Polish enjoyed the support of his congregants not only for his civil rights activism but also for his energetic advocacy of Zionism. At the urging of Stephen S. *Wise, he served as national chairman of the Committee on Unity for Palestine (1947), as well as president of the Chicago Zionist Federation (1975–76). He furthered the cause of Zionism in the *Central Conference of American Rabbis as a member of the executive board (1945–47; 1967–69; 1973–75), as well as chairman of the CCAR Committee on Projects for Palestine (1948). He also chaired the Committees on Liturgy (1959–61), Rabbinic Training (1967–69), the Future of the Rabbinate and the Synagogue (1969–72), Jewish Organizations (1973–75) and the Rabbi's Manual Committee (1986). He represented the CCAR at the Prime Minister's Conference in Jerusalem in 1968, where he delivered an address in Hebrew, and planned the first CCAR conference in Jerusalem in 1970. Symbolic of the triumph of his many years of lobbying the organization on behalf of Zionism and embracing tradition, he was elected vice president (1969) and then president of the CCAR (1971–73). During his tenure in office, the CCAR became a member of the World Jewish Congress (1972) and embarked on a series of dialogues with the *kibbutz movement in Israel, resulting in the establishment in the *Aravah of kibbutz Yahel (1977) and kibbutz Lotan (1983), both comprising young American *olim* and sabras and affiliated with Reform Judaism. As president, he testified before the U.S. Congress in favor of home rule for the District of Columbia (1972); he was later cited in the Salt II Treaty of 1979. In 1977, Polish was a founder of the Association of Reform Zionists of America and author of ARZA's Statement of Principles.

In 1980, Polish retired from Beth Emet, retaining the title founding rabbi, which he preferred to emeritus. He taught that year at the Los Angeles campus of HUC-JIR and subsequently at Northwestern University, where he was instrumental in

establishing the Philip and Ethel *Klutznick Chair of Jewish Civilization in 1986. The senior editorial writer for the Chicago Jewish Sentinel, Polish was the author of nine books, including *Higher Freedom*, which won the Frank and Ethel S. Cohen Award from the Jewish Book Council of America in 1966 as an outstanding work in the field of Jewish thought. His major works are *A Guide for Reform Jews* (with Doppelt, 1957), *The Eternal Dissent* (1961), *The Higher Freedom: A New Turning Point in Jewish History* (1965), *Israel – Nation and People* (1975), *Renew Our Days: The Zionist Issue in Reform Judaism* (1976, based on his 1973 monograph “Are Reform and Zionism Compatible?”), (1989), and *Abraham's Gamble: Selected Sermons for Our Times* (1988). He also edited *The Reform Rabbi's Manual* (1988) for the CCAR.

POLISH LITERATURE.

Biblical and Hebraic Influences

Translations of the Bible played an important part in the development of Polish as a literary language. From the early 14th century onward, the Old Testament – particularly the Psalms – provided a major source of poetical inspiration in Polish literature and culture. Some of the best-known of these Polish versions of the Scriptures were the 15th-century Queen Sophia Bible; the 14th-century Floriański Psalter; the Calvinist Brześć (Radziwill) Bible (1562); Szymon Budny's Nieświez Bible (1572); and Fr. Jakub Wujek's classic Catholic Bible (1593–99), which injected the greatest concentration of biblical imagery and expression into the Polish language. Polish Bibles from the 16th century onward were mainly the work of Protestants, who also produced many paraphrases of biblical books such as the Psalms. New translations have been produced in the 20th century, and there have also been a few Polish Jewish versions of Old Testament texts, notably Song of Songs (1922) by Juliusz Feldhorn (1901–1943), who was murdered by the Nazis; and complete Old Testaments by F. Aszkenazy (1927–30) and S. Spitzer (1937). In Polish literature proper, the influence of the Bible may be detected during and after the Renaissance era in works such as *Żywot Józefa z pokolenia żydowskiego* (“The Life of Joseph,” 1545), a biblical interlude by Mikołaj Rej, the Calvinist “father of Polish literature” who also published a verse translation of Psalms (1546); and the *Kazania sejmowe* (“Parliamentary Sermons,” 1597) of the Jesuit Piotr Skarga. The impact of the Old Testament was most evident in the outstanding Polish poet of the Renaissance, Jan Kochanowski, whose works include *Pieśń o potopie* (“The Song of the Flood,” 1558), *Zuzanna* (1562), and *Treny* (“Lamentations,” 1580; English selections, 1920). Kochanowski's sensitive and beautiful version of Psalms, *Psalterz Dawidów* (1578), was the finest poetical work of its time and served as a literary model until the 19th-century romantic period. Some later Psalters by his followers and imitators were Maciej Rybiński's *Psalmy monarchy i pro-*

roka św. Dawida ("The Psalms of David, King and Prophet," 1598) and the paraphrase by Mikolaj Sęp-Szarzyński in *Rytm* (1601). Some Polish writers were also interested in other books of the Bible, which they either translated or used as stylistic models. The staunchly Catholic poet and historian Wespazjan Kochowski celebrated the tenth anniversary of the battle of Vienna (in which King Jan III Sobieski defeated the Turks) with his *Psalmody polska* ("Polish Psalmody," 1693), written in the form of biblical prose. There were also scores of dramatic works and interludes on biblical subjects belonging to the theatrical repertory of the Polish court from the 16th and 17th centuries onward.

LATER BIBLICAL WRITING. Scriptural phraseology, syntax, and imagery constantly recur in the works of Poland's greatest writers, particularly in the romantic era. Some notable examples are Adam Mickiewicz's *Księgi narodu polskiego i pielgrzymstwa polskiego* ("The Books of the Polish Nation and Pilgrimage," 1832), Juliusz Słowacki's *Anielli* (1838), and Zygmunt Krasiński's *Psalmy przyszłości* ("Psalms of the Future," 1845). Cyprian Kamil Norwid ranks next with his *Żydowie Polscy* ("Polish Jews"), which summarizes the history of the Jews from the time of Moses until the era of the struggle of the Poles and Jews ("Maccabees") against their common oppressors. Biblical books such as Isaiah, Jeremiah, and Job; figures such as Cain and Abel, Moses, Samson, Saul, David, Judith, and Daniel; historic sites such as Mount Ararat and Babylon; and even objects such as Samson's pillar or the prophet's staff were, for centuries, the poetical stock-in-trade of many Polish writers. These include Kazimierz Brodziński, Stefan Witwicki, Kornel Ujejski, Maria Konopnicka, Władysław Belza, Kazimierz Przerwa-Tetmajer, Stanisław Wyspiański, Jan Kasprzowicz, Leopold Staff, and Jan Dobraczyński. After Poland lost her independence, writers used biblical themes to discuss the present in the guise of an ancient historical setting, this being the only means of presenting the slavery into which the Poles had been forced, without exposing the authors to the wrath of foreign oppressors. Polish poets found in the Bible the moral values required by a people condemned to slavery, contempt, and humiliation. Biblical and other Jewish figures had the same function as those drawn from Greek and Roman mythology in the dramas of Stanisław Wyspiański (*Daniel*, 1907) and Karol Hubert Rostworowski; *Opowiesci biblijne* ("Biblical Tales," 1963) of Kosidowski had a vast sale even in post-World War II Communist Poland.

The Image of the Jew

Evidence of an unfriendly attitude toward the Jews may be found in Polish literature of the 16th and 17th centuries, as well as in Catholic polemical literature of the Reformation period. This was also the case with epigrams and satires of the so-called bourgeois literature, in the satirical *Worek Judaszów* ("Judas' Sack," 1600) by Sebastian Fabjan Klonowicz, who was mayor of Lublin, and in *Wyprawa żydowska na wojnę* ("The Jewish War Expedition," 1606), a comedy by an anonymous author. In writings of this type there are sometimes echoes of

anti-Jewish riots, as in *Taniec Rzeczypospolitej Polskiej* ("The Dance of the Polish Republic," 1647), a rhymed chronicle by Gabriel Krasiński which describes part of the student riots at Kazimierz, the Jewish district of Cracow.

FAVORABLE PORTRAYALS. A markedly different attitude governs works about Jews during the period of the so-called Four-Year Sejm (1788–92) and at the beginning of the 19th century, which appealed for tolerance toward the Jews (see *Poland). This also characterized the first Polish social novel about Jews, *Lejbe i Sióra* ("Leib and Sarah," 1821), by Julian Ursyn Niemcewicz. Polish folk poetry also mentions Jewish participation in the Kościuszko revolt, one instance being the song about Berek Joselewicz, the commander of a squadron of Polish lancers, who died a hero's death near Kock in 1809. The figure of the Jew and the Jewish problem both appear in the works of the great Polish romantic poets (Mickiewicz, Słowacki, and Z. Krasiński) and their imitators. Juliusz Słowacki portrayed the fate of the Jew as a human being – hated, alien, and condemned to shame, contempt, and death – in Judith, a character in his drama *Ksiądz Marek* ("Father Marek," 1843). Proud and conscious of her fate, she seeks revenge on her antisemitic persecutors. The third of the great romantics, Zygmunt Krasiński, symbolized the role of Jewish converts in the revolutionary movements of Europe in his historical drama *Nieboska Komedia* ("The Ungodly Comedy," 1835). The events preceding the outbreak of the November insurrection (1830) and its collapse inspired a rich political and polemical literature dealing with the problem of the Jews. Works of this type were *Au Peuple d'Israël* (1832), a French appeal by the historian Joachim Lelewel, who also wrote the booklet *Sprawa żydowska w roku 1859* ("The Jewish Question in 1859," 1860), defending the Jews against antisemitic attack; and papers by the Jew Ludwik Ozeas Lubliner, author of *Des Juifs en Pologne* (1839), *Obrona Żydów* ("The Defense of the Jews," 1858), and *Do Polaków Izraelitów, w Polsce* ("To Polish Israelites in Poland," 1862). Pro-Jewish works were also written by other romantics, such as Cyprian Norwid, Władysław Syrokomla, Mieczysław Romanowski, Aleksander Teofil Lenartowicz, and Włodzimierz Wolski. Their sympathetic references to the Jews were often interwoven with others about Polish suffering under the foreign oppressor. In 1883 the poet Władysław Belza published poems of this kind about the Jews in his anthology *Żydzi w poezji polskiej – głosy poetów o Żydach* ("Jews in Polish Poetry – Voices of the Poets on the Jews," 1906), a work inspired by the Jewish assimilationist Agudas Achim society. The short-lived rapprochement between Poles and Jews before and after the outbreak of the January Revolution (1861–63) was reflected in poems by some Poles, such as Ludwik Mierosławski, a nationalist politician and general, and in the verse of Jews like Henryk Merzbach and M. Epstein, who also participated in the uprising; but these were phenomena of minor literary importance.

THE JEWS AS A SOCIAL PHENOMENON. The deep changes in political outlook after the defeat of 1863 and the attitude ad-

opted by literature of the so-called Positivist period toward everyday contemporary themes made Polish poets increasingly aware of the Jews and the Jewish problem, not only from the Polish point of view, but also as a specific, characteristic feature of contemporary society. The role of Jews in science, industry, commerce, and banking was reflected in Polish literature of the period. The radical development of Polish socialism on the one hand, and of Polish nationalism on the other, made the Jew a stock character – artisan, merchant, scholar, politician, journalist, or yeshivah student – and writers portrayed him according to their specific outlook. Polish poets, far from despising the Jews, pitied and defended them in their works. This was especially true of the Warsaw urban poet Wiktor Gomułcki, although such writers tended to overlook the Jewish world discovered by playwrights and prose writers. However, sympathetic insight was evident in the works of Poland's greatest poetess, Maria Konopnicka, who condemned antisemitic outrages in one of her novellas, and in *Żydzi* (1843), a play by Józef Korzeniowski. Much space was also devoted to the Jewish problem by prose writers such as Eliza *Orzeszkowa, Klemens *Junosza, Józef Rogosz, and Ignacy Maciejowski (Sewer). Another leading writer, Bolesław Prus, introduced two Jewish figures in *Lalka* (3 vols., 1887–89), the first important Polish realistic novel. Szlangbaum, a Jewish stereotype, is avaricious, ruthless, self-abasing before the rich, and self-confident with the poor, sacrificing everything for the sake of business; but the second Jew, Dr. Szuman, partly resembles the romantic hero of the novel. In his great historical novel *Faraon* (“The Pharaoh,” 3 vols., 1895–96), set in ancient Egypt, Prus also alludes to the Jewish situation in contemporary Poland. In his weekly column in a Warsaw newspaper, Prus displayed a contradictory attitude, either attacking the Jews for their financial skill and resourcefulness or praising them for the same abilities, through which the Jews, unlike Polish Christians, served the interests of society in general. The Jew as a revolutionary social innovator was a figure created by the great radical prose writer Stefan Żeromski. In his novel *Ludzie bezdomni* (“The Homeless,” 2 vols., 1900) he depicted the role of a Jewish physician in initiating the fight for reforms in stagnant Polish society. Żeromski's last novel, *Przedwiośnie* (“Early Spring,” 1925), aimed against the right-wing Pilsudski regime, assigned a much more important task to the Jews as the co-authors of the Polish Communist movement. In Communism Żeromski saw a force capable of redeeming Poland's disinherited youth.

NEGATIVE PORTRAYALS. A different tendency also made its appearance from the late 19th century, some writers setting out to prove the destructive role of the Jews in the social, political, economic, and cultural life of Poland. Władysław Stanisław Reymont (1867–1925) drew an unfavorable picture of the Jews in his novel *Ziemia obiecana* (“The Promised Land,” 1899), where he showed the different cross sections of industrial life in Łódź during the period of czarist occupation. Both Jewish and German capitalists exploit the Polish work-

ing classes, which are thus denied the benefits of a native capitalism. Other hostile assessments were presented by Teodor Jeske-Choiński, a mediocre novelist and critic who expressed reactionary, clericalist opinions, and Roman Dmowski, the ideologist of Polish nationalism and a leader of the National Democratic movement, who played a major role in the propagation of antisemitism. Aleksander Świętochowski, once broadminded and progressive, joined the conservative, antisemitic groups of writers, as did the poet Andrzej Niemojewski, who edited *Mysł niepodległa*. In his youth Niemojewski had been a revolutionary democrat, but in his later years he joined the extreme reactionary, nationalist circles frequented by Adolf Nowaczyński (Neuwert), a playwright and pamphleteer of Jewish birth. Many antisemites were active as essayists and literary critics, although scarcely anyone of major importance campaigned against the Jews.

LATER TENDENCIES. After Poland attained independence and national sovereignty in 1918, new forms of social and artistic life came into being. At the same time the whole basis of political thought underwent a change under the impact of the new conflicts in a society liberated from foreign oppression. Polish poetry, which was revitalized during the years 1918–39, also echoed the voice of Polish Jewry. Some poets dedicated works to the Jews, whom they considered to be fellow citizens sharing common ideals determined by the same political program. In two pre-World War II poems, “*Księżyc ulicy Pawiej*” (“The Moon of Pawia Street”) and “*Na śmierć rewolucjonisty*” (“On the Death of a Revolutionary”), Władysław Broniewski, a communist, sympathetically portrayed the life of the Jewish poor and the struggle of the Jewish revolutionaries who died in the cause of the Polish working classes. In his moving *Ballady i romanse*, written after a pogrom organized by the Nazis, Broniewski expressed his admiration for the Jews, while his “*Pamięci Szmulę Zygielbojma*” commemorated Samuel *Zygielbojm who committed suicide in London in order to draw world attention to the destruction of the Jewish people by the Nazis. Artur Oppman (Or-Ot), a Warsaw poet, eulogized a certain Rabbi Jawor who chose to remain within the walls of the embattled Polish capital. Among its citizens he enjoyed “the credit of the ancient sons of Judah, the servants of Jehovah, and of the bards and knights.” On the other hand, another outstanding poet, Konstanty Ildefons Gałczyński, sometimes described the Jews in a satirical manner in poems such as his “*Sonata księżycowa rodziny Kon*” (“The Moonlight Sonata of the Kon Family”), “*Ballada o Aronku*” (“The Ballad of Little Aaron”), and “*Wilno, ulica Niemecka*” (“Vilna, the German Street”). Wanda Melcer's *Czarny ląd* (“The Black Land,” 1896), a series of reportages written after a visit to the Jewish section of Warsaw, stressed the exoticism of Jewish customs, clothing, speech, behavior, and way of life. This account was not written for the sake of cheap sensation, but indicated the many aspects of a social problem.

PROTESTS AGAINST FASCISM. The upsurge of Polish antisemitism immediately before the outbreak of World War II

found reflection in the satirical poetry of Antoni *Slonimski, whose *Dwa końce świata* ("Two Ends of the Earth," 1937) attacked racism and Fascism. Many leading Polish writers dealt with issues involving the Jews and fought antisemitic manifestations. They included members of the *Przedmieście* group founded in 1933: Jerzy Kornacki, Helena Boguszewska, Pola Gojawiczyńska, and Halina Górska. Allied with them were other writers and journalists who worked for weeklies such as *Oblicze Dnia*, *Epoka*, *Czarno na białym*, *Sygnali*, *Poprostu*, *Lewar*, and *Dziennik Popularny*. Weeklies ranging on the opposing side included *Prosto z mostu* and *Merkurjusz Ordynaryny*. In the battle against Fascism and antisemitism during the years preceding World War II many satirical poets took an active part. Among them were Jewish writers such as Antoni Slonimski, Julian *Tuwim, Leon Pasternak (1910–1969), Stanisław Jerzy *Lec, Jan *Brzechwa, Włodzimierz Słobodnik (1900–1991), Lucian *Szenwald, Jerzy Jurandot, and Jerzy Kamil Weintraub (1916–1943); and non-Jewish writers such as Artur Marya Swinarski, and Eduard Szymański. After the defeat of the Nazi invaders, many Polish writers – Jews and non-Jews – devoted books to the "Final Solution" of the Jewish problem, as put into effect during the German occupation. Events in Poland two decades later, after the Israel-Arab Six-Day War of 1967, were reflected in "Israel" (1968), an outstanding poem by the émigré Polish writer Kazimierz Wierzyński, a member of the old *Skamander* literary group, and Czesław Miłosz, émigré Polish writer.

The Jewish Contribution

Since Polish Jewry was almost entirely Yiddish-speaking until the early part of the 20th century, Jews who wrote in Polish were at first comparatively few. The pioneer of Jewish literary activity in Polish was the converted essayist Julian *Klaczko. Two writers who followed his lead later in the 19th century were Władysław Ordon (Władysław Szancer, 1848–1914), a tragic figure of humble origin whose poems were once highly regarded, and the poet and historian Alkar (Aleksander Kraushar, 1843–1931), who translated works by *Heine. By the beginning of the 20th century, Jews had become more active in Polish literature, their participation being reflected in the symbolic figure of the Jewess Rachel in Stanisław Wyspiański's drama *Wesele* ("The Wedding" 1901). The Jewish share in Poland's cultural life gained momentum during the first two decades of the 20th century, and particularly after the achievement of national independence following World War I. Those representing this trend include the poets Franciszka Arsteinowa (1865–1942), Henryk Balk (1901–1941), Mieczysław Braun, Julia Dickstein-Wielczyńska (1880?–1943), Juliusz Feldheim (1901–1943), Zuzanna Ginczanka (1917–1944), Bruno *Jasiński, Cezary Jellenta (Napoleon Hirszbard, 1861–1935), Bolesław *Leśmian, Stefan Napierski (Stefan Marek Eiger, 1899–1949), Artur Prędski (Artur Pfeffer, 1900–1941), S.R. Stande, Jan Stur (Hersz Feingold, 1895–1923), L. Szenwald, and J.K. Weintraub. Among the novelists were Leo Belmont (Leopold Blumenfeld, 1865–1940), Henryk Drzewiecki, Halina Górska,

Gustawa Jarecka (1908–1942), Alfred Aleksander Konar (Aleksander Kinderfreund, 1862–1940?), Bruno *Schulz, and Bruno Winawer. The last also wrote plays, as did Jasiński. Three early Jewish literary critics and historians were Samuel *Adalberg, Henryk *Biegeleisen, and Wilhelm *Feldman. Many of these writers died during the Nazi occupation of Poland, and among them also the famous children's writer and educator Janusz *Korczak. Both between the world wars and after 1945, Jews, or men and women of Jewish origin, continued to make an important contribution as poets, playwrights, novelists, short story writers, and literary historians and critics. Some who were active before World War II resumed their careers in Poland after the German defeat. Leading poets in this category were Jan Brzechwa, Mieczysław *Jastrun, Stanisław Jerzy Lec, Tadeusz *Peiper, Tadeusz Różewicz, Antoni *Slonimski, Arnold Słucki, Julian Tuwim, Aleksander *Wat, Adam Ważyk, Józef *Wittlin, Wiktor Woroszyński, and Stanisław *Wygodzki. Of these, Slonimski maintained his independence of the Communist Party line on Zionism, while Wygodzki left Poland for Israel after the Six-Day War of 1967. Other poets included Stefania Grodzieńska (1914–), Leon Pasternak, Józef Prutkowski (Józef Nacht, 1915–1981), Włodzimierz Słobodnik, and Irena Tuwim (1900–1987), Julian Tuwim's sister. Two major playwrights were the émigré satirist Marian *Hemar and the ex-Zionist convert Roman *Brandstaetter; others included Benedykt Hertz and Jerzy Lutowski (1923–1984). Kazimierz *Brandys, Adolf *Rudnicki, and Julian *Strykowski were leading novelists, the last specializing in stories of pre-World War I Jewish life; and others included Michał Maksymilian Borwicz (Maksymilian Boruchowicz, 1911–), whose anthology, *Pieśń ujdzie cało* ("The Song Will Prevail," 1947), contained Jewish songs of the occupation era, as well as Irena Krzywicka (1904–1994) and Stanisław Lem (1921–). Hanna Mortkowicz-Olczakowa (1905–1967), who in 1936 published *W Palestynie: obrazy i zagadnienia* ("In Palestine: Pictures and Problems") on the situation of Palestinian Jewry, later wrote the biographical *Janusz Korczak* (1949; *Mister Doctor*, 1965). Some Jewish authors in other genres were the screenwriter Józef Hen (1923–), the émigré author and actor Henryk Grynberg, the satirist Karol Szpalski (1908–1963), and Krystyna Żywulska (1918–), author of *Przeżyłam Oświęcim* ("I Survived Auschwitz," 1946).

Polish Jews were also prominent as literary historians and critics, and as editors and publishers of important literary reviews which influenced cultural life, notably *Wiadomości Literackie* (edited by M. Grydzewski). Juljusz Kleiner (1866–1957), who wrote many literary monographs and standard textbooks on Polish literature, trained a whole generation of literary critics, including scholars such as Henryk Balk and Henryk Szyper (1900–1949). Some later writers of eminence in this field were Jan Kott (1914–2001), whose works on Shakespeare were translated into many languages; Henryk Markiewicz (1922–), a leading Marxist literary theorist; Maria Renata Mayenowa (1910–1988); Henryk Wolpe (1899–1967); and Wiktor Weintraub (1908–1988), who became professor of

Polish literature at Harvard University, U.S. Other authorities on Polish literary history and criticism included Rafal Marcel Blueth (1891–1939), Emil Breiter (1886–1943), Wilhelm Fallek (1888–1941), Ludwik Fryde (1912–1942), Dawid Jakub Hopenstzand (1904–1943), Roman Karst (1911–), Jerzy Pomianowski (1921–), Artur Sandauer (1913–1989), and Henryk Vogler (1911–2005). A number of major writers and critics were also distinguished translators.

POLITICS.

Introduction

Jewish involvement in national politics in the various countries in which they settled dates from the period of Jewish emancipation at the end of the 18th and the first half of the 19th century. In fact, personalities such as Joseph *Nasi, duke of Naxos, and Solomon *Ashkenazi held powerful positions in Ottoman politics in the late Middle Ages; Jewish ministers held office in medieval Spain; and Jews served as court advisers to various rulers in Holland, Germany, and Sweden. Nevertheless, professing Jews entered representative institutions of modern states only at a much later date. Until the Emancipation, Jews who were eager to hold political office were generally obliged to content themselves with participation in local government (as in Russia) or to convert to Christianity. The political emancipation of the Jews came in the U.S. from the late 18th century and in parts of Western Europe it was effected soon after the outbreak of the French Revolution. Thus, in Holland, Moses *Asser and Jonas Daniel *Meyer were appointed in 1797 to the legislative council and state council and, in Venice, following the overthrow of the oligarchy, the elected municipal council contained three Jewish members. In France and Germany, Jews were still generally excluded from political office but, even after the onset of reaction at the end of the Napoleonic Wars, it was clear that Jewish emancipation could not be long delayed. Soon after the 1848 revolutions in Europe, Jews were permitted to become members of representative institutions in nearly all major European states, outside the Russian Empire.

In English-speaking countries other than Britain and Canada, Jewish entry into political life developed more rapidly than elsewhere. The small Jewish community in the United States enthusiastically supported the revolutionary cause, and in 1775 Francis *Salvador was elected to the South Carolina Provincial Congress, probably the first Jew to be elected to a representative assembly in modern times. The Declaration of Independence, issued the following year, affirmed the principle of equality and Jews were freely admitted into all American legislative bodies from that time onward. No restrictions ever existed on Jewish political activities in Australia and South Af-

rica, and Jewish pioneers in these territories were prominent in public affairs, as mayors of cities, legislators, and, in the case of Sir Julius *Vogel and Vabian *Solomon, as prime ministers. On the other hand, in Canada and Great Britain, where Jews received the right to serve as representatives in parliament in 1832 and 1851, respectively, they had previously been refused this right because they could not swear “on the true faith of a Christian,” as the oath required.

Once admitted to parliament, Jews rapidly achieved top government posts in the democracies outside America and rose to ministerial rank in France in the 1850s (Achille *Fould), Holland in the 1860s (Michael *Godefroy), Australia in the 1870s (Sir Julius Vogel), Britain in the 1880s (Henry de *Worms), and Italy at the turn of the 20th century (Luigi *Luzzatti). On the other hand, professing Jews were generally deprived of ministerial status in Germany and Austria, but there was no discrimination against converts, and Franz Klein, Austrian minister of justice, was the only unconverted Jew to become a minister in a Central European national government before 1918. In America, on the other hand, Jews were not victims of discrimination, but neither were they as a rule sufficiently integrated into American society to participate in national politics.

One important reason why Jews did not hold ministerial posts in many states, especially before World War I, was that Jewish politicians were generally numbered among the opposition radical parties of the center and left. This was particularly true of Germany and Austria where, following the upheavals after World War I, a number of Jews who had been prominent in the Socialist parties assumed senior government positions. The same situation proved true of France and Britain, where Socialist administrations brought Jews into cabinets, but conservative governments rarely included any Jewish members. Thus, in France all three Jewish prime ministers professed varying shades of socialism, and in England, of ten professing Jews to become members of British cabinets (up to 1970), only Sir Keith *Joseph was a Conservative. A similar trend was noticeable elsewhere.

A number of reasons have been advanced for the Jewish tendency toward radical parties. One of the most obvious is that liberal and left-wing political groups have generally been far less hostile to underprivileged newcomers (as Jews generally were) than conservative parties. The Right associated itself with the Church, the establishment, and social tradition – three concepts with which Jews had no connection – and was frequently antisemitic, while the radical groups, committed to challenge the establishment and alter tradition, were obviously more attractive to Jewish voters and prospective politicians alike. This reason also explains why Jews found advancement in left-wing parties much easier than in rightist ones (e.g., Ferdinand *Lassalle, Eduard *Bernstein, Leon *Blum, and others). Even in 1970 it was as true as at the beginning of the 20th century, that Jews in Western Europe were found mainly in the Socialist and Liberal parties and in the United States in the Democratic Party.

In pre-revolutionary Russia Jews were officially discriminated against and deprived of the opportunity to air their grievances democratically. Many of them, particularly young intellectuals who did not choose to emigrate overseas or join the Zionist movement, were impelled toward revolution. The Socialist revolutionaries and both Menshevik and Bolshevik factions of the Social Democrats seemed to be the only real alternative to the autocracy of the czars, which openly professed antisemitism. Many middle-class Jews in Russia did vote for the liberal Constitutional Democratic (Kadet) Party, but many more supported political groups that sought not to reform, but to destroy the existing regime. As a result, a significant proportion of the Social Democratic party consisted of the Jewish *Bund, and among the leaders of the general revolutionary parties the number of Jews was also disproportionately high.

Undoubtedly, Socialist doctrine, with its emphasis on equality and the destruction of the ruling classes, had a considerable appeal to Jewish intellectuals fighting against discrimination. This proved true not only in Russia, but in other European countries amid the convulsions at the end of World War I. Jews practically dominated the short-lived Communist regimes in Hungary (Béla Kun) and Bavaria (Kurt *Eisner), and it is reasonable to assume that this fact contributed to their quick downfall, since they lacked support in the general population. They were murdered or forced into exile when the counterrevolutionaries took control. After World War II Jews were again prominent at the head of East European Communist regimes (*Rakosi became the party leader in Hungary, *Minc and *Berman leading members of the Polish Communist regime under Bierut, and a number of Jews held key ministries in Czechoslovakia). This was largely a result of the fact that during the Stalin period Moscow could rely more on Soviet-trained old Communists of the satellite countries, among whom Jews played a prominent part. These Jews, however, did not reflect the general political attitude of the Jewish population in those countries and ultimately, when the Stalinist regimes crumbled there, they mostly disappeared or were openly attacked, frequently with antisemitic allusions (particularly in Poland and Czechoslovakia). In the Soviet Union the number of Jews in the top leadership sharply declined from the great Stalinist purges of the 1930s onward. In contrast to the prominent position of individual Jews in the Communist movement, Jews were never active in other totalitarian regimes and hardly any right-wing dictatorships included Jewish ministers. Clearly, Jews could not be expected to support regimes whose policy was specifically antisemitic, and in other dictatorships not characterized by antisemitism, the authorities were nonetheless reluctant to number Jews in their party in order not to cause offense to antisemitic elements.

An important issue connected with the involvement of Jews in politics is the degree to which Jewish and national interests have clashed. In Germany most leading Jews generally accepted the principle that German national interests were of paramount importance (e.g., Levin *Goldschmidt), and were

anxious to prove their loyalty to the state in the face of attacks by antisemites. Furthermore, Jewish politicians, with very few exceptions – mostly Zionists – were assimilationists and had no interest in Jewish affairs. Most Jewish Socialist politicians in Germany as well as Austria rejected Judaism and, either by converting to Christianity or professing atheism, demonstrated their detachment from any Jewish interests. On the other hand, in English-speaking countries, where Jews were less subject to antisemitic pressures and were not required to prove their social integration by assimilation, Jewish politicians were frequently prepared to oppose government policies even in face of accusations of “dual loyalty.” In the United States and Great Britain Jewish political leaders repeatedly pressed their governments to take steps to stop antisemitic excesses in Central and Eastern Europe and help Jewish immigration and settlement in Palestine. Later, in the United States, Jews were also in the forefront of demands upon the government to increase its assistance to Israel in the face of Arab threats. In supporting Israel, Jewish politicians in English-speaking countries often clashed openly not only with the government of their country but also with their parties as, e.g., Labor MPs in Britain during the Sinai Campaign (1956) or Jewish supporters of De Gaulle in France after the Six-Day War of 1967. Jewish politicians in South Africa generally accepted Israel’s clear stand at the UN against their government’s apartheid policy. However, the degree to which Jewish politicians canvassed Jewish issues often tended to reflect the political advantage to be gained by it. Jewish politicians in New York City have an interest in the large Jewish vote; those in most parts of Europe are more conscious of the antisemites. Nevertheless, though Jewish interests have been pressed hard on occasion, Jews rarely organized themselves for solely political purposes and have in most instances denied the existence of a Jewish political interest. In some East European countries, before World War II, many Jews were elected to parliament as Jews, i.e., as representatives of the Jewish community or of Jewish parties, and in such cases there was no question of conflicting loyalties. In Hapsburg Austria-Hungary Jews had the choice of voting for the assimilationist Socialists, many of whose leaders were Jewish, or the Jewish, i.e., Zionist Party, while before and after World War I Jews from different political parties united to defend the Jews from state persecution. Although these groups never had substantial influence in general politics, they played an important part in maintaining the unity of the Jewish communities and providing a forum for airing Jewish grievances.

Australia

No discrimination existed against Jews in Australia and they played an important part in the early development of the Australian colonies. As a result, Jews were identified with Australian political life from the first years of self-government. The first Jew to be elected to an Australian legislative body was Sir Saul *Samuel, who became a member of the New South Wales legislative council in 1854. He was joined by Jacob Mon-

tefiore, who was elected in 1856 while the first Jewish members of the Victoria legislative assembly were Nathaniel Levi who was elected in 1860, Charles Dyte who represented Ballarat East from 1864 to 1871 and championed miners rights on the Ballarat goldfields, and J.F. Levien, who was a member of the Victoria parliament for over 30 years. Other prominent figures included Judah Moss *Solomon who represented Adelaide in the South Australian parliament from 1858 to 1874, Edward Cohen (1822–1877) who represented East Melbourne from 1864 until his death, and Ephraim Zox (1837–1897) who succeeded him as member for East Melbourne. Jewish representation in the 19th-century Australian parliament was out of proportion to their total number and in Adelaide where the Jewish population was only 500 there were four Jewish members of the legislative assembly (Judah Moss Solomon, Emanuel Solomon, Vabian Solomon, and Lewis Cohen). Four Jews also held ministerial posts in Australian colonial governments: Sir Saul Samuel was minister of finance and trade, Edward Cohen served as commissioner of customs, Sir Julian *Salomons became vice president of the New South Wales executive council, while Vabian Solomon was premier of South Australia for a short time in 1899.

When the first Australian federal parliament met in Melbourne in 1901 there were three Jewish members, Vabian and Elias Solomon, and Pharez Phillips. However, few Jews were subsequently elected to the Australian federal parliament, prominent exceptions being Senator Sam *Cohen, who was deputy leader of the Australian Labor Party, and Max Falstein. Many Jews played an important part in the various state parliaments, however, particularly in Victoria where several rose to the rank of minister, among them Theodore *Fink, minister without portfolio, Henry Isaac Cohen who held several ministerial appointments, Harold Edward Cohen who was minister of public instruction and solicitor general, and in New South Wales Abram *Landa who was successively minister of labor, housing, and cooperative societies. In addition, Matthew Moss was a minister in the government of Western Australia and Sir Asher Joel was a member of the New South Wales Legislative Council. Two Jews also acquired distinction as speakers of parliaments, Sir Daniel Levy being speaker of the New South Wales parliament and Sir Archie Michaelis (d. 1975) was speaker of the Victorian parliament. Most distinguished of all was Sir Isaac *Isaacs, chief justice of Australia, who was governor-general of Australia from 1931 to 1936, the first Australian-born governor-general and the first Jewish governor-general of any British Dominion territory. In subsequent years, fewer Jews have served in Australia's federal parliament, although four – Peter *Baume, Joe *Berinson, Barry *Cohen, and Sam *Cohen – have served in Australian cabinets since the 1970s. Sir Zelman *Cowen was governor-general of Australia in 1977–82.

[Isidor Solomon]

Austria

Although a few Jews were prominent in Austrian political society in the 17th and 18th centuries as court advisors to Haps-

burg monarchs, Jews were not generally allowed to hold political posts until after the reforms which followed the outbreak of the 1848 Revolution. Five Jews were elected to the first revolutionary parliament of that year: Adolph *Fischhof, Joseph Goldmark, Abraham Halpern, Isaac Noah *Mannheimer, and Rabbi Dov Ber *Meisels. The suppression of the revolutionary movement, however, led to the renewal of restrictions on Jews and they were denied the right to hold government or municipal offices. These rights were restored in 1860 when liberal legislation allowed the Jews various civil liberties and two Jews, Ignaz *Kuranda and Simon Winterstein, were elected to the Reichsrat. In the same year Baron Anselm von *Rothschild was made a member of the Austrian upper house. The constitution of 1867 abolished all discrimination on the basis of religion, and for over half a century Jews suffered no legal restrictions on their entry into public life though anti-Jewish prejudice frequently acted as an equally effective bar. Except for Franz Klein who was twice minister of justice, no professing Jews held ministerial posts in the Hapsburg Empire until October 1918. In the half century between the promulgation of the constitution of 1867 and the collapse of the Hapsburg Empire, a number of Jews became prominent figures in Austrian politics. They included successful industrialists and bankers such as Simon Winterstein, Baron Anselm von Rothschild, Moritz von *Koenigswarter, and Rudolph *Auspietz. Most Jews were members of the German Liberal Party but toward the end of the century many turned to the new Social Democratic Party under Victor *Adler which acquired wide support among the Jews of Austria and rapidly became the target of antisemitic attacks. Among the leaders of the party were Wilhelm *Ellenbogen, Friedrich Austerlitz, and Otto *Bauer, all of whom pledged their sole allegiance to the Socialist cause, supported Jewish assimilation, and opposed all forms of Jewish nationalism, believing that this was an effective way of combating growing antisemitism. By contrast, Rabbi Joseph Samuel *Bloch formed the Union Oesterreichischer Juden to defend Austrian Jewry against the antisemites and on the two occasions he was elected to the Reichsrat fought strenuously against anti-Jewish discrimination. Following the granting of universal suffrage at the end of 1906 four Jews were elected to parliament as members of the newly formed Jewish National Party (*Volkspartei, Juedische) which advocated an independent Jewish policy and was pro-Zionist. Its members were Heinrich Gabel, Arthur Mahler, and Adolf Stand, all from Galicia, and Benno Straucher from Bukovina. During World War I many Jewish Socialists opposed the war and for most of the war were an ineffective minority, but the pro-Western liberal politician Joseph *Redlich became increasingly more important and was briefly minister of finance at the end of the war. With the creation of the Austrian Republic in November 1918, a Socialist government took office with the Socialist leader Otto Bauer as foreign minister. Bauer and Friedrich *Adler were among the party leaders to combat the threat of a Communist revolution which became a serious possibility as long as the short-lived Bolshevik regime of Béla Kun held

power in Hungary. But though the Socialists retained their respectability as an anti-Communist party, the fact that a large number of their leaders were of Jewish origin, among whom were Julius *Braunthal, Robert Danneberg, and Hugo *Breitner, was a continual source of embarrassment to the party. Many Vienna Jews voted for the Socialist Party but many also supported the Zionist candidates of whom Robert *Stricker was elected to the Austrian National Assembly and three others were elected to the Vienna city council. The Zionist candidates were not subsequently successful, however, largely because the Jewish refugees from the eastern part of the old Hapsburg Empire, who were the least assimilated and the most pro-Zionist, were denied the right to vote at all. However, toward the end of the 1920s the Zionist parties gained strength in the Jewish communal elections while the Jewish Socialists declined in importance in both communal and national politics following the resurgence of the nationalist and later fascist parties. When Chancellor *Dollfuss assumed rule by executive decree, Jewish Socialist leaders like Braunthal and Breitner were among those temporarily imprisoned as part of the policy of destruction of the Social Democratic Party, but for a time Jews were allowed to become members of the Vaterlaendische Front. However, following the *Anschluss* with Germany in March 1938 Austrian Jews were deprived of all their political and civil rights and many fled the country to avoid arrest, among them Otto Bauer, Friedrich Adler, and Hugo Breitner. After World War II few Jews were active in politics in Austria, a notable exception being Bruno *Kreisky who became successively foreign minister, chairman of the Social Democratic Party, and in 1970, chancellor of the Austrian Republic, remaining in office until 1983.

Canada

Prior to the British conquest in 1759, Canada was a French colony. Only Roman Catholics were legally allowed to settle in the colony. Protestants and Jews were excluded. But when France ceded Canada to Great Britain at the Treaty of Paris in 1763, the common law of England became the law of the new British colony. Nevertheless, as a Jew Ezekiel Hart, first elected to the Legislative Assembly of Canada in 1808, was prevented from taking his seat and again in 1809. The Jews of Montreal petitioned the Legislature of Lower Canada for the recognition of a Jewish religious corporation. A "Jewish Magna Carta" of 1831–32 was passed in which it was declared that Jews were to be "entitled to the full rights and privileges of other subjects of His Majesty ... and capable of taking, having, or enjoying any office or place of trust within this Province." Nevertheless, long before the passage of the 1832 Bill of Rights, a tradition of public service among the early Jews of Canada had already existed – as early as Aaron Hart, who was postmaster in Three Rivers in 1763, and in 1790 John Frank, chief of the fire brigade of Quebec.

The theoretical question of whether Jews possessed equal rights had long before been resolved by parliament in England where almost a full century earlier rights had been accorded

Jews in 1740. In 1832 Jews in the British colonies of North America were granted naturalization although in Canada the problem was at first complicated by the absence of an oath-taking procedure appropriate to Jews. And even later, after the Law of 1832, it took Royal intervention to smooth the way. Thereafter, however, Jews could stand for and hold political office without any of the former impediments.

As early as 1871, Henry Nathan from Victoria, British Columbia, was elected a member of parliament in Ottawa. Almost a half-century would pass before another Jew, Samuel Jacobs from Montreal in 1917, was sent to Ottawa as an elected member of parliament. After World War I, Peter Bercovitch, Maurice Hartt and A.A. Heaps were elected in the House of Commons. During and after World War II, the numbers of Jewish members of parliament increased significantly, especially during the 1960s. Jews were elected for most parties, including Fred *Rose, the only Communist ever elected to the House. David *Lewis of the New Democratic Party was the only Jew chosen to lead a federal party. In 1969, Pierre Elliott Trudeau appointed the first Jew to a federal cabinet minister, Herbert *Gray, as minister without portfolio. Since that day, a government without a Jew in a cabinet post has become the exception rather than the rule. In 2005 two Jews were members of the federal cabinet, Justice Minister and Attorney General Irwin *Cotler, and Jacques Saada, who was the minister of the Economic Development Agency of Canada for the Regions of Quebec and minister responsible for the Francophonie.

Jews have also been prominent in provincial politics. They have led major political parties in Ontario, Manitoba, and British Columbia. Dave *Barrett, leader of the New Democratic Party in British Columbia, went on to become the first Jewish provincial premier, serving between 1972 and 1975. There have also been many Jewish elected mayors of towns and cities across Canada, particularly in the smaller towns of Ontario, and in the West. The first Jewish mayor elected in the Province of Quebec was William Hyman of Gaspé in 1858. Vancouver elected a Jewish mayor, David Oppenheimer, in December 1887. He was a crucial figure in the creation of the services necessary for the city. In Toronto Nathan *Phillips, elected in 1952, was the first non-Protestant ever elected mayor of Toronto. His election was a major step in the transformation of Toronto from a solid and stolid outpost of British and conservative values to a modern pluralist metropolis. Phillips served for eight years. Since then, Philip *Givens and Mel *Lastman have also served as mayors of Toronto. In 1955 Leonard Kitz was elected mayor of Halifax. In 2004, Stephen Mandel was elected mayor of Edmonton and Sam Katz mayor of Winnipeg.

The widening acceptance of Jews in civil society in the first decades after World War II encouraged politicians to appoint Jews to ranking public service positions. Prime among them was Louis *Rasminsky who, after some disappointments, was named the governor of the Bank of Canada in 1961; little more than a decade later, with Bora *Laskin pointed chief justice of the Supreme Court of Canada in 1973, the fact of Jews

being appointed in the upper reaches of the public service was becoming so accepted that it hardly merited comment. This included the appointment of Jews to major diplomatic posts. Canadian Jews have, for example, served as ambassadors to the United States, Germany, Turkey, the United Nations, and to Israel and the Palestinian Authority.

As in other arenas of Canadian public life, such as the judiciary and the press, Jews have achieved a presence in Canadian politics and what was exceptional before World War II became increasingly commonplace by the late 1960s. In the early 21st century Jews were politically active in the Canadian public square from one ocean to the other and at all levels of government.

Harold Troper (2nd ed.)]

England

After the resettlement of the Jews in England in 1656, they enjoyed social freedom, but did not achieve full political emancipation until 1858. For a century and a half their exclusion from national and local government was shared by nonconformists and Roman Catholics, although these minorities were emancipated in 1818 and 1819, respectively. The insistence of the House of Lords on retaining the words “on the true faith of a Christian” in the parliamentary oath prevented Jews from sitting in parliament for almost 30 more years. Thus, before 1858 only converts or the descendants of converts were able to enter parliament or hold any state or municipal post. Nevertheless, the very fact that such men were permitted to sit in parliament testified to the fact that the bar was purely religious and not racial. Benjamin *Disraeli, for example, who was an active supporter of Jewish emancipation, was regarded as a Jew by many of his contemporaries and was the victim of social discrimination but not of any legal bars. In 1845 the Jewish Disabilities Removal Act allowed Jews to hold office in municipal government and two years later David *Salomons became an alderman of the City of London. In the same year Lionel de *Rothschild became the first Jew to be elected to parliament but was not allowed to take his seat. In 1851 Sir David Salomons was elected to parliament but was forcibly removed from the Commons Chamber after he had voted three times and even made a speech to explain his position. Eventually, a bill was passed in 1858 allowing each House to fix its own oath to be administered to a Jew; Lionel de Rothschild became the first Jewish member (but, incidentally, never made a speech). Lionel de Rothschild was one of eight Jewish MPs in the Liberal Party during the 19th century; the others were Sir David Salomons, Sir Francis Goldsmid, Sir Frederick Goldsmid, Sir Julian *Goldsmid (who sat for 30 years and became speaker of the House of Commons), Sir John *Simon, Sir George *Jessel, who, as solicitor general in 1871, became the first Jewish minister in a British government, and Arthur *Cohen. The first Jewish Conservative member was Saul Isaac, elected in 1874, who was followed by Lionel Louis *Cohen and Henry de *Worms, who as Lord Pirbright was made parliamentary secretary to the board of trade and undersecretary of state for the

colonies. Jews at first found the road to political advancement easier in the more progressive Liberal Party, but after Disraeli became prime minister, the Conservatives became the party of reform. Nevertheless, most Jewish politicians were to be found in the ranks of the Liberal Party, among them Herbert *Samuel who became Chancellor of the Duchy of Lancaster, postmaster general, home secretary, and the first Jewish cabinet minister in Britain. Others included Rufus Isaacs, Lord *Reading, who was Lord Chief Justice of England and later viceroy of India, and Edwin *Montagu who was Chancellor of the Duchy of Lancaster, minister of munitions, and secretary of state for India. The decline of the Liberal Party in the 1920s led many Jews to switch their allegiance to the growing Labor Party and a number of Jews sat in parliament, first in the Liberal cause and later as Labor members. Among them were Harry *Nathan, who was minister of civil aviation in the Labor government after World War II, George Spero, and Barnett *Janner. Few Jews held important positions in the national governments of the 1930s, though a prominent exception was Leslie *Hore-Belisha, who was minister of war from 1937 to 1940. In the general election immediately after World War II the number of Jewish Labor members of parliament rose from 4 to 26. Considerable influence was also wielded by Harold *Laski who was chairman of the Labor Party. Jewish MPs from other parties were virtually eliminated, a notable exception being Phil Piratin (1907–1995), the only Jewish Communist in parliament in Britain. Jewish liberals were gradually eliminated by the failure of the party at elections while Jewish Conservative candidates tended to be passed over by the constituency associations, though Henry d’Avigdor *Goldsmid sat for many years in the Conservative interest and Sir Keith *Joseph became the first Jewish Conservative cabinet minister. Lord Reading had served in 1931 as foreign secretary in a national government and Leslie Hore-Belisha as a National Liberal in Conservative-dominated conditions. Several Jews became cabinet ministers in the Labor governments of 1945–51 and 1964–70. In the former Labor government under Clement *Attlee, Lewis *Silkin was minister of town and country planning; Emanuel *Shinwell was minister of fuel and power and secretary of state for war; Harry Nathan was minister of civil aviation; and George *Strauss was minister of supply. In the Labor government of 1964–70 there were more than 30 Jewish Labor MPs and Jewish ministers included John *Diamond and Harold *Lever, who held senior posts at the Treasury, and John *Silkin, who was minister of public building and works. In addition, several Jewish members who never held ministerial posts had considerable influence on Labor policy, in particular Sydney *Silverman and Ian Mikardo (1908–1993). Nevertheless, Jews played little part as Jews in the formation of government policy and there was never a “Jewish vote” even on the Palestine question during the last days of the British Mandate. A few Jewish women played a part in Jewish parliamentary life. Marion Phillips (1881–1932) was the first Jewish woman member, while Barbara Ayrton Gould (c. 1890–1950) was chairman of the Labor Party (1939–40). Two Jewish women

were returned to parliament in 1970, Renée Short (1919–) for the Labor Party and Sally Oppenheim (1930–) for the Conservatives. Four women were among the first ten Jews to be made life peers: Dora Gaitskell (1909–1989), Beatrice Serota (1919–2002), Alma Birk (1917–1996), and Beatrice Plummer (1903–1972). The government of Margaret *Thatcher brought about a reversal of the traditional affiliation of most active Anglo-Jewish politicians with the Left. From her accession in 1979 there were now many more Jewish Conservative MPs than Laborites, with five Jews being members of her cabinet in the 1980s, among them the chancellor of the exchequer and the home secretary. Under her successor John Major, Sir Malcolm Rifkind served as foreign secretary. The Jewish presence in the Labor government of Tony Blair, which took office in 1997, has been much less marked. Michael *Howard became leader of the Conservative Party in 2003, stepping down at the end of 2005 after the Conservative election defeat.

Ireland

Robert *Briscoe, who represented the Fianna Fail Party, was the only Jewish member of the Irish parliament from 1927. On his retirement in 1965 he was succeeded by his son, Benjamin.

[Vivian David Lipman]

France

Before the French Revolution of 1789 Jews had neither civil nor political rights and very few took part in French public affairs. They were granted civil rights in 1791 and from then onward no formal bars remained before their advancement in politics, though for many years they were not active in public affairs largely because of the exclusiveness of French society. One of the first Jews in politics in France was Benjamin David (1796–1879), who was elected deputy for the department of Deux-Sèvres in 1834 and became mayor of his native city of Niort in 1846. The first Jewish minister was the banker Michel *Goudchaux who led the opposition to King Louis Philippe's economic policy and himself became minister of finance in 1848, shortly before the revolution of that year. The famous advocate, Isaac *Crémieux, was another prominent opponent of the regime who participated in the revolution and was briefly minister of justice. After the revolution Achille *Fould served as minister of finance until 1852 when he became a senator and then minister of state, the first Jew in France to hold these positions. His three sons, Ernest Adolphe, Edouard Mathurin, and Gustave Eugène, and his grandson Achille Charles (see *Fould family) were subsequently elected to the chamber of deputies. During the Franco-Prussian War of 1870 two Jews came to the fore. Camille *Sée became secretary general of the Ministry of Interior in the government of National Defense and Leo *Frankel, a Hungarian émigré, was minister of labor in the Paris Commune. Subsequently, Jewish politicians tended to support socialist or radical parties largely because the royalist and clerical groups tended to be antisemitic. Thus Camille Sée was a member of the Republican Party as was David *Raynal, who was minister of public

works in Gambetta's ministry in 1881 and later minister of the interior. Nevertheless, Jews were not particularly prominent in French politics at the end of the 19th century and the anti-semitic attacks during the *Dreyfus case were directed more against Jews in the professions generally than against Jews in public affairs. Following the turn of the century, however, an increasing number of Jews served in Clemenceau's war cabinet from 1917 to 1919: Georges *Mandel, who was *chef de cabinet*, Edouard Ignace (1864–1924), and Louis *Klotz, the latter serving as minister of finance. After the war Klotz was raised to the senate, Abraham *Schrameck, formerly governor of Madagascar, became minister of the interior and minister of justice, and Maurice Bokanowsky was minister of commerce and industry from 1926 to 1927. Thereafter, however, most Jewish politicians tended to represent socialist parties, a notable exception being Mandel who served in several non-socialist cabinets before the outbreak of World War II and was minister of the interior until the fall of France. Salomon *Grumbach was a member of the Socialist Party central committee, Leon *Meyer was a Socialist minister of mercantile marine, and in 1936 Léon Blum became prime minister of France, the first Jew and the first Socialist to hold this post. Blum's cabinet included Jules *Moch as minister of public works and Jean Zay as minister of education. Blum was briefly prime minister of France after World War II as were the Radical Socialist René *Mayer and the Radical leader Pierre *Mendès France. France was thereby the only European state in which three Jews held the post of prime minister, each representing a different shade of socialist policy. In addition, Moch, René Mayer, and the Socialist Party leader Daniel Mayer all held posts in postwar French coalition cabinets until the end of the Fourth Republic in 1958 and the return to power of General de Gaulle. Few Jews held positions of influence during De Gaulle's term of presidency from 1958 to 1969 but following the election of Georges Pompidou as president in June 1969 two Jews were appointed to ministerial posts, Maurice *Schumann, as minister of foreign affairs, and Leo *Hamon as secretary of state to the prime minister. In subsequent years Simone *Veil became the most prominent Jew in French politics, serving in numerous cabinets and becoming president of the European Parliament in 1979.

The main Jewish organizations continued to follow the old tradition of not giving any directions on how to vote. Constituting about 1 percent of the French electorate, they could only play an important role in specific localities such as Paris and Marseilles. On the basis of analyses of voting behavior, it is known that the Jewish vote is spread among all parties, while Jews are active within the machinery of every party.

Germany

Although individual Jews acted as *Hoffaktoren* and *Hoffjuden* (*Court Jews) to monarchs in a number of German states during the 17th and 18th centuries, acting both as advisers and financial agents, Jews played no part in German national politics until the middle of the 19th century, and almost no part

in government until the 20th. Jews who converted to Christianity, however, enjoyed full political rights and rose to high office. Thus, Friedrich Julius *Stahl became leader of the reactionary Conservative Party and a firm opponent of political emancipation for his former coreligionists. Other converted Jews who rose to high office included Martin Eduard von *Simson, president of the Reichstag, Heinrich von Friedberg (1813–1895), Prussian minister of justice, and Karl Rudolf Friedenthal (1827–1890), Prussian minister of agriculture under the Empire. The first professing Jew to hold a public position in Germany was David *Friedlaender who was elected to the Berlin municipal council in 1809. Not until the 1840s, however, did the Jews gain electoral rights, including the right to vote for the German National Assembly and to be elected to the Assembly or to state parliaments. Jews participated in the liberal revolution in 1848, and among the Jewish representatives to the National Assembly held in Frankfurt after the revolution were Moritz *Veit and Gabriel *Riesser, who was vice president of the Assembly. Both were staunch champions of Jewish emancipation as were Fischel *Arnheim, the only Jewish member of the Bavarian Diet and Johann *Jacoby, an early leader of the liberal movement. The German states finally removed all political restrictions from the Jews during the 1860s and after the unification of Germany (1871) they were granted legal equality in most spheres. Nevertheless, they were still effectively excluded from holding government office and with the exception of Moritz *Ellstaetter, minister of finance in Baden from 1888 to 1893, no unbaptized Jew held ministerial office. On the other hand, Jews were very active in political life, being among the leaders of the progressive political parties. They were particularly well represented among the liberals, whom the Jews tended to favor. Thus Eduard *Lasker was one of the founders of the National Liberal Party and was influential in framing the social legislation of his regime while his colleague Ludwig *Bamberger helped organize the state finances. Other Jewish politicians included Max Hirsch, the trade unionist and advocate of popular education, Leopold *Sonnemann, a leader of the Democratic Party, Ludwig *Loewe, a founder of the Progressive Party in North Germany, and Wolf *Frankenburger, leader of the Liberal Party in Bavaria.

Toward the end of the 19th century Jewish politicians became increasingly prominent in left-wing parties. At the same time the political allegiance of German Jewry was itself undergoing a process of radicalization, moving from moderate to progressive liberalism, and eventually to Socialism, with the upper strata of Jewish society retaining a traditional allegiance to liberalism. Thus Jews were very prominent in the leadership of the Socialist Party though they formed but a fraction of the electorate. The party itself was founded by Ferdinand *Lassalle who adopted the ideology of Karl *Marx and formed the General German Workers Association (ADAV) which was the forerunner of the German Social Democratic Party. The Social Democratic Party was later much influenced by Eduard *Bernstein, who called for a fundamental revision of Marxist doctrine arguing that the party should work for social re-

form rather than revolution, and by Rosa *Luxemburg, who advocated workers' control by revolution and led the abortive Communist rising at the end of 1918. After the outbreak of World War I the German Social Democratic Party split into two factions, the majority supporting the war while the minority opposing the war included a number of Jews, among them, Hugo *Haase, president of the German Social Democratic Party in the Reichstag, Bernstein, and Luxemburg.

The prominence of Jewish left-wing intellectuals in German political life was successfully exploited by the antisemites and right-wing parties and revolutionary socialism became identified with Jewry especially since the Soviet and Hungarian revolutions after World War I were led by Jews. In Germany, too, Jews rose to high office in the revolutionary ferment that followed the collapse of the German Empire at the end of 1918. Paul Hirsch (1868–1938) was briefly prime minister of Prussia, Kurt *Eisner headed the revolutionary government of Bavaria and Hugo Haase and Otto *Landsberg were two of the six people's commissars in the first postwar government. In addition Paul *Levi succeeded Rosa Luxemburg as head of the Communist Party and the Communists included many Jewish members, among them Ruth *Fischer and Gerhart *Eisler. During this period of the Weimar Republic there were no restrictions on Jews holding political posts and four Jews held high ministerial office. Hugo *Preuss, one of the drafters of the Weimar Constitution, became minister of the interior, Otto Landsberg was minister of justice, Walther *Rathenau was foreign minister, and Rudolf *Hilferding minister of finance. The Nazis deliberately overstated the importance of Jews in German politics, however, and condemned the Weimar Republic as being the hated *Judenrepublik* dominated by Jews.

Soon after the Nazis came to power in 1933 all political parties were banned except the Nazi Party from which Jews were excluded. Jewish politicians were either arrested or forced to leave the country. After World War II a small number of Jews took part in German political life, among them Herbert *Weichmann who was president of the Bundesrat and Joseph Neuberger (1902–1977) who was minister of justice in North-Rhine-Westphalia. In East Germany the only figure of importance was Gerhart Eisler, who was for a time minister of information. Though for many years not a single professing Jew has been a member of the Bundestag, at the beginning of the 21st century there were a few well-known younger Jews active in political life, such as Michel Friedman for the Christian Democrats and Prof. Micha Brumlik for the Greens. Together with the late Ignatz *Bubis, a leading member of the Free Democrats, these most visible Jewish politicians all came from Frankfurt.

Holland

The first Jewish politicians in Holland represented William III of Orange in international diplomatic negotiations. Thus Samuel Palecke was made representative of the king of Morocco in Holland, Isaac *Belmonte was agent-general of the king of Spain to the Netherlands, and several Jews were involved in his

negotiations to secure the British crown. Jews were not active in Dutch internal Politics, however, until after their emancipation in 1795, following the conquest by France and the formation of the Batavian republic. In 1798 Jews were given the right to vote and be elected to state offices and two Jews, H.L. Bromet and H. de H. Lemon, were elected to the national assembly, being the first Jewish parliamentarians ever. Subsequently, two Jewish lawyers held high government posts, Moses Salomon *Asser who became a member of the legislative council and Jonas Daniel *Meyer who was appointed to the state council during the reign of Louis Napoleon. In the first half of the 19th century Jews were represented in the city councils of Amsterdam, The Hague, and Rotterdam, but they did not enter provincial and national politics again. These local Jewish politicians were seen as the representatives of their communities. After 1848, when the Netherlands became a constitutional monarchy, Jews entered the provincial and national political scenes as well. One of them, Michael *Godefroi, became minister of justice and Samuel *Sarphati became a leading campaigner for social reform. In the 19th century Jewish politicians were foremost active within the liberal parties and from the end of the century on in the socialist parties as well. Jews elected to the second chamber of parliament included Abraham Hartogh (1844–1901), Samuel van den *Bergh, Abraham *Wertheim and Joseph *Limburg (1866–1940), all of whom were members of the Liberal Party. In the 20th century two Jewish women were prominent in Dutch politics: Aletta *Jacobs (1854–1929) and Betsy *Bakker-Nort (1874–1946), both of whom championed the rights of women. Several Jewish socialists sat in Parliament, among them A.B. *Kleerekoper, Henri *Polak, Ben Sajet, and the Communist Party chairman, David *Wijnkoop. However, only two Jews were appointed to ministerial posts before World War II besides Godefroi: Eduard van *Raalte, minister of justice at the beginning of the 20th century and Salomon Rodrigues de *Miranda who was socialist minister of housing in the 1930s. After World War II two more Jewish ministers of justice held office, Ivo *Samkalden being appointed in 1956 and 1965 and Carel *Polak taking office in 1967. Other prominent Jewish politicians included the ministers Sidney van den *Bergh (1959), Aaron Pais (1977–981), Ed van Thijn (1981–82, 1994), and Hedy d'Ancona (1989–94). Within the Second Chamber the leader of the Socialist Party, Jacques Wallage, was prominent as well as the liberal chairman of the Second Chamber, Frans Weisglas. In the post-World War II period Amsterdam had no fewer than four Jewish mayors: Ivo Samkalden (1967–77), Wim Polak (1977–83), Ed van Thijn (1983–94), and Job Cohen (from 2001).

[Bart Wallet (2nd ed.)]

Italy

In 1778 Jews were given the right to become members of municipal councils in Tuscany and this right was extended to other parts of Italy at the end of the century following the French invasion of Italy under Napoleon. Thus in 1796 the

venerable oligarchic government of Venice was overthrown and a new municipality was elected that included three Jews: Moses *Luzzatto, Vita Vivante, and Isaac Grego. After the defeat of Napoleon at the hands of the Holy Alliance, Jews were deprived of their newly acquired civic equality and as a result actively supported the secret revolutionary forces, such as the *Carbonari* and Young Italy movements. In this respect Italy was the only 19th-century European state in which substantial elements of the Jewish population took up a political cause.

Following the outbreak of the 1848 Revolution, Jewish rights were restored in most parts of Italy and two Jews became ministers in the Venetian Republic, headed by the half-Jew Daniel Mantin: Leone Pincherle, minister of agriculture and commerce, and Isaac Maurogonato (1817–1892), minister of finance. In 1855 Isaac *Artom became private secretary to the Piedmontese prime minister Count Cavour and in the following year Sansone d'*Ancona became director of finance and public works in the government of Tuscany. When the reunification of Italy was completed in 1870, a number of Jews were members of the Italian parliament and by 1894 their numbers had increased to 15, representing a wide variety of political views. The number of Jewish deputies and senators never became large in proportion to the size of the Italian parliament but a number of Jews held important posts at the turn of the century. Luigi *Luzzatti served as minister of finance on several occasions and later became prime minister, the first Jew in modern times to achieve this distinction; Leone *Wollemborg was minister of finance for a short period in 1901, Guseppe *Ottolenghi was minister of war from 1902 to 1903, and Ernesto *Nathan became mayor of Rome. The rise of Fascism after World War I virtually brought to an end Jewish involvement in Italian politics. Many Jews did support Mussolini at first but with the exceptions of Guido Jung, minister of finance (1932–35), and Aldo Finzi, who was assistant minister of the interior, none held important posts in his party or government and Jewish politicians of the left such as the socialist leaders Guseppe Modigliani and Claudio *Treves (1869–1944) and the Communist Umberto *Terracini were systematically persecuted or forced into exile. When the Fascists became antisemitic in the late 1930s Jews were expelled from the Fascist Party, by then the only legal political party in Italy, and effectively excluded from all political activity. Political rights were restored to the Jews after World War II but only Terracini, who became a leading Communist figure in the Italian senate, played a significant part in Italian politics in the early postwar period. In later years, two Italian Jews were elected to parliament: Bruno Zevi on the Radical ticket in 1987 and Enrico Modigliani, a Republican, in 1992. In 1992, Oscar Luigi Scalfaro was elected president of the Italian Republic only two months after having been named the first president of the newly formed Italy-Israel Parliamentary Friendship Association.

Muslim States

TURKEY. Jews played an important part in Turkish politics in the 16th century, a few Jews acting as ministers and finan-

cial advisers, among them Joseph *Nasi, Duke of Naxos, Solomon *Ashkenazi, and Esther *Kiera. The decline in the status of Turkish Jewry from the beginning of the 17th century led to the exclusion of Jews from public affairs, and civil rights were not granted to Turkish Jews until the middle of the 19th century. Exceptional were the *Picciotto family of merchants, five of whom, Hillel, Raphael, Ezra, Elijah, and Moses ben Ezra, were consuls for European powers in Aleppo. In 1876, Daniel *Carmona became the first Jew to serve in the Turkish Parliament and in 1899 Behor *Ashkenazi became the representative of Turkish Jewry in the Ottoman Parliament, later becoming vice prefect of Istanbul and a member of the senate. A few Jews joined the Young Turk movement at the beginning of the century, among them Haim *Nahoum who was appointed chief rabbi of Egypt when the Young Turks came to power. After World War II Solomon Adato was the sole representative of Turkish Jewry in Parliament and after his death in 1953 he was succeeded by Henry Soviano.

EGYPT. Jews took little part in Egyptian affairs during the centuries that Egypt was under Turkish rule. One of the first Jews active in Egyptian politics in modern times was Joseph Aslan *Cattai who worked with Sir Ernest *Cassel on engineering projects and was made pasha in 1912 and a member of the legislative assembly. He was appointed minister of finance and transport and later became a member of the senate. Other prominent Jews in Egyptian politics who were elected to the senate were Joseph *Picciotto, a leader of the Egyptian Zionist movement, and Cattai's elder son, Cattai Bey. Following full Egyptian independence after World War II, Jews were made to suffer for the government's anti-Zionist policy and no Jews held positions in the government or parliament.

IRAQ. Few Jews were prominent in politics in Iraq either during Turkish rule or after independence but a few were elected to the Iraqi parliament where at one time seats were specifically reserved for candidates elected by the Jewish community. The first Jewish representative from Iraq in the Turkish parliament was Menahem ben Salah *Daniel who was appointed in 1876. Sir Ezekiel *Sassoon was the first Iraqi delegate to the Turkish Parliament after the Young Turk revolution and from 1920 to 1925 was Iraqi minister of finance during the British protectorate.

Following Iraqi independence in 1924, three Jews were elected to the Iraqi lower house and Menahem ben Salah Daniel, at the age of nearly 80, was appointed to the senate. On his retirement in 1935 he was succeeded by his son Ezra. The number of Jews representing Iraqi Jewry was raised to six and many prominent Jewish businessmen were active in politics. The anti-Zionist campaign after World War II led to a change in government policy toward Iraqi Jewry. The right of separate Jewish representation in parliament was abolished and Jews were deprived of civil rights. Following the death of Ezra Daniel in 1952 no Jews sat in the Iraqi parliament.

MOROCCO. Jews were prominent in Moroccan state affairs during the reign of the Marinids (1269–1465). Two members

of the Roggasa (or Waqqasa) family were influential ministers and toward the end of the dynasty *Aaron ben Batash was prime minister. In the 17th century Abraham Maimaran and Moses *Atar were ministers and advisors to King Mulay Ishmael. In the 18th century Samuel *Sumbal was advisor to the sultan on foreign affairs and his son Joseph Hayyim was Moroccan ambassador to London. Several members of the *Corcos family were advisors on financial and foreign affairs to five successive sultans during the 19th century, and Meir Macnin was ambassador to London. However, wealthy Jews no longer held a prominent place in state affairs during the period of the French Protectorate (1912–56). Following Moroccan independence in March 1956, Leon *Benzaquen was made minister of posts and David Benazeraf became a member of the advisory council. Growing Muslim nationalism acted as a brake on Jewish political activity from July 1957 to 1961 but after the accession of King Hassan II Jews once again held representative posts, David Amar as a senator and Meyer Obadia and Jacob Banon as members of the National Assembly.

TUNISIA. Although Jews held powerful economic and political positions in Tunisia in the Middle Ages, Jews were deprived of all their rights in the 16th century. Nevertheless, members of the Cohen-Tanudji family were advisors on foreign affairs to the bey and in the 19th century Abraham Belaish and Nessim *Samama were finance ministers. Several members of the *Valensi family were statesmen and one was Tunisian minister of war. In the 20th century Jews tended to support the French administration and many fought in the French army in World War I. Later many Jews joined the Zionist movement and some were active in the nationalist Destour Party, among them Albert *Bessis who was made minister of public works in the Tunisian cabinet upon independence and André Barrouch who was appointed to the cabinet on Bessis' resignation. The anti-Zionist campaign at the end of the 1950s led to Barrouch's resignation and a sudden decline in Jewish involvement in politics. Following the mass emigration from Tunisia in the 1960s, Jews ceased to take any part in Tunisian politics.

Poland

Until the end of the 18th century Jews played no part in public life in Poland. Their interests were bound up with those of the Polish Jewish community as a whole and in any case they were granted no civil rights in Polish society. The decline in the cohesion of the Jewish community, however, led to increasing involvement of the Jews in the large cities in Polish affairs and after the partition of Poland and the outbreak of the French Revolution a number of Jews joined the insurrection against the Russians in 1794, among them Berek *Joselewicz who commanded a force of 500 Jews in the defense of Warsaw. Nevertheless, though Jews fought in the army of Napoleon, they were not granted political rights in the Grand Duchy of Warsaw, nor, after 1815, when the Russians regained control over most of Poland. During the Polish insurrections of 1830 and 1831 Jews were again prominent as support-

ers of the revolutionary cause and following the suppression of the insurrection, Stanislaus Harnisz Ludwig Lubliner and Leon Hollandaerski were leaders of the group of émigré Polish leaders agitating abroad for Polish independence. In the 1860s Rabbi Dov Ber *Meisels, chief rabbi of Warsaw, organized the Jewish community's support for the Polish nationalist movement. He was arrested by the czarist authorities for closing the Warsaw synagogues as an act of solidarity with the Catholic leaders who closed the churches in defiance of the authorities. Meisel's funeral in 1870 was the occasion for a mass demonstration of Polish national feeling. Other Jewish revolutionary leaders were Henry K *Wohl who became head of a department in the insurgent government of 1863 and was later arrested and imprisoned and Bernhard *Goldman. Toward the end of the century a number of Jewish intellectuals joined the Social-Democratic Party of Poland and Lithuania, one of whose founders was Rosa *Luxemburg. The party's leaders included Herman *Diamand, Feliks *Kon, Herman *Lieberman, Adolf *Warski-Warszawski, and Boleslaw *Drobner, the last being among the many Jews to take part in the anti-czarist uprisings between 1905 and 1907. Following the granting of universal suffrage in the Austro-Hungarian Empire and the establishment of the Duma in Russia, Polish Jews were allowed to vote for and to be elected to the Austro-Hungarian Reichsrat and the Russian Duma. Herman Lieberman and Herman Diamand were elected to the Reichsrat in 1917 as representatives from Galicia and several Jews stood as candidates for the Duma. None was successful, however, largely because they attracted the Jewish vote only and also because they were officially opposed by the authorities. Furthermore in the elections to the fourth Duma, the Jews supported the Polish Socialist Party candidate en masse and this led to an organized boycott of Jewish traders in protest. After the outbreak of World War I, Jews ceased to play any part in politics in Russian Poland even after the Central Powers occupied the territory. Nevertheless Jewish representatives from Galicia sat in the Austro-Hungarian Reichsrat.

Following the declaration of Polish independence at the end of World War I the Polish government concluded a minorities treaty granting full equality to the Jews and other minorities and the provisions of the treaty were incorporated in the Polish constitution. In the first Sejm of 1922, 45 Jews were elected, six of them being elected to the senate. Jews represented Zionist parties, the non-Zionist Agudat Israel and the Polish Socialist Party, the last being the only non-Jewish political party which was not antisemitic. Most of the Jewish members of the chamber of deputies joined together to form a Jewish parliamentary club ("Kolo") headed initially by the Zionist leader Yitzhak *Gruenbaum and were mainly concerned with attempting to improve the social and political condition of the Jews in the face of government-inspired antisemitism. Jewish Socialists, of whom Herman Lieberman and Boleslaw Drobner were among the leaders of the party, were more concerned with general Polish politics. In 1925 the

Jewish club agreed to support the government on condition that the government acted to improve the condition of the Jews. However, when it became clear that the government had no intention of fulfilling its side of the bargain, most of the Jewish members rejoined the Socialists in opposition. Government policy became increasingly antisemitic and during the 1930s the number of Jews in the Sejm dwindled to seven and many of the Jewish Socialist leaders were imprisoned or exiled, among them Herman Lieberman who led the opposition to the government, Isaac *Schwarzbart and the Polish communist leaders Roman *Zambrowski and Adolf Warski-Warszawski.

The destruction of Poland on the outbreak of World War II and the Nazi Holocaust did not result in the end of political activity among Polish Jews. Adolf *Berman cooperated with left-wing political groups in Warsaw and fought in the Warsaw uprising of 1944. Herman Lieberman was briefly a member of the Polish government in exile in London and a number of Polish Jews who fled to the Soviet Union in 1939 held important position in the Soviet-sponsored Union of Polish Patriots and the Polish army in the U.S.S.R., among them Eugeniusz *Szyr, Stefan Wierblowski, Roman Zambrowski, Hilary *Minc, Jacob *Berman, and Drobner. On the formation of the Polish Committee of National Liberation in 1944, Drobner was made minister of labor and social care, the first Jew to hold a portfolio in a Polish government.

The liberation of Poland at the end of World War II led to the formation of a Provisional Government of National Unity in which the Communist Party with its prominent Jewish members played a key part. All discrimination against Jewish politicians ceased and when the pro-Communist Socialists merged with the Communists into the Polish United Workers Party, Boleslaw Bierut became head of the party with two Jews, Jacob Berman and Hilary Minc, as close colleagues, the latter serving as minister of commerce and later as vice premier. Berman and Minc were, like Bierut, loyal supporters of Stalin and included several other Jewish Stalinists in the government and party, among them Szyr, Starewicz, and Wierblowski, and Julius *Katz-Suchy. Following the death of Bierut, however, and the rise to power of Wladyslaw Gomulka, Berman and later Minc were forced to resign. In the 1960s Zambrowski and Szyr held important party posts but the former was dismissed during the government-inspired antisemitic campaign of 1968 in which a number of Jews holding lesser positions were also forced to resign. By 1971, two Jews were left in the government – Szyr as deputy prime minister and Edward Sznajder, minister for home trade.

Russia

As early as 1783 Jews were given the right to hold municipal office in Belorussia. The right was extended to all parts of Russia in 1835 but was later limited to western Russia, where most Jews lived, so that Jews could not be elected as mayors or municipal chairmen, nor could they constitute more than a third of the number of municipal councilors even in areas

where Jews constituted a majority of the inhabitants. Jews were thus prevented from playing an influential part in municipal affairs while they were completely excluded from national politics by the very nature of the autocratic and antisemitic czarist rule. As a result, many Jews, particularly among the secularly educated, joined or supported the illegal revolutionary organizations that sprung up in the 1870s. Their number included Pavel *Axelrod, Aaron Zundelevich, and O. Aptekman (see *Socialism). The abolition in 1882 of the right to vote for local councils or to be elected to them added impetus to the Jewish opposition to the regime. Several Jews were founders of the Narodniki (Populists) and of the Social Democratic Party (among them Axelrod and Lev Deutsch), both of which groups received wide support in Jewish assimilationist or semi-assimilationist circles. Most Jews, however, remained in purely Jewish frameworks; they were Orthodox, Zionists, or joined the *Bund. The failure of Nicholas II to make any substantial reforms brought about a resumption of revolutionary activity at the turn of the century. Jews held leading positions in the Social Democratic Workers Party but when the party split in 1903, most of the Jewish members, among them members of the Bund, joined the Menshevik group under Julius *Martov, among them Fyodor *Dan, Raphael *Abramowitz, and Grinevich, who from 1905 to 1917 was chairman of the All-Russian Council of Trade Unions. Jews were also prominent in two other political parties, the Socialist Revolutionary Party, which continued the heritage of the Populists, and the liberal Union of Liberation. The Socialist Revolutionary Party, formed in 1902, appealed mainly to the peasants as the Social Democrats appealed to the industrial workers. Its leaders included Chaim *Zhitlovsky, Grigori *Gershuni, and Mikhail Gots. The Union of Liberation was a radical liberal group who drew their support from the urban professional classes and attracted Jewish professionals such as the lawyers Maxim *Vinaver and Henry *Sliosberg. When the abortive 1905 revolution led to the setting up of the first *Duma, the Union of Liberation, called Kadet (short name for the Constitutional Democratic Party), formed the largest single political group, their 179 members including nine Jews. However, owing to changes in electoral law during the period of reaction, the party's strength in the later Dumas declined, and there was also a decline in representation of the small Jewish parties (Zionists, Folkspartei, Jewish People's Group, and Jewish Democratic Group), whereas Jewish socialists were not elected at all. The outbreak of revolution in February 1917 brought the immediate abolition of all restrictions against Jews, and four Jews from the Kadet and Menshevik groups were offered posts in Kerensky's provisional government, M. *Vinaver, L.M. Bramson, Fyodor Dan, and M.I. Liber. All refused on the grounds that the time was not yet ripe for Jews to enter a Russian government. On the other hand, A. Galperin was secretary of the provisional government and later Mark Vishniak became secretary of the Constituent Assembly, which was dispersed by force by the Bolshevik Soviet government

U.S.S.R.

In Lenin's first Soviet government Jews were prominently represented, not only among the Bolsheviks (e.g., *Trotsky, *Zinoviev, *Kamenev, *Sverdlov) but also among their left Socialist-Revolutionary partners in the short-lived coalition (e.g., the people's commissar for justice, Isaac *Steinberg). Jews were also strongly represented in republican and local soviets and in all echelons of the ruling party hierarchy. Some Jewish politicians in areas densely populated by Jews, and during the first stages of the *Birobidzhan experiment particularly those engaged in *Yevseksiya work, could be regarded Jewish representatives, since they communicated mainly with the Jewish population or represented its interests. This situation changed quickly in the 1930s. The Yevseksiya itself was closed down in 1930 and with the purges of the later 1930s most leading Jewish Bolsheviks were imprisoned and liquidated, together with other members of the Old Guard. Simultaneously, the last shreds of Jewish regional and cultural autonomy disappeared and the Birobidzhan experiment, as a "nascent Jewish republic," was practically abandoned. Prominent exceptions were Lazar *Kaganovich, a close associate of Stalin, and Maxim *Litvinoff, people's commissar for foreign affairs. During and after World War II, very few Jews remained in the Soviet top leadership. Under Stalin only Kaganovich was a member of the ruling circle and when Khrushchev assumed personal leadership in 1957 Kaganovich was declared a member of a subversive "anti-party group" and disappeared. No other Jew ever became a member of the policy-making bodies of the party, particularly the Politburo, which is the real government of the country. In 1962 the Jewish economist Venyamin *Dymshyts was appointed one of the six deputies of Soviet prime minister Khrushchev and put at the head of the central planning body *Gosplan*, but the post was without much political significance. Jews also practically disappeared from the middle and lower party hierarchy and the number of Jews in the representative organs of central and local government (both houses of the Supreme Soviet of the U.S.S.R. as well as the republican, regional, and local soviets) declined rapidly. By 1970 it was much below the percentage of the Jews in the total population, not only of the cities (where 95% of the Jews live) but even of the population at large. In the new Russia, after the fall of Communism, the so-called Jewish oligarchs achieved political influence in a cozy relationship with President Boris Yeltsin, but fell out of favor with his successor, Vladimir Putin.

[Binyamin Eliav]

South Africa

Although Jews first settled in South Africa in the beginning of the 19th century, for many years they played little part in South African politics. An exception was Benjamin *Norden, one of five brothers who emigrated from England in 1820 and became a municipal commissioner (city councilor) in Cape Town in 1840. Norden was narrowly defeated in the elections to the Cape parliament. Saul *Solomon was elected to the Cape parliament in 1854, 20 years after he and his brother Henry had

converted to Christianity. He and Simeon *Jacobs, who was elected in 1866, campaigned for the separation of Church and State in Cape Colony. Four other Jews were elected to the parliament of Cape Colony, Julius and Joseph Mosenthal, Ludwig Henry Goldenschmidt, and Ludwig Wiener. Jews were also among the pioneers of some of the other South African colonies. One of the first settlers in Natal was Nathaniel *Isaacs who unsuccessfully canvassed a treaty between the Zulu monarch and the British crown as the basis for the European settlement of Natal. Another was Jonas Bergtheil, who emigrated to South Africa in 1834 and became the first Jewish member of the Natal legislative council. In the Orange Free State, Isaac Baumann, who arrived in South Africa from Germany in 1840, became chairman of the municipal board of Bloemfontein, and Adolphe Coqui, an immigrant from Belgium, negotiated the establishment of republican government for the Orange Free State after Britain announced that she was terminating her sovereignty over the territory. A third Jewish personality in the early days of the Orange Free State was Moritz Levisur, who was elected to the provincial parliament in 1905 and became mayor of Bloemfontein in 1906. Levisur was elected to the Union of South Africa parliament in 1921. The first Jewish parliamentarian in the Transvaal (Zuid-Afrikaansche Republiek) was M de Vries, a Dutch immigrant who was chairman of the Transvaal Volksraad (Parliament), 1872–73.

The discovery of diamonds and gold brought a number of Jews to prominence in South African politics. Barney *Barnato became a member of the Transvaal parliament and a personal friend of President Paul Kruger. Barnato did not commit himself in the Anglo-Boer dispute but his nephew Solly *Joel became a member of the reform committee which organized the Jameson raid. Barnato's cousin, Sir David *Harris, took Barnato's seat in the Cape parliament after the latter's death. He was one of six Jews elected to the first Union parliament in 1910, the others being Morris *Alexander, who was a member for over 30 years, Emile Nathan, Sir Lionel Phillips, C.P. Robinson, and Sammy *Marks, a member of the senate. Subsequent Jewish members of the Union parliament included Morris *Kentrige, the first Jewish Labor member of parliament, who sat continuously from 1924 to 1958, Leopold *Lovell, Hyman Davidoff, Sam Kahn – the first Jewish communist MP, who was unseated in 1952 following the Suppression of Communism Act, Bertha *Solomon, who advocated the cause of women's rights in parliament and initiated the Matrimonial Affairs Act of 1953, Abe Bloomberg and Charles Barnett. Jewish senators included: Franz Ginsberg, Fritz Baumann Adler, Alfred Friedlander, Hyman Basner, and Leslie Rubin. The 36-year parliamentary career of Helen *Suzman commenced in the Union Parliament in 1953 and continued after South Africa became a Republic in 1961. In 1959 she was a co-founder of the Progressive Party, which opposed the government's apartheid policy, and was the sole Progressive elected in the elections of 1961, 1966, and 1970. Other prominent Jewish parliamentarians after 1961 included Harry *Schwarz (1974–89), Ruth Rabinowitz (representing the opposition Inkatha Freedom

Party from 1994), Ben Turok, and Tony *Leon (from 1989), who became Leader of the Opposition Democratic Party (later Democratic Alliance) after the 1999 elections. Four Jews have served as cabinet ministers. They are Henry *Gluckman, who served as minister of health in the *Smuts cabinet from 1945 to 1948, Louis *Shill (minister for national housing and of public works, 1993–94), Joe *Slovo (minister of housing, 1994–95), and Ronnie *Kasrils (minister of water affairs and forestry, 1999–2004, and from 2004 minister of intelligence). Two Jews have served as deputy cabinet ministers, Ronnie *Kasrils (deputy minister of defense, 1994–99) and Gill Marcus (deputy minister of finance, 1996–99).

South America

Before World War II Jews were not generally active in politics in South America, although in most South American states there were no legal bars to their entering parliament. They were handicapped by the fact that most were immigrants from Central and Eastern Europe and by deep-rooted anti-semitism in many of the Catholic states. Nevertheless, a few Jews did achieve considerable prominence in political life. One of the first was Horacio *Lafer who was appointed Brazilian delegate to the League of Nations in 1928. He was a member of the Federal Chamber of Deputies from 1934 to 1964 and served as minister of finance and foreign minister in postwar Brazilian governments. Another important figure was Angel Faivovich *Hitzcovich who was elected to the Santiago municipal council in 1935. During a 30-year political career he was president of the Chilean Radical Party and vice president of the senate. The number of Jews in politics gradually increased after World War II, particularly in Argentina where the Jewish population was at one time over half a million. Several Jews represented the Argentine Radical Party (Union Civica Radical Intransigente) in the Chamber of Deputies, among them Santiago Nudelman, David *Blejer, who was undersecretary to the ministers of the interior and of labor, Isaac Breyter, David *Schapira, and Naum Jaroslavsky. Enrique Dickman and Adolfo Dickman were prominent socialist deputies. Few Jews were prominent in Argentine politics during the rule of the dictator Domingo Peron but an exception was Jose Alexenicer who was head of Peron's "Justice" Party in Cordoba and a member of the provincial parliament. In Chile, Miguel *Schweitzer, was minister of labor, and several other Jews were elected to the Chamber of Deputies. Among them were Jacobo Schaulson *Numhauser who was president of the Chamber of Deputies, and Daniel *Schweitzer, both of whom served as Chilean delegates to the United Nations. There were also two Jewish communist deputies in Chile, Adolfo Berman and Volodia Teitelbaum. Jews were also elected to parliament in Brazil where Marcos Melzer and Aarao Steinbruch sat in the Chamber of Deputies, while in Uruguay Jacobo *Guelman was a member of the senate as was Benazar *Serfaty in Venezuela. In Panama Max *Delvalle became first vice president of Panama and was president for two months in 1968 following a controversial decision of the National Assembly to remove

the constitutional president. He thus became the only Jew ever to become president of a state (outside of Israel).

In South America in general, both the Foreign Office and the army remained almost closed to Jews, and the few Jewish ambassadors who served owed their appointment to personal friendships with the president in office.

In Argentina, after the establishment of a democratic regime in 1983, Raúl Alfonsín, a progressive and charismatic president, opened the doors to Jews: Bernardo Grinspun became minister of the economy and Mario Brodersohn district secretary; Adolfo Gass obtained a seat in the Senate, Marcelo Stubrin and César Jaroslavsky (the latter, head of the district bank) entered the Chamber of Deputies, and Jacobo Fiterman, ex-president of the Argentinean Zionist Organization, became secretary of public works in the Buenos Aires municipality. In the field of education and culture, traditionally a Catholic enclave, Marcos Aguinis became minister of national culture. Manuel Sadosky was minister of science. Under Menem additional Jews served in government: Moisés Ikonikoff (minister of planning), Enrique Kaplan (director of protocol), Néstor Perl (governor of Chubut), and Carlos Corach (presidential adviser).

In Brazil, before the Parliament was dissolved in 1968, six Jews representing various parties were elected to the federal legislature in the 1966 parliamentary elections. There were also Jewish politicians in the state legislatures and city councils. Horacio *Lafer was a leading Jewish political figure and served as finance minister and foreign minister of Brazil. A former federal deputy, Aarão *Steinbruch, was elected senator, the first Jew to be elected to that prestigious post. Under the government of Fernando Collor de Melo (1990–92, when the president was politically impeached), Celso Lafer was minister of foreign affairs. In the two terms of President Fernando Henrique Cardoso (1994 to 1998 and 1998 to 2002) numerous members of the Jewish community took an active part in the government.

[Paul Link / Efraim Zadoff and Roney Cytrynowicz (2nd ed.)]

United States

At the turn of the 21st century American Jews play an outsized role in American politics, representing a dramatic change from earlier eras. For example, when the first edition of the *Encyclopaedia Judaica* was published in the early 1970s, the section on United States politics cited three “facts in connection with Jews in American politics”:

- 1) “Jews have not been prominent as political office holders, political appointees or party leaders”;
- 2) “Jews have never expressly organized themselves for solely political purposes.... They were at pains to deny the existence of Jewish political interests”;
- 3) “...[S]upport for liberal and left of center parties and candidates is proportionally higher among Jews...”

By 2006 two of the three “facts” were no longer facts. First, the American Jewish community in the last third of the 20th century became the most highly politicized ethnic/religious

groups in America. As a result, during the first decade of the 21st century the Jewish community is highly over-represented among political opinion leaders – including such groups as major donors to the political parties, elected federal officials, political journalists, political consultants, and high-level political appointees. Second, Jewish organizations have become quite adept at trying to organize the community for political purposes, and most are not reluctant to speak about Jewish political interests.

The third fact of 1972 – the community’s allegiance to liberal and left of center parties and candidates – remains true today. The Jewish community continues to strongly back the Democratic Party and its candidates. This remains true despite dramatic demographic changes in the community in 80 years; despite dramatic changes in Jewish public opinion between the early 1920s and the first decade of the 21st century; and despite the fact that the Democratic and Republican parties of the 1920s were entirely different from what they are today.

It is exceedingly difficult to reconstruct the political behavior of American Jews in the earliest days of the Republic – the Jewish community was tiny (2,000 people or .038% of the U.S. population in 1800), and historical Jewish voting data for this period is nonexistent. However, one can assume that most American Jews during the period were Jeffersonian or Jacksonian Democrats. In the first few decades after the adoption of the Constitution there were a handful of Jewish officeholders, all of whom were Democratic-Republicans (the earliest name for the Democratic Party). Jews were among the earliest leaders of the pro-Jeffersonian Tammany Hall, and an early 19th century speaker of the Pennsylvania House was a Jewish Jeffersonian. Probably the best-known Jewish politician of the age, Mordecai *Noah, started his career as a Democratic-Republican (he was appointed U.S. consul to Tunis by President Madison) and was an early supporter of President Jackson as well. Moreover, there is evidence that the Federalist Party used overtly antisemitic rhetoric in the hard-fought 1800 presidential elections as a means of attacking Thomas Jefferson’s candidacy.

Between 1840 and 1860, the Jewish population grew from 15,000 (.09% of the population) to 150,000 (less than .5% of the population) largely because of immigration from German-speaking parts of Europe. In this era, Whigs (and by the late 1850s, Republicans) battled Democrats for political supremacy. There is anecdotal material that points to some Jewish support for the Whig party of Henry Clay – especially by the older Sephardi community. However, most of what is known about the period indicates that a majority Jews of this era were Democrats. Of the five Jews who served in the U.S. House of Representatives in the 1840s and 1850s, four were Democrats and one (the first Jewish Congressman, Lewis *Levin) was a member of the anti-Catholic American Party. Of the two Jewish U.S. senators who served in the same period, one – David *Yulee – was a Democrat. The other Jewish senator of the period, Judah *Benjamin (who went on to serve in the Confederate Cabinet), was elected in 1853 as a

Whig and re-elected in 1859 as a Democrat. The Rothschilds' agent in America, Augustus *Belmont, was appointed chairman of the Democratic National Committee in 1860 by Stephen Douglas and continued to serve as the chairman until 1872. As late as 1860, an Illinois state Jewish legislator who was helping Abraham Lincoln in his presidential campaign wrote about the Jews of New York as a constituency that had been voting 2–1 Democratic.

The roughly three-decade period from 1860 until 1896 was an intensely partisan era, which is usually characterized as the third American party system. In that era the country was evenly divided geographically – the south overwhelmingly Democratic and New England and the upper Midwest overwhelmingly Republican. At least one prominent political scientist has concluded that starting with Lincoln in 1860, American Jews swung their support over to the new Republican Party. Again, Jewish voting data is scarce for this period, and it appears as if the truth is a bit more complicated.

The Jewish population continued to grow, especially in New York City. By 1890 there were 475,000 Jews in America, representing 0.67% of the total population. There is evidence that in Midwestern cities like Chicago, the Jewish community began voting Republican by the 1860s. Many German Jews were attracted to the GOP but the newer Yiddish-speaking Jews probably did not have strong party loyalties. Meanwhile, the Jews of the South remained Democratic and the city with the largest Jewish population – New York – remained a largely Democratic stronghold in the latter half of the 19th century.

There were a few prominent Jewish political leaders in the period – men like Abe Reuf, the powerful Republican Party boss in San Francisco, and Oscar *Straus, who served as President Cleveland's minister to Turkey. Fourteen Jews served in Congress during this period. They included nine Democrats and five Republicans. A review of a larger database of 60 known Jewish officeholders during this period reveals a close partisan split between Democrats and Republicans.

In the first decade of the 21st century, Americans are used to an ideologically congruent party system – a reliably liberal Democratic Party and a reliably conservative Republican one. But this was not the case in the late 19th and early 20th centuries. In the first 60 years after the Constitution was ratified, it can be argued that the Jeffersonian and Jacksonian Democrats with their more egalitarian views on white manhood suffrage were more liberal than their Federalist and Whig opponents. By the time of the Civil War, however, the Democrats were largely the party of states rights and support for slavery. And in the years after the Civil War both parties supported economic policies that were pro-business. Thus Jewish support for one party or the other prior to the 1920s cannot be attributed to liberal or conservative proclivities of the community.

The election of 1896 ushered in a 35-year period of national dominance of the Republican Party. The minority Democratic Party in this era was made up of rural populists in the west and south and a few urban machines, like New York's Tammany Hall. This was also a period in which the Jew-

ish community grew exponentially as poor Yiddish-speaking Jews from the Austro-Hungarian and Russian empires streamed into Ellis Island. By 1920 there were 3.15 million Jews in America – three percent of the total population – and in New York State the Jewish population became the key swing vote in city- and statewide elections. It is also during this period that one can start tracking the voting behavior of heavily Jewish voting districts.

Former Jewish Democratic businessmen like Oscar Straus (who was appointed the first Jewish cabinet official by Teddy Roosevelt) became Republicans in reaction to the populism of William Jennings Bryan. The newer and more numerous immigrant voters did not have strong partisan attachments. Sometimes they voted for Eugene Debs' new Socialist Party, and two Jewish Socialists were elected to Congress – Meyer London in New York and Victor *Berger in Wisconsin. Sometimes these immigrants voted for reform politicians (often these reformers were WASP-Republican politicians) in reaction to the graft of urban political machines. Sometimes these Jewish newcomers turned against WASP reformers who advocated Sunday blue laws and voted the machine politicians back into office. It is clear that in presidential elections, American Jews strongly backed Republicans Teddy Roosevelt in 1904 and Warren Harding in 1920, and more narrowly backed Democrat Woodrow Wilson in 1912 and 1916.

From 1896 through 1930, 15 Jewish Republicans, 15 Jewish Democrats, and two Jewish Socialists served in Congress. Two Jewish Democrats were elected governor in the west – Simon *Bamberger in Utah and Moses *Alexander in Idaho – and President Wilson appointed the “people's attorney,” Louis D. *Brandeis, as the first Jewish Supreme Court justice in 1916.

Most people attribute the modern Jewish community's attachment to the liberal policies of the Democratic Party to the presidency of Franklin D. Roosevelt. However, the beginnings of this Democratic trend began a decade earlier in 1922. In 1920, Jews (as well as the rest of the country) voted overwhelmingly Republican in reaction to disillusionment with Wilson's Treaty of Versailles and a series of economic recessions. In the Congress that convened in 1921 there were 11 Jewish congressmen – 10 Republicans and one Socialist (in New York five Republican Jews and one Socialist were elected).

In 1922 former New York Governor Al Smith ran to avenge his defeat of 1920, and in winning he carried the Jewish vote overwhelmingly. Though Smith was a supporter of Tammany Hall, unlike many Tammany politicians he supported progressive labor legislation like the eight-hour day, and he opposed many of New York's blue laws. This was the perfect combination for New York State Jews, which at the time accounted for one-half of American Jewry. In the Congress, which convened in 1923 there were 10 Jewish congressmen – four Republicans, five Democrats, and one Socialist. In New York State only one Jewish Republican survived, and four new Democrats were elected. From 1922 onward New York Democratic candidates were usually in the mold of Al Smith and Senator Robert Wagner – progressive reformers who ran

with Tammany support – and the Jewish vote increasingly solidified as a Democratic bloc.

In 1928 the national Jewish vote split 72–28 in favor of Al Smith, the first non-Protestant (he was Roman Catholic) to run for president. In 1932 FDR carried the Jewish vote with 82%. In his first re-election he carried 85%, in his second re-election he carried 90%, and in 1944 he won 90% of the Jewish vote. Between 1948 and 1968 Democrats captured between 60% and 90% of the Jewish vote in each presidential election.

Jewish voting for Democrats at the state and national levels was perfectly understandable in the 1920s and 1930s. The New York Democrats and increasingly the national Democratic party was the party of liberalism, economic populism, and the “little guy.” The Jewish population of the 1920s and 1930s was overwhelmingly poor and working class. However, after World War II the Jewish population was increasingly middle class and highly educated. Yet at the state and national levels, Republican candidates could not secure a respectable Jewish vote. Only at the municipal level could Republican candidates like Mayor Fiorello LaGuardia win a majority of Jewish voters.

Another development in this period was the rising importance of “reform” political clubs in cities like New York and Los Angeles. Though there were few Jewish professional politicians (Chicago’s political boss Jake Avery was one of the exceptions) in this era, the amateur reformers became increasingly important in Democratic politics, and a disproportionate share of these reform leaders were Jewish. The other arena where Jews came to prominence was in the labor union movement. Sidney Hillman was the most prominent of these labor leaders. In 1944, Hillman – as the head of the CIO’s Political Action Committee – acted as one of FDR’s most trusted political allies.

Between 1932 and 1970, a number of Jewish Americans became prominent at the highest levels of American politics. In the Senate five Jews served during this era – the most prominent being former Governor Lehman of New York and Jacob Javits of New York. Jews also became increasingly common as presidential cabinet officers – Henry Morgenthau, Jr. in FDR’s cabinet; Lewis Strauss in Eisenhower’s cabinet; Arthur Goldberg and Abraham Ribicoff, the sons of Jewish immigrants, not German-Jews, in the cabinet of Irish American John F. Kennedy, the first Catholic elected president; and Wilbur Cohen, who served under President Johnson. Moreover, during this period presidents appointed Felix Frankfurter, Benjamin Cardozo, Arthur Goldberg, and Abe Fortas to the highest court in the land. There was a tradition of a Jewish seat on the Court.

Though there were well-known Jewish personalities in the public arena in mid-20th century America, in 1950 politics was not considered a Jewish profession. Fifty years later American politics was a decidedly Jewish occupation.

In the last third of the 20th century, very significant changes took place in the role that Jewish Americans played

in the political process. In 2005 Jews represented something less than 2% of the U.S. population. Yet in the same year they represented 11% of the U.S. Senate. In 1970 14 Jews were elected to the U.S. Congress; in 2004, 37 were elected. By the first decade of the 21st century Jewish Americans were significantly represented among the top political appointees and senior civil servants in the elite agencies of the U.S. government. At the same time a substantial proportion of top political journalists and nationally prominent political consultants (a new profession which largely replaced the political boss in American politics) were Jewish. Perhaps equally important, both major political parties (but particularly the Democrats) and their candidates for office were heavily reliant on contributions from Jewish Americans to help fund their election year expenditures.

This increase in the political roles played by Jewish Americans was complemented by a change in how Jewish Americans were “accepted” in American society. In the 1930s, Jewish Americans were subjected to some of the worst antisemitism in American history. In that decade Ivy League colleges and medical schools had strict quotas on Jewish enrollment, and at the same time many law firms and corporate management slots were strictly off-limits to American Jews. In 1937 the Gallup Poll found that only 46% of Americans were willing to vote for a Jewish candidate for president. By the 1970s most of these barriers to Jews in American life were gone, and by 1999 – according to Gallup – fully 92% of Americans were willing to vote for a Jewish candidate for president.

The list of Jewish Americans who rose to prominence on the American political scene in the last 40 years is so large that it is only possible to highlight the most famous in an article of this size. In the early 1970s Robert Strauss was chair of the DNC, and between 1997 and 2005 three Jews (two Democrats and one Republican) were national party chairs. Richard Nixon appointed perhaps the most prominent secretary of state of the 20th century, Henry Kissinger, in his second term. President Gerald Ford had two Jewish Americans in his cabinet. President Jimmy Carter, despite his periodic disputes with the organized Jewish community, appointed three Jews to his cabinet. President Clinton appointed five Jews to his cabinet, and there were at least as many Jewish appointees who held cabinet-rank positions. Moreover, both of Clinton’s Supreme Court appointments – Ruth Bader Ginsburg and Stephen Breyer – were Jewish. As of 2005 President Bush had one Jewish American in his cabinet, but the director of his Office of Management and Budget and numerous senior White House and subcabinet appointees were Jews.

Some observers describe the chairman of the Federal Reserve Board as the second most powerful person in the world. From 1987 to 2006, that position was held by Alan Greenspan. His successor, chosen by President Bush in 2005, was another Jewish American, Ben S. (Shalom) Bernanke. But perhaps the most widely-known Jewish political figure at the turn of the 21st century was Senator Joseph Lieberman. In

August of 2000, Vice President Al Gore picked Lieberman as his vice presidential running mate. This was the first time in history that a Jewish American had been on the presidential ticket of a major American political party. Despite the concern of some that America was not ready for a Jewish president or vice president, Lieberman was widely credited with running a good campaign and was seen as an overall asset to the Democratic ticket that year. He began his acceptance speech as nominee with the proto-typical American Jewish phrase “only in America.”

Not only did the doors of opportunity open for Jewish Americans in the last third of the 20th century, but Jews also became increasingly comfortable in publicly acknowledging their ethnic and religious background. The Six-Day War in 1967 engendered a great deal of ethnic pride and in the following decades the *American Israel Public Affairs Committee (AIPAC) became a major Washington lobbying institution that represented the Jewish community’s very public commitment to fostering strong U.S.-Israel relations. In the late 1980s two partisan Jewish organizations – the *National Jewish Democratic Council (NJDC) and the *Republican Jewish Coalition (RJC) – emerged as an acknowledgement that Jewish Americans were now comfortable in asserting a particular Jewish agenda in the public arena. Moreover, a review of nearly any Jewish weekly at the turn of the 20th century would turn up a headline or two that asked the very public question, “What is good for the Jews?”

In the 1960s Milton Himmelfarb observed that “Jews live like Episcopalians and vote like Puerto Ricans.” In the latter third of the 20th century, many commentators examined an American Jewish community that was one of the richest and most highly educated groups in America and predicted that such a minority was bound to become Republican. However, the GOP realignment among Jews never happened.

In 1968 Republican Richard Nixon captured about 17% of the Jewish vote in his run for president. Four years later against George McGovern the Nixon percentages doubled to 35%. Elsewhere Nixon was elected in a landslide. In the next four presidential elections the Jewish Republican vote bounced between 30% and 39% – the trend seemed to be away from the community’s New Deal loyalties. Jimmy Carter received a plurality of Jewish votes and Jews voted in significant numbers of John Anderson, the third party candidate.

However, in 1992 George H.W. Bush only received approximately 12% of the Jewish vote, and in the next two elections, the Clinton-Dole-Perot election, the GOP garnered 16% and then 19% of the Jewish vote in the Gore-Lieberman-Bush-Cheney election. Between 2001 and 2004, the administration of President George W. Bush adopted a pro-Israel stance toward the ongoing violence in the Middle East. Republican political operatives openly targeted the Jewish vote as they prepared for the 2004 election. During the same time frame there were numerous predictions by Republican spokesmen and Jewish organizational leaders that the Jewish vote was about to shift to the Republican party. On election day 2004,

John Kerry defeated George W. Bush in the Jewish community by a margin of 77% to 22%.

Why did the Jewish vote continue to be a reliable Democratic bloc at the presidential level in the 1990s and the first four years of the 21st century? The most important reason has to do with the nature of the two American political party coalitions. The modern Republican coalition’s most dominant element has been evangelical Christians. Though this group is widely viewed as pro-Israel, the other issues it champions – opposition to abortion rights, gay rights, and the separation of church and state – clash with the issue agenda of the vast majority of American Jews. Republicans have tried to paint the Democratic Party as anti-Israel, but this has been unsuccessful as both parties in America are broadly seen as pro-Israel.

The progressive world-view that the vast majority of American Jews adhere to does not mean that Republican candidates can never win majorities in the Jewish community. Party-identification in 2004 was less strong than it had been in previous eras. Jews split along religious lines with Orthodox Jews voting far more often for George Bush than did their non-Orthodox counterparts. In municipal elections Republican candidates are often successful with Jewish voters. Moreover in the northeast states, where GOP candidates are often much less conservative than their brethren in the rest of the country, individual moderate Republicans have run fairly strongly in Jewish constituencies. But as long as the national GOP strongly identifies with conservative Christian constituencies, it will be hard for most state and national Republican candidates to compete effectively in the Jewish community.

By the first decade of the century, the American Jewish community played an unprecedented role in the politics of the United States. Jewish actors were placed in significant roles throughout the process. Unlike in Europe, antisemitism has not surged in recent years and American Jews are comfortable in running for office and even in asserting a Jewish agenda in the political process. Jewish public opinion remained much more liberal than most other segments of the American electorate and Jewish voting remained largely, if not universally, Democratic.

Antisemitic appeals by candidates have been fairly rare and largely ineffectual over the last few decades. When they are used they are usually the work of fringe candidates, or they are of the “whispering campaign” variety, or they have engendered an immediate backlash. Candidates, whose records on Jewish-related issues have been problematic, have tended to go out of their way to move toward a more pro-Israel, pro-Jewish point of view as they move into the mainstream. Of course, there have been exceptions such as Patrick Buchanan.

It is difficult to predict the future political landscape for the American Jewish community, but demographic trends provide a few hints. By 2001 Orthodox Jews comprised less than 10% of the Jewish electorate. However, given fertility rates it is expected that Orthodoxy will represent a larger percentage of the Jewish electorate in future decades. It is also the least progressive segment of the Jewish community. Moreover, if

current overall rates of assimilation and lower birthrates persist, it will be very difficult for the Jewish community to be as influential in the political process by the latter half of the 21st century.

POLITISCHE GEMEINDE (“political community”), political group right conferred on Jewish communities in *Moravia. In Moravia Jews had for centuries been permitted to reside in a restricted number of locations only (52 according to the patent issued by Francis II on Feb. 15, 1798). These, and other restrictions, were abolished on March 4, 1849. On March 17, however, the *provisorisches Gemeindegesetz* (“provisional communities law”) created 25 “political communities” (out of the 52 Jewish communities); the remainder were either placed under the jurisdiction of the local city or town authorities or merged with them (two additional political communities, Boskowitz (*Boskovice), and Holleschau (*Holešov), were created later, raising the total number to 27). The political communities were constituted as autonomous territorial units within the towns, having their own mayor and functionaries, municipal services, and right of taxation. Membership of the political community was hereditary. However as Jews tended to move out of the area of their former quarters while Czechs moved there instead, an anomalous situation was created, as for instance in Trebitsch (*Třebíč), where of 1,342 persons living in 194 houses in 1921, only 178 were Jews. All the same, electoral rights for the political community were retained by Jews living elsewhere, either in the same town or in other localities.

The existence of the political communities was a factor in helping the Germans maintain an electoral majority in the country, since the political communities were represented in the municipal *curia* out of proportion to their numerical importance, and Jews, who tended to adopt German culture, generally supported Austro-German policies against the rising Czech national movement. The Czech parties tried to exclude the Jews from the assembly of municipal *curia* and to diminish their influence in the representation of the country (Landgemeindenkurie). It was indicated that in many cases there was no basis for the existence of a political community and that their existence was illegal because they were not territorial units. The political Jewish communities increasingly concentrated on political functions and ceased to be suitable for dealing with religious needs.

In 1880 the Austrian Ministry of the Interior ordered the amalgamation of the political communities with the local authorities, but this was not implemented because of the opposition of both Jews and Germans, which was given support

by the courts. Ten years later a type of purely religious community, the *Kultusgemeinde*, was established by law. About 50 *Kultusgemeinden* were established in Moravia and they took over the religious functions of the political communities there. The political community, however, continued to exist until the dissolution of the Hapsburg Empire after World War I; 25 were liquidated by the Czechoslovak authorities in 1919–20, and the last two, Trebitsch and Misslitz (*Miroslav), in 1921. The institution of the political community was unique in retaining the features of the old Jewish communal autonomy within the modern political framework.

For map see *Moravia.

POLITZER, ADAM (1835–1920), founder of modern otology. Politzer, who was born in Alberti, Hungary, studied at Vienna University where from 1870 to 1907 he was professor of otology. During his tenure Vienna became the center for study in otology for students from all over the world. His *Lehrbuch der Ohrenheilkunde*, published in 1878 was translated into many languages and his *Geschichte der Ohrenheilkunde* (2 vols., 1907–13) was the authoritative book in that field.

Politzer devised many new methods for diagnosing and treating ear diseases. He invented a method of opening a blocked eustachian tube (a method which bears his name all over the world), a method for illuminating the eardrum, an ear speculum, and a bag for inflating the middle ear. He also showed how to test for deafness in one ear. Politzer founded the Otologic Clinic at Vienna University and the Austrian Otologic Society as well as the journal *Archiv fuer Ohrenheilkunde*.

POLITZER, H. DAVID (1949–), U.S. physicist and Nobel laureate. He was born in New York City and educated at the Bronx High School of Science. He gained his B.S. from the University of Michigan, Ann Arbor (1969), and his Ph.D. in physics from Harvard University (1974) under the direction of Sidney Coleman. He joined the physics department of the California Institute of Technology, Pasadena, in 1975 where he became professor (1979) and head of department (1986–88). His research in theoretical particle physics was essential to the discovery of asymptotic freedom, the phenomenon in which the strong force binding quarks together increases when quarks move apart and decreases when they move closer together. This finding was influential in establishing the field of quantum chromodynamics that explains the interactions between quarks and gluons on the basis on their color charge, consisting of a color and an anti-color. These theories, largely validated experimentally, have the eventual aim of producing a standard model for the structure of matter throughout the universe. Politzer shared the 2004 Nobel Prize in physics with his collaborators David J. *Gross and Frank Wilczek.

Poltzer played the role of the physicist Robert Serber in the 1989 movie *Fat Man and Little Boy* about the Manhattan Project. His Nobel lecture admirably describes the uncertainties in particle physics and the difficulties in attributing discoveries to individual scientists.

[Michael Denman (2nd ed.)]

POLLACK, EGON (1879–1933), conductor. Born in Prague, Pollack was chorus master at the German Theater there and later held posts at Bremen, Leipzig, and Frankfurt. From 1917 to 1932 he was principal conductor of the Hamburg Opera, which developed considerably under his direction. He conducted in Chicago (1931–32) and appeared as guest conductor in Cairo. He died in Prague of a heart attack while conducting *Fidelio*. Pollack was especially known as an interpreter of Richard Strauss. He also conducted Wagnerian opera and promoted the work of contemporaries.

POLLACK, ISRAEL (1910–1993), industrialist. Pollack was born in Transylvania and raised in Bukovina where he received a traditional education and studied in a textile school. He opened his first textile factory in 1935. In 1947 he moved to Chile, where in addition to his textile business, he was active in Jewish affairs and education. While in Chile he was the head of the Jewish Federation. In the early 1960s he established the Polgat textile works in Kiryat Gat, and in 1966 he arrived in Israel to serve as Polgat's CEO. Pollack was active in many public institutions. He was one of the founders of Klal Corporation, serving as its chairman. He was the chairman of the United Fund and a member of the university boards. In 1990 he received the Israel Prize for special contribution in national and social fields.

[Fern Lee Seckbach / Shaked Gilboa (2nd ed.)]

POLLACK, JACOB BEN JOSEPH (1460/70–after 1522), rabbi and first Polish halakhic authority. His name has given rise to the conjecture that he was born in Poland, but it appears that he was born in Bavaria. Pollack studied under Jacob Margolis in Regensburg, and was already known in his youth as a profound talmudist. He married Esther, the daughter of Moses and Rachel Fischel of Cracow, who acted as government tax farmers and were on intimate terms with the Polish royal court, upon whom they were able to exercise some influence. Pollack was appointed rabbi in Prague and was a member of the *bet din* together with Isaac Margolis, the son of his teacher. In 1492 an incident took place which roused a violent controversy. His wife's sister, Sara had been married while a minor to David Zehner of Buda, Hungary. Before she reached her majority she exercised her right of *me'un* (see *Child Marriage) to free herself from her husband and Pollack permitted her to remarry, in accordance with talmudic law, despite the fact that *Menahem of Merseburg had 50 years earlier enacted a *takkanah* abolishing *me'un*. This permission roused against him all the great contemporary scholars and he was laid under a ban. The only one to support him was Meir Pfefferkorn

because Jacob Pollack's mother-in-law had used her influence to obtain the release from prison of his wife and children.

Pollack left Prague and went to Cracow where he opened the first yeshivah in Poland and transferred there the method of *hillukim* ("fine distinctions") that he had learnt from his teachers. At that time knowledge of the Talmud in Poland was generally at a low ebb, and the talmudists were not conversant with this method of study. He was given the sobriquet of *avi ha-hillukim*. In Cracow he was highly admired and immediately became one of the communal leaders. When in 1494 the king of Poland imprisoned the dignitaries of Cracow, Pollack and his father- and mother-in-law were among them. After his release he moved together with the whole of the Cracow community to Kazimierz, a suburb of the town. In 1503 he was appointed by King Alexander as rabbi of the whole of Poland, or Lesser Poland – the letter of appointment is not clear. But Pollack was to find no tranquility in this position either. The friction and quarrels between the two local communities of Polish and Bohemian Jews embittered his life. Under pressure from the king, separate rabbis were finally chosen for the two communities, R. Perez for the Bohemians and Asher Lemel, Pollack's brother-in-law, for the Polish. Pollack retained only the conduct of his yeshivah. In 1520 a dispute which broke out in Italy on a financial matter between Emanuel of Ferrara and Abraham Raphael of Bologna was brought before Abraham Mintz of Padua. One of the parties turned to Pollack and as a result Pollack excommunicated Mintz. Some two years later, Pollack became involved in a libel against Samuel, the court physician of Cracow, as a result of which he was compelled to flee. From this time all traces of him disappeared. However in the *Birkat Avraham* of Abraham b. Solomon Trebitsch-Zarefati of Constantinople, written in 1524, there is a commendation, without a date, which concludes with the words "I have signed here, says the 'quiet' and 'smooth' [the words are applied to Jacob in the Bible (Gen. 25:27) and are applied here to mean "innocent" and "free of sin"] Jacob b. Joseph Ashkenazi Pollack of Jerusalem." If the signature is indeed that of Jacob Pollack and was written in the same year as the commendation of Israel Dayana to the same work in 1532, then Pollack must have been in Constantinople that year on his way to Jerusalem. It is even possible that he settled in Erez Israel before 1532, since he signs "of Jerusalem." The year of his death and his place of burial are not known. (Some think a tombstone found in Lublin with the inscription: "The *Gaon* Koppelman named Jacob ha-Levi..., the *gaon* Jacob b. Joseph died 23rd of Sivan 301" (1541) is his, however, it is doubtful whether Pollack was called Koppelman and nowhere is there mention of his being a levite.) No works by Pollack are known.

[Shlomo Tal]

POLLACK, MILTON (1906–2004), U.S. judge. Born in Brooklyn, Pollack earned undergraduate and law degrees at Columbia University. He joined the Wall Street firm of Gilman & Unger and was made a partner in 1938. In 1942 he brought a stockholder suit against General Motors, charging that senior executives had been given improper bonuses in cash and stock of more than \$4.3 million. Eight named executives were forced to return the bonuses, plus \$2 million in interest. Flushed with success, Pollack opened his own firm in 1945 and continued to practice, specializing in cases related to finance, until appointed a federal district court judge by President Lyndon B. Johnson in 1967. In a prominent case for New York City, Pollack issued a decision in 1977 that forced the Port Authority to allow the Concorde supersonic jet to land at Kennedy International Airport. Later, past the age of 80, he began hearing the massive civil litigation involving the bankruptcy of Drexel Burnham Lambert and the prosecutions on securities charges of Ivan *Boesky and Michael *Milken. In 1992, Pollack oversaw a settlement and then the distribution of \$1.3 billion in settlement funds to creditors who purchased junk bonds through Drexel. Pollack continued hearing cases until two days before his death at the age of 97.

[Stewart Kampel (2nd ed.)]

POLLACK, SYDNEY (1934–), U.S. film director and producer. Born in Lafayette, Indiana, Pollack first learned his craft by directing many TV episodes of such programs as *Ben Casey*, *The Defenders*, *Dr. Kildare*, *The Fugitive*, and *The Naked City*. Pollack then initiated his career as a feature film director with *The Slender Thread* (1965), and over the past decades has directed varied cinematic fare, including *This Property Is Condemned* (1966), *The Scalp-hunters* (1968), *Castle Keep* (1969), *They Shoot Horses, Don't They?* (Oscar nomination for Best Director, 1969), *Jeremiah Johnson* (1972), *The Way We Were* (1973), *The Yakuza* (1975), *Three Days of the Condor* (1975), *Bobby Deerfield* (1977), *The Electric Horseman* (1979), *Absence of Malice* (1981), *Tootsie* (Oscar nomination for Best Picture and Best Director, 1982), *Out of Africa* (Academy Award for Best Picture and Best Director, 1985), *Havana* (1990), *The Firm* (1993), *Sabrina* (1995), *Random Hearts* (1999), *Sketches of Frank Gehry* (2005), and *The Interpreter* (2005).

Pollack produced more than 40 films, which include many of the above, as well as other successes such as *Songwriter* (1984), *The Fabulous Baker Boys* (1989), *Dead Again* (1991), *King Ralph* (1991), *Leaving Normal* (1992), *Sense and Sensibility* (1995), *Sliding Doors* (1998), *The Talented Mr. Ripley* (1999), *Iris* (2001), *Heaven* (2002), *The Quiet American* (2002), and *Cold Mountain* (2003).

He also acted in several films, such as *Tootsie*, Robert Altman's *The Player* (1992), Woody Allen's *Husbands and Wives* (1992), Stanley Kubrick's *Eyes Wide Shut* (1999), *Random Hearts*, and Roger Michell's *Changing Lanes* (2002).

[Jonathan Licht and Ruth Beloff (2nd ed.)]

POLLAK, MIKSA (1868–1944), Hungarian rabbi and historian; born in Beled, Hungary. He was a rabbi in Sopron from 1894 until he was killed in Auschwitz.

His main works are *Die Juden in Wiener-Neustadt* (1927, earlier in Hung., 1892) and *Die Geschichte der Juden in Oedenburg* (1929, in Hung., 1896). Despite new sources, Pollak's works are still considered valid in their major conclusions. His other scholarly activities were centered on exploring biblical influences on great Hungarian poets – Arany János (1904), Tompa Mihály (1912), and Madách Imre (in IMIT, 1935–39). He also published a Hungarian translation of the prayer book. Pollak was an outstanding preacher; a volume of his collected sermons was published in 1938.

BIBLIOGRAPHY: A. Scheiber, in: MHJ, 11 (1968), 5–15.

[Alexander Scheiber]

POLLAK, MOSES HA-LEVI (1845–1888), Hungarian rabbi. Born in Szerdahely, Pollak studied under Judah Aszod and Abraham Samuel Sofer. In 1872 he was appointed rabbi of Bonyhad, where he established a yeshivah which attracted pupils from all parts of Hungary. He was one of the founders of the Orthodox community of Bonyhad, which he developed to a considerable extent.

Pollak was the author of *Va-Yedabber Moshe* (1894–95; photoprint New York, 1943), in five parts, on the Pentateuch and various talmudic themes; *Tikkun Moshe* (1894–99), in five parts, sermons and discussions on talmudic topics; and *Birkat Moshe* (1911) on tractate *Hullin*.

[Naphtali Ben-Menaḥem]

POLLAK, WALTER HEILPRIN (1887–1940), U.S. attorney. Born in New Jersey, Pollak was admitted to the New York bar in 1911 and entered private practice in New York City. During World War I he worked on the legal staff of the War Industries Board. He was a special assistant attorney general for the Arnstein bond theft case (1923–1924) and was counsel, consultant, and chairman of a number of important federal and state commissions. One of the most prominent lawyers at the U.S. bar, Pollak rendered services for the defense of those who were persecuted for unpopular views and causes, and inspired his younger associates to follow this same path. He helped in the drafting of the brief of Arthur Garfield Hays in the Scopes evolution case. He argued the Whitney and Gitlow free speech cases in the U.S. Supreme Court and in 1932 and 1935 was counsel before the Supreme Court in the Scottsboro case involving the issue of a fair trial for blacks in the South.

[Michael Hart Cardozo]

POLLAK, ZALMAN (1901–1985), cantor, composer, and instructor of cantorial music. Born into a rabbinic family in Patrovosla, then Hungary and later part of Yugoslavia, he studied in a *heder*, and then in *yeshivot*, including the Pressburg

yeshivah. He began singing with the choir of the Great Synagogue of Pressburg. Upon the conclusion of World War I he emigrated to Palestine and settled in Jerusalem. He led services in the Great Synagogue of the Hürvah of Rabbi Judah Hāsīd in Jerusalem and then served as cantor in Rishon le-Zion. From 1922 he was in Europe and was cantor in Yugoslavia (Sobotizia and Sarajevo) and in Vienna, Austria, where he was the chief cantor at the Kehillat Montefiore synagogue for almost five years. He advanced his cantorial education under Judah Leib Miller. After returning to Palestine in 1935 he was cantor at various synagogues in Jerusalem and Tel Aviv. His main efforts were directed at instructing the younger cantors. He wrote many works for passages from the services and his wife, Margalit, initiated the publication of his works, the first volume of which, *Nusah le-Shabbat*, appeared in 1989, edited by Benjamin Glickman.

[Akiva Zimmerman]

POLLARD, SIDNEY (1925–1998), British economic historian. Born Siegfried Pollak in Vienna, the son of a salesman, Pollard came to England in 1938 on a *Kindertransport*; his parents perished in the Holocaust. Through the help of charities and British relatives, Pollard was able to study at the London School of Economics and then became one of Britain's most respected economic historians, holding the post of professor of economic history at Sheffield University from 1963 to 1981. Among his many works are *The Development of the British Economy, 1914–50* (1962), *The Genesis of Modern Management* (1962), *Peaceful Conquest* (1981), and *Britain's Prime and Britain's Decline* (1989). In 1971 Pollard was offered a chair at the University of California at Berkeley, but was barred from entering the United States because he had briefly been a member of the Communist Party in the 1940s, despite the fact that his books were emphatically pro-capitalist. From 1981 until 1990 he was professor of economic history at the University of Bielefeld in West Germany.

POLLARD AFFAIR. Jonathan Jay Pollard, an American Jew, born in 1954 in Galveston, Texas, the son of a distinguished scientist, was educated at Stanford and became an intelligence analyst with the U.S. Naval Intelligence Service in Suitland, Maryland, in late 1979. He rose in the ranks and had access to sensitive information. In May 1984 he was recruited by Israeli agents and for the next 18 months was “run” by a senior Israeli air force officer Colonel Aviem Sella, then on study leave in New York. Pollard provided Israel with a vast amount of information pertaining to Israel, the Middle East, and other countries, thus compromising the United States. This information was channeled through an independent intelligence unit called the Scientific Liaison Unit, which functioned in the Israeli Defense Ministry from the 1960s and was headed by a veteran Mossad operative, Rafael Eitan. During those 18 months Pollard was paid for his services, traveled to Israel

and Europe, and was promised asylum in case of discovery. The Israelis argued that his recruitment and “running” were never authorized by any Israeli defense minister or the cabinet, though their denial was not widely regarded as credible in the United States.

When FBI agents began to follow Pollard and his wife, they fled to the Israeli embassy in Washington seeking asylum, but were ejected from the embassy's grounds and arrested on November 21, 1985. Their arrest and revelations were leaked to the U.S. media, and the extent of their operation and the Israeli involvement generated an extreme and furious reaction by the American leadership – including American Jewish leadership – and public opinion. There emerged a serious danger of an open confrontation between Israel and the Reagan administration and the U.S. Congress. The row that erupted required an immediate Israeli effort to stem the tide. By then the Israeli people were appalled over the details of this operation carried out by civil servants. The details of the affair could have created a major crisis with Israel's only major ally, and placed American Jews in a highly delicate situation.

The U.S. demanded cooperation from Israel in the investigation, and on December 1, 1985, Prime Minister Peres agreed to allow questioning of the Israelis involved by U.S. officials, to return all the documents taken by Pollard, to disband the Scientific Liaison Unit, and to punish the Israelis responsible. Pollard was never brought to trial. As part of a plea bargain, which provided for the limited – five-year – imprisonment of his then wife Anne, Pollard pleaded guilty to espionage charges in June 1986. But in spite of this he was sentenced in March 1987 to life imprisonment. The severity of his sentence remains a matter of considerable controversy even in the early 21st century.

The government charged Pollard with violating 18 USC 794 (c), the federal law that makes it a crime to deliver defense information to a foreign government “with intent or reason to believe” that the information is to be used “to the injury of the United States” or “to the advantage of a foreign nation.” The indictment did not charge Pollard with injury of the United States but with the “intent and reason to believe that the [information] would be used to the advantage of Israel.” Israel is clearly a foreign nation but an ally, not an enemy, of the United States, which is of moral significance though not necessarily of legal significance. Those involved in the Pollard case assumed that this distinction would result in a more lenient sentence than life imprisonment.

Between the time of the plea bargain and the actual sentencing the government submitted two Victim Impact Statements, one that was made public and one that was delivered in camera because of issues of national security.

The government argued in the Victim Impact Statement that the scope of what was revealed was great, that it threatened U.S. relations with its Arab allies, and that it diminished U.S. leverage with Israel. In short, the government argued that Pollard had done significant damage to the United States. In

January 1987 the government submitted a 46-page classified declaration from Secretary of Defense Caspar Weinberger that described in detail the harm Pollard's activities had allegedly caused national security. The contents of this submission have never been made public; a heavily redacted document was released, which alleges that Pollard "jeopardized ... the sources of that information, by placing it outside a U.S.-controlled security environment." In addition, "U.S. combat forces, wherever they are deployed in this world, could be unacceptably endangered through successful exploitation of this data."

Then, on March 3, 1987 – the day before Pollard was to be sentenced – Secretary Weinberger submitted a supplementary declaration to the court, which included the following:

It is difficult for me, even in the so-called "year of the spy," to conceive of a greater harm to national security than that caused by the defendant in view of the breadth, the critical importance to the U.S., and the high sensitivity of the information he sold to Israel... I respectfully submit that any U.S. citizen, and in particular a trusted government official, who sells U.S. secrets to any foreign nation should not be punished merely as a common criminal. Rather the punishment imposed should reflect the perfidy of the individual's actions, the magnitude of the treason committed, and the needs of national security.

The word treason – which was not part of the government's initial charge – was introduced by Weinberger for the first time, just prior to sentencing.

In a breathtaking display of poor timing, a few weeks before sentencing U.S. public opinion was again inflamed by the news that Rafael Eitan had been appointed chairman of the board of Israel Chemical Industries, a government corporation, while Aviem Sella was appointed to command a major air base, which meant promotion in rank, moves that seemed to belie Israel's formal claim that this was a rogue operation, unauthorized and wild. Following public outcry in the U.S., Sella resigned his post. Meanwhile public opinion in Israel demanded the appointment of an inquiry committee to investigate the evolution of the affair and to determine responsibility for this operation. The harshness of the Pollard sentence led the government to appoint a two-man committee (the Tsur-Rotenstreich Committee) on March 12, 1987, while a subcommittee of the Knesset Foreign Affairs and Defense Committee headed by Abba *Eban carried out its own separate and independent investigation. Both committees submitted their reports on May 26, 1987.

The Tsur-Rotenstreich committee felt that the entire cabinet should bear responsibility for the affair. In a secret annex it affixed blame on Prime Ministers Peres and Shamir and Defense Ministers Arens and Rabin for failure to exercise control and supervision over the Scientific Liaison Unit and recommended new procedures in intelligence operations. This body and the Knesset subcommittee felt that the involved civil servants, Eitan and Sella, acted injudiciously and far exceeded their authority, but also blamed the senior political echelon for lack of involvement in such operations and their failure to

check the details pertaining to the source of the vast intelligence information flowing to Israel. Both committees severely criticized Israel's leadership for hasty actions and serious errors of judgment, although they justified their cooperation with the United States government.

American Jews were furious, most especially Israel's strongest supporters in Congress and in the Executive Branch and the bevy of Israel's supporters who worked in Washington to advance the U.S.-Israeli alliance. The avowed justification of Pollard that he was a Zionist and the exploitation of that commitment by Israeli agents – and perhaps even higher authorities – threatened the easy communications, the close friendships, and cooperative working relationships throughout Washington. The affair placed the American Jewish community in an embarrassing situation, their confidence in Israel's leadership seriously shaken, fearing that the affair could be used in the future by anti-Israel and anti-Jewish elements in America. Public opinion both in Israel and the U.S. felt however that the Israeli committees' reports basically amounted to a whitewash. Accusations by such eminent Israeli intellectuals as Shlomo Avineri that the Pollard case was the Dreyfus case redux only inflamed the tension. The differences were basic: Pollard was guilty, Dreyfus was framed, and American Jewry was not reticent about going public in defense of Jewish interests and confronting the administration, whether Democratic or Republican.

To some, Pollard was a hero. A fundraising effort on Israeli city streets brought more than \$150,000 for the Pollard defense fund. Significant sums were raised to pay for ongoing litigation that reached not only the Court of Appeals but the Supreme Court. Those Israelis who sought to defend their country's actions argued that Israel was still under siege, fighting a battle against terror, and living in a fragile and turbulent Middle East. Israel's strategy rested on early warning with intelligence the key to that strategy. Denying Israel vital information was seen as hurting its vital security interests. In spite of the existing Israel-U.S. Strategic Understanding, some Israelis felt they were not being supplied with all relevant information.

These arguments did not convince many Israelis who felt that a monumental error had been committed and that Israeli leaders were not being required to pay the political price for their lack of judgment and involvement. It was feared that the affair would have long-term negative effects on Israel-American relations and the degree of trust and confidence once prevailing in these ties had been seriously compromised.

Over time, the anger generated by the Pollard Affair within American Jewry has faded; many who condemned him and the Israeli government now support clemency, and Pollard is a hero to some within the American Jewish community though not within the political establishment. Still, few relish the image of Pollard going to Israel and receiving a hero's welcome.

By the early 21st century all avenues of appeals had been denied at every level of the U.S. judicial system. The case had

been litigated again and again. Pollard divorced his first wife and remarried. Pollard remained in prison, often in solitary confinement, angry at American Jewry for abandoning him, angry at Israel for leaving an agent in the field. His only hope was clemency, and it seemed that every time Israel made a major concession in the peace process such as in the Wye Agreement, the request for presidential clemency was made and then the American intelligence establishment used all of its considerable resources to pressure the president – as George Tenet and others did with President Clinton – not to acquiesce to the Israeli request. The case also has ongoing consequences, as in 2005 two AIPAC officials were indicted for passing on to the Israeli government secret information given to them by a Pentagon official. Painstaking efforts were made to distinguish their case from the Pollard Affair. No documents were passed, no funds were offered or received, and these men were not American officials but lobbyists who routinely trade in information.

In 2006 yet another appeal on behalf of Jonathan Pollard was presented to the U.S. Supreme Court.

[Meron Medzini / Michael Berenbaum (2nd ed.)]

POLLEGAR (Pulgar, Policar), ISAAC BEN JOSEPH IBN (first half of 14th century), Spanish scholar and philosopher. Pollegar's chief literary work was the *Ezer ha-Dat* ("Support of Faith"), consisting of five sections, which was published with an English summary by G. Belasco in 1906, while a variant text of the second section was published by E. Ashkenazi in *Ta'am Zekenim* (1854), 12–19. The purpose of the work was to answer the criticisms of certain schools of thought against Judaism. In the first and main section, the author sets forth the chief principles of Judaism, such as the superiority of Moses and the Torah, the world to come, and the Messiah, and rejects despair over the sufferings of Israel. Combating the apostate *Abner of Burgos, whom he had befriended in his youth, he refutes the latter's Christological interpretation of the *aggadah* by claiming that the *aggadot* are not binding and need not be taken literally. The second section consists in large part of a dialogue between an opponent of philosophical studies and someone who believes that philosophical studies should be pursued, and concludes with the author's reconciliation of Judaism and philosophy along Averroistic lines. In the third section, Pollegar opposes the view, usual in medieval Judaism, that human affairs are guided by the influence of the heavenly bodies, and attacks determinist views such as those expounded by Abner of Burgos. Pollegar attempts to solve the problem posed by Abner of the alleged contradiction between human freedom and divine foreknowledge by his theory of the mutual cooperation of the divine and human wills. The source of all action is the divine will. All of man's actions are founded upon the imitation of the divine will by the human. At the moment when human actions are realized, their completion is ordained by the divine will, and at the very same moment they become objects of the human will, which thus imitates the divine will. Since God's foreknowledge and the decision of

His will exist within His essence at the same moment, neither precedes man's actions. God's knowledge, however, does not change, since knowledge of particulars originates in His all-embracing knowledge identical with his essence. The fourth section consists of an attack on various kinds of pseudosciences which conflict with true philosophy. This section includes a four-part critique of

(a) the philosophizers who do not really know philosophy yet mock religion,

(b) the kabbalists, criticized for their language, their belief in their tradition and its authority, and their alleged non-monotheism,

(c) those who see nature as an independent force, and

(d) believers in sorcery. In the fifth section Pollegar praises pure intellectual activity which, he states, can only be fully developed in the next world.

Pollegar also composed at least one treatise against astrology, a translation of the third book of Al-Ghazālī's *Maqāsid al-Falāsifa*, and a reply to Abner of Burgos known as the *Iggeret ha-Ḥarifot* ("Epistle of Blasphemies"). He refers to commentaries on Genesis, Psalms, and Ecclesiastes, and also to a work called *Musar Banim* ("Discipline of Sons"); none of these is extant.

[Frank Talmage]

POLLIN, ABE (1923–), U.S. sports owner, philanthropist. Pollin's parents were immigrants from Russia who came to America as teenagers with no money and no knowledge of the English language. His father taught himself to read and write, and worked his way up as a plumbing and heating contractor, to the point where he became the largest contractor in Washington with 250 employees. He was the first chairman of Israel Bonds in Washington, and was present at the meeting on November 8, 1946, when money was collected to purchase the *Exodus* the next day. Pollin was born in Philadelphia, and moved to Washington, D.C., when he was eight, growing up seven blocks from Griffith Stadium. He graduated from George Washington University in 1945, and went to work for his family's construction company for 12 years. He then started his own construction company in 1957. In 1964 Pollin purchased the NBA's Baltimore Bullets for \$1.1 million, the most anyone had ever paid for a team at that time, and then moved the team in 1973 to Landover, Maryland, near Washington, D.C. The Washington Bullets won the NBA championship in 1978. He later changed the name of the basketball team from Bullets to Wizards, three months after Yitzhak *Rabin was gunned down, saying "the name Bullets is no longer appropriate." In 1972, Pollin received an N.H.L. franchise that later became the Washington Capitals.

Pollin, chairman and CEO of Washington Sports & Entertainment, twice built a multi-million dollar sports and

entertainment arena. On December 2, 1973, he opened the Capital Centre in Landover, Maryland, and 24 years later, on December 2, 1997, he opened the MCI Center in the middle of downtown Washington, D.C., which was a cornerstone in helping to revitalize the downtown area. Both arenas were considered state of the art facilities, the standard for new arenas throughout the world. By 2006, Pollin was in his 42nd season of ownership, making him the longest-tenured owner in the National Basketball Association.

Together with his wife, Irene, Pollin's philanthropic and humanitarian work was widespread: he served as chairman of the Advisory Council for UNICEF and was on the international board of the Red Cross; he was president of the Advisory Board of the American Foundation for Autistic Children, honorable chairman of the Salvation Army's Leadership Committee for Centers of Hope, a founding partner of the National Health Museum, and co-sponsor of the "I Have a Dream Foundation" through which he has personally guaranteed college education for some 60 students in Maryland. Pollin also works with business and government leaders in Washington to help the city's homeless population, and helps administer a host of D.C. programs including Abe's Tables, Food For Kids, Serving Seniors Thanksgiving Dinner, Pollin Award, Read To Achieve, Our House Rules, Annual Turkey Basket Giveaway, and The Wizards Kids 'n Kops program. Pollin and his wife established the Pollin Prize for Pediatric Research, administered by New York Presbyterian Hospital, and Irene Pollin, president and founder of the Linda and Kenneth Pollin Foundation, was founder and chairperson of the Sister to Sister – Everyone Has a Heart Foundation.

Pollin was awarded the Duke Ziebert Capital Achievement Award for helping to revitalize downtown Washington, and was the recipient of the Distinguished Civilian Service Award, presented by the U.S. Army; the 1996 Robert F. Kennedy-Martin Luther King, Jr. Award, presented by Coalition to Stop Gun Violence; the 1996 United Cerebral Palsy Achievement Award; and the 1997 Jewish Leadership Award.

[Elli Wohlgernter (2nd ed.)]

POLLINI, BERNHARD (Baruch Pohl; 1838–1897), opera manager. Pollini began his career as a tenor (later baritone) in his native Cologne and while on tour with an Italian opera troupe, he became its manager. Subsequently he managed the Lemberg Theater and the Italian Opera in St. Petersburg and Moscow. Pollini directed the Hamburg City Theater from 1874 until his death. Under his leadership, it gained an international reputation both for its performances and for the many outstanding musicians, such as Gustav *Mahler, whom it first brought to public attention.

POLNA (Czech Polná), town in S.E. Bohemia, Czech Republic. Jews are mentioned in the vicinity in 1415 and two Jewish families in Polna itself in 1570. The town's law-manual of 1582 also contains a Jewish *oath formula. A cemetery was estab-

lished in 1619. In 1681 Jewish and town representatives signed an agreement to build a Jewish quarter of 16 houses (one of its gates was still extant in 1970). The synagogue was built in 1684 and renovated for the first time in the 18th century. The register of synagogue seats was kept in the town archives. In a conflagration in 1863 the synagogue and 32 houses were destroyed. There were 27 Jewish families in Polna in 1724, and 541 Jews lived in the town in 1847. The synagogue was renovated for a second time in 1861. In 1869 there were 430 Jews in Polna, and 238 in 1890. Polna acquired a dubious notoriety through the *Hilsner blood libel case in 1899. In 1930 the community numbered 51 (1.2% of the total population). In 1942 the Jews remaining in Polna were deported to Nazi death camps. The synagogue equipment was sent to the Central Jewish Museum in Prague. Although no congregation was reorganized after the Holocaust, the synagogue and the Jewish cemetery remained extant. Restoration of the synagogue commenced in 1990s.

[Jan Herman and Meir Lamed]

POLONNOYE, town in the Khmel'nitski (Proskurov) district, Ukraine. Jews are mentioned in 1601, and by the middle of the century it was an important community in *Volhynia. In 1648, the time of the *Chmielnicki massacres, when the Cossack armies approached the town about 12,000 Jews found refuge in its fortress, defending themselves, together with Poles, against the enemy. When the Cossacks overran the town about 300 Jews gathered in the *bet ha-midrash* and, led by the kabbalist R. Samson *Ostropoler, they wrapped themselves in their *talitot* and met death with a prayer on their lips. The number of dead in the town was estimated at 10,000. In 1684 the owner of the town, Countess Lyubomirskaya, granted Jews letters-patent which authorized them to build houses in one of the town's quarters. They were also exempted from military service in exchange for a special payment in favor of the Christian inhabitants, "...with the exception of a general mobilization in the event of an attack by the enemy." In the 18th century the Jews suffered from attacks by the Haidamacks and from Polish and Swedish soldiers.

Polonnoye rapidly became an important commercial and spiritual center. During the second half of the 18th century, two of the pillars of Ḥasidism (and disciples of the Ba'al Shem Tov), Aryeh Judah *Leib ("The 'Mokhiaḥ' of Polonnoye," d. 1770) and after him, Jacob Joseph *ha-Kohen (d. 1782), held the rabbinical positions of the town.

Hebrew printers were active in Polonnoye between 1782 and 1820. Among them was Samuel b. Issachar Ber, who also printed in *Korets and *Shklov, and who transferred the press to *Ostrog in 1794. Another was Joseph b. Zevi ha-Kohen, active from 1800 to 1820, who founded another press in *Medzibezh, in 1815. Altogether some 90 works, mostly kabbalistic, ḥasidic, and ethical, were issued, some of the latter in Yiddish.

In 1847 there were 2,647 Jews in Polonnoye and, according to the census, there were 7,910 Jews (48.5% of the population) in 1897. In 1919 the town was at the center of the battle area between the Red and Ukrainian armies, and consequently, during Passover of that year, most of the inhabitants fled to nearby towns. In September cavalry units of Budenny rioted, robbing and killing about 40 Jews. In 1926 there were 5,337 Jews (32.5% of the population) in Polonnoye, and their number dropped further by 1939 to 4,171 (30% of the total population). The Germans occupied the town on July 6, 1941, and after a month they executed 19 Jews as Communist agents. On August 23, 1941 they murdered 113, and in June 1942 they killed 1,200. In all the Germans murdered about 2,000 Jews. There was no information available on the presence of Jews in Polonnoye after World War II.

[Yehuda Slutsky]

POLOTSK, city in Vitebsk district, Belarus, one of the oldest Jewish communities in Lithuania. There is evidence that Jews settled in Polotsk toward the end of the 15th century. In 1551 the Jews of the city were exempted from paying a special tax known as the *srebrzczyzna*. When Ivan the Terrible captured Polotsk in 1563, he ordered that all the Jews who refused to be baptized (around 300), should be drowned in the Dvina River. (Memorial prayers for these martyrs were recited in Polotsk each year on the 25th of Kislev.) The Jewish community was revived soon after, but in 1580, when the town adopted the *Magdeburg law, it forbade Jewish commerce and purchase of real estate within the city. Jews lived on six landholdings outside municipal jurisdiction. The Jewish community was destroyed in 1654 by Cossack rebels, but was rebuilt shortly after. When local residents complained in 1681 that the Jews were purchasing land within the city without paying municipal taxes, King John III Sobieski ordered them to pay. In 1765 there were 1,003 poll-tax paying Jews in Polotsk. The city was one of the earliest centers of Hasidism in Belorussia and *Israel ben Perez of *Polotsk (a disciple of Dov Baer the Maggid of Mezhrich) was a leader of hasidic immigration to Erez Israel in 1777. Polotsk had 2,600 Jews in 1815 (56.3% of the total population). The figure rose to 7,275 by 1847 and to 12,481 in 1897 (61% of the total). In the late 19th century the city became a center of anti-Jewish agitation, largely because several Russian Orthodox monasteries and an officers' training school were located there. When pogroms broke out in October 1905, the authorities prohibited Jewish self-defense activities in the city. There were 19,252 Jews living in Polotsk in 1910. The community maintained 23 synagogues, a *talmud torah*, and a Jewish high school. The *kehillah* (Jewish community organization) was abolished under Soviet rule in 1918, along with many other Jewish public institutions. In 1926 the number of Jews had fallen to 8,186 (32% of the total) and dropped further by 1939 to 6,464 (22% of the total population). The

two Yiddish schools had 340 pupils, and a Jewish orphanage and kindergarten existed there. The Germans occupied the town on July 16, 1941. A ghetto was organized in August, but in September all Jews were moved to a closed camp near the village of Lozovka, where many died from hunger and disease. In December 1941 7,000 Jews of Polotsk and its environs were murdered. In 1970 the Jewish population of Polotsk was estimated at about 500. There was no synagogue.

[Yehuda Slutsky]

POLOTSKY, HANS JACOB (1905–1991), Orientalist and linguist. Born in Zurich to Russian parents, Polotsky attended the universities of Berlin and Goettingen, studying Egyptology and Semitics. While at Goettingen he was employed at the “Septuaginta Unternehmen,” in connection with Greek, Coptic, Syriac, and Arabic material. In Berlin he edited Manichaean texts in Coptic. These texts brought him into contact with Turkish (and Iranian) dialects. His interest in Ethiopic languages (Ge'ez, Amharic, Gouragé, Tigrina, etc.) widened when he began teaching at the Hebrew University in 1934, as professor from 1948. He received the Israel Prize in humanities (1965). In Jerusalem he discovered native speakers of Eastern Neo-Aramaic (modern Syriac) dialects, and thus became acquainted with this long-neglected subject. Being familiar with Russian besides many other European languages, he was able to use important Russian contributions in this field. The discovery of Greek Papyri in Israel (Naḥal Hever) provided him with the opportunity to return to Hellenistic Greek. Polotsky is the rare, if not the last, of a type of linguist whose achievements are outstanding in several language families. This enabled him to obtain remarkable results in such studies as his *Etudes de syntaxe Copte* where he solved problems that had been vexing generations of Coptologists, such as the use of the so-called “second tenses,” which he approached through the comparison of Coptic texts with their Greek “Vorlage” and by adducing Arabic on French and English constructions of the type “it is who...” (cleft sentence). This type of work, using parallels from different language families, relied less upon dictionaries and grammars of the languages concerned than upon his own material which he collected himself. As an Egyptologist he made his mark with several important studies, e.g., *Egyptian Tenses* (the Israel Academy of Science and Humanities, Proceedings no. 5; 1965). Polotsky proceeds along the lines of synchronic description, following the Saussure school. Only after achieving his aim does he take recourse to comparative material, sometimes nailing down his results by employing diachronical proofs. Since he never published an article on general linguistics, his approach to languages can be pieced together only by studying carefully all his articles, dealing with different languages. In his *Études de grammaire Gouragé*, he reconstructed a form that (he thought) had dis-

appeared from Ethiopian dialects and had the satisfaction to learn that the “reconstructed” form does indeed exist in one of them. In his studies in modern Syriac he showed his firsthand knowledge of the different Neo-Aramaic dialects spoken near the sea of Urmia (in Iran and Iraq), and proved that synchronic problems of certain dialects can be solved by comparative dialectology plus the diachronic approach. In his article *Syntaxe Amharique et syntaxe Turque* (1960), a study of two languages which belong to two entirely different language families (Semitic and Uralo-Altaic), he showed how close they are in the field of syntax, without having had any contact with each other. While conversant with recent linguistic trends, including that of N. Chomsky, Polotsky tended toward the school of de Saussure. His *Collected Papers* were published by the Magnes Press of the Hebrew University (1971).

A bibliography of his writings appeared in H.B. Rosén (ed.), *Studies in Egyptology and Linguistics in Honour of H.J. Polotsky* (1964), ix–xi. Quite a few languages never dealt with by Polotsky in his articles are even more familiar to him than those mentioned, e.g., Latin (Classical and Middle) and, of course, Hebrew, biblical, mishnaic, that of the prayer book and of Israeli Hebrew. Polotsky is the linguists’ linguist.

[Eduard Yechezkel Kutscher]

POLSHEK, JAMES (1930–), U.S. architect. Polshek received his bachelor’s degree from Case Western Reserve University and masters in architecture from Yale University (1955). He established Polshek Partnership Architects in Greenwich, Conn., in 1963 and is now based in New York. Polshek also served for 15 years as dean of the School of Architecture, Planning and Preservation at Columbia University in New York.

Central to Polshek’s view of architecture is the necessity of it being connected to community and tradition. Polshek has suggested that the “increasing homogenization” of architecture in the United States “brings despondence and is unhealthy. It indicates a loss of place.” As a result, Polshek became an important critic of what he called the “bad quality of building today” that is due to a variety of problems, especially lack of vision by public leaders. Polshek’s approach is to create architecture that “implements resolutions rather than creating oppositions,” and must fulfill the aspirations of the institutions they house.

Polshek’s most well-known projects are the William Jefferson Clinton Presidential Center in Little Rock, Ark., the Carnegie Hall renovation, and Zankel Hall expansion in New York, the Rose Center for Earth and Space at the American Museum of Natural History, the New York Times Printing Plant, the Santa Fe Opera Theater in New Mexico, the WGBH public television headquarters near Boston, the Newseum/Freedom Forum headquarters in Washington, D.C., the Omaha Performing Arts Center, and National Inventors Hall of Fame in Akron, Ohio.

The Clinton Library drew particular praise because of the choice of site in a downtown industrial zone, linked to downtown Little Rock by a 27-acre public park. On the other hand,

a more modest, yet important renovation by Polshek Partnership was that of Symphony Space and the Thalia Theater on Manhattan’s Upper West Side, which has a tradition of catering to avant-garde film and theater.

[Stephen C. Feinstein (2nd ed.)]

POLTAVA, capital of Poltava district, Ukraine. Jews began to settle there at the close of the 18th century. In 1801 there were 18 Jewish merchants in Poltava and 292 Jews classed as townsmen (about one fifth of the total number of inhabitants). The community in Poltava and its environs numbered 2,073 in 1847. The number of Jews in the town doubled by the 1870s, and in 1897 reached 11,046 (20.5% of the total population), of whom a considerable number were from Lithuania and Belorussia. The Poltava community was one of the best organized and most progressive in Russia. It had 10 synagogues. Jews owned four large flour mills, most of the distilleries, some lumber warehouses, and two printing presses. At the close of the 19th century the *talmud torah* was converted into a modern elementary school, which was attended by 300 children who studied both religious and general subjects; its teaching staff included Alexander Siskind *Rabinovitz and M. Haezrahi. There were also a girls’ vocational school supported by the *Jewish Colonization Association, a yeshivah, and 20 *hadarim*. The community’s hospital and clinic provided free services, and there were an old age home and a loan bank. The Jewish library contained 8,000 volumes. The influence of the Russian intelligentsia, led by the author V. Korolenko, prevented the outbreak of pogroms in Poltava during both periods of revolution in Russia in 1905 and 1917. There was a strong Zionist movement in Poltava, which was one of the foremost centers of the *Po’alei Zion movement in Russia; several founders of this party were born in Poltava and began their activities there: B. *Borochof, I. *Ben-Zvi, and Y. *Zerubavel (the last two were natives of Poltava). The ideological organ of the party, *Yevreyskaya Rabochaya Khronika* (founded in 1906), was published in Poltava, and the founding conference of Po’alei Zion was held there. Rabbi of Poltava from 1893 to 1917 was E.A. Rabinowich, a leader of the extreme Orthodox and a strong opponent of the Zionists. He published the religious monthly *Ha-Peles* (1903–06) and the weekly *Ha-Modi’a* (1910–15) in Poltava. The historian Elias *Tcherikower was born in Poltava.

Under the Soviet regime the fate of the community was the same as that of the rest of Russian Jewry. Until 1927 Poltava remained a center for printing of Jewish religious books (particularly *siddurim* and calendars). In 1926 among the 9,000 Jewish breadwinners, 2,415 were white collar workers, 1,862 craftsmen, and 1,676 simple laborers. Some 80% of the artisan union were Jews. Many were occupied in the large sock factory that supplied the entire Soviet Union. There were 2 Yiddish schools and a Yiddish section in the railroad school. The Jew-

ish population numbered 18,476 (20.1% of the total) in 1926. It dropped by 1939 to 12,860 (10% of the total population).

The Germans entered the city September 18, 1941. Many Jews were successfully evacuated or escaped. A Judenrat was established, and the Jews were called to register. On September 25, 5,000 were murdered, and on November 23, after a new registration was ordered, 3,000 Jews were executed. In the following days Jews who evaded registration or hid were caught and executed. In the late 1960s the Jewish population was estimated at 5,000. There was no synagogue, the remaining one having been closed down in 1959 by the militia, which broke in, confiscated all religious articles, dispersed the congregation, and prohibited the holding of further gatherings. Subsequently Jews have prayed in private. There is a Jewish cemetery in Poltava. There are also two mass graves of Jewish martyrs murdered by the Nazis; one in which 13,000 bodies are buried, and in the other 7,000. The monuments there do not specify that all the victims were Jews.

Region of "Poltavshchina"

Jews began to settle in the region during the early 17th century in the process of Jewish participation in the colonization of Ukraine. By 1610 there was a Jewish community in Berezan (to the north of Pereyaslav), and within a few decades about a dozen Jewish communities were established in the districts of *Pereyaslav and Mirgorod, of which the largest were in Pereyaslav and *Lubny. Jews engaged in commerce and the leasing of estates, flour mills, liquor distilleries, breweries, and inns. There was strong competition from Christian townsmen, and during the *Chmielnicki massacres of 1648 these communities were among the first to be destroyed. After the region came under Russian rule Jews were not permitted to live there until the first partition of Poland in 1772. Individual Jewish families, however, settled in various estates under the protection of their owners despite frequent expulsions by the authorities.

After the first partition of Poland in 1772, Jewish settlement on the eastern bank of the river Dnieper was renewed, and by 1792 there were over 700 Jews in the region, most of whom lived on estates or in villages. In 1794 this region, which then formed part of the province of Yekaterinoslav, was incorporated within the *Pale of Settlement. In 1803 there were 82 Jewish merchants and 2,030 Jews classed as townsmen living in the province of Poltava, which was formed in 1802. The community of *Kremenchug was the largest in the district, and developed in particular owing to its position on the Dnieper, the main waterway from Lithuania to the south. It accounted in 1897 for 30% of the Jews in the province. In 1847, 15,572 Jews were counted in the 18 communities of the province (which also included the Jews in the small settlements and their environs). Their numbers increased as a result of a large emigration from Lithuania and Belorussia, and were estimated at 84,000 in 1881. The census of 1897 recorded 111,417 Jews (4% of the total population) in Poltava province (the lowest percentage of Jews in all the provinces of the Pale). The Russian-Ukrai-

nian majority had a strong assimilationist influence on the Jews in the province, who were a minority in all the towns; it was only in Kremenchug that their numbers approached half the population. On the other hand, *Chabad Ḥasidism, which penetrated from the north, was an important spiritual influence (the tomb of *Shneur Zalman of Lyady, the founder of Chabad Ḥasidism, is in *Gadyach in Poltava province).

About one half of the Jews of the province of Poltava earned their livelihood from commerce (in contrast to 38.5% in the whole of Russia), and about 30 percent were engaged in crafts and industry. Commerce was principally conducted in grain and other agricultural produce. Although some Jews owned saw mills, brick-kilns, flour mills, alcohol distilleries, and other enterprises, the overwhelming majority of the workers in them were non-Jews. During the spring of 1881 pogroms occurred in the north of the province of Poltava. In 1905 a wave of pogroms swept across 52 settlements of the province. The most severely affected were Gadyach, Kremenchug, *Romny, and *Zolotonosha.

During World War I thousands of refugees and Jews expelled from the battle zone arrived in the province of Poltava and found refuge in the Jewish communities. During the Civil War, the communities of the western section of the province suffered especially from pogroms by bands of Ukrainians and the "volunteer army" of A.I. *Denikin. In 1926 there were approximately 93,000 Jews in the five districts (Kremenchug, Lubny, Poltava, *Priluki, Romny) of the former territory of the province of Poltava.

[Yehuda Slutsky]

POLYAKOV, family of railroad builders and bankers in Russia, headed by the brothers Jacob, Samuel, and Eliezer. They originated in Dubrovno, Belorussia. JACOB (1832–1909) began his economic career as a liquor excise farmer and later went on to railroad construction. He participated in the founding of the Don-Azov and other Russian banks and also acted as the vice chairman of the *Jewish Colonization Association in Russia. He received a Russian title of nobility. SAMUEL (1837–1888) was one of the most important railroad builders in Russia. He was responsible for laying over 1,600 mi. (2,500 kms.) of railroads, including the Kozlov (Michurinsk)-Rostov and the Kursk-Kharkov-Azov lines, and strategic railroads in Romania during the Russo-Turkish War of 1877–78. He also founded the South Russian Coal Mining Society and several important banks (Moscow Estate Bank, Don Estate Bank, etc.). He contributed generously to Russian educational and cultural institutions and showed a special concern for technical education (he founded the first technical school for railroad construction in Yelets in 1867 and the first school for mining in Korsun). He was unpopular among Jews because of his refusal to employ Jewish workers in his enterprises, but

toward the end of his life played a role in Jewish public life. He initiated the foundation of the *ORT organization, participated in negotiations with the minister of the interior P.N. *Ignatyev in 1881–82 and contributed to the construction of the synagogue of St. Petersburg. He received a Russian title of nobility. ELIEZER (1842–1914) constructed railroads in partnership with his brother Samuel and was one of the leading bankers in Moscow. He was president of the Moscow Estate Bank and in 1873 founded the Polyakov Bank. He invested large sums in the development of industries in Russia and Persia. Eliezer was president of the Jewish community of Moscow and received a Russian title of nobility. In 1908, after a crisis befell his enterprises, he was removed from the majority of them by the government.

[Yehuda Slutsky]

***POLYBIUS OF MEGALOPOLIS** (c. 210–128 B.C.E.), the most notable of the Hellenistic historians. Polybius did not devote much space to the Jews or Judaism in his universal history. His detailed description of the fourth Syrian war (book 5) makes no mention of Jerusalem or Judea, although it gives a comparatively lengthy account of the conquest of Palestine. He does, however, discuss the Jews in the context of the fifth Syrian war, as attested in the fragment from book 16 of his history, preserved in Josephus (*Ant.*, 12:3, 135–6). Here Polybius records among other achievements of Antiochus III that those Jews who lived near the Temple of Jerusalem allied themselves with him. From another passage (*Jos.*, *Apion*, 2:53–54) it can be seen that a section of Polybius' work, now lost, also gave *Antiochus Epiphanes' impecunious state as his motive for plundering the Temple.

POLYKOFF, SHIRLEY (1908–1998), innovative advertising executive. Born the middle daughter of Russian Jewish immigrants, Polykoff began selling coats in a department store at the age of 11 and wrote her first advertising copy as a teenager while working at *Harper's Bazaar*. By 1929 she was earning money as a copywriter for a women's specialty shop and soon began writing catchy ads for other products, including "Chock Full O'Nuts, the heavenly coffee." Her most famous ad was written in 1955 for Clairol hair products. "Does she ... or doesn't she? Hair color so natural only her hairdresser knows for sure," was tremendously successful and enriched both Clairol and Foote, Cone & Belding, the agency where Polykoff was employed. The Clairol ad budget grew from \$400,000 to \$33 million in one year. Polykoff, who colored her hair, credited her mother-in-law with the phrase. Polykoff continued with catchy ads such as "Is it true blondes have more fun?" and "If I've only one life, let me live it as a blonde!" During her marriage she had the agency hold her salary at \$25,000, so as not to make more money than her lawyer husband, George Halperin. After his death in 1961, the agency increased her salary tremendously, in part as a result of her promotions within the agency. In 1968 she became the chairman of the creative board

of Foote, Cone & Belding and a vice president. She went on to head her own advertising firm, Shirley Polykoff Advertising, Inc., one of the few women to do so. Polykoff was named Advertising Woman of the Year in 1967 by the American Advertising Federation, an award she considered her greatest honor; she received some 16 other awards, including a Matrix award for professional achievement in the media. Polykoff, who had two daughters and three grandchildren, wrote about her career in her book, *Does She ... or Doesn't She? And How She Did It* (1975).

[Sara Alpern (2nd ed.)]

POMEGRANATE (Heb. רִמּוֹן, *rimmon*), the tree, *Punica granatum*, and its fruit. It is one of the seven choice fruits of Erez Israel (*Deut.* 8:8), and among the fruits brought by the spies sent by Moses, as proof of the land's fertility (*Num.* 13:23). After the devastation of the land "the vine, the fig tree, and the pomegranate and olive tree" ceased producing their fruit (*Hag.* 2:19). The pomegranate, with its beautiful red flowers, decorative fruit, and its delicate flavor, was especially beloved by the poet of the Song of Songs, who mentions it six times. The loved one is compared to "a park of pomegranates" (4:13); her cheek (*rakkah*) to a "pomegranate split open" (4:3, 6:7), the reference being to a divided pomegranate, as the cheeks are called "the *rimmon* of the face" in the Talmud (*Av. Zar.* 30b). In the spring its large flowers are conspicuous in their beauty (*Songs* 6:11). The juice of pomegranates is a delicious drink (8:2). Adornments in the shape of the fruit embellished the hem of the robe of the high priest Aaron (*Ex.* 28:33–34) and the capitals of the pillars of the Temple (1 Kings 7:18, 42). Three joined pomegranates also appear on the Hasmonean coins, and it also appeared upon the one *lirah* coin of modern Israel. A number of localities in Israel have its name: Ein Rimmon, Gat Rimmon, Sela ha-Rimmon, etc.

In the time of the Mishnah and Talmud, the pomegranate was one of the important plants, and details about it abound. It grew in nearly every region of the country, but the best were the pomegranates of the valleys (*Tosef.*, *Bik.* 1:5). Those from Badan, apparently in the Wadi Badan near Shechem, won particular praise (*Or.* 3:7). Various species of it were grown (*Tosef.*, *Ter.* 2:4) and there were both sweet and sour varieties (*ibid.* 5:10). Pomegranates were of different sizes (*Kel.* 17:5), but the average size was less than that of the average *etrog* (*TJ*, *Naz.* 1:4, 51c). It is noted that the pomegranate's "fruit is beautiful but not its tree" (*TJ*, *Suk.* 3:5, 53d). Unlike the seeds, the peel is very bitter, hence the pomegranate was used metaphorically for a pupil who selected only the good: "He found a pomegranate, ate the fruit and discarded the peel" (*Hag.* 15b). Schoolchildren sitting in their rows and learning Torah were compared to the compact kernels of the pomegranate (*Song R.* 6:11), and the Talmud interprets the Song of Songs 4:3 homiletically to the effect that "even the most empty of Jews is as full of good deeds as the pomegranate [is of kernels]" (*Ber.* 57a). The delicate beauty of pomegranate kernels found poetic expression in the description of the beauty of Johanan

of whom it was said that anyone wishing to see it: "Let him bring a silver cup from the smelter, fill it with the kernels of a red pomegranate, surround it with a crown of red roses, and put it between the sun and the shade, he will then sense in its brilliance the beauty of Johanan" (BM 84a). The kernels were eaten fresh, or pressed into juice or they were dried and a sort of raisin made from them (Tosef. Shev. 6:29).

The peel of the pomegranate contains a dark brown dye that was used for dyeing (Shev. 7:3) and also as a test for invisible ink (Git. 19b; *narah* there being the Persian for pomegranate). Pomegranate trees are cultivated in Israel and are frequently to be seen near the houses of Arabs. In the valley of Beth-Shean extensive pomegranate orchards were planted but with doubtful success, since the pomegranate was attacked by pests.

POMERANIA, former duchy, subsequently Prussian territory; divided between Poland and Germany since 1945. The earliest references to Jewish settlement in Pomerania date from the 13th century, when (in 1261) Duke Barnim I decreed that the clauses of the Magdeburg *Law concerning the Jews would apply to Stettin (*Szczecin) and the rest of Pomerania. It is recorded that in 1320 the Jews of Templin, Prenzlau, and Pasewalk enjoyed civic equality; indeed, until the *Black Death persecutions (1350) the position of Pomeranian Jewry was relatively favorable. Originally the Jews made their living as traders, later turning to moneylending. Nevertheless, in spite of the privileges of 1481 and a grant of residence to 22 Jewish families, Boguslaw x expelled them in 1492/3. On the other hand, Frederick William, the "Great Elector" (1640–88), extended an invitation to Jewish merchants who had been expelled from Vienna in 1670 to settle in his domains, and by 1682 at least four Jewish families were living in the part of Pomerania that was under Prussian rule. However, numerous complaints against Jewish business practices caused him to threaten Jewish expulsion in 1687/8. By then 15 families had been licensed to reside in Pomerania, the gentry frequently interceding on their behalf. Polish Jewry continued to immigrate to Pomerania in spite of obstructive regulations. In 1706 a rabbi was elected by an assembly of Pomeranian Jewry (46 licensed families), but the king appointed his own nominee to the position.

In the western half of Pomerania, intermittently under Swedish rule, harsher regulations against Jews were in force. From 1728, however, all laws of Prussia applied to the Jews of Pomerania, who at that time totaled about 325 persons. During that period the Jews were mainly engaged in the wool, wheat, and amber trades, and in peddling.

The communities grew after 1812 (c. 1,700 Jews) until 1880 (13,886), after which date they began to decline. In 1932

there were 7,760 Jews (0.4% of the total population) in 50 communities, 28% of whom lived in the modern industrial city of Stettin. During World War II the majority of Pomeranian Jews were deported and annihilated. After the war a community was renewed in Stettin.

[Henry Wasserman]

POMERANTZ, BERL (1900–1942), Hebrew poet. Pomerantz was born in the Polish village of Udrzyn. He studied in Vilna and later settled in Warsaw, where he unsuccessfully applied to the British authorities for an entrance visa to Erez Israel. In December 1942, while hiding with a group of fellow Jewish escapees in the forest near the townlet of Janow, he was killed by German soldiers.

His work constitutes one of the most significant achievements in Hebrew poetry written in Poland between the two world wars. As distinct from the poetry of Bialik and his followers, Pomerantz's poems are in the modern manner. Composed in rhymeless *vers libre*, they are daringly figurative and evince a close affinity with the Yiddish poetry of the day which had been affected by German expressionism. His themes and preoccupations – nostalgic reminiscences of his native village with contrasting urban tableaux suggested by Warsaw (seen as the epitome of the city) – are in keeping with the spirit of his age. He is at his best when rendering visual impressions that are figuratively elaborated until they acquire the status of symbols of an uprooted, humiliated, poverty-ridden humanity. Although emotionally intense and figuratively hyperbolic, Pomerantz's language is also characterized by the concrete detail in its natural contours. His facility in perceiving metaphoric relationships never interfered with his ability to delineate what was actually observed and genuinely felt.

Pomerantz's poetry is closest to that of Ḥayyim *Linsky and Abraham *Shlonsky, but Pomerantz's work is more concrete than the latter's, as well as more intimate in tone. His longest poem, *Me-al ha-Hadom* ("From Above the Footstool"), is dedicated to the memory of his father, "whose grace lasted longer than his meal," as the poet puts it. This is an im-

pressive work, moving in its simple sincerity, which has been compared with Bialik's *Yatmut* ("Orphanhood") cycle. *Bi-Se-fatayim el ha-Sela* ("With Lips to the Rock"), his first book of poems, appeared in Warsaw in 1935. His second book, *Hallon ba-Ya'ar* ("A Window in the Forest"), the last to come out during his lifetime, was published in 1939 by the Stybel Publishing House in Warsaw. In Erez Israel, his poems were regularly printed in the literary journal, *Gilyonot*. However, to make a living Pomerantz engaged in teaching, translation from Yiddish and Polish, and various forms of literary hackwork. Despite his trials, his poetry is never devoid of gentle and compassionate humanity nor does it ever become embittered or aggressive. His last poems, written in occupied Poland, were never recovered and were probably buried with him in the forest. Other works were published in 1966 under the title, *Shirim* ("Poems").

[Natan Zach]

POMERANTZ, FRED P. (1901–1986), U.S. garment manufacturer. Although his formal education never went beyond the sixth grade, Pomerantz was one of the apparel business's most prominent executives. His company, Leslie Fay Inc., was an industry giant, one of the first dress manufacturers to be listed on the New York Stock Exchange, and his products were sold in stores all over the U.S. Pomerantz, a native New Yorker, was a larger-than-life character who looked more like a boxer than a businessman. Rough-hewn in manner, he would arrive at his office in a chauffeur-driven, maroon Rolls-Royce with his initials on the license plates. The car was a gift to him from the workers at his factory in Wilkes-Barre, PA., where Leslie Fay was a major employer, at one time supporting almost 2,000 people. Pomerantz started working at the age of 11, doing odd jobs and learning how to cut fabrics. With his older brother, Michael, he operated a succession of coat, dress, and uniform companies and during World War II he produced uniforms for the U.S. military. In 1947 he launched his own business, using the government's sizing guidelines to make women's dresses, a category he felt was about to increase in importance as the country moved further away from a wartime environment. He called his company Leslie Fay, naming it after his daughter, and began turning out dresses, sportswear and coats in different price ranges with a variety of labels, including Leslie Fay, Kaspar for ASL, LF Petite, Leslie Pomer, and Breckenridge. The company prospered and in 1962, a public offering was issued. In the 1980s, Leslie Fay went through two leveraged buyouts and a second public offering. The first buyout was in 1982, when Pomerantz took Leslie Fay private for \$54.5 million, selling it to his son, John, and other investors. It allowed Pomerantz to cash out his 30% stock interest in the company and he retired. His son succeeded him as chairman. Two years later a second buyout was completed, for \$178.4 million. Following Pomerantz's death in 1986, Les-

lie Fay went public again. Its volume peaked at almost \$900 million in 1991, but early in 1993, it was discovered that two company officials had fraudulently reported quarterly earnings. Corrected figures revealed huge losses. The stock price, around \$12 a share when the scandal broke, eventually plummeted to less than 50 cents. Leslie Fay filed for bankruptcy in 1993 and remained there for five years before emerging with new owners. It changed its name to LF Brands in April 2003, then closed at the end of the year. Despite Pomerantz's limited education, his name became attached to two prominent schools. In the 1960s, a dormitory at Brandeis University in Waltham, Mass., was named for him and his wife, Gerta. In 1986, just a few months after Pomerantz died, his family contributed \$1 million to the endowment fund of the Fashion Institute of Technology in New York and the school's Art and Design Center was named for him.

[Mort Sheinman (2nd ed.)]

POMERANTZ, SIDNEY IRVING (1909–1975), U.S. historian. Pomerantz was born in New York and taught at City College, rising to the rank of professor of history in 1960. He was a pioneer in the study of American urban history, with particular emphasis on the role of the press and business enterprise as determinants of metropolitan growth. His best-known work is *New York, an American City, 1783–1803* (1965²).

The history department of the City University of New York has established the Sidney I. Pomerantz Prize for the best essay on the history of New York City written in an elective course.

ADD. BIBLIOGRAPHY: I. Yellowitz (ed.), *Essays in the History of New York City: A Memorial to Sidney Pomerantz* (1978).

POMI(S), DE' (Heb. מִן הַתְּפוּחִים, *Min ha-Tappuḥim*), one of the four distinguished Roman families which, according to an ancient tradition, were brought by Titus from Erez Israel to Italy (see title page of David de' Pomis, *Zemah David*).

ELIJAH DE' POMI(S) (d. 1298), rabbi and possibly also head of the community in Rome, martyred on the 20th Tammuz 5058. The Inquisition sought to strike at the richer Jews since it considered them supporters of the Patrician Colonna family, who opposed Pope Boniface VIII (1294–1303). While denying that there was any basis for the allegation, Elijah allowed all suspicion to fall on him alone. He was burned at the stake and his family sought refuge in Spoleto. Two anonymous elegies on his death have been preserved.

DAVID DE' POMIS (1525–1593) was linguist, physician, and philosopher. Son of the learned R. Isaac, he was born in Spoleto. He received his early education from his father and later, at Todi, from his uncles Rabbi Jehiel (Vitale) and Moses *Alatino, both physicians who were well versed in philosophy. For six years David studied medicine and philosophy in Perugia, where he received his doctorate in medicine in 1551. He was rabbi and physician at Magliano near Rome, but on account of the edict of Pope *Paul IV forbidding Jewish physicians to attend Christians (1555), he moved from town to town

in Italy before he settled in 1569 in Venice, where he published the greater part of his works. Pius IV (1559–65) gave him permission to attend Christians, a concession revoked by Pius V (1565–72) and later restored by Pope Sixtus V (1585–90). In his booklet *De Medico Hebraeo Enarratio Apologica* (Venice, 1588) David de' Pomis refutes the charges brought against Jews and Jewish physicians in particular by a bull of 1581 by Gregory XIII (1572–85). He stresses that according to the Bible and Talmud a Jewish physician must give help to every sufferer, and cites numerous instances of Jewish doctors who had distinguished themselves by their work and their loyalty. The volume ends with a selection of talmudic rules translated into Latin in order to prove that the Talmud should not be despised.

David de' Pomis is famous above all for the *Zemah David*, a trilingual Hebrew, Latin, and Italian dictionary (Venice, 1587). The work, which is dedicated to Pope Sixtus V, contains numerous discourses of a scientific and historical nature; the preface embodies the author's genealogy and autobiography. Among his other works are a translation into Italian of Ecclesiastes with explanatory notes (Venice, 1571) dedicated to Cardinal G. Grimani; *Discorso intorno a l'humana miseria e sopra il modo di fuggirla* ("A Discourse on Human Suffering and How to Escape It"; Venice 1572), dedicated to Margaret of Savoy, was published as an appendix to this work. His medical works include a treatise on the plague (Venice, 1577) and another on maladies of old age (Venice, 1588) dedicated to the doge and senate of Venice; in the latter, he mentions a work on the divine origin of the Venetian Republic which has not been preserved; also lost were *Sukkat David* and *Migdal David* (mentioned in the preface to *Zemah David*) and a treatise on the battering ram (mentioned under the name of תותק). His translations of Daniel and Job have never been published.

[Alfredo Mordechai Rabello]

POMMER, ERICH (1889–1966), German producer. After serving in the German army in World War I, by 1919 Pommer was directing the Deutsches Eclair (Decla) film company and had gathered a staff that included the director Fritz Lang and the set and costume designers who had been associated with the avant-garde Der Sturm group, Pommer's expressionist succès de scandale. *Cabinet of Dr. Caligari* (1919) was followed by *Dr. Mabuse* (1922); *Niebelungen* (1924), produced after Decla had merged with the German colossus of the industry, UFA; *Variety* (1925); *Metropolis* (1925/26); *Blue Angel* (1930); and *Last Laugh*. The day Hitler became chancellor of Germany, Pommer left the country for Paris, where he produced *Liliom* (1934) with Lang. In the 1930s he worked in England as an independent and in the United States for Fox, producing *Jamaica Inn* (1939) with Alfred Hitchcock and adapting the Sidney Howard

play *They Knew What They Wanted* (1940). He worked again in Germany as an independent producer after the war.

POMPEII, city in Campania, Southern Italy. There is enough epigraphic evidence, mostly graffiti, to show that Jews lived in Pompeii as well as in the neighboring cities of Herculaneum and Stabia, before its destruction in the eruption of Vesuvius in 79 C.E. It seems that most Jews arrived in Pompeii after 70 C.E. This assumption is corroborated by their humble status as freedmen, slaves, servants, or prostitutes. They bear traditional Jewish names such as Iesus, Ionas, Maria, and Martha. However there were also more affluent Jews like a certain Fabius Eupor, who bears the title *princes libertinorum*, or a certain Youdaikos, a wine merchant. It seems, according to epigraphic evidence, that the Jews took an active part in the municipal life of the city.

One of the houses excavated, called by the excavators "Casa degli ebrei" (N. 6, Reg. VIII, Ins. 6), exhibits wall paintings, which depicts the Judgment of Solomon. However it is possible that this painting in fact depicts a tale from Ancient Egypt, mediated by Hellenistic Alexandrine Art, and not a biblical episode. As the painting clearly caricatures the subjects, depicting them as pygmies, the owner was not Jew.

An interesting graffito (Reg. IX, Ins. I, n. 26) read "Sodom Gomor." It is possible that it was written during the eruption of Vesuvius. Another graffito bears the word Cherem in Latin, which may correspond either to *herem* (ban) or *kerem* (vineyard).

°POMPEIUS TROGUS (c. first century B.C.E.), Roman historian of the Augustan age. His comprehensive *Historiae Philippicae* (perhaps completed in 9 C.E.), concentrating on the Macedonian-Hellenistic empires, is not extant. However, an abstract made by Justin in the third or fourth century C.E., and the prefaces to all 44 books, remain. The Jews are first discussed in Book 36 in the context of events in the reign of *Antiochus Sidetes. The account falls into three sections: antiquities (archaeology); a geographical description of Judea; and the history of the Jewish nation from the Persian period. The first section is a combination of the biblical account, a Damascene account, and the hostile Greek-Egyptian tradition. Pompeius Trogus emphasizes the close connection existing between the priesthood and the monarchy in Jewish affairs, and his work reflects the conditions prevailing under the Hasmonean monarchy. He undoubtedly had access to

Greek sources, evidently among them Timagenes. The preface to Book 39 shows that he also extended his history to later developments in Hasmonean Judea.

[Menahem Stern]

°POMPEY (Gnaeus Pompeius Magnus; 106–48 B.C.E.), Roman general and one-time triumvir with *Julius Caesar and *Crassus. In 64–63 B.C.E. Pompey effectively established Roman rule throughout Syria and Palestine. He ostensibly attempted to arbitrate between the Hasmonean factions, represented by the brothers *Hyrchanus II and *Aristobulus II, contending for supremacy in Judea. A third party, according to Diodorus (4:2; cf. Jos., Ant., 14:41), expressed preference for Roman domination which would allow for Jewish religious autonomy. Pompey, though receiving costly gifts from both the brothers, was only biding his time, and when the moment was opportune made his way to Jerusalem. The pro-Hyrchanus party opened the city gates to him. Aristobulus' faction (though he himself was now a prisoner of Pompey) resisted a siege of several months' duration. Both Jewish (Jos., *ibid.*, 64ff.) and pagan sources (Dio Cassius, 37:16) confirm that Pompey took advantage of the Sabbath day, on which Jews refrained from taking the offensive, to accelerate siege operations. The Temple appears to have been stormed in midsummer 63 B.C.E. According to Josephus Pompey entered the Holy of Holies on a "fast-day" but left it intact. There is evidence by Dio Cassius, however, that the Temple treasury was robbed by Pompey. Wholesale slaughter of the defenders took place and the country became tributary to Rome. With this, Jewish independence came to an end, save for the few fitful years of the Jewish War (66–70) and the Bar Kokhba War (132–135). A telling blow was the severance from Judean control of the vital coastal towns of Gaza, Jaffa, Straton's Tower (later Caesarea), among others, as well as Samaria (Ḥag. 25a) and large areas of Transjordan. This act was the prelude to *Gabinus' later subdivision of the country. Aristobulus was carried off to Rome in chains together with the members of his family, including his two sons, Alexander and Antigonos, the former escaping en route. Hyrchanus was rewarded by being granted the high priesthood and leadership of the nation.

The noncanonical Psalms of Solomon are generally attributed to the period of Pompey's capture of the city where this event is described. Pompey is regarded as the "alien to our race" and rod of God's wrath against Hasmonean usurpation of the Davidic throne (Ps. of Sol. 7–9). According to some scholars his era may also be the background of the first century C.E. *Pesher Habakkuk* of the Dead Sea Scrolls.

[David Solomon]

°POMPONIUS MELA (first century C.E.), Roman geographer. Referring to Near-Eastern countries (he calls the area Syria), he mentions Judea and singles out three ancient cities of its southern coastal plain (which he calls Palaestina): Gaza (Aza), Ascalon (Ashkelon), and Jope (Jaffa; *De Situ Orbi* 1:11).

[Jacob Petroff]

POMUS, DOC (Jerome Solon Felder; 1925–1991), U.S. blues singer and songwriter who helped define rock & roll and rhythm & blues music, lyricist and co-lyricist of some of the greatest songs in rock and roll history, including "This Magic Moment," "Suspicion," "Sweets for My Sweet," "Teenager in Love," and "Save the Last Dance for Me," one of the 25 most-performed songs in history; member of the Rock and Roll Hall of Fame. Born in the Williamsburg section of Brooklyn, New York, Pomus contracted polio at age nine and walked with crutches, but it did not hinder his career: he began performing as a teenager, and became one of the finest white blues singers of his time. At the age of 15, already playing saxophone and singing at jazz and blues clubs throughout the New York metropolitan area, he changed his name to hide his profession from his parents. Pomus recorded a number of blues-influenced singles for independent companies beginning in his late teens, none of which were hits. In 1956 he began to focus on writing songs, and soon formed a partnership with Mort Shuman, a pianist, to become one of the greatest songwriting teams in the history of American popular music. They wrote 12 songs a week, and a range of artists including B.B. King, the Drifters, the Mystics, Fabian, Bobby Darin, Dion and the Belmonts, Andy Williams, and Ray Charles cut Pomus' songs. Elvis Presley recorded at least 20 Pomus originals, including "Little Sister," "Viva Las Vegas," "Kiss Me Quick," and "A Mess of Blues."

The Pomus-Shuman partnership dissolved in 1965, and Pomus went into semi-retirement after a fall that left him confined to a wheelchair the rest of his life. He re-emerged in the mid-1970s, and worked with John Belushi to put together the band that supported the Blues Brothers. Pomus teamed with Dr. John (Mac Rebennack), and wrote the songs for his albums *City Lights* and *Tango Palace*. Pomus also co-wrote most of the material for B.B. King's album *There Must Be a Better World Somewhere*, which won a 1981 Grammy Award. Some of Pomus' songs were also used on the soundtracks of the films *Dick Tracy* and *Cry Baby*. Pomus estimated that during his career he wrote more than 1,000 songs, of which 100 were domestic and foreign Top Ten songs and more than 350 top-100 songs, that sold more than 250 million recordings. Pomus was given a Pioneer Award from the Rhythm & Blues Foundation, an organization he co-founded, the first white musician to be so honored. In 1995, a tribute album featuring recordings of 14 of his songs, *Till the Night Is Gone: A Tribute to Doc Pomus*, was recorded by artists including B.B. King, Bob *Dylan, Lou *Reed, Los Lobos, Roseanne Cash, and Dr. John. He was inducted into the Rock and Roll Hall of Fame in January 1992.

[Elli Wohlgelernter (2nd ed.)]

PONARY (Lithuanian: **Paneriai**), a resort area about 5 mi. (8 km.) from Vilna, where from July 1941 to July 1944, about 100,000 people were executed by the Nazis, with the aid of special Lithuanian units. The decisive majority of the victims were Jewish men, women, and children from Vilna and the surrounding area, as well as from other countries. In addition, a few thousand non-Jewish Soviet prisoners of war and civilians were killed there. In spite of the deceit that the Nazis staged to mislead the victims brought to Ponary, the nature of the place was known in the Vilna ghetto, as early as the fall of 1941, from reports of the few people who managed to escape during the executions. A frequently sung lullaby in the Vilna ghetto, "*Shtiler, Shtiler*" ("Quieter, Quieter"), by Shmerle *Kaczerginsky, included the line: "Many roads lead to Ponary, but no road leads back." On January 1, 1942, Abba *Kovner proclaimed in his call for resistance: "Of those taken through the gates of the [Vilna] ghetto not a single one has returned. All the Gestapo roads lead to Ponar [the forest seven miles outside the city], and Ponar means death.... Ponar is not a concentration camp. They have all been shot there. Hitler plans to destroy all the Jews of Europe, and the Jews of Lithuania have been chosen as the first line." His perception of the "Final Solution" came three full weeks before the *Wannsee Conference. It took 18 more months for the Vilna ghetto inhabitants to share his perceptions.

It is known from German documents and other sources that there were instances of resistance on the part of the Jewish victims at Ponary when they were taken out to be executed. In August 1943, the Germans returned to the site, in order to cover up the traces of their crime and began to dig up and burn the corpses. The work was carried out by a group of 70 Jews and ten Soviet prisoners of war, bound in chains. A secret group was organized among them and, during a period of about three months, its members dug a tunnel about 30 meters long with spoons and with their bare hands. On the night of April 15, 1944, this group carried out its escape. Only 13 managed to get away alive, and of these 11 reached the Rudniki forests, where they joined partisan units.

After the war a monument was erected to the memory of the victims and a museum was opened containing remains discovered at the place. An information bulletin entitled *Der Muzej in Ponar* was published for Jewish visitors (1966), who come in large numbers from throughout the world. In 1969 the singer Neḥamah *Lifshitz brought remains of Ponary victims to Israel, and they were placed in the Memorial Hall of Yad Vashem in Jerusalem.

[Dov Levin / Michael Berenbaum (2nd ed.)]

PONTECORVO, BRUNO (1913–1993), Italian nuclear physicist. Born in Italy, Pontecorvo studied at Pisa University and at Rome University, where he taught from 1933 to 1936. He then served with scientific institutions in France and in 1940 moved to the U.S., where he worked as an expert in radiographic prospecting for oil. In 1943 he became a member of the Anglo-Canadian atomic energy team in Montreal and worked

under the Nobel prizewinner Enrico Fermi in the Chalk River atomic project, participating in research leading to the development of neutron physics. From 1948 he was in England as an associate in the Harwell Atomic Research Laboratory. In 1950 Pontecorvo defected to the Soviet Union, where he was put in charge of a team at the Joint Nuclear Research Institute. He became a member of the U.S.S.R. Academy of Sciences and won the Lenin Prize and Order of Lenin (both in 1963).

His main fields of research were neutron physics (1943–48), the production of pi-mesons from neutrons (1950–55), and the interaction of pi-mesons with nucleons. Among his publications are "Artificial Radioactivity Produced by Neutron Bombardment" (in *Proceeding of the Royal Society of London*, 1935); "Isométrie nucléaire produite par les rayons \times du spectre continu" (with A. Lazard, in *Comptes rendus des séances de l'Académie des Sciences, Paris*, 1939); *O protsesakh obrazovaniya tyazholykh mezonov i chastits* ("Production Processes of Heavy Mesons and Particles," 1955); and *Slabye vzaimodeystviya elementarnykh chastits i neytrinov* ("Weak Interactions of Elementary Particles and Neutrinos," 1963).

BIBLIOGRAPHY: A.M. Moorehead, *The Traitors: The Double Life of Fuchs, Pontecorvo and Nunn May* (1952); *Prominent Personalities in the U.S.S.R.* (1968), s.v.

***PONTIUS PILATE**, Roman governor of Judea from 26 to 36 C.E. Pilate held office at the time of Jesus' crucifixion. At the outset of his rule, he incurred the resentment of the Jews when his army, in Jerusalem for its winter encampment, brought into the city its standards bearing the imperial image (Philo, *De Legatione ad Gaium*, 38). This act utterly disregarded the religious sensibilities of the Jews, who staged a mass protest before Pilate in Caesarea. Pilate, who realized that his threats of force would not deter the Jews, yielded to their demands and had the standards removed from Jerusalem to Caesarea. He caused even greater bitterness by his appropriation of Temple funds in order to build an aqueduct. When angry crowds demanded the abandonment of the project, Pilate planted Roman soldiers among them. At a signal from him, the soldiers fell upon the demonstrators, killed and injured many of them, and crushed the resistance (Jos., *Wars* 2:177; *Antiq.* 18:60–62). The situation worsened when Pilate ordered his soldiers to attack the Samaritans who had gathered on Mount Gerizim for a religious ceremony. Many, including several of their leaders, were killed. The Samaritans sent a delegation to protest to L. Vitellius, governor of Syria. Vitellius ordered Pilate to Rome to account for his conduct to Emperor Tiberius and appointed Marcellus in Pilate's place, as well as alleviating taxation in Jerusalem. Before Pilate reached Rome, however, the emperor died and Pilate never returned to Judea.

Bloody riots in the time of Pilate are also hinted at in the New Testament, though there is no clear statement of the circumstances. Pilate is best known with regard to the crucifixion of *Jesus. According to Tacitus "Christus, the founder of the name, had undergone the death penalty in the reign of

Tiberius, by sentence of the procurator Pontius Pilate, and the pernicious superstition was checked for a moment..." (Annales xv, 44:2–5). According to the Evangelists, Pilate considered Jesus innocent of any crime. Jewish pressure alone is supposed to have caused Pilate to have him tried and executed. Christian sources, presumably motivated by a desire to place complete responsibility for the *crucifixion on the Jews, are generally sympathetic to Pilate. Josephus, however, is extremely matter of fact about Pilate's actions: "Pilate, upon hearing him [Jesus] accused by men of the highest standing amongst us, condemned him to be crucified." (Antiq. 18.64, though some scholars believe this passage to be a later interpolation into the text). This is in contrast to the account given in the epistle of Agrippa I (Philo, *ibid.*) which depicts Pilate as corrupt, cruel, and bloodthirsty. In Christian tradition, Pilate's death is attributed either to suicide or to execution by the emperor. A Latin inscription mentioning the emperor Tiberius and Pilate was discovered at Caesarea in 1961 ("...this Tiberium, Pontius Pilate, prefect of Judaea, did [or erected]..."); it clearly indicates that the title of the governors of Judaea was also *praefectus* (see *Procurator). Coins minted by Pilate belong to the years 29–31 C.E.; it is unclear why he did not strike coins in the early years of his governorship (26–28 C.E.), or in his later years (32–36 C.E.). A lead weight from the time of Pilate and dated "Year 15 of Tiberius" is also known.

PONTOISE, town in the department of Seine-et-Oise, France. Toward the close of the 12th century, the Jews of Pontoise were accused of having murdered a Christian child named Richard. In 1204 there was already an established Jewish community supervised by a Christian provost. Proof of the considerable financial activities transacted by the Jews of Pontoise was the introduction of a special royal seal which was to be affixed to all documents. Notable among the scholars of Pontoise was *Moses b. Abraham of Pontoise, the *paytan*, tosfist, and commentator on the Pentateuch and Talmud. Until World War II, there were about 30 Jewish families in Pontoise, but no community was established after the war.

PONTRÉMOLI, EMMANUEL (1865–1956), French architect. Born in Nice, Pontrémoli was appointed inspector of public buildings and state palaces in 1926 and from 1932 to 1937 was director of the École Nationale des Beaux-Arts, Paris. Among his works are the Museum of Natural History and the Institute of Human Paleontology, Paris, the synagogue at Boulogne-sur-Mer, and the Maison Grecque at Beaulieu-sur-Mer built for Theodore *Reinach.

POOL, DAVID DE SOLA (1885–1970), U.S. rabbi, civic and communal leader, and historian. Pool, who was born in London, pursued his rabbinic studies, first at Jews' College, London, and then at the Hildesheimer Rabbinical Seminary in Berlin. Pool went to the U.S. in 1907 to become minister of the Sephardi Congregation Shearith Israel in New York City, the oldest synagogue in the U.S. He served there until his retirement in 1956.

Pool's other posts and activities included: president of the New York Board of Rabbis (1916–17); member of Herbert Hoover's food conservation staff (1917); field organizer and director of army camp work of the Jewish Welfare Board during World War I (1917–18); U.S. representative of the Zionist Commission in Jerusalem to help implement the Balfour Declaration (1919–21); regional director for Palestine and Syria of the Joint Distribution Committee (1920–21); founder and director (1922) of the Jewish Education Committee of New York; president of the Union of Sephardic Congregations from 1928; president of the Synagogue Council of America (1938–40); chairman of the Committee of Army and Navy Religious Activities of the National Jewish Welfare Board (1940–47); vice president (1951–55) and president (1955–56) of the American Jewish Historical Society; and U.S. delegate to the NATO Atlantic Congress in London (1959).

Pool wrote several significant works and monographs in the fields of American Jewish history, religion, education, and Zionism, and edited and translated Sephardi and Ashkenazi Hebrew liturgical works. His works include: *The Kadish* (1909; 1964³); *Hebrew Learning Among the Puritans of New England Prior to 1700* (1911); *Capital Punishment Among the Jews* (1916); *Portraits Etched in Stone: Early Jewish Settlers, 1682–1831* (1952); *An Old Faith in the New World: Portrait of Shearith Israel, 1654–1954* (1955); *Why I Am a Jew* (1957); and *Is There an Answer?: An Inquiry in Some Human Dilemmas* (1966), the last three with his wife, TAMAR DE SOLA POOL (1893–1981). Mrs. Pool was national president of Hadassah from 1939 to 1943 and held executive positions with several other national and world Jewish organizations, among them the American Jewish Committee, the World Zionist Organization, and Youth Aliyah.

POONA, city 75 mi. S.E. of Bombay, India, formerly seasonal headquarters of the British government of Bombay. Poona's Jewish community, which was established in the middle of the 19th century, consisted of Arabic-speaking Jews who made Poona their summer residence and of *Bene Israel from Bombay. David *Sassoon built the synagogue Ohel David, and the Sassoon family endowed a hospital, infirmary, and leper asylum. The Bene Israel synagogue, known as Sukkath Shlomoh, was founded later. From 1870 Poona had a Hebrew printing press, publishing many works in Hebrew with Arabic translations for the Baghdadi Jews, and the Bene Israel published several liturgical works there. Once prosperous and numerous, the Jewish population has declined in recent years as a result of immigration to Israel.

POOR, PROVISION FOR THE. The Bible makes frequent references to the obligation to help the poor, to render them material assistance, and to give them gifts. This obligation is mentioned in the Prophets (Isa. 58:7, 10; Ezek. 18:7, 16) and especially in the Wisdom Literature (Prov. 31:20; Job 22:5–9; 29:12–13; 31:16–20; cf. Ps. 112:9). The Wisdom Literature also urges consideration of the destitute, i.e., by making loans to them (Prov. 14:21, 31; 19:17; 28:8; cf. Ps. 37:21, 26; 112:5). Concern for the poor and hungry is one of the qualities of God Himself (Ps. 132:15; 146:7, etc.); Deuteronomy says that “He loves the sojourner, in giving him food and raiment” (10:18 – sojourners (Heb. *gerim*) were among the poor).

In post-Exilic times it was customary to give gifts to the poor on holidays (Esth. 9:22; Neh. 8:10). This obligation gained in importance in post-biblical times, and in the language of the rabbis, *zedakah* (originally “righteousness”) came to mean giving to the poor. This meaning of *zedakah* appears already in Ben Sira (3:30; 7:10; 29:12; Tob. 4:7–11; 12:8–9), as well as in Syriac, *zedketa*, and in Arabic, *sadaqa*. In biblical usage, however, this meaning is not yet attached to *zedakah*.

Several gifts are mentioned in the Pentateuchal laws; some are to be given to the poor along with other people, while others are intended solely for the poor. Exodus 23:11 says of the produce of the seventh year: “... let the needy among your people eat of it, and what they leave let the wild beasts eat.” According to Leviticus 25:6, these crops are eaten by masters and their slaves, and also by hired servants, sojourners, and strangers, i.e., the poor of the people. In Deuteronomy, the seventh year is a year for the release of debts (Deut. 15:1–2); a warning is given against withholding loans from the poor because of the proximity of the year of release (15:7–11; see *Sabbatical and Jubilee Year). Deuteronomy also commands

that the poor be included in the celebration of the pilgrimage feasts (16:11, 14), which means that they must be allowed to partake of the eating of the sacrifices. Similarly, the poor are the recipients of the tithe of the third year, which, according to Deuteronomy, is not brought to the chosen city but is eaten in the local settlements hence the name of the year “the year of the tithe” (14:28–29; 26:12–15) and the rabbinic name of the *tithe “the tithe of the poor.” The gifts which are specifically intended for the poor are mentioned in Leviticus (19:9–10; again briefly, 23:22 in conjunction with Shavuot, the festival of wheat harvesting) and in the laws of Deuteronomy (24:19–22). The rabbis derived from these passages four gifts from the vineyard – *peret* (“individual grapes [fallen off during cutting]”), *shikhḥah* (“what is forgotten”), *pe’ah* (“[unharvested] edge”), and *olelot* (“small single bunch [of grapes]”); three gifts from grain fields – *leqet* (“gleanings [of what is dropped by harvesters]”), *shikhḥah*, and *pe’ah*; and two from orchards – *shikhḥah*, and *pe’ah* (Tosef., Pe’ah 2:13).

According to the plain sense, Leviticus 19:9–10 designated two types of gift, both given from field and vineyard. The first gift consists of part of the produce which is to be left for the poor. The farmer is enjoined not to reap his entire crop, but to leave part of it unharvested for the poor: “And when you reap the harvest of your land, you shall not reap all the way to the edges of your field”; and the owner of a vineyard is commanded: “you shall not strip your vineyard bare” (Lev. 19:9–10). The *pe’ah* which is left in the field parallels the *olelot* of the vineyard. The second gift consists of what falls to the ground during the harvesting: it is to be left there for the poor, as is written: “neither shall you gather the gleanings [*leqet*] of your harvest ... neither shall you gather the fallen grapes [*peret*] of your vineyard” (*peret* in the vineyard is the same as *leqet* of the harvest, as the rabbis have explained).

Deuteronomy 24:19–22 refers to the second type of gift, exemplified, in the rhetorical manner peculiar to Deuteronomy, by produce of the field, olive grove, and vineyard. The prohibition against returning to gather the sheaf forgotten in the field is another version of the prohibition of total harvest in Leviticus. Similarly, the prohibition of beating the boughs of olive trees again and picking the vineyard again is the equivalent of Leviticus’ ban on gathering up grapes fallen during the harvest.

Ruth’s gleaning the *leqet* after the harvesters (Ruth 2), and the common reference to gleanings after the grape harvest (Judg. 8:2; Isa. 24:13; Micah 7:1, etc.) indicate that these laws were grounded in current practices. Various customs of other peoples have been compared: leaving the last sheaf in the field after the harvest in the superstitious fear that it contained the grain-demon and should therefore be left for strangers; or burial of a “corn baby,” shaped out of a sheaf, in the field in order to assure the renewal of the crop the next year. Such conceptions, however, are alien to the Bible; its injunctions on behalf of the poor are given explicitly moral grounds. Permitting the widow to glean unhindered and giving gifts of oil to the poor are commended in Egyptian wisdom literature as

approved by the gods ("The Instruction of Amen-em-opet," 28; in Pritchard, *Texts*, 424).

[Menahem Haran]

POPES. The earliest, semi-legendary popes, Peter and his immediate successors, were of Jewish birth, yet nothing specific is known of their relations with the Jews. The first pope reported historically to have entered into direct relations with Jews was SYLVESTER I (314–335), who is said to have discussed religious matters with a Jew named Noah and to have conducted a triumphant disputation with a number of Jews, headed by Zambri the magician, in the presence of Emperor Constantine. LEO I (the Great; 440–461) composed some polemical sermons nominally (though not really) directed against Jews. Nothing further is known of papal-Jewish relations until the time of *Gelasius I (492–496), who had in his service, perhaps as physician, a Jew named Telesinus, whom he called *vir clarissimus*, recommending one of his relatives, Antonius, in a letter to Bishop Quingesius. He also ordered an inquiry (496) into the complaint of a Christian slave who claimed he had been circumcised by his Jewish master.

By far the most important medieval pope as regards relations with Jews, as in other respects, was *Gregory I (the Great; 590–604), whose letters are replete with information on the subject. He may be regarded as the founder of the accepted papal Jewish policy in both its positive and its negative aspects. On the one hand Pope Gregory ordered that the Jews should not be molested, that they should be protected from violence and permitted the free exercise of their religion, and on the other hand he said the Jews should be restrained from exercising any semblance of authority over Christians, or from enjoying equal status with Christians, or any privileges beyond those guaranteed them by existing law (i.e., the laws of the Roman Empire after the triumph of Christianity). A letter he wrote to the bishop of Palermo opened, "In the same way as the Jews should not have license to practice in their synagogues anything more than is allowed them by the law, so they should not suffer any disability in that which is conceded to them." This position summed up papal policy and set the example for all later papal legislation on the matter. The statement was reproduced as a fixed rubric, *Sicut Judaeis*, in bulls of protection issued by popes of the later Middle Ages on at least 22 occasions. It is with Gregory I, moreover, that

the papacy came to be recognized as the supreme authority of the Western Church and accordingly Jews outside *Rome, and even outside Italy, began to address appeals for protection to the various popes, primarily through the mediation of the Jews of Rome.

Succeeding popes carried out the policy laid down by Gregory I without, however, extending it. At times of danger to the Church and consequent internal reformation, the tendency was to emphasize the negative rather than the positive side of that policy. Thus STEPHEN III (768–772), protested against the privileged position of the Jews of *Narbonne, their possession of landed property, and their mingling with their Christian neighbors on equal terms. NICHOLAS I (858–867) prohibited the wearing of "Jewish vestments" (i.e., those based on Old Testament prescriptions) by Christian priests. *Leo VII (936–939), departing from the tolerant policy of his immediate predecessors, authorized the archbishop of *Mainz to offer the Jews of his diocese the alternatives of expulsion or apostasy. So far as is known, in the persecutions which took place throughout most of Europe early in the 11th century (in the wake of a report that the Jews had persuaded the Muslims to destroy the Church of the Holy Sepulcher in Jerusalem) the popes took no part. Although a spurious document connected with the event is ascribed to SERGIUS IV (1009–12) a very old Hebrew account tells how on the occasion of a persecution at Rouen the Jews appealed to the pope for protection. If the extant report is reliable, Pope *Benedict VIII (1012–24) must have condoned the persecution of the Jews of Rome (1020–21) on a charge of blasphemy which was supposed to have brought about an earthquake. On the other hand, *Alexander II (1061–73) admonished the Christian warriors setting out to fight the Muslims in Spain (1063) not to molest Jews, and in 1065 he reproved the ruler of *Benevento, in Italy, for forcibly converting the Jews of that city to Christianity. The reformist popes who succeeded Alexander, and who reverted to strict Church discipline, inevitably emphasized the repressive aspect of papal policy. In 1078 GREGORY VII (1073–85) renewed the canon laws against placing Jews in positions of trust, with a particular view to their employment as taxfarmers or mintmasters; he renewed the prohibition in a brief to *Alfonso VI of Castile in 1081. (The suggestion that this pope and his kinsman Gregory VI (1045–46) were of Jewish extraction is based on error: see G.B. Picotti, in *Archivio Storico Italiano*, 1942.)

The popes were not implicated in the persecutions in Europe at the time of the early Crusades, although URBAN II (1088–99) berated Emperor *Henry IV for permitting those Jews who had been baptized by force to return to their faith. Urban's position was based on the doctrine that although compulsion could not properly be used in the baptismal act, once performed the sacrament of baptism was irrevocable, however it had been carried out. In 1120 *Calixtus II (1119–24) issued the protective bull, or *Constitutio pro Judaeis*, beginning with Gregory the Great's words *Sicut Judaeis*, in which any sort of persecution of the Jews was condemned in unqualified terms.

Henceforth, for generations, this bull was often renewed by popes shortly after their accession, on the petition of the Jewish communities and presumably accompanied by gifts. In the next three centuries, the bull was reissued 21 times. Although his authority was not recognized elsewhere, ANACLETUS II, who was of immediate Jewish extraction and who for this reason was inveighed against by his opponents, maintained himself as pope in Rome between 1130 and 1138. It is possible that his career was the source of the medieval Jewish legend of the Jewish pope, Elhanan. Although his enemies lost no opportunity of calling attention to his Jewish origin, this had no lasting ill effects upon the Jews.

On his visit to Rome (c. 1165) Benjamin of Tudela found the Jews enjoying a favorable status. R. Jehiel, grandson of the author of the *Arukh* Nathan b. Jehiel, was then in the service of the reigning pope, *Alexander III (1159–81), who on his state entry into Rome (1165) had been greeted by the Jews, headed by their rabbis and bearing embroidered banners. However, this same pope presided over the Third *Lateran Council of 1179, which renewed the conventional canonical restrictions against Jews, forbidding them to exercise any authority over Christians or to live in close associations with them. The council marked the beginning of reform forced on the Church by the danger inherent in the development of the *Albigenses movement of southern France, in which Jewish influences were wrongly suspected

The reform reached its climax with the Fourth Lateran Council of 1215–16, convened under the auspices of Pope *Innocent III (1198–1216), who may be recognized as at least the systematizer, if not the founder, of medieval clerical anti-semitism. He is also the most important figure in the history of relations between the papacy and the Jews after Gregory I. The anti-Jewish canons of the Fourth Lateran Council, while not necessarily enforced or obeyed forthwith, set a standard of policy which afterwards was kept constantly before the eyes of Christian rulers, especially by the *Dominicans, who established their order at about this time to combat heterodoxy and heresy. Even Innocent, however, did not overlook the other aspect of the traditional papal policy and confirmed the *Constitutio pro Judaeis* in 1199, which protected Jews against violence from the French crusaders. At the same time he contested the claims of the Holy Roman emperor, as the successor to their conqueror, Vespasian, to suzerainty over the Jews throughout Europe.

Although all, or almost all, Innocent's successors confirmed the *Constitutio pro Judaeis*, they usually attempted to secure the enforcement of the anti-Jewish canons of the Lateran Council. Honorius III (1216–27) was, however, forced by circumstances to permit the king of Castile to suspend the obligation of wearing the Jewish *badge as prescribed by this council, so as to prevent the Jews from migrating to Muslim realms. Under *Gregory IX (1227–41), who attempted to enforce the wearing of the badge in Navarre (1234), the papal offensive against the Jews was extended to Jewish literature, for it was with his authorization that the attack upon Jew-

ish books and the Talmud was launched. Copies of the latter were sequestered pending an inquiry into its contents (1239; see Nicholas *Donin; *Jehiel b. Joseph of Paris). This was followed by its condemnation and sentence to burning, which apparently took place not only in France but also (under the pope's specific authority) in Rome (see *Talmud, Burning of). *Innocent IV (1243–54) repeated the condemnation of the Talmud in his bull *Impia judaeorum perfidia* of 1244. In 1253 he approved the archbishop's expulsion of the Jews from *Vienne in France for not obeying the Lateran decrees, and in 1250 he intervened to prevent the erection of a new synagogue in *Córdoba. On the other hand, in two bulls of 1246 he condemned in unqualified terms *blood libels which had begun to arise, and embodied his condemnation in the *Constitutio pro Judaeis*, which he issued for the second time that year. This condemnation remained an integral part of the text of the *Constitutio* whenever it was subsequently reissued by his successors. Although *Alexander IV (1254–61) attempted to enforce the Jewish badge and incited further attacks on the Talmud, he recognized also the value of the Jewish merchants for his treasury, and in 1255 relieved a number of them of all tolls throughout the papal possessions.

In the course of his brief papacy (1265–68) *Clement IV professed anxiety over the conversion of Christians to Judaism and authorized the *Inquisition to take measures against it, thus bringing Jews and the Inquisition into official contact for the first time (1267). A further extension of the Dominican offensive against Jews was approved by *Nicholas III (1277–80); in his bull *Vineam Soreth* (1279) he ordered that the Jews be compelled to listen to conversionist sermons. (There is, however, no evidence that this was enforced in Rome until much later.) This was the pope from whom the mystic Abraham b. Samuel *Abulafia sought to demand in person the release of the Jews from captivity, and was saved from the stake, according to his own account, only by the death of the pope at his summer residence at Soriano on the very night before Abraham entered the city to interview him. Boniface VIII (1294–1303) was the first pope recorded to have treated disdainfully the Jewish deputation who regularly came to congratulate the pope on his accession; he returned over his left shoulder the Torah Scroll presented to him with the scornful remark that they could not comprehend it. Under his pontificate, moreover, R. Elijah de *Pomis was put to death by the Holy Office in Rome, apparently for allegedly having helped the Colonna family in their rebellion. This instance opened up serious possibilities of blackmail, and in 1299 a bull was procured which excluded the Jews, regardless of their material means, from the category of "powerful persons" who could be denounced anonymously to the inquisitors. On the other hand, it was at this time, notwithstanding the canonical prohibition, that popes are first recorded as having Jews regularly in their employment as personal physicians. The first known case is that of the philosopher and translator, Isaac b. Mordecai ("Master Gaio"), who was in the service either of Boniface or his predecessor, Nicholas IV.

On the death of Boniface, there began the “Babylonian Exile” of the papacy at *Avignon (1309–77) which, along with the adjacent *Comtat Venaissin, had at that time finally become a papal possession by purchase. From this time onward, these papal territories in France were treated in much the same way as those in Italy, and Jews were consequently permitted to remain there when they were expelled from the rest of Provence. Not much is recorded about the policy toward the Jews of the first Avignonese pope, CLEMENT V (1305–14). His successor, *John XXII (1316–34), however, adopted a singularly antagonistic attitude toward Jews, although he did attempt to protect them at the time of the *Pastoureaux disturbances in 1320. John expelled Jews from certain places in the French papal dominions and temporarily (1321) from Rome itself. He converted former synagogues into churches, enforced the wearing of the Jewish badge (1317), encouraged conversion by permitting apostates to retain their property (1320), instituted special surveillance over converts to prevent backsliding (1317), and once more stirred up the French bishops against the Talmud (1320). John’s successors proved themselves more favorably disposed toward the Jews. With them, there are records of Jews acting as tailors and parchment makers to the papal court in Avignon. *Benedict XII (1334–42) actively protected the Jews of Germany from a wave of massacres which broke out after a charge of the desecration of the *Host, by refusing to give credence to the charge without proper inquiry. *Clement VI (1342–52) was among the most benevolent of all medieval popes. Besides reconfirming the *Constitutio pro Judaeis* (as almost all other popes of the period had done), he condemned forcible baptism, and in 1348 he issued a benevolent edict protecting Jews in the widest terms from the fantastic accusations and brutal massacres which followed the *Black Death.

During the period of the great schism (1378–1417) the papacy was so absorbed in its own problems that it had little opportunity to occupy itself with the Jews. Hoping to score an impressive victory by having the Jews acknowledge the truth of Christianity, thereby to reinforce his personal status, the Spanish antipope *Benedict XIII established an almost frenetic anti-Jewish policy. It was he who was responsible for and presided over the disputation of *Tortosa (1413–14) and who instigated the persecutory movement, including condemning the Talmud and imposing wide-sweeping restrictions upon the Jews, which followed also in the Spanish Peninsula.

The Italian popes, however, influenced by the spirit of the Renaissance, reverted (with some exceptions) to a more tolerant policy. *Boniface IX (1389–1403), for example, had a succession of Jews in his employ as physicians and was responsible for a number of protective edicts, including one in 1402 which recognized the citizen rights of the Roman Jews. *Martin V (1417–31), with whose election the great schism ended, followed the example of Boniface, owing in part possibly to the influence of his Jewish physician, Elijah b. Shabbetai *Beër. Martin greatly favored the Jews of Rome, prohibited forcible baptism, and even abolished the clerical prohibition

on employing Jewish physicians. There is extant a drawing showing him greeting a deputation of Jews from Constance who came to welcome him to that city. This, however, was the period of intensified agitation against the Jews by the friars, led by John of *Capistrano, which could not fail to influence the papacy. In 1422 the alarmed Jews obtained a further edict of protection from the pope, and the friars were warned not to continue to incite the populace against them. (The edict was actually withdrawn a year later on the grounds that it had been obtained by fraud.) In 1427, as a result of reports that the Franciscan chapel on Mount Zion had been seized, the pope forbade Italian vessels to convey Jews to Palestine. A number of other unfavorable edicts led the Jews of Italy to organize countermeasures, backed by appropriately bestowed monetary gifts. This resulted in a very sweeping edict from the pope in 1429 protecting the Jews from the propaganda of the friars. The two conflicting currents, favorable and unfavorable, appear also in the policy of *Eugenius IV (1431–47) who, though at first renewing the privileges and safeguards of the Jews, was later forced to issue a bull putting into effect the severe decisions of the Council of Basle against Jews, forbidding them to practice handicrafts and moneylending, to engage in intercourse with Christians in any capacity, and even to study the Talmud. Once again there was a conference of Italian Jews and countermeasures (no doubt including bribery) were taken until the pope, persuaded that his policy was economically ruinous, withdrew the prohibitions. Restrictions were, however, renewed though apparently not enforced under the successors to Eugenius, *Nicholas V (1447–55) and & Calixtus III (1455–58), under whose rule the influence of Capistrano and the Observantine *Franciscans reached its climax. The humanist PIUS II (1458–64), who maintained the poet Moses da *Rieti in his service as his physician, was bent on a crusade against the Turks and therefore heavily increased taxation on the Jews.

With *Sixtus IV (1471–84) the Renaissance spirit triumphed in Rome, and for the next three quarters of a century relations between the popes and Jews were particularly close and cordial. Formally, of course, the popes had to conform to the external demands of unbending Christian orthodoxy. Thus Sixtus was nominally responsible for the introduction of the *Inquisition into Spain by his bull of 1478. On the other hand he had close personal relationships with Jews, as did his immediate successors down through the middle of the 16th century. Sixtus was interested to some extent in Hebrew literature and employed Hebrew copyists at the Vatican library. He also employed Jewish physicians, one of whom is said to have attempted a blood transfusion to save him in his last illness. In 1475 Sixtus initially refused to countenance a blood libel associated with the name of Simon of *Trent. The notorious *Alexander VI (1492–1503) permitted refugees from Spain to settle in Rome and had as his body physician Bonet de *Lattes, who dedicated his *Annuli... super Astrologiae utilitate* to him in 1493. JULIUS II (1503–13) extended his favor in the same manner to Samuel Sarfatti.

The climax in the favorable relations between the Jews and the Holy See was, however, reached with the popes of the house of Medici. *Leo X (1513–21) was so well disposed in fact that it was said that the Roman Jews considered his pontificate a presage of messianic times. Leo issued a notably benevolent edict in favor of the Jews in 1519, in which he repealed the obligation of wearing the Jewish badge in the papal dominions in France and allowed it to fall into disuse in Italy. He employed the converted Jewish musician, *Giovanni Maria, took a lively interest in Jewish literature, and permitted the printing of the Talmud. It is significant at this time that when Johann *Reuchlin made his appeal to the pope from the sentence of the Dominicans of Cologne, he requested the papal physician Bonet de Lattes, a Jew, to support him, such was the influence and esteem the latter enjoyed at the papal court. A kinsman and successor to Leo, *Clement VII (1523–34), showed even greater benevolence toward the Jews, so much so in fact that he was called “the favorer of Israel.” He was especially noted for his close and friendly relations with David *Reuveni and Solomon *Molcho. His outstandingly favorable attitude was continued by his successor, PAUL III (1534–49), who invited refugee Marranos from Portugal to settle in Ancona and who employed Jacob *Mantino as his physician. The reluctance of the Medici popes to authorize the Inquisition in Portugal or to permit it to go into effect, although ultimately defeated, typifies the general tolerance of their approach to the Jews.

By now the spirit of the Counter-Reformation was beginning to make itself felt. *Julius III (1550–55) was personally friendly enough; he employed *Amatus Lusitanus as his physician, confirmed the rights of the Marranos of Ancona, condemned the blood libel, and prohibited the baptism of Jewish children without the consent of their parents. But the reactionary party led by Cardinal Caraffa, the embodiment of the Counter-Reformation, ultimately gained the upper hand. Before long this resulted in the establishment in 1553 of the House of *Catechumens (*Casa dei Neofiti*) in Rome at the expense of the local Jewish communities, the confiscation and burning of the Talmud (1553), the institution of the Congregation of the Holy Office with the surveillance of the Jews as one of its functions (1553), and the institution of a regular censorship of Hebrew books (1554). After the brief papacy (April 1555) of MARCELLUS II, Cardinal Caraffa himself became pope as Paul IV (1555–59), and the spirit of the Counter-Reformation triumphed with him and through his personal influence. The reaction against the Jews (especially in Rome and the Papal States, where he was able to carry his policy into effect) began immediately after his accession with the fanatical bull *Cum nimis absurdum* of 1555, which in effect drove the Jews out of civilized life and began the age of the *ghetto in Italy with all its horrors. Pope Paul IV was, moreover, personally responsible for the treacherous and faithless onslaught on the Marranos of Ancona, as a result of which some 25 were burned at the stake in the spring and summer of 1556. When he died on Aug. 18, 1559, there was a general reaction against his severity and a story is told that his overthrown statue was

surmounted by a yellow hat such as he had imposed on the Jews of his dominions.

PIUS IV (1559–65), Paul’s successor, brought a brief respite, and in 1562 he modified the severity of the enactments of his predecessor, even permitting the printing of the Talmud with certain omissions or, without them, under a different name (1564). He also induced the Holy Roman emperor to withdraw an edict of expulsion against the Jews of Bohemia, and eased living conditions in the newly established Roman ghetto by prohibiting the increase of rentals there. He was succeeded by Pius V (1566–72), who, as Cardinal Ghislieri, had formerly been at the head of the Roman Inquisition, in which capacity he led the assault on Jewish literature during the preceding decade. With him the policy of repression triumphed again; the regulations of 1555 were renewed and the concessions made by his predecessor revoked. In 1567/68 he forbade Jews of the Papal States to lend money at interest, and his bull *Hebraeorum gens* of 1569 expelled Jews from the smaller places in the papal dominions, with the exception of Rome and Ancona in Italy, and Avignon, Carpentras, and two other places in France. His personal zeal, moreover, was responsible for the introduction of the ghetto system into the duchies of Urbino and Tuscany (1570–71).

There were some slight ameliorations under *Gregory XIII (1572–85), but he was responsible for the renewal of the institution of the conversionist sermons which Jews were compelled to attend, and for the stringent prohibition of the practice of medicine by the Jews among Christians. The latter marked the end of the tradition of Jewish medical practitioners in the service of the Vatican, which had been commonplace since the 13th century.

There was again a brief favorable interlude under Sixtus V (1585–90), who made a determined attempt to restore the economic prosperity of the papal states and for that reason reversed the anti-Jewish policy of former popes, although before his election he had shown great severity against the Marranos when he was inquisitor in Venice. He had in his service as his majordomo Joao Lopes, a Marrano who had reverted to Judaism. He also granted Meir *Magino a monopoly for an improved method of silk manufacture, accepted the dedication to himself in David de’ Pomis’ dictionary, *Zemah David*, and protected the Jews of the Papal States physically on more than one occasion. His bull *Christiana pietas* of 1586 revoked the persecutory edicts of his predecessors and permitted the Jews to return to the Papal States, to employ Christian servants as before, and to practice medicine. Moreover, he reversed the policy of former popes in regard to the practice of usury, permitting the opening of loan banks in the Papal States and issuing licenses or “absolutions” for Jewish moneylenders in various parts of Italy, which for the next 100 years provided a considerable income to the papal treasury. This favorable interlude was short-lived, ending soon after the death of Sixtus V. *Clement VIII (1592–1605) must at one time have been on friendly terms with Jews, for a Hannukkah lamp bearing his coat of arms as cardinal is preserved in the Victoria and

Albert Museum, London. Nevertheless, in the year after his accession he issued the bull *Caeca et obdurata* (1593), which reinforced once more the persecutory policy of Paul IV and Pius V, except for the prohibition on moneylending, which remained permissible for some time longer.

From this period on, for between 200 and 300 years, there was no intermission or change in the policy of the popes who, absorbed with fears for the position of Roman Catholicism in Europe, considered that the repression of the Jewish communities under their control was an essential part of Catholic orthodoxy. Still, they preserved something of traditional balance in protecting the Jews of their dominions from the physical violence and the more fantastic antisemitic allegations common elsewhere. Occasionally, they were successfully appealed to by the Jewish communities of other countries for protection against such violence and allegations. With the extension of the area of Italy politically subject to the pope, the Roman policy was extended to the Jewish communities of the duchy of Ferrara (in 1625) and to Urbino (in 1634) by Urban VIII (1623–44), who was responsible also for prohibiting tombstones in Jewish cemeteries. He also legalized forced baptisms in certain circumstances, declaring that the baptism of the head of a family could include, if he so desire, everyone in his household who were under age or dependent on him. Popes Innocent X (1644–55), Alexander VII (1655–67), and Clement IX (1667–69) enforced the policy somewhat less severely, the last named in his brief pontificate abolishing (in 1668) the humiliating race run by the Jews at carnival time. In 1674 *Clement X (1670–76) suspended the activities of the Portuguese Inquisition which were, however, renewed in 1681 by Innocent XI (1676–89). Innocent again (and this time finally) prohibited the practice of moneylending by the Jews of the papal possessions and suppressed their loan banks, a measure so harsh that its execution had to be twice postponed, eventually bringing the Jewish communities to the edge of ruin. At the same time this pope discouraged forced baptisms (which decreased somewhat under his rule) and in 1685 secured the release by the republic of Venice of the Jewish prisoners captured in the Morea.

With the 18th century conditions deteriorated still further. Renewed severity began under *Benedict XIII (1724–30) and *Clement XII (1730–40). The latter commissioned Cardinal Petra in 1733 to draw up a new anti-Jewish code, which introduced various new degradations, e.g., that the Jewish badge was to be worn even while traveling and that rabbis were not to be permitted to have any distinguishing costume. In 1766 this code was renewed and rigorously enforced by *Benedict XIV (1740–58) and the condition of the Jews of the papal dominions reached its nadir. The pope reinstated rigorous measures against Hebrew literature, and in 1747 he ruled that a Jewish child once baptized, even against Church law, had to be brought up as a Christian. This ruling gave impetus to the scandal of forced baptisms, which from then on assumed tragic prominence in the history of Roman Jewry. Yet even this pontiff did not forget the nobler papal traditions.

When in 1758 the Jewish communities of Poland appealed to him, through Jacob Selek, for protection against the wave of blood libels which were becoming a perpetual menace to their lives, he sympathetically referred the matter to the Holy Office of the Inquisition, an act which resulted in the famous report of Cardinal Ganganelli condemning the libel. In 1759 this report was presented to and approved by the next pope, *Clement XIII (1758–69), who communicated the findings to the papal nuncio in Warsaw and instructed him to protect the Jews from violence in this matter. Ten years later, Ganganelli himself became pope, as Clement XIV (1769–74). Profoundly moved by the misery into which the Jewish communities of the Papal States had fallen, he wanted to improve their economic condition. Among other reforms, he accorded Jews some freedom of occupation and released them from the immediate jurisdiction of the Inquisition. He showed marked favor to the Roman Jewish leader, Ezekiel Ambron. This proved to be only a brief interlude, however, for with his successor, Pius VI (1775–98), a complete reaction set in. The *Editto sopra gli ebrei* (1775) of Pius codified, reinforced, and intensified the whole of former, degrading anti-Jewish legislation, however barbarous it was, and went so far even as to forbid Jews from passing the night outside the ghetto, under pain of death. These were the conditions under which the Jews of the Papal States continued until the armies of the French Revolution overthrew the temporal power of the popes in 1797–98 and as a matter of course abolished all discriminatory legislation. After the overthrow of Napoleon, Pius VII (1800–23) led the way in the reaction which followed throughout Italy. (The papal possessions in the south of France, with control over the Jewish communities of that region, were by now lost.) To an antiquated religious obscurantism was now added the more cogent consideration that Jews were correctly suspected of sympathy with the liberal movement in Italian politics. From this time down to the overthrow of the temporal power of the papacy, the old policy of repression was renewed, from this point of view the Papal States now being the most reactionary area in Europe. Pope Pius VII returned from his long exile determined to reestablish the pre-revolutionary ecclesiastical regime down to the last detail, including the ghetto, conversionist sermons, and so on. Only the wearing of the Jewish badge, though nominally prescribed, was not actually enforced. Pius VII was, however, almost moderate as compared with his successor, Leo XII (1823–29), who revived the most fierce anti-Jewish prejudices, even to the point of having the gates of the ghettos restored and reenacting the *Editto sopra gli ebrei* of 1775. Pope Pius VIII (1829–30) found time in the course of his brief pontificate to forbid the Jews to enter into personal relations with Christians for any purpose except in the course of business. His successor, Gregory XVI (1831–46), even reimposed the carnival tax, which had replaced the old abuse of the Jewish carnival race, with all its degrading associations. In 1836 he expelled the few Jews who had settled “illegally” in Bologna. Pius IX (1846–78) began his pontificate as the hope of the liberal movement, introducing several

measures for the amelioration of the position of the Jews of the Papal States. Later, however, he too turned to reaction, and though his personal attitude remained not unfriendly he kept to all of his predecessors' restrictions with an unabated vigor. Under him even the abusive forced baptism of children prevailed, the most notorious (but not the only or the last) instance being the infamous *Mortara case of 1858, in which the pope maintained an absolutely unyielding attitude.

After the fall of Rome and the end of the Church's temporal power in 1870, up to which time the policy of repression had continued in force almost unmodified, the relationship of the papacy with the Jews inevitably changed. It was no longer a question of political treatment in an area subject to direct papal rule, but of a general attitude toward them on the intellectual and theological plane, political influence being therefore indirect. The papal attitude was inevitably influenced to some extent by the natural sympathy of the Jews in Catholic countries with the secular and anti-clerical party and their natural antagonism to Church influence in education. Although Leo XIII (1878–1903) was guilty in 1895 of the blunder of sending his blessing to the clerical-antisemitic coalition in Austria, he did, on the other hand, try to some extent to moderate passions in France. In 1892 he called on all right-thinking persons in that country, including Protestants and Jews, to unite against the “enemies of religion and society,” i.e., the Freemasons and secularists. *Pius X (1903–14), though no less opposed to modernism, was not as interested in political matters as his predecessor. Early in 1904 he received Theodor *Herzl in audience, his secretary of state subsequently expressing mild sympathy with the humanitarian, though not the political objectives of Zionism. Benedict XV (1914–22), on the other hand, though he vaguely endorsed the *Balfour Declaration in an interview with Nahum *Sokolow, afterward expressed grave concern over the control of the holy places in Palestine. *Pius XI (1922–39) was confronted with the problems which arose with the triumph of the Nazi movement in Germany and antisemitism in Italy, and expressed his disapproval of racism in the most outspoken fashion, declaring that “spiritually we are all Semites.” In 1935, at the time of the revival of the blood libel in Germany, he formally accepted from Cecil Roth a copy of his new edition of Pope Clement XIV's report condemning the libel, thereby confirming in effect the declaration of his predecessor. His successor, *Pius XII (1939–58), though less outspoken at a period of greater danger and failing even to condemn publicly the deportations and annihilation of European Jewry, nevertheless, on the occupation of Rome by Germans in 1943, received many refugees in the Vatican, and thus set the example for, even if he did not inspire, the protection of the Jews of Italy by the Catholic population. His reaction to the establishment of a Jewish state was unfavorable, since this falsified the Catholic interpretation of prophecy. The personal relations of *John XXIII (1958–63) with individual Jews were cordial both before and after his elevation to the papacy, and as cardinal he showed active sympathy with the victims of Nazi persecution. Jews moreover shared in the

atmosphere of tolerance toward non-Catholics which became manifest during his pontificate. Under his successor Paul VI (1963–1978), the Second Vatican Council adopted a schema deploring antisemitism and stating that the blame for Jesus' death must be attributed to some of his contemporaries and not to the Jewish people as a whole. The declaration was less forthright than had been advocated by John XXIII but its spirit led to important modifications in Catholic textbooks. In 1964 Paul visited Christian holy places in Israel for a day.

Paul VI was followed by John Paul I (1978) whose sudden death, a month after his election, cut short his papacy.

*John Paul II (1978–2005) succeeded John Paul I, his pontificate of 27 years becoming the third longest in Church history. The first Polish pope, the former Karol Wojtyła was a political activist who fought for justice and human rights and who vigorously opposed totalitarianism. Known as a defender of the Jewish people, his ideological focus, personal integrity, and lengthy tenure provided a stable platform for growth in Jewish-Catholic relations, as he sought to broaden the ecumenical and interreligious relations of the Church.

As a youth in Wadowice, he had extensive contacts with the Jewish community, a legacy which deeply informed his pontificate. As pope, he worked consistently to improve Jewish-Catholic relations, as well as Vatican-Israel relations. He was the first pope since Peter to visit a synagogue (the Great Synagogue of Rome in 1986), a move seen as bridge-building by Jews and Catholics alike. During this visit, he acknowledged the filial ties of Christianity to Judaism, stating, “I am Joseph, your brother!” In June 1994, he established formal diplomatic relations between the Holy See and the State of Israel, a move that publicly acknowledged Israel's centrality for the Jewish people. In March 2000, he convened a Day of Pardon for the sins committed by Church members over the centuries, including all antisemitic actions, which he declared were “a sin against God and humanity.”

John Paul II, the most widely traveled pope in history, made a historic visit to Israel in 2000. He visited Yad Vashem, where he paid homage to the victims of the Holocaust. At the Western Wall, he inserted a written apology to the Jewish people for antisemitic sins by Catholics into a crack in the wall.

John Paul II authored or commissioned several very important documents on the Churches' relations with the Jews including “We Remember: A Reflection on the Shoah” (1998; Commission for Religious Relations with the Jews). His focus was to affirm the special relationship between Christianity and the Jewish people and the permanent validity of God's on-going covenant with the Jews, as articulated in the groundbreaking work of the Second Vatican Council “*Nostra Aetate*.” He challenged the Catholic Church throughout the world to repent of its past history of antisemitic actions and to strive for a fresh, deeper understanding of the Jews and Judaism within God's plan for salvation history, emphasizing the filial ties between Judaism and Christianity and denouncing supersecessionism. He was unafraid to ask if the Church's own attitudes allowed or encouraged the cataclysm of the Holocaust, and

he diligently sought to battle against latent antisemitism in the Church. While affirming the right of the State of Israel to exist, the pope also established official contacts with the Palestine Liberation Organization, beginning in 1994, and culminating with the signing of a formal Basic Agreement in 2000. He opposed the invasion of Iraq in 2003, but welcomed its new government in 2004. Pope John Paul II also canonized more saints than any other pope in history. Two among them proved disconcerting in some Jewish circles: Edith Stein (d. 1942, canonized 1998), a Jewish convert to Catholicism who died in the Holocaust, and Pius XII (beatified though not yet canonized), who many felt should have done more to protect the Jewish people during the Holocaust.

BENEDICT XVI (2005–). The former Joseph Cardinal Ratzinger, an eminent theologian who served alongside John Paul II for many years as prefect for the Congregation of the Doctrine of the Faith, began his pontificate with a visit to the Roonstrasse Synagogue in Cologne, the oldest synagogue in northern Europe. During this visit, Benedict XVI, a German by birth, spoke out against “new signs of antisemitism” that are emerging in his home country, Europe, and throughout the world. This action is seen as an affirmation of the course of action and theological outlook begun during the Second Vatican Council, and continued in the ground-breaking work of Benedict’s predecessor, John Paul II. In 2006 he visited Auschwitz, delivering a speech criticized by many for the failure to characterize the Holocaust explicitly as a crime of the German people against the Jews.

POPLAR (Heb. פופל צפצפה), tree. The *Populus euphratica* grows wild on the banks of the Jordan. Its leaves are usually broad though some are long and narrow, resembling those of the willow. In Israel the white poplar, *Populus alba*, is grown as an ornamental tree. It is a tall tree with a white bark, and the underside of its leaves are silvery white. This species, which flourishes on the banks of rivers, is one of the two that Ezekiel refers to as a tree growing by the side of water (Ezek. 17:5). It is possible that the white poplar was the *livneh* peeled by Jacob to place in front of the sheep (Gen. 30:37; but see *Storax). When stating that it was not permitted to use the poplar for the *willow branch, one of the *Four Species, the Talmud indicates its characteristics: “The poplar has a white stem, a round leaf, and an edge serrated like a sickle” (Suk. 34a), and notes that whereas the serrations of the leaf edges of the willow are small and dense, those of the

poplar are like the teeth of a saw (Maim. Yad, Lulav 7:3–4). The warning against confusing the poplar with the willow was due to the fact that their names were interchanged.

POPPAEA, SABINA, second wife of Nero (62–65 C.E.). Josephus describes her as being sympathetic toward Judaism, even terming her a “god-fearing” woman (Ant., 20, 189–96). She twice interceded successfully on behalf of the Jews. When Josephus went to Rome in 64 C.E. to plead for the priests imprisoned by Felix, he was introduced to Poppaea by the Jewish actor *Aliturus. With her assistance the priests were freed and she bestowed many gifts on Josephus himself (Life, 16). On the second occasion she interceded on behalf of a delegation headed by the high priest *Ishmael b. Phabi, sent by the priests to Rome to appeal against a decision of the procurator *Festus, who had, at the request of *Agrippa II, ordered the demolition of a wall erected by the priests to prevent the king from viewing the proceedings in the Temple. Poppaea influenced Nero to uphold the appeal and the wall was allowed to stand. Tacitus, who makes no mention of her attitude toward the Jews, pictures Poppaea as a corrupt and cruel woman.

POPPER, family of entrepreneurs and communal leaders in Bohemia. Members of the Popper family from Breznice, Bohemia, attended the Leipzig fairs from the late 17th century. WOLF POPPER, the “Primate of Bohemian Jewry,” was in charge of the collection of taxes for 18 years (1749–67). His son HAYYIM (Joachim; 1720–1795) moved to Prague and was a successful merchant (woolens, potash, whalebone), banker, manufacturer, and co-lessee of the profitable tobacco monopoly. In 1775 he is mentioned as holding his father’s position in perpetuity. Joachim Popper was a patron of literature and also donated large sums to philanthropy, maintaining a balance between Christian and Jewish causes. In 1790 he was ennobled as Edler von Popper in recognition of his contributions to the welfare of the state. On the day he received his patent of nobility he presented a petition to Leopold II requesting the introduction in Bohemia of the more liberal *Judenpatent* of Galicia, which included obligatory military service for Jews. However, a group of Prague Jews presented a counterproposal arguing against conscription. He suggested reform of the system of taxation in 1792, the same year he resigned from office. On his death he bequeathed large sums to charity, and provided for the creation of a synagogue in his home in which prayer and study were to be subsidized perpetually. He also stipulated that his firm continue to bear his name.

POPPER, DAVID (1843–1913), cellist and composer. Popper, son of a cantor, studied the violin at the Prague Conservatory but because of a shortage of cello students, he changed to cello and became a pupil of Julius Goltermann. At the age of 18 he was appointed assistant principal cellist of the Löwenberg Court Orchestra and at the age of 20 became famous as a concert artist after his first tour of Germany in 1863. From 1868 to 1873 he was first cellist at the Vienna Opera and the Vienna PO (the youngest player to hold such a post) and became a member of the Hubay Quartet. After 1896 he was professor at the Budapest Conservatory. He composed more than 75 works, including many solos for cello, which won favor among cellists. Among his compositions are four concertos for cello and orchestra (op. 8, 1871; op. 24, 1880; op. 59, 1880; op. 72, 1900); Requiem, op. 66 (1892); String Quartet, op. 74 (1905); and his manual *Hohe Schule des Violoncellspiels*, c. 1901 (a set of 40 studies that examine the positions of the left hand within a highly chromatic, Wagner-influenced setting) which remains in use until today.

[Israela Stein (2nd ed.)]

POPPER, JOSEF (pseudonym, **Lynkeus**; 1838–1921), Austrian social philosopher, engineer, and inventor. Born in Kolín, Bohemia, Popper studied at Prague University. As a Jew, he was refused a teaching post at the university and worked for a while with the national railroads in Hungary. He then went to Vienna where, after a series of fairly humble jobs, he invented, at the age of 30, a device to prevent fur from accumulating on engine boilers. The meager profits from this and other inventions enabled him to devote his later years to writing on social reform. His pseudonym, Lynkeus, is the name of the keen-sighted, mythological, Argonaut helmsman.

As a scientist Popper was far ahead of his time. In 1862 he proposed a system for the electrical transmission of energy, but sent the monograph to the Vienna Academy of Sciences in a sealed letter to be opened 20 years later. He discussed the possible existence of quanta of energy before Max Planck enunciated the quantum theory; in 1884 he tried to relate matter and energy, 20 years before Einstein's theory of relativity; and in 1888 discussed the possibility of lightweight steam engines for flying machines in a treatise, *Flugtechnik* (1889). In *Phantasien eines Realisten* (2 vols., 1899), suppressed by the Austrian government as "immoral," he anticipated, as Freud himself acknowledged, the fundamental basis from which the latter elaborated his theory of dreams.

Popper was best known, however, for his writings on social reform.

In his first work of this nature, *Das Recht zu Leben und die Pflicht zu Sterben...* (1878), he contrasted man's natural right to live with the alleged obligation to sacrifice himself when required to do so by the state. He denied that man

has a duty to let himself be killed when ordered and, in *Die allgemeine Naehrpflcht als Loesung der sozialen Frage* (1912), advocated the right of the individual to live in freedom and dignity within the framework of a social system created for the benefit of its members. Popper's solution to social problems was the formation of a labor force (*Naehrmee*) whose purpose was "producing or procuring all that physiology and hygiene show to be absolutely indispensable." This was to be regarded as a minimum contribution by every member of society. Popper's philosophy differed from Marxism, in that it was based on simple humanitarianism and common sense and endeavored to eliminate class hatred by a synthesis of socialism and realism. In trying to revive Voltaire's philosophy, he advocated a policy which in fact became crystallized in the modern welfare state.

Popper regarded metaphysics, theology, and traditional religion as harmful, and to be eliminated from an economically and socially reformed state. He saw religion, especially Christianity, as opposed to genuine individual human values, and believed that education, especially about the history of religions, could lead to a superstition-free culture.

Although he suffered considerable humiliation as a Jew, Popper refused to convert, and accused the German chancellor, Bismarck, of antisemitism in *Fuerst Bismarck und der Antisemitismus* (1886). He believed that only a Jewish state would eliminate antisemitism, and although he never took an active part in the Zionist movement he bequeathed his substantial collection of books to the National Library in Jerusalem.

Popper was a close friend of Albert Einstein, who described him as a "prophetic and saintly person" who had forecast that "the continued existence of mankind without organized planning is inconceivable." He was widely regarded as a genius, and a bust of him was erected in the Rathauspark in Vienna. It was destroyed by the Nazis in 1938. Popper's writings include *Die technischen Fortschritte nach ihrer aesthetischen und kulturellen Bedeutung* (1886), *Friedensvorschlaege, Schiedsgerichte, Voelkerbund* (1910), and *Krieg, Wehrpflicht und Staatsverfassung* (1921).

[Josef J. Lador-Lederer.]

POPPER, JULIUS (1857–1893), Romanian explorer. Popper's father was the principal of the first Jewish school in Bucharest. After studying engineering in Paris, he went on a world trip during which he heard about gold deposits on Tierra del Fuego. His exploration of the island proved the stories to be true, and he accordingly designed a machine for extracting the gold. Establishing himself as ruler over the island, Popper gave it a code of laws and defended it against other adventurers.

POPPER, SIR KARL (Raimund; 1902–1994), philosopher. Popper was born in Vienna of Jewish parents who had converted to Christianity. In the early 1920s he worked with juvenile delinquents in Alfred *Adler's clinic in Vienna. In 1930 he became a secondary school teacher of mathematics and science. The rise of Fascism led to his leaving Austria in 1937, and until 1945 he taught philosophy at Canterbury University College, New Zealand, where he wrote *The Open Society and Its Enemies*. He then moved to the University of London, and in 1949 became professor of logic and scientific method at the London School of Economics. He was knighted in 1965, and in 1982 was made a Companion of Honour (CH). Popper's philosophical views were profoundly influenced by the Einsteinian revolution in physics.

As early as 1919 Popper began to draw the philosophical consequences of this revolution. He saw that the "inductive method," hitherto supposed to be the distinguishing mark of science, was a myth. Empirical evidence was used in science, not to establish cautious hypotheses, which is impossible, but to refute bold ones. The mark of a scientific theory was its refutability, and the scientific pretensions of those other contemporary revolutions in thought, the theories of *Marx, *Freud, and Adler, were suspect on this count. Popper's revolutionary philosophy of science was eventually published in *Die Logik der Forschung* (1934; *The Logic of Scientific Discovery*, 1959). He had close contact in these early years with the logical positivist movement. He criticized the positivists' inductivism, and their attempt to dismiss all metaphysics as meaningless. This, he argued, ignored the suggestive value of many metaphysical ideas for science. Popper wrote *The Open Society and Its Enemies* (2 vols., 1945, 1965), which criticized the authoritarian political philosophies then in vogue. He attacked their belief in the inexorable laws of history, and the idea that the task of the social sciences was to discern these laws and to prophesy the future development of society. His elaboration of these criticisms, and his positive views on the method of the social sciences, later appeared in his book *The Poverty of Historicism* (1957). From the time Popper began working in England a stream of articles issued forth, witnessing to his new, more metaphysical interests in such things as indeterminism and emergent evolutionism. A collection of these, entitled *Conjectures and Refutations: The Growth of Scientific Knowledge*, appeared in 1963. Popper also wrote an interesting autobiography, *Unended Quest* (1976). Popper's influence, through his fertile and original contributions to a wide variety of problems, has been great: his concept of *critical fallibilism* is an important trend in contemporary philosophy. His view that to be scientific a theory must be falsifiable, and his insistence that the so-called "scientific socialism" of Marxism is not scientific, have had profound effects upon postwar Western thought. Popper is often grouped with such influential writers in Britain as George Orwell and Frederick von Hayek whose key works, which also appeared in the mid-late 1940s, undermined the intellectual attractiveness of Marxism in the West and, eventually, everywhere.

[Alan E. Musgrave]

POPPER, SIEGFRIED (1848–1933), Austro-Hungarian rear admiral and naval engineer. From 1871 to 1904 he served as an engineer on battleships and was then appointed head of naval construction with the rank of rear admiral. Popper developed new methods of naval warfare and almost all the Austrian battleships of his time, as well as torpedo boats and fast destroyers, were constructed under his direction. After his retirement he served in the Technische Hochschule in Vienna but was dismissed through Nazi pressure in 1933.

POPPER, WILLIAM (1874–1963), U.S. Orientalist and biblical scholar. Born in St. Louis, Missouri, Popper served from 1902 to 1905 as an associate editor of the *Jewish Encyclopedia* and acting head of the Oriental Department of the New York Public Library. During this period and again in 1919/20, he also lectured on Semitic languages at Columbia University. From 1905 onward he taught at the University of California, Berkeley, becoming a full professor and head of the Semitic department in 1922. He retired in 1945.

Popper's biblical research centered on the literary and stylistic aspects of Isaiah (*Parallelism in Isaiah*, 1923), whose text he tried to reconstruct, publishing with an English translation of his own (*The Prophetic Poetry of Isaiah*, 1931). In the field of Arabic studies his critical editions and translations of Arabic historical texts of the 15th century have made this period accessible to non-Arabist historians. Among his works are: parts of the critical edition of Yūsuf ibn Taghri-Birdī's *Al-Nujūm Al-Zāhira fī Mulūk Miṣr waal-Kāhira* (History of Egypt; 1909) and part of his *Hawādith al-Duhūr* (4 vols., 1930–42). *History of Egypt* (8 vols., 1954–63) is the English translation to Taghri-Birdī's Arabic Annals. *The Cairo Nilometer* (1951) presents studies in Ibn Taghri-Birdī's "Chronicles of Egypt." *Egypt and Syria under the Circassian Sultans 1382–1468* (2 vols., 1955–57) offers systematic notes to Ibn Taghri-Birdī's chronicles. In the field of Jewish scholarship he wrote *The Censorship of Hebrew Books* (1899, reprinted with introduction by M. Carmilly-Weinberger, 1969). On the occasion of his 75th birthday, Popper was presented with a Jubilee Volume (*Semitic and Oriental Studies*, ed. by W.J. Fischel, 1951).

[Walter Joseph Fischel]

POPPER BOZIAN, WOLF (d. 1625), merchant and banker in Cracow. His father, Israel Gershon ha-Kohen, was from *Checiny; and his wife, Cyrl, was the daughter of Judah Lewek *Landau, one of the heads of the Jewish community in Kazimierz. Popper Bozian engaged in import, especially of cloth

from *Cologne, and in financial transactions in a number of fairs which took place in several towns in Poland and Schleswig, from which businesses he became very rich. His will revealed that his financial transactions, which amounted to many thousands of zlotys, were often carried out with use of special promissory notes (*mamram). His success in business was used as an excuse for blaming the Jews for a period of commercial strife in Cracow in the second decade of the 17th century. In a pamphlet entitled *Zwierciadło korony polskiej* ("The Mirror of the Polish Kingdom," Cracow, 1618), the antisemite Sebastian *Miczynski describes Popper Bozian as a businessman who owned seven stores in Cracow and whose transactions extended to many towns and amounted to more than 300,000 zlotys. In order to incite mob hatred, Miczynski also implicated him in a blood libel. In 1620 Popper Bozian financed the construction of a synagogue (Popper Shul, destroyed by the Nazis) and a *bet midrash*.

POPPERS (Poppers), JACOB BEN BENJAMIN HAKOHEN (d. 1740), German rabbi. Born in Prague, Poppers studied under his father and in various yeshivot. He was subsequently appointed rabbi of Coblenz and of Trier, in the Rhineland. He declined an invitation to Halberstadt in 1718 but accepted the rabbinate of Frankfurt where he headed a large yeshivah. His disciples included Jacob Berlin, Joseph *Steinhardt, and Joseph Wassertrilling. Poppers corresponded with the great scholars of his time on halakhic and contemporary problems. He was among those who imposed a ban on Moses Hayyim *Luzzatto in 1725 for teaching Kabbalah and on suspicion that he adhered to the Shabbatean doctrine. Compelled to leave Italy, Luzzatto arrived in Frankfurt, where he was summoned before the *bet din* of Poppers and, after much discussion, was obliged again to promise not to teach Kabbalah nor to engage in its study until he was 40 years old. Poppers was the author of *Shav Ya'akov* (Frankfurt, 1741–42), responsa in two parts. Some of his novellae are included in *Minhat Kohan* (Fuerth, 1741) by Shabbetai b. Moses. Poppers died in Frankfurt.

[Jacob Rothschild]

POPPERS, MEIR BEN JUDAH LOEB HA-KOHEN (d. 1662), kabbalist of Ashkenazi descent who was active in Jerusalem after 1640. A pupil of Jacob Zemaḥ, he became the last editor of the Lurianic writings. He divided the mass of Vital's different versions of Luria's teachings into three parts, *Derekh Ez Ḥayyim*, *Peri Ez Ḥayyim*, and *Nof Ez Ḥayyim*. Poppers' version became the one in most widespread use in Poland and Germany. After 1640 he composed a large number of his own kabbalistical writings in the vein of Lurianic Kabbalah. They are said to have comprised 39 books, each of which contained the word *or* ("light") in its title, the entire corpus being called *Kokhevei Or*.

Several parts have been preserved (Ms. Jerusalem no. 101, Ms. R. Alter of Gur no. 170). They included commentaries on *Sefer Bahir*, on Naḥmanides' Torah commentary, on the Zohar, and on Luria's writings according to his own edition (Ms. Jerusalem no. 102). In the latter manuscript Poppers reports that he had studied Luria's writings for 17 years. Only two of these books have been published: *Or Zaddikim* (Hamburg, 1690), written in Jerusalem in 1643, and later incorporated in Moses *Katz's compilation, *Or ha-Yashar* (Amsterdam, 1709); and *Me'orei Or*, a dictionary of kabbalistic symbolism, published with copious notes by Jacob Vilna and Nathan Neta Mannheim under the title *Me'orot Natan* (Frankfurt, 1709). In addition, *Mesillot Hokhmah*, a booklet summarizing Lurianic metaphysics in 32 paragraphs, later published under Poppers' name (Shklov, 1785), was first printed anonymously (Wandsbeck, c. 1700). Poppers is credited with the authorship of a graphic description and summary of the Lurianic system, in the form of a scroll, published under the title *Ilan ha-Gadol* (1864). This tree, however, shows the distinct influence of Israel *Sarug's version of Lurianism, which is not to be found in Poppers' other writings. Part of his homilies on the Torah were published as *Tal Orot* (1911).

He mentions as his teachers one R. Israel Ashkenazi and his father-in-law, Azariah Ze'evi (probably from Hebron). During the 1650s Poppers spent about two years in Constantinople. He died in Jerusalem.

POPULATION.

Methodological Uncertainties

Because of the great difficulties in ascertaining human population data in general, and Jewish data in particular, especially in ancient and medieval times, a word of caution is even more necessary here than in most other areas of historical and sociological research. Even the size of the world Jewish population is questionable because the two largest countries of Jewish settlement, the United States and the Soviet Union, were supplying only inadequate estimates, rather than scientifically verifiable facts (see below). The same holds true for many other countries embracing substantial numbers of Jews.

In their report to the International Congress of Historical Sciences in 1950 Carlo Cippola and his associates reported on behalf of their Committee that "in the eyes of demographers bent on scientific precision and certainty all demographic research undertaken for any period before the 18th century runs the risk of appearing as a mere fantasy." Nevertheless, the Committee felt impelled to present some results of their investigations, as have many other scholars dealing with population statistics of past ages. They have felt that the rise or fall of populations, and the concomitant facts relating to natality and mortality rates, sex and age distribution, marriages and divorces, and so forth, are too vital for the understand-

ing of all other socioeconomic, political, and even intellectual developments for scholarship to be satisfied with a resigned *ignoramus et ignorabimus*. Many demographers and historians are, indeed, convinced, to cite the Spanish sociologist Javier Ruiz Almanza's pithy epigram, that "history without demography is an enigma, just as is demography without history."

Population censuses were not completely absent in the ancient and medieval worlds. As a matter of fact, an Egyptian record of about 3000 B.C.E., preserved on the so-called Palermo Stone, gives us a fair idea of how the population was counted at that early age. Egyptian censuses were rather frequently conducted during the Middle Kingdom; they went into such details as naming all members of the respective families. In ancient Israel, too, the censuses attributed to Moses and David have a high degree of probability as to fact, if not with respect to the actual results. However, these counts were much too sporadic to serve as reliable guides. Even modern censuses become truly dependable only when they are periodically repeated and employ the same basic methods. If their final results are not absolutely accurate, they at least reveal some fundamental trends in growth or decline and other variations during the intervening periods. Ancient and medieval censuses, even when recorded, were taken too far apart, and used unknown or, at least, variable statistical methods. Hence they furnish almost no guidance for the prevailing trends. The resultant figures, moreover, are frequently available to us only in texts reproduced by successive copyists over many generations, or even centuries. It is a well-known fact that copyists are more likely to err with respect to numbers than in regard to almost any other words, because such changes, as a rule, do not make the meaning of the entire phrase or sentence incomprehensible. It is enough, for example, for a Hebrew copyist to omit a *lamed* in *shalosh* to produce the word *shesh* which immediately doubles the figure. In its abbreviated form a change from a *dalet* (representing four) to a *resh* (two hundred), or vice versa, can play havoc with any number intended by the author. Nor does any proofreader or ordinary reader, unless well-informed about the particular situation, notice such changes which, by constant repetition, sometimes assume the appearance of dependability.

Even informed students, moreover, often approach the recorded figures with set presuppositions. Until the 18th century Jewish, as well as general, European opinion believed that ancient times were in all aspects more glorious than the Middle Ages or the modern period. They assumed that ancient populations were far larger than those familiar to them from observation or readings of more recent events. Even so critical a thinker as Montesquieu was convinced that the world population of his day did not total more than one-tenth of what it had been in antiquity. The first scholar to question these assumptions was David Hume. Subsequently, the pendulum swung to the other extreme. As in other areas of life, most scholars were convinced of mankind's gradual progress, despite occasional relapses, and believed that the size of hu-

man populations, too, as a rule showed an upward curve. In time, however, more careful studies revealed that there were constant ups and downs, with periods of growth followed by those of decline, and the other way around. Another drawback of the recorded censuses and other population records consisted in their underlying purposes. Ancient and medieval governments rarely, if ever, undertook counting population out of general scientific curiosity. They did it principally in order to secure lists of prospective taxpayers, soldiers, or both. Understandably, since they often served as instruments of greater fiscal oppression and more effective military levies, censuses were heartily disliked by the masses of the population. Thus readily grew the widespread superstition that censuses caused divine wrath and retribution. Even King David's census provoked the biblical writer to observe: "And again the anger of the Lord was kindled against Israel, and He moved David against them, saying: 'Go, number Israel and Judah'" (11 Sam. 24:1). In fact, it is related, the king later repented his irreligious act. As a result of this popular resentment many persons undoubtedly succeeded in evading the count, thus greatly reducing its value. A remarkable talmudic anecdote states that when Persian tax collectors arrived in a city to number the Jews subject to the capitation tax, the latter were forewarned by their leaders to go into hiding until the collectors departed. The community at large had a self-interest in reducing the figures thus obtained because it afterwards had to negotiate with the government for some lump-sum payment to cover the total tax due.

Bearing all these deficiencies in mind, scholarship must nevertheless make concerted efforts to come to grips with the demographic facts of life in both the past and the present. Wherever possible a number of convergent hypotheses, even if by themselves none too reliable, may offer at least some more or less acceptable approximations. Yet in the summary here presented its often extremely tentative nature must never be lost sight of.

Ancient Israel

There are only a few direct pieces of information about the population of ancient Israel. Some of it is quite dubious. The well-known figure of 600,000 adult male Israelites (601,730 men aged 20 or over in addition to 23,000 male levites, including minors, according to Num. 26:51 and 62), who are said to have been counted by Moses after the Exodus from Egypt, has long been discounted by critical scholars. Including the women and minors, this number would have represented a population of about 2,500,000, much too large for the small province of Goshen in northeastern Egypt where the majority of Israelites had lived before their departure. The addition of some non-Israelites of the "mixed multitude" (Ex. 12:37-38) who joined the Exodus was undoubtedly more or less balanced by those Israelites who refused to leave the "fleshpots" of Egypt and remained behind. It is to them and their descendants that some Egyptian papyri of the 12th century B.C.E. refer when they speak of some "Hebrew" (*apiru*) still living in Egypt

at the time. Moreover, a mass of 2,500,000 persons crossing the “Red Sea” and migrating through the desert for 40 years staggers the imagination. Even if we accept the extreme emendation by some scholars which reduces the figure to 6,000 adult males, it would still leave a considerable number of 25,000 or more persons finally entering Canaan, where they may have joined some descendants of the ancient Ḥabiru (“Hebrews”) who had never left Palestine for Egypt but had slowly been occupying Canaanite territory from the days of the El-Amarna Letters in the 15th and 14th centuries B.C.E.

Much more informative are the figures yielded by the census conducted by Joab at the behest of King David. Here there is a major difficulty in having two apparently contradictory records. The figures given in 11 Samuel 24:9, namely that “there were in Israel eight hundred thousand valiant men that drew the sword; and the men of Judah were five hundred thousand men,” seem to be controverted by the report in 1 Chronicles (21:5) that “all they of Israel were a thousand thousand and a hundred thousand men that drew sword; and Judah was four hundred three-score and ten thousand men that drew sword.” Whichever figure is taken – and with some difficulty they can be harmonized – it indicates a population of well over 5,000,000, which is possible, if at all, only if Joab counted the population, including the subject peoples, of the entire Davidic empire from parts of Syria to the border of Egypt. In that case, the Israelite population doubtless formed but a minority of those counted. If, in the following generations, Israel rapidly assimilated some of the subject tribes in its midst, the area under its control had shrunk considerably under Solomon and his successors. Another figure of great interest is given in the Assyrian king Sennacherib’s boast that at the time of his siege of Jerusalem in 701 B.C.E. he had deported 200,150 men, women, and children from the Judean kingdom, all of which except the capital had been occupied by the Assyrian troops. This number too, has been subjected to much carping by modern critics. One of them, Karl Ungnad, suggested that it be reduced to 2,150 persons – a number which would have rendered the royal boast entirely meaningless. While Sennacherib’s grandiloquent inscription may indeed have exaggerated considerably the number of prisoners taken back to Assyria, it must to some extent have approximated reality.

Some of the figures here quoted are partially supported by the existence in the country of a large number of “cities.” As early as the 15th century B.C.E. the famous Egyptian inscription by Thutmose III named more than 100 Palestinian cities conquered in an area covering only about one-fourth of what was later to become the land of Israel and Judah, which bears out the development of some 400 “municipalities” under the Israelitic regime indicated by both the ancient *Onomastica* and modern geographic research. These cities were for the most part very small. Even in Israel’s heyday their vast majority embraced only 1,000 inhabitants or less, but from Canaanite times on they had served the purpose of protect-

ing the farming population against raids from hostile outsiders. Most farmers seem indeed to have lived within walled cities while cultivating their soil by “going out” to their fields or vineyards in the morning and returning in the evening. (This is, therefore, the sequence of the well-known biblical phrase.) Incidentally, this situation explains why ancient Palestine did not have any such major cleavage between the urban and rural populations as has characterized the medieval and modern West.

Finally, there is also some interesting data concerning the kingdom of Judah during the Babylonian conquests and its aftermath in the years 597–582 B.C.E. One source reports that 3,023 Judeans had been deported in the seventh year of Nebuchadnezzar, 832 Jerusalemites in the 18th year, 745 Judeans in the 23rd year, together “all the persons were four thousand and six hundred” (Jer. 52:28–30). In contrast, 11 Kings (24:14–16) states that the Babylonians “carried away all Jerusalem, and all the princes, and all the mighty men of valor, even ten thousand captives, and all the craftsmen and the smiths.” Somewhat differently, the figure of 7,000 is mentioned in the same context. These contradictory data have been subjected to a variety of interpretations, but with some effort and ingenuity they can be harmonized. In any case, both sets of figures evidently refer only to a small elite of landowners, priests, and craftsmen whose absence would deprive the subject population of leadership and the supply of arms, but the Babylonians must have simultaneously deported a great mass of captives from the lower classes. Archaeological discoveries have confirmed the fact that after 586 B.C.E. the Judean countryside was quite deserted, although the conquerors may have brought in some replacements in addition to maintaining their own garrisons on the spot. This exchange of populations had long been practiced by the Assyrians in order to stem irredentist movements and, a century and a quarter before the fall of Jerusalem, they had deported a great many Northern Israelites before and after the fall of Samaria in 733–719 B.C.E.

In short, on the basis of these and numerous other scattered data, supported by a number of demographic considerations, the present writer ventured to propose the highly tentative Table 1, Ancient Population for the approximate population of ancient Israel and Judah between 1000 and 586 B.C.E.: The decline in the population, here assumed, may well be explained by the general deterioration in the political and economic strength of the two kingdoms in the intervening four centuries. It did not seriously affect, however, the number of “cities” (about 300–400 in the whole country and about 60–70 in Judah alone), the population of which may have been greatly reduced, but which continued to function as more or less autonomous municipalities. These avowedly extremely tentative “guesstimates,” made more than 40 years ago, still seem to offer the most acceptable approximations. The enormous amount of additional archaeological and other source material and interpretation which have since been brought forth by biblical scholars has, if anything, helped to support them.

Table 1. Ancient Israel: Approximate Population of Ancient Israel and Judah between 1000 and 586 B.C.E.

	1000	733/701	586
Judah	450,000	300,000–350,000	150,000
Israel	1,350,000	800,000–1,000,000	–
Total Israelite and Judean population	1,800,000	1,100,000–1,350,000	150,000
Per square mile	40	28–32	24

Second Commonwealth

During the restoration period the recovery of Palestine's Jewish population was very slow. At first the Second Commonwealth embraced only an area of some 1,200 square miles in and around Jerusalem. According to Ezra (2:64–65), "the whole congregation [of returning exiles] together was forty and two thousand three hundred and threescore, besides their manservants and their maidservants, of whom there were seven thousand three hundred thirty and seven; and they had two hundred singing men and singing women." Even adding to these figures a number of survivors from the pre-Exilic period, the population of the Commonwealth could not have amounted to much more than 60,000–70,000. In time, this population must have increased considerably so that, writing in the third century B.C.E., Pseudo-Hecataeus could estimate the number of Jerusalem's inhabitants alone at 120,000 (Jos., Apion, 1:197). There also were growing Jewish settlements outside the boundaries of the autonomous Jewish province, particularly in Galilee (still called the *Gelil Ha-Goyim*; "the district of gentiles"), along the coast, and in Transjordan. Yet at the outbreak of the Hasmonean Revolt in 165 B.C.E. the total Jewish population in the country still was very small. It grew by leaps and bounds, however, after the establishment of the sovereign Judean state by Simeon Maccabee in 140 B.C.E. and particularly after the annexation of large territories conquered by his successors, John *Hyrcanus and Alexander *Yannai. It now included a considerable number of Idumeans and others forcibly converted to Judaism by these conquerors, whose amalgamation with the older Jewish inhabitants proceeded apace with great speed. In the days of Jesus and the *tannaim* Galilee was as Jewish as the environs of Jerusalem. This growth was not stemmed by the occupation of the country by the Romans under Pompey in 63 B.C.E. and the conversion of Judea into a sub-province of the Roman Empire. Only some cities, organized along the lines of a Hellenistic polis along the coast and in Transjordan, were now under the control of their "Greek" city councils, with the Jews often constituting but a tolerated minority.

During the two centuries of Hasmonean and Herodian rule over Palestine the Jewish people expanded numerically to an unprecedented degree not only in Palestine but also in other lands, in part by active proselytization. Curiously, the Phoenician-Carthaginian Diaspora, long a major factor throughout the Mediterranean world, suddenly vanished at the beginning of the Common Era. It has been suggested

that, with their ancient kinship to the Canaanite-Hebrew civilization, these offshoots of enterprising Tyre and Sidon were now submerged within the Jewish Dispersion. Be this as it may, unquestionably, many new communities now sprang up as far west as Italy and Tunisia and possibly even Spain and Morocco. Few reliable figures, however, are available for either the total Jewish population of any Roman province or that of individual communities. Not even Palestine has left behind records from which one could derive dependable statistics. Babylonian Jewry fell almost totally silent from the days of Ezra and Nehemiah to the second century C.E., although the presence there of great masses of Jews is not subject to doubt. Josephus' attempt to justify his behavior during the great Roman-Jewish War of 66–70 by first writing his history of that war in Aramaic is definite proof of the importance of those communities outside the Roman Empire. But numerically there are only such vague assertions as Josephus' statement that "myriads upon myriads" of Jews lived in the Euphrates Valley, while admitting that their "number could not be ascertained" (Ant., 11:133). Egypt, next to Palestine harboring the most culturally creative Jewish community of the time, embraced about a million Jews in the first century C.E., according to a casual remark by the well-informed Philo Judaeus. Other sources show that Jews probably predominated in two of the five quarters of Alexandria, that great emporium of trade and cultural activity, the population of which is variously estimated at 500,000 to 1,000,000. They may, indeed, have formed almost 40% of the population, in which case the Alexandrine community may well have exceeded in size that of Jerusalem in its heyday. There are also glimpses of such lesser Egyptian communities as the *Elephantine Jewish colony under the Achaemenids and Apollinopolis Magna or Edfu under the Ptolemies and Romans.

To be sure, certain data reported by the rabbis seem vastly exaggerated. For instance, the figures given for the attendance at the Passover sacrifices at the Temple of Jerusalem shortly before its destruction (Tosef., Pes. 4:3; Pes. 64b) cannot be taken at their face value. The Temple could not possibly have accommodated at any time a bare fraction of that number even if the Jews offered their sacrifices in frequent relays. A little more informative are the reports of the casualties in deaths and prisoners sustained by Jerusalem during the Roman siege. The figures transmitted by such distinguished historians as Josephus and Tacitus ranging between 600,000 fatalities and 1,197,000 dead and captured (Jos., Wars, 6:420; Tacitus, *Historiae*, 5:13) are not quite so out of line as they appear at first glance. Jerusalem's population before the siege had been swelled by countless numbers of pilgrims from all over the Dispersion and refugees from the provinces previously occupied by the Roman legions.

A new factor was injected into the discussion by the report of Gregory bar Hebraeus, a 12th-century Syrian chronicler of Jewish descent, about a census of the Jewish population taken by Emperor Claudius in 48 C.E. (*Historia compendiosa dynastiarum*, ed. by E. Pococke, 75, 116; ed. by A. Salhani,

115). According to this report, first brought to the attention of students of ancient Jewish history by Jean Juster, Claudius found no less than 6,944,000 Jews within the confines of the empire. To be sure, some scholars denied the authenticity of this report, or attributed the census to one of Roman citizens, rather than of Jews. However, the weight of evidence still favors the acceptance of that figure as the most likely approximation of the number of Jews living within the empire. To them must be added the numerous Jews of Babylonia, the Iranian Plateau, the Yemen, and Ethiopia. It stands to reason, therefore, that shortly before the fall of Jerusalem the world Jewish population exceeded 8,000,000, of whom probably not more than 2,350,000–2,500,000 lived in Palestine. Other major countries of Jewish settlement included Egypt, Syria, Asia Minor, and Babylonia, each probably embracing more than 1,000,000 Jews. Even Rome, the capital of the empire, seems to have included a Jewish community of about 40,000 in a total population of some 800,000, if we accept the figure of 8,000 Roman Jews accompanying a Palestinian delegation in the year 4 B.C.E., and 4,000 Jewish youths reputedly deported by Tiberius to the salt mines of Sardinia, as reported by Josephus (*Ant.*, 17:300; 18:84) and Tacitus (*Annales*, 2, 85). This numerical strength of the Jewish population was important not only for the subsequent destinies of the Jewish people but also for the rise and expansion of Christianity. No less an authority than Adolf Harnack developed the theory that only where Jewish communities existed in the first century were there substantial Christian congregations before Constantine the Great in the early fourth century.

Unfortunately, after the fall of Jerusalem the demographic sources relating to Jews almost completely dried up. Unquestionably, the total number of Jews rapidly declined. As a result of the war ravages in 66–70, during the uprisings against Trajan in 115–117 and the *Bar Kokhba War in 132–35 the population of Palestine, Egypt, Cyprus, and other areas diminished sharply. Jerusalem for a while ceased to be a Jewish city altogether. After Trajan, Egyptian Jewry, though not completely suppressed, became almost totally silent for nearly a century; it never recovered from that mortal blow until centuries after the Muslim conquest. The conversion of some Jews to the new Christian religion was further aggravated by the more or less continuous Roman oppression culminating in the anti-Jewish legislation of the Christian Roman emperors from the fourth to the sixth centuries. Nor could the Jews entirely escape the impact of the biological decline of the empire as a whole from the third century on. Ultimately, in 632 Emperor Heraclius outlawed Judaism altogether. At the same time, through both immigration and natural growth, the Jewish population in Babylonia and elsewhere throughout the resurgent Persian Empire under the Sassanid dynasty (after 226) grew rapidly and, by the fourth century, may have equaled in size that of Rome and Byzantium. But no estimates of any kind, nor even informed guesses, can be made for the actual numbers of Jews inhabiting either empire.

Characteristically, however, the Jewish dispersion continued to expand in all directions. During those centuries some Jews seem to have penetrated India, as well as parts of Africa outside of Rome's control, while, if tradition is to be believed, some individuals even reached China. In the West there is some documentary and epigraphic evidence about Jewish settlements in Gaul, Germany, Hungary (Pannonia), Romania (Dacia), and perhaps even Britain. But these outlying Jewries were, for the most part, very small, and influenced the size of the world Jewish population to but a minor extent.

Medieval Islam and Byzantium

Curiously, for the long medieval period (from 313 or 476 C.E. to 1492) there is no global figure for the Jewish population of any year even comparable to the reconstruction, however uncertain, of the Claudian census in the mid-first century. There are only stray records pertaining to individual communities in different areas and periods which rarely lend themselves to any overall "guesstimates." The following medieval data are, therefore, even more tentative than those for the Ancient period. Palestine Jewry, though greatly decimated by the wars and Roman persecutions, seems nevertheless to have recovered sufficiently to be able to stage several revolts against their oppressive masters. According to one Christian chronicler even 4,000 Jews living in neighboring Tyre were able to start a revolt in 610, with the aid of 20,000 Jewish soldiers assembled from Palestine, Damascus, and Cyprus (Euty chius ibn Baṭriq, *Annales*, in J.P. Migne's *Patrologia graeca*, 111:1084f.; and in Arabic text, ed. by L. Cheikho et al., 1:216). Another large-scale uprising, supported by an invading Persian army, was so successful that for three years the Jews seem to have exercised control over large parts of the country including Jerusalem and Tiberias (614–617). The repression in 629–632, however, was sharp and swift. Yet the total outlawry of Judaism in 632 hardly began to be implemented when five years later the Arab armies overran the country.

Jerusalem, which since the days of Bar Kokhba's defeat had only a sporadic and largely surreptitious Jewish settlement, was gradually reopened to Jewish residents under the Muslim domination. At first, Caliph Omar I admitted only 70 Jewish families. But this number increased considerably in the following generations owing to both Rabbanite and Karaite immigration. Similarly Caesarea, which in the Byzantine period had served as the administrative capital of the province, continued to harbor a substantial Jewish population, although the figures given by Balādhurī (200,000 Jews, 30,000 Samaritans, 700,000 Byzantine soldiers) and Yāqūt (100,000 Jews, 80,000 Samaritans, 100,000 soldiers) are fantastically exaggerated. This evolution was cut short by the bloodbath perpetrated by the conquering Crusaders in 1099 from which the Jewish community but slowly recovered. Some 70 years later the traveler Benjamin of Tudela found in Jerusalem a small community of perhaps 1,000 persons (the extant manuscripts differ between 4 and 200 families), while in 1218 Judah Al-Ḥarizi noted the presence there of three Jewish congregations.

A similar divergence may be observed between Benjamin's estimate of 3,000 Jews in Damascus and the 10,000 Jews quoted, a decade later, by another visitor, Pethahiah of Regensburg.

The other great center of Jewish life, Babylonia, seems more successfully to have conserved its biological strength. Despite the numerous sufferings inflicted upon the Jews by the Mazdakite movement during the chaotic fifth century, the figure of 90,000 Jews welcoming the arrival of the Arab general Ali (*Iggeret Sherira Gaon*, ed. by B.M. Lewin (1921), 101) is not out of the range of historical probability. Under the Muslim administration the Jews of Babylonia and the neighboring Iranian Plateau continued to expand. The city of Sura, for example, the seat of a famous rabbinic academy, was found by a tenth-century Muslim investigating committee to have a large Jewish majority (Ibn abī Uṣaybī'a, *Ṭabaqāt al-aṭibbā'*, ed. by A. Mueller, 1:221). The original Aramaic name of Mosul, Ḥesna Ebraya ("Hebrew Castle": the Jews themselves called it Ashshur) was undoubtedly deserved before the city grew into a major administrative and economic center. These old communities were speedily overshadowed by Baghdad after 762 when it became the capital of the vast Caliphate. In spite of the empire's dissolution and the chaotic conditions which prevailed there in the tenth century, Benjamin still found in the Baghdad of the 1160s a flourishing Jewish community of perhaps 40,000 persons. According to the Arab writer, Ibn al-Naqqāsh, the Mongolian invaders of Baghdad in 1258 counted there no less than 36,000 Jewish taxpayers – doubtless an exaggeration. In any case Jews constituted but a small segment of a population which at times may have ranged from 1,000,000 to 2,000,000 in size.

Egyptian Jewry, too, seems to have gradually recovered from its sharp decline of the second century. Although the glorious community of Alexandria had never recovered its former size and intellectual eminence and, in 414, had suffered from a serious, if unauthorized, expulsion, the conquering Arabs exaggeratingly claimed to have found there in 640 no less than "400,000 poll-tax paying Jews" (Euty chius, *Annales*, in: PG 111: 1107; in the Arabic text, ed. by Cheikho, 2:26). Here, too, the recovery proceeded apace under the Muslim rule, particularly the friendly Fatimid and Seljuk regimes of the 11th and 12th centuries. In the newly developed capital of Fostat (Old Cairo) Benjamin found 7,000, and in Alexandria, 3,000 Jewish families. He also saw or heard of numerous other Jewish communities throughout the land. Taking these figures as representing persons, rather than families, some careful historians calculated that all of Egypt had a Jewish population of no more than 20,000–40,000, which is probably too conservative a ratio in the country's general population of perhaps 7,000,000–8,000,000. While Benjamin's estimates do not quite tally with the evidence of local sources, particularly those preserved in the Cairo **Genizah*, they all give the impression of populous and often flourishing Jewish settlements.

To the west of Egypt there were growing Jewish communities in Kairouan (Tunisia), Morocco, and particularly Muslim Spain. However, no precise data are available on the

demographic situation in most of these communities. Only here and there are there some figures, as a rule none too reliable, in the writings of Arab chroniclers and geographers or in rabbinic sources. The famous Moroccan community of Fez, for example, is said to have sustained 6,000 Jewish fatalities during the massacre of 1032–33. In Spain, al-Idrīsī calls the frontier town of Tarragona a "city of Jews" (*Description de l'Afrique*, ed. and trans. by R. Dozy and M.J. de Goeje, 191 (Ar.) and 231 (Fr.)). In addressing the Jewish leaders of Lucena the ninth-century Babylonian *Gaon*, Natronai b. Hilai, casually mentions that "there are no gentiles living among you at all" (Responsum, reproduced in B.M. Lewin's *Oẓar ha-Ge'ōnim*, vol. 3, 1, 24f. no. 64). Even the celebrated city of Granada is, doubtless for good reason, called by al-Ḥimyarī *Ighranāṭat-al-Yahūd* ("Jewish Granada"; in *La Peninsule Ibérique*, ed. by E. Lévi-Provençal, 23, 42f. (Ar.), 29ff., 53ff. (Fr.)). Córdoba, the metropolis of Muslim Spain, also included a very sizable Jewish community. Although these stray data do not allow for any comprehensive estimate of the Jewish population of the whole country, it appears that here, too, Ely Ashtor's estimate of but 50,000–55,000 Jews in the whole Iberian Peninsula around 1050 (in a general population of some 7,000,000–9,000,000) is the result of excessive caution. Even under the intolerant Almohad domination of the 12th century many, perhaps most, Jews continued secretly to profess Judaism. They "rolled with the waves" until the 13th-century reconquest by the Christian Spaniards, when they could once again overtly profess Judaism and resume their demographic as well as socioeconomic and cultural expansion.

Similar uncertainties beset the demographic historian trying to ascertain the size of the Jewish population in the Byzantine Empire. It is a remarkable testimony to the enormous vitality of the Jewish people that, despite four successive total outlawries of Judaism in 632, 722–3, 873–4, and 930, it survived and resumed its historic evolution, without noticeable breaks in its continuity. At any rate, when around 1160 Benjamin of Tudela visited Constantinople, he found there no less than 2,000 Rabbanite and 500 Karaite families. For that time this was an impressive estimate of 12,000–15,000 Jews, although they evidently constituted but a small minority of the capital's population which, ranging between 50,000 and 100,000 persons, by far exceeded that of any Christian city of the period. Some ten to fifteen years later, Pethahiah of Regensburg, on arriving in Byzantium, was so overawed by the number and size of its Jewish communities, which sharply contrasted with the underpopulated cities and Jewish settlements of his German homeland, that he exclaimed: "There are there [in the Byzantine Empire] so many congregations that the land of Israel could not contain them, were they to be settled therein." Nonetheless, there is no way of closely estimating the total Jewish population of the empire, both before or after the Arab expansion of the 630s.

Here, too, much of the demographic information depends on data supplied by Benjamin of Tudela. Regrettably, different manuscript of his travelogue quote figures with con-

siderable variants. The question whether he had in mind persons, taxpayers, or families still is largely unresolved. It is quite possible that some of his figures represented different entities and that he merely reported numbers as they were given to him by local informants in the towns he happened to visit. Though displaying unusual interest in Jewish demography and probably quite accurately transmitting the information he received, he was, needless to say, unable to check it. With all these weaknesses, Benjamin is relatively the most reliable guide. It has been shown that the sum total of his figures was 512,532. Since he did not visit all communities and did not record figures even in many of those he had seen, these numbers must at least be doubled. In short, at the end of the 12th century the world Jewish population may well have embraced 1,000,000, perhaps even close to 2,000,000 persons, the large majority of whom still resided in countries under the domination of Islam. This situation began changing rapidly in the 13th century, when the center of gravity of the Jewish people shifted to the Western lands. With the rest of the population, the Eastern Jewries declined sharply, to be revitalized only under the Ottoman Empire of the late 15th and the 16th centuries.

Medieval West

Despite the availability of much more ample and better-investigated source materials, population studies of medieval Western Jewry are likewise affected by great uncertainties. Apart from the general decline of population during the Barbarian invasions, many Jewish settlements were totally destroyed during the wave of intolerance which, in the seventh century, swept through Visigothic Spain, Merovingian France, and Langobard Italy. Thereafter the total number of Jews in Western Europe, including Germany, must have been very small indeed. The only continuous major settlements carried over from Antiquity were in the Papal States, southern Italy, parts of Spain, and southern France. However, here, too, the general population decline is well illustrated by the city of Rome which, from a metropolis embracing some 1,000,000 inhabitants at the end of the second century, was reduced to but 35,000 eight centuries later. Nonetheless, in the 1160s Benjamin could find substantial Jewish communities in Rome, Naples, Messina, and particularly in Palermo, whose 1,500 Jewish families undoubtedly formed the largest Jewish community under Roman Catholic Christianity. Rome itself may also have embraced at that time about 1,000 Jews.

Relatively, the best information deals with the conditions in medieval England. Owing to the comparatively small number of Jews, the availability of large and well-preserved source material, and untiring research by scholars, Christian and Jewish, over several decades, the evolution of the medieval Anglo-Jewish community has been fairly well elucidated. Its demographic aspects, however, have left many questions open. It appears that, beginning with the Norman Conquest of 1066, the number of Jewish settlers gradually reached about 2,500 persons before the massacres of 1190–91 and the ensuing flight of numerous Jews to the Continent. Within a few years

English Jewry recovered its strength, however, and resumed its growth in the first half of the 13th century. Yet the endless fiscal exactions of Henry III and the general hostility of the population, which found expression in a number of cities securing privileges *de non tolerandis Judaeis*, before long began taking their toll. Even at the expulsion of 1290 there were probably no more than about 10,000 Jews in a total population of about 3,500,000 in the country. This is avowedly a compromise figure between the decided underestimate by George Caro of no more than 3,000 Jewish residents and the records of contemporary chroniclers, whose reports about the Jews effected by the decree of expulsion of 1290 ranged from 15,000 to 17,500. Even that relatively small number was scattered over 91 cities, of which 21 (at their heyday, 27) were sufficiently important to contain royal *archae* where records of all Jewish loans were officially kept. In addition, there were more than 100 other localities in which individual Jews were mentioned in the sources. A few individuals seem also to have penetrated Wales, Scotland, and Ireland, though no organized community existed in any of these areas in the Middle Ages.

On the Continent Jewish demography depends for the most part on sporadically preserved tax records. In the case of capitation taxes it is relatively easy to multiply the number of taxpayers by whatever quotient is derived from our knowledge, otherwise obtained, of their ratio to minors, indigents, and other non-paying groups. Of course, here, too, it was in the best interest of the Jewish communities to underestimate the number of taxpayers whereas the government authorities sought to exaggerate them. In addition, there were sporadic censuses of population, including Jews, such as was instituted in Aix-en-Provence in 1341 on orders of King Robert of Anjou. It revealed that, at that time, 1,205 Jews occupied 203 houses and constituted some 10% of the city's population. A Jewish taxpaying "hearth" averaged 5.9 members, while individual households included a membership of up to 30 persons. In contrast, a similar census in Carpentras in 1471 revealed a Jewish average of only 4.3 per "hearth," as against 5.2 persons per Christian "hearth." The latter discrepancy is explainable only by the intervening trials and tribulations of Carpentras Jewry which was always treated more harshly by both the populace and the city council than that of its larger neighbor, Avignon. Here no less than 210 Jewish heads of households were called upon in 1358 to take an oath of allegiance to the pope, which indicates the presence of a Jewish community of well over 1,000 persons. In general, the Jewish population of Provence and the papal possessions in France exceeded the general ratio of Jews in the rest of France and for that matter anywhere in Europe north of the Alps and Pyrenees. Already in the days of Benjamin the community of Arles, with its 200 families, seems to have formed some 20% of the city's population. The smaller town of Tarascon embraced 125 Jewish families in 1442, 183 families in 1487. On the other hand, Narbonne, once the leading southern French community and, in Carolingian times, the seat of a "Jewish king," steadily declined and, shortly before the 1306 expulsion, numbered no

more than 1,000 Jews among the city's 15,000 inhabitants. Similarly, Toulouse in 1391 had only 15 Jewish families in a population of 25,000–30,000. All of Gascony under English domination apparently never exceeded that total of 1,000 Jews before their banishment in 1288. More remarkably, the "great city" of Paris (Benjamin), where, before the expulsion of 1182, some chroniclers spoke exaggeratingly of Jews forming half the city's population and owning half its real estate, in fact embraced at no time before the final expulsion of 1394 many more than the 124 taxpayers (in 86 households) among the 15,200 taxpayers recorded in 1292 in a total population of 80,000 or more counted in 1328.

No house-to-house canvasses are recorded in the Holy Roman Empire. There we depend principally on tax records which, however, are almost invariably incomplete. Even the very significant list of taxpaying Jewish communities in 1241 omits such large Jewish settlements as that of Nuremberg. On the other hand, Germany has preserved a number of examples of the *memorbuch* which, by recording victims of persecutions by name, are the most dependable, if partial, sources of demographic information. In Nuremberg, for example, 628 such fatalities are recorded as a result of the *Rindfleisch massacres of 1298; despite the community's subsequent recovery, 570 more Jews lost their lives in the massacre of 1349. Wuerzburg sustained in 1298 no less than 900 casualties, of whom 100 are specifically mentioned as nonresidents. Even smaller communities like Weissensee or Ueberlingen could lose 125 and over 300 Jews respectively, in massacres resulting from local *blood libels in 1303 and 1332. However, such incidental records give us but a remote approximation of the total Jewish population in the respective periods. The only conclusion one may draw from these stray references is that, especially after 1350, most German Jewish communities were very small.

In Jewish, as in general West and Central European life, the 14th century was a period of great crisis, both economically and biologically. The recurrent famines (1315–17, etc.) and pestilences – the greatest of the epidemics, the *Black Death of 1348–49, was but one of a series of destructive diseases – resulted in a long-lasting decline in population. During many decades an annual birthrate of 39 per 1,000 population was exceeded by a mortality rate of 41 per 1,000. Hence life expectancy of newly born children in many areas sank as low as 17–20 years. Jews not only fell victim to these widely spreading contaminations, but were often massacred in advance of the plague by their panic-stricken Christian neighbors, as alleged "poisoners of the wells" responsible for the contagion. Not surprisingly, their numbers declined frightfully even in a city like Vienna, which was restrained by its rulers from attacking Jews, despite its daily losses of 500 (occasionally up to 1,200) dead to the plague. Its Jewry, considered by some informed contemporaries the largest Jewish community in the empire, 70 years later had only 92 male and 122 female martyrs during the persecution (the so-called *Gezerah*) of 1421. The celebrated Jewish community of Augsburg listed only 17 and 21 Jewish taxpayers in 1401 and 1437, and in the following

year banished the whole community of 300 persons. Erfurt, which a short time before possessed four or five synagogues and four slaughterhouses for the supply of ritually permissible meat, dwindled to a total of only 50–86 taxpayers in 1357–89. Similarly Frankfurt, which was destined to play so great a role in German Jewish history in the following centuries, embraced only a few Jewish families in the 1360s, and as late as 1462, when its new ghetto was formally established, it counted no more than about 200 inhabitants. If during that period many German Jews found shelter in the neighboring lands of Poland, Lithuania, and Hungary (each destined to occupy an imposing place in the modern history of the Jewish people), before 1500 C.E. their total numbers, even when augmented by the earlier settlers in part stemming from territories further east, still were quite small before the end of the Middle Ages.

The largest agglomerations of Jews under medieval Christendom were to be found on the Iberian and Apennine peninsulas together with the adjacent Balearic Islands and Sicily. Spain, the largest and most influential focus of medieval Judaism, has preserved a great many demographically relevant records, some of which are yet to be explored. However, their evaluation by modern scholars has diverged very greatly. While the first careful investigator of the subject, Isidore Loeb, estimated the Jewish population of Castile at 160,000 around 1300 C.E., Yitzhak Baer, the outstanding student of Spanish Jewish history, attributes to that kingdom only some 3,600 Jewish families at that time. Together with Navarre and Aragon, he believes, the combined Jewish population did not exceed 40,000. Once again the truth seems to be somewhere in between, and a total of 150,000 would seem to offer a much closer approximation. Remarkably, neither the Jewish nor the general population suffered permanently irretrievable losses as a result of the Black Death of 1348–49, or the subsequent major plagues of 1394–96 and 1490. Despite various setbacks, especially after 1391, the Iberian Jewish population continued to grow, particularly in Castile, and there is somewhat more agreement about the number of Jews affected by the expulsion of 1492. The best approximation was given by Meir Melammed, son-in-law of "Chief Rabbi" Abraham Senior, and another Jew (both of whom preferred conversion to exile) who estimated the number of Jewish families affected by the decree of expulsion at 35,000 in Castile and 6,000 in Aragon (Andrés Bernaldez, *Historia de los Reyes Catolicos*, c. ff.). Not very much higher is the figure of 300,000 Jewish inhabitants of Spain, cited by Isaac Abrabanel, the leader of the departing exiles (*Ma'yenei ha-yeshu'ah*, introd.). If it be true that some 120,000 of these expatriates proceeded to neighboring Portugal (Abraham Zacuto, *Sefer Yuhasin*, 277a), the total Jewish population of the smaller country may have reached 200,000 to be affected by the forced conversion of 1496–97. These large figures lent themselves to easy exaggeration and even such a well-informed and careful 16th-century historian and political theorist as Juan Mariana glibly speaks of 800,000 Spanish Jews affected by the expulsion (*Historia general de España*, ed.

by J.M. Gutiérrez, vol. 5, 440). In the Iberian case, moreover, there is a major problem of estimating the number of Conversos (including numerous secret Judaizers) who lived under the reign of Ferdinand and Isabella and whose number was greatly increased by those Jews who in 1492 preferred baptism to exile. These Conversos were to furnish a considerable number of members to the growing Marrano dispersion in the West, while others found ways of speedily returning to Judaism by settling in Muslim lands.

Somewhat less controversial is the size of the large Jewish population of Sicily and the kingdom of Naples. Sicily alone doubtless had a Jewish population of more than 50,000 in the 15th century, many of whom departed in 1492 for Naples, Rome, and other localities. Combined with refugees from Spain, the Sicilian exiles may well have temporarily doubled the Jewish population of the kingdom of Naples before the expulsion of Jews in 1511 and 1541. At the same time, the resettlement of Jewish communities in Italy north of the Papal States was proceeding rather slowly and the glorious Renaissance republics of Florence, Ferrara, Venice, and others became really important areas of Jewish settlement only in the early modern period.

In short, after considering these and many other complicated factors and in full realization of the perilous nature of any computation, S. Baron has submitted Table 2, Jewish Population in European Countries before 1500 C.E. covering the Jewish population in Western and Central Europe during the last centuries of the Middle Ages.

1500–1800

The three centuries of the early modern period were at first marked by a simultaneous expansion and contraction of Jewish settlement, which of course had an important bearing on Jewish demography as well. On the one hand, the wave of expulsions from England, France, the Iberian Peninsula, and many Italian and German territories of the period from 1290 to 1500 now continued unabated. Jews were ousted permanently from the kingdom of Naples in 1511 and 1541; from the duchy of Milan in 1597; and from the Papal States (except Rome and Ancona) on a more temporary basis, in 1569 and

1593. The banishment of the Jews from Regensburg in 1519 and Rothenburg in 1520 was followed during the early Reformation period by expulsion from Saxony in 1536, Brandenburg (after their readmission in 1540) in 1571, and many other German principalities, bishoprics, and free cities. The result was a greater diffusion of Jews into smaller localities, even villages, in both Italy and Germany – a trend which was reversed only during the Thirty Years' War. At the same time there was not only a great expansion of the Jewish people into Poland-Lithuania, the Ottoman Empire, and other Muslim countries, but through the Marrano dispersion there was the incipient resettlement of Jews, first secret and later overt, in Western Europe. There was also the beginning of Jewish participation in the colonization of the New World, as well as of the Far East and some African territories by the great colonial powers.

If, on balance, the Jewish settlement in the middle of the 17th century extended over a much larger area than that of 1500 C.E., the growth of Jewish population did not keep pace with that geographic expansion. Certainly those New Christians, who by 1660 had formally returned to Judaism, were but a small fraction of the descendants of the original Conversos on the Iberian Peninsula. The small size of the Jewish or Marrano settlements did not prevent, however, unfriendly observers from magnifying the Jewish presence beyond measure. Even a great scholar like Erasmus of Rotterdam, who had had hardly any contacts with living Jews, could exclaim with abandon: "Jews are very numerous in Italy; in Spain there are hardly any Christians. I am afraid that when the occasion arises that pest, formerly suppressed, will raise its head again" (*Opus epistolarum*, 3:253; 4:114). More recklessly, temperamental Martin Luther once contended that Italy was so full of Jews that, for instance, Cremona had no more than 28 Christians among its inhabitants (*Tischreden*, 3:369 f.; 4:619 f.). These comments were made at a time when Italy's most populous areas of Naples and Sicily no longer had any professing Jews. After 1569, moreover, the Papal States, too, but grudgingly admitted Jews outside Rome and Ancona but never in sufficient numbers to justify the maintenance of some 115 synagogues such as had existed before the 1569 expulsion. Similarly, the Jews readmitted to Brandenburg in 1540 formed but tiny commu-

Table 2. The Jewish Population in European Countries before 1500 C.E.

Country	1300 C.E.		1490 C.E.	
	Jews	General population	Jews	General population
France (including Avignon)	100,000	14,000,000	20,000	20,000,000
Holy Roman Empire (including Switzerland and the Low Countries)	100,000	12,000,000	80,000	12,000,000
Italy	50,000	11,000,000	120,000	12,000,000
Spain (Castile, Aragon, and Navarre)	150,000	5,500,000	250,000	7,000,000
Portugal	40,000	600,000	80,000	1,000,000
Poland-Lithuania	5,000	500,000	30,000	1,000,000
Hungary	5,000	400,000	20,000	800,000
Total	450,000	44,000,000	600,000	53,800,000

nities of eight to ten families in Berlin, Stendal, and Frankfurt on the Oder when they were once again banished 31 years later. It was only in the 17th and particularly the 18th century that the German-speaking Jewry of the Holy Roman Empire, aided by immigration from Eastern Europe and later by the inclusion in Prussia and Austria of formerly Polish territories through the partitions of Poland in 1772–95, started rising significantly throughout the country.

At the same time, the “Golden Age” of both Polish Jewry and Poland as a whole in the 16th and early 17th centuries was largely terminated in the era of the Chmielnicki uprising (1648–49) and the Swedish-Muscovite wars of 1648–56. Not only did Polish Jewry sustain very severe losses in human lives but, combined with the general economic decline of the country, these disturbances set in motion a Jewish mass emigration which kept the growth of the population at a relatively low rate. Nevertheless the Jewish numerical strength continued gaining and the area of what was Poland-Lithuania in 1648 may well have embraced a Jewish population twice as large in 1800. The majority was now included in the Russian Empire which, after many centuries of refusing to admit Jews – as late as 1740 the whole Jewish population of 292 men and 281 women, scattered through 130 manorial estates in the Ukraine and Belorussia, was expelled – thus suddenly became the largest country of Jewish settlement.

Unfortunately, dependable demographic data on Jews are available only in very few areas. Italy, to be sure, often conducted population censuses, and information concerning Jews in various Italian communities of the early modern period is quite illuminating. The emergent Jewish communities in France, England, and particularly Holland can also be estimated with close approximation to the truth. On the other hand, the Holy Roman Empire, until its dissolution in 1806, offers only sporadic insights into the number of its Jewish inhabitants. In Poland-Lithuania the Jewish population in certain cities can be estimated with a fair degree of accuracy, while vast areas in the country are subject to more or less questionable estimates based on the yield of the capitation tax which in 1560 amounted to only 6,186 florins (on an assessment of 1.50 florins per family), but rose to 80,000 florins in 1634 and to 220,000 florins in 1714 (both representing collections of 3 florins per person). There were also a number of regional censuses (so-called *lustracje*), but only those of 1764–65 shortly before the partitions of Poland have left behind more comprehensive and reliable records; they have also been subjected to closer scrutiny by modern scholars.

In contrast, the enormously important Jewish settlement of the Ottoman Empire, with its western Asiatic and North African provinces, offers an almost hopeless problem to the demographic historian. It stands to reason that, since the empire had seen its glory progressively dimmed from 1600 on and its Jewish subjects suffered serious setbacks several decades later in the era of the Shabbatean movement, the forward motion of both the Jewish and the general populations also greatly slowed down. Yet it appears that, as in Poland,

such retardation did not completely halt the numerical expansion of the Jewish masses. However, this assumption cannot be supported by precise statistical data despite the fact that the Ottoman archives have preserved many records of detailed censuses, some of which go back to the 15th century. These records are in many ways far superior to what is preserved in most Western countries of that period. Yet even with the aid of so-called *defters*, or brief summaries kept in the archival registries, these sources have thus far been scrutinized only to a very slight extent. The few Jewish studies heretofore published relate almost exclusively to Palestine's population under the early Ottoman regime. They have opened up new vistas and whetted the appetite for more information but they have supplied only disjointed fragments which do not add up to a total picture. Equally unsatisfactory is knowledge of Jewish demography in the North-African countries. Only here and there do the sources, often derived from casual observation by foreign visitors, mention figures pertaining to the size of Jewish communities. Yet with some effort and ingenuity Maurice Eisenbeth succeeded in compiling, on the basis of such reports, approximate statistics of Jewish inhabitants in the city of Algiers. His estimates for the 16th century range from 1,000 to 5,000 Jews. About 1600 their number rises to 8,000 or 9,000 persons, while about 1700 it reaches a peak of 10,000–12,000. In the course of the 18th century the Jewish population declines to some 7,000 and is further reduced to but 5,000 by 1818 (M. Eisenbeth, *Les Juifs en Algérie et en Tunisie à l'époque turque (1576–1830)*, 147 ff.).

In the following we can refer, therefore, only to a number of illustrations of Jewish communities which have undergone extraordinary expansion, while others have lagged behind. In Italy the papal capital under the Renaissance popes allowed its Jewry to grow, so that it may have reached the number of 2,500–3,000 Jews before the expulsion from the rest of the Papal States in 1569. Although locked in a formal ghetto since 1555, the Rome community continued to grow because after 1569 it had to absorb a great many refugees from the provinces. It is estimated that in 1592 it embraced 3,500 persons in a total population of 97,000. A century later the Jewish population is said to have reached a peak of 10,000–12,000 persons which was never exceeded thereafter even in the 20th century. In the 18th century the Jewish population dropped back to a median of 3,076 persons, according to the official records of 1775–1800. Venice, after the expulsion of Jews in the Middle Ages, did not tolerate them at all until 1509 and in 1516 shut them off in a ghetto, the first to bear that name. But subsequently it allowed the Jewish community to grow rather speedily so that by the middle of the 17th century it may have reached a total of 5,000 persons. Even more remarkably, Leghorn, which had few Jews before 1593, embraced 114 in 1601, 711 in 1622, and 1,175 in 1642. It continued to grow in the following decades; the official censuses refer to a Jewish population of 3,476 in 1738, 4,327 in 1784, and 4,697 in 1806. Leghorn thus competed with Rome and Venice for the designation of the largest Jewish community in Italy. Even a medium-sized community, such as that of

Verona, grew to 400 persons in 1600 and over 1,000 in 1751. In contrast, many cities, including Genoa, never admitted more than a handful of Jews. The constant ups and downs in the size of respective communities are well illustrated by the following estimates for the three neighboring Jewish centers in the duchy of Urbino. In 1628 Pesaro had 610 Jewish inhabitants, Urbino 370, Senigallia 200. By 1700 the respective figures were about 600, 200, 600, Senigallia assuming the cultural, as well as numerical, leadership. Historically, the relatively small Jewish communities of Piedmont (its capital Turin first reached a Jewish population of 500 in 1563) were to play an important role in the 19th century when their country marched in the vanguard of Italian unification. All of Italy embraced some 25,000 Jews in 1638, according to the well-informed apologist Simone Luzzatto (*Discorso circa il stato degl' hebrei*, 91). At this level Italian Jewry remained more or less stabilized during the following two centuries while the general Italian population grew from about 11,000,000 in the 17th century to 18,125,000 in 1800, and 23,000,000 in 1850.

In Germany, too, some startling increases contrasted with declines or, at best, demographic stagnation. In Frankfurt, which had only 110 Jews at the time when the community moved into its assigned quarter in 1462, the number grew to 250 in 1520, 900 in 1569, 2,200 in 1600. By 1613 the assailants of Jews led by Vincent Fettmilch complained that the 454 Jewish families in the city engaged in too sharp a competition with the Christian artisans and traders. The concentration of about 3,000 Jews within the original quarter throughout the 17th and 18th centuries caused that tremendous overcrowding which made the Frankfurt ghetto a byword in Jewish literature. Hamburg admitted a few New Christians in the 16th century but did not legally recognize the presence of a Jewish community until 1612. Its Jewry, both Sephardi and Ashkenazi, grew rapidly (together with the sister communities of Altona and Wandsbeck which jointly formed the single tri-community of Altona-Hamburg-Wandsbeck, abbreviated into AHU according to its Hebrew initials) during the following two centuries, reaching in 1810 the number of 6,299 Jews, according to the official census. It thus was second only to the community of Prague among the Jewish settlements in the empire. The Bohemian capital, a much older community, which had maintained its historic continuity despite several decrees of expulsion in the 16th century and again in 1744 (often not seriously implemented), was throughout the early modern period a major center of Central European Jewish life and learning. By 1729 it embraced, according to an official census, 10,507 persons.

At the same time a great many German Jews of the 16th and early 17th centuries lived scattered through countless hamlets and villages. An investigation conducted in 1541 in the Memmingen district revealed the presence of but 40 Jewish families living in 11 localities. Throughout Germany there were such small Jewish settlements with but one to ten families trying to eke out a meager livelihood and yet instilling in their children a pride in, and knowledge of their Jewish

heritage. This great dispersal was largely the result of the preceding wave of expulsions of Jews from the major cities, including their famous medieval settlements of Mainz, Speyer, Cologne, and Regensburg, and their finding shelter, however precariously, under the domination of the petty lords. This trend was reversed, however, during the Thirty Years' War (1618–48) when Jews fleeing before the marching armies and pillaging marauders often had to be admitted to the larger cities, which in turn found that they often benefited greatly from Jewish trade and taxation. Thus was ushered in the era of progressive urbanization of German Jewry, which was to make tremendous strides in the 19th and early 20th centuries. An example of such growing concentration in German metropolitan areas is offered by Prussia of the days of Frederick the Great. While no reliable data for Jews in that rapidly expanding state are available, a well-informed student, Friedrich Wilhelm August Bratring, estimated that in 1750 Berlin had 2,188 Jews (in a population of 133,520), while the rest of the Kurmark accommodated only 1,685 of their coreligionists. Twenty years later the Berlin Jewish community embraced 3,842 persons (an increase of nearly 80%), whereas the provincial communities together totaled only 1,996 persons (an increase of but 20%). In the subsequent three decades, to be sure, Berlin's Jewish inhabitants numerically declined in contrast to both the city's general population and the provincial Jewries, but this was a mere temporary interruption in the process of rapid growth which brought the size of Berlin Jewry up to 172,672 in 1925.

The Netherlands, emerging from the War of Liberation as a forward-looking and relatively liberal state, embraced but a few New Christians in the late 16th century. But, beginning in 1593, the country witnessed a tremendous expansion in the number and size of Jewish settlements which, two centuries later, embraced a population of well over 50,000. Amsterdam alone accommodated in 1795 no less than 21,000 Ashkenazi and 2,400 Sephardi Jews. Its community, often styled the "New Jerusalem," exceeded in size any contemporary or earlier European Jewish community, except perhaps those of ancient Rome and early modern Constantinople.

France's total Jewish population at the outbreak of the Revolution in 1789 amounted to less than 40,000. Their majority was concentrated in Alsace – which at the time of its annexation by France after 1648 included a number of older Jewish communities. Lorraine's Metz speedily developed into a major center of some 3,000 Jews, whereas Strasbourg, the metropolis of the area, saw its privilege *de non tolerandis Judaeis* breached only in the 1780s. A governmental census of 1784, probably incomplete, enumerated 182 Alsatian localities embracing a Jewish population of 3,913 families and 19,707 persons (9,945 males and 9,762 females). The actual figures were a bit higher; Z. Szajkowski estimates the total at between 22,570 and 23,800 persons. It may also be noted that, in contrast to the German areas, Alsace under French domination witnessed a continued dispersal of Jewish settlements from 95 in 1689, to 129 in 1716, and 182 in 1784. Simultaneously, south-

ern France, particularly Bordeaux and Saint Esprit, a suburb of Bayonne, in the 18th century accommodated a total of some 4,500 Jews. Characteristically, Paris, the very heart of French life and culture, barely tolerated 500–800 Jews at the outbreak of the French Revolution.

England's Jewish population, too, still was very small, as was that of the New World. It is estimated that English Jewry embraced some 6,000 persons in 1730, and 12,000 in 1791. Other contemporary estimates raise this figure to 20,000 and more at the end of the 18th century. The large majority was concentrated in London (R.D. Barnett, in: V.D. Lipman (ed.), *Three Centuries of Anglo-Jewish History* (1961), 60f.). In contrast, the six known communities in the United States during the American Revolution counted among them only little more than 2,000 Jews. Possibly the same number was scattered through the Caribbean Islands and Surinam; the largest community among them, that of Kingston, Jamaica, numbered some 500 Jews, and thus rivaled New York in continental North America. On the other hand, the community of French Martinique, which was allegedly reinforced by 400 Jewish refugees from Brazil in 1654, was wiped out by the French decree of expulsion of 1683. In Latin America, under its intolerant Spanish and Portuguese regimes, only New Christians were sometimes grudgingly allowed to settle. In some areas they were quite numerous. Out of them subsequently emerged groups of professing Jews who helped populate the Western Hemisphere. The largest of these groups lived in Recife, Brazil; more than 1,000 of them publicly professed Judaism during the short-lived Dutch domination (1630–54). Upon the return of the Portuguese, the majority found refuge in Surinam, the Caribbean Islands, New Amsterdam (later New York, where 23 of them in 1654 laid the foundations for the largest Jewish community in history), as well as Holland.

1800–1939

A new phase of Jewish demography began with the 19th century. More and more countries now conducted regular censuses; many included a column relating to religious faith. The vast majority of Jews unhesitatingly indicated their Jewish allegiance to the census takers. In the early 1800s, to be sure, when censuses were still taken primarily for fiscal and military purposes, numerous Jews hesitated to appear before the enumerators. Their fears of discriminatory treatment were enhanced by the old folkloristic apprehensions, nurtured by the biblical references to the effects of David's census. According to Gustav Adolf Schimmer, one of the early pioneers in Jewish population studies (1873), there were many localities in Eastern Europe, where upon the advent of the census takers the entire Jewish youth vanished from the scene, to reappear only after the enumerators' departure. In time, however, as the censuses became more purely administrative and scholarly undertakings and were periodically repeated, their accuracy usually improved by the use of more refined techniques. Apart from supplying definite figures of the Jewish population and such other relevant information as that of

the Jewish birth and mortality rates, sex and age distribution, marriages and divorces, they offered periodic data revealing the prevailing trends.

Regrettably, this practice was not universal. Czarist Russia, where before 1914 almost half of the world Jewry resided, had no such dependable investigations until 1897 when the government and the Alliance Israélite Universelle from its Paris headquarters collaborated in the attempt to obtain more detailed statistical information about the Russian Jews who, because of recurrent pogroms and discriminatory legislation, had attracted world-wide attention. This endeavor was not repeated, however, except for a valiant but incomplete effort by the ORT in 1921, until 1926 when the Soviet Union took a comprehensive census of its own. Here the Jews were listed as a national, rather than religious group; however, removing some elements of comparison with the earlier accounts. Even worse was the situation in the Ottoman Empire and the other Muslim lands, where before World War I all population statistics were in a deplorable state.

Not much better was the situation in the United States, the burgeoning world center of the Jewish people, which after World War I became the largest country of Jewish settlement. Because of the constitutional separation of state and church, the governmental censuses conducted every ten years since 1790 did not include a question on the person's religious allegiance. For a time the government collected data on the number of congregations affiliated with each denomination, their membership, and other pertinent factors. After 1890, however, the combination of these inquiries with the official decennial censuses was abandoned and a special "census of religious bodies" was instituted in the middle of each decade following the general census of 1900. The first such specific survey was made in 1906; it was followed by others in 1916, 1926, and 1936. However, the preparation of replies was left to the respective denominations themselves, many of which used different criteria for counting their members. In the case of Jews the religious censuses of 1906 and 1916 by definition counted only Jews who were members of congregations. In 1926 and 1936 a new definition was employed. The instructions given to the agent in charge read: "The Jews... now consider as members all persons of the Jewish faith living in communities in which local congregations are situated" (U.S. Census Bureau, *Religious Bodies Summary*, 1 (1926), 16). This definition greatly increased the totals from 357,135 in 1906 to 4,081,242 in 1916 and thereby removed the most important element for comparing the new results with the earlier accounts. The census itself admitted it by deleting any reference to Jews in the column recording the membership growth over the preceding two decades. Since the Jewish communities were unable to undertake a house-to-house enumeration, they had to rely upon information supplied by more or less informed local leaders whose estimates, frequently mere "guesstimates," often widely differed. The result was that the compilers of the census had to reach median numbers of such diverse estimates. The general result was that many figures, including the total

membership of 4,641,184 in 1936, tended toward exaggeration. When almost simultaneously with the census of 1936 a more detailed canvass of ten important communities was conducted by local leaders under the sponsorship of the Conference on Jewish Relations, it turned out that the resulting more accurate figures ran between 8% and 20% below those suggested in the census. Of course, no one could be sure that the experience of these ten cities was typical of the whole country, particularly of the New York metropolitan area which apparently embraced some 40% of American Jewry.

Even in those Western European countries, such as France, Belgium, the Netherlands, Switzerland, or Italy, where the governmental censuses included a query concerning the inhabitants' religious preference, the returns are not completely reassuring. In the first place, all census bureaus (including that of the United States which uses highly refined statistical techniques) count with a margin of error of at least 1–1.5%. In the case of Jewish respondents the difficulty is aggravated by the uncertainty of "who is a Jew." Many persons who considered themselves Jews refused to give the enumerator straight answers about their religious preference, either because they felt that religion should be treated as a "private" concern which no government had any right to probe, or because, for a variety of reasons, they personally tried to hide their Jewishness. There is also the problem of children of mixed marriages who, according to rabbinic law, are automatically considered Jews if their mother is Jewish – a distinction which in practice is often disregarded, positively as well as negatively. Baron has suggested, therefore, that for practical reasons everyone be regarded as a Jew "who (1) is born of Jewish parents and has never been converted to another faith; (2) is born of mixed parentage but declares himself a Jew and is so considered by the majority of his neighbors; and (3) one who by conscious will has adopted Judaism." In view of these largely subjective criteria it has been found doubly imperative to supplement the official census data, wherever such exist, by more searching sample studies.

Another complication has arisen in various countries as a result of the new Jewish national movement. Some Jews, professing no religion, nevertheless counted themselves as belonging to the Jewish "nationality," while others, even if staunchly Orthodox, regarded themselves as members of a different "nationality." Still other Jews who neither professed Judaism nor regarded themselves as nationally Jewish nonetheless thought of themselves as Jews and were thus regarded by their neighbors, Jewish and non-Jewish. The confusion arising from these varying definitions was well illustrated in 1921 in the first Czechoslovakian census. "The official figures showed that there were 336,520 Czechoslovak nationals [in addition to 17,822 foreigners] professing the 'Israelite' religion. Their majority, 180,616, declared themselves to be members of the Jewish nationality (this majority was larger in Slovakia and Carpathian Ruthenia but it turned into a minority in the main provinces of Moravia, Bohemia, and Silesia). Of the rest, 73,371 signed up as members of the Czech nationality, 49,123

as Germans, 29,473 as Magyars, 3,751 as Russians, 74 as Poles, and 112 as belonging to other nationalities. In addition, there were 100 persons who professed no religion but were members of the Jewish nationality. More astonishingly, there also were some members of the Jewish nationality who professed the Roman Catholic faith (74), Greek Catholicism (23), Greek Orthodoxy (12), Protestantism (19), and one woman, who was an adherent of the new Czechoslovak national faith. Thus the 180,616 members of the Jewish nationality who also professed the Jewish faith were joined by 229 co-nationals who professed other religions or none. There probably were many more thousands of Jews who never signed up as Jews by either nationality or religion and thus did not appear as such in the census" (S.W. Baron, "Who Is a Jew?" in *History and Jewish Historians*, 16f.).

The matter was far more serious in the Soviet Union. With its anti-religious bias the government eliminated all references to religious preference from the census, leaving only the Jewish nationality as a criterion. While most Jews declared themselves Jews by nationality, in each case the decision depended on the nationality entered in the passports of the respective heads of households. For one example, Leon Trotsky always signed up as a Russian by nationality, whereas Maxim Litvinov, even while serving as Soviet ambassador to the United States or as a Soviet foreign minister, always carried with him a passport marking his membership in the Jewish nationality. There is no way of telling how many Jews thus escaped being counted in the censuses of 1926, 1939, and again, in 1959. If the first Soviet census, even with respect to the territories which had formerly been part of Czarist Russia, was not quite comparable to the 1897 enumeration, the one of 1939 came on the eve of World War II and the German invasion of Russia. It has been subjected, therefore, to little detailed scrutiny and its Jewish aspects in particular have been inadequately explored.

Nonetheless, the situation was not hopeless. Many countries such as Austria-Hungary and its successor states, Germany, interwar Poland, the Baltic states, Romania, the emergent settlement in Palestine under the Mandate, and others had regular censuses which yielded relatively reliable information also on all aspects of Jewish demography. From these data one may deduce much also concerning the conditions in countries lacking satisfactory official census records. At any rate, quite apart from the accuracy of specific figures, certain major trends in the rise or decline of the Jewish population clearly manifested themselves throughout the Jewish world in the course of the 19th and the first third of the 20th centuries. This period was characterized by a "population explosion" of the Western world. In the relatively peaceful period of 1815–1914 Europe's population more than doubled (from some 190,000,000 to over 400,000,000), while European émigrés helped populate the Western Hemisphere and other continents. The United States alone increased its population from 7,240,000 in 1810 to 91,972,000 in 1910. Growth of this rapidity was owing less to increase in natality than to a sharp decrease in the death rate – a result of the great progress of

medical science and the spread of more hygienic ways of life among the European and American masses.

In the Jewish case these factors operated with redoubled intensity. Like their neighbors in Eastern Europe, Jews still married quite early, definitely earlier than the average couples in Central and Western Europe. Marriages of boys aged between 15 and 18 with 14–16-year-old girls were quite common. An 18th-century Polish census mentions a Jewish wife aged eight. (Even in the West the burgomaster of Amsterdam had to prohibit in 1712 a marriage of a Jewish couple under the age of 12.) These conditions prevailed through most of the 19th century. As late as 1891, Arnold White, an English visitor to the Jewish agricultural colonies in the Ukrainian province of Kherson, was told by some Russian landowners who employed Jews that “they have no vice, unless early, improvident, and fruitful marriages can be deemed a vice” (*New Review*, 5, 98). Moreover, more than their neighbors, East European Jews (and many West Europeans as well) took the rabbinic interpretation of the blessing in Genesis (1:28) “Be fruitful, and multiply, and replenish the earth” as the first commandment in the Bible, rather than a blessing. A great many did not even consider the “moral restraint,” propagated by Thomas Robert Malthus, as truly moral and hence shunned any form of birth control. More importantly, while their natality may more or less have equaled that of their equally fruitful East European neighbors, mortality, particularly the most decisive one of infants under one year of age and of children between two and five, was decidedly lower. In Czarist Russia’s European provinces, for example, where general mortality per 1,000 inhabitants had declined from 37.1 to 31.2 between 1861–70 and 1895–1904, respectively, of 1,000 newly born children no less than 268 died before reaching their first birthday – a figure practically unchanged for several decades. Suffice it to mention that by 1967 the United States reduced its infant mortality to 22.1 per 1,000 and the U.S.S.R. to 26.3. Nor can these two superpowers boast of leading the world in this respect; they lag far behind Sweden, the Netherlands, New Zealand, Australia, and Japan. The Jewish population of Israel had in 1966 an infant mortality of only 21.6 per 1,000. Among the reasons for the long-term Jewish record of keeping newly born children alive was the extreme rarity of illegitimate births among Jews. As late as 1929 and 1930 among 100 Jewish children born in Vilna only 0.5 and 0.9 were illegitimate, whereas the ratio among the Catholics was 14%. More generally, even in the crowded East European ghettos medical help was much more readily available, while better hygienic conditions prevailed owing to the numerous requirements for religious ablutions and ritual food controls. There also was relatively greater family cohesiveness and devotion of Jewish parents to their children. Moreover, because of the strong sense of responsibility for each member by the community at large and the presence of numerous charitable societies specifically devoted to help the indigent sick, even the destitute groups were rarely deprived of basic nourishment and medical care. The result was that even in New York City, where the gap between Jews and non-Jews was constantly narrowing, Jewish infant mortality in

1915 was only 78 for each 1,000 births, whereas that for the rest of the population amounted to 105.

Similarly favorable, at least between 1800 and 1914, was the Jewish ratio in deaths occasioned by violence, particularly wars. It so happened that even most of the great Napoleonic battles took place outside territories densely inhabited by Jews. The same held true for the rest of the century until World War I. Jewish fatalities among combatants were relatively small because the two large centers of Jewish population, Czarist Russia and the Ottoman Empire, did not begin drafting Jews into the army until 1827 (in Congress Poland, 1845) and 1908, respectively. While in previous centuries Jews had suffered numerous casualties as a result of uprisings and massacres, the period of 1800 to 1914 was relatively quiescent in this respect. The Russian pogroms of 1881, 1891, 1903, and 1905, though highly significant in their psychological impact upon Jews and non-Jews, did not cause enough fatalities significantly to retard the growth of the Russian Jewish population. The situation changed abruptly during World War I when Poland, Galicia, Lithuania, Romania, as well as Salonika, Palestine, and other areas with large Jewish concentrations, were turned into theaters of war. Jewish combatants in the various armies also were quite numerous, probably exceeding 500,000 in the Russian, Austrian, German, and the Western Allied armies. Their high ratio of fatalities was exemplified by the death in battle of about 12,000 German Jewish soldiers. The aftermath of the war, particularly during the Communist Revolution and the civil war in Russia, and the following massacres of Ukrainian Jews, likewise caused much destruction of Jewish lives. However, the biological vitality of the people was still so great that losses thus sustained were quickly made up by the continuous natural increase in the world’s Jewish population.

Incipient signs of retardation became noticeable in the Western countries toward the end of the 19th century, however. As is well known, the French population during the first decades of the 20th century had become practically stationary. Germany, England, and the United States also had declining birthrates which progressively narrowed down the surplus of births over deaths. Because of their increased concentration in urban, even metropolitan areas, which revealed these tendencies most pronouncedly, Jews were ahead of their neighbors in reducing their birthrate. At the same time their death rate, which had long declined, began to be stabilized owing to the relatively larger segment of old persons in the Jewish population, the result of the previous decline in Jewish mortality. Even in Polish Lodz, in 1919–29, where Jewish infant mortality of 134–54 contrasted favorably with the corresponding non-Jewish mortality of 171–203 per 1,000 births, the ratios were reversed in the case of persons over 70. At the beginning of the 20th century these trends had become so manifest that in 1908 Felix A. Theilhaber (in *Der Untergang der deutschen Juden*) warned his German coreligionists that, if these demographic weaknesses were to continue unabated, German Jewry, without the aid of immigration from the outside, would decline rapidly and ultimately die out.

These tendencies became more pronounced during and after World War I. In the years 1911–24 the general Prussian population still had an excess of births over deaths of 3,019,100 persons, but the Jewish population, on the contrary, had an excess mortality of 18,252. In 1925–28 Prussia's general population gained 1,182,056 persons, while the Prussian Jews lost 5,090 through natural causes (H. Silbergleit, *Bevoelkerungs...*, p. 39). These losses were made up only by the continued influx of Jews from Eastern Europe, as well as from the province of Posen (Poznan), which was allotted by the peace treaties to Poland. These adverse factors gradually unfolded also among the Jews of Western Europe and the United States. For example, a Jewish census taken in Buffalo in 1938 testified to a marked decline of the Jewish birthrate, much larger than that of non-Jews. While in the total population the age group under 15 amounted to 26.4% (1930), in the Jewish population it amounted to only 23.2%. The ratios of children under five were more unfavorable: 8.3 versus 6.3% (U.Z. Engelman, in: S. Robinson's *Jewish Population Studies*, 40). Most remarkably, these trends began affecting also the main reservoir of Jewish manpower in East-Central Europe. In 1926 the Soviet Jews had a birthrate of only 24.6 per 1,000 (as against 35.9 30 years before, and 43.3 of the 1926 Soviet population as a whole), the lowest of all major nationalities in the Union. Such large cities as Vienna and Budapest actually had an excess of Jewish mortality over natality (2,709 deaths vs. 1,343 births in Vienna in 1929 and a still larger surplus of 1,588 deaths in Budapest in 1932). Even in Warsaw in 1925–29 the Jewish ratio of 15.5 births vs. 11.1 deaths per 1,000 contrasted with that of 22.4:15.4 among the city's Christians. On a world scale these retarding tendencies still were partially made up by an increasing growth of the Jewish population in North Africa and some other Oriental communities. There the introduction of improved sanitary conditions and health services by the colonial powers before and after World War I created conditions similar to those of the European nations in the preceding century. With the speedily declining death rate, particularly among infants and children, and continued high birthrate, the surplus of births over deaths constantly increased. Nonetheless, the disquieting demographic trends in the much larger Ashkenazi communities were so great that in the 1930s sociologists began to warn the Jewish people that, before very long, their world population would become stationary and begin declining at an accelerated pace thereafter.

Other socioreligious factors, especially conversions and mixed marriages, further aggravated the decline in the rate of increase in Jewish population. In the history of the Jewish dispersion both in the East and the West there always existed converts out of Judaism to Christianity and Islam. For the most part this was a one-way street, since conversions from the dominant faiths to Judaism were outlawed, often under the sanction of capital punishment. Such prohibitions continued throughout the 19th century in Czarist Russia and the Ottoman Empire. Elsewhere, too, social and economic pressures led many more Jews to adopt Christianity than vice versa. Even

in Russia, with its staunchly Orthodox Jewish majority, strong conversionist impulses were generated by the *Rekrutchina* (forcible draft for long-term military service, often involving young children) over the three decades of 1827–56 (see *Cantonists). Under these and other pressures the number of baptized Jews increased substantially during the 19th century. According to the Berlin missionary, Johannes de la Roi, a biased but informed student of the missionary movements, no less than 84,500 Russian Jews found their way to the baptismal front in the 1800s (*Judentaufen im neunzehnten Jahrhundert, ein statistischer Versuch*, in *Nathanael*, vol. 15, 65–118). The ratio was understandably higher in such a Western country as Prussia, where the number of Jewish converts to Christianity seems to have reached a peak of 3,771 in the years 1812–14, according to A. Menes' computation.

Elsewhere the statistics are not very good but the number of Jews who left their community often increased threateningly. In Austria-Hungary, before World War I the second-largest center of the Jewish population, most of those who took that step were not necessarily converts. Many of them simply declared themselves persons without religion (*konfessionslos*). In Vienna alone the number of such losses to the community often amounted to 1,000 annually in the period after World War I. In Prussia, on the other hand, as a result of the Jewish Community Law of 1876 many Jews severed their ties with the existing communities because of real or alleged "religious scruples." While some of these Jews merely wished to separate themselves from the middle-of-the-road communities and to join special Orthodox groupings (the so-called *Trennungsorthodoxie*), most others did it for financial or other secularist reasons. In other countries, too, conversions to Judaism were relatively rare; they were far outweighed by conversions of Jews to other faiths, or their simple disappearance within the majority without formal action. Many of the *konfessionslos* persons, particularly in Austria, adopted this status in order to marry out of the faith, since until the interwar period the marriage of a Catholic to a Jew was legally invalid. In Germany, France, and Italy, too, mixed marriages were quite frequent. In one year (1927) 52% of marriages entered into by the Jews of Trieste had a non-Jewish partner. Demographically, intermarriage interfered with the growth of Jewish population in two ways. Unlike in the United States in recent years, European couples, when denominationally divided, as a rule raised their children as Christians rather than as Jews. Secondly, perhaps to avoid further complications, many intermarried couples refrained from having children altogether or were satisfied with but a single child. The end result was a further diminution of the Jewish numbers.

Under these circumstances only tentative estimates can be given for many figures in Table 3, Jewish Population 1820–1939. They relate to the three periods of 1820–25 (rather than 1800, because after the rapid changes during the Napoleonic Wars the frontiers of the countries of Jewish settlement essentially stable until (World War I), 1900 (before World War I), and 1939 (on the eve of World II).

From the table's figures, however unreliable in detail, one may obtain an approximation of both the growth and the shifts of the Jewish population over the 120 years from 1820 to 1939. They are largely cited here from the works of Jacob Lestschinsky, notwithstanding serious reservations as to the accuracy of all such computations. The most startling evolution was, of course, that of the Jewish population in the Western Hemisphere which was owing more to Jewish migrations than to natural increase. The United States, in particular, in the half-century preceding World War I became the great magnet for immigrants from Eastern Europe, as well as from almost all other European and Middle Eastern countries. Suffice it to say that in the course of merely 24 years, from 1890 to 1914, some 30% of all East European Jews changed their residence to some overseas country, particularly the United States. In addition, there were major migratory movements of Jews within their countries of settlement. Many Russian Jews moved into the newly annexed neo-Russian territories in the south, including a number of agricultural colonies established for them on the initiative of the Czarist regime. They also spoke in the 1830s of the Jewish "discovery of Volhynia" which brought many new Jewish settlers from the western provinces into that area which had made noteworthy contributions to Jewish culture already in pre-partition Poland. On the other hand, a great many Russian Jews, often simply called Litvaks, settled in Congress Poland in the years before World War I. After the removal of the *Pale of Settlement as a result of that war and the Communist Revolution, there was a great exodus of Jews from the original Pale into the interior of Russia, particularly the two metropolises of Moscow and Leningrad, as well as such newly founded industrial centers as Magnitogorsk in the Urals. There also was a small Jewish movement to Far Eastern *Birobidzhan, more significant ideologically than numerically. Similarly, there was a constant transplantation

of Jews from Galicia to other parts of Austria-Hungary, particularly to neighboring Bukovina and Slovakia and the two capitals of Vienna and Budapest. The same holds true for the formerly Polish possessions incorporated into Prussia in the years 1772–95 but subsequently lost to resurrected Poland in 1919. The majority of Jewish residents of that area had been leaving it for other parts of Germany, England, and the United States throughout the 19th century, but their departure was accelerated after 1918.

These migratory movements gave additional stimuli to the process of Jewish urbanization which had long been under way. The settlement of Jews in many major cities and metropolitan areas far exceeded their ratio in the respective populations. The climactic urban and metropolitan concentration of Jews continued in the course of the 20th century.

1940–1971

These three decades belong to the most portentous periods of human history, general and demographic. They also were of decisive historic importance in the destinies of the Jewish people. Begun with the great Holocaust, which destroyed thousands of European Jewish communities and ended eight centuries of European Jewish hegemony, the decade of the 1940s ended with the rise of the State of Israel. This ushered in an entirely new period of Jewish history which has already had demographic effects of enormous importance.

Despite the ever-growing literature on the Holocaust, certain aspects have not yet been sufficiently explored. Among the questions still incompletely resolved is the precise number of victims of the Nazi extermination squads. The accepted figure of 6,000,000 Jews, along with many more millions of non-Jews slain by the Nazis, has often been challenged, especially by some German writers. One of the major difficulties in obtaining definitive and precise figures consists in the fact

that, in pursuing their “final solution” of the Jewish question, the Nazi authorities were quite careful in simultaneously destroying human lives and the records pertaining to them. In his oft-quoted Posen speech of Oct. 4, 1943, Heinrich Himmler alluded to the “very grave matter” of exterminating Jews and declared: “Among ourselves it should be mentioned quite frankly, and yet we shall never speak about it publicly... I mean... the extirpation of the Jewish race. This is a page of glory in our history which has never been written and is never to be written.”

Yet not only does the partial evidence from various localities confirm the 6,000,000 estimate, but it also emerges as the most likely figure from the demographic changes in European and world Jewish population during the war and post-war periods (see *Holocaust). If on the eve of World War II the Jewish people numbered some 16,750,000, by 1945 this number was reduced to about 11,000,000. True, in addition to their victimization at the hands of Nazi extermination squads, Jews suffered considerable losses in manpower as combatants in the Soviet, U.S., and other armies, as well as from the numerous other adverse by-products of the great war. But these losses should easily have been made up by the natural growth of the Jewish population during the six war years, especially in the Western Hemisphere and other continents where the war touched only the periphery of Jewish life. Moreover, even the defeated nations of Germany, Italy, and Japan quickly recovered their biological strength and in the two decades of 1940–60 increased their populations by 25–33%. But the Jewish people which, if allowed to continue its population growth of the preceding two decades, by 1960 should have reached a total of 19,000,000–20,000,000 persons, counted instead no more than 12,800,000 persons. Even today, another decade later, it still is very far from returning to its populousness of 1939. As a result of the Holocaust and World War II there was a complete shift of the center of gravity of the Jewish people from the Old to the New World. With Russian Jewry not only weakened, but subject to a severe antisemitic onslaught especially during the declining years of Stalin’s regime in 1948–52, its isolation from the rest of Jewry became even tighter than before. Its influence on the historic progress of the entire people, particularly in the cultural sphere, declined rapidly. The demographic picture, too, of the entire European Continent was affected adversely, although Western Europe, particularly France, has staged a steady recovery in the postwar era: in the French case because of the growing immigration of North African Jews. During the prolonged Algerian uprising the Jewish communities of that country reaching back to antiquity and glorying in a great historic tradition were nearly emptied; their majority found shelter in either France or Israel. So did many refugees from other Arab countries.

In reaction to the rise of the State of Israel in 1948 anti-Jewish pressures on the declining Jewries in all Arab countries became unbearable. With the exception of Morocco and Tunisia where substantial remnants of the Jewish inhabitants have carried on against tremendous odds, the other Arab countries

almost totally lost their long-established Jewish populations. On the other hand, the very rise of Israel opened untold new possibilities for the concentration of Jews in that country. By absorbing the majority of Jewish émigrés from the Arab lands, as well as most of the surviving remnants of victims of Nazi persecution in continental Europe located in the displaced persons camps, together with migrants from many other countries, Israel’s unparalleled population growth more than redressed the balance as far as the continent of Asia was concerned. But Africa continued to be in the losing column also in many of the newly arisen black republics, where the small Jewish communities were further reduced in size by emigration.

Regrettably, during the 1940–70 period the demographic facts relating to Jews became less rather than more thoroughly investigated. To begin with, such leading European countries as Poland, Czechoslovakia, Austria, Germany, and Holland, which before World War II offered, through their governmental censuses, excellent source material for Jewish demography, became so depopulated of Jews that between them they accommodated but little more than 1% of world Jewry. Their place was taken only by Israel, whose excellent censuses and annual statistical estimates have in many ways become a mainstay of Jewish demographic research. Israel scholarship has even helped to stimulate such investigation in other lands. In the largest country of Jewish settlement, the United States, the situation likewise improved somewhat. Although the governmental censuses still fail to supply adequate information, the awareness of U.S. Jewry of the need to be acquainted with the demographic facts of life had been sufficiently aroused to call forth a number of local surveys in the 1950s and the 1960s. While these were consistently enough pursued so as to furnish successive data from decade to decade, nor conducted with the same methods so as to make them fully comparable with one another, they managed to assemble a substantial body of material from which statistical conclusions of a sort could be derived with somewhat greater assurance. All this was merely a beginning, but it appeared, at least, to be a step in the right direction. Similar hesitant steps were made in Western Europe, Argentina, and most successfully, in Canada, where the governmental censuses help supply many vital statistics relating to Jews.

At the same time figures for the second-largest Jewish community, that of the Soviet Union, were still almost exclusively dependent on foreign Jews analyzing the results of the official censuses. That of 1959 was published by the government in 16 volumes, together with some additional data periodically supplied by the official census bureau in regular bulletins. One of the most puzzling problems concerning that census was the question of the extent to which the figures given for Jewish “nationality” really covered Soviet Jewry. Though every Soviet citizen had to carry a “passport” indicating his “nationality” many Jews could escape registering as members of that nationality in the presence of enumerators, since the census takers were instructed to register only the

indications made orally by the inhabitants without checking their documents. A good case was made, therefore, for raising the results of the 1959 census which gave the total number of Jews as 2,267,814 and to postulate that their total really came close to 3,000,000.

On April 17, 1971, the Soviet press published the first summaries of the population census taken on Jan. 15, 1970. According to the figures quoted, the Jewish population fell from 11th to 12th in size among 100 nationalities in the Soviet Union, and the overall number of Jews declined from 2,267,814 (January 1959) to 2,151,000.

Despite all the obscurities and uncertainties, one may perhaps venture to propose the Table: World Population, Jewish, largely based (with all due reservations) upon the estimates annually published in the *American Jewish Year Book* and the United Nations' *Statistical Yearbook*.

Regrettably, some of the above data refer to censuses or estimates of populations in the cities proper, while others cover metropolitan districts of a wider area. In the same 1969 edition of *The World Almanac* (pp. 578f., 604ff., and 651), for example, the number of inhabitants in New York City, according to the census of 1960, was given as 7,781,984, and in Greater New York (embracing an additional 8 New Jersey and 5 New York counties) as 14,114,927. In Los Angeles the respective 1960 figures were 2,479,015 and 6,488,791; in Chicago: 3,550,404 and 6,488,791; in Buenos Aires: 2,966,816 and 6,762,629; in Paris: 2,811,171 and 7,369,387 (1962 census) or 9,811,171 (1968 estimate), and so forth. (Incidentally, the same issue of the *Almanac*, p. 602, offers somewhat different estimates of the Jewish population by counties and cities, as prepared by Dr. S.H. Linfield.) Jews had fully participated in that postwar movement, some call it flight, from the core cities to the suburbs, making estimates between official censuses or several years after the completion of communal surveys quite hazardous. It is quite evident that in 1970 about one-half of world Jewry lived in the Western Hemisphere, the United States embracing far more Jews than any other country. In 1970, the second- and third-largest concentrations were found in the U.S.S.R. and Israel. Together, the United States, the U.S.S.R., and Israel between them embraced more than 80% of world Jewry.

The progress of Jewish settlement in major cities during the period of 1900–69 proceeded apace at a tempo even more rapid than that of the general population. Already before 1939 about one quarter of the entire Jewish people lived in metropolitan areas of over 1,000,000 each. Another quarter lived in cities with populations of between 100,000 and 1,000,000 inhabitants. Thirty years later the latter ratio still was approximately correct. But the percentage of "metropolitan" Jews had risen to about 40% of the whole people, leaving barely a third for localities, urban and rural, with less than 100,000 inhabitants. In many countries, moreover, the metropolitan ratios were considerably exceeded; for instance, in England, France, and Argentina, the majority of Jews have long lived in the capitals, while in the United States such a majority may be found in a radius of 100 miles from Times Square in New York. This

evolution would not have been surprising even under more normal circumstances, since this is indeed a world-wide trend. Even the Soviet Union, which in the 1920s started as an overwhelmingly rural country, had an urban majority. The Holocaust, however, greatly accelerated that trend, inasmuch as it put an end to most of the agricultural colonies and other rural Jewish settlements in Russia, Carpathian Ruthenia (where originally more than one quarter of the Jewish population engaged in agriculture), and elsewhere. It also eliminated most of the hamlets which still accommodated a large segment of the East European Jewish population. Even in the United States postwar developments were not favorable to Jewish agricultural colonization. The same held true for Israel, where the mass immigration of the first 20 years of statehood strengthened the trend toward urban concentration.

The increase in Jewish population from 1948 to 1968 lagged far behind that of the world population as well as that of most environmental peoples. Mankind as a whole increased by around 36% between 1948 and 1968, but world Jewry added less than 20% to its numbers. This is clearly not the result of increased mortality, but rather of a relatively lower birthrate. The phenomenon of the declining Jewish birthrate so manifest in the Western countries in the interwar period gave way to a growing natality in the 1940s and the 1950s. However, this trend seems not to have lasted to the same extent into the 1960s. While conversions to other religions greatly diminished, the relative demographic ravages caused by intermarriage increased, particularly in the U.S.S.R. and Western Europe, where the offspring of mixed marriages were more likely permanently to sever its ties with the Jewish community. Under these circumstances, it was clear that it would take many more years before the Jewish people recovered its population strength of 1939.

For developments in the last third of the 20th century, see *Demography; *Vital Statistics.

[Salo W. Baron]

PORAT, ORNA (1924–), Israeli actress. Born in Germany of non-Jewish parents, Orna Porat was an established actress when she decided to settle in Israel. After learning Hebrew, she joined the *Cameri Theater and became a leading player. Among her important parts were Shaw's Saint Joan, Schiller's Mary Stuart, and the leading role in *The Good Soul of Sechuan* by Brecht. She also participated in the management of the Cameri, and was head of the company's children's theater. She was awarded the Israel Prize in the arts (theater) in 1979.

PORATH, ISRAEL (1886–1974), rabbi. Israel Porath (son of Aryeh Lieb and Sara Sharashevsky) was born in Jerusalem, the second of seven children. His grandfather Yosef and his grandmother Malka came to Palestine from Lithuania in 1837. Malka came from 15 generations of rabbis. His grandfather and father were among the best-known painters and decorators in Jerusalem, who, according to family tradition, had decorated both the Cave of Machpelah in Hebron and Jerusalem's Hurvah Synagogue. Moses Montefiore had presented a citation to them for being self-employed, rather than living off of the *halukkah*, the funds of the community. As a young boy he studied at the Ez Ḥayyim Yeshivah and at Yeshivat Ohel Moshe. When Rabbi Abraham Isaac *Kook arrived in Jaffa in 1904, he traveled to meet him and became one of his preferred students. Rabbi Kook said of him that from all of his students he received the most pleasure from Rabbi Porath and Rabbi Jacob Ḥarlap. In 1905 he married Peshe Miriam Tiktin, the sister of Rabbi David Tiktin, who was the *mashgi'ah* (spiritual advisor) at Ez Ḥayyim Yeshivah. He received ordination from Rabbi Kook as well as from Rabbi Chaim Berlin and Rabbi Jacob David Willowsky (the Slutzker Rav).

In 1906 he founded a spiritual center for young Torah scholars called Beit Va'ad le-Ḥakhamim and served as the principal and director of Doresh Ziyyon, a school system for Sephardi students. He became increasingly involved in religious and political issues of the *yishuv* and in 1911 was the

Ashkenazi candidate for the position of *hakham bashi* (chief rabbi); however, time-honored tradition won out and only Sephardi chief rabbis were selected (Rabbi Ouziel was chosen). At the behest of the leadership of the *yishuv* he was encouraged to learn foreign languages and was sent to Constantinople to secure draft deferments for yeshivah students from the Turkish army.

During World War I he was responsible for emergency welfare, food, and clothing in Jerusalem, in conjunction with the American Jewish Joint Distribution Committee. He participated in founding many new neighborhoods on the western side of Jerusalem, including Bayit ve-Gan.

In light of post-war economic difficulties as well as internal political strife between the pro- and anti-Zionist factions in the *yishuv*, he left Palestine in 1922, first for Liverpool, England and then for the United States, to head an office for the Ez Ḥayyim Yeshivah, where he was joined by his family (in September 1923). He served as a rabbi at Congregation B'nai Israel in Plainfield, New Jersey, and in 1925 moved to Cleveland to become the rabbi of Congregation Oheb Zedek, where he served for 14 years. He then moved to Congregation Neve Zedek, and in 1945 went to New York to head the Rabbi Israel Salanter Yeshivah. He returned to Cleveland within the year where he was rabbi at the Cleveland Heights Jewish Center until his death in 1974.

He was regarded as one of the outstanding leaders of Orthodox Jewish life in Cleveland. In addition to his serving as one of the founders and chairman of the Orthodox Rabbinical Council of Cleveland (Merkaz Harabanim) he was active in the general Jewish community, including the Board of the Jewish Welfare Federation, the Board of Jewish Education, and B'nai B'rith. He was instrumental in the establishment of the Telz Yeshiva in Cleveland. He was an ardent Zionist and a member of the Mizrachi (Religious Zionists of America); he was honored by numerous Zionist organizations for his work on behalf of the State of Israel, including Bar-Ilan University and the Jewish National Fund. He served as the dean of the Cleveland rabbinate for more than 50 years.

He wrote numerous scholarly articles on rabbinic literature. His major contribution was the *Mavo ha-Talmud* (seven volumes), which he composed at the inspiration of his great teacher and mentor, Rabbi Kook, who had encouraged him many years previously (already in 1913) to dedicate himself to writing a new introduction to the Talmud, based on careful research and presentation of the classical sources.

Rabbi Israel Porath died in Cleveland and was buried in Jerusalem. His beloved wife of 68 years, Peshe Miriam, had passed away four months previously. They had six sons and a daughter (Samuel, Josef, Tzvi Haim, Benjamin, Benzion, David, and Shoshana Haas). Many of his descendants returned to Israel including three of his children, nine of his grandchildren, and dozens of great grandchildren. A street is named for him in Jerusalem's Ramot neighborhood (Rehov Harav Yisrael Porath). Three of his sons became rabbis: Samuel Porath, who became a rabbi in Niagara Falls; Benjamin Porath;

and Tzvi Porath, who was rabbi for nearly half a century in Chevy Chase, Maryland. Two of his grandsons also became rabbis, Gerald Porath and Jonathan Porath, who directs the JDC programs in West Russia.

[Jonathan D. Porath (2nd ed.)]

°**PORCHETUS SALVAGUS** (**Victor Porchetto de Salvatici**; d. c. 1315), Italian Carthusian of Genoa. Porchetus wrote an anti-Jewish work entitled *Victoria adversus impios Hebraeos, in qua tum ex sacris litteris tum ex dictis Talmud ac cabbilistarum et aliorum omnium auctorum quos hebraei recipiunt monstratur veritas catholicae fidei*.

The first part (24 chapters) enumerates proofs to demonstrate the truth of Christianity from the Holy Scriptures, and the second part (16 chapters) similarly instances proofs from the Kabbalah and rabbinic sources. Porchetus' material was not original, being copied mostly from the *Pugio fidei* of Raymond *Martini. His book in turn was copied by later writers such as Pietro *Galatinus Columna and others. The book by Porchetus appeared in Paris in 1520. Its introduction (*prologus*) was reprinted by J.C. Wolf in his *Bibliotheca Hebraea* (vol. 2, 1124–27).

PORGES, HEINRICH (1837–1900), writer and conductor. Born in Prague, Porges became coeditor with K.F. Brendel of the *Neue Zeitschrift fuer Musik*, Leipzig (1863) and in 1867 he was responsible, with the editor Julius Froebel, for the arts pages of the *Sueddeutsche Presse*. From 1863, he was drawn into Richard Wagner's circle and became a staunch champion of the composer, and at Wagner's request, he documented in detail in *Die Bühnenproben zu den Bayreuther Festspielen des Jahres 1876* (Leipzig, 1881–96). After living for a while in Vienna he was called to Munich by Wagner's patron, Ludwig II of Bavaria, for whom he had written a study of Wagner's *Tristan und Isolde* (publ. 1906). In 1886 he founded the Porges Choral Society, which promoted the works of Berlioz and Bruckner.

[Israella Stein (2nd ed.)]

PORGES, MOSES BEN ISRAEL NAPHTALI (17th century), rabbi and emissary of the Ashkenazi community of Jerusalem. Born in Prague, he was a relative of Isaiah ha-Levi *Horowitz, whom he followed to Erez Israel, settling in Jerusalem, where he became a scribe. When, after the *Chmielnicki massacres of 1648–49, the contributions from Poland to Jerusalem ceased, and the Ashkenazi community in Jerusalem was overwhelmed with debt, Porges was sent as their emissary to Germany. During this mission he published, in Prague or in Frankfurt, his small work *Darkhei Ziyyon* designed to arouse sympathy and obtain support for the Jewish community in Erez Israel.

This work, one of the best examples of this type of literature, is divided into four sections: the virtue of living in Erez Israel, prayer, study, memorial prayers. The first section is a kind of guidebook for new immigrants to Israel, in which Moses draws upon his personal experiences and advises them on what to take for the journey, the easiest routes, how to conduct themselves on the way and the like. In this section he also gives practical details on prices and currency, describes the foods available in Erez Israel, recounts in detail how much is needed for living, rent, and taxes, and lists customs of dress and conduct in everyday life. In the second section he describes in detail the liturgical customs of Jerusalem, in the third section, the methods of study there, including various details about the holy places, and in the fourth, customs then practiced in Jerusalem, among them those of reciting memorial prayers for the departed and of obtaining contributions from generous individuals outside of Erez Israel, in whose honor lights were kindled in the synagogues on Sabbaths and festivals and for whom blessings were invoked. The book was directed to the masses, and therefore was written in the language they knew best – Yiddish. It succeeded admirably in its aim of presenting an attractive picture of Israel. *Darkhei Ziyyon* has only been published once and is very rare.

PORGES, NATHAN (1848–1924), rabbi, scholar, and bibliographer. Born in Prossnitz, Moravia, Porges received his rabbinical diploma at the Breslau seminary, in 1874. He served as rabbi in Nakel, Mannheim, Pilsen, and Karlsbad (Karlovy Vary), and from 1888 to 1917 in Leipzig, where he was awarded the title of professor in 1913. His important library contained many incunabula and rare books, which were dispersed and sold through book dealers (cf. Shunami, *Bibl*, index s.v.).

He wrote articles on Hebrew bibliography which appeared in the *Revue des Etudes Juives*, the *Zeitschrift fuer hebraeische Bibliographie*, and other periodicals. Porges was an expert in medieval Hebrew philology and literature, publishing essays on *Dunash ibn Labrat, Judah *Hayyuj, and Joseph *Bekhor Shor, as well as *Bibelkunde und Babelkunde* (1903) and some sermons.

PORIYYAH (Heb. פּוֹרִיָּיָה), two urban quarters and a village in northern Israel, on the Poriyyah Ridge, just S. of *Tiberias. Poriyyah was founded in 1912 as a fruit farm, mainly based on almond plantations, by a group of American Zionists. A few of these Zionists went to settle on the site which was worked by Jewish laborers. The place was abandoned in World War I. In 1940 kibbutz *Alummot temporarily settled on the site. In 1949 a work village (*kefar avodah*) was established there by immigrants from Yemen. In 1952 it became an affiliate of Tenu'at ha-Moshavim but later left the association and remained un-

affiliated. A government regional hospital was built further north in 1949, as well as housing projects of Upper Tiberias. A youth hostel, named after the veteran Tiberias inhabitant, Y. Taiber, was opened at Poriyyah. In 1968 the village had 180 inhabitants, the Poriyyah Illit quarter had 790, and the Neveh Oved quarter, 750. In 2002 the village population was 288, the Poriyyah Illit population 529, and Neveh Oved had 888 inhabitants.

[Efraim Orni]

°PORPHYRY (233–305 C.E.), Greek philosopher, disciple of Plotinus, and one of the most versatile thinkers of his day. Porphyry displayed considerable interest in Judaism, both as one of the ancient religions of the Orient and as the source of Christianity, to which he was hostile. His attitude to Judaism is sympathetic. In his *De Abstinencia* he cites Josephus (the only pagan writer to do so), drawing upon his description of the Essenes, and he describes with commiseration the misfortunes suffered by the Jews during the reign of *Antiochus Epiphanes and under Roman rule. In his life of Pythagoras, he features him as a disciple of the Hebrews. In his lost polemic against Christianity, Porphyry did not confine himself to criticism of the books of the Bible and of the New Testament, but conducted an empirical investigation which revealed a knowledge of biblical sources even greater than that of *Celsus, his predecessor in this field. Porphyry devoted an entire book to discussion of the Book of Daniel (referred to in Jerome's commentary), concluding that it was written by a Jewish contemporary of Antiochus Epiphanes, and that it can, therefore, only be regarded as "prophecy after the event."

[Menahem Stern]

PORTAL. The design of a single or double doorway, with flanking columns, appeared early in Jewish funerary art, synagogue mosaics, and paintings, and on glass, lamps, and later in textiles and manuscripts. At first it signified a physical symbol of the concept of the heavenly abode and, later, came to represent the Torah Shrine and the destroyed Temple of Jerusalem. Together with the **menorah*, snuff shovel, **etrog*, **lulav*, and **shofar*, the portal is one of the most common Jewish symbols found from the first centuries of the Common Era. The meaning of the design goes back to the ancient Oriental symbol for the residence of the gods on high. The doorway represented and signified the entrance to the heavenly precincts. Gods were portrayed standing or sitting in the doorway while the sun god Shamash from second-millennium-B.C.E. Akkadian art was frequently shown rising in the eastern mountains from between open double doors. These were the "portals of the sky" from which Shamash called out to the world. In Egypt, too, gods made their appearance standing between pillars that symbolized the heavenly sky. Later, in pagan art the portal was formed into a cult niche (*aedicula* or *naos*) holding the

god and indicating his divinity. The early Jews conceived of a portal of heaven opening onto the house of God (Gen. 28:17). The Temple of Solomon is spoken of as the earthly residence of the Divine; the "glory of the Lord" enters, as did the image of Shamash in the Mesopotamian world, through its East Gate (Ezek. 43:4–7). The twin pillars that flanked the Temple, called **Jachin* and *Boaz*, are also found in pagan temples of the Palestinian period. Probably the visual device of the portal was adopted into Jewish art from the neighboring Canaanites and Phoenicians, among whom the portal enclosed and sanctified the cult image. The Jews, having no cult idol, substituted Jewish symbols between the columns of the doorway. This is seen in the Jewish catacombs in Rome on the Via Torlonia where the portal was made in the form of a miniature Roman temple. It is shown with open doors, exposing the ends of scrolls, thus indicating the holy nature of the Torah. Painted directly above the Torah niche on the wall of the third-century-C.E. synagogue at **Dura Europos* is a classicized portal probably symbolizing Solomon's Temple. Two columns supporting an arched lintel on a lead coffin from the first- and second-century necropolis at **Bet She'arim* in Israel enclosed the *menorah*, thereby signifying the sacred aspect of the candelabrum. Other sepulchers are ornamented with elaborate portals and stone doors that probably retain some of the symbolic value of the heavenly portal. The sixth-century-C.E. synagogues at Bet Alfa and Tiberias have mosaic representations of the pedimented portals surrounded by other Jewish symbols. When the portal was used in Jewish funerary art it probably represented not only the holiness of the tomb, but also the gates of heaven through which the deceased had passed.

[Bernard Goldman]

PORTALEONE, family in N. Italy which originated in the Portaleone quarter of Rome; the **Sommo* (or *Sommi*) family also belonged to it. From the last half of the 14th century the family produced rabbis, physicians, authors, and poets. Among the first important members was ELHANAN BEN MENAHEM (14th and 15th centuries), rabbi of Fano. He is mentioned in 1399 in connection with a bill of divorce (Responsa of Isaac b. Sheshet, no. 127, New Responsa no. 27; Responsa of Simeon b. Zemah Duran, no. 1). In 1416 he represented the town of Ferrara at a synod held in **Bologna*, and he is last mentioned in Fano in 1428. His son BENJAMIN PORTALEONE and his grandson JUDAH PORTALEONE were both physicians. Elhanan's brother, MORDECAI (Angelo), is mentioned in Ferrara in 1420. The latter's son, BENJAMIN (Guglielmo Mizolo; d. before 1432), lived in Ferrara, and his grandson, MORDECAI (Angelo) was mentioned there in 1432. BENJAMIN (Guglielmo Mizolo; c. 1420 – c. 1500), Mordecai's son, was born in Mantua and was a renowned physician, well thought of by his Christian colleagues. He completed his studies in Sienna and served as physician to a number of princes; in Naples he served Ferdinand I who knighted him (thereafter he was of-

ten referred to as the Jewish knight), and in Milan, Galeazzo Maria Sforza. By 1446 Benjamin returned to his native town, where he served as the physician of the dukes of Mantua: Ludovico Gonzaga, Federico, and Francesco.

Benjamin's son, ABRAHAM, was the physician of the duke of Urbino, Guida Baedo, later returning to Mantua, where he served as the physician of the noble Federico and other nobles. He was regarded as one of the best physicians of his generation and also won the esteem of Pope Clement VII. His other son, ELEAZAR, also engaged in medicine in Mantua. In 1499 he received a permit to practice from Pope Alexander VI, and he, too, became physician to a number of noblemen, among them Prince Carlo Giovanni Sassatelli, commander of the army of the Venetian Republic. In 1530, when David *Reuveni visited Italy, he met Eleazar in Sabbioneta and some time later was entertained by Abraham in Mantua. Eleazar had two sons, DAVID and ABRAHAM. In 1518 both were authorized to practice medicine by Pope Leo X, the former in Mantua and the latter in Sermide. The sons of Abraham were JUDAH, MEIR, and SOLOMON. The first two practiced as physicians in Sermide and served the princes of the house of Gonzaga. Despite an injunction forbidding Jewish physicians to attend Christians, they received special permits from the pope and the rulers to do so. (Meir received such permits in 1593 and 1598.) David's son was the well-known physician, Abraham *Portaleone, author of *Shiltei ha-Gibborim*. Abraham had three sons, ELIEZER, JUDAH, and DAVID; the last was also a physician authorized by popes Clement VIII and Gregory XV to attend Christians. In 1596 David was in Padua but later he returned to Mantua. David's son, BENJAMIN (D.C. 1683), studied medicine at the University of Sienna, receiving his diploma in 1639, with the special authorization of Pope Urban VIII. His brother's son-in-law, SOLOMON, was a well-known surgeon (though without a degree in medicine) serving until 1727. The author of the first Hebrew play, Judah Leone *Sommo, also belonged to this family.

[Abraham David]

PORTALEONE, ABRAHAM BEN DAVID II (1542–1612), Italian physician and author. After graduating in philosophy and medicine at the University of Pavia in 1563, he was admitted to the College of Physicians in Mantua in 1566, and was authorized to practice in his father's place; in 1573 he was appointed body physician to the ducal house. Three years later he escaped from an assassination attempt. In 1591, he received papal authorization to attend Christian patients not withstanding the current restrictions. He built up a considerable

practice both among Jews and non-Jews and enjoyed a great reputation. At the duke's request he composed a Latin work containing medical guidance (*consilia medica*) as well as *Dialoghi tres de duro* (Venice, 1584) on the application of gold in medicine. He also mentions his volume of selected remedies. When in 1605 he had a stroke and was half-paralyzed, he composed for the use of his children his great work *Shiltei ha-Gibborim* ("Shields of the Mighty"; Mantua, 1612), the first Hebrew book using European punctuation. In this, he attempted to elucidate the details of the Temple, its service, and everything pertaining to it, in order to make the prescribed daily recitals of the relevant passages more intelligible. His treatment is so discursive as to make the work a compendium of all branches of science known in his day, in which all of the 10 languages which he knew were amply used.

He begins by describing the architecture of the Temple, this serving as the basis for discussing the architectural measurements and scales and the relationships of parts of a building and their proportions. In discussing the songs of the Levites in the Temple service and the musical instruments they used, he deals with music in general and instrumental music in particular, as well as poetic meter. The division into priests, Levites, and Israelites offers him the opportunity to discuss the social order and general structure of an ordered society or "political unit." Returning to a discussion of Temple sacrifices, he touches upon the cubic measurements of solids and liquids, their weights and the relationship between the two, and attempts to clarify it through his own experiments. For example, he determines the specific gravities of liquids such as wine, oil, and honey, and solids such as wheat, sifted wheat flour, and barley flour (e.g., the *Omer*). The salting of the sacrificial meat gives him an opportunity to give a lengthy description of salts in general, which, together with precious stones and medicinal herbs, were his favorite topics. Salts interested him also as ingredients of explosives, and he therefore describes in detail how saltpeter was produced, and also how to prepare gold salts and silver salts and their use in medicine, and the use of other salts in medicine. The chapter on salts thus becomes a kind of pharmacopeia.

Having completed his scientific excursions, Portaleone returns to his main topic... urging his children to be sure to recite the account of the sacrificial service and the incense burning included in the daily prayers, and he gives in three of the "shields" the order of sacrifices for each day, the passages for evening study of the Torah for each day in the year, arranged according to the days of the week and according to the weekly Scriptural portions, as well as a complete list of the chapters from Pentateuch, Prophets, Hagiographa, Mishnah, Talmud, Midrash, and Zohar. Finally, as a kind of introduction to the list of errata, Portaleone discusses reading, writing, and all aspects of the art of printing, and alphabets, Hebrew as well as others. His method of linking different subjects resulted in confusing the important with the trivial in the light of the goal he set himself, but this very confusion increases the importance of his book as a cultural-historical document, both

Jewish and general, in addition to its value as a biographical document. He combines the faith of his forefathers and the traditional Jewish intellectual preoccupations with the theories and accomplishments of the technology and science of the Renaissance and the Italian humanism of his time.

[Meir Hillel Ben-Shammai]

PORT ELIZABETH, port city in Eastern Cape Province, Republic of South Africa. Jewish families were among the founding British settlers of 1820. A congregation was formed in 1861 (or 1862) and the first synagogue building (a converted Lutheran church) was acquired in 1862. Port Elizabeth became an important center of the wool trade, in the development of which Jewish merchants, notably the *Mosenthal brothers, played a leading part. Hyman Henry Salomon was mayor in 1873–75 and Max Gumpert in 1900. Ministers of Port Elizabeth were: Samuel Rapoport 1873–94, Jacob Philips 1897–1912, and Abraham Levy 1912–54 (with a short break). In 1923 Adolph Schauder, merchant and industrialist, was elected to the city council and remained a member for more than 40 years. He served as mayor in 1940–42; a township for colored people was named after him in recognition of his work for nonwhites. He was also president of the Orthodox Hebrew Congregation for some years. Solly Rubin served as mayor in 1972–3. The United Hebrew Institutions include a *hevra kaddisha* and a benevolent society. There are two Orthodox synagogues, the Port Elizabeth Hebrew Congregation and the Summerstrand Hebrew Congregation was founded in 1947, and one Progressive Congregation (Temple Israel), founded in 1949. There is a Jewish day school (Theodor Herzl), although today over 80% of its pupils are non-Jewish. The headquarters of both the Eastern Cape Committee of the Jewish Board of Deputies and the Eastern Province Zionist Council are in Port Elizabeth. In 1969 the Jewish population of Port Elizabeth numbered 2,811 (1.1% of the general population). This had declined to approximately 450 by 2004.

[Lewis Sowden]

PORTELLA, DE, a family of courtiers in the kingdom of Aragon, Spain, who flourished at the close of the 13th century, at the time the Jews were removed from the royal administration. Its most distinguished members were the brothers Muça and Ishmael. MUÇA (d. 1286) was the royal *baiulus* (“baliff”) and *merino* in *Tarazona. He first held these functions during the last years of James I (1213–76), who granted him and his family the privilege of not having to pay more than a fifth of the tax which was imposed on the Jewish community of Tarazona (1267). Even though he was considered the private official of the king, he was recognized as the chief administrator of the state’s incomes during the reign of Pedro III (1276–85), who also entrusted him with the repair and maintenance of the fortifications of the border regions. In November 1286 he

was assassinated in unknown circumstances. His property was at first confiscated by Alfonso III (1285–91) but after negotiations his family succeeded in redeeming both property and status and settled in Albarat, near Borja.

His brother ISHMAEL (d. c. 1312) also participated in the administration of the state incomes, especially after the death of MUÇA. Until 1289 he acted as dispensator (administrator of the household) of the infante Pedro. In appreciation of his numerous services James II (1291–1327), who entrusted him with various diplomatic missions, granted him many privileges and favors, such as exemption from the payment of taxes. He appointed him rabbi of all the Jewish communities of Aragon. After Ishmael’s death, his family settled in Navarre. Its decline marked the end of the presence of Jews in the royal administration of Aragon during the period of the Christian reconquest.

PORTER, SIR LESLIE (1920–), British businessman. Porter joined his family’s textile business (J. Porter and Company), of which he became managing director in 1955. In 1959 he joined as director the supermarket chain, Tesco, which had been founded by Sir John Edward *Cohen, and after being appointed assistant managing director in 1964 and deputy chairman in 1970, served as chairman from 1973 to 1985. He was president of the Institution of Grocery Distribution from 1977 to 1980. A noted philanthropist, Porter also served as the Chancellor of Tel Aviv University. In 1949 he married (DAME) SHIRLEY (1930–), daughter of Sir John Edward *Cohen. In addition to company directorships, including that of Capital Radio, an independent broadcasting company in London, Lady Porter was active in Conservative local politics, serving as a Westminster city councilor from 1974 and as leader of the council from 1983 to 1991. She was especially concerned about the promotion of the campaign for a cleaner London. She was awarded a knighthood in 1991. From the late 1990s she received much publicity resulting from her conviction in a so-called “homes for votes” scandal, arising out of the sale of council houses in Westminster during her time as leader of the local council, which resulted in the controversial fine of £37 million being levied on her.

[Vivian David Lipman / William D. Rubinstein (2nd ed.)]

PORTLAND, Oregon’s largest city with a population of approximately 1.5 million, situated at the confluence of the Willamette and Columbia rivers on the west coast of the United States; Jewish population (2005) approximately 25,000. The earliest Jewish settlers arrived from Central Europe in the early 1850s. The first Jewish woman, Mrs. Weinshank, opened a boarding house in 1854. Early occupations included peddling and storekeeping. Pioneer Jews, mostly concerned with making a living, recognized that the community would grow only if religious needs could be met. On May 2, 1858, eight men

gathered in Portland's National Hotel to establish Beth Israel. The congregation officially organized with 21 male members. Reverend Samuel M. Laski conducted services above a livery stable and blacksmith shop. Congregation Emanu-El in San Francisco loaned the *torah* and *shofar*, which were eventually purchased. In a town that sported five churches, one school and 55 saloons, Portland's first synagogue emerged. Portland quickly became Oregon's major Jewish community. Prussian and Polish Jews founded Ahavai Shalom in 1869. In 1883 a group of Russian Jews, formerly of North Dakota, established what is now the Conservative congregation Talmud Torah. Neveh Zedek, Portland's Orthodox congregation, was established in 1900, merging with Talmud Torah two years later. Ahavai Shalom and Neveh Zedek Talmud Torah merged in 1962 to form Congregation Neveh Shalom, Portland's major Conservative synagogue. Russian Jews established the Orthodox Congregation Shaarei Torah in 1905. In 1911 a group of Sephardi Jews from the island of Rhodes founded Congregation Ahavat Achim, and in 1912 Eastern European immigrants founded Kesser Israel, the only Portland synagogue still in its original location. Reconstructionist Havurah Shalom was founded in 1979. P'nai Or, founded in 1992, is an egalitarian, Jewish Renewal congregation.

Eastern European immigrants had begun arriving around 1900 and became the core of the Portland Jewish community. Settling at the southern end of the center of Portland's downtown, they formed a nearly self-sufficient community lasting more than 50 years. Everything – a kosher shopping district, five synagogues and a community center – contributed to a lively Jewish culture that intermixed with other immigrant groups who also lived in South Portland. The neighborhood changed radically in the late 1950s with an urban renewal project designed to replace residences with a business and commercial district. By this time, many of the second and third generation had moved to the suburbs. Most remaining residents were forced to move. Shops closed or relocated, buildings were razed and a unique part of Portland's history ended.

By the time the immigration from Eastern Europe halted in 1924, Portland Jews worked mostly as merchants and storekeepers or in family networks. Although Portland Jews faced discriminatory practices in country clubs and certain residential areas, for the most part acceptance came easily. Following World War II, as shifts in economic mobility provided more occupational choices, Jews gained access to the middle class and positions in the non-Jewish world in professions such as doctors, lawyers, and upper level managers.

In the early 21st century Portland's vibrant Jewish community supported numerous communal institutions including a Jewish community center, established in 1914 by the local B'nai B'rith Lodge (founded 1879), the Jewish Federation of Greater Portland, two elementary day schools, Cedar Sinai Park (a Jewish facility for the elderly), the Oregon Jewish Community Foundation, Jewish Family and Child Service, Northwest Campus of Jewish Life/Chabad Lubavitch of Oregon, the Institute for Judaic Studies and the Oregon Jewish Museum. Reed

College and Portland State University both have Jewish Studies faculty positions. Portland has had many distinguished rabbis, including Stephen S. *Wise and Jonah B. *Wise (Beth Israel) and in recent years, Emanuel Rose (Beth Israel), Joshua Stampfer (Neveh Shalom), and Yonah Geller (Shaarei Torah) each of whom served their communities for more than 40 years. In 2005, Portland sustained 17 congregations. Prominent Jewish civic, business, and cultural leaders have made Portland their home (see *Oregon). The city has seen five Jewish mayors – the first was Bernard Goldsmith (1869–1871) and the most recent was Vera Katz (1992–2004).

[Judith Margles (2nd ed.)]

PORTNOY, JEKUTHIEL (Noah; Yuzef; 1872–1941), one of the pioneers of the *Bund. Portnoy joined a revolutionary circle at the Jewish teachers seminary in Vilna (1888–92). As a teacher in Kovno (Kaunas), he was active among the Jewish workers and in contact with Polish and Lithuanian socialists. Sent to Siberia for revolutionary activities, he managed to escape in 1899 and shortly thereafter joined the central committee of the Bund. He edited its paper, *Arbeter Shtime*, and directed its organizational matters, settling internal differences of the Bund and lending direction to its program. After 1908 he lived permanently in Warsaw. During World War I he worked for cooperation of the Bund with the Polish socialist parties, but was imprisoned by the Germans. After World War I, in independent Poland, he headed the central committee of the Bund, and in 1925 and 1930 was sent as an emissary to the United States. When the Nazis occupied Poland, he succeeded in escaping to the United States and served as head of the U.S. delegation of the Bund of Poland.

[Moshe Mishkinsky]

PORTO, Italian family prominent during the 16th and 17th centuries. Its members were scattered in various Italian towns, notably Mantua, Venice, Verona, and Rome. The family originated in Germany, from the Rafa (Rabe, "raven") family, which settled in the town of Porto in the province of Verona, and from which the noted *Rapoport family was descended. Its members include Abraham Menahem ben Jacob ha-Kohen *Porto, one of the heads of the family. ABRAHAM (d. 1593) was a rabbi of Mantua, and author of *Ammudei ha-Golah* (in manuscript). His sons were JEHIEL (1532–1577), a pupil of Meir *Katzenellenbogen of Padua, and GERSHON (1538–after 1593), also a scholar of Mantua. Gershon's son, SIMḤAH, was a pupil of Samuel Judah Katzenellenbogen in Venice, where he worked as a proofreader until 1589. In 1602 he left for the Moravian town of Prossnitz (Prostějov), where he published *Kol Simḥah* (1603), a rhymed work on the Sabbath laws. From there he went on to Vienna.

Other members of the family include MENAHEM ZION (EMANUEL) PORTO (d. c. 1600), rabbi and mathematician.

Born in Trieste, he held rabbinical office in Padua, and wrote a number of works on mathematics and astronomy in Italian, and one in Hebrew entitled *Over la-Soher* on various mathematical subjects (Venice, 1627). ZECHARIAH BEN EPHRAIM MAHALALEL (d. 1672) lived in Urbino, Rome, and Florence. He was a wealthy philanthropist and many Italian communities benefited from his generosity. He wrote *Asaf ha-Mazkir*, a reference book of sayings and legends of the Talmud (Venice, 1675). ISAAC BEN DAVID (d. c. 1577) was rabbi in Mantua. Toward the end of his life he was imprisoned, having been slandered by his opponent R. Abraham Jagel Gallico. ZEMAḤ BEN ISAAC (d. c. 1666) was appointed rabbi in Mantua in 1637. (See also *Rapoport family.)

[Abraham David]

PORTO (Rafa-Rapoport), ABRAHAM MENAHEM BEN JACOB HA-KOHEN (1520–after 1594), one of the important rabbis of Verona. In his youth he studied in Venice where he became acquainted with Elijah *Levita and where he was a proofreader for the printing press of *Bragadini. Porto witnessed the burning of the Talmud in Venice on the 13th and 14th of Marḥeshvan 1553, and appointed these days annually as days of mourning and fasting. In 1555 he published his *Zafenat Paneah*, containing a cypher-code of his own invention. He left Venice not later than 1574 and may have gone to Cremona where he is known to have been in 1574 and where he stayed until at least 1582. From 1584 to 1592 he was rabbi of Verona. The period of his rabbinate in Verona was that of its crowning glory, and the yeshivah which he conducted there became famous. In 1593 he was in Cologne (Germany).

He was the author of *Minḥah Belulah* (Verona, 1594), a commentary on the Pentateuch based upon the Midrashim. It was reprinted together with the text of the Pentateuch (Hamburg, 1795). He compiled similar commentaries on several other books of the Bible and on *Avot* which have never been published, although they have been preserved in manuscript with some of his writings (the ms. is in Hekhal Shelomo, Jerusalem). Some of his responsa and rulings are scattered in the works of contemporary scholars; additional responsa are extant in manuscript (H. Hirschfeld, *Descriptive Catalogue of the Hebrew Mss. of the Montefiore Library* (1904) nos. 480–481).

Abraham Menahem Porto was among those who forbade the reading of Azariah de *Rossi's work, *Me'or Einayim*, which had been published in Mantua in 1573 (his letter to Menahem Azariah *Fano). However, after the rabbis of Mantua, David b. Abraham *Provencal and Judah b. Joseph *Moscato, allowed it to be read, he retracted and joined them in permitting this (his letter to Azariah de Rossi). His signature appears on *tak-*

kanot forbidding gambling (1573) and the infringement of moneylending franchises held by fellow Jews.

PORTO ALEGRE, capital of the State of Rio Grande do Sul, Brazil; population: 1,416,363 (2004); estimated Jewish population: 9,000 (2004). After São Paulo and Rio de Janeiro, Porto Alegre has the third most important Jewish community in Brazil, with a solid institutional network and an active social and cultural life.

The Jewish community was established in Porto Alegre in the 1910s, when immigrants from Eastern Europe founded the local association União Israelita. In 1915, the first Jewish newspaper to appear in Brazil, *Di Mentsshayt*, written in Yiddish, was published in Porto Alegre. The Centro Israelita Porto-Alegrense (Jewish Center of Porto Alegre) was founded in 1917, while the Centro Hebraico Rio-Grandense (Jewish Center of Rio Grande do Sul, 1922) and Sociedade Beneficente das Damas Israelitas Sefaradis (Beneficent Society of Jewish Sephardic Women, 1931) were founded by Sephardi immigrants.

The pattern of Porto Alegre's Jewish community follows the general pattern established in the most important urban centers in Brazil: a well-organized institutional life; successful economic, social, and cultural integration; and a Jewish-Brazilian identity. The local community has created a school and several cultural, sport, and social welfare entities. Among them are Associação Israelita Damas de Caridade (1922), Cooperativa de Crédito Popular (1922, providing its 2,000 members with credit and banking services), Colégio Israelita Brasileiro (1922), Grêmio Esportivo Israelita (1929), Círculo Social Israelita (1930), Sociedade Beneficente de Socorros Mútuos Linath Hatzedek (1932), Sociedade Israelita Brasileira de Cultura e Beneficência – Sibra (1936), founded by German Jews who arrived during the 1930s, and the youth movements Yavne, Ha-Bonim Dror, Betar, Ha-Shomer ha-Za'ir and Chazit Ha-Noar.

Located in a region with considerable economic development and large ethnic minorities (Germans, Italians, Poles), the Jewish community of Porto Alegre flourished and developed its institutions. In 1941, the Jews had a radio program. A second one came into existence in 1968. After World War II, new institutions were created: Organização Sionista (1945), WIZO (1947), Naamat Pioneiras (1948), Clube Campestre (1958), Federação Israelita do Rio Grande do Sul (1961), and a Jewish sport club (inaugurated in 1966). After 1956, scores of refugees from Egypt and Hungary, as well as immigrants from Israel, joined the community.

In 1992, there were around 3,300 Jewish families living in Porto Alegre and 310 in other small towns located in the State of Rio Grande do Sul. In the 1920s most of the colonists from ICA colonies moved to Porto Alegre and also created small communities in the hinterland of Rio Grande do Sul: Santa Maria (1915), Pelotas (União Israelita Pelotense, 1920), Rio Grande (Sociedade Israelita Brasileira, 1920, many from Philipson), Passo Fundo (União Israelita Passo-Fundense, 1922), Erechim (Sociedade Cultural e Beneficente Israelita, 1934, with many colonists from Quatro Irmãos), and also Erebango, Cruz Alta, and Uruguaiana.

Moacyr *Scliar (1937–) the most important Jewish-Brazilian writer, was born and lived Porto Alegre. He was the main literary voice of the Brazilian Jewish experience in the 20th century. Physician and member of the Academia Brasileira de Letras (Brazilian Academy of Literature), some of his books take place in the Jewish neighborhood of Bom Fim, where the author creates an atmosphere of fantastic realism. Some of his most famous books are *A Guerra no Bom Fim* (“The War in Bom Fim,” 1972), *Balada do Falso Messias* (“Ballad of the False Messiah,” 1976) and *A Estranha Nação de Rafael Mendes* (“The Strange Nation of Rafael Mendes,” 1983).

Cintia Moscovich (1958–), from Porto Alegre, is an important Jewish-Brazilian writer from the new generation and has published titles like *O reino das cebolas* (“The Kingdom of the Onions,” 1996) and *Duas Iguais – Manual de amores e equívocos assemelhados* (“The Identical Two – Manual of Loves and Similar Mistakes,” 1998). Carlos Scliar (1920–2001) was a distinguished artist, being one of the most important Brazilian engravers. The local community had also a soccer player idol in the 1950s: David Russowsky, the “Russinho” (1917–1958), who played for “Internacional” and was also a lawyer.

Instituto Cultural Judaico Marc Chagall (1985) is a very active Jewish-Brazilian cultural institution, promoting different kinds of activities. Marc Chagall has a Memoirs Department with a well-organized historical archive about Jewish immigrants in Rio Grande do Sul.

Antisemitism

Antisemitism was a significant question in Porto Alegre during the 1990s due to the activity of local Editora Revisão, a publishing house that translated and edited some antisemitic titles such as *The Protocols of the Elders of Zion*; antisemitic works by Gustavo Barroso (a fascist leader in the 1930s), such as *Brasil, colônia de banqueiros* (“Brazil, a Colony of Bankers,” first published in the 1930s), and Holocaust-denial books such as *Holocausto judeu ou alemão? Nos bastidores da mentira do século* (“Jewish or German Holocaust? The Framers of the Century’s Lie,” written by S.E. Castan, pseudonym of the editor Siegfried Ellwanger); and *Quem escreveu o diário de Anne Frank?* (“Who Wrote the Diary of Anne Frank?”). In 1989, when the books achieved commercial distribution and political repercussions, a group of Jews and other activists, including Afro-Brazilians, launched Movimento Popular Anti-

Racismo – Mopar to respond to the diffusion of antisemitism. Editora Revisão participated in several book events in Brazil, and this provoked discussions between those who were in favor of “absolute” freedom of expression and those who denounced the racism and the antisemitism. After a legal battle of many years, the publisher S.E. Castan, owner of Revisão, was condemned for the crime of racism and antisemitism in 2004. It was the first Brazilian court conviction for antisemitism, establishing an important precedent in the matter.

In 2005, three young Jews were attacked in a bar in Porto Alegre by a skinhead group, in a rare episode of violent and open antisemitism in the country.

PORTO-RAFA (Rapaport), MOSES BEN JEHIEL HAKOHEN (d. 1624), Italian scholar. Moses was a member of the German family Rafa that settled in the town of Porto in the vicinity of Verona and became the progenitors of the renowned *Rapaport family. In 1602 Moses served as rabbi of Badia Polesine in Piedmont. Subsequently he became rabbi of Rovigo. While he was there a great controversy broke out about the validity of its *mikveh. He was among those, headed by his relative Avtalyon b. Solomon of *Consiglio, who prohibited its use. Moses collected, edited, and published all the rulings of those who took a stringent view in the dispute in a work entitled *Palgei Mayim* (Venice, 1608), appending to it a criticism of the *Mashbit Milhamot*, which gave all the rulings of those who permitted the use of the *mikveh*. Moses was on friendly terms with Leone *Modena. He died in Venice.

His brother, ABRAHAM MENAHEM PORTO (b. 1569), studied in his youth under members of his family in Cremona and Mantua. He appears to have been one of the rabbis of Verona.

He was the author of *Havvot Ya'ir* (Venice, 1628), giving epigrams and other witty deductions of rabbinic sayings in alphabetic order. He corrected and published the *Minḥah Belulah* (Verona, 1594), a commentary on the Pentateuch by his relative Abraham Menahem b. Jacob Ha-Kohen *Porto (Rafa-Rapaport). The following works by him have remained in manuscript: *Gat Rimmon*, a collection of poems; *Shimush Avraham*, a commentary on the Pentateuch; and *Hasdei David*, a commentary on the Psalms. A few of his responsa have been published in the works of his contemporaries.

[Abraham David]

PORTO-RICHE, GEORGES DE (1849–1930), French playwright. Born in Bordeaux into an assimilated family of Italian origin, Porto-Riche began his literary career with some collections of poetry: *Prima Verba* (1872), *Pommes d'Ève* (1874), and *Tout n'est pas rose* (1877). After writing two plays in verse – *Le Vertige* (1873) and *Un Drame sous Philippe II* (1875) – he turned his dramatic talent to plays dealing with the psychology of love. The most successful of these witty and well-constructed dramas were *La chance de Françoise* (1888), *Amoureuse* (1891), *Le passé* (1898), *Le vieil homme* (1911), and *Le marchand d'estampes* (1918). Collected as *Théâtre d'amour* (1928), his plays fill four volumes.

Porto-Riche's view of love was the 17th-century classical concept of a tyrannical and destructive passion. His success was due largely to what was, at the time, a daring novelty: the presentation on the stage of the most intimate problems of people in love. This won him great popularity with many critics as well as with the public, but it also earned biting criticism from some of the more conservative. This, in the case of the extreme reactionaries of the "Action française," often took an antisemitic turn.

In 1906 Porto-Riche was appointed director of the Bibliothèque Mazarine. He was elected to the Académie française.

[Moshe Catane]

PORTRAITS OF JEWS. Portraits were known among the Jews in the classical period: Josephus (*Ant.*, 17:6) records that "Alexandra sent portraits of her sons to Mark Antony in order to rouse his sympathy. The Jewish "zoographos" Eudoxios who lived in Rome was presumably a portrait painter. No such portraits have survived, though an extant statue of the classical period has been said to represent "Josephus. In the Middle Ages there are numerous representations of Jews in biblical (especially New Testament) scenes, but none that can be identified with any specific living person. What has been described as the earliest Jewish portrait is the Scharfzandt window of the Church of Our Lady in Munich but it is no more than a vivid representation of a Jewish type. The earliest actual representations of identifiable Jews are presumably the medieval Anglo-Jewish caricatures of Isaac of Norwich (1233) and of Aaron 'fiz Diaboli' of Colchester (1277). In a late 14th-century Spanish prayer book in the Vatican library (Ms. Vat. ebr. 324) there are a number of crude sketches of various members of the community, similarly caricatures rather than portraits.

The earliest identifiable portraits of Jews in the full sense are those of Daniel da Norsa and his family at the foot of the painting of the Madonna made for the Basilica di Sant' An-

drea in Mantua in 1495, built on land confiscated from him. Somewhat later is the portrait of "Joseph of Rosheim in a contemporary German document. It is somewhat curious that the earliest known specially commissioned portraits of Jews are three medals of the Renaissance period, for the religious prohibition was considered to apply more strictly to plastic art than to a plane surface. Leone "Modena stated that in his day Jews had portraits in their homes, but his own portrait, prefixed to his *Riti Ebraici*, was made as an exercise by a gentile acquaintance.

From about this time portraits of prominent Jews, including rabbis, became commonplace in the northern European Sephardi communities, where presumably the former traditions to which they had become accustomed as "Marranos had become deeply engrained. On occasion the Jews went to the most eminent artists of their time for the purpose: while "Rembrandt's portraits of "Manasseh Ben Israel may have been executed as an act of friendship, there is every reason to believe that his *Dr. Ephraim Bueno* was commissioned. In 18th-century England, artists of the caliber of Reynolds and Gainsborough carried out portrait commissions for wealthy Anglo-Jewish families. Sculptured portraits begin to emerge in the Jewish communities only in the late 18th century. To this day some of the extreme Orthodox object to having their portraits taken even by photography, because of their stern interpretation of the biblical prohibition. On the other hand, portraits of the dead persons in high relief are to be found in the Jewish cemetery of Curaçao, and in some parts of the U.S. photographs are incorporated into tombstones. In recent times, eminent Jewish portraitists include P. de "Laszlo and S.J. "Solomon, and the sculptor Jacob "Epstein.

[Cecil Roth]

PORT SAID, city N.E. of "Cairo on the Mediterranean, at the entrance to the Suez Canal. With the construction of the Port Said harbor in 1856 Jews began to settle there. The Anglo-Jewish traveler S. Samuel found about 20 families (70 souls) in the town in 1879, earning their livelihood as tailors, retail traders, and money lenders. The community in Port Said prospered after the building of the Suez Canal. In 1882 there was a blood libel against the Jews of Port Said, but the local governor protected them. In April 1892 there again was a blood libel which resulted in the death of a Jewish merchant and an attack on the synagogue. Some Jews then left the city. Nevertheless, the census of 1897 showed that the Jewish population had increased to 400 (out of a total of 42,972 inhabitants). In 1901, 1903, and 1930, there were further blood libels. The community was organized at the end of the 19th century and obtained the patronage of the Austro-Hungarian Empire. In 1890 the members of the local Jewish court of law were R. Jo-

seph Buskila, Rabbi Bechor Abraham Bitran and the *shoḥet* Jacob Aaron Luria. At the beginning of the 20th century an Ashkenazi woman had a pub in the city. In 1901 the rabbis of Cairo traveled to Port Said and published there their new regulation on *kiddushin*. In the same year seven children from Port Said studied at the Alliance Israélite Universelle school in Jerusalem. The community was subordinate to the Jewish court of law in *Alexandria. The census of 1907 found 378 Jews in Port Said; the majority were of *Aden and Yemenite origin and a minority of Egyptian origin, Ashkenazi and Sephardi Jews. In 1917 594 Jews lived in the city. During World War I, the Jewish population temporarily increased. At that time, there were also some Zionist activities in the town. During the 1920s, the community had two synagogues and a school built by the Binyan family of Aden. It closed down in the 1930s. In 1927 there were 1,009 Jews in Port Said; in 1937 they numbered 767 and in 1947, 864. The rabbi of the community in 1918–35 was Nissim Benjamin Ohana, who was born in Algeria (died in Haifa in 1966). He published a responsa collection called *Na'eh Eshiv* (published in Jerusalem; 1958) and a halakic book about *sheḥitah*, *Ze Torat Ha-Zevah* (published in Jerusalem in 1959). In 1956 the number of Jews in the town was estimated at 300, most of whom were compelled to leave as a result of the Suez campaign in 1956. In 1960 only six Jews lived in Port Said. In 2005 there were no Jews in Port Said.

[Haim J. Cohen / Leah Bornstein-Makovetsky (2nd ed.)]

PORTSMOUTH, seaport and naval base in Hampshire, S. England. The Jewish community, perhaps the oldest in continuous existence in England outside London, was founded in 1746 and a cemetery was acquired in 1749. Among early settlers were a family of engravers, a jeweler, navy agents, and small tradesmen. In a boat disaster in 1758 11 Jews were drowned, the only survivor being Samuel Emanuel, ancestor of a family later prominent in civic life. A communal split occurred in 1766 over the recognition of the rabbi of the Great Synagogue or the rabbi of the Hambro' Synagogue as spiritual leader. A reconciliation in 1771 led to reunion of the two groups in 1789. In 1780, the original synagogue was reconstructed and was still in use until 1936, when it was replaced by a new building in Southsea, the residential suburb. Portsmouth's prosperity as a naval and garrison town during the Napoleonic Wars attracted large numbers of Jews, but with the decline of the town after 1815 the community also decreased. A Jewish day school, Aria College, existed in Portsmouth for many years. In 1969 the Jewish population was estimated at 600 (out of a total of 215,000). The only communal institutions apart from the synagogue were the benevolent institution and a Board of Guardians for the poor. In the mid-1990s the Jewish pop-

ulation was estimated at approximately 385. The 2001 British census found 235 declared Jews in Portsmouth.

PORTUGAL, southwesternmost country of continental Europe, in the Iberian Peninsula. Jewish settlement in the area began prior to Portugal's emergence as a nation. The existence of a significant Jewish settlement on the peninsula by 300 C.E. is apparent from the edicts of *Elvira which proscribe "taking food with the Jews" and single out the Jewish group in a number of dicta. A tradition among the Sephardi Jews ascribes their arrival in Iberia to Roman times, in the wake of the destruction of the Temple in 70 C.E. and subsequent dispersion toward Europe. James *Finn endeavored to make a case for dating the initial Jewish involvement in the area as early as 900 B.C.E., based on reports of two ancient Hebrew inscriptions, one mentioning *Amaziah, king of Judah, and a second marking the grave of King Solomon's treasurer, *Adoniram.

When Portugal emerged as a distinct national entity under Affonso (Henriques) I (1139–85), a number of wholly Jewish districts existed, including communities in *Lisbon, *Oporto, *Santarém, and *Beja. Affonso employed as his treasurer Yahya ibn Ya'ish, thereby initiating the pattern of Portuguese rulers enlisting Jewish talent in the management of affairs of state. Under King Affonso III (1248–79) Portugal attained total independence and fixed its historic geographic boundaries, and during his reign the classic Portuguese model of Jewish communal life emerged. The crown recognized the Jewish community as a distinct legal entity, headed by the royally appointed *arraby mor. The *arraby mor*, in turn, named seven *dayyanim, one for each of seven regional centers; Santarém, Oporto, *Moncorvo, *Viseu, *Faro, *Evora, and *Covilhã, each with his own administrative staff to adjudicate both civil and criminal cases. Their decisions were subject to appeal before the *arraby mor*, who visited the district courts annually for this purpose, accompanied by an *av bet din ("chief justice") and an executive staff. The vast power of the *arraby mor* was balanced by the right of the people to select the local rabbis – who, however, were paid by the crown and required its confirmation – and to elect the *tovei ha-ir* (see *Community, *Elders) who directed the daily functions of the community. In the larger towns Jews generally lived together in a *juderia* (see *Jewish Quarter) such as Oporto's Jews' Hill or Loulé's Jews' Vale.

Portuguese Jewry prospered under these separatist conditions, continuing the attentiveness to learning that marked the peninsula's formative years. The community's autonomy amid officialness was the crucible in which the proud, enduring Portuguese Sephardi heritage was shaped. By the 15th century the Jews were playing a major role in the country's monarchical capitalism, as that economic system has been characterized. The concentration of Jews in Lisbon and other

Places of Jewish settlement in Portugal, 1200–1497.

population centers rendered obvious the group’s business success and – as a result of their access to royalty – their disproportionate prominence in society. At the same time, Portuguese Jews were fastidious in loyalty to their faith and reciprocated the distant posture assumed by their devout Catholic neighbors, making way for the suspicions that feed on envy. Furthermore, the independence enjoyed by the Jewish community, in the otherwise Christian state, aroused the ire of the clergy. Their efforts to erode Jewish civil rights were resisted by the cultured King Diniz (1279–1325), who retained the *arraby mor* Don Judah as his treasurer and reasserted that the Jews need not pay tithes to the church. In any event the Jews were heavily taxed as the price of remaining unmolested, including a special Jews’ tax intended to redeem the “accursed state of the race,” and a tax based on the number of cattle and fowl slaughtered by the *shohatim*. The unsympathetic Affonso IV

(1325–57) increased the direct tax load to bring him an annual state income of about 50,000 livres. He also reinstated the dormant requirement that Jews wear an identifying yellow badge, and restricted their freedom to emigrate. The emboldened clergy accused the Jews of spreading the *Black Death in 1350, inciting the populace to action. During the short rule of Pedro I (1357–67) – who employed as his physician the famed Moses *Navarro – the deterioration of the Jewish position was halted. The situation then fluctuated from ruler to ruler until the reign of Affonso V (1438–81), who gave the Jews his conscientious protection, affording them a last peaceful span of existence in Portugal. The general populace was seething with envy and religious hate. In 1449 there occurred a riot against the Jews of Lisbon; many homes were sacked and a number of persons were murdered. Local assemblies in 1451, 1455, 1473, and 1481 demanded that steps be taken to reduce the national prominence of the Jew.

Somehow the Jews of Portugal never considered their predicament as hopeless, and when *Spain expelled its Jews in 1492, some 150,000 fled to nearby Portugal, where both the general and Jewish culture approximated their own (see *Spanish and Portuguese Literature). King John II (1481–95), eager to augment his treasury, approved their admission. Wealthy families were charged 100 cruzados for the right of permanent residence; craftsmen were admitted with an eye to their potential in military production. R. Isaac *Aboab was permitted to settle with a group of 30 important families at Oporto. The vast majority, however, paid eight cruzados per head for the right to remain in Portugal for up to eight months. When this unhappy group found that a dearth of sailings made their scheduled exit impossible, John II proclaimed them automatically his slaves. Children were torn from their parents, 700 youths being shipped to the African island of Saõ Tomé (Saint Thomas) in an unsuccessful scheme to populate this wild territory.

With the accession of Emanuel I the Fortunate (1495–1521), the harsh distinctions between the displaced Spanish and the native Portuguese Jews began to be erased, and hopes for a tranquil period were raised. Instead, Emanuel’s reign signaled the end of normative Jewish life in Portugal, for within a year of his accession he contracted a marriage with the Spanish princess Isabella – hoping thereby to bring the entire peninsula under a single monarch – and Spanish royalty made its consent dependent on his ridding Portugal of all Jews. Consenting reluctantly, on Dec. 4, 1496, Emanuel ordered that by November of the following year no Jew or Moor should remain in the country. Fortright action was not taken against the Moors, if only because Christians in Moorish lands would then be subject to reprisals. As the departures proceeded Emanuel reconsidered the loss of the Jewish citizenry and the attendant economic losses. He resolved to keep them in the country by turning the Jews into legal Christians. He tried persuasion and torture, but with little success, and the chief rabbi, Simon *Maimi, died resisting conversion. Accordingly on March 19, 1497, all Jewish minors were forcibly

baptized and detained, a move that tended to prevent their parents from attempting to flee. The order then went out for all who were still intent on embarkation to assemble at Lisbon. Some 20,000 gathered there, but instead of being evacuated they were ceremonially baptized and declared equal citizens of the realm. Bewildered, these *Conversos cautiously began to emigrate, prompting Emanuel to respond on April 21, 1499, by withholding the right of emigration from the *New Christians, as this new class was officially designated, but technicalities aside, the Portuguese majority continued to regard them as Jews. In the spring of 1506, over 2,000 New Christians were massacred during a Lisbon riot. If the Conversos had had any thoughts of finding solace in the religion thrust upon them, such riots dissuaded them. Consequently even those who were otherwise weak of spirit tended to cling to their God, with the resultant emergence of *Crypto-Judaism, or Marranoism. While attending church and conducting themselves outwardly as Catholics, in secret they maintained Jewish observances, to whatever extent was possible.

As early as 1516 King Emanuel, suspecting that such a situation existed, proposed to Pope *Leo X that an *Inquisition – on the Spanish model – be authorized to ferret out backsliding New Christians. John III (1521–57) enlisted Enrique *Nuñez, an apostate from the Canary Islands, to mingle with the Marranos and report on their practices. In 1527 Nuñez presented King John with an exposé of Marrano life, appending a list of Crypto-Jews. Popular support for a Portuguese Inquisition surfaced in 1531, when the populace attributed the earthquake of that year to divine retribution for New Christian duplicity. Unable to resist these pressures, Pope Clement VII authorized the Inquisition, with King John's confessor Diogo da Silva as the first inquisitor general. Attempting to counter this, the Marranos dispatched Duarte de *Paz to Rome. Armed with unlimited funds, Paz was to attempt, at the very least, to deny the Inquisition the right to confiscate the property of those condemned, recognizing that this would be an incitement to prosecution. The ensuing diplomatic fray lasted half a century. On April 5, 1533 the Marranos won a suspension of the Inquisition, but on May 23, 1536 it was reauthorized, to be effective three years hence. A first *auto-da-fé took place in Lisbon on Sept. 20, 1540, but in 1544 the Inquisition was again suspended. Finally Emperor *Charles V brought his influence to bear and King John offered the bribe of Viseu's total tax revenue; irrevocable papal consent was given on July 16, 1547. Permanent tribunals were established at Lisbon, Evora, *Coimbra, and in Portugal's Far East outpost *Goa. Ultimately, in 1579, the right to confiscate the culprit's property also accrued to the inquisitors, so that every wealthy Portuguese not certified as pure-blooded (*limpieza de sangre) lived in terror. The Portuguese Inquisition became inspired more by greed than by piety, as Padre Antonio *Vieira charged. Soon the tribunal authorities were able to construct lavish palaces, to proffer large sums to receive condemnatory testimony, and to produce spectacular autos-da-fé, which competed with the bullfights in drawing crowds of tens of thousands. Accused Marranos

could escape death by repentantly admitting to Judaizing, but in such an event they would be forced into implicating family and friends, thus providing a spiraling supply of victims. Occasionally even a genuine Christian was martyred for Judaizing, young Don Lope de *Vera y Alarcon (1620–1644) being the most notable example. Crypto-Jews sought precarious safety among the ruling classes and clergy; in time this tendency resulted in a significant percentage of Marrano blood being found within Portugal's ruling circles – as bitterly documented by Mario Saa.

The surest method of evading the Inquisition was to abandon the peninsula, and a constant flow of Conversos escaped – some with daring (see Samuel *Nunez), some with luck – to the communities of the *Marrano Diaspora, where many of them quickly reverted to normative Judaism. Some ex-Marranos, however, such as Spinoza's teacher Juan de *Prado, were not found acceptable by congregational leaders, giving rise to a responsa literature debating the status of the New Christians and ex-Marranos in Jewish law. The leading city of the Portuguese Diaspora was *Amsterdam, with *Salonika ranking first in the Ottoman East, but the former Marranos became ubiquitous in all the Old and New World centers of trade, to the extent that "Portuguese" became synonymous with "Jewish" – much to the consternation of gentile Portuguese travelers. The stream of refugees continued until the end of the inquisitional period. As late as 1795, immigrants to London cited flight from the Inquisition on their aliens' certificates. In 1791 Isaac Lopes Simões fled Lisbon to enter the covenant of Abraham at Bordeaux, France.

The Inquisition was brought to an end during the reign of Joseph Emanuel I (1750–77) through the initiative of Sebastião José de Carvalho e Mello, Marques de Pombal (1699–1782), who was the power behind the titular monarch. In a series of acts from 1751 to 1774 Pombal deprived the Holy Office of real power, placing it under secular control, and restored the civil rights of the New Christian class, even bullying certified Old Christian families into contracting marriages with New Christians. A last auto-da-fé took place in 1791; on March 31, 1821, the Inquisition was abolished in Portugal. During the nightmare centuries of Portugal's Inquisition, over 40,000 persons were implicated, of whom 30,000 were sentenced at autos-da-fé. A total of 750 of these were staged, at which 29,000 persons were reconciled to the Church, 600 persons burned in effigy, and 1,200 persons burned at the stake. The majority of the victims were accused of Judaizing. The terror that weighed on the Marranos who managed to avoid detection cannot be measured.

Historians writing at the beginning of the 20th century supposed that the last Marranos had by then disappeared. In 1917, however, a mining engineer named Samuel *Schwarz discovered a community of Marranos in the remote northern region near *Belmonte. Apparently they had succeeded in maintaining their identity in the remote mountain areas, marrying among themselves, harboring memories of Jewish observances, being called Jews by their neighbors, and hold-

ing to the belief in a single, personal Deity who would redeem His people at the end of days. While Schwarz was publicizing his discovery, a Portuguese hero of Marrano descent, Captain Arturo Carlos de *Barros Basto, openly espoused Judaism and undertook to revitalize the spiritual life of the Marranos. World Jewry took a warm interest in the Barros Basto enterprise, with British Jews taking the lead in a plan to forge a link between the Marranos and the Jewish community that had sprung up in Portugal since the end of the Inquisition.

[Aaron Lichtenstein]

Resettlement

Jewish settlement in Portugal was renewed around 1800: a corner of the British cemetery in Lisbon contains Hebrew tombstones dating from 1804. The first settlers, who held British nationality, had been buried in a separate plot allotted to them in the English cemetery. Later, in March of 1833, a Portuguese nobleman by the name of António de Castro let to Abraham de José Pariente, at an annual rent of 4,000 reis, a plot of land to serve "as a cemetery for the tenant, Abraham de José Pariente, his descendants, and relatives." It was used as a general Jewish cemetery. By a decree published in 1868, the Jews of Lisbon were permitted to "construct a cemetery for the burial of their coreligionists." Official recognition was not accorded to the Jewish community until 1892, when a decree was published entitling it "to hold religious services, maintain a cemetery for the burial of Jews resident in or in transit through Portugal, to establish funds for the assistance of the poor, and to keep registers of births, deaths, and marriages." After the establishment of the republic by the revolution of Oct. 5, 1910, the government of Portugal approved the community's statute presented to it in 1912. In accordance with the approved statute, the community was authorized to maintain places of worship, a cemetery, and a *hevra kaddisha*, to slaughter in accordance with the Jewish law, to keep registers of births, deaths, and marriages, and to establish charity funds. Beginning in the 1920s, cases of conversion to Catholicism were not infrequent and several families were split into Jewish and Catholic branches. However, after 1950, this tendency declined to a great extent.

[Reuven Nall]

Holocaust Period

At the outbreak of World War II, Portugal had an organized Jewish community of about 380 Portuguese nationals, in addition to another 650 Jews, many of whom were refugees from Central Europe, who were granted "resident" status. The Jewish community was headed by Moses *Amzalak, a personal friend and associate of President Salazar. After the fall of France, Portugal adopted a most liberal visa policy under which thousands of refugees, including a large proportion of Jews, were allowed to enter the country as immigrants. This policy, however, excluded those of Russian origin or birth. Starting late in 1940, and particularly from the Spring of 1941, Portuguese immigration policy became increasingly stringent as a result of the limited sailings from Portuguese ports. Dur-

ing the second half of the war, Portugal agreed to grant entry visas as part of various rescue operations, on the condition that its territory be used only for transit purposes. For reasons outside Portugal's control, these plans were never realized. During this period, however, Portugal saved all of its 245 Jewish citizens and those Jews in occupied countries to whom it granted consular protection, forcing the Germans to return part of their confiscated property. Portugal joined the other neutral countries in saving Hungarian Jews (see *Hungary, Holocaust) in late 1944, by granting them her protection. Throughout the war Lisbon served as a base for the operations of Jewish organizations in and beyond the Iberian Peninsula.

[Haim Avni]

Contemporary Period

In 1971 the Jewish community of Portugal consisted of 650 persons, about half of them Sephardim and the others Ashkenazim. Of these, 630 lived in Lisbon, 15 in Oporto, and five in Algarve. Most of the Ashkenazim (mainly of German and Polish origin) took up residence in Portugal after World War II, with such notable exceptions as Kurt Jacobsohn, the vice rector and the interim rector of Lisbon University, who settled in Portugal in the late 1920s. The majority of the Jews were in the liberal professions, or engaged in business, real estate, construction, and private employment. Several occupied high positions in the academic and medical fields. There were four synagogues in Portugal, one in Lisbon opened in 1902, one in Oporto, built with the assistance of the Portuguese communities in London and Holland and the generous donation of the Kadoorie family, and two private synagogues in Faro, one belonging to Semtob Sequerra and the other to the Amram family. Apart from the Lisbon synagogue, these were seldom frequented. The former community center in Lisbon was used as a prayerhouse by the Ashkenazim.

At the outset of the 21st century about half of Portugal's 600 Jews lived in Lisbon, maintaining two synagogues, a cultural center, and a home for the aged. Most Portuguese Jews came from North Africa. There was also a small number of Ashkenazi Jews, some of whom arrived in the country during World War II. Their most serious problems were common to other communities, especially the small ones: assimilation and mixed marriages. In certain mountainous regions far to the north, the remaining *Crypto-Jews maintain old customs, ways of praying, and special festivities. They were able to survive thanks to the preservation of their tradition and a high rate of endogamic marriages. In 1917, the community of *Belmonte in the Estrella Mountains was discovered. In 1983, a film was produced about those "judeos" of Belmonte, portraying their fidelity to Jewish customs. Around 100 were living there at the beginning of the 21st century, some of them returning to Orthodox Judaism.

Relations with Israel through the 1960s

Diplomatic relations were not established between Portugal and Israel. In 1958, after diplomatic contacts had been made

in other European capitals, Israel established a consulate general in Lisbon on the understanding that this step would be followed by the establishment of full diplomatic relations. The expectation did not materialize, however, probably due to Portugal's fear of Arab reactions. In 1959 an agreement was signed between the Bank of Israel and the Bank of Portugal, and trade relations developed in the 1960s. In 1969 Israel's exports to Portugal amounted to \$1,542,000, mainly in cotton and diamonds, and imported commodities reached \$297,000, mainly copra and wood. In the United Nations, Portugal usually abstained on issues related to Israel or supported the Arab viewpoint. Israel voted against Portugal several times on questions of colonialism.

[Shimeon Amir]

After the 1974 Revolution

The troubled period between the outburst of the revolutionary disturbances of April 1974 (the "Carnation Revolution"), and the establishment of a regular constitutional government in 1976 was characterized by a flare-up of extremist and anarchist movements directed against parliamentary democracy, freedom of speech and free enterprise. As a result, about half of the 600 Jews of Portugal left, migrating to Israel, Brazil, Canada, and the United States, in that order; the 300 who remain reside mostly in Lisbon, with a handful in Oporto.

During the political struggle for power in 1974–76, accusations of "collusion" with Israel with its (then) governing Labor Party were hurled at the leadership of the Portuguese Socialist Party (PS) led by Dr. Mario Soares by its Communist and leftist opponents. The MRPP, a Maoist militant party, gave its agitation a "Jewish" slant; its organization in the Beira Baixa province, where several thousand Marranos lived, waged its political campaign under the slogan "Hitler killed your brethren, do not back Fascism and reaction." But they gained no support whatsoever in the region.

With the end of Portuguese rule in Angola and Mozambique, the few Jews resident there emigrated to Brazil and South Africa. All the institutions of the Lisbon community still function, including two synagogues, a Jewish cultural center, a kosher butcher, a special slaughter-house, and a home for the aged.

The Soares government established diplomatic relations on ambassadorial level with Israel at the beginning of 1977, after a successful exploratory mission to Jerusalem headed by Jaime Gama, future minister of the interior of Portugal. The chairman of the Portuguese parliament, Salgado Zenha, who visited Israel as an official guest of the Israeli Labor Party, was also warmly received by the representatives of all the political parties in Israel. As a result, an Israeli embassy was established in Lisbon, the first ambassador being Ephraim Eldar. But anti-Israeli tendencies, embodied mainly in circles having commercial relations with Arab countries, and in the Supreme Revolutionary Council, where the former Foreign Minister, Major Melo Antunes, exercised a dominant influence, prevented the opening of a Portuguese embassy in Israel.

The cultural and economic links between Portugal and Israel were noticeably strengthened. Israeli specialists in agriculture and fisheries (mainly experts in the raising of fresh-water carp in artificial ponds) worked in Portuguese villages; the Gulbenkian Foundation, the main scientific and cultural institution of Portugal, granted scholarships to Israeli scientists.

In 1978 Israel's exports to Portugal amounted to \$21.6 million (mainly machinery, chemicals, medicaments, textiles), a nearly twenty-fold increase over the 1969 figures. The value of imports from Portugal reached \$9.4 million (raw materials, especially wood), a 31-fold increase over 1969. In 1980 the sums were \$61 million and \$16.1 million, respectively, and in 2004, \$76.1 million and \$70.1 million.

[Michael Harsgor]

During the early 1980s there was a considerable increase in cultural exchange between Portugal and Israel. The Institutos de Relações Culturais Portugal-Israel (Institutes for Portuguese-Israel Cultural Relations) was active in Porto and Guarda. In 1983, the Mayor of Lisbon, Nuno Kruz Abecassi, visited Israel to participate in the Fourth Jerusalem Conference of Mayors. Dr. Jorge Sampaio, who visited Israel twice as mayor of Lisbon, has served as president of Portugal since 1996. His maternal grandmother was from a Moroccan Jewish family. His cousin is president of the Lisbon Jewish community.

PORTUGALOV, BENJAMIN OSIPOVICH (1835–1896), Russian physician and publicist. He was imprisoned for his activities in the *Narodnaya Volya* movement in 1860 in the fortress of St. Peter and Paul. After his release he qualified as a physician but was arrested again in 1874 and exiled to the Urals. Later he settled in Samara (Kuibyshev). Portugalov devoted a great deal of his time to philanthropic work and to combating drunkenness. He was the first physician in Russia to advocate social medicine. A fanatic assimilationist, Portugalov was opposed to the rituals of *shehitah and *circumcision and even asked the authorities to forbid them. He took an active part in the Jewish-Christian movement initiated by Jews in southern Russia in the 1880s. He considered the pogroms in the 1880s as a social movement against the injustice perpetrated by leading classes. Portugalov was also opposed to Zionism, seeing the solution of the Jewish problem in social religious reform, based on a general humanistic religion free of ritual ceremonies.

PORUMBACU (Schwefelberg), VERONICA (1921–1977), Romanian poet and novelist. Born in Bucharest, Veronica Porumbacu grew up in an intellectual circle, and studied psychology and sociology. A member of the anti-Fascist underground during World War II, she began her literary career under the postwar Communist regime, first publishing children's books in 1946.

Like many of her subsequent publications, her first collection of verse *Visele Babei Dochia* ("The Dreams of Baba Dochia," 1947) dealt with contemporary political questions. She also wrote lyrical works, notably *Intoarcerea din Cythera* ("Return from Cythera," 1966). Her volumes of poetry include *Generația mea* ("My Generation," 1955), *Lirice* ("Lyrics," 1957), *Diminetele simple* ("Simple Mornings," 1961), *Memoria cuvintelor* ("Recollections of Worlds," 1963), and *Histriana* (1968). Many of her poems have been translated into other languages. In 1968 she published a much-praised autobiographical novel, *Portile* ("Gates"). Set in the period of the

pre-Nazi Antonescu regime, the book tells of her reaction to antisemitism and of the exclusion of Jewish children from the Romanian educational system. Despite her assimilated upbringing, Veronica Porumbacu became aware of her Jewish heritage and was impressed by the traditional loyalties of her ancestors, whom she describes sympathetically. She also published translations from Hebrew poetry (N. Alterman, A. Shlonsky, and Y. Amichai) and from English the 19th-century U.S. author E. Dickinson.

[Dora Litani-Littman]

PORUSH, ISRAEL (1907–1991), Australian rabbi. Porush was born in Jerusalem and, after receiving a traditional religious education in the talmud torah and yeshivah *Ez Hayyim* of the old *yishuv*, he proceeded to Berlin to study at the Hildesheimer Rabbinical Seminary, where he received his rabbinical diploma in 1932, and at the universities of Berlin and Marburg, where he received his doctorate in mathematics. On Hitler's rise to power in 1933, Porush moved to London and was appointed rabbi of the Finchley Synagogue (1934–1940). In the latter year, he was appointed to the Great Synagogue of Sydney, the mother congregation of Australian Jewry, and became *Av bet din*, retaining that position after his retirement at the end of 1972. Porush was regarded as the Orthodox spiritual head of Australian Jewry and rabbinic representative of the community in state and civic affairs. In 1952, he founded the Association of Jewish Ministers of Australia and New Zealand, of which he was president. He was also president of the Jewish Historical Society of Australia from 1948. He retired in 1975 when he also resigned as president of the association and was appointed honorary life president. Porush wrote *Today's Challenge to Judaism* (1972) and *The House of Israel, A History of the Sydney Great Synagogue* (1977), published on the occasion of its centenary (1878–1978). His manuscript autobiography, *Memoirs of an Australian Rabbi*, was published posthumously by the Australian Jewish Historical Society in 1993.

BIBLIOGRAPHY: W.D. Rubinstein, Australia II, index.

PORUSH, MENACHEM (1916–), *haredi* politician and public figure, member of the Fourth to Thirteenth Knessets. Porush was born in Jerusalem. He studied at the *Ez ha-Hayyim* yeshivah in Jerusalem. In the years 1932–38 he was a reporter for *haredi* papers. In 1949–63 he was appointed editor of *Kol Yisrael*, and in the years 1950–51 was editor of *Ha-Mevasser*. In 1951 Porush founded a network of nurseries for *haredi* children. In 1953 he was one of the founders of the independent education system of Agudat Israel, and served as one of its directors. In 1954 he became a member of the Agudat Israel Center in Israel, and a member of the Executive of the World Agudat Israel. In 1955 he was appointed chairman of

the Agudat Israel Center in Israel. Porush was first elected to the Fourth Knesset in 1959 on the Agudat Israel list. He was a member of the Knesset Education and Culture Committee from the Fourth to Ninth Knessets, and of the Constitution, Law, and Justice Committee from the Fifth to Eighth Knessets. In the Ninth and Tenth Knessets he served as chairman of the Labor and Welfare Committee, and in the Twelfth Knesset as a member of the Foreign Affairs and Security Committee and the Interior and Environment Committee. In the years 1984–85 he served as deputy minister of labor and welfare, and again in 1990–92, after the Labor Party left the National Unity Government.

Simultaneously with his membership in the Knesset Porush was elected to the Jerusalem municipality in 1969, and served as deputy mayor of Jerusalem under mayor Teddy *Kollek until 1974. In 1973 he established Kiryat ha-Yeled – a center for *haredi* children.

The son of Menachem Porush, MEIR, was a member of the Jerusalem City Council in the years 1983–96, and deputy mayor under both Teddy Kollek and Ehud *Olmert in the years 1989–96. He has been a member of the Knesset on behalf of Agudat Israel within Yahadut ha-Torah since the Fourteenth Knesset, and served as deputy minister of construction and housing in the years 1996–2003.

[Susan Hattis Rolef (2nd ed.)]

PORZECANSKI, TERESA (1945–), Uruguayan anthropologist, poet, and writer of Ashkenazi and Syrian descent. Her professional works includes nine books on anthropology and social sciences, among them *Historias de vida de inmigrantes judíos al Uruguay* (“Life Stories of Jewish Immigrants to Uruguay,” 1986), based on oral history. Porzecanski is lecturer and researcher in social sciences at the Universidad de la República, Montevideo. Her novels and short stories frequently deal with small, unimportant people in their desperate struggle for happiness and sense in life, which is frequently related to mythic motifs and impulses deeply rooted in the human soul. Her Jewish characters (Ashkenazi and Sephardi, following her own roots) show the transformations of traditions and beliefs in a modern and often alien environment, and the forging of a new, Latin American Jewish identity. Her main books are *Construcciones* (“Constructions,” 1979); *La invención de los soles* (1982; *Sun Inventions and Perfumes of Carthage, Two Novellas*, 2000); *La respiración es una fragua* (“Breath Is a Forge,” 1989); *Mesías en Montevideo* (“Messiah in Montevideo,” 1989); *Perfumes de Cartago* (1994); *Una novela erótica* (“An Erotic Novel,” 1986); *La piel del alma* (“The Soul’s Skin,” 1996); *Nupcias en familia y otros cuentos* (“Marriage in the Family and Other Stories,” 1998); and *Felicidades Fugaces* (“Shooting Happiness,” 2002). She has received many national and international awards, including the Fulbright and Guggenheim scholarships. Her works have been translated into English, Portuguese, German, and Dutch, and included in anthologies of Uruguayan, Jewish, and women’s writing.

[Florinda F. Goldberg (2nd ed.)]

POSEKIM, a Hebrew term for scholars whose intellectual efforts were concentrated on determining the *halakhah* in practice (for whom the word “decisors” is sometimes used) in contrast to those commentators who applied themselves to study for its own sake, and in order to facilitate the understanding of the subject under discussion and who are called *mefarshim* (expositors or commentators). This distinction was already recognized by early authorities who stressed, for instance, that *halakhah* should not be derived from *Rashi’s commentary on the Talmud – since Rashi did not introduce into his commentary various ancillary considerations without which no practical decision can be arrived at, except perhaps for those few instances where Rashi explicitly states that the *halakhah* is in accordance with his exposition.

In the early period, especially in Germany, the term *posekim* was identical with the teachers and leaders of the generation in every locality. It included the heads of the yeshivot, *avot battei din*, rabbis and talmudic scholars generally, on condition that their statements were made “by way of *pesak*,” on actual cases which arose. The ruling of the *posek* was binding only upon those subject to his authority, since he laid down the *halakhah* in accordance with local tradition and for the people who accepted his authority. A ruling was never successfully imposed upon communities outside the area of the jurisdiction of the *posek*. The authority of the *posek* during this period depended on his being a competent talmudic scholar, possessing a comprehensive knowledge in every field on his subject, and on the fact that he continued the tradition of his locality and of his teachers transmitted to him while he studied under them. In the course of time this situation gradually changed, as a result of the dissemination of the codes, which afforded easy access to sources necessary for deciding the *halakhah*. From the second half of the 16th century with the beginning of the spread of the Shulhan Arukh, the character of the works by the *posekim* changed fundamentally. Henceforth the outstanding *posekim* hardly engaged at all in theoretical exposition, and to the extent that they did do so their commentaries were generally forgotten and ignored. The *posek* during this period won general recognition by virtue of the extensive practical experience he accumulated and by gaining the approbation of contemporary scholars, by devoting the whole of his intellectual and physical energy to this goal, and by virtue of “divine aid,” the charisma with which he was endowed. For a survey of the *posekim* and their development see *Codification of Law.

POSENER, GEORGES HENRI (1906–1988), French Egyptologist. Born and educated in Paris, Posener was a member of the Institut Française d'Archéologie Orientale in Cairo from 1931 to 1935. In 1945 he was named directeur d'études of the Ecole Pratique des Hautes Etudes (4th section). From 1961, he held the chair of Egyptian philology and archaeology of the Collège de France. He was elected president of the Société Française d'Égyptologie in 1963.

Posener's work concentrated on ancient texts. He published for the French Institute in Cairo the *Catalogue des ostraca hiératiques littéraires de Deir el Medineh* (2 vols., 1934–52). His *La première domination Perse en Egypte* (1936) collected the hieroglyphic inscriptions relating to the Persians in Egypt. In *Princes et pays d'Asie et de Nubie* (1940) he studied the hieratic texts written on figurines, believed to have magic properties. *Littérature et politique dans l'Égypte de la XI^e dynastie* (1956) continued his interest in the use of literature in historical studies. He also wrote *De la divinité du pharaon* (1960), but is probably best known for the *Dictionnaire de la civilisation égyptienne* (1959; A Dictionary of Egyptian Civilization, 1962).

[Irwin L. Merker]

POSENER (Pozner), SOLOMON (1876–1946), social historian and writer. Born in Minsk, Posener began to write for the Russian-Jewish press under the name of Stellin.

He contributed to the report prepared by *ICA on the economic position of Russian Jewry (1904). He also wrote a study on Jews in government schools in Russia for *Novy Vosk-hod* (printed separately in 1913). In Paris from 1903, he contributed to the French press on conditions in Russia and on Russian Jewry, as well as editing *La Correspondence Russe* and *La Tribune Juive*. He published articles in French on the history of Jews in France in various journals. His most important work is a biography of Adolphe *Cremieux (French, 1933–34, 1939; English, 1940).

[Yehuda Slutsky]

***POSIDONIUS** (c. 135–c. 51/50 B.C.E.), Greek philosopher, ethnologist, scientist, and historian from Apamea in Syria, one of *Cicero's teachers. He lived on the island of Rhodes. No book of his survives, though his influence was great. His voluminous writings included a history and ethnology of the Jews, who were treated also in his book on Pompey. The antisemitic accusations he retailed in his writing (on Jewish asocial behavior, misanthropy, impiety, inhumane religion and rites) reflected common Hellenistic opinions and attitudes, and later found wide echoes, e.g., in Apion (according to Jos., *Apion*, 2:79). His antisemitic remarks can be reconstructed from the more or less close paraphrase of Posidonius by Diodorus Siculus (as quoted in Photius, *Bibliotheca*, 244; 379),

including the story that Antiochus Epiphanes found a statue of a bearded man seated on an ass in the Holy of Holies. However, if, as is likely, the respectful appraisal of Moses and his beliefs found in Strabo 16:2, 35ff. also derives from Posidonius, it is probable that the latter did not concur fully in the slanders he related.

[Daniel E. Gershenson]

POSNANSKI (Poznański), family of scholars. ADOLF POSNANSKI (1854–1920) was a rabbi and a scholar. Born in Lubraniec, Poland, Posnanski served as rabbi at Reichenberg (Liperec) and Pilsen, Bohemia, and from before World War I as teacher of religion in high schools in Vienna.

Posnanski's scholarly work was mainly concerned with the messianic idea in Judaism and Christianity; his major contribution in this field was *Schilo, ein Beitrag zur Geschichte der Messiaslehre* (1904). He also published an edition of Profiat *Duran's anti-Christian work, *Kelimat ha-Goyim* (in HHY, vols. 3–4, 1914–15), and prepared *Abraham b. Hiyya's *Megillat ha-Megalleh*, for publication (1924). Posnanski's study of the *Tortosa Disputation also appeared posthumously (in REJ, vols. 74–76, 1922–23); other editions of polemical literature which Posnanski was working on at the time of his death remained unpublished.

SAMUEL ABRAHAM POZNANSKI (1864–1921), rabbi, scholar, and bibliographer, the younger brother of Adolf Posnanski. Born in Lubraniec, Poland, he studied at Berlin University and at the *Lehranstalt (Hochschule) fuer die Wissenschaft des Judentums, where he came under the influence of M. *Steinschneider. In Poland he served as spiritual leader of the Tlomacka "choir" synagogue in Warsaw. There he took great interest in Hebrew education and culture, founding a government-supported training college for Jewish teachers. He was an early and ardent Zionist, and was a delegate to the First Zionist Congress.

Poznański's scholarly interests and achievements were catholic and were greatly helped by his linguistic propensities. His interests covered the history of Hebrew grammar and philology in the Middle Ages, the cognate field of Bible exegesis in the geonic, Spanish, and French periods, the Palestinian and Babylonian *geonim*, the North African communities, Jewish-Arabic literature, and others.

As a Karaitologist

Poznański's interest in early geonic literature led him as a young man to the study of Karaite history and literature, first of the geonic period, and subsequently as a whole, from the earliest times to the modern period. The result of this lifelong attention was a vast amount of published material, mostly in the form of papers contributed to learned journals (for the most part the *Jewish Quarterly Review*, the *Revue des Études Juives*, and the *Zeitschrift fuer Hebraeische Bibliographie*), jubilee and memorial volumes, and similar publications. Some

of these were also issued separately, as reprints. As a Karaitologist Poznański ranks with Abraham *Harkavy, and indeed surpasses him in the overall range of his interest. His erudition in rabbinic literature, his command of Arabic philology, his extensive use of original manuscript sources, and his accuracy and industry have endowed his works in this field with a value which has not succumbed to the passage of time. They include, among others, studies of *Anan and his immediate successors, of the various writers of the golden age of Karaite learning (10–12th cent.), and of *Saadiah's Karaite opponents (from Saadiah's time to the 19th cent.); a pioneering survey of Karaite printing and book production; a genealogy of the eminent Karaite family *Firüz; an annotated list of copyists and owners of Karaite manuscripts; and an edition of the *Zekher Zaddikim* by the 19th-century Karaite historian Mordecai *Sultansky. As a frequent reviewer of Karaitological publications by other scholars, Poznański often enriched his reviews with extensive and valuable corrections and annotations. His long article on Karaism in Hasting's *Encyclopedia of Religion and Ethics* (1915) is still the best available general sketch of Karaite history and literature. For many years Poznański assembled material for his major work in this field, a comprehensive bio-bibliographical dictionary of Karaite writers, of which a file of some 8,000 cards had been prepared by the time of his death.

[Leon Nemoy]

The extensive bibliography of his works, prepared by his son Edward Poznański (see below) and A. Marx (see bibl.), runs into many hundreds of items. His countless book reviews are an indispensable commentary on modern Jewish scholarship. In 1908 Poznański, together with D.J. Simonsen and A. Freimann, reorganized the *mekizei Nirdamim society and continuously stimulated its activities. His excellent relations with scholars and directors of libraries the world over made his vast knowledge and generous advice and assistance in all scholarly matters invaluable assets for all concerned. A memorial volume in his honor was published in 1927 (repr. 1970). EDWARD (ISAAC JACOB) POZNAŃSKI (1901–1974), the son of Samuel Abraham Poznański, was a bibliographer and lecturer in philosophy at the Hebrew University, of which he was academic secretary from 1946 to 1964.

POSNER, AKIVA BARUKH (Arthur; 1890–1962), rabbi, scholar, librarian, and bibliographer. Born in Samter (Szamotuly), Poznan, Posner taught at Mainz, Halle, and Vienna, and he served as rabbi at Kiel, Schleswig-Holstein, from 1924 to 1934. He was an outspoken and courageous critic of Nazism. After being forced to leave Germany, he settled in Jerusalem where he worked as a librarian, first at the E.L. Prinz

Library of the Mizrahi Teachers' Seminary (until 1954), and then at the central rabbinical library at Heikhal Shelomo in Jerusalem.

While still in Germany, Posner published *Das Buch des Propheten Micha* (1924); *Die Psalmen, des Religionsbuch der Menschheit* (1925); *Prophetisches und Rabbinisches Judentum* (1925); and *Die Freitag-Abendgebete* ("Friday Night Prayers," 1929), with translation and commentary. He later prepared similar editions in Hebrew of the Sanctification of the Moon and Sanctification of the New Moon liturgies (1945, 1948), as well as a *siddur* of domestic prayers (*Le-Veit Yisrael*, 1957). Posner wrote communal histories on Czarnkow (Heb. and Eng., 1957), Gniezno (Heb. and Eng., 1958), and Rawicz (with Eng. abstract, 1962) – all towns in his native Poznan. His literary legacy included 35 such histories in manuscript. Among his bibliographical studies were a biography of the book collector E.L. Prinz (*E.L. Prinz, Hayyav ve-Avodato ha-Sifrutit*, 1939); a bibliography of E.M. *Lipschuetz (*E.M. Lipschitz, Reshimah Bibliografit*, 1941); a monograph on the Hebrew printer Monasch of Krotoszyn (in *Aresheth*, 1 (1958), 260–78); and a supplement to the index of the first 75 volumes of the MGWJ, which is extant in manuscript. A memorial brochure, *Zikkaron ba-Sefer la-Rav A.B. Posner*, published by Heikhal Shelomo and edited by A. Piczenik (1964), contains a biography of Posner by A.Z. Givon and a bibliography by Rachel Posner.

POSNER, DAVID BEN NAPHTALI (mid–17th cent.), talmudist. David lived in Posen and then in Krotoschin. He was the author of *Yalkut David* (Dyhernfurth, 1691), a collection of Midrashim serving as a kind of supplement to the *Yalkut Shimoni*. The material, edited by his father, Naphtali Hirsch Shpitz, is arranged in the order of the weekly Torah portions. Fuenn holds that David Posner is to be identified with David Tevele Posner, author of the *Sha'arei Ziyyon* (Hamburg, 1615).

BIBLIOGRAPHY: Steinschneider, *Cat Bod*, 863; Fuenn, *Keneset*, 248; Braun, in: MGWJ, 40 (1896), 524 f.

POSNER, RICHARD ALLEN (1939–), U.S. jurist, law professor, and author. Posner graduated from Yale College *summa cum laude* in 1959 and Harvard Law School (where he was president of the *Harvard Law Review*) *magna cum laude* in 1962. He was a law clerk to Supreme Court Justice William J. Brennan, Jr. (1962–63) and to Federal Trade Commissioner Philip Elman (1963–65), and an assistant to Solicitor General Thurgood Marshall (1965–67). In 1967 he became general counsel to the President's Task Force on Communications Policy. He began teaching law at Stanford Law School in 1968 and moved to the University of Chicago Law School in 1969, where he continued full-time teaching until his appointment by President Reagan to the Court of Appeals for the Seventh Circuit in December 1981. He was chief judge of that court from 1993 to 2000, while he continued teaching part-time at the University of Chicago.

Posner is a prolific writer on the law, economics, and social sciences. By 2005, he had written over 2,200 judicial opinions, 38 books, and more than 300 articles and book reviews. His original ideas regarding the interplay of economics and law were presented in volumes titled *Antitrust Law: An Economic Perspective* (1976), *Economic Analysis of Law* (1977), and *The Economics of Justice* (1981). These books, as well as his articles in the *Journal of Legal Studies*, which he founded, encourage economic analysis of law and had a major influence on American judicial thought in the final decades of the 20th century. Between 1977 and 1981 he was the president of Lexecon, Inc., a firm of lawyers and economists that he created to provide economic and legal litigation research. In 1991, a national legal periodical reviewing potential candidates for the Supreme Court called Posner “the most influential legal scholar and the most brilliant judge in the country.”

The most notorious of his unconventional proposals was to eliminate the black market in adoptions by abolishing adoption agencies, buying and selling babies on the open market, and paying pregnant unwed mothers not to have abortions. Following the 9/11 terrorist attacks on the United States, he turned his attention to national security and intelligence reform, publishing books on those subjects in 2004 and 2005.

A case that demonstrated Posner’s innovative approach to Jewish religious rights concerned a public high school basketball association’s prohibition against the wearing of headgear by basketball players. An Orthodox Jewish team that wore yarmulkes fastened with bobby pins challenged the rule as a violation of freedom of religion. While upholding the general applicability of the rule when yarmulkes are “insecurely” fastened with bobby pins during a game, Posner directed that the team be permitted alternative means of securing the yarmulkes during play with chin straps or by sewing them onto headbands.

[Nathan Lewin (2nd ed.)]

POSNER, SOLOMON ZALMAN BEN JOSEPH (c. 1778–1863), rabbi and author. Posner studied under his father, the rabbi of Poznan (Posen), and under Akiva *Eger, Solomon Zalman of Warsaw, and his own uncle, Zeeb Wolf Kalafri. He occupied himself mainly with commerce in the city of Lubraniec and amassed great wealth, but nevertheless found time for extensive study. He wrote many works, some of which have remained in manuscript.

Among his unpublished works are *Zemir Arizim*, against those who regarded the study of Talmud as unnecessary; *Gal-Ed*, 33 (the numerical equivalent of “Gal”) letters on educational topics addressed to his children when they left home to study in yeshivot; *Tal Yaldut*, a letter to his young children; *Nir Rash*, on the Torah, containing in particular explanations of obscure allusions in Rashi’s commentary; and *Dodo Yigalenu*, on the Book of Esther. His *To’ar Penei Shelomo* (1870) is a valuable and unique book describing his own life and the lives of his forebears as far back as the 17th century, and contains many interesting details of the civilization of the

period. This book also includes educational directives to his children. His testament is appended to it. It has been claimed that this book is not his own, but that of his son, Moses, who was also rabbi of Poznan and that Solomon gave his name to it. Of his other sons, Aryeh Leib became rabbi of Pniewy, and Elijah, rabbi of Wodzislaw.

POSQUIÈRES, ancient name of the present town of Vauvert, S. France. The earliest record of the presence of Jews in Posquières is from 1121: the dowry that Ermensinde, daughter of the viscount of Béziers and Nîmes, brought to her husband, the lord of Posquières, included a Jew of Béziers, Benjamin. According to *Benjamin of Tudela, there were 40 Jews (or 40 heads of families) in the town in about 1165. It appears that the lords of the town employed the Jews in public office: After an admonition of Pope *Innocent III in 1209, the lord of Posquières solemnly swore not to entrust such offices to Jews. The Jews lived in a quarter known as *Carrière des Juifs*. Wealthy Jews who possessed more than 100 sols paid an annual tenure of one gold florin to the lord. After the expulsion of 1306 the Jews of Posquières migrated to *Provence, *Comtat Venaissin, and *Perpignan. Of the scholars of the town named by Benjamin of Tudela, the only one known from other sources was the renowned *Abraham b. David, head of the yeshiva of Posquières.

[Bernhard Blumenkranz]

POSTAN, MICHAEL MOISSEY (1899–1981), British economic historian. Postan, who was born in Tighina, Bessarabia, began his teaching career in 1927 at University College, London. He was a lecturer on economic history at the London School of Economics from 1931 to 1935, when he became a lecturer at Cambridge University. From 1938 to 1965 he held the professorship of economic history at Cambridge and from 1934 to 1960 served as editor of the *Economic History Review* at a time when this discipline grew strongly in size. Postan’s lucid style, searching inquiries and comprehensive analyses of economic problems of the past made him one of the world’s leading historians in his field. His major contribution, in addition to many publications, was the coeditorship of the *Cambridge Economic History of Europe* from 1952 onward. Postan received a knighthood in 1980.

[Joachim O. Ronall]

***POSTEL, GUILLAUME** (1510–1581), French Orientalist and philosopher, and an outstanding exponent of the Christian *Kabbalah. A self-taught prodigy, Postel was appointed in 1538 professor of mathematics and philology at the College

of the Three Languages in Paris and thereafter produced an enormous output of books, tracts, and pamphlets. Four years later he abandoned his post following the first of several mystical visions. His first major work, *De orbis terrae concordia* (1544), made room for Islam in its universal scheme and Postel thereafter exploited rabbinic and kabbalistic literature in support of his pretensions, notably his “immutation” as Elijah and Balaam and as the “Angel-Pope.” Postel traveled constantly in search of rare manuscripts and prophetic writings. In Venice he met Elijah *Levita and Daniel *Bomberg, the Christian pioneer of Hebrew printing, whose Jewish publications he was engaged to censor during his second visit to Venice in 1546–49. Here he began his first translation of the *Zohar and published an extraordinary mystical treatise on the significance of the *menorah (“candelabrum”), first in a Hebrew broadsheet entitled *Or Nerot ha-Menorah* (undated; 1547?) and then in a modified Latin version, *Candelabri typici in Mosis Tabernaculo... interpretatio* (1548). A Latin-Hebrew copy made by Conrad *Pellicanus has been preserved in Zurich, and unpublished versions in French and Italian are also extant. During the next few years, Postel’s millenarianism reached frenzied heights. He visited Erez Israel (1549–50), accepted the emperor’s invitation to teach in Vienna (1554–55), and multiplied his publications in anticipation of the messianic year 1556. In his Hebrew *Candelabrum*, Postel had styled himself *Ish Kefar Sekhanya u-Shemo Eliyyahu Kol-Maskalyah she-Nitgayyer le-Hibbato shel Yisrael...* (“A man of Kefar Sekania, named Elijah Kol-Maskalyah, who converted [to Judaism] out of love for Israel...”), which suggests that he had then become some kind of Judeo-Christian (cf. Av. Zar. 27b; and see *Jacob of Kefar Sakhnayya). During his imprisonment by the Inquisition at Ripetta (1555–59), he was said by a Jewish fellow-captive to have prayed in Hebrew. Postel returned to Paris in 1562 and spent the rest of his life in protective custody. However, he continued his voluminous writing and correspondence, and also influenced such younger scholars as G. *Génébrard, A. *Maes, and the French poet Guy *Le Fèvre de la Boderie, through whose agency Postel’s approach even penetrated the “Catholic” Antwerp Polyglot Bible printed by Christophe *Plantin (*Biblia Regia*, 1568–72). His published works include many of Jewish interest – grammatical and philological compendia, a guide to the Holy Land (1562), and a Latin version of the Sefer *Yeẓirah (1552), with his own mystical comments. Postel’s unpublished Latin translations of the Zohar on Genesis and of other Jewish classics have in recent years been discovered and discussed by François Secret. Long derided as a heretic or madman, Postel has emerged as one of the impressive and influential personalities of the Renaissance.

[Godfrey Edmond Silverman]

POSTOLSKY, SHALOM (1893–1949), composer. Born in Siedlce, Poland, he went to Erez Israel in 1920 and was among the founders of kibbutz En-Harod in 1921. Some years later he began composing songs for the needs of the kibbutz and also arranged the *omer and *seder ceremonies of En-Harod. Later he settled in Bet Yizḥak. His songs include *Kumah Eha, Elef Laylah ve-Od Laylah, Ba-Hashai Sefinah Gosheshet (Olim), Bikkurim Peri Hillulim* (all to texts by Y. *Shenhar), *Ha-Shibbolim Penimah, Im Garin Zarata* (*Levi Ben-Amitai), and *Ein Zeh Pele* (N. *Alterman), generally corrupted to *Eizeh Pele*.

POTIPHAR (Heb. פּוֹטִיפָר), Egyptian royal official who purchased *Joseph (Gen. 37:36; 39:1). His wife attempted unsuccessfully to seduce Joseph and then brought false charges against him, as a result of which Potiphar had him incarcerated. The name reflects an underlying Egyptian prototype *Pa-diu-pa-Re*, “The one whom the sun god Re has given.” The Egyptian name occurs on a stele from the Late period (c. 1087–664 B.C.E.), during which time the near variant *pa-di* followed by the name of a god is most commonly found. Potiphar’s titles, “servant of Pharaoh” and “chief [or “master”] of the cooks,” while not Egyptian in themselves, may well be Hebrew translations of two Egyptian titles. The former could have been a general term for almost any servant, official, or courtier, and the latter appears to be a translation of the Egyptian *wpdw nsw* or *wb 3 nsw* (“butler/cook of the king”). In any event, the title did not imply that its bearer was a lowly servant, but rather a very high official. It first comes to prominence very late in the Twentieth Dynasty, and its bearers are attested as leading military expeditions, heading royal commissions, and exercising high administrative functions. Both Potiphar’s name and his title strongly suggest that the writing down of the Joseph story should be dated no earlier than the later Twentieth Dynasty (and possibly even to the Twenty-First to Twenty-Second dynasties), a suggestion substantially supported by other Egyptian elements occurring in it, particularly the Egyptian names. Further support for this dating is given by the parallel between the attempted seduction of Joseph by Potiphar’s wife and the opening portion of an Egyptian literary text, “The Tale of the Two Brothers,” which is dated, on paleographic grounds, to about 1225 B.C.E.

[Alan Richard Schulman]

In the Aggadah

Potiphar is regarded as identical with *Poti-Phera (Gen. 41:45), indicating different aspects of his idolatrous behavior. “Potiphar” refers to his practice of rearing bullocks, *mefattem parim*, for idolatrous sacrifices; and “Poti-Phera” to his habit of indecently exposing himself (*pore’a*) in honor of his gods. He purchased Joseph in order to perform sodomy with him,

but was castrated by God (or by the angel Gabriel; Sot. 13b.), in order to prevent him fulfilling his desire and for this reason is called the “eunuch of Pharaoh” (Gen. 37:36). From the fact that the light-skinned Joseph was offered for sale by the negroid Midianites, he realized that Joseph had been kidnapped. The conflicting scriptural account of the purchase indicates that Potiphar insisted that the Midianites prove prior purchase, in order that he should not be party to a theft (Gen. R. 86:3). Two of Potiphar’s actions are favorably commented on. He saw that “the Lord was with [Joseph]” (Gen. 39:3), although he personally was a sun worshiper. Secondly, he was extremely skeptical of his wife’s account of Joseph’s attempted seduction; had he believed it he would have put Joseph to death instead of imprisoning him. He apologized to Joseph for his action, explaining that his purpose was to prevent a stigma upon his children (Gen. R. 87:9).

In Islam

Qitfir (also Qutayfar) of Muslim legend is the biblical Potiphar, who bought Joseph from the Midianites or the Ishmaelites (Gen. 37:36; 39:1). Although his name is not mentioned in the tale of Joseph in the *Koran, there is no doubt as to his identity, in spite of the error in the first letter of the source, which is due to the Arabic script. Ṭabarī calls him Atfir. Tha’labī counts Qitfir among the three valiant (“afra”): al-‘Azīz, i.e., Qitfir, for his defense of Joseph; the woman who brought Moses to her father; and the caliph Abū-Bakr, when he appointed ‘Omar.

POTI-PHERA (Heb. פּוֹטִי פֶרַע), father-in-law of *Joseph. According to Genesis 41:45, 50, and 46:20, Joseph was married to *Asenath the daughter of Poti-Phera, “the priest of On.” Since On, the city of *Heliopolis, was the center of the Egyptian solar cult, the “priest of On” could hardly have been any other than the high priest of the sun god Re. The name Poti-Phera contains the same underlying elements as that of Joseph’s former master, *Potiphar, but in a transcription more fully and more accurately reflecting the original Egyptian form.

[Alan Richard Schulman]

POTOCKI, VALENTINE (**Abraham ben Abraham**; d. 1749), Polish count martyred as a proselyte. According to legend, Potocki, a gifted scion of the celebrated Potocki family, while studying in Paris became friendly with Zaremba, another young Polish aristocrat. Once, while in a tavern, they noticed the owner, an old Jew, immersed in the study of the Talmud, and expressed a desire to be instructed in the principles of Judaism. The two vowed that they would become Jews if

convinced of the error of Christianity. Zaremba married and forgot both his vow and his friend. Potocki, however, after spending some time at the papal academy in Rome, went to Amsterdam and became a Jew. When Zaremba heard the report, which had spread throughout Lithuania, of Potocki’s disappearance from Rome, he recalled his vow, and, taking his family with him to Amsterdam, also became a Jew there, and subsequently settled in Erez Israel. Potocki went to Lithuania and settled as a Jew in *Ilya, near Vilna.

Once Potocki scolded a boy for disturbing the prayers in synagogue. The boy’s father, a coarse tailor, took umbrage and reported the existence of the proselyte to the authorities, thus leading to his arrest. Potocki was put on trial, and despite the pleas of fellow aristocrats refused to recant. On the second day of Shavuot, 5509 (1749), he was burned at the stake at the foot of the fortress of Vilna, on his lips the prayer, “Blessed art Thou, O Lord, . . . who sanctifiest Thy name before multitudes.” A local Jew, Eliezer Ziskes, pretending to be a Christian, succeeded through bribery in collecting some of the ashes and a finger from the corpse, and these were eventually buried in the Jewish cemetery. From the soil over the grave of Potocki, who was called by them the *Ger Zedek* (“the righteous proselyte”), there grew a big tree which drew vast pilgrimages of Jews. The grave was demolished by Polish vandals. The first to publish the story of the *Ger Zedek* was the Polish writer J. Kraszewski in 1841. He claimed to have found it in a Hebrew manuscript. Later it was published by I.M. *Dick in Hebrew (1862) and in Yiddish (n.d.) under the title *Gerei ha-Zedek* (see *YIVO Bleter*, 1 (1931), 331–3). So far no historical evidence for the story has been discovered, although it is generally believed to have been true. The story served as a theme for a drama in Yiddish, called *Dukus* (“Prince”), by Alter *Kacyzne and for some novels. The Jews of Vilna celebrated the anniversary of Potocki’s death by reciting the *Kaddish* and by making pilgrimages to his purported grave on the Ninth of Av and on the High Holy Days.

POTOFSKY, JACOB SAMUEL (1894–1979), U.S. labor leader. Potofsky, who was born in the Ukraine, went to Chicago in 1908. His trade union career began almost immediately. From 1916 to 1946 he held a succession of important posts in the Amalgamated Clothing Workers Union and during these years worked closely with union leader Sidney *Hillman. Upon Hillman’s death in 1946, Potofsky was elected as the president of the union and continued the major programs developed under Hillman’s leadership. Thus, the Amalgamated Clothing Workers continued the policy of avoiding strikes and substituting arbitration wherever possible, a policy over which it clashed with such militant labor unions as John L. Lewis’ United Mine Workers. It expanded its insurance programs,

increased the number of its group health centers, maintained two banks, and led in sponsoring cooperative housing. Potofsky headed the United Housing Foundation, a combine of his and other trade unions and organizations, which erected large cooperative housing developments.

Under Potofsky's leadership, the Amalgamated continued to play an active political role in national, state, and municipal elections, normally in support of the candidates of the Democratic Party. As a member of the CIO Political Action Committee after 1947 and a vice president of the AFL-CIO after 1955, as well as a leading figure in New York State's Liberal Party, he was one of the prominent, most influential U.S. labor leaders. Potofsky was a supporter of the State of Israel, and the Amalgamated has established a close relationship with the Histadrut. He was also a delegate to many international labor conferences. A vigorous opponent of all forms of prejudice, Potofsky was closely associated with the efforts of the American Jewish Committee and the Anti-Defamation League of B'nai B'rith. He served on a number of public bodies, including the New York Temporary State Commission on Economic Expansion (1959–1960) and the New York City Temporary Commission on City Finances (1965). In both cases, he dissented freely from recommendations that seemed to compromise the interests of wage earners.

POTOK, CHAIM, (1929–2002) novelist and editor. Born and raised in New York City, Chaim Potok graduated from Yeshiva University in 1950 with a B.A. *Summa Cum Laude* in English literature. In 1954 he was ordained as a Conservative rabbi at the Jewish Theological Seminary.

Potok was a member of the faculty of the University of Judaism in Los Angeles; in 1964 he became managing editor of *Conservative Judaism*. He received his doctorate from the University of Pennsylvania in 1965, and in 1966 he became editor for the Jewish Publication Society of America. Among his works are *The Chosen* (1967), *The Promise* (1969), *My Name is Asher Lev* (1972), *In the Beginning* (1975), *Wanderings* (1978), *The Book of Lights* (1981), *Davita's Harp* (1985), *The Gift of Asher Lev* (1990), and *I Am the Clay* (1992).

The recurrent theme in Chaim Potok's work is the moment of radical change in traditional Jewish existence – a change personified by a son and not usually entailing an actual break with the basic Judaism of the father. Such rebellions have been depicted before in various degrees of severity. Potok's scene differs in that it takes place within an elitist society of learning, the yeshivah, in which all members, fathers and sons, have a deep-rooted respect for each other, and hierarchies of study and knowledge take precedence over familial hierarchies. This mutual respect between fathers and sons, as scholars, many of them *musarniks* in a sphere where, in Potok's words, “the fusion of the sacred and the secular seems almost effortless,” therefore creates an impasse when a son chooses

a totally different vocation: painting in *Asher Lev*, psychiatry in *The Chosen*, scientific examination of the Oral Law in *The Promise*. In the final reckoning the father is usually reconciled to the son's role in the world, thereby affirming the fluidity of Judaism and its basic tenet of “*ele ve'ele divre Elokim hayyim*” (both these and those are the words of the one Living God).

It has been argued that Potok's rebel sons do not venture very far; they shave off beards and sidelocks and work in a secular world, but their basic Orthodoxy does not suffer from any serious modern doubt. Yet Potok's yeshivah may well be seen as a parable for any community with a consequent way of living, the total destruction of which would be equivalent to the destruction of sanity. Chaim Potok proposes a sociological change without a change of values. In Freudian terms, Chaim Potok's sons rebel against the father without actually killing him, thereby assuring cultural continuity.

Potok works within the framework of Jewish value concepts, including the *hakham*, the *zaddik*, and the overall supremacy of study. His fictional style is uncluttered, his dialogue credible, and he loves his protagonists. Absorbed in father-son, teacher-student relationships, Potok is far less vivid in depicting women who seem in his work to have fewer spiritual doubts, and their existence is delineated mainly by their men.

[Shulamith Hareven]

POTTERY. Pottery appears for the first time in the Neolithic period, around the middle of the sixth millennium B.C.E. For two reasons, it serves as a major tool for the archaeological study of the material culture of ancient man: first because of its extensive use in everyday life and second because of its durability; for although the vessels break easily, the material survives as potsherds. Pottery is of great value for acquiring the knowledge of the technological progress of various periods, the trends in the development of early plastic art, and international cultural and commercial relations which form the basis of the comparative chronology of different cultures in the ancient Near East. On the basis of stratigraphic finds at archaeological excavations, pottery is seen to have undergone changes in different periods as well as in different phases of the same period – changes in form, decoration, techniques of working the clay, and firing. As a result, pottery serves as a major index of the relative chronological framework of a given culture. For protohistoric cultures and periods containing no written remains or coins, which are the primary sources of absolute chronology, the relative chronology constructed on pottery sequence serves as a substitute. Once the absolute date of a potsherd is established, the stratum in which it was found can be dated, and thus it also becomes an aid in fixing the absolute chronology (see *Archaeology).

POTTERY MANUFACTURE

The clay from which pottery is produced is an aluminum silicate mixed with various additions such as iron oxides, alkalies,

quartz, and lime. Two kinds of clay have been differentiated: clean clay, of pure aluminum silicate, which is not found in Erez Israel, and a rich clay, consisting of aluminum silicate mixed with iron oxides, carbon compounds, etc. The material was prepared for use by sifting and removing foreign matter, mixing it with water and levigating it. If the clay was too rich and not sufficiently plastic, it was tempered by the addition of substances such as sand and quartz grit. The wet sifted clay was then wedged by hand or treaded; after it was well mixed it was ready for shaping. The earliest pottery was handmade. In the Neolithic period, pottery was made by joining together coils of clay, smoothing the junction line by hand. The pottery was shaped on a base or stand of wood, stone, or matting. A technical innovation was shaping pottery from a ball of clay. In the Chalcolithic and Early Bronze periods primitive potter's wheels consisting of a turning board (tournette) were used. Examples of the next stage in the development of the potter's wheel have been found in excavations in Palestine. It consists of two horizontal stone disks placed one on top of the other, the lower one with a conical depression and the upper with a conical projection which could be turned by hand. Several types of pottery were thrown on the wheel in the Early Bronze Age but it was used extensively only in the Middle Bronze Age. After the pot was shaped it was removed from its stand and set aside to dry until its water content was not more than 15%. The pot was then of a leather hard consistency and handles, base, spout, projecting decorations, etc. were applied and various types of ornamentation were added: slips and burnishing, paint, incisions, relief and impressed markings. When the pot was completely fashioned it was dried a second time until it retained only about 3% of its water content. Afterwards it was fired in an open or closed kiln at a temperature of 450°–950° C. The best wares were produced at the highest temperatures. The earliest pottery was fired in open pits, in which combustible material was laid over the pottery, leaving blistering or patches on the sides of vessels. At a later stage the pottery was separated from the fuel by a perforated clay partition built above the fuel compartment. With the invention of the closed kiln it was possible to use an oxidizing fire, which produced pottery of a red color, or a reducing fire, without oxygen, which turned the pottery black.

NEOLITHIC PERIOD

The invention of pottery is believed to have taken place first in the northern Levant, together with the plaster-based White Ware ("vaisselles blanches"), and slowly it began appearing in Palestine as well. Crude attempts at making pottery (sun-dried or low-fired) were found at Pre-Pottery Neolithic c levels at Ain Ghazal and Basta (c. 5800–5500 B.C.E.). At Yiftahel (Stratum III) the White Ware and the early pottery was visually indistinguishable, and some distinctions could only be made by petrographic analysis.

The pottery of the Late Neolithic period (5500 to 4000 B.C.E.) is handmade, coarse, and badly fired. The pottery types include jars, cooking pots, bowls and storage jars

decorated with a red-burnished slip or painted triangular and zigzag lines, and with incised and painted geometric designs (such as chevron and herring-bone patterns). The main finds of this period come from the Jordan Valley, Sha'ar ha-Golan, Jericho, etc. The Wadi Rabbah pottery is a more accomplished type of pottery, known particularly in the coastal region.

CHALCOLITHIC PERIOD

In the Chalcolithic period (4000–3300 B.C.E.) several new forms are added to the pottery repertoire of the previous period. The pottery is handmade, sometimes made on a tournette (particularly bowls), and decorated with a rope ornament and occasionally painted with bands of red paint. Tiny lug handles are characteristic of the period, and the shapes include cornets, v-shaped bowls, goblets, jugs, and kraters. Mat impressions are found on the bases of the storage jars. A bird-shaped pot with a lug handle at each end has been named "churn" since it apparently served for making butter, though it may have been a water container. The largest assortment of Chalcolithic pottery was found in the Ghassulian and Beer-Sheba cultures. Additional pottery types are known from the Golan. There also appears to be an earlier phase of Chalcolithic ("Middle Chalcolithic") pottery from the Jordan Valley and from the central highland regions.

EARLY BRONZE AGE

The Early Bronze Age 3300 B.C.E. to 1200 B.C.E. may be subdivided into three or four secondary phases:

(1) Early Bronze I – the typical pottery of the period is gray burnished ware, band-slip (grain-wash) ware, and burnished red-slip ware. Gray burnished ware has a more northerly distribution. Imports of Egyptian vessels are also known, with local imitations, particularly at southern sites (e.g., En Besor).

(2) Early Bronze II – the most distinctive pottery type is the so-called "Abydos (Egyptian) ware," a group of pitchers and storage jars with burnished red-slips on the lower half and triangles and dots painted brown-black on the upper half. This pottery is named after the site where it was first found – the royal tombs of the First Dynasty at Abydos in Upper Egypt. It is of great value for correlating the chronology of Egypt and Palestine. Another important pottery group consists of storage jars with two loop handles and surfaces decorated with pattern combing.

(3) Early Bronze III – the characteristic pottery of this phase is called Khirbat Karak ware (named after Bet Yerah (Khirbat Karak) where it was first found). The pottery types include kraters, bowls, pitchers, and stands. The ware is made of a poor-quality clay and is covered throughout with a highly burnished slip. Occasionally it has a red slip all over but often the rim and interior are red and the exterior is black. The decoration consists of incised lines or groups of lines in relief.

Intermediate Bronze Age

The Intermediate Bronze Age (also known as the Early Bronze IV, 2300–2000 B.C.E.) constitutes a transitional stage between

the Early Bronze Age and the Middle Bronze II period. Its material remains are known from villages, campsites, and tombs. The pottery of the period is globular or cylindrical in shape, with wide flat bases, and lacks shoulders and handles. The handles which do occur – enveloped ledge handles and lug handles between the neck and the body – are apparently a continuation of the Early Bronze ceramic tradition. The body of this type of vessel is handmade while the neck, which flares outward, is formed on the wheel; the line where the two are joined together is decorated with combing or with single incised grooves. A group by itself is an assortment from the Megiddo tombs, which consists of “teapots” and goblets made on the wheel of black clay decorated with yellow bands and also jugs with red slips. There are no distinctive cooking pots; hole-mouth jars were apparently used for cooking. The typical lamp of the period is a small bowl with four pinched corners.

MIDDLE BRONZE AGE

With the renewed urbanism of the Middle Bronze Age (2000–1550 B.C.E.) the pottery assemblage flourished with common wares matched by luxury vessels, and greater regionalism in ware types now becomes apparent. All the pottery is now produced on the wheel, which allowed for great artistic development. The period is subdivided generally into the Middle Bronze IIA and Middle Bronze IIB.

Middle Bronze IIA

In the Middle Bronze IIA period a glossy red slip decoration – produced by burnishing with a shell or pebble – appears on many vessels, such as small and closed carinated bowls with disk bases (perhaps imitations of metal prototypes); open bowls with flat or disk bases; jugs and juglets with double or triple handles, often set on the shoulder, and dipper juglets. The storage jars are elliptical with a flattened base and often have two loop handles in the center of the body. The cooking pot has straight sides with a thumb-indented projecting band surrounding the body and some are perforated above the band. An interesting group are the storage jars, jugs, and juglets decorated on the upper part of the body with black and red bands, triangles, or circles on a white slip. This ware was thought to be similar in ornamentation to that found in the Khabur region and at Byblos.

Middle Bronze IIB

The red burnished slip ceases to be dominant in the Middle Bronze IIB period and many vessels are undecorated. The technique of manufacture is highly developed and many vessels are produced with thin walls and complicated shapes, such as open carinated bowls with disk or trumpet bases, made of a well-fired, levigated clay. The storage jars have elongated elliptical bodies with two to four loop handles. A special group consists of pear-shaped (pyriform) juglets with a button base and red, brown, or black burnished slips. In the final phase of the period, the characteristic juglet is cylindrical with a flat base. The lamps are small pinched bowls with one wick

hole. The cooking pots are shallow with rounded bases and rounded flaring rims. An unusual group of pyriform juglets are known as Tell al-Yahūdiyya ware – named after the site where they were first found in the Nile Delta (many types are now known from Tell ed-Daba’). These juglets have black, gray, or red burnished slips and a white puncture-filled decoration on the surface made with a pointed tool.

LATE BRONZE AGE

The Late Bronze Age (1550–1200 B.C.E.) extends from the conquest of Palestine by the first pharaohs of the 18th Dynasty to the appearance of the Israelites. Palestine in this period was under Egyptian rule, and its culture was influenced both by Egypt as well as by extensive trade connections with the Aegean and East Mediterranean civilizations. It is possible to subdivide the period into three phases (according to Egyptian chronology): Late Bronze I (c. 1550–1400 B.C.E.), the beginning of the 18th Dynasty; Late Bronze IIA (c. 1400–1300 B.C.E.), mainly the Tell el-Amarna period; Late Bronze IIB (c. 1300–1200 B.C.E.), 19th Dynasty.

Late Bronze I

The pottery types and technique of manufacture of the Middle Bronze IIB period persist partly in the Late Bronze I period. The pottery repertoire includes carinated bowls with ring bases or high ring bases; kraters with two loop handles and a ring base, often with a rope decoration as in the previous period; storage jars with elongated bodies, rounded bases, and flaring rims. The ceramic tradition of the Middle Bronze IIB period is also seen in the jugs, juglets, cooking pots, and lamps. Two new groups of ware appear in this period: pilgrim flasks and the so-called “biconical” vessels. The latter have one loop handle. The upper part is decorated with metopes painted red, black, or brown. A new class of vessels first appearing in the transition period between the Middle and Late Bronze Age and continuing into the Late Bronze I is the Bichrome Ware. Made of finely levigated and well-fired clay it is slipped and burnished. The group includes jugs, kraters, and bowls decorated with metopes formed by bands painted red and black. The metopes contain animal decoration – birds, fishes, oxen – and geometric patterns. The character of the ware, which contains a number of unique forms, the decoration, and the uniform method of production indicate that this pottery may have been created by a group of artists in a single center, possibly Tell al-‘Ajūl, south of Gaza.

Late Bronze II

In the Late Bronze II period the previous pottery tradition continues on the whole but shows a certain degeneration in form and quality. The workmanship of the carinated bowls is cruder. The bowls are mainly simple flat vessels with flat or disk bases. The storage jar now shows a sharp shoulder and thickened button base (this type of storage jar was exported from Erez Israel and has been found, together with imitations, in countries in the Aegean Sea and Egypt). The typical jug has a prominent neck with the handle from the rim to the shoul-

der, and the most common juglet is a dipper juglet generally with trefoil mouth. A new style of painted pottery develops in this period. The ornamented ware – biconical vessels, jugs, kraters – are painted in a single color, red, black, or brown, and a typical decoration has two gazelles facing each other with a palm tree between them. This style degenerates in the second half of the period, Late Bronze IIB, and becomes more schematic and cruder. The pilgrim flasks are flattened and generally decorated with painted concentric circles. In the Late Bronze IIA the neck is attached to the handles of the flask like a flower among leaves while in the second half of the period the flasks are lentoid shaped and the attachment of the neck to the handles is effaced. The lamps have an elongated sharply pinched rim; the cooking pots are shallow with a rounded base and have an ax rim and no handles

There is an abundance of imported pottery in this period, mostly of Mycenaean and Cypriot origin. All the Cypriot pottery occurs in Palestine parallel with its appearance in Cyprus. The most distinctive feature of this pottery is the technique of manufacture – it is all handmade and the handles are inserted inside the body of the vessels. This pottery falls into two main groups – White Slip Ware, which includes the “milk bowls,” half-globular bowls with wishbone handles and a white-slip and ladder decoration painted brown or black. The second type is called Base Ring Ware and is characterized by a high ring base. This ware is made of well-fired clay and has a metallic ring when struck; it is covered with a reddish brown slip. Its most common types are bowls with wishbone handles and jugs with high tilted necks called *bilbil*. Groups of Monochrome Ware are also found in Palestine as well as the knife-pared type – usually dipper juglets – and other groups. The bulk of the Mycenaean pottery appears in Late Bronze II. It is wheel-made of a light-colored, finely levigated clay, and well fired. The vessels are covered with a light slip and painted with bands of geometric patterns and floral and animal motifs. Aside from a number of shards and a cup decorated with an ivy-leaf design which are attributed to the Late Bronze I (Mycenaean II), the entire assortment belongs to the Mycenaean IIIA–B period. The vessels include cups, pear-shaped amphoriskoi, stirrup-jars, pilgrim flasks, juglets, bowls, pyxides, etc. A small amount of pottery imported from Syria and Egypt is also found in this period.

IRON AGE

The Iron Age is divided into two main parts: the Early Iron Age (or Iron Age I, 1200–1000 B.C.E.) and the Late Iron Age (Iron Age II A–C, 1000–586 B.C.E.). The history of this period encompasses the appearance of the Philistines, Israelites, and other peoples in the region, and subsequently, the period of the United Monarchy, the Kingdoms of Israel and Judah, and the destruction of Jerusalem in 587/586 B.C.E. The collective term for pottery in the Bible is *kelei heres* (כְּלֵי הָרֶסֶת, Lev. 6:21; Num. 5:17; Jer. 32:14), while pottery sherds are called *heres* (שֶׁרֶט, Job. 2:8). Pottery vessels were used for cooking (Lev. 6:21), as containers for liquids (Num. 5:17), and containers for

scrolls (Jer. 32:14). There are references in the Bible to some of the methods that the potter used in his work – “the potter treads clay” (Isa. 41:25) and “I went down to the potter’s house, and there he was working at his wheel. And the vessel he was making of clay was spoiled in the potter’s hand, and he reworked it into another vessel, as it seemed good to the potter to do” (Jer. 18:3–4). Only two types of vessels in the Bible are designated as pottery. They are: “earthen pots” (*nivlei heres*; Lam. 4:2) and “earthen flasks” (*bakbuk yozer heres*; Jer. 19:1). Other vessels that presumably were made of clay are, e.g., *aggan*, *agganot*, “bowl, cup” (Song 7:3 (2); Isa. 22:24); *asukh*, “jar” (II Kings 4:2); *gav’ia*, “pitcher” (Jer. 35:5); *kad*, “jar” for water (Gen. 24:14) or flour (I Kings 17:14); *kos*, “cup” (Jer. 35:5); *sir*, “pot” (Ex. 16:3); *sefel*, “bowl” (Judg. 6:38); *pakh*, “vial” (of oil; Jer. 25:28; I Sam. 10:1); *zappaḥat*, “cruze” (I Kings 17:14); *kubba’at*, “cup” (Isa. 51:17, 22); *ke’arah*, “bowl” (Num. 7:85).

Early Iron

In the areas not settled by the Israelites, the Late Bronze pottery tradition seems to continue in the first phase of the period. At the same time new types of pottery appear in the highlands and inland regions of the country. This pottery is associated in the central highlands with the appearance of the Israelites, but in Galilee there are pottery types that indicate Phoenician influence as well. The pottery types which continue the Late Bronze tradition include kraters with two loop handles and painted metope decoration, cooking pots which continue the ax-shaped rim and are without handles, lentoid flasks which are decorated with painted concentric circles, and lamps. The pottery attributed to the area of the appearance of the Israelites, mostly coarse in shape and carelessly made, includes simple, crude bowls, storage jars mostly with a collar rim, many-handled kraters (up to eight) with a rope or incised decoration. The cooking pot shows numerous variations of the ax-shaped rim. During this period there also appear carinated bowls, especially in the south of the country, often with a pair of degenerated horizontal handles. Toward the end of the period new pottery features develop—two loop handles are added to the cooking pot which also has a ridge beneath the rim on the outside; tiny juglets appear with a black or red burnished slip; red-slipped vessels are also common with irregular hand burnishing which is the hallmark of the period. A very distinctive pottery assortment occurs in the 12th–11th centuries B.C.E., called Philistine Ware; it is found mainly in the area inhabited by the Philistines. The shapes and decorative motifs of the pottery are derived from the Aegean pottery tradition, mainly Mycenaean IIIC 1. The typical Philistine shapes include kraters with two horizontal loop handles; stirrup jars; jugs with long narrow necks, loop handles, and strainer spouts, which are known as “beer jugs”; long-necked jugs influenced by Egyptian pottery; elongated pyxides; and horn-shaped vessels. Some vessels are covered with a whitewash on which metopes are painted in red and black and ornamented with geometric designs, or even with animals and birds. With the consolidation of the Philistines into the material culture

of Palestine in the late 11th century B.C.E., the typical animal motifs disappear and their pottery is no longer differentiated from other pottery types of the period.

Late Iron

Although many differences are found in the pottery of the north and south of the country in various periods, a sharper differentiation occurs with the division of the Monarchy and recent research has been able to highlight various aspects of regionalism. The excavation of Lachish was instrumental in establishing the character and date of pottery assemblages from Level III (destroyed in 701 B.C.E.) and Level II (destroyed in 587/586 B.C.E.). In Judah red-slip and wheel-burnished vessels are more common; the bowls are carinated with enveloped rims toward the end of the period; the kraters have from two to four handles, are covered with a red slip, and are wheel-burnished on the inside, and on the rim of the outside; the rims of the cooking pots are ridged on the outside, and toward the end of the period a special type of cooking pot with a high ridged rim appears; the typical storage jar (in Lachish III) has four ridged loop handles, often stamped with *la-me-lekh* ("of the king") seal impressions, an elliptical body, and a rounded base; the hole-mouth jars have a round bottom and a wide enveloped or ridged rim; the jugs have bulging bodies and thick necks; at the end of the period the lamps have high bases. In Israel not only the red-slip burnished ware is dominant but red- and black-slip pottery is also very common. The typical storage jar has an elongated globular body, prominent shoulder, and pointed base; bowls and kraters are often decorated with bar handles under the rim. A distinctive northern group is known as Samaria Ware, appearing in two groups – thick-walled and thin-walled ware. This pottery is characterized by a very high standard of workmanship. The walls of the thin ware are of eggshell thinness; it is slipped and burnished throughout in red or in alternating concentric circles of red and yellow. The thick ware, made of a creamy clay, has thick walls and either ring, high ring, or stepped bases. The bowls are covered with a red, yellow, or black burnished slip. The pottery common to both Israel and Judah includes water decanters, spouted jugs, carinated bowls, dipper juglets, etc. Several types of imported pottery also occur in this period – the most prominent is known as Cypro-Phoenician Ware which first appears in Palestine toward the end of the Iron I period and continues until the eighth century B.C.E. This pottery includes bowls with two degenerated horizontal handles and juglets with a flat base and one or two handles. The vessels are decorated with black stripes and concentric circles on a lustrous red slip ("Black on Red"). Some imports from Assyria are also found.

PERSIAN PERIOD

This period (586–330 B.C.E.) is identical with the post-Exilic period, and covers the half century of Babylonian rule after the destruction of the Temple, as well as the subsequent two centuries of Persian rule. Some scholars have suggested that the

material culture of the Iron Age II did not cease with the destruction of Jerusalem in 586 B.C.E., but that it continued during the time of Babylonian rule, at least until 530/520 B.C.E., with others suggesting lowering the terminal date well into the fifth century B.C.E.

The pottery of the Persian phase includes coarse bowls with a high ring base and ribbed sides; storage jars with an elongated stump base and two loop handles rising above the shoulders; carrot-shaped juglets; storage jars with two deformed loop handles, elongated pointed base, straight shoulders, and slightly projecting rim. Towards the end of this period kraters and holemouth jars appear with a decoration of bands of reed incisions on their shoulders. The lamps have flat bases with one elongated wick hole and a wide rim around the bowl. A number of pottery types imported from Greece are found in Palestine.

HELLENISTIC PERIOD

Palestine in the Hellenistic period (330–63 B.C.E.) was for most of the time part of an empire and under its cultural influence. The local pottery made for ordinary domestic use was on the whole coarse and clumsy, with regional production centers, but two groups of imported ware are found: fine luxury ware and amphorae for storing imported goods, especially wine. The most characteristic of the local ware are bowls with inverted or outward flaring rims and ring or flat bases; spindle-shaped juglets; cooking pots with two handles and a low erect neck which are reminiscent of the Iron Age pots. There is also a group of open pinched lamps with one wick hole. Both classes of imported ware are widely distributed in this period, the most widespread being the Rhodian wine amphora with stamped handles. The luxury ware included Megarian bowls which were cast in molds; various types of black-glazed bowls ("fish plates") with impressed or roulette decoration. At the end of the period appears the terra sigillata ware – fine red-glazed pottery with impressed and roulette decoration.

ROMAN PERIOD

The pottery of the Roman period (63 B.C.E.–325 C.E.), is divided into the Early Roman period (63 B.C.E.–135 C.E.), with some types disappearing with the fall of Jerusalem in 70 C.E., and the Middle Roman and/or Late Roman (135–325 C.E.). The typical local pottery of the Herodian period (first century C.E.) includes pilgrim flasks with twisted handles; bottles with high necks and thick bodies; juglets with flaring rims; closed lamps cast in molds with pared horned nozzles. The cooking pots follow the tradition of the previous period. Changes occur in the storage jars which divide into elongated bag-shaped jars and bell-shaped jars. Of the imported ware the most common type is the terra sigillata ware, mainly platters and flat bowls with ring bases; they are covered with a red glaze and have a roulette and impressed decoration. Both eastern and western sigillata appear in Palestine. The western, Arretine style (30 B.C.E.–30 C.E.) is outstanding in workmanship and finish. Nabatean Ware also appears in this period – eggshell-

thin bowls decorated with red floral patterns on an orange background. A local painted variety of bowl – resembling slightly Nabatean examples – appears in Jerusalem. In the Late Roman period these shapes continue to develop – the discus lamps are round and closed, cast in a mould, with a handle or a knob. Numerous Mediterranean types of amphorae appear in the region.

THE BYZANTINE PERIOD

Pottery types of the previous period continue into the Byzantine period (325–640 C.E.). From the beginning of the period, red gloss bowls (“Late Roman Wares”) make their appearance. Hayes (1972) produced a dated series of these LRW types (but changes in this dating system is now being assumed by scholars). Local examples, such as bowls with rouletted decorations on their rims, also make their appearance. Various kinds of storage jars are typical of the period, particularly the so-called “Gaza” jar which was made at kilns sites along the lower coast region, from Ashkelon towards north Sinai. Numerous imported jars are also known for this period. Closed cooking pots with two ear-like handles give way to shallow cooking pots with two horizontal handles and a lid. There are also clay pans with only one horizontal handle. The lamps are closed, cast in molds, and elongated in form. Most of them are decorated. The pottery of the Byzantine period did not change with the invasion of the Hejaz Arabs in the early seventh century C.E., but continued with very small changes until the Abbasid period, i.e., in the mid-eighth century. It is at this point that major changes in the pottery assemblages of the Islamic period first become apparent.

[Isaak Dov Ber Markon / Shimon Gibson (2nd ed.)]

°**POUND, EZRA LOOMIS** (1885–1972), U.S. poet and critic. Born in Idaho, Pound left the United States in 1907 and lived in London and in Paris before settling in Rapallo, Italy, in 1925. By then he had already won international acclaim as a modern poet. A prolific writer, he published over 40 volumes of poetry, verse translations, and literary criticism whose influence on 20th-century poetic style has been enormous. In Italy, Pound became an admirer of Mussolini and came to adopt an increasingly pro-Fascist, anti-British, and antisemitic tone. He developed an ardent, if amateur, interest in economics and became an advocate of the Canadian C.H. Douglas’ social credit doctrine, which vocalized agrarian discontent and blamed human misery on the financial manipulations of a small capitalistic class, largely Jewish in composition and inspiration. Pound’s *Money Pamphlets* (6 vols., 1950–52), published in Italy in the 1930s, spoke repeatedly of the “Jewish poison,” and in 1939 he

wrote an article for the Italian press entitled “The Jew, Disease Incarnate.” Many of his poems are also violently anti-Jewish. During World War II Pound broadcast pro-Axis propaganda over the Italian radio.

He was arrested by the American army in 1945 and returned to the United States to face an indictment of treason, but was judged mentally unfit to stand trial and was committed to a mental hospital in Washington, D.C., in 1946. In 1958, following the intervention of many noted poets, he was released, and returned to Italy.

[Charles Reznikoff]

POUPKO, BERNARD (1918–), U.S. Orthodox rabbi. Poupko, who was born in Russia, was ordained by the Rabbi Isaac Elchanan Theological Seminary in 1941 and was appointed rabbi of Pittsburgh’s Sha’are Torah Congregation in 1942. He served there for more than 60 years until 2004. He completed his Ph.D. at the University of Pittsburgh on alternatives in adult Jewish education. He was a founder of the Hillel Academy in Pittsburgh. Poupko visited the U.S.S.R. several times after 1964. He was one of the first rabbis to visit the Soviet Union and wrote extensively on Soviet Jewry. He edited or co-edited a 38-volume series for the Rabbinical Council of America including volumes in memory and in honor of Bernard Revel and Norman Lamm, Chief Rabbi Herzog of Israel and The Rav, Rabbi Joseph B. Soloveitchik. A collection of his articles based on his Russian visits was published as *In the Shadow of the Kremlin* (1969). In 1970 he became president of Mizrachi in the U.S. He was a national vice president of the Rabbinical Council of America and for 50 years was president of the Rabbinical Council of Pittsburgh, where he was a most influential Orthodox leader.

[Louis Bernstein / Michael Berenbaum (2nd ed.)]

POVERTY. Distinctions between rich and poor predate recorded history. In Israel, however, these differences do not seem to have become pronounced until the eighth century B.C.E., following the social revolution produced by the monarchy and the dissolution of the earlier tribal solidarity. The expansion of trade and foreign conquest brought an influx of wealth into the land, while urbanization and the rise of favored classes resulted in the amassing of fortunes (Isa. 2:7; Hos. 12:9; Amos 3:15) and the cruel impoverishment of many families (Amos 8:5; Micah 2:2).

The gross social injustice drew stinging rebukes from the prophets (e.g., Isa. 1:23; 3:14; Amos 4:1; 5:11), who called for obedience to the divine command for righteous living (Isa. 1:16–17; Amos 5:14–15) and loyalty to His covenant (Hos. 12:7ff.). Unlike the authors of the wisdom literature, the prophets did not condemn the poor for having brought poverty on themselves through sloth (Prov. 6:6–7; 10:4) and irresponsibility

(13:18; 23:21). At the same time, they did not idealize the poor, recognizing that they, too, were often guilty of ignoring God’s commands (Isa. 9:12–16; Jer. 5:3–5; 6:13).

Those who were in a better economic position were expected to treat the poor with compassion in order to avoid the further aggravation of their wretchedness (Ex. 22:24–26). Indeed, God Himself was their protector and His blessing to Israel was contingent upon the generous treatment they received (Deut. 15:7–11). Accordingly, Israel’s laws – for example, those concerning the prompt payment of wages (Deut. 24:14–15), the prohibition of usury (Ex. 22:24; Lev. 25:36; Deut. 23:20), allotments from vintage and harvests (Lev. 19:9–10), the right to enjoy the Sabbatical fruits (Ex. 23:11) and third-year tithes (Deut. 14:28–29; 26:12–13), and the privilege of eating one’s fill from a neighboring vineyard or field (Deut. 23:25–26) – provided for the amelioration of their conditions. It was the duty of the judge to protect the rights of the lowly (Ex. 23:6ff.; Lev. 19:15), as it was that of the more fortunate citizen to enable them to participate in the festivals (Deut. 16:11, 14). The king could assure the stability of his rule by concerning himself with the just treatment of the humble (Prov. 29:14).

The Torah recognized that poverty as such could not be eliminated (Deut. 15:11). At the same time, it sought to avoid the evils of pauperism by providing for periodic remission of debts during the Sabbatical Year (Deut. 15:1ff.), and the return of ancestral landed properties in the Jubilee Year as well as the manumission of Israelite slaves (Lev. 25:8ff.). In this way, it was hoped, the ancient covenant fellowship of Israel could retain its original force, as the tribal solidarity was reaffirmed and restored to the social conditions of pre-monarchical times.

Social oppression, however, did persist, and a “spiritual transposition of vocabulary” is apparent in the later literature, with *‘ani* (עני) and *‘anaw* (ענו) becoming functionally equivalent to “God-fearing” and “pious” (Zeph. 2:3; 3:12–13), the opposite of *rasha’*. By this time, though, the term had lost its sociological significance. In any event, neither before nor after the Exile did the poor constitute a religious party or social class.

[David L. Lieber]

In the Talmud

The Talmud reveals a distinctly ambivalent attitude toward poverty. It would appear that poverty was so widespread and was regarded as so irremediable that it was raised to the level of a virtue which had its positive value. Poverty appears to have been particularly endemic in Babylonia. “Of ten measures of poverty which descended to the world, Babylonia took nine” (Kid. 49b) and it was stated that the poverty of the Jews there was the reason that the festivals were celebrated with special joy (Shab. 145b). Both the negative and positive aspects are equally stressed. The former finds its expression in such statements as that “grinding poverty deprives a man of his mental balance” (Er. 41b) and it is the worst of all sufferings in the world (Ex. R. 31:12). “Poverty in a man’s house is worse than 50 plagues” (BB 116a). The statement in the Tal-

mud (Ned. 64b) that the “poor man” is one of the four who are regarded as dead has to be amended, as the context shows, to “he who has lost his property,” i.e., the man who was once wealthy and is reduced to poverty. Rav’s daily prayer, which included “a life of wealth and honor” (Ber. 16b), is only one of a host of statements which extol the contrary desirable ideal of wealth, or at least the absence of poverty.

On the other hand poverty is extolled as having a positive value, from the point of view of its salutary effect both upon the character of the poor and upon the sense of generosity which it engenders in those who relieve it. All the various statements in the Talmud which emphasize both aspects are collated in one statement in a late Midrash, “the Holy One Blessed be He considered all the boons which He could confer upon Israel, and selected poverty, since as a result of poverty they fear the Lord. Righteousness derives only from poverty; **gemilut ḥasadim* derives only from poverty; a man becomes godfearing only through poverty; a man studies Torah only through poverty” (EHZ 24). For the last, compare “take special care of the children of the poor; from them comes Torah” (Ned. 81a). Indeed “Poverty is as becoming to Israel as red trappings on a white horse” (Hag. 9b). The parallel passage (Lev. R. 35:6) which has “the daughters of Israel” is ascribed to R. Akiva and it is he who answers the other aspect of the positive value of charity. “If your God loves the poor why does he not support them?” asked *Tinneius Rufus, and Akiva answered, “so that through them [i.e., by relieving their wants] we may be delivered from Gehinnom” (BB 10a). A particular aspect of the virtue of poverty is found in the statement “the men of the Great Synagogue fasted 24 fasts that scribes of Torah scrolls, **tefillin*, and **mezuzah* should not become prosperous” (Pes. 50b). The Midrash enumerates eight names for the poor man in the Bible. The comprehensive one is *ani*; the *evyon*, as the root of the word conveys, is the needy man in the literal sense (“he who is in need of something”); while the *miskin* is “the most despised of all” (Lev. R. 34:6). The poor man who was entitled to receive food from the public soup kitchen (*tamhui*) was one who did not have sufficient for two meals a day (Shab. 118a).

Poverty was almost predetermined and was regarded as independent of man’s efforts. “R. Meir said: One should always pray to Him to whom all wealth and property belong, for there is not a craft in which are not [the potentialities] of poverty and of wealth, for neither poverty nor wealth is due to the craft, but all depends upon one’s [spiritual] merit” (Kid. 4:14).

The relief of the poor had to be effected with the utmost delicacy and consideration. “God stands together with the poor man at the door, and one should therefore consider whom one is confronting” (Lev. R. 34:9). One of the earliest talmudic authorities, Yose b. Johanan of Jerusalem, made as his maxim: “Let the poor be members of thy household” (Avot 1:5); “he who is openhanded to the poor will be vouchsafed male children” (BB 10b). The previous circumstances of the poor man were taken into consideration, and the story

is told of Hillel who, when a poor man who had once been in prosperous circumstances came to him for help, provided him with a horse and a “servant to run before him” since that was the minimum to which he was accustomed, and when he could not find (or afford) a servant he acted himself in that capacity (Ket. 67b). Applicants for food were examined as to the genuineness of their needs, but not applicants for clothes, but the contrary view also has its advocates (BB 9a). In the dispensation of charity the local poor took precedence over those from other towns (BM 71a). A peripatetic mendicant was provided with a minimum of a loaf of bread of a certain value, and lodging for the night (BB 9a). It was stated that most poor are descendants of the tribe of Simeon; this being the effect of Jacob’s curse “I will scatter them in Israel” (Gen. 4, 9:7; Gen. R. 98:5).

POVICH, SHIRLEY LEWIS (1905–1998), sports reporter, editor, and columnist for the *Washington Post* for 76 years. Born in Bar Harbor, Maine, the eighth of ten children to Lithuanian immigrants Rosa (Orlovich) and Nathan, Povich was named after his grandmother Sarah, or “Sorella” in Yiddish, thus “Shirley,” which accounted for his listing in *Who’s Who of American Women* in 1962. Povich’s father, who arrived in the U.S. in 1878 at age 20 with his grandfather, owned a furniture store frequented by the wealthy families who maintained summer homes in the area, including Edward McLean, owner of the *Washington Post*, for whom Povich caddied at the Kebo Valley Country Club. After graduating from Morse High School in Bath, Maine, in 1922, 17-year-old Povich was persuaded by McLean to move to D.C. to serve as his caddy and to work at the *Washington Post*. Povich’s first day in Washington found him caddying for President Warren Harding, and on his second day he started working in the *Post*’s city room – first as a copyboy and then a police reporter and a rewrite man, before moving to the sports department in 1924. Povich attended Georgetown University – paid for by McLean – from 1922 to 1924, when he left without a degree. His first byline appeared on August 5, 1924, above a report on the Washington Senators.

In 1926, at age 20, Povich was named *Post* sports editor, the youngest sports editor of a metropolitan daily in the nation. His column, “This Morning With Shirley Povich,” ran from August 1926 until 1974, interrupted only by a stint as a war correspondent in the South Pacific during World War II. In 1933, Povich gave up his position as sports editor to concentrate on his column, logging more than 15,000 columns during his career, including some 50 a year after his “retirement” in 1973. Povich, who covered 60 World Series and 20 Super Bowls, was an eyewitness to most of the significant sporting events of the 20th century: the 1927 Dempsey–Tunney “Long

Count” fight; Ruth’s “called shot” in the 1932 World Series; and Cal Ripken breaking Lou Gehrig’s consecutive-game streak. Povich wrote with clarity, style, grace, and wit, and some of his writings are considered sports journalism classics. At Lou Gehrig’s retirement speech at Yankee Stadium in 1939 he wrote: “I saw strong men weep this afternoon, expressionless umpires swallow hard, and emotion pump the hearts and glaze the eyes of 61,000 baseball fans in Yankee Stadium. Yes, and hard-boiled news photographers clicked their shutters with fingers that trembled a bit.”

Povich was an early voice for the integration of sports, writing a column advocating the integration of Major League Baseball in 1939, eight years before Jackie Robinson broke the color barrier. When he finally signed, Povich wrote: “Four hundred and fifty-five years after Columbus eagerly discovered America, major league baseball reluctantly discovered the American Negro...” He regularly criticized then-Washington Redskins owner George Preston Marshall for refusing to hire any black players. On one occasion, Povich wrote: “Jim Brown, born ineligible to play for the Redskins, integrated their end zone three times yesterday.”

Povich wrote until, literally, the day before he died, and his last column appeared the following day. He was the recipient of the Baseball Writers Association of America’s J.G. Taylor Spink Award, the Baseball Hall of Fame honor for sportswriters, in 1975, and he is the only sportswriter to receive the National Press Club’s prestigious Fourth Estate Award (1997). The University of Maryland created the Shirley Povich Chair in Sports Journalism in his memory. He was elected to the National Sportswriters Hall of Fame in 1984.

Povich, the father of American television personality Maury Povich, is the author of *The Washington Senators* (1954) and *All These Mornings* (1969). A collection of his columns, *All Those Mornings ... At the Post*, was published in 2005.

[Elli Wohlgerlenter (2nd ed.)]

POWDERMAKER, HORTENSE (1896–1970), pioneering scholar in American anthropology. Powdermaker was born in Philadelphia, one of four children of Minnie (Jacoby) and Louis Powdermaker, a German-Jewish middle class family. She attended Goucher College, where she became interested in the labor movement; after graduation she worked for the Amalgamated Clothing Workers of America and organized workers in Cleveland and Rochester. In 1925 Powdermaker enrolled in a graduate course in social anthropology with Bronislaw Malinowski at the London School of Economics. Strongly influenced by Malinowski, she went on to receive a Ph.D. in 1928, writing a thesis on leadership in “primitive society.” Powdermaker’s first book, *Life in Lesu* (1933), was based on fieldwork in Melanesia; her second study, *After Freedom* (1939), reflecting her research in Indianola, Mississippi, was among the first anthropological studies of a modern American community. Her psychological analysis of black-white relations in the context of the larger communal dynamics in a racially divided city made this book a landmark achievement.

In 1938 Powdermaker founded the Department of Anthropology and Sociology at Queens College in New York City and during World War II she also taught at Yale in an army training program focusing on the Pacific. During this time, her writing was focused on racial problems and included *Probing Our Prejudices* (1944), for high school students. In 1946–47, Powdermaker served as a part-time visiting professor at the University of California at Los Angeles, while conducting research on the Hollywood movie industry. The resulting book, *Hollywood, The Dream Factory* (1950) remains the only serious anthropological study of American filmmaking. In the 1950s, Powdermaker did research in a mining town in Northern Rhodesia and published her analyses in *Coppertown* (1962). Her 1966 volume, *Stranger and Friend*, compared and evaluated her four very different fieldwork experiences. Following her retirement from Queens College, Powdermaker moved to Berkeley, California. Among other honors, Powdermaker served as president of the American Ethnological Society and received an honorary doctorate from Goucher College. She also was awarded the Distinguished Teacher Award from the Alumni Association of Queens College.

[Judith R. Baskin (2nd ed.)]

POZNAN (Ger. **Posen**), city in historical *Great Poland; in Prussia 1793–1807 and 1815–1919; now in Poznan province, W. Poland. One of the most ancient and leading Jewish communities of Poland-Lithuania, it was probably one of those for whom the charter of rights granted by Prince Boleslav the Pious (1264) was intended. Jews are known to have lived in Poznan in 1379; a *blood libel is mentioned in 1399. The development of the community was interrupted in 1447 when a fire ravaged the town, impoverishing the Jews. The first signs of economic recovery appeared during the second decade of the 16th century, inaugurating a period of progress and spiritual efflorescence which lasted until approximately the close of the century. Then one of the largest communities in Poland-Lithuania, with 3,000 persons (about 10% of the city’s population) and 137 wooden and stone houses, Poznan became the Jewish center of Great Poland. Its rabbis, among the most prominent authorities of the generation, were recognized throughout the country and the “sages of Poznan” were renowned. Nevertheless this period of prosperity was marked by a severe struggle with the local townspeople and the monks. The townsmen repeatedly (1521, 1523, 1554, 1556) endeavored to hinder the retail trade of the Jews, to restrict the number of houses in the Jewish quarter and beyond it (1532, 1537, 1545), and to expel new Jewish settlers (1549). Students of the Jesuit seminary organized bloody attacks (*Schuelergelauef*, 1575) on the Jewish quarter. During riots in 1577, 20 Jews lost their lives and after a fire in 1590 the Jewish quarter was abandoned for two years.

Through further misfortunes the community began to decline. Jesuit persecutions were renewed in 1607, and in the wake of another fire (1613) the Jews temporarily settled on the outskirts of the town, from where they were expelled in 1620. The plague known as St. Anthony's Fire claimed a number of victims and those who fled at this time did not return. Signs of decline became apparent in the middle of the 17th century with a one-third decrease in the population, although the proportion of Jews within the general population rose to 15%. The burden of taxation became severe and attempts to raise funds by new lease methods did not alleviate the financial plight. There was constant recourse to loans but these were insufficient for the growing needs and settlement of former debts (not finally settled until the middle of the 19th century). As German merchants from Silesia penetrated the region, trade rivalry grew. Jewish traders at the fairs (*Brandenburg, *Gniezno, Frankfurt on the *Oder) met with difficulties that reduced their sources of livelihood. In riots in 1639 some lost their lives and property was destroyed. Famine and plagues following the Swedish War (1655–60) and renewed riots (1687) brought economic ruin and accelerated the depletion of the community. A call for assistance to the communities of Germany and Bohemia (1674) failed to raise sufficient funds for charity or for redemption of the *Sifrei Torah*, mortgaged in payment of debts (which amounted to 60,000 zlotys to the nobility alone). Economic distress was accompanied by social and cultural decline: Tension prevailed and quarrels became endemic; even education was neglected.

Deterioration continued during the 18th century. In 1709 there was a renewed outbreak of St. Anthony's Fire, and an attack by the army of the so-called Tarnograd Confederation (1716–17) further depleted the community. A severe fire (1717), the flooding of the Warta River, and a blood libel (1736) had disastrous consequences, and rehabilitation of the community became beyond its means. Growing numbers of Jews left the city, some for Swarzędz, a subsidiary community of Poznan. Those who remained could not halt the process of disintegration in all aspects of Jewish communal, social, and economic life. In 1759 the conquering Prussian army imposed an enormous fine of 2,676 guilders. Another fire in 1764 destroyed 76 houses and claimed many victims. The debts of the community increased to unprecedented figures (686,081 guilders, with 27,800 guilders annual interest). A royal commission failed to solve the problem of the debts. The majority of the members of the community, which numbered 3,000 persons (about 40% of the population) at the end of the 18th century, were poor recent arrivals, unable to bear the burden of taxation and payment of debts.

When Poznan was under Prussian rule (1793–1807), *Prussia's legislation relating to the Jews and its general legislation affected Jewish life in Poznan in many new spheres, e.g., it restricted communal jurisdiction in favor of the local Prussian tribunal. General elementary and secondary schools were opened to Jews. Haskalah and Germanization received considerable impetus. The municipality attempted to induce the

new rulers to restrict the numbers and activities of Jews in the city, and seized the opportunity after the fire of 1803, in which the Jewish quarter was severely damaged, to submit proposals for the confinement of the Jews to their original quarter. For hygienic reasons, however, the Prussian government decided not to rebuild the Jewish quarter and to allow the Jews to settle in any part of the town, with the sole reservation that they should have no more houses than they had previously owned. The purchase of houses from Christians was permitted. This decision could not take effect because of the outbreak of the Napoleonic War, and so the Jews of Poznan returned to their quarter and rebuilt a number of houses. A minority, presumably *maskilim*, settled outside the Jewish quarter.

The situation of Poznan's Jews was certainly not improved during the period of the Grand Duchy of Warsaw (1807–13); the *maskilim* were disillusioned by the abrogation of emancipation (1808), while the general Jewish population was burdened by new taxes (the recruits' tax and the kosher meat tax). The community viewed with suspicion the activities of David *Caro. A member of the Berlin Haskalah and contributor to *Ha-Me'assef*, he called for reforms in education and Divine Worship and disseminated Haskalah literature. When Prussian rule was reestablished (1815), a conflict broke out within the community over the election of the rabbi. The *maskilim* were opposed to the candidacy of Jacob Moses Eger, whose scholarly authority and social influence worked against their plans for the closure of the *hadarim* in favor of public schools and the opening of a teachers' seminary. Toward the end of his life (1833), these questions were again raised by the Prussian government in the form of "temporary directives," aimed at achieving a Germanic assimilation to counter the Polish element in the city. The resistance of the community prevented their implementation and the *hadarim* were not replaced until 40 years later. Another article of the "temporary directives" granted equality to that tiny section of the community whose education (knowledge of the German language), length of residence (from 1815), or act of Prussian patriotism entitled them to state citizenship. The overwhelming majority of the Jewish population (85%) was merely "tolerated," a status which was not changed until 20 years later. Germanization of the Jewish community was partially achieved during the 1850s, under the pressure of the Prussian authorities, who forced the German settlers to consent, and in the face of growing hostility of the Poles. When delegates of the Jews were elected to municipal institutions in 1853, Poles for the first time were in the minority. Relations between Germans and Jews improved and, as a result, Germanization was intensified. The ties between the community of Poznan and those of Prussia and central Germany were strengthened while those with communities to the east weakened. The Jewish population increased (about 6,000 in the 1860s) and its economic situation improved. Communal authority confined itself to religious and philanthropic spheres: A magnificent synagogue was built and rabbinical conventions were held there in 1876, 1877, 1897, and 1914.

The defeat of Germany in World War I and the annexation of Poznan by Poland came as a severe blow to the Jews, who had supported Germany in the struggle (1918–19). The renewal of Polish rule was marked by riots and clashes and the community rapidly declined. By the late 1930s, about 2,000 Jews remained in the city.

The Organization of the Community (16th–18th Centuries)

The records of the Poznan community (the memorial volumes and the lists of *kesherim* (“eligibles”)) provide a detailed picture of its organization and of the activities of its institutions (1611–1833). Communal officials were chosen by means of eligible arbitrators or by the community council (there were about 100 delegates every year). The eligible arbitrators were elected by the outgoing community council from among the members of the community and they in turn elected the higher officials by secret ballot and majority vote: the *parnasim*, the elders, the council, the *dayyanim*, and the treasurers (about 35 people). The new community council selected the lower officials: the city representatives, the initiators of regulations, various functionaries, the superintendents of the guilds, assessors, the council of the *bardan* (a specific tax levied partly on food consumption and partly on trade turnover), accountants, and those responsible for relief work (about 65 people). Election procedures followed very elaborate rules designed to fulfill certain halakhic requirements while embodying various methods designed to ensure a moderate oligarchical regime in the community. The salaried community officials – rabbis, preachers, *shtadlanim*, *hazzanim*, and beadles – were selected by 32 men (13 from the council and 19 from the three classes: the wealthy, the middle class, and the poor) and their term of office was from one to three years, fixed by letter of appointment. As the rabbi of Poznan also acted as rabbi of the province of Great Poland, the arbiters of the province assisted at his election; an inhabitant of Poznan was disqualified from holding this office. Later, after obstruction by the province, the election of the rabbi was entrusted to 32 men. The *kesherim* also had legislative power, formally in pursuance of their electoral power. Their ordinances were intended as guidance for the higher and lower officials. The overt legislation (the regulations) and the hidden legislation (“secret letters”) were decreed by the *kesherim* themselves at their meetings (these constituted about 85% of the whole legislation), sometimes on the initiative of the “initiators of the regulations.” The *kesherim* advised and passed regulations in the spheres of economy, jurisdiction, relief, and education. Sumptuary regulations were also included. The *kesherim* also undertook the supervision of the community’s institutions. It was considered their task to ensure that the regulations were executed to the full, in letter and spirit. Thus the *kesherim* became one of the most distinctive and firmest institutions of the Poznan community, but because they were selected annually and about 50% were newcomers every year, they did not become a closed ruling group. Through them the members of the community felt that

their leadership was under permanent control and that their selection was a responsible public act.

The community determined the number of permanent and temporary residents, as well as the number of dwelling houses in the community. In general they acted according to principles accepted in Jewish society (see **Herem ha-Yishuv*) but there were special considerations prevailing in the Poznan community. Acceptance of new settlers was dependent on the agreement of the 32-member committee or a commission acting in its name. Their decision was based on two considerations: the quota of Jewish inhabitants permitted by the municipal council and the number of poor members, which could not be increased. Community membership was granted to a new settler after three years’ residence and after payment of special fees. Those living “outside the community” as a result of wars, floods, plagues, and fires became once more full-fledged members when they had equipped themselves with a letter of residence granting its bearer the right to trade in Poznan in exchange for his sharing the burden of taxation. The optimum number of houses in the Jewish quarter was fixed. In 1641 there were 80 wooden houses (40 housing one family, 39 two families, and one three families) and another 57 stone houses (48 housing two families and nine three families). In 1710 the number of houses decreased to 98, but in 1714 it increased to 109. The ownership of many dwellings by the wealthy during the community’s period of prosperity and their refusal to rebuild after various calamities resulted in a shortage of houses, a rise in rents, and the demand that rents be paid in advance. Because of the opposition of the municipal authorities it was difficult to find temporary lodging – especially after wars, plagues, and fires – beyond the Jewish quarter. Specialized community institutions dealt with fiscal problems, with the collection and assessment of taxes. The collection of “gifts for the authorities” (to the *wojewoda*, the ministers, the municipal council, and the monks) was borne by the communal institutions. To achieve greater efficiency in the collection of charity donations and payments for *mitzvot*, a list of the needy was drawn up and collection methods and procedures for the distribution of allocations were established.

The community intervened in the regulation of trade competition. The *kesherim* supported the merchants against the craftsmen (butchers, tailors, hatters, furriers, buttonhole makers), the brokers, and the moneylenders. The attitude of the *kesherim* toward the middleman, i.e., the itinerant broker in the town or at the fair, was based on the extent of his usefulness or the damage caused by his economic activities to commerce and moneylending. The merchant class waged a fierce struggle against the permanent brokers to non-Jews, against the middleman between one non-Jew and another, and against the brokers who acted as messengers or attracted customers from one trader to another. Loans for consumption were not encouraged, but a loan for trading purposes was viewed favorably. A loan which surpassed the means of the borrower was condemned and invalidated. Guarantees for loans were

defined (*pledge, agreement by handing over an object (*kinyan sudar*), mortgage, and **mamram*) and a rate of interest was fixed (in towns 22%; at fairs 33%; for squires 15%; for monks 8%). In the legal and judicial field, special and detailed attention was given to procedures, such as summons to court, the actual trial, and the execution of the sentence. The community tried to impose sumptuary laws based on the principles of: “everyone according to his wealth and prevailing conditions”; “a man is only authorized to spend according to his status”; and “the Torah took pity on the money of Israel.” These restrictions were applied to clothes and religious celebrations in accordance with financial means (middle class, lower class, and religious officials). The poor were supported by various funds, most important being the charity fund for the poor, and assistance funds for poor brides, the needy aged, guests, youth, the sick, and paupers. The youth of Poznan attended two educational institutions: the *bet midrash* (or the synagogue) and the yeshivah. In the *bet midrash* they studied in three classes and the teachers were supervised by the community. In the yeshivah the number of students was predetermined and limited. Adults also studied in these institutions under the guidance of the *av bet din*, the preacher, the *dayyan*, and learned laymen. Public religious life was centered around the numerous synagogues. The larger synagogues enjoyed more extensive rights with regard to the status of their treasurers, the selection of *hazzanim*, the distribution of *etrogim*, and the determination of the seat of the *Gaon* or preacher.

[Dov Avron]

Holocaust Period

At the outbreak of World War II there were about 1,500 Jews in Poznan. Many of them escaped before the entry of the Germans or in the first weeks of the occupation. Poznan became the capital of the Reichsgau Wartheland under the Nazi occupation. The Jewish community in occupied Poznan existed for only three months. In that time the synagogue was transformed into a stable, Jewish property was systematically plundered, and the Jews were driven out of the better residences. On Nov. 12, 1939, the S.S. and police chief of Warthegau, Wilhelm Cappy, ordered that Poznan be made “*judenrein*” within three months. On Dec. 11–12, 1939, the Jews were deported to Ostrow Lubelski and other towns of the General Government. Some of the refugees reached Wloszczowa; others went to Grodzisk Mazowiecki, Zyrardow, Wiskitki, and Blinie. On April 15, 1940, the Nazi paper *Ostdeutscher Beobachter* reported the solemn, symbolic, ceremonial removal of the Star of David from the last synagogue in Poznan. From November 1939 until August 1943 Jewish forced labor camps existed in the town and vicinity. The inmates, who came from various towns in Warthegau, worked on road building, land estates, and other work sites.

[Danuta Dombrowska]

Postwar Period

A report issued in 1947 by the Central Committee of the Jews of Poland (set up immediately after the liberation of the coun-

try) showed that 224 Jews were living in Poznan in January 1946 (148 men, and 76 women), and 343 in June of the same year (208 men, and 135 women).

No significant Jewish community developed in subsequent years.

POZNAŃSKI, EDWARD (1901–1974), philosopher. Poznański, the son of Samuel Abraham Poznański (*Posnanski), was born in Warsaw, and studied philosophy and mathematics at the local university. While in Poland he was the secretary and moving spirit of the Friends of the Hebrew University in Poland. His principal concern was the building of the Jewish National and University *Library, and many thousands of books arrived at the library through his good offices, bound and catalogued – since among his fields of expertise and hobbies were bibliography and librarianship.

He immigrated to Palestine in 1939, and was appointed academic secretary of the Hebrew University in 1946, holding the position until his retirement in 1964. One of his major concerns was the advancement of junior staff through administering funds for fellowships and scholarships. He was instrumental in defining the university’s policy for enabling younger scholars to visit great universities abroad and return with enhanced experience and deepened scholarship to join the ranks of the Hebrew University faculties.

During his tenure of office as academic secretary, Poznański taught logic, philosophy of science, and philosophy of mathematics at the Department of Philosophy. After his retirement he devoted all his time to this department as teacher, administrator, student counselor, and as principal editor of the Hebrew philosophical quarterly *Iyyun*. He wrote extensively in the field of his specialization.

Poznański established a wide-spread network of contacts with philosophers all over the world. During and after the Yom Kippur War of 1973 he disseminated information and analyses of the situation in many of his letters, some of which also reached the Soviet Union.

Poznański was rooted in Jewish culture, was widely read in the literatures of several languages, and was interested in poetry, music, children's books, and photography. His friendship with the renowned Jewish educator Janusz *Korczak was an important part of his life and a source of inspiration to him as a man and educator.

[Nathan Rotenstreich (2nd ed.)]

POZNANSKI, GUSTAVUS (1804–1879), Jewish religious leader and reformer. Born in Storchnest, Poland, and educated in Hamburg, he immigrated to the United States in 1831 and served for a time as the *shohet* of Shearith Israel in New York, blowing the *shofar* and serving as assistant *hazzan* as well. In 1837 he went to Congregation Beth Elohim of Charleston, SC, then the wealthiest and most cultured Jewish community in America as *hazzan*. He came to a divided community between Reformers and an Orthodox group well recommended by Isaac Leeser, then the leading Orthodox figure in the United States. He came as an Orthodox Rabbi on probation but soon earned the admiration of his congregation and was given life tenure. Leeser was soon to regret his recommendation when Poznanski's views changed radically. In 1838, his synagogue burned and when the new building was constructed an organ was introduced, the first organ ever used in a U.S. synagogue. It divided the synagogue and the case was taken to court by 40 members who had left the congregation because of their objection to the organ. When he recommended the abolition of the second day of Jewish Festivals more members withdrew. Poznanski offered to step aside to bring peace but returned to the pulpit for four additional years until 1847. His successor could not be chosen until 1850 because the community remained divided. Among those who applied for the position was Isaac Mayer Wise. After retirement, Poznanski remained in the community for some 15 years and later divided his time between New York and Charleston. In New York, he was a member of Shearith Israel, which was an Orthodox Congregation still retaining his Reform membership in Charleston.

POZNANSKY, MENAHEM (1887–1956), Hebrew writer. Born in Kamenets-Podolski (Russia), Poznansky emigrated to Palestine as a result of his close friendship with J.H. *Brenner, who was one of the main influences in his life. Besides teaching, Poznansky wrote stories, which were posthumously collected together with his sketches in *Demuyyot Melavvot* (1958). After Brenner was killed, Poznansky devoted him-

self to Brenner's literary estate, and published the first complete edition of his works (8 vols. in 9 books, 1924–30). This was followed by an abridged edition (3 vols., 1946–51), and a revised complete edition (1961), of which Poznansky succeeded in preparing only the first volume. All these editions included introductions and notes by Poznansky. He also published an annotated collection of Brenner's letters (vols. 1–2, 1941). Poznansky translated into Hebrew works by Turgenev, Goncharov, and Gogol. One of his stories appears in English translation (Goell, *Bibliography*, 74, no. 2349).

[Getzel Kressel]

PPS (Polska Partia Socjalistyczna), Polish Socialist Party. Founded in Paris in 1892, the PPS began activities in Poland despite Russian political restrictions. While in Galicia, then under Austrian control, the movement formed a legally recognized popular party, the PPSD (Polish Socialist Democrat Party). In Congress Poland, as a result of czarist oppression, the PPS became an underground movement. The PPS also was in conflict with the general Social Democratic movement in Poland and Lithuania, which on cosmopolitan principles opposed the nationalist tendency among the leaders of the PPS. During World War I the right wing of the PPS organized its own military units (the "legions") to act for the liberation of Poland. With the attainment of Polish independence, the PPS organized a national convention in April 1919 which brought about the establishment of the party throughout the country.

From the outset many Jews were active in the PPS. However, in the wake of ideological conflicts during and after the war a considerable number of Jewish activists left the party to join the extreme left. Three Jews became prominent in the party in the interwar years: (1) Feliks Perl (1871–1927), a native of Warsaw, who influenced the program of the united movement by his adherence to the party's socialist views as opposed to its rightist nationalist tendencies; (2) Herman *Diamand (1860–1931) of Lvov, lawyer and economist, who was a PPS member in the Austrian parliament between 1907 and 1914, and the party's economic expert in the Polish *Sejm (parliament); and (3) Herman *Lieberman (1870–1941), lawyer, journalist and outstanding speaker, member of the Austrian parliament and the Polish Sejm, and later (1940) minister of justice in the Polish government-in-exile in London. All three considered that the solution to the Jewish problem lay in Polish patriotism and eventual assimilation; they were opposed to the principles of Zionism and the efforts of Jewish leaders to preserve Jewish cultural identity.

The PPS made efforts to approach the mass of Jewish workers through Yiddish publications. It tended to regard the Jewish socialist parties, such as the *Bund and the leftist Po'alei *Zion, as potential competitors for voters, accusing them of separatism and nationalism. In its attitude to actual discrimination against Jews, the PPS showed a willingness to assist them in principle. However it was cautious in the

extent of its support so as not to be suspected of “serving Jewish interests.” In the trade unions the PPS showed a tendency to make difficulties in the admission of Jewish workers to industrial enterprises, even where the owners themselves were Jews.

It was only in the late 1930s that the PPS showed more courage in the struggle against antisemitism, then being overtly exploited by the reactionary successors of *Pilsudski, as a means of hitting at the opposition.

[Moshe Landau]

PRAAG, SIEGFRIED EMANUEL VAN (1899–2002), Dutch novelist and writer. He studied French language and literature at the Municipal University of Amsterdam, became a schoolteacher, married Hilda Sanders, and started a career as a writer. After 1933 they initiated a German department in the Allert de Lange publishing house in Amsterdam. They moved to Brussels in 1936. In 1940 they succeeded in reaching England, where Van Praag worked for the Belgian radio. After the war they returned to Brussels and Van Praag again taught school but mainly spent his time in writing. When he passed away in Brussels he could look back on a long life in letters – having written more than 60 books.

Van Praag wrote on literature: *De West-Joden en hun letterkunde sinds 1860* (1926), *In eigen en vreemden spiegel. Uit de letterkunde van en over Joden* (1928).

He excelled in writing (historical) novels on women, *Maria Nunes* (1928), *La Judith. Een groot actrice* (1930; Ger., *Judith, der Roman einer Schauspielerin*, 1931), *Julie de Lespinasse. Een groote minnares* (1934), *Madame de Pompadour. Roman van eierzucht en liefde* (1936), *Een vrouw van tact* (1947), *De Hebreeuwse lichtekooi* (1954), and his last novel *De lieve glorie van Truitje Bonnettemaker* (1988). Moreover he was fascinated by people and by the animals of the Amsterdam Zoo (“Artis”), so he wrote articles on “Artis in de kunst” (1926) and on the topic of the animal in literature, *Wij en de dieren* (1932).

Along with the published recollections of Jaap Meijer, Meyer J. Perath, Mozes H. Gans, Meyer Sluyser, and Eddy van Amerongen, Van Praag’s descriptions of pre-war Jewish Amsterdam have been decisive for younger generations. On this topic he wrote among others *Jeruzalem van het Westen* (1961; seventh pr., 1985), *De oude darsjan. Over Jodenbuurten en joodse buurten* (1971), and *Een lange jeugd in Joods Amsterdam* (1985), a companion volume (with about 100 photographs) to a film by Willy Lindwer made the previous year. The book covers his years 1899–1935 in Amsterdam. Van Praag wrote more extensively on his life in *De arend en de mol. Au-*

tobiografische schetsen (1973). The memoirs of his wife, Hilda van Praag-Sanders, followed: *Meedoen. Persoonlijk en niet-persoonlijke ervaringen van een journaliste* (1975).

In 1995 he entrusted his library, manuscripts, correspondence and photographs to the Bibliotheca Rosenthaliana, Amsterdam University Library.

PRACTICE AND PROCEDURE.

CIVIL

Court Sessions

The courts of three (judges) exercising jurisdiction in civil matters (see bet *din) held their sessions during the day, but – following Jethro’s advice to Moses that judges should be available “at all times” (Ex. 18:22) – they would continue sitting at night to complete any proceedings commenced during the day (Sanh. 4:1). The session started early in the morning, with the judges robing themselves – they had special robes “wrapped around them,” so that they would not look around too much (*Sma*, חמ 5 n. 16) – and usually continued for six hours until mealtime (Shab. 10a). While originally the session was not interrupted even for prayers, the law was later revised so that in this case it may be interrupted (חמ 5:4). No court was held on the Sabbath or holidays, lest any writing was done. On the eves of the Sabbath or holidays the courts would sit only in exceptionally urgent cases (*Rema*, חמ 5:2), but a party summoned was not punished for failing to appear on such a day (חמ 5:2). The court may sit on the intermediate days of a festival (*Hol ha-Moed*, מך 14b).

Parties

Any person, male or female (Sif. Deut. 190), may sue and be sued, except minors, deaf-mutes, and lunatics (see Legal capacity). Actions brought by or against guardians on behalf of such incapacitated persons may be heard by the court, but any judgment rendered is binding only if in their favor (Git. 52a). Non-Jews who sue or are sued in a Jewish court may demand that their own non-Jewish law be applied to them (Yad, Melakhim 10:12); a Jew litigating with a non-Jew was originally entitled to claim any benefit of non-Jewish law, but this discrimination was later abolished (cf. *Beit ha-Beḥirah* thereto).

The rule is that parties must litigate in person and may not be represented; and even when and where representation is allowed, the parties are required to attend in person so as to enable the court to form a direct opinion of them (*Sma*, חמ 13 n. 12, 17 n. 14). An exception was made in favor of women defendants: if such women were accustomed to stay at home and not to be seen in public they were allowed to make their statements to a scribe of the court in their own homes (Tos. to Shevu. 30a). When suing for his own usufruct in his wife’s property, a husband may also sue for the prin-

cipal without special authorization, but not otherwise (Git. 48b; *ḤM* 122:8).

Joint claimants may sue jointly or separately (*Ket.* 94a; *ḤM* 77:9, 122:9), but in an action by one of them, the others will normally be included by order of the court. In cases of joint liabilities each defendant can be sued only for his share of the debt, unless he expressly or by implication guaranteed the whole debt (*ḤM* 77:1); such a guarantee is implied in the debts of partners, joint contractors, and joint tort-feasors (*ibid.*).

Venue

The plaintiff “follows the defendant,” i.e., the claim has to be lodged in the court of the place where the defendant resides (*Rema*, *ḤM* 14:1); but if the plaintiff finds the defendant at a place where there is a court in session, he may sue him there and then (*Resp. Maharik* no. 14). The ancient rule that a party had the right to insist on trial by the Great Court at Jerusalem (*Yad, Sanh.* 6:7), though obsolete (*ibid.* 9), has been interpreted in many countries as enabling the plaintiff to compel the defendant to stand trial outside his place of residence in a court of higher repute or authority (*Sanh.* 31b; *Tur ḤM* 14; *ḤM* 14:1 and *Rema* thereto). The debtor’s property may be attached by order of the court sitting at the place where the property is situated (*Rema*, *ḤM* 73:10).

Summonses

On the plaintiff’s application a summons is issued to the defendant to appear in court on a day named in the summons (*MK* 16a; *ḤM* 11:1). A plaintiff need not disclose particulars of his claim before the defendant stands in court to answer the summons (*BB* 31a), and, if he does, he is not bound by any such summons unless he repeats them in court (*ḤM* 80:1). This rule was devised in order that the defendant should not have time, before coming into court, to fabricate a defense (*Rashbam*, *BB* 31a); but later jurists held this purpose to be outweighed by the more desirable opportunity of an out-of-court settlement if the claim was disclosed in advance (*Siftei Kohan*, *ḤM* 11, n.1).

The issue of a summons requires an order of the full court (*Sanh.* 8a), but one judge may make the order if the others are present in court. The summons is delivered by the officer of the court, either orally or by a written notice endorsed by the court (*ḤM* 11:6). It must specify not only the exact time the defendant is required to appear in court, but also the name of the plaintiff suing him (*Nov. Ritba* thereto). It may specify alternative dates of hearing (*MK* 16a), so that if the defendant fails to appear at one date, he must appear at the next specified date (*Rashi* thereto). Originally, such alternative summonses were issued for the next following Monday, Thursday, and Monday (*Yad. Sanh.* 25:8), these being the fixed court days in talmudic times (*Ket.* 3a). If not drawn up as alternative summonses, they could be issued subsequently one after the other in case of nonappearance (*Rashi*, *BK* 113a).

The court has discretion on whether or not to issue a summons; it may refuse to summon scholars of great eminence (*Kid.* 70a), practicing rabbis, and women who live

in seclusion (*ḤM* 124). Each summons contained a warning that, failing his appearance in court on the date (or one of the dates) specified, the defendant was liable to be declared under a ban (see *Rashba*, *BK* 113a). A defendant who had to go on a journey or was otherwise prevented from attending court had to send an apology and request an adjournment (*ḤM* 11:1 and *Rema* thereto). Failing both appearance and apology, the court would issue a bill of attainder (*petihah*) to be served on the defaulter, and a ban would be imposed on him, unless he appeared in court within one week, paid the expenses of the *petihah*, and produced it to be torn up (*BK* 112b–113a). A less rigorous mode of enforcing court summonses was the attachment of the defaulter’s property (*Resp. Rosh* 73:1, 97:4).

Default Procedure

It is forbidden to adjudicate the plaintiff’s case in the absence of the defendant (though duly summoned) except where the plaintiff’s claim is prima facie valid, e.g., where it is based on a bill signed by the defendant and confirmed by witnesses (*BK* 112b; *Tur ḤM* 106 and *Beit Yosef* thereto), or where the defendant is abroad more than 30 days’ journey away (*Yad, Malveh* 13:1; *ḤM* 106). The reason for this deviation from the general rule that there shall be no adjudication unless both parties stand before the court (cf. *Deut.* 19:17), is said by Maimonides to be “that not everybody should take the money of other people and then go and settle abroad, with the result that borrowers will find all doors closed to them” (*Yad, Malveh* 13:1). Judgments in civil cases may always be given in the absence of the parties (*ḤM* 18:6).

Cause List

Hearing out “high and low alike,” and fearing no man (*Deut.* 1:17) was interpreted as prohibiting any preference of major over minor cases (*Sash.* 8a; *Yad, Sanh.* 20:10): the case that came in first must be heard first, whatever its relative importance (*Rashi, Sanh.* 8a; *ḤM* 15:1). There are several exceptions to this rule: the case of a scholar is given preference, so that he should not be kept too long from his studies (*Ned.* 62a); orphans and widows are given preference even over scholars, for it is by judging them that justice is done (*Isa.* 1:17); and cases in which one of the parties is a woman are advanced so as not to keep her waiting in court (*Yev.* 100a).

Subject Matter

The court will not entertain a claim for anything of less than minimal value (*BM* 55a; *Yad, Sanh.* 20:11). Opinions were divided on whether the court, once seized of a claim for *shaveh perutah*, could proceed to deal with other (ideal and non-valuable) matters between the same parties; the leading view is that it could (*BM* 55b; *Yad, loc. cit.*; *ḤM* 6:1).

Settlement

When the parties stand before the court, they must first be advised to settle their dispute by a friendly *compromise (*Sanh.* 6b), which is the “judgment of peace” alluded to by the prophet (*Zech.* 8:16). Failing such compromise, the court will ask them whether they insist on adjudication according

to law, or whether they would not rather empower the court to adjudicate between them by way of fair compromise (Yad, Sanh. 22:4; *ḤM* 12:2); and courts were admonished to do everything in their power to dissuade parties from insisting on adjudication according to law (*ḤM* 12:20). However, so long as a compromise had not actually been implemented by *kinyan or by performance, the parties might go back on their agreement and resort to law (*ḤM* 12:7, 19).

Court Decorum

The parties are required to stand up before the court (cf. Deut. 19:17), and so are the witnesses (Shev. 30a), and they may not sit down except with the court's permission (Yad, Sanhedrin 21:3; *ḤM* 17:1). Maimonides comments sadly upon the fact that the post-talmudic courts always allow parties and witnesses to be seated – there being no longer sufficient strength in us to conduct ourselves according to the law (loc. cit. 21:5; *ḤM* 17:3). Permission to be seated may not be given to one party unless it is also given to the other (Tosef., Sanh. 6:2; TJ, Sanh. 3:10, 21c). Even where a scholar is permitted to be seated out of respect for him, his opponent must be given the same permission, and it is up to him whether he avails himself of it or not (Shev. 30b; Yad, Sanh. 21:4; *ḤM* 17:2).

There is no rule requiring parties (or attorneys) to be dressed in any particular manner; but where one party is more richly dressed than the other, he will be ordered to dress in the same manner as the other before being allowed to address the court (Shev. 31a). This rule has been said to be now obsolete, because differences in dress are no longer so ostentatious (*Sifteï Kohen*, *ḤM* 17 n. 2); others have held that instead of ordering the party to change his dress, the court should rather assure the other party that his adversary's showy appearance makes no impression on it (Maharshah, quoted in *Bah.*, *ḤM* 17:1 and in *Be'er ha-Golah*, *ḤM* 17, n. 4).

Equality of Parties

The injunction: "Judge your neighbor fairly" (Lev. 19:15) was interpreted as prescribing equal treatment by the court for all parties before it (Shev. 30a; Yad, Sanh. 21:1; *ḤM* 17:1). In particular, the parties must all be given the same opportunity and the same time of audience (*ibid.*); no party may be heard in the absence of the other (Shevu. 31a; Sanh. 7b; Yad, loc. cit. 21:7; *ḤM* 17:5). Where one party desires to be represented or to be accompanied by friends, relatives, or partners, the other party may be so represented or accompanied too, and will be heard to oppose such representation or escort through lack of equal facilities (*ḤM* 17:4 and *Pithēi Teshuvah*, *ḤM* 17 n. 7). Where there are several plaintiffs and one defendant (or vice versa), they will be asked to choose one of them to argue for all, so as to keep the proportions even (*Sma*, *ḤM* 17 n. 8).

The injunction not to favor the poor or to show deference to the rich (Lev. 19:15; cf. Ex. 23:3) was elaborated as follows:

No judge should have compassion for the poor and say, this man is destitute and his adversary is rich – why should he not support him? I will give judgment for the poor

man and thus cause him to be honorably provided for; nor should a judge favor the rich: when there are before him a wealthy notable and a poor ignorant man, he should not greet the notable and show him any respect, lest the other may be embarrassed; nor should he say to himself, how can I decide against him and cause him disgrace? I will rather send him away now and tell him in private later that he ought to satisfy the other party – but he must give true judgment forthwith. And when there are before him two men, one good and one evil, he may not say, the one is a criminal and probably lies, and the other is virtuous and will stick to the truth – but he must regard both as if they were potential evildoers who might lie in order to strengthen their own case, and he must judge them according to his best conscience; and, having so judged them, he should then regard them both as perfectly in order (*ḤM* 17:10).

Pleadings

The rule is that the parties must plead for themselves (see *Attorney), orally, but if both so agree, they may be allowed to put their arguments into writing, either by dictating them to the scribe of the court or by filing written briefs (*Rema*, *ḤM* 13:3); in the latter case, they cannot be allowed to go back on anything they have written (*ibid.*), and it appears that the courts have resorted to written pleading so as to prevent parties from changing their positions every now and then (cf. *Rema*, *ḤM* 80, n. 2). The costs of all such written records are borne equally by both parties (BB 10:4; 168a).

The court may not put any argument in a party's mouth or teach him how to argue his case (Avot 1:8; Yad, Sanh. 21:10; *ḤM* 17:8), nor may the court express an opinion presupposing a hypothetical argument ("if A would plead this way, judgment might be given for him"; *Rema*, *ḤM* 17:5). On the other hand, the court is admonished to open the mouth of the dumb for him (Prov. 31:8), i.e., to help a litigant who is intellectually or emotionally unable to express himself to formulate his argument (Yad, Sanh. 21:11; *ḤM* 17:9). This rule applies especially to orphans and imbeciles (cf. *Bah.*, *ḤM* 17, n. 12).

The plaintiff pleads his case first (BK 46b; *ḤM* 24), but he may be allowed by the court to postpone his pleading in whole or in part if he so desires (*Rema*, *ḤM* 24). There is a curious exception to the rule: if by hearing the plaintiff first, the property of the defendant may depreciate (e.g., by rumors in the market that the title is disputed), the defendant is heard first (*ḤM* 24 and *Sifteï Kohen* thereto, n. 1). When the plaintiff has stated his case, the defendant is bound to reply forthwith, but the court may, in a suitable case, give him time to think and prepare his defense (*Rema*, *ḤM* 16:2). For the various pleadings open to litigants and their respective effects, see *Pleas.

Evidence

Where a case cannot be disposed of on the pleadings and has to be proved by *evidence, the parties must be ready with their witnesses and documents on the day of the pleading, but the court may allow them up to 30 days' grace to produce their

witnesses or documents (Sanh. 3:8; BK 112b; ḤM 16:1). Opinions were divided on what should happen if they failed to do so within this time limit (Sanh. 3:8), and the law was eventually settled to the effect that while the court would not extend the time limit (except where the witnesses are known to reside at a distance of more than 30 days' journey; ḤM 16:1), any judgment given on the pleadings was subject to review, and could be annulled, if and when warranted by any further evidence being adduced (ḤM 20:1). Where a party had declared in court that there were no witnesses or documents available to prove his case, he would not afterward be allowed to adduce such evidence, the suspicion being that it would be fabricated (Yad, Sanh. 7:7–8; ḤM 20:1); but where a party declared that there were witnesses or documents in existence but he could not trace them, the court would make a public announcement threatening a *herem* on any person who withheld evidence (ḤM 16:3); such an announcement would even be initiated by the court where evidence was lacking to prove claims or defenses by representatives of estates (ḤM 71:8). Before testifying, witnesses were warned by the court of the consequences of perjury and the moral turpitude this involved (Yad, Eduṭ 17:2; ḤM 28:7).

For the burden of adducing evidence, and presumptions in lieu of evidence, see *Evidence.

Deliberations

Having heard the parties and their witnesses, the judges confer with each other. According to ancient Jerusalem custom, the conference is conducted in private (Yad, Sanhedrin 22:9; ḤM 18:1); but while the parties always had to be excluded, primarily because they ought not to know how each judge voted (Maim. *Comm. to Mishnah*, Sanh. 3:7), it appears that some courts allowed the general public to be present while they conferred (*Bah.*, ḤM 18:1); and there is a talmudic tradition that the judges' students were allowed not only to be present but also to participate in the discussions (Sanh. 33b, and *Rashi* thereto). Witnesses who testified in the case could express their opinion on the merits of the case while giving testimony, but could not be heard during the judges' conference, because "no witness is made a judge" (Yad, Eduṭ 5:8).

The conference starts with the oldest (or presiding) judge stating his opinion (Sanh. 4:2, Yad, Sanhedrin 11:6); but the view was expressed that, as in criminal cases, it should rather be the youngest member of the court who states his opinion first, the same reasons applying in civil cases as well (*Rema*, ḤM 18:1; see also below). Any judge may, in the course of deliberations, change any opinion he previously expressed (Sanh. 4:1). If a judge cannot make up his mind, he must say so, and need not apologize or give reasons for saying so (Yad, Sanhedrin 8:3). Two more judges will then be added to the court (Sanh. 3:6), as the judge unable to form an opinion is regarded as being absent and the remaining two judges, even if of one mind, are not regarded as a court (*Rashi*, Sanh. 29a). The augmented court (of five) will start deliberations anew, but need not hear the case once more (ḤM 18:1).

Judgment

At the close of the deliberations, the parties are called back into court and asked to stand up (Shevu. 30b; Yad, Sanh. 21:3; ḤM 17:1); the presiding judge announces the decision, without disclosing whether or not the judgment is unanimous, or how each judge voted. If the judgment is unanimous, so much the better; if not, the majority prevails (Sanh. 3:6, Sanh. 3b; et al.). If (owing to the judges being unable to form an opinion) the court has been increased time and again up to the maximum of 71 members and is still almost equally divided, judgment will be given for the defendant as the plaintiff has not established his case to the satisfaction of a clear majority (Yad, loc. cit. 8:2; ḤM 18:2).

Any party may ask the court for a record of the judgment in writing (Sanh. 30a; Yad, loc. cit. 22:8, ḤM 19:2) and for a written statement of the reasons behind it (BM 69b and Tos. thereto; Sanh. 31b; Tur ḤM 14 and *Beit Yosef* thereto), if only for the purposes of appeal to the Great Court (Yad, Sanhedrin 6:6). The written judgment (and the reasons for it) must be signed by all the judges, including the dissenter (R. Johanan in TJ, Sanh. 3:1, 21 ḤM d). While judgment is given on the day the case was heard (Sanh. 4:1; Maim. *Comm. to Mishnah*, Avot. 5:8; ḤM 17:11), and any delay of justice is regarded as a violation of "Ye shall do no unrighteousness in judgment" (Lev. 19:15), the written record of the judgment and the reasons for it may be given whenever a party applies for it, without any time limit (*Rema*, ḤM 14:4). Where the judgment has not been put into writing, the fitness of the judges to say what judgment they gave ceases when the parties no longer stand before them (Kid. 74a; ḤM 23:1), i.e., when they are no longer associated with the case (Tosef., BM 1:12). This rule apparently caused great hardship and was later restricted, first to discretionary judgments given without pleadings and without evidence, and then to judgments given by a single judge (ḤM 23:1; Resp. *Rosh* 6:15, 56:4; *Mordekhai* Kid. 541), and was thus virtually abolished.

The judgment may not exceed the amount of the claim (*Rema* ḤM 17:12); but where the court is satisfied that the plaintiff was genuinely ignorant of the real extent of his rights, it may impose fines and other sanctions on the defendant to compel him to satisfy the plaintiff even beyond his claim (*Sma*, ḤM 17:26; *Bah* ḤM 17).

For the effect of judgments *inter partes* and *inter alios*, see *Ma'aseh.

Revision

A judgment is always subject to revision, normally by the court that made it in the first place, if new evidence has come to light disproving the facts which the judgment was based on, provided the party seeking to adduce such new evidence is not debarred from so doing (see above; Sanh. 3:8; Yad, Sanhedrin 7:6; ḤM 20, 1). Every judgment is also subject to revision for errors of law. Originally the rule appears to have been general and to have applied in all civil cases, whatever the quality of the error (Sanh. 4:1); later it was confined to erroneous judg-

ments of nonprofessional and non-expert judges (Bek. 4:4); finally, the rule was confined to errors of mishnaic (i.e., clear and undisputed) law, as distinguished from “errors of discretion” (Sanh. 6a, 33a; Ket. 84b, 100a). While “discretion” was originally understood in its wide literal sense (cf. Sanh. 29b; TJ, Sanh. 1:1, 18a), it was eventually confined to matters on which there were different views in the Talmud and the *halakhah* had not been decided; whatever view the judge followed, his judgment would not (for that reason alone) be subject to revision. It might otherwise be where the court followed one opinion in ignorance or disregard of the fact that another opinion had been accepted and put into practice “throughout the world” (Yad, Sanh. 6:2; ḤM 25:2). The revisable error could (in certain well-defined circumstances) be of great moment to the judge personally, as he might find himself saddled with the obligation to pay out of his own pocket any irrecoverable damage caused by his error (Yad, loc. cit. 6:3; ḤM 25:3).

Apart from revisable error, unwarranted assumption of judicial authority (whether it resulted in error or not) is a cause for having the judgment set aside, but it stands until set aside (Yad, loc. cit. 6:4; ḤM 25:4). The finding of unwarranted assumption of judicial authority is tantamount to a finding of a trespass, and counts in damages (*ibid.*). In many countries, the revision of judgments of errors of law was reserved to courts of appeal, i.e., mostly courts presided over by the leading scholars of the community.

Modern Law

While the procedure in Israel civil courts is mainly based on English law, the procedure in the rabbinical courts is governed by the *Takkanot ha-Diyyun* which were enacted by the chief rabbinate of Israel in 1960 (revising earlier *takkanot* of 1943). They purport to reflect talmudic and post-talmudic law, but actually deviate from it and follow modern procedural concepts in many important particulars; for example, the requirement of written statements of claim, representation by attorneys, cross-examination of parties (in addition to witnesses), reduction of judgments into writing before delivery, and discretion in the matter of costs.

PENAL

For the composition of courts competent to adjudicate in criminal cases, see Bet *din. The composition of the court and certain matters of procedure differ in capital and non-capital cases. While the following account deals with capital cases (unless otherwise indicated), practice and procedure were modeled on them as far as possible (cf. Maim., Yad, Sanh. 16:1–4).

Court Sessions

In criminal cases, the court sits only during the day and adjourns at sunset (Sanh. 4:1; Yad, Sanh. 11:1). If the proceedings have been concluded during the day, a judgment of acquittal will be announced forthwith, but a judgment of conviction and sentence may not be announced until the following day (Sanh., loc. cit.; Yad, loc. cit.), since there is a chance that the

judges may change their minds during the night (*Rashi*, Sanh. 32a). No criminal sessions may therefore be held on the eves of the Sabbath and holidays (Sanh. 4:1; Yad, Sanhedrin 11:2); and either because a trial is regarded as potentially a first step in an execution, which may not take place on a Sabbath (TJ, Sanh. 4:7, 22b), or because the trial involves writing prohibited on the Sabbath (Tos. to Bezeh 36b and Sanh. 35a), no criminal trials may be held on the Sabbath or holidays.

In the Temple precincts (see Bet *din), criminal sessions started after the morning sacrifices and ended with the late afternoon sacrifice (Sanh. 88b); otherwise the time of court sessions is the same in criminal as in civil cases. The following is a mishnaic account of the manner in which courts of 23 held criminal trials:

The court sat in the form of a half-circle, so that the judges could all see one another. The two court scribes stood before them, one at the right and one at the left, and recorded the words of the judges – one the words of those in favor of conviction, and the other the words of those in favor of acquittal. Three rows of learned disciples sat before them, each knowing his place; when the seat of a judge became vacant, his place would be filled with the first sitting in the first row (Sanh. 4:3–4 – According to Maim., Yad, Sanhedrin 1:9; but *Rashi* (to Mishnah, Sanh. 36b) states that the two scribes write the words both of those in favor and those against, so that if one scribe errs the other can correct him).

The public and the disciples would be already in court when the judges entered – the presiding judge last – and everyone present would rise and remain standing until the presiding judge gave them leave to sit down (Tosef., Sanh. 7:8).

Duplicity of Trials

Only one capital case may be tried on any one day in any one court (Sanh. 6:4; Tosef., Sanh. 7:2). An exception was made where there were several participants in one crime, provided they were all liable to the same penalty (Sanh. 46a). However, where participants in one crime were liable to execution by different methods, as, e.g., in *adultery where the male adulterer was liable to strangulation and the female adulteress, if a priest's daughter, to burning, they had to be tried separately on different days (Yad, Sanh. 14:10).

Arrest

The arrest and detention of persons awaiting trial is reported in the Bible (Lev. 24:12; Num. 15:34), and the appointment of judges presupposed the concomitant appointment of police officers (*shoterim*: Deut. 16:18). Maimonides describes *shoterim* as officers equipped with sticks and whips who would patrol streets and marketplaces, and bring any criminals they caught before the court; these officers would also be dispatched by the court to arrest any person against whom a complaint had been brought (“they act upon the judges’ orders in every matter”: Yad, Sanhedrin 1:1). In capital cases the accused would be detained pending trial (Sif. Num. 114; Yad, Sanhedrin 11:2), if he was caught *in flagranti delicto* or there was at least some *prima*

facie evidence against him (TJ, Sanh. 7:8). However, the fact that the available evidence was as yet insufficient to put a man on trial was no reason not to detain him until sufficient evidence was available (Sanh. 81b). Or, where death had not yet ensued but the victim was dangerously wounded, the assailant would be detained until the degree of his offense could be determined (Sanh. 78b; Ket. 33b). The accused would always be held in custody (Yad, Sanh. 12:3). Opinions were divided on whether an arrest could be made on the Sabbath.

Bail

The release of an accused person on bail pending trial is already mentioned in early sources (Mekh. Nezikin 6). The rule evolved that in capital cases no bail should be allowed (*ibid.*; and Resp. Ribash no. 236, quoted in *Beit Yosef*, ח"מ 388, n. 5), from which it may be inferred that in non-capital cases bail would be granted as a matter of course.

Default Proceedings

No criminal proceeding may be conducted in the absence of the accused (Sanh. 79b; Yad, Roze'ah 4:7; Sanh. 14:7).

Prosecution

There is good authority for the proposition that in cases of *homicide the *blood-avenger acted as prosecutor (Nov. Ran; Sanh. 45a). Where no blood-avenger was forthcoming, the court would appoint one for this purpose (Sanh. 45b). By analogy, it may be assumed that in cases other than homicide the victim of the offense acted as complainant and prosecutor. In offenses of a public nature, the court initiated the proceedings and dispensed with prosecutors. Such proceedings were normally prompted by witnesses who came forward and notified the court that an offense had been committed; if they could identify and name the accused and satisfy the court that a *prima facie* case could be made out against him, the court would take action (Yad, Sanh. 12:1).

Defense

In criminal matters, any person who wished to plead in favor of the accused was allowed and even encouraged to do so (Sanh. 4:1). If a disciple of the judges wished to plead for the accused, he was raised to the bench and allowed to stay there until the end of the day (Sanh. 5:4), clearly a potent encouragement. There are records in post-talmudic times of defense attorneys having been appointed by the court (e.g., Ribash Resp. no. 235).

Evidence

Unlike civil trials, criminal trials started with the interrogation of the witnesses. Before this, each witness had to be warned separately by the court in the following terms:

If you are going to tell us anything which you only believe or opine, or anything you may have heard from any other person, however trustworthy he may seem to you, or anything you know from rumors – or if you are not aware that this court is going to examine you by a probing cross-examination – you had better know that a criminal trial is not like a civil trial;

in a civil case, a false witness pays money to the man he has wronged and will then be discharged; but in a criminal case, his blood and the blood of his children will be on him until the end of the world. Man was created single in this world, to show you that whoever causes one single soul to perish from this world is regarded as if he had caused the whole world to perish; and he who keeps one single soul alive in this world is regarded as having kept the whole world alive. Are not all men created in the form of Adam, the first man, and still the form of each man is different from that of anybody else? Therefore can each and everybody say, it is for me that the world was created. And do not say, why should we bring this calamity upon ourselves? for it is written, whoever is able to testify from what he has seen or known, and does not do so, will be punished [Lev. 5:1]; nor may you say, it is more convenient for us to incur punishment for our silence, than to bring upon ourselves the blood of that criminal; for it is written, there is rejoicing when the wicked perish (Sanh. 4:5; Yad, Sanh. 12:3).

The evidence of at least two witnesses (Deut. 17:6) is required to prove not only that the accused was seen to have committed the act constituting the offense (Ket. 26b; Sanh. 30a; Git. 33b), but also that, immediately before committing it, he had been warned of its unlawfulness and of the exact penalty he would incur (Sanh. 12:2). No circumstantial evidence is ever sufficient to support a conviction (Sanh. 37b; Tosef., Sanh. 8:3; see *Evidence; Penal *law). The accused must be present during the examination of the witnesses, but opinions are divided on whether he must stand up or may be seated. The judges, are of course, seated when hearing evidence (ח"מ 28:6), while the witnesses stand (Shevu. 30a; ח"מ 28:5).

For the methods of examination of witness, see *Witness.

Deliberations

It is only if and when the evidence of all the witnesses heard is first found consistent, i.e., if it is established to the satisfaction of the court that the witnesses do not contradict themselves or each other in any material particular, that the deliberations (in the technical sense) start (Sanh. 5:4; Yad, Sanh. 12:3). If the evidence is found to be inconsistent, the accused is acquitted and discharged there and then. The rule is that the youngest member of the court has the first say in the deliberations (Sanh. 4:2; Yad, Sanh. 11:6), in case the junior members be unduly impressed and influenced by what their elders have to say (Yad, Sanh. 10:6; Rashi to Ex. 23:2 and to Sanh. 36a); but this rule yields to another that the deliberations must always start with a view propounded in favor of the accused (Sanh. 4:1; 5:4; Yad, Sanh. 11:1, 12:3). Talmudic scholars wondered how anything could be said in favor of the accused once the evidence against him had been found to be consistent, and they solved the problem by suggesting that "opening in favor of the accused" really meant asking the accused whether he could adduce any evidence in rebuttal (Sanh. 32b; TJ, Sanh. 4:1), or reassuring the accused that if he was innocent he had nothing to fear from the evidence adduced against him (*ibid.*;

Yad, Sanh. 10:7). Deliberations were thus held in the presence of the accused, and it would appear that at this stage he was given the opportunity of saying anything he wished in his defense: "If he says, I wish to plead in favor of myself, he is heard, provided there is some substance in his words" (Sanh. 5:4). According to Maimonides, he is even raised to the bench for this purpose (Yad, Sanh. 10:8). However, he is not allowed to say anything to his detriment, and as soon as he opens his mouth to admit his guilt or otherwise prejudice himself, he is silenced and reprimanded by the court (Tosef., Sanh. 9:4). Where the accused is not capable of speaking for himself, the court or a judge will do so for him (Sanh. 29a).

It appears that the credibility and weight of the evidence, even though it was found consistent (and hence admissible), was an open issue for the deliberation of the judges, as was the legal question whether the act committed by the accused constituted a punishable offense (Yad, Sanh. 10:9). Having once expressed his view in favor of an acquittal, a judge is not allowed to change his view during the deliberations (Sanh. 4:1, 5:5, 34a; Yad, Sanh. 10:2); but having expressed his opinion condemning the accused, a judge may change his mind even during the deliberations (*ibid.*; Yad, Sanh. 11:1). Judges ought not to follow the opinion of other, greater judges, especially in criminal cases, but must decide solely according to their own knowledge and personal conviction (Tosef., Sanh. 3:8; Yad, Sanh. 10:1).

If, at the end of the day, a majority for an acquittal has been reached, the accused is acquitted forthwith; if no such majority has emerged, the case is adjourned to the next day (see above), the judges conferring, in groups of two, throughout the night, abstaining from too much food and from all alcohol. The next morning, back in court, the scribes checked the judges' views with those they had expressed the day before, so that the number of those arguing in favor of an acquittal could meanwhile only have increased (Sanh. 5:5, Yad, Sanh. 12:3). If a clear majority for conviction has eventually been reached, judgment will be pronounced accordingly; but a "clear majority" presupposes some minority and accordingly, where the whole court is unanimous that the accused be convicted, proceedings are adjourned and deliberations continued until at least one judge changes his view and votes for an acquittal (Sanh. 17a; Yad, Sanh. 9:1). It is believed that this rule applied only to the Great Sanhedrin of 71 (Maim., Yad, *ibid.*, speaks of the "Sanhedrin" as distinguished from the "Small Sanhedrin" in the immediately following paragraph), while in courts of 23 and of three unanimity was as good as, or even better than, a majority.

Judgment

The sentence pronounces the accused guilty and specifies the punishment to be inflicted on him; it is not reasoned. Unlike in civil cases (see above), the accused knows which of the judges were in the majority and which in the minority, and what were the reasons which prompted each judge in his voting, since he had been present at their deliberations.

Once a capital sentence is pronounced, the accused is in law deemed to be dead (Sanh. 71b), and a person killing him would not be guilty of homicide (Yad, Mamrim 7, 9), nor would a person wounding him be guilty of any offense or liable for damages (Tosef., BK 9:15). The theory was propounded that it is this legal fiction which enables the court and the executioners to execute capital sentences without incurring liability as murderers.

On the other hand, as long as the sentence has not been carried out, the judgment is subject to revision: on the way from the court to the place of execution, a herald announces that *A* son of *B* is going to be executed for having committed the offense *C*, and witness *D* and *E* have testified against him; whoever has anything to say in his defense should come forward to say it (Sanh. 6:1). The case is returned to court for a retrial not only if any such person is forthcoming but even if the accused himself wishes to plead again in his own defense – provided there is some substance in what he says (*ibid.*). In order to find out whether or not there is some substance in what the accused wishes to say, two men learned in the law are seconded to accompany him on his way to the place of execution (Yad, Sanh. 13:1), and if they are satisfied that there is some such substance, they will have him brought back into court even two and three times (*ibid.*). If, on retrial or redeliberation, the accused is acquitted, the sentence is deemed to be annulled *ex tunc*, as if it had never been passed.

Where the accused escapes after sentence and before execution and then is caught and brought before the court which had sentenced him, his trial is not reopened, but the sentence stands (Mak. 1:10). It might be different if he were brought before a court in Erez Israel, and the court which had sentenced him had sat outside Erez Israel (Yad, Sanh. 13:8). For the purpose of establishing that sentence had duly been pronounced against him, two witnesses must testify that in their presence sentence had been passed on this particular accused and they had also heard the evidence given against him by two named witnesses (Mak. 1:10; Yad, Sanh. 13:7). Before the sentence is finally executed, the accused is asked to confess in order that he may have a share in the world to come (Sanh. 6:2). If he does not know how to make confession, he is asked to repeat the words, "may my death expiate all my sins" (*ibid.*).

For the various modes of execution, see Capital *Punishment.

[Haim Hermann Cohn]

RULES OF PROCEDURE OF THE RABBINICAL COURTS OF THE STATE OF ISRAEL

The promulgation of the Rules of Procedure for the Rabbinical Courts in Erez Yisrael marked the first attempt in the history of halakhic literature to provide a modern compilation of the rules of procedure. The Council of the Chief Rabbinate published the Rules of Procedure, based largely on the Shulḥan Arukh and responsa literature, in 1943. The Rules have been revised several times over the years. As of 2006 the last revi-

sion was made in 1993, and all references in this article are to those Rules.

The Court's Intervention in Litigation

In this article, we present the primary findings of a comprehensive study of the rabbinical court's intervention in litigation in general, and in pleadings and the examination of witnesses in particular (Y. Sinai, *Me'uravut Bet ha-Din be-Halikh ha-Diyuni be-Mishpat ha-Ivri* (Ramat-Gan, 2003)).

Sources of Jewish Law dealing with the intervention of judges in pleadings paint a complex picture, drawing upon several procedural systems that developed at different times and in different places. In this context, we find tension between the adversarial principle, "Do not play the part of an advocate" (M. Avot 1.8), and the inquisitorial principle – "Open thy mouth for the mute" (TJ Sanh. 3:6).

In general, one may distinguish between two primary procedural approaches, which developed against different legal and historical backgrounds. While these approaches were clearly enunciated by medieval scholars in Spain and Ashkenaz, they were already hinted at in talmudic literature. One approach, emphasized primarily in the classical Spanish tradition, took an adversarial view, and tended to shy away from the court providing any assistance to a litigant's pleadings, whether factual or legal, in the course of the proceedings (see, e.g., Yad, Sanh. 21:10–11). This approach sees in the live, spontaneous conflict between the parties a means for uncovering the factual truth. The proceedings are conducted primarily by the parties themselves, who present their arguments before the court. Any uncontrolled intervention in that spontaneous dispute by third parties (whether the court or lawyers) may seriously impede the process of uncovering the truth. Nevertheless, this approach does permit the court to intervene in the proceedings in exceptional circumstances. We thus find the rule that the court may raise arguments for the benefit of an heir or a buyer (Git. 58b).

The second approach, emphasized in the Ashkenazi tradition, prefers an inquisitorial view. This approach recognizes numerous situations in which the court is required to assist in raising factual and legal arguments (see, e.g., *Teshuvot u-Fesakim me'et Hakhmei Ashkenaz*, sec. 99). However, even the supporters of this system did not adopt an extreme inquisitorial approach, and limited court intervention to some degree. Similar to the supporters of the first approach, their aim was that the truth be uncovered with the assistance of the court. The Ashkenazi scholars developed and perfected a comprehensive theory to distinguish between common and uncommon arguments, so that the court was allowed to take the initiative to raise only the more common arguments that might reasonably reflect the truth.

Talmudic and post-talmudic sources reveal a clear, fundamental distinction between factual and legal arguments. In general, the Sages were in favor of judges raising legal argumentation and safeguarding the rights of defendants in criminal cases, and of litigants in civil monetary cases (in

the framework of arbitration). Raising arguments is part of a judge's role, in accordance with the duty to apply the law in the case before him. In light of Maimonides' statement at the beginning of Chapter 6 of *Hilkhot To'en ve-Nit'an*, we must distinguish between two stages of the proceedings. During the first stage, the parties raise their factual claims. The legal arguments are only addressed at the second stage, that of rendering judgment, and the court decides in accordance with the legal principles. The court's role is to draw the legal conclusions that flow from the litigants' factual pleadings. At the stage of rendering judgment, the court is required to raise legal arguments deriving from *halakhah*, even if a litigant was mistaken in this regard or failed to raise the arguments.

Under the rules of procedure of Jewish Law, witnesses are examined by the court and, in principle, litigants and their attorneys may not question the witnesses. On the subject of examining witnesses, see *Witness.

ADHERENCE TO THE RULES OF PROCEDURE. Many scholars have noted that, although the courts operate in accordance with established rules of procedure, the approach of the Sages and of judges is fundamentally informal. While the rules of procedure are intended to establish appropriate order in the normal course of the court's work, they are not sacrosanct, and breach of a rule will not result in any unnecessary loss of rights or any harm to a litigant that does not serve the interests of justice (N. Kirsch, "*Le-Mahut ha-Prozess ha-Ivri*," in: *Yavneh*: 3 (1949), 128–36; A.H. Shaki, "*Kavvei Yi'ud be-Sidrei ha-Din ha-Rabbanyyim u-ve-Gishat ha-Dayyanim le-Tti'un Formalisti: le-Or Pesikat Batei ha-Din ha-Rabbaniyyim be-Yisrael*," in: *Sefer Sanhedrai* (Tel Aviv, 1972), 248; S. Darnes, "*Hoser Formalizim be-Sidrei ha-Din be-Vatei ha-Din ha-Rabbaniyyim be-Yisrael*," in: *Dinei Yisrael*, 10–11 (1981–83), 27).

In this regard, the Israeli Supreme Court stated (CA 561/77 *Hevrat Ram Ltd. v. Bank Leumi Ltd.*, 32 (2) PD 639, 643, *per* Justice Elon):

The importance of the rules of procedure requires no emphasis, as they are the guarantor of legal stability and of the search for truth. Nevertheless, the commandment to do true justice may require that the court show leniency when one of the litigants errs in a matter of procedure, when it will not harm the opposing litigant... We may learn from the words of the Rabad of Posquières ... one of the great halakhists of the 12th century, who stated in a certain matter in which a litigant erred in one of his pleadings: "We must not decide in accordance with his pleading but pronounce true judgment... and therefore it is up to the court, if it sees that he pleaded mistakenly or foolishly... not to follow it to its conclusion but to correct it" (*Tamim De'im*, 56).

In the following we will examine other subjects in the order that they appear in first part of this entry.

COURT SESSIONS. The Talmud states: "The day is for the beginning of the trial, the night is for the conclusion of the trial" (Sanh. 34b), and that is the rule established in the Shulhan Arukh (ḤM 5.2). This is taken to mean that the parties are not to be summoned to court at night. However, if the proceed-

ings – i.e., the pleadings and taking of testimony – are concluded while it is still day, the trial may be concluded – i.e., the judgment may be read – at night. Various opinions have been expressed as to whether the judges must conclude their deliberations during the day, or whether they may continue them at night (*Pithēi Teshuvah* on Sh. Ar., ҲМ 5.7). Opinions differ as to the validity of the decision of a court that breaches this rule (*Hagahot ha-Rema, ad loc.*). Nevertheless, the litigants may give their consent to conducting proceedings at night (*Responsa of Rabbi Meir b. Baruch of Rottenburg* (Cremona, 1557) 29).

Ending the court's session at noon is dictated by the prohibition of sitting in judgment without eating, because the judges cannot devote their undivided attention to the proceedings if they are hungry (*Arukh ha-Shulḥan*, ҲМ 5.11). If the judges choose to reconvene after the noon meal, the litigants must comply (*Be'er Eliyahu al Bi'ur ha-Gra*, Sh. Ar., ҲМ 5.7). When a judge is a public appointee, his work hours are set by agreement or by the customary rules (Resp. R. Joseph ibn Migash, 127).

In the State of Israel, the rabbinical courts are in recess for one month of the year (from the ninth of Av until the tenth of Elul), during which period only emergency cases are heard.

PARTIES. There is a fundamental tendency in Jewish Law opposing representation by lawyers. The court must hear the pleadings from the litigants themselves in order to obtain an impression from their appearance and their behavior as an aid in determining who is telling the truth. Despite the fundamental tendency to reject representation by counsel, the institution nevertheless found its way into Jewish Law by virtue of practical realities that overcame the theoretical objections (see in detail, Rackover, *ha-Sheliḥut ve-ha-Harsha'ah ba-Mishpat ha-Ivri*, Chap. 8). Granting a defendant the possibility of appointing an attorney to argue on his behalf derives from a custom that was roundly criticized by several *poskim*, but that garnered the support of others (*Sema* on Sh. Ar., ҲМ 17.14). In the modern period, the said custom ultimately crystallized into a rule included in the Rules of Procedure of the Rabbinical Courts of Israel permitting litigants to appoint representatives to appear before the court on their behalf. Nevertheless, the regulations do not entirely ignore the negative view of the majority of *posekim* in regard to representation. Thus, under rule 57, the appointment of a legal representative does not exempt the appointing party from personally appearing in court. Rule 60 (1) further establishes that, in general, the litigant shall initially plead on his own behalf, and only thereafter are his representatives permitted “to explain and reason their pleadings.”

The court's authority to order a joinder of parties can be based upon the basic procedural principle of judicial economy: “it would not be proper to trouble the Court of Law so much for nothing” (BK 89b), namely, that the court should not be troubled without reason, and should be saved from unnecessary annoyance. It would therefore appear that, where

there is a question before the court that is common to several parties, the joinder of those parties in a single action is within the competence of the court, and is even desirable under the procedural rules of Jewish Law, even if the parties do not all share an interest in every element of the case (Shochetman, *Seder ha-Din*, 58).

VENUE. The basic rule is that the appropriate venue for litigation between parties residing in the same city is the court of that city (Sanh. 31b). Even if both parties are present in another city, one cannot compel the other to submit to the court of that city, but must file suit before the court of their permanent place of residence (Naḥmanides' *Torah Commentary* to Deut. 16:18). The ancient rule that a lender could demand that his case be heard before the Great Court in Jerusalem (Yad., Sanh. 6:6) was interpreted by the Shulḥan Arukh to mean that, in the case of a debt for which the plaintiff is the defendant's creditor, the rule that the case be heard in their own city applies only if it is acceptable to the plaintiff, who is at liberty to choose that the matter be brought before a higher court in another place (ҲМ 14:1). However, the plaintiff can demand that the defendant go to the Great Court only if he first brings evidence or testimony before the local court showing that there is substance to his suit. This is the law, and Rema adds in his gloss to the Shulḥan Arukh that the prevailing custom is that no litigant may demand that his case be heard by a court in another city, even if it be a greater court. This custom is based on the fear of abuse by dishonest plaintiffs who might file baseless suits against wealthy victims, in the expectation that the defendants would prefer to offer a settlement rather than travel to a distant city in order to present a defense (Resp. Maharik, no.21). Another reason given for the custom is to prevent disputes as to which court is greater (Resp. Maharshdam, ҲМ 7). If the litigants do not reside in the same city, the applicable rule is that “the plaintiff follows the defendant” (Rema, ҲМ 14:1).

Rule 7 of the Rules of Procedure of the Rabbinical Courts of Israel establishes that “the place of the defendant shall be deemed to refer to his permanent place of residence, permanent place of work, or primary place of business.” Where there is no court in the defendant's city, the plaintiff must file suit in the court closest to the defendant's place of residence (*Piskei Mordekhai le-Sanhedrin*, Chap. 3, end of §709).

Although the general rule is that the plaintiff follows the defendant, if the defendant comes to the plaintiff's place of residence, the plaintiff may require the defendant to submit to the jurisdiction of the local court, as this will not cause the defendant to incur added expense. If both litigants are present in another city, the plaintiff can require the defendant to submit to the jurisdiction of the local court in order to frustrate a suspicion of evasion by the defendant (Rema, *ibid*; *Pithēi Teshuvah*, *ibid.*, §2). Other exceptions to the rule are that a son sued by his father must appear in the court of his father's place of residence (*Rema* on Sh. Ar., YD 240:8), and that a student must appear in the court of his teacher's

residence (*Knesset ha-Gedolah le-Hoshen Mishpat* 14; *Hagahot ha-Tur*, §8).

DEFAULT PROCEDURE. Some scholars are of the opinion that the demand that a litigant be present at the proceedings is the preferred rule, but that a case may be tried in absentia (*Kezot ha-Hoshen*, חמ 13:1). On this basis, Rule 101 of the Rules of Procedure of the Rabbinical Courts of Israel establishes that if a litigant does not appear in court, “the court may decide to hear the suit, including hearing testimony and evidence, in the defendant’s absence, and render judgment or adjourn the proceedings to a later date.” Examples of various rules that granted courts in the Diaspora the authority to hear cases in the defendant’s absence may be found in Assaf, *Batei ha-Din ve-Sidreihem le-Ahar Hatimat ha-Talmud*, 36–37.

The halakhic sources do not refer to situations in which the two parties failed to appear at the trial, or in which the plaintiff did not appear, but these situations are contemplated in the Rules of Procedure of the Rabbinical Courts of Israel. Where both parties fail to appear, Rule 100 grants the court the power to adjourn to a later date, or to dismiss the case without prejudice. The court is not empowered to dismiss the case with prejudice and prevent reinstating the suit, inasmuch as such a dismissal is possible only after hearing the pleadings and the witnesses (Resp. Maharam Schick, חמ no. 1). If the plaintiff fails to appear, Rule 102 states: “If the defendant appears and the plaintiff does not appear after having been duly summoned, the court will dismiss the case at the defendant’s request, unless the court finds that, under the circumstances, the case should not be dismissed, in which case it shall adjourn the proceedings.” Here, too, the court is not authorized to dismiss with prejudice and rule in favor of the defendant.

CAUSE LIST. Some scholars are of the opinion that the laws presented in this regard were intended to address a reality that required the personal appearance of the various parties before the court in order to submit complaints. Thus, the rules established that certain persons be granted priority. However, in modern practice the court sets the dates for hearings only after the submission of written complaints, so that it would appear that there would be no affront to the dignity of scholars or women if their cases were not granted precedence (Shochetman, *Seder ha-Din*, 38).

SETTLEMENT. The preference for compromise over judicial decision is rooted in the fact that the parties agree to a compromise, whereas in the latter the winning side welcomes the judicial decision and the loser is always left dissatisfied. In addition, there is a fear that if the judge is left to decide in accordance with Torah law, he may err as to the true intent of the Torah. As Rabbi Jacob ben Asher wrote: “The judges must do all in their power to distance themselves from having to decide in accordance with Torah law, as the minds have greatly diminished” (Tur חמ 12:6). Handing down judgment in accordance with a compromise removes this fear, as the judge is not required to seek the truth under the law of the Torah.

Nevertheless, a judge is not at liberty to suggest an arbitrary compromise. Even the suggested compromise must reflect the law, and a mechanical compromise of fifty-fifty division is invalid (BB 132b and Rashi there). The *halakhah* informs us that, as long as the proceedings have not ended, the court may – and even must – suggest that the parties agree to a compromise (*Sema* on Sh. Ar., חמ, ad loc., §§6, 9).

The court’s authority to settle the issue before it in accordance with a compromise was given statutory expression in Israeli law in 1992, in Sec. 79A of the Courts Law [Consolidated Version], 5744 – 1984. The court’s obligation to suggest a compromise was emphasized by Judge Kister in a decision of the Tel Aviv District Court (MA (TA) 288/57 *Blin v. Officers of Execution Office*, 20 PM 60, 63, 79).

PLEADING. The reasons underlying the *halakhah*’s opposition to written pleadings, and its preference for oral arguments, are that requiring written pleadings presents a burden for the parties, and that hearing oral arguments from the parties themselves may aid the court in ascertaining who is telling the truth, while written pleadings are usually prepared by lawyers who are professionally proficient (Resp. Ribash no. 98).

The need for a written complaint as a general requirement is an innovation of the Rules of Procedure of the Rabbinical Courts of Israel (chapter 3). Like the accepted rules of procedure in civil courts, the Rules establish a general requirement of a written complaint, even if the defendant does not request it.

We find a broad, original approach to the principle “open thy mouth for the mute,” even where a party is represented by counsel, in an Israeli Supreme Court decision (CA 634/76 *Estate of Gerltz v. Aharon*, 33 (1) PD 253, 255–256, per Justice H. Cohn):

There are judges who are unwilling to make themselves “play the part of an advocate” but, consistent with my own approach that we not punish clients for the sins of their attorneys, and in order to do justice with the party standing before it, the court will uphold the maxim “open thy mouth for the mute,” even in regard to a lawyer who does not know how to plead.

There is no express source in *halakhah* for the right of litigants to question one another, inasmuch as the examination of witnesses is carried out primarily by the court. Nevertheless, the Rules of Procedure of the Rabbinical Courts of Israel (rule 63 (1)) provide that, after the parties present their arguments, each side may examine the other in regard to its claims. These examinations must be aimed at aiding the court in uncovering the truth.

EVIDENCE. On developments in contemporary Israeli law in regard to warning witnesses and the abolition of oaths, see *Witness.

Testimony cannot be taken in the absence of the concerned party (Sh. Ar., חמ 28:15) because, when a witness speaks in the presence of the person about whom he is testifying, he is careful not to testify about things of which he is not certain (*Sema* on Sh. Ar., חמ, *ibid.*, §48).

The court may call witnesses upon its own motion, even if they have not been summoned by the parties (Rule 93 of the Rules of the Rabbinical Courts of Israel).

On the examination of witnesses in civil law, see *Witness.

FRAUDULENT CLAIMS. Halakhic literature presents a variety of approaches, not necessarily contradictory, with regard to the manner in which a court should proceed when it believes that it is faced with a fraudulent claim. The early Palestinian view assumed that a judge must refrain from attempting to contend in the usual manner with a case that he feels will lead to an untrue result, and that he must either refuse to adjudicate or adopt the alternative means of compromise (TJ Sanh. 94.1; Y. Sinai, “*Me’uravut Bet ha-Din be-Halikh ha-Diyuni be-Mishpat ha-Ivri*,” pp. 286–93). This approach is consonant with the desire to distance the judge from fraudulent claims, as expressed in the *baraita* in Shevu’ot 30b. Some see this approach as consistent with the dominance of the concept of *yir’at ha-hora’ah* (reluctance to render decisions for fear of making a mistake in *halakhah*) in Palestine during the period of the Sages (Sinai, *ibid.*, 293–98).

A later period saw the development of the activist Babylonian approach, expressed by R. Papa, which held that, if a judge senses that he is confronted with a fraudulent claim, then he should – and, it would seem, must – continue with the legal proceedings as usual, and contend with the fraud by means of a careful examination of the witnesses that will help him uncover the truth and correctly decide the law (TB Sanh. 32b). Here, too, one scholar has demonstrated that the conceptual roots of R. Papa’s approach to fraudulent claims are grounded in the activist conduct of his predecessors (Sinai, *ibid.*, 304–7).

These approaches became more sharply distinguished in the post-Talmudic period (Yuval Sinai, “Judicial Treatment of Fraudulent Claims (*Din Merummeh*): An Examination of Legal Traditions,” in: *Jewish Law Annual* (see bibliography)). On the theoretical level, there is not necessarily any clear, fundamental dispute among medieval scholars. Most would appear to agree, that in cases of fraudulent claims, there are instances in which the judge carefully examines the witnesses, and there are other instances in which he refuses to adjudicate. However, in practice, the scholars differ as to the emphasis they give to each of the said approaches as well as to the tendency toward judicial activism or restraint.

The *geonim* and the Spanish *rishonim* developed the Babylonian activist approach, supporting an aggressive judicial approach toward fraud (Responsa Rambam, ed. Blau, 58; Responsa Rashba, vol. 2 no. 148). This may reflect the aggressive authoritarianism characteristic of these authorities, who enjoyed a broad measure of judicial autonomy enabling them to contend even with problematic cases of fraud without fear (Sinai, *ibid.*). As opposed to this, the traditional approach in medieval Ashkenaz and France tended toward judicial restraint, and saw refusal to adjudicate a fraudulent case

as a practical, legitimate course of action (see Resp. Maharam mi-Rothenburg (ed. Prague), no. 319; Resp. Mahari Bruna no. 213). This approach may be related to *yir’at ha-hora’ah* as a dominant factor in these countries, as is also expressed in the desire of the scholars of Ashkenaz and France to avoid adjudicating monetary claims. The matter is also linked to the limited judicial autonomy in Ashkenaz, and to the fact that the appointing of arbitration tribunals was common, and took the place of a permanent court. It is only natural that an arbitrator who is not a professional judge, and who has been selected to decide a particular case, will refrain from addressing fraudulent claims (Sinai, *ibid.*). Rabbenu Asher disagreed with the idea of leaving the case in dispute, and of not deciding in cases of fraud. He deviated from the traditional Ashkenazi approach, and adopted an activist position much closer to, although not identical with, the Spanish approach (Resp. Rosh, rule 107.6).

The judge’s duty to decide *din emet le-amito* (“the true law truthfully”; Shab. 10a) was interpreted by the Tosafot as follows: “‘true’ – this excludes a deceitful judgment... ‘truthfully’ – one may not distort the law” (Tosafot, BB 8b, s.v. *din emet le-amito*). On the basis of this interpretation, Justice Elon wrote in one of his decisions that “‘True’ (*emet*) – is the factual truth; ‘truthfully (*le-amito*) – is the legal truth. The judge must adjudicate in accordance with both truths, and put them into effect one upon the other” (Cr. A. 115/82 *Moadi v. State of Israel*, 38 (i) PD 197, 259). On fraudulent claims, also see *Witness.

JUDGMENT. The prevailing custom in the rabbinical courts in Israel is to publish judgments in the name of the judge who wrote the opinion (Shochetman, *Seder ha-Din*, 373). In an Israeli Supreme Court decision (HC 228/64 *Plonit v. Beit ha-Din ha-Rabbani ha-Eizori*, 18 (4) PD 141, 156), Justice Haim Cohn brought support for the importance of publishing the minority opinion from R. Judah’s statement that the minority view is preserved along with that of the majority so that it may be relied upon should the need arise (Tosefta Eduyot 1.4).

Although *halakhah* does not strictly require that a decision be delivered in writing, special *takkanot* requiring written decisions were instituted in various places (*Takkanot Medinat Mehrin* (Jerusalem, 1952) §379, p. 125; *Takkanot Nikolsberg* (Jerusalem, 1962) §126, p. 135). The Rules of Procedure of the Rabbinical Courts of Israel also establish that both the decision and the judgment must be rendered in writing (Rule 112).

The overwhelming majority of judgments issued by rabbinical courts over the generations did not state the reasoning (E. Shochetman, “The Obligation to State Reasons for Legal Decisions in Jewish Law,” in: *Shenaton ha-Mishpat ha-Ivri*, 6–7 (1979–80), 335–38). The establishment of courts of appeal by the Chief Rabbinate of Israel institutionalized the right of appeal, and thus made it necessary that courts reason their decisions. The Rules of Procedure of the Rabbinical Courts of Israel establish a general rule requiring them to record the

reasoning for their decisions (rule 114), as is the accepted practice in civil courts.

REVISION. Many legal systems recognize the doctrine of *res judicata*, according to which a matter will not be reopened once all avenues have been exhausted and a final decision has been rendered. Jewish law adopts an entirely different approach and does not recognize such a doctrine. An expression of the preference of this approach to that of English law may be found in an opinion by Justice Berenson (CA 395/60 *Amrani v. Attorney General*, 15 PD 594, 602), in which he states that “it would be preferable to make recourse to this rule [Sh. Ar., חמ 20] that is better suited to the conditions of Israel than to be loyal to the severe, rigid English rule.”

In order to challenge a decision, the petitioner must show that the new evidence was not in his possession and that he was unaware of it (Resp. Rosh, 13:20). Relying upon sources in Jewish law, Justice Kister held that new evidence cannot be introduced after the rendering of a decision if it could have been brought earlier (CA 211/65 *Attorney General v. Mazan*, 19 PD 32, 42–44).

There is a difference of opinion as to whether a party may challenge a decision on the basis of new arguments that were not raised at trial. One view is that a decision can only be challenged on the basis of new evidence (*Sho'el ve-Nish'el le-Rabbi Khalfon Moshe ha-Kohen*, Pt. 5, חמ § 8, s.v. *ve-khen yesh le-hokhi'ah*). However, the prevailing view would appear to be that a decision can be challenged on the basis of new arguments (*Sefer Me'irat Einayim* on Sh. Ar., חמ 20:1; *Arukh ha-Shulhan*, חמ 20:3).

Where there is a suspicion that the court may have erred in rendering judgment, the challenge need not originate with one of the parties. The court itself may – and even must – take the initiative to reverse the judgment (Sh. Ar., חמ 17:8).

APPEAL. Halakhic sources make no mention of appellate courts as a permanent institution, nor is there any recognition of a doctrine of *stare decisis* (= binding precedent). Nevertheless, appeals courts were established at various times and places, through communal edict (*takkanah*; see Assaf, *Batei ha-Din ve-Sidreihem le-aḥar Ḥatimat ha-Talmud* (Jerusalem, 1924) 74ff.). This is also the basis for the establishment of a permanent court of appeals in the rabbinical court system, and is one of the important innovations of the Rules of Procedure of the Rabbinical Courts of Israel. Although some rabbinical court judges reject the authority of the Supreme Rabbinical Court of Appeals to order them to act contrary to their own opinions, the position of the Supreme Rabbinical Court of Appeals is that it is empowered to reverse the decisions of the district rabbinical courts, and that the district rabbinical courts are subject to the orders of the Supreme Rabbinical Court of Appeals (Shochetman, *Seder ha-Din*, 447–450). See also *Appeal.

Criminal Procedure

DEVIATION FROM PROCEDURE. Just as, in an emergency, it

is possible to inflict punishment upon those whom the *halakhah* exempts from punishment, it is similarly possible to deviate from established procedure in an emergency. Strict adherence to the established rules of procedure may impede bringing criminals to justice and punishing them. It is therefore permissible to deviate from the rules and to impose punishment that is not grounded in the Torah. Thus, we are told that Simeon ben Shetaḥ hanged 80 women in one day (Mish. Sanh. 6:4), contrary to the rule that one may judge only one person a day. Rashi explains that this was carried out in an emergency situation, so that “the relatives not conspire to save them” (Rashi, at Sanh. 45b).

ARREST. Imprisonment is not always carried out by force of a court order. This was the case, for example, in regard to a tax debtor who is “imprisoned in jail and is not brought before the court, but the city dignitaries judge him according to their custom” (Resp. Rosh 7:11). Nevertheless, the rules of Valladolid of 1432, governing the congregations of the Kingdom of Castile, included the following rule with regard to arrests: “We establish that a judge may not order the arrest of a Jew or Jewess except by an arrest order issued in writing, signed by the judge and two witnesses. In every order – other than an arrest order for informing or for capital crimes – the judge must state the specific reasons for issuing the order” (see M. Elon, *Ha-Mishpat Ha-Ivri*, 1:647).

Israel Supreme Court Deputy President M. Elon relied upon the principles of Jewish Law in rendering important decisions on the subject of the arrest of suspects (see, e.g., MA 335/89 *State of Israel v. Lavan*, 43 (2i) PD 410; MA 71/78 *State of Israel v. Abukasis*, 32 (2) PD 240). In greater detail, see *Detention.

DEFAULT PROCEEDINGS. Nevertheless, one of the great decisors ruled with regard to an informer that, although a person cannot be tried in absentia, if “the court is of the belief that this involves a danger, then, in an emergency, the court may deviate from the law for the purpose of creating a fence around the Torah” and hear the case in the absence of the defendant (Resp. Rivash, no. 237).

PROSECUTION. The role of prosecutor was generally fulfilled by the witnesses who observed the criminal conduct (Num. 15:32–33). Where the death penalty was imposed, the witnesses executed the judgment, inasmuch as they had actually seen the commission of the offense with their own eyes (Rambam’s *Mishnah Commentary*, at Sanh. 7:3).

DEFENSE. From certain verses in the Torah (Num. 35:22–25), the Sages concluded that a court serves two functions – judging and defending the accused (M. Sanh. 1:6; Yad, Sanh. 5:3). The Sages were of the opinion that defending the accused was one of the court’s primary roles. Thus, a significant part of criminal procedure is devoted to the defense of the accused against conviction for an offense, and the court serves as the defendant’s guardian and advocate.

The principle that we “begin in favor” of the defendant was put into effect by the Israeli Supreme Court in an interesting way (HC 3412/91, *Sufian v. IDF Commander*, 47 (2) PD 843, 851) by Deputy President Menachem Elon, who wrote “that today the principle ‘begin in favor’ in criminal law includes, first and foremost, both the right of an arrested suspect to know that he has a right to meet with counsel, and the duty of the authorities to inform him of that right.”

The principle that a person who has been acquitted cannot be convicted upon appeal was expressed by the Israeli Supreme Court (Cr. A. 348/78 *State of Israel v. Mishali*, 32 (3) PD 245, 250) when Justice Menachem Elon wrote: “This far-reaching principle [of Jewish Law] does not exist in our criminal law, by which we must rule, but the concept it embodies was given some expression in the accepted principle that an appellate court must not act to the full extent of the law in the framework of an appeal by the state against the leniency of punishment.”

EVIDENCE. Testimony is not to be heard through a translator (Mish. Makkot 1:9), for fear that the judges and the translators may not adequately understand the witness’s intent. For details on the examination of witnesses in criminal law, see Witness.

JUDGMENT. Supreme Court Justice Tirkel grounded the principles of open court in the verse “and be guiltless before the Lord, and before Israel” (Num. 32:22). From this verse, the Sages learned “that a person must fulfill his obligations to his fellow beings in the manner that he fulfills his obligations before the Divine” (Yoma 38a). This rule applies, in particular, to those fulfilling judicial and public functions, in order to keep them above suspicion. Infringement of the open court principle might lead to suspicion that the judge is not objective. Nevertheless, Justice Turkel added that “even the sources of Jewish Law recognized the principle of open court to be a relative principle that may, at times, retreat before defined rights and interests,” among these security interests (HC 4841/04 *Ra’id Salah v. State of Israel*, Takdin Elyon 2004 (2), 3304, para. 6).

Nevertheless, it would appear as if the parties were not present at the critical juncture of the judges’ deliberations (in this regard, see N. Rakover’s article on criminal procedure [*Ha-Praklit* 18, p. 322], in which he cites sources indicating that the involved parties and others were not present during the judges’ deliberations, and as if the parties were not aware of who voted for conviction and who voted for acquittal (325)).

The possibility of appealing a sentence was established in Lithuania in the 17th century. The defendant was granted 24 hours to give notice of his intention to file an appeal. If notice was given, execution of the sentence was stayed for eight weeks, which would appear to have been the time estimated for completing the appeal (Assaf, *Batei ha-Din*, 83–84).

PRADO, JUAN (Daniel) DE (c. 1615–c. 1670), *Marrano physician. Born in Spain, probably at Alcalá de Henares, Prado studied at the university there and then at the University of Toledo, where he received a medical diploma in 1638. Outspoken by nature, Prado felt impelled to leave inquisitorial Spain and made his way to Picardy, in northern France. By 1655 he had moved to Holland, where he proclaimed him-

self a Jew and took the name of Daniel. A dozen contemporaneous documents reveal how upon settling in Amsterdam, Prado formed a circle of young intellectuals and led them in the development of unorthodox philosophical ideas. One of the group was Baruch *Spinoza, then 22. As early as 1656, Prado was charged with being publicly critical of the Bible, derogating the distinctiveness of Jewish people, denying the authority of rabbinic tradition, and preaching the supremacy of Natural Law. To avoid being condemned, Prado read the required statement of regret for heresy. Nevertheless, he was excommunicated in 1657. Unlike Spinoza, however, he strove to have the ban (*herem*) lifted. A full review of Prado's expulsion in 1657 resulted in a reaffirmation of the ban. Inquisition arrest warrants for the "tall, black-bearded" Prado and for Spinoza were circulated twice during 1659. The Inquisition had been an indirect factor in their excommunications, for the congregation had feared that their liberal pronouncements would offend the Church and would serve as pretexts to force the Dutch authorities into restricting the freedom of Amsterdam Jewry. After 1659 there was no apparent contact between Prado and Spinoza. Spinoza, content in the *herem*, went on to develop his pantheistic philosophy, in which Prado had no share; Prado continued to grapple with the problems of universalism versus Jewish identity, still seeking reentry into the Jewish fold.

Three letters attacking Prado were written around 1665 by Isaac *Orobio de Castro. Legalistically thorough and longest is the *Epistola Invectiva Contra Prado, un Philosopho Medico, que Dubitava, o no Creya la Verdad de la Divina Escritura, y Pretendió Encubrir su Malicia con la Affecta Confesion de Dios y Ley de Natureza* ("Epistle against Prado, philosopher/physician who doubted or disbelieved the truth of Divine Writ, maliciously hiding behind affectations of faith in God and natural law"). Another Spanish Marrano, the poet Daniel Levi de *Barrios, took Prado as his subject, condemning him in three poems composed during 1665–72. The most ironic was occasioned by Prado's death, with Barrios bidding good riddance "to that master of false dogmas."

PRAEFECTUS JUDAEORUM (Hebraeorum supremus, Obrister der Judischkait, prince des juifs, etc.), office of the leader of Jews in Hungary during the Middle Ages. It may be assumed that the position of *Praefectus Judaeorum* was established by the Hungarian king, Matthias Corvinus, at the suggestion of János Ernuszt, a treasurer of Jewish origin, at the time of the financial reforms (1467–76). The principal function of the *Praefectus* was the collection of taxes for the royal treasury. In exchange for this he enjoyed royal privileges and could effectively defend the rights of the Jews against any attack. On festive occasions, he was authorized to accompany the king with much splendor at the head of a bat-

alion. The *Praefectus* governed the Jews of the country and was exempted from wearing distinctive signs. Until its abolition in 1539, this position was held by members of the *Mendel family.

[Andreas Kubinyi]

PRAGER, DENNIS (1948–), U.S. author, radio commentator. Prager was born in Brooklyn, N.Y., and received his B.A. from Brooklyn College in 1970. He did his graduate work as a Fellow at the Russian and Middle East Institutes of the Columbia University School of International Affairs and was awarded an honorary doctorate of laws from Pepperdine University in 1996. He taught Russian and Jewish history at Brooklyn College (1972–73); and following a trip to the Soviet Union to meet with Soviet Jews, during which he brought out names of those wishing to emigrate, and brought in Jewish religious and cultural materials, he was sent out to speak on the plight of Soviet Jewry by the Student Struggle for Soviet Jewry, who named him their national spokesman. In 1976, Dr. Shlomo *Bardin appointed Prager to succeed him as director of what became known as the Brandeis-Bardin Institute in Simi Valley, California. During his tenure (1976–83), BBI programs enjoyed unprecedented success, attracting up to 1,000 people on the Sabbath and some 90 college students to attend the Brandeis Collegiate Institute. He also launched a singles group, leading to several marriages, and a group for interfaith couples to bring them closer to Judaism.

In 1982 Prager became a radio talk show host on KABC Radio in Los Angeles. For 10 years, he conducted a weekly interfaith dialogue on radio with representatives of virtually every religion in the world. Beginning in 1985, he began writing a quarterly journal, *Ultimate Issues*, which in 1995 became the bi-weekly *The Prager Perspective*. As his popularity increased, his radio show was nationally syndicated by the Salem Radio Network in 1999. The following year he discontinued the newsletter and began writing a weekly column, syndicated nationally by Creators Syndicate and appearing in newspapers throughout North America. His radio show, now broadcasting from KRLA in Los Angeles, is heard on approximately 100 radio stations in the United States as well as over the Internet.

Prager's reputation in the Jewish community was built largely on the success of his first book, *Eight Questions People Ask about Judaism* (1975), which he authored with Rabbi Joseph *Telushkin. Their self-published effort was so well received that prominent publisher Simon & Schuster picked up its revised version, with one added question. *Nine Questions*

People Ask about Judaism remains in print, has been translated into nearly a dozen languages, and is one of the most widely used introductions to Judaism in the world. Their second collaboration, *Why the Jews? The Reason for Antisemitism* (1983) was revised in 2003 to reflect more recent global developments.

Prager's first solo book, *Think a Second Time* (1996), is a collection of 44 essays on as many topics. He then wrote *Happiness Is a Serious Problem: A Human Nature Repair Manual* (1998), which became a number one bestseller on the *Los Angeles Times* bestseller list. His *The Case for Judeo-Christian Values* appeared in 2006.

Prager's writings have appeared in major national and international publications and won significant awards, including the Amy Foundation First Prize and the American Jewish Press Association's Excellence in Commentary Award for his columns in *Moment* magazine (2005). An eloquent speaker, Prager lectures to Jewish communities in North America and abroad about 50 times a year. He also often speaks to Christian groups – especially those identified with fundamentalism and evangelism – with whom he shares a common worldview.

From 1992, Prager taught the Bible verse-by-verse at the *University of Judaism. He also led a weekly Sabbath service for a small congregation he defined as "Hassidic Reform." In 1986, he was appointed by President Ronald Reagan to the U.S. Delegation to the Vienna Review Conference on the Helsinki Accords.

In 2002, Prager produced a documentary, *Israel in a Time of Terror*, telling the story of the Intifada from the standpoint of Israelis under the daily threat of terrorist attacks. He also wrote and produced three comedy videos on values: *For Goodness Sake* (directed by Hollywood director David Zucker); *For Goodness Sake II*, and *Character: What It Is and How to Get It*.

Although Prager describes himself as a "passionate centrist" and a "JFK liberal," he is a critic of contemporary liberalism (and of the Democratic Party) and has become identified with the conservative wing of the Republican Party. His outspoken support of many of the Bush administration's policies – he considered running for the U.S. Senate as a Republican with White House backing in 2004 – as well as his ties to conservative Christian ideologues have caused him to become a more controversial figure in the Jewish community. He was the first to break with the Christian right in regard to Mel Gibson's *The Passion of the Christ*, indicating that he wished the film was never made. His break may have given some cover for those Jews on the right who oppose the film. Moreover, unlike most of the Jewish mainstream, he defends references to God, the Ten Commandments, and the Christian cross in public facilities such as schools, parks, and courthouses and has criticized the stance of the *Anti-Defamation League on the issue of church (religion) and state.

[Bezalel Gordon (2nd ed.)]

PRAGER, RICHARD (1883–1945), German astronomer. Prager was born in Hanover. In 1908 he joined the Berlin Academy of Sciences; and in 1909 was appointed head of a department in the National Observatory in Santiago, Chile. From 1913 onward he worked as scientific collaborator, and from 1924 as observer at the Berlin University Observatory at Babelsberg. He made an important contribution to photoelectric stellar photometry, and also extended, by several volumes, the large enterprise of a complete history and bibliography of the light variations of variable stars. He was imprisoned in Potsdam by the Nazis in 1938, an experience from which he never recovered. His friends in Britain and the United States were able to free him and brought him to England and America, where he applied his talents to pure astronomy and war work for the U.S. Navy.

PRAGUE (Czech **Praha**), capital of the *Czech Republic; it has the oldest Jewish community in *Bohemia and one of the oldest communities in Europe, for some time the largest and most revered. Jews may have arrived in Prague in late Roman times, but the first document mentioning them is a report by *Ibrahim ibn Ya'qub from about 970. This may be interpreted as showing that Jews had either settled in Prague or carried on business there without necessarily settling permanently. The first definite evidence of the existence of a Jewish community in Prague dates to 1091. From an analysis of medieval commerce in Prague, it is reasonable to assume that its beginnings date from about the middle of the tenth century. Jews arrived in Prague from both the East and West around the same time. It is probably for this reason that two Jewish districts came into being there right at the beginning, one in the suburb of the Prague castle (*Suburbium Pragense*) and the other close to the second castle, Wissegrad (*Vicus Wissegradensis*).

The relatively favorable conditions in which the Jews at first lived in Prague were disrupted at the time of the First Crusade in 1096. The Crusaders murdered many of the Jews of Prague, looted Jewish property, and forced many to accept baptism. During the siege of the Prague castle in 1142, the oldest synagogue in Prague and the Jewish quarter below the castle were burned down and the Jews moved to the right bank of the river Moldau (Vltava), which was to become the future Jewish quarter, and founded the Altschul ("Old Synagogue") there.

The importance of Jewish culture in Prague is evidenced by the works of the halakhists there in the 11th to 13th centuries. The most celebrated was *Isaac b. Moses of Vienna (d. c. 1250), author of *Or Zarua*, a native of Bohemia who spent part of his life in Prague. Since the Czech language was spoken by the Jews of Prague in the early Middle Ages, the halakhic writings of that period also contain annotations in Czech. From the 13th to 16th centuries, the Jews of Prague increasingly spoke Ger-

The Jewish quarter in Prague.

man. At the time of persecutions, which began at the end of the 11th century, the Jews of Prague, together with all the other Jews in Europe, lost their status as free people. From the 13th century on, the Jews of Bohemia were considered servants of the Royal Chamber (**servi camerae regis*). Their life in Prague was subject to the most humiliating conditions (the wearing of special dress, segregation in the ghetto, etc.). The only occupation that Jews were allowed to adopt was moneylending, since this was forbidden to Christians and considered dishonest. Socially the Jews were in an inferior position, but economically many of them were relatively well off. Against payment of high taxes they were protected by the king by means of special privileges (e.g., the privilege issued by *Přemysl Otakar II in 1254).

Protection by the kings made it possible for larger numbers of Jews to settle there, particularly from Germany. In the 13th century a new Jewish settlement was founded in Prague, in the vicinity of the Altneuschul (the “Old-New Synagogue”), construction of which was completed in 1270. The synagogue, which still exists, is the oldest remaining in Europe. By the 13th century the Jewish community of Prague owned a cemetery, which was then situated outside the city walls (on the present Vladislav street), and also served other Jewish communi-

ties in Bohemia. It was sold, under pressure, to the citizens of Prague as a building plot in the 15th century.

The community suffered from persecutions accompanied by bloodshed in the 13th and 14th centuries, particularly in 1298 and 1338. Charles IV (1346–78) protected the Jews, but after his death the worst attack occurred in 1389, when nearly all the Jews of Prague fell victims. The rabbi of Prague and noted kabbalist Avigdor *Kara, who witnessed and survived the outbreak, described it in a *selihah*: *Et Kol ha-Tela'ah*. It was also described in a Christian work *Passio Judaeorum Pragensium secundum Joannem rusticum quadratum*. Under *Wenceslaus IV the Jews of Prague suffered heavy material losses following an order by the king in 1411 canceling all debts owed to Jews.

At the beginning of the 15th century the Jews of Prague found themselves at the center of the Hussite wars (1419–36; see *Hussites). An analysis of Hussite biblical interpretation shows possible Jewish influence. The attitude of German Jews toward the Hussites reveals a certain sympathy on the part of the Jewish communities for this movement (as expressed, e.g., by Jacob b. Moses *Moellin, the “Maharil” of Cologne). The attitude of the Hussites to the Jews was not entirely friendly. Some Hussite ideologists (e.g., Jacobellus of Stríbro (Mies) in the treatise *De usura*) demanded that Jewish moneylending be prohibited. However, no such prohibition was ever issued in Prague during the time of the Hussites. The Jews of Prague also suffered from mob violence (1422) in this period. The unstable conditions in Prague compelled many Jews to emigrate. Nevertheless, the Jewish community continued to exist there throughout the Hussite period, and this in itself may be considered proof of the relatively tolerant attitude of the Hussites toward the Jews.

The position of the Jews in Prague in the second half of the 15th century remained insecure. There were also attacks in that period (as in 1448 and 1483). Following the legalization, at the end of the 15th century, of moneylending by non-Jews in Prague, the Jews of Prague lost the economic significance which they had held in the medieval city and had to look for other occupations in commerce and crafts. Thus the Jews began to compete economically with the citizens, at a time when the traditional crafts were in a state of crisis.

The tension between the Jews and the citizens brought about a considerable change in the position of the Jews in Prague. From the beginning of the 16th century the citizens repeatedly attempted to obtain the expulsion of the Jews from the city. Their demands to this effect, in 1501, 1507, 1517, etc., were unsuccessful, however. Despite the growing tension between the Jews and the citizens of Prague, the position of the Jews began to improve at the beginning of the 16th century, mainly owing to the assistance of the king and the nobility. The Jews found greater opportunities in trading commodities and monetary transactions with the nobility. As a consequence, their economic position improved. The number of Jews in Prague increased from the beginning of the 16th century. In 1522 there were about 600 Jews in Prague, but by

1541 they numbered about 1,200. At the same time the Jewish quarters were extended. At the end of the 15th century the Jews of Prague founded new communities in the New Town and on the *Kleinseite*. At the beginning of the 16th century they left these districts and concentrated on extending the Jewish quarter in the Old Town. At the turn of the 15th and early in the 16th centuries they rebuilt the devastated Altschul and built the Pinkas Synagogue (the construction of which was completed in 1535).

Under pressure of the citizens, King *Ferdinand I was compelled in 1541 to approve the expulsion of the Jews. The elegy *Anna Elohei Avraham*, composed by *Abraham b. Avigdor, is related to that expulsion. The Jews had to leave Prague by 1543 but were allowed to return in 1545. Following the defeat of the first anti-Hapsburg rebellion in Bohemia in 1547, in which the towns played an important part, the latter lost a great deal of their political importance in the country and were no longer able to threaten the Jews of Prague seriously. However, in 1557 Ferdinand I once again, this time upon his own initiative, ordered the expulsion of the Jews from Prague. They had to leave the city by 1559. Only after the retirement of Ferdinand I from the government of Bohemia were they allowed to return in 1562.

The progress of the Jewish community of Prague had been noticeable also in the cultural sphere even before their expulsion when the Gersonides (successors of Gershom Kohen) founded a Hebrew printing establishment before 1512 (see Hebrew printing in Prague, below). During the reign of Rudolf II (1576–1611), who transferred his court to Prague, and of his successor Matthias (1611–19), the position of the Jews was particularly favorable. L. *Zunz called that period the golden age of Prague Jewry. Some Jews attained fabulous wealth and became the patrons of the Jewish community, notable among them Marcus Mordecai *Meisel (1528–1601), the Gersonide Mordecai Zemaḥ Kohen (d. 1592), and Jacob *Bassevi von Treuenberg (d. 1634).

The favorable position of the Jewish community of Prague during the reign of Rudolf II is reflected also in the flourishing Jewish culture. Among illustrious rabbis who taught in Prague at that time were *Judah Loew b. Bezalel (the "Maharal"); *Ephraim Solomon b. Aaron of Luntschitz; Isaiah b. Abraham ha-Levi *Horowitz, who taught in Prague from 1614 to 1621; and Yom Tov Lipmann *Heller, who became chief rabbi in 1627 but was forced to leave in 1631. The chronicler and astronomer David *Gans also lived there in this period. At the beginning of the 17th century about 6,000 Jews were living in Prague. To extend the Jewish quarter, the community acquired in 1627 the so-called Lichtenstein houses, thus almost doubling the area.

In 1648 the Jews of Prague distinguished themselves in the defense of the city against the invading Swedes. In recognition of their acts of heroism the emperor presented them with a special flag, which is still preserved in the Altneuschul. Its design, with a Swedish cap in the center of the Star of David, became the official emblem of the Prague Jewish community.

After the Thirty Years' War, government policy was influenced by the Church Counter-Reformation, and measures were taken to separate the Jews from the Christian population, to reduce the number of Jews and segregate them in ghettos, to limit their means of earning a livelihood, and to extort larger contributions and higher taxes from them. The ultimate aim of this "antisemitism of the authorities" was to reduce the importance of the Jews in Prague. A number of resolutions and decrees were promulgated; among them, the resolution of the provincial diet of Bohemia passed in 1650, and the *Familiants Law of 1727 were particularly oppressive. According to the latter, only the eldest son of every family was allowed to marry and raise a family, the others having to remain single or leave Bohemia.

In 1680, more than 3,000 Jews in Prague died of the plague. Shortly afterward, in 1689, the Jewish quarter burned down, and more than 300 Jewish houses and 11 synagogues were destroyed. The authorities initiated and partially implemented a project to transfer all the surviving Jews to the village of Lieben (Libén) north of Prague, later a suburb of the capital. The clergy fanned anti-Jewish feelings. Great excitement was aroused in 1694 by the murder trial of the father of Simon Abeles, a 12-year-old boy who, it was alleged, had desired to be baptized and had been killed by his father. Simon was buried in the Tyn (Thein) church, the greatest and most celebrated cathedral of the Old Town of Prague. Concurrent with the religious incitement against the Jews, an economic struggle was waged against them.

The anti-Jewish official policy reached its climax after the accession to the throne of *Maria Theresa (1740–80), who in 1744 issued an order expelling the Jews from Bohemia and Moravia. This was actually carried out against the Jews of Prague, who were banished (1745–48) but were subsequently allowed to return as a result of influential intervention on their behalf and after they promised to pay high taxes. In 1754 a great part of the Jewish quarter burned down. Despite all these persecutions, Jewish culture continued to flourish in Prague. In the Baroque period, noted rabbis were Simon Spira; Elias Spira; David *Oppenheim; and Ezekiel *Landau, chief rabbi and *rosh yeshivah* (1755–93).

The position of the Jews greatly improved under *Joseph II (1780–90), who issued the **Toleranzpatent* of 1782 and other decrees connected with it. The new policy in regard to the Jews aimed at gradual abolition of the limitations imposed upon them so that they could become more useful to the state in a modernized economic system. At the same time, the new regulations were part of the systematic policy of Germanization pursued by Joseph II. Jews were compelled to adopt family names and to establish schools for secular studies; they became subject to military service and were required to cease using Hebrew and Yiddish in business transactions. Wealthy and enterprising Jews made good use of the advantages of Joseph's reforms. Jews who established manufacturing enterprises were allowed to settle outside the Jewish quarter. Among the first Jewish industrialists of Prague, who were en-

gaged particularly in the textile industry, were the Porges (later Porges of Portheim), Dormitze, and Epstein families.

Subsequently the limitations imposed upon Jews were gradually removed. In 1841 the prohibition on Jews owning land was rescinded. In 1846 the Jewish tax was abolished. In 1848 Jews were granted equal rights, and by 1867 the process of legal *emancipation had been completed. In 1852 the ghetto of Prague was abolished and united with four other "cities" as the fifth district of Prague, called Josefov (Ger., Josefstadt). Because of the unhygienic conditions in the former Jewish quarter, the Prague municipality decided in 1896 to pull down the old quarter, with the exception of important historical sites. Thus the Altneuschul, the Pinkas and Klaus, Meisel and Hoch synagogues, the famous Radnice, or Rathaus (Jewish town hall), erected by Mordecai Meisel, the larger part of the old cemetery, and some other places of historical and artistic interest remained intact. Many Jews moved out of the old quarter and dispersed throughout the city. Whereas in 1870 more than half of Prague Jewry lived in the old quarter, in 1900 less than one-quarter remained.

In 1848 the community of Prague, numbering over 10,000, was still one of the largest Jewish communities in Europe (Vienna then numbered only 4,000 Jews). In the following period of the emancipation and the post-emancipation era, the Prague community increased considerably in numbers but did not keep pace with the rapidly expanding new Jewish metropolitan centers in Western, Central, and Eastern Europe. While an increasing proportion of Bohemian Jewry concentrated in Prague, the importance and size of Bohemian Jewry within world Jewry began to dwindle. In the period 1880 to 1900, Jewish natural increase reached its peak in the world, whereas the number of Jews in Bohemia reached its maximum in 1880 and subsequently decreased. The table "Number of Jews in the Jewish Community in Prague" shows the numerical development of the Jewish population of Prague (including the suburbs incorporated in the city, some only after World War I).

During the revolutionary period of 1848 there were violent anti-Jewish outbreaks in Prague. In consequence, the emigration of Bohemian Jews to America and Western Europe that had begun in the 1840s increased and gained momentum.

After emancipation had been achieved in 1867, emigration from Prague abroad ceased as a mass phenomenon;

Number of Jews in the Jewish Community in Prague

Year	No. of Jews	% of Jewish population of Bohemia	% of total population of Prague
1880	20,508	21.7	6.52
1890	23,473	24.8	5.91
1900	27,289	29.4	5.31
1910	29,107	33.9	4.72
1921	31,751	39.8	4.69
1930	35,463	46.4	4.17

movement to Vienna, Germany, and Western Europe continued, but in Prague the loss had been offset by the influx of Jews from the smaller provincial communities. Jews contributed to the economic progress of the city. They were now represented in industry, especially the textile, clothing, leather, shoe, and food industries, in wholesale and retail trade, and in increasing numbers in the professions and as white-collar employees. Some Jewish bankers, industrialists, and merchants achieved considerable wealth. The majority of Jews in Prague belonged to the middle class, but there also remained a substantial number of poor Jews.

Emancipation brought in its wake a quiet process of secularization and assimilation. In the first decades of the 19th century Prague Jewry, which then still led its traditionalist Orthodox way of life, had been disturbed by the activities of the followers of Jacob *Frank. The situation changed in the second half of the century. The chief rabbinate was still occupied by outstanding scholars, such as Solomon Judah *Rapaport (Shir; officiated from 1840 to his death in 1867), the leader of the Haskalah movement; Markus *Hirsch (officiated 1880–89); Nathan *Ehrenfeld (1890–1912); and Heinrich (Ḥayyim) *Brody (1912–30), but the mainstream of Jewish life was no longer dominated by the rabbinate. Many synagogues introduced modernized services, a shortened liturgy, the organ, and a mixed choir, but did not necessarily embrace the principles of the *Reform movement.

Jews availed themselves eagerly of the opportunities to give their children a secular higher education. The table "Number of Jews of Prague among the University Students" shows the participation of Jewish university students at Prague (the famous Charles University, founded in 1348, was split in 1882 into a German and a Czech university).

Emancipation was accompanied by a strong tendency to adopt the German language, and by assimilation to German

Percent of Jews of Prague who Declared their Nationality

1925	29.8	9.70

culture and national consciousness. Jews formed a considerable part of the German minority in Prague, and the majority adhered to liberal movements. David *Kuh founded the German Liberal Party of Bohemia and represented it in the Bohemian Diet (1862–73). Despite strong Germanizing factors, many Jews adhered to the Czech language, and in the last two decades of the 19th century a Czech assimilationist movement (see Čechů-židů, Svaz) developed which gained support from the continuing influx of Jews from the rural areas. Through the influence of German nationalists from the Sudeten districts antisemitism developed within the German population and opposed Jewish assimilation. At the end of the 19th century Zionism struck roots among the Jews of Bohemia, especially in Prague. The table “Number of Jews of Prague who Declared their Nationality other than Jewish,” showing the national affiliation of the Jews of Prague, indicates the extent of assimilation there (Jews were entitled to declare their nationality as Jewish from 1920).

Growing secularization and assimilation led to an increase of *mixed marriages and abandonment of Judaism. Whereas under Austrian rule cases of baptism were not very frequent, at the time of the Czechoslovak Republic, established in 1918, many more people registered their dissociation of affiliation to the Jewish faith without adopting another. The proportion of mixed marriages in Bohemia was one of the highest in Europe, amounting to 24.3% in 1927 and 30.73% in 1933 of the marriages of all Jewish males and 22.1% and 25.25% respectively of Jewish females. The proportion in some small communities may have been higher than in Prague, but the difference could not change the overall picture substantially, since almost half of Bohemian Jewry resided in Prague. The consequences of this development are clearly demonstrated in the census of 1939, conducted under the German occupation. Of those classified as Jews in Prague according to the Nazi racial laws, 12.1% did not profess the Jewish faith.

After the establishment of the Czechoslovak Republic, when the suburbs were incorporated in the municipality of Prague, the Jewish communities did not similarly affiliate. The paradoxical situation therefore developed that there were seven Jewish communities in Prague, one covering the inner city (districts I–VII) with approximately one-half of the Jewish population of Prague, and the other six in the various suburbs. These seven communities were federated in the Union of Jewish Religious Communities of Greater Prague, cooperated on many issues, and also established joint institutions; among these the most important was the Institute for Social Welfare, established in 1935. There were many Jewish associations, organizations, and institutions in Prague. Among associations of a religious character the most important was the *hevra kaddisha* existing from the early 16th century. The *Afike Jehuda Society for the Advancement of Jewish Studies was founded in 1869. There were also the Jewish Museum and the Jewish Historical Society of Czechoslovakia. A five-grade elementary school was established with Czech as language of

instruction. The many philanthropic institutions and associations included the Jewish Care for the Sick, the Center for Social Welfare, the Aid Committee for Refugees, the Aid Committee for Jews from Carpatho-Russia, orphanages, hostels for apprentices, old-age homes, a home for abandoned children, free-meal associations, associations for children’s vacation centers, and funds to aid students. Zionist organizations were well represented. There were three *B’nai B’rith lodges, several other fraternities, women’s organizations, youth movements, student clubs, sports organizations, and a community center. Four Jewish weeklies were published in Prague (three Zionist; one Czecho-assimilationist), and several monthlies and quarterlies. Most Jewish organizations in Czechoslovakia had their national headquarters in Prague.

Jews first became politically active, and some of them prominent, within the German orbit. David Kuh and the president of the Jewish community, Arnold Rosenbacher, were among the leaders of the German Liberal Party in the 19th century. Bruno *Kafka and Ludwig *Spiegel represented its successor in the Czechoslovak Republic – the German Democratic Party – in the chamber of deputies and the senate respectively. Many Jews also joined the German Social Democratic Party and some rose to leadership; Emil Strauss represented that party in the 1930s on the Prague municipal council and in the Bohemian Diet. From the end of the 19th century an increasing number of Jews joined Czech parties, especially T.G. *Masaryk’s Realists and the Social Democratic Party. In the latter party Alfred Meissner, Lev Winter, and Robert Klein rose to prominence, the first two as ministers of justice and social welfare respectively. Klein, leader of the white-collar employees, participated in the founding of the World Jewish Congress; he was tortured to death in a concentration camp. Meissner (d. 1952) was a member of the last Council of Elders in *Theresienstadt, and survived the Holocaust.

The Zionists, though a minority, soon became the most active element among the Jews of Prague. Before World War I the students’ organization *Bar Kochba, under the leadership of Samuel Hugo *Bergman, became one of the centers of cultural Zionism. At the same time Zionism also spurred Jewish political activity. The Prague Zionist Arthur *Mahler was elected to the Austrian Parliament in 1907, though as representative of an electoral district in Galicia. Under the leadership of Ludvik *Singer the Jewish National Council was formed in 1918. Singer was elected in 1929 to the Czechoslovak Parliament, and was succeeded after his death in 1931 by Angelo *Goldstein. Singer, Goldstein, František Friedmann, and Jacob Reiss represented the Zionists on the Prague municipal council also. Some important Zionist conferences took place in Prague, among them the founding conference of *Hitaḥadut in 1920, and the 18th Zionist Congress in 1933.

Jews were prominent in the cultural life of Prague. Their contribution to German literature was most significant. Of the older generation Salomon *Kohn dealt mainly with Bohemian Jewish topics; Friedrich *Adler, Auguste Hauschner, and Hugo *Salus were among the most prominent authors; Hein-

rich Teweles was important as an author, editor, and director of the theater. The group of Prague German-Jewish authors which emerged in the 1880s, known as the “Prague circle” (*Der Prager Kreis*), achieved international recognition and included Franz *Kafka, Max *Brod, Franz *Werfel, Oskar *Baum, Ludwig Winder, Leo *Perutz, Egon Erwin *Kisch, Otto Klepetar, and Willy *Haas. Among Jews who contributed to Czech literature a pioneer was the poet Siegfried *Kapper; he was later considered the herald of Czech-Jewish assimilation. To this group also belonged at a later time Eduard Lederer *(Leda), Vojtěch *Rakous, celebrated for his novels about Jewish life in the Czech countryside, and Jindřich *Kohn, the philosopher and ideologist of assimilation. Other important authors were Otakar *Fischer, Richard *Weiner, František *Langer, his brother Mordecai Jiří *Langer, Jiří *Weil, František *Gottlieb, and Egon *Hostovský. Important scientists teaching at Prague universities included Arnold Piek, Max Saenger, and Edmund Weil (medicine), Samuel *Steinherz (history), Ludwig *Spiegel (constitutional law), Moritz *Winternitz (Sanskrit), Otakar Fischer (German literature), Oskar Engländer (economics), and Guido *Adler (musicology). Albert *Einstein taught in Prague in 1911–12, and Hans *Kelsen, a native of Prague, taught there in 1936–38. The composer Jaromir *Weinberger was born in Prague and lived there until his emigration in 1937; Gustav *Mahler, a native of Bohemia, spent several years in Prague as a conductor. Among many other noted Jewish conductors and musicians from Prague were Walter Suesskind, Frank *Pellegrini, George Singer, and Karel Ančerl. The German theater in Prague knew its most glorious period under the directorships of Angelo Neumann, Heinrich Teweles, and Leopold Kramer. Ernst *Deutsch and Franz Lederer were among the most celebrated actors on the German stage, and Hugo Haas and Jiří Voskovec on the Czech stage. Emil *Orlik and Hugo Steiner-Prag were outstanding artists.

Jewish topics, and particularly the history and legends of Prague Jewry, were a frequent theme in the work of non-Jewish authors and artists, more so in the Czech cultural sphere than in the German. Retrospectively, the Jewish ghetto has been considered part and parcel of Prague’s history. The statue of Judah Loew b. Bezalel at the entrance to the new City Hall, and a statue of Moses near the Altneuschul, both works of Czech sculptors commissioned by the Prague municipality, are monuments to this attitude. The Jews of Prague responded with gratitude and pride in their history; but latterly only a minority was still capable of living a meaningful Jewish life, much less of forging a creative Jewish future.

[Jan Herman / Chaim Yahil]

Holocaust Period

From 1935, two years after Hitler’s seizure of power in Germany, a constant influx of refugees arrived in Prague from Germany, followed in 1938 by refugees from Austria and the German-speaking occupied parts of Czechoslovakia. As a result the number of Jews in Prague on March 15, 1939, the day of the Nazi occupation, amounted to about 56,000. On July

22, 1939, *Reichsprotektor* Constantin von Neurath ordered the establishment of a Zentralstelle fuer juedische Auswanderung in Boehmen und Maehren (“Central Office for Jewish Emigration in Bohemia and Moravia”). Its director in fact was Adolf *Eichmann. Initially the office dealt only with Prague’s Jews but as of Feb. 16, 1940, it affected all the Jews in the protectorate.

At the outbreak of the war (Sept. 1, 1939), prominent Prague Jews were arrested and deported as hostages to *Buchenwald concentration camp. Various anti-Jewish measures, e.g., deprivation of property rights, prohibition against religious, cultural, or any other form of public activity, expulsion from the professions and from schools, a ban on the use of public transportation and the telephone, affected Prague Jews much more than those still living in the provinces. Jewish organizations provided social welfare and clandestinely continued the education of the youth and the training in languages and new vocations – in preparation for emigration. The *Palestine Office in Prague, directed by Jacob *Edelstein, enabled about 19,000 Jews to emigrate legally or otherwise until the end of 1939. In March 1940, the Prague Zentralstelle extended the area of its jurisdiction to include all of Bohemia and Moravia. In an attempt to avert the deportation of the Jews to “the east,” Jewish leaders, headed by Jacob Edelstein, proposed to the Zentralstelle the establishment of a self-administered concentrated Jewish communal body; the Nazis eventually exploited this proposal in the establishment of the ghetto at *Theresienstadt (Terezin). The Prague Jewish community was forced to provide the Nazis with lists of candidates for deportation and to ensure that they showed up at the assembly point and boarded deportation trains. In the period from Oct. 6, 1941, to March 16, 1945, 46,067 Jews were deported from Prague to the east or to Theresienstadt. Two leading officials of the Jewish community, H. Bonn and Emil Kafka (a former president of the community), were dispatched to *Mauthausen concentration camp and put to death after trying to slow down the pace of the deportations. The Nazis set up a Treuhandstelle (“Trustee Office”) over evacuated Jewish apartments, furnishings, and possessions. This office sold these goods and forwarded the proceeds to the German *Winterhilfe* (“Winter Aid”). The Treuhandstelle ran as many as 54 warehouses, including 11 synagogues (as a result, none of the synagogues was destroyed). The Zentralstelle brought Jewish religious articles from 153 Jewish communities to Prague on a proposal by Jewish scholars. This collection, including 5,400 religious objects, 24,500 prayer books, and 6,070 items of historical value, the Nazis intended to utilize for a “Central Museum of the Defunct Jewish Race.” Jewish historians engaged in the creation of the museum were deported to extermination camps just before the end of the war. Thus the Jewish Museum had acquired at the end of the war one of the richest collections of Judaica in the world. The Pinkas Synagogue, which is included in the museum complex, contains inscriptions of the names of 77,297 Jewish victims of the Nazi extermination campaign in Bohemia and Moravia.

In April 1945 the Prague representative of the International Red Cross (IRC), Paul Dunant, negotiated with *Reichsprotektor* Karl Hermann Frank for the transfer of the Theresienstadt ghetto to IRC auspices. When the Czechoslovak government-in-exile in London returned to Prague, a Jewish member of the State Council, Arnošt Frischer, also came back; under his leadership, the Prague Jewish community was reconstituted and a council of Jewish communities in Czechoslovakia established. According to the monthly *Věstník*, the official Jewish community publication, Prague had a Jewish population of 10,338 in 1946, of whom 1,396 Jews had not been deported (mostly of mixed Jewish-Christian parentage); 227 Jews had gone underground; 4,980 returned from prisons, concentration camps, or Theresienstadt; 883 returned from Czechoslovak army units abroad; 613 were Czechoslovak Jewish émigrés who returned; and 2,233 were Jews from Ruthenia (Carpatho-Ukraine), which had been ceded to the U.S.S.R., who decided to move to Czechoslovakia.

Contemporary Period

In the three years following the end of the war, the Jewish population of Prague rose to 11,000, after the return of Prague Jews and the settlement of other survivors of the Holocaust. Thus a basis for Jewish life again existed in the city, and Chief Rabbi Gustav Sicher, who had returned from Palestine, sought to establish firm foundations for the further development of Jewish activities. The Communist takeover of 1948, however, put an end to these endeavors and marked the beginning of a period of stagnation. By 1950 about half of the Jewish population had gone to Israel or immigrated to other countries. The *Slaňský Trials* and the officially promoted antisemitism had a destructive effect upon Jewish life. Nazi racism of the previous era was replaced by political and social discrimination. Most of the Jews of Prague were branded as “class enemies of the working people” and suffered from various forms of persecution, including imprisonment, exile, forced labor, and, in some cases, execution. During this period (1951–64) there was also no possibility of Jewish emigration from the country. The assets belonging to the Jewish community – estimated at 100 million Czech crowns – had to be relinquished to the state, the charitable organizations were disbanded, and the budget of the community, provided by the state, was drastically reduced. The general anti-religious policy of the regime resulted in the cessation, for all practical purposes, of such Jewish religious activities as bar mitzvah religious instruction, and wedding ceremonies. Two Prague rabbis – E. Davidovi and E. Farkas – left the country, and in 1964 the office of the chief rabbi also became vacant; only two cantors and two ritual slaughterers were left. Services were held in only two of Prague’s nine synagogues, while the other seven were used as exhibition halls and warehouses for the State Jewish Museum. The Hebrew inscription on the wall of the Talmud Torah Synagogue was removed by the museum director. The museum’s collection of Jewish art and religious articles were used by the Czechoslovak Travel Bureau as a tourist attrac-

tion. Officials of the Jewish communal organizations achieved their positions by manipulated elections.

The social, cultural and, above all, political activity of Jewish communal officials was strictly supervised, and the officials themselves were agents of the authorities – in charge of supervising the members of the congregation, the people who attended prayers and festivities, and clients of the kosher restaurant. The officials participated in propaganda projects such as the World Peace Movement. They abstained, however, as much as they could from attacking the State of Israel and Zionism. The *Rada zidovských náboženských obcí* (Council of Jewish Religious Congregations) cooperated with the central federation of Jewish religious congregations in Slovakia, but the cooperation did not always go smoothly. While Bratislava complained that Prague was monopolizing the representation of Czechoslovak Jewry, Prague charged that Bratislava was getting a disproportionate amount of assistance from abroad. The bulletin *Věstník* (“The Informer”) represented both Czech and Slovak Jewry, both sides supplied material for the publication, and both covered the expenses.

The liberalization of the regime during 1965–68 held out new hope for a renewal of Jewish life in Prague. At the end of March 1967 the president of the *World Jewish Congress, Nahum *Goldmann, was able to visit Prague and give a lecture in the Jewish Town Hall. Among the Jewish youth, many tended to identify with Judaism. In August 1968, however, the Soviet invasion of Czechoslovakia put an end to this trend. The festivities that were to mark the millennium of Jewish life in Prague were canceled four times. A new wave of emigration began, and the Jewish population of Prague was further reduced to about 2,000.

The period of “normalization” after the invasion of the Warsaw Pact forces in August 1968 heralded renewed discrimination and oppression of the Jewish minority. The liberals who led the Prague Spring of 1967 granted the Jewish community freedom. Jewish institutions were free to act as they pleased. These liberals approved the Israeli and Jewish policies of President Novotny and his people. After the occupation on August 21, 1968, Jewish policies and Jewish institutions once again became targets of suspicion and attack. President Husak and the conservatives who surrounded him earmarked the Jews for special treatment. Prague’s Jewry and foreign Jewish institutions were under surveillance. After the wave of hasty emigration in 1968–70, the authorities would not permit Jews to leave, particularly to the State of Israel. The close governmental ties with Arab countries had a strong impact on Czechoslovak foreign and domestic policies.

Czech dissent was by and large inclined to understand local Jewry and objected to governmental policies. The anti-Zionist campaign, which increased after 1970 and sometimes turned into overt antisemitism, affected the life of Prague’s Jewish community. The conditions improved somewhat when Mikhail Gorbachev assumed the reins of power in Moscow. When the student demonstrations occurred in Prague in the fall of 1989 and the police displayed unusual brutality, numer-

ous Prague organizations protested and the Council published a special communiqué. During the Samet Revolution, Prague Jewry identified with the protesters. After the change of the regime, the council was reorganized, personnel changes took place, and a young rabbi took over the vacant seat of the chief rabbi. Rabbi Karol Sidon, who had studied in Heidelberg and in Jerusalem and was trained there for the rabbinate, was installed in the position. He had cooperated with the dissent in the past and proved to be a prolific and respected writer.

The authorities handed back to the Prague congregation its jurisdiction over the Altneuschul synagogue and the adjacent ancient cemetery, as well as other synagogues and properties. These became a source of considerable income from visitors and tourists. The congregation renewed the regular services in the Altneuschul. There was a certain unrest in the early years when Jews, and youth in particular, wanted to return to Judaism. The veteran Orthodox synagogue goers – some immigrants from Carpatho-Rus – would not recognize the newcomers as Jews. Those not recognized as Jewish according to *halakhah* had to fight for their rights. In Prague, the younger generation identified with Judaism and the State of Israel and was forced to face the apprehension of the Conservatives.

The social function of the congregation and the desire to enjoy reparation, and indemnity monies from Germany and elsewhere led the elderly in particular to join the congregation. Also, cultural activities sponsored by the congregation and by the Jewish Museum gave the impetus for more extensive Jewish life; and many who had hitherto hidden their Jewish ancestry began to avail themselves of the services provided by the congregation. These included the activities of the Center for Educational and Cultural Activities, organized by the Jewish Museum. Consequently, Jewish life saw a revival. The center organized conferences, hosted exhibitions, and published books and other material. The bulletin *Rosh Chodesh* serves the Jewish communities in the Czech lands and in Slovakia, as does the annual magazine *Zidovsk rocenka*. The Czech Jewish communal institutions do not enjoy inner consolidation. Frequent quarrels, resignations, election campaigns, and confrontations disturb the congregation's peace and the communal life. Rabbi Sidon has been unable to remedy the situation. In 2005 around 1,300 Jews were affiliated with the community.

Hebrew Printing in Prague

Prague was the first city north of the Alps where Hebrew books were printed. The earliest, printed in 1512, was a book of miscellaneous prayers. Of the early printers Gershom *Kohen emerged as the leading figure; from 1526 he and his sons carried on the printing business which for several generations remained one of the outstanding Hebrew presses in Europe. Gershom Kohen, with his brother Gronim (Jerome), produced independently in 1526 the famous illustrated Passover *Haggadah* (facsimile edition, 1926). In the following year (under the name of Herman) he obtained from King Ferdi-

nand of Bohemia a printing privilege, which at his death in 1545 was reissued to his son Moses and in 1598 to his great-grandson Gershom b. Bezalel. He and his brother Moses after him were active until the middle of the 17th century. The Gersonides printed mainly liturgical items in this period, but also such important works as Jacob b. Asher's *Turim* (1540) and Moses Isserles' *Torat ha-Olah* (1569). Another printing press was founded by Jacob Bak who was printing in Prague by 1605. Jacob died in 1618, and after him eight generations of Baks printed Hebrew books in Prague up to the threshold of the 19th century. Their productions were mostly liturgical and for local use, and they, like other Hebrew printers, suffered much under the Jesuit censorship (from 1528) and occasional book burnings (1715, 1731). Jonathan *Eybeschuetz obtained permission to print the Talmud at Bak's (1728–41).

Besides Kohen and Bak, other Hebrew printers of note in Prague included Abraham Heide-Lemberger and his sons (1610–41). From 1828 Moses Landau printed independently, in particular a Talmud edition (8°, 1830–35).

PRATO, DAVID (1882–1951), rabbi and Zionist leader. Born in Leghorn, Prato was chief cantor in Florence, rabbi of Alexandria (Egypt) from 1927 to 1936, and chief rabbi of Rome from 1936 to 1938. Conditions became impossible for him when the Fascist regime began its antisemitic policy, and Prato moved to Erez Israel. He resumed his post in Rome in 1945. An ardent Zionist, Prato played a prominent part in the administration of the *Jewish National Fund and *Keren Hayesod in Italy. In 1929 he founded in Alexandria the French-Hebrew review *L'illustration Juive*, which was followed by *Cahiers Juifs* in 1933. He published two collections of sermons, *Cinque anni di Rabbinate* (1933), and *Dal pergamo della Comunità di Roma* (1950), covering his activities in Rome.

PRATT, RICHARD (1934–), Australian businessman. One of the most successful contemporary Australian businessmen, Pratt was born in Danzig, migrating to Australia in 1939 from London, where his father, a retailer, had moved. In 1948 Pratt's father, Leon, opened a cardboard factory in Melbourne, which was developed by Richard Pratt after his father's death in 1969. Known as Visy Board (now Visy Industries), it grew into one of the largest producers of packaging and waste recyclers in the world. By the 1990s it employed 8,000 staff in a hundred plants around the world. Pratt, a powerful, athletic man, was also a notable Victorian Rules football player in his youth and was then an actor, starring in the noted Australian play *The Summer of the Seventeenth Doll*. By 2004 Pratt was regarded as the second wealthiest man in Australia (jointly with Frank *Lowy), worth an estimated A\$4.2 billion (US\$3.5 billion). With his wife, Jeanne, he was the founder of the Pratt Foundation, one of the major Australian philanthropies. Pratt received numerous awards. He became a Companion of the Order of Australia (AO) and, in 2004, was named Australian Humanitarian of the Year.

PRAWER, JOSHUA (1917–1990), Israel historian. Born in Bedzin, Poland, Praver settled in Palestine in 1936. He began

teaching at the Hebrew University of Jerusalem in 1947 and was promoted to the chair of medieval history in 1958. From 1962 to 1966 he was dean of the faculty of humanities. Praver also served the Israel Ministry of Education as chairman of the pedagogical council for the planning of national education (1957–59) and headed the committee that recommended reforms in secondary education, which constituted the basis of the reform law adopted by the Knesset in 1968. He was also a co-founder and first dean of the Haifa University College, whose academic chairman he was from 1966 to 1968. Praver's scholarly interests centered mainly on the Crusades. He wrote *Mamleket Yerushalayim ha-Zalbanit* ("The Crusader Kingdom of Jerusalem," 1946–47), *Toledot Mamleket ha-Zalbanim be-Erez-Israel* ("A History of the Latin Kingdom of Jerusalem," 2 vols., 1963), and *The History of the Jews in the Latin Kingdom of Jerusalem* (1988). He was a member of the Israel Academy of Sciences and Humanities and from 1967 chief editor of the *Encyclopaedia Hebraica*. In 1969 he was awarded the Israel Prize for humanities.

[George Schwab]

PRAWER, SIEGBERT (1925–), British professor of literature. Born in Cologne, Praver came to Britain in the late 1930s and attended King Henry VIII School in Coventry and Oxford and Cambridge Universities. A distinguished scholar of German and other literatures, he was professor of German at London University and then at Oxford Universities. He wrote noted works on Heine, Marx, Thackeray, and others and received many awards, including the Goethe Medal (1973), the Isaac Deutscher Prize (1977), and the Gold Medal of the Goethe Gesellschaft (1977). He was a fellow of the British Academy.

[William D. Rubinstein (2nd ed.)]

PRAYER, the offering of petition, confession, adoration or thanksgiving to God.

In the Bible

The concept of prayer is based on the conviction that God exists, hears, and answers (Ps. 65:3; cf. 115:3–7) – that He is a personal deity. In a sense it is a corollary of the biblical concept that man was created "in the image of God" (Gen. 1:26–27), which implies, inter alia, fellowship with God (see *Man, Nature of). Although prayer has an intellectual base, it is essentially emotional in character. It is an expression of man's quest for the Divine and his longing to unburden his soul before God (Ps. 42:2–3 [1–2]; 62:9[8]). Hence prayer takes many forms: petition, expostulation, confession, meditation, recollection (anamnesis), thanksgiving, praise, adoration, and intercession. For the purpose of classification, "praise" is distinguished from "prayer" in the narrower, supplicatory sense, and "ejaculatory" from formal, "liturgical" prayer. But the source is the same; in its irresistible outpouring, the human heart

merges all categories in an indivisible “I-Thou” relationship. Thus prayer and praise may intermingle (1 Sam. 2:1–10) and supplication and thanksgiving follow in close succession (Ps. 13:1–5, 6). Indeed many scriptural passages might be called “para-prayers” – they seem to hover between discourse and entreaty (Ex. 3:1–12), meditation and petition (Jer. 20:7ff.), or expostulation and entreaty (Job, *passim*). It has been estimated (Koehler-Baumgartner) that there are 85 prayers in the Bible, apart from 60 complete psalms and 14 parts of psalms that can be so termed; five psalms are specifically called prayers (Ps. 17, 86, 90, 102, 142). But such liturgical statistics depend on the definition given to prayer.

TERMINOLOGY. The variegated character of biblical prayer has given rise to a rich nomenclature for praying. The rabbis already noted that “prayer is called by ten different expressions” (Sif. Deut. 26), but on closer examination even more can be found. The most common word for prayer is *tefillah* (Isa. 1:15); the corresponding verb is *hitpallel* (1 Kings 8:42). The stem, *pll*, has been explained to mean “to cut oneself” and to refer to the primitive pagan custom of slashing oneself in a frenzy during worship. This etymology is not only hypothetical, but is wholly irrelevant to the biblical situation. It was the idol-worshippers who cut themselves (1 Kings 18:28) and the verb used is *wa-yitgodedu*; the Torah forbids such practices (Deut. 14:1). In Scripture the stem *pll* signifies “to interpose, judge, hope.” These meanings are eminently suited to the biblical conception of prayer as intercession and self-scrutiny leading to hope. Other terms are: *qaraʿ* (“to call” on the name of the Deity, i.e., worship – Gen. 4:26); *zaʿaq* (“to cry out” for redress of wrongs – Judg. 3:9); *shiwvʿa* (“to cry aloud” for help – Ps. 72:12); *rinnah* (“ringing cry” of joy or sorrow – Ps. 17:1); *darash* (“to seek” God – Amos 5:4); *biqqesh penei* (“to seek the face of” God – Hos. 5:15); *shālal* (“to inquire” – Ps. 105:40); *nasaʿ* (“to lift up” – Jer. 7:16); *pagʿa* (“to encounter,” i.e., to appease, gain favor – Jer. 7:16); *hithannen* (“to seek favor,” i.e., beseech – Deut. 3:23); *shafakh lev* (“to pour out heart” – Ps. 62:9[8]); and *siʿah* (“complaint” – Ps. 142:3[2]).

THE CHARACTER OF PRAYER. Despite its multifaceted character, biblical prayer is essentially a simple human reaction. The rabbis called it “the service in the heart” (Taʿan. 2a); the expression has its roots in biblical thought (Hos. 7:14; Ps. 108:2; 111:1). But the needs of man are so numerous and complex that prayer inevitably came to reflect the vast range of human moods, fears, hopes, feelings, desires, and aspirations. In early times – in the patriarchal age – a simple invocation, a calling upon the name of the Lord (Gen. 12:8; 21:33), would suffice. The approach to God at this stage was marked by spontaneity, directness, and familiarity – God was near. Yet the future was veiled by mystery; man was often undecided how to act. Hence the request for a sign or oracle addressed directly to God (Gen. 24:12–14), or indirectly through a priest (1 Sam. 14:36–37) or prophet (11 Kings 19:2ff.). From this stratum grew the magnificent prayers for understanding and guidance (Num. 6:24–26; 1 Kings 3:6ff.; Ps. 119:33ff.).

But in emergency man does not merely want to know the future; he seeks to determine it by entreating God’s help. Thus Jacob (in a votive supplication) prayed for essential material needs (Gen. 28:20ff.); Eliezer for the success of his mission (Gen. 24:12–14); Abraham for the salvation of Sodom (Gen. 18:23–33); Moses for erring Israel (Ex. 32:31–32); Joshua for divine help in the hour of defeat (Josh. 7:6–9); Hezekiah for deliverance from Sennacherib (11 Kings 19:15–19); the prophets on behalf of their people (Jer. 14:1ff.; 15:1ff.; Amos 7:2ff.); Daniel for Israel’s restoration (Dan. 9:3–19); Ezra for the sins of his people (Ezra 9:6–15); and Nehemiah for the distress of his people (Neh. 1:4–11). Solomon’s noble dedication prayer at the consecration of the Temple (1 Kings 8:12–53) includes almost every type of prayer – adoration, thanksgiving, petition, and confession. It also strikes a universal note (8:41ff.) so often echoed by the prophets. The spectrum of biblical prayer thus ranges from the simplest material needs to the highest spiritual yearnings (Ps. 51:1ff.; 119:1ff.), transcending, like prophecy, the horizon of history and reaching to the realm of eschatology (Isa. 66:22–23).

There was an early relationship between *sacrifice and prayer (Gen. 13:4; 26:25), which persisted until the destruction of the Second Temple. The sacrifice suggested man’s submission to the will of God; the prayer often provided a commentary on the offering. But the two are not necessarily linked. It is noteworthy that the sacrificial regulations make no liturgical provisions (except for the Day of Atonement, Lev. 16:21); but actually the offerings were themselves a dramatic form of prayer. Contrariwise, prayer could replace sacrifice (Ps. 141:2). In the synagogue, prayer, accompanied by Scripture reading and exposition, entirely took the place of altar offerings.

Examples of prayers of intercession have already been cited. The intercessor, whether prophet, priest, king, or national leader, does not point to the need for an intermediary in worship: “The Lord is near to all who call upon Him in truth” (Ps. 145:18). The intercessor is one who, by his innate spiritual attributes, lends weight to the entreaty. The ultimate criterion still remains not the worthiness of the pleader but of those for whom he is pleading (Ezek. 14:14, 20).

THE ACCESSORIES OF PRAYER. Prayer, unlike sacrifice, could be offered up anywhere (Gen. 24:26; Dan. 6:11 in the upper chamber; Ezra 9:5ff.), but there was a natural tendency to prefer a sacred site (e.g., Shiloh or Gibeon). Eventually the Temple at Jerusalem became the major place of prayer (Isa. 56:7); those who could not be there physically at least turned toward it when worshiping (Dan. 6:11; cf. Ps. 5:8 [7]). In time to come the Temple would be a house of prayer for all nations (Isa. 56:7). The synagogue had its origin during the Babylonian exile; originally a place of assembly, it became in due course a house of prayer and study. The emphasis on congregational prayer began to grow but private prayer was never abolished. The heart and not the hour dictated the occasion for prayer. Day and night the Heavenly Father could be entreated (e.g., 1 Sam. 15:11; Ps. 86:3; 88:2[1]). But the need

for regularity brought about a synchronization of the times of prayer and of sacrifice: morning worship corresponded to the morning oblation (Ps. 5:4[3]), afternoon orisons to the late afternoon sacrifice (1 Kings 18:36; Ezra 9:5). Nightfall provided yet another occasion for worship, so that prayers came to be offered thrice daily (Ps. 55:18; Dan. 6:11; though twice in 1 Chron. 23:30). The seven times mentioned in Psalms 119:164 mean “often” or “constantly.”

In the Bible no particular gestures are prescribed in connection with prayer. But certain postures developed naturally to lend emphasis to the content of the prayer: standing, which is normal (1 Sam. 1:26; 1 Kings 8:22); kneeling (Dan. 6:11; Ezra 9:5); prostration (Josh. 7:6); head bowed (Gen. 24:26; Neh. 8:6); hands stretched out or uplifted (1 Kings 8:22; Ps. 28:2); face between knees (1 Kings 18:42); and even sitting (11 Sam. 7:18). More important accompaniments of prayer were fasting, mourning, and weeping (Isa. 58:2–5; Joel 2:12); but the ultimate criterion remained earnestness of heart (Joel 2:13).

Originally prayer was undoubtedly spontaneous and personal; but the need to organize religion gave rise to liturgical patterns and musical renderings (Ezra 2:65; 1 Chron. 16). Prayer formulas are found already in the Pentateuch (Deut. 21:7ff.; 26:5–15). The Psalms provide examples of fuller liturgical development, including choral and instrumental features (see *Psalms). The response “Amen” occurs in Numbers 5:22, Psalms 41:14, etc.; a prayer before the reading of the Torah in Nehemiah 8:6; a doxology in Nehemiah 9:5, 32; a typical review of God’s dealings with Israel leading to a confession and a pledge in Nehemiah 9:6–10:1 (9:38).

ANSWER TO PRAYER. That prayer is answered is an accepted biblical verity (e.g., Gen. 19:17–23; Num. 12:9ff.); but Scripture is no less emphatic that not all prayers are answered (Gen. 18:17ff.; Isa. 29:13ff.). Ritual is not enough, while hypocritical worship is an abomination (Isa. 1:15; Amos 4:4ff.); and there are occasions when intercession is forbidden (Jer. 7:16; 11:14). It is at this point that the biblical concept of prayer is seen in its true inwardness. Paganism regarded worship as a form of magic, whereby the deity could be compelled to fulfill the worshiper’s wishes; the moral element was wholly absent. In biblical faith the divine response is essentially linked to ethical and spiritual values. Man, as it were, answers his own prayer (Gen. 4:7), and fundamentally the answer is a significant change of spirit and outlook. Abraham learned the lesson of faith (Gen. 15:1–6); Moses became his people’s deliverer (Ex. 3:2–4:18); Isaiah was transformed into a prophet (Isa. 6:5–8). Prayer and prophecy were probably closely correlated, the former providing spiritual soil in which the revelatory seed took root (Jer. 1:6ff.; Hab. 1:13–2:3). In many instances prayer assumes a tempestuous character (Jer. 12; Ps. 22; Job, passim [cf. 16:17]), but the storm always ends in newfound faith and peace. At times, moreover, God answers before He is appealed to (Isa. 65:24; cf. Dan. 9:20ff.), for man not only beseeches God, but God also seeks man (Isa. 50:2; 65:12). The “I-Thou” relationship is reciprocal.

In sum, the Bible conceives prayer as a spiritual bridge between man and God. It is a great instrument of human regeneration and salvation, worthy even of martyrdom (Dan. 6:11). Rooted in faith (Ps. 121) and moral integrity (Ps. 15), it banishes fear (Ps. 23) and asks, in its noblest formulations, only the blessing of divine favor (Num. 6:24–26). Clothed in language of simple but matchless beauty, it is imbued with religious love and a sense of sweet fellowship with God. Both the Christian and Muslim liturgies have been profoundly influenced by the spirit, thought, and forms of biblical prayer.

[Israel Abrahams]

In the Apocryphal Literature

There are a number of references to prayer in the apocryphal books, including the idea of the living offering up prayers on behalf of the dead (11 Mac. 12:44–45). The apocryphal work, The Prayer of Manasseh, is a penitential prayer. The biblical concept that God is near to those who suffer is also developed (Ecclus. 35:13–17). Prayer is associated with the giving of alms (Ecclus. 7:10), and there is a national prayer for deliverance from an enemy (Ecclus. 36:1–17).

In Rabbinic Thought

On the biblical verse “And serve Him with all your heart” (Deut. 10:10), the rabbis commented “What is service of the heart? This is prayer” (Ta’an. 2a). “Service” (*avodah*) in this context is connected with the Temple and its worship, for which prayer is seen as a substitute. On the other hand, the saying of R. Eleazar that prayer is dearer to God than good works and sacrifices (Ber. 32b), though hyperbolic, may nonetheless be intended to express the real superiority of prayer. Possibly, the tension in this matter is to be perceived in the two reasons given for the statutory prayers of the day. According to one opinion, these were ordained by the patriarchs, while another view has it that they correspond to the perpetual offerings in Temple times (Ber. 26b).

The obligation of offering up prayer, though supported by a scriptural verse, is considered to be rabbinic, not biblical (Ber. 21a). Prayers are to be recited three times a day: morning, afternoon, and night (Ber. 4:1). In addition to the statutory prayers and private prayers of various kinds, public prayers were offered in times of distress; prayers for rain, for instance, in times of drought (Ta’an. 2:1–5).

THE VALUE OF PRAYER AND CONCENTRATION IN PRAYER. Prayer stands high in the world of values (Ber. 6b). God Himself prays, His prayer being that His mercy might overcome His judgment (Ber. 7a). Nevertheless, the study of the Torah occupies a higher rung than prayer, and some scholars, whose main occupation was study, only prayed periodically (Shab. 11a; RH 35a). A rabbi who spent too much time on his prayers was rebuked by his colleague for neglecting eternal life to engage in temporal existence (Shab. 10a). Communal prayer is of greater significance than private prayer (Ber. 8a; Deut. R. 2:12). Too much reflection on one’s prayers in the expectation that these will be answered was discouraged (Ber. 32b). Prayer

should be offered with proper concentration (*kavvanah*) on the words uttered in God's presence (Ber. 31a). R. Eliezer said: "He that makes his prayer a fixed task, his prayer is not supplication" (Ber. 4:4). R. Simeon b. Nethanel said: "...and when thou prayest make not thy prayer a fixed form, but [a plea for] mercies and supplications before God" (Avot 2:13). One way of avoiding the deadening familiarity of a "fixed form" was to recite a new prayer each day (TJ, Ber. 4:3, 8a). When R. Eliezer was asked by his disciples to teach them the ways of life that they might learn them and by following attain the life of the world to come, part of his reply was: "When you pray, know before Whom you stand" (Ber. 28b). A person who has just returned from a journey and is consequently unable to concentrate properly, should not pray until three days have elapsed (Er. 65a).

PROPER FORMS OF PRAYER. Not every prayer is valid. A prayer for God to change the past, for instance, is a "vain prayer" (Ber. 9:3). The impossibility of God answering every prayer addressed to Him is acknowledged in the account of the prayer of the high priest on the Day of Atonement who used to pray before the rainy season that the prayers of the travelers who required fair weather should not be allowed to enter God's presence (Yoma 53b). A man should not only pray for himself but should also think of others, using the plural form "grant us" rather than the singular "grant me" (Ber. 29b–30a). If a man needs something for himself but prays to God to grant that very thing to his neighbor who needs it, such an unselfish prayer causes God to grant him his wish first (BK 92a). Man should never despair of offering supplication to God "even if a sharp sword rests upon his neck" (Ber. 10a). In praising God, man should be circumspect, using only the standard forms of praise found in Scripture and established for use in prayer (Ber. 33b). Prayers of thanksgiving, particularly in the form of the benediction (*berakhah*), are repeatedly enjoined by the rabbis (Ber. 6:1–3), as well as praise of God for His wondrous works and the marvelous beings He has created (Ber. 9:1–2; Ber. 58b).

THE ADDRESSING OF PRAYERS DIRECTLY TO GOD. R. Judah said that if a human being is in trouble and wishes to invoke the aid of his patron he must first stand at the door and call out to a servant or a member of the patron's family and he may or may not be allowed to enter. But it is otherwise with God. God says, "When a man is in trouble, do not cry out to the angel Michael or to the angel Gabriel but to Me and I will answer immediately" (TJ, Ber. 9:1, 13a). On the other hand, R. Johanan said: "When one petitions for his needs in Aramaic, the ministering angels do not heed him, for they do not understand Aramaic" (Shab. 12b). Possibly a distinction is to be made between the angels bringing man's prayers to God and direct intercession, with the angels as intermediaries between man and God (cf. Tob., 12:12, 15). Some men were renowned for their capacity to pray and to have their prayers answered, so that great scholars, less gifted in this direction, would ask

these saints to pray on their behalf (Ber. 34b). A number of miracle tales are told to illustrate the immediacy of God's response to the prayers of such men (Ta'an. 3:8; Ta'an. 23a–b).

In Medieval Thought

Although medieval Jewish thinkers profoundly considered major theological problems, there is surprisingly little discussion in their writings of the intellectual difficulties involved in prayer. One of the few discussions as to why prayer should be necessary, since God knows man's needs, is that of Joseph *Albo (Ikkarim 4:18). Albo replies that the act of turning to God in prayer is itself one of the conditions upon which God's help depends, just as it depends on other forms of human effort.

MAIMONIDES. True to his doctrine of theological negation, *Maimonides in the standard liturgy only permits the use of those divine attributes in prayer which have been ordained by the "prophets," and he is opposed to the indiscriminate writing of hymns (Guide, 1:59; cf. Ibn Ezra to Eccles. 5:1). In spite of the talmudic statement that the obligation to pray is of rabbinic origin (*mi-de-rabbanan*), Maimonides observes that this only applies to the number, form, and times of prayer, and that it is a biblical duty for the Jew to pray daily (Yad, Tefillah, 1:1). The need for adequate concentration in prayer (*kavvanah*) is particularly stressed in the Middle Ages and formed part of the general tendency prevalent among medieval Jewish thinkers who stressed greater inwardness in religious life. *Bahya ibn Paquda (*Hovot ha-Levavot*, 8:3, 9) remarks that prayer without concentration is like a body without a soul or a husk without a kernel. Maimonides' definition of *kavvanah* reads: "*Kavvanah* means that a man should empty his mind of all other thoughts and regard himself as if he were standing before the Divine Presence" (Yad, Tefillah, 4:16; cf. H.G. Enelow, in: *Studies in Jewish Literature Issued in Honor of Prof. Kaufmann Kohler* (1913), 82–107).

THE KABBALISTS. The kabbalists stress the difficulty of petitionary prayer to a God who is unchanging. They advance the view that prayer cannot, in fact, be offered to God as He is in Himself (*Ein Sof*), but only to God as He is manifested in the ten divine potencies (the *Sefirot*). God Himself is, therefore, not entreated directly to show mercy, for example, but prayer is directed to God as He is manifested in the *Sefirah* of loving-kindness. As a result of the power of man's prayer, this potency might function on earth. The magical nature of kabbalistic prayer and the dangers of setting up the *Sefirot* as divine intermediaries were the topic of much subsequent debate (Ribash, Resp. no. 157). The kabbalists, in fact, substituted for the older doctrine of *kavvanah* the concept of special intentions (*kavvanot*) i.e., meditations on the realm of *Sefirot*. Instead of concentrating on the plain meaning of the prayers, the kabbalist dwells on the realm of divine potencies and directs his mind, when reciting the words, to the supernal mysteries which govern and are controlled by them (see I. Tishby, *Mishnat ha-Zohar*, 2 (1961), 247–306).

The Ḥasidim

In Ḥasidism, the kabbalistic type of *kavvanot* yields to a far more emotional involvement and attachment (*deveikut*) to God. “The metamorphosis which took place in the meaning of *kavvanot* at the advent of Ḥasidism, and more explicitly after the Great Maggid [*Dov Baer of Mezhirech], consists in this – that an originally intellectual effort of meditation and contemplation had become an intensely emotional and highly enthusiastic act” (Weiss, in: *JJS*, 9 (1958), 163–92). In Ḥasidism, prayer is a mystical encounter with the Divine, the heart leaping in ecstasy to its Source. Violent movements in prayer were not unusual; some of the ḥasidic groups even encouraged their followers to turn somersaults during their prayers (Dubnow, *Ḥasidut*, 112–5).

Prayer is frequently seen in Ḥasidism as man’s most important religious activity. R. Shneur Zalman of Lyady, the founder of the intellectual *Ḥabad sect in Ḥasidism, writes: “For although the forms of the prayers and the duty of praying three times a day are rabbinic, the idea of prayer is the foundation of the whole Torah. This means that man knows God, recognizing His greatness and His splendor with a serene and whole mind, and an understanding heart. Man should reflect on these ideas until his rational soul is awakened to love God, to cleave to Him and to His Torah, and to desire His commandments” (M. Teitelbaum, *Ha-Rav mi-Ladi u-Miflegat Ḥabad*, 2 (1914), 219).

In Ḥabad Ḥasidism, the true meaning of prayer is contemplation on the kabbalistic scheme whereby God’s infinite light proceeds through the whole chain of being, from the highest to the lowest. Man should reflect on this until his heart is moved in rapture, but he should not engage in prayer for the sake of the pleasure such rapture will bring him; he must take care not to confuse authentic ecstasy with artificial spiritual titivation (Dov Baer of Lubavitch, *Kunteres ha-Hitpa’alut*). Many ḥasidic groups, otherwise strictly conformist, disregarded the laws governing prayer at fixed times on the grounds that these interfere with the need for adequate preparation and with the spontaneity which is part of the prayer’s essence.

THE PRACTICE OF SWAYING IN PRAYER. During the Middle Ages, the practice of swaying during prayer is mentioned. The Zohar (3:218b–219a) refers to the difference between Israel and the nations. It states that the soul of the Jew is attached to the Torah as a candle is attached to a great flame, and hence Jews sway to and fro while studying the Torah. *Judah Halevi (*Kuzari* 2:79–80) also refers to the custom as practiced during the study of the Torah, but makes no mention of prayer. Isserles, however, quoting earlier authorities, also mentions the custom for prayer, while other authorities disagree (see Sh. Ar., OH, 48:1 and *Magen Avraham*, ad loc.). The explanation given by Simeon Brainin (quoted by Judah David Eisenstein in *JE* 11 (1907), 607), that swaying during study and prayer was intended to afford the body with exercise, is incredibly banal. Bodily movements during prayer are, of course, not unusual among the adherents of most religions.

In Modern Thought

The early reformers were much concerned about such questions as prayers for the restoration of sacrifices or the return to Zion, and whether prayer might be recited in the vernacular. Very few challenges, however, were presented to the idea of prayer as such in its traditional understanding. In the 20th century, Jewish thinkers began to consider the basic philosophical problems surrounding prayer. Petitionary prayer was felt to be especially difficult in the light of scientific views regarding cause and effect. A definite move away from the idea of prayer as a means of influencing God and toward its function as a way to affect man’s attitudes can be observed. “Self-expression before God in prayer has thus a double effect; it strengthens faith in God’s love and kindness, as well as in His all-wise and all-bountiful prescience. But it also chastens the desires and feelings of man, teaching him to banish from his heart all thoughts of self-seeking and sin, and to raise himself toward the purity and the freedom of the divine will and demand” (K. Kohler, *Jewish Theology* (1918), 275).

The tendency in some circles to reinterpret the God-idea itself in impersonal terms has cast prayer into a different light. It is seen as an attempt by man to attune himself to those powers in the universe which make for human self-fulfillment and as a reaching out to the highest within his own soul. Defenders of the traditional view of God and of prayer to Him have, however, not been lacking. (See *Proceedings of the Rabbinical Assembly of America*, 17 (1953), 151–238, for these two opinions).

[Louis Jacobs]

Women and Prayer

Biblical examples of female prayer include the songs of Miriam (Ex. 15:20–21) and Deborah (Judg. 5:1–31). Hannah’s entreaty at Shiloh (1 Sam. 2) became the rabbinic exemplar of supplicatory prayer for women and men (Ber. 31a–b).

Although Berakhot 20a–b is clear that women are obligated to pray (since prayer is a supplication “for mercy,” necessary for all), rabbinic Judaism exempted women from communal prayers which were to be recited at specific times. Women’s prayer was to follow the spontaneous model of Hannah’s worship from the heart and could be uttered at any time and in any language (Sot. 32a–33a). However, rabbinic literature has little to say about the content of women’s personal worship. Some authorities have claimed that women were not obligated in rabbinic time-bound commandments, including prayer, because regular synagogue attendance would interfere with their primary domestic roles. However, women not responsible for home and family were also exempt from communal prayer. Others have suggested that women were not obligated in time-bound public rituals because, like slaves and minors, they are of subordinate status: In the system of rabbinic Judaism, male heads of households perform religious acts on behalf of women, children, and other dependents under their aegis.

An exception to Judaism’s normative exemption of women from participation in communal prayer occurred in

medieval Ashkenaz, between the 11th and 13th centuries, when Jewish women's central roles in economic and social life, coupled with a concurrent religious revival in Christian Europe, empowered women to demand more significant participation in Jewish worship (Grossman, *Pious and Rebellious* ...). This included fulfilling time-bound positive commandments such as shaking the *lulav* and sitting in a *sukkah* as well as regular participation in synagogue worship on the Sabbath and holidays. Medieval rabbis, among them R. Jacob *Tam, permitted these innovations. A century later, some Ashkenazi sages agreed to include women in the quorum of three or ten needed for the invitation to recite grace after meals. *Dulcea of Worms (d. 1196), wife of R. *Eleazar of Worms (the Roke'ah), was one of a number of Ashkenazi women, including Richenza and Urania, described by contemporaries as serving as "prayer leaders of the women." These women stood in the women's section of the synagogue near a small window which was connected to the main sanctuary and repeated the cantor's prayers aloud so that the women could follow the service.

In East European synagogues of the early modern era, women called *firzogerin* (Yiddish for "foresayers") led prayers among women in the synagogue. Some may have composed **tkhines*, vernacular petitionary prayers written for and sometimes by women.

In the modern era, particularly in North America, gender issues in prayer have defined the differences among Jewish denominations. Nineteenth-century American Reform Judaism introduced a number of changes, including family pews, mixed choirs, and the confirmation ceremony (initially intended to replace the bar mitzvah), directed at reducing women's inequality in prayer. Penina *Moise of Charleston, South Carolina, was the author of America's first Jewish hymnal, published in 1842; many of her contributions were used in Reform worship well into the 20th century.

Women's roles in prayer in Conservative Judaism were circumscribed until the 1950s, when the Committee on Jewish Law and Standards first raised the possibility of women being called to the Torah. By the 1980s and 1990s, after Jewish feminists agitated for change, women were counted in the *minyan* and called to the Torah in a majority of Conservative synagogues. Havurot (prayer and study groups without professional clergy, which arose in the 1960s) promoted egalitarian worship and opportunities for women's religious leadership. The Reconstructionist movement established gender equality as a founding principle. By the late 20th century, Orthodox women also expanded traditional roles by forming women's prayer groups where women led services, read the Torah, and celebrated life cycle passages. However, such groups did not say those prayers for which a *minyan* is required. By the first decade of the 21st century, new prayer communities in Israel and North America included women as much as possible in traditional worship. In these prayer groups, a *mehizah* separates men and women but divides the room evenly between them. With a traditional *minyan* of ten men (or, in some cases, ten men and ten women), women lead certain parts of the

service (the introductory morning blessings and the prayers welcoming the Sabbath) and fully participate in the Torah service, including reading from the Torah.

In the last quarter of the 20th century, feminism had a significant impact on Reform, Conservative, and Reconstructionist liturgies. Changes included eliminating references to the community of worshipers as male and adding the names of the matriarchs to those contexts in which the patriarchs were traditionally invoked. Other innovations focused on gender neutral ways to address God, using both English translations and new Hebrew epithets such as *Mekor ha-Hayyim* ("Source of Life").

In the last decades of the 20th century, women also constructed new prayers and rituals for events in their lives not previously sanctified in Judaism, such as onset of menstruation, pregnancy, childbirth, weaning children, and menopause. Others created liturgical roles for women and girls in traditional lifecycle passages, such as egalitarian wedding ceremonies, lesbian commitment ceremonies, and rituals acknowledging separation and divorce. Healing ceremonies addressed women's pain and losses from violence and abuse, illness, miscarriage, infertility, abortion. Other life cycle innovations, such as bat mitzvah and *simhat bat* (baby naming/covenant ceremonies), were female complements to existing rituals centered on males.

PRAYER BOOKS. Books containing the texts of the customary daily prayers did not exist in ancient times. Sources of tannaitic and amoraic times take it as understood that prayer is by heart (e.g., Ber. 5:3–5; RH 4:5–6; Ta'an. 2:2). In public prayer the reader prayed aloud before the congregation, which responded "amen" to the blessings. The writing down of the text

of blessings and prayers was considered forbidden (“writers of blessings are [like] those who burn the Torah,” Tosef. to Shab. 13:4; Shab. 115b; TJ, Shab. 16:1, 15c). After the completion of the Talmud, however, this prohibition was disregarded, and in the geonic era written prayer books undoubtedly existed already (L. Ginzberg, *Geonica*, 1 (1909), 119ff.). In Babylon it was permitted, at first, to use them only on the Day of Atonement, and on other fast days, but later they were permitted generally. This development was complete at the beginning of the eighth century. The Cairo *Genizah* has preserved fragments of prayer books both from Erez Israel and the countries bordering it from this period (see *Liturgy).

Siddur and Maḥzor

The book that included the regular prayers for the whole year was called *seder* (*siddur*) *tefillah* – a name fixed by the *geonim* themselves – or, according to the cycle of the year, *maḥzor* (i.e., the cycle of prayers). At first there was no difference between the two names, and in the early period (in certain communities, until the present time) they were used indiscriminately. In the course of time the additions for special days (i.e., the *piyyutim*) were also included. However, the present Ashkenazi custom (and, through their influence, that of certain Sephardi communities as well) to differentiate between the *siddur* (pl. *siddurim*) – containing only the regular prayers – and the *maḥzor* (pl. *maḥzorim*) – containing also the *piyyutim*, in most cases only those of the festivals – came into being at a very late period, and is without foundation. The (Arabic-speaking) Jews of Yemen call the comprehensive *siddur*, *Tikhlal*. All the *siddurim* that have been preserved are designed for a particular rite. In the manuscripts there are a greater number of rites than those of the countries or the cities which finally came to be established or which later reached publication.

Early Siddurim

The beginnings of the order of prayer are found in the second part of tractate *Soferim*, which is a compilation from the period of the first *geonim*.

SEDER RAV AMRAM GAON. The first true prayer book, however, is the *Seder Rav Amram Gaon* from the ninth century. This prayer book (compiled at the request of the Jews of Spain) contains the regular prayers, according to the order of the whole year – weekdays, Sabbath, New Moon, fast days, Ḥanukkah, Purim, and all the festivals – together with the relevant *halakhot* preceding each section. At the end are the *benedictions and special prayers for occasions such as marriage, circumcision, redemption of the firstborn, and the burial service. Unfortunately this text of the prayers cannot serve as an authentic source for the custom of the *geonim* since all the extant manuscripts of this *seder* differ greatly from one another, in accordance with the rite of the copyist (ed. by N.N. Coronel, 1865, A.L. Frumkin in 1912, partially by D. Hedegård, 1951).

SIDDUR SAADIAH GAON. The *Siddur Saadiah Gaon*, which was written 100 years later, and which also contains the rel-

evant *halakhot* along with the text of the prayers – the former written in Arabic for the benefit of the Jews of Egypt – is apparently, in the sole extant manuscript (ed. by I. Davidson, S. Assaf, and B.I. Joel, 1941), the rite of the Babylonian *geonim* (with some influence of the rite of Egypt). In contrast the *Genizah* fragments of the *siddur* contain the text of the prayers in a different and adapted version. The logical, methodical order of this prayer book, however, which differs from the ordinary calendar order, was not generally accepted (except by Maimonides); its order possibly explains as well the limited circulation of this *siddur*. Another prayer book compiled in the 11th century by *Hai b. Sherira Gaon, has been lost except for some quotations from it in halakhic literature.

The work entitled *Siddur Rashi*, which emerged in the 11th/12th centuries from the school of *Rashi (ed. by S. Buber, 1911), does not contain the text of the prayers at all, but only the halakhic material, with full talmudic treatment. Also the *Seder ha-Tefillot* that *Maimonides (12th century) attached to his *Mishneh Torah* is not a true prayer book but a collection of versions of prayers from which it is possible to compile a *siddur*; his rite is apparently that current in Egypt in his time, very different from that of the Spanish Jews; it was also adopted in Yemen.

MAḤZOR VITRY. In contrast to these works, the *Maḥzor Vitry, compiled in the 11th century by *Simḥah b. Samuel of Vitry, a pupil of Rashi, is a prayer book in the full sense of the word. It contains the text of all the regular prayers, in accordance with the rite of northern France, which is close to that of Germany. The laws of prayer precede each section in great detail. In the halakhic part, which is mainly consistent with the *Siddur Rashi*, large sections have been copied from the *Seder Rav Amram Gaon*, but later *geonim* are also cited. The edition of S. Hurwitz, published in 1889–93, is based on a London manuscript, amplified by additions of the 13th and 14th centuries. Besides the regular prayers, the *Maḥzor Vitry* includes only a limited number of *piyyutim*, namely *ma'arivim* and *hoshanot*; added to it are the Passover *Haggadah* and the prayers for Simḥat Torah; it lacks all the *kerovot* (which were, however, already in use at that time), and thus cannot be regarded as a complete *maḥzor*. It seems, however, that this format came about through a certain logic; beginning with the Middle Ages, prayer books were copied mostly in a small format for individual use, and it was usual among Germans and French to include in them *ma'arivim* and *hoshanot*, while the *maḥzorim* including the *kerovot*, mainly in large format (folio), were designed for the cantors. The prayer books themselves, apart from a few differences in text, do not differ from one another in their scope. The sole difference is in the laws of the prayers, which are sometimes brought at length and sometimes briefly. In place of the full talmudic explanation of the themes and the discussion of the various opinions found in the *Seder Rav Amram Gaon* and the *Maḥzor Vitry*, the final ruling alone came to be given.

MANUSCRIPTS FROM OTHER RITES. From this period prayer books of other rites have also been preserved (see *Liturgy) in manuscript: those of the Jews of Italy (*Roman Maḥzor*) mainly in small folio format, and also of the Jews of the Balkans, and of the Jews of Spain, mostly in quarto. Among the Jews of Yemen (where there was no printing press at all) the writing of prayer books continued (mostly *Tikhlalim* in small folio) until the beginning of the 20th century. This wealth of manuscripts, most of which are in the large libraries, has not yet been fully exploited for scientific editions and for research into the history of the text. There is still no critical text of any of the well-known rites constructed out of the actual texts in the manuscripts.

Commentaries on the text of the prayers began simultaneously with the composition of the ancient prayer books. In the prayer books of the *geonim* there is as yet no explanation of the texts of the prayers but the *Maḥzor Vitry* contains explanations of a number of prayers, such as *Kaddish*, **Nishmat Kol Hai*, *hoshanot*, and the Passover *Haggadah*. The greatest rabbinic authorities, such as Rashi, Joseph *Caro, *Eliezer b. Nathan of Mainz (Raban), *Ephraim b. Jacob of Bonn, Baruch the father of *Meir of Rothenburg, Judah he-Ḥasid of Regensburg, *Eleazar b. Judah of Worms, author of *Ha-Roke'ah* (see Abraham b. Azriel, *Arugat ha-Bosem*, ed. by E.E. Urbach, 4 (1963), introd., passim), participated in the exposition of the prayer books. Their comments were transmitted anonymously from place to place and passed into the customary manuscript expositions, and then into print in the margins of the *siddurim* and *maḥzorim*.

Printed Prayer Books

With the advent of printing, prayer books for different customs, both *maḥzorim* for the whole year as well as *siddurim* in small format for use of the individual, were printed. Among the *incunabula there are already many prayer books (see A. Freimann, *Thesaurus Typographiae Hebraicae Saecue*; xv, Suppl. to pt. 1, 1967–69; list of incunabula). Prayer books of the Roman rite were published first (*Maḥzor Roma*, Soncino-Casalimaggiore 1485/86; *Siddur Katan* called “Sidorello,” 1486), then those of the Spanish rite (*Seder Tefillot*, 1490). Printed Spanish and Portuguese books have come down only in fragments. In the 16th century, German and Polish prayer books were published (*maḥzorim*, beginning with 1521, 1522, and *siddurim*, about 1508), and those of the Romaniot custom (*maḥzorim*, from 1510, *siddurim*, later still). Prayer books for the communities of southern France were not printed until the 18th century (*Maḥzor Avignon* 1765–66, Carpentras 1739–62), while the *Tikhlal* of the Yemenite Jews was published only at the end of the 19th century (Jerusalem, 1894–98). Certain categories of prayers such as *seliḥot* and *kinot* for the Ninth of *Av were printed long ago in special editions (e.g., *seliḥot* according to the German custom, Soncino 1496; *kinot* for the Ninth of Av according to the Polish custom, Cracow 1584), although in the main they were also incorporated in the *maḥzorim*.

Types of Prayer Books

In the course of time the following types of prayer book became established among Ashkenazi Jews:

- (1) *Ha-Maḥzor ha-Gadol* in folio (also called *Kol Bo*), containing, according to the ancient custom, all the prayers of the year – weekday, Sabbath, festivals, and special days;
- (2) the so-called *Maḥzor*, which included only the festival prayers, usually a separate volume for each festival;
- (3) the small *siddur*, containing only the regular prayers;
- (4) *Ha-Siddur ha-Shalem*, completed by the addition of the *yozerot* for the special Sabbaths, the *hoshanot*, *seliḥot* for fast days, *ma'arivim* for the nights of the festivals, and supplemented at times by the Book of Psalms and *ma'amarot*.

The Sephardi Jews, on the other hand, arrived at the following subdivision:

- (1) *Tefillat ha-Ḥodesh*, comprising the prayers for weekdays, Sabbath, the New Moon, Ḥanukkah, and Purim;
- (2) *Mo'adim*, consisting of the prayers for the three pilgrim festivals;
- (3) *Rosh Ha-Shanah*, for the New Year;
- (4) *Kippur* for the Day of Atonement;
- (5) *Ta'aniyyot*, which also included the Ninth of Av and its *kinot*.

Only the Jews of Italy and Yemen maintained the original form of the *Maḥzor ha-Shanah*, which contained all the prayers in cyclical order; small *siddurim* were, however, also published by them.

Textual Editions

As to the text of the regular prayers, the *siddur* of the Sephardi Jews was edited in the 16th century in accordance with the “intentions” (**kavvanah*) of Isaac *Luria; as a result hardly any pre-Lurianic prayer books are extant. In many editions they made the divine names conform with the Lurianic “intentions” by a different pointing or by interlacing the ineffable name with various forms of the word *Adonai*. The text of the Ashkenazi *siddur* occupied several scholars, particularly in the 17th to 19th centuries, who published the prayer book in new editions or wrote books in which they justified substantiation or amendment of the text: Naḥman Lieballer (Dyhrenfurth, 1690); Azriel and his son, Elijah of Vilna (*Derekh Si'ah ha-Sadeh*, Frankfurt on the Main, 1704); Solomon Zalman Katz Hanau (*Kunteres Sha'arei Tefillah* and the ed. *Beit Tefillah*, Jesnitz, 1725); Jacob Emden (Yavez; *Lu'ah Eresh*, an appendix to his prayer book, Altona, 1769); Mordecai Duesseldorf (*Kunteres Hassagot al Siddur Sha'arei Tefillah*, published after his death, at Prague in 1784); Isaac Satanow (*Va-Ye'etar Yizḥak*, Berlin 1785, who polemicizes with all his predecessors); Judah Leib Ben Zēv (*Tikkunei ha-Tefillah*, published after his death with the edition *Tefillah Zakkah*, Vienna, 1816); Wolf Heidenheim (*Siddur Safah Berurah* with notes at several points, Roedelheim, 1806). In the course of time Heidenheim's text was accepted as a sort of standard text. All disputes about the text, however, turn on such grammatical niceties as the insertion of a *dagesh* or *meteg* and matters of pointing, and only very

rarely on establishing the text. In the case of Heidenheim, particularly, and those following him, it should be pointed out that they preferred, to too great an extent, the language of the Bible to Mishnaic Hebrew.

Critical Editions

Critical treatment of the prayer book begins with the activity of E.L. Landshuth who contributed to the *Siddur Hегyon Lev* (published by Z.H. Edelman, 1845) the commentary *Mekor Berakhah*, in which he consistently gathered the sources of the prayers and tried to establish the date of their compilation and composition. This method was continued by W. Jawitz (*Mekor ha-Berakhot*, 1910), A. Berliner (*Randbemerkungen zum taeglichen Gebetbuch*, 2 vols., 1909–12), and S. Elbogen (*Der juedische Gottesdienst*, 1913, 1931³).

Commentaries

Commentaries to the prayer book appeared in fairly large numbers, and it is impossible to mention here even an appropriate part of them. The old commentaries, based upon manuscript commentaries, were printed in the folio editions of *maḥzorim* (e.g., *Hadrat Kodesh*, Venice, 1554, et al.; *Maḡelei Zedek*, Venice 1588, et al.; to the *maḥzor* of Rome, *Kimḥa de-Avshuna*, Bologna 1540). There are commentaries with a kabbalistic approach (like that of Lipmann *Muehlhausen, in *Siddur Dikduk Tefillah*, Thiengen 1560; the *Sha'ar ha-Shamayim* of Isaiah *Horowitz, Amsterdam 1717; *Beit Tefillah*, with the commentary of Isaac Luria and Moses *Zacuto to the Sephardi *siddur*, Amsterdam 1712, et al.; and the *siddur Ha-Gra* of *Elijah b. Solomon, the Gaon of Vilna, Jerusalem 1895). Other commentaries deal more with explanations of the words and themes, such as *Beit-El Sha'ar ha-Shamayim* (Altona, 1745/47) of Jacob Emden, though here too comments of an esoteric nature are intermingled; *Iyyun Tefillah* (1857) of Jacob Zevi Meklenburg; *Avodat Yisrael* (1868) of Isaac Seligman *Baer, containing sources of the prayers, many notes on grammatical topics, and comparisons of the texts of different rites, as well as a short exposition of the *seliḥot* and *yozerot*; *Ishei Yisrael* (c. 1900) following the rite of Elijah b. Solomon, with two commentaries – *Avnei Eliyahu* of Elijah Landau, and *Si'ah Yizḥak* of Isaac Malzan; *Ozar ha-Tefillot* (1915, et al.) with the commentaries of A.L. Gordon and Enoch Zondel b. Joseph, to the sections of *piyyut*, too, and with a special section, “*Tikkun Tefillah*,” on the textual variations – apparently the most complete prayer book; *Siddur Tefillah* (1912) with the commentaries “*Magen ha-Elef*” and “*Mekor ha-Berakhot*” of A.L. Frumkin (in his edition of the *Seder Rav Amram Gaon*); *Avodat ha-Levavot* (1922) with the commentary of Wolf Jawitz, dealing mainly with the dependence of the language of the prayer book upon that of the Bible; *Olat Re'iyah* (1939–49), with the commentary of Abraham Isaac Kook; *Zelota de-Avraham* (1957–62), in accordance with the usage of Abraham Landau, rabbi of Czechanow (d. 1875), with the commentary of his grandson M.M.H. Landau, and with additional exposition by Jacob Werdiger, the latter's grandson, containing important studies of the sources of the prayers and of the various

rites. To these should be added the commentary “*Ez Ḥayyim*” of Yaḥya b. Joseph Zelah to the Yemenite *Tikhlah* (1894–98). The ancient connection between the text of the prayers and their laws was renewed in the 19th century when the *Derekh ha-Ḥayyim* (1828) of Jacob *Lorberbaum of Lissa and the *Ne-hora ha-Shalem* (1827) of Jehiel Michael of Michailishki (Vilna region), author of the *Korban Aharon* on the *maḥzor*, were accepted into the prayer books; both have been published innumerable times. The Sephardi Jews created similar editions for the use of their congregations, when they added to their prayer books the *Kesher Godel* (Leghorn, 1802) of Ḥ.J.D. Azulai, dealing with the laws of the prayers, and the *Shelemut ha-Lev* of an anonymous author.

Ḥasidic Siddurim

In the 18th century the Sephardi tradition with certain modifications was adopted by the ḥasidic communities of Poland and Russia. From that time on ḥasidic prayer books were published, i.e., Ashkenazi prayer books with the regular prayers adapted to the needs of the Ḥasidim. A careful editing of this version was executed by the founder of the Chabad ḥasidic sect, *Shneur Zalman of Lyady – he called this version specifically the Lurianic version (*Nosah ha-Ari*). It was published and disseminated in many editions, in part enlarged by commentaries in the form of lectures to the Ḥasidim (Kapust, 1816, reprinted New York, 1965, with full printing history).

[Ernst Daniel Goldschmidt]

Modern Prayer Books (English Editions)

Mention should be made of some of the better known translations of the prayer books in English. The *Authorized Daily Prayer Book* (1890) by S. *Singer has been a standard for the English speaking world for many years. It went through many editions and by 1970 had sold nearly 500,000 copies (a revised edition was published in 1962). A companion to this prayer book was published by (1914) and an annotated edition by J.H. Hertz (1941) with the addition of occasional prayers. In the U.S. another version with notes was edited by P. *Birnbaum (*Daily Prayer Book* (1949, and many editions)), and the *High Holyday Prayerbook* (1951, and many editions). A prayer book that grew considerably in popularity in the 1990s was the ArtScroll Siddur. The best-known modern Sephardi prayer book and *maḥzor* were the ones edited by David de Sola *Pool.

Reform Prayer Books

Liturgical reform began in the practical sphere, with most of the attention being given to the external aspects of worship. During the initial stages the aesthetics of the synagogue service occupied the minds of the early Reformers more than the doctrinal content of the prayer book. The major emphasis as exemplified by the efforts of Israel *Jacobson, I.S. *Fraenkel, and M.I. *Bresselau, was placed on the form of worship rather than on serious grappling with theological issues. In 1810 Jacobson, a financier and philanthropist, provided a simplified, decorous service for boarding-school children in Seesen, and

in 1815, opened a synagogue in Berlin in which he installed an organ and instituted the confirmation ceremony (see *Bar Mitzvah), while the editorial labors of Fraenkel and Bresselau created the Hamburg *Gebetbuch* (*Sefer ha-Avodah, Ordnung der oeffentlichen Andacht*, first ed. 1819). However, the more scholarly contributions of Wolf *Heidenheim's "Mendelssohn des Gebetbuches" (Elbogen) were not ignored by the early Reformers. The closing pages of the Hamburg volume contain learned notes citing dissenting views in older sources that might lend support to Reform. Yet the emphases of the first Reformers were practical, and it was not until later that the burgeoning *Wissenschaft des Judentums*, as well as recent developments in Jewish theology, left their influence on the reformulated *siddur*. While the German Reform Rabbinical Conferences (1844–46) were in session, lending shape and direction to the amorphous variety of liturgical changes then in the making, the founders of the Berlin Reform community broke company and began to devise its own radical, predominantly German rite which limited the Hebrew to a few selected biblical verses. When the congregation secured Samuel *Holdheim as its spiritual leader, he was authorized to revamp its liturgical manuals. While keeping much of their dissentient character, Holdheim brought classical and traditional forms and recent liturgical research into greater play, thus moderating the excesses of the Reform community's ritual. D.W. Marks, a remarkably well-versed layman, edited *Seder ha-Tefillot – Forms of Prayer*, published in 1841–43. A spiritual offspring of the Hamburg *Gebetbuch*, the prayer book was used in the West London Synagogue of British Jews of which Marks was the spiritual leader. Although in the introduction the editor admits his debt to the scholarship of *Zunz, *Rapoport, and others, in actuality, he relied very little upon the content of their works. Rather Marks derived from these learned men the encouragement and inspiration for his own original endeavors. Unlike its continental counterparts, *Forms of Prayer* evinces an almost Karaite scriptural fundamentalism. Marks imitates his Hamburg predecessors, however, in some choices of Hebrew prayers to be read in the vernacular, in shunning repetitions, in the offhand treatment of the *haftarah*, in slight abbreviations of the standard text, and in the partiality toward Sephardi *piyyutim*. Apart from occasional pseudo-Karaizing, *Forms of Prayers* may be said to stand in the Orthodox tradition. Only infrequently did Marks contribute original Hebrew compositions. These works were often written in a felicitous classical style, as in his unique *Birkat ha-Mo'adim* which replaces the festival additional service. The prayer books of the aforementioned Reform community were probably the first to pay particular attention to the theological principles underlying the prayer text and to make emendations accordingly. In line with his evolutionary view of Judaism, Abraham *Geiger was the first consistently to introduce Reform principles into the body of the traditional Hebrew text. Historical consciousness and theological integrity are the hallmarks of Geiger's liturgical works (the first edition of his prayer book was published in 1854) that became the ma-

ior characteristics of the moderate Reform (Liberal) liturgy in Germany for nearly a century.

During the middle of the 19th century, German Jewish immigrants to the U.S. brought with them the liturgical reforms that were then emerging in Central Europe. The single formative influence to dominate all others was the Hamburg *Gebetbuch*. The principal U.S. prayer books of the day, Leo *Merzbacher's *Seder Tefillah – The Order of Prayer for Divine Service* (1855), David *Einhorn's *Olat Tamid – Book of Prayers for Israelitish Congregations* (1856), and Isaac M. *Wise's *Minhag Amerikah – The Daily Prayers for American Israelites* (1857), which varied in degree of reform, revealed the tastes and talents of their authors, and reflected the demands of their respective congregations, nevertheless, bore the stamp of the Hamburg *Gebetbuch*, the parent Reform prayer book. *Seder Tefillah*, *Olat Tamid*, and *Minhag Amerikah* contain similar treatments of *Ausheben* (*Hoz'at ha-Torah*) and have either the expanded Hamburg Mourner's Kaddish and/or an elaborate *Todtenfeier* (*Hazkarat Neshamot*) for the Day of Atonement, rendered almost entirely in the vernacular. (For sentiment's sake, Wise kept his German version even in his English translation). All of the prayer books have recourse to hymns from the Hamburg *Gesangbuch*. Each carries the Sephardi *hashkavah*, usually replacing *El Male Raḥamim* of Ashkenazi tradition, and all delete *Kol Nidrei* in favor of Leopold Stein's *O Tag des Herrn* ("O Day of God") or some other appropriate substitute. *Piyyutim* of Spanish-Portuguese origin take precedence over the more recondite and allusive Ashkenazi *piyyutim*. Influenced by a process already begun in the Hamburg rite, Einhorn progressed further than his German-American counterparts by making his ritual bilingual, although German predominated, especially in the new, protracted pieces recited by the rabbi in oratorical style. Merzbacher pared his Hebrew service to mishnaic simplicity and occasionally recast phrases or whole sections in unexceptionable Hebrew, saving the vernacular for extra-liturgical, non-statutory prayers and hymns. Both Merzbacher and Einhorn dropped the **Musaf*, the former, however, reserving it for the day-long worship on the *Day of Atonement. Wise, however, kept the order intact, concentrating chiefly on revising the text in accordance with Reform doctrine. (On rare occasions he permits himself such liberties as replacing the **Pesukei de-Zimra* on the festivals with the *Hallel* psalms and creating an unusual private service for *yahrzeit*.) All of these rites were incorporated in the most important Reform work of the following century, *The Union Prayer Book for Jewish Worship – Seder Tefilot Yisrael* (first ed. 1894–95). Of particular importance in the compilation of *The Union Prayer Book* were the transitional works of Adolph *Huebsch (e.g., his prayer book for Congregation Ahawath Chesed (1889) in New York, translated by A. Kohut) and Isaac S. *Moses. Huebsch combined Holdheim's work with Wise's *Minhag Amerikah*; while Moses combined *Seder Tefillah*, *Olat Tamid*, and later, Huebsch's synthesis as well. The end of the 19th century witnessed the writing of many new vernacular compositions. Some from predominantly English formularies,

beginning with Joseph *Krauskopf's *The Service Ritual* (1888) and *The Service Manual* (1892), Gustav *Gottheil's *Morning Prayer* (1889), and Kaufmann *Kohler's *Sabbath Eve Service* (1891), found their way into the *Union Prayer Book*. After much weighing and harmonizing of texts, the result was an abbreviated and simplified liturgy with both languages kept in balance, interspersed with prayers and responses in the language of the country. The *Union Prayer Book* represents the cumulative efforts of the American Reform movement to achieve a uniform rite that would meet the needs of diverse congregations throughout the nation. The remarkable durability of the prayer book in its various editions testifies to the success of those efforts. Each edition mirrors changes in theological views and reflects the vicissitudes of the Jewish community both in the U.S. and abroad. The second edition (1922), for example, shows an increased interest in ceremonial life which hitherto had been substantially eliminated. Neither Merzbacher's volume nor Einhorn's contains the ritual *berakhot* for the blowing of the *shofar* or the kindling of the Hanukkah candles, whereas the second edition of the *Union Prayer Book* readmits them. The greater quality of the Hebrew in the revised 1940 edition attests to a heightened ethnic consciousness. Jewish group solidarity is expressed by the inclusion of Hebrew prayers from all eras and places, which enhance the diminished rabbinic *stammgebete* (regular prayers). The 1975 edition, *Shaarei Tefillah: The Gate of Prayer – The New Union Prayer Book* affirms Jewish tradition, culture, and nationhood in its choice of prayers and supplements. In the 1990s a gender-sensitive edition appeared as well.

OUTSIDE U.S. IN 20TH CENTURY. Reform in the U.S. was generally dependent upon Central European prototypes for doctrinal reformulations until the early 20th century, when American Reformers took the lead in liturgical renewal. Two cases in point, Caesar *Seligmann's *Israelitisches Gebetbuch* (1910) and the French Union Libérale Israélite's *Tefillot Kol ha-Shanah – Rituel des Prières Journalières* (1925), which take considerable liberties with the historical text and the directions for the performance of the ritual, were inspired by American models. While there is no slavish imitation – distinctively European requirements having been given attention – the desire to forestall monotony during the service by introducing variety and meaningful alternation of languages was substantially derived from the U.S. *The Liberal Jewish Prayer Book* (1923–26) by Israel I. *Mattuck, former U.S. Reform rabbi and a founder of English Liberal Judaism, displays unique and wide-ranging literariness. (The same disposition toward variety is maintained in *Avodat ha-Lev – Service of the Heart* (1967).) Largely influenced by the *Union Prayer Book*, the emended West London Synagogue's *Seder ha-Tefillot – Forms of Prayer* (1931) exhibits renewed appreciation for both traditional rabbinic arrangement and religious liberalism in being shorn of its eccentric and ostensibly fundamentalist character. This is seen in the selection of benedictions for the weekday *Amidah*, in the choice of the *Aleinu* text, and in the reinstatement

of *berakhot* for rabbinic ordinances. The *Einheitsgebetbuch* (edited by C. Seligmann, I. Elbogen, and H. Vogelstein, 1929) deserves special mention not only because it appropriated a variety of texts from the *Union Prayer Book*, but, more significantly, because it succeeded in achieving unity among the Liberal congregations of Germany before World War II. This major accomplishment serves as a becoming *Memorbuch* to a decimated German Jewry.

Conservative and Reconstructionist Prayer Books

The Conservative and Reconstructionist manuals adhere to the classical outlines, although also constituting a departure from traditional Judaism, representing what J.J. *Petuchowski calls "Reform from within." *Maḥzor le-Shalosh Regalim – The Festival Prayer Book* (United Synagogue of America, 1927), a Conservative publication, is closer to the enlightened Orthodoxy of Hermann *Adler and Joseph H. *Hertz, former chief rabbis of Great Britain, than to any publication of the moderate Reform or proto-Conservative movement such as Benjamin *Szold's and Marcus *Jastrow's *Avodat Yisrael – Israelitish Prayer Book* (first ed. 1865), or Aaron Wise's *Shalhevet Yah – The Temple Service* (1891). A reason for this may lie in the Conservative movement's loyalty to Solomon *Schechter's motto "catholic Israel." Dependence upon the official British books can be seen in the use of the festival *piyyutim* and of the introductory memorial prayer at *Hazkarat Neshamot*. This anglophile penchant gave way approximately 20 years later to a more independent *Seder Tefillot Yisrael le-Shabbat u-le-Shalosh Regalim – Sabbath and Festival Prayer Book* (Rabbinical Assembly of America and United Synagogue of America, 1946), wherein a minimum of textual reforms are permitted as in some of the preliminary benedictions of the morning service and in the middle benediction of the additional service where *sham nāaseh ve-nakriv* is altered to *sham asu ve-hikrivu*. With unity of Conservative congregations their overriding aim, the editors were determined not to add unnecessarily to the plethora of variations on controverted texts. Among the more innovative features of the *Sabbath and Festival Prayer Book* are the supplementary readings and explanatory notes at the end of the volume. The most far-reaching of the Conservative liturgical publications in hard-cover is the *Siddur li-Ymot ha-Ḥol – Weekday Prayer Book* (1961). The editors introduce significant changes in wording to bring the prayers into closer harmony with the consensus of Conservative belief. Apart from obvious Zionist sentiment, the rewritten *Musaf* for the festivals and for Rosh Hodesh reads materially as a 19th-century German Liberal reconstruction. The 1985 *Siddur Sim Shalom* preserves much of the traditional liturgy while again addressing itself to contemporary concerns. It too came out with a gender-sensitive edition in the 1990s. The Reconstructionist *siddurim* (*Seder Tefillot le-Shabbat – Sabbath Prayer Book*, 1945; *Maḥzor le-Yamim Nora'im – High Holy Day Prayer Book*, 1948; *Festival Prayer Book*, 1958; and *Seder Tefillot li-Ymot ha-Ḥol – Daily Prayer Book*, 1963) also make extensive use of supplementary readings. Reconstructionist tenets, such as the denial of the

idea of the Chosen People, and the diminution or deletion of supernatural and anthropomorphic references, set them apart from the Conservative prayer books.

Prayers for Contemporary Events

It has taken time for the events of World War II, the Holocaust, and the rebirth of the State of Israel to be fully comprehended and treated in adequate liturgical form, but none of the official prayer books of American Jewry alludes to any of these momentous happenings except the Reconstructionist *Daily Prayer Book*, and the Conservative *Siddur li-Ymot ha-Hol – Weekday Prayer Book* (1961), which includes a newly composed *Al ha-Nissim* for Israel Independence Day. That these events have not been forgotten is proven by the fact that individual congregations and communities mark these occasions by circulating mimeographed prayers, privately or locally printed. Because Europe was the battleground, the remnant of Progressive Jewish communities in Europe have already responded to this chain of circumstances. Virtually all of the latest European Liberal and Reform prayer books include at least an entreaty on behalf of the State of Israel. Within the last two decades, as the shock of the Holocaust has been absorbed and its implications assimilated, a number of new prayer books have been compiled both in Europe and in Israel that give proper weight to the twin experiences touching world Jewry. The majority of these prayer books show an awareness of the scope of tradition and clearly enunciate principles of 20th-century Reform (e.g., Zionism is obviously no longer the taboo it once was). A modern and uniform liturgy is beginning to emerge in which the mishnaic nucleus of the *Stammgebete* is preserved and the *Musaf* dismissed. Differences consist mainly in wording, in selections from the opening sections of the prayer book, i.e., *Birkhot ha-Shahar* and *Pesukei de-Zimra*, and in the length of individual prayers. Variety is emphasized even within this simplified and relatively fixed framework. Novel and unexpected developments have been taking place in the U.S., including experimentation with jazz, rock, and multi-media in the performance of the liturgy.

[Eric Lewis Friedland]

There have been many innovations by the Rabbinat in Israel with regard to certain events. The most extensive of these new prayers concerns Israel Independence Day (see Prayers for *Independence Day). In addition the Israel rabbinat has composed special prayers for Holocaust Remembrance day (Nisan 27) and for the day of general *yahrzeit* for victims of the Holocaust (Tevet 10). They have also produced special *El Male Rahamim* prayers for victims of the Holocaust and for those who fell in the defense of the State of Israel, and special prayers on behalf of Soviet and Arab Jewry. The Israel Army Rabbinat composed a special *Tefillat ha-Derekh* for paratroopers (written by the Chief Chaplain Rabbi Shelomo *Goren). After the Six-Day War the religious kibbutz movement Ha-Kibbutz ha-Dati issued a new version of the *nahem* prayer (which mourns the destruction of Jerusalem) recited

on the Ninth of Av, emphasizing the opportunity to rebuild Jerusalem.

PREACHING.

In the Talmudic Period

NATURE AND PURPOSE OF THE SERMON. The sermon, delivered in the synagogue or in the house of study, mainly on Sabbaths and festivals, is a very ancient institution. Nothing is known of its beginnings. It may have originated in the *Targum, i.e., the translation of the lections from Scripture into the Aramaic vernacular for the benefit of those who could not follow the Hebrew reading. The Targum in days of old was paraphrastic and the biblical texts were embellished with much aggadic material. Eventually, the Targum was curtailed and additions to the text were no longer allowed (Tosef., Meg. 4:41). Its former function of instruction and edification was then taken over by the sermon. By the end of the Second Temple period, sermons were a well-established custom both in Palestine and in the Diaspora.

The importance of the sermon can hardly be overestimated. Not only did it serve as the chief means of instructing all the people – peasants, women, and children – and imparting to all and sundry at least an elementary knowledge of the Torah and its teachings, but it also provided the sages with a means of guiding the people, strengthening their faith, and refuting heretical views.

By using at times daring methods of interpretation, the preachers succeeded in making the Bible an unceasing source of ever-new meaning and inspiration in which answers to the problems of every generation could be found. Thus when the unquestionable biblical faith in the rewards of the righteous in this life could no longer satisfy the people in times of disasters and persecutions, the rabbis would unhesitatingly substitute for it the belief of reward in the world to come: “He has given food unto them that fear Him, He will ever be mindful of His covenant” (Ps. 111:5) became – by means of a play on the words *teref*, “food,” and *teruf*, “confusion” – “He has given confusion

to those who fear Him in this world; but in the future to come He will ever be mindful of His covenant" (Gen. R. 40:2). To the outcry of those who witnessed the destruction of the Temple, and who, on reading such a verse as "Who is like unto Thee, O Lord, among the mighty?" (Ex. 15:11) would ask: "Where then is His might, if he looks on while His Temple is destroyed and keeps silent?" The rabbis answered: "Who is like unto Thee among the mute ones" (a play on the words *עִלְמִים*, *elim*, "the mighty ones," and *עִלְמִים*, *illem*, "mute"). The explanation was: "His very restraint and silence is the proof of His strength and power: for who is mighty? He who conquers his passions!" (TJ, Ber. 7:4, 11c; Mekh., Shira, 8; Yoma 69b; Avot 4:1).

THE SERMON AND AUDIENCE. Through their reinterpretations of the Bible, their bold use of the biblical material to give expression to the burning issues of their own times, and the application of ancient traditions to new circumstances, the rabbis succeeded in keeping the Bible alive and meaningful for their own generations.

Entertaining Devices Used in Sermons. In addition to the use of exegesis, the preachers would amplify and recreate stories, would enliven their preaching by ample use of folktales and parables, and employ dramatization and various rhetorical means to make their sermons attractive and challenging. They would modulate their voices in presenting dialogues and imitate the different characters represented. The "entertainment value" of the sermon was often no less important than its educational and edifying aspects. Some critics indeed compared the Jewish preachers to actors whose "performances" were too "theatrical" for their liking. Small wonder then that the people would come in masses to hear sermons, especially of well-known preachers (TJ, Hor. 3:7, 48b). They would come even from outlying villages, and would make special arrangements beforehand to permit them to exceed the "Sabbath-limit" of 2,000 cubits (Er. 3:5).

The rabbis contrasted the synagogues and the houses of study and their sermons with the attractions of the circus and of the theater of the Roman-Hellenistic world. Remarkably enough, they succeeded in making the bulk of the people prefer the former: "They that sit in the gate talk of me" (Ps. 69:13) was given two different interpretations: "those are the gentiles who sit in their theaters and circuses ... scoffing me"; and "those are Israel who sit in the synagogues and houses of study ... reading dirges and lamentations and *Eikhah*" (Lam. R., Proem 17). However, the well-to-do would, at times, stay away from such "vulgar" gatherings (Git. 38b). The audience expressed their approval and enjoyment; at times, they reacted with laughter, or, when the preacher did not succeed in arousing them, with indifference. The preachers would adapt their interpretations and examples to the level of the audience, and when addressing simple people they would not refrain from using very telling, even ribald, phrases or illustrations (Lev. R. 18:1; S. Lieberman, *Greek in Jewish Palestine* (1942), 161–2). The popularity of the aggadic sermon emerges clearly from the following statement: "In times of old when the *perutah* [a

small coin] was easy to come by, a man would desire to hear words of Mishnah and of Talmud; but now when the *perutah* is no longer easily found, and moreover we are suffering from the kingdom [i.e., Roman rule], a man desires to hear words of Scripture and words of *aggadah*" (PDRK 101b).

Time of Delivery of Sermon. Sermons were delivered, whenever possible, on every Sabbath and on other special occasions, including fast days, especially on the Ninth of Av. They would be based mostly on the Torah sections read on the days when they were delivered, i.e., the *sidra* of the so-called *triennial cycle on ordinary Sabbaths and the special lections on festivals. On special Sabbaths (e.g., before and after the Ninth of Av), the prophetic readings might provide the texts for the homilies. The exact time of the sermon varied. It is known that there were sermons delivered on Friday nights (TJ, Sot. 1:4, 16d), on Sabbath mornings after the readings from Scripture (Luke 4:16ff.), or on Sabbath afternoons (Yal. Prov. 964). It appears that many sermons were given before the scriptural readings, serving as introductions to, and preparations for, the latter (see below). Probably, such sermons were rather brief.

The Preacher. If one of the great sages delivered the sermon, he would make his appearance only after the whole audience had assembled; in the meantime, younger rabbis, acting as auxiliary preachers, would keep the people occupied (TJ, Suk. 5:1, 55a; Gen. R. 98:11; but also Deut. R. 7:8). The preacher made use of a *turgeman* ("translator"), or of several, whose task it was to broadcast the words of the preacher in a loud voice which could be heard by all sections of the audience. This served not so much a practical purpose, for some of the preachers at least must have had voices powerful enough to make themselves heard, but was a token of respect (I.M. Kosowsky, in *Sinai*, 45 (1959), 233 – 43). The preacher would take care to prepare his sermon properly; but in some places, at least, it was customary for members of the audience to address questions to him which he was expected to answer on the spot. Some inexperienced preachers found this custom disconcerting and were unable to reply (Gen. R. 81:2).

The Openings of Sermons. The sections opening with a halakhic question, preceded by the formula *yelammedenu rabbeni* ("may our master teach us") or the like, which appear at the beginning of homilies, especially in the **Tanhuma* Midrashim, reflect the custom of introducing a sermon by a question posed by a member of the audience. The challenge to the preacher was not so much in finding the answer – for mostly the questions referred to well-known *halakhot* – but to improvise a way of linking up both the question and the answer with the real subject matter of his sermon, concerned usually with an aggadic interpretation of the Bible reading for the day. It is, however, quite possible that often the question posed to the preacher had been prompted and was known to him beforehand.

FORMS OF THE SERMON. Though the "classical" Midrashim undoubtedly drew the bulk of their material from the tens of

thousands of sermons which had actually been preached in the synagogues of Palestine during the first four or five centuries C.E., they have hardly ever preserved these sermons in their original form. In many cases, they present mere outlines of actual sermons or of parts of them, while, on the other hand, they take sections from many separate sermons and weld them into new and larger units.

The Proem Type. One of the rhetorical forms, found frequently in practically all of the old Midrashim, the proem (*petiḥta*), undoubtedly had its origin in the live sermon. It opened with a quotation from Scripture, not taken from the text read on that day, but mostly from the Hagiographa. Through a series of aggadic interpretations and stories, the quotation was gradually linked up with the first verse of the pericope (or the prophetic lesson) of the day. Often, the preacher intentionally chose a verse which seemed completely unconnected with the weekly portion so as to arouse the curiosity of the audience and increase its interest. Sometimes the connection would be established by means of a play on words or similar rhetorical device. Nearly always, the opening verse chosen expressed a general idea which was subsequently illustrated by the specific example provided by the contents of the pericope. Such proems served originally either as opening sections of complete sermons (according to Maybaum, Bacher) or, more likely, were sermons complete in themselves (according to Bloch, Baeck) and were preached, presumably, immediately before the readings from Scripture, serving as introductions to the latter (Heinemann).

Other Types. But the proem type was by no means the only kind of sermon in vogue. Apart from the *yelammedenu* form, already mentioned, there were sermons opening with a form of benediction, praising God for giving Torah to Israel, and proceeding from this to the specific theme to be developed (J. Heinemann, *Ha-Tefillah bi-Tekufat ha-Tanna'im ve-ha-Amora'im* (1964), 160 – 2). Undoubtedly, other sermons took for their point of departure the first verse of the weekly portion itself; the section in *Mekhilta*, beginning with “And Moses took the bones of Joseph with him” (Ex. 13:19), may serve as an example of this type. Another type of opening of the sermon has been preserved in passages in which the first verse of the pericope is immediately followed by a reference to a verse elsewhere, in the light of which the former is interpreted, e.g., “Then came Amalek’... This verse is to be ... explained in connection with the passage in Job where it is said ‘Can the rush shoot up without mire ...’”(Mekh., Amalek, 1 beginning).

Conclusions of Sermons. The concluding sections of homilies in the Midrashim mostly sound the messianic theme, contrasting the suffering and the troubles of “this world” with the joys of “the world to come.” It stands to reason that these sections also represent perorations of actual sermons. Other sermons appear to have ended in prayers which expressed either thanks to God for the giving of the Torah or a request for the speedy

coming of redemption or both (Heinemann, loc. cit.). One example of such a concluding prayer is the **Kaddish*.

Example of a Complete Sermon. One of the few sermons whose entire structure appears to have been preserved (though probably only in outline) is the one by R. Tanḥum of Nevay (Shab. 30a–b): It starts with the halakhic question of whether one may extinguish a light on the Sabbath for the sake of a person dangerously ill. It then proceeds to discuss the relation of life and death on the basis of scriptural quotations, illustrating its argument with poignant stories from the lives of David and Solomon and making the point, among others, that even one day in the lives of the righteous is of supreme value in the eyes of God. It concludes by answering the question posed at the beginning that man’s soul “is the lamp of the Lord” (Prov. 20:27) and it is better that a lamp made by man be extinguished on the Sabbath rather than the soul (life), the lamp made by God. In form this sermon is unique, for in spite of its affinities with the *yelammedenu* type, it differs from it by placing the answer to the halakhic question at the conclusion of the entire sermon.

HOMILIES IN THE MIDRASHIM. It follows that in different times and places sermons exhibited a variety of structures and patterns. Against this, in the so-called homiletic Midrashim all homilies are constructed more or less in a uniform pattern: after a series of proems there follows the “body” of the sermon (whose structure is not clearly defined), and finally the messianic peroration (Lev. R.; פֶּדְרָק). In Midrashim of the *Tanḥuma-yelammedenu* type, the parts mentioned are preceded by the section opening with a halakhic question. Such homilies do not represent single, actual sermons as preached in public. Even if the proems are considered to be mere opening sections, no preacher would have used a whole series of such introductions, independent of one another, consecutively, in order to arrive again and again at the same point which he had already reached with the first one, i.e., the first verse of the pericope. Hence these homilies must be taken as creations of the editors of the Midrashim who made use of a number of sections, especially proems, taken from different sermons, and combined them into a new form, the “literary homily,” which must not be confused with the actual live sermon as preached in the synagogue (in a variety of forms).

J. Mann developed a highly ingenious theory that both the halakhic question (in the *yelammedenu* type of homily) and the Bible verses with which the proems open were chosen for the sake of verbal tallies to the prophetic reading (*haftarah*) for the day. Thus a system of associations with the *haftarah* provides the hidden links between the various sections of the sermon (even though the *haftarah* itself is not quoted, as a rule). Pertinent objections to this theory have been raised by S. Lieberman (*Kovez Madda'i le-Zekher M. Schorr* (1944), 186) and by H. Albeck (Zunz-Albeck, *Derashot*, 473–4, n. 180). Among the weaknesses of Mann’s hypothesis is the fact that associations consisting of a mere verbal link – provided often by very common words – could presumably be discovered

in practically all cases, even if they had not been intended. What is more, where the required tally with the known *haf-tarah* cannot be found, Mann unhesitatingly stipulates a different one. Even the actual *yelammedenu* sermons, to the analysis of which Mann's book (see bibliography) is devoted, are frequently not the ones found in fact in the Midrashim, but sermons reconstructed by Mann himself by combining parts taken from different sources. Moreover, Mann assumes that such homilies were invariably composed of a good many parts: the halakhic openings, series of proems, the bodies of the sermons, and the perorations. Although he occasionally states that some of these parts (e.g., the proems) may be more ancient than others, he remains ambiguous as regards the all-important question of whether such complex structures represent live sermons actually preached, or are mere literary creations of the editors of the Midrashim.

[Joseph Heinemann]

Medieval Period

Through the *derashah*, or homily, the medieval synagogue pulpit could respond to and influence communal life on the pressing issues of the day and reinforce the traditions and ethics of the Torah. It served, too, as a vehicle for social criticism and reform, arousing concern and giving encouragement in times of trial and gloom. The sermon also provided scholars with the opportunity to show their worth, erudition, and acuteness. The *derashah*, while always based on biblical verses and rabbinic sayings, and utilizing the approach of the traditional commentary, aims, nevertheless, to interpret its subject matter according to contemporary needs and concepts. For the most part, the preacher also attempts to attune his homilies to the level and tastes of his listeners.

THE PREACHER. Over the generations, especially at times of crisis, scholars arose who regarded the sermon as their chief interest and duty. Many of them served as peripatetic preachers among the various communities and lands. Preachers appointed by particular communities received fixed salaries, while itinerant preachers usually had to rely on irregular contributions and, on occasion, congregational allotments for their support. The majority of homilies have survived in the forms in which they were composed and written down by the preachers themselves, which are undoubtedly different from the forms in which they were originally delivered. The *darshan* ("preacher") organized the written text and made it more scholarly than the original oral version. The language, also, was different, since the homily was preached in the tongue spoken by the Jews of the locale, while it was written down in Hebrew.

CONTENTS. Because the sermon was directed at the congregation as a whole, the *darshan* was frequently faced with the problem of reconciling the different levels of education within his audience, being caught between the use of a simple, clear approach on the one hand, and his desire for an original, innovative, and profound manner of preaching on the other. At

times the focus on nuances of interpretation would far outweigh the ethically instructive and socially beneficial aspects of the homily, which while pleasing the learned members of the community worked to the detriment of the simple folk, as well as impairing the effectiveness of the sermon itself. Midrashim from the early Middle Ages indicate that ethical teachings and commentaries touching on matters of communal interest were also at this time closely related to Torah reading in the synagogue. During that period anthologies of such material were prepared specifically for preachers. Their purpose was "to broaden the scope of Scripture and interpret it in terms of the world scene, thereby showing that God has from the very beginning of time foretold the end of days, and that we may learn many things about the commandments from the conversations of the Patriarchs" (*Midrash Lekah Tov, Va-Yeze*). The chronicle of *Ahimaaz relates that a certain learned preacher from Erez Israel had a number of prepared sermons written in rhymed Hebrew. The exegetical method as well as the socioreligious function of the *darshan* was already well established and defined for the Mediterranean Jewish communities from the time of Isaac *Alfasi and *Maimonides (11th and 12th centuries). The latter even ruled that "each Jewish congregation must arrange to have a respected and wise elder who has been known for his piety from his youth and is beloved by the people, who will publicly admonish the community and cause them to repent" (Yad, Teshuvah 4:2; cf. also Tefillah 11:3; Maim. Responsa, ed. by J. Blau, 1 (1957), no. 67). Judah *Hadassi in his *Eshkol ha-Kofer* records that by the 12th century the *Karaites had recognized the importance of the homily and accepted it as a standard practice: "The learned preacher would expound and comment upon the current Scriptural reading and Psalm before the people, who piously sought his presence and interpretation on Sabbaths, festivals, fast days, in the house of mourning, at weddings, and at circumcisions ... and turns many away from transgression" (para. 18).

The homily likewise had become an accepted part of Jewish life in Germany by the first half of the 12th century. Accounts of Jews martyred in 1096 include an actual *derashah* publicly delivered to "the first to be slain" and urging them to accept martyrdom. A substantial number of the stories and ethical teachings in *Sefer Hasidim* appear to have been passages from sermons, parables, and the like. R. *Eleazar b. Judah b. Kalonymus of Worms ruled that "one must preach in words more precious than gold on the Sabbath ... one must assemble the people at that time and preach to them" (Comment. to Prayers, Mss. Bodleian, Opp. 110; see also A.M. Habermann, *Gezerot Ashkenaz ve-Zarefat* (1945), 166). After the carnage during the *Black Death, the homily in Germany in the late 14th and early 15th centuries became mainly a means to exhort the people to remain observant, as well as to teach laws and commandments as they should be practiced. In the second half of the 13th century, *Moses b. Jacob of Coucy, France, personally described a journey which he made throughout Spain giving sermons of admonition. His purpose was to strengthen

the ritual practices of *tefillin*, *mezuzot*, and *zizit*; to persuade the men to give up their non-Jewish wives and to prevent them from profaning the name of God through abusing the gentile (*Sefer Mitzvot ha-Gadol*, 1, 2, 112; 11, introd.). He also records a complete sermon in a style very similar to the manner in which it was delivered, obviously directed to a group particularly in need of spiritual awakening. For this he used the system of explaining biblical verses, raising the threat of divine punishment as well as the promise of a heavenly reward. This wandering halakhist and *darshan* is the first known preacher in the Middle Ages to appear as a moral and ethical preceptor of the masses. Most of the ethical works of *Jonah Gerondi appear to be the literary residue of fiery preaching. The homilies of *Naḥmanides which have been preserved (as, e.g., for Rosh Ha-Shanah and in the debate with the king of Aragon in the synagogue on the Sabbath) are in reality profound, comprehensive essays on ethical theory, an indication of the high level of his Spanish audience. The rationalist followers of Maimonides in 14th-century Provence also publicly delivered philosophical-allegorical homilies (compare Jacob *Anatoli in his *Malmad ha-Talmidim*).

In Spain, by the 14th century, the *derashah* had attained a well-developed methodology and compact structure. To the halakhic and philosophical content of the *derashah* were now added mystic elements (e.g., cf. the *Kad ha-Kemah* of R. *Baḥya b. Asher). One of the most renowned preachers of this period was *Nissim b. Reuben Gerondi. The 15th-century sermon reflects the struggle with Christianity and points up the social crises that arose at a time of persecution. The homilies of the most illustrious *darshan* of the generation of the Expulsion, R. Isaac *Arama, show that periods of vigorous anti-Jewish Christian preaching have called forth an equally strong reaction from contemporary Jewish preaching (introd. to *Akedat Yizḥak*). Arama's sermons in *Akedat Yizḥak* combine a more difficult speculative analysis with popular appeal in order to strengthen the faith, be alert against Christian slanders, and safeguard the character of his hearers during the calamities threatening them.

STRUCTURE AND STYLE. Joel *Ibn Shuaib, a *darshan* who taught the transposition of laws from theory to practice, summed up the architectural and aesthetic tradition of the *derashah* in Spain around the time of the Expulsion. The preacher, he counseled, should concern himself with two essentials in his sermons: (1) the integrity of the subject matter, and (2) the perfecting of his manner of expression.... Regarding the first, he must be careful ... that, whatever he will say, his listeners will derive benefit. Though his sermons be very profound, he must make them clear enough for the masses of the people to gain something from them on their level. Yet no less must he have regard for the special interests of the more intellectually inclined who may be present when his subject is mostly directed to the simple folk. On the second principal concern, the form of the sermon, three considerations are paramount:

(1) the length – it should not be the least bit longer than is absolutely necessary to convey the intended *derashah*;

(2) the structure – the sermon should be well organized, not lacking in proper order, now in the streets, now in the broad places (Prov. 7:12);

(3) his phrases and words should possess grace and dignity, and they ought to be delivered in a pleasing and proper way according to the following conditions: Along with an attractive style and an inherent order within the sermon, the preacher must also make proper use of his voice in addressing the people so that they should understand even from his external manner of speaking that his words have value for them (Introd. to *Olat Shabbat*, Venice, 1577).

An interesting illustration of the actual style of the *derashah* as it was preached has been preserved in the homily delivered by Isaac *Aboab, the last principal of the yeshivah of Lisbon, in 1492–93, to the exiles from Spain:

How can I endure so much suffering? A man can exist in this world for one of two reasons: either because he is in his own land, or because the Lord is watching over him. About the first reason, Cain said: "Behold, Thou hast driven me out this day from the face of the land" (Gen. 4:14). Regarding the second, he added, "whosoever findeth me will slay me" (*ibid.*), meaning, whatever may befall me, whether through the air or from some other part of the world, may be a reason for Him to kill me. The Holy One will have mercy on us.... There is a parable of a father and son walking together. Tired and feeling weak, the son asks the father if they are far from the city... and the father explains to him how he may know: once you see a cemetery, then you will be near the city.... When we see many misfortunes at hand, it signals the coming of the Messiah (*Nahar Pishon*, Constantinople, 1538, 11a).

This homily is an immediate, live reaction to the expulsion from Spain.

The *derashah* developed further in the 16th and 17th centuries among the exiles, and Jews in Italy influenced by them, who were all nourished to some extent by Renaissance culture. The sermons of the most prominent 16th-century preacher in Italy, Judah *Moscato, intersperse references to music and astronomy and Italian phrases with rabbinic aphorisms. Within this milieu, Leone *Modena compared the preacher to "a stone engraver carving out a fine statue" (*Midbar Yehudah*, Venice, 1602, 5a). To the Venetian Jewish community the homily was a work of art valued for the perfection of its form.

Homiletics underwent a more turbulent development in Poland and Lithuania, reflecting communal dissension and social problems. A number of Polish-Jewish preachers openly declared that they had the right to interpret Scripture freely in order to admonish and instruct their congregants. Yet some scholars complained about the preachers who would take liberties with biblical verses not in order to reprove their communities but to prove their own dialectical subtlety and to satisfy the eagerness of their listeners for novel and clever interpretations. This tendency led to confusion and awkwardness in the *derashah*. From the same period there are many *midreshei-peli'ah* ("wonder tales") invented by preachers who

attributed them to early Midrashim. *David b. Manasseh, an itinerant often-persecuted preacher, wrote *Ketav Hitnazzelut la-Darshanim* (“Writ of Apology for Preachers”) in 1574, in which he argues for homiletic license to interpret and use various rhetorical devices to influence listeners. The *darshan* *Berechiah (Berakh) b. Isaac Eisik of Cracow testifies (in his *Zera Berakh*) that the homily provided the learned with a means of persuading the leaders of the community to their point of view.

SOCIAL IMPACT. Some preachers battled openly and vigorously in communal affairs. Outstanding among these was Ephraim Solomon of *Luntshits, whose sermonic works (*Ir Gibborim*, *Olelot Efrayim*, *Ammudei Shesh*, and *Orah le-Hayyim*) influenced his own as well as later periods. R. Ephraim forcefully attacked egotism, the avaricious pursuit of wealth, the haughtiness of the rich, and their self-righteous hypocrisy. Formerly a wandering *darshan*, frequently derided and little known, by his dynamic preaching Luntschitz achieved such recognition that he was invited to deliver a homily before the *Council of Four Lands in session at Lublin. He later served as rabbi of Prague, succeeding *Judah Loew b. Bezalel, who was himself an eminent preacher.

The pervasive influence of the *derashah* is apparent, too, from regulations and communal actions in Poland-Lithuania. In 1638 and 1648 the salary of the preacher appointed by the Poznan community was set as second only to that of the *av bet din*, and the difference between the two was negligible. In 1717, the Jews of Cracow defined the ideal preacher as one who “in his pleasant utterances gives joy to both God and man, and quenches the spiritual thirst of every class of people according to the depth and breadth of their understanding. Sometimes he teaches the Law in depth, explaining the words of our rabbis, distilling the strong waters of *Gemara*, codes, and *tosafot*. Yet he can still clarify, instill into his hearers a sense of reverence, sweeten the bitterness of life through his pleasant manner of speaking with straightforwardness..., in sermons open and understood by all, including those whose minds cannot fathom the depth of his words” (D. Weinryb, *T’udot le-Toledot ha-Kehillot ha-Yehudiyot be-Polin* (1950), 185).

The regulations issued by the Council of Lithuania indicate that the communal leadership was apprehensive of the potential force of the *derashah*, which they could not control. In 1628, they instituted supervision over all sermons in reaction to the freedom which the itinerant preachers had assumed. In 1667, during the agitation which followed the appearance of *Shabbetai Zevi, they again protested that “a number of men go around in this region, preaching publicly in synagogues and other places, pompously delivering open reproofs. However, their preaching appears in some part for their own self-glorification.” The Council placed supervision of the sermons under “the local rabbi and seven city elders. If a man attempts to preach without their express permission, they may say to him: ‘Step down from the pulpit,’ aside from imposing additional penalties” (S. Dubnow (ed.), *Pinkas ha-Medinah* (1925), no.

596). In Moravia, too, the governing body issued regulations regarding “the acceptability of preachers who station themselves at houses of learning,” and in 1701 they felt it necessary to warn the local leaders not to allow such *maggidim* (“wandering preachers”) to deliver sermons without the approval of the local *av bet din* (I. Halpern, *Takkanot Medinat Mehrin* (1951), 100, 168).

18th to Early 19th Century

The changes which occurred in Jewish life as a result of the partitions of Poland, the rise of *Hasidism, the development of *Haskalah, and *Emancipation brought a modification of the character and status of the homily. Significantly, even in the 18th century, preaching in the medieval style still retained its importance. Just as the Jewish leaders in Poland had epitomized their concept of the ideal preacher of the past in 1717, *Elijah b. Solomon ha-Kohen of Izmir in his homiletic work *Shevet Musar* (Constantinople, 1712) summed up the method of admonition which invokes the fear of Gehinnom and sufferings in the afterlife. His work was widely read, and translated into Yiddish. Jonathan *Eybeschuetz achieved fame in his lifetime as well as posthumously for his homilies (*Ya’arot Devash*). In the 18th century, Jacob *Kranz, the Dubno *Maggid*, exerted a profound effect upon his listeners through the effective use of parables. Some scholars believe that in 18th-century Poland these itinerant *maggidim* made up an intelligensia opposed to the existing intellectual establishment, who indirectly aided the rise of Hasidism. Yet the hasidic movement gradually substituted “the saying of Torah” by the hasidic rabbis for the standard *derashah*, thereby eventually replacing the wandering preachers.

Within the cultural sphere of the *Mitnaggedim the homily continued to play a role. Itinerant *darshanim* like *Moses b. Isaac ha-Darshan of Kelmy, and Hayyim Zadok, the *Maggid* of Rumschischki, were influential in Jewish society. Their chief concern focused on the struggle against Hasidism and Haskalah, as well as the founding of charitable institutions in the small towns of Lithuania and White Russia. They often intoned their sermons using a special plaintive melodic mode, and the parable was one of their most essential homiletic tools. For the *derashah* given by the boy who had become bar mitzvah, see *Bar Mitzvah. Also there was a custom that the bridegroom or the scholar give a *derashah* under the wedding canopy or at the festivities following.

[*Encyclopaedia Hebraica*]

In Modern Times (From the Beginning of the 19th Century)

THE MODERN SERMON. Part of the aim of Zunz’s most famous work, *Gottesdienstliche Vortraege der Juden* (1832), was to demonstrate, when this was challenged by the Prussian government (under the influence of Orthodox groups who saw the sermon in the vernacular as the beginnings of Reform), that preaching is not an innovation but an ancient Jewish institution. While this is true, the traditional *derashah* was, in fact, replaced in the 19th century by a new type of Jewish ser-

mon, the *Predigt*, as it was called in Germany. There were a number of important changes in language, style, and content which, first in Germany and then in other European countries, gave a completely new cast to the sermon. This new type of sermon was delivered in the vernacular and unlike the occasional *derashah*, it was a regular feature of the service. It sought to express Jewish values in a contemporary idiom and in the thought patterns of the day. Woven around one central theme, the modern sermon developed in orderly fashion, without academic digressions on the texts quoted, emphasizing edification rather than pure instruction. Although the early 19th-century preachers in Germany were not rabbis, preaching, instead of being delegated to a special functionary, eventually became the preserve of the rabbi and one of his most important duties in Western countries. Among the well-known preachers in 19th-century Germany were: Eduard *Kley, Gotthold *Salomon, Abraham *Geiger, Samuel *Holdheim, Jehiel Michael *Sachs, Samson Raphael *Hirsch, and David *Einhorn; and in the 20th century: Siegmund *Maybaum, Nehemia Anton *Nobel, and Leo *Baeck.

A. Altmann (see bibl.) has demonstrated the influence of the Protestant pulpit on the development of the modern Jewish sermon. The early German preachers consciously modeled their sermons on the patterns of Christian homiletics and used Christian guides to the art of preaching. Even Isaac Noah *Mannheimer, the most outstanding 19th-century preacher, who pleaded for a closer link with the Jewish homiletical tradition, admitted “that we as pupils and disciples, as novices in the art of preaching which we have been practicing only a little while, can learn a great deal from the masters of the art, and we have gratefully to accept every guidance and instruction offered to us in their schools.” Zunz, in his brief career as a preacher at the New Synagogue in Berlin (1820–22), was influenced by *Schleiermacher. It is even on record that the most popular Christian preachers of the time, such as Ritschl and Schleiermacher, used to hear the young preachers at Israel *Jacobson’s temple in Berlin and give them, after the service, “manifold hints and directives.”

A reaction soon set in. There was a persistent demand for a truly Jewish homiletic, arguing, in Mannheimer’s words, that “it is always better to feed on one’s own resources than to live from alms.” But, generally speaking, the reaction in the 19th century only amounted to a greater use of rabbinic, especially midrashic, material, as exemplified in the sermons of the illustrious preacher Adolf *Jellinek in Vienna. Jellinek’s preaching attracted many of the intellectuals of his day who, in their quest for Jewish identity, needed his reassurance that Judaism was supremely worthwhile and still capable of making important contributions. Jellinek was fond of preaching that too many were saying: “Now Israel’s eyes were dim with age; he could not see” (Gen. 48:10), whereas the truth was that Moses still spoke and God still answered him in thunder (Ex. 19:19). Jellinek’s methods and strong Jewish emphasis influenced Jewish preaching everywhere. A later occupant of Jellinek’s pulpit, Hirsch (Zevi) Perez *Chajes, for example,

preached to a bar mitzvah the story of the woman whose vessels were miraculously replenished by the oil (11 Kings 4:1–7). The never-ending power of Judaism is always available if only Jews will provide the vessels with which to contain it. No matter how great the Jew’s spiritual demands, Judaism is capable of satisfying them (*Ne’umim ve-Harza’ot* (1953), 400).

Tobias *Goodman is credited with being the first Jew to preach in the English language. Two of his printed sermons are: *A Sermon on the Universally Regretted Death of the Most Illustrious Princess Charlotte*, preached on Wednesday, Nov. 19, 1817, at the synagogue, Denmark Court, London (the first sermon to be both delivered and printed in English), and *A Sermon Occasioned by the Demise of Our Late Venerable Sovereign, King George the Third*, preached on Wednesday, Feb. 16, 1820, at the same synagogue (A. Barnett, *The Western Synagogue Through Two Centuries* (1961), 48–51). In December 1828 a Committee of Elders was appointed at the Bevis Marks Sephardi Synagogue in London to inquire into the best means of elevating the tone of public services. Among their recommendations was that an English sermon based on a text taken from Scripture should be delivered every Saturday afternoon. Before delivery every sermon should be examined by a committee of three elders for statements contrary to Jewish doctrines or hostile to the institutions of the country (J. Picciotto, *Sketches of Anglo-Jewish History* (1956²), 318–20). In the U.S., preaching in the English language was introduced much later. Some preachers, like the Reform Rabbi David Einhorn, preferred to give sermons in their native German. Einhorn declared that “Where the German sermon is banned, there the reform of Judaism is nothing more than a brilliant gloss, a decorated doll, without heart, without soul, which the proudest temples and the most splendid theories cannot succeed in infusing with life.” The Jewish sermon in English was developed to a fine art by such preachers as Simeon *Singer, Morris *Joseph, Joseph Herman *Hertz, Israel *Mattuck, A.A. Green, Abraham *Cohen, and Ephraim Levine in England; Stephen S. *Wise, Israel Herbert *Levinthal, Abba Hillel *Silver, Solomon *Goldman, and Solomon Bennett *Freehof in the U.S. Two annual collections of sermons in English are those published by the Rabbinical Council of America (Orthodox) since 1943; and since 1954, the collection by rabbis from all three groups in *Best Jewish Sermons*, edited by Saul I. Teplitz.

In Eastern Europe the older type of *derashah* delivered in Yiddish by the *maggid* still predominated, but certain new features manifested themselves even here. The winds of change in the Jewish world moved the *maggidim* to find a rather more sophisticated approach. Preaching in Yiddish became directed to the needs of the individual as well as the community. The Haskalah movement was frequently fought by the *maggidim* with the weapons of pulpit oratory. With the rise of Zionism, many of its opponents used the same weapons to combat it, while others sympathetic to Zionism preached the love of the Holy Land and the legitimacy of Jewish nationalistic aspirations with new fervor. In fact, a new type of nationalistic preacher emerged and was given the name *mattif* (“speaker”;

Micah 2:11), to distinguish him from the old-type *maggid*. Under the influence of the Lithuanian Musar movement, with its strong moralistic concern, the *derashah* began to place greater emphasis on ethical matters. The hellfire preaching of Moses *Isaac, the Kelmer *Maggid* (1828–1900), the most popular of the folk preachers, was directed largely against dishonesty in business and general unethical conduct (D. Katz, *Tenu'at ha-Musar*, 2 (c. 1958), 395–407). Many of the *maggidim* went to the U.S., England, and South Africa where their preaching was directed against the widespread desecration of the Sabbath and neglect of the dietary laws, abuses unknown in their native countries. *Maggidim* still flourish in the State of Israel, but there has been little development of the sermon in Hebrew and the rabbi-preacher is virtually unknown there as a regular and respected synagogue functionary. Among the Yiddish preachers of renown were: Hayyim Zundel, H.Z. *McCobey (the Kamenitzer *Maggid*), J.L. Lazarov, Z.H. *Masliansky, Isaac *Nissenbaum, M.A. *Amiel, Zalman *Sorotzkin, and Ze'ev *Gold.

PREACHING TECHNIQUES. Simeon Singer in "Where the Clergy Fail," an address delivered to young preachers on Jan. 17, 1904 (*Lectures and Addresses* (1908), 203–25), describes the aim of the Jewish preacher thus: "to teach the word of God to their brethren, young and old; to help them to the perception of the highest truths of religion; to uplift their souls out of the rut of the common, the sordid, the selfish, in life; to speak a message of comfort to the sorrowing, of hope to the despondent, of counsel to the perplexed, of courage to the struggling and aspiring." In the belief that the art of preaching can be taught, the major rabbinical seminaries have departments of homiletics. Sigmund Maybaum taught homiletics at the Hochschule in Berlin, Israel *Bettan at Hebrew Union College, Mordecai Menahem *Kaplan at the Jewish Theological Seminary, and Abraham Cohen at Jews' College.

The modern Jewish sermon is usually based on a text chosen from the portion (the *sidra* or *haftarah*) read in the synagogue on the day the sermon is delivered. Books of the Bible which are not read in public, like Job, rarely furnish texts for sermons, though they may be quoted in support of a position the preacher adopts. Normally the sermon is delivered toward the end of the service. While the note of exhortation is never entirely absent from the sermon, many preachers nowadays prefer to use the sermon chiefly as a means of instruction, imparting information about Jewish faith, history, and teachings. The length of the sermon varies from preacher to preacher but on the average is about 20 minutes. Preaching from a prepared manuscript is the rule for some preachers while others prefer to speak extemporaneously. Adequate preparation is counseled by the best preachers. In the preface to his *Faith of a Jewish Preacher* (1935), Ephraim Levine compares the preacher who waits for Providence to put words into his mouth to Balaam who said the very opposite of what he intended to say. Oratory has now generally yielded to an easier conversational tone. Few preachers would today follow

the example of Leo Baeck of whom it was said that he never used the personal pronoun "I" in the pulpit.

Sermon illustrations are taken from the personal experience of the preacher, Jewish history, the Midrash, natural science and psychology, and, latterly, ḥasidic lore. L.I. Newman's *Hasidic Anthology* (1934) and M. Buber's *Tales of the Hasidim* (1947–48) have come to serve as sources for sermon illustrations. Quotations from secular literature are used to develop themes. In a typical sermon outline on *Kol Nidrei* by Milton *Steinberg (*Sermons*, B. Mandelbaum, ed. (1954), 58–63) there are references to the *geonim*, Walter Pater, Tennyson, Leibnitz, Omar Khayyam, and W.L. Phelps. Louis I. *Rabinowitz (*Out of the Depths* (1951), 332–5) builds a *Kol Nidrei* sermon around a poem by the modern Hebrew writer Zalman *Shneur. In a Day of Atonement sermon by Israel H. Levinthal (*Steering or Drifting – Which?* (1928), 128–35), there are quotations from *Judah Halevi, the Talmud, the prayer book, a Christian legend, folk language, the Bible, and the Midrash. Preachers in the U.S. frequently take for their sermon theme a book, movie, or play that has received much attention for its treatment of some moral or religious question. Some sermons conclude with a prayer. This and other pulpit pretensions, however, were severely criticized by Franz *Rosenzweig in his scathing attack on preaching in *Sermonic Judaism* (N.N. Glatzer, *Franz Rosenzweig* (1953), 247–50). The chosen text and the way it is treated depend on the individual bent of the preacher but, judging by published sermons, certain themes are constant. Each of the festivals, for example, has its particular message so far as the preacher is concerned. The theme of Passover is freedom; of Shavuot Jewish education (in Orthodox pulpits the immutability of the Torah); of Sukkot trust in God and thankfulness for His bounty; of Ḥanukkah spiritual light; of Purim Jewish peoplehood; of Rosh Ha-Shanah the need for renewal; and on the Day of Atonement sin and atonement. In addition to the weekly Sabbath sermon the rabbi preaches on the special occasions in the life of his congregation: anniversaries, weddings, funerals, installation of officers, bar mitzvahs, and his own induction. A number of rabbinic manuals contain sermonic material in capsule form for the rabbi's use on special occasions (e.g., H.E. Goldin, *Ha-Madrikh*, 1939).

ISSUES OF THE DAY IN PREACHING. The modern Jewish sermon frequently addresses itself to particular problems which agitate the Jewish community as well as to wider issues of universal import. There is much discussion on the extent to which politics should be introduced, but few Jewish preachers accept a total ban on political questions. There are numerous instances of preachers seeking to influence their congregants either when a topic is a source of controversy in the community or when they feel that widely held views are contrary to Jewish teaching. Themes treated in the contemporary pulpit are the controversy between religion and science, the role of the State of Israel, the permissive society, intermarriage, Jewish education, war and peace, social injustice, racial discrimination, the use and abuse of wealth, and Judaism and its rela-

tion to other faiths. The 1968 edition of *Best Jewish Sermons* contains sermons against the taking of drugs; on the “death of God” movement, fair housing, the estrangement of the Jewish intellectual from Judaism, recreation, and the need to care for the hungry of the world. Rabbis have fought to free the pulpit from control by the lay leaders of the congregation. When Stephen Wise was being considered for the influential post of rabbi of Temple Emanu-El in New York, Louis *Marshall, the president, held that in controversial matters the pulpit must remain under the control of the trustees. Wise refused to consider the post under such conditions and eventually founded the Free Synagogue to uphold the principle of pulpit liberty.

In 19th-century America the slavery issue was echoed from the Jewish pulpit. Morris J. *Raphall preached that slavery was a divinely ordained institution since it is sanctioned in the Bible. David Einhorn, however, attacked slavery from the pulpit as “the greatest crime against God.” As a result, his life was placed in jeopardy and on April 22, 1861, Einhorn and his family were secretly escorted out of Baltimore.

With the rise of the *Reform movement the issue of Reform was hotly debated from the pulpit. A favorite text for the Reform sermon, used by Geiger and others, was: “One generation passeth away, and another generation cometh; but the earth abideth for ever” (Eccles. 1:4). The “earth” represents the essential, unchanging spirit of Judaism, which must be interpreted by each generation in the light of its own needs and insights. Often the same set of texts would be used by both Orthodox and Reform preachers in support of their positions. The “wicked son” of the Passover *Haggadah* was, for the Orthodox preacher, the Reform Jew who asks “What is this service to you?” For the Reform Jew the son who represented their point of view was the “wise son” who was ready to ask the intelligent questions demanded by the new age. Chief Rabbi N.M. *Adler preached in London, on the second day of Passover in 1868, a sermon against the abolition of the second day of festivals in the Diaspora, a matter which at that time had begun to be an issue in the struggle between Orthodoxy and Reform. His son and successor, Hermann *Adler, at the beginning of the 20th century, refused to permit a synagogue under his jurisdiction to appoint Morris *Joseph as preacher because the latter had published views “at variance with traditional Judaism.” Solomon *Schechter, living at that time in Cambridge, pointed out that if doctrines were to become the test of a minister, then the greatest names in Jewish learning – Zunz, Graetz, Herzfeld, Joel, Gotthold Salomon, Rapoport and others – would never have been permitted to preach in a United Synagogue (R. Apple, *The Hampstead Synagogue* (1967), 23–27). Chief Rabbi J.H. *Hertz preached a series of sermons, *Affirmations of Judaism* (1927), attacking the new Liberal movement founded by Claude Goldsmid *Montefiore and others.

PRECIOUS STONES AND JEWELRY.

In the Bible

Precious stones are mentioned in various contexts in the Bible, the most comprehensive list appearing in the description of the breastpiece worn by the high priest. The breastpiece was set with 12 precious stones arranged in four rows with three stones in each row to represent the 12 tribes: “set in it mounted stones, in four rows of stones. The first row shall be a row of *òdem*, *pitdah*, and *bareqet*; the second, of *nofekh*, *sappir*, and *yahalom*; the third of *leshem*, *shevo*, and *àhlamah*; and the fourth, of *tarshish*, *shoham*, and *yashfeh*...” (Ex. 28:17–20). Most of these stones are mentioned again as present in the Garden of Eden where the king of Tyre originally abode (Ezek. 28:13).

(See Table: Gems in High Priest Breastplate.)

From the talmudic period onward, biblical translators and commentators have attempted to determine the mineralogical nature of these stones and to identify them in terms of the names of modern minerals. However, the identity of the stones of the breastpiece cannot be established by a mineralogical study, since there is no statement even about their colors except in the late Midrash (in *Midrash Rabbah*). Philological research is of assistance only in a few cases. Archaeological excavations can help somewhat by establishing which minerals were utilized as precious or semiprecious stones in pre-Exilic times. The chart presented here summarizes a few of the different identifications of the stones of the breastpiece found in ancient and modern Bible translations, and advanced by the modern scholars N. Shalem and R. Sverdlov. There is also disagreement between the Palestine Targum (followed

Precious Stones in the High Priest's Breastplate in the Hebrew Bible and its Versions

by Maimonides and Bahya) and the Targum Jonathan (followed by Rashi) as to the order of the names of the tribes on the stones. According to the Palestine Targum, the six sons of Leah appear first, then the sons of the maidservants, and lastly the sons of Rachel. Targum Jonathan, on the other hand, claims that they followed the order of their birth, i.e., the sons of the maidservants preceded Issachar and Zebulun. The only source specifying a mineralogical property is the description found in *Midrash Rabbah* (Num. R. 2:7):

“There were distinguishing signs for each prince; each had a flag and a different color for every flag, corresponding to the precious stones on the breast of Aaron ... Reuben’s stone was *odem* and the color of his flag was red; and embroidered thereon were mandrakes. Simeon’s was *pitdah* and his flag was of a yellow (or green) color ... Levi’s was *bareqet* and the color of his flag was a third white, a third black, and a third red ... Judah’s was *nofekh* and the color of his flag was like that of the sky ... Issachar’s was *sappir* and the color of his flag was black like stibium ... Zebulun’s was *yahalom* and the color of his flag was white ... Dan’s was *leshem* and the color of his flag was similar to *sappir* ... Gad’s *ahlamah* and the color of his flag was neither white nor black but a blend of black and white ... Asher’s was *tarshish* and the color of his flag was like the precious stone with which women adorn themselves ... Joseph’s was *shoham* and the color of his flag was jet black ... Benjamin’s was *yashfeh* and the color of his flag was a combination of all the 12 colors ...”

If this ancient Midrash is accepted, it appears that the color of the stones was the most accurate mark of identification that popular Jewish tradition could preserve. Ibn Ezra (Ex. 28:9), on the other hand, sharply criticizes the translations of Saadia Gaon: “and we have no way of clearly knowing the ‘stones for setting’ because the Gaon rendered them as he wished, and he has no tradition which he can rely on...”

Through a comparison of the various translations and commentaries, reasonable identification may be advanced for some of the stones; with others, an identification is impossible. Some of the stones may be identified mineralogically, but because they are different in color they were called by different names.

’ODEM. (אֶדֶם; Ex. 28:17; 39:10; Ezek. 28:13), a red stone. *’Odem* is rendered as *samqan* (סַמְקָן), i.e., “red,” in Aramaic translations; as *sardion* in the Greek versions; and *ahmar* in Arabic. This stone is probably cornelian sard, one of the red cryptocrystalline varieties of quartz (SiO₂). It is found in excavations. Some regard it as the opaque red jasper found in Egypt and in the vicinity of Eilat.

PITDAH. (פֶּטְדָה; Ex. 28:17; 39:10; Ezek. 28:13), according to the commentators, a green stone, and generally identified in the versions as the green-yellow topaz. According to Pliny, however, what was known as the topaz in antiquity was not identical with the modern stone called topaz Al₂F₂SiO₄, but with the modern chrysolite or peridot belonging to the olivine group. This mineral is usually green in color and is used as a gem. The identification of topaz or chrysolite with *pitdah* is rejected by N. Shalem who proposed plasma, a green variety of cryptocrystalline quartz. *Pitdah* is also mentioned in Job 28:19 as *pitdah* of Ethiopia, which is used as a symbol of the value of wisdom. This is apparently a reference to *pitdah* imported from Ethiopia.

BAREQET. (בְּרֶקֶת; Ex. 28:17; 39:10; Ezek. 28:13), a similar term in Akkadian, *barraqtu*, also means a precious stone. Both words may share a common etymology in the Semitic root *brq* or may be borrowed from the Sanskrit *marakata* which means smaragd. Most Greek versions explain *bareqet* as smaragd, which is a variety of beryl Al₂Be₃Si₆O₁₈ with small additions

of other elements, i.e., the emerald. Emerald-smaragd mines were located in ancient times in Kosseir in Egypt. Smaragd was considered the most valuable green stone, and it has been found in the form of gems in the tombs of the pharaohs. U. Cassuto and others identify *bareqet* with malachite, which is similar in color to smaragd and was easier to work in ancient times. According to these explanations, *bareqet* is green and thus does not fit the description in the Midrash which states that *bareqet* is found in three colors. N. Shalem therefore proposed to identify *bareqet* with jasper (SiO₂).

NOFEKH. (נֹפֶכֶח; Ex. 28:18; 39:11; Ezek. 27:16; 28:13). *Nofekh* is mentioned as one of the stones on the breastpiece, in the description of the precious stones belonging to the king of Tyre in the Garden of Eden, and also among the valuable goods brought to Tyre by the Arameans. *Nofekh* has been identified by some scholars as the red mineral pyrope Mg₃Al₂(SiO₄)₃ of the garnet group. According to the Midrash, it was sky blue in color and N. Shalem, therefore, proposed to identify it with turquoise (Cu₃Al₂O₃·2P₂O₅·9H₂O) which was well known in Sinai as early as the time of the first pharaohs.

SAPPIR. (סַפִּיר). This stone appears in the Bible as the second stone in the second row of the breastpiece (Ex. 28:18; 39:11) and also in other passages as a very costly gem. It is included among the precious stones brought to Tyre by the Arameans (Ezek. 28:13); the firmament is said to have the appearance of the *sappir* stone (Ezek. 1:26); it is used as a symbol of beauty (Song 5:14; Lam. 4:7) and of value – “It cannot be valued in the gold of Ophir, in precious onyx, or *sappir*” (Job 28:16). The Midrash describes the *sappir* as “black, like stibium.” Most translations identify the *sappir* with the present-day blue sapphire (Al₂O₃); this stone, however, was apparently unknown in antiquity. In contrast to the Midrash, which regards the *sappir* as blue, Saadia Gaon calls it white, on the basis of the verse “the likeness of *livnat ha-sappir*” (Ex. 24:10), where he interprets *livnat* as “whiteness.” Ibn Ezra disagreed with Saadia, explaining that the *sappir* is red on the basis of the verse “their bodies were more ruddy than coral, the beauty of their form was like *sappir*” (Lam. 4:7). Despite these sources, most scholars identify *sappir* with lapis lazuli, a translucent blue mineral of the lazulite group, which was used as a decorative stone in antiquity. Lapis lazuli was known in Cyprus as a natural stone and in ancient Egypt also as an artificial gem.

YAHALOM. (יְהָלוֹם), the third stone in the second row of the breastpiece (Ex. 28:18; 39:11), also mentioned in Ezekiel 28:13 as one of the precious stones found in the Garden of Eden. The *yahalom* was a white stone according to the Midrash, and Ibn Ezra rendered it as diamond “which breaks all stones and precious *bedolah*” (on Ex. 28:9). Although in modern Hebrew *yahalom* means diamond, the hardest mineral found in nature, it is not likely that the Bible refers to this stone, which was apparently unknown in biblical times. N. Shalem has proposed chalcedony, a variety of quartz (SiO₂), which is a relatively hard white mineral which fits the midrashic description.

LESHEM. (לֶשֶׁם), the first stone in the third row of the breastpiece (Ex. 28:19; 39:12). Scholars disagree as to the identity of this stone: Sverdlov attributed it to the zircon family, whereas Shalem identifies it with aventurine; others regard it as amber. The name Leshem and the tribe of Dan are connected by means of the *leshem* stone on the breastpiece as well as by means of the city Leshem, also called Laish, which was settled by the tribe of Dan in the north of Israel (Josh. 19:47).

SHEVO. (שֵׁבֻ), the second stone in the third row of the breastpiece (Ex. 28:19; 39:12). According to the Midrash, it is neither white nor black but of a mixed color. *Midrash Rabbah* renders it as *achatis*, as does the Septuagint. This corresponds to the agate, a variety of chalcedony (SiO₂) which has variegated colors as a result of impurities – sometimes in the form of stripes and sometimes in other forms. Agate, a very common mineral, was known in Near Eastern countries in biblical times.

ʾAḤLAMAH. (אֶחְלָמָה), the third stone in the third row of the breastpiece (Ex. 28:19; 39:12). Most translators and commentators identify it with amethyst, a transparent purple stone of the SiO₂ group. The Septuagint, Vulgate, and most other versions render it as amethyst. It was believed in antiquity that wine drunk from an amethyst cup would not intoxicate, since the word amethyst in Greek apparently means “not drunken.” Ibn Ezra connects the word *ʾaḥlamah* with *ḥalom*, “dream”: “whoever wears this stone on his finger never fears dreams,” and goes on to say that the *ʾaḥlamah* possesses a magic power which influences dreams, just as there is “a stone which attracts iron” (magnet) and “a stone which flees from vinegar” (the influence of acid on certain minerals). The identification of *ʾaḥlamah* with amethyst, which was well known in antiquity, is generally accepted by most scholars.

TARSHISH. (תַּרְשִׁישׁ), the first stone in the fourth row of the breastpiece (Ex. 28:20; 39:13). The *tarshish* apparently had an unusual luster and brilliance and is thus mentioned several times in the Bible: “the appearance of the wheels... was like the gleaming of a *tarshish*” (Ezek. 1:16; 10:9); “his arms are rounded gold set with *tarshish*” (Song 5:14); “his body was like *tarshish*, his face like the appearance of lightning” (Dan. 10:6). The Targums Onkelos and Jonathan translate *tarshish* as “color of the sea.” In all probability, the reference is to the mineral known today as aquamarine, a transparent, bluish green variety of beryl which was considered a very beautiful and costly stone. The aquamarine stone was apparently known in southern Egypt and Spain. This explanation also seems to agree with the Midrash which states that its color resembles a precious stone, since aquamarine was known from earliest times as a precious stone. N. Shalem, in 1931, identified *tarshish* with opal, but later suggested it was mother-of-pearl, perhaps because of the connection between the “color of the sea” and the “sea stone” of Targum Onkelos, which can refer only to pearls. No connection should apparently be sought between the *tarshish* stone and the country or island of the same name to which boats were sent to bring back metals (1 Kings 10:22)

and to which Jonah fled. It seems that aquamarine is the most correct suggestion.

SHOHAM. (שֹׁהַם), the second stone in the fourth row of the breastpiece (Ex. 28:20; 39:13). *Shoham* is mentioned as one of the stones of the land of Havilah in the Garden of Eden (Gen. 2:12). The translations are not agreed on any one definition: the Septuagint renders it as beryl, as apparently does Onkelos (“burla”); the Palestine Targum translates it as *bedolah* and Josephus, in *The Jewish Wars*, as onyx. According to the Midrash, it was very black in color, whereas Ibn Ezra calls it white (on Ex. 28:9). Onyx is also a variety of silica and usually has different shades and colors. There is no evidence to substantiate the ancient translation of beryl. There is no doubt that *shoham* was considered one of the precious stones of the Garden of Eden (Ezek. 28:13), and it also appears in Job as a symbol of wealth and importance: “wisdom... cannot be valued... in precious *shoham*” (Job 28:16). It was apparently a very costly, hard, and rare stone, but as yet no well-founded identification has been proposed.

YASHFEH. (יֶשֶׁפֶה), the third stone in the fourth row of the breastpiece (Ex. 28:20; 39:13) and one of the precious stones of the Garden of Eden (Ezek. 28:13). This stone appears with the same name in many ancient documents, including the Tell el-Amarna letters, and is apparently identical with the mineral jasper. This is the only case where one of the stones of the breastpiece is identified with a modern mineral through a similarity of names (that is, if we accept the above theory that the biblical *sappir* is not the modern sapphire). *Yashfeh* was translated as jaspir or jasper from very early times, although the Targums Onkelos and Jonathan do not mention them. Jasper is also a variety of silica.

ʿELGAVISH. (אֵלְגַבִּישׁ) appears in the Bible in connection with heavy rains: “there will be a deluge of rain, great *ʿelgavish* stones will fall” (Ezek. 13:11; 38:22). The Septuagint translates *ʿelgavish* stones both as hail and as slingstones. It is very likely that hail was seen as the slingstones of God, and for this reason the term was used in both senses. Some scholars read it as *ʿelgavish*, *gavish*, as in Job 28:18, probably meaning crystal as in modern Hebrew. The common crystal is quartz, also known as rock crystal. Hail was called *ʿelgavish* since it was similar in form to real crystal, but as it was only water it could not be called *gavish* but only *ʿelgavish*.

ʿEQDAH. (אֵקְדָה), mentioned only once in the Bible: “I will make your pinnacles of *kadkod*, your gates of *ʿeqdah*” (Isa. 54:12). It has not been identified. Some commentators associate the word *ʿeqdah* with a sparkling, lustrous stone, on the basis of the verse: “you are all kindlers of fire (*qodhe ʿesh*), who set brands alight” (Isa. 50:11). According to Rashi, *ʿeqdah* is not a mineral but a gate constructed from a large stone in which an opening was made by drilling (*qidduah*).

KADKOD. (כַּדְכֹד), a term that appears twice in the Bible: “I will make your pinnacles of *kadkod*” (Isa. 54:12) and in the list of

precious goods brought to Tyre by the Arameans (Ezek. 27:16). *Kadkod* apparently denotes a shiny, sparkling stone, and it is possible that it does not refer to one specific mineral but is a name based on the expression *kiddode ʿesh*, “sparks of fire” (Job 41:11). The Septuagint substituted the letter *resh* for *dalet* which makes the word closer to *karkond*, the Arabic name for spinel, a red precious stone. Some identify *kadkod* with the hyacinth, a transparent orange, red, or brown precious stone which is a variety of zircon.

BAHAṬ, SHESH, DAR, SOḤARET. (בַּהַט, שֵׁשׁ, דָּר, סוֹהַרֶת), four terms appearing in the description of the floor of Ahasuerus’ palace (Esth. 1:6). This floor was apparently a mosaic pavement containing these four stones. *Bahaṭ* is possibly a type of marble. Alabaster, which was very common in all Near Eastern countries, is sometimes called *bahaṭ* in modern Hebrew. *Shesh* is marble. *Dar*, which means “pearl” in Arabic, may designate stones with a pearl-like luster. The identity of the last term, *soḥaret*, is unknown. These four terms denote decorative building stones which could be polished, but apparently not precious stones.

RAʿMOT. (רְאֵמוֹת), mentioned in the Bible in various contexts. It is listed among the precious goods brought by the Arameans to Tyre (Ezek. 27:16); as a precious stone which is compared to wisdom in the eyes of a fool: “Wisdom is for a fool as *raʿmot*” (Prov. 24:7); and again as a very costly stone whose value is nevertheless surpassed by wisdom (Job 28:18). *Raʿmot* is clearly a precious stone; its identity, however, is unknown.

[Uri Shruga Wurzbarger]

In Rabbinical Literature

Talmud, Midrash, Aramaic and other versions as well as the medieval commentators give translations or interpretations of the two *shoham* (onyx?) stones on the high priest’s Ephod and of the 12 precious stones that make up the “Breastplate of Judgment” (Ex. 28:6–12; 15–30). Rav Assi (Meg. 12a) endeavored to explain “stones of a crown, glittering over His land” (Zech. 9:16) and the *bahaṭ* of Esther 1:6 by בעליהן על (“stones that flash back at their owner,” but see Rashi and He-Arukh, s.v. חט). Another explanation given (*ibid.*) reads המחישטות לעיניים במקומן (“which dazzle the eyes in the place where they are found” (see Jastrow, Dict, s.v. חטט). The precious stones mentioned in Job 28:18 are translated in the Targum by סנדלכון (corrupted from Greek σαρδόνυξ) and בירולין or בירוצין (beryl), the former also being used in the Talmud as a generic term for precious stones (Sanh. 59b; ARN1¹, 5 and 38, 114). The onyx stone (אֵנֶךְ) is mentioned (Av. Zar. 8b, 11b and Tosef. Kel. BM 1:3).

Under the influence of beliefs prevalent among other peoples and cultures, Talmud and Midrash attach magical, in particular medical but also psychological, influences to precious stones, ideas which continued to prevail among medieval Jewish Bible commentators like Abraham Ibn Ezra, David Kimḥi, Bahya b. Asher and also in the Zohar (see *Astrology). Simeon b. Zemah Duran (14th–15th centuries) in his *Magen*

Avot 2, 1 refers to the more than 400 precious stones and their qualities mentioned by Aristotle, and Abraham b. David Portaleone (16th century) devoted a special chapter to this subject in his *Shiltei ha-Gibborim* (1612). Abraham wore a precious stone, hanging from his neck, which healed all those who looked at it (BB 16b); cf. the pearl-bag worn by animals (Sanh. 68a and Rashi ad loc.). Josephus mentions that the Essenes used precious stones for healing purposes (Wars, 2:136). Many legends have been woven round the *Shamir* stone (or worm?) which was said to have been used to cut stones for Solomon's Temple and to engrave the Ephod and breastpiece stones (*Avot* 5:6; Sot. 48a–b; Git. 68a). Similar qualities were ascribed to the sapphire (PDRK 135b) which was believed to be indestructible and out of which the Two Tablets of the Law (the Ten Commandments) were said to have been made (Tanh. Ki Tissa 26; Song. R. 5:14, 3). Precious stones almost invariably occur together with gold and silver as signs of wealth throughout rabbinic literature, and are the subjects of numerous legends (see Ginzberg, Legends, index, s.v. Stone (Stones), Precious). Precious stones were also used for *seals and signet rings.

The expression תכשיט (esp. תכשיטי נשים) = finery, covers not only jewelry but also *cosmetics. Women's finery as a means of seduction was said to have been the invention of the daughters of Cain (see Krauss, TA I. 198), yet women were entitled to possess and wear it (Ket. 65a). Jewelry formed part of the marriage settlement (*Song. R.* 4:12; TJ, Ket. 6:3, 30d), and was sometimes given in lieu of betrothal money (Kid. 48a); cf. certain restrictions on Sabbath wear and some purity regulations (Shab. 6:1; Tanh. Gen. 34, 1; Kel. 11:8, 9; cf. Shab. 62b; Tosef., Kid. 1:11). A bride in particular, was to adorn herself lavishly (*Song. R.* 4:10, 1; Tanh. Ex. 31, 18). Jewelry was of gold, silver, precious stones, pearls, and sometimes coral. There are full details of the treatment of pearls, their size, color, and shape and the manner in which they were pierced. They were strung together into necklaces sometimes consisting of several rows. Pearls were also set in diadems, together with precious stones; they were also inset in them or vice versa. In general pearls rated above jewels as the most precious objects, and served as presents between royalty (Artaban of Persia to Judah ha-Nasi, TJ, Pe'ah 1:1, 15d). Not only men wore these but even animals were sometimes adorned with precious stones as amulets as can be seen from the story of the ass bought by Simeon b. Shetaḥ (TJ, BM 2:5, 8c).

The main types of jewelry mentioned are signets (see *seals) usually worn as finger rings; women generally wore no signet rings, only ordinary rings (Shab. 6:1, 3; 62a; Kel. 11:8). Metal rings with a seal made of sandalwood or vice versa are mentioned. Rings, probably as other jewelry, were acceptable as loan-pledges (TJ, Shev. 10:9, 39d). They could also contain poison (*Deut. R.* 2:24). Women, brides in particular, wore as diadems a "City of Gold" (representing Jerusalem, Shab. 6:1; Kel. 11:8; Sot. 49b) such as Akiva once gave to his wife (Shab. *ibid.*; TJ, Shab. 6:1, 7d; ARN² 12:30). Above all, women wore necklaces (*catella*), some of the "choker" type which were made of precious metal or stones, pearls, glass beads, or san-

dalwood. Ear- and nose rings were very common among women and also children of both sexes. An amulet-text was inserted in a capsule worn round the neck; children wore also small tablets or scrolls containing a Bible verse. Officials and tradesmen wore the insignia of their office or trade as adornments. Other ornaments included anklets, bracelets, and also strings of coins, worn, by children in particular, on the forehead, as a necklace, or on the upper part of the dress. Women also wore bells around the neck or attached to their dress.

PREGER, JACOB (1887–1942), Yiddish playwright, poet, and short story writer. Preger was born in Kobrin, Belorussia, and raised in Drogichin and Warsaw. His reputation is based largely on two highly successful plays, *Der Nisoyen* ("The Temptation," 1925) and *Simkhe Plakhte* ("Simkhe the Rag," 1935), a comedy produced by Maurice Schwartz in the U.S. under the title *Der Vaseretreger* ("The Watercarrier"). His published verse includes *Oyfdi Vegn* ("On the Roads," 1914), *Oyfn Veg* ("On the Road," 1919), and *Shloyme Hameylekh* ("King Solomon," 1932), a "dramatic poem in three acts." Preger's art is rooted in folklore and the popular imagination. He is reported to have been killed by the Germans in Otwock.

[Leonard Prager]

PREIL, ELAZAR MEIR (1881–1933), rabbi. Born in Birz, Lithuania, he studied with his bother Rabbi Joshua Joseph before going to Slabodka. After ordination he joined the faculty of the yeshivah in Sadove and then moved with Rabbi Bloch to Telshe. In 1907 he became the rabbi of Beit Midrash Hagadol in Manchester, England, and then immigrated to the United States in 1911 where he became a rabbi in Trenton. A fellow graduate of Telshe, Rabbi Bernard Revel invited Preil to teach at the Rabbi Isaac Elchanan Theological Seminary where he taught from 1912 onward, first while serving in Trenton and then as rabbi in Elizabeth, New Jersey. During World War I he worked with the Central Relief Committee and became secretary of Agudath ha-Rabbonim and chairman of its *Vaad Kashrut*. He was widely published in Torah journals and published a book on family purity law in Yiddish. He was succeeded by his son-in-law Rabbi Pinchas Teitz, who strengthened the Elizabeth Jewish community.

PREIL, GABRIEL JOSHUA (1911–1993), U.S. Hebrew poet. Born in Dorpat, Estonia, Preil was taken to the United States in 1922. Though he published essays from time to time, wrote in Yiddish and English, and translated from Hebrew into English and from English into Hebrew, he was mainly a modernist Hebrew poet who introduced new themes and cadences into Hebrew literature in America. His lyrical pieces, which form the bulk of his collected poems, usually move in subtle, unrhymed rhythms on the boundary of prose and poetry. He is a poet of things and facts: a map, a mailbox, Lincoln Center in New York City, a Chinese sketch, a picture of Vincent van Gogh serve as foci for poetical aperçus and reflective moods. Though influenced by Whitman, Frost, and Sandburg, whose “Prairie” he translated into Hebrew, he was mainly an introspective lyricist. The New Hampshire and Vermont landscapes fascinated him: The cool sobriety of the north corresponded to his temperament which never ventured into flights of pathos.

Preil’s poetry appeared in the following volumes: *Nof Shemesh u-Kefor* (1944); *Ner Mul Kokhavim* (1954); *Mappat Erev* (1961); and *Ha-Esh ve-ha-Demamah* (1968). A volume of his Yiddish poems, *Lider*, including his translations of his Hebrew poems, appeared in 1966. Other books of his poems are *Mi-tokh Zeman ve-Nof* (1973), *Shirim mi-Shenei ha-Kezavot* (1976) and *Yalkut Shirim* (1978), *Adiv le-Azmi* (1981), *Hamishim Shir ba-Midbar* (1987). Dan Miron collected the later poems and wrote an essay on Preil’s poetry in *Asfan Setavim* (1993). Preil also published a monograph in English on *Israeli Poetry in Peace and War*, in 1959.

[Eisig Silberschlag]

PREMINGER, OTTO LUDWIG (1905–1986), U.S. film and stage director and producer. Born in Vienna, Preminger worked at Max Reinhardt’s Josefstadt Theater in Vienna in 1923, and in 1928 was engaged by Reinhardt as director. He went to the U.S. in 1935 and gained prominence in the theater with productions that included the anti-Nazi play *Margin for Error* (1943). Taking up film work, he became one of the most controversial and important directors.

His successes include *Laura* (1944); *Daisy Kenyon* (1947); *Angel Face* (1952); *The Moon Is Blue* (1953), which led to a Supreme Court decision that prohibited local censors from stopping distribution; *Carmen Jones* (1954), an African American version of Bizet’s opera *Carmen*, starring Harry Belafonte and Dorothy Dandridge, whose performance earned her an Oscar nomination for Best Actress – the first for an African American actress in a leading role; *The Man with the Golden Arm* (1956); *Saint Joan* (1957); *Bonjour tristesse* (1958); *Anatomy of a Murder* (1959); *Exodus* (1960), based on Leon Uris’ novel that dealt with the pre-1948 migration of European refugees to Israel; *Advise and Consent* (1962); *In Harm’s Way* (1965); *Bunny Lake Is Missing* (1965); *Hurry Sundown* (1967); *Skidoo* (1968); *Tell Me That You Love Me, Junie Moon* (1970); *Such Good Friends* (1971); *Rosebud* (1975); and *The Human Factor* (1979), all of which he produced and directed. Preminger also directed such films as *Forever Amber* (1947); *River of No Return* (1954); and *Porgy and Bess* (1959).

Despite condemnation of several of his films by the Roman Catholic Legion of Decency, Preminger was later decorated by the Vatican for his film *The Cardinal* (1963). Both *Laura* and *The Cardinal* earned him Academy Award nominations for Best Director, and *Anatomy of a Murder* was nominated for a Best Picture Oscar.

Preminger’s autobiography, *Preminger*, appeared in 1977.

[Harvey A. Cooper / Rohan Saxena and Ruth Beloff (2nd ed.)]

°PŘEMYSL OTTOKAR II (c. 1230–1278), margrave of Moravia in 1247, duke of Austria in 1251, and king of Bohemia in 1253. Following his general policy of developing the cities, Přemysl protected the Jews in his dominions. The city privilege of *Jihlava (Iglau), which he signed in 1249, contained clauses concerning Jews. In 1254 he issued a charter, based on the 1244 declaration of *Frederick II of Babenberg and even more liberal than the earlier proclamation. It was valid for all his dominions. Among other provisions, it added sacred vestments to the articles forbidden as pledges, but it left the adjustment of the rate of interest to the contracting parties. Though omitting the provisions about capital punishment for desecration of cemeteries, it laid down that the Jews were not to be disturbed on their holidays with the return of pledges. Another provision was that an oath taken by a Jew was itself sufficient to absolve him of responsibility in the case of a pawn that was accidentally destroyed. Moreover, Přemysl included the bulls of *Innocent IV against the blood libel. He employed two Jewish *comes camerae*, and Jewish tax collectors and mintmasters. His favorable treatment of the Jews was opposed by the clergy. In 1268, apparently as a reaction to the Vienna Church Council of 1267, he renewed the Jewish rights “of his youth”; since the

Jews belonged to his chamber, he indicated, they came under his protection. Between 1273 and 1278 he exempted the *Brno (Bruenn) community from all taxes for one year.

[Meir Lamed]

PRESBYTER JUDAEORUM (arch-presbyter, or *le prestre* in Norman French), secular head of the exchequer of the Jews in 13th century England who supervised the collection of taxes and fees for the crown. He has been variously identified by historians as chief rabbi, high priest, bishop, or judge. As one of the most prominent Jews in England, he was often called upon by the king to advise on a variety of matters affecting his people, and was sworn “to look after the administration of justice on behalf of the king and to explain the king’s laws,” largely, presumably, on administrative matters. Six such arch-presbyters are known, all of them wealthy. Jacob of London, appointed in 1199, was followed in 1207 by Josce fil’ Isaac, who was succeeded by *Aaron of York in 1236. *Elias le Eveske assumed the position in 1243. After protesting against the onerous taxes and fines, he was deposed in 1257 and eventually became an apostate. The king then offering the Jews the right to select a successor, they chose Hagin (Hayyim), son of Master Moses of Lincoln, in 1258. The last arch-presbyter, who held office from 1281 until the expulsion of the Jews from England a decade later, was Cok Hagin, son of Deulecresse of London.

[Isaac Levitats]

PRESENCE, DIVINE. The notion of the Divine Presence is expressed in the Bible in two different senses: (1) in the corporeal sense, i.e., the actual dwelling (*shakhan*, שָׁכַן) of God in His abode; (2) in the abstract sense, i.e., symbolic representation by means of calling or establishing His name (*shikken shem*, שִׁמְךָ שָׁכַן) upon the Sanctuary or the people.

The Corporeal Notion

God’s presence, according to the ancient view, is confined to the Tabernacle/Sanctuary and to other visible phenomena serving as the vehicles of God, such as the Ark and the *cherubim or the cloud enveloping the Godhead in its movements. That the Tabernacle was considered an indicator for God’s presence in ancient Israel may be learned from the words of Nathan the prophet to David: “... I have been moving about [*mithalekh*] in a Tabernacle and tent [*be-ohel u-ve-mishkan*] ... All the time I was moving about among the Israelites...” (11 Sam. 7:6–7). The same concept is given expression in the Priestly source of the Pentateuch: “I will establish My abode

[*mishkani*] in your midst... and I will be moving about[i.e. be present]in your midst: I will be your God and you shall be my people” (Lev. 26:11–12). Similar statements are found in other parts of the Priestly literature, where *shakhan*, “dwelling,” is used instead of *hithalekh*, “moving about,” as in Exodus 25:8: “Let them make me a Sanctuary that I may dwell [*weshakhanti*] among them,” and at the end of the inauguration of the Tabernacle in Exodus 29:45–46: “And I will dwell among the Israelites and I will be their God.” The rabbinic term *Shekhinah is actually an abstraction of this concept of “dwelling,” which in the sources just quoted is understood literally. Indeed the Tabernacle, as depicted in the Priestly tradition, represents a royal house with all its necessary facilities.

Within the inner recesses of the Tabernacle, removed and veiled from the human eye sits the Deity ensconced between the two cherubim and the entire conception of the service is anthropomorphic (see below). It is performed “before the Lord” (לפני ה') that is, in His presence.

The presence of the Deity in the Sanctuary demands a rigorous observance of all rules concerning holiness and purity; any laxity might incur the wrath of the Deity and thus invite disaster. The divine seclusion must be respected. Thus in an adjoining chamber, the high priest, the most intimate of God’s ministrants, attends to His essential needs. Only the priest who ministers to the Lord may approach the divine sanctum; the “stranger” who draws near must die (Num. 17:28 etc.). Drawing near to the Deity here signifies entrance into the actual sphere of the Divine Presence and for this reason is fraught with great physical danger (cf. Lev. 10:1–2; Num. 16:35).

This anthropomorphic theology derives from early sacral conceptions. The Ark was conceived as the footstool of the Deity and God as sitting enthroned upon the cherubim (1 Sam. 4:4; Ps. 80:2; 99:5, etc.) The shewbread (לחם הפנים) laid out before the Lord by the high priest, the lamp kindled before Him to furnish light, the sweet incense burned mornings and evenings for His pleasure, the offerings consumed by the Divine fire, and the danger that accrues from approaching the Divinity are all alluded to in the early historiographic narratives.

In the ancient Israelite traditions God’s presence is manifested mainly by the Ark and the pillar of cloud (see below). The Ark guided the people in the desert (Num. 10:33–34) and preceded the Israelites in the crossing of the Jordan before entering the Holy Land (Josh. 3:3ff.). The Ark also accompanied the people in their battles with their enemies (Num. 10:35–36), a fact which is well exemplified in the story of the critical encounter between the Israelites and the Philistines in Aphek (1 Sam. 4). When the Ark was brought into the camp, the Israelites shouted with a great shout so that the whole earth stirred (4:5), and the Philistines, hearing the shout, became terrified, saying that “God has come into the camp” (4:7). The most common expression for the manifestation of God’s presence is *Kevod YHWH*.

THE KAVOD OF THE LORD. The Godhead and its appearance are associated with the term *kavod*, a term underlying

the imagery of the Divine Presence in the Bible and paralleling the term *Shekhinah* in rabbinic literature. The Tabernacle is said to be sanctified by the “*Kavod* of the Lord” (Ex. 29:43) and indeed when God enters the Tabernacle after its inauguration the Tabernacle is said to be filled with the *kavod* (Ex. 40:34–35). The dedication of the Jerusalem Temple is described in similar terms in 1 Kings 8:11. In both cases the *kavod* enters the holy abode, accompanied by the cloud, up to the Holy of Holies during which time Moses, on the one hand, and the Jerusalem priests, on the other, could not come in to minister. Only after the cloud departed and the *kavod* arrived at its place between the cherubim could Moses or the Jerusalem priests reenter the holy House.

The cloud serves as an envelope which screens the Deity from mortal view. Only Moses, who converses with God face to face, may enter into the cloud (Ex. 24:18). To the Israelites, however, God manifests Himself only when covered by a cloud. Unlike Moses they see only flames flashing forth from the cloud (Ex. 24:17). Only once does God manifest Himself to Israel without His screen of cloud – on the day of the inauguration of the Tabernacle (Lev. 9:23), an event whose importance parallels the Sinaitic revelation. The cloud departs from the Deity only when He assumes another mode of concealment, namely the Tent of Meeting or the Sanctuary. When the *kavod* enters the Tabernacle, the cloud remains outside and covers the tent. When the Tabernacle is dismantled, the *kavod* leaves the tent which is enveloped once again by the cloud which awaits Him and rises upward (Num. 9:15ff.).

THE NATURE OF THE KAVOD. Knowledge of the underlying imagery of the concept of *kavod*, which is embedded in Priestly tradition, is provided by Ezekiel whose ideology and divine imagery is grounded on Priestly doctrine. In Ezekiel 1, the *kavod* is described as an envelope of fire and brightness conveyed on a chariot. From afar, the apparition is like a blazing fire upon a great cloud swept by a storm wind (1:4). It is this radiance and brightness of the *kavod* which made Moses’ face radiant after he spoke with God (Ex. 34:29–35).

This characteristic feature of God, i.e., His being surrounded by an aureole or nimbus, is salient in the description of gods in Mesopotamia. The terms denoting the halo of the gods in Mesopotamia, *pulḫu-melammu*, actually correspond to the Hebrew *kavod-yir’ah* and indeed refer to the flame and fire enveloping the Godhead. Like the Tabernacle and Temple in Israel, the Mesopotamian shrines and chapels were clad with the *melammu*, i.e., the divine splendor. The *kavod* is said to cover (cf. Hab. 3:3, *ksh*) and fill (Num. 14:21; Isa. 6:3, *ml’*) heaven and earth. The same idea occurs in connection with the *pulḫu-melammu* in Akkadian expressed by the verbs *katāmu* and *malû* which are identical with the Hebrew *ksh* and *ml’*. The Akkadian *pulḫu-melammu* is often employed in connection with overwhelming the enemy and terrifying him. This is in fact expressed in Isaiah 2 where on the “day of the Lord” God appears in “terror” and “majestic glory” (*paḥad YHWH ve-hadar ge’ono*) a pair of concepts which

can now be better understood on the basis of the Mesopotamian parallels.

The correspondence of *pulḫu-melammu* to *kavod-yir’ah* may be discerned in some other biblical descriptions. The Mesopotamian god imparts his *melammu* to the king who is the god’s representative and thus endows him with divine power. When the god rejects the king and deprives him of the *melammu*, the king no longer continues to reign by divine grace. Reflections of these beliefs may also be discerned in biblical literature. Though the Priestly document describes only Moses as being endowed with the divine radiance, biblical wisdom and psalmodic literature describe man in general, in contexts in which he is likened to a king, as being endowed with the divine *kavod* and splendor: “Thou hast made him little less than God, and dost crown him with *kavod* and splendor” (Ps. 8:6). If man becomes unworthy then God deprives him of the divine *kavod*: “He has stripped me of my *kavod* and taken the crown from my head” (Job 19:9).

Ezekiel in his divine chariot vision describes the divine animals as endowed with terror (*yir’ah*; 1:18). The passage appears to employ the term in the sense of a dazzling and awe-inspiring covering or dress of heavenly and divine beings as does its Akkadian counterpart in Babylonian and Assyrian literature (see Oppenheim, in bibl.). The obscure expression in the Song of the Sea *nora’ tehillot* (Ex. 15:11a) is also best rendered in this sense. The word *tehillot* in this verse does not mean “praises” but “radiance” (cf. Job 29:3; 31:26, 41:10) as it does in Habakkuk 3:3: “His splendor covered the heavens and the earth was full of his *tehillah*.” The *tehillah* of God fills the universe as does His *kavod* (cf. Num. 14:21; Isa. 6:3). The terms *yir’ah* and *kavod*, then, are used synonymously in biblical literature as are their Akkadian counterparts *pulḫu* and *melammu* in Babylonian literature.

The Abstract Notion

In contradiction to this corporeal representation of the *kavod*, Deuteronomy promulgates the doctrine of the “Name.” The Deity cannot be likened to any form whatever, and He cannot therefore be conceived as dwelling in a Temple. God has caused the Temple to be called by His name or has caused His name to dwell therein, but He Himself does not dwell in it. The Deuteronomist school used the word *shem*, “name,” to indicate the incorporeal aspect of God in a very consistent manner and never made the slightest digression from it. There is not one example in the Deuteronomist literature of God’s dwelling in the Temple or the building of a house for God. The Temple is always the dwelling of His “name.” This consistency is seen most clearly when a Deuteronomist text is interwoven with an earlier text which does not know the “name theology.” Thus the account of the building of the Temple and the ancient story of its dedication speak plainly about building a house for God (1 Kings 6:1, 2; 8:13), while the Deuteronomist whenever he mentions the building, describes it as being for the “name” of God (1 Kings 3:2; 5:17, 19; 8:17, 18, 19, 20, 44, 48).

The most definitive expression of this theology is to be found in the prayer of Solomon in 1 Kings 8. The Temple is not God's place of habitation but serves only as a house of worship in which Israelites and foreigners alike may deliver their prayers to the Lord Who dwells in heaven. The idea that God's habitation is in heaven is here articulated most emphatically to eradicate the belief that the Deity sat enthroned between the cherubim in the Temple. Whenever the expression "Thy dwelling place" (*mekhon shivtekha*) is employed it is invariably accompanied by the word "in heaven" (8:39, 43, 49). The Deuteronomic editor is here disputing the older view implied by the ancient song that opens the prayer (8:12–13) and that designates the Temple as God's "exalted house and dwelling place [or pedestal] forever." The word *ba-shamayim*, "in heaven," is consistently appended to the expression *mekhon shivtekha* to show that it is heaven which is meant and not the Temple as the ancient song implies.

In actual fact, however, the term "thy dwelling place" in the early sources as well as in Solomon's song (8:12–13) denotes the Sanctuary; it is the editor who is here attempting to alter this meaning and thereby wrest the song from its natural sense. This may be apprehended from the Song of the Sea (Ex. 15) in which the poet declares: "Thou wilt bring them in, and plant them on Thy own mountain, the foundation, O Lord, which Thou hast made for Thy abode [*makhon le-shivtekha*] the Sanctuary, O Lord, which Thy hands have established" (15:17). The Israelites can only be planted in YHWH's own mountain. The latter denotes not the Temple mount alone but the entire Holy Land (cf. Isa. 11:9; 14:25; 25:6, 7, 10; see *Isaiah), but "the place for You to dwell in" and "the Sanctuary" means naturally the Temple, and one suspects an adaptation of Solomon's dedication with "you made" substituted for an original "I made" and "Your hands" for an original "my [i.e., Solomon's] hands" (cf. *Eretz-Israel*, 9 (1969), 45 n. 4). Indeed, Isaiah who visualizes God as seated upon a throne in the Temple (chapter 6), designates the Temple as the "foundation [*mekhon*] of Mount Zion" (4:5) and elsewhere explicitly describes the Lord as dwelling on Mount Zion (*ha-shokhen be-har Ziyon*; 8:18; cf. 31:9). The expression "a place to dwell in," or rather the concept of a permanent abode for the Deity, goes back to the period of the United Monarchy when the House of the Lord was first erected, and constitutes an innovation in the Israelite conception of the Divinity. The psalms which extol Zion and Jerusalem, most of which are rooted in the court theology of the United Monarchy, consistently stress the idea that Jerusalem and its house of worship are the place of God's domicile (Ps. 46:5; 48:9; 50:2; 76:3, etc.). Thus, Psalms 132, which describes the transfer of the Ark to Jerusalem, expressly declares that "the Lord has chosen Zion, for He has desired it for His habitation [*moshav*]" (132:13). It is in the Temple of Jerusalem that God found, in a sense, His true place of rest, hence the Psalmist declares in the name of the Lord: "This is My resting place for ever, here will I dwell, for I have desired it" (132:14).

This conception appears to have been first contested during the period of the Hezekian-Josianic reforms, in all

probability by the circle which was then engaged in the final crystallization of Deuteronomy. It is interesting that the very book which elevates the chosen place to the highest rank of importance in the Israelite cult should at the same time divest it of all sacral content and import. With remarkable consistency it resorts again and again to the phrase "the place where He shall choose to cause His name to dwell" (*le-shakken/lasum shemo*) so as to emphasize that it is God's name and not God Himself who dwells within the Sanctuary, as against the Priestly tradition which speaks of God's dwelling in the midst of the children of Israel (Ex. 25:8; 29:45; Num. 16:3).

It appears then that it was the Deuteronomic school that first initiated the polemic against the anthropomorphic and corporeal conceptions of the Deity and that it was afterward taken up by the prophets Jeremiah and Deutero-Isaiah. It is by no means coincidental that the only passages which reflect a quasi-abstract conception of the Deity and negation of His corporeality are to be found in Deuteronomy and Deutero-Isaiah: Deuteronomy 4:12: "You heard the sound of words, but saw no form [*temunah*]" (cf. 4:15) and Isaiah 40:18: "To whom will you liken God or what likeness compare Him," and similarly in Isaiah 40:19 and 46:5.

These later conceptions, then, are diametrically opposed to the earlier views articulated in the JE and P documents and in the prophetic books antedating Deuteronomy. Thus Exodus 24:9–11 refers to the leaders, elders, and so on seeing God; in Exodus 33:23 Moses is said to have beheld God's back, and Numbers 12:8 speaks even more strikingly of Moses as gazing upon "the form [*temunah*] of the Lord." Amos similarly sees the Lord "standing beside the altar" (9:1), and Isaiah beholds God sitting upon a throne with His train filling the Temple (6:1; cf. 1 Kings 22:19–20).

REVELATION AND THE ARK IN DEUTERONOMIC LITERATURE. In contrast to the account in Exodus 19 of God's descent upon Mt. Sinai (19:11, 20), Deuteronomy 4:36 says: "Out of heaven He let you hear His voice, that He might discipline you; and on earth He let you see His great fire and you heard His words out of the midst of the fire." In other words, the commandments were heard from out of the midst of the fire that was upon the mount, but they were uttered by the Deity from heaven. Deuteronomy has, furthermore, taken care to shift the center of gravity of the theophany from the visual to the aural plane. In Exodus 19, the principal danger confronting the people was the likelihood that they might "break through to the Lord to gaze" (19:21); it was to prevent this that there was need to "set bounds for the people round about" (19:12) and to caution them not to ascend the mountain. Indeed, the pre-Deuteronomic texts always invariably speak of the danger of seeing the Deity: "For man shall not see Me and live" (Ex. 33:20), and similarly in Genesis 32:30: "For I have seen God face to face, and yet my life is preserved" (cf. Judg. 13:22; Isa. 6:5). Deuteronomy, on the other hand, cannot conceive of the possibility of seeing the Divinity. The Israelites saw only "His great fire" which symbolizes His essence and quali-

ties (Deut. 4:24: "For the Lord your God is a devouring fire, a jealous God"; cf. 9:3), whereas God Himself remains in His heavenly abode. In Deuteronomy the danger threatening the people and the greatness of the miracle is that of hearing the voice of the Deity: "Did any people ever hear the voice of a god speaking out of the midst of the fire as you have heard, and survived" (4:33; cf. 5:23).

This attempt to eliminate the inherent corporeality of the traditional imagery also finds expression in Deuteronomy's conception of the Ark. The specific and exclusive function of the Ark, according to Deuteronomy, is to house the tables of the covenant (10:1–5); no mention is made of the Ark cover, *kapporet*, and the cherubim which endows the Ark with the semblance of a divine chariot or throne (cf. Ex. 25:10–22 [P]). The holiest vessel of the Israelite cult performs, in the Deuteronomistic view, nothing more than an educational function: it houses the tablets upon which the words of God are engraved, and at its side the Book of the Torah is laid from which one reads to the people so that they may learn to fear the Lord (Deut. 31:26; cf. 31:12, 13). The Ark does not serve as God's seat upon which He journeys forth to disperse His enemies (Num. 10:33–36), but only as the vessel in which the tables of the covenant are deposited. This becomes quite clear when Deuteronomy 1:42–43 is compared with Numbers 14:42–44, a tradition on which the Deuteronomistic account is based. Numbers 14:44 states that after the incident of the spies "the Ark of the Covenant of the Lord departed not out of the camp" and that this was the reason for the Israelites' defeat in their subsequent battle with the Amalekites and Canaanites. The Deuteronomistic account, on the other hand, completely omits the detail of the Ark and ascribes the Israelite defeat to the fact that God was not in their midst, without referring to the whereabouts of the Ark.

The author of Deuteronomy similarly relates that it was God who went before the people to seek out new resting places (1:33), whereas the earlier source, upon which Deuteronomy was dependent, relates that it was the Ark which journeyed forth before the people to seek out new resting places for them (Num. 10:33). The absence of the Ark is especially striking in the Deuteronomistic law of warfare (23:15). One would expect a passage which speaks of the presence of the Divinity within the military encampment to make some mention of the Ark which accompanied the warriors on their expeditions, as in 1 Samuel 4:6–7 (see above). The Deuteronomistic law, however, speaks of the Lord as moving about the camp but does not make any allusion to the Ark or the holy vessels.

A similar conception is encountered in Jeremiah, for example, in 3:16–17: "They shall say no more, 'The Ark of the Covenant of the Lord.' It shall not come to mind... At that time Jerusalem shall be called the throne of the Lord." In other words, the Ark of the Covenant shall no longer serve as God's seat, as the people were previously accustomed to believe, but all of Jerusalem shall be "the seat of $\Upsilon\text{H}\text{W}\text{H}$," that is in a symbolic sense. In another passage the prophet declares: "Do I not fill heaven and earth, says the Lord" (23:24), recalling the

words of Deutero-(or Trito-) Isaiah when he expressly repudiates the notion of the Sanctuary as the place of God's habitation: "Heaven is My throne and the earth is My footstool, what is the house which you build for Me, and what is the place of My rest" (66:1). This view is also encountered in the Deuteronomistic prayer of Solomon: "Behold, heaven and the highest heaven cannot contain Thee; how much less this house which I have built" (1 Kings 8:27). The Sanctuary is here conceived as a house of prayer and not as a cultic center.

Although the abstract notion of the Divine Presence associated with the so-called "Name" theology found its full expression in Deuteronomy and in the Deuteronomistic school, it should be pointed out that traces of it are already found in some of the earlier sources, especially in E (see *Pentateuch). The latter source does not contain theophanies in which God appears visibly in human form but revelations through various media, such as the dream or the angel. In one particular case, the angel, representing God, is said to contain God's "name" in himself (Ex. 23:21), which is at least an anticipation of the Deuteronomistic "Name" theology.

[Moshe Weinfeld]

PRESIDENT OF ISRAEL, the official head of the State of Israel, resembling a constitutional monarch in function and powers, bears the ancient Hebrew title of "*nasi*." According to the Basic Law: President of the State, passed by the Knesset on June 16, 1964, any citizen of Israel resident in the country is eligible for the office and may hold it for no more than two consecutive terms. The seat of the president is Jerusalem. With the exception of these two provisions, the Basic Law does not differ substantially from the Presidency of the State Law, 1951, which provides that the president must be elected by a majority of all members of the Knesset (i.e., by at least 61 votes) for a five-year term beginning on the day when he makes and signs the declaration of allegiance before the Knesset. He cannot be called to account before any court but he may be deposed by the Knesset for unbecoming behavior or in the case of ill-health, which makes it impossible for him to carry out his duties.

The president signs all laws (other than those concerned with his own powers) and treaties ratified by the Knesset. He appoints (upon the recommendation of the foreign minister) the diplomatic representatives of the state, and accepts the credentials of diplomatic representatives of foreign states accredited to Israel. Upon the recommendation of the appropriate governmental authorities, he appoints the state comptroller, the governor of the Bank of Israel, the members of the civil judiciary, and the judges of the religious courts. The president

receives the resignation of the government and sets in motion the process of forming a new government by consulting representatives of all the political parties in the Knesset and then entrusting a member of the Knesset with the task of setting up a government. He is also given reports of government meetings. The president is empowered to pardon offenders and to mitigate sentences.

The first president of the state, Chaim *Weizmann, was elected on Feb. 16, 1949, at the opening session of the First Knesset – held with symbolic significance in Jerusalem, though the seat of the Knesset and government was still in Tel Aviv. He brought to the presidency his extraordinary experience in Zionist leadership and diplomatic negotiation, but illness restricted his activities to the formal duties of the office. Weizmann died on Nov. 9, 1952, and was succeeded by Izhak *Ben-Zvi. Under President Ben-Zvi, the official residence and office of the president were established in Jerusalem. There for two full terms and part of a third, until his death on April 23, 1963, Ben-Zvi filled the office with rich human, spiritual, and scholarly content. He and his wife Raḥel made the residence a meeting place for the diverse “tribes of Israel,” aiding notably in the process of national amalgamation during those years of mass immigration from Europe and the Islamic countries. The monthly “New Moon” meetings of groups from particular countries and the “Open House” held annually during Sukkot week were typical of the direct contact established with the masses of Israel’s citizens, including the Muslim, Druze, Christian, Bahai, and Samaritan communities. President Ben-Zvi paid state visits to Belgium and Holland, to Burma, and to Congo Brazzaville, the Central African Republic, and Liberia.

When Zalman *Shazar was elected president on May 21, 1963, he brought with him the qualities of a historian, Israel and Zionist leader, and orator, who had devoted himself to the world Jewish community, its educational problems, and its literature in Hebrew, Yiddish, and other languages. All these interests were expressed in the activities of the president’s residence. The Bible Study Circle, originally led by the Prime Minister, David *Ben-Gurion, met there regularly, as did the Circle for the Study of the Diaspora under the aegis of the Hebrew University’s Institute of Contemporary Jewry. The president instituted a special fund for the encouragement of literature and scholarship and invited outstanding writers, artists, and thinkers from abroad to visit Israel as his guests. He and his wife Raḥel, a writer and women’s leader, paid state visits to Nepal, Uruguay, Chile, and Brazil in 1966, and Canada in 1967.

[Shulamit Nardi]

Shazar was succeeded by Ephraim *Katzir in 1973, Yitzhak *Navon (1978), Chaim *Herzog (1983), Ezer *Weizman (1993), and Moshe *Katzav (2000). Katzir, a renowned scientist, promoted science and higher education as president as well as encouraging the spirit of volunteerism. Navon, a member of the Knesset from 1965 to 1978, was the first Israeli president to take a public stand on a controversial political issue, calling for a

commission of inquiry to investigate the events surrounding the Sabra and Shatilla massacre in the Lebanon War. He also made state visits to Egypt under Sadat and the U.S. at President Reagan’s invitation. Herzog too spoke out on the issues and played a key role in the formation of the 1984 and 1988 coalition governments. He visited over 30 countries, including first-time presidential visits to Germany and China. Weizman brought a brash, down-to-earth style to the presidency, more than once putting his foot in his mouth. He frequently visited the wounded in hospitals and bereaved families in their homes. He resigned the office midway through his second term because of failing health and public criticism concerning his personal finances. His successor, Moshe Katzav, took a more low-key conciliatory approach.

PRESOV (Slovak. **Prešov**; Hung. **Eperjes**; Germ. **Preschau**; Ukr. **Prjasev**), town in E. Slovakia. From the late Middle Ages, foreigners attended the fairs of Presov, but the Jews had to leave in the evenings. The official rationale was that Jews were a different creed, but documents indicate that the burgers and guilds feared business competition. In the decree of Hungarian King Mathias II Corvinus, the guilds prohibited members from doing business with Jews. Austrian Empress Maria Theresa (1740–48) permitted Jews to stay in the city for the fair, but local law specified that a burger who provided a Jew accommodation would be fined. The Jew would be beaten, deprived of his wares, and expelled. So Jews settled in nearby villages. Things improved during the reign of Emperor Joseph II (1780–90) but declined again after his death.

In 1780 a Jewish businessman from Tarnopol, Poland, settled in Presov. Prosperous and well connected with the imperial court in Vienna, Markus Holaender (1760–1849) could not be expelled by the burgers, who were determined to oust him. In 1789 he received permission to live in Presov. Soon other Moravian Jews arrived. In 1830 a prayer room was established in Holaender’s house, and in 1847 the first synagogue was erected. In 1855 the *ḥevra kaddisha* was established; in 1857 a primary school was opened; and in 1870 the *mikveh* opened. In 1887 the old cemetery, dating back to 1827, was replaced.

During the Magyar Revolution of 1848–49, many Presov Jews enlisted in the army. In 1868 Holaender’s son, Leo, presided over the Hungarian Jewish Congress in Budapest, and led the Neolog (Reform) faction there. The Presov congregation joined the congress (Neolog organization of Hungarian Jewry). In 1871 the Orthodox split and established a new congregation. The influx of Orthodox Jews from Galicia and neighboring villages soon overshadowed the Neologs. In 1892 the Orthodox erected their own synagogue. The Neologs constructed a new synagogue in 1888 after theirs had been burnt in a townwide fire.

In 1836 there were 89 Jews in Presov; in 1844 there were 120; in 1851 there were 170. The community increased fast and in 1880 there were 1,221; in 1900 there were 1,211; in 1910 the number reached 2,673. In 1930 there were 4,858. In 1940,

on the eve of the deportations, the official number of Jews was 4,308.

In 1860 the Neologs elected Dr. Mayer Austerlitz to serve as rabbi. Officiating until his death in 1913, he had a lasting impact on his congregation and the Jewish community. In 1912 a *nusah* "sefarad" Hasidic group left the Orthodox congregation and organized one of their own. They hired a rabbi, created their own yeshivah, and built a synagogue, a *talmud torah*, and other Jewish installations. Each congregation had its own school system. In 1931 the Orthodox established a Beth Jacob girls' elementary school. Presov also had a vocational school for metal work.

During World War I many young men enlisted in the army. After the war, a wave of antisemitism swept upper Hungary. In Presov, all Jewish stores on the main street were looted and demolished. As a result, Zionist political parties and youth movements were formed. The Czechoslovak Communist Party was also engaged in political activity among the Jewish public and Jewish youth.

On the eve of the deportations, there were 6,000 Jews in Presov. In addition to the local population, the city hosted Jewish refugees from Germany, Austria, and Poland.

In October 1938, Hlinka's Slovak People's Party, a clerical nationalistic and Fascist party, proclaimed Slovakia's independence under Nazi supervision. One of their first orders of business was to persecute the Jews. In November 1938 Slovakia lost a part of its mainland, which was annexed to Hungary. The party blamed the Jews for the loss. On March 14, 1939, Slovakia proclaimed independence under the name the Slovak State. Again, the Jews were persecuted as violent demonstrations accompanied the proclamation. Jews were assaulted in the streets and their property vandalized. Soon all Jewish institutions and organizations were shut down. Jews were expelled from schools, and the Presov community was charged with the responsibility of teaching the children. The next year, appropriation of Jewish property under the pretext of "Aryanization" began. Jews were losing their property and sources of income. In the spring of 1941, the Hlinka Party ordered Jews to wear a yellow armband. Six months later, all Slovakian Jews had to wear a yellow Star of David. In January 1941 a mob burned down the Orthodox synagogue. During the winter of 1941–42 Jews who lived on main streets were forced to leave their apartments. Consequently, Jews expelled from Bratislava sought accommodation in Presov.

In March 1942, deportation to the camps in Poland began. In Presov, the deportations started on May 12. Some 6,000 of Presov's Jews perished in the Holocaust. While still crowded around Lublin, the home communities did their best to provide the deportees with money, medicine, and food. The remaining community organized a network of smugglers to transfer goods, money, and letters to the exiles. Jews who manage to escape from the camps and reach Slovak borders were transferred to safety in Hungary. In the spring of 1944, with the approaching front, the Jews of eastern Slovakia were ordered to resettle in central and western Slovakia.

At the end of August 1944, an anti-Fascist uprising took place in Slovakia; 26 Presov Jews participated. Among the six Presov Jews killed in the attempt was Egon Roth, leader of the Ha-Shomer ha-Za'ir movement and head of the effort to help the Jews who had escaped from Poland.

In 1947 there were 548 Jews in Presov. There was only one congregation. The Orthodox synagogue was restored, as was the *mikveh*. A memorial was erected for the Holocaust victims. A kosher kitchen and restaurant supplied meals for those who returned but had no place to stay, as well as those on their way home. In the spring and summer of 1945, mobs attacked and vandalized Jewish installations, shouting anti-semitic slogans. This prompted the remaining Jews to immigrate abroad.

In 1957 the synagogue underwent restoration and the cemetery was cleaned. During the Velvet Revolution, there were 60 Jews in Presov, who faced an unexpected problem: an American Jewish company wanted to purchase the Orthodox synagogue and transfer it to the United States. The Jews deterred their government from selling out. The Jewish Museum was reconstructed and opened in November 1993. The Orthodox synagogue is occasionally used for services. All other synagogues are used mainly as warehouses.

The first Jewish newspaper is generally considered to be the *Gazeta de Amsterdam*, which appeared in 1675. Holland had by then become an important Jewish center, having attracted many Spanish-Portuguese and Polish Jews seeking a refuge from persecution, and some years earlier *Manasseh Ben Israel had set up the first Hebrew *printing press there. The appearance of the *Gazeta* was no accident. It was issued by a Sephardi printer, was written in Judeo-Spanish or Ladino, the language of the exiles, and carried dispatches from other countries. The next notable publication, *Dinstagishe un Fraytagishe Kurant* in Yiddish, appeared twice a week and then once a week as the *Dinstagishe Kurant* in 1686 and 1687. The first Jewish periodical was *Peri Ez Hayyim*, also of Amsterdam, a monthly bulletin containing rabbinical decisions of the Sephardi community. It appeared from 1728 to 1761.

As Emancipation and Haskalah gained ground among European Jewry in the middle of the 18th century, Jewish journals appeared in Germany and other countries. Their numbers increased with the revival of Hebrew, the growth of Yiddish literature, and the continued flight of Jews from Eastern Europe. The rise of modern Zionism and the emergence of political parties among the Jews stimulated printing and publishing, and by 1882 Isidore Singer of Vienna, in the brochure *Presse und Judentum*, was able to list 103 extant Jewish newspapers and journals. Thirty of them were in German, 19 in Hebrew (three of them appearing in Jerusalem), 15 in English, 14 in Yiddish, six in Ladino, five in French, and the rest in eight other languages.

The first successful Jewish newspaper in the modern sense was the **Allgemeine Zeitung des Judentums*, launched in Leipzig in 1837 and surviving until 1922. The *Jewish Chronicle*, founded in London in 1841, was to prove even more successful and in 2006 has flourished as the oldest Jewish newspaper in the world. On Jan. 17, 1896, it published the first Zionist article by Theodor *Herzl. Herzl himself launched **Die Welt* in 1897. These two weeklies published the latest Jewish and Zionist news and served as sources for other newspapers before the Zionist Organization established its own press bureau to supply the Jewish press with the latest news from Erez Israel and the Diaspora. The first Jewish news agency was the Neue Juedische Korrespondenz, which was founded in Berlin in 1907 and served the Jewish press until shortly after the

outbreak of World War I. In order to keep in touch under war conditions with communities in other parts of the world, some Jewish organizations established offices in neutral countries. The World Zionist Organization, with headquarters in Berlin, opened offices in Copenhagen where an information bulletin appeared under its auspices in English, French, and German, and reached (sometimes in reprint) the countries of both the Allied and Central powers. Another well-organized agency was the Juedische Presse Zentrale in Zurich. The main function of these agencies was to scan the world press for information of Jewish interest and pass it on to the newspapers. They were mostly short-lived; but the *Jewish Telegraphic Agency, established in The Hague in 1914 by Jacob *Landau and re-established in London in 1919 by Landau and Meir *Grossman, proved more permanent. In 1922 its headquarters were transferred to New York. It had correspondents and bureaus in many countries, and it issued a *Jewish Daily Bulletin* in English and other languages; in 1962 it began a weekly bulletin, *Community News*.

Until World War II, Europe had the largest number of Jewish periodicals. There were Yiddish dailies in Warsaw, Lvov, Cracow, Lodz, Bialystok, Vilna, Riga, Kovno, and other large East European towns, including Soviet Yiddish newspapers in Moscow, Kharkov, and Minsk. There were also Jewish Polish dailies, more than two dozen weeklies in Yiddish, Hebrew, and Polish, and nearly 100 monthlies. There were more than 100 Jewish German-language weeklies, fortnightlies, and monthlies in Germany and Austria. A Jewish German-language daily appeared in Vienna, 1919–27. The rise of Nazi power brought most of these papers to an end. When the Nazi forces overran any country, one of their first acts was to close down the Jewish publications. “Underground” newspapers also appeared in the ghettos, among the partisans in the forests, and even, if rarely, in the concentration camps.

In 1967 there were 580 Jewish newspapers and periodicals in the world, outside Israel: 178 in Europe, 245 in the U.S., 82 in Central and South America, 29 in Africa, 21 in Canada, 19 in Australia and New Zealand, several in Asia, and two in the Soviet Union. English was the language of the largest number (300), with Yiddish coming second (112). The position of the Yiddish language presented a paradox. Though Yiddish was regarded as generally losing ground, all the Jewish daily papers outside Israel, ten in number, were in Yiddish. Efforts to establish a Spanish Jewish daily in Argentina were without success, and an English Jewish daily in London proved unsuccessful. In 2006 there were around 50 weekly newspapers and a large number of bi-weekly and monthly publications in the U.S. There were 15 weekly Jewish newspapers in Europe, seven in Canada, three in Latin America, and two elsewhere in the world. In addition, there were many which appeared bi-weekly or monthly in different centers of Jewish population. The former Soviet Union saw a rebirth of the Jewish press with over 40 publications among the republics associated with the Federation of Jewish Communities.

[Lewis Sowden and Josef Fraenkel / Yoel Cohen (2nd ed.)]

In Australia and New Zealand

The Voice of Jacob, founded in Sydney in 1842, was the first Jewish newspaper in Australia, and before the end of the century several others, all in English, had run their brief careers and ceased publication. A few, however, became firmly established, notably the *Australian Jewish Herald* (1879), the *Australian Jewish Times* (1893), and *Hebrew Standard* (1894). There was no significant growth in the Jewish press until the middle decades of the 20th century, when the Jewish population rose from about 27,000 in 1938 to 67,000 in 1960. The *Australian Jewish News*, founded in Melbourne in 1933 as a bilingual English and Yiddish weekly, published a Sydney edition under the name of *The Sydney Jewish News*. In 1967 the two editions had a combined circulation of 20,000.

The Jewish press attained a high standard under the guidance of Newman Rosenthal, O. Rubinstein, and Reuben Havin, its leading editors during the 1930s and 1940s. They made it an important factor in molding opinion both in the Jewish community and among prominent non-Jews. Leading political figures gained their knowledge of Zionism, the Holocaust, and Israel from pages of the *Australian Jewish Herald* and the *Australian Jewish News*. This bore fruit in the pro-Jewish stand taken by Dr. C. Evatt of Australia, as chairman of the UN Advisory Committee on Palestine in 1947. Within the community, the press exercised a strong influence on the development of representative bodies, particularly the state Boards of Deputies and the Executive Council of Australian Jewry. It also influenced the decision in favor of establishing the Melbourne day school, Mount Scopus College, and later the Jewish day-school movement generally.

The strong support which the Jewish press gave to Zionism influenced the outlook of the Jewish community, eventually winning over old-established families who had opposed political Zionism in the pre-State era. The pro-Israel opinion thus formed eventually led to the downfall of the *Australian Jewish Herald* and its Yiddish subsidiary, the *Australian Jewish Post*. In 1968 the *Australian Jewish Herald*, the oldest existing Jewish paper in Australia, published an article with an anti-Israel bias. During the controversy that followed, David Lederman, publisher of the *Herald* and the *Post*, also attacked the Victoria Jewish Board of Deputies. Pressure by the board and the immediate loss of popularity compelled both papers, with a total circulation of 12,500 weekly, to cease publication. Among the other publications which appeared in Australia were *The Bridge*, a literary quarterly, and Yiddish periodicals, *Der Landsmann* and *Unzer Gedank*.

In New Zealand, the *Jewish Times*, a monthly, appeared in Wellington in 1931, and was succeeded by the *New Zealand Jewish Chronicle*, a bimonthly, in 1944. A monthly, *Hashofar*, was founded in 1959.

[Lewis Sowden]

In Belgium

The small size of the Jewish community of Belgium for long limited the publication of Jewish periodicals. The first, *Revue Orientale*, edited from 1841 to 1846 by Eliakim *Carmoly, did

not have enough local interest to last. No others were published until shortly before World War I, when several publications were sponsored by Jews of East European origin.

By 1959, however, no fewer than 225 Jewish periodicals had appeared in Belgium, reflecting the vitality of the community in the 20th century. Of these, 46 were in a mimeographed or lithographed form; 97 were in Yiddish, four in Hebrew, 80 in French, two in German, one in Russian, one in English, and 27 in more than one language. Four were published between 1900 and 1918, 137 from 1919 until the German occupation of Belgium in 1940, seven illegally during the German occupation of 1940–44, and 70 after the liberation of Belgium. Most of these were intended for the membership of an organization, rather than for the public at large.

In 1970 there were five Jewish journals in Belgium: the weekly *Belgisch Israelietisch Weekblad*, founded in 1954; the bimonthly *Tribune Sioniste*, founded in 1951 and having a circulation of 5,500; three monthlies, *Centrale* (circulation 8,000), *Regards (Cahiers du Centre Communautaire Laic Juif)*, and *Kehilatenou*; and a quarterly, *Central* in Flemish and Yiddish.

In Canada

The earliest Jewish newspaper to appear in Canada was the *Jewish Times*, a weekly first, published in 1897. In 1909 its name was changed to *Canadian Jewish Times*, and in 1915 it merged with the weekly *Canadian Jewish Chronicle* of Montreal, which had been founded in 1914. The *Chronicle* amalgamated with the *Canadian Jewish Review* and appeared as the *Canadian Jewish Chronicle Review* from 1966 in both Toronto and Montreal, becoming a monthly in 1970. There was no Yiddish press until 1907, when *Der Kanader Adler* (The Canadian [Jewish] Eagle) began daily publication in Montreal. Other Yiddish newspapers, such as the Toronto-based daily *Yiddisher Zhurnal* (Hebrew Journal) established in 1911, emerged in the wake of increased immigration from Eastern Europe. After several false starts, a weekly Yiddish paper *Dos Yiddishe Vort* (The Jewish Word) started up in Winnipeg.

Driven by a strong political agenda, Canadian Jewish communists began publishing a Yiddish newspaper starting from the 1920s that went through several name changes emerging as the *Vokhenblat* after World War II. A monthly *Congress Bulletin*, by the Canadian Jewish Congress from 1943 and the *Canadian Zionist*, in English and Hebrew, was published by the Zionist Organization beginning in 1931; the English/Yiddish *The View-Dos Vort* by the Canadian Labour Zionist movement beginning in 1940 and *Orah* of the Canadian Hadassah Organization. In addition a French monthly, *Bulletin du Cercle Juif*, was published by the Canadian Jewish Congress from 1954, and a quarterly in English and Spanish, *Newsletter*, founded by the International Council of Jewish Women, were both widely distributed.

[Lewis Sowden]

The Yiddish language press no longer existed in Canada in the 21st century, but the Anglo-Jewish press was alive

and well. The *Canadian Jewish News* was by far the largest weekly Jewish newspaper in Canada with separate Toronto editions and Montreal editions. The Montreal edition offered readers some French articles. With a combined weekly subscriber count of about 41,000 households, the paper is read from coast to coast across Canada. It is privately-owned but effectively functions as the national community-based newspaper featuring diverse points of view on topics of Jewish interest, national and foreign. The weekly *Jewish Independent*, published between 1930 and 2005 as the *Jewish Western Bulletin*, serves the Jewish communities of British Columbia, especially Vancouver, and is largely circulated by mail. Serving Winnipeg and surrounding communities since 1925 is the weekly *Jewish Post and News*. Similarly *The Jewish Free Press* is an independent newspaper published in Calgary which addresses the interests of Jew in southern Alberta. *The Jewish Tribune* is published twice a month by B'nai B'rith Canada, and deals with local, national and international concerns. A left-leaning monthly magazine, *Canadian Jewish Outlook*, is currently published out of Vancouver, with the assistance of "collectives" in other communities. Increasingly, all these publications have online editions. Across Canada, many Jewish organizations, synagogue, Jewish campus groups and smaller communities also have their own newspapers or regular bulletins and there are several Jewish-community-focused radio and television programs broadcast in centers of heavier Canadian Jewish population.

[Richard Menkis and Harold Troper (2nd ed.)]

In Czechoslovakia

Jewish journalists worked in papers of all political parties in Czechoslovakia. There were Conservatives like Josef Penížek, Liberals like Josef Kodíček, Karel Poláček, and Richard Weiner; Social Democrats like Gustav Winter; and Communists like Rudolf Slánský. There were also baptized Jewish editors on the Catholic press, among them Alfred Fuchs and Pavel Tigrid. Adolf Stránský founded the daily *Lidové Noviny*. The *Prager Tagblatt* had many Jews on its staff (Max *Brod among them) and a large Jewish readership.

The Jewish press itself was characterized by vehement public discussion between the Zionists and the organized assimilationist movement, which created its first paper, *česko-židovské Listy*, in 1894. In 1907 it amalgamated with a similar periodical published by Viktor Vohryzek and appeared then as a weekly under the name *Rozvoj* until 1939. The first Zionist organ was the German weekly for youth, *Jung Juda*, which was established in 1899 by Filip Lebnhart and survived until late in the 1930s. Another weekly, *Selbstwehr*, edited from 1918 by Felix *Weltsch, assisted later by Hans Lichtwitz (Uri Naor; d. 1988), became one of the outstanding Zionist periodicals in Europe, and from the 1920s issued a woman's supplement edited by Hanna Steiner. Another Zionist weekly, *Juedische Volksstimme*, edited by its founder Max Hickl and later by Hugo *Gold, appeared in Brno. The paper was established in 1901 and appeared until 1939.

The first Zionist organ in Czech, *Židovské Listy pro čechy, Moravu a Slezsko*, appeared in 1913, but was suspended during World War I and replaced in 1918 by the weekly *Židovské zpravy*, edited by Emil Waldstein, František Friedman, Gustav Fleischmann, Zdeněk Landes, and Viktor Fischl (Avigdor *Dagan). In Slovakia and Carpathorussia the Jewish press included Orthodox organs and papers in Hungarian and Yiddish. In Slovakia were the Zionist weekly *Juedische Volkszeitung* (with a Slovak supplement), edited by Oskar Neumann, and the Mizrahi organ *Juedisches Familienblatt*; in Carpathorussia the Zionist weekly *Juedische Stimme*, the Revisionist *Zsidó Néplap*, and the journal of the rabbi of Munkacz, *Yidische Tsaytung*, had the largest circulation. Of the many other Jewish periodicals the following were notable: the historical review *Zeitschrift fuer die Geschichte der Juden in Boehmen und Maehren* (editor Hugo Gold); *B'nai B'rith Blaetter* (editor Friedrich Thieberger); the Revisionist *Medina Iwrit-Judenstaat*, edited by Oskar K. *Rabinowicz (1934–39); the *Po'alei Zion paper *Der Neue Weg* (editor Karl Baum); and the sports monthly *Hagibor-Hamakabi*. The Jewish youth and student movements also published periodicals of varying duration in the different languages of the country. The *Juedische Revue* was issued by emigrants from Germany in the late 1930s. Between 1945 and the Communist take-over in 1948, attempts were made to revive some Jewish periodicals, but eventually all that remained of the extensive Jewish press in Czechoslovakia was the organ of the Prague congregation; *Věstník židovské náboženské obce v Praze*, edited by R. Iltis (d. 1977), who also edited the almanac *Zidovská ročenka*.

[Avigdor Dagan]

In England

The Anglo-Jewish press had its beginnings in the first half of the 19th century. During the next 100 years and more, numerous publications appeared both in London and the provinces. Many of them were short-lived, but some had long and influential careers, and in 1968 the Jewish press in Britain comprised about 60 publications.

The first periodical was *The Hebrew Intelligencer*, printed and published by J. Wertheimer in London. Intended as a monthly, it first saw light in January 1823, but published only three issues. More successful was *The Hebrew Review and Magazine of Rabbinical Literature*, also a monthly, which lasted from 1834 to 1837, under the editorship of Morris Jacob *Raphall. Persecution of Jews abroad demonstrated the need for a channel of expression in England and brought about the first effective enterprise in Anglo-Jewish journalism. *The Voice of Jacob*, edited by Jacob *Franklin, was initiated in September 1841 as a fortnightly, and was followed two months later by the *Jewish Chronicle*. The two papers were in competition until 1848, when the *Jewish Chronicle* gained the field for itself and was destined to become the most long-lived of Jewish newspapers. Among other papers that appeared in the ensuing years were *Sabbath Leaves* (1845) sponsored by Haim *Guedalla; *The Cup of Salvation* (Liverpool, 1846–47); *The Hebrew Observer* (1853), which merged with the *Jewish Chronicle*

in the following year; *The Jewish Sabbath Journal* (1855); and the *Hebrew National* (1867).

The first Jewish penny paper, *The Jewish Record*, was a weekly that ran for four years (from 1868). *The Jewish World*, established in 1873, was edited by the novelist S.L. *Bensusan in 1897, when its circulation rose to 2,000. In 1931 it was acquired by the *Jewish Chronicle* and was amalgamated with it in 1934. Other papers were *The Jewish Times*, a penny weekly of 1876; *The Jewish Standard*, also a penny (1888–91); and *Jewish Society* (1888–91), under the nominal editorship of Frank Danby (the novelist Julia *Frankau). Provincial Jewry had periodicals such as *Jewish Topics* (Cardiff, 1886), *The Jewish Record* (Manchester, 1887), and *The South Wales Review* (1904). A Hebrew weekly *Ha-Yehudi* appeared in London 1897–1913 issued by Isaac *Suwalski.

The period after World War I produced *The Jewish Woman* (1925–26); *The Jewish Family* (1927); *The Jewish Graphic* (1926–28); *The Jewish Echo* (Glasgow, 1928–); *The Jewish Gazette* (Manchester, 1928–); *The Jewish Weekly* (1932–36); *World Jewry* (1934–36); and *The Jewish Guardian* (1920–36), which was founded under the editorship of Laurie *Magnus by a group of anti-Zionists. In 1968 the Jewish press of Great Britain included a branch of the Jewish Telegraphic Agency; the *Press Survey* of the World Jewish Congress, founded in 1945; the Jewish World News Agency (Yiddish), founded in 1940; and the *Jewish Chronicle* Feature and News Service, founded in 1948. There were weeklies in Glasgow, Manchester, Leeds, and Newcastle. In London, another weekly, *The Jewish Observer and Middle East Review*, was founded in 1952, as a successor to the *Zionist Review*. The fortnightlies included the *Mizrachi Jewish Review*, the *Po'alei Zion's Jewish Vanguard*, and *The Jewish Tribune* in English and Yiddish. The others varied widely from monthly trade journals to learned quarterlies and annuals.

YIDDISH PRESS. Attempts to establish Yiddish newspapers in England preceded the mass immigration from Eastern Europe in the 1880s. The *Londoner Yiddish-Deitche Zeitung* was started in 1867 and the socialist *Londoner Israelit* in 1878, but both were short-lived. Later enterprises were more successful. The weekly *Peilisher Yidel* (later *Die Zukunft*) was founded in 1884 and lasted for two years. As the immigrant communities increased in numbers in London, Leeds, and Manchester, they were served by dailies and weeklies, mostly socialist in outlooks – *Der Arbeter*, *Arbeter Fraynd* (1886–91), *Germinal* (anarchist fortnightly), *Der Veker* (anti-anarchist), *Di Naye Velt* (1900–01), and humorous periodicals such as *Pipifax*, *Der Bluffer*, and *Der Ligner*. It was not until the 20th century that Yiddish newspapers like the *Advertiser* and the *Yidisher Telefon* began to flourish. The *Advertiser* was absorbed by the *Yidisher Zhurnal*, founded in 1907, which was itself absorbed in 1914 by the *Yiddisher Ekspres*. The *Ekspres* began publication in Leeds in 1895 and became a London daily in 1899. The *Yidisher Tageblatt* appeared from 1901 to 1910, and **Di Zeit*, a daily founded in 1913, survived until 1950. A Yid-

dish fortnightly, *Yidishe Shtime*, founded in 1951, was edited in 1970 by I.A. Lisky. There was also a Yiddish literary journal *Loshn un Lebn*.

[Lewis Sowden]

In France

There was no Jewish press in France before the French Revolution. The first Jewish publication was the *Caitung*, a weekly in Alsatian Yiddish issued by a Metz printer for five months from November 1789. Several later journals were also short-lived, and it was not until the early 1840s that a monthly, *Les Archives Israélites de France*, showed any capacity for survival. It was founded by S. Cahen and advocated reform. This stimulated J. *Bloch to launch a rival conservative monthly, *L'Univers Israélite*, in 1844. For nearly 100 years both periodicals exercised considerable influence on Jewish life, *Les Archives* surviving until 1935 and *L'Univers* continuing as a weekly until 1940. This 100-year period, however, saw the birth and demise of more than 300 other publications. A total of 374 appeared from 1789 to 1940. Only 38 of these saw the light before 1881; the largest number, 203, came into being after 1923. Of the total, 134 were in French, 180 in Yiddish, and nine in Hebrew; 56 of them (21 in Yiddish) were Zionist, and 28 (all in Yiddish) were communist. Many of them were stable and influential. Two of them were Yiddish dailies. During World War II a few underground papers were published in Yiddish and French. After the war, the Jewish press recovered its pre-war character. In 1957 the illustrated *L'Arche*, edited by Joseph Samuel and published by the Fonds Social Juif Unifié, the leading Jewish welfare and fund-raising organization in France, began to appear. *L'Arche* was intended to express the revival of French Jewry after World War II by reflecting its religious, intellectual, and artistic life. In 1967 there were three Yiddish dailies, among them *Unzer Vort* (Po'alei Zion) and *Unzer Shtime* (*Bund), and a large number of weeklies and monthlies in French and Yiddish.

In Germany and Austria

Jewish periodicals appeared in Germany from the middle of the 18th century, when they became an expression of the era and its movements – Enlightenment, Reform, and Emancipation. One of them, the *Dyhernfurther Privilegierte Zeitung*, published in 1771–72 in the Lower Silesian town famous for its Hebrew printing presses, was a German-language journal written in Hebrew script. A few years later **Ha-Me'assef* (Berlin, 1784–1811), was founded by Moses *Mendelssohn and used Hebrew as its medium. The first periodical intended for Jews published in the German language and script was *Sulamith*, which appeared in Dessau from 1806 to 1833. Apart from this, the only periodical before 1850 that lasted for any significant length of time was the *Wissenschaftliche Zeitschrift fuer Juedische Theologie*, which Abraham *Geiger edited in Frankfurt from 1835 to 1847. The longest-lived journal in German Jewish press history – 85 years – was the religiously liberal weekly *Allgemeine Zeitung des Judentums*, founded in 1837 by R. Ludwig Philippson of Magdeburg, and edited by him for 50 years.

Of the 75 Jewish newspapers and periodicals that came into existence during the 60 years before World War I, only 16 of those appearing at least once a month held out for more than 12 years. They were the following:

- (1) the **Monatsschrift fuer Geschichte und Wissenschaft des Judentums* (1851–1939);
- (2) **Jeschurun* (Frankfurt, 1854–70), founded by Samson Raphael **Hirsch*;
- (3) the Hebrew **Ha-Maggid* (Lyck, 1857–92);
- (4) the Orthodox **Israelit* (Mainz and Frankfurt, 1860–1938);
- (5) the *Juedische Zeitschrift fuer Wissenschaft und Leben* (Breslau, 1862–75);
- (6) the **Juedische Presse* (Berlin, 1869–1923), edited by *Hirsch *Hildesheimer*;
- (7) the Conservative *Israelitische Wochenschrift fuer die religioesen und sozialen Interessen des Judenthums* (Breslau and Magdeburg, 1870–94);
- (8) the *Monatsblaetter zur Belehrung ueber das Judentum* (Frankfurt, 1881–1908);
- (9) the liberal *Allgemeine Israelitische Wochenschrift* (Berlin, 1891–1906);
- (10) *Im deutschen Reich* (Berlin, 1895–1921), the organ of the Central Union of German Citizens of Jewish Faith;
- (11) the independent *Juedisches Volksblatt* (Breslau, 1896–1923);
- (12) the Zionist **Juedische Rundschau* (Berlin, 1896–1938, see below);
- (13) the Mizrahi *Israelitisches Familienblatt* (Frankfurt, from 1900) called after 1920 *Neue Juedische Presse*;
- (14) the arts periodical *Ost und West* (Berlin, 1901–22);
- (15) the *Zeitschrift fuer Demographie und Statistik der Juden* (Berlin, 1904–22);
- (16) the *Israelitisches Familienblatt* (Hamburg, 1898–1938).

BETWEEN THE TWO WORLD WARS. The Jewish political press was at its most flourishing after World War I, when German Jewry enjoyed a cultural revival. This political press consisted mainly of weeklies, such as (1) the Zionist *Juedische Rundschau*; (2) the **C.V. Zeitung* (Berlin, 1922–38) edited by Ludwig Hollaender, Alfred Weiner, Alfred Hirschberg, and others, founded in Berlin in 1922 as an outgrowth of the Central Union's monthly *Im Deutschen Reich*; (3) the *Israelitisches Familienblatt*, established in Hamburg in 1898 by Max and Leo Lessmann; (4) the **Israelit*; and (5) *Der Schild*, founded in 1921 by the Jewish ex-servicemen's association.

Of more than three dozen community papers that appeared at various periods, most of them neutral in their handling of Jewish politics, the most prominent ones were those appearing in Berlin from 1911, Frankfurt from 1922, and Munich (serving the Bavarian region) from 1924. A considerable number of papers served the special interests of youth, women, teachers, cantors, social workers, and other groups. In addition to these, a large number of periodicals – published,

practically without exception, in German – dealt with religious, scientific, and politico-cultural affairs. Among these was *Der Morgen* (Darmstadt, later Berlin, 1925–38), which had a “German-Jewish” or assimilationist policy. **Der Jude* was the name given to a periodical published by Gabriel **Riesser* during his campaign for Jewish Emancipation (Altona, 1832–35). The same name was used some 75 years later for another periodical, directed by Martin **Buber* in Berlin from 1916 to 1924 and supporting Jewish nationalism. The title *Zion* was given first to a religious fortnightly (Berlin, 1833–35), then to a Reformist monthly (Frankfurt, 1840–43), later still to a Zionist monthly (Berlin, 1895–99), and finally to a Mizrahi periodical (Berlin, 1929). In this connection J. **Ettlinger's* monthly *Der Zionswaechter* (Altona, 1845–55) should be mentioned.

Until *Kristallnacht* (Nov. 10, 1938), as a direct result of which the entire Jewish daily and periodical press of the Reich was wiped out, there were about 12 regular publications in Berlin and nearly three dozen more outside the capital. The *Juedisches Nachrichtenblatt*, established on the orders of the Nazi authorities shortly after the general ban on Jewish publications, first appeared on Nov. 23, 1938. It was restricted to announcements of official decrees, bulletins of the Nazi-enforced organization of the Jews in Germany (Reichsvereinigung der Juden in Deutschland), and of the larger Jewish communities, and the issue of important notices about emigration and welfare matters. This paper, which had none of the characteristics of a Jewish publication, appeared until 1943.

AFTER WORLD WAR II. The Jewish press revived in West Germany after World War II was little more than a shadow of what had existed in pre-Nazi days. The first journal to appear, in 1946, was the Duesseldorf *Mitteilungsblatt fuer die juedischen Gemeinden der Nordrheinprovinz*. In the following year the *Juedisches Gemeindeblatt fuer die britische Zone* was published in the same city. The German journalist Karl Marx founded the popular *Allgemeine Unabhængige Juedische Wochenzeitung* in 1946. In 1951 two pro-Israel weeklies were founded: the *Muenchner Juedische Nachrichten* and the Yiddish *Naye Yidische Tsaytung*. By 1970 these three were the only three Jewish newspapers in the whole of the German Federal Republic, including West Berlin. Apart from occasional publications, a monthly bulletin published by the *Juedischer Presседienst* of Duesseldorf (the JPD) has appeared from 1965. In the German Democratic Republic one newspaper, the *Nachrichtenblatt*, has been issued since 1961 by an editorial board divided between East Berlin, Dresden, Erfurt, and Schwerin, its full title being *Nachrichtenblatt der juedischen Gemeinde von Gross-Berlin und des Verbandes der juedischen Gemeinden in der Deutschen Demokratischen Republik*.

IN VIENNA. The German language was also predominant in the Jewish papers of Austria, all of which were published in Vienna. The first weekly came into existence in the second half of the 19th century. It was the politically liberal *Neuzeit* (1861–1904), a paper well disposed to religious re-

form, founded by Leopold *Kompert and Simon Szánto and vigorously promoted by Adolf *Jellinek. The *Oesterreichische Wochenschrift*, founded in 1884 by R. Joseph Samuel *Bloch, several times a member of the Austrian parliament, lasted for 37 years. This was for a time the organ of the Vienna Jewish community, and as such it actively opposed both the antisemitic Christian Social movement and early Zionism. *Die Wahrheit*, the weekly organ of the Union of Austrian Jews, which first appeared in 1885, was emphatically assimilationist and anti-Zionist; its last editor was Oscar Hirschfeld. *Die Welt* (1897–1914), founded by Theodor Herzl, which appeared in Cologne and Berlin as well as in Vienna, was the weekly organ of the Austrian Zionist movement; in 1918–19 Robert *Weltsch edited the Zionist *Juedische Zeitung* (1907–21). He was also associated with the only Jewish daily ever to appear in Vienna, the *Wiener Morgenzeitung* (1919–27). The weekly *Die Neue Welt* (1928–38) was directed by Robert *Stricker, the founder of the Jewish People's Party. The weekly *Juedische Presse* (1915–34) represented the interests of the Agudat Israel; and the *Juedische Welt*, founded in 1929, was close to the Austrian Mizrachi movement. *Die juedische Front* (1931–38) was the organ of the Jewish ex-servicemen.

On Nov. 10, 1938, all Jewish newspapers and periodicals in Austria were forced to close down. A Vienna edition of the official Nazi *Juedisches Nachrichtenblatt* appeared from the end of 1938. After World War II the Austrian Jewish press was confined to monthlies. By the end of the 1960s there were a half dozen in existence, the two leading ones being *Neue Welt*, founded in 1948 and directed by Georg Kuenstlinger (1892–1969), and *Die Gemeinde*, founded by the Vienna Jewish community in 1958 and edited by Wilhelm Krell.

[Ernst Gottfried Lowenthal]

In Holland

The *Gazeta de Amsterdam*, which was issued in 1675, is generally regarded as the first Jewish newspaper. It was printed by David de Castro Tartas, a Sephardi Jew, and though its contents were not specifically Jewish, its language, Judeo-Spanish, shows that it was intended for the Spanish-Portuguese or Marrano community. The first Yiddish paper was the *Dinstagishe un Fraytagishe Kurant*, which appeared first as a semi-weekly from Dec. 5, 1680, and then as a weekly, *Dinstagishe Kurant*, in 1686–87. It was issued by the Amsterdam Jewish printer Uri Phoebus Halevi. In 1797–98 the secession of a number of Amsterdam Jews from the *alte kehile* ("the old congregation") and their formation of the new congregation called Adath Yeshurun led to the publication of a polemical Yiddish weekly *Diskursen fun di Naye Kehile*, which appeared for 24 issues (November 1797–March 1798). Its rival, *Diskursen fun di Alte Kehile*, appeared for 13 issues.

During the next 50 years, several yearbooks or almanacs appeared for short periods, but there was no regular Jewish press until about 1850, when a number of Jewish weeklies made their appearance under various titles. The first was the *Nederlands Israëlitisch Nieuws-en Advertentieblad* (1849–50),

started by A.M. Chumaceiro (1813–1883), who became chief rabbi of Curaçao in the Dutch West Indies in 1855. It then continued as *Israëlitisch Weekblad*, under a new editorial committee. The original editors established the *Weekblad voor Israëlieten* (1855–84), which was continued as *Nieuwsblad voor Israëlieten* (1884–94). As the *Weekblad voor Israëlieten* it defended Reform Judaism, while a rival Orthodox weekly, the *Nieuw Israëlitisch Weekblad* (*NIW*) was started in 1865 "to advocate the real love of truth." Its founder and first editor was the bibliographer M.M. *Roest. During the last quarter of the 19th century, it was one of several Jewish weeklies in Holland and had a circulation of 3,000. By 1914 its circulation had risen to 13,000 and in 1935 to 15,000 among a Jewish population of about 120,000. Publication was interrupted by the Nazi occupation of Holland but was resumed in 1945, when its policy, formerly anti-Zionist, became pro-Israel, while its approach remained Orthodox. By 1970 it was the only Jewish weekly in Holland and had a circulation of about 4,500 among a Jewish population of about 20,000.

Contemporary with the *NIW* until 1940 were the *Weekblad voor Israëlietische Huisgezinnen* (1870–1940), edited by the firm of Haagens in Rotterdam, and the *Centraal Blad voor Israëlieten in Nederland* (1885–1940), published by Van Creveld in Amsterdam. These three publications carried detailed reports of local Jewish events, and readers' letters, with foreign Jewish news usually in a subordinate place. Different was the approach of the weekly, later a bimonthly, *De Joodse Wachter*, established in 1905, which became the official publication of the Netherlands Zionist Federation. Its editors, always unpaid honorary officers of the federation, included Fritz (later Peretz) *Bernstein in the 1920s. From 1967 until 1969 it existed only as a one-page supplement to the *NIW*, appearing once every two or three weeks, but has since become independent again as a monthly. Other Zionist periodicals were *Tikvath Israel* (1917–40), the official monthly of the Zionist Youth Federation; the Zionist youth leaders' *Baderech* (1925–38) which continued as *Herutenu* (1938–40); the woman's monthly *Ha Ischa* (1929–40), and *Het beloofde Land* (1922–40), later called *Palestine*, and issued by the Keren Hayesod. An important cultural journal, opening horizons far beyond the confines of Holland, was *De Vrijdagavond* (1924–32), established by Izak M. Prins, J.S. da Silva Rosa, librarian of Ez Ḥayyim, and Justus Tal, then chief rabbi of Utrecht.

By order of the Germans, most Jewish journals had to cease publication in October 1940. Only one Jewish weekly was allowed, *Het Joodse Weekblad*, which first appeared in August 1940 and which, from April 1941 until September 1943, was issued under the auspices of the Joodse Raad ("Jewish Council"). It published official announcements.

After the liberation of the southern part of the Netherlands in the autumn of 1944, Jews started publishing *Le-Ezrath ha-Am*. This periodical merged with *NIW* in 1946. Postwar publications of a more than ephemeral nature include *Habijnjan* (1947–1999), the monthly of the Portugees-Israëlitische Gemeente Amsterdam (the Sephardi Congregation of Am-

sterdam); *Hakehilla* (1955–1998), the monthly of the Joodse Gemeente Amsterdam (the Ashkenazi Jewish Community of Amsterdam); and *Levend Joods Geloof* (1955–), the monthly of the Verbond van Liberaal-Religieuze Joden in Nederland (Union of Liberal Synagogues in the Netherlands). In 1998 *Hakehilla* merged with *Hakehillot*, the new monthly of the Nederlands-Israëlitisch Kerkgenootschap (Organization of Jewish Communities in the Netherlands). In 1999 *Habinjan*, too, merged with *Hakehillot*.

Studia Rosenthaliana (1966–) is a scholarly journal, devoted to Dutch Jewish history and related subjects, published by the Bibliotheca Rosenthaliana of the Amsterdam University Library. Until 2002 it was published biannually, from 2002 onward annually.

Around 2000 several new publications came into being: the glossy quarterly *Joods Journal* (1997–); *Grine medine* (2000–), a literary quarterly about and partly in Yiddish; *Orange Juice* (2004), a bimonthly for young Jews. In 2000 the website *Joods.nl* started, which mainly publishes Jewish news from Dutch and foreign newspapers.

[Henriette Boas / Hilde Pach (2nd ed.)]

In Hungary

The beginning of a Jewish press in Hungary dates back to the 1840s. A few issues of a Hungarian-language quarterly, *Magyar Zsinagóga*, appeared in Papa in 1846–47, and a German-language weekly, *Der Ungarische Israelit*, appeared in 1848. The first journal of any importance was Ben *Chananja, a German-language quarterly which had originated in Leipzig but from 1858 was published in Szeged, Hungary, by R. Leopold Loew, who used it in the struggle for Jewish Emancipation; in 1861 it became a weekly in reduced format. There had hitherto been little demand for Jewish newspapers in Hungary, where capable Jewish journalists usually found employment in the general press. But now the position underwent a change. Several short-lived papers appeared in the 1860s, and in 1869 a Yiddish paper, *Pester Juedische Zeitung*, was founded in Budapest. It appeared five times weekly and continued publication until 1887, when it was converted into a German-language weekly, *Allgemeine Juedische Zeitung* (in Hebrew characters), which lasted until 1919. More significant was the Hungarian-language weekly **Egyenlőség* (1881–1938), which, during the *Tiszaeszlár blood libel case of 1882–83, appeared daily with reports of the proceedings. An important contemporary was the monthly **Magyar Zsidó Szemle* (“Hungarian Jewish Review”), which was founded in 1884 and appeared until 1948. It was produced by members of the Budapest rabbinical seminary and also joined in the struggle for Jewish Emancipation and religious equality. The same personnel simultaneously published a review in Hebrew, which was at first entitled *Ha-Zofeh le-Hokhmat Yisrael* (“Judaic Studies Observer”), later *Ha-Zofeh me-Erez Hagar* (“Hungarian Observer”), and finally *Ha-Soker* (“The Observer”). This review provided a forum for Hebrew writers at a time when almost all Jewish publications in Central Europe were in German.

Between 1846 and World War I, many periodicals appeared for short periods, most of them weeklies and most of them in German or Hungarian. During the early years of Zionism, the authorities refused permission for the publication of a Zionist paper. This was largely the result of the attitude of Jewish organizations which were opposed to the development of Hungarian Zionism. The first Zionist weekly was the German-language *Ungarlaendische Juedische Zeitung* which appeared from 1908 to 1914. A Zionist periodical in Hungarian, *Zsidó Néplap*, appeared from 1903 to 1905 and reappeared in 1908 as *Zsidó Élet* (“Jewish Life”). In 1909 the Hungarian Zionist Federation founded its own organ, *Zsidó Szemle* (“Jewish Review”), which was banned in 1938. The poet J. *Patai published a literary monthly **Mult és Jövő* from 1912 to 1939 and opened its columns to Zionist discussion.

Between the two world wars, there were only about 12 effective weeklies and monthlies in Hungary. The Jewish press practically came to an end in 1938, after which time the Hungarian totalitarian regime (whether Nazi or Communist) authorized only one Jewish periodical. The periodical *Új Élet* (“New Life”) was founded in November 1945 by the Central Board of Hungarian Jews, and from 1948 reflected the policies of the Communist rulers, giving no space to the subject of Israel. Its circulation in 1967 was 10,000.

[Baruch Yaron]

In India

The first Jewish periodicals of India were in Judeo-Arabic. *Doresh Tov le-Ammo*, edited by David ben-Ḥayyim had a short life around 1870 and was followed by the Calcutta weeklies, *Mevasser; the Jewish Gazette* (1873–77), edited by Ezekiel Solomon; and *Maggid Meisharim* (1889–1900) edited by Solomon Abed Twena. Bene Israel publications in Marathi begun appearing in the late 1870s. There was an almost continuous succession of periodicals, sometimes more than one at a time, in Marathi and English. These contributed substantially to the education of the community. *The Bene Israelite* appeared in English and Marathi (the mother tongue of the *Bene Israel) from 1896, and reported the rejection by the Bene Israel leaders in Bombay of Theodor Herzl’s invitation to send two delegates to the First Zionist Congress in 1897. It gave as the main reason the community’s support for the “*Protestrabbiner” of Germany and the extremely Orthodox section of Anglo-Jewry.

The first national periodical to appear in India was *The Jewish Advocate*, an independent monthly published by the Bombay Zionist Association from 1923 to 1951. Another Zionist paper, *The Jewish Tribune*, appeared in Bombay from 1933 to 1939. *India and Israel* was owned and edited from 1949 to 1953 by F.W. Pollack, who in 1952 became Israel trade commissioner and consul in Bombay. In 1968 there were three regular Jewish periodicals. The fortnightly *News from Israel*, founded in 1954 and published in Bombay by the Israel consulate, had a circulation of 2,000. The *Maccabi* monthly, founded in 1947,

was published in both English and Marathi. Other organizations published house journals from time to time.

[Percy S. Gourgey]

In Italy

The Italian Jewish press dates from the middle of the 19th century. The first newspaper, *La Rivista israelitica*, edited by Cesare Rovighi, appeared in Parma in 1845 and continued until 1848. Jewish journalism in the 19th century gave rise to such short-lived publications as Leghorn's *L'Israelita* in 1866, and Pitigliano's *Il romanziere israelitico* in 1895. It also produced two important reviews, *L'educatore israelita* and *Il Corriere israelitico*. The first, founded in Vercelli in 1853 by the rabbis Giuseppe Levi (1814–1874) and Esdra Pontremoli (1818–1888), published articles on religious affairs and news from the Jewish communities abroad. Among its contributors were Elijah *Benamozegh, S.D. *Luzzatto, and Lelio della *Torre. In 1874 *L'educatore israelita* became *Il Vessillo israelitico*, which appeared at Casale Monferrato under the editorship of Flaminio *Servi and lasted until 1922. *U Corriere israelitico*, founded in Trieste by A.V. *Morpurgo in 1862 and later edited by A. Curriel and then by Dante *Lattes, was a publication sensitive to the pressing problems of Jewish life. This newspaper staunchly supported the Zionist movement when it came into being.

In 1901 the rabbinical college at Leghorn launched the short-lived review, *L'Antologia ebraica*. *L'Idea sionista* appeared in Modena from 1901 to 1910. In 1904 the journal *Lux*, edited by Arrigo Lattes and Alfredo *Toaff, appeared in Leghorn, but ceased publication after ten numbers. *La Rivista israelitica*, published in Florence from 1904 to 1915, was edited by the chief rabbi S.H. *Margulies and became a source of great interest for Italian studies. Umberto *Cassuto, P.H. *Chajes, Ismar *Elbogen, S. *Colombo, and E.S. *Artom were among the contributors. In 1910 Rabbi Margulies also founded *La Settimana israelitica*, a weekly in the style of the Florentine cultural weeklies, which appeared until 1915, edited by Alfonso *Pacifci, Carlo A. *Viterbo, Q. Sinigaglia, and G. *Ottolenghi. In 1916 the *Corriere israelitico* and *La Settimana israelitica* were amalgamated in Florence under the title *Israel* and was edited by Carlo A. Viterbo. Offshoots of *Israel* were *Israel dei ragazzi* (1919–39) and **La Rassegna mensile di Israel* (from 1925).

Other publications with considerable circulation in 1970 were *Bollettino della Comunità israelitica di Milano*, founded in 1945 and edited by Raoul Elia; *Shalom*, a monthly of Roman Jewry since 1952; *Ha-Tikvah*, the monthly organ of the Federation of Jewish Youth (1953); *Karnenu*, the semimonthly publication of the Jewish National Fund (1948); and *Hed ha-Hinnukh*, an educational monthly.

[Yoseph Colombo]

Ladino Press

One of the reasons for the growth of a Ladino press was the reluctance or inability of the exiles from Spain to learn the languages of the countries in which they found themselves. Before World War II – during which the Sephardi communities of the Balkan countries were either entirely or partly

destroyed – a considerable number of Sephardi Jews, mainly of the older generation and especially women, spoke Ladino. They had only an elementary knowledge of the local language – enough for local business and social intercourse with the surrounding population. There was, therefore, a growing need for some kind of Ladino reading material.

As mentioned above, the first Jewish newspaper appeared in 1675 in Amsterdam and it was *Gazeta de Amsterdam*, printed in Ladino. It lasted less than a year and had no Ladino successors until the beginning of the 19th century. The main reason for this delayed development of the Ladino press, in spite of its early start, is to be found in the social environment of the Ladino-speaking Jews, the bulk of whom lived in the countries of the Balkans and the Middle East. During the 18th century these countries were socially and culturally retarded, and their newspapers were neither many nor widespread. Like the population around them, the Jews, even the educated exiles from Spain among them, felt little need for the stimulus or enlightenment that newspapers could give. All this changed gradually in the 19th century and when in 1882 Isidore Singer of Vienna listed 103 extant Jewish newspapers, six of them were in Ladino.

Newspapers in Judeo-Spanish, transcribed in *Rashi type, had appeared in Jerusalem, Smyrna, Constantinople, Salonika, Belgrade, Paris, Cairo, and Vienna. One of them was the Smyrna journal, *La Puerta del Oriente* (“Gateway of the Orient”), which first appeared in 1846 under the Hebrew name *Sha'arei Mizrah*. Edited by Rafael Uziel, it contained material of general interest, commercial notices, and literary articles. It lasted just one year. *El Luzero de la Paciencia* (“The Light of Patience”), the first Judeo-Spanish newspaper to appear in Latin characters, was started in 1885 by Elia M. Crespín, in the Romanian city of Turnu Severin. It was a bimonthly and continued publication until 1889. The reason for publishing in Latin characters, according to the editor, was that the writing of Spanish had become greatly corrupted because Rashi often spelled words of different meaning in the same way. The corruption of Ladino by the violation of the rules of Spanish, from which it derived, was a subject often discussed in the Ladino press. Thus *El Tiempo* (“The Times”) of June 28, 1907, ridiculed the Ladino used by a Bulgarian Ladino paper. *El Tiempo*, a literary, political, and financial paper, was first published in Constantinople in 1871 under the editorship of Isaac Carmona, and continued to appear until 1930. Its last editor was David *Fresco, one of the best-known Ladino writers of his time. Fresco was also the editor of *El Sol* (“The Sun”) of Constantinople (1879), a scientific and literary bimonthly. It seems to have lasted for about two years. He also edited *El Amigo de la Familia* (“The Friend of the Family”), an illustrated periodical, which was published in Constantinople in 1889.

There were journals which were published partly in Ladino and partly in other languages. *Salonik* (“Salonika”), which appeared from 1869 to 1870, was published in Ladino, Turkish, Greek, and Bulgarian, the Bulgarian part being edited in Sofia. It seems to have been the official newspaper of the Turkish au-

thorities in Salonika under the editorship of Rabbi Jacob Uziel. *Djeridie y Lesan* ("The Journal of the Language") appeared in Constantinople in 1899 in Ladino and Turkish. Its purpose was to make Turkish a living language among the Jews.

Ladino found considerable support among the Jewish socialists of the Balkans, who claimed that it was the language of the Sephardi masses and should be preserved and encouraged. They insisted, therefore, that it should be the medium of instruction in Jewish schools. A number of Ladino newspapers were exponents of the socialist idea. Among them the best known was *Avante* ("Forward"), which began publication in 1911 in Salonika under the name *La Solidaridad Obradera* ("Workers' Solidarity"). It may be said that the history of this journal, which began as a biweekly and during the Balkan Wars (1912–13) became a daily, is the history of socialism among the Jewish workers of Salonika. Its first editor was Abraham ben Aroya, who was succeeded by Alberto Ardit. In 1923 the paper became the mouthpiece of the Jewish Communists with its editor Jack Ventura, for some time one of the Communist representatives in the Greek Parliament. *Avante* ceased publication in 1935. *El Azno* ("The Donkey"), a satirical journal which appeared as a weekly for three months in 1923, was apparently designed to counter *Avante* when the latter became communistic. Another important Ladino journal published in Salonika was *La Epoca*, edited by Bezalel Sadi Halevi. It appeared from November 1875, first as a weekly, then twice a week, and finally as a daily, until 1912.

In Bulgaria, where a number of Ladino newspapers and periodicals appeared under the auspices of the community and the rabbinate (*El Eco Judaico*, *La Luz*) the best-known Zionist journal was *El Judío* ("The Jew"), whose editor was David Elnecave, one of the most prominent Zionist leaders in the Balkans. It first appeared in 1909 in Galata, and was later published in Varna and Sofia. It ceased publication in 1931, when Elnecave immigrated to Buenos Aires where he launched *La Luz*. On his death, the editorship was taken over by his son, Nissim.

ZIONISM. With the rise of Zionism, Hebrew was revived as a spoken language among the Jews of the Balkans, and newspapers made their appearance in both Hebrew and Ladino. *Yosef ha-Da'at* or *El Progreso*, a bimonthly, was published in Adrianople in 1888 in Hebrew and Ladino under the editorship of Abraham *Danon. Devoted mainly to historical research among the Jews of Turkey, it was published for about a year. Another Adrianople periodical was *Karmi Shelli* ("My Vineyard"), a literary and national monthly (1881), published under the editorship of David Mitrani. Among the better-known Zionist Ladino journals was *El Avenir* ("The Future"), started in 1897. It existed for 20 years under the editorship of David Florentin. The organ of the Zionist Federation of Greece, the weekly *La Esperansa* ("The Hope"), appeared in Salonika from 1916 to 1920. A Zionist weekly which was predominantly French but also contained articles in Ladino was *Lema'an Yisrael – Pro Israel*, founded in Salonika in 1917 and

edited from 1923 to 1929 by Abraham Recanati, who eventually settled in Israel.

A number of satirical Ladino journals also appeared. At the beginning of the 20th century, *El Kirbatj* – the Turkish word for "whip" that found its way into Ladino – appeared in Salonika as a "liberal, humorous, independent weekly journal" under the editorship of Moise Levy. It was followed in 1918 by *El Nuevo Kirbatj* ("The New Whip") under the editorship of Josef Karaso, which ceased publication in 1923.

Altogether, about 43 satirical and humorous journals were published among the Balkan communities at various times. Among them were *El Burlon* ("The Joker"), of Constantinople, edited by Nisim Behar; and *La Gata* ("The Cat"), a satirical journal established in Salonika in 1923 with M. Matarasco as editor.

At no time were the incentives for the creation or maintenance of Ladino newspapers in any sense great or compelling. The Sephardi Jews found themselves mostly in countries of little cultural development and they long retained the desire for knowledge inherited from Jewish life in Spain. This enabled them to resist for some time the primitive influences of their surroundings, to which in time, however, they succumbed. The intellectual classes of Sephardi Jews, educated in the cities of Central Europe, spoke the vernacular and other languages such as French and German. They, therefore, did not feel the need for Ladino newspapers. Finally, to most of the Sephardim in the Balkans the study of the Holy Scriptures, the Talmud and the Codes, and above all the daily recitals of prayers, were not merely religious duties: they also provided almost all their educational and cultural needs. The Bible, the prayer books, and certain rabbinical works were available in Spanish or Ladino. Textbooks were also available for the learning of Hebrew. Aspirations for a wider world outlook did not exist among the Sephardim, largely because the countries in which they lived were on the whole cut off from the mainstream of European intellectual life. There was, therefore, little scope for newspaper activity. According to Moshe David Gaon in his *Ha-Ittonut be-Ladino* (1965) there were 296 publications in Ladino between 1845 and World War II, most of them in the Balkans and the Middle East, with Salonika as the greatest center. In 1968 there was hardly any regular Ladino press, except for two weeklies in Israel and one, partly in Ladino, in Turkey.

IN THE U.S. Although Sephardim were the first Jews to settle in the New World and founded the first Jewish congregation there in 1654, Ladino newspapers did not appear in the United States until the beginning of the 20th century, when the second wave of Sephardi immigrants began to arrive, mainly from the Balkan countries. The daily *La Aguila* ("The Eagle") and the weekly *La America* appeared under the editorship of Moshe Gadol between 1911 and 1925. Moshe Gadol, a native of Bulgaria, and his partners Jacob Farhi, Asher Benveniste, Eliyahu Hananya, and Josef Abulafia, acquired their own printing press in New York. In 1926 *El Luzero* ("The Dawn"), an

illustrated monthly, was launched by the Sephardic Publishing Company, its editors being Albert Levy and Moise Sulam. Only 12 issues appeared. The weekly *La Vara* ("The Stock") existed from 1928 until 1948, advertised as "the only Spanish Jewish newspaper in America"; the editors were the same as those of *El Luzero*. A weekly journal edited by Nisim and Alfred Mizrahi appeared from 1915 under the name *El Progreso* and later took the name *La Boz del Pueblo* ("The Voice of the People"). In 1919 it became *La Epoca de New York* but survived for only one more year.

For all practical purposes the Ladino press in the United States had come to an end by 1948. A new English-speaking generation was taking the place of the older people, and even when the young Sephardim knew Ladino, their use of it approximated to modern Spanish.

ISRAEL. Before World War II there was a constant *aliyah* of Sephardim from the Balkan countries and the Middle East. Many of these immigrants had acquired a good knowledge of Hebrew in their native countries and when they settled in the Holy Land it required no special effort for them to use Hebrew in their daily life, while preserving Ladino in their family circles and among friends. For this reason there was a real need for Ladino papers, which were usually concerned with the preservation of Sephardi culture, customs, and literature. *Havazzelet-Mevasseret Yerushalayim* was published in 1870, its editor being Ezra Benveniste. During the year of its existence 25 issues appeared.

After the establishment of the State of Israel, a number of Ladino journals appeared, mostly sponsored by political parties. In 1968 there were two weeklies, *El Tiempo* (affiliated to Mapai) and *La Verdad*.

[Salomon Gaon]

In Latin America

The Jewish press plays an important part in the life of Latin American Jewry. Though it started almost exclusively in Yiddish, it had been going over to Spanish, although as late as 1970 Yiddish still held a predominant position. The first Jewish papers appeared in Argentina in 1898; one of them, *Folks Shtime*, lasted for 16 years. There were many other short-lived publications, but in 1914 the first daily, *Di Yidishe Tsaytung*, came into being, and was followed in 1918 by *Di Prese*. They continued to appear into the 1970s. Until the 1920s *Di Prese* was inclined toward the left, but both papers supported Zionism, and after the establishment of the State of Israel the ideological differences between them diminished. Although exercising political and social importance, neither paper ever achieved a circulation of more than 10,000. The only Jewish daily in Spanish, *Amanecer*, appeared in 1957. It was supported by most Jewish writers in the Spanish language, but lasted only until the following year.

Besides the Yiddish dailies, Argentine Jewry produced also a variety of weeklies and other publications. Their contents ranged from popular medicine to humor, literary criticism, and philosophical essays in quarterly reviews. Some of

them, like *Ilustrirte Literaishe Bleter*, a monthly which started in 1953, and *Davke*, a philosophical quarterly founded in 1949, were in publication in 1970. Jewish weeklies and monthlies in Spanish, *Juventud* and *Vida Nuestra*, made their first appearance before or during World War I. The monthly *Israel* was established in 1917, serving especially Jews of Sephardi or Near Eastern origin, among whom it found lasting support. Other enduring weeklies were *Mundo Israelita* ("Israel World"), founded in 1923; *La Luz*, which started as a fortnightly in 1930; *Davar*, issued from 1945 by Sociedad Hebraica; and the literary quarterly *Comentario*, founded in 1953. Although closely identifying itself with Zionism and Israel, Argentine Jewry has produced few periodicals in Hebrew. *Ha-Bimah ha-Ivrit* ("Hebrew Forum"; 1921–30), *Atidenu* ("Our Future"; 1926), and *Darom* ("South"), founded 1938 and amalgamated with *Zohar* ("Window") in 1964, were the most important. Only the last mentioned survives. By 1970 the circulation of the popular press had declined considerably, but two dailies, about seven weeklies, 20 monthlies, and a dozen other periodicals, most of them representing political parties, were still flourishing in Argentina.

In Brazil, Jewish newspapers date from the period of World War I. Subsequently there were Yiddish and Portuguese weeklies and biweeklies of varying duration. Attempts at establishing a Yiddish daily were only partly successful, but the others were more enduring. In 1970 *Der Nayer Moment* (Yiddish) appeared three times a week, the *Yidishe Prese* appeared as a weekly, and a paper in Portuguese appeared bi-weekly. São Paulo and Rio de Janeiro were the main centers of publication (see also *Brazil). There was practically no Jewish press in Mexico until the *Meksikaner Yidish Lebn* appeared in 1927. In 1970 *Der Veg* appeared weekly and *Di Shtime* (1939–) bi-weekly, both in Yiddish. There was also a Zionist Spanish-language weekly, *Prensa Israelita* (1948), and several fortnightlies (see also *Mexico). A daily, *Yidishe Tsaytung*, appeared in Uruguay shortly after World War I, but was short-lived. The weekly *Unzer Lebn* was initiated in 1926, but a Jewish press was not firmly established in Uruguay until the daily *Unzer Fraynd* was launched in 1935. *Haynt*, a daily with Zionist affiliations, began publication in 1957. Several weeklies were also flourishing in 1970 (see also *Uruguay). Since the 1970s, however, Yiddish has almost disappeared from the print media in favor of Spanish.

In the years of Argentine dictatorship the weekly *Nueva Presencia* (1977) was founded, which started as a Spanish offshoot of the Yiddish daily *Di Prese*. Under the editorship of Herman Schiller, it adopted an opposition stance against the repression in Argentina. This journal became one of the referents of the Argentinean Human Rights Movement, and Schiller, who participated in the organization of the Jewish Movement for Human Rights, was recognized as one of its leaders. Other new Jewish publications in Argentina were *Comunidades* (1980s), and *La Voz Judía* (1990s). In recent years there were also daily news publications on the Internet such as Iton Gadol and ShalomOnline. In Brazil the Jewish written press

lost much of its circulation and turned inward to the community. Most of the main organizations had their own newsletters. In Mexico, too, communities had their own bulletins, though here were some independent organs such as the *Foro* magazine available by subscription and *Kesher* with free distribution in all the communities.

In the Middle East and North Africa

Oriental Jewish newspapers emerged only during the first half of the 19th century, but they soon acquired importance among the communities they served. Some of them were published in two or more languages; Hebrew, which was rarely used, was sometimes employed not because there were many Hebrew readers, but with the aim of reviving the language. The Hebrew press in the Middle East was in fact preceded by Jewish papers in Ladino, from 1841, and papers in the colloquial Arabic of the Baghdadi Jewish dialect, such as *Doresh Tov le-Ammo*, from 1855. The first Hebrew paper to appear in Baghdad was *Ha-Dover* (1863), which was published by Moses Baruch Mizrahi. At a rough estimate, the circulation of Jewish papers in the Middle East, even though these served communities beyond the city or land in which they appeared, never exceeded 5,000. Many papers were shortlived, surviving for no more than a year or two, with only a few appearing regularly for more than five years. Jewish papers appeared in Turkey, Tunisia, Algeria, Erez Israel, Egypt, Syria, Lebanon, Iraq, and Persia. The languages used were literary Arabic, colloquial Arabic, Jewish dialects (i.e., local languages written in Hebrew characters), Hebrew, French, English, Ladino, Spanish, Turkish, and Persian.

In Turkey, only a few papers appeared in languages other than Ladino, such as Hebrew or French, and these had a Zionist orientation, first making their appearance after 1910. In North Africa, Egypt, and Lebanon many Jewish papers appeared in French, some examples being *La Renaissance Juive* (Cairo, 1912), the fortnightly *L'Israélite algérien* (Oran, 1900), and the religious *Gazette de Jérusalem* (Jerusalem, 1882). Another Jewish newspaper which had a long career was the Zionist weekly *LAurore*, founded by Lucien Sciuto in 1908. It appeared in Istanbul until 1919, but from 1924 to 1931 was published in Cairo. It then came under the control of Jacob Elmaleh, who, with the support of the B'nai B'rith, transformed it after the rise of Hitler into the organ of the League for War on antisemitism, based in Egypt.

Among the longer-lived Oriental Jewish newspapers was the weekly *Israel*, which first appeared in French, Hebrew, and Arabic (Cairo, 1920). Although the Hebrew section was soon dropped, the Arabic section survived with some interruption for 14 years. In 1939 the paper was amalgamated with *La Tribune Juive*, which had been established at Alexandria in 1936. In Tunisia most Jewish papers appeared in French (e.g., *La Justice*, 1917–), and in Turkey a B'nai B'rith monthly, *Ha-Menorah*, appeared in Turkish and French. The English-language press was mainly confined to India (see above), but in Baghdad there was also the *Iraq Times*.

After the papers appearing in Hebrew, the largest number of Jewish newspapers appearing in Arab countries were published in Arabic. The origins of this press may be traced to Ya'qub *Şanū⁶, who issued an Egyptian Jewish paper in Arabic in the 1870s. These papers were both religious and secular and were irregular and short-lived. Most of them were ardent supporters of the Zionist cause and defended Zionism and the idea of a Jewish national home against the attacks of the general Arabic press. Papers that survived for some years included the monthly (later weekly) *al-Ā'ila* ("The Family"), founded by Esther *Moyal in 1898; the weekly, *al-Miṣbāḥ* (Baghdad, 1924–29); the literary and cultural weekly *al-Hāṣid* (Baghdad, 1924–39); the Lebanese *Ālam al-Isrā'īlī* (*L'Univers Israélite*, Beirut, 1921–46); the Egyptian Karaite paper *al-Ittiḥād al-Isrā'īlī* (Cairo, 1924–30); and *al-Shams* ("The Sun," Cairo, 1934–48), published in literary Arabic.

Christiane Souriau's research on the Tunisian and Algerian press brought to light a large number of Jewish papers that had appeared in colloquial Arabic and in Arabic characters from the year 1878, when the dual-language (Judeo-Arabic and French) *al-Amāla al-Tūnisīyya* first appeared. From then until 1900, as many as 22 papers were established, most of them lasting no more than a year or two. The Zionist *al-Bustān* ("The Garden," 1888–97) was exceptional. During the years 1901–19, a further 37 Jewish newspapers and periodicals in colloquial Arabic were published in Tunisia, only two of which lasted for more than four years: *al-Ṣabāḥ* ("The Morning," 1904–29) and *al-Sion* ("The Voice of Zion," 1913–20). The number of papers declined from 1920, although the life-span of those that remained became longer, e.g., *al-Najma* ("The Star," 1920?–38). Souriau mentions 37 Jewish papers in colloquial Arabic appearing in Tunisia. After the establishment of the State of Israel, the Arabic Jewish press in the Arab lands ceased to exist. Instead, the number of papers appearing in Arabic in Israel increased as a result of the immigration of Jews from the Arab countries.

[Shmuel Moreh]

In Poland

For the period up to World War I, see below: In Russia. The great development of the Jewish press in Poland that took place in the years immediately after the war reflected the vigorous life of the Jewish population. More than 200 newspapers and periodicals appeared in the 1920s, and many of them were still flourishing when the Nazi armies overran Poland in September 1939. The papers represented all shades of opinion; most of them were in Yiddish, but a few were in Hebrew and some in Polish. During this period, about 20 daily papers appeared, three in Vilna – *Letste Naves* (1915), which became *Der Tog* (in 1920), *Avend-Kurier* (from 1924, and *Tsayt* (1924); two in Bialystok – *Dos Naye Lebn* (1919), and *Bialystoker Telegraf*; three in Lodz – *Lodzer Tageblatt* (1908, under J. Unger, having a circulation of 20,000); *Dos Morgenblatt* from 1912, and *Naye Folksblatt* (1923); in Lublin the *Lublīner Tageblatt* (1918); and in Grodno, the *Grodne Moment* (1924). Lvov had two, one in Polish, *Chwila* (1919), and one in Yiddish, *Der Morgen* (1926);

and Cracow had two, one in Polish, *Nowy Dziennik* (1918), first under Wilhelm Berkelhammer and from 1921 to 1924 under Isaac *Schwarzbart.

The others were published in Warsaw, where **Haynt* and *Der Moment* had the largest circulations and were in close competition. Other Warsaw dailies were *Der Yid* (later, *Dos Yidishe Vort*, from 1917), *Varshever Ekspres* (1926), *Naye Folkstzaytung* (1926), and *Unzer Ekspres* (1927). The daily *Nowy Czas* (1929) was in Polish, as was the Zionist daily *Nasz Przegląd* (1923). Besides these publications there were literary weeklies like *Literarische Bleter* (Warsaw, from 1924), *Kino-Teater-Radio* (1926), *Veltshpigl* ("World Mirror," 1927), and the Yiddish *PEN Klub Naves of Vilna* (1928). The scientific *Land un Lebn* (1927) appeared monthly; a popular science fortnightly, *Der Doktor*, appeared in Warsaw from 1929; and another, *Folksgesunt*, in Vilna from 1923. A humorous weekly, *Der Blufer*, was prominent in Warsaw journalism from 1926. This body of newspapers and periodicals, employing thousands of people, was closed by the Germans in 1939, and its editors, contributors, and printers fled or perished as the Nazi terror fastened on the country.

[Artur Fiszer]

AFTER WORLD WAR II. The first Jewish newspaper in postwar Poland, *Dos Naye Lebn*, appeared in Lodz on April 10, 1945. At first it was published weekly, then semiweekly and on March 1, 1947, at the conference of the Jewish regional committees, it was decided to make *Dos Naye Lebn* a daily paper and the official organ of the Central Committee of Polish Jews, which comprised all existing Jewish parties. Between 1945 and 1949 there were also weekly and semiweekly publications of various Jewish parties, e.g., the *Arbeter Tsaytung* of the Po'alei Zion, the *Ihud* of the Liberal Zionists, *Di Folkshtime* connected with the Communist Polish Labor Party (PPR), the "*Glas Młodzieży*," of the Ha-Shomer ha-Za'ir, and *Yidishe Shriftn*, a publication of the Jewish Writers' Association. After the liquidation of the Jewish political parties in November 1949, most of the Jewish press was gradually closed down by the authorities (see *Poland). The literary monthly *Di Yidishe Shriftn* continued to be published by the Jewish Cultural Society as an organ of the Jewish writers, who elected its editorial board. *Di Folkshtime* alone remained as a newspaper appearing four times a week and serving officially as the Yiddish organ of the ruling party, controlled to a large degree by the Jewish Cultural Society. By 1968 *Di Folkshtime* became a weekly, publishing a Polish section once in two weeks, and *Di Yidishe Shriftn* ceased its publication after its 25th issue.

[David Sfar]

In Romania

The Jewish press in Romania developed with the social and intellectual life of the Romanian Jews. Two short-lived publications made their appearance in the middle of the 19th century and were followed in 1857 by the weekly *Israelitul Român* ("Romanian Israelite") of Bucharest and in 1874 by the review *Revista Israelită* of Jassy. In 1890 Moses *Schwarzfeld, pub-

licist and historian, founded the weekly *Egalitatea* ("Equality"), which lasted until the rise of the Fascist regime. Other publications of that period were the weekly *Ha-Yo'ez* ("The Adviser"), which leaned toward the Hovevei Zion, appearing from 1876 to 1920, and the review *Likht* ("Light," 1914), both in Yiddish. In 1906, Horia *Carp founded the weekly *Curierul Israelit* ("Israelite Messenger"), which became the official organ of the group Uniunea Evreilor Pământeni (Union of Native Jews; after 1918, Uniunea Evreilor Romani – Union of Romanian Jews) and continued until 1941.

After World War I most of the Jewish newspapers in Romania had Zionist leanings. Major influences in forming a Zionist outlook among the Jewish population were two weeklies: *Mahtuirea* ("The Deliverance"), founded by A.L. *Zissu in 1922 and republished, after a long break, from 1945 to 1949; and *Renașterea Noastră* ("Our Revival"), founded by S. Stern, publicist and Zionist, in 1928. The weekly *Viata Evrească* ("Jewish Life," 1944–49) had a Zionist Socialist tendency. In addition to these weekly publications, there were literary and political reviews. The monthly *Hasmonaea*, founded in 1915, was the official organ of the association of Zionist students. The review *Adam* (1929–39) founded by I.O. Ludo, attracted to its pages Jewish writers in the Romanian language.

Except for a brief period in 1877, there was never a daily Jewish press in Romania because there was no autonomous national Jewish life. The information published by the Jewish weekly and monthly papers in Yiddish, German, and Romanian, was limited to Jewish international and local life. Political outlook was centered on events of specific Jewish interest, and the Jewish press had a rather polemic character. The weekly Zionist paper *Renașterea Noastră* resumed publication in 1944. Five more papers that appeared in 1945 were similarly oriented. In the years that followed, various attempts were made to maintain other Jewish papers, several in Yiddish and one in Hebrew, but by the end of 1953 all had ceased publication. From 1956 the Jewish population in Romania was served by a review published by the Jewish community in Bucharest, **Revista Culturii Mozaic* ("The Mosaic Cult's Review"), edited by Moses *Rosen, the chief rabbi.

[Isac Bercovici]

In Russia

The history of the Jewish press in Russia before the Bolshevik Revolution falls into two periods: the mid-19th century to the 1905 Revolution – years during which severe restrictions and censorship were in force; and 1906 to 1917 – a period during which restrictions were partially relaxed. Jewish newspapers in czarist Russia appeared in four languages: Hebrew, Yiddish, Russian, and (in Warsaw) Polish. During the first period, the publication of Jewish periodicals was beset with obstacles. A license to publish was obtained only with great difficulty, and when granted, the official censor controlled the paper's contents. This situation accounted for the strange practice of publishing journals intended primarily for Russian Jews in places outside the country, mainly in Prussia and Austria. Even these newspapers had to pass the Warsaw censor, who

deleted any item he did not approve. In spite of its distance from the centers of Jewish population, many newspapers were published in St. Petersburg because the censor there held more liberal attitudes.

Efforts at establishing a Jewish press in the early decades of the 19th century resulted in such short-lived publications as **Beobachter an der Weichsel*, a Yiddish weekly issued in Warsaw in 1823, and *Pirhei Zafon*, an annual that published two volumes in Vilna in the 1840s. The first enduring Hebrew periodical intended for Russian Jewry was *Ha-Maggid*, published from 1856 to 1891 in Lyck (later Elk), a Prussian border town. It contained news and essays, whose prominent tone was a moderate approach to the Haskalah. In 1860, Alexander *Zederbaum, who became a leading figure in the Jewish press, founded a Hebrew weekly, *Ha-Meliz*, which was published until 1871 in Odessa and then for another three years in St. Petersburg. Its stated purpose was to be “the mediator (*ha-meliz*) between the Jews and government and between faith and Haskalah.” Zederbaum also published the first weekly in Yiddish, *Kol Mevasser* (1862–71), which grew to become very popular. In Vilna S.J. *Fuenn issued *Ha-Karmel*, intended mainly for local consumption, which ran as a weekly from 1860 to 1870 and as a monthly until 1880. In Warsaw, **Ha-Zefirah*, edited by H.S. *Slonimski, began as a weekly in 1862 but was published for only six months. In Odessa, Russian-speaking members of the Jewish intelligentsia published Russian-language weeklies, such as *Razsvet*, renamed *Sion* (1860–61), and later *Den* (1869–71). These papers had the dual purpose of serving as a forum for the discussion of Jewish themes and for presenting Jewish problems to the general Russian public in order to combat antisemitism. In 1871 Zederbaum launched a Russian-language weekly in St. Petersburg, *Vestnik russkikh yevreyev* (“Russian Jewish Herald”) which, however, was boycotted by the Jewish intelligentsia and ceased publication in 1873. The first Jewish weekly in Polish, *Jutrzenka*, was published in Warsaw in 1861–63; it had a pronounced assimilationist tendency and was eventually replaced by *Izraelita*, which appeared from 1866 to 1906. A Hebrew monthly, *Ha-Boker Or*, was published by Abraham *Gottlober in Lemberg and later in Warsaw (1876–86). Eight volumes of a Russian annual, containing a variety of literary works and named *Yevreyskaya Biblioteka*, edited by Adolph *Landau, appeared in the period 1871–80.

Ha-Zefirah resumed publication in 1874, first in Berlin and from 1875 in Warsaw. In addition, *Ha-Meliz* was revived in 1878. The Balkan Wars of 1877–78, the pogroms of the early 1880s, and the anti-Jewish restrictions that followed aroused greater interest in newspapers among the Jewish public. In 1879 two Russian-language weeklies made their appearance in St. Petersburg: **Razsvet* (1883), which pioneered in awakening the national consciousness of Russian Jewish youth, and *Russkiy yevrey* (1884). Another weekly, **Voskhod* (1881–1906), edited by Adolph Landau until 1899, served as the major forum for Russian Jewish intellectuals. Because of the oppressive restrictions placed on them, Yiddish publications were constantly in difficulties, and only the indefatigable Zeder-

baum succeeded in issuing a Yiddish weekly in St. Petersburg, *Yidishes Folksblat* (1881–90). A revolutionary development in Hebrew journalism took place in 1886, when the first Hebrew daily, *Ha-Yom*, edited by Judah Leib *Kantor, made its appearance in St. Petersburg. Although its career was short (two years), *Ha-Yom* exerted a profound influence on the style employed by the Hebrew press, hastening the transition from florid phraseology to practical prose. The two competing weeklies, *Ha-Meliz* and *Ha-Zefirah*, were forced to become dailies. The spread of the *Hibbat Zion movement in the 1880s resulted in the publication of a considerable number of annuals which served as a forum for the movement’s ideology. Among the annuals were *Ha-Asif*, edited by Nahum *Sokolow (1884–88, 1893); *Keneset Yisrael*, edited by Saul Phinehas *Rabbinowitz (Warsaw, 1886–88); and *Ha-Pardes* in Odessa (1892–96, three vols.). They were followed by *Ha-Shilo’ah* (1896–1905 in Berlin and Cracow, 1902–19 in Odessa, and until 1926 in Jerusalem). Under the editorship of *Aḥad Ha-Am, and later J. Klausner, *Ha-Shilo’ah* became the leading Hebrew monthly, printing articles of a literary and general nature. Attempts which were made by D. Frischmann to publish the intellectual literary weekly *Ha-Dor* (1901, 1904) were unsuccessful as the readership required for this kind of publication was as yet too small.

The need for Yiddish reading matter was met by such annuals as *Hoysfraynd*, edited by Mordecai *Spector (Warsaw, 1888–96); *Yidische Folks-Bibliothek*, edited by *Shalom Aleichem (Kiev, 1888–89); and *Yidische Bibliotek*, edited by I.L. *Peretz (3 vols., Warsaw, 1891–95). A Zionist weekly, *Der Yid*, directed at the educated reader, was published in Cracow from 1899 to 1902, and a popular weekly (vocalized for easy reading), *Yidische Folkstsaytung*, also in Cracow (1902–03), had a women’s supplement, *Di Yidische Froyen Velt*. These weeklies paved the way for the first Yiddish daily to appear in Russia – *Der Fraynd* (1903–08 in St. Petersburg, 1909–13 in Warsaw), which gained immediate acceptance by the Jewish masses and had a circulation of tens of thousands.

In the beginning of the 20th century, the older Hebrew dailies ceased publication (*Ha-Meliz* in 1904 and *Ha-Zefirah* in 1906) and were replaced by more modern newspapers, *Ha-Zofeh* (Warsaw, 1903–05) and *Ha-Zeman*, the latter founded by Benzion *Katz (St. Petersburg, 1903–04; Vilna, 1905–15), which tried to keep pace with the general Russian press in reporting the latest news and commenting upon it. At the end of the 19th century, the Bund undertook the publication of underground newspapers such as *Arbeter Shtime*, *Der Yidische Arbeter*, and *Posledniye Izvestia*, which were printed in the West and smuggled into Russia.

At the end of 1905 censorship was abolished and the press enjoyed a short period of freedom. It soon turned out, however, that the authorities still retained means of controlling the press by administrative measures, ranging from economic reprisals (such as prohibiting advertising, stopping the sale of single copies, closing down the printing press) to temporary or permanent suspension of publication. The im-

mediate result of the short interval of freedom was the appearance of party newspapers. The Bund published *Der Veker*, and, when this was closed down, *Folks Tsaytung* and other newspapers. The Zionist Socialists issued *Der Yidisher Proletarier*, *Der Nayer Veg*, and *Dos Vort*. Another workers' party, the *Sejmists, sponsored the *Folks Shtime*. *Po'alei Zion had a Yiddish weekly, *Der Proletarisher Gedank*, and a Russian periodical, *Yevreyskaya Rabochaya Khronika*. All these party publications disappeared in 1907, when the revolutionary movement was suppressed. The Zionist press, nevertheless, continued to flourish. There were Zionist newspapers in Yiddish (*Dos Yidische Folk*, Vilna, 1906–08); in Hebrew (*Ha-Olam*, Cologne, 1907; Vilna, 1908; Odessa, 1912–14), and in Russian. The first Zionist Russian-language monthly was *Yevreyskaya Zhizn* (1904–06), followed by *Razsvet*, which became the most popular Russian Jewish weekly with a circulation of tens of thousands. Attempts were made to revive the Hebrew press in Warsaw with the dailies *Ha-Yom* (1906–07) and *Ha-Boker* (1909). In 1910, *Ha-Zefirah* also reappeared as a daily, and, with the support of the Zionist Organization, attained a circulation of 15,000.

The most significant development of this period, however, was the growth of a popular Yiddish press centered in Warsaw. At the end of 1905, a Yiddish daily, *Der Veg*, edited by Zevi *Prylucki, was founded in the Polish capital and became the forerunner of the popular Yiddish press in Poland. It was succeeded by *Haynt* (1908–39) and *Der Moment* (1910–39), two Yiddish dailies which catered to popular taste and reduced the price of the papers. Along with the news and literary articles they printed sensational items and fostered the cheap novel. The papers enjoyed a circulation of many thousands and acquired great influence. Politically they supported Jewish nationalism and Zionism. Yiddish periodicals also appeared in the large provincial cities (Odessa, Lodz, Vilna, Kiev) but were of local character. An extreme Orthodox weekly, *Ha-Modi'a*, made its appearance in Poltava from 1909.

The non-Zionist Russian Jewish intelligentsia issued its own weeklies, such as *Yevreyskiy Mir* (1910–12) and *Novy Voshkod* (1910–17), both published in St. Petersburg. There were also magazines devoted to special subjects, such as the educational magazines *Yevreyskaya Shkola* (1904–05) and *Vestnik*, the latter founded in 1910 by the Society for the Spread of Enlightenment; *Yevreyskiy Meditsinskiy Golos*, a medical quarterly founded in Odessa in 1908; *Perezhitoye*, a history annual; *Yevreyskaya Starina*, a scientific quarterly (1909–30); and *Vestnik Yevreyskoy Obshchiny* (1913–14), which dealt with community administration. There were children's magazines in Hebrew, Russian, and Yiddish (see *Children's Literature). In 1913 a literary magazine *Di Yidische Velt*, edited by S. *Niger and maintaining high standards, was founded in Vilna.

The outbreak of World War I caused a crisis in the Jewish press: the price of paper and printing rose sharply, and military censorship restricted freedom of expression. The advance of the Central Powers into Poland and Lithuania also separated the masses of readers from the sources of their newspapers.

In July 1915 a government decree ordered all Hebrew and Yiddish journals to cease publication. Jewish papers in the Russian language, especially the Zionist-oriented *Razsvet*, did their best to fill the void. The ban was lifted with the outbreak of the February 1917 Revolution.

IN THE U.S.S.R. (1917–1970). The February 1917 Revolution ushered in a short period of freedom of the press which lasted until the Bolshevik Revolution in October. Newspapers independent of the Communist Party continued to appear until September–October 1918 and in some regions (such as Ukraine and Belorussia) until Soviet rule was established there in 1920. This brief period proved to be the golden era of the Jewish press in the U.S.S.R. The leading newspapers were the Zionist Hebrew daily *Ha-Am* in Moscow (July 1917–June 1918), which had a circulation of 15,000 at its height, and the Zionist Yiddish daily *Tagblat* in Petrograd (May 1917–August 1918). Kiev had no less than four papers: the Bundist *Folks Tsaytung* (August 1917–May 1919), the United Socialists' *Naye Tsayt* (September 1917–May 1919), the Po'alei Zion's *Dos Naye Lebn* (December 1917–March 1919), and the Zionist *Der Telegraph* (November 1917–January 1918). Minsk had *Der Yid* (December 1917–July 1918) and *Far'n Folk* (September 1919–January 1920), which were both Zionist in outlook, and the Bundist *Der Veker* (first published in May 1917, and becoming a Communist paper in April 1921).

Hebrew periodicals were also revived after a two-year lapse. In Odessa, *Ha-Shilo'ah* resumed publication in June 1917 and continued until banned by the Soviet authorities in April 1919. In the same city, *Barkai*, the last of the Hebrew weeklies, appeared until the beginning of 1920. There were educational magazines such as *Ha-Ginnah* in Odessa, *Ha-Moreh* in Kiev, and *Ha-Makkabbi*, dealing with physical education. A children's magazine in Hebrew, *Shetlim*, was published in Petrograd. A number of annuals served as the forum literary and scientific work, such as *Keneset*, *Massu'ot*, and *Erez* in Odessa and *Olamenu* in Petrograd. Outstanding for size and quality was the quarterly *Ha-Tekufah*, the first three issues of which appeared in Moscow in 1918. Collections were devoted to history and ethnography: *He-Avar* (2 vols., Petrograd), *Reshumot* (1 vol., Odessa), and *Sefatenu* (Odessa). Publication of Hebrew periodicals ended with the ban on the use of Hebrew in the Soviet Union.

Before long, the Jewish press in the Russian language also ceased to exist. *Razsvet* was closed down in September 1918 and *Khronika Yevreyskoy Zhizni* in July 1919. In the period 1924–26, when *He-Ḥalutz was a legal organization, it published the central organ of the movement, *He-Ḥalutz*, in Moscow. The left Po'alei Zion was permitted to publish its central organ, *Yevreyskaya Proletarskaya Mysl*, until 1926 (with a Yiddish edition appearing until 1927). A group of writers and scholars, members of the long-established *Society for the Promotion of Culture and the Historical Ethnographical Society, published several collections of literary and historical pieces in the 1920s, including *Yevreyskaya Starina* (vols. 9–13,

1924–30), *Yevreyskaya Letopis* (4 vols., 1923–26), and *Yevreyskaya Mysl* (2 vols., 1922–26). One official publication in Russian, *Tribuna* (Moscow, 1927–37), the central organ of OZET (see *Yevseksiya), was directed at the Jews.

When Yiddish was recognized as the national language of the Jews in the 1920s, the Yiddish press (like Yiddish literature and the Yiddish theater) became part of the official apparatus for mass propaganda and indoctrination. It was controlled by the authorities, but its writers and correspondents enjoyed the substantial material advantages accorded to all writers who were loyal supporters of the regime. A widespread network of newspapers, entirely dependent upon the regime for its existence and policy, was created. In the 1920s and 1930s, these newspapers had considerable achievements to their credit. There were three central dailies: in Moscow, *Der Emes* was first published in 1918 as *Di Varhayt* and ceased publication in 1938; in Kharkov, *Der Shtern* (1925–41); and in Minsk, *Oktyaber* (1925–41). In addition, there were numerous local papers, such as *Der Odeser Arbeter* (1927–37) and *Proletarisher Fon* (Kiev, 1928–35).

A newspaper, *Biro-Bidzhaner Shtern*, began to appear in *Birobidzhan in 1930; it continued into the 1970s, appearing three or four times weekly. Important literary periodicals included *Prolet* (1928–32), *Farmest* (1932–37), and *Sovietish Literatur* (1938–41), all published in Ukraine; *Shtern* (1925–41), in Belorussia; and a literary annual, *Sovietish* (12 vols., 1934–41). Specialized publications, such as *Oyf dem Veg tsu der Nayer Shul* (Moscow, 1924–28) and *Ratebildung* (Kharkov, 1928–37) dealt with educational problems. Children found reading matter in *Oktyaber* (Kiev, 1930–39), *Zey Greyt* (Kharkov-Kiev, Kiev, 1928–41), and *Yunger Leninetz* (Minsk, 1929–37). The Jewish scientific institutes in Minsk and Kiev published periodicals on scientific and literary subject and on the Yiddish language: *Tsaytshrift* (5 vols., Minsk, 1926–31); *Oyf 'n Visnshaftlikn Front* (Minsk, 1932–35); *Lingvistisher Zamlbukh* (3 vols., Minsk, 1933–36); *Die Yidische Shprakh* (Kiev, 1927–30), and *Oyf 'n Shprakh Front* (Kiev, 1931–39).

In 1939–40, when eastern Poland and Lithuania were incorporated into the Soviet Union, local Yiddish newspapers were established to serve the Yiddish-speaking population in Vilna, Bialystok, Kovno, and Riga. With the Nazi occupation of large parts of the U.S.S.R. in the summer of 1941, the Yiddish press ceased publication. In 1942, to rally the Jews to the war against the Nazis, the Jewish *Anti-Fascist Committee established **Eynikeyt* in Kuibyshev. After the war, the paper moved to Moscow and continued to appear there. In the immediate postwar period, several literary journals also made their appearance: *Heymland* (7 vols., Moscow, 1947–48), *Der Shtern* (7 vols., Kiev, 1947–48), and *Biro-Bidzhan* (3 vols., 1946–48).

In November 1948, all Yiddish literary publications and the entire Yiddish press in the Soviet Union were liquidated. The “thaw” that set in after Stalin’s death brought no revival. In the summer of 1961, in response to pressure exerted by Jewish public opinion in the West, a bimonthly, **Sovietish Heymland*, was founded, and subsequently published the works of

the remaining Yiddish writers in the U.S.S.R. In 1965 *Sovietish Heymland* became a monthly publication, claiming a circulation of 25,000 in 1967.

[Yehuda Slutsky]

At the beginning of the 1980s the total legal Jewish press in the U.S.S.R. amounted to two publications in Yiddish: the Moscow Jewish monthly journal *Sovietish Heymland* and the Birobidzhan newspaper *Birobidzhaner Shtern*, plus an annual in the Judeo-Tat language, *Vata Sovetimu*. Furthermore, attempts in refusenik circles to establish illegal publications were strictly repressed and led to the gradual curtailment of all Jewish *samizdat* publishing. With the revival of Jewish community life in the former Soviet Union a flourishing Jewish press with over 40 periodical publications developed. The most influential and widely circulating Jewish newspaper in Russia was *Mezhdunarodnaia evreiskaia gazeta* (“The International Jewish Newspaper”), the successor of *VESK* (see above), which made efforts to mirror not only Russian-Jewish life, but also Jewish life in the entire area of the former Soviet Union. The paper was published in Moscow, twice a month, by Tankred Golenpolskii and Eliezer Feldman. The most popular Jewish newspaper in St. Petersburg was *Narod moi – Ami*, published by the Jewish Association of St. Petersburg, also twice a month. In the North Caucasian region, the most conspicuous newspaper was *Vatan-Rodina* (“The Homeland”), published twice a week by Mikhail Gavriellov in Derbent, Daghestan, in Judeo-Tat (the language of the Mountain Jews) and Russian. Among other relatively widely circulating newspapers were *Tarbut* (“Culture”) (in Samara, former Kuibyshev), *Stern-Zvezda* (“The Star”) (in Ekaterinburg, former Sverdlovsk), and from July 1993 on – *Gazeta evreev Severnovo Kavkaza* (“The Newspaper of the Jews in the North Caucasus”) (Nalchik, Karbardino-Balkaria). The *Birobidzhaner Shtern* (“The Birobidzhan Star”) continued to be published in Yiddish and Russian in the Jewish Autonomous Region. The magazine *Sovietish Heimland* from 1993 changed its title to *Di Yiddische Gass* (“The Jewish Street”) and continued to appear in Russian and Yiddish. Papers were published by Jewish organizations abroad, e.g., *Rodnik* (“The Spring,” or “Source”) (by the World Union of Progressive Judaism), *Lekhaim* (“To Life”) (by the International Jewish Organization Habad-Lubavitch), and several papers – by the Jewish Agency. Jewish newspapers were also issued in Briansk, Novosibirsk, and Perm. Two academic Jewish journals, both supported by the JDC, were published: *Vestnik Evreiskovo Universiteta v Moskve* (“Herald of the Moscow Jewish University”), from 1992 on, and *Vreiskaia Shkola* (“Jewish School”), issued by the St. Petersburg University.

[Michael Beizer /Daniel Romanowski (2nd ed.)]

In Scandinavia

Jewish newspapers in Sweden before World War II included: the Yiddish fortnightly *Volkshilf* (1916–1923); and the monthly *Israeliten*, founded in 1914, as well as two monthlies, *Judisk Tidskrift* (1928–) and *Juediska Kroenika* (1932–). The Jewish community of Stockholm issued its own quarterly,

Församlingsblad, from 1941 under the editorship of David Köpniwski. A later arrival was the *Center Bladet*, which was founded as a family journal in Stockholm in 1966. It appears about five times a year in Swedish, deals with Jewish communal life, youth clubs, and the problems of Israel, and reaches about 1,400 Jewish homes. Two Jewish publications existed in Norway before World War II: the Zionist monthly *Ha-Tikvah*, founded in 1929, which did not survive the war, and the quarterly *SJUF-Bladet* of the Scandinavian Jewish Youth Organization. Founded in 1917, the organization revived its periodical after World War II and issued it in Norwegian, Swedish, and Danish. The magazine also circulates among the Jewish communities of Finland, where a knowledge of Swedish is widespread. This magazine also supports the maintenance of Jewish tradition. In Finland, *Den Finski Juden* (1918) of Viborg was short-lived, but the *Judisk Krönika*, a monthly founded in Helsinki in 1923, had a longer career. The first attempt at publishing a Jewish journal in Denmark was made at the beginning of the 19th century. It was called *Nordlyset* and was an answer to current antisemitic literature. When the Jewish community achieved full civil rights in 1814, the publication was no longer considered necessary. In 1857 and 1865 new publishing attempts were made, but the *Israelitisk Ugeblad for Norden* and *Israelitisk Tidende* appeared only for a few issues. In 1907 two periodicals were started. The Zionist leader Louis Fraenkel was the editor of *Jødisk Tidsskrift*, a fortnightly of literary standard which survived for only a year and a half. The other was *Mosaik Samfund*, which survived until the German occupation of Denmark in 1940. With the influx of immigrants from Eastern Europe, the need arose for a Yiddish press and in 1911 *Dos Yidische Vokhenblat* appeared, edited by Joseph Litschewsky. The paper flourished until 1921. Other Yiddish papers were *Di Yugendshtime* and *Yidische Folkstsaytung*, the latter as a daily from 1917 to 1925. From 1920 to 1923 the Scandinavian Jewish youth organization produced the Copenhagen *Israeliten* edited by Max Goldschmidt. In 1929 Goldschmidt founded *Jødisk Familieblad* which, after two changes of name (*Jødisk Samfund* and *Jødisk Orientering*), is now in its fifth decade. Among its editors was Chief Rabbi Marcus Melchior, and from 1947 it was edited by Torben Meyer. In 1947 the Zionist Federation issued *Palestine Telegram Service* as a weekly, which in 1950 turned into a periodical called *Israel*.

[Lewis Sowden]

In South Africa

The bulk of Jewish journalism in South Africa has been in English in the form of weeklies, which have enjoyed wide readership and considerable advertising support. The earliest attempts at establishing a Jewish press, however, were in Yiddish. They date from 1890 when N.D. Hoffman imported Hebrew type and started *Der Afrikaner Israelit* in Johannesburg; it lasted for six months. Since then there has been an almost continuous, if tenuous, line of Yiddish publications, including *Der Kriegstaphet*, a daily run by David Goldblatt in Cape Town from 1899. Hoffman also started a fortnightly

Hebrew journal, *Kinneret*, which ran for 12 issues in 1905. The first Jewish newspaper in English was *The South African Jewish Chronicle*, started as a fortnightly in Cape Town by Lionel L. Goldsmid (1867–1952). The most prominent journals over the next century were the following: in English, *The Zionist Record* (1908–93), *The South African Jewish Chronicle* (1908–59, after which it was subsumed under the *Zionist Record's* name), *The South African Jewish Times* (1936–87), and *Jewish Herald* (1937–87) – the latter combined in 1987 to form the *Herald Times* (1987–94) and the *South African Jewish Report* (1998–), all weeklies; *Jewish Voice* (1990–93), a monthly, and *South African Jewish Times* (1994–97), bi-monthly; *Jewish Affairs* (1941–) and the *Federation Chronicle*, which was renamed *Jewish Tradition* in 1986 (1954–), initially monthlies, but from 1988 quarterlies; in Afrikaans: *Buurman* (1970–85), monthly; in Yiddish, *Afrikaner Yidische Tsaytung* (1930–83), a weekly; *Dorem Afrike* (1948–86), literary journal; and in Hebrew, *Barkai* (1932–78 bimonthly). All were published in Johannesburg.

[Lewis Sowden / David Saks (2nd ed.)]

In Switzerland

Apart from a monthly periodical of the 1830s, the first attempt to establish a regular medium of Jewish news was made by Alexander *Kisch, who in 1878–80 issued in Zurich a German-language fortnightly *Neue Israelitische Zeitung*. The first journalistic effort to meet with any success was the *Juedische Volkszeitung*, later the *Israelitisches Wochenblatt Zentralorgan fuer die Israeliten in der Schweiz, Baden und Elsass-Lothringen*, which appeared from 1895 to 1898 under the editorship of H. Berliner.

The first newspaper to prove of enduring influence was the German-French *Israelitisches Wochenblatt fuer die Schweiz/Revue Juive*, which was founded in Zurich in 1901 by Martin Littman (d. 1925) and David Strauss (d. 1921). Ownership and editorship passed in 1916 to David Weinbaum and in 1921 to Erich-Marx Weinbaum, whose son, Manfred Marx, took over in 1966. Hans Klee directed the weekly from 1953 to his death in 1959, with Leon Wohlmann as main contributor for more than 20 years. Kurt Roschewski became editor in 1958. In its earlier years, the *Israelitisches Wochenblatt* was a journal on communal life that contained religious and other reading matter. Later it widened its field of interest and published reports on Zionism, Palestine, and world Jewry. After the creation of the State of Israel, the paper added comprehensive reports on events in Israel and acquired a wide readership in Switzerland, Alsace, and other German-speaking Jewish districts of Europe. A Zionist weekly, *Juedische Pressezentrale*, appeared from 1917 to 1940 in Zurich under the editorship of Oscar Gruen, and numbering Hermann Witzhumb and Benjamin Segalowitz (d. 1970) among its contributors. The Zionist fortnightly *Das Juedische Heim* had a short career from 1927. In Basle the *Juedische Rundschau-Maccabi*, a Zionist weekly, appears from 1940 as an independent organ in German with Adrien Blum as editor. The establishment of the State of Israel in 1948 stimulated further enterprises. *Das Neue*

Israel was founded in June of that year as the monthly organ of the Swiss Zionist Organization, with the additional aim of furthering relations between Switzerland and Israel. Containing both German and French contributions, it has appeared under the editorship of Veit Wyler since its inception. Another monthly, *Liaison*, with Daniel Halperin, Emanuel Haymann and Michael Wyler as editors, was initiated in Geneva in 1967 as a magazine of news, politics, and the arts.

[Veit Wyler]

In the United States

The first English-language Jewish newspapers in America were published to counteract proselytizing by missionaries attempting to convert poor Jewish immigrants to Christianity. In 1820 Abraham Collins published *Israel Vindicated*, and three years later New York printer Solomon Henry Jackson started *The Jew* to discredit the propaganda in the newspaper *Israel's Advocate*. Jackson's masthead enunciated its purpose – "Being a Defender of Judaism against all the adversaries, and particularly against the insidious attacks of *Israel's Advocate*." When the offensive newspaper died in 1825, Jackson ceased publishing *The Jew*.

Jackson's endeavor was a precursor to the efforts of the Jewish press throughout the years – to protect and defend the Jewish community from outside attacks, to aid in the acculturation of immigrants, to inform its readers, and to enunciate the community's goals.

From 1843 until his death in 1868, Rabbi Isaac Leiser of Philadelphia covered news in the Jewish world in his monthly English-language newspaper *The Occident* and the *American Jewish Advocate*. Leiser helped lay the foundation for the Jewish Publication Society in 1845.

During the middle of the 19th century when thousands of Jews emigrated from Germany, Isidor Busch founded the short-lived, German-language weekly *Israel's Herald* in 1849. That year, Robert Lyon put out the *Asmonean*, the first English-language Jewish weekly that covered local, national and news from abroad.

Most Jews lived in eastern seaboard cities, and when the population migrated westward, newspapers were started in fledgling Jewish communities. In 1854, Rabbi Isaac Meyer *Wise sought to reach isolated Jews living west of the Allegheny River, and began the English-language weekly *The Israelite* in Cincinnati, Ohio, which became *The *American Israelite* after 1874 – a newspaper still published weekly in 2006. Wise's newspaper fought "against errors, superstition, prejudice, arrogance, hypocrisy and bigotry." To reach Jews unable to read English, Wise published the eight-page weekly in German **Die Deborah* from 1885 until the end of the 19th century.

German and German-English-language Jewish newspapers were also launched in Milwaukee, St. Louis, and Memphis. When the Gold Rush lured Jews to California, San Francisco became the home of a German and English language weekly *The Hebrew Observer* (1855–88), *The Gleaner* (1856), *The Jewish Times and Observer* (1858) and *The Pacific Messenger* (1860).

In 1870, J.K. Buchner introduced his sporadically published *Yiddische Zeitung* ("Jewish Times"), America's first Yiddish newspaper that covered politics, history, science, and the arts. In 1872, pioneer Yiddish journalist Kasriel Hersch Sarasohn founded the New Yorker *Yiddische Zeitung*, offered the weekly *Judische Gazetten* ("Jewish Gazette") from 1874 to 1885, and attempted two Yiddish dailies that failed to survive. The rise of the Yiddish press paralleled the influx of Eastern European Jews to America from the 1870s into the 20th century who feared pogroms and sought a better life – and most were Yiddish speakers. Some of the first Yiddish papers were a combination of Hebrew and Yiddish, but by 1874 they settled on Yiddish. The Yiddish press, written in the immigrants' language, exerted influence and helped them to acculturate to a new and far different world. They found news from abroad, editorials and essays – and sought stimulation and escape after a hard day's work reading the serials, novels, featured stories and verse by Yiddish writers. Rabbi Wise maintained a great disdain for the Yiddish-language press.

Between 1871 and 1931, about 125 Hebrew periodicals were published in America, and were mainly weeklies and monthlies with small circulations, operated by one person. The first American Hebrew weekly *Ha-Zofeh* ("The Observer in a New Land") appeared in New York from 1871 to 1876, and Sarasohn's weekly *Ha-Ivri* ("The Hebrew") lasted from 1891 to 1898. Few Hebrew periodicals survived beyond a few issues since American Jews could neither understand Hebrew nor had any real interest in it.

In 1885 Sarasohn published the politically and religiously conservative *Judisches Tageblatt* ("Jewish Daily News"), the first Yiddish daily to survive. *The Tageblatt* introduced an English page in 1897, and by 1900, its circulation stood at 100,000. In 1905 a new daily emerged, *Warheit* ("The Truth") that was absorbed by the *Tageblatt* in 1919.

Some Jewish immigrants sought more liberal newspapers that reinforced their beliefs and turned to the socialist weekly New York Yiddish *Folk Zeitung* (1885–89), the *Arbeiter Zeitung* ("Worker's Press," 1890), and the Yiddish Socialist Labor daily *Abendblatt* ("Evening Paper") which lasted from 1894 to 1902.

In 1886, Abraham *Cahan edited *Naye Tsayt* (New Times), the first radical weekly, and in 1897 became the inaugurating editor of the Yiddish-language *Forverts* (*The Jewish Daily Forward*). He departed within a few months after a dispute with radical socialists at the newspaper, and when he returned five years later, he received full editorial control and ran the *Forward* until his death in 1951. Circulation grew from 6,000 in 1903 to a peak of 250,000 in 1929 when it was the most widely read Yiddish newspaper in America. In 1906, Cahan introduced *Bintel Brief* – "a little bundle of letters" – which encouraged immigrant readers to write in, tell of their problems, and seek help. *The Forward* encouraged humanism and morality, translated European classics, published articles on American Jewish history, and helped immigrants to assimilate. Cahan brought in distinguished authors includ-

ing Sholem *Asch and I.J. *Singer. His brother Isaac Bashevis *Singer was on staff from the 1930s into the 1960s, as was Elie *Wiesel in the 1950s, and both won Nobel Prizes.

Jacob Saphirstein published the afternoon *Abendpost* (1899–1903), and in 1901 started *Der Morgen Zhurnal* (*The Jewish Morning Journal*), which was Orthodox, pro-Zionist, and Republican. Foreign correspondents cabled news in from Russia, Poland and the Balkans. The Yiddish press offered readers a mix of ideological, political, business, trade and women's publications. After immigrants settled in other cities, attempts made to establish Yiddish dailies there failed when they were unable to compete with the New York City newspapers trucked in every day.

Some Americanized Jews strongly opposed the use of Yiddish among newcomers, and believed that writers should use either correct German or good English. Many readers deserted the Yiddish press and gravitated toward English-language newspapers, as did their children.

To reach readers seeking local news, Jewish city newspapers began around 1900 including the *Jewish Exponent* in Philadelphia (1887), the Jewish news weekly of Northern California and New York's *Jewish Week*, and *Boston's Jewish Advocate* (1902). Each of these were still being published in the 21st century and offered an online version for their readers.

A limited number of Zionist periodicals appeared including the English-language cultural and literary magazine *Maccabean*, started in 1901. In 1900, the Labor Zionists introduced an irregularly published weekly *Der Yiddisher Kemfer* ("Jewish Warrior"), which was still being printed in the 21st century, as was the Woman's Labor Zionist magazine *Na'amat Woman* which began in 1925. In 1908, the weekly *Dos Yidushe Folk* ("The Jewish People") came into being, and eventually the Yiddish press realized that they could not avoid coverage of the Zionist movement. *Der Morgen Zhurnal* and the more liberal *Der Tog* supported Zionism while the *Forverts* railed against compromising socialism. After Hitler and the Holocaust, its editor Abraham Cahan became a fervent supporter of Israel.

English-language Jewish magazines opened a new venue in 1886 with B'nai B'rith's *Menorah* which became the *International Jewish Monthly*. In 1896 *The Jewish Veteran* was introduced, and in 1914, *Hadassah* was produced by the Women's Zionist Organization of America. All three ushered in the millennium, with the latter's circulation at 272,000.

By the early 1900s, there were periodicals for every taste, ideology, trade, and purpose. In 1906, newspaper baron William Randolph Hearst published a Yiddish daily expressly aimed at New York City's 600,000 Jews when he campaigned for governor. After his defeat, Hearst immediately closed the paper.

In 1909, editor Moses Ha-Kohen *Goldman introduced the first Hebrew daily *Ha-Yom* (*The Day*) in New York, but the paper soon failed financially. *Ha-Doar* (*The Post*) was started by Histraduth Ivrit and directed by Hebraist Max Lipson. It lasted as a Hebrew daily for eight months in 1921 and 1922,

continued as weekly through 1992, became a monthly, and was a quarterly when it succumbed in 2004. (See also *Newspapers, Hebrew.)

The Yiddish press was more radical and outspoken than the conservative and traditional Hebrew press, which was unable to survive. Publishing was a business and Hebrew periodical editors were not business people. In 1914, *Der Tog* (*The Day*) was founded by a group led by Rabbi Judah L. *Magnes. It was a non-partisan, liberal publication of high literary and journalistic standards whose masthead read "The newspaper for the Yiddish intelligentsia." That year, there were ten Yiddish dailies with a combined circulation of over 750,000. *Der Tog's* peak circulation was 81,000 in 1916 and it merged with *Der Morgen Zhurnal* in 1953 and ceased publishing in 1973.

By 1921 there were five Yiddish daily newspapers in New York, three in Chicago, and one each in Philadelphia, Cleveland, Milwaukee, and Los Angeles. Their heyday ended when the Immigration Act of 1924 severely restricted immigration from Europe, and Yiddish press circulation began its decline.

Concurrently, from the 1920s into the 1940s there was the rise of English-language magazines and Jewish city newspapers. In 1943, Phillip *Slomovitz, the first editor of the *Detroit Jewish News* (1942) founded the American Association of English-Jewish Newspapers – now known as the American Jewish Press Association. Slomovitz, a well-respected leader, called the Jewish press "the guardian over the public welfare of our people... the historian of Israel and the watchman of our freedoms."

At the outset of the 21st century, there were 104 English-language-Jewish newspapers being published in 36 states and the District of Columbia. Most appeared either weekly (49), twice monthly (23), or monthly (22), with 49 connected to a Jewish Federation. Independent newspapers also covered local activities and some provided in-depth reporting of issues of concern to American Jews.

The Jewish Telegraphic Agency (JTA) provided national and international news concerning Israel to more than 100 newspapers in North America and around the world. The JTA, founded in 1917, and headquartered in New York, had bureaus in Washington and Israel and correspondents in North and South America, Europe, Africa, and Australia.

More than 50 Jewish magazines were aimed at the gamut of religious, organizational, ideological, and scholarly audiences. Three religious magazines were quarterlies; *Humanistic Judaism*, *Reform Judaism* with a circulation of more than 300,000, and *Jewish Action* published by the Orthodox Union. *United Synagogue Review* went to 250,000 Conservative readers twice a year. *Tradition* is published by the Rabbinical Council of America and *Conservative Judaism* by the Rabbinical Assembly. *Commentary* founded in 1945 was sponsored by the American Jewish Committee, while *Congress Monthly* (1933) and *Judaism* (1952) came from the American Jewish Congress. The independent magazine *Tikkun* (1986) presented a radically progressive perspective.

The Simon Wiesenthal Center's *Response* (1979) attacked antisemitism and went to its 250,000 members. In 1980, The National Yiddish Book Center, began publishing *Pakn Treger* (Book Peddler) which looked at contemporary Jewish life and its Yiddish roots. Three years later, the Yiddish-language *Forward* became a weekly, and in 1990, an English-language weekly version began and circulation grew to 25,000. A Russian-language edition was inaugurated in 1995 to reach new immigrants, but after losing money it was sold in 2004.

The *Forward* went online in 1998 followed by the *Forverts*, which tried to reach a younger, worldwide audience of Yiddish speakers. An online Jewish audience was also sought by Jewish city newspapers and organizational, political and religious periodicals. There was a host of Jewish bloggers (Web Loggers) who expressed their personal views on a variety of subjects that included dating, converting to Judaism, politics, and religion, with one site devoted to Orthodox Jewish female bloggers.

During the early years of the 21st century, new niche publications tried to capture younger Jewish audiences – *Heeb* was a generation x magazine and *New Voices* was aimed at college students.

They joined a plethora of publications that offered readers a choice of venues printed in English, Russian, German, and Yiddish, with 11 Yiddish periodicals in New York alone. The Jewish press had reached back to its 19th century roots to satisfy the needs of an eclectic and diverse Jewish readership.

PRESS, FRANK (1924–) U.S. geophysicist. Born in Brooklyn, New York City, he graduated from City College, New York (1944), and received his M.A. (1946) and Ph.D. (1949) from Columbia University under the direction of Maurice Ewing. He was a faculty member of the Columbia department of geophysics (1946–55) and professor of geophysics and head of the seismology laboratory at the California Institute of Technology at Pasadena (1955–65) before moving to the Massachusetts Institute of Technology as head of the department of geology and geophysics. Press made fundamentally important contributions to seismology, geophysics, oceanography, the lunar and planetary sciences, and resources exploration. His best known research explored earthquake seismology by introducing methods of digital data collection and analysis, and investigated seismic wave propagation, free oscillations of the earth, and the composition of the part of the earth's crust called the asthenosphere. His seismographic expertise was invaluable for establishing the worldwide network of seismographs for detecting nuclear weapons testing. He also contributed to the studies that established the precise dimensions of the Antarctic continent. His books on his fields of expertise have become standard texts. Press made many vital contributions to institutional and national organizations. These include president of the U.S. National Academy of Sciences (1981–93), board member of the Woods Hole Oceanographic Institution, membership of the U.S. delegation at four nuclear test ban treaty conferences (1959–63), chairman of the Earth-

quake Prediction Panel of the President's Office of Science and Technology, membership of the President's Scientific Advisory Committee (1961–64), and science adviser to President Carter and director of the Office of Science and Technology Policy (1977–80). His many honors include Honorary Membership of the Society of Exploration Geophysicists (1961) and the Society's Maurice Ewing Medal (1982), the Royal Astronomical Society of Great Britain's Gold Medal (1962), the Arthur Day Medal of the Geological Society of America (1962), the U.S. National Medal of Sciences, Columbia's Pupin Medal (1993), the Japan Prize (1993), and the Lomonosov Gold Medal (1997). In 1961 Mount Press in Antarctica was named in his honor for his contributions to Antarctic exploration. He held strong views on science policy and education, emphasizing the need to provide support for young investigators. His wife, Billie, was an education specialist.

PRESS, YESHAYAHU (1874–1955), Israel historian and topographer of Erez Israel. Press was born in the Old City of Jerusalem. He was a teacher and headmaster of the Laemel School until his retirement and was active in the civic life of Jerusalem for almost 50 years. His scholarly work was devoted to the history of Erez Israel, and especially of its Jewish communities. His main work is *Erez Yisrael Enziklopedyah Topografit-Historit – A Topographical-Historical Encyclopedia of Palestine* (4 vols., 1946–55). His memoirs *Me'ah Shanah bi-Yrushalayim*, published posthumously (1964), are a vivid description of life in the Old City.

PRESSER, JACOB (Jacques) (1899–1970), Dutch historian and writer. Presser was born in Amsterdam into a secular and well-assimilated family. He studied history at the University of Amsterdam, earning his doctorate in 1926 with a thesis on *Das Buch "De Tribus Impostoribus"*, and became a teacher.

After the German invasion in May 1940, he and his wife tried to flee the Netherlands; when their attempt failed, they tried to commit suicide. In March 1943, Presser's wife was arrested and deported to Sobibor death camp. Presser went into hiding.

Soon after the war, he was taken on by the University of Amsterdam, where he eventually became a full professor. In 1950 the Netherlands State Institute for War Documentation commissioned him to write a study of the persecution of the Jews in the Netherlands. *Ondergang. De vervolging en verdelging van het Nederlandse jodendom 1940–1945* ("Destruction: the Persecution and Extermination of Dutch Jewry 1940–1945") was published in 1965 and had an enormous impact on Dutch society.

Presser also wrote poems and detective stories. The short story "De nacht der girondijnen" ("Breaking Point," 1958) was a poignant account of the Dutch Jewish transport camp of Westerbork.

The mass murder of the Jews greatly increased Presser's Jewish consciousness, but he never became a Zionist. After 1967, however, he did express growing concern about Israel's security.

Among his writings, in addition to *Ondergang*, are *De Tachtigjarige Oorlog* (1941); *Napoleon* (1946); and *Amerika. Van kolonie tot wereldmacht* (1949).

[Conny Kristel (2nd ed.)]

PRESSLER, MENAHEM (1928–), pianist. Originating in Magdeburg, the family immigrated to Eretz Israel in 1939. Pressler received most of his musical training in Israel – he studied with Eliyahu Rudiakow and Prof. Leo Kestenberg. A brilliant soloist, he first achieved international prominence at the age of 17, when he won the Claude Debussy Prize. He made his North American concerto debut shortly thereafter with the Philadelphia Orchestra under the baton of Ormandy (1948). Pressler appeared and recorded regularly with leading orchestras around the world. From 1955 he was professor and later distinguished professor of piano at the University of Indiana, Bloomington, and pianist/founder of the famous Beaux Arts Trio, which became one of the world's most enduring and widely acclaimed chamber music ensembles. The trio recorded almost the entire piano trio literature and received many prestigious awards. Pressler also appeared with the Juilliard, Emerson, Guarneri, and Fine Arts Quartets. He received a Lifetime Achievement Award from *Gramophone* magazine in London and the German Critics Ehrenurkunde award in recognition of 40 years as the standard by which chamber music is measured.

[Uri (Erich) Toeplitz and Yohanan Boehm / Naama Ramot (2nd ed.)]

PRESSMAN, DAVID (1916–), U.S. immunochemist. Pressman was born in Detroit. He was head of immunochemistry at Sloan-Kettering Institute (1947–54) and professor at Cornell University (1952–54), director of cancer research at Roswell Park Memorial Institute, Buffalo, from 1954, and research professor at State University of New York, Buffalo and Niagara University from 1968. Pressman's research helped to clarify the structure and thereby the function of antibody molecules and tissue antigens of the HLA system important in transplantation medicine and determining disease susceptibility. He was also a pioneer in research on utilizing anti-tumor immunity as therapy.

[Michael Denman (2nd ed.)]

PRESSMAN, JACOB (1919–), U.S. rabbi. Pressman was born in Philadelphia and received his B.A. from the University of Pennsylvania in 1940 and began rabbinical studies at New York's Jewish Theological Seminary. In 1944, while still a

Seminary student, Pressman assumed spiritual leadership of the Forest Hills Jewish Center, whose rabbi, Ben Zion Bokser, was serving in the war-time chaplaincy. Jacob was ordained in 1945, and in 1946 he relocated to Los Angeles, where he would emerge as one of the key pioneering rabbis in what was to become the second largest Jewish community in the United States.

After serving as assistant rabbi at Sinai Temple after the war, in 1950 Pressman accepted an invitation to become rabbi of a small congregation near Beverly Hills which eventually became Temple Beth Am. With Pressman at the helm, by the mid-1960s the synagogue had grown to become the largest synagogue on the West Side of Los Angeles, with a membership in excess of 1,300 households. He served the synagogue until the 1980s.

As he was establishing himself as one of the leading congregational rabbis in America, Pressman was also playing a significant role in the founding and development of a number of key institutions that served the growing Conservative movement in Southern California, such as the University of Judaism; Camp Ramah in California; the Los Angeles Hebrew High School; the Herzl School, a non-Orthodox junior/senior high school; Akiba Academy, the first Conservative day school in Los Angeles; and a day school at Temple Beth Am, later renamed The Rabbi Jacob Pressman Academy, following his retirement.

All the while Pressman remained active in a leadership capacity on a variety of boards and commissions of the Los Angeles Jewish Federation Council and served as president of the Board of Rabbis of Southern California and of the Western States Region of the Rabbinical Assembly. Maintaining his commitment to the State of Israel, he moved Temple Beth Am into the forefront of the national Israel Bonds synagogue campaign and eventually became chair of the Southern California Israel Bonds campaign.

On a national level, in the 1960s Pressman helped to create the Save Soviet Jewry movement that brought the plight of Soviet Jewry to the attention of the American public and helped create the program that eventually enabled tens of thousands of Soviet Jews to immigrate to Israel. And, as a supporter of the civil rights movement, in 1965 he joined a group of 293 Southern Californians who walked with Martin Luther King, Jr., to the state capitol building in Montgomery.

In July of 1985, Pressman assumed the title of rabbi emeritus, as he relinquished the reins of spiritual leadership of Temple Beth Am to Rabbi Joel Rembaum. Thus began two decades of continuing community service, including two years as executive director of the local Israel Bonds office in the late 1980s. He remained involved in the affairs of the Los Angeles Jewish Federation, serving as chair of its board of governors, among other activities.

Known for his brilliant oratory and penetrating wit, Pressman welcomed the 21st century by embarking on a number of writing projects. In 2002 he published a collection of his sermons on the seminal historical moments of the 20th

century, titled *Dear Friends*. He became a regular columnist for the *Beverly Hills Courier*.

[Joel Rembaum (2nd ed.)]

PRESSMAN, LEE (1906–1969), U.S. lawyer. He left his law practice to accept a position in Roosevelt's New Deal administration. In 1934, while assistant general counsel in the Agricultural Adjustment Administration, Pressman gravitated within the Communist Party orbit. Although he severed formal affiliation with the party after leaving government service a year later, he did not break ideologically with Stalinism until 1950. In 1937 Pressman became counsel for the Steel Workers Organizing Committee, and soon thereafter general counsel for the CIO. Brilliant and quick-witted, Pressman won the confidence of John L. Lewis, and later, CIO president, Philip Murray. He came to be considered "indispensable" in CIO administrative matters. While holding his position in the CIO, Pressman continued to consult with Communist Party leaders. However, he was actually forced to act more as a check on, rather than agent of, the Stalinist interests in the CIO. Pressman resigned from the CIO in 1948 to back the Progressive Party standard-bearer Henry Wallace's unsuccessful attempt for the presidency. He retired to the practice of law during the Korean War.

[Kenneth Waltzer]

PRESSMANE, JOSEPH (1904–1967), French painter, born at Berestechko, Ukraine, a member of the *Paris School. He settled in Paris in 1926 after three years in Palestine. Pressmane became known after World War II. His paintings on Jewish themes, his landscapes, and his studies of Paris industrial suburbs are poetic but often melancholy.

PRETORIA, administrative capital of the Republic of South Africa. The earliest Jewish settlers after the foundation of Pretoria in 1855 were among the officials whom the Boer government brought from Holland. One such was M. de Vries, and although the laws of the Transvaal Republic placed civil disabilities upon non-Protestants, he became state prosecutor in 1868 and a member of the Volksraad (Legislative Assembly) in 1871. Jewish communal life dates from 1876, when *minyanim* were held in the home of Daniel M. Kisch, a photographer, and a Jewish wedding was celebrated in 1878. The first meeting of the congregation was held there in 1890, and the first synagogue building was consecrated in 1898. The first minister, the Rev. E. Jaffe, was appointed the following year. Jewish institutions today include the Pretoria Hebrew Congregation (Orthodox), Bet Menorah (Progressive), a *Chevra Kaddisha* and other philanthropic bodies, a branch of the Union of Jewish Women, and a women's Zionist organization. The Pretoria Council of the S.A. Jewish Board of Deputies acts as a coordinating body. The Jewish population numbered 3,553

in 1969 (1.2% of the total population). This had declined to 1,500 by 2004.

PREUSS, HUGO (1860–1925), German jurist and politician, creator of the Weimar constitution. Born in Berlin, Preuss was elected to the Berlin city council where he advocated a new system of decentralized government based on strong, independent municipal councils. Preuss was an authority on German constitutional law and lectured at the University of Berlin but was refused a professorship because of his Jewish origins and liberal view. In 1906 he became professor of public law at the Berlin Handelshochschule and later rector. At the end of World War I Preuss became minister of the interior of the new German republic and headed the committee drafting the so-called Weimar constitution. It was hailed as the epitome of democracy in liberal circles but was attacked by right-wing circles as being “Un-German.” Preuss opposed the signing of the Versailles Peace Treaty and resigned from the government. Though not active in Jewish affairs and an opponent of Zionism, Preuss was highly regarded in Jewish circles.

PREUSS, JULIUS (1861–1913), German physician and medical historian. Born in Gross-Schoenebeck (Saxonia), Preuss settled in Berlin as a practitioner and became an important writer on medicine in Jewish sources. He also took an active part in Orthodox community life. Preuss scientifically researched the problems of biblical and talmudic medicine, and his writings on the subject have remained a reliable guide.

His series on Hebrew medicine and Jewish medical men began with his *Der Arzt in Bibel und Talmud* (separate publication of *Virchow's Archiv*, 138 (1894), 261ff.). It was followed by a large number of essays on various aspects of biblical and talmudic medicine in scientific and literary journals. These were later collected in *Biblich-talmudische Medizin* (1911, repr. 1921, 1923, 1969). The book is a model of scholarly research and presentation and has become a classic reference work.

[Suessmann Muntner]

PREVIN, ANDRÉ (George; 1929–), conductor, composer, and pianist. Born in Berlin, Previn studied piano at the Berlin Conservatory as a child; subsequently his family moved to Paris, where he continued his studies at the Paris Conserva-

toire and then, in 1939, to California. At the age of 16, he joined the music department of Metro-Goldwyn-Mayer studios in Hollywood, where he was to gain four Academy Awards for original film scores and orchestrated more than 60 other film scores. He studied conducting with Pierre *Monteux and composition with Joseph *Achron and Mario *Castelnuovo-Tedesco. Well known as a jazz pianist, he also made appearances as concerto soloist with various American orchestras and worked with musicians such as Benny *Goodman, Herb Ellis, Shorty Rogers, Pete Rugolo, Jackie Cain and Roy Kral, and Ella Fitzgerald. In 1945 he made his first recording, for the Sunset label, and his early recordings for RCA in 1947 brought him considerable success. In 1961 he received a Grammy Award for the album *André Previn Plays Harold Arlen*. In 1964, an engagement as conductor with the Houston Symphony Orchestra led to his appointment as its chief conductor (1967–68); from that time he conducted most of the major American and European orchestras. His association with the London Symphony Orchestra, which began with a recording of Shostakovich's *Fifth Symphony* in 1965, resulted in his appointment as its principal conductor in 1968. He made many recordings with the orchestra and led it on numerous world tours. Previn often appeared as a chamber pianist, especially during London's South Bank Summer Music Festival, of which he was artistic director in 1972 and 1973. As a conductor, he was noted for his advocacy of British and Russian music, particularly works by Vaughan Williams, Walton, and Rachmaninov. As a composer, his works other than film scores include a piano suite (1967), a cello concerto (1968), and a guitar concerto (first performance, London, 1971). He also collaborated with Alan Jay *Lerner on a Broadway musical based on the life of “Coco” Chanel (1969). In the late 1980s he revived his jazz career with the album *After Hours* (1989), as part of a trio consisting of Joe Pass and Ray Brown. He made further jazz recordings in the 1990s (such as *Old Friends* (1991) and *Jazz at the Musikverein* (1995)) and published an autobiography, *No Minor Chords: My Days in Hollywood* (1991).

[Max Loppert / Israella Stein (2nd ed.)]

PREZIOSI, GIOVANNI (1881–1945), Fascist journalist and leading theorist of racial antisemitism in Italy. Even before World War I, Preziosi, a former priest, began a crusade to preserve “Italianness” from “foreign intrigue,” chiefly through the review he founded in 1913, *La Vita Italiana all' Estero* (later renamed *La Vita Italiana*). In 1917 Preziosi formed one of the first *Fasci*. In August 1920, with an article in *La Vita Italiana* entitled “The Jewish International,” he initiated a campaign of hatred and slander against Jews and Judaism, with the avowed purpose of “inoculating antisemitism into the blood of the Italians.” Preziosi was an anomaly on the Italian scene, even among Fascist hotheads, and more than anyone else he was responsible for preparing the Italian people for the psycho-

logical acceptance of racism. The antisemitism of *Farinacci and even *Mussolini was chiefly political and opportunistic, while Preziosi, inspired by his own phobias, saw the Jews, both foreign and Italian, as objective enemies who had “infiltrated” Italy at all levels. In 1921 he was the first to publish the Italian version of the *Protocols of the Elders of Zion*, which he reissued in 1937. Preziosi’s ideas were the main inspiration for the July 1938 *Manifesto della Razza*, which served as a basis for the subsequent racial legislation and discrimination. In 1941 he became minister of state, ever in quest of “integral racism” and complete friendship with Germany. Under German pressure Mussolini appointed Preziosi head of the Inspectorate for Racial Affairs (Ufficio della Razza) in March 1944, during the last and most brutal phase of Italian Fascism. In April 1945 he committed suicide.

[Emmanuel Beeri]

PRIBRAM, ALFRED FRANCIS (1859–1942), historian and political publicist. Pribram, who was born and died in London, was professor of history at the University of Vienna from 1894 to 1930.

He wrote copiously on 17th-century Austrian history and published scholarly editions of documents on international relations, including the dispatches of Venetian ambassadors to the Court of Vienna. He edited the final volume of Heinrich Friedjung’s *Das Zeitalter des Imperialismus* (3 vols., 1919–22) and, after 1918, contributed to the study of the “war guilt” problem, notably the role of Austria-Hungary, with his *Austrian Foreign Policy 1908–1918* (1923). His lectures at Oxford University were published in 1931 as *England and the International Policy of the European Great Powers, 1871–1914*. His work on the relations between Austria and Britain before World War I appeared in an English translation in 1951 as *Austria-Hungary and Great Britain 1908–1914*. In 1938 he published *Materialien zur Geschichte der Preise und Löhne in Oesterreich*. Pribram’s contribution to Jewish history was *Urkunden und Akten zur Geschichte der Juden in Wien* (2 vols., 1918).

[Herbert A. Strauss]

PRIBRAM, KARL (b. 1877), economist. Born in Prague, he obtained his professional training in Prague, Berlin, and Vienna. From 1907 to 1914 he taught at the University of Vienna, and in 1911 he entered the Austrian civil service. During 1921–28 he served as head of the statistical office of the International Labor Office in Geneva, and in 1928 he became professor of economics at the University of Frankfurt. After moving to the United States in 1934, he was successively connected with the Brookings Institution, in Washington, D.C., the Social Security Administration, and the United States Tariff Commission. After his retirement in 1951, he taught at the American University in Washington and in Frankfurt.

Pribram was an authority in the field of the history of economic thought and of international commercial policy. His main publications include *Cartel Problems* (1935); *Conflicting Patterns of Thought* (1949); and *Prolegomena to a History of Economic Reasoning* (in *Journal of Economics*, 65, 1951).

[Joachim O. Ronall]

PRICE, ABRAHAM A. (1900–1994), rabbi and author. Born in Stopnica (Stopnitz), Poland, Price studied with Abraham Borenstein and Rabbi Silman of Chmielnick, from whom he received *semikhah*. In 1923 Price moved to Berlin, where he became a banker, but with Hitler’s rise to power he moved to Paris. Price found his way to Toronto in the late 1930s and became both spiritual leader of Congregation Chevra Shas and *rosh yeshivah* at Yeshivat Torat Chayim. During World War II Price was one of only a few who managed to break down the resolve of Canada’s restrictionist and bigoted director of Immigration, F.C. Blair. Price secured the release of a number of young German- and Austrian-born Jewish men who were then being interned in Canada as enemy aliens. Price brought them to his yeshivah.

Price maintained an extensive library and had command of a wide range of Jewish texts, both halakhic and non-halakhic. A gifted teacher, he also commanded the respect of the students, and taught Talmud daily to his most advanced students. They marveled at his *pilpulim*, and when the fiercely independent Price crossed swords with various figures, including rabbis in Toronto, as in the matter of Toronto’s *eruv*, his students rallied to his side. Price eventually ordained many of Canada’s leading rabbis, both Orthodox rabbis such as the halakhic authority Gedaliah *Felder and a number of rabbis who eventually were drawn to the Conservative movement, including Erwin *Schild and Albert Pappenheim. Some of Prices’ students, embracing ḥasidic fervor, found their way to the then larger ḥasidic community in Montreal.

Price was the author of a number of published works. In his two-volume *Mishnat Avraham* (1943/4; 1949/50) he used the method of *pilpul* to explore various halakhic problems. He also published a two-volume collection of sermons (1945/6; 1974). Not one to mince words, he ended the first of the two volumes on Jewish preaching by charging that North American rabbis were increasingly becoming entertainers, summoning up laughter or tears, but at the cost of less and less Torah content. Price also published a three-volume edition of *Sefer Ḥasidim* using a manuscript that had not been used in the previous edition. He also included a commentary. During the war, he briefly published a journal dedicated to issues of Torah which included a number of articles written by students of his yeshivah.

[Richard Menkis (2nd ed.)]

PRIESAND, SALLY JANE (1946–), the first U.S. woman to receive rabbinic *ordination from a theological seminary. Born to Irving Theodore and Rose Elizabeth (Welch) Priesand

in Cleveland, Ohio, Priesand determined in her teens to pursue a rabbinic career. She received her B.A. in English from the University of Cincinnati in 1968, together with a Bachelor of Hebrew Letters from neighboring *Hebrew Union College-Jewish Institute of Religion, the rabbinical school of American Reform Judaism. She continued as a rabbinic student at HUC-JIR and was ordained as a Reform rabbi in 1972. As a pacesetter, Priesand endured what she described as “the unbelievable and almost unbearable pressures of being the first woman Rabbi” (Nadell, p. 169). Her early rabbinic positions included serving as assistant and associate rabbi at the Stephen Wise Free Synagogue in New York City (1972–79) and working as a chaplain at Lenox Hill Hospital in Manhattan. Since 1981, she has served as rabbi of Monmouth Reform Temple in Tinton Falls, N.J.

Priesand is the author of *Judaism and the New Woman* (1975) and “Postscript,” in *Women Rabbis: Exploration and Celebration*, ed. G. Zola (1996), a volume honoring 20 years of women in the rabbinate. She has received several honorary degrees, has served as president of the Rabbinic Alumni Association, and is a member of the HUC-JIR Board of Governors. In 1997, the Women’s Rabbinic Network initiated efforts to establish the Rabbi Sally J. Priesand Visiting Professorship of Jewish Women’s Studies at HUC-JIR.

BIBLIOGRAPHY: P.S. Nadell. *Women Who Would be Rabbis* (1998), 148–169.

[Judith R. Baskin (2nd ed.)]

PRIESTLY BLESSING (Heb. בְּרִכַּת כֹּהֲנִים), the formula in Numbers 6:24–26 ordained by God and transmitted to the priests by Moses for the blessing of Israel. Verse 27, “They shall invoke My name on behalf of the Israelites and I will bless them,” makes explicit the intent of the ordained formula: to invoke the power of the Lord, who alone dispenses blessing. The threefold arrangement of the benediction may reflect an older incantation form; the three verses probably represent synonymous rather than climactic parallelism.

The blessing has been customarily translated “The Lord bless you and keep you; the Lord make His face to shine upon you and be gracious to you; the Lord lift up His countenance upon you and grant you peace.” The literalness of this translation obscures the force of the Hebrew and fails to convey the court imagery of the biblical idiom. In biblical idiom the king shows favor (the verb *hanan*) to his subjects by giving them audience, access to “the light of his face,” whereas his disfavor is expressed by “hiding” his face from them. The third verse of the benediction presents a problem, for the king never “lifts up his face upon” his subjects as a token of favor: “to lift one’s own face” means “to look up” (II Kings 9:32), and it is rather the recipient of favor whose “face is lifted up” (who is *nesu panim* by the one who shows favor, see II Kings 3:14; Job 42:8, 9). In the blessing, however, the idea seems to be that of raising the features in a smile, the opposite of dropping them in a frown (cf. *lo appil panai ba-khem*; lit. “I will not drop my face against you,” Jer. 3:12; cf. Gen. 4:5–6; Job 29:24). Finally, favor

is a good deal more than the mere absence of hostility; consequently not just “peace” but friendship is what *shalom* means here, as in Judges 4:17 and in *beriti shalom* (Num. 25:12), and *berit shelomi* (Isa. 54:10), both of which mean “my covenant/promise of friendship.” If one further assumes that a ו (vav) has been omitted at the end of וְשָׁלוֹם before the ו (vav) at the beginning of וְשָׁלוֹם לְךָ שְׁלוֹמוֹ, וְשָׁלוֹם לְךָ שְׁלוֹמוֹ, וְשָׁלוֹם לְךָ שְׁלוֹמוֹ will mean the exact opposite of וְשָׁלוֹם לְךָ שְׁלוֹמוֹ, וְשָׁלוֹם לְךָ שְׁלוֹמוֹ, וְשָׁלוֹם לְךָ שְׁלוֹמוֹ (“I have withdrawn my friendship from that people”; Jer. 16:5). With this small change, the rendering of Numbers 6:24–26 in the Jewish Publication Society’s translation of the Pentateuch (1962) is reproduced below in order to bring out the synonymy of the verses:

The Lord bless you and keep you!
The Lord deal kindly and graciously with you!
The Lord bestow His favor upon you and grant you His friendship!

The structure of this threefold blessing is interesting to note: the first sentence contains three words, the second five words, and the third seven words. The name of the Deity (*Tetragrammaton) is found in the second word of each sentence.

[Herbert Chanan Brichto]

In the Halakhah

This priestly blessing was part of the Temple cult. Every morning and evening at the *Tamid offering, the priests ascended a special platform called *dukhan (the Yiddish expression *dukhenen*, i.e., “to deliver the priestly blessing,” is derived from this), and pronounced the blessing with their hands uplifted (Mid. 2:6; Tam. 5:1; 7:2; Sot. 7:6; Meg. 18a, etc.). In rabbinic literature the Priestly Blessing is also known as *nesi’at kap-payim* (“raising of the hands”). On Sabbaths and festivals the Priestly Blessing was pronounced also at the *Musaf* service and on certain public fast days during the *Minḥah* service, too (Maim. Yad, Tefillah, 14:1–2). In the Temple the priests uttered the *Tetragrammaton whereas in the synagogues *Adonai* was substituted (Sot. 38a). The congregation then responded “Blessed be the Lord God, the God of Israel, to all eternity” (Sot. 40b).

During the time of the Second Temple the Priestly Blessing was pronounced outside the Temple in the synagogues; after the destruction of the Temple and the cessation of the sacrificial cult it became the main remnant of priestly ritual. It was also inserted into the last benediction of the *Amidah*. Every adult kohen is enjoined to perform this function unless disqualified by certain physical and other defects. Thus a kohen may not participate in the ritual if he has killed a person, committed idolatry, married a woman forbidden to him, or is intoxicated. He is also disqualified if he suffers from certain physical deformities or is unable to articulate the words properly (Ber. 32b; Meg. 24b; Ta’an. 26b; Maim. Yad, Tefillah, 15:1–6; Sh. Ar., Oḥ 128:30–41). It was argued, in explanations of these rules, that physical defects might distract the attention of the congregants, or that bodily perfection was a symbol for a perfect soul (Philo, *De Monarchia*, 2:5).

The Priestly Blessing is pronounced only at a public synagogue service with the required quorum of 10 male adults (Sh. Ar., םה 128:1). If all worshipers are priests, some of them ascend to say the blessing while the rest listen to it as “congregants” (Sot. 38b). Priests in mourning are exempted from participating in the ritual, but should leave the synagogue before the *hazzan* invites the priests to ascend the platform. Originally the Priestly Blessing was part of the morning service each weekday, but as the daily business of the people did not allow them to concentrate with proper devotion, it was reserved, in the Diaspora, for Sabbaths and holidays. Local customs differ as to the place (*Shaharit or *Musaf) and time of the recital of the Priestly Blessing. The general *Ashkenazi Custom is to recite it only on the High Holidays and three *pilgrim festivals. In Erez Israel, it is customary to recite it every Sabbath both at *Shaharit* and *Musaf* and in Jerusalem, every day. If the Priestly Blessing is not performed for some reason, its text is recited by the *hazzan* at the end of his repetition of the *Amidah* before the last benediction.

The general procedure of the Priestly Blessing is: After *Kedushah the priests prepare themselves, removing their shoes and washing their hands with the assistance of the levites, whereafter they ascend the platform before the Ark. The *hazzan* then recites the prayer: “Our God and God of our fathers, bless us with the threefold blessing of the Law, written by the hand of Moses Thy servant, which was spoken by Aaron and his sons the priests...” At this last word, the priests turn toward the congregation and pronounce the benediction for the *mitzvah* of the Priestly Blessing. In Israel, however, it is customary for a member of the congregation to call out “*kohanim*” immediately after the 17th blessing of the *Amidah* at which the priests begin their benediction. The *hazzan* says each word of the Priestly Blessing which is then repeated aloud by the priests.

The kohanim recite the blessing with their prayer shawls drawn forward to cover their heads and their hands stretched out at shoulder height with the palms facing forward. The hands are held touching at the thumbs with the first two fingers of each hand separated from the other two, thus forming a sort of fan. This figure became the device of the kohanim and is often inscribed on their tombstones. It has become the custom not to look at the kohanim while they are performing the Priestly Blessing. In many communities the father draws his children to himself and covers them with his *tallit*. Originally the congregants listened silently to the Priestly Blessing, but in the course of time they began to accompany it with the silent recital of appropriate biblical quotations (Sot. 40a). There is a widespread custom to respond “Amen” after each of the three sections of the Priestly Blessing, when said by kohanim but “so may it be Thy will” when the *hazzan* recites it. In the course of time considerable magical power came to be ascribed to the Priestly Blessing, especially the power to neutralize bad dreams, which were considered to be evil omens for the future. Thus, a special prayer to God to turn bad dreams into blessings was inserted in some rites, and said by the congre-

gants at the end of both the first and the second verse (Bet. 55b). Later, other prayers of kabbalistic origin were added to those recited by the congregation. They necessitated the prolonging of the Priestly Blessing, and this was accomplished by the insertion of a chant by the priests before the final word of each section. This custom impinged on the solemn character of the Priestly Blessing, but although opposed by some rabbis (e.g., Moses of Przemysl, *Matteh Moshe*, 1 (1591), 193) it became widely accepted.

In Conservative Judaism the recital of the Priestly Blessing by the priests is optional. *Reform Judaism discarded the notion of special priestly privileges in modern times; the Priestly Blessing is read by the rabbi as a closing benediction at the end of the service. The Priestly Blessing is also used as a formula of blessing at other ceremonies such as circumcisions or weddings (**huppah*) where it is recited by the officiating rabbi.

PRIESTLY VESTMENTS, the special garments that were worn by the priests during divine worship, as was customary in cultic services in the Ancient Near East and elsewhere (see e.g., 11 Kings 10:22). The priests are commanded to leave their priestly garments in the holy chambers after the service (Ezek. 42:14; 44:19), and to refrain from carrying them into the outer court (Lev. 6:4). It is likewise stated: “He shall then take off his garments and put on other garments,” the latter apparently referring to garments worn by the people, as in Ezekiel 42:14. (The talmudic sages (Yoma 23b) disputed whether these were priestly garments inferior to the former ones or profane garments.) In the Bible, the priestly garments are described only in the Priestly Code. Several of them are briefly referred to in Ezekiel 44:17–18; the ephod, the sole exception, is also mentioned in non-Priestly sources. Many scholars maintain that with respect to the garments, the Priestly Code reflects post-Exilic times, for, according to the prevalent view, this source was not committed to writing until this period. The ephod mentioned in sources other than the Priestly Code is held by these scholars to be either an image, not a garment, a garment of divine images, or the earliest priestly garment. However, it actually appears that all the garments described in the Priestly Code are from the pre-Exilic period, and it is only this source which had need to describe them, since it is a priestly work whose contents called for such a description.

Several features characterize the priestly vestments. Some of them are made “for splendor and for beauty” (Ex. 28:40); others, as is usual with cultic apparel, undoubtedly preserve vestiges of an old style, while some reflect acts of cultic significance. The breeches were for modesty (see below). Bearing as they do the hallmark of holiness, the priestly garments as

a whole are frequently referred to as holy garments (see below). A total of eight garments, the number also prescribed by the sages (Yoma 7:5), are enumerated in the Priestly Code, but only Aaron attired himself in all eight. Of these, the four undergarments are to be worn by the common priests too, but those of Aaron are somewhat more embellished. Mentioned as a special group in connection with Aaron as well as with the common priests are four other garments of simple linen, which were worn when acts of extraordinary holiness were performed.

The four undergarments are to be made of fine twined linen (*shesh moshzar*), that is, a superior quality of linen; an exception within this group is Aaron's girdle made of a mixture (*kilayim*) of fine linen and wool. The four undergarments consist of:

(1) A coat. Of Aaron's coat it is said: "And you shall weave the coat in checkerwork of fine linen" (Ex. 28:39), and hence it is called "a coat of checkerwork" (28:4; cf. the ornamented coat mentioned in connection with Joseph in Gen. 37:3 ff., and Tamar in 11 Sam. 13:18–19). No mention is made of checkerwork with respect to the coats of the common priests (Ex. 28:39–40; cf. Ibn Ezra's comment). In Second Temple times, the priests' coats descended apparently to the ankles and had sleeves reaching to the palms (Jos., Ant., 3:153; cf. Yoma 72b; Maim., Yad, Kelei ha-Mikdash, 8:17).

(2) A girdle. The girdle, bound around the coat, is also regarded as a vestment of distinction (cf. Isa. 22:21). Whereas the girdles of the common priests were made exclusively of fine twined linen (Ex. 28:39), Aaron's was of fine linen and dyed wools and was of embroidered work, *ma'aseh rokem* (Ex. 28:39; 39:29).

(3) A headdress. For the common priests turbans or "decorated turbans," *pa'are migba'ot*, are prescribed, while for Aaron there is a miter, *miznefet* (Ex. 28:39–40; 39:28; cf. Ezek. 44:18). The "decorated turban" is considered an attire of beauty and distinction (cf. *pe'er* in Isa. 3:20; 61:3, 10; Ezek. 24:17), but more imposing is the miter, which is mentioned as synonym for crown (Ezek. 21:31; cf. Isa. 62:3).

(4) Breeches. The breeches are worn "to cover the flesh of their nakedness; from the hips to the thighs" (Ex. 28:42; 39:28; Ezek. 44:18).

The four outer garments, which pertain specifically to the high priest, are of greater richness and splendor than the undergarments. They consist of a mixture of dyed wool and fine linen, and display "skillful workmanship," *ma'aseh hoshev*. Some also contain threads of pure gold, while others are woven of gold filaments and yarn of a mixture of wool and linen. In conformity with the system of the Priestly Code, these costly substances allude to a high degree of holiness, as is also attested by the mixture of wool and linen. Such a mixture was generally prohibited in profane garments as it was conducive to holiness (Lev. 19:19; Deut. 22:9–11). Precisely for this reason, however, it was preserved among the priests. In this respect, the priestly garments correspond to the curtains and the veil of the Tabernacle, which are also said to have been made of a

mixture of wool and linen, and have displayed "skillful workmanship" (Ex. 26:1, 31, et al.).

The very wearing of the four outer garments is regarded as an act of worship and is connected with the other acts performed by the high priest inside the Temple. True, nowhere is it specifically stated that the high priest has to wear the four outer garments when he enters to officiate inside the Temple, that is, to perform the daily cultic act in the morning and in the afternoon. Furthermore, from Second Temple times there are evidences that the high priest actually appeared in court dressed in garments of gold and a mixture of wool and linen (Ecclus. 45:7 ff.; Jos., Wars, 5:239). However, this custom seems to have come into being in Second Temple times, whereas in the pre-Exilic period the high priest wore the outer garments only when he officiated inside the Temple. Proof of this is the fact that in composition as well as mode of workmanship these garments resemble the curtains and the inner vessels of gold, while the undergarments resemble the hangings and screens in the court. Moreover, the outer garments are too heavy, cumbersome, and splendid for the tasks performed at the outer altar.

The four outer garments have several features characteristic of royalty (the gold, the blue, and the purple, as well as the crown) and when combined with the miter and with the anointing oil poured on the high priest (Ex. 29:7, et al.) they give him a regal appearance. In Ezekiel's constitution there is no mention of these garments; of the priestly vestments, Ezekiel knows only those of ordinary linen (Ezek. 44:17–8), just as there is no hint in Ezekiel of the existence of the high priesthood itself.

The four outer garments are the following:

(5) The ephod, made of gold and a mixture of wool and linen, displaying "skillful workmanship" (Ex. 28:6–12; 39:2–7). This is the most distinguished of the priestly garments; hence it alone is mentioned in the Former and the Latter Prophets (Judg. 8:27; 17:5; Hos. 3:4, et al.). A garment by this name is mentioned in Ugaritic writings (*ipd*; CH Gordon, *Ugaritic Textbook* (1965), 67, 1:5) and in the Assyrian documents from Cappadocia (*epattu*).

(6) The breastplate, measuring a span by a span, attached to the ephod. It is either a square tablet or a pouch. In it are set 12 precious stones on which are engraved the names of the tribes of Israel, and on the breastplate are placed the *Urim and the Thummim. The breastplate is made in the same manner as the ephod – that is, of gold and a mixture of wool and linen, and displayed "skillful workmanship" (Ex. 28:15–30; 29:8–21).

(7) The robe of the ephod, that is worn under the ephod. The robe is probably longer than the ephod, and extends below it. It is made of woolen threads only, all of blue. On its hem hang bells of gold and pomegranates of a mixture of dyed wool and fine linen (Ex. 28:31–35; 39:22–26). The number of bells and pomegranates, not specified in the text, was a subject of controversy among the sages, who disputed over whether there were 72 or 36 (Zev. 88b), while still other numbers were

given by Church Fathers. In Second Temple times the robe, like the tunic, apparently reached the high priest's heels (Jos. Ant., 3:159; Jos. Wars, 5:231; cf. Philo, II Mos. 118–21).

(8) The plate, also called a crown, *nezer*, hangs on a blue thread in front of the miter. Made of pure gold, the plate has two words engraved on it: *qodesh le-YHWH*, "Holy to the Lord" (Ex. 28:36–38; 39:30–31), as stated by the sages (Shab. 63b, et al.). However, in Second Temple times, apparently only the Tetragrammaton was inscribed on it (Jos., Ant., 3:178; cf. Jos., Wars, 5:235; Philo, II Mos. 115, 132; Arist. 98).

Shoes are not included among the priestly vestments and the priests evidently ministered barefoot, as was obligatory in a holy place (cf. Ex. 3:5; Josh. 5:15; cf. also the remark in Ex. R. 2:6 end).

In four passages (Ex. 31:10; 35:19; 39:1, 41) all the priestly garments of Aaron and of his sons, are referred to by the special designation "the garments of *serad*," the etymology of which has not as yet been adequately explained. The talmudic sages assumed that this designation applies to the high priest's eight garments (Yoma 72 a–b). According to the literal meaning of the text, however, it seems that Aaron's eight garments, i.e., his four undergarments and the four outer ones that were specifically for him, are referred to not as "the garments of *serad*" but as "the holy garments for Aaron the priest" (see the references above, and also Ex. 28:4; 29:29; 40:13), while the four garments of the common priests are called "the garments of his sons, for their service as priests."

A third group of priestly garments consists of those made of ordinary, not fine, linen, which are used for officiating in the holiest of places. On the Day of Atonement, Aaron enters the inner sanctum clothed in four garments of ordinary linen: a coat, breeches, a girdle, and a miter (Lev. 16:4), which, as the sages correctly stated, were of white linen (Yoma 3:6, et al.). However, garments, including breeches, of ordinary linen are also worn by the common priest when he ascends the outer altar to remove the ashes (Lev. 6:3), and these are assumed to be similar to the former four garments. The simple garments of ordinary linen bear a holiness still greater than that of the vestments of gold and a mixture of wool and linen, and the text finds it necessary to emphasize that "they are the holy garments" (Lev. 16:4). In the Egyptian priesthood, too, garments of simple linen were regarded as holy. In the Bible, angels of the heavenly entourage are represented as clothed in simple linen (Ezek. 9:2–3, 11; 10:2; Dan. 10:5; 12:6–7). Because of their extraordinary holiness, the custom was instituted that the inner sanctum should be entered and the altar ascended in these garments only.

PRIESTS AND PRIESTHOOD.

Definition of Priesthood

The priests are the principal functionaries in divine services, their special task being to engage in cultic ceremonies which they conducted mainly in the Temple. In general the priests' post is authorized by hereditary right and they constitute a distinct class separate from the rest of the people. In extrabiblical sources the title *Kohen* ("priest") is found in Phoenician inscriptions, in Aramaic documents including Nabataean, and Ugaritic documents. The Ethiopian *kahen* is found in the sense of seer or soothsayer, and on the basis of this term various scholars attempted to explain the primal nature of the priesthood in Israel (see below). It seems, however, that the Arabic term was borrowed from the Canaanite, and that by way of the Aramaic. The etymology of the title is not sufficiently clear.

The institution of priesthood in its typical crystallization as a social class is encountered in many different religions, both primitive and advanced, in the Ancient Near East and elsewhere – but not in all religions. Thus, priesthood, at least in its cultic manifestations, did not exist among the early Arabs or among other nomadic-tribal religions. At the same time, any given priesthood with its procedures and customs tends to be shaped by the specific style and religious attitudes characterizing the particular culture. Even the Canaanite priesthood differed from that of the Israelites, although the Canaanite term for priest is identical with the biblical one. For example, among the Canaanites one finds a priestess and even a female "high priestess" (*rb khnt*) paralleling the male "high priest" (*rb khnm*). In Israel, in contrast, the priesthood is restricted to males; there are no priestesses in their own right (i.e., other than the female members of a priest's family, such as his wife or daughter).

The priests' involvement in the cult was conceived of essentially as service of the deity. This concept is rooted in the primary nature of the temple, which was regarded literally as a "house of the god," i.e., the special abode of the deity-king, his dwelling place. In this abode there are servants who attend on him and fulfill his wants, the whole cult being designed essentially to provide for the needs of the deity. This conception of the nature of the priesthood was accepted throughout the ancient world and found its expression in images and even in technical terms connected with the priesthood. For example, the Egyptian name designating priest, *hom-neter*, literally means "servant of the god." In Israel this conception, though opposed by some, never completely lost its actual, concrete meaning. The priests are called ministrants of God (Isa. 61:6; Jer. 33:21–22; Joel 1:9, 13; 2:17, et al.) and their function in the temple is called service – holy service (Ex. 28:43; 29:30, et al.); they stand before God to minister to Him (Deut. 10:8; cf. 17:12; 18:5, 7, et al.), they approach Him to minister to Him (Ezek. 40:46; 43:19; 44:15), draw near to His table to serve Him (Ezek. 44:16), and the like.

Right to Serve in the Priesthood

The question of who is entitled to serve in the priesthood – whether the whole levite tribe, only part of it, or every male

Israelite – is one of the basic questions necessary for a comprehension of the character of the Israelite priesthood. On this point the biblical laws appear contradictory, and this too seems to be the case with testimony provided by the historical books.

THE CONCEPTIONS OF P AND D. According to P, the right to priesthood is maintained exclusively for one family of the levite tribe, the family of Aaron. Aaron and his sons are dressed in special garments (Ex. 28:1ff.) and are also anointed with the anointing oil, in exactly the same manner as are the holy vessels (Ex. 30:26–30; 40:9–15). The ceremony of their consecration for the priesthood follows the construction of the Tabernacle (Ex. 29: Lev. 8). The other members of the levitical tribe have other functions connected with the service in the Tabernacle (Num. 3–4; cf. below), but they play no role in the cultic ceremonies themselves. Moreover, they are forbidden to approach the altar and the other holy vessels.

According to the point of view of Deuteronomy (10:8–9), also formulated in the blessing of Moses (Deut. 33:8–10), the entire levitical tribe is appointed to serve in the priesthood. To put it more precisely, those levites serve in the priesthood who reside in the chosen city, which is the only place where cultic service is permitted. Hence the characteristic terminology of this book – “priests, sons of Levi,” and levitical priests” (17:18; 18:1; 21:5; 31:9, et al.). Levites who reside in provincial towns do not participate in the cult. However, it maintains that every levite has the right to come to the chosen city and to serve before God there (18:6–7). This means that at least de jure each member of the levitical tribe may join the priesthood if he so desires.

THE ALLEGED CONCEPTION OF JE. The conception of JE is a little more obscure. At first glance it appears that these sources permit every man in Israel to offer sacrifices on the altar himself (see Ex. 20:24 [21]), and indeed they relate that the Patriarchs not only used to build altars but also used to offer sacrifices on them (e.g., Gen. 22:9; 31:54; 46:1). In the same way, Moses erects altars in Rephidim and at the foot of Mt. Sinai and offers sacrifices with the aid of the “young men of the Israelites” and together with Jethro and the elders (Ex. 17:15; 18:12; 24:4). This same attitude is characteristic of the authors of the narratives in the Former Prophets. Moreover, it appears that this was indeed the historical reality. *Gideon, for example, offers sacrifices himself on the altar at Ophrah (Judg. 6:20–28), as does Manoah at Mahaneh-Dan (13:15–23), the people of Beth-Shemesh on the large stone in the field (1 Sam. 6:14–15), *Adonijah on the stone of Zohaleth near Jerusalem (1 Kings 1:9), and many other biblical personalities who have no connection with the priesthood. Thus Elijah the prophet rebuilds the ruined altar on the Carmel and makes an offering on it (1 Kings 18:30–38).

These facts served as the decisive starting point for the description advanced by many scholars of the evolution of the priesthood in Israel. According to this description – which

was formulated in a crystallized form by J. Wellhausen and W. Robertson-Smith – in the early stages of Israelite history there was no difference between priests and laymen. Every citizen was entitled to participate in cultic ceremonies, and there was no special priestly class in existence. Eli at the temple of Shiloh or Ahimelech at the temple of Nob are viewed merely as gatekeepers, like similar functionaries among the ancient Arabs, called *hājib* or *sādin*, whose function, which was hereditary, was limited to guarding the temple. The temple guards in the early period of Israel also used to engage in soothsaying, as did the ancient Arab *kāhin*, but they did not as yet constitute a true priesthood since they had no special cultic functions. Only after the establishment of the monarchy, with the growth of ceremony in public life, were special people appointed to serve in the priesthood. These people were assigned to serve in the royal temples and were regarded as officials of the monarchy, which had granted them their positions. Their tribal origin was not necessarily levitical. Thus the Bible attests that the sons of David were priests (11 Sam. 8:18) and that Ira the Jairite was a priest of David (20:26). Zadok, whose descendants continued to officiate in the Temple of Jerusalem, also did not belong to the levite tribe, according to this theory. A member of Solomon’s entourage who served as priest was Zabud son of Nathan, the king’s friend (1 Kings 4:5), while Jeroboam also appointed priests from among all the people (12:31; 13:33). In the course of time the appointed royal priests and their descendants became a consolidated and closed class. This theory generally regards the ancient levite tribe as an ordinary secular tribe. The conception of Deuteronomy and particularly of P according to which Levi is a sacred tribe having a special connection with the priesthood, in fact, refers, according to this theory, only to a late class of rejected priests, a class which was created as a result of the cultic innovations of Josiah and was fictitiously attached to the levitical tribe which by that time had already disappeared.

Various scholars, both before and after Wellhausen, tended to acknowledge the antiquity of the Israelite priesthood and its actual existence as early as the time of the Judges (thus H. Ewald, F. Delitzsch, A. Dillmann, and esp. W.W. Baudissin; more recently, Y. Kaufmann). However, in relation to the right to perform cultic ceremonies and to offer sacrifices on the altar, most of these scholars too adhered to the theory that originally this right was not reserved necessarily for the priests. As for the tribal descent, most of these scholars were inclined to admit at times that the first priests were not necessarily from the levite tribe, though several dynasties of priests did descend from this tribe. This is, then, the reality underlying the narratives of the Former Prophets and reflected in JE, which explicitly mention the offering of sacrifices by laymen, without considering this objectionable. Among those who rejected the antiquity of the Israelite priesthood there were some who went so far as to say that in J, or in the early strata of JE, there is no mention of priests. To the extent that Aaron is mentioned there by name, he is not regarded as a priest but as one of the elders of Israel.

CRITICISM. Both the above-mentioned conceptions, that which denies the antiquity of the Israelite priesthood and that which acknowledges it, overlook the difference between altar and temple, and, therefore, are incapable of explaining with adequate precision the early history of the Israelite priesthood and even the conceptions of JE themselves. Altars consisted of any type of structure, even merely large stones, and were placed outside. In contrast, temples were primarily closed structures, i.e., “houses of God.” Every temple had an altar in an adjoining courtyard, but not every altar was necessarily joined to a temple. Many altars stood by themselves in inhabited places or far from them. The difference between these two institutions is also reflected in the scope and nature of cultic activity. Furthermore, the altars were extremely numerous and were found in every corner of the land, which was not the case with the temples whose number was fairly limited. It should be emphasized that the high place (*bamah*) was of the category of an altar; it seems to have been a specific type of large altar (not a “house of God”). Now, the place of the priests, whether in Israel or elsewhere, was only in the temples. While every man of Israel was entitled to offer sacrifices on individual altars without the intermediation of authorized personnel, the cultic service associated with the altars attached to the temples, like the service in the temples themselves (in Israel and everywhere in the Ancient Near East), was always reserved for regular priestly families.

Moreover, it can be seen that the families which officiated regularly in the priesthood of the Israelite temples, as far as is known, were related to the levitical tribe. The family of Eli which served in the temples of Shiloh and Nob (1 Sam. 14:3; 21:1–10; 22:9, 12) is presented as being of ancient lineage going back to the period of bondage in Egypt and as being chosen from among all the tribes of Israel (2:27–28). There should be no doubt that these statements are based on the assumption that the family belonged to a chosen tribe and it may be even deduced that this family was considered to be what is called in P Aaronide. The priestly dynasty which served in the temple of Dan (Judg. 18:30) originated with the young levite. Zadok, who was the founder of the dynasty of Jerusalem’s priests, was apparently also of the levite stock. When the ark is being carried from the city of David, he appears within a group of levites (11 Sam. 15:24; there is no justification for assuming the words “and all the levites with him” to be a later addition). In any case, Ezekiel refers to the Zadokites (following the style of Deuteronomy) as “priests, sons of Levi,” or “levitical priests” (Ezek. 40:46; 43:19; 44:15). It may be assumed that the priests of the Beth-El temple, too, were related to a fixed dynasty, of which Amaziah, a contemporary of Amos (Amos 7:10–17), was a member. In a small and provincial temple such as that of Micah, the son of the owner could serve in the capacity of priest, but even here it was preferred that a levite fulfill that function (Judg. 17:13). There is no information extant regarding the priests of other Israelite temples in the biblical period, but there is no justification for assuming that those who officiated in those temples undertook their functions only by

chance and that their origin was precisely from the other tribes of Israel.

It thus cannot be proven that in the houses of God (as distinguished from the high places) the priesthood was likely to be granted to people from any family in Israel. The bearers of the ark for David were Abiathar and Zadok, the legitimate priests, while David’s sons (11 Sam. 8:18) and Ira the Jairite (20:26) apparently served as priests only in connection with the sacrifices of the king which took place in the high places and at private altars, not in the temples of God. It should not be forgotten that David did not yet have his own temple. Similarly, Zabud son of Nathan (1 Kings 4:5) was probably engaged by Solomon in high-place sacrifices, and he is included in a list of officials of the time preceding the building of the Temple in Jerusalem. Jeroboam appointed priests from among all the people, but the text explicitly states that these were priests of high places (1 Kings 12:31–32; 13:33), i.e., their cultic function was outside the framework of the temples. The altars at Beth-El were numerous (cf. Amos 3:14; Hos. 10:8), and not all were attached to the temple of that town, in which Jeroboam even built a special “house of high places” (1 Kings 12:31). The Deuteronomistic editor naturally regards even these actions as sinful.

Thus, the historical reality was that at individual altars every man of Israel was entitled to perform cultic activities, whereas in the temples the right to officiate as priests was reserved for specific families which generally traced their lineage to the tribe of Levi. Now, this same reality is reflected in JE. The narrative content of these sources often concerns altars of the popular type, i.e., altars which are not attached to any temple and which can be found even outside settled areas. However, houses of God are also mentioned in these sources both in the legal sections (Ex. 23:19; 34:26) and as projections of the future (Gen. 28:22; see also Ex. 22:7–8; Josh. 6:19, 24; 9:23). The dearth of references to the temples in these sources stems not only from their specifically popular nature but also from their assumption that temples emerged in Israel only after the settlement of the land (in contrast, according to P a temple was built immediately after the theophany at Sinai, which is the *Tabernacle described in it). Anachronistically, priests are mentioned incidentally in JE’s accounts (Ex. 19:6 (paralleling a “holy people”), 22–24 (it is difficult to consider this an addition); see also Josh. 6:4–16, et al.). It is clear that their natural place is only in a house of God. Aaron is mentioned in these sources and there should be no doubt that he is considered a priest, in fact, the head of the priests, although this facet of his figure cannot be actualized in Egypt or against the wanderings in the wilderness, when the Israelites do not yet have temples. In Exodus 4:14, Aaron is called “the levite,” on the assumption that Levi is the tribe that usually serves as priests, so that membership in it turns into a synonym of priesthood. Moreover, it is explicitly stated in a JE account that after the levites had proven their loyalty to the God of Israel when the people sinned with the golden calf, Moses said to them: “Fill your hands today for God” (Ex. 32:29). This is the usual phraseology designating an ordination for the priesthood.

CONCLUSION. To summarize, all parts of the Pentateuch indicate that in the temple cult only families of priests officiated. According to P, this was only one family from the levite tribe, the family of Aaron. According to D, every levite family is entitled to serve in the priesthood in the temple. According to ancient historical reality (which conforms to the conceptions of JE), various families from the tribe of Levi regularly officiated as priests in various temples (e.g., the various branches of the family of Eli in the temples of Shiloh and Nob, the family of Jonathan son of Gershom in the temple of Dan, the family of Zadok in the Temple of Jerusalem). There are thus no great divergences among the conceptions, since all the sources indicate at least that the priesthood was not granted to common Israelites but only to the tribe of Levi, and, in fact, was limited to special families within this tribe. If it is assumed that in historical reality several levitical families were descended from Aaron (according to Josh. 21:8–19, the descendants of Aaron received 13 towns), the actual divergence between the conceptions is still further reduced.

To put it differently, the disagreements among the sources concern only the altars which were distant from the temples. JE permits every Israelite to sacrifice at such altars at will (this indeed corresponds to the ancient historical reality, hence the impression that common Israelites served in the priesthood). D demands the demolition of such altars, while P assumes a priori that they did not exist. (For this question, which is connected with the centralization of the cult, see *Deuteronomy and *Pentateuch.)

Levels Within the Priesthood

Cultic service in the temple, being generally multifaceted and complex, tended to be crystallized in a complex and graded organizational framework. Thus the priesthood was not composed of a single group but rather several groups can be discerned within it which were of various levels, according to the various functions devolving upon them and their degree of importance. This was the case with all the priesthoods of the Ancient Near East as well as with the biblical priesthood.

THE GRADATION OF PRIESTHOOD ACCORDING TO P. In the P sections the classification of the priests is a fairly simple one into just two levels: the high priest and the ordinary priests. The epithet “high priest” (*ha-Kohen ha-gadol*) occurs only once in the Pentateuch (Num. 35:25, 28, hence also in Josh. 20:6; cf. Lev. 21:10 “the priest who is exalted above his fellows”). In several places he is called the anointed priest (Lev. 4:3, 5, 16; 6:15). To be sure, all the priests were anointed with the holy oil (Ex. 28:41; 30:30; 40:13–15; Lev. 7:36) and even the ordinary priests were called anointed priests (Num. 3:3), but there are differences in the method of anointing at the consecration ceremony: all the priests, including Aaron, are anointed with oil sprinkled on their vestments (Ex. 29:21; Lev. 8:30), whereas in Aaron’s case it is also poured on his head before the bringing of sacrifices for that ceremony (Ex. 29:7; Lev. 8:12; 21:10). Thus the anointing with holy oil refers primarily to him (Ex. 29:29; Lev. 6:13; 16:32; Num. 35:25).

According to P, the high priest was granted several special privileges, especially in the area of the cult, insofar as his degree of holiness also exceeded that of the ordinary priests. He alone is allowed to go behind the veil on the Day of Atonement (Lev. 16:2ff.) and he deals with the sin offerings whose blood is brought into the sanctuary (4:3–21). In general, all the cultic activities which take place inside the Temple are performed solely by him (see below). The cultic activity of the ordinary priests is actually limited to offering regular sacrifices on the outer altar. The high priest must take more care than the ordinary priests with the restrictions concerning impurity and marriage (see below). His eldest son serves as the head chieftain of the levites (Num. 3:32). The high priest’s death terminates the sojourn of manslayers in *cities of refuge (Num. 35:25–28; Josh. 20:6). Moreover, the high priest bears certain signs of royalty. In addition to his anointment, which is performed in the manner of that of a king, i.e., with the pouring of oil on his head (cf. 1 Sam. 10:1; 11 Kings 9:6), his garments contain gold and purple. He wears a miter (*miznefet*) on which is placed the plate (*ziz*, Ex. 28:36–39), which is also called *nezer* (Ex. 29:6; 39:30; Lev. 8:9). The miter is considered a sign of distinction being a form of headdress worn by kings, and in poetic parallelism is synonymous with *atarah* (Ezek. 21:31; cf. Isa. 62:3). The plate (*ziz*, perhaps “rosette”) is also mentioned in relation to the *atarah* (Isa. 28:1, 3–4), while the *nezer* is considered the distinguishing mark of kings (11 Sam. 1:10; 11 Kings 11:12; Ps. 89:40; 132:18). According to P, only the line of eldest sons of the descendants of Aaron can serve as high priests (cf. Lev. 21:10). An ordinary priest cannot become a high priest, in the same way that a levite cannot be made a priest. A man’s position in the hierarchy of holiness and cult is determined from the time of his birth, and he is not free to liberate himself from his position. In Numbers 25:10–13 the descendants of Phinehas are promised a “covenant of eternal priesthood,” and apparently this refers particularly to the right to the high priesthood.

Most scholars who hold that P was committed to writing at the beginning of the Second Temple period assume that this type of high priesthood existed in Israel only during that period. The high priests of the First Temple, according to this view, were only the first among equals, and their degree of cultic holiness was no greater than that of ordinary priests. Other scholars, especially those who recognize the antiquity of Israelite priesthood in general (see above), also acknowledge the existence of this type of high priesthood in Israel as early as the time of the Judges. According to this view, Eli in the temple of Shiloh might already have been a type of high priest, as that described in P.W.F. Albright, in particular, points to the fact that among all the peoples of the Ancient Near East there was a head of the priestly hierarchy. In Ugarit too (and in Phoenician inscriptions) such a person is mentioned and is called *rb khnm*. However, it turns out that the antiquity of the Israelite priesthood can be proven not necessarily by analogy with the nations of the Ancient Near East, but especially by an analysis of its cultic and mantic functions (for this mat-

ter see below). In the code of Ezekiel 40–48 there is no mention of the high priest. It is possible that the reason for this is not that the high priest did not yet exist, as is maintained by those who reject the antiquity of the high priesthood but, on the contrary, because by this time this type of high priesthood had already vanished; and during the Second Temple attempts were made to reinstate it following the canonization of the Torah (which now included the Priestly Code). A high priest is not mentioned in Deuteronomy either, but this may be because it does not deal with priestly matters and has no need to describe them. Deuteronomy 20:2 mentions a priest who encourages the people before the battle, and it is possible that the high priest is intended here. But the rabbis interpreted this as a priest anointed for war who was appointed specifically for that purpose (Sot. 42a).

PRIESTLY GRADATION IN THE FIRST TEMPLE. During the First Temple period there was actually a slightly more complex group of priests than that described in the Pentateuch. High priests are mentioned, some of them even by name, and possibly they are all descendants of Zadok. Some of these high priests of First Temple times are explicitly called high priest, (*Kohen gadol*), while others are called the head priest (*kohen ha-rosh*), and sometimes one of them might be called simply priest. The following are specified by name: *Jehoiada, a contemporary of Joash (II Kings 11:4–12:11; cf. Jer. 29:26); Urijah (Uriah), a contemporary of Ahaz (II Kings 16:10–16; Isa. 8:2); *Hilkiah, a contemporary of Josiah (II Kings 22:4–14; 23:4, 24); Seraiah, a contemporary of Zedekiah (25:18). Chronicles also mentions Amariah, a contemporary of Jehoshaphat (II Chron. 19:11); Azariah, a contemporary of Uzziah (26:17–20); and another Azariah, a contemporary of Hezekiah (31:10). It is difficult to determine to what extent these conform to the image of the high priest as it is described in P, since there is no real information regarding their character and functions. Several other functionaries should be added to these. The nature of the secondary priests (*kohen mishneh*) is unclear, and apparently there could be several secondary priests simultaneously (II Kings 23:4). At the time of the Destruction, however, there was only one, named Zephaniah (II Kings 25:18). Perhaps the deputy (*segan*) priest of the Second Temple was merely a continuation of the secondary priest of the First. In the First Temple there were also several priests who served as gatekeepers (II Kings 12:10; 22:4; 23:4), and there were three of these during the Destruction (25:18). From the time of Jehoiakim, one is known by name, Maaseiah son of Shallum, who had a special chamber in the Temple court (Jer. 35:4). Jehoiada the priest commanded watchmen in the Temple (II Kings 11:18), i.e., small groups of priests whose function it was to supervise the decorum at the gates and in the courts of the Temple (cf. Ezek. 44:11). The members of these groups were called *pekidim* (officers) and they were authorized to apprehend those who appeared to them to be riotous and to put them in prison and in stocks (Jer. 29:26). One of these *pekidim* was Pashhur son of Immer the priest who was a “chief officer” in the sanc-

tuary, i.e., one of the overseers of the officers, and it was he who struck Jeremiah and put him in prison (Jer. 20:1–3). It is possible that Irijah son of Shelemiah, an officer who while on guard at one of the gates apprehended Jeremiah and brought him to the ministers, also belonged to these groups (37:13–14). The senior priests (lit. “elders of the priests”) are also mentioned (II Kings 19:2; Isa. 37:2; Jer. 19:1), and it is not known whether they had some kind of definite function. Perhaps the function of keeper of the wardrobe (II Kings 22:14) was also given to one of the priests.

THE PRIESTS’ SERVANTS. Together with the priests there is mention of another group which, while its place is outside the cult, is nevertheless related to it; this is the group of priests’ servants. They are mentioned in the Temple of Shiloh (I Sam. 2:13–17), and Samuel was one of them (2:11, 18; 3:1). Possibly some of those included among the priests of Nob (22:11) were in fact nothing more than “priests’ servants.” Their function was to help the priests in their work, but they had no contact with the cultic ceremonies proper. The priest himself would burn the fats on the altar, sprinkle the blood, light the candles, and so on, and the servant would only help him by bringing the portion of meat belonging to the priest, lying down within the house of God (I Sam. 3:3), opening the doors of the house (3:15), and engaging in other similar activities. Thus, these were mere servants, like the servants that every citizen of Israel used to have. Some of them, being close to the sphere of holiness, were permitted to put on a linen ephod (I Sam. 2:18; 22:18). They were members of all the tribes of Israel, like Samuel who was brought from the tribe of Ephraim.

Functions of the Priests

The functions of the priests, although mainly concerned with the cult, were not solely limited to it. In general four types can be distinguished among them: specifically cultic functions; mantic functions, i.e., functions concerned with the solution of mysteries of the future or the past and the making of decisions in uncertain cases through the revelation of divine will; treatment of impurities and diseases, with the special ceremonies involved; and judging and teaching the people.

CULTIC FUNCTIONS. The primary and outstanding cultic function of the priests was the offering of the sacrifices on the altar which stood in the Temple court. The priests’ activities in this ceremony are described in detail at the beginning of Leviticus, and they can be classified into two major roles: sprinkling the blood and burning portions of *sacrifices. This function was generally performed by the ordinary priests. Aaron did not engage in this function except when the sacrifice was brought by all the priests (such as the sacrifices of the eighth day, Lev. 9; the daily offering sacrificed from the day of consecration on, 6:12–15). However, public sacrifices are not necessarily performed by the high priest. Aaron is not mentioned in connection with the daily offerings and the additional offerings of Sabbaths and festivals (Num. 28–29). Similarly, in the description of the Temple of Shiloh, it was the sons of Eli

who dealt with sacrifices (1 Sam. 1:3; 2:12–17). However, those sacrifices (sin offerings) whose blood is brought into the inner temple are offered by Aaron himself (Lev. 4:3–21; 16:3–25; the burnt offering that accompanies the sin offerings of the Day of Atonement is also made by Aaron).

The priests blessed the people in the name of God (Deut. 10:8; 21:5). Numbers 6:22–26 includes a version of the *priestly blessing that comprises three verses in each of which the name of God is mentioned. Later it is stated (6:27) “Thus they shall link My name with the people of Israel, and I will bless them.” The blessing priest would raise his hands and would sometimes proclaim his blessing to the people from above the altar (Lev. 9:22); Melchizedek king of Salem, who was a priest, blessed Abraham (Gen. 14:18–20); the priests also proclaimed blessings and curses to the people in a special ceremony held between Mt. Gerizim and Mt. Ebal (Deut. 27:12–26; Josh. 8:33–34).

On various occasions the ordinary priests sounded trumpets, e.g., on festivals and New Moons, when the offerings and sacrifices for these days were brought, and this served as a reminder of the sacrifices of Israel before God (Num. 10:10). On the Day of Atonement in a *Jubilee year it was obligatory to blow a *shofar* (ram’s horn) throughout the land (Lev. 25:9) and on the first day of the seventh month it was obligatory to carry out a “memorial blowing” (Lev. 23:24; Num. 29:1) probably of the *shofar*, but it cannot be known if this was a function of the priests.

A distinct function of the priests was to carry the ark. Deuteronomy mentions this as one of the distinguishing features of priesthood (10:8; 31:9, 25), and in all the transportations of the ark during the period of the Conquest it is told that the “priests, sons of Levi,” were its bearers (Josh. 3:3–17; 4:3, 9–10, 16–18; 8:33). This is also the view of the sources marked by the characteristics of JE (Josh. 6:6, 12), and this was actually the case in historical reality whenever the ark was carried out to the battlefield. When it was brought to the camp near Eben-Ezer, *Hophni and Phinehas sons of Eli accompanied it (1 Sam. 4:4, 11). When it was returned from the field of the Philistines to Beth-Shemesh it was carried by the levites (who according to the point of view of these sources are the ones who serve in the priesthood; cf. Ex. 33:29; and see above) from the cart to the large stone (1 Sam. 6:15). When the ark was in the war camp of Saul, *Ahijah the priest is mentioned near it (14:18; according to MT). When an attempt was made to remove it from the City of David, during Absalom’s rebellion, it was carried by Zadok and all the levites (i.e., insofar as they are considered priests, as above; 11 Sam. 15:24). Solomon testified regarding Abiathar the priest that he was among the bearers of the ark (1 Kings 2:26; there is no reason to emend the text here). Again, when it was brought to the temple which Solomon had built and into the Holy of Holies, this was done by the priests (8:3, 6, 10). Where it is not explicitly stated who the bearers of the ark were (such as when it was brought up from the house of *Obed-Edom to the City of David, 11 Sam. 6:13; as distinct from the way from the house of *Abinadab to

the house of Obed-Edom, where it was transported on a cart; 6:3–7), there is no need to assume that they were not priests.

P contains a complete description of several cultic activities inside the Temple, all performed daily at fixed times, in the morning and at sunset, and according to the plain sense of the text these are all done by the high priests alone (but the talmudic sages permitted them to be done by an ordinary priest). These activities included the burning of frankincense on the inner altar (Ex. 30:7–9), the care of the lamps (Ex. 27:20–21 = Lev. 24:1–4; Num. 8:1–3), and setting out the shewbread on the table (Lev. 24:5–9). Some trace has been preserved of a libation which was put in some of the vessels on the table (Ex. 25:29; 37:16; Num. 4:7), but possibly in biblical times this special libation had already been abolished. In addition to these four activities there are three others which stem from the cultic functions of the high priests’ vestments: the stones of the ephod and breastplate serve as reminders of the names of the Israelite tribes before God (Ex. 28:12, 29); the bells at the hem of the ephod coat resound at the times of the daily offerings, i.e., in the morning and at sunset, when Aaron enters and leaves the sanctuary (28:35); and the plate on Aaron’s head bears “any guilt incurred in the holy offerings” of Israel so that they will be accepted favorably by God (28:38). These activities, simultaneously performed by the high priest inside the temple, complement one another and constitute a uniform and comprehensive system. They provide, as it were, food (bread), drink (the libation on the table), aroma (frankincense), light (candles), sound (bells), and arouse the memory (the stones of the ephod and breastplate), and the will (plate). Thus they encompass all the human senses and should be discussed as a single and self-contained cultic phenomenon. This inner system of ceremonies is rooted in the primal conception of the Temple as God’s dwelling place, in which He, as it were, “lives” His life, and in which all His needs are to be satisfied (cf. above). The Israelite religion inherited the system of ceremonies as a fixed and crystallized pattern of divine worship.

MANTIC FUNCTIONS. According to the viewpoint of P, the high priest consults the *Urim and Thummim (Num. 27:21), which are located on the breastpiece attached to the ephod (Ex. 28:30; Lev. 8:8). In order to obtain a reply, the high priest must enter with the Urim and Thummim “before God,” i.e., into the sanctum. The use of Urim and Thummim was common in the ancient Israelite priesthood. However, it may be deduced from Ezra 2:63 (= Neh. 7:65) that by the Second Temple the Urim and Thummim had been entirely forgotten and the returnees to Zion did not know how to reinstate them despite the fact that they had found them mentioned in the Torah (see *Urim and Thummim). The Urim and Thummim were consulted when it was necessary to decide between two contradictory possibilities, and a yes or no answer was received. Solution by lots was needed in more complex situations, such as the division of allocated areas. The Bible mentions two kinds of lots. The one was a popular lot used

by the masses in daily life, to which the Prophets (Isa. 34:17; Ezek. 24:6; Micah 2:5, et al.) and the Hagiographia (Ps. 22:19; Prov. 1:14; 16:33) frequently refer and which was also common among foreign peoples (Joel 4:3; Obad. 11; Jonah 1:7; Neh. 3:10, et al.). The other was a formal priestly lot which took place in the temple court, “before God,” and was used for decisions of public, national significance, such as the following cases related by biblical tradition: the division of the land west of the Jordan (Num. 26:55–56; Josh. 14:21; Judg. 1:3), the separation from the rest of the people of a man who has taken from the *herem* (Josh. 7:13–18), choosing the fighters with Benjamin (Judg. 20:9–10), Saul’s election as king (1 Sam. 10:17–21), and others. In all these cases it is written that the lot was cast “before God,” i.e., in the temple court. The lots for the scapegoats of the Day of Atonement are cast by Aaron (Lev. 16:7–10). In connection with the division of the land it is stated that next to *Joshua stood Eleazer the priest (Num. 34:17; Josh. 14:1–2; although later (Josh. 18:6–10) it is stated that it is as if Joshua alone casts the lot before God). It is possible, therefore, that while this action was attributed to the national leader it was actually performed by the high priest.

Priests would conduct ordeals to resolve doubtful cases. Such a ceremony, held by the priest in the court of the sanctuary, was conducted in the case of a suspected adulteress (Num. 5:11–31) and it appears that this was not the only ceremony of its kind.

TREATMENT OF IMPURITY; PURIFICATION AND APOTROPAIC RITES. Disease and plague were not viewed in the Ancient Near East simply as an organic-physiological phenomenon, but as an external-tangible embodiment of an impure spirit which came to rest within the body of the afflicted person or object. Healing was thus performed by waiting until the impurity left the body or by purification activities aimed at hastening its exit. These attitudes prevalent in the Ancient Near East also found expression in the actions of the Israelite priesthood, although they were stamped with the special mark of biblical religion.

It is generally agreed in the Bible that it is the function of the priests to deal with impurities or diseases. True, the prophet too could heal leprosy, but this was performed by the prophet as a miraculous action (Num. 12:13; 11 Kings 5:1–15; cf. Ex. 4:6–8), while the regular and systematic care was in the hands of the priests. Deuteronomy admonishes the people to follow carefully the instructions of the priests pertaining to these matters (Deut. 24:8; cf. 21:5). According to the code of Ezekiel, too, the priests must guide the people in matters of impurity and purity (Ezek. 44:23).

This aspect of priestly activity is described especially in P in the sections dealing with impurities of animals and carcasses (Lev. 11), leprosy (Lev. 13–14), emissions (Lev. 15), and laws concerning impurity of the dead (Num. 19). The ceremonies described in these sections are aimed at expelling impurity from the body undergoing purification. A special role is played in these ceremonies by, among other things, blood –

blood of the slaughtered bird (Lev. 14:5–6), or the blood of the red heifer (Num. 19:4). In other circumstances the priests could use the blood of sacrifices for purification, especially for the purification of the altar or temple. The essence of the sin offering is the purifying action of the victim’s blood, some of the blood being applied to the corners of the altar (Lev. 4:25, et al.). The great sin offerings whose blood was brought into the sanctuary would purify not only the altar but the temple as well (Lev. 4:3–21). The decisive ceremony of temple purification was conducted on the *Day of Atonement. The temple purification ceremony described in the code of Ezekiel is already much more general and diluted, and contains no mention of the scapegoat (Ezek. 45:18–20). Another ceremony of purification, performed by Aaron on the levites during their consecration rites, was accompanied by the sprinkling of “sin waters,” the shaving of all the hair, and the washing of clothes (Num. 8:7). Purification by means of sprinkling “pure waters” is also mentioned in Ezekiel 36:25 (cf. Zech. 13:1).

The process of purification is not completely ended until the priests offer the sacrifices for the person who is being purified, usually sin and burnt offerings. However, a leper who is being purified also brings a guilt offering and a *log* of oil. Some of the blood of the guilt offering and the oil is used by the priest, in this case, for various ceremonial activities (Lev. 14:11–18), which apparently had an apotropaic significance, i.e., were intended to place a barrier before the forces of impurity so that they could not return to the purified body. A similar ceremony was also held during the consecration of priests (Ex. 29:20–21; Lev. 8:23–24, 30). Frankincense could also serve as a defense against impurity (Num. 17:11–13), and parallels to this are found in the customs of the Ancient Near East.

JUDGING AND INSTRUCTING THE PEOPLE. The priests also participated in judging. Although this was generally a function of the elders and heads of families, in temple towns where there were priests, they would participate in judging together with the elders. This is made sufficiently clear in Deuteronomy. In a difficult case requiring fuller investigation Deuteronomy enjoins the litigants to go up to the chosen city and be judged there (17:8–13), although the assumption is that judging there is not only in the hands of the priests since they are mentioned in the Bible together with judges (Deut. 17:9; cf. 19:17). Deuteronomy requires that “every law suit” be decided by the priests (21:5), but this seems to be a somewhat generalized mode of speech, referring as it does to “every” lawsuit. Apparently the description contained in Deuteronomy, if the point of the centralization of the cult is removed from it, essentially reflects actual historical reality according to which the priests participated in judicial authority. In P there is no mention of this priestly function; and indeed this source which views the priests as detached from the people and endowed with supreme holiness – would not be likely to attribute the function of judging to the priests, since this would generally have necessitated direct contact with the public in judging. However, in historical reality Eli the priest could have achieved

the status of a great judge of Israel (1 Sam. 4:18). Ezekiel as well says of the priests that “in controversy they shall act as judges” (Ezek. 44:24).

The priests also served as teachers of “*torah*” to the people. This function is mentioned as early as the blessing of Moses (Deut. 33:10). The priests’ instruction of the people did not exist as a special institution but was generally a by-product of their other activities. Thus *torah* followed from the legal discussions held before the priests (Deut. 17:11; 33:10). *Torah* was also taught by way of guidance given by the priests to the people in matters of impurities and diseases (Deut. 24:8; Haggai 2:11 ff.). Indeed, the various types of laws of impurity were called *torah* (Lev. 11:46; 13:59, et al.) and were to be learned by the public (Lev. 10:10–1). The various cultic customs were also called *torah* (Lev. 6:2, 7, et al.), and many of the sections dealing with laws and rebukes interspersed throughout the Pentateuch actually constitute scrolls of *torah*. Books of law were preserved mainly by the priests (see *Pentateuch).

Holiness of the Priesthood

The priests, being essentially servants of God, enjoy greater holiness than the rest of the people. This is a basic notion common to every culture of the Ancient Near East, although there were differences in its actual formulation from place to place. The priests did not function as emissaries of the public, since the right to priesthood itself is not in the hands of the public. This right is seen in the Bible basically as divine grace extended to a chosen tribe, or part of it. The holiness of the priests is agreed upon in all biblical sources, and is expressed in various ways. The servants of Saul, for example, refuse to harm the priests of God, despite the king’s explicit command (1 Sam. 22:17). Solomon refrains from killing Abiathar since he has the merit of being a priest and bearer of God’s ark, though as a traitor to the monarchy he is subject to death (1 Kings 2:26). In Exodus 19:6 a kingdom of priests and a holy nation are mentioned as synonymous terms. However, the holiness of the priesthood is most explicitly pronounced in P, as well as in its extension, that is, the code of Ezekiel 40–48.

According to the conceptions of P (and the code of Ezekiel 40–48), the holiness of the priests equals the holiness of the house of God itself. Both are on the same level of holiness which is the level also of the sacrifices of the highest rank of sanctity. This is the most extreme holiness, the most palpable, which can be transferred by contact from one body to another. In the Former Prophets this type of holiness is attributed to the ark alone, while P and the code of Ezekiel 40–48 extend it to include the temple with all its appurtenances. Several external signs affirm the identification of the priests with the holiness of the house of God.

In order to maintain this holiness, especially during their cultic service, the priests are subject to special obligations and restrictions. A blemished priest cannot approach the altar or enter the temple in order to serve there (Lev. 21:17–23), in the same way that a sacrifice has to be “whole,” i.e., without taint (Lev. 22:18–25; cf. 1:3; 3:1; 4:3, et al.). Before the priests

approach the altar or enter the temple in order to serve, they must wash their hands and feet in the laver in the court (Ex. 30:18–21). Though not required to abstain from wine at all times, they are forbidden to drink wine and other intoxicants during the performance of their cultic or didactic duties (Lev. 10:9; Ezek. 44:21).

They were even forbidden to defile themselves for the dead, except in cases of the closest family blood ties (Lev. 21:1–14; Ezek. 44:25). The priest’s wife is not included in the list of such relatives (Lev. 21:2b–3; Ezek. 25b), and Leviticus 21:4 apparently specifically excludes her. In the latter verse, however, *ba’al* is to be omitted as a mutilated dittography (or an abbreviation?) of *be-’amaw le-hehallo*. The rabbis permitted the priest to defile himself for his legal wife (Yev. 22b and parallels). In no case were priests permitted to perform certain mourning rites such as shaving the head smooth, shaving the corners of the beard, and making gashes in the flesh (Lev. 21:5). These mourning rites were introduced into Israel from foreign sources, and in the pentateuchal law were also forbidden to the people (Lev. 19:27–28; Deut. 14:1–2), but in the case of priests the text found it necessary to add a special admonition for them. Mourning rites which would normally be practiced both by the priest Ezekiel and by Israelite laymen are mentioned in Ezekiel 24:15–23, and it may be inferred from these verses that priests in general normally observed them no less than Ezekiel.

The rigors of priestly purity become even more severe during the seven days of consecration. The high priest is admonished that while he is being consecrated and the anointing oil is poured on his head, he is forbidden to bare his head, rend his clothes, be defiled even for the limited circle of his relatives, or even go out of the temple (Lev. 21:10–12; according to the plain sense the text is speaking here only of the days of consecration; cf. Ibn Ezra). Actually the ordinary priests were subject to the same restrictions. During the entire seven days of consecration Moses forbade Aaron and his sons to go out of the entrance of the Tent of Meeting (8:33–35), and when Nadab and Abihu, Aaron’s sons, died before the days of consecration were over, Moses forbade the others to bare their heads, rend their clothes, or go out of the entrance of the Tent of Meeting (10:6–7). Those defiled for Nadab and Abihu were levites, relatives of Aaron (10:4–5). Thus the admonitions in Leviticus 21:10–12 are merely an added warning to the high priest and not intended to separate him in this matter from the ordinary priests. On the other hand, the restrictions mentioned in Ezekiel 44:20 refer not to the days of consecration or to mourning rites but to the priests’ custom throughout the year. Ezekiel enjoins the priests to cut their hair elegantly (Heb. *kasom yikhsemu*, on the basis of the Akkadian *kasāmu*; the Heb. root *gzm* is close to it). That is, in their daily lives the priests were commanded to care for their hair – neither to shave it entirely nor to neglect it entirely, but to comb it decoratively. The rabbis for their part said that a high priest cuts his hair once a week and an ordinary priest once every 30 days (Sanh. 22b).

The holiness of the priesthood is also expressed in restrictions concerning marriage. The priests were forbidden to marry a woman degraded by harlotry or a divorced woman (Lev. 21:7). The high priest is also forbidden a widow, and the text admonishes him to marry only a virgin “from among his people,” i.e., of Israel (21:13–15). Aaron married Elisheba daughter of Amminadab from the tribe of Judah (Ex. 6:23). Ezekiel warns the priests to marry virgins of Israelite origin, but permits them a priest’s widow (Ezek. 44:22). At the same time, it is difficult to attribute legal precision to these distinctions. They are aimed primarily at removing any suspicion of prostitution from the priestly families, for otherwise the holiness of the priestly seed is profaned (Lev. 21:1–9). Divorcees and widows are subject to a certain suspicion of prostitution, since they are removed from any familial framework and are independent. In contrast, a priest’s daughter who was widowed or divorced returns to her father’s house and eats of the holy meat (22:13), and it does not stand to reason that she could be forbidden to marry a priest a second time. Indeed, care was exercised in priestly families to allow no deviation from modesty. Every Israelite citizen was admonished not to profane his daughter through prostitution (19:29), but such a sin perpetrated by a priest’s daughter was extremely grave and she was sentenced to be put to the fire (21:9).

Outlines of the History of the Israelite Priesthood

FROM THE PATRIARCHAL PERIOD UNTIL AFTER THE SETTLEMENT. During the patriarchal period, the Hebrew tribes had no temples, as was commonly the case in nomadic communities, and thus there was also no priestly class. The locus of cultic service was the open altar and the priestly functions could be performed by every head of a household. A trace of this situation has been preserved in the expression “a father and a priest,” which was fossilized in linguistic usage (Judg. 17:10; 18:19). The period of temples in Israel began after the conquest of Canaan. Thus the main crystallization of the Israelite priesthood began with the settlement, although to a certain extent it already had existed in the period which preceded the settlement. Its real activity began with the message of Moses, which brought Yahwism to the world and laid the foundations for the history of Israel. From that time the priesthood became one of the faithful bearers of this religion and the preserver of its cultic rites. The rites themselves were generally taken over from the pagan culture which preceded Moses, but the Israelite priesthood used them as raw material to actualize by their means the new message and to give it an expression by way of symbolic concretization.

From earliest times the priesthood was exclusively in the hands of the levite tribe. In the period which preceded the religious innovation it was a secular tribe, and something of its secular character probably remained for a long time afterward, but in the context of Yahwistic religion it appears in all the sources as a sanctified tribe, all, or at least part, of which was destined to serve in the priesthood. This tribe, from which Moses himself originated, was the first to be attracted by his

religious announcement and when necessary even made conquests by force for the new faith. In the episode of the golden calf it is related that the levites supported the prophet and gained control of the unruly camp by means of the sword, as a reward for which they were authorized for the priesthood (Ex. 32:26–29; cf. Deut. 10:8–9). Such upheavals apparently occurred more than once. The blessing of Moses, in which Levi is described as a tribe of priests, mentions the tribe’s “foes and enemies” and prays for their discomfiture (Deut. 33:11). The distribution of the levites among the other Israelite tribes is already mentioned in the blessing of Jacob, where it is stated as a curse (Gen. 49:7). Possibly this distribution preceded their sanctification and stemmed from other motives. However, in any case, the fact that they remained without allotted land increased their connections with cultic activities and made them dependent on the holy gifts.

At the same time, the sources contain vague echoes of tension between the house of Aaron and the tribe of Levi. In the sin of the golden calf, Aaron is mentioned as the head of rioters whose behavior compelled Moses and the levites to take warlike steps. According to P, on the other hand, the levites are not permitted to serve in the priesthood, although the source admits that they have a certain measure of holiness and that they were given to God in place of the firstborn (Num. 3:40–45). In the polemic of *Korah it is related that some of the levites rebelled against Moses and Aaron seeking the priesthood for themselves, but they paid with their lives (Num. 16). Likewise, there are several allusions here to opposition to the priesthood of Aaron on the part of all the tribes. Korah’s rebellious group also contained Israelites, or at least gained the support of the public (Num. 16:2–3, 19). After Korah and his group were burned in the ordeal of the frankincense, all the people gathered to complain that Moses and Aaron had killed “the people of God,” as a result of which a great plague broke out (17:6–15). Later another ordeal was conducted, this time involving the staffs of the tribal heads, in order to confirm that it was indeed Aaron who had been chosen for the priesthood of all the people (17:16–26).

It appears that the family of Aaron was the first to join the new religion, preceding the whole of the levite tribe. It is told of Aaron that he was the first to meet Moses when the latter returned from Mt. Horeb and believed in him (Ex. 4:14–16, 27–30). He serves as a “mouth” for Moses (4:16), or a kind of “prophet” for him to others (7:1–2), and Moses and Aaron participated together in most of the signs and miracles in Pharaoh’s court. Of the family of Eli, which was probably considered to be descended from Aaron, it is also said that even in Egypt and in the house of Pharaoh it had been chosen “from all the tribes of Israel” to serve in the priesthood (1 Sam. 2:27–28). Many scholars have assumed that originally Aaron’s family was not even included in the tribe of Levi. The names bearing an Egyptian coloring that appear in it (Phinehas, Putiel father-in-law of Eleazar (Ex. 6:25), Hophni, Hophniel, a relative of Jeremiah (Jer. 32:7ff.); some say Aaron’s own name as well) indicate its alien origin and genealogical

distinctness. However, it is clear that in the course of time it became assimilated into the levite tribe. In all the biblical sources Aaron is already considered a member of the tribe and a brother of Moses, despite the fact that his name bears Egyptian characteristics.

The history of the Israelite priesthood from the Conquest on is connected with the history of the temples. These were erected in the course of time throughout the area of settlement, from Dan to Beer-Sheba, and various families from the levite tribe served as priests in them. At the beginning, the family of Aaron apparently officiated near the ark (see also Judg. 20:27–28), and when the ark was established at Shiloh this family held the priesthood of that temple. According to the tradition of P, Shiloh was the last location of the Tabernacle (Josh. 18:1). There is no doubt that in the period preceding the monarchy, the Temple of Shiloh was elevated above most of the other temples and became a kind of national-religious center for the Israelite tribes. Eli, the high priest at Shiloh, reached the status of one of the judges of Israel, and the figure of Samuel also evolved within the walls of this temple.

DURING THE PERIOD OF THE MONARCHY. The connection between the monarchy and the priesthood in the Ancient Near East was expressed in two ways: in several places the kings themselves are considered high priests, and this identification appears also in the case of Melchizedek, king of the town of Salem and priest of ^ʿEl *Elyon*, who blesses Abraham and takes a tithe from him (Gen. 14:18–20). In other places the priesthood was separate from the monarchy and entrusted to special dynasties. This arrangement was the custom in Israel; however, even when this was the case the monarch could still perform several typical priestly functions. The monarchs were permitted to ascend the altar in the court of the house of God, to sprinkle blood upon it, and to offer sacrifices (1 Sam. 13:9; 1 Kings 12:33; 13:4; 11 Kings 16:12–13). David allowed himself to wear a linen ephod (11 Sam. 6:14; yet this is not a regular priest's ephod). David also blesses the people, apparently from the altar (6:18), and Solomon does likewise (1 Kings 8:14–21, 54–61).

On the other hand, during the period of the monarchy several families of priests who served in the royal temples attained economic and social advancement. These priests were henceforth considered as royal ministers and were included in the lists of bearers of high positions.

A notable change in the important priestly houses occurred at the beginning of the monarchical period. The family of Eli lost its importance and its place was taken by the family of Zadok, which from then on served in the priesthood of the central Temple in Jerusalem. This family, too, like that of Eli, originated from the levites who were scattered in the towns of Judah and Benjamin; according to Joshua 21:9–19, they lived in 13 towns and all were descended from Aaron. (For the division of functions among the priests of the temple in Jerusalem, see above.) The great influence of the Jerusalem

priesthood was revealed in the time of Jehoiada, who rebelled against Athaliah and in her place crowned Joash in the house of God, and served as the young king's teacher throughout his life (11 Kings 11:3–12:3). He himself was related by marriage to the royal household (11 Chron. 22:11).

A notable change in the situation of the priesthood took place in the time of Josiah, following the cultic reforms introduced by this king. His reforms, too, were made doubtless under the influence of the Jerusalem priesthood and the final impetus for their implementation was the book found in the Temple. In addition to purging idolatry, these reforms included the destroying of the high places and the altars outside the temple, even those that were in Jerusalem itself. All the priests in the towns of Judah were brought to Jerusalem (11 Kings 23:8). Most biblical scholars (since W.M.L. de Wette) assert that these reforms were made in accordance with the conceptions of Deuteronomy, which was the book found at the time in the Temple. Several scholars, however, maintain that there are a number of contradictions between the requirements of Deuteronomy and the reforms instituted in the time of Josiah. One of their main arguments (held by K. Budde, G. Hoelscher, and others) is that the priests of the high places who were gathered together in Jerusalem were not permitted to ascend the altar (11 Kings 23:9), while Deuteronomy permits every levite to come and serve as a priest in the chosen place (Deut. 18:6–8). This, however, is a seeming contradiction since the text speaks of "priests of high places," i.e., priests who served in the altars distant from the houses of God, and these priests were never considered as belonging to the levite tribe (cf. above). It is not surprising, therefore, that after they had been transferred to Jerusalem they were not permitted to serve in the priesthood. The reforms of Josiah necessarily involved also the abolishment of the temples outside Jerusalem (as distinct from the high places), and possibly their priests were added to the Jerusalem priesthood. However, the temples in Judah outside Jerusalem were few, and the one to which there are allusions, the temple at Hebron, may already have declined by the beginning of the monarchy. The temples of Israel probably stood desolate after the destruction of Samaria. Thus, the number of priests eligible to serve in the priesthood who were brought to Jerusalem was not significant.

AFTER THE BABYLONIAN EXILE. In the Babylonian Exile the prophet-priest Ezekiel rose, and in his visions of redemption demanded that basic changes in the organization and order of service of the priesthood be introduced. His visionary code (Ezek. 40–48) is merely a later and diluted extension of that earlier school that finds expression in P. They share basic conceptions of cultic holiness and nature of priesthood as well as a common technical style. And yet, they differ in concrete details. Many priestly customs described in P are restricted in *Ezekiel to simple and schematic activities, like vague shadows of distant models, or are entirely absent. There is no proof that the demands of this prophet were implemented in his time or wrought any change in the priesthood.

The decisive change took place with *Ezra, who brought with him from Babylon those old scrolls which constitute the Priestly source, and these were integrated into the Book of the Torah, which then became a determining force in the life of all Israel. Henceforth, the ancient priestly concepts and customs of P were revived and attempts were made to realize them in life. It was a kind of rebirth of the semi-utopian world of the Israelite priesthood, but even now it was not fully realized. True, during the Second Temple only those who were considered descendants of Aaron served in priesthood, and levites served beside them as a lower clergy. However, several basic elements from the priestly contents of P were not realized even now. The ark as well as the cherubs of the holy of holies were missing. Also missing were the anointing oil (and with it the concept of tangible holiness, transferrable by contact from one body to another), the Urim and Thummim, various customs connected with matters of impurity, and other things. Several of the demands and principles of P were not actualized in reality because of objective obstacles. On the other hand, much of the content of this source was given a secondary significance through the interpretation of the Torah and by comparison and coordination with the other parts of the Torah.

The economic and social position of the priests in this period also changed. Their number reached several thousand, about a tenth of the total population of Judah. Most of them lived in the towns outside Jerusalem, like all the inhabitants of the country (Ezra 2:70 [= Neh. 7:72]; 11:3, 20), and they made their living from the soil. The priestly gifts were not sufficient for their livelihood, and besides the people were not punctilious about bringing them. While the obligation to bring the gifts was included in the covenant (*a'manah*), and was accepted by all the signatories (Neh. 10:33–40), apparently the declaration itself did not have sufficient coercive power and Nehemiah had to prod the people periodically to fulfill their obligation (Neh. 12:4447; 13:10–13; and see 13:31). It is told of the levites and singers that when they did not receive their portions they fled “every man to his field” and the house of God was deserted (Neh. 13:10–11), and there is no doubt that this alternative was also sometimes available to the priests. Many of them became economically independent of the temple service, and in Nehemiah's time many of them volunteered to build the wall, together with other well-to-do citizens, and some of them participated in bringing the wood sacrifice to the Temple (10:35).

These new conditions of total cultic centralization, the increased number of priests, and their decreased dependence on the priestly gifts led to a regulation of the temple service among all the priests (and the levites), which took on the form of a system of divisions, or courses, *mishmarot*. Every *mishmar* would work during its assigned week until the round was completed and was then begun anew. The sources mention 24 divisions, and every priestly division was allotted a period of only two weeks per year. The service for these limited periods of time was regarded partly as a privilege, with the enjoyment of the material benefit entailed, partly as a duty, that the

house of God should not be emptied of its servants. The divisions are mentioned in sources from the Second Temple on, but apparently this system is rooted in the reality of the end of the First Temple period, after the cultic reforms of Josiah. The Chronicler dates the establishment of the divisions earlier, to the time of David (1 Chron. 24:3–19), but in this he is merely adhering to his method of attributing all the arrangements of the temple to King David. Josephus states that the 24 divisions persisted in his time (Ant. 7:366; Life 1–2; cf. Luke 1:5). The rabbis stated that every priestly division was composed of several households each of which had a fixed day of the week for its work (Tosef., Ta'an. 2:2, et al.). According to one tradition, the rabbis ruled that each division should be divided into six households, one for each weekday, and the entire division would officiate on the Sabbath (cf. Men. 107b). During the pilgrim festivals all the divisions served together (Suk. 55b–56a). The splitting of the divisions into daily households apparently reflects the reality of the end of the Second Temple period, when the number of priests became still larger.

For the income of the priests see *Tithe.

[Menahem Haran]

From the Beginning of the Hellenistic Era Until the Destruction of the Temple

During the whole of the Hellenistic era the priesthood was the class with the highest status among the people. From it came the administrators of Judea. In practice the high priest was head of independent Judea, and most of the other responsible people in politics and in administration were also priests. It appears that until the time of the Hasmoneans the outstanding spiritual leaders, such as *Yosef. Joezer and others, were also from their midst. The temple overshadowed all other institutions and even foreign writers like *Hecataeus regarded the Jews as a nation of priests, and at all events designated them as a nation dominated by priests. When Antiochus III granted rights to Jerusalem he freed the priests from a series of taxes. Hecataeus estimated their number in his time at 1,500 but it is possible that he was only referring to Jerusalem, since many of them were settled in the country towns and villages of Judea and southern Samaria and only went up to Jerusalem in accordance with their duty in the system of priestly watches.

The high priests belonged to the family of Zadok and to the watch of Jedaiah, and were descendants of Joshua b. Jehozadak. The office passed from father to son, and if this was not possible, a member of the family was appointed. The high priest served until his death, but Antiochus Epiphanes brought about the cessation of this custom. The high priest, together with the elders, represented the nation to the monarchy. He supervised the temple service, cared for the security of the capital and the water supply, and was responsible for the collection of taxes. Spiritual cultural activities were also placed upon him. A high priest with personality, such as Simeon son of Onias II – who was apparently Simeon the *Just – exercised great influence upon the religious and spiritual development of the nation. The high priests had close connections with in-

stitutions outside of the country; the sister of *Onias II was married to the *Tobiad family in Transjordan. Foreigners, too, regarded the high priest as the head of the Jewish people and the Spartans turned to him in negotiations they conducted with Judea (1 Macc. 12). The high priestly house was not uniform and unequivocal in its national religious view. Simeon II and *Onias III continued in practice the activity of Ezra and Nehemiah, while *Jason was one of the leaders of the Hellenists and it was he who turned Jerusalem into a polis. Besides the dynasty of the high priest the dynasties of other priests were conspicuous like those of the sons of Hakkoz who already played an important role in financial administration in the Persian era. One of them, Johanan, obtained its privileges for Jerusalem from Antiochus III. His son Eupolemus headed on behalf of Judah the Maccabee the delegation which made the first pact with Rome. Although this family was influenced by Hellenism, its members placed themselves at the service of the Hasmonean dynasty who were themselves priests of the watches of Jehoiarib. The members of another priestly house, of the watch of Bilgah, were converted – in partnership with the sons of Tobiah – into the mainstay of the Hellenistic movement; Simeon fought against Onias II and *Menelaus was appointed high priest by Antiochus IV after he had removed Jason. A Hellenistic high priest from another house was *Alcimus. The connections of some of the priests with the policy of Antiochus brought about a diminution in the prestige of the class, but when the government passed to the Hasmoneans the priesthood seemed to reach its highest peak among the Jewish people. For the Hasmonean high priest became also the leader, and the king, of an independent nation. At that time, however, began the rise of the *Pharisee scholars, the students of the Torah, and these began to supplant the priests as spiritual leaders. This fact is particularly important in view of the fact that the priests stood out in general as the leaders of the *Sadducee sect whose central sector was composed of the upper grades among the priests, and these were an important element in the Sanhedrin. Among the separatist sects (the Essenes, the sect of the Damascus covenant, the Judean desert sect), too, the priests retained an honorable status as is evident in their writings. With the ascent of Herod to the monarchy, the political leadership of Judah passed – for the first time in the Second Temple era – to a non-priestly element. After the extermination of the Hasmonean dynasty, Herod appointed the high priest at his will from among the priests. He loosened the linking of the high priesthood with a particular family and also abolished finally the custom for the high priest to serve the whole of his life. His status remained exalted and hallowed but his role was chiefly limited to the service of the Day of Atonement, which could be performed by him alone. After the death of Herod and the removal of Archelaus, the appointment of the high priest passed to the Roman governors. In the final generation of the temple this authority was restored to the dynasty of Herod (*Agrippa I, Herod of Chalcis, and *Agrippa II). During that period a group of wellborn wealthy priestly families became established from

among whom most of the high priests were appointed; such were the Boethus family, the Phiabi family, and the family of Anan. According to the Talmud (Yoma 18a; Yev. 61a), these high priests bought the office from the government, and they were changed each year. Since an ex-high priest kept his additional rights as to dignity and status, there came into being a kind of oligarchy of high priests and of their families, some of whom were related by family ties; some of these were inordinately wealthy. This aristocracy of distinguished and wealthy noble families tyrannized the people, though at times there were struggles between the high priests and fisticuffs between their followers, from which the dwellers of Jerusalem and the villages suffered. The attitude of most of the people of the Pharisee leadership to this Sadducean oligarchy was given pungent expression (Pes. 57a; Tosef. Men. 13:21): “Woe is me because of the house of Boethus! Woe is me because of their staves! Woe is me because of the house of Hanim! Woe is me because of their whispering! Woe is me because of the house of Kathros! Woe is me because of their pens! Woe is me because of the house of Ishmael son of Phiabi! Woe is me because of their fists!; for they are high priests, their sons treasurers, their sons-in-law trustees, and their slaves beat the people with staves.” These aristocrats were also regarded as loyalists and protected persons of the Roman government. However, there were individual priests whom the sages mention with praise because of their piety and good deeds, among them being *Joshua b. Gamala to whom is attributed the important regulation to erect a school for children in every town. There was a great contrast, ideological and material, between the upper class high priesthood and the mass of ordinary priests, many of whom did not live in Jerusalem but in the towns and villages of Judea, and also in Galilee, in Transjordan and in the lands of the dispersion. Many of them could not exist on the priestly perquisites, and some of them engaged in work and in commerce. The whole of the priestly class did not belong to the Sadducees. Among the Pharisees, too, were many priests and also among the leaders of the Jerusalem zealots (*Eleazar b. Hananiah, *Eleazar b. Simeon, *Zechariah b. Avkilus). In the defense of the Temple Mount in the time of Pompey, and at the time of the destruction of the Temple, the priests of the Temple displayed wonderful self-sacrifice.

The hatred of the people for the aristocratic high priesthood found expression at the time of the great revolt. When the zealots dominated Jerusalem they expelled all of them, slew a number of them, and chose a high priest from the ordinary priests, viz. *Phinehas b. Samuel a stonemason by profession, a relative by marriage of the family of Hillel. He was the last Jewish high priest.

[Menahem Stern]

In the Halakhah

The main function of the priests during the Second Temple period was the offering of sacrifices in the Temple, while the levites served as choristers, musicians, and gatekeepers. Their biblical role as teachers and judges was preserved in the expectation that the Sanhedrin contain priests and levites (Sif. Deut.

153), but the destruction of the Temple completed the process by which they were replaced by the sages and their students. The sacrificial service, from the receiving of the victim's blood on, must be performed by a priest (Zev. 2:1, 3:1). He must wear four sacred vestments (tunic, drawers, turban, and girdle; the high priest wore eight sacred vestments) and be free of physical blemish or defect. The rabbis further declared that a priest who contracts an improper marriage (see below) is declared unfit to perform the Temple service until he severs all connection with his wife (Bek. 7:7). A priest must himself be of proven pedigree to serve in the Temple (Mid. 5:4; Kid. 4:5). Those currently designated "priests" are "presumed priests," inasmuch as there is no legally sufficient proof testifying to their descent from ancient priestly families (see Maim., Yad, Issurei Bi'ah 20:1–2; *Magen Avraham* to OH 457:2).

Priests received "twenty-four priestly donations" (BK 10b). Twelve of these referred to parts of the animal- and meal-offerings in the Temple. The others were: firstlings of animals; firstfruits; a share of the agricultural produce (*terumah*), often given at the rate of 2%; a share of the tithe given to the levites; a share of baked products (*hallah*); the redemption price – five shekels – for firstborn male children; the sheep given as redemption for the firstlings of asses; the first fleece sheared; the shoulder, two cheeks, and maw of slaughtered animals; fields donated to the Temple and sold revert to the priests at the Jubilee year; fields declared *herem* by their owners; and property stolen from a proselyte who dies leaving no issue. With the destruction of the Temple, the tendering of some of those "gifts" became impossible, while the bestowal of others fell into a gradual decline. Currently, the redemption of the firstborn (*pidyon bechor*) is widely practiced, though the law continues to require that – in Erez Israel at least – firstlings be given to a priest as well as the first fleece and the shoulder, cheeks, and maw of slaughtered animals (Sh. Ar., YD 61:21, 333:1, 305, 360:1).

The priest may not marry a divorced woman or a harlot (Lev. 21:7) – the latter being defined as a woman who has had sexual relations with a man forbidden to her in marriage, or with a profaned priest (see below), or with a convert to Judaism (Sh. Ar., EH 6:8) – and the rabbis added the woman who had been rejected by her levir (Yev. 2:4). In addition to these, the high priest may not marry a widow. The child born of most of these unions is "profaned" (*halal*) and, if female, may not be married to a priest. Finally, the priest ought not to marry a woman both of whose parents were proselytes, but he need not divorce her if he does so (Sh. Ar., EH 7:21). The motive for these restrictions is that the holiness of the priest demands that he marry an unblemished wife.

The priest is forbidden any direct contact with the dead; he may not enter into or step above an enclosure in which a dead body, or its constituents, is lying, nor may he touch anyone or anything that is impure through contact with the dead. He must, however, defile himself for his mother, father, son, daughter, brother, and unmarried sister (Lev. 21:2–3), and for his wife (Yev. 22b; see Sifra to Lev. 21:2). He must also bury the

abandoned dead (*met mitzvah*). The priest is assigned priority as an expression of his sanctity: he speaks first, makes the first benediction, and receives first choice; he is also called to the Torah first (Git. 59b). Furthermore, one is not to be served by a priest unless he has waived his prerogatives (Isserles to Sh. Ar., OH 128:45).

The tithe (one-tenth of agricultural produce) was assigned by the Torah to the levite. His main distinction in modern times is to be called up to the Torah immediately after the priest, whose hands he washes for the priestly *blessing.

[Gerald Y. Blidstein]

In Modern Times

Although, as stated above, the prevailing halakhic opinion is that the claim to be an Aaronide, of priestly descent, is mainly a presumptive one, which, in the absence of pedigree registers, cannot be proved, all the rights and privileges of the kohen, as well as the prohibitions, apply among Orthodox Jews today in full force where they are applicable. These privileges are, the right to be called up first to the reading of the Law (see "Reading of the *Torah"), invoking the Priestly Blessing in the Synagogue, and the redemption of the first born, both of humans and of animals. The only reservation is that in view of the fact that Aaronide descent is mainly presumptive, some authorities suggest that the redemption money should be returned after the ceremony to the father of the child or the owner of the animal (Sh. Ar., YD, 305:8 and 306).

The provision that the kohen has the privilege of reading the Grace after Meals (Sh. Ar., OH 201:2) is largely disregarded at the present time, though in some places the custom exists, where a kohen is present, for the person leading the grace to say *bi-reshut Kohan* ("with the permission of the kohen").

The laws prohibiting contact with the dead are in full force. As a result, it is the custom to bury kohanim at the end of a row and arrange for the paths to be at least eight cubits wide, so that his priestly relations may visit the grave and be able to stand four cubits from the grave. The fact that a kohen is forbidden to be under the same roof with a corpse, unless there is a permanent partition between the place in which he is standing and the location of the corpse would render it impossible for a kohen to visit a hospital if the mortuary is under the same roof as the hospital proper. Special arrangements have been made in the Hadassah hospital in Jerusalem: double doors, one of which is always closed, or swinging doors which always "seal" the entrance are used to enable kohanim to visit the sick.

Similarly, the fact that the main highway from Jerusalem to Jericho was built by the Jordanians over a portion of the Mt. of Olives cemetery has resulted in a halakhic prohibition against kohanim using that road, and signposts have been erected in Jerusalem and its outskirts indicating an alternative possible route for kohanim.

Similarly the question whether a kohen may practice medicine, since he must come into contact with the dead, is discussed in the *halakhah*.

The laws of the marriages prohibited to the kohen, an unchaste woman, a proselyte, a divorcee, a widow who has received **halizah* are still operative. In view of the fact that, unlike other prohibited marriages, such a marriage, if it is celebrated is valid, and the children are legitimate except that they are *halalim* (non-kohanim) considerable pressure is being exercised in Israel today to permit such a marriage, though the rabbinical authorities remain adamant in their refusal. Some Conservative rabbis agree to marry a kohen and a divorcee.

There is a difference of opinion as to whether a kohen may marry the daughter of proselytes (Sh. Ar., EH 7:21). It is referred to as a "blemish" and not a prohibition and though the tendency is toward stringency, it is permitted by some.

Since a kohen is forbidden to remarry even his own divorced wife, it is the custom to delay the execution of his *get* as long as possible.

Reform Judaism disregards all the laws applying to a kohen.

PRIGOGINE, ILYA (1917–2003), mathematician and Nobel laureate in chemistry. Born in Moscow, Prigogine moved with his family to Belgium at the age of four. His father was a chemist and Prigonine, who had a lifelong interest in music and history, obtained his doctorate in chemistry in 1947 at the Free University of Brussels, whose staff he then joined. However, his broad intellectual interests profoundly influenced the direction of his scientific research. From 1959 to 2003, he was director of the International Solvay Institutes in Brussels and in 1967 he founded Ilya Prigogine Center for Studies in Mathematics and Complex Systems at the University of Texas at Austin, Texas. When he started his life's work, conventional attitudes were based on the Second Law of Thermodynamics, which states that heat can never pass spontaneously from a colder to a hotter body, with the inference that energy transfer is unidirectional and all natural processes are irreversible. Prigogine and his associates used physical chemical experiments and mathematical modeling to understand the basis of stability in chemical reactions and biological systems. He refined the earlier concept of entropy, a measure of disorder in a system, with the theory of dissipation, that is, the regulated fluctuations which promote stability in the face of irreversible change. His theoretical and mathematical formulation of "dissipative structures" created by irreversible processes led to the award of the Nobel Prize in 1977. In his later years Prigogine became increasingly concerned with applying novel thermodynamic principles to the complexities of human biology and even human behavior. A natural extension of his interests was his concern for the potentially disastrous impact of human activities on the environment.

[Michael Denman (2nd ed.)]

PRIJS, JOSEPH (1889–1956), bibliographer and historian. Born in Wuerzburg, Bavaria, Pries served as rabbi and teacher at Breslau (1918–21), became rabbi and head of the *talmud*

torah at Munich, and in 1927 lecturer in Jewish subjects at Munich University. When the Nazis came to power (1933), he went to live in Switzerland, where he devoted himself to research in Swiss university libraries and cataloged the Jewish holdings in several Swiss university libraries.

Prijs wrote on the Hebrew book collections in Bavaria (1927) and on Hebrew printing in *Sulzbach (JTLG, 21, 1930, 319) *Mitteilungen der Soncinogesellschaft*, no. 7 (1931), 26–33) and in Fuerth (*Nachtraege zu L. Loewensteins Bibliographie...* etc., 1938). His great achievement is the monumental work *Die basler hebraeischen Drucke* (1964), published posthumously by his son Bernard. Since Basle was a great center of learning in the 16th century, Prijs' book is an important contribution not only to the history of Jewish printing but also to history of the culture of the early Reformation. Prijs also published some genealogical studies: *Familie Hirsch auf Gereuth* (1931); *Stamboom der Familie Goldsmidt-Cassel te Amsterdam* (1936).

Prijs' son, LEO (1920–) was research fellow at Yeshiva University, New York, and at the Institutum Judaicum, Muenster (Westphalia), Germany. From 1957 to 1960 he was lecturer in Bible at Bar-Ilan University and from 1968 professor at Munich University.

Among his published works are *Juedische Tradition in der Septuaginta* (1948), *Die grammatische Terminologie des Abraham ibn Esra* (1950), and *Die Jeremia Homilie, Pesikta Rabbati 26* (1966), a critical edition with German translation and commentary.

[Walter Baumgartner]

PRILUKI, town in Chernigov district, Ukraine. A Jewish settlement in Priluki existed in the 16th century, and was destroyed in 1648 in connection with the *Chmielnicki massacres. The community was restored at the beginning of the 19th century. There were 2,007 Jews in Priluki in 1847, 5,722 (31% of the total population) in 1897. They then owned two tobacco factories, two flour mills, and small oil refineries. Many Jewish tailors sewed ready-made garments, which were sold in fairs in faraway towns. Apart from *hadarim* there were schools for boys and girls, and from the beginning of the 20th century, there was a Hebrew-language school. The Zionists remained active for a couple of years after the October Revolution. In 1921 a pioneer group went to Palestine, where they were among the founders of the kibbutz Kiryat Anavim. During the civil war there were pogroms on October 23, 1917, June 4–14, 1919, and in September 1919. In the 1920s Yiddish was used officially in the court of law and in the local council. Some 65% of Priluki Jews worked as factory laborers and artisans, and about 165 were members of a Jewish kolkhoz. Jews numbered 9,001 (31.4% of the total population) in 1926, decreasing to 6,140 in 1939 (16.65%). The Germans captured the town on September 18, 1941. Many Jews managed to escape. On January 15, 1942 a few hundred Jews were killed. On May 20, 1942 1,290 were murdered, and on July 10 and September 10, 1942 hundreds more were executed. About 3,000 Jews were killed during German occupation. There were about 2,000 Jews in Priluki

in 1959. The last remaining synagogue was closed down by the authorities in 1961. In the 1990s most Jews emigrated to Israel and the West.

PRIMO, SAMUEL (c. 1635–1708), talmudist and Shabbatean leader. Probably born in Cairo, where he studied under Judah Sharaf, Primo later settled in Jerusalem and in 1662 represented the Jewish community there in its quarrel with the heirs of the late David *Habillo, the kabbalist. Primo was considered an outstanding talmudist and kabbalist. Meeting *Shabbetai Zevi during his stay in Jerusalem, he joined the first group of fervent “believers” at the outbreak of the messianic movement (1665), and was present at the height of the messianic excitement in Gaza during May and June 1665. Later he left, joining Shabbetai Zevi in Constantinople, becoming a member of his most intimate circle. While Shabbetai was imprisoned in the fortress of Gallipoli, Primo served as his “scribe” and secretary and held court for the masses of his followers. It was he who composed the circular letters and pronouncements of the “Messiah,” written in a high-flown and majestic style, and received the delegations visiting Shabbetai Zevi. In the absence of *Nathan of Gaza, he and Abraham *Yakhini were the outstanding spokesmen for the movement at that time. In a famous letter (summer, 1666) he encouraged messianic terrorism against those who spoke disparagingly of Shabbetai Zevi. When catastrophe befell the movement with Shabbetai's apostasy, Primo remained faithful, but refrained from any public display of his belief and participation in Shabbatean activities. He stayed for many years in Sofia, making frequent visits to Shabbetai Zevi in Adrianople and later in Dulcigno, and maintaining close contact with Nathan of Gaza and other Shabbatean leaders. Shabbetai Zevi initiated him into his later kabbalistic teaching concerning the “mystery of the Godhead.” In later years Primo divulged this teaching, under the greatest secrecy, only to those whom he deemed trustworthy. He embraced Shabbetai Zevi's theory of divine apotheosis and other teachings of the radical wing, while outwardly returning to his occupation of orthodox talmudic scholar and acquiring a great reputation as such. Sometime after 1680 he moved to Adrianople where, after several years of study on behalf of the community, he became rabbi of the Apulian synagogue and later its *av bet din*, enjoying the highest esteem until his death. For a long time he suffered from severe rheumatism in his legs, and after a serious illness he added Judah to his name, signing all documents Judah Samuel Primo. He did not join the *Doenmeh sect, strongly opposing every public demonstration of Shabbatean faith, but he is known to have said to confidants that the *amoraim* did not really understand the secrets of the faith and that in some respects their wisdom was obsolete. When Abraham *Cardozo publicly preached his brand of Shabbatean theology and tried to settle in Adrianople, in 1693 and in 1697, Primo repudiated his teachings and caused him to be expelled. In his last years Cardozo wrote several papers against Primo's secret teachings without, however, suggest-

ing that Primo had abandoned his belief in Shabbetai Zevi. Primo's equivocal stand on Shabbateanism resembles that of many of the scholars of his day.

In addition to being an outstanding preacher, Primo wrote many responsa and halakhic decisions, but almost all his writings were destroyed by the great fire in Adrianople in 1704. His son-in-law, R. Moses Kohen, included his remaining responsa in his own collection, *Kehunnat Olam* (Constantinople, 1740), and Primo's pupil, David ibn Shanji, added his edition of his extant sermons under the title *Imrei Shefer* to the end of this volume. Summaries of his secret teachings are preserved in several Shabbatean manuscripts (for instance, Ben Zvi Institute 2262). Among his chief pupils and followers were Ḥayyim *Malakh, who stayed with him for two or three years (1694–96), and Ḥayyim *Alfandari originally of Brusa and later one of the leading rabbis of Constantinople, whom, according to Cardozo, Primo believed for some time (between 1696 and 1700 if not earlier) to be the man destined to take Shabbetai Zevi's place after his apotheosis. It is not clear how he reconciled the appointment of a possible successor to Shabbetai Zevi with his consistent aloofness from Shabbatean activities on other than strictly esoteric levels. Primo died in Adrianople.

[Gershom Scholem]

PRINCE, HAROLD (1928–), U.S. theatrical producer and director. Born in New York, Prince was awarded the first of 20 Antoinette Perry Awards at age 26 for coproducing Broadway's *The Pajama Game* (1954). His other 19 Tony Awards came for *Damn Yankees* (1955); *Fiorello* (1959, for which he also won the Pulitzer Prize); two for *A Funny Thing Happened on the Way to the Forum* (1962); two for *Fiddler on the Roof* (1964); two for *Cabaret* (1966); two for *Company* (1970); *Follies* (1971); A Special Tony Award (1972); *A Little Night Music* (1973); two for *Candide* (1973); *Sweeney Todd* (1978); *Evita* (1979); *The Phantom of the Opera* (1987); and *Showboat* (1994).

Prince produced other Broadway plays such as *New Girl in Town* (1957), *West Side Story* (1957), *Tenderloin* (1960), *Take Her, She's Mine* (1961), *Poor Bitos* (1964), *Flora* (1965), and *Side by Side* by Sondheim (1977).

Prince added directing to his professional activities in 1963, producing and directing *She Loves Me*. He produced and directed such plays as *Superman* (1966), *Zorba* (1969), *The Visit* (1973), *Love for Love* (1974), *Pacific Overtures* (1976), *Merrily We Roll Along* (1981), *Grind* (1985), and *Hollywood Arms* (2002).

Among the plays that Prince directed are *A Family Affair* (1962), *Baker Street* (1965), *Some of My Best Friends* (1977), *Play Memory* (1984), *End of the World* (1984), *Roza* (1987), *Kiss of*

the Spider Woman (1993), and *Parade* (1999). From 1976 Prince occasionally directed operas.

In the film industry, he produced *The Pajama Game* (1957), *Damn Yankees* (1958), and the TV movie *She Loves Me* (1978). He directed *Something for Everyone* (1970), *A Little Night Music* (1977), and the TV movie *Sweeney Todd* (1982).

Prince wrote *Contradictions: Notes on Twenty-Six Years in the Theater* (1974).

ADD. BIBLIOGRAPHY: C. Ilson, *Harold Prince: A Director's Journey* (2000); idem, *Harold Prince: From Pajama Game to Phantom of the Opera* (1989); F. Hirsch, *Harold Prince and the American Musical Theater* (1989).

[Jonathan Licht / Ruth Beloff (2nd ed.)]

PRINGLE, MIA (1920–1983), British psychologist. Born in Vienna, the daughter of a wholesale merchant, Samuel Kellmer, Pringle arrived in London with her mother as a refugee in 1938. Gaining a degree in psychology at London University, she became an academic at Birmingham University, specializing in remedial education and children in care. In 1963 she became the first director of the National Children's Bureau, where she remained until her retirement in 1981. Pringle is probably best known for heading the National Child Development Study, a longitudinal study of 17,000 children born in 1958 whose development has been reported on at seven-year intervals ever since. This survey was imitated in Britain and other countries. She also made important contributions to child care in such works as *Adoption: Facts and Fallacies* (1967) and *The Needs of Children* (1974). She received honorary degrees from three universities. A chronic depressive who spoke little of her personal feelings, she committed suicide at the age of 62.

PRINGSHEIM, HANS (1876–1940), German biochemist. Pringsheim was born in Oppeln, Upper Silesia and was a professor at the University of Berlin from 1921. He left Germany for Paris after the Nazi accession to power in 1933 and worked in a private laboratory in Geneva from 1936 until his death. He wrote *Die Polysaccharide* (1919, 1931³), *Die Variabilitaet niederer Organismen* (1910), and *Zuckerchemie* (1925).

PRINS, LIEPMAN PHILIP (Eliezer Liepman; 1835–1915), merchant and scholar of Arnhem, the Netherlands. Until 1876 Prins was privately tutored, after which time he continued his studies in Amsterdam and moved to Frankfurt in 1887.

He was the publisher of the previously unedited part of the work by David Abudarham, *Tashlum-Abudraham*, for *Mekizei Nirdamim (1900). He also wrote an introduction to a second edition of *Seder Berakhot* by Michael Moravsky. His own writings include annotations on the tractate *Hullin* (204b) and on the *siddur* (in *Ozar ha-Tefillot*, 1915) as well as numerous articles in Jewish weeklies and journals.

In recent years more details became known about him as one of his grandchildren, Els Bendheim, initiated the publication of his correspondence, the marginal notes he made in his books, and an anthology of his work in Dutch.

His library consisting of 6,000 books was moved to Jerusalem (and opened to the public in 1930); it is still kept as such at Lipschuetz Teachers' College (Jerusalem).

[Frederik Jacob Hirsch / F.J. Hoogewoud (2nd ed.)]

PRINTERS' MARKS, the devices or badges used by early printers to distinguish their productions. The first known printers' mark in Hebrew printing is the lion rampant within a red shield, which was used by Eliezer Alantansi at Híjar in and after 1485. The *Soncino family of printers, both in Italy and in other countries, used a tower, probably the badge of the city of Soncino in Lombardy; this was subsequently adopted by the Soncino Gesellschaft in Germany and by the 20th-century Soncino Press in London. Later, various printers of the Kohen family, especially the Proops of Amsterdam, used a printers' mark of the hands spread in priestly benediction. The Giustini-ani Press in Venice employed a conventional representation of the Temple in Jerusalem – subsequently much copied – and the Bragadini used three crowns symbolizing the diadem of royalty, priesthood, and Torah (cf. Avot 4:13). At a later time Italian printers often employed their family badges as printers' marks. Thus, the productions of the Foa family, from the middle of the 16th century down to the 18th, were distinguished by a badge showing two lions rampant against a palm tree supporting the shield of David, with various permutations. Abraham Usque of Ferrara adopted the Portuguese royal badge of a sphere, losing the significance of the punning motto *spera in dominum* by translating it back into the Hebrew original *kavveh el Adonai* (Ps. 27:14). The Basevi brothers of Verona used their family badge, subsequently incorporated into their coat of arms, of a white lion back to back with a black eagle, both crowned. The badge of Manasseh Ben Israel was memorable, with the words *emet me-erez tizmah* ("Truth springeth out of the earth," Ps. 85:12) shown as a rebus, or in his non-Hebrew productions, a pilgrim with the motto *Apercebido como hu romeiro*. The Benveniste family of Amsterdam used a lion rampant against a tower, surmounted by a star, which presumably was their coat of arms. The symbols of fertility, fish, were common throughout the 17th and 18th centuries in various countries. Monograms in Latin characters were sometimes used. The Eastern European printers' marks were for the most part unoriginal and often poorly printed and designed. Among the Christian printers of Hebrew books, Froben used intertwined serpents, and *Fagius a leafy tree. From the 18th century, the use of printers' marks became less common and their designs less distinctive.

[Cecil Roth]

PRINTING, HEBREW.

PRE-MODERN PERIOD

The first mention of Jews in connection with printing is found in Avignon c. 1444 (before Gutenberg) when a Jew, Davin de Caderousse, studied the new craft. The first Hebrew books were printed at least within 35 years after the invention of printing – the first dated ones being Rashi's commentary on the Pentateuch and Jacob b. Asher's *Arba'ah Turim* of 1475 (see *Incunabula). This new and wonderful invention was called the "crown of all science," and its practice, like that of writing of sacred books, *melekheth shamayim* ("a divine craft," see Er. 13a) or *melekheth ha-kodesh* ("a sacred craft," Ex. 36:4). It was regarded as a means to realize Isaiah's prediction (11:9) that "the earth shall be full of the knowledge of the Lord." There were, on the other hand, interested parties such as the copyists, who feared for their livelihood and who opposed the innovation, as did those monk-copyists who described it as the "work of the devil." Printing raised halakhic problems as shown by contemporary responsa: the question arose whether the *halakhah* concerning the writing of sacred books and the care and respect due to them was applicable to printed books as well and whether, in particular, *Sifrei Torah*, *tefillin*, *mezuzot*, bills of divorce, etc., could be printed. Despite difficulties, the production of Hebrew books grew: David Kimḥi's *Sefer ha-Shorashim* saw three editions within a decade.

Printing had a revolutionary influence on the religious and cultural life of Jewish communities everywhere: on books and their distribution, on learning and education, on synagogal rites, etc. The order and division of the books of the *Bible, which today differ from both the talmudic and masoretic traditions, and the division into chapters in particular, are the result of printing. The printing of the Bible popularized it, while dictionaries and grammars, now easily obtainable, contributed greatly to the understanding of the Bible. The same is true for the Talmud, with its standard pagination originating in the first complete Bomberg edition (1520–23). The study of the Talmud became easier and far more widespread, and the printing alongside of the text, in addition to Rashi's commentary, of the *Tosafot of Touques gave talmudic learning a new direction which led to the development of the novellae literature and of *pilpul*. The widespread use of printed prayer books reduced the importance and relative freedom of the reader; minor rites were eliminated in favor of the major ones, which in turn became fixed and standardized by the printed text. Purely local variations of rite have survived in manuscripts only. Earlier (1477) the word *defus* (talmudic: frame, mold) was used as a noun for printing, alliterating to the Latin *typus*. To describe the activity, the same word as for writing (*katav*) or engraving (*ḥakak*) was chosen, from which was derived *mehokek* for the printer; but also

Main locations and start of Hebrew printing, 15th–20th centuries.

ha'atek (to copy) which led to the noun *he'etek* for the copy of a printed book. Occasionally one finds such strange circumscriptio-ns as "writing with many pens" (cf. Yoma 38b) or "writing without a pen." By the 16th century the derivatives from *defus* in the verb-forms of *hidpis* and *nidpas* – and *madpis* for the printer – were in common use, though some of the early terminology such as *mehokek* survived in Germany and Eastern Europe for a considerable time. (For Hebrew printing in the 15th century, see *Incunabula.)

SIGNATURE AND PAGINATION

The early book productions had no signature, a device which was introduced by Joshua *Soncino in 1483. Usually, the signature is found on the left side of the bottom of the page in Hebrew alphabetical numbers, but some Augsburg, Constantinople, and Salonika issues of the early 16th century have them on the top left or bottom right corner. Up to about 1515 only Hebrew letters were used, but Daniel *Bomberg introduced Arabic figures as well. In rare cases the alphabet took the place of numbers (*Kol Bo*, Rimini, 1525, Rome, 1545). Pagination was introduced later than the signature. No incunabulum appears to have had it. The first to have had numbered folios, though not very consistently so, is Maimonides' *Mishneh Torah*, printed in Constantinople in 1509. Soncino did not number his pages to the end. Of Bomberg's productions those prepared by Adelkind – with the exception of Bibles and prayer books – have numbered folios; from 1525 this is the case with all Bomberg's work, and most other Italian printers followed his example. The Hebrew number appears on the upper left of the first page in Bomberg's works; other printers added Arabic figures. One work printed in Sabbioneta and one in Cremona repeat the number on the upper right of the second page of the leaf. Pagination of pages is rather rare at first, exceptions being the works of Stephanus at Paris, Plantin at Antwerp, and Zanetti at Rome in the 16th century. The Cremona Zohar of 1559 has two columns to each page and numbers opposite every tenth line.

TITLE PAGES AND DECORATION

Title pages, too, make their first appearance in the 16th century. In the incunabula the text begins at first on the first page, but from 1483 the first page or folio is empty. The early title pages were very simple, with only a title, *colophon, place, and year. Whatever ornaments would appear on the first page of the text were then transferred to the title page. Such decorations – woodcuts of initials and border ornaments – were introduced by the Soncinos. Printers in Naples (Joseph b. Jacob *Gunzenhauser), as well as in Spain and Portugal, also used framed initials. Bomberg, following the general trend in book production, discarded the border ornaments and introduced the title page portal.

1500–1550

The first half of the 16th century was in many ways the golden age of Hebrew printing, with Italy and the house of *Soncino

(until 1526) in a leading position. (See Map: Hebrew Printing Locations). Gershon Soncino published mainly the Bible and its commentators, prayer books, and single Talmud tracts. His great competitor was Daniel Bomberg, the Christian printer from Antwerp, who from 1516 (or perhaps a few years earlier) to 1549 systematically issued the basic texts of Judaism in hitherto unequaled typographical perfection. With Bomberg Venice became the capital of Hebrew printing until well into the 18th century: in the above period the names of *Giustiniani and *Bragadini were outstanding. Elsewhere in Italy Samuel Latif printed in Mantua (1513–15). In 1518 the sons of Avigdor of Padua were active in Rome, where Samuel Zarefati printed in 1540–45 and Antonio Blado in 1545–46; another son of Avigdor used German square type in a *siddur* issued in Trino in 1525. More important were the productions of the Jewish silk-makers in Bologna (1537–40), mainly beautifully finished prayer books of the Italian rite of which many copies printed on parchment have survived.

Constantinople, Salonika, and Fez

Next to Italy in importance were Constantinople (1493) and Salonika (1513) where Hebrew printing was introduced by exiles from Spain and Portugal; the Soncinos began their activity in Salonika in 1527/28 and in Constantinople in 1530. Iberian refugees also brought printing to North Africa. Hebrew books were printed in Fez with Lisbon type, 1516–22.

Northern Europe

Hebrew printing in northern Europe began in Prague in 1512 with a group of printers who were later joined by Gershom b. Solomon Kohen, founder of a long and famous line of printers (the "Gersonides"; see *Kohen family). He used German square and a new cursive rabbinic type and many ornaments: angels, birds, lions, municipal coats of arms, and outspread hands, the priestly symbol of the family. To this group also belonged Hayyim *Shaḥor, who left Prague in 1526 to print at Oels (1530), Augsburg (1533–44), Ichenhausen, and Hedernheim (1546). Apart from continuing in the Prague style of type and decoration, Shaḥor also used the smaller Italian type. In Poland, Cracow and Lublin became important centers of Hebrew printing.

Hebrew Printing by and for Non-Jews

This was a special feature of the first half of the 16th century though it continued long afterward. The age was that of the Reformation and humanism, when enlightened Christian scholars became interested in the Hebrew Bible, its language, and grammar. This demand was filled by such men as Stephanus in Paris (1508–?), who used his own rabbinic and square types which bore a resemblance to the Spanish ones. Only after 1542 did he go over to the Italian type. In Basle Hebrew printing began in 1516 – and continued through the century; here the German square type, but somewhat slanting, was used. Psalms, Hebrew grammars, and some Christian liturgical pieces in Hebrew, Latin, and Greek were printed in Lyons from 1520 by Gryphius, who utilized the same type. German

cities in which Hebrew printing took place were Tuebingen (1511), Augsburg (1514), Cologne (1518), Wittenberg (1521), Leipzig (1533), Solingen (1538), and Mainz (1542). A special position was occupied by the Hebrew press, set up in 1540 by the Christian Hebraist Paulus *Fagius in conjunction with Elijah *Levita at Isny, Wuerttemberg, and later at Konstanz on the German-Swiss border, where some books were printed in separate editions for Jews and Christians (e.g., Levita's *Tishbi* of 1541–42). They used the German type for their meticulous productions.

1550–1627

The single most influential event in the history of Hebrew printing in this period was the papal prohibition and subsequent burning of the Talmud in 1553. The virtual monopoly of Venice on Talmud printing came to an end, resulting in complete or partial Talmud editions in Lublin (1559), Salonika (1563), and Basle (1578). In Cracow and Constantinople, too, single tractates were printed at this time. In Italy itself two different periods are distinguishable:

(1) the decentralization of Hebrew printing over many small presses in different places during 1550–68;

(2) the reemergence of Venice as the center of Hebrew printing and the predominance of certain presses in the town from 1569 onward.

Ferrara, Sabbioneta, Mantua, Cremona, and Riva di Trento

In 1551 Samuel Zarefati, who had worked as a Hebrew printer in Rome, set up a press at Ferrara, which was taken over two years later by the Marrano Abraham *Usque. Simultaneously, Tobias *Foa established a Hebrew press at Sabbioneta, near Mantua, with Joseph Shalit of Padua, Jacob b. Naphtali, and later Cornelio *Adelkind (1553–55) as printers. The last-mentioned printed the last Talmud tractate (*Kiddushin*) before the prohibition, as well as an exemplary edition of Alfasi, the study of which was now substituted for that of the Talmud. In Sabbioneta, too, Salonika's influence was paramount, and the two types were so similar as to lead to confusion. The very small type used found its way to Mantua and later to Venice (De Gara, 1572; Bragadini, 1616). Sabbioneta productions are more lavishly decorated than those of Ferrara. Joseph Shalit and Jacob b. Naphtali continued printing at Mantua from 1556 at Rufinelli's, 1557–63. After a rather quiescent period (1563–90), of which only Azariah dei Rossi's *Me'or Einayim* of 1574 was noteworthy, more active printing was resumed at the press of Tomaso Ruffinelli. A new one was set up in 1612 by Eliezer d'Italia where besides smaller liturgical items such larger works as Abraham Portaleone's *Shiltei ha-Gibborim* appeared. In 1622 the Perugia family took over this press which remained active for another 50 years. Mantua productions show little originality, in their decorations. Jacob ha-Kohen first introduced a title page with a decorative border and the outspread hands of the priesthood. When he entered into partnership with Meir Sofer, the typical Mantua title portal with winding pillars made its appearance. They also used the

various vignettes of Bragadini and De Farri and those of Sabbioneta. The Mantua illustrated *Haggadot* with the big German type have become famous. In Cremona Vincenzo Conti printed, between 1556 and 1566, some 40 books, of which the most important was the *Zohar* of 1559. His assistants were Samuel Boehm, Zanvil Pescarol and Vittorio Eliano. From 1558 works display the *cum licencia* of the Inquisition. Conti extended his activities to Sabbioneta, where Israel Zifroni printed several books for him in 1567. The last book printed in Cremona was *Yosef Lekah* by Eliezer Ashkenazi, issued by Solomon Bueno at Draconi's in 1576. Riva di Trento received its Hebrew press in 1558 when the physician Jacob Marcaria obtained a license from Cardinal Madruzzi. With the help of R. Joseph *Ottolenghi he first issued a reasonably priced edition of Alfasi for Ottolenghi's yeshiva students. This was followed by some philosophical and rabbinic works. The last of these, *Me'ir Iyyov* by Meir Arama, of 1562, had to be completed by Cavalli in Venice in 1566. Marcaria used mainly square types, among them a small one. His decorations are similar to those of Mantua in their title portals and decorated initials. Books of 1562 have their own vignette, later copied in Cracow.

Venice

When in 1563 the printing of Hebrew books in Venice was once more permitted, most of the printers mentioned before moved or moved back there and found employment with the houses of Gryphio (1564–67), Cavalli (1565–67), and Zanetti (1565–67), each using his own printer's mark. At that time mostly *Turim* with Caro's commentary and his Shulhan Arukh came off the presses, taking the place of the prohibited Talmud. Eventually Di Gara and Bragadini emerged as the leading presses. Di Gara, whom some of the best printers had joined, aspired to continue the Bomberg tradition. He succeeded as far as externals were concerned until 1585, when new title pages, borders, and decorated letters gave the productions a different character. In the choice of books Di Gara followed in the footsteps of Bomberg. Di Gara also printed many homiletical works, mostly by Oriental authors, such as Alshekh, Alkabez, and Almosnino. He was assisted in this by Isaac Gershon of Safed, as corrector. Bragadini resumed printing immediately after the repeal of the prohibition, with Meir Parenzo and, after the latter's death, his brother Asher as his managing printers. They published the first (1565) and two further editions of Caro's Shulhan Arukh and a new edition of Maimonides' *Mishneh Torah* with Caro's commentary *Kesef Mishneh* (1574–75). From 1579 to 1600 Bragadini and Di Gara worked together. After a period of recession, there was a revival under Giovanni Cajon's management (c. 1615) which produced a new Bible (1617/18) under Leone *Modena's supervision. From 1625, under Caleoni, several *maḥzor* editions and other liturgical items were printed, but with the rise of the Amsterdam and German presses, Bragadini's lost its impetus. A short-lived revival took place in 1710–15 as shown by the two-volume folio German *maḥzor*, printed with new, large types. Another press active at Venice at the time was that of Zanetti, with Isaac *Gershon as

supervisor (1593–1608). Outside Venice, apart from Mantua, there was Padua, where Samuel Boehm printed at Lorenzo Pasquato in 1562–67, and Crivellari's press with two works, 1622–23. Some Hebrew and Judeo-German books were issued at Verona by Francesco della Donne (1594–95).

Cracow and Lublin

Italian influence made itself felt in Cracow when Isaac b. Aaron *Prostitz with the aid of Samuel Boehm set up his press in 1569. They had brought type and decorations with them from Italy and imitated the ornaments of most Italian presses. They printed, largely for local needs, the works of German and Polish authors as well as ethical and liturgical items in Hebrew and Yiddish. From 1595 onward larger works were published. With Isaac b. Aaron's return to Prossnitz (*Prostejov) some Hebrew printing, such as an *Ein Yaakov*, took place there (1603–05). In Lublin, where Kalonymus Jaffe was active from 1562, the influence of both Prague and Venice were at work. Jaffe printed, besides local authors, the Talmud and Zohar as well as some philosophical (or anti-philosophical) works. In Bistrowicz he prepared in 1592 a *Haggadah* with Abrabanel's commentary. His printer's mark was the Temple, which was also used in Prague and by Giustiniani.

Prague, Basle, and Hanau

The Kohen family in Prague continued to be active from 1562; in 1605 another printing family, the *Baks, established themselves. They both continued the Prague tradition, Italian influence making itself felt only occasionally. The Prague productions were mainly in the liturgical and ethical field, both in Hebrew and Judeo-German. Israel Zifroni guided the Hebrew press of Frobenius in Basle, which hitherto had worked mainly for the Christian market, in a different direction by printing several rabbinic works, including an edition – censored – of the Talmud (1578–88) and without the “objectionable” tractate *Avodah Zarah*, which was, however, supplemented in Cracow (1580). Zifroni-Froben printed a couple of works in Freiburg-im-Breisgau as well (1583–84). The original Basle type had to give way to the Italian one. Another Basle Hebrew press at the time was that of Konrad Waldkirch who, with the assistance of printers from Poland, issued among others a Bible (1618–19) and Joseph Solomon Delmedigo's *Ta'alumot Hokhmah* (1629–31). About this time Hebrew printing took place in Hanau (Hesse), where from 1610 to 1630 several important kabbalistic and Judeo-German works were issued. Both sides of their title pages showed the figures of Moses and Aaron – which set a fashion among later printers – and above was a representation of the *Akedah*.

Turkey, Egypt, and Palestine

In Constantinople and Salonika in the second half of the 16th century, the *Jabez brothers took the place of the older printers. After a short stay in Adrianople, they arrived in the two cities in 1559 and produced up to 1586 a series of rabbinic, philosophical, anti-Christian, and Karaite works, among them two Talmud editions based on Bomberg's edition with ele-

ments from Giustiniani (Salonika, 1563–65; Constantinople, 1580–82). The printers used the Italian type but not the decorations, their only ornament being the trefoil. Between 1578 and 1600 Joseph Nasi's widow Doña Reyna had Hebrew presses at her palace of Belvedere and in other places near Constantinople. Her husband had been a patron of Hebrew printing. About 1590 members of the Italian Bat-Sheva family settled in Salonika and set up a press, using Italian type and decorations. In Cairo a fourth-generation Soncino printed two Hebrew books in 1557 and 1562. The aforementioned Eliezer b. Isaac printed several works in Safed during 1577–87, and the same type was used a generation later to print Josiah Pinto's *Kesef Nivhar* in Damascus (1605).

THE 17TH AND 18TH CENTURIES

Amsterdam

Hebrew printing followed the wanderings of the Jews. (See Map: Hebrew Printing Locations). Fugitives from the Inquisition established the new Portuguese community in Amsterdam at the turn of the 16th century. Ignorant of Hebrew, they recited their prayers in Spanish, and prayer books in that language were printed in Amsterdam by 1604. When Hebrew became more familiar, Venice supplied prayer books in Hebrew, with or without translation. In 1626 *Manasseh Ben Israel set up the first Hebrew press in Amsterdam – a turning point in the history of Hebrew printing. He discarded Italian type, making himself independent of Venice, and had his own type cast which was destined to become dominant all over Europe, including Venice. Amsterdam productions were much sought after as those of Venice had been earlier and they found imitators among Hebrew printers elsewhere. Amsterdam was at the time a great center of general printing, and in format, composition, and decoration Manasseh followed the Dutch style; thus he added the author's portrait to some works. Manasseh's press changed owners several times, though he remained connected with it. Simultaneous with this press another was set up by Daniel de *Fonseca but only two works were issued: Meir Aldabi's *Shevilei Emunah* and Abraham de Fonseca's *Einei Avraham* (1627). Manasseh found successors among his fellow Sephardim, among them Joseph *Athias (1658–98) and his son (d. 1709). In externals such as vignettes and diagrams they adopted in some way the style of the famous Dutch printer Elsevier. Athias first used Manasseh's title pages, but later had one designed for himself depicting Joseph (his namesake) meeting his father Jacob. This was later adopted by Jablonski in Berlin. He also added a neatly executed copperplate engraving to some of his productions, which found a number of imitators; one of them (*Shenei Luhot ha-Berit*, 1698) was by the proselyte Abraham b. Jacob, who illustrated the famous *Amsterdam Haggadah* of 1695, produced by the German-Jewish printer Kosmann Emerich. Another member of the Athias family, Abraham b. Raphael Hezekiah, printed some handsomely produced books during 1728–40. To the same Sephardi group belongs David de *Castro Tartas, who learned the craft at Manasseh's press and

often used Manasseh's borders. His frontispieces show scenes from the life of David. Of particular interest are his small-format liturgical items of 1666, dated year one of the new Shabbatean era and with an engraving of Shabbetai Zevi as king-messiah. Smaller entrepreneurs were Moses b. Abraham Mendes *Coutinho, for whom Solomon *Proops worked for some time; Isaac de Cordova (1668–1710), later in Hamburg; Moses b. Isaac Dias (1706–13); Isaac Templo (1714–34), who printed Nehemiah Hayon's *Ha-Zad Zevi* (1744) but otherwise mainly liturgical items of the Sephardi rite; and Nethanel Foà (1700–15) who displayed as printer's mark the coat of arms of this well-known family. In addition to these printers, who produced mainly for their own community, there were those who endeavored to meet the needs of the German community established in Amsterdam in the course of the 17th century. There was Manuel (Immanuel) Benveniste, whose productions lack the finish of those of Manasseh, though his title page with the initials cvs has been imitated by German, Italian, and even Salonika printers. Benveniste was succeeded by his former employee *Uri Phoebus b. Aaron ha-Levi (1658–89), who worked even more for the German and also for the newly established Polish communities. From Manasseh he borrowed the title border and the vignettes. The frontispieces in his Bibles and prayer books have engravings with motifs borrowed from Prague, Augsburg, and Hanau, showing Moses and Aaron on each side. This engraving has been much copied by German presses. In 1612 he founded a Hebrew press at Zolkiew, thus bringing the Amsterdam type to Poland. Less important Ashkenazi printers in Amsterdam were Samuel b. Moses ha-Levi, who was active from 1650 to 1655, having for assistants Reuben b. Eliakim and Judah b. Mordecai; and Asher Anshel Shoḥet, who had worked with Uri Phoebus from 1663 to 1665 and printed some liturgical and popular items. The two Ashkenazi *dayyanim* Joseph Dayyan and Moses Frankfurter printed some Talmud tractates the latter in particular a large, four-volume Bible, *Kehillat Moshe* (1724–27). Of greater importance was the physician Naphtali Herz of Emden (1721–42, to 1768 with his son-in-law) who printed some fine books. Some Christians too engaged in the Hebrew printing in Amsterdam – employing Polish refugees – such as Kaspar Steen. Albertus Magnus brought out a handsome *Seder Berakhot* with Spanish translation in 1687; G. Surenhuys printed a famous and impressive edition of the Mishnah with Latin translation and notes (1698–1703). In the 18th century the dominant figure in Amsterdam Hebrew printing became Samuel Proops (1702–34). He printed mainly *siddurim* and *maḥzorim* of the various rites. From 1715 a list of his publications is advertised at the end of every copy. He was also the first to bring out a sales catalog of Hebrew books (*Appiryon Shelomo*, 1730). The press remained in the family until 1849 and was as important to Amsterdam as Bragadini was to Venice.

Germany

The unsettled conditions in Central and Eastern Europe – wars, frequent expulsions, sack, and fire, and, above all, the

Chmielnicki pogroms in Poland with thousands of refugees fleeing westward and leaving behind everything including their books and libraries – had a profound influence on Hebrew book production. There was in particular an urgent need for Talmud copies and rabbinic literature in a period of unabated, passionate interest in these disciplines. This need was met by Amsterdam and the many Hebrew presses springing up in Germany. During the 18th century the Talmud was printed ten times, each edition in several thousand copies. Catastrophic events produced a desire among the less learned and the womenfolk for works of solace and edification, which accounts for the great increase in the publication of Yiddish literature. Printing became a profitable business besides being a pious enterprise, and large sums were being invested, loaned, or donated for these diverse reasons. In Central and Eastern Europe, Jews found it difficult to obtain the necessary printing licenses from feudal lords, and therefore had to associate with Christians as their nominal printers. On the other hand, economic considerations such as the needs of local papermills and fiscal expectations led many small princes or authorities to grant licenses, at the same time protecting the new industry and their country's balance of payments by prohibiting the importation of Hebrew books. Large sums were involved: in about 1780 it was calculated that the Jews of Vienna spent 290,000 florins annually on books. Typographically the new Hebrew printers in Germany were at first dependent on Prague whence most of the personnel came. Gradually the influence of Amsterdam made itself felt, even in Prague itself. The German square type was increasingly discarded. The Hebrew presses of Germany consisted of two groups: those with the Prague connection, such as Sulzbach, Wilhermsdorf, and Fuerth; and those originating with the Ashkenazi printers of Amsterdam, such as Dyhernfurth, Dessau, Halle. Apart from Christian presses which issued Hebrew books sporadically only, and small, ephemeral Jewish printers, Germany produced a considerable number of important Hebrew presses. One of the most prominent Jewish agglomerations was the triple community of Altona, Hamburg, and Wandsbeck (AHW), which was reflected in printing as well. S. Poppert was active in Hamburg and Altona (1715–36); Ephraim Heckscher and his partner Aaron b. Elijah Kohen (1732–75); Abraham b. Israel of Halle, son of the printer at Offenbach, Homburg and Neuwied (1743–47). In 1745 Jacob *Emden, the great rabbinic scholar and polemicist, set up his own press which printed mainly his own works, such as the three-volume *siddur Ammudei Shamayim* (1745–48) and his polemics against Jonathan *Eybeschuetz.

THE TWO FRANKFURTS, BERLIN, ETC. In the ancient and influential community of Frankfurt on the Main no Jew could obtain a printing license from the guild-dominated city authorities, but Christians owned Hebrew presses: Johannes West (1677–1707), Blasius Ilsner (1682–?), the Andreas (1707–?), Nikolas Weinmann, and Anton Heinscheit. Of special importance was Johann Koelner (1708–28) from

whose printing office came a five-volume *Arba'ah Turim* with J. Sirkes' commentary (1712–16) and an excellent edition of the Talmud (1720–23) which became the basis for later editions. Aryeh Loeb, son of the Frankfurt rabbi Joseph Samuel of Cracow, and later rabbi in Mattersdorf, was responsible for this enterprise. Aryeh Loeb had also prepared the second Amsterdam Talmud of 1714–17, the unacknowledged master copy for the later Berlin-Frankfurt on the Oder edition. The Frankfurt on the Oder Christian presses had issued Hebrew books before the end of the 16th century, but widespread printing began in 1695 with J.C. Beckmann and Michael Gottschalk, whose successors, F. Grillo, his widow, his daughter, and J.T. Elsnor continued Hebrew printing until 1818. Gottschalk prepared the first Talmud edition in Germany (1697–99) which Behrend *Lehmann of Halberstadt financed, with 50,000 taler. A second edition, which Lehmann first wanted to divert to the other Frankfurt, was eventually printed (1715–22) in both Frankfurt on the Oder and Berlin. Midrashim (*Rabba*, *Tanḥuma Yalkut*) were also issued there. Gottschalk employed setters from Prague and Venice; his type and vignettes were of Amsterdam origin. In Berlin, the court preacher D.E. Jablonski established a Hebrew press with Judah Loeb Neumark as manager. From 1708 to 1717 Baruch Buchbinder of Radow printed, among others, the *Ein Ya'akov* (1709) and several works of the Shabbatean writer Nehemiah Ḥayon Neumark's son Nathan had his own press from 1719 to 1727 on which he printed some Talmud tractates from 1723. His brother-in-law Aaron b. Moses Rofe was active for three decades from 1733. He printed the Talmud (1734–39) with the backing of Jablonski, whose type was used, and Grillo of Frankfurt on the Oder; it was thus an undertaking of both cities. Aaron's press continued under his grandson Moses and his great-grandson Mordecai Landsberg. There was also Hebrew printing in Dessau (1694–), Jessnitz (1718–), and Koethen (1717–) in the duchy of Anhalt. In Halle, the proselyte Moses b. Abraham of Nikolsburg (Mikulov) and Prague was active from 1709 to 1714, after having worked with Hebrew printers in Amsterdam, Dessau, Berlin, and Frankfurt on the Oder. In Dyhernfurth (Silesia), Shabbetai Bass of Prague, who had learned the trade with Uri Phoebus at Amsterdam, founded a press in 1689; his son Joseph took over in 1712 (till 1739). While his newly cast type and decorations were mostly of Amsterdam origin, Bass's employees came from Poland, among them Zevi Hirsch b. Ḥayyim. Neuwied (Rhineland) had Hebrew presses (Grat and J.B. Haupt), run by Israel b. Moses. Another printer there was Benjamin Solomon Kroneburg.

SOUTHERN GERMANY. In southern Germany and the environs of Frankfurt in particular, Hebrew printing had already taken place early in the 17th century in Hanau and was resumed from 1709, partly by Christian printers such as H.J. Bashuysen and J.C. Beausang. Among Jewish printers there was Seligman Reis (1710–30), who also had been active in Frankfurt on the Main, Offenbach, and Homburg v.d.H. (1711–12). Aaron Dessau and partners set up a press in Homburg in 1736 (to 1757).

In Offenbach, Seligmann Reis and his son Herz printed from 1714 to 1721. Bonaventura de Nannoy worked with the Jewish printer Israel b. Moses, who was also active in Neuwied and Homburg. In 1724 Israel acquired the press and worked it until 1733 and on his return from Neuwied in 1737 finished a Mishnah edition begun there in 1736.

SULZBACH, WILHERMSDORF, AND FUERTH. In Sulzbach (Bavaria) an interesting and successful experiment in Christian and Jewish cooperation in the production of Hebrew books began in 1667, when Abraham Lichtenthaler, a Lutheran, set up a Hebrew press. He was assisted by Isaac b. Judah Loeb Yuedels, a Prague-trained printer, who had a license but no capital, and who was soon after in Wilhermsdorf. The patron of the project was Duke Christian August, an enthusiast of theosophy. Most early Sulzbach title pages have no decorations; only later did there appear simple border lines or illustrations engraved or on woodblocks. Some show a serpent winding round a tree (the Tree of Knowledge); others show crabs and fishes, or Moses and David on the right and Aaron and Solomon on the left. Some of these title pages were used in Fuerth and Dyhernfurth as well. The type was at first that of Prague, but for certain works the type of Amsterdam was used. Moses Bloch was succeeded by his widow and sons (1694–99) who printed some tractates as part of a plan to print the entire Talmud. Then Bloch's son-in-law Aaron Frankl took over, his first production being a two-volume folio *maḥzor*, attractively printed with decorated initials and a convenient arrangement of the prayers. Aaron was followed by his son Meshullam Zalman (1721–64), who printed a Talmud edition, 1755–63. His competitor, Proops of Amsterdam, obtained from the rabbinical assembly at the Four Council meeting at Staro-Konstantinov (1755) an injunction, which was countermanded by the decision of a ten-member rabbinical court presided over by the rabbi of Fuerth, David Stanss. A similar controversy arose in the next century over the Talmud editions of Vilna and Slavuta. Meshullam Zalman's sons and grandsons continued the business into the middle of the 19th century, when it was carried on under the name of S. Arnstein and Sons (1818–51); their publisher's catalogs appeared from 1830. The firm founded by Moses Bloch had been active for 160 years, issuing about 600 works, among them many cheaply printed but popular liturgical items. Another center of Hebrew printing in Bavaria was Wilhermsdorf, where Isaac b. Judah Loeb Yuedels (see before under Sulzbach) set up a press in 1669 with staff recruited from Prague, among them his daughters as setters and a son-in-law as proofreader. Another Prague printer, Israel Meir, set up a press in 1712 but sold it the same year to Hirsch b. Ḥayyim of Fuerth, whose son worked later in Fuerth, printing until 1739. Hirsch cultivated book decorations: his printer's mark was the tree with the serpent and a crab and a lion on each side; the title page showed Moses and Aaron and angels hovering above them and the last page a flower basket as vignette. Nearby Fuerth, a center of talmudic learning, had its first Hebrew presses by 1691. One was estab-

lished by Solomon Shne'ur and his son Joseph with the help of the Cracow printer Moses Menahem Katz, and later continued under another son (Abraham) and a son-in-law Isaac Bing, and their sons or successors to 1730. This press printed some important rabbinic and Yiddish works. The other enterprise was that of Hirsch Frankfurter (till 1701), who had the backing of his brother-in-law, the Court Jew Mordecai Model of Ansbach; the latter had a license to print the Talmud. Another press was founded in Fuerth in 1737 by Ḥayyim b. Zevi Hirsch, son of the Dyhernfurth printer (see above), and it continued under him and his widow until 1774.

Italy, Prague, and Poland

In Venice, bereft of its former glory, Bragadini was still dominant at this period with Vendramini (de Zara) as his main competitor (from 1631) until they joined forces. Their activities were soon limited to *siddurim* and similar items. In Mantua, too, Hebrew printing continued, first under J.S. Perugia and his descendants, and from 1724 under the physician Raphael Ḥayyim d'Italia and his successor Eliezer Solomon d'Italia. From 1718 to 1723 Isaac Jare b. David and Jacob Ḥaver-Tov also printed in Mantua. A new center was to arise in Leghorn, where Abraham Ḥaver-Tov, one of Bragadini's best proofreaders, printed some important works in partnership with Jedidiah Gabbai. They used as printer's mark the three crowns – borrowed from Bragadini – with the addition of the coat of arms of the Medicis. Some Hebrew printing took place at Rossi's press in Verona during 1645–52, with the Amsterdam influence predominating. Such was the case in Venice from 1700 and, in particular, in Leghorn, where Israel da Paz, who had worked with Isaac Templo at Amsterdam, was active from 1740. In Prague Hebrew printing resumed, after an interval of two decades, at Jacob Bak's press. During the 17th century Prague preserved its own style, but in the 18th century the old German square type disappeared from the superscriptions and much was borrowed from Amsterdam. In 1746 the archbishop's press issued the Gospels in Hebrew, Yiddish, German, and Latin for missionary purposes. In Cracow Menahem N. Meisels established his press in 1631 and returned to the Prague style which replaced the Italian introduced by Isaac b. Aaron of Prossnitz. Meisel's manager was Judah Kohen of Prague, and there is a great similarity between their productions and those of Prague. Lublin too, where Hebrew printing took place with interruptions until 1683, remained under the Prague influence. Only when Uri Phoebus went to Zolkiew in 1692 did the Amsterdam style find a home in Poland.

Turkey

Constantinople too experienced an almost complete break in Hebrew printing from 1585 to 1638. In the latter year Solomon Franco set up his press, which his son Abraham continued until 1683 and where several refugees from the Chmielnicki massacres were employed. Jonah b. Jacob of Zalocze in Galicia set up a press in 1710 and printed mostly in the Am-

sterdam style, but Italian influence was also present. When his press burned down in 1741, the Constantinople rabbi Abraham Rosanes helped him to reestablish himself, and his sons continued to print from 1743. Both Franco and Jonah modified the old decorations in the Oriental style, as can be seen by comparing the Temple as printer's mark used in Venice, Prague, and Lublin with that of Constantinople, e.g., Joshua Benveniste's *Sedeh Yehoshua* of 1749. In Salonika too, after a long interval, Hebrew printing was resumed in 1650 on a modest scale. A revival began in 1709 under Abraham b. David and Yomtov Canpillas, the latter printing alone from 1729 and with partners from 1732. They printed mainly rabbinic novellae, responsa, and homiletics. Salonika preserved in type, decorations, and even paper its own easily recognizable style. Jedidiah Gabbai's Leghorn press was transferred to Smyrna by his son Abraham in 1657. Jonah b. Jacob (see above) also printed there in 1729–41. In Chufut-Kale, Afda and Shabbetai Jeraka with other partners set up the first Karaite press in 1734 (until 1741), working with types similar to that of Constantinople.

MODERN PERIOD

Central and Eastern Europe: 1760–1900

From the middle of the 18th century the center of Hebrew printing shifted more and more to Central and Eastern Europe. (See Map: Hebrew Printing Locations). States, large and small, in these regions wanted to prevent the importation of Hebrew books and the resulting drain on their capital resources. In addition, the increasing severity of the church-state censorship – severer than it ever was in other parts of Europe, in a region that had not known such censorship before – made it desirable to them to have Hebrew presses under their immediate supervision. For both these reasons the setting up of local Hebrew presses was encouraged. A more positive cause of the rise of these presses was the efflorescence of Talmud study in the growing number of yeshivot in Lithuania and Poland as well as of Ḥasidism and its literature, creating an ever larger demand for Hebrew books. The beginnings of Haskalah should also be mentioned in this context. This shift to Eastern Europe admittedly meant a lowering of the standards of printing and book production.

Austria

The Hapsburg Empire occupied a middle position between East and West, and its capital, Vienna, a leading position in Hebrew printing in this period. Presses established in the last decade of the 18th century by the court printers Joseph Hrazchansky and Anton Schmidt succeeded the great Hebrew printing houses of Venice and Amsterdam. By 1850 they had issued five editions of the Talmud. Schmidt, who acquired a great part of the Bomberg and Proops presses, printed most of the classical texts, including Bibles and prayer books of all the rites. Later in the century and well into the 20th century Joseph Schlesinger was the leading publisher-printer of such liturgical items with translations into the main European lan-

guages. In what became Czechoslovakia and what were, up to 1914, provinces of the Austro-Hungarian monarchy, the old center in Prague, the capital of Bohemia, never regained its former prominence. An attempt at revival by the Bak press from 1762 was stifled by the severity of the censorship. A certain revival took place under Moses *Landau (1820–50), who produced two Talmud editions and a good deal of Enlightenment literature emanating from the Mendelssohn school. In Bruenn (Brno), capital of Moravia, a Hebrew press had been founded in 1754 on the initiative of the Moravian chamber by Joseph Neumann which until 1802 produced mainly liturgical items, works of edification in Yiddish for the local market and those of local authors. Another Bruenn Hebrew printer at the time was Bezalel (Gottlieb) *Jeiteles. In Pressburg (Bratislava), capital of Slovakia, where some Hebrew printing had taken place in 1789–90, Schmidt of Vienna set up a press in 1838 from which important items were issued. Joseph Schlesinger, too, printed there in the 1860s. In the Austrian-dominated parts of Poland (Galicia), Cracow retained its importance, with Naphtali Herz Shapiro and his sons active in 1802–22; Karl Budweiser (1863–74), who is found later in Lemberg (Lvov); and, in particular Joseph Fischer (1878–1914). The several small presses of Zolkiew were forced to transfer to Lvov in 1782, which led to the rise of that city as a center of Hebrew printing in the next century, with the presses of Mann (Grossmann-) Rosanes, Letteris, and, above all, Madfes, and some as yet unsurpassed editions of the Shulḥan Arukh were produced there. In Zolkiew itself a new press was founded in 1791 by a certain Meyerhofer, where works of the local rabbi Z.H. Chajes appeared in 1840–50. In Czernowitz Hebrew printing took place from 1819; in 1835 a Talmud edition was issued. In the Romanian capital of Bucharest the *Sifra* with the commentary by M.L. Malbim, then rabbi at Bucharest, came out in a fine edition.

Poland and Russia

In Russia proper the first Hebrew book is said to have been printed in 1760 in Oleksinets (Y.L. Heller’s *Berit Melah*), where printing continued until 1770. The press of Slavuta (Ukraine), founded in 1792, issued three Talmud editions between 1800 and 1820; and one each (1816–28) in Kopys (Belorussia, founded 1807) and Grodno-Vilna (1835–54). The Shapira family of Slavuta continued in Zhitomir, printing fine editions of both Talmuds and the Zohar. Toward the middle of the 19th century Vilna became a great printing center – the Talmud editions of *Romm, who also issued other standard rabbinic texts, being recognized universally as the best editions. They continued to be reproduced to modern times. Romm’s competitors in this field were printers like Samuel *Orgelbrand and Rosenkranz-Schriftsetzer in Warsaw, where the first Hebrew book was issued in 1796, and which eventually became an important center of Hebrew printing. See following table for a list of places in Poland and Russia where Hebrew printing took place in this period:

Berdichev	Ukr.	1807	Nowy Dwor	Pol.	1782
Boguslav	Ukr.	1819	Odessa	Ukr.	1845
Bratslav	Ukr.	1821	Oleksinets	Ukr.	1760
Dubno	Ukr.	1794	Ostrog	Ukr.	1793
Dubrovo	Bel.	1802	Piotrkow	Pol.	1876
Grodno	Bel.	1788	Polonnoye	Ukr.	1791
Hrubieszow	Pol.	1817	Poritsk	Ukr.	1786
Jozefow	Pol.	1825	Radziwillow	Ukr.	1814
Kopys	Bel.	1807	Shklov	Bel.	1783
Korets (Korzec)	Ukr.	1778	Slavuta	Ukr.	1792
Lutsk	Ukr.	1787?	Sudikov	Ukr.	1817
Medzhibozh	Ukr.	1817	Ternopol	Ukr.	1813
Mezkorov	Ukr.	1789	Vilna	Lith.	1799
Minkovtsy	Ukr.	1796	Warsaw	Pol.	1796
Minsk	Bel.	1808	Zaslavl	Ukr.	1807
Mogilev	Bel.	1825	Zhitomir	Ukr.	1804
Mogilev-Podolski	Ukr.	1809			
Ukr. = Ukraine	Lith. = Lithuania				
Pol. = Poland	Bel. = Belorussia				

The Russian Karaites too resumed printing in Chufut-Kale, 1804–06, and in Goslov-Yevpatoriya, Crimea, 1833–36, issuing prayer books and works of Karaite literature.

WESTERN EUROPE

It should not be assumed that in Germany Hebrew presses had ceased working. In Berlin the *Orientalische Buchdruckerei* was founded in 1760. The apostate Julius Sittenfeld was active in the middle of the 19th century, producing a fine Talmud, 1862–68, for which N.A. Goldberg was responsible. Another Berlin printer from the second half of the century onward was H. Itzkowski. In Koenigsberg, where there had been sporadic printing during the 18th century, Gruebe and Longrien printed some fine rabbinic texts from 1858. To this group belongs Johannisberg, also in East Prussia, in the 1850s; Stettin, from 1859, where parts of the Talmud and a fine Mishnah were printed; Danzig (Mishnah with *Tiferet Yisrael* commentary, 1843); Hanover, at Telgeners, from 1828; Halberstadt from 1859 (Jeruham Fishel b. Zevi Hirsch); Leipzig; Breslau, from 1790; Lyck, east Prussia, where the weekly *Ha-Maggid* was printed, 1856–91, and the Mekize Nirdamim Society brought out its early editions; Krotoszy, from 1834, with a fine Jerusalem Talmud; and in Posen from 1802. Of special importance is the press founded by Wolf *Heidenheim in Roedelheim, near Frankfurt on the Main, about 1800, where he issued his famous Pentateuch, *maḥzor*, and other liturgical texts. This tradition was continued by his successor, M. Lehrberger, later in Frankfurt, who printed Seligman Isaac *Baer’s well-known liturgical texts. Karlsruhe had a Hebrew press both in the 18th and the 19th centuries. In France Hebrew presses were established in Metz (c. 1760), Strasbourg (1770), and later in Paris (1806). Here the house of Durlacher has been active from the 19th century. In England, where Hebrew had been printed – in London and Oxford – in earlier centuries, London, as well as Edinburgh in Scotland, had their Hebrew presses in the 19th century. In Italy, Venice continued to decline, with Leghorn

becoming from 1740 the center of liturgical work for the Mediterranean area. First Sadun and then Solomon *Belforte were the leading printers in Leghorn. Venice printers branched out to Pisa in 1779, printing for the Oriental market, and in Constantinople (so it was stated) books exclusively printed by Jews were preferred. Reggio Emilia had a small press from 1805 to 1820. Salonika and Smyrna continued in this period to turn out large amounts of rabbinical literature but no copies of the Talmud.

UNITED STATES

Hebrew printing in the United States at first took the form of Christian printers inserting isolated Hebrew words or phrases into their English publications, for which the type was brought over from England. Thus, in the first book printed in the U.S., an English version of Psalms (Cambridge, Massachusetts, 1640), the Hebrew alphabet accompanied Psalm 119 and Hebrew words were used six times in the preface. In the two centuries following, many works containing some Hebrew were printed in Cambridge, Andover, Boston, New Haven, New York, and Philadelphia, comprising mainly Hebrew lexica, grammars, primers, and single books of the Bible. Hebrew was also used in printed rules and regulations of Jewish communities and religious societies, or in special orders of services. From the middle of the 18th century onward complete prayer books (*maḥzorim* with English translations) began to appear. In the 19th century Hebrew printing of sorts is found also in Baltimore (1843), Charleston, South Carolina (1842), Cincinnati (1824), New Orleans (1850), San Francisco (1850), and Kingston, Jamaica (1842). Jewish printers began to be active from 1825 (Solomon Henry *Jackson, Henry Frank, both in New York). With rising immigration from Eastern Europe, Hebrew and Yiddish newspapers began to appear from 1874 onward. By 1926 there were Hebrew presses, apart from those in the cities already mentioned, in Chicago, Cleveland, Detroit, Los Angeles, Minneapolis, Pittsburgh, St. Louis, and Toronto (Canada).

NEW TRENDS

While no new trends developed in Hebrew printing up to World War I and even World War II, the Russian Revolution and the debacle of European Jewry in the Holocaust terminated almost all Hebrew printing in Central and Eastern Europe. With the establishment of the Jewish National Home in Palestine (1918–47) and the State of Israel (1948), Jerusalem and Tel Aviv have become the centers of Hebrew printing and publishing. New York too, as well as other cities in the U.S., produce a good deal of Hebrew, particularly rabbinic literature. England, France, and Switzerland play a minor part. The invention of new processes of photomechanical printing have been applied to a great number of the best editions of the 19th century as well as incunabula and rare early prints to satisfy – if not the bibliophiles – the growing demand for rabbinic and other scholarly literature. On the other hand, the phenomenal growth of modern Hebrew (and Yiddish)

literature is reflected in the work of the Hebrew printers and publishers in Israel, some of whom began their activities in Russia, Poland, or Germany before or after 1900. Yiddish literature too was being printed in the U.S. and to a very small extent in Soviet Russia.

See also the individual articles on most of the places where Hebrew printing took place and on the most important printers.

[*Encyclopaedia Judaica* (Germany)]

IN EREẒ ISRAEL

Before Statehood

SAFED. About 120 years after the invention of printing, in 1577, Rabbi Eliezer *Ashkenazi of Lublin attempted to set up a printing press in Safed. The press lasted for only ten years and printed ten books, including *Lekah Tov* by Rabbi Yom Tov Zhalon, considered to be the first book ever printed in Erez Israel and the Near East. Two and a half centuries later, in 1831, a fresh start was made in Safed by Israel *Bak, who had brought with him from Berdichev, Russia, type-founding equipment and two wooden presses. His printing house was destroyed by the earthquake that struck the town in 1837, after he had printed only six books.

JERUSALEM. Four years later, in 1841, he opened a printing house in Jerusalem. This was the first step toward developing the craft of printing, which later became one of the city's main industries. A second printing house was opened in 1862 and ten years later others were established and employed many yeshivah students who had hitherto lived only on the charity of the *ḥalukkah*. In 1882 Bak's printing house was liquidated and his equipment was sold, but his name remained a symbol as the pioneer of printing in Erez Israel. The iron printing press presented to him as a gift in 1835 by Sir Moses Montefiore is still on show at the Lewin-Epstein Press at Bat Yam.

For many years Jerusalem continued to be the printing center of Erez Israel. The industry's chief clients were at first the weekly newspapers *Ha-Havazzelet* and *Ha-Levanon* and the many religious institutions in the city. Jerusalem printing was distinguished for its own peculiarly decorative style in calendars, greeting cards, and **mizraḥs*, which were sent to all parts of the Diaspora. The Printing Workers' Association, established in 1897, was the first trade union in the country.

After World War I Zionist and communal institutions began to give out considerable printing orders, and the first process engraving works were established in Jerusalem to facilitate the printing of Jewish National Fund stamps, pictures, and illustrated publicity material for public bodies. Non-Jewish printing houses were to be found mainly in monasteries; there was one in the Schneller orphanage, which specialized in printing school exercise books. In the 1920s the new town of Tel Aviv began to replace Jerusalem as the printing and publishing center.

TEL AVIV. The first Jewish printing works in the area was opened in Jaffa in 1906, where most of them were to be found

until the 1920s. Sa'adyah Shoshani, nephew of the owner, Aaron Eitan, was a pioneer in the organization of the industry and became president of the Organization of Printing Presses in Israel. Many printing workers arrived from Poland in the 1920s with the Third and Fourth Aliyah. Some of them established the Ha-Po'el ha-Za'ir cooperative; others joined the Ahdut cooperative, which had been set up in Jerusalem in 1909 and subsequently transferred to Tel Aviv. The daily press that grew up in Tel Aviv was an important factor in the industrialization of printing and modern equipment was purchased to meet its needs. When the canning industry started in the 1930s, Eliezer Lewin-Epstein, of the famous Warsaw printing family, set up a tin-can printing enterprise which became the first offset press in the country and was particularly noted for the printing of postage stamps and posters. Other offset presses were soon established and supplied Israel industry with advertising material and printed packing materials.

In the State of Israel

The establishment of the Government Printer – at first in Tel Aviv and soon with a branch in Jerusalem – gave an impetus to the development of printing. It did photogravure work, which had previously to be sent to Britain, and printed postage stamps and banknotes for various African and Asian countries. In 1966 it was transferred to Jerusalem. It is the largest printing establishment in the country, with some 300 workers, and is also a channel for handing out government orders to other printers in Jerusalem and elsewhere.

From the mid-1960s modern machinery for cold type composition, including IBM, Monophoto, and Photon equipment, was installed by several firms, including Isratypeset and the Israel Program for Scientific Translations (IPST; now *Keter) in Jerusalem, enabling high-quality bookwork to be done for local and foreign publishers. Offset notary presses for printing illustrated weeklies were imported; in 1970 there were over 30 offset presses in Israel that were capable, *inter alia*, of producing good-quality color work. Printing presses were also opened in Haifa, in many development towns, and in three kibbutzim. There were three Arabic presses in Nazareth and several in Jerusalem.

In 1969 there were some 900 printing and publishing enterprises in Israel, with 9,500 persons employed (about two-thirds of the employees working in Tel Aviv). Exports totaled about \$5,000,000 (about half of which went to the U.S.), compared with \$2,900,000 in 1966 and \$400,000 in 1956. About 80% of the enterprises employed a little more than a quarter of the workers, while two-fifths of the personnel were employed by 3.5% of the enterprises, as shown in Table: Printing and Publishing. By the late 20th century Israel's printing industry met the most rigorous and advanced modern standards, and several publishers specialized in packaging coproductions for publishers overseas. The availability of advanced digital printing processes led to the re-issuing of many rare books, especially in the fields of Judaica and rabbinic studies. In 2004 the industry employed around 7,000 workers.

Printing and Publishing Establishments and Persons Employed in Israel in 1969

Number of employees	Establishments	Employed persons
1–10	79.0%	26.4%
11–20	9.5%	11.9%
21–50	8.0%	21.2%
51–100	1.9%	11.5%
Over 100	1.6%	29.0%

VOCATIONAL TRAINING. The first school of printing was established in 1946 by the *Hadassah Women's Organization in Jerusalem as part of the Brandeis Center. Additional schools were set up in Tel Aviv (the Amal School), Jerusalem (Boys' Town), and Kefar Habad. By the late 1960s these schools had over 300 pupils, and another 600 apprentices in printing houses were taking part-time courses there.

[Gershon Zilberberg]

Women Printers

Jewish women produced Hebrew books from the earliest days of Hebrew printing. In 1477, the colophon of the Hebrew incunabulum *Behinat Olam*, printed in Mantua, declared, "I, Estellina, the wife of my worthy husband Abraham Conat wrote this book *Behinat Olam* with the aid of Jacob Levi of Tarascon." Estellina, who arranged for the printing and was involved in the actual process, used the word "wrote" because there was as yet no Hebrew term for "printing." Printing in general was a cottage industry until the 19th century. Adjacent living and printing areas enabled all family members to help with the multiple tasks involved. Women generally took up the profession when their husbands died.

From Estellina Conat through the 1920s, the names of at least 54 other Jewish women printers appeared in Hebrew books. Some are mentioned specifically by name; others can be identified by lines on title pages which state, as in the case of the *Proops family of Amsterdam, "Printed by the Widow and Orphans of Jacob (or Joseph) Proops." Names of female typesetters survive on random pages of texts or colophons; women typesetters were particularly associated with the Hebrew presses of the towns of Fürth and Wilhelmsdorf in Franconia. Countless Jewish women also contributed anonymously to the printing endeavor through the centuries as many young girls learned the skill from their printer-fathers.

External sources provide evidence for women printers whose books have not survived. Inquisition records state that Juan de Lucena, considered the first Hebrew printer in the Iberian peninsula, and four of his daughters were accused of printing Hebrew books in the village of Montalban and in Toledo before 1480. In 1485, one daughter confessed before the Inquisition that she had helped her father print Hebrew books. Almost 50 years later, another was condemned to life imprisonment after a similar confession.

There is little evidence of women involved in Hebrew printing in the Muslim world with the exception of Dona Reyna Mendes (1536–1599), daughter of Dona Gracia *Mendes,

and wife of Don Joseph *Naxos. Dona Reyna, when widowed and living in Constantinople, was the first Jewish woman to establish her own independent press. She published at least 15 books, including prayer books and a talmudic tractate. Hers was the only printing press in Constantinople in any language; after her death no Hebrew books were printed again until 1638.

Jewish women printers were prominent in 19th century Lemberg (Lvov). Judith Rosanes, great-granddaughter of the renowned printer *Uri Phoebus, initially printed by herself in Zolkiev, with her husband, David Mann, before his death, and with various cousins who were also printers. In 1782 she moved to Lemberg, established her printing business, and married the rabbi of the city, Hirsch Rosanes. Rosanes printed at least 50 books before her death in 1805, and was the first Jewish woman to print Hebrew books on a commercial basis over an extended period. She was so renowned that when the authorities forbade the publication of ḥasidic books, printers used her name to suggest that their books had been printed much earlier. Rosanes' daughter-in-law, Chave Grossman, and granddaughter Feige also ran a press in Lemberg that printed until at least 1857. Other Lemberg female printers were Chaya Taube, wife of the printer Aharon Madpis, and Tsharni, wife of Ze'ev Wolf Letteris. Most famous in the second half of the 19th century was Pesel Balaban. After her husband's death, she expanded their press, producing high-quality editions of halakhic texts, such as the Shulḥan Arukh.

At the end of the 19th century the most renowned Jewish printing house was that of the Widow and Brothers *Romm in Vilna. The Romm family, which had begun printing in 1799, had its greatest success under the management of Deborah Romm (d. 1903), beginning in 1862. Romm took over the firm when she was widowed at 29 and expanded it with her brothers-in-law; helped first by her father and then by the enterprising literary director Samuel Shraga Feigensohn. She remained the major partner in the firm as it produced thousands of superior editions including the famous edition of the Babylonian Talmud.

PRINZ, JOACHIM (1902–1988), U.S. rabbi and communal leader. Prinz, who was born in Burchartsdorf, Germany, was ordained by the Breslau Jewish Theological Seminary in 1925. In 1926 he became the rabbi of the Berlin Jewish community. His adherence to the Zionist movement brought him into conflict with Berlin Jewish community leaders. Prinz continually attacked Nazism from his pulpit, even after Hitler came to power, and was arrested several times by the Gestapo. His sermons were masterful in saying what had to be said, without actually saying anything that could quite get him into trouble. In 1937 he held his last meeting with his congregation before immigrating to the U.S. The meeting was spied on by Adolf *Eichmann, who reported to the Gestapo that Prinz's plan to immigrate proved that an international Jewish conspiracy had New York headquarters. Prinz was subsequently arrested by the Gestapo and expelled from Germany. In 1939 he was appointed rabbi at Temple B'nai Abraham, Newark, New Jersey.

After a long association with the Zionist movement, Prinz left it in 1948, contending that the establishment of Israel made it obsolete. It was a position that he shared with David Ben-Gurion. He suggested a new movement based on what he called "Jewish peoplehood," be created to strengthen further ties and community of interest between Israel and U.S. Jews. Prinz was a leader in the fight against antisemitism and a staunch civil libertarian. He opposed government aid to religious and private schools and advocated that state governments permit exceptions to their Sunday closing laws to non-Christians.

Extremely active in Jewish organizational affairs, his posts included president of the Jewish Educational Association of Essex County (1944); chairman of the Essex County United Jewish Appeal (1945); member of the executive board of the World Jewish Congress (1946); vice president (1952–58) and president (1958–66) of the American Jewish Congress; director of the Conference on Jewish Material Claims Against Germany (1956); and chairman of the Conference of Presidents of Major Jewish Organizations (1965–67). He was prominent in the civil rights movement. In fact, he was the speaker at the March on Washington in August 1963 who preceded Rev. Martin Luther King and his immortal address "I Have a Dream."

Prinz's writings include *Juedische Geschichte* (1931), in which he contended that Jews, despite their emancipation, still existed in the ghetto's shadow; *Illustrierte juedische Geschichte* (1933); *Die Geschichten der Bibel* (1934); *Wir Juden* (1934), urging Jews to be proud of their patrimony and to leave Germany; *Das Leben im Ghetto* (1937); *The Dilemma of the Modern Jew* (1962); and *Popes from the Ghetto* (1966). Contemporary readers can learn about Rabbi Prinz from Philip Roth's *The Plot Against America*. Roth, a native of Newark, who is not known for his reverential attitudes toward rabbis, treats Prinz as heroic in his opposition to antisemitism and defense of civil liberties.

[Michael Berenbaum (2nd ed.)]

PRISCUS, a Jewish agent of the Frankish king Chilperic I (561–584). In 581 Chilperic engaged Priscus in a religious debate in the presence of Bishop *Gregory of Tours. Courageously rejecting the arguments of the king, Priscus stated that "God does not need to share Himself, and He does not divide His power with others." Priscus asked, "Can God be made a man, be born of a woman, be struck with rods, and condemned to death?" The king did not reply but Gregory, who brought all his oratorical talent to bear, quoted a great number of christological passages from the Bible and Apocrypha as evidence for the Christian truth. Nevertheless, all his arguments were of no avail as Priscus stood his ground.

When all the Jews of Paris were ordered to accept Christianity, Priscus, who was imprisoned, but later released, withstood the king's attempts to baptize him by force. On a Saturday, while on his way to the synagogue together with several men of his household, Priscus was assassinated by the convert Phatir and a band of his henchmen. Priscus was avenged by his relatives who killed Phatir.

PRITZKER, U.S. family in business and philanthropy. One of the world's wealthiest and most philanthropic families, the Pritzker clan was moving into its fifth generation in the early years of the 21st century with fortunes made in hotels, Levitz Furniture, Ticketmaster, gambling casinos in Las Vegas and Lake Tahoe, Nev., and Atlantic City, N.J., an airline, magazines, and a variety of other businesses. Its charitable contributions in Chicago are legendary, with virtually every cultural and educational institution a beneficiary of family largesse. In addition, family members have served on the boards of every major institution in Chicago.

NICHOLAS PRITZKER (1871–1957), from a poor family, settled in Chicago in 1881, leaving a ghetto near Kiev, Ukraine. He taught himself English by reading the *Chicago Tribune* with the aid of an English-German and a German-Russian dictionary. After selling newspapers on streetcorners, he became a

tailor's assistant and then a licensed pharmacist. At the age of 30, he became a lawyer after studying at night. He started the family's first business ventures after opening his law practice in 1902. His three sons, ABRAM NICHOLAS (1896–1986), HARRY (1893–1957), and JACK (1904–1979), also became lawyers. Abram, who was born in Chicago, was a 1920 graduate of Harvard Law School. Jack joined their father's firm, Pritzker & Pritzker, but Abram and Jack left in 1936 to try their hand in commerce. Abram is credited with moving the family into real estate. The Pritzkers built the worldwide chain of Hyatt hotels to 140 from scratch after buying the Hyatt House in Los Angeles in 1957.

Jack's son, NICHOLAS (1945–), was a lawyer in Chicago and led the development side of Hyatt and the family's push into gambling. He was a major supporter of environmental causes.

Abram had three sons, DONALD (1932–1972), ROBERT (1926–), and JAY (1922–1999). Donald led the early expansion of Hyatt. He died of a heart attack at the age of 39. Robert was an engineer who specialized in turning around underperforming companies. With Jay, Robert built the Marmon Group into a \$5 billion conglomerate that over the years had interests in dozens of businesses. Jay, a lawyer and accountant, began buying small companies when he was 29, first timber mills, then a small metal-goods company. But he was best known for deciding that an airport was a good place to site a hotel. He bought his first, named for its owner, Hyatt von Dehn, providing deluxe surroundings for business travelers. After building a second Hyatt hotel near San Francisco International Airport, the brothers went on to develop properties near airports around the United States and internationally. There were more than 200 hotels in the first years of the 21st century. Jay was a trustee of the University of Chicago and endowed the Pritzker Architectural Prize. He also founded the Nancy Friend Pritzker Laboratory at Stanford University for the study of clinical depression. It was named for his daughter, who committed suicide in 1972 at the age of 24. Jay had four other children, THOMAS (1950–), who took over and was running the \$15 billion empire in 2005, JOHN (1953–), who runs Geolo, a private equity fund that invests in entertainment, hospitality, and retailing, DANIEL (1959–), a songwriter and member of a rock-soul band, and GIGI (1962–), co-owner of a film production company. She produced the movie *The Wedding Singer*.

Robert, an engineer, left Marmon, which had 266 companies and subsidiaries under its umbrella, in 2002. Robert had several children by two marriages. JAMES (1950–) lives in Chicago. He retired from the Illinois National Guard and runs the Pritzker Military Library. He supported conservative political causes and research in Antarctica. LINDA (1953–) is a Jungian therapist and political activist and contributes to Buddhist causes. She lives in Montana. KAREN (1958–), who lives in Connecticut, is a major supporter of education causes, including literacy in schools. She sponsors two websites that provide books to children.

Donald had three children: PENNY (1959–), the first female family member to take a leadership position in the business; ANTHONY (1961–), who headed a high-tech and manufacturing private equity firm with his brother “J.B.” or JAY ROBERT (1965–), who ran unsuccessfully as a Democrat in a 1998 Illinois Congressional primary and heads a private equity firm, Pritzker Group LLC with Anthony. Penny, a fourth-generation Pritzker who earned her law and M.B.A. degrees simultaneously at Stanford University, carved out a leading role in the family’s business empire. She oversaw a nationwide network of upscale retirement communities, multi-family housing developments, and office park complexes. She served as chairman of the Superior Bank from 1989 to 1994, but the savings and loan institution collapsed. Nevertheless, she was responsible for real-estate operations in at least 11 states, ranging from several thousand apartment units and modest commercial developments to master-planned communities.

Thomas, a fifth-generation Pritzker, was a board member of Royal Caribbean Cruises, where the family and partners held a 25 percent stake. He made a side career out of his interest in Asia. He was chairman of the Art Institute of Chicago’s committee on Asian art and photographed and wrote about eighth-century Nepalese art.

In the early part of the 21st century, after the death of Jay in 1999, and according to his wishes, the Pritzker empire was overseen by Penny, her cousin Thomas, and Nicholas, their first cousin once removed. The family was always notoriously secretive about its activities, its trusts funds, many of them overseas, its complicated and intricate partnerships and business arrangements. It rarely talked about successes or failures. However, in 2001 the Pritzker heirs decided to break up the family fortune into 11 shares worth an estimated \$1.4 billion each. That agreement remained a secret until Liesel Pritzker, Robert’s daughter from his second marriage, filed a lawsuit in 2002 alleging that her trust funds had been emptied of nearly \$1 billion. Her brother, Matthew, later joined the suit. The dispute was quietly settled in 2005, with Liesel and Matthew relinquishing their claim on family assets in exchange for \$500 million each. That allowed the 11 heirs to proceed with the family agreement to divide the Pritzker empire among themselves.

The Pritzker Architecture Prize has been given annually since 1979 to a living architect. Largely modeled on the Nobel Prize, it is the premier architectural award in the United States. The prize is awarded by the Hyatt Foundation and the winner, who receives \$100,000, is selected by members of the Pritzker family.

PROBST, MENAHEM MENDEL (1881–1941), Hebrew bibliographer. Born in Galicia, he settled in Erez Israel in 1928 and joined the staff of the National Library in Jerusalem, devoting himself to bibliography of Hebrew and Palestinian journalism.

Among his works are *Ha-Ittonut ha-Ivrit be-Hitpatteḥutah ha-Keronologit* (*Lu’ah Aḥi’asaf* (1923), 239–87); *Ḥomer Mispari le-Toledot Hitpatteḥutah shel ha-Ittonut ha-Yisre’elit le-Arzo-teha... 1667–1920* (“Statistical Material to the History of the Jewish Press... 1667–1920”; KS, 2 (1925–26), 212–4); *Yalkut Sefarim* (1929), a complete and detailed listing of modern Hebrew literature according to subjects. He also published articles on bibliographical subjects in the daily press.

[Getzel Kressel]

PROBST-KRAID, RIZA (1894–?), Romanian painter. She was born in Cracow and studied art in Bucharest. She exhibited in Romania, Belgium, Poland, Greece, and France. She taught painting and drawing and lectured on art under the auspices of the University of Bucharest and at the Jewish schools. In 1950, she immigrated to Israel, where she continued to teach and paint.

PROCURATOR, title of the governors (first over Judea, later over most of Palestine) appointed by Rome during the years 6–41 and 44–66 C.E. From a recently discovered inscription in which *Pontius Pilate is mentioned, it appears that the title of the governors of Judea was also *praefectus*. Procuratorial rule came into force with the banishment of *Herod’s son *Archelaus in the year 6 and was interrupted for three years during the reign of *Agrippa I (41–44). The Judean-Palestinian procurator held the power of jurisdiction with regard to capital punishment (*jus gladii*). Roman citizens had the privilege of *provocatio*, i.e., the right to transfer the trial from the provincial governor to the emperor (cf. the case of *Paul, Acts 25:10–12; cf. 22:25 ff.). The procurator was subject to the Roman legate in Syria, an illustration of this being the deportation of Pontius Pilate (26–36 C.E.) by Vitellius. Josephus also states (Wars, 2:280–1) that formal charges would have been preferred by the Jews against the last procurator Gessius *Florus (64–66 C.E.; see below) but that they refrained from taking their case to *Gallus in Syria from fear of reprisals. The Sanhedrin was allowed to exercise jurisdiction in civil matters, although the procurators could exercise control in this sphere as well. As a rule, the procurators maintained supervision over the country from their official residence at Caesarea. On Jewish festivals, their seat was temporarily transferred to Jerusalem in order to control the thousands who flocked to the Temple and on these occasions they sometimes gave physical expression to their hatred of Rome.

It is fair to assert that the procurators were either openly hostile or, at best, indifferent to the needs of the Jewish populace. They were notorious for their rapacity. Their relatively short tenure, coupled with hostility toward Jews as a whole, may have impelled them to amass quick profits. Whatever the case, the last two procurators before the Jewish War (66 C.E.), *Albinus and Gessius Florus, as a consequence of their monetary extortions and generally provocative acts, were indubitably instrumental in hastening the outbreak of hostilities. The only exception appears to have been Porcius *Festus

(60–62 C.E.) who made vain attempts to improve conditions. The procuratorial administration made an unfortunate beginning when the very first procurator, *Coponius, was dispatched to govern Judea, while the Syrian legate *Quirinius carried out a census (Jos., Ant., 18:1). The political consequences of this act were not delayed, as it led to the establishment of the Fourth Philosophy (*Sicarii) by *Judah the Galilean and the Pharisee Zadok. *Valerius Gratus (15–26) went so far as to depose high priests at will, an outrage on popular feeling hitherto perpetrated only by Herod. The outraged feelings of the populace were not calmed with the appointment of Gratus' successor, Pontius Pilate, during whose term of office Jesus was crucified. Pilate's decision to introduce into the city military standards bearing the emperor's likeness may have been inspired by Rome. Incontrovertible, however, are his own acts of cruelty and his miscarriages of justice, such as the execution of Galilean patriots without trial and his violence toward the Samaritans (35 C.E.). The latter act caused his recall to Rome and deposition by Vitellius in the spring of 36. So serious were the possible consequences of his misrule in the eyes of Rome that Vitellius was specially charged with the task of regaining Jewish favor by granting minor concessions.

While the "second series" of procurators, after the interlude of semi-independence under Herod Agrippa I, were deprived of the power of appointing the high priest, the very first of them, Cuspius *Fadus, gained custody of the priestly vestments. Although appointed by Claudius to counteract the Syrian legate's antipathy toward the Jews, Fadus adopted violent means in suppressing the followers of the pseudo-Messiah *Theudas. Tiberius *Alexander ordered the execution of Jacob and Simeon, sons of Judah the Galilean. Ventidius *Cumanus, next in office, not only let his troops cause a panic in the overcrowded Temple area on Passover, resulting in the death of 20,000 Jews (Jos., Ant., 20:105–12) but in addition armed the Samaritans against them. Whether the measure was actually considered necessary in order to maintain order is unclear. Cumanus was, however, subsequently removed by the Syrian legate. The last of the Judean procurators, Gessius Florus (see above), is reported by Josephus to have sparked off the Jewish War with his demand for 17 talents from the Temple funds, which caused rioting leading up to the outbreak of hostilities on a large scale. After 70 C.E. the office of procurator sometimes alternated with that of legate and was subordinate to the governor of the region, eventually being disbanded altogether.

LIST OF PROCURATORS

- Coponius 6–9 C.E.
- Marcus Ambibulus 9–12 C.E.
- Rufus Tineus 12–15 C.E.
- Valerius Gratus 15–26 C.E.
- Pontius Pilate 26–36 C.E.
- Marcellus 36–37 C.E.
- Marullus 37–41 C.E.

- Cuspius Fadus 44–46 C.E.
- Tiberius Julius Alexander 46–48 C.E.
- Ventidius Cumanus 48–52 C.E.
- Antonius Felix 52–60 C.E.
- Porcius Festus 60–62 C.E.
- Albinus 62–64 C.E.
- Gessius Florus 64–66 C.E.

[David Solomon]

PROFANITY. Judaism has always stressed the importance of the spoken word and hence cleanliness in speech was inculcated in addition to strict prohibition of certain forms of speech such as lying, slander, calumny, or insults. Not only was outright indecent speech to be avoided, but even gross expression was to be shunned. According to the Talmud the Torah uses eight additional letters rather than utter a graceless expression in order to illustrate this principle, for it is written "and of the beasts that are not clean" (Gen. 7:2), instead of "unclean" (Pes. 3a). Likewise, the single word "unclean" would have saved nine letters in the Hebrew text in the verse, "If there be among you any man that is not clean by reason of that which chanceth by night" (Deut. 23:11; Pes. 3a). The Talmud relates that two disciples sat before Rav. One said: "This discussion has made us as tired as an exhausted swine"; the other said: "This discussion had made us as tired as an exhausted kid." Rav would not speak to the former. Similarly, there were three priests; one said, I received as much as a bean of the shewbread: the second said, I received as much as an olive; while the third said, I received as much as a lizard's tail. They investigated the third priest and found that his genealogy was impure and that he was unfit to serve in the Temple (Pes. 3b).

The Talmud considered obscene speech a grievous sin. Many calamities befalling the community were considered by the sages to be punishments for this offense. R. Hanan b. Rabbah remarked that even though all know for what purpose a bride enters the bridal chamber, yet God would punish him who say it *expressis verbis*. *Gehinnom is deepened for the individual who puts his mouth to folly, and punishment is meted out also to one who hears obscenities and does not protest (Shab. 3a). The Rabbis explained that fingers are jointed like pegs so that if a man hears an unworthy statement he should be able to plug them into his ears. The whole ear is hard and the earlobe soft so that if a man hears an unworthy thought he should be able to bend the earlobe into the ear (Ket. 5a–b). Proper language at times of warfare was particularly stressed; the interdiction that "thy camp be holy; that He see no unseemly thing in thee, and turn away from thee" (Deut. 23:15)

is interpreted to mean that God shall hear no improper language in the military camp (Lev. R. 24:7).

[Aaron Rothkoff]

PROGRESSIVE JEWISH ALLIANCE. In March 1999, the Los Angeles chapter of the American Jewish Congress closed its doors. According to the National Office, the chapter had not been fulfilling its financial responsibilities, but the outgoing regional leaders told a different story. In their telling, the closure was the result of a long simmering dispute over ideological differences. The Los Angeles chapter had charted a more aggressively liberal stance on domestic and foreign policy issues – being on the cutting edge of anti-sweatshop work for example, and supporting a two-state solution in the Middle East years before the issue became popular in the mainstream.

Immediately upon closing the AJ Congress chapter, the outgoing leaders (Patsy Ostroy, Douglas Mirell, and Steve Kaplan) announced the formation of a new organization, which they called the Progressive Jewish Alliance (PJA). This new organization intended to pick up where the L.A. chapter of Congress had left off. The importance of the new organization for the history of American Jewish social justice activism lay in two important facts. First, the PJA was based in Los Angeles and not on the East Coast. The center of liberal activism had long since left the east coast cities that had birthed the classic Jewish defense organizations (ADL, AJ Committee, and the upstart AJ Congress). However, the centers of power for the Jewish establishment were still ensconced in Boston, New York, and Washington, D.C. PJA attempted to marry the cultural and political liberalism of the West Coast to an explicitly progressive Jewish political program.

Second, the PJA claimed as its mandate the traditional American Jewish social justice issues – worker's rights, anti-death penalty activism, feminism, gay and lesbian rights – and also embraced a two-state position in the Middle East. This latter position had sunk previous short-lived left and progressive Jewish organizations, such as New Jewish Agenda and Breirah, at a time when such views were heresy, not the policy – implied or actual – of the Israeli government.

In its first half-decade, PJA demonstrated that the West Coast could nurture a different model of Jewish social justice activism. By 2006 the two PJA chapters (Los Angeles and Northern California) had created cross-ethnic alliances on economic justice issues, inter-religious dialogue with both Christian and Muslim groups, and brought together Orthodox, Conservative, and Reform Jews with its restorative justice project (the Jewish Community Justice Project). At the same time, the PJA has laid claim to the Jewish textual tradition by recruiting professors and scholars to its leadership. All the PJA education programs and organizing initiatives have a text component to them, from mediation training and teach-ins to support hotel workers to amicus briefs on the death penalty and affirmative action.

In its activism and organizing the PJA seems to have forged a new model of Jewish activism that borrows from both the mainly secular Jewish labor movements (which led to the left and new-left unaffiliated though heavily Jewish movements) and from the religious traditions that support progressive activism, which before had been found mainly in Israel in the writings of the religious kibbutz movement and the Po'alei Agudat Israel movement.

[Aryeh Cohen (2nd ed.)]

PROHOVNIK, ABRAHAM (in Polish *prochownik* is a dealer either in powder or gunpowder), legendary Jewish figure in the pre-political period of the Polish tribes. After the death of the legendary prince Popiel (attributed to the middle of the ninth century) in the town of Kruszwica, a public meeting (*wiec*) was called to elect a new ruler. Conflicting opinions, however, prevented the nomination of a candidate acceptable to all the assembled. It was therefore decided to choose the first man to enter the town on the next day. This happened to be a Jew named Abraham Prohovnik. When brought to the assembly to be crowned Abraham refused. After some discussion, he was given three days in which to reflect, being warned that he would forfeit his life if still unwilling. After the delay, a crowd, led by a Pole named Piast, approached Abraham's lodgings to crown him. The latter remained adamant, and pointed to Piast as suitable to wear the princely crown. His suggestion was accepted, thus inaugurating the reign of the equally legendary founder of the Polish Piast dynasty. The origin of the legend and the period of its appearance are unknown. A number of Jewish historians consider it to be a transmutation of the Saul *Wahl legend, which arose during the golden era of Polish Jewry at the end of the 16th and early 17th centuries. Other scholars regard it as an echo of the Jewish presence and influence in Poland at the beginning of its political existence and connect the person of Abraham Prohovnik with the arrival of Jews in Poland from the southeast. The Polish Piast legend (first formulated in 1112) contains no mention of Jewish elements. The story undoubtedly is merely an expression in legendary form of the Jewish sense of deep-rootedness in Poland.

[Arthur Cygielman]

PROJECT RENEWAL, the joint program of the government of Israel and the Jewish Agency for Israel for rehabilitation of distressed neighborhoods. Founded in 1978, by 1983 a total of 82 urban neighborhoods and towns throughout Israel, with a total population of 450,000, had been included in Project Renewal. By the early 21st century the number had risen to 100,

representing a \$2 billion investment, a quarter of the money coming from Diaspora communities via the Jewish Agency. A comprehensive redevelopment plan, this project differs from previous government programs in that it is aimed at whole neighborhoods rather than specific residents, groups of residents, or special target issues. In principle, residents are encouraged to remain in their homes, which are improved, rather than be evacuated to newer areas, and the process of physical renovation and repair is integrated with overall social rehabilitation.

Background

The conditions which make neighborhood renewal necessary have their roots in the country's history and unique character. Large waves of immigration followed the establishment of the State of Israel in 1948 and in the first three years of its existence the Jewish population doubled. In 1955–57, an additional 140,000 Jews immigrated to Israel and in 1965–66, another 50,000 arrived. The task of absorbing these immigrants was enormous, straining the limited resources of the state.

Initially, the newcomers were housed in temporary transit camps throughout the country or in abandoned residential buildings. Where possible, temporary shacks were constructed, but often only tents were available. In response to the need for immediate housing solutions, new towns and neighborhoods were hastily built. Financial constraints dictated that a maximum number of housing units be erected at a minimum cost; the resulting buildings are substandard by today's criteria, as is the physical infrastructure installed to serve them.

Service frameworks created over the years were often inadequate and in many cases encouraged dependency. Most social service agencies were centralized and therefore geographically distant from their clients. This remoteness led to both a lack of direct contact with the population and a failure on the part of professional staff to conceptualize community needs. The absence of an overall plan exacerbated the situation.

More than half of the first wave of immigration and most of the subsequent waves were from North African and Asian countries. These immigrants brought with them Jewish cultural heritages and traditions which differed radically from those prevailing in Israel at the time. This Western-oriented culture demanded adherence to its mores and values, causing a conflict which tended to act to the disadvantage of the newcomers.

Immigration had a negative effect on traditional community and interpersonal relations. Old and understood values which had provided the basis for community consensus were weakened. Family roles were eroded and past experience provided no model for present needs. Community cooperative activity became difficult and traditional ethnic leadership which had rested on old societal frameworks was rendered ineffective in the new situations.

Few of the men from these countries had been prepared, through either education or experience, for the skilled or pro-

fessional jobs then available in Israel, since the demands of their earlier homes had been very different. Education levels were often low and many – women in particular – had received no formal education at all. Lack of appropriate skills created a serious employment handicap and kept incomes low. The fact that their culture discouraged women from working outside the home further limited per-capita and family earning power.

The country's security needs were a major factor in the siting of many settlements for new immigrants. Development towns such as Ma'alot and Kiryat Shemonah in the north and Bet-Shean in the east were intended not only to provide homes for the country's new citizens but to strengthen Israel's borders as well. Since these towns are on the economic and social periphery of the country, many of the original settlers have left. Often, new immigrants were settled in already problematic neighborhoods, placing additional strain on an inadequate social and physical infrastructure. In such cases, the stronger, more ambitious, better trained population left at the first opportunity, leaving behind the elderly, the less educated, and the more dependent population groups.

Faced with what seemed like a wall of official indifference, the residents of these neighborhoods and towns took refuge in apathy and cynicism. Bitterness about the poor quality of their lives increasingly expressed itself in draft evasion and delinquency among the young. This deterioration reinforced the already unfavorable image of the neighborhoods, both for the residents and for outsiders, and encouraged further out-migration.

History

In 1974, a government agency designated 160 distressed neighborhoods as areas requiring rehabilitation, and work was begun in a number of them. It was not until October 1977, however, that the Ministry of Housing and Construction announced a plan to focus government resources on the rehabilitation of the 160 neighborhoods. During the early months of 1978, with the formation of the Social Policy Team for Project Renewal, an interministerial approach was developed which has been maintained throughout.

Shortly thereafter, Prime Minister Menahem Begin declared his government's intention to give first priority to elimination of the conditions of neighborhood distress and issued an invitation to world Jewish leaders to participate with the government of Israel in a joint venture toward this end. With the acceptance in principle of this challenge, the Jewish Agency became a partner in discussions with the government ministries. In the course of talks, the Diaspora Jewish leadership concluded that the most promising basis for world Jewry's support would be a direct community-neighborhood relationship. Thus, the idea of twinning of individual Jewish communities with specific Israeli neighborhoods was born.

The seventh annual assembly of the Jewish Agency in 1978 ratified the decision taken by world Jewish leadership to join the government of Israel as partners in renewal. In addi-

tion to assigning the name Project Renewal to the program, the assembly established a number of principles which continue to guide activities to this day:

(1) That the project be a joint effort involving Israel government ministries, municipal authorities, local residents, the Jewish Agency and Jewish communities from abroad.

(2) That the basis for participation by Jewish communities from abroad be a direct twinning relationship between individual communities abroad and specific neighborhoods in Israel. That funds raised in a community for Project Renewal be used only for the specific Project Renewal neighborhood twinning with that community and that funds raised for a specific purpose are to be released for that purpose only.

(3) That the program deals with social as well as physical needs on the basis of a comprehensive plan covering all aspects of life in the neighborhood.

(4) That local residents take an active part in the planning and implementation of the project.

(5) That the duration of the program be limited to a period of about five years.

Initially, 11 neighborhoods were included in the project; by 1979 the number had grown to 30. Some of the neighborhoods were twinned with communities abroad and the first tentative activity began. By 1981, full activity was in progress in 69 neighborhoods, twinned with over 200 Jewish communities all over the world. In 1982, 13 neighborhoods were added, bringing the total number of renewal neighborhoods to 82.

Organizationally, a number of changes have taken place since the project's inception. In 1980, the Jewish Agency assembly upgraded its unit dealing with Project Renewal to the status of a department. The government's participation in the project was administered through the Prime Minister's Office until 1981, when it was placed under the jurisdiction of the Ministry of Housing.

The Renewal Process

Despite the complexity of the organizational structure of Project Renewal that has resulted from the partnership between the government of Israel, local authorities, Diaspora communities, and neighborhood residents, the emphasis in the program is on coordinated policy-making, planning, and implementation. However, the Jewish Agency, the body representing the Diaspora communities, must act within its legal framework, which imposes upon it direct responsibility for implementation and direction of the programs that it funds.

Authority in the project is derived from the joint Government/Jewish Agency Project Renewal Committee, cochaired by the deputy prime minister and by the chairman of the Executive of the Jewish Agency.

Day-to-day policy and coordination of activity on a national level are within the authority of an interministerial team. This team consists of representatives of the Jewish Agency and the government ministries participating in the project (Housing; Labor and Welfare; Education; Health; Interior; and Finance).

A central element in the organizational structure is the local steering committee which exists in each neighborhood. It consists of local residents (who comprise 50% of the membership), professionals, representatives of the municipal authority, representatives of government agencies at the regional level, and a representative of the Jewish Agency. The committee's tasks are to weigh program and project recommendations, to set priorities in view of available funds and financial framework, to approve the annual proposed program and budget, and to approve the comprehensive plan proposed for each industrial neighborhood. The project is administered in each neighborhood by the project manager.

The establishment of the local neighborhood corporation was originally dictated by legal considerations to enable utilization of funds from abroad in the neighborhood. Its board of directors includes local residents, representatives of the local authority, and Jewish Agency representatives. The corporation's task is to implement all projects and programs assigned to the Jewish Agency. Local neighborhood corporations have provided a new dimension for residents' involvement in the implementation of programs: the acquisition of experience both in contending with the bureaucracy and in public administration.

Role of a Twinned Community from Abroad

All projects and programs designated for Jewish Agency implementation are funded by twinned communities from abroad on a community-neighborhood basis. In most communities, committees of lay leaders responsible for Project Renewal are formed. In the United States, the *United Jewish Appeal (UJA) acts as the liaison between the communities and the Agency Renewal Department in Israel and – through the department – the neighborhoods. In other parts of the world, *Keren Hayesod (the United Israel Appeal) fulfills this function. The community, acting in cooperation with the UJA or Keren Hayesod, encourages mission groups and individuals to visit the neighborhood, thereby maintaining ongoing contact between the residents of the neighborhood and members of the community. Once a year, the community Project Renewal Committee is invited to the community's twinned neighborhood for a consultation visit, to review and approve neighborhood programs.

Long-range budgets which represent the program proposal for the entire funding period are prepared and presented to community representatives for approval, and regular reports on the financial and operational status of the project are sent to the community for its consideration and examination.

The Impact of Project Renewal through 1983

More than 600,000 people throughout Israel have been directly or indirectly touched by Project Renewal and before the project is completed 20% of the country's population will have been affected by it.

During the first five years of its operation, 30,653 housing units were renovated and expanded. More than 200 com-

munity and neighborhood centers were built, improved, or enlarged as part of the total of more than 500 public service facilities that the project made available to neighborhood residents. Among these facilities are early childhood development centers, family health and dental clinics, day centers for the elderly, and playgrounds.

Physical infrastructure, roads, sewage and drainage systems, street lighting, and the like have been upgraded in all neighborhoods and the general appearance of most of the neighborhoods has been greatly improved. With the betterment of the quality of life in the neighborhoods, the steady departure of stronger population groups has been virtually halted. Apartment prices, which had been much lower than market prices, have risen steadily, as the demand for housing in the neighborhoods has increased.

Sixteen thousand neighborhood residents currently take part in "Second Chance" programs designed to raise educational levels and improve or provide educational skills, with more than 5,000 adults learning basic Hebrew language skills in the Tehila program of adult education classes each year.

A number of programs are aimed at improvement of parental skill. The Etgar preschool development program, for example, is designed to encourage cognitive development in preschoolers; 6,000 parents take part each year. In addition, more than 15,000 preschoolers and schoolchildren regularly participate in enrichment programs sponsored by Project Renewal.

Courses have been established to encourage burgeoning leadership and to help interested residents obtain the tools necessary for responsible decision-making. At least 1,300 residents in over 50 neighborhoods have taken part in courses for local lay leaders. An academic leadership course toward a bachelor's degree, operated in cooperation with the Open University is offered to over 400 students in several locations throughout the country.

The twinning relationship has added a more personal and direct dimension to both fund-raising and to Israel-oriented activity. Close to 20,000 Jews from all over the world have visited their renewal neighborhoods since the inception of the project. Young people from abroad – as many as 500 in the summer of 1984 alone – have served as volunteers in their twinned neighborhoods.

The Project Renewal twinning relationship has provided a unique opportunity for Israeli citizens to meet with Diaspora Jews in Israel—in their homes, at community gatherings, and at committee meetings, and 600 Israeli children are in contact with their counterparts in the Diaspora through pen pal programs.

According to preliminary assessment of the International Committee for the Evaluation of Project Renewal, the impact of the project's activities has been positive both for the neighborhoods in Israel and for the Jewish communities abroad. The reports indicate significant improvements in housing;

in social and community services; in the level of resident participation in neighborhood affairs; in relations with the Diaspora, and in residents' attitudes toward their neighborhoods.

In many of the neighborhoods included during the first years of the project, a phase-out of community funding has begun, and responsibility for essential programming has been transferred to other funding agencies. Neighborhood residents and representatives of the twinned community abroad are full partners in this process.

Subsequent Phases

Beginning in the mid-1980s the Project moved into a second phase of selective intervention focusing on populations in distress (the aged, single parents, etc.). In the early 1990s a differential approach was taken, focusing on the special needs of individual neighborhoods. At the same time, an attempt was made to draw previously neglected populations into the Project, such as the Arabs, Druze, Ethiopians, and ultra-Orthodox.

The work of Project Renewal is not yet complete. Changing economic conditions and continuing economic distress in the neighborhoods and the country as a whole require a new look at how the Project and its beneficiaries may best be served in the future.

PRONUNCIATIONS OF HEBREW. This article is arranged according to the following outline:

THE TRANSMISSION OF HEBREW AS
A LITURGICAL LANGUAGE

Before its revival at the end of the 19th century, Hebrew existed, for a period of about 1700 years, mainly as a literary and liturgical language. This period in the history of Hebrew probably began around the third century C.E. There is evidence that Hebrew was spoken, at least in some parts of Palestine, in the second century C.E. This is clear from the story in the Talmud about the maid of Rabbi Judah ha-Nasi who knew the meanings of some Hebrew words with which the scholars of that time were not acquainted (RH 26b; Meg. 18a; TJ, Meg. 2:2, 73a). Evidence that Hebrew was spoken in the first half of the second century C.E. is also borne out by the Hebrew letters of Bar-Kokhba, some of the grammatical forms of which show that Hebrew was still a living language at that time (c. 135 C.E.). It should be mentioned, however, that at that period, and for centuries before, other languages were spoken concomitantly by the Jewish communities of Palestine, mainly Aramaic and Greek. The use of Hebrew as a spoken language became more and more limited, and finally it was superseded by Aramaic and Greek. Although the exact time when Hebrew ceased to be spoken is not known, there is no unequivocal evidence for the use of Hebrew as the ordinary spoken language of any Jewish community in a period later than the second century. It may be assumed, therefore, that the period in which the use of Hebrew was limited to literature and liturgy only began about the third century C.E.

As a liturgical language Hebrew has been transmitted during this long period, and in fact up to the present day, in a number of forms which are known as the “traditional pronunciations” of Hebrew. This term denotes those pronunciations which have been used by the various Jewish communities in reading the Bible and the post-biblical literature and in prayers. Another term used for “traditional pronunciation” is “reading tradition,” or “liturgical reading tradition.” A few words explaining these terms are in order here. A “reading tradition” may be defined as a corpus of linguistic information, transmitted orally, upon which the correct reading of a text is based; a “liturgical reading tradition” is a reading tradition that is used in the transmission of those parts of the literature which have particular religious importance. The traditional pronunciations of Hebrew have been transmitted in the various communities over a long period. They still exist in Israel and in various Jewish communities of the Diaspora. In Israel, however, the traditional pronunciations are disappearing at a fast rate, as a result of the mutual contact among

the various communities, and of the influence of the current pronunciation of Hebrew.

The traditional pronunciations of Hebrew extant with most communities are of two major categories: (a) the pronunciations used in the reading of the Bible; (b) the pronunciations used in the reading of the post-biblical literature, primarily the Mishnah. In the pronunciations pertaining to the first category, the reading is based upon the vocalized text of the Bible, whereas in the second it is based, in many communities, upon an unvocalized text. This results from the fact that for the Mishnah no authorized vocalization exists that could be compared to the Tiberian vocalization of the Bible (which was accepted by all Jewish communities, except for the Samaritan, as the authoritative vocalization according to which the Bible should be read). Therefore, the reading of the Mishnah in most communities is based upon a text which does not possess vocalization signs and which, for many words, represents only their consonantal skeleton. The reader supplements those phonological entities that are not represented in the orthography according to the oral tradition of his community. In other words, in reading the Bible the reader gives each grapheme (that is, the letters and the vocalization signs) the phonetic value it has in the traditional pronunciation of the community. In reading the Mishnah, on the other hand, in addition to giving each grapheme the phonetic value it has in the traditional pronunciation of the community, the reader also supplements, according to the oral tradition of his community, those phonological entities which are not represented by the orthography. Since the oral traditions of the various communities differ from each other, it follows that the various reading traditions of the Mishnah disclose different forms of the same word. To illustrate the difference between the traditional pronunciation of the Bible and that of the Mishnah, the word *qereah* (קרה) “bald” may be taken. This word appears both in the Bible and in the Mishnah. In the Bible this word is spelled קרה and vocalized *qereah*, and the communities differ from each other in the phonetic values they give to the consonants and the vowels. Thus ק is pronounced as [g] or [q] by the Yemenite (the exact pronunciation depending on the district from which the individual reader comes; for further details, see below), as [q] by the Iraqi readers, and as [k] by the Ashkenazi and some of the Sephardi readers; the *◌* (the vowel sign *šere*) is pronounced as [e] by the Yemenite and Sephardi readers, and as [ey] or [ay] by the Ashkenazi; the ך is pronounced as [ħ], an unvoiced pharyngeal fricative, by the Yemenite and some of the Sephardi readers, but as [x] by the Ashkenazi. The situation is utterly different in the reading of the Mishnah. Here the word is spelled קרה, as it is in the Bible, but no vocalization signs appear in the text which would make a certain form of the word binding for a specific community. Therefore, there are differences among the communities as to the very form of the word – the Iraqi reading it as [*qareyah*], the Yemenite as [*qereħ*], all other communities as *qereah* (that is, a form identical to the biblical) – and not only in the phonetic values given to the consonants and the vowels.

**CLASSIFICATION OF THE TRADITIONAL
PRONUNCIATIONS OF HEBREW**

1. First, a differentiation must be made between the Samaritan pronunciation and all other pronunciations. Due to its specific features, the Samaritan pronunciation occupies a unique position within the bulk of the traditional pronunciations, and is of particular importance. We shall mention a number of the features typical of the Samaritan pronunciation: (a) the total disappearance of ן and in many cases also of ף; (b) the realization of the letter ך as [b]; (c) the existence of four degrees of length in the realization of the vowels, two of which are phonemic; (d) the realization of historical [i:] as [ə] (for example, the word הַבְּרִיָּים – Ex. 25:13 – is pronounced as *abbaddəm* – Z. Ben-Ḥayyim, *The Literary and Oral Tradition of Hebrew and Aramaic Amongst the Samaritans*, vol. III pt. 1, p. 40); (e) the distinction between the counterparts of the historical vowels ū, u and those of ō, o disappeared; in most cases, the realization of these vowels as either [o] or [u] depends on their position in the word. Thus Tiberian סוס, “horse,” is [sos] in the Samaritan pronunciation (Ben-Ḥayyim, *ibid.*, p. 37), whereas Tiberian שמו, “his name” is [se:mu] in Samaritan (*ibid.*). These features, and a number of others, make the Samaritan pronunciation unintelligible to the members of all other Jewish communities. In this connection it should also be mentioned that the Samaritan reading tradition of the Pentateuch is not based on vocalized texts. Such texts have not been used by the Samaritan community in the teaching of the traditional pronunciation, and in the reading of the Pentateuch. The Samaritan reader supplements the Pentateuch with the missing phonological entities according to the oral tradition transmitted in the community. In this respect the Samaritan traditional pronunciation differs from the traditional pronunciation of the Bible extant in all other Jewish communities, which use the Tiberian vocalization for the reading of the Bible.

2. The traditional pronunciations of the communities except the Samaritan are to be classified into three major groups: the Yemenite, the Sephardi, and the Ashkenazi.

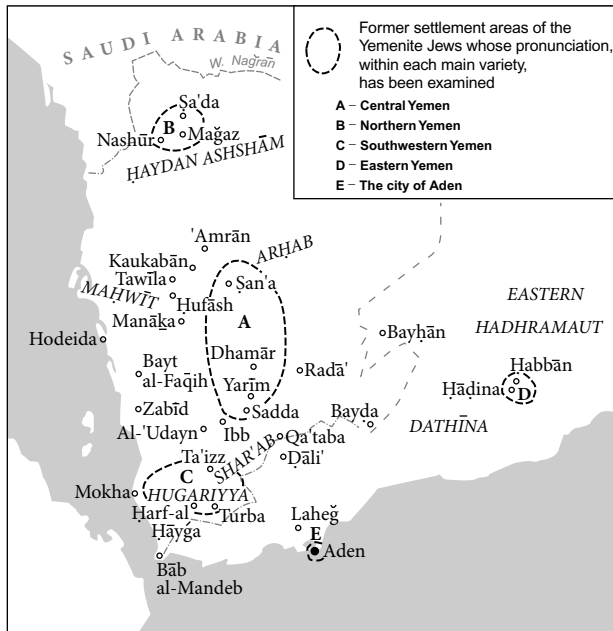

The Yemenite Pronunciation

Geographically isolated for generations, the Yemenite community has preserved a traditional pronunciation possessing a number of peculiar features. Some of these features, it is true, resulted from the influence of the pronunciation of the Yemenite Arabic vernaculars on the pronunciation of Hebrew. This influence is disclosed, e.g., in the realizations of ʔ (when having a *dageš*) by members of the community who originally came from various regions of Yemen as an affricate [ʔ], a velar [g], or a palatalized [gʲ]. These realizations correspond to the realizations of the Arabic phoneme [g] in the respective regions of Yemen (for which see below). Other features of the Yemenite pronunciation – particularly as regards the vowels – reflect, however, the traditional pronunciation of the Jewish community of geonic Babylonia. The correspondence between the present-day Yemenite pronunciation and the Babylonian pronunciation may best be proven by two pho-

netic phenomena: (a) the identity of the realizations of *pathaḥ* and *segol*; (b) the realization of *ḥolem* as *šere* by members of the communities of southwestern Yemen and of Aden. Both these phenomena are attested by the Babylonian vocalization, that is, the vocalization which reflects the pronunciation of Hebrew in Jewish communities of geonic Babylonia. However, whereas the former phenomenon is a regular feature of the Babylonian system of vocalization, which has only one vowel as the counterpart of both Tiberian *pathaḥ* and *segol*, this is not the case with the latter. The Babylonian system has signs for both *ḥolem* and *šere*; but in certain Babylonian manuscripts the signs for these two vowels interchange freely, and this indicates that in the pronunciation of the vocalizers of these manuscripts the two vowels were identical. Evidence for the identity of the realizations of *ḥolem* and *šere* by the Jewish communities of some provinces of Babylonia in the first half of the tenth century C.E. is borne also by a literary source, mainly al-Qirḳisānī's *Kitāb al'anwār walmarāqib*. It is, therefore, clear that the identity of the realizations of *ḥolem* and *šere* by members of some Yemenite communities reflects a feature of the pronunciation of Hebrew in geonic Babylonia, and the Yemenite community is the only community to have preserved the Babylonian pronunciation of Hebrew. In fact, Yemenite Jewry has been the recipient of the legacy of geonic Babylonia in other fields as well: for centuries the Yemenites have used the Babylonian vocalization, in periods when it has been completely unknown to other Jewish communities; the Yemenites have used the Babylonian recension of the Bible at least until the beginning of the 13th century C.E.; the Yemenite reading tradition of post-biblical Hebrew resembles in many of its morphophonemic and morphological features the Babylonian tradition of post-biblical Hebrew, which is reflected by manuscripts of the Mishnah and Midrashim possessing Babylonian vocalization. The Yemenites have preserved a stable tradition of the vocalization of Targum Onkelos and Targum Jonathan, a tradition which most probably received its final shape in geonic Babylonia.

The fact that Yemenite Jewry has been the recipient of the Babylonian traditions in a number of fields is to be seen in the light of the close relations that existed between the Jewish community of Yemen and that of Babylonia in the geonic period. Historical evidence for these relations is found in some Genizah documents.

The Yemenite tradition of biblical Hebrew is to be clearly differentiated from that of post-biblical Hebrew. In reading the Bible, the Yemenites use the Tiberian vocalization and matorah; however, they give the Tiberian vocalization signs the values they had in the traditional Babylonian pronunciation. Thus, no distinction is made in the Yemenite pronunciation between Tiberian *pathaḥ* and *segol* since in the Babylonian pronunciation of Hebrew these two vowels were identical. In other words, the Yemenite pronunciation of biblical Hebrew discloses phonological features of the Babylonian tradition, but the morphology of biblical Hebrew in this tradition is Tiberian. Hence it follows that in their pronunciation of biblical

Map 1. Major varieties of the traditional pronunciation of Hebrew in Yemen. After S. Morag, *The Hebrew Language Tradition of the Yemenite Jews, Jerusalem, 1963.*

Hebrew the Yemenites differ from other communities in aspects which are purely phonetic, but not in the morphology.

The situation is, however, different in the pronunciation of post-biblical Hebrew. The Yemenite reading of post-biblical Hebrew is not based upon vocalized texts, but upon an oral tradition of the vocalization. Therefore, the reading of these texts discloses in the morphology, and not only in the phonology, a number of specific features. Many of those morphological features are originally Babylonian. This is readily proved by comparing the morphology of post-biblical Hebrew as reflected by the Yemenite pronunciation with the morphology of Hebrew as represented by manuscripts of Mishnah and Midrashim possessing Babylonian vocalization. Thus, for example, both the Yemenite pronunciation and the manuscripts have **הֵן** for “they” (versus **הֵם** in biblical Hebrew) and **זֶן** for “pair” (versus **זָן** in other pronunciations).

It should be noted that the Yemenite pronunciation is not homogeneous. Within what is usually called “Yemenite pronunciation of Hebrew” five major groups may be distinguished, each group representing a different geographical zone of Yemen. These groups are:

- (a) central Yemen, around the capital Sa'na';
- (b) northern Yemen, the region of Ḥaydān ashshām – Sa'da;
- (c) southwestern Yemen, the region of Shar'ab;
- (d) Eastern Yemen, consisting of the communities of Ḥabbān and Hāđina;
- (e) the city of Aden.

The differences existing among these groups in the consonantal aspects of the pronunciation of Hebrew mostly cor-

respond to the differences which exist among the Arabic dialects of the respective geographical zones. This is not the case, however, as regards a number of variations in the pronunciation of the vowels, which do not reflect the influence of the Arabic dialects on the pronunciation of Hebrew. These variations probably disclose inner varieties of the Babylonian pronunciation, which, as seen above, is to be considered as the source of the Yemenite pronunciation of Hebrew. Of these features we shall mention the following: 1. the realization of *holem* as *šere* by groups (c) and (e); 2. the realization of *hireq* as a central vowel in group (d); 3. the realization of *qameš* as a back low unrounded vowel [ɒ] in group (d).

The Sephardi Pronunciation

This term denotes a rather large variety of pronunciations used by the Jewish communities of the Orient (except the Yemenite community, whose pronunciation as observed above, differs basically from that of the other communities of the Orient) and of North Africa, as well as by the Sephardi communities of Europe (such as the Dutch-Portuguese, the Sephardi communities of Greece, Bulgaria, Yugoslavia, and Italy). Among these pronunciations there are considerable differences, which are mostly due to the influence of the vernaculars of the respective communities on the pronunciation of Hebrew. Two features, however, are common to all the pronunciations known as “Sephardi” or Oriental (but non-Yemenite): lack of distinction between *pathaḥ* and *qameš* on the one hand (except a *qameš* is a closed unstressed syllable; see below), and *šere* and *segol* on the other. These two features are characteristic of certain manuscripts possessing ‘Palestinian’ vocalization. A certain variety of the ‘Palestinian’ pronunciation is, therefore, to be regarded as the source of the Sephardi pronunciation. By the term “Palestinian pronunciation” we denote the pronunciation reflected in manuscripts (mostly of *piyyutim* and of biblical texts) whose vocalization is called Palestinian, which was used by some communities of Palestine in a period approximately lasting from the sixth to the ninth century C.E. The Palestinian vocalization was apparently used in Palestine concomitantly with the Tiberian vocalization, but most probably not by the same communities. Each of these two vocalizations was based upon a different reading tradition, and in a general way it may be said that the Tiberian vocalization reflects a more classical and more pure reading tradition than the one reflected by the Palestinian. The latter vocalization is apparently based upon a more popular, or rather “vulgar,” reading tradition. It may be added here that the Palestinian vocalization and pronunciation disclose a number of affinities with the vocalization and pronunciation of Samaritan Hebrew. The Palestinian pronunciation was adopted by many communities, far beyond the boundaries of Palestine, as the standard pronunciation of Hebrew, the pronunciation to be used in the liturgy and the teaching of the language. The Tiberian pronunciation, on the other hand, had, for some time at least, a classical standing. However, in spite of this classical standing of the Tiberian pronunciation, the Sephardi communities, some of which,

particularly those of Spain and North Africa, may have used the Babylonian pronunciation during a certain period, finally adopted the Palestinian pronunciation. This may have resulted from the fact that the use of the Tiberian pronunciation was current only in a rather small group of Masoretes, whereas that of the Palestinian was far more common. The Palestinian pronunciation was probably first transplanted from Palestine to Italy, and later, when the influence of Italian Jewry on the Jewish communities of Spain became prominent, it was transplanted from Italy to Spain (this transplantation possibly took place in the time of Rabbi Moses ben Ḥanokh, in the second half of the tenth century C.E.). After the expulsion of the Jews from Spain, the Palestinian pronunciation, known by then as the Sephardi pronunciation, was transferred by the emigrants to the many communities in which they settled. These communities include the Dutch-Portuguese community of Amsterdam and the Sephardi communities in the Mediterranean countries (Italy, Yugoslavia, Bulgaria, Greece, Turkey, North Africa). The communities of the East (Syria, Palestine, Egypt, Persia) apparently used the Palestinian pronunciation for generations prior to the expulsion of the Jews from Spain.

The term “Sephardi” (or “Palestinian-Sephardi”) pronunciation comprises in fact a number of pronunciations which differ from each other in a number of details, such as the pronunciation of the gutturals (for which see below). The features common to all varieties of pronunciations which are called “Sephardi” are, as stated above, lack of distinction between *pathaḥ* and *qameṣ* on the one hand, and between *šere* and *segol* on the other. The term “Sephardi” reading tradition when applied to the post-biblical literature (primarily the Mishnah) is a general term, covering a number of reading traditions, such as the Iraqi, the Aleppo, the Moroccan, etc. As yet the Sephardi reading traditions of the Mishnah have not been sufficiently studied, and an exhaustive description of their features is not possible. We shall therefore present here only a few phonological and morphological features of the “Sephardi” reading traditions of the Mishnah.

PHONOLOGICAL FEATURES. A number of Sephardi reading traditions of the Mishnah have a *quiescent šewa* in forms which in the reading of the Bible have a *mobile šewa*. This occurs when a medial *šewa* follows a *qameṣ* or a *holem*, in forms like *שְׁמֵרָה*, *שְׁמֵרִים*, *שְׁמֵרִים*. In such forms all the “Sephardi” pronunciations have in the reading of the Bible a *mobile šewa* (with primary stress on the last syllable, and secondary stress on the syllable preceding the *šewa*), that is, *šame’ra*, *šome’rim*. In the reading of the Mishnah a number of “Sephardi” communities have in these forms a *quiescent šewa* (with primary stress on the syllable preceding the *šewa*), that is, *šamra*, *šomrim*. Another phonological (or, to be more precise, morphophonemic) feature in which the “Sephardi” reading traditions of the Mishnah differ from the “Sephardi” reading traditions of the Bible is disclosed by the distribution rules of the hard and soft realizations of those consonants of the *בגדכפ”ת* series for which the traditional pronunciations of the respective com-

munity have a double realization, hard and soft (for the realization of *בגדכפ”ת* consonants, see below). In the reading of the Bible the distribution rules of those */bgdkpt/* consonants for which the Sephardi communities have a double realization agree with the distribution rules of the Tiberian vocalization. This is not, however, the case in the reading of the Mishnah. Thus, for example, a number of Sephardi reading traditions of the Mishnah have a hard realization of a *בגדכפ”ת* consonant when this consonant follows an initial preposition whose vowel is a *šewa*. Such a realization – e.g., in the form *bekerem*, “in a vineyard” – stands in contradiction to that extant in the reading of the Bible, which is, in the form given here, *bekerem*.

MORPHOLOGICAL FEATURES. Morphologically, the Sephardi reading tradition of post-biblical Hebrew is not homogeneous, that is to say, there are differences in the forms of words in the various traditions, e.g., in the Iraqi tradition as compared with that of Aleppo, Morocco, and other traditions. There is lacking, for the time being, sufficient information as to the morphological structure of post-biblical Hebrew in the various Sephardi traditions; therefore, we shall mention here only two features which are shared by many of those traditions.

(1) The use of the pausal forms of the third person, fem. sing. and masc. plur., in the *hofʿal* stem (e.g., *huqama*, “she was raised,” *huqamu*, “they were raised”) as the usual forms, that is, the forms which appear both in pausal and contextual positions.

(2) The appearance of *-ak* as the pronominal suffix for the second person masc. sing., as in e.g., *kevodaḵ* “your (masc. sing.) honor” (sometimes, in some traditions side by side with *kevodeka*).

The Ashkenazi Pronunciation

The term “Ashkenazi” pronunciation is used to denote a variety of pronunciations used by the communities of Eastern and Central Europe and by immigrants from these communities who settled down in other parts of the world. We shall first survey briefly the salient features of the Ashkenazi pronunciation in the consonantal and vowel system. As regards the former system, the Ashkenazi pronunciation possesses two main features, which are shared by all its varieties, namely:

(a) the realization of *ʿ* as *ʔ* that is, as “zero” (in some varieties of the Ashkenazi pronunciation [*n*] appears sporadically as the reflex of *ʿ*; this [*n*] may appear also as the reflex of historical *ʔ*, e.g., *kanšer*, “when” (Heb. *כַּאֲשֶׁר*)).

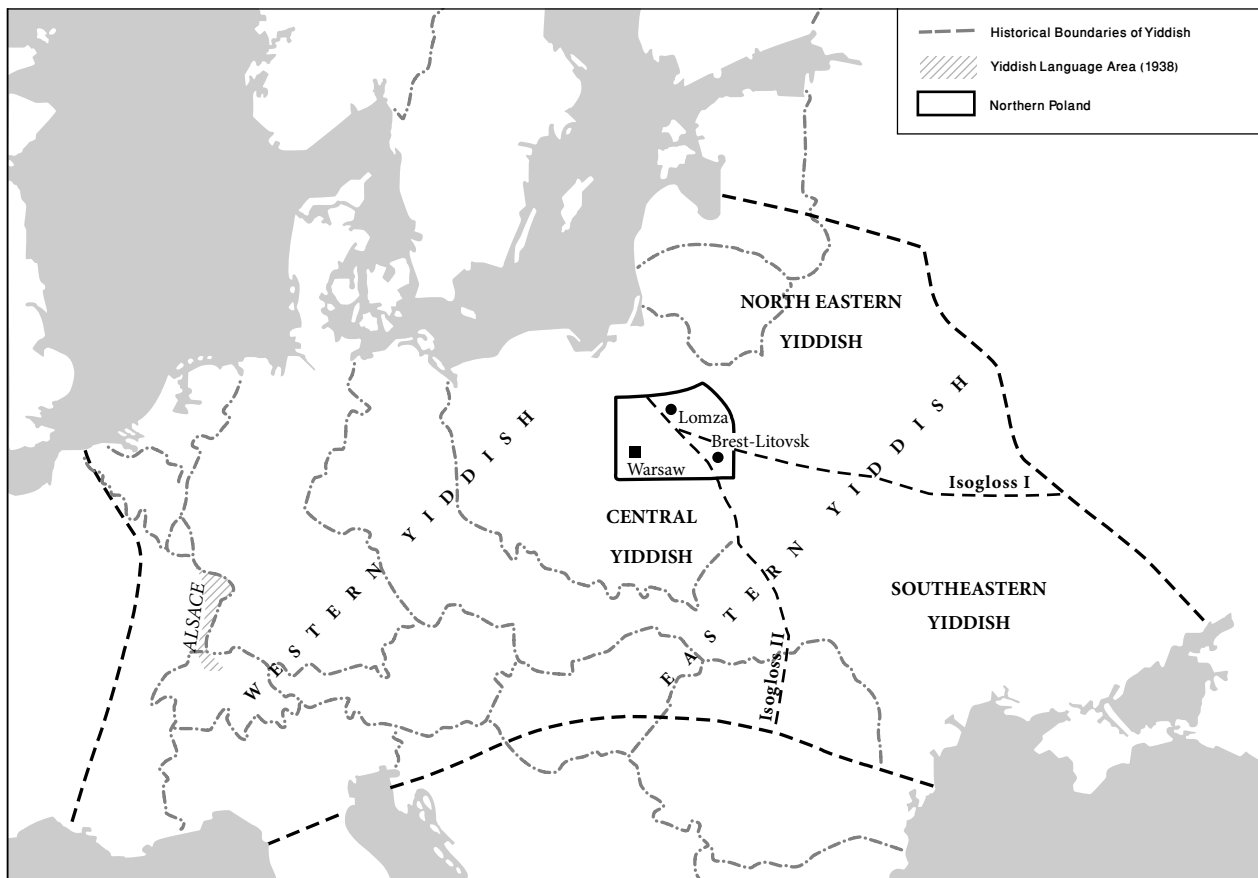

(b) the realization of the soft *ת* as [*s*], e.g., *ʿbayis*, “house.”

The vowel system of the Ashkenazi pronunciation is far from being homogeneous. Thus the *holem* is pronounced as [*ey*], and its realization is identical to that of the *šere*, in the northeastern variety of the Ashkenazi pronunciation (this variety is more commonly called the “Lithuanian”); as [*oy*] in the southeastern and central variety; as [*aw*] in many of the subtypes of the western varieties; as [*ow*] in those

varieties of the Ashkenazi pronunciation used in the last generations in English-speaking countries. By and large the geographical distribution of the main varieties of the Ashkenazi pronunciation agrees with that of the dialects of Yiddish.

To quote another illustration of the heterogeneity extant in the Ashkenazi pronunciation as to the realizations of the vowels: the *qameš* is realized, in different varieties of the Ashkenazi pronunciation, as [o] or [u]. Of all the three major groups into which the traditional non-Samaritan pronunciations of Hebrew are divided, the Ashkenazi pronunciation is the only one to possess distinct phonetic realizations for all seven vowel graphemes of the Tiberian vocalization system: *šureq-qibbuš* (the *qibbuš* in the Tiberian vocalization is an allograph of the *šureq* and does not denote a different vowel phoneme), *holem*, *qameš*, *hireq*, *šere*, *segol*, and *pathah*. In the Yemenite pronunciation, which reflects the Babylonian, there is no distinction between *pathah* and *segol* (see above); in the Sephardi, which continues the Palestinian, there is no distinction between *qameš* and *pathah* on the one hand and between *šere* and *segol* on the other. In the course of time, however, some varieties of the Ashkenazi pronunciation developed a leveling of the realizations of two of the seven Tiberian vowels. In the northeastern (“Lithuanian”) variety the realization

of the *holem* had been equaled with that of the *šere*, both becoming consequently [ey]; in most, if not all, subtypes of the southwestern and central varieties the realization of the *šureq-qibbuš* had been equaled with that of the *hireq*, both becoming consequently [i] or rounded [i]. These developments within the Ashkenazi pronunciation resulted from parallel developments in the Yiddish dialects of the regions in which the above varieties of the Ashkenazi pronunciation were used. The fact that the Ashkenazi pronunciation had originally possessed distinct phonetic realizations for all seven vowels of the Tiberian vocalization system led some scholars to surmise that the Ashkenazi pronunciation constitutes, in its vowel system, a direct continuation of the Tiberian pronunciation. This opinion, however, cannot be accepted since there is evidence that until the 13th century C.E. the Sephardi pronunciation was used by the Ashkenazi communities. The above evidence is borne out by various sources (vocalized texts, transcriptions of Hebrew words in Latin character, notes in grammatical treatises), which show that in Ashkenazi communities until the 13th century C.E. the *qameš* was realized as *pathah* and the *šere* as *segol*, and these two features are typical of the Sephardi pronunciation. The evidence is reinforced by certain Hebrew loanwords in Yiddish in which historical *qameš* is reflected by *pathah* and historical *šere* by *segol*.

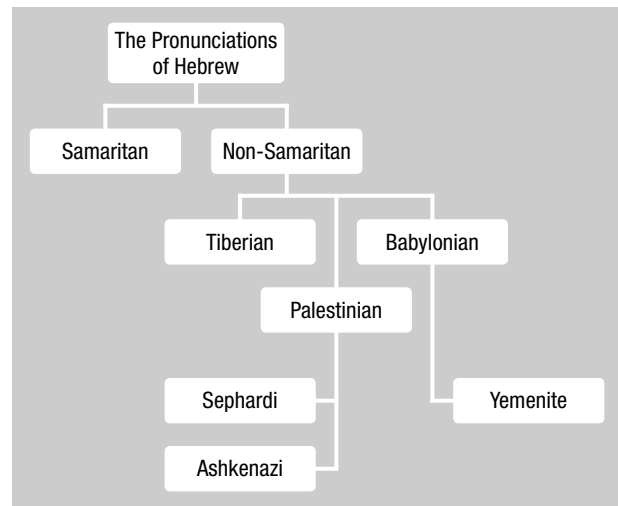

Map 2. Traditional classification of Yiddish dialects. After M. I. Herzog, *The Yiddish Language in Northern Poland*, Bloomington, Indiana, 1965.

How can the fact be explained that until the 13th century C.E. there prevailed in the Ashkenazi communities (or, at least, in a number of them) the Sephardi pronunciation, making no distinction between *qameš* and *pathah* on the one hand and between *šere* and *segol* on the other, and later these communities developed the Ashkenazi pronunciation, which differentiates between the above vowels? Max *Weinreich suggested that the pronunciation which is known as Ashkenazi was formed, in its main features, in Central Europe approximately in the 13th century; until that period the pronunciation used by the Ashkenazi communities was rather close to the Sephardi. The formation of the Ashkenazi pronunciation at that time in Europe resulted from the introduction of the Tiberian pronunciation (mainly as concerns the vowel system) into the Ashkenazi communities, this introduction being made by “Babylonian” scholars and teachers who immigrated to Central Europe from Babylonia (Iraq). By that time, and in fact for generations before, the original Babylonian pronunciation (for which see above) had been superseded in the Babylonian communities by the Tiberian. The Babylonian teachers and scholars were the carriers of the Tiberian pronunciation, and its transplantation into the Ashkenazi communities is due to their activity in these communities. The introduction of the Tiberian pronunciation into the Ashkenazi communities, which, according to Weinreich, played a major role in the formation of the Ashkenazi pronunciation, is a part of a more general process that took place at that time in Ashkenaz, and which Weinreich calls “The Babylonian Renaissance.” Weinreich’s theory is weak in that there is not sufficient historical evidence for the transplantation of the Tiberian pronunciation into the Ashkenazi communities through the medium of “Babylonian” scholars and teachers. The explanation offered by Yalon, with whom Weinreich agrees as to the very existence of a Sephardi pronunciation (or a pronunciation close to the Sephardi) in the Ashkenazi communities prior to the 13th century, is more plausible. Yalon’s opinion is that the development of the distinction between *qameš* and *pathah*, as well as between *šere* and *segol* – that is, of the main features in the vowel system in which the Ashkenazi pronunciation differs from the Sephardi – is due to the influence of the vowel system of Yiddish of that period (the Judeo-German dialects of the 13th century) on the pronunciation of Hebrew current in the Ashkenazi communities. In these dialects there was a sound shift *a > o* (cf. e.g., German *das*, Yiddish *dos*, “this”), and this sound shift brought over the realization of the *qameš* (which had been realized before as a *pathah*, that is, as [a]) as [o] in the Ashkenazi pronunciation of Hebrew. The rise of the differentiation between *šere* and *segol* followed a similar course.

Classification of the Pronunciations of Hebrew

The classification of the pronunciations of Hebrew is presented in two charts, the first showing the historical aspects of the classification (See Table 1: Hebrew Pronunciations – Historical Classification), the second indicating the present-day ramifications (or, to be more precise, the ramifications that existed,

Table 1. Historical classification

especially as to the varieties of the Ashkenazi pronunciation, until the extermination of the Jewish population of central Europe during World War II). (See Table 2: Hebrew Pronunciations – Present-day Classification.)

Chart: Hebrew Pronunciations – Historical Classification shows that whereas the Babylonian pronunciation was continued by the Yemenite and the Palestinian by the Sephardi and (indirectly – see above) by the Ashkenazi, there is no direct continuation of the Tiberian pronunciation in any of the pronunciations that were adopted by the Jewish communities. The present-day classification of non-Samaritan Hebrew pronunciation is as follows:

The Yemenite ramifications divide into Central, Northern, Southwestern, Aden, and Eastern.

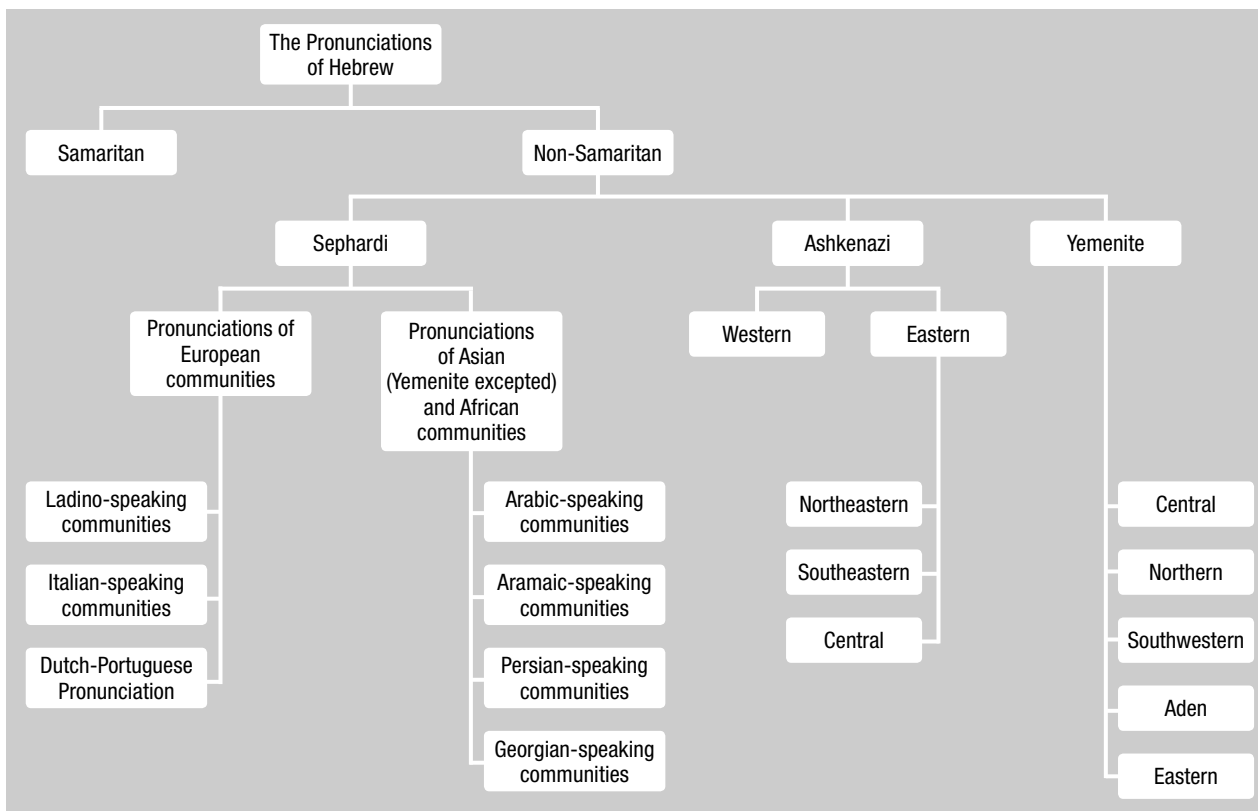

The Ashkenazi branches are Western and Eastern. The Eastern further subdivides into Northeastern, Southeastern, and Central.

Among the Sephardi pronunciations there are those of the European communities – Ladino-speaking communities, Italian-speaking communities, and Dutch-Portuguese pronunciation – and the pronunciations of the Asian (Yemenite excepted) and African communities – Arabic-speaking communities, Aramaic-speaking communities, Persian-speaking communities, and Georgian-speaking communities.

THE REALIZATIONS OF THE CONSONANTS AND THE VOWELS AND THE STRESS PATTERNS IN THE VARIOUS PRONUNCIATIONS

First, a word of comment on the term “realization.” In describing the sounds extant in the traditional pronunciations of Hebrew we have to deal with a pronunciation of a literary language transmitted from generation to generation through a reading tradition. In each of these reading traditions specific phonetic values are given to the letters that represent consonants and vowels, as well as to the vocalization signs which represent vowels and some other phonological entities. These

Table 2. Present-day classification

phonetic values are called the realizations of the letters and the vocalization signs. (See Table 3: Realization of Graphemes.)

The Consonants

בגדכפ"ת. The realization of these letters as plosives [bgdkpt] in initial position and medially after a consonant and as fricatives [vɣdkft] is attested in the Middle Ages in all Arabic-speaking communities, including Spain, and in France (I. Garbell, in: *Bulletin de la Société de Linguistique de Paris*, 50 (1954), 232). Of the pronunciations of Hebrew extant today, only the Yemenite pronunciation, and that of the Aramaic-speaking communities of Zakhō (near Mosul, in Iraqi Kurdistan) differentiate the plosive series from the fricative series in the realizations of all the six letters. Other communities have fricative counterparts for the plosive realizations of some of the letters only, and the details will be given here. The realization of each of the **בגדכפ"ת** letters in the various communities will be presented according to the phonetic order of these letters (that is, in the order, פ, ב, ת, ד, כ, and ג).

For the letter פ, there exist in all communities, but for the Georgian-speaking community of the Caucasus, a plosive, [p], and a fricative, [f], realization for the hard and the soft p respectively. The Georgian-speaking community has only the plosive realization [p] for both hard פ and soft פ. Members of Arabic-speaking communities tend to replace [p] by [f] as the

realization of hard פ, but all these communities have both [p] and [f] as the realizations of hard and soft פ respectively.

The letter כ is constantly, whether hard or soft, realized as the plosive [b] by many Arabic-speaking communities (those of Iraq, Syria, Egypt, Libya, North Tunisia, and Algeria), as well as by the Dutch-Portuguese community of Amsterdam and by some Italian communities, such as the community of Leghorn. In the Yemenite community, the learned members distinguish between the plosive realization, [b], for hard כ and the fricative realization, [v], for soft כ; other members of the community have [b], or both [b] and the bilabial fricative [β], as the realizations of the letter כ, hard or soft. Such a free variation between [b] and [β] is found also in other communities, namely those of eastern Kurdistan, the island of Djerba, southern Algeria and some of the provinces of Morocco. In the Persian-speaking communities, hard כ is realized as [b], soft כ as either [β] or [v], and, in the vicinity of a back vowel, as the semivowel [w]. This realization of soft כ as [w] also occurs, when it comes at the end of a syllable, in some communities in the northwestern part of Italy. The Georgian-speaking community has only [b] as the realization of both soft and hard כ. All the communities not mentioned here have [b] and [v] as the realization of hard and soft כ, respectively.

The letter ת, when hard, is realized as voiceless (or fortis) dental (or alveolar) plosive by all communities but not a few exceptions: in some communities of Yemen, affricate [ts]

occurs (mostly as a free variant of [t]). When it is soft, it is realized as [s] by the Ashkenazi communities, as interdental voiceless [t̪] by the Yemenite community, the Arabic-speaking Iraqi community, and the Aramaic-speaking community of Zakho in northern Iraq; as [d] by the communities of Italy (but for the Sephardi communities of this country); and as voiced interdental or postdental [d̪] by the Cochin community of India. All other communities have [t] as the realization of both hard and soft ת, but for some communities of Morocco which have the affricate [ts] for both hard and soft ת.

Only relatively few communities differentiate the realization of soft ׀ from that of hard ׀. Soft ׀ is realized as an interdental [d̪], whereas hard ׀ is [d], by the Yemenite community, by the Aramaic-speaking Zakho community of northern Iraq (where [z] appears as a free variant), and by a number of communities in the Balkan countries. The Arabic-speaking community of Iraq has [d] as the realization of soft ׀ only in a few words: in the divine name [ʔadonay] and in the word [ʔehad], “one,” but only when occurring in the first verse of *Qeriat Shema*. In all other words [d] is the realization of both hard and soft ׀ in the Iraqi community.

כ is realized as a voiceless velar stop, [k], when hard, and as a voiceless velar fricative [k̟], when soft, by all communities but for the Samaritan, who has [k] for both hard and soft כ.

ג, when soft, is realized as a voiced velar fricative, [g̟], by most Arabic-speaking communities, as well as by some communities of the Balkans. The Dutch-Portuguese community has a voiceless velar fricative, [k̟], as the realization of soft ג. All communities not mentioned here have only one realization, [g], for both hard and soft ג. This is also the realization of hard ג in the above communities who do maintain this differentiation, except for certain Yemenite communities. The communities of central Yemen have a voiced prepalatal affricate, [g̟], as the realization of hard ג; those of extreme eastern Yemen, and some of those of northern Yemen – a voiced prepalatal plosive, [gʔ].

THE GUTTURALS. *The Laryngeals.* The letter ׀ is realized as a glottal stop, [ʔ], in most pronunciations. It should be noted, however, that in the Ashkenazi pronunciation, and occasionally, but much less frequently, also in some Sephardi (including the Italian) and Yemenite pronunciations, it may be realized as zero, that is, it is not represented by any sound. In some Ashkenazi pronunciations the contact between two vowels caused by the elision of ׀ in medial intervocalic position gives birth to a glide. In the Georgian-speaking community as well as in some North African communities, and in the community of Cochin (India), [h] appears as free variant of ׀.

The letter ׀ is realized as a glottal fricative [voiced or voiceless] by most communities. In the Italian-speaking communities its realization is, however, zero, as that of ׀. In some Ashkenazi communities, as well as in some communities of the Balkan countries, and in a great number of communities located in the area stretching from Libya to southeast Morocco, it varies freely with the realizations of ׀, that is also with zero.

Final consonantal ׀ (׀ with a *mappiq*) is realized as [h] in the Yemenite pronunciation and in those of some other Arabic-speaking communities. In the Ashkenazi communities and in most Sephardi communities of Europe it is generally realized as zero. In the Dutch-Portuguese community it is realized as [aha].

The Pharyngeals. The realizations of the letters ׀ and ׀ as voiceless and voiced pharyngeal fricatives, [ħ] and [ʕ], respectively, are found in all Arabic-speaking communities and in most Aramaic-speaking communities. Most of the Persian-speaking communities, however, have [h] as the realization of ׀, and zero as that of ׀. ׀ is realized as a voiceless velar fricative, [k̟], by all European communities, both Ashkenazi and Sephardi, and by the Georgian-speaking community. ׀ is realized as [ʔ] or zero by all of the European communities, with the exception of those of Italy and the Dutch-Portuguese of Amsterdam. The latter communities have a voiced velar nasal, [ŋ] – the sound of *ng* in the English word “king” – as the realization of ׀. The Georgian-speaking community has for this letter a voiceless glottalized uvular plosive, [qʔ], in initial and final position; intervocally it is realized as a voiced laryngealized uvular fricative.

THE EMPHATICS. ׀ is realized identically to its non-emphatic counterpart, ׀ in the pronunciations of the Ashkenazi, Italian, Dutch-Portuguese, and Sephardi communities of Europe, as well as in the pronunciation of the communities of Persia and eastern Kurdistan (in the pronunciation of the Kurdish communities, however, a historical ׀ is reflected in the quality of the phones of the word, which became emphatic). In the Arabic-speaking communities, the Aramaic-speaking community of Iraqi Kurdistan and in the Georgian-speaking community the realization of ׀ differs from that of ׀: it is a velarized dental (or alveolar) voiceless (or fortis) plosive, [t̪], in most Arabic-speaking communities and in the aforementioned Aramaic-speaking community; either [t̪] or [d̪], the voiced (or lenis) counterpart of voiceless (or fortis) [t̪], in the Yemenite community, and [t̪ʔ], a voiceless glottalized dental plosive in the Georgian-speaking community.

׀ is realized as a voiceless dental affricate [ts] by the Ashkenazi, Italian, and Dutch-Portuguese communities; as [s̪], a velarized hissing sound, in the Arabic-speaking communities and the Aramaic-speaking community of Iraqi Kurdistan; as a non-emphatic [s] – its realization being identical to that of ׀ – in the Persian-speaking communities, in the Aramaic-speaking communities of eastern Kurdistan and Azarbaijan, in the Georgian-speaking community, in the community of Cochin (India), and in some communities of the Balkan and North African countries.

׀ is realized identically to its non-emphatic counterpart, ׀, in the Ashkenazi, the Italian, the Dutch-Portuguese, and the other Sephardi communities of Europe, in some Algerian and east Moroccan communities, and a number of Persian-speaking communities. In the following communities ׀ is realized in a way different from ׀: in the communities of central, north-

1. In some communities.
2. In some North African communities a sound intermediate between z and ž.
3. In some North African communities a sound intermediate between š and s (for these communities see also footnote 4).
4. No distinction between ט (and ת) and טׁ; both realized as š or as a sound intermediate between š and s.
5. For North African communities see D.
6. In Iraq.
7. Merger of šureq-qibbuš and holem into one phoneme, whose allophones are o, u.
8. In North African communities merger of holem and šureq-qibbuš into one phoneme, whose allophones are o, u.
9. In German-speaking communities: aw.
10. Merge of these phonemes into one phoneme: ε; allophones: e, a.
11. Šewa ga'ya = a; šewa preceding y=i.
12. In some communities as in the Yemenite pronunciation, but less consistently.

Notes to Table 3.

1. Two or more phonetic signs are given as the realizations of any letter (or of a vowel sign) in a specific community, when the letter has two or more realizations, the relationship between them being that of “free” or “positional” allophones (that is, sounds whose articulation depends on their position in the word, the preceding and the following sounds, the structure of the syllable, etc.).

One of the phonetic signs that represent the realizations of a letter comes in brackets when it is less common than the other realizations, or when it is used only by a part of the community in question.

2. c stands for “consonant.” CC = a geminated, double, consonant.

3. The sign \sim above a letter representing a vowel, denotes that the vowel is ultrashort, e.g. [ä] = ultrashort [a].

4. A long vowel is denoted by a line above it, e.g. [ā] = long [a].

ern, and eastern Yemen it is realized as a voiced velar or uvular plosive [g] or [g̃]. In the communities of southwest Yemen and Aden it is realized as a voiceless uvular plosive, [q], which has, particularly in the community of Aden, a voiced uvular fricative, [ʙ], as its variant in certain positions. In some Persian-speaking communities ʔ is realized as a voiced uvular stop, [g̃], which has as its variant a voiced uvular fricative [ʙ]; other Persian-speaking communities realize ʔ as [k]. Many Arabic-speaking communities and those speaking Aramaic have a voiceless uvular plosive, [q], as the realization of ʔ. In the community of Aleppo, as well as in some communities of Algeria and Morocco, ʔ is realized as a glottal stop, [ʔ]; in these communities, however, this realization of [ʔ] exists alongside with [q]. In the communities of southern Algeria and Cochín, ʔ has a velar, or uvular, voiceless fricative, [k], as its realization (along with the realization [q]). In the Georgian-speaking community ʔ is realized as a velar-uvular affricate, [kʙ].

THE SIBILANTS. No community maintains the distinction that existed in biblical Hebrew between the phonemes represented by the letters ʃ, ʂ, and ʃ. In the Samaritan community the realization of ʃ is identical to that of ʃ; in all other communities the realization of ʃ is equal to that of ʂ. Most communities realize ʃ as an unvoiced hushing sound, [ʃ], and ʂ (as well as ʃ) as an unvoiced hissing sound, [s]. Exceptions are the following:

(1) In the northeastern (“Lithuanian”) Ashkenazi and some North African communities, no distinction was made between the realization of ʃ on the one hand and that of ʂ (and ʃ) on the other, the exact articulation of the sound representing both ʃ and ʂ (and ʃ) – whether [ʃ] or a sound intermediary between [ʃ] and [s] – varying locally. This pronunciation, which corresponds to dialectal features of northeastern Yiddish, tended to disappear after about 1930. A similar phenomenon occurs in some Moroccan communities in which

both ʃ and ʂ (and ʃ) are realized as a sound intermediary between [ʃ] and [s], or as [s].

(2) In some communities of Greece the realization of ʃ as [ʃ] has a variant [s].

(3) In the communities of northwest Italy, and to a lesser extent in the communities of northeast Italy, ʃ is realized as [s].

ʔ is realized by most communities as a voiced hissing sound, [z]. In some Italian-speaking communities it is realized as a voiceless hissing sound, [s]; in other communities as an affricate, voiced, [dz], or voiceless, [ts]. In both categories of these communities, the exact realization of ʔ depends on the position of the letter in the word. In some communities of Morocco it is realized as a sound intermediary between [z] and [ž].

RESH. The letter ʀ is realized as an apical flap or trill, [r], by most of the Arabic-speaking, Aramaic-speaking, and Persian-speaking communities as well as by the Sephardi communities of Europe. Most of the Ashkenazi communities, on the other hand, realize it as a voiced velar fricative [g̃], or a velar frictionless continuant; some Ashkenazi communities, however, realize ʀ as an apical flap or trill, [r].

THE SEMIVOWELS. The letter ʁ is realized by most Arabic-speaking communities as the semivowel [w]; in some communities of Syria and Egypt, as well as in northwest Morocco, it is realized as a labiodental voiced fricative, [v]; in the communities of northeast Morocco the realization [w] has the variant [v]; in some communities of Algeria [w] is realized as a bilabial voiced stop, [b]. In the Aramaic-speaking communities ʁ is realized as [w]; this realization, however, has a bilabial voiced fricative, [β], as its variant. In the Persian-speaking communities the realization of ʁ is identical to that of soft ʁ: it is either a bilabial voiced fricative, [β], or a labiodental voiced fricative, [v]; in the environment of a back vowel it has as its variant the semivowel [w]. Some Italian-speaking communities realize as [v] when it comes in initial and medial position, but as [w] in final position.

All Ashkenazi communities have [v] as the realization of ʁ.

The letter ʁ is realized by the great majority of the communities as the palatal semivowel [y]. Some communities have for this realization the variants [i] or [ʔi], the particular positions in which these variants occur differing for the various communities. In some communities in northeast Italy, ʁ, when occurring at the beginning of a syllable, is realized as the voiced prepalatal affricate, [ç]. According to the medieval grammarians Profiat Duran and Abraham de Balmes, such was the realization of geminated ʁ in Provence and Italy.

GEMINATION. The *dageš forte* is realized by doubling the consonant in the Arabic-speaking communities and the Aramaic-speaking communities of eastern Kurdistan. However, a single consonant occurs in some of these communities as the realization of a letter which has a *dageš forte*, particularly in

an unstressed syllable. Most of the Italian-speaking communities also have a doubling of the consonant as realization of the *dageš forte*; the communities of northeast and northwest Italy, however, tend to realize a letter with a *dageš forte* in a way identical to that of a letter not possessing a *dageš forte*.

All the Ashkenazi communities, as well as the Persian-speaking communities, disregard the *dageš forte* in their traditional pronunciations.

The Vowels

The basic features of the vowel systems of the three major groups of the traditional pronunciations, in their relation to the Tiberian system of vocalization, were described above. We shall now present the realizations of the vowels in the various pronunciations.

ŠUREQ-QIBBUŠ שׁ, שׂ. The Ashkenazi communities of the regions in which southeastern and central Yiddish was spoken – that is the Ukraine, Poland, Western Hungary, Western Slovakia, etc. – realize the *šureq* and the *qibbuš* as [i], or, some of them, as [ü] (rounded [i]). A realization of the *šureq* and the *qibbuš* as [ü], or as a centralized variant of this vowel, [ɨ], also exists in a number of other communities – in some communities of Yemen, in Shiraz (Persia), Azarbaijan, in western Kurdistan, in some communities of northwestern Morocco, in northwestern Italy – but in most of these communities the realizations in question, rounded [i] and [ɨ], are in fact variants of [u]. Since *qibbuš* appears in the vocalization of the Bible mostly in closed unstressed syllable, some scholars stated that in these communities a realization of the *qibbuš* is found – rounded [i] or [ɨ] – which differs from that of the *šureq*, which is [u]. But the situation is not so. Today a consistent and regular differentiation between the realization of the *šureq* and that of the *qibbuš* does not exist in any community.

For communities in which the difference between the realizations of the *šureq* (and the *qibbuš*) and that of the *holem* was neutralized, see below.

ĤOLEM ה, ח. In two groups of communities, which were geographically located quite apart, the realization of the *holem* was identical with that of the *šere*: in the communities of the regions in which northeastern (“Lithuanian”) Yiddish was spoken, and in the communities of southwest Yemen (as well as in the community of Aden): in the former group both the *holem* and the *šere* were realized as [ey], in the latter as [e]. From a historical point of view, however, there is no relation between the realization of *holem* as *šere* in these two groups of communities. In the “Lithuanian” communities this realization apparently resulted from an interference of Yiddish in the traditional pronunciation of Hebrew. In the pronunciation of the aforementioned Yemenite communities, the realization of *holem* as *šere* constitutes a feature of the pronunciation that prevailed in some Babylonian communities of the geonic period (see above).

The communities of the regions in which central and southeastern Yiddish was spoken realized the *holem* as [oy],

some German-speaking communities as [au], English-speaking communities as [ou]. In the communities of central, northern, and eastern Yemen – that is, in all Yemenite communities but for these in which *holem* is realized as *šere* (see above) – the *holem* is realized as a lower-mid rounded central vowel, [ö] (quite similar to the realization of *eu* in French *peur*). A similar realization of the *holem* is attested in the Aramaic-speaking communities of Persian *Azerbaijan.

QAMEŠ AND PATHAĤ קָ, פָּ. All the Sephardi communities of Europe, the Italian communities, the Dutch-Portuguese communities of Amsterdam, and all the Asian and African communities – but for the Yemenite and the Persian (to some extent – see below) – do not differentiate between the realization of *qameš gadol* (that is, a *qameš* not occurring in a closed unstressed syllable) and that of a *pathaĥ*: they are both realized as a low front (or, in some communities, low central) vowel, [a]. This is a feature typical of the Sephardi pronunciation. In the Aramaic-speaking communities of eastern Kurdistan and Persian Azerbaijan a historical *qameš gadol* (which is realized as [a]) is reflected by the emphaticization of the phones of the word in which it occurs. All the above-mentioned communities realize *qameš qatan*, i.e., *qameš* which comes in a closed unstressed syllable (and which historically reflects the phoneme [u]) as [o], that is as a *holem*. It should be noted, however, that the communities in question make two exceptions to the realization as [o] of *qameš* which historically reflects the phoneme [u], namely:

(1) A *qameš* preceding a *hatef-qameš*, e.g., in קָמֶשׁ הַתֶּפֶן, is consistently regarded by these communities as a *qameš gadol*, and is realized as [a]. This realization of the *qameš* originated in the fact that these communities regard the *metheg* that follows a *qameš* preceding a *hatef-qameš* as indicating that the **qameš* is a *qameš gadol* (whereas in fact it indicates that the syllable is open and that it has secondary stress).

(2) In the word קָל, but only in two instances in the Bible (Ps. 35:10; Prov. 19:7) the *qameš* is realized as [a], that is, this word is pronounced [kal]. The reason for this lies in the fact that in these two instances the word קָל has an accent, and this has been taken by the communities whose pronunciation is Sephardi to indicate that the *qameš* is a *qameš gadol*, which is realized as a *pathaĥ*, namely [a] (see Z. Ben-Ḥayyim, *Studies in the Traditions of the Hebrew Language* (1954), 71–72).

The Ashkenazi, the Yemenite, and some Persian communities differentiate between the realizations of *qameš* (*qameš gadol* as well as *qameš qatan*: no distinction is made in these communities between these entities) and that of *pathaĥ*. In the Ashkenazi communities the *qameš* is realized as [o] or [u] (the latter realization prevailing in communities of the region in which central and southeastern Yiddish is spoken). Most of the Yemenite communities realize the *qameš* as a rounded lower-mid back vowel, [â]; the communities of Ḥabbân and Ḥāḏina in Ḥaḏramaut realize the *qameš* as an unrounded low back vowel, [b]. Some Persian-speaking communities realize the *qameš* as a rounded lower-mid back vowel, [â].

ŠERE AND SEGOL שֶׁרֶ, שֶׁגֹּל. All the communities which follow the Sephardi pronunciation have one realization for both *šere* and *segol* (see above). This realization is a front higher-mid or lower-mid vowel, [e] or [ɛ]. In some North African communities no distinction is made between the realizations of *šere* (and *segol*) and that of *hireq*. This applies also, to some extent, to the Iraqi community. In the Yemenite pronunciation the realization of the *segol* is identical with that of the *pathah*. The Ashkenazi pronunciations are divided into two major groups as to the realizations of *šere* and *segol*:

(1) The communities of the area of northeastern Yiddish (the “Lithuanian” communities), as well as some other Ashkenazi communities, realized the *segol* (in a stressed syllable) as a front unrounded higher-mid vowel, [e]; the *šere* is realized as the diphthong [ey].

(2) Many communities of the areas of central and south-eastern Yiddish realize the *segol* in a stressed syllable as [ey] and the *šere* as [ay]. No community makes any distinction between the realization of a defective *šere* and that of full (“plene”) *šere*, as well as between the realization of a defective *segol* and that of a full (“plene”) *segol*.

HIREQ הִירֵק. All communities realize the *hireq* as a high front vowel, [i], with some positional variants. In eastern Yemen the *hireq* is realized as a central vowel, [ə].

THE ŠEWA שְׁוָא. In presenting the realizations of the *šewa* two points should be considered: the principles that guide the various communities in differentiating a *mobile šewa* from a *quiescent šewa*; the realizations of the *mobile šewa* in the various communities.

Mobile Šewa and Quiescent Šewa in the Various Communities. The Yemenite community and the communities that adhere to the Sephardi pronunciation, including the Italian community, regard the *šewa* sign as denoting *mobile šewa* when it belongs to one of the following categories:

- (1) when it appears in the beginning of a word;
- (2) when it follows another *šewa*;
- (3) when it comes with a letter that has a *dageš forte*;
- (4) when it comes with the second of two identical letters, as in the word מִן (to this rule, however, there are exceptions);
- (5) when it follows, in medial position, *qameš*, *šere*, *holem*, *šureq*, or *hireq* which do not come in a syllable that has a primary stress, but may have a secondary stress (the reading traditions of many communities regard the *metheg* as a sign denoting secondary stress), and after which a *dageš forte* does not come (this applies mostly to the *hireq*). It should be noted that there is no general consistency as to the realizations of the *šewa* of this category as a *mobile šewa*. In Hebrew grammar this *mobile šewa* is known as “a *šewa* following a ‘long vowel’”; in the traditional pronunciation of these communities, however, there is no consistent differentiation between “long” and “short” vowels in accordance with the opposition between these two categories of vowels in Hebrew medieval grammati-

cal theory (primarily, in the grammatical theory of the school of the Kimḥis). Therefore, for the actual pronunciation of the communities in question this kind of *mobile šewa* cannot be defined in terms of “a *šewa* following a ‘long vowel.’”

In some Yemenite pronunciations the second of two final *šewas* is regarded as *mobile*.

In the reading of the post-biblical literature the communities who adhere to the Sephardi tradition disclose some deviations from the ways they follow in differentiating the *mobile šewa* from the *quiescent šewa* in the reading of the Bible. The most prominent among these deviations is the realization as a *quiescent šewa* of the *šewa* in forms of the *qatēla*, *qatēlu*, *qotēlim*, and *qotēlot* patterns.

In the pronunciations of the Ashkenazi communities a *šewa* which historically should be regarded *mobile* is in fact *quiescent* in many cases. This is always the case with a *šewa* coming with a letter that has a *dageš forte* (see above, category (3)); these communities do not geminate the consonants) and with a *šewa* that follows a so-called “long vowel” (above, category (5)). As to an initial *šewa* (above, category (1)), its realization either as a vowel (that is, as a *mobile šewa*) or as zero (that is, as a *quiescent šewa*) depends on the phonological rules according to which initial clusters may or may not exist in the vernaculars of the various communities.

The Realizations of the Mobile Šewa. In the Yemenite community there exist three categories in the realizations of the *mobile šewa*:

- (1) when it comes with a letter which is not followed by ׀ or by a guttural (that is, a laryngeal – ה, ח, or a pharyngeal – ע, פ), the *šewa* is realized like an ultrashort *pathah*, namely, [ä];
- (2) when it comes with a letter which is followed by ׀, the *šewa* is realized as an ultrashort *hireq*, namely [i];
- (3) when it comes with a letter which is followed by a guttural (but is not itself a guttural), the *šewa* is realized as an ultrashort vowel, whose quality is identical to that of the vowel of the following guttural. Thus, when the vowel of the following guttural is a *qameš*, the *šewa* is realized as an ultrashort *qameš* namely, [ô]; when it is a *šureq*, the *šewa* is realized as an ultrashort *šureq*, namely [ü]; when it is a *holem* the *šewa* is realized as an ultrashort *holem*, namely [ö].

A *šewa* followed by a *ga’ya* (“*šewa-ga’ya*”) is realized by the Yemenite community as a short (not an ultrashort) vowel, its quality being determined by the nature of the following consonant as stated above, in categories (1), (2), (3). The realizations of the *mobile šewa* in the traditional pronunciation of the Yemenite community disclose complete agreement with the realizations of the *mobile šewa* in the pronunciation that prevailed in the Tiberian school. To these latter realizations a number of medieval grammatical treatises bear evidence. Very few communities except the Yemenite have preserved the above realizations that the *mobile šewa* had in the Tiberian school: they exist – but much less consistently than in the Yemenite community – in the Aramaic-speaking communities

of western Kurdistan. Some Persian-speaking communities, as well as the Aramaic-speaking communities of Persian Azerbaijan (see above) have the realization [a], or [ʌ], a lower-mid unrounded back vowel, for the *mobile sewa*. This realization is identical, in quality, to category (1) of the realizations of the *sewa* in the Yemenite community; but whereas in the Yemenite community this realization occurs when the *šewa* comes in certain positions only (see above), in the above-mentioned communities it is the regular realization of the *mobile šewa*. The Dutch-Portuguese community realizes the *šewa -gaʿya* as [a] and a *šewa* preceding ʾ as [i], an ordinary *mobile šewa* as [e]. All the communities that follow the Sephardi tradition – except the Dutch-Portuguese community and the above-mentioned Aramaic- and Persian-speaking communities, which can be regarded as following the Sephardi tradition in as much as they realize the *qameš* as *pathaḥ* and the *šere* as *segol* – realize the *šewa* as a phone which is qualitatively identical to the realization of the *šere* and the *segol*. Quantitatively, the *šere* and the *segol*, when they come in stressed syllables, may be realized as long vowels, whereas the *šewa*, which does not come in a stressed syllable, is always realized as a short vowel.

In the Ashkenazi communities, the *šewa*, in those instances in which it is realized as a vowel (see above) is realized as [e] or [ə]. The Samaritan community has usually a vowel as the counterpart of a *mobile šewa* of the Tiberian vocalization.

THE ḤATEFS. The Yemenite community is the only one to have preserved the quantitative difference between the realization of a *ḥatef* and that of a vowel which is its counterpart, that is between *ḥatef-pathaḥ* and *pathaḥ*, between *ḥatef-segol* and *segol*, between *ḥatef-qameš* and *qameš*; the *ḥatefs* are realized as ultrashort vowels which are qualitatively identical with the vowels which are their counterparts – *ḥatef-pathaḥ* and *ḥatef-segol* as [â], *ḥatef-qameš* as [ậ]. The reason for the identity of the realizations of the *ḥatef-pathaḥ* and the *ḥatef-segol* is that in the Yemenite pronunciation the realizations of the *pathaḥ* and *segol* are identical.

In the Sephardi and Ashkenazi pronunciations the *ḥatefs* are realized as the vowels which are their counterparts: *ḥatef-pathaḥ* is realized as [a], *ḥatef-segol* as [e] (or as a variant of this phone, in accordance with the variants of the realizations of the *segol* in the various communities), *ḥatef-qameš* as [o].

VOWEL QUANTITY. No community maintains, in the realizations of the vowels, the distinction between a “long” and a “short” vowel (“*tenuʿah gedolah*” and “*tenuʿah qeṭanah*”), a distinction prevalent in later medieval grammatical theory. In most communities long realizations of the vowels occur in stressed syllables. The Yemenite community maintains the distinction between ultrashort and ordinary vowels, the *mobile šewa* and the *ḥatefs* being realized as ultrashort vowels.

Stress

The communities which follow the Sephardi tradition follow, in reading the Bible, the Tiberian rules of stress distribution,

as regards both primary and secondary stress. In reading the post-biblical literature there are, in these communities, quite a few cases of deviations from these rules (detailed studies as to the stress distribution in the reading traditions of post-biblical literature in the Sephardi communities are, as yet, missing).

The Yemenite community generally maintains in reading the Bible the Tiberian rules of stress distribution in words which have disjunctive accents; words which have conjunctive accents, on the other hand, quite frequently have stress patterns differing from those of the Tiberian tradition. This latter phenomenon is manifest in the fact that words, which in the Tiberian tradition have an ultimate stress (“*milleraʾ*”), have in the Yemenite pronunciation the stress on the penultimate syllable (“*milleʾl*”), and occasionally on the antepenultimate, when they come with a disjunctive accent. In the reading of post-biblical literature the number of the words having a penultimate or an antepenultimate stress, and which according to the Tiberian rules of stress distribution should have an ultimate stress, is greater than in the reading of the Bible.

The Ashkenazi communities do not adhere to the Tiberian rules of stress distribution. Quite frequent is the occurrence of penultimate (or, in some communities, antepenultimate) stress where the Tiberian tradition has ultimate stress.

Samaritan Hebrew has, as a rule, penultimate primary stress (with concomitant secondary stress on the second syllable preceding the one which has the primary stress; secondary stress may fall on the syllable directly preceding the syllable which has the primary stress – this is the case when the former syllable has a long vowel). It may be, however, proven that the actual stress patterns of Samaritan Hebrew are rather late, and that the stress patterns that Samaritan Hebrew formerly possessed were identical with those of Tiberian Hebrew (Z. Ben-Ḥayyim, *Sefer Ḥanokh Yalon* (1963), 149–160).

SPECIMEN TEXTS

The text of Genesis 47:28–31 is given here in the traditional pronunciations of several communities

1. ʾ = primary stress; , = secondary stress. Both signs appear before the stressed syllable. When a word has no stressed syllable, no space is left in the transcription between this word and either the preceding or the following word. Since in the Samaritan pronunciation, stress usually falls on the penultimate syllable, it is not marked in specimen text no. 1, unless it occurs in the last syllable.

2. A colon that follows a letter representing a vowel denotes that the vowel is ultralong, e.g. [ā:] = ultralong[a].

1. The Samaritan Community

(transcription kindly provided by Professor Z. Ben-Ḥayyim)

Gen. 47:28: wyī yā:qob bārəš mišrəm šāba ʿāšāra šēna wyāyyu yāmi yā:qob šēni ʿayyo šāba šēnəm warʾbīm wmat šēna.

[Shelomo Morag]

PROOPS, family of Hebrew printers, publishers, and booksellers in Amsterdam. SOLOMON BEN JOSEPH (d. 1734), whose father may have been a Hebrew printer as well, was established as a bookseller in Amsterdam and associated with other printers from 1697 to 1703. In 1704 he set up his own Hebrew press, which produced mainly liturgical books but also a wider range

of works in *halakhah*, *aggadah*, Kabbalah, ethics, and history. In 1714 Proops began to print a Talmud edition in competition with that planned by Samuel b. Solomon Marches and Raphael b. Joshua de Palacios, but was forced by them to discontinue in view of their prior rabbinic monopoly. From 1715 productions by Proops carried advertisements of books he had published, and in 1730 he issued a sales catalog (*Appiryon Shelomo*), the first such Hebrew publication.

At his death, appointed guardians continued to operate the press, and even when his sons JOSEPH (d. 1786), JACOB (d. 1779), and ABRAHAM (d. 1792) took over, they traded under the old name until 1751. Between 1752 and 1765 the sons – now under their own name – printed a Talmud edition with interruptions, which were due in part to attempts to print a Talmud in *Sulzbach, against which they successfully asserted their own rabbinical monopoly. In 1761 they bought the typographical material of the *Athias press, but business declined. In 1785 Joseph Proops sold most of his work to Kurzbeck of Vienna, and when he died a year later his widow and sons – for some time in partnership with Abraham Prins – continued printing on a small scale until 1812. From 1774 to his death Jacob Proops worked on his own; his widow and sons continued along until 1793 and until 1797 in partnership with SOLOMON (d. 1833), son of Abraham Proops; Solomon worked alone until 1827. Abraham Proops had been active on his own in 1776–79; afterward he removed his business to *Offenbach, but his son, who worked with him, returned to Amsterdam at his father's death. DAVID, a son of Jacob Proops, printed from 1810 to 1849 in partnership with H. van Emde and his widow, when the press was sold to Levisson who continued it until 1869; the Levisson brothers remained active until 1917.

PROOPS, MARJORIE (1911–1996), British advice columnist and journalist. Born Rebecca Marjorie Israel in Tottenham, London, the daughter of salesman, she went to art school and became a freelance fashion artist, known as Marjorie Proops after her marriage. Around 1945 she became fashion editor of the London *Daily Mirror* newspaper and soon after began the advice column which made her nationally known, “Ask Marje.” Emulating such American advice columnists as Abigail Van Buren, Proops became probably the best-known “Agony Aunt” (as such columnists are known) in Britain. She was especially noted for her extreme frankness on sexual matters and is seen as having a role in initiating the more liberal attitudes of the 1960s. A 1992 biography by Angela Patmore, *Marje: The Guilt and the Gingerbread*, revealed her own failing marriage and many affairs. Proops was named Woman Journalist of the Year in 1969 and was the author of an autobiography, *Dear Marje* (1976).

PROPERTY.

Classification

Property may be divided into different classes in accordance with the various legal principles applicable thereto. One common division is between immovable property and movables, distinguished from each other in the following respects among others: in their different modes of *acquisition, since there cannot be a “lifting” (*hagbahah*) or “pulling” (*meshikkah*) etc., of land; the law of overreaching (see **Ona'ah*) applies to the sale of movables but not land, apparently because land is always distinctive by virtue of its quality and situation and frequently it is of varying value for different people (see *Sefer ha-Hinnukh*, no. 340); in the case of land a rival claim to ownership may be resisted upon proof of three-year possession (see **Hazakah*), whereas movables which are in a person's possession for any period of time are presumed to belong to him; litigants are only required to swear an *oath if the dispute concerns movables and not land; unlike movables, land can never be stolen (see *Theft and Robbery) since it cannot be removed or carried away – and it is for this reason that originally only the debtor's land and not his movables became subjected to the creditor's *lien (although later, as a result of changed economic circumstances, the lien was extended by the Babylonian *geonim* to both categories, probably because the majority of Jews had ceased to be landowners at that time). The laws relating to slaves resemble those applicable to land in some respects – for instance as regards overreaching – and in other respects resemble the laws applicable to movables – for instance as regards incidental acquisition (*kinyan aggav*, Tos. to BK 12a).

For the purposes of debt recovery, land is divided into best, median, and poorest quality (*iddit*, *beimonit*, and *zibburit*, respectively). A claim arising from tort is recovered from land of the best quality, the creditor's claim from the median, and the wife's *ketubbah* from the poorest (Git. 5; see also *Execution). In biblical times land was further classified according to location, thus, “a dwelling house in a walled city,” “land of one's holding,” “land that is purchased” (Lev. 25:25ff.; 27:16ff.).

Movables may be classified by a number of criteria:

(1) *perot* (“fruits” or “produce”) and *kelim* (“vessels” or “utensils”), the one for consumption and the other for use respectively; the latter serve for the purpose of acquiring by barter by way of *kinyan sudar*, the former not (see *Acquisition, Modes of);

(2) animals and other movables, the former requiring three-year possession for establishment of title whereas *hazakah* of the latter is immediately acquired (Sh. Ar., חמ 133–5);

(3) coins which are legal tender constitute a special category of movables which cannot be acquired or alienated by barter and can only be given as a loan for consumption but not for use and return (i.e., the borrower need not return the very coins of the loan);

(4) deeds are another separate category of movables since these are not in themselves property but only serve as evidence

of their contents, and they differ from other movables in their modes of acquisition (see **Shetar*; *Assignment).

A criterion unrelated to physical differences is one between property that is owned and ownerless property (*hefker*), for which there are different modes of acquisition. Owned property is further subdivisible into public property (see Meg. 26; BB 23a and *Tosafot*) and private property (including joint ownership (see *Partnership)); and into consecrated property (**hekdes*) as distinct from property of the common man (*nikhsei hedyot*). It is forbidden for the common man to derive a benefit from consecrated property as long as it retains its sanctity of which there are different categories (see **Hekdes*).

Consecrated property is further distinguished from property of the common man as regards the modes of acquisition and the applicable laws of overreaching, tort, etc. Land which is owned may be classified into free, unencumbered property (*nekhasim benei ḥorin*) and encumbered and mortgaged property (*nekhasim meshu'badim*), the latter being land sold by the debtor to others but remaining charged in favor of his creditors for the repayment of debts which cannot be recovered out of his free property (see *Lien).

Another separate category is property from which no enjoyment may be derived, such as **ḥamez* ("leaven") on Passover, the ox that is condemned to death by stoning, fruit of the *orlah* (i.e., the first three years), etc. Such property is not considered to be in the possession of its owner, nor apparently does the latter have a full proprietary right thereto since it not only cannot be enjoyed but may not even be purchased or sold (see *Lien).

Property is further divisible into capital, fruits or profits, and improvements (*keren*, *perot*, and *shevah*, respectively). The capital is the property as it is at any given time; the fruits are the profits derived therefrom; and the improvement is the increase in market value of the property – whether deriving from actual improvement, natural or effected, or from increase in market price without such.

Proprietary Rights

OWNERSHIP. This is the most common proprietary right and is closely connected with possession. A person is the owner of property if he has possession thereof for an unlimited period, or if it is out of his possession for a limited period only and thereafter is due to be restored to him for an unlimited period – for instance when it had been let, lent, or even when it has been lost or stolen or robbed from the owner in circumstances where it may be surmised that he will regain possession of the property; if not, his ownership of the property will likewise terminate. Since the same property may be in the possession of different people – for instance, one in possession of a dwelling and another of its upper floor – it follows that ownership may be shared by different people with each owning a defined part of the property. The owner does not have unrestricted freedom to deal as he pleases with his property. In biblical times for instance it was not possible to

sell a field in perpetuity, but only until the Jubilee Year. Other restrictions have applied at all times, including the following: a person may not use his land in such a manner as to disturb his neighbors in the normal use of their land (see *Nuisance); in certain special circumstances a person is obligated to allow others the use of his land (BK 81a).

RIGHTS IN THE PROPERTY OF OTHERS. Short of ownership, a person may have proprietary rights in the property of others (*jura in re aliena*). Such rights are not exhausted by the recognized legal categories thereof, but may be freely created by the parties thereto in a form and on conditions suited to their needs, without restriction. Broadly, however, these rights may be classified as falling into one of the following three categories: a right to the use of another's property along with its possession as in the case of hire (see *Lease and Hire), loan, and bailment; a right to the enjoyment of another's property without its possession – such as the right to project a bracket into the space of the neighboring courtyard; a right in the form of a charge on another's property, such as a mortgage, and the abutter's rights (see **Mazranut*; *Execution). All the above proprietary rights have in common the fact that they avail against the whole world, including the owner of the property concerned, continue to attach to the property even if it be sold to a third party, and cannot be cancelled without the right-holder's consent. Hence these rights are like a form of limited or partial ownership for a specific purpose – their acquisition being a "transfer of the body for its fruits," such as transfer of a tree for its fruit, a dovecote for the fledglings, or land for a road or thoroughfare (see *Servitude). Similarly, hire is like a sale for a limited period and loan like a gift for a limited period (Yad, She'elah 1:5; Sekhirut 7:1). However, this does not really amount to full, nor even limited, ownership (*Nimmukei Yosef*, BM 56b, in the name of Ran), but only to a real right in the property, available against the whole world.

The most common of the first of the above-mentioned categories of *jura in re aliena*, i.e., with possession, is hire or *lease. The lessor, like the lender or bailor, may not withdraw during the subsistence of the contract and the lessee's rights are protected against all comers, including the lessor. A contract of lease may take various forms and, in the case of land, may be for monetary remuneration or the right to work the land for a proportional part of the produce (Yad, Sekhirut 8:1) – the latter right either for a fixed period or passing on inheritance; the lease may even take the form of a sale of the land for return after a number of years. The "sale for the fruit" is so close to the transfer of ownership that the *amoraim* disputed whether acquisition for the fruits was an acquisition of the land itself (*kinyan ha-guf*; Git. 47b), i.e., whether the sale of a field for its fruits involved transfer of the field's ownership or not. When the law of Jubilee Year was observed, any sale of a field was in fact no more than a sale for its fruits.

The proprietary rights attaching to the above relationships carry also corresponding personal rights or obligations. Thus in the case of movables it is the duty of the hirer to take

care of the hired property and he assumes liability for damage arising from his negligence, or from the loss or theft of the property, and – in the case of loan – even from inevitable accident. These obligations are separate from the proprietary right in question and the two may even come into effect at different times (see Tos. to BM 99a). Thus an unpaid bailee who has mere custody or detention, but not possession, of the deposit – since it may be removed by the owner at any time – apparently has not proprietary right in the deposit but only the obligation to take proper care thereof and to compensate for his neglect to do so. Other similar obligations may be circumscribed by agreement in the same way as are the terms of the real rights, since both may be created by the parties in a manner they think fit.

The second of the above-mentioned categories of proprietary rights are those which allow a person the enjoyment of another's property without its possession. These include a man's right to cause a nuisance to his neighbor or to project an abutment into the airspace of his neighbor's court (see *Servitude). Similarly, a man buying a tree has the right of having it stand in the land of the seller (BB 81b), or the owner of a vine or shrub to have it cling to the tree of his neighbor (BM 116b). These too are proprietary rights which are transferable to others and available against purchasers of or heirs to the servient property, the owner whereof may not withdraw from or cancel the said rights.

Acquisition and Transfer of Proprietary Rights

The usual transfer of proprietary rights is by the parties' will. There are two categories of voluntary acquisition of ownership, the first involving the acquisition of ownerless property, and the second acquisition of property from its former owner. For acquisition of the former, i.e., original acquisition, it is necessarily required that the person becoming entitled thereto have possession of the property together with the intention of acquiring its ownership. Hence in this case the formality of acquisition is satisfied by way of a "lifting" or "pulling" of the property, or by its presence within his "premises which are guarded for him" or his "four cubits" (*arba ammot*), or, in the case of land, by acts revealing his control thereover (i.e., *hazakah*).

For the acquisition of property from its former owner, it is not necessary that the acquirer have possession of the property, which may be at any place whatever. In this case acquisition takes place by consent of the parties and their making up their minds to the transaction so as to exclude withdrawal therefrom. Here too it is not sufficient that the parties make up their minds, but this fact must also be revealed in a manner that is recognized by all. In general it is customary for the parties to make up their minds and complete the formal acquisition by the same modes as those applicable to the acquisition of ownerless property; additional modes of acquisition in this case are those which naturally reveal that the parties have made up their minds – including by way of money, deed, delivery (*mesirah*), barter, or by way of an act or for-

mality which for historical reasons had become recognized as an act of acquisition, such as *kinyan sudar* (acquisition by means of the "kerchief") and *kinyan aggav* (incidental acquisition). These acts are not symbolic of anything else, but are acts bringing about the making up of the parties' minds and its revelation. Hence if in a particular locality some other act is equal legal validity (as, e.g., in the case of *kinyan* customary in the closing of a transaction, it will be of *sitomta*, i.e., affixing of a mark).

For details, see *Acquisition, Modes of.

Extinction of Ownership

A person's ownership of property is extinguished when he is reconciled (makes up his mind) to the fact that he no longer has permanent possession of the property or that it will no more return to his permanent possession. Here too his state of mind must be revealed and recognizable to all, save that no formal act is required and it may be indicated by speech or conduct alone. Thus ownership terminates upon (1) **ye'ush* ("despair"), i.e., when the owner abandons hope of recovering possession of property of which he has been deprived, for example through loss or theft; (2) abandonment or reunification, whereby the owner reveals his intention to terminate his ownership, whether or not the property be in his possession (see **Hefker*); (3) transfer or alienation of property to another, whereby the owner reveals his intention to terminate ownership thereof but only through its acquisition by a specific person and only from the moment of such acquisition. Transfer of ownership other than by the will of the parties concerned, takes place on a person's death (see *Succession), or upon forfeiture by order of the court, or by the operation of law (see *Confiscation, Expropriation, Forfeiture). Ownership is also extinguished upon the destruction of property or its transmutation (*shunnui, specificatio*).

In the State of Israel

Property law in the State of Israel is governed mainly by Knesset laws, such as the Water Law, 5719 – 1959; the Pledges Law, 5727 – 1967; the Bailee's Law, 5727 – 1967; the Sale Law, 5728 – 1968; the Gift Law, 5728 – 1968; the Land Law, 5729 – 1969; etc. Some of the provisions of the above laws are in accordance with Jewish law on the particular subject.

[Shalom Albeck]

PROPHETS, LIVES OF THE, name given to one of the few examples of ancient Jewish hagiographic writings (another example being the "Martyrdom of Isaiah"). Although in its present form the book contains some Christian elements, there is a general consensus among scholars as to the antiquity and

the basic Jewish character of the work. Many of the traditions, such as that of Isaiah's death at the hands of Manasseh, find echoes in Jewish apocryphal and rabbinic literature (see also Martyrdom of *Isaiah).

The primary text is preserved in Greek. The Greek version falls into four recensions, two attributed to Epiphanius of Cyprus (hence the title "Pseudo-Epiphanius" sometimes given to this work), one to Dorotheus, and one anonymous. The anonymous recension is to be found in Codex Morchalianus (Codex Q of the Septuagint). It is generally considered to be the oldest extant form of the work. Certain of the other recensions, especially that attributed to Dorotheus, are much expanded, containing the lives of various New Testament figures, apostles, and so forth. The "Lives of the Prophets" is also known in a number of the Oriental Churches in translation. There are various Syriac forms of the book which all appear to be developments of a single original translation from Greek. Although it is attributed to Epiphanius, Nestle and Schermann were of the opinion that the form of the Syriac "Lives" contained in the Syrohexaplar Code represents a different translation, but this is denied by Torrey. The "Lives" are also extant in Armenian, in a number of forms, but little is known of this version. Most scholars consider the Greek to be original, although Torrey posited a Hebrew original for the book.

The recension of Q contains the lives of Isaiah, Jeremiah, Ezekiel, and Daniel, followed by the lives of the Twelve Minor Prophets. These are followed by the lives of Nathan, Ahijah, Joed (identified with the anonymous prophet who is mentioned in I Kings 13), Azariah (son of Oded – II Chron. 15:1 ff.), Zechariah b. Jehoiada (II Chron. 24:20–22; cf. Matt. 23:35; Luke 11:51), Elijah, and Elisha. Some of these "Lives" are quite extensive, containing many traditions of extra-biblical character touching on the circumstances of birth, acts, or death of the prophet concerned. Others seem to be limited to the very barest of details of place of birth and death. The traditions contained in these brief narratives are of considerable interest. Some of them are found in other sources, others are extant only in the "Lives." It is plausible that the "Lives" preserve references to lost apocryphal documents or at least traditions in common with them. The popular character of many of the traditions also adds to their interest. The "Lives" abound with geographical names, not all of which can be identified.

IN THE BIBLE

Classifications

The second division of the Hebrew Canonical Scriptures is today subdivided into "The Former Prophets," i.e., the books

of Joshua, Judges, Samuel, and Kings (the term is taken from Zech. 1:4, where it has a different sense), and “The Latter Prophets,” i.e., the books of Isaiah, Jeremiah, Ezekiel, and the Twelve Minor Prophets.

This division is basically a chronological one. A preferable nomenclature would be the pre-classical, or popular, prophets and the classical, or literary, prophets. The latter terminology is reserved for those prophets whose oracles were preserved in writings either by themselves, their disciples, or their scribes (e.g., Jer. 36:4, 18). The primary literary remains of the pre-classical, prophets, in contrast, are the stories and accounts of their lives transmitted at first, no doubt, orally by followers and admirers. Though several third-person biographical accounts of the classical prophets have also been preserved in their respective books (e.g., Isa. 36–39; Jer. 26 ff.; Amos 7:10–17), these stories are secondary to their prophetic pronouncements. The terminological division serves as a formal external criterion for distinguishing between the two.

Nature of Prophecy

The institution of prophecy is founded on the basic premise that God does not abandon humans to their own devices, but provides them with divine guidance. A prophet is a charismatic individual endowed with the divine gift of both receiving and imparting divine messages. In biblical theory, the prophet does not choose his profession but is chosen, often against his own will, to convey the work of God to his people regardless of whether or not they wish to hear it (Ezek. 3:11). A prophet does not elect to prophesy, nor does he become a prophet by dint of a native or an acquired faculty on his part. Prophecy is not a science to be learned or mastered. There is no striving to be one with God, no *unio mystica*, no indwelling of God within the spirit of the prophet through rapture, trances, or even spiritual contemplation. The prophet is selected by God and is irresistibly compelled to deliver His message and impart His will, even if he personally disagrees with it. He is to some extent set apart from his fellowmen and is destined to bear the responsibility and burden of being chosen. The prophet stands in the presence of God (Jer. 15:1, 19) and is privy to the divine council (Isa. 6; Jer. 23:18; Amos 3:7). He speaks when commanded, but once commanded, must speak (Amos 3:8). Appointed messenger, he must translate his revelatory experience into the idiom of his people. For though the prophet is overwhelmed by the divine word and becomes “word possessed,” he does not lose his identity nor does he suffer from any effacement of personality. The “word of YHWH” and not His “spirit” is the primary source of prophecy. The “spirit” may prepare the prophet to receive divine revelation, may evoke the revelatory state of mind, but the “word” is the revelation itself. What makes him a prophet is not the spirit which envelops or moves him – for this spirit also motivated elders, judges, Nazirites, and kings – but the word that he has heard and which he transmits to others. In fact, the “spirit” or the “hand” of God (see below) is mentioned only occasionally in the writings of the classical prophets (a major exception being Ezekiel), and

then it constitutes the stimulus, not the content, of revelation. The prophet, although conscious of being overwhelmed by the divine word and of being involved in an encounter with God, is still capable of reacting and responding and may even engage God in a dialogue. The divine constraint does not exclude the prophet’s personal freedom; his individuality is maintained, and the divine message is accented by his own tones.

The prophetic experience is one of confrontation. The prophet is both a recipient and a participant. Armed solely with the divine word and as conveyor of the divine will, he views the world *sub specie dei*. He is concerned not with the being of God but with the designs of God. He has knowledge not about God but from God concerning His actions in history. The prophet is neither a philosopher nor a systematic theologian, but a mediator, often a covenantal mediator, who delivers the word of God to his people in order to shape their future by reforming their present. He is not the ultimate source of the message nor its final addressee; he is the middleman who has the overpowering experience of hearing the divine word, and who must perform the onerous task of bearing it to a usually indifferent if not hostile audience.

The individuality of the prophet is never curtailed. No two prophets prophesied in the same style. Their unique literary styles, whether expressed in prayers, hymns, parables, indictments, sermons, dirges, letters, mocking and drinking songs, or legal pronouncements, bear the mark of independent creativity. The divine message is refracted through the human prism. This is dramatically brought out by the striking image of the prophets’ receiving, literally eating, God’s word, and then bringing it forth (Jer. 15:16 ff.; Ezek. 3:1 ff.). God speaks to the prophet and the prophet speaks out. The divine revelation is delivered by a human agent.

ORIGIN AND FUNCTION. The Hebrew term for a prophet, *navi*, cognate of the Akkadian verb *nabû*, “to call,” i.e., “one who has been called,” is first applied to Abraham. He merits this title because of his role as intercessor (see below): “But you [Abimelech] must restore the man’s wife [Sarah] – since he is a prophet, he will intercede for you – to save your life” (Gen. 20:7). The origin of the office of prophecy, according to Deuteronomy, is rooted in the event at Horeb. Since the people were afraid of receiving God’s word directly in a public theophany (divine manifestation), they requested Moses to “go closer and hear all that our Lord our God tells you... and we will willingly do it” (Deut. 5:24). The account serves as an etiological explanation of why ordinary Israelites do not have direct access to the divine word. This etiology is elaborated in the words of Moses: “I stood between the Lord and you at that time to convey the Lord’s word to you, for you were afraid of the fire and did not go up the mountain” (Deut. 5:5; cf. Ex. 19:19). Thus Moses in Deuteronomy serves as the inaugurator of prophecy in Israel (see further Deut. 18:15–19).

The term *navi*, translated in the Septuagint by the Greek word *prophētēs* (“prophet”), which means “one who speaks on behalf of” or “to speak for” “speak before,” is a “forthteller” and

spokesman as well as a “foreteller” and prognosticator. He is God’s mouthpiece (Jer. 15:19); the one to whom God speaks, and who, in turn, speaks forth for God to the people. This, indeed, is the very definition of the prophet’s role found in several places in the Bible. In Exodus 4:15–16 the roles that Moses and Aaron are to assume before Pharaoh are delineated: “You [Moses] shall speak to him [Aaron] and put the words in his mouth... and he shall speak for you to the people. Thus he shall be your spokesman and you shall be an oracle [’*elohim*].” In Exodus 7:1, “The Lord replied to Moses, ‘See I make you an oracle [’*elohim*] to Pharaoh, and your brother Aaron shall be your spokesman [’*navi*].’” So, too, in Deuteronomy 18:18, “I will raise up a prophet for them among their own people, like yourself. I will put My words in his mouth, and he will speak to them all that I command him.”

DREAMS. Moses, though he is called a *navi* for the first time only in Deuteronomy (18:15; 34:10), is cast as the prophet par excellence. He is distinguished by God’s revealing Himself directly to him, “mouth to mouth, plainly and not in riddles,” while to other prophets, God revealed Himself only in visions or dreams (Num. 12:6–8). This distinction between *dreams and prophecy is made because of the universal belief that gods communicate their will to humans through the medium of dreams. Several instances of divine revelation through dreams are attested in the Bible, e.g., the dreams of Abimelech (Gen. 20:3; cf. Gen. 31:10–13); Solomon (1 Kings 3:5–14); Joel (3:1); and Job (33:14–18).

In Deuteronomy 13:2ff. dreams are directly linked to prophecy. It is no wonder, then, that they are considered a possible means for determining the will of God, e.g., 1 Samuel 28:6 (cf. 28:15). Nevertheless, this means for revealing the will of God is frowned upon by some prophets (see Jer. 23:28; 27:9; Zech. 10:2; cf. Jer. 29:8). Dream interpretation existed in ancient Israel as shown by 1 Samuel 28:6, 15 and by the stories of Joseph and Daniel. Even though classical Judaism viewed prophecy as a thing of the past, dream interpretation persisted in rabbinic literature (Bar 101–7).

DIVINATION. In the aforementioned quotations from the books of Jeremiah and Zechariah, the medium of dream communication is coupled with that of divination, a science that was well known and widely spread throughout the entire Ancient Near East. It was a highly specialized skill, which enabled the expert practitioner to peer into the world of the future by fathoming the inexplicable will of the gods. The art of divination was extremely elaborate and encompassed many different fields, including hepatoscopy, extispicy, lecanomancy, libanomancy, necromancy, belomancy, reading entrails, bird omens, astrology, and so on. Against these common practices of Israel’s neighbors the Bible inveighs, “You shall not practice divination or soothsaying” (Lev. 19:26); “Do not turn to ghosts and do not inquire of familiar spirits” (Lev. 19:31; cf., also, 20:6, 27). The most comprehensive prohibition is found in Deuteronomy 18:10–11: “Let no one be found among you who consigns his son or daughter to the fire, or who is an

augur, a soothsayer, a diviner, a sorcerer, or one who casts spells, or who consults ghosts or familiar spirits, or who inquires of the dead.” The prohibition is a clear indication that these practices obtained in Israel (see 1 Sam. 28:7; 11 Kings 23:24; Isa. 2:6; 8:19; 29:4). In keeping with their attribution of practices of which the biblical writers disapprove (e.g., forms of sexual activity) to the Canaanites, the biblical legislator of Deuteronomy 18:10–11 expresses disapproval of some divinatory practices by identifying them with the Canaanites. The Bible is well aware of divination in other nations as well, e.g., Philistines (1 Sam. 6:2; Isa. 2:6); Babylonians (Isa. 47:9, 12–13; Jer. 10:2; 50:35; Ezek. 21:26–28), and Egyptians (Isa. 19:3). It is of interest that the Bible never says that these practices are ineffective. When a prophet vilifies other prophets, he may link them rhetorically with sorcerers (Jer. 27:9).

Biblical opposition to divination is selective. There are several biblical analogues to various forms of divination, e.g., hydromancy or oleomancy (Gen. 44:5, 15), and tree oracles (11 Sam. 5:24). Other biblically sanctioned, legitimate means through which God discloses His will are dreams (1 Sam. 28:6; see above), the *Urim and Thummim placed in the priest’s breastplate (Ex. 28:30; Lev. 8:8; Num. 27:21; 1 Sam. 14:41; Ezra 2:63), and the *ephod (1 Sam. 23:9ff.). In fact, it seems that prophets may have, at times, fulfilled the same function as the last two. This is suggested by the manner of framing questions in the simple form of alternatives in 1 Samuel 14:37, 42 (cf. Greek version); 23:11, and 1 Kings 22:6. Lots (Num. 26:55–56) and the ordeal (Num. 5) were also occasionally resorted to.

Pre-Classical Prophets

TERMINOLOGY. The pre-classical prophets are referred to by four different names: *hozeh*, *ro’eh*, both meaning “seer”; *’ish ha-’Elohim*, “man of God” (1 Kings 13:1; Elijah, 1 Kings 17:18, 24; 11 Kings 1:10; Elisha, 11 Kings 4:7, 9, 21; 8:4, 8, 11; 13:19; cf. Moses, Deut. 33:1; Josh. 14:6; Ps. 90:1; Ezra 3:2; 1 Chron. 23:14; 11 Chron. 30:16); and *navi*, “prophet.” (The last is also the standard term for the classical prophets.) The seer was one who possessed the ability to reveal that which was concealed from ordinary mortals; he was also able to foretell the future. The term *ro’eh* is first applied to Samuel in 1 Samuel 9, when Saul, in search of his father’s asses, seeks the aid of the seer Samuel and is prepared to pay a fee of one-quarter of a shekel. Samuel, who in this narrative (9:6) is also called *’ish ha-’Elohim*, and who had been previously informed by the Lord of Saul’s arrival, provides the necessary information and, in addition, anoints Saul king of Israel (1 Sam. 10). He then informs Saul of the events which are about to befall him on his way home. It is within this account that the editor of the narrative adds an important historical-chronological footnote (9:9): “He who now is called *navi* was formerly called *ro’eh*.” The title *ro’eh* is later applied to Samuel in 1 Chronicles 9:22; 26:28; and 29:29. The only other one clearly designated by this title is Hanani (11 Chron. 16:7, 10; some also attribute it to the priest Zadok (11 Sam. 15:27), but this is highly dubious). In 1 Chronicles 29:29 the three diversely titled proph-

ets of the period of David, Samuel the *ro'eh*, Nathan the *navi*?, and Gad the *hozeh*, are named together.

The title *hozeh* is first applied to Gad in II Samuel 24:11, where he is called the *hozeh* of David (so, also in I Chron. 21:9), where he once again is distinguished by protocol from Nathan the *navi*?. (On the interchangeability of these two terms, however, one may note that Gad is also called *navi*? in I Sam. 22:5, and in II Sam. 24:11 he is accorded the dual title *navi*? and *hozeh*.) According to Chronicles, several other kings kept in their courts men who bore the title *hozeh*: I Chronicles 25:5, Heman is mentioned as a *hozeh* for David; II Chronicles 9:29, Jedo (Iddo) for Jeroboam (in II Chron. 12:15, he is distinguished from Shemaiah the *navi*?); II Chronicles 19:2, Jehu son of Hanani, for Jehoshaphat; II Chronicles 33:18, anonymous men for Manasseh; and II Chronicles 35:15, Jeduthun, Heman, and Asaph for Josiah. Since only the term *hozeh* (and not *ro'eh* or *navi*?) is found when reference is made to a king (*hozeh ha-melekh*), it most probably indicates that the seers who bore this title were officially attached to the court, the so-called court prophets.

The term *hozeh* was at times also connected with *navi*?: positively, in II Samuel 24:11 and II Kings 17:13, and negatively, in Isaiah 29:10 (cf. 28:7); Amos 7:12; and Micah 3:7. That this technical term was not confined to Israel, but was a common West Semitic title for such seers is attested by the inscription of King Zakkur of Hamath (early eighth century B.C.E.), who declares: "I lifted up my hands to Ba'alsha[ma]n and Ba'alshamayn answered me [and spoke] to me through seers [𐤁𐤍] and diviners" (lines 11–12; Pritchard, Texts3, 655; COS II, 155).

GROUP PROPHECY. The first story in the Bible that makes reference to a seer also mentions bands of prophets. When Saul consults the seer Samuel as to the whereabouts of his father's lost asses, he is told that he is to become "prince over his people Israel" (I Sam. 10:1). To substantiate the authenticity of this prediction, he is informed that upon arriving at Gibeah he will meet "a band of prophets coming down from the high place with harp, tambourine, and lyre before them." And when he did subsequently meet them, a "spirit of God came mightily upon him and he spoke in ecstasy among them." This encounter became the source for the proverbial question "Is Saul also among the prophets?" (I Sam. 10:12). I Samuel 19:18–24 relates this proverb to another instance of the contagious nature of group prophecy: Saul sends men to capture David, who was then in the company of Samuel. However, when the men "saw the company of prophets with Samuel standing as head over them, the spirit of God came upon the messengers of Saul and they also prophesied." This incident is repeated two more times as subsequent messengers are overcome by their contact with the band of prophets. Finally, Saul himself goes to capture David, but the spirit of God comes upon him and he, too, prophesies before Samuel, strips off his clothes, and lies naked all that day and night. Hence, it is said, "Is Saul also among the prophets?"

ECSTASY. The ecstatic nature of these groups of prophets is illuminated by Numbers 11:16ff., a narrative whose purpose may have been the legitimation of the phenomenon of ecstatic prophecy. Moses gathered 70 of the people's elders and stationed them around the Tent of Meeting. "Then the Lord came down in a cloud and spoke to him. He drew upon the spirit that was on him and put it upon the 70 elders. And when the spirit rested upon them they spoke in ecstasy" (11:25; cf. 11:16–27).

Another instance of group ecstasy is found in I Kings 22, where some 400 prophets rage in ecstasy before kings Jehoshaphat and Ahaz on the eve of their attack against Ramoth-Gilead. This feature of collective dionysiac frenzy is not confined to early Israelite prophets. In I Kings 18 it is recorded that 450 Canaanite prophets (referred to as *navi*) of Baal (and 400 prophets of Asherah, verse 19) "cried aloud and cut themselves after their manner with swords and lances till the blood gushed out upon them. And it was so, when midday was past, that they prophesied in ecstasy until the time of the evening offering..." (18:28–29). Ecstatic seizures, moreover, were not limited to groups; individuals, too, could have them. Thus, the seizure of Elijah: "The hand of the Lord was upon Elijah... and he ran before Ahab[']s chariots]" (I Kings 18:46; see also *Ecstasy).

An extra-biblical reference to an ecstatic prophet is attested in the 11th-century tale of the Egyptian Wen-Amon, which takes place in Byblos. It relates that "while he [Zakar-Baal, king of Byblos] was making offering to his gods, the god seized one of his youths and made him possessed. And he said to him, 'Bring up [the] god! Bring the messenger who is carrying him! Amon is the one who sent him out! He is the one who made him come!' And while the possessed [youth] was having his frenzy on this night..." (Pritchard, Texts, 26; COS I, 90). Additional examples of this phenomenon are found among the Hittite *šunianza* and the pre-Islamic *kāhins*.

In such a state one turns, as Saul did, into "another man" (I Sam. 10:6) and may behave madly, as witnessed by Saul's attempt to take the life of David in I Samuel 18:10ff. The irrational and ecstatic behavior of such possessed individuals makes them appear to be madmen. Thus, when Elisha goes to Ramoth-Gilead to anoint Jehu king of Israel, Jehu was asked, "Is all well? Why did this madman come to you?" (II Kings 9:11). A juxtaposition of "madman" and "ecstatic prophet" is found in Jeremiah 29:26; and in Hosea 9:7 the parallel to "prophet" is "madman." (The Hebrew term for madman, *meshugga'* in these verses may very well be a *terminus technicus*, related to the Akkadian *muḥḥûm*, "crazy/frenzy," found in *Mari).

According to the Bible, an ecstatic seizure might be induced by external means, e.g., music. In II Kings 3:15 Elisha requests a musician, "and when the musician played, the power of the Lord came upon him." Specific mention of various musical instruments of the band of prophets is found in I Samuel 10:5 and II Chronicles 35:15. (Dancing in order to induce a prophetic frenzy is mentioned in connection with the Canaanite prophets of Baal, I Kings 18:26.) Of course, prophetic seizure is

conceived of as dependent on God, otherwise it would simply be madness. It is ascribed directly to Him and is caused either by “the hand [*yad*] of YHWH,” “the spirit [*ru’ah*] of YHWH” or “the spirit [*ru’ah*] of God.” The term “the hand of YHWH” to indicate divine inspiration is employed when Elisha resorts to music to help induce this state (II Kings 3:15). It is also found in I Kings 18:46 in the description of Elijah in an ecstatic fit running before Ahab’s chariot (cf. Jer. 15:17). The term “the spirit of God” appears in both I Samuel 10:6, 10 and 19:20, 23, where the spirit “came mightily” upon Saul and his messengers (cf. I Sam. 18:10). In I Kings 22:21–24 the “spirit” is responsible for inducing false prophecy. Azariah son of Oded in II Chronicles 15:1 and Jahaziel son of Zechariah in II Chronicles 20:14 are both inspired by “the spirit of God/YHWH,” which comes upon them (cf. Neh. 9:30).

GROUP LIFE OF PROPHETS. The pre-classical prophets as a group were distinguished by several prominent personalities, e.g., Samuel, Nathan, Elijah, and Elisha, and by their number, at times in the hundreds. They were often banded together in groups of “disciples of the prophets” (Heb. *benei ha-nevi’im*) who may or may not have been located at a shrine. Such groups first appear when Saul encounters a “band of prophets” (I Sam. 10:5, 10) and reappear in the Elijah and Elisha cycles. Though in II Kings 4:38 it is stated that they have their meals in common, some of their members are married and have families. Elisha performed a miracle for the widow of one of the members of this order (II Kings 4:1–7). Some of them owned their own houses (I Kings 13:15ff.). One group was found at Beth-El, and another at Jericho, the latter consisting of 50 members (II Kings 2:3, 5, 7, 15). Elisha performed miracles on behalf of his coterie at Gilgal (II Kings 4:38–44, where 100 are mentioned), and sent one of them to anoint Jehu (II Kings 9:1ff.). He is also called their master (lit., “father,” II Kings 6:21). Obadiah, the chief steward of Ahab, saved 100 of them, during the siege of Jezebel (I Kings 18:3–4, 13), and kings Ahab and Jehoshaphat consulted some 400 prophets prior to their attack against Ramoth-Gilead (I Kings 22:6). There is also one possible, but far from certain, indication that heredity may have played some role in such circles, for Jehu, the *hozeh*, was a son of Hanani, presumably the same Hanani who was himself a *ro’eh* (II Chron. 16:7; 19:2; I Kings 16:1, 7).

Some of these prophets had attendants in their service. Elisha ministered to Elijah (I Kings 19:21), and Elisha had an attendant (*mesharet*) himself (II Kings 4:43; 6:15). A synonymous term, *na’ar* is also employed for the servants of Elijah (I Kings 18:43; 19:3), of Elisha (II Kings 4:38; 9:4), who was also attended by Gehazi (II Kings 4:12, 25; 5:20; 8:4), and of the attendant of the “man of God” in II Kings 6:15.

ROLE IN SOCIETY. These early prophets played a prominent role in communal affairs and were often sought out and consulted for advice, and asked to deliver oracles in the name of God. In I Kings 14:5, the wife of Jeroboam turns to Ahijah; in I Kings 22:8, Jehoshaphat and Ahab to Micaiah (cf. verses

5ff.); in II Kings 3:4ff., Jehoshaphat and Jeroboam to Elisha; in II Kings 8:8, Ben-Hadad (king of Aram!) to Elisha; and in II Kings 22:13, Josiah to Huldah. Prophets, like ordinary people needed to make a living. There are several references to remunerations for prophetic services, sometimes amounting to as little as one quarter of a shekel (I Sam. 9:8) or ten loaves of bread, some cakes, and a jar of honey (I Kings 14:3); or as much as 40 camels bearing the treasures of Aram (II Kings 8:9). Prophets in Israel, as was true earlier in Mari, delivered their oracles whether asked to or not. In II Kings 1:3ff. Elijah stops Ahaziah’s messengers on their way to inquire of Baal-Zebub; Ahijah the Shilonite tears his new garment when he confronts Jeroboam and announces the division of the United Kingdom (I Kings 11:29ff.); and Shemaiah announces to that same king that he should not go to war against his kinsmen of Israel (I Kings 12:22ff.). In Israel (as in Mari and Assyria) prophets could be female as well as male (Ex. 15:20; Judg. 4:4; II Kings. 22:14; Isa. 8:3; Neh. 6:12).

Politics. The prophets greatly influenced the political destiny of Israel. Samuel chose both Saul (I Sam. 9) and David (I Sam. 16) to be kings over Israel. Nathan castigated David for his conduct with Bath-Sheba and Uriah, her husband (II Sam. 12:7ff.), and later instigated the scheme to have David recognize her son, Solomon, as the next king (I Kings 1:8ff.). Ahijah announced both the selection and the rejection of Jeroboam as king of Israel (I Kings 11:29–39; 14:1–18; 15:29). Another “man of God” declared to Jeroboam the future birth of Josiah, who would destroy the idolatrous priests of the high places (I Kings 13:1–2). Shemaiah, mentioned above, forbade that king to attempt to regain the ten tribes of the North (I Kings 12:22–24; II Chron. 11:2–4). Azariah son of Oded influenced King Asa to institute a reform in Judah and to rely on God (II Chron. 15:1ff.), but the seer Hanani reprimanded Asa for requesting Ben-Hadad’s aid against the blockade set up by Baasha, king of Israel (II Chron. 16:1ff.). Jehu denounced Jehoshaphat, king of Judah, for allying himself with Ahab (II Chron. 19:2–3). (He also chronicled that king’s career, II Chron. 20:34.) In I Kings 22 both Ahab and Jehoshaphat turn to the prophets for an oracle to instruct them whether or not to go to war, and they receive an answer from Micaiah. (“Shall I go to battle against Ramoth-Gilead, or shall I forbear”; the alternative form of this question is reminiscent of the type formerly addressed to the Urim and Thummim.) Elisha foretells the defeat of Moab at the hands of Jehoshaphat and Jehoram (II Kings 3:16ff.). Elisha has one of his colleagues anoint Jehu king of Israel, inspires the latter’s rebellion against Jehoram (II Kings 9), and later (II Kings 13:14ff.) by means of a symbolic act (see below) helps insure the victory of Joash over the Arameans.

Prophets were so important to the crown that several kings had their own court prophets. Both Nathan (II Sam. 7; I Kings 1:8ff.) and Gad (I Sam. 22:5; II Sam. 24:11; I Chron. 21:9; 29:29; II Chron. 29:25) served with David. Also in David’s court were the sons of Asaph, Heman, and Jeduthun “who could prophesy with lyres, harps, and cymbals” (I Chron.

25:1ff.; II Chron. 29:30; 35:15 – the interesting connection between the prophets and musical guilds may be noted). According to the Chronicler, both Nathan and Ahijah wrote accounts of Solomon's career (II Chron. 9:29); Jedo (Iddo) wrote of either Solomon or Jeroboam (II Chron. 9:29); Iddo and Shemaiah recorded Rehoboam's acts (II Chron. 12:15); and Iddo did the same for Abijah, Rehoboam's successor (II Chron. 13:22).

CLAIRVOYANCE AND PREDICTION. The prophets were both clairvoyant and capable of predicting future events. For example, Ahijah predicted the overthrow of Jeroboam's house and the death of his son (I Kings 14:6ff.); Elijah predicted a drought (I Kings 17:1), and the death of Ahaziah (II Kings 1:4); and Elisha predicted a famine for seven years (II Kings 8:1), and many other events. The prophetic groups in Beth-El and Jericho knew that the Lord would take Elijah away that very day to die (II Kings 2:3ff.). Elisha was aware that Gehazi had accepted a remuneration, for "did I not go with you in spirit when the man turned from his chariots to meet you? Is it a time to receive money...?" (II Kings 5:26). He also knew where the Arameans were encamping (II Kings 6:9) and hears their very words (6:12). Only in exceptional cases does he not foresee events, e.g., when the Shunamite's son died and he declared, "the Lord has hid it from me, and not told me" (II Kings 4:27). Elisha even falls into a trance and foretells the future harm that Hazael, king of Aram, is going to cause Israel (II Kings 8:11ff.). Even if some of these events are *vaticinium ex eventu*, "prophecy after the events," the narratives make it abundantly clear that the people believed in the prophet's ability to foresee the future. Some prophets are also visionaries, e.g., in I Kings 22:19ff., Micaiah sees God enthroned on high; in II Kings 6:17, Elisha sees a mountain full of horses and chariots.

SYMBOLIC ACTS. The prophets did not merely predict the future, however. They often performed symbolic acts, which dramatized and concretized the spoken word. Though the dynamism of the spoken word is considered to have a creative effect in and of itself, it is given further confirmation by this act, which is efficacious and actually plays a role in bringing about the event. Ahijah rends his garment into 12 pieces and bids Jeroboam take ten of them for "thus says the Lord of Israel: 'Behold I will rend this kingdom out of the hand of Solomon and will give you ten tribes, but he shall take one tribe for my servant David's sake...'" (I Kings 11:29ff.). Elisha, in turn, orders Joash to take bow and arrows, open the window eastward, and shoot: "The Lord's arrow of victory, the arrow of victory over Aram! For you shall fight the Arameans in Aphek until you have made an end of them" (II Kings 13:14ff.).

WONDERS. These prophets were also wonder workers. The two most famous are Elijah and Elisha. Elijah causes the jar of meal and the cruse of oil not to fail the widow of Zarephath, "according to the word of the Lord which he spoke" (I Kings 17:8ff.); later, he brought her son back to life (17:17–24). He succeeded in bringing fire down from heaven in his famous

contest with the Canaanite prophets (I Kings 18); split the Jordan River by striking it with his mantle (II Kings 2:8); and was swept up on high into heaven by a whirlwind (II Kings 2:11). His successor, Elisha, was no less successful in performing miracles. He, too, split the waters of the Jordan into two with Elijah's mantle (II Kings 2:13–14), made a small jug of oil fill many large vessels (4:1–7), and brought back to life a child who had died (4:8ff.). When the inhabitants of Jericho complained that "the water is bad and the land is unfruitful," he requested a new bowl and salt, which he then threw into the water and said, "Thus says the Lord: 'I have healed these waters; henceforth neither death nor miscarriage shall come from it.' And so the waters were healed" (II Kings 2:19–22). Once in Gilgal during a famine, the prophetic guild complained that the pottage they were eating had the taste of death. By pouring some flour into the pottage, he effected a miracle and made the food edible (II Kings 4:38–41). Another miracle made a small allotment of food suffice for 100 men, "For thus says the Lord, 'They shall eat and leave some'" (4:42–44). His potency for producing miracles continued even after his death. A dead man was reported to have come back to life when his corpse was thrown into Elisha's grave and touched his bones (II Kings 13:20–21). The stories of Elijah and Elisha influenced the New Testament portrayals of Jesus.

These prophets did not always enjoy the security and immunity that their prophetic position should have assured them. Ahab persecuted or permitted Jezebel to persecute Elijah (I Kings 17ff.); Micaiah was put into prison because he foretold the defeat of Israel and the death of Ahab (I Kings 22:27); and Asa, king of Judah, put Hanani, the seer, in the stocks, because the prophet reprimanded him for not relying on God but accepting the help of the king of Aram (II Chron. 16:7–10).

EXTRA-BIBLICAL PROPHECY: MARI. In the pre-biblical period, apostolic prophets, i.e. prophets who declare that a god has sent them, appear in Syria at *Mari in the early second millennium, while late second millennium *Emar texts have the tantalizing *nābû* and *munabbiātu* among their cultic personnel who call upon god. Seers are attested by name outside of Israel (cf. above, the Zakkur inscription). In the neo-Assyrian period favorable oracles are delivered personally to Kings Esarhaddon and Assurbanipal by individuals, mostly women, who address Esarhaddon in the name of Ishtar, and Assurbanipal in the name of Mullissu (Ninlil).

Comparison of Pre-Classical and Classical Prophets

Earlier scholars attempted to draw strong distinctions between the pre-classical prophets such as Samuel, Elijah, and Elisha and such classical prophets as Isaiah and Jeremiah. Among the alleged distinctions are the following:

- (1) The classical prophets rejected the cult and ritual and called for ethical monotheism.
- (2) They rejected the nationalistic outlook of the popular prophets and replaced it with their concept of universalism.

(3) Whereas the popular prophets functioned as part of guilds, the classical prophets always appear alone (e.g., Amos 7:14).

(4) The popular prophets were ecstatics, given to intoxication of the senses (1 Sam. 19:20–24), and they employed musical accompaniment to induce or heighten their frenzy (11 Kings 3:15). The classical prophets, however, for the most part pronounced their oracles soberly in clear control of their senses.

It was thought that there was an unbridgeable gap between the two, and with Amos, the first of the literary prophets, the watershed was reached. Yet, there are many points of contact and continuation in the lives and writings of the classical prophets. Classical prophecy, like every other institution in ancient Israel, did not exist in a vacuum but came into being with an ancestry. The classical prophets were indebted in many ways to the heritage of their predecessors. The technical title *navi* is applied to both. Both speak solely in the name of the God of Israel, who reveals His will directly to them. They are both sent by God, hear the divine word, and are admitted into His council; their messages are sometimes rooted in the Covenant. These and the following considerations lead to the conclusion that there was one continuous religious tradition. More likely the difference between the pre-classical and classical prophets is the literary form in which the prophetic traditions have reached us.

RITUAL VERSUS MORALITY. The prophet Nathan rebukes King David for his breach of the moral law in his conduct with Bath-Sheba, and Elijah takes Ahab to task for the Naboth incident, in which Ahab was an accessory to murder. True, both indictments concern a primary breach of the moral law, adultery and murder, and are leveled against kings; but they are still an integral part of the ethical-moral dimension. Here, too, may be added Samuel's rebuke of Saul "Has the Lord as great delight in burnt offerings and sacrifices, as in obeying the voice of the Lord? Behold to obey is better than sacrifice, and to hearken than the fat of rams" (1 Sam. 15:22). The classical prophets for the most part, do not reject the cult per se any more than they absolutely reject prayer or any other type of worship. To them the cultic obligations are secondary to, and dependent upon, the fulfillment of the moral code of behavior. There is a decided change in the degree of emphasis in the pre-exilic literary prophets, but not in the principle. Moreover, the words of castigation leveled against the cult are found in the writings of the pre-Exilic prophets; in contrast, in the books of the Exilic and post-Exilic prophets the ritual is often highly emphasized and favorably viewed (see below).

NATIONALISM VERSUS UNIVERSALISM. Nationalistic as well as universalistic tendencies are present in greater or lesser degree in the writing of both. This can be seen in Elijah's command that Elisha anoint Hazael king of Aram (1 Kings 19:15), for YHWH is considered equally responsible for events in Aram and in Israel. Other universalistic themes in the early prophets are exemplified in 1 Kings 20:28, in which a man of

God says to the king of Israel, "Thus says the Lord, 'Because the Arameans have said, "the Lord is a god of the hills but he is not a god of the valleys," therefore I will deliver all of this great multitude into your hand, and you shall know that I am the Lord," and in 1 Kings 5:15 in which Naaman, the commander of the Aramean army, after being cured by immersing himself in the Jordan River as prescribed by Elisha, confesses, "Behold, I know that there is no God in all the world but in Israel." The universalistic prophecies of the classical prophets on the other hand, do not preclude, of course, their predominant number of nationalistic oracles.

MANTICS VERSUS REPROVERS. Mantic behavior was not restricted to the pre-classical prophets. For example, Isaiah foretells the future for Hezekiah (Isa. 37:1ff.; 38:1ff.), and Jeremiah, for Zedekiah (Jer. 32:4–5, and see below). The latter also predicts the death of his prophetic rival, Hananiah (Jer. 28:16–17). At the same time, the early prophets Nathan, Elijah, and Elisha do not restrict their activity to merely predicting the future and the answering of queries, but are themselves messengers, apostles, and chasteners who deliver the word of God.

GROUP VERSUS INDIVIDUALS. Although Samuel, Elijah, and Elisha are followed by bands of prophets, when they fulfill their missions, they do it alone as individuals just as the later prophets did. The latter, too, may have had their followers (e.g., the difficult verse, Isa. 8:16), for it is most likely that it was the disciples of these prophets who recorded their masters' words (e.g., Jer. 36:4).

ECSTATICS VERSUS NON-ECSTATICS. Ecstasy, too, is not limited to the pre-classical prophets. The classical prophets had visions and unnatural experiences during their prophetic "seizures." Ezekiel, in particular, was prone to various ecstatic fits; Hosea is called a "madman" (Hos. 9:7) and so too, by direct implication, is Jeremiah (Jer. 29:26).

ROLE IN SOCIETY. The classical prophets played an extremely important role in the Israelite society, as is well known. Like the earlier prophets, they were consulted by those who wanted information from God. Jeremiah is requested by King Zedekiah's messengers to "inquire of the Lord for us, for Nebuchadnezzar, king of Babylon, is making war against us..." (Jer. 21:1–2; cf. similar requests in Jer. 37:7ff.; 42:1ff, and the advice given in Jer. 23:33ff.; Ezek. 8:1ff.; 14:1ff.; 33:30ff.; and contrarily, Isa. 30:1–2).

SYMBOLIC ACTS. The classical prophets, too, performed significant symbolic acts which not only presaged future events but were efficacious in initiating their process of realization. In this category may be included the symbolic names which Isaiah gave his children: "a remnant shall turn back" (Isa. 7:3), and "pillage hastens, looting speeds" (Isa. 8:3), and most probably his own name (Isa. 8:18; cf. the child's name, "God is with us," Isa. 7:14). Isaiah walked about naked and barefoot for three years as a sign that the king of Assyria would lead

the Egyptians and Cushites naked into exile (Isa. 20:2ff.). Jeremiah (16:1ff.) refrained from marrying and having children as a portent that both the parents and children of Israel would perish by the sword and famine. He buys a linen waistcloth, wears it, and then buries it in a cleft of the rock, and later upon recovering it, he finds that it has become spoiled, “good for nothing”: “Thus will the Lord spoil the pride of Judah and Jerusalem who were made to cling to God but would not obey” (Jer. 13:1ff.). He buys a potter’s earthen flask and promptly smashes it to signify that the Lord “will break this people and this city, as one breaks a potter’s vessel so that it can never be mended” (Jer. 19:1ff.). He is commanded by the Lord to make thongs and yoke bars and put them on his neck as a portent that any nation or kingdom that does not put its neck under the yoke of Nebuchadnezzar, king of Babylon, will be punished, and only those who submit will be left alone to till their own land (Jer. 27:2ff.; cf. the same act performed by Zedekiah, 1 Kings 22:11).

The “false” prophet Hananiah, as a symbolic act of his own, breaks these very bars and says, “Thus says the Lord: ‘Even so will I make the yoke of Nebuchadnezzar king of Babylon break from the neck of all the nations within two years.’” Jeremiah subsequently replaces his wooden yoke with one of iron and repeats the same message (Jer. 28). During the very last months of the siege of Jerusalem, he purchases a field from his uncle as a sign that “houses and fields and vineyards shall again be bought in this land” (Jer. 32:6ff.). In Jeremiah 43:8ff. the prophet is commanded to take large stones and hide them in the mortar in the pavement which is at the entrance to Pharaoh’s palace in Tahpanhes as a sign that the Lord will set the throne of Nebuchadnezzar over these stones. In Jeremiah 51:61–64, when Seraiah comes to Babylon, Jeremiah commands him to read the book he has written concerning all the evil that would befall Babylon. He is then to bind a stone to it and cast it into the Euphrates and say, “Thus shall Babylon sink, to rise no more, because of the evil I am bringing upon her.” Both the recitation of curses and the sinking of the scroll portend the final downfall of Babylon. Ezekiel (4:1ff.) takes a brick, portrays upon it the city of Jerusalem, puts siege works against it, builds a siege wall, casts a mound, sets camps against it, and plants battering rams round about. He then takes an iron plate and places it as an iron wall between himself and the city and presses the siege against the city, “a sign for the house of Israel.” He also lies alternately on his left and right sides for an extended period of time, presaging the oncoming days of punishment of Israel and Judah. He eats and drinks during those days only a very small amount of food including barley cake baked on human dung to indicate that the people of Israel and Jerusalem “shall eat their bread unclean among the nations” and “shall eat bread by weight... and water by measure” (Ezek. 4:9ff.). In chapter 5 he takes a sharp knife, uses it as a barber’s razor to cut the hair of his head and beard, takes balances and weights, and divides the hair for impending judgment. And in chapter 12 he conspicuously prepares for exile in full sight of his people.

SIGNS AND WONDERS. The literary prophets, following their predecessors, also resorted to the use of signs and wonders to authenticate their prediction of impending events. Isaiah tells King Ahaz that since the latter did not put his complete confidence in the Lord in order to withstand the Syro-Ephramite coalition, “The Lord Himself will give you a sign: Behold a young woman is with child and shall bear a son and shall call his name, Immanuel.” Before this lad reaches maturity, the kingdoms of Aram and Ephraim would be destroyed (Isa. 7:10–25). The same prophet gives a sign to King Hezekiah in order to prove to him that the Lord has heard his prayer; 15 years would be added to his life, and he would be delivered from the hand of the king of Assyria: “This is the sign to you from the Lord, that the Lord will do this thing that he has promised: Behold I will make the shadow cast by the declining sun on the dial of Ahaz turn back ten steps” (Isa. 38:5–8). He also cures the king by rubbing a cake of figs over his inflammation (38:21–22; 11 Kings 20:7). In the previous chapter he gives the following sign to that same king: “And this shall be the sign for you: This year eat what grows of itself, and in the second year what springs of the same; then in the third year sow and reap, and plant vineyards” (Isa. 37:30). This is a sign that the surviving remnant of Judah would take root and bear fruit.

Jeremiah, in an embarrassing confrontation with the “false” prophet Hananiah, who later smashed the wooden yoke bars of Jeremiah and subsequently replaced them with bars of iron, says, “Thus says the Lord... ‘This very year you shall die, because you have uttered rebellion against the Lord.’” The next verse tells that in that very year Hananiah died (Jer. 28:15–17). In one instance Ezekiel himself becomes a sign to the people, when God predicts and then executes the death of the prophet’s wife and forbids him to mourn for her as an omen of what the people are about to experience (Ezek. 24:15ff.).

VISIONS. Both the pre-classical and classical prophets share the common oracular terminology “Thus says YHWH.” Though the latter are more “hearers” than “seers,” they, too, often report visions, e.g., those of Amos (7:8); Isaiah (6); Jeremiah (1:11ff.; 24:1ff.), and the extraordinary visions of Ezekiel (particularly in chapters 1–3, 8–10); and Zechariah (5–6). Indeed, visions play an important role in the classical prophetic writings, as the following quotations further attest:

I spoke to the Prophets;
It was I who multiplied visions (Hos. 12:11).
And it shall come to pass in the future
that I will pour out my spirit in all flesh;
your sons and daughters shall prophesy,
your old men shall dream dreams, and your young
men shall see visions (Joel 3:1).
For they are a rebellious people, lying sons,
sons who will not hear the instruction of the Lord;
who say to the seers, ‘See not!’ and to the prophets,
‘Prophecy not to us what is right’ (Isa. 30:9–10; cf. Isa. 29:10;
Amos 7:12 in negative contexts).

Like their pre-classical forerunners, the literary prophets occasionally employ the terms “the hand of YHWH” (Isa. 48:16; 59:21; 61:1; Joel 3:1; Micah 3:8; Zech. 7:12; cf. Isa. 11:2; Hos. 9:7) and “the spirit of YHWH” to describe the power that activates and evokes their revelatory state of mind. The ecstatic character of literary prophecy is documented in the various trances of Ezekiel. Finally, classical prophets also, at times, bore the consequence of their dire predictions. Just as Ahab persecuted Elijah (1 Kings 17ff.) and had Micaiah imprisoned, because he foretold the destruction of Israel and the death of the king (1 Kings 22:27), so too Jeremiah was put into the stocks (Jer. 20:2) as well as in prison (Jer. 32ff.), and Uriah was put to death (Jer. 26:20–23).

Classical Prophecy

The classical prophets, thus, cannot be fully understood without knowledge of their antecedents. Some prophets are connected with the literature of the Torah, e.g., Jeremiah with Deuteronomy and Ezekiel with the Priestly Code. Hosea was indebted to traditions about Jacob; and he, Micah, and Jeremiah knew traditions of Exodus and wilderness wanderings. Isaiah was indebted to traditions of David and Zion. Nevertheless, they cannot be entirely explained by their predecessors or by earlier traditions. For in the middle of the eighth century B.C.E., a new dimension was added to Israelite religion, which definitively shaped the character of the nation. Commencing with Amos, a herdsman from Tekoa, there arose a series of great religious teachers and thinkers, inspired spokesmen who became the passionate bearers of the word of God.

HISTORICAL SCOPE. Their appearance was engendered by specific historical and political events. The temporal limits of the classical apostolic prophets can be placed in a historical framework extending over some 300 years and highlighted by two cataclysmic events. The first prophets appeared a few decades before the fall of Northern Israel (722 B.C.E.), after the conclusion of the 100-year war with the Arameans – a war which produced a vast societal cleavage between the impoverished masses and the wealthy minority, and they disappeared approximately a century following the destruction of Jerusalem (587/6 B.C.E.). Within this period three major empires successively dominated the world scene: Assyria, Babylonia, and Persia.

The prophets, however, always addressed their message to the contemporary situation. Amos, living in the time of Jeroboam II before the rise of Tiglath-Pileser (745 B.C.E.) and the neo-Assyrian empire, foretold exile and destruction for Israel, but he never indicated that it would be executed by Assyria. Second *Hosea (chs. 4–14), a somewhat later contemporary, also foresaw destruction, but although he was aware of both pro-Egyptian and pro-Assyrian factions, he did not designate Assyria as the enemy par excellence. Isaiah’s call, in contrast, came at the time of the peak of Assyrian ascendancy. He called that nation the rod of God’s wrath and considered it the last of the world powers. Simultaneous with the fall of Assyria would come the demise of arrogance, the root of all

idolatrous behavior. Micah and *Zephaniah, too, knew of the Assyrian menace, but except for one late interpolation in the former (Micah 4:10), they, like Isaiah, did not include Babylonia within their historical purview. *Nahum, coming a bit later, rejoiced over the fall of Assyria, but was silent about Babylonia. The Book of *Habakkuk reflects the transition period between Assyrian and Babylonian hegemony. Jeremiah, who received his call to prophecy in 627 B.C.E., identified the enemy described as the “nation from the north” with Babylonia only after the battle of Carchemish in 605 B.C.E. When he portrays the eventual defeat of Babylonia, however, he once again resorts to his initial image of a “nation from the north.” Persia is never mentioned as the successor to Babylonia in Jeremiah. Ezekiel, living in the time of Nebuchadnezzar, prophesied the fall of Babylonia but never specified Persia as the conqueror. (Persia is mentioned only once in this connection and then incidentally, 38:5.)

Only with the advent of the anonymous prophet of the Exile who is called Deutero-Isaiah (Isa. 40ff.), was Cyrus, king of Persia, specifically mentioned and then favorably so (Isa. 44:28; 45:1). The three last prophets of Israel, *Haggai, *Zechariah, and *Malachi, were active during the post-Exilic period under the Persian rule and were not aware of the future ascendancy of the Greek Empire. (For the dating of all these prophets as well as *Jonah, *Joel, and *Obadiah, see the individual articles under their names.) Though there are supplements and interpolations, the oracles of the prophets are oriented to their own contemporary situation.

Thus, classical prophecy arose and reached its zenith during the rise and fall of world empires. In the period of the pre-classical prophets, the political-historical horizon was of limited local significance. The enemies of those days – Ammonites, Moabites, Edomites, Philistines, and Arameans – did not strive for world dominion. The age that witnessed the emergence of great empires bore witness to the unique religious phenomenon of classical prophecy, which interpreted these world-significant events in the light of its own theological viewpoint. The Lord of Israel was seen as the director of the drama of world history. His ever-changing cast included the leading historical figures of those days – Sargon, Sennacherib, Nebuchadnezzar, Cyrus – but his attention was continually focused on Israel; her destiny within the divinely controlled arena of world politics was his main concern. The prophets provided an answer to the “why” of destruction and the “how” of future restoration. One implication of classical prophetic teaching was that Israel’s defeats did not indicate Yahweh’s weakness, but his strength. He could move all the peoples of the earth to punish his people or reward them, depending on their behavior.

DEDICATION AND COMMISSIONING OF THE PROPHET. The dedication and commissioning of a prophet has its own literary motif; the account of his being called. Such commissioning or re-commissioning accounts are found in Isaiah 6 (which does not describe the prophet’s original call to prophecy, but

rather his re-commissioning, so Kaufmann); Jeremiah 1:4ff. and 15:19–21 (the latter, too, being a re-dedication; see below); Ezekiel 1–3; and perhaps Deutero-Isaiah 40:6–8.

The lengthy prophetic dedication of Moses (Ex. 3–4) contains motifs that recur from time to time in the descriptions of the dedication of other prophets: (1) the humble occupation of the prophet (so, too, Amos 7:14); (2) the human response; (3) a protest of inadequacy for the mission; and (4) the divine reassurance. Moses made several attempts to dissuade God from selecting him, since he felt that he did not possess sufficient credentials for his mission. He pleaded inadequacy: “Who am I that I should go to Pharaoh and free the Israelites from Egypt” (Ex. 3:11) and “Please, O Lord, I have never been a man of words... I am slow of speech and slow of tongue” (Ex. 4:10).

Isaiah, in chapter 6, which describes his re-dedication to the prophetic office, after complaining of “unclean lips,” first has his mouth sanctified, and then upon hearing God’s question, “Whom shall I send?” volunteers his services, “I am ready, send me.” (In an augural vision, the prophet would most likely not be asked to volunteer but would be compelled to go willy-nilly.) Jeremiah, who was prenatally designated and consecrated for his calling, recounts how God touched his mouth, too, and put His words into his mouth (Jer. 1:9). Ezekiel describes his consecration as the devouring of a scroll written by God (Ezek. 3:1ff.). The organ of speech is specifically mentioned in all of these prophetic accounts, because the prophet becomes, upon dedication, God’s “mouthpiece.” Not only the lips, however, but the prophet’s whole being becomes dedicated to the service of God.

His Reluctance and God’s Reassurance. The prophets, however, were often reluctant to accept their calling. The most dramatic example by far is the unsuccessful flight of Jonah. The unwillingness of Moses, Isaiah, and Jeremiah to accept the divine call is also concentrated on their organ of speech: “I have never been a man of words” (Ex. 4:10); “Woe is me, for I am lost; for I am a man of unclean lips” (Isa. 6:5); “Alas, Lord God, I do not know how to speak, for I am inexperienced” (Jer. 1:6). God, in turn, responds with encouraging assurances, for Moses (Ex. 4:11), for Isaiah (Isa. 6:7), and, in particular, for Jeremiah, “Gird up your loins... Do not be dismayed... They will fight against you; but they shall not prevail against you, for I am with you, says the Lord, to deliver you” (Jer. 1:17–19; cf. 15:19–21).

LIFE OF THE PROPHET. Why such initial opposition? Why, too, such an outpouring of divine encouragement? The prophet’s distinction of being chosen by God was matched only by his frustration and rejection on the part of his fellowman. The prophetic office was not easy to bear. The description of the prophet’s emotional experience upon receiving a “stern vision” is at times graphic and overwhelmingly frightening: his loins are filled with anguish; his pain is comparable to birth pangs; he is tortured, anguished, terror-stricken; he reels, and

he is filled with the wrath of God (Isa. 21:3–4; Jer. 4:19; 6:11; 15:17; Hab. 3:16).

Of far greater significance, however, is the fact that such a selected messenger sometimes becomes a solitary individual, whose life is marked by loneliness and bitterness: “I sat not in the company of merrymakers, nor did I rejoice; I sat alone because Your Hand was upon me” (Jer. 15:17); “Oh that I had a lodge in the wilderness that I might leave my people and go away from them, for they are all adulterers, a troop of treacherous men” (Jer. 9:1). Jeremiah, whose personal tribulations and confessions are better known than those of any other prophet, became the paradigm of one who suffers for his mission. It is no wonder that he was not euphoric about being selected for such a task. Rejected and spurned, he bemoans his fate, “Woe unto me, my mother, that you bore me, a man of strife and contention to the whole land. I have neither a lender nor borrower been, yet everyone belittles me” (15:10). Even his own kinsmen and family are counted among his chief antagonists (12:6; cf. 20:10). Enemies were continually plotting against his life (11:19). Eventually, he even cursed his fate, “Cursed be the day on which I was born. Let the day my mother bore me not be blessed... Why did I come forth from the womb to experience trouble and grief and to waste my days in chagrin” (20:14–18).

Some prophets were fated to become harbingers of their nation’s downfall. Messengers of doom, they were doomed to suffer from their very message: “Lord, how long!” (Isa. 6:11); “Let me weep bitterly. Seek not to comfort me for the destruction of the daughter of my people” (Isa. 22:4); “For this I will lament and wail. I will go stripped and naked... For incurable are her blows, for it has come to Judah, has reached the gate of my people, to Jerusalem” (Micah 1:8–9); “O that my head were water and my eyes a fountain of tears, that I might weep day and night for the slain of the daughter of my people” (Jer. 8:23). The prophet bemoans their imminent tragedy and weeps over their tragic rejection of his words: “But if you will not listen, I will weep in secret for your pride; my eyes will weep bitterly and run down with tears because the Lord’s flock has been taken captive” (Jer. 13:17; cf. 10:19ff.; 14:17–18).

The life story of a prophet is liable to be one of anguish, fear, rejection, ridicule, and even imprisonment (Isa. 28:9–10; Jer. 11:18–23; 12:1ff.; 15:10, 15; 17:14–18; 18:18–23; 20:7–18; 37:12–21; Ezek. 21:11–12; Hos. 9:8; Amos 7:12–13; Micah 2:6). Some did not escape their assassins (Jer. 26:20–23; Uriah). Though the prophet weeps with his destined victims and takes up the cry of his compatriots, he is not understood by them. Great yet unbearable is the fate of one who claims that he was seduced, even forced into his role: “O Lord you have seduced me, and I was seduced; you have raped me, and have prevailed” (Jer. 20:7). Nevertheless he cannot cease from being a prophet: “If I say, ‘I will not mention Him or speak any more His name,’ there is in my heart as it were a burning fire shut up in my bones, and I am not able to hold it in” (Jer. 20:9). Yet paradoxically when he does prophesy, he may be silenced by God (Jer. 7:16; 11:14; 14:11) or mocked and spurned by man. Jeremiah

is eventually led to curse his people and demand vengeance against his adversaries (11:20b; 12:3b; 15:15a; 18:21–23).

Reproaching God. He is even driven in extremis to reproach God: “Why are you like a man dumbfounded, like a mighty man who cannot save?” (Jer. 14:9); “You are to me like a deceitful stream, like waters that fail!” (15:18). With this last outburst the prophetic protest reached its ultimate, as is indicated by the response of God, “If you return, I will restore you, and you shall stand before me” (15:19). Paradoxically, he who dedicated his life to persuading the people to return must now “return” himself. And why? So that he can once again perform the role of God’s emissary, “You shall be my spokesman” (15:19). Thus, it seems that for a short period of time Jeremiah had actually lost prophetic office. This “demotion” is further substantiated by the remainder of God’s response, where He repeats in almost exactly the same words the original encouragement at the time of the prophet’s initial call, “I will make you before this people an impregnable wall of bronze; They will attack you, but they will not prevail over you, for I am with you to save you and deliver you, says the Lord” (15:20). Jeremiah, after his defiant outcry of reproach, was re-commissioned to deliver the word of God.

False Prophets. The problem of how to distinguish a prophet who was truly commissioned by God from a “false” prophet is perplexing. A prophet may speak falsely but there is no term for a false prophet in the Bible. The distinction, which is found in rabbinic literature, was introduced by the Greek translation of the Bible into some verses in the books of Jeremiah (6:13:26 (= Greek 33); 7, 8, 11, 16; 27 (= Greek 34):9; 28 (= Greek 35):1) and Zechariah (13:2), as *pseudoprophētēs*. In the Hebrew Bible, however, both “false” and “true” prophets are called *navi*, and both claim inspiration and a mission.

In Deuteronomy there are several, not too useful, attempts to provide infallible criteria for distinguishing between them. Deuteronomy 18:20–22 reads “Any prophet who presumes to speak in My name a prophetic word that I did not command him to utter, or who speaks in the name of other gods – that prophet shall die. And should you ask yourselves, ‘How can we know that the prophetic word was not spoken by the Lord?’ – if the prophet speaks in the name of the Lord and the word does not come true, that word was not spoken by the Lord; the prophet has uttered it presumptuously: do not stand in dread of him.” Deuteronomy 13:2ff. goes one step further: even if the prophet utters prophecies after providing signs and wonders, should his message be to worship other gods, that prophet, too, is not to be heeded, since his appearance is only a test to determine whether the people really love and revere the Lord alone.

However, examples of an Israelite prophet delivering his message in the name of another god (Jer. 2:8; 23:13) are rare and not one demands that an alien god be worshipped. Most of them spoke, apparently with sincerity and conviction, in the name of God. As for the chronological criterion of the fulfillment of the oracle, this was of no value whatever at the mo-

ment the prophecy was uttered. How could the people suspend judgment if Hananiah told them not to submit to the king of Babylon and foretold the release from Babylonian captivity within two years, while Jeremiah declared that it was God’s plan that Israel surrender and remain in exile for 70 years (Jer. 27–28)? Jeremiah, himself, was completely perplexed and left the scene of confrontation without further contradicting Hananiah (28:11). Furthermore, several occasions are specifically recorded in which an oracle delivered by an acknowledged true prophet did not materialize in the manner in which he predicted – even within his own lifetime! Only a few examples of unfulfilled prophecies need be cited: Jeremiah predicted an ignominious end for King Jehoiakim (Jer. 22:19); yet 11 Kings 24:6 clearly belies this oracle. Ezekiel predicted the destruction of Tyre by Nebuchadnezzar (26:7–14), but later he acknowledged that the king’s siege of the city was unsuccessful (29:17–20). Both Haggai’s (2:21–23) and Zechariah’s (4:6–7) glorious anticipations and designs for Zerubbabel never materialized.

Jeremiah sought another objective criterion for distinguishing between a true and false prophet when he was dramatically confronted and confuted by Hananiah son of Azzur (Jer. 28). Hananiah declared in the name of YHWH that the Lord was going to break the yoke of Babylon, and that within two years the exiled community in Babylon and their king Jehoiachin would return to Israel. Jeremiah sincerely wished that Hananiah’s words were true. He did not question his sincerity nor did he call him a false prophet, but he merely pointed out that “the prophets who were of old, before my time and yours, prophesied against many countries and great kingdoms of war, disaster, and plague.” Only the future would vindicate the prediction of a prophet who foresaw peace; “As for the prophet who prophesies of well-being, when that prophet’s word comes to pass, then it can be acknowledged that he is the prophet whom YHWH really sent.” But then again how could one suspend judgment until history decided?

Jeremiah, more than any other prophet, was in constant combat with these prophets. He attacks three different types of “false” prophets (Jer. 23): (1) those who have dreams and report them as though they were the word of God and thus mislead the people, “The prophet who has a dream, let him tell his dream”; (2) those who are plagiarists “who keep stealing My words from one another” and pretend that they have had direct revelation; and (3) those “who using their own speech” concoct their own oracles and pass them off as prophecy. Nevertheless, when prophet clashed with prophet not only were the people confounded, but Jeremiah himself, in the case of Hananiah, was left speechless, and was unable to point to any irrefutable objective standard by which to verify or disqualify his opponent (Jer. 28).

To confound matters even more, a true prophet might be misled by a “false” prophet (1 Kings 13), and false prophecy might even be inspired by God in order to deceive and entice Israel (1 Kings 22:21ff.). According to Ezekiel 14:9–11,

moreover, God might actually seduce a bonafide prophet to deliver a false message!

If the individual prophet had a questionable moral character – if he was a drunkard (Isa. 28:7), an adulterer, or a liar (Jer. 23:14); if he used his office to make a living by telling the people what they wanted to hear and not what they ought to hear (Micah 3:11); or if he was a “professional” prophet attached to the staff of temple personnel (the joint denunciation of priest and prophet may be noted in Isa. 28:7; Jer. 23:11, 34; Micah 3:11; Zech. 7:2–3), his veracity obviously would be highly dubious. But what of the others? If there was no difference in the technical form of the prophecy, what of the contents? Apparently the only, and by no means infallible, criterion would be the nature of the message, whether it was one of weal or woe. Proclamations of national-religious salvation were suspect for over 250 years (cf. 1 Kings 22:11 ff.; Jer. 6:14; 8:11; 14:13; 23:17; 28:2 ff.; Ezek. 13:16; Micah 3:5 ff.). It is also possible that such prophecies were related to the national interests of the crown and the cult – Hananiah predicted the early return of the cult vessels (Jer. 28:3).

But this, too, was not an absolute definition, for both pre-Exilic, e.g., Nahum 2:1, Jeremiah 30–33 (if these chapters stem from the early part of his career), and Exilic, e.g., Deutero-Isaiah, as well as post-Exilic prophets, Haggai, Zechariah, and Malachi, brought messages of comfort, and some also took a positive view of the cult (see below). Hence, the falsity or veracity of prophecies could not be determined on the external basis of form or content. They could only be judged by the person who had true insight into the intentions of God at that historical moment. A prophet “who has My word, let him faithfully speak My word. What has straw to do with wheat?... Is not My word like fire... like the hammer that shatters the rock” (Jer. 23:28–29).

The Prophet as Intercessor. The irresistible character that such a religious experience has on a “God-intoxicated” individual (Jer. 23:9), “who has stood in YHWH’s council and seen and heard His word...” (Jer. 23:18), not only constrains him to deliver the divine message but compels him, at times, to intercede on behalf of his people. Herein lies one possible means of distinguishing between the two kinds of prophets: the function of the prophet as an intercessor. In this role, as distinct from his role as a messenger, the prophet attempts through prayer to offset the impending doom. The first individual in the Bible to be designated a prophet, Abraham, does not merit this title because he delivered oracles in the name of God, but because he was ready to intercede: “Since he is a prophet, he will intercede for you to save your life” (Gen. 20:7). Abraham also valiantly attempted to save the twin cities of Sodom and Gomorrah, and with unbridled daring challenged God: “Shall not the judge of all the earth deal justly” (18:25).

The paragon of prophets, Moses, paradigmatically and eloquently exemplifies this aspect of his prophetic mission several times:

(1) After the incident of the golden calf, “Let not Your anger, O Lord, blaze forth against Your people, whom You delivered from the land of Egypt with great power and with a mighty hand... Turn from Your blazing anger, and renounce the plan to punish Your people. Remember Your servants, Abraham, Isaac, and Jacob, how You swore to them by Your Self and said to them: ‘I will make your offspring as numerous as the stars of heaven, and I will give to your offspring this whole land of which I spoke, to possess for ever’” (Ex. 32:11–13). Moses’ plea was successful. “And the Lord renounced the punishment He had planned to bring upon His people” (Ex. 32:14).

(2) At Taberah, “The people cried out to Moses. Moses prayed to the Lord and the fire died down” (Num. 11:2).

(3) After the incident of the spies, Moses prayed, “Therefore, I pray, let my Lord’s forbearance be great... Pardon, I pray, the iniquity of this people according to Your great kindness, as You have forgiven this people ever since Egypt” (Num. 14:13 ff.). Once again he met with success, “And the Lord said, ‘I pardon, as you have asked’” (Num. 14:20). (For Moses’ personal intervention on behalf of Miriam and Aaron, see Num. 12:13 and Deut. 9:20, respectively.)

Next in line in the Bible’s narrative tradition of prophetic intercession stands Samuel, who prayed on behalf of his people after their defeat at the hands of the Philistines (1 Sam. 7:5–9), on their behalf after their request for a king, which so embittered God (1 Sam. 12: 19, 23), and on behalf of Saul after God rejected his election as king of Israel (1 Sam. 15:11).

In the Book of Jeremiah, both Moses and Samuel are singled out as the exemplars of great intercessors on behalf of their people (Jer. 15:1; cf. Ps. 99:6). Jeremiah proved a worthy, though unsuccessful, successor to these two. That he prayed to God on behalf of his nation is explicitly stated several times, e.g., in a time of drought, when he was driven by the enormity of his task to defy God, “Why are You like a man confused, like a mighty man who cannot save” (Jer. 14:1 ff.; cf. his words in 4:10; 15:11; and his confession in 18:20, “Remember how I stood in Your presence speaking good on their behalf so as to avert Your anger from them”). Even more impressive are God’s express commands to Jeremiah not to intercede! “Do not pray for this people, or lift up cry or prayer for them, and do not intercede with Me, for I do not hear you” (Jer. 7:16; cf. 11:14). When God attempts to silence Jeremiah in 14:11–12, the prophet, nevertheless, blurts out a plea on their behalf (verse 13). The die, however, was cast; the nation was doomed. Even Moses and Samuel (Jer. 15:1) would be helpless in such a situation. Intercession would no longer avail, or more properly stated, God would not permit any further intercession, because it just might have been successful in diverting Him from His self-prescribed course.

The passages cited above and the pleas of Amos (Amos 7:1–3, 4–6) make it patently clear that a prime function of the prophet was to defend his people and to act as mediator on behalf of his nation. Kings Hezekiah and Zedekiah also requested Isaiah (Isa. 37:2 ff. = 11 Kings 19) and Jeremiah (Jer.

37:3; cf. 42:2, 20) respectively, to intercede on behalf of Israel in the face of an enemy onslaught.

Intercession, thus, is an integral component of the true prophet's mission. To be a prophet means to speak for the people to God, represent their case, and take up their cause. Should one shirk from such a duty by refusing to engage God in polemics and confine himself to merely speaking to the people for God, he would be belying his prophetic call. He would then be a "false" prophet. This interpretation finds confirmation in Ezekiel, who himself carries on the tradition of intercession (cf. 9:8; 11:13). In Ezekiel 13:4–5, God declares, "Your prophets have been like foxes among ruins, O Israel. You have not gone up into the breaches to prepare the broken wall around the Israelites, that it may stand firm in battle on the day of the Lord." The prophet's mission was to stand in the breach of the nation's wall, a breach caused by the sin of his people. He was to prevent God from entering; for entrance spelled doom and destruction. This is explicitly stated in Ezekiel 22:30–31, "I looked for a man among them who could build up a barricade, who could stand in the breach before Me to defend the land from ruin; but I found none. Thus I poured out my indignation upon them and utterly destroyed them in the fire of My wrath..." It is of interest to note that the very same imagery is employed in Psalms 106:23 (Y. Muffs).

In sum, though some of the "false" prophets did have revelations and visions, performed symbolic actions (Jer. 28:10 ff.), imparted oracles (23:31), and prophesied in YHWH's name (14:14; 29:9), since they promised good fortune and prosperity and thereby lulled the people into false security (6:14; 8:11; 14:13; 23:17; 28:2 ff.), they were accused by Jeremiah of not having been sent by God (14: 14–15; 23:21, 32; 28:15; 29:9), of not having been admitted to the divine council (23:18), and of not interceding with God on behalf of the people (27:18). However, after all, the final verdict could only be given by a true prophet, and even he was not always completely certain.

HISTORY

Universalism and Election

To the prophets, events of history disclosed the finger of God. God revealed Himself in the language of history. It is true that other nations in the Ancient Near East also regarded their gods as being active in history on significant occasions, but none of them conceived of a panoramic world outlook in which all of history was seen to be governed by the will of one God, nor did they interpret the history of their nation as a unified sequence governed by one, all-encompassing divine plan. Though the God of Israel addressed Himself to all humanity (see, e.g., Isa. 13:23; Jer. 27:2ff.; 28:8; 46–51; Ezek. 25–32; Amos 1:3–2:3; 9:7; Obad.; Nah. 3), the concept of election was unique to Israel: "Only you have I chosen from amongst the nations; therefore I shall punish you for all your sins" (Amos 3:2). Election was not a bona fide guarantee of special protection. Some prophets actually fought against this popular conception of inviolability (e.g., Isa. 28:15; Jer. 5:12; Amos 5:14). The consequence of being chosen was not immunity but heightened responsibility.

Whereas the nations of the world were held culpable solely for gross violations of the established order, Israel alone was taken to task for any and every infringement of the moral and ethical code of behavior. Indeed, one of the distinctive characteristics of the writings of the classical prophets is their insistent and adamant denunciation of corruption in the moral, ethical, and social fields. No one was impervious to their attack: not kings, priests, prophets, judges, women, creditors, wealthy landowners, or even the poorer classes. They leveled severe criticisms against murder, juridical corruption, violence, cruelty, dishonesty, greed, oppression, exploitation, bribery, harlotry, degeneracy, debauchery, arrogance, luxury, callousness, apathy, lust for power, and militarism. Each and every one of these vices exemplifies a "forgetting of God," which leads to the disintegration and the eventual condemnation of the nation (e.g., Isa. 3:14–15, 16–24; 5:8, 11–12, 18–19, 20–23; 9:8–9, 16; 31:1; Jer. 5:26; 7:9; Ezek. 22; Hos. 1:7; 4:2, 6, 11–13; 6:8–10; 7:1–7; 8:14; 10:13; 12:8–9; 13:6; Amos 2:6–8; 3:10–11; 4:1; 5:7; 6:1–7, 13; Micah 3:1–3, 11; Zeph. 1:12). Idolatry, too, was subjected to its usual severe criticism (e.g., Isa. 65:3–4; Jer. 7:18, 30–31; 19:4–5; Ezek. 8; Hos. 2:15; Amos 8:14; Zeph. 1:4–6).

Supremacy of Morality

Special attention should be given to the prophets' new concept of the cult and their novel idea of the supremacy of morality. The problem of the relationship of the prophets to cultic worship has gone through several stages of interpretation. One of the basic axioms of biblical scholarship was the notion that the priest and prophet were fundamentally opposed to one another. The major contribution of the prophets was considered to be the de-ritualization of religion. The basic message of the prophets was "ethical monotheism," with the stress on morality rather than ritual. Thus, it was thought that the independent spirit of the prophet conflicted head-on with the priest, the professional officiant of organized religion. The former was interested in right; the latter in rites. The prophet was "word-possessed" – he brought the word of God to man. The priest was "cult-possessed" – he raised man's sacrifice to God.

The development of form-critical studies brought a partial scholarly reversal, and the attempt was made to demonstrate the positive attitude of the prophets toward the cult. Their utterance of divinely inspired oracles was supposed to be an integral component of Israelite worship. The time, and later even the content, of these oracles were understood to be liturgically fixed. The prophets were identified as members of the cultic personnel.

Both views, especially the latter, are extreme and are constantly being debated. What can be said with certainty is that the prophetic attacks on the cult did introduce a new principle into the religion of Israel: The essence of God's demand is not to be found in the cult but in the moral and ethical spheres of life. In the Torah and pre-classical prophetic literature there is no sharp distinction between cultic and moral prescriptions. Both are equally important, and both are essential to the con-

tinued existence of the nation. With the words of the classical prophets, however, a new aspect was introduced. While Samuel argued for the primacy of obedience over sacrifice (1 Sam. 15:22), Amos and his fellow prophets stressed the primacy of morality (Isa. 1:11–17; 66:1ff.; Jer. 6:20; 7:21–23; 14:12; Hos. 6:6; Amos 5:21–25; Micah 6:6–8). The prophets were no more unequivocally opposed to the cult than they were to song and psalm (Amos 5:23) or prayer, festival, and Sabbath (Isa. 1:13–15), all of which they mentioned in their attacks. On the contrary, Isaiah's call came apparently while he was in the Temple (Isa. 6). The Exilic (Isa. 44:28; 52:11; 66:20–24; Jer. 33:11, 18; Ezek. 20:40–44; 22:8, 26; 40–48), as well as the post-Exilic prophets Haggai and Zechariah, had a very positive attitude toward the Temple and its cult. They advocated the rebuilding of the sanctuary, with the restoration of sacrificial worship, and stressed ceremonial law. The prophets did not denounce the practice of sacrifice per se, but they did adamantly oppose the absolutization of the cult.

Attitude Toward Ritual

In Israel, ritual is conceived of as God's gift, an act of grace intended for the good of humanity. It affords man means by which to draw closer to God. Worship and ritual are means, justice and righteousness are ends. "God requires devotion, not devotions" (S. Spiegel, *Amos versus Amaziah* (1957), 43), right not rite. When cult becomes a substitute for moral behavior, it is to be condemned. Religion is not to be equated with formal worship, nor is it to be restricted to certain specified times during the calendar year; it is to encompass all of life. Hence, any cultic act performed by a worshiper whose moral or ethical character is not beyond reproach is considered an abomination to God. It is no wonder that, after disparaging independent importance of the cult, the prophets clashed with the acknowledged heads of established religion, the priests. Clashes such as of Amos with Amaziah (Amos 7:10ff.), Jeremiah with Pashhur (Jer. 20), or with Zephaniah son of Maaseiah (Jer. 29:25ff.), are unheard of in stories set in pre-classical times. In the dramatic, near tragic confrontation of Jeremiah with his antagonists (Jer. 26) the priests are among the forefront in demanding the death sentence for the prophet, who was accused of "blasphemy" for repudiating the inviolability of the Temple (Jer. 7).

Moreover, it should be recalled that in other religions of the Ancient Near East the correct observance of the cult was of paramount importance, since it was thought that the welfare of the gods was dependent on both the maintenance of their temples and the daily upkeep of their sacrifices. The prophets, however, devaluated the intrinsic significance of ritual, and stressed God's ultimate concern with correct behavior. Justice, righteousness, kindness, integrity, and faithfulness were among God's chief demands (e.g., Jer. 9:22–23; 22:15–16; Hos. 6:6; Amos 5:15, 24; Micah 6:8).

Morality and Destiny

The prophets took yet another step. Not only was morality of ultimate importance but it became the decisive factor in de-

termining the national destiny of Israel. The classical prophets differ in emphasis from the view expressed in the Torah literature and in the Former Prophets, according to which the sin of idolatry was the primary transgression. Not only were the worship of other gods than Yahweh and the cardinal sins of murder and incest denounced as before, but the everyday immoral acts of society were condemned as well. With the emergence of the classical prophets a new criterion became operative – moral rectitude. The destiny of the nation was bound up with it, and unrighteousness would spell the end of Israel.

Repentance

The prophets consistently pleaded with Israel to seek God that they might live (Amos 5:4, 14). They demanded piety and faithfulness to the covenant between God and Israel, and threatened punishment and fulfillment of the covenant's curses for those who were disloyal to it. Yet all of their denunciations and frightful maledictions were not meant as ends in themselves. They were, rather, a vain attempt to arouse the people from their lethargic status quo; they were didactic means to achieve the desired end – repentance. The objective of the prophetic threat of dire punishment was that it should not take place. Paradoxically, the prophets wished to make their own calling self-defeating by persuading man to return to God. They censured, warned, and admonished their audiences to forsake their immoral ways in order to avoid imminent destruction.

The prophets were not always ready to accept the finality of divine judgment (for Amos and Jeremiah, see above). They prayed that repentance would have the desired effect: "Who knows, God may yet have a change of heart and turn from His fierce anger so that we shall not perish" (Jonah 3:9, the words of the king of Nineveh expressing the prophetic sentiment; cf. the "perhaps" of the sailors in 1:6). There are other examples: "Who knows whether He will not turn and change His decision and leave a blessing behind Him" (Joel 2:14). "It may be that the Lord, the God of hosts, will be gracious to the remnant of Joseph" (Amos 5:15). "Perhaps you may find shelter on the day of the Lord's anger" (Zeph. 2:3). The future is contingent on human response to the prophetic word. Divine plans are not unchangeable; human actions tip the scales of justice and mercy: "If at any time I declare concerning a nation or a kingdom, that I will pluck up and pull it down and destroy it, and if that nation, concerning which I have spoken, turns from its evil, I will repent of the evil that I intended to do it. And if at any time I declare concerning a nation or a kingdom that I will build and plant it, and if it does evil in My sight, not listening to My voice, then I will repent of the good which I intended to do to it" (Jer. 18:7–10; cf. Ezek. 3:17–21; 33:7–20). Even the possibility of a "divine turning" not predicated upon the prior repentance of the people was contemplated, "How can I give you up, Ephraim! [How can I] hand you over, Israel! How can I treat you like Admah or make you like Zeboim! My heart is changed within Me; My compassion grows warm and tender, I will not execute My fierce anger, I will not again de-

stroy Ephraim..." (Hos. 11:8–9). Compassion may overcome wrath (cf. Jer. 33:8; Micah 7:18–19).

SUSPENSION OF FREEDOM AND GOD'S INACCESSIBILITY. Yet the prophets were not often so optimistic. They knew very well the futility of chastisement (e.g., Amos 4:6–11; Isa. 1:5ff.; 9:12; Jer. 2:30; 5:3). This incurable stubbornness and hardheartedness of the people (Jer. 5:21; Isa. 42:18–20; 43:8; 46:12; 6:10, 17; 9:25; Ezek. 2:4; 12:2) led one prophet to take the most radical step of all: the suspension of freedom. Isaiah was commissioned to "make the heart of this people fat, their ears heavy, and their eyes dim, lest they see with their eyes, and hear with their ears, and understand with their hearts, and turn and be healed" (Isa. 6:10). The prophet became God's messenger to harden their hearts and thereby to prevent the people from repenting! Since Israel had so often spurned the words of God and since they had not returned to Him, the privilege of repentance was to be denied them (until only one-tenth of the population remained). The only "cure" for obdurate hardness was to intensify it.

At other times God would make Himself inaccessible to the people as a punishment (e.g., Hos. 5:6; Amos 8:11–12), or to the prophet himself. Jeremiah had no immediate answer for Hananiah (Jer. 28:11) and had to wait once for ten days for the word of God (Jer. 42:7).

New Covenant

The frustration of waiting for human response and the realization that human effort alone could not effect a total return to God led to the development of an entirely new idea. If humans would not initiate the process, God would. He would not only initiate it but finalize it as well. This is the thought implicit in the concept of a "new covenant." Since the old covenant was broken, God despairing of further futile warnings and punishments, would implant His will directly into the human heart, thereby changing human nature by a divine "grafting." The human heart of stone would be turned into a heart of flesh. People would have their whole being filled with the "knowledge of God," and thus he could not but obey God; they would no longer be capable of rejecting God's teachings. This new covenant would be unbreakable and would presage final redemption (Isa. 55:3; Jer. 24:7; 31:30–33; 32:38–41; Ezek. 16:60; 34:25ff.; 36:26ff.; 37:26ff.; cf. Deut. 30:6; Isa. 11:9; 54:13).

Future of Israel

With the covenant renewed, the future community of Israel, constituted by the *remnant (e.g., Isa. 4:3–4; 8:16–17; 10:20–21; Jer. 31:31ff.; Amos 9:8ff.; Micah 7:8; Zeph. 2:3, 9), which will have survived the "Day of the Lord" (see also *Eschatology), would live in peace, no longer troubled by oppression, injustice, or war (e.g., Isa. 2:1–5; 10:27; 11:1–9; 60:5–16; 61:4–9; Hos. 2:21ff.; Micah 4:3–4). It would be an age in which God's glory would be manifested to all mankind (Isa. 40:5), and so all the nations would come to reject idolatry and recognize and revere the God of Israel alone (Isa. 19:18–25; 45:22ff.; Jer. 3:17; 12:16; Ezek. 17:24; Micah 7:16ff.; Hab. 2:14; Zeph. 2:11; Zech.

2:15; 8:20–23; 14:16–21). Jerusalem would become the spiritual center of the world (Isa. 2:2), from which would flow God's instruction to all mankind (Isa. 2:3; 51:4ff.). Israel, would, according to Deutero-Isaiah, become a prophet nation (49:2–3; 51:16; 59:21), spreading the teaching of God to all humanity (42:1–4) and recounting His glory (43:21). It would become "a light to the nations" (42:6; 49:6) and bring God's blessing and beneficence to the ends of the earth (45:22–24).

[Shalom M. Paul / S. David Sperling (2nd ed.)]

In the Talmud

Despite the many aggadic elements in the references to prophecy or the prophets in rabbinical literature, there emerges a clear picture of the rabbinic view of the prophets. Substantially it is based upon two main principles. The first is that Moses was the "master of the prophets" and no prophet after him succeeded as did Moses in penetrating into the nature of the Divine, communing with Him, and receiving His message while in full possession of his normal cognitive faculties. This is of course clearly expressed in the Bible (Num. 12:6–8) but it is extended to apply to all future prophecy. This concept is expressed in various ways, the most striking being that whereas Moses beheld the Divine as through a clear mirror, the other prophets did so through a distorted mirror ("a mirror which does not shine," Yev. 49b; cf. "through a glass darkly," 1 Cor. 13:12).

However, there is noticeable a definite tendency to give Isaiah precedence over all other prophets. Although it is stated that of the four near-contemporary prophets, Isaiah, Amos, Micah, and Hosea, the last was first both in time and in importance (Pes. 87a), it is stated that of all the prophets only Moses and Isaiah "knew what they were prophesying" (Mid. Ps. 90:1, no. 4). Both are referred to together as "the greatest of the prophets" (Deut. R. 2:4). Isaiah is responsible for more prophecies than any other prophet and he prophesied not only to Israel but to mankind as a whole (PR 34:158a); he received revelation direct from God and his prophecies were "doubled" (Pd-RK 125b). If Ezekiel was vouchsafed a revelation of the Divine Essence equal to that of Isaiah, he saw Him as "a villager sees the person of the king," while Isaiah saw Him as an "inhabitant of a metropolis [*kerakh*] who sees the person of the king" (Hag. 13b).

The second principle is a corollary of the first. It is to the effect that the prophets were not responsible for any religious innovations or novel doctrines, their function being confined to expounding and clarifying the teachings of the Pentateuch. The Talmud interprets the verse (Lev. 27:34) "these are the commandments which the Lord commanded Moses for the children of Israel in Mount Sinai," to mean that "henceforth a prophet may make no innovations" (Shab. 104a). "The prophets neither took away from, nor added to, aught that is written in the Torah, save only the commandment to read the *megillah*" and even for that they sought biblical sanction (Meg. 14a). In conformity with this view, in the chain of tradition with which tractate *Avot* opens, the prophets appear merely as the

IN JEWISH PHILOSOPHY

tradents of the Torah of Moses, the successors to the elders after Joshua, and the predecessors of the men of the Great Synagogue. It is highly probable that this view was influenced by the contrary Christian view of progressive revelation through the ages, culminating in Jesus, though one need not go so far as does Weiss (Dor, 2 (1904⁴), 8) in seeing in it a polemic against the antinomianism of Paul. Consequently statements of the prophets which have no pentateuchal confirmation or support cannot normally be made the basis of the *halakhah*.

According to the rabbis the number of prophets was innumerable ("double the number of the children of Israel who went forth from Egypt") and every tribe produced them (Suk. 27b). However only the prophecies of those which contained a lesson (lit. "were required for") future generations were recorded. They amount to 48 prophets and seven prophetesses: to Miriam (cf. Ex. 15:20 and Num. 12:2), Deborah, and Huldah, the rabbis add Sarah, Hannah, Abigail, and Esther (Meg. 14a). There were also seven gentile prophets: Balaam, his father Beor (Sanh. 105a), Job and his three companions, and Elisha the son of Barachel (BB 15b), but of them Balaam was incomparably the greatest. He was even regarded as the equal of Moses (see *Balaam in Aggadah) and the gentile nations cannot therefore claim that they were not vouchsafed prophecy (Yalk 966; Num. R. 14:34). Nevertheless prophecy came to them only by night and in "half words" and from "behind the curtain" (Gen. R. 52:5). All the prophets prophesied only concerning the messianic age (i.e., the present world in its ideal state) but were not vouchsafed to see the celestial world to come (Ber. 34b). The statement "the same message [*signon*, lit. "sign"] is given to a number of prophets but no two prophets prophesy in the same *signon*" (Sanh. 89a) is probably to be taken to refer to the fact that although they all reveal the word of God, each one has his own particular message or doctrine. The daring use of anthropomorphisms by the prophets is regarded as a sign of their "greatness" (Num. R. 19:4). With the exception of Jeremiah, all the prophets conclude their prophecies on a note of hope and comfort (TJ, Ber. 5:1, 8d). Where the patronymic of the prophet is given, it is to show that his father was also a prophet; when his place of origin is not given he was a Jerusalemite (Meg. 15a).

The prophets are divided into the Early and Later Prophets, but the former encompass all those of the period of the First Temple, only the post-Exilic – Haggai, Zechariah, and Malachi – constituting the latter (Sot. 48b). All the prophets were wealthy. An interesting proof is given with regard to Amos. Since he was both a herdsman of Tekoa (Amos 1:1) and a dresser of sycamore trees (7:14), and sycamores grow only in the Shephelah but not in the hilly country of Tekoa, he must have been a wealthy landowner with flocks in Judea and plantations in the Shephelah (Ned. 38a). When prophecy came to an end, the **Shekhinah* departed from Israel and the **Bat Kol* became a partial substitute (Yoma 9b).

For the order of the prophets according to the Talmud (BB 14b) see *Bible Canon.

[Louis Isaac Rabinowitz]

Philo

The teaching of *Philo concerning prophecy has to be reconstructed from discussions scattered throughout his writings. Philo conceives of the prophet as priest, seer, and lawgiver all in one. Prophetic understanding is the highest form, transcending reason, which is based on sense perception. When the divine prophetic spirit rests on a man, he is "possessed" by it in a kind of frenzy or "sober intoxication." All prophecy is by grace of God, but prophecy through the divine spirit, in contrast to communication through angels or the divine voice, demands preparation in the recipient, be he Jew or non-Jew: he must be refined, wise, and just, and emancipated from bodily concerns.

[Ralph Lerner]

Medieval Jewish Philosophy

Prophecy is a critical subject in medieval Jewish philosophy. This is hardly surprising. Where a religious community defines itself by a divinely revealed law and regards the teachings of the biblical prophets as the Word of God, the nature and significance of revelation, the manner of its transmission, and the qualities of the human recipient of the divine message are issues of primary importance. The early medieval Jewish philosophers developed their approaches to prophecy in the broader context of Greek philosophical thought as it was received and shaped in the Islamic world. A fundamental question they wrestled with as a result of this influence is how can the incorporeal, transcendent Deity appear to human beings and communicate with them. As we shall see, their approaches vary greatly in addressing this problem. While all the philosophers agreed that God has no body and hence cannot be seen, nor does He possess any organs of speech, some continued to view Him as directly involved in every bestowal of prophecy, while others developed naturalistic explanations for understanding the phenomenon.

SAADIAH GAON. The early 10th-century Babylonian *gaon* *Saadiah in his *Book of Beliefs and Opinions* (Books 2 and 3) deals with a number of issues related to prophecy, particularly the problem raised by the corporeal descriptions of God in biblical literature, and the problem of the purpose of prophecy and the manner of its verification. Since God, in Saadiah's view, is incorporeal and is not to be characterized by any of the categories that pertain to matter (e.g., time, place, quantity, affections), most of the prophets' corporeal descriptions of Him are not to be interpreted literally but allegorically. In regard to the instances when the prophet reports actually seeing God, Saadiah, however, presents a different explanation. These visions are to be interpreted literally – the prophet in fact sees with his eyes what he is describing – but they are not of God. Rather their object is a special created entity made from the purest luminous matter and called the Created Glory or the *Shekhinah*. God sends this special entity to the prophet in order to confirm that the message heard indeed comes from Him. The message itself consists of words created by God, Cre-

ated Speech, and conveyed through the air to the hearing of the prophet. Prophecy hence is an experience that the recipient attains and verifies by means of the external senses, which, in Saadiah's view, are a source of reliable knowledge. Prophecy is verified by others by their beholding this special entity in one of its manifold forms, or by miracles that accompany the relaying of the divine message and which only God is capable of performing. This explanation serves to preserve the integrity of Scriptures by limiting the necessity for introducing allegorical interpretations which undermine its literal meaning. Allegorical interpretations are to be accepted only when there is a blatant contradiction between the literal meaning and the other sources of reliable knowledge.

The Created Glory receives a more extensive treatment in Saadiah's earlier *Commentary to the Book of Creation*, where he identifies it with the Holy Spirit (**Ru'ah ha-Kodesh*) which is the first of God's creations. In addition to being the instrument for transmitting prophecy, it also fills the entire world and plays a crucial role as an intermediary for divine governance. One can detect in this work overtones to the Philonic idea of the *Logos*. Saadiah in his *Book of Beliefs and Opinions* greatly reduces the stature of the Glory, stressing instead God's direct governance of the world.

As for the purpose of prophecy, Saadiah underlines its role in revealing to all of humanity the fundamental truths of reason, such as the existence of God and the creation of the world, so everyone will possess these beliefs with full confidence even prior to being able to prove them. He also sees a necessity for prophecy with respect to the commandments dictated by the intellect, in addition to those known only by way of revelation (see *Reasons for *Commandments*). While the former commandments are known by reason and obligatory upon all human beings, reason dictates only general moral principles. Revelation lays down specific commandments which translate these principles into a body of law.

JUDAH HALEVI. While Saadiah views prophecy primarily in terms of a mission, the early 12th-century philosopher Judah *Halevi in his *Kuzari* identifies this phenomenon as the ultimate perfection of the individual. Halevi at the beginning of his treatise indicates that the Islamic Aristotelian philosophers posit the following criteria for attaining human perfection: possessing the proper potential inherited from one's parents, living in a moderate geographical climate conducive to actualizing this potential by attaining the moral virtues and mastering all of the sciences. They define ultimate perfection in terms of conjunction with the Active Intellect resulting in the eternal felicity of the intellect, as well as attainment of knowledge of hidden matters by way of prophetic visions. As opposed to this view, while at the same time drawing heavily from it, Halevi maintains that prophecy is unique to the Jewish people due to a special inherited quality they possess and which is actualized by living in the Land of Israel and observing the divinely revealed commandments with the proper intent. God alone knows the actions that will perfect the soul and they are those

given in the Torah. Halevi describes prophecy in terms of conjunction with the *Amr Ilahi* (Divine Matter), though he never offers a clear definition of this term (some scholars maintain that it refers to the *Logos* while others see it as an epithet for God in those instances where there exists an unmediated connection between the Deity and His creatures). The prophet attains the rank of the angels. By means of prophetic intuition, labeled by Halevi "the inner eye," the prophet sees the divine world and experiences an immediate relation with God leading to an overpowering love of the deity, described also in terms of the sense of "taste" (4:3, 15–17) – a state reminiscent of Islamic mystical descriptions of ecstatic rapture.

Halevi, however, does not present a single model for understanding the prophetic phenomenon. In passages where it is important for him to show that prophecy is an empirically verifiable phenomenon proving that God is cognizant of individuals and acts in history, Halevi adopts Saadiah's view of the Created Speech and Created Glory. In this manner he explains the Revelation at Sinai (1:87). In other cases of prophecy he wavers between this approach and the one that treats prophecy as an internal experience. Halevi goes so far as to leave open the possibility that the visions themselves are the product of the prophet's imagination acting under the control of the intellect, a view that follows the Aristotelian philosophers (4:3).

In treating prophecy more in terms of ultimate perfection than a divinely bestowed mission, Halevi himself may have sought to attain this state. Certainly his intention to move to Israel and revive the Jewish community there was part of his plan to bring about the conditions leading to the reappearance of prophecy. His aspiration for achieving this state also finds expression in his liturgical poetry.

MAIMONIDES. Prophecy is a central topic in all of *Maimonides' major writings. It is integrally related in his thought to a host of issues – the nature of God, divine knowledge, providence, divine law, politics, human perfection and biblical exegesis. Already in his early legal writings Maimonides presents a naturalistic approach to prophecy drawn from the Islamic Aristotelians. In his *Commentary to the Mishnah: Introduction to Perek Helek* (Sixth Principle of Faith), Maimonides describes prophecy as follows: "There are human beings possessing a superior nature and great perfection. They prepare their souls till they receive the form of the intellect. The human intellect then conjoins with the Active Intellect. From it [the Active Intellect], a noble emanation emanates upon them. These are the prophets; this is prophecy and this is its essence." The "form of the intellect" is a reference to the "acquired intellect," which according to Alfarabi (see *Farabi, Abu Nasr Muhammad, Al-) is attained only after mastery of all the sciences and apprehension of the essence of the intellect itself. This intellect is an immortal entity, not dependent upon the body for its existence, and it conjoins with the Active Intellect. A similar description of prophecy is presented by Maimonides in his *Mishneh Torah: Laws of the Principles of the Torah* (7:1). In both of these legal works he goes on to

deal with the imagination's role in prophecy, which accounts for the prophetic visions.

The naturalistic approach to prophecy characterizes also *The Guide of the Perplexed*. Maimonides dismisses the view of the masses that God bestows prophecy upon whom He chooses even if the individual is not perfect. He insists that only a perfect individual – one who possesses a perfect physical temperament and imagination, the moral virtues, and a perfect intellect – can attain prophecy. He introduces the proviso, however, that God can miraculously withhold prophecy from the worthy individual (2:32). In this manner he leaves room for the workings of divine will, though he ascribes to it a negative role. Maimonides defines prophecy as an emanation from God to the Active Intellect and from there to the individual's rational faculty and imaginative faculty (2:36). This emanation results in the apprehension of metaphysical truths, principles of governance and the ability to divine the future. Philosophers and non-prophetic rulers and diviners possess perfection in only one of these two faculties, while one alone attains the Active Intellect's emanation (2:37) – the rational faculty in the case of the philosophers enabling them to master the sciences and the imaginative faculty in the case of the others enabling them to govern and divine the future (though imperfectly). The prophet for Maimonides thus reaches the pinnacle of human perfection and achieves the rank of the perfect philosopher, statesman and diviner. His account suggests that the emanation to the prophets does not consist of specific information, the Active Intellect has no cognizance of the recipient or his circumstances; rather it strengthens the prophet's own faculties to apprehend those matters about which he is thinking and to represent them in a figurative manner. Even the prophetic mission is explained by Maimonides in a naturalistic manner. While for many, if not most, prophets this attainment is a private one, for some the emanation is so strong that the recipient feels inwardly compelled to extend his perfection to others by assuming a leadership role despite the dangers involved (2:37). Maimonides stresses that one attaining intellectual perfection and prophecy in truth prefers the solitary existence in which he can continuously enjoy the state of contemplation. The private longings of the individual who attains perfection to detach himself from society together with the overpowering feeling that he must assume a public role is reflected in Jeremiah's initial prophetic vision in which he tries to refuse the divine mission but is commanded to undertake it nevertheless. The vision itself reflects the conflict in Jeremiah's own soul. Maimonides attempts to reconcile the dilemma facing the public prophet by positing a state in which the prophet continues to live in his own private space, contemplating God and the order of the world, even while engaged in interacting with others and leading them.

In Maimonides' approach to prophecy one can detect his wavering between viewing prophecy primarily in terms of an intellectual attainment and viewing it primarily in terms of the perfection of the imagination. In his most lengthy treatment of this phenomenon in the *Guide of the Perplexed* (2:36–48)

he stresses the latter dimension. His distinction between prophetic dreams, which occur while the recipient is asleep, and the higher level prophetic visions, which occur while awake, is based on the functioning of the imagination. A similar consideration marks his division of prophetic levels based on whether the prophet saw only parables in his dream, heard a voice without seeing anything, beheld a human being speaking, beheld an angel speaking, or beheld God speaking (2:45). His discussions of prophecy in the introduction to his treatise and towards its conclusion (3:51), on the other hand, describe prophecy as the ultimate intellectual attainment, surpassing the metaphysical knowledge possessed by the philosophers. The stress on the imaginative dimension of prophecy is not only important in explaining the biblical visions but also in order to draw a categorical distinction between Moses and all other prophets.

From his discussion of prophecy Maimonides excludes Mosaic prophecy and the Revelation at Sinai. He insists that as opposed to all other prophets, Moses' imaginative faculty was not involved in his prophetic experience, only his intellect. The uniqueness of Moses' prophecy has as its most important corollary the fact that his prophecy alone involves divine legislation. No other prophecy, past or future, results or will result in the laying down of a divine law (2:39). Maimonides appears to maintain that Moses received the Torah directly from God, word for word, and not from the Active Intellect. Furthermore, at Sinai an audible voice was heard by all of Israel, though only Moses heard the actual words (2:33). Maimonides clearly builds on Saadiah's view of Created Speech. Whether this stance reflects his true opinion on the subject or is designed solely for public consumption has been a source of controversy among Maimonidean scholars. His views on the nature of Mosaic prophecy and the Revelation at Sinai are clearly intended to uphold the supernatural origin of the Torah, its uniqueness and inviolability in a manner that would appeal to the masses of Jews. Despite this apparent fundamental departure from the naturalism of the Aristotelian philosophers, Maimonides continues to follow in their footsteps in his conception of the goal of the Torah. He maintains that it is designed to lead society to human perfection in the best possible manner by preventing wrongdoing, instilling the moral virtues and inculcating true beliefs, particularly the monotheistic idea and all this idea entails, which directs one to the path of intellectual perfection (2:49; 3:27). Even all the ceremonial commandments play a crucial role in this regard. All other legislations fall short in attaining this goal.

GERSONIDES. Maimonides' approach to prophecy, as well as Averroes' account of divination in his *Epitome to Parva Naturalia* had a decisive impact on subsequent treatments of this topic among the Jewish philosophers in Provence and in Spain. The most analytical discussion of this phenomenon is to be found in the early 14th-century treatise by Gersonides (*Levi ben Gershom), *Wars of the Lord*. Gersonides deals with prophecy in Book Two of his treatise in the context of his dis-

cussion of veridical dreams. He was more interested than his predecessors in understanding the details of this phenomenon – what exactly is the nature of the emanation from the Active Intellect and how does it come about that the prophet receives it as a particular message relating to his own historical circumstances. While Gersonides views prophets as perfect philosophers, he treats prophecy itself as primarily concerned with knowledge of the future. The prophet has no advantage over the philosopher *qua* prophet when it comes to theoretical knowledge.

The fact that prophecy primarily involves future contingent events raises in its wake certain fundamental philosophic problems for Gersonides: Can the future be known while humans at the same time enjoy free will? Can God's knowledge which is unchanging nevertheless encompass all particulars throughout history? Since Gersonides does not feel that the future can be known absolutely without sacrificing the idea of human freedom, even God in his view does not know what occurs as a result of free choice. The implications of this point are profound. Since God's knowledge is unchanging, not only does He not know the future but also does not know the past. In short, God does not know any individual *qua* individual nor any of his particular circumstances. The same is true also of the knowledge of the Active Intellect. This position is certainly exceptionally radical (and problematic) from a theological perspective. It also does not explain the empirical fact that diviners and prophets often see the future, including events that are contingent upon human choice.

Gersonides resolves this dilemma by ascribing to God and to the Active Intellect knowledge of the entire order of the world, including all the specific influences of the stars and planets upon human events. God does not know individuals as such, but has knowledge of all the influences that the heavenly bodies exert upon any person born at any given time and place. One may say that according to Gersonides, God and the Active Intellect possess knowledge of all possible horoscopes without knowing which horoscope applies to any particular person. Since most people act in accordance with the influences of the heavenly bodies, and do not exercise their freedom to act in a manner contrary to them, their future can be predicted with a fair amount of confidence. Hence all predictions are not absolute but conditional; they are contingent upon the fact that those involved will act in accordance with the celestial influences.

This view still does not explain how the Active Intellect transmits specific knowledge to a particular individual regarding other particular individuals or groups, without at all being cognizant of the individual and his circumstances. According to Gersonides, all information pertaining to the world order emanates continuously from the Active Intellect. The rational and imaginative faculties of the prophet, while “withdrawn” from the other faculties of the soul in the state of sleep, attain the information that applies to an individual or group who the prophet has in mind. One may think of the Active Intellect as a giant transmitter which transmits on all frequencies at once

all information regarding celestial influences on all places on earth through all time. The prophet receives only the information on the frequency to which his mind is attuned, that is to say, which people and groups he is thinking about. In this manner he learns their probable future without the Active Intellect being aware who receives this information, who and what is the subject of the information, and what actually occurs in the domain of human events.

Gersonides deals with Moses' perfection within the context of his discussion of prophecy, but he does not discuss in his philosophic treatise the most important facet of Moses' attainment – the divine law. He turns to this subject in his commentary on the Torah, where he sees the Torah as resulting from a miraculous and unique act of divine providence. Both the topics of providence and miracles are treated in the *Wars of the Lord*. They are seen as resulting from the impersonal activity of the Active Intellect vis-à-vis the person who has attained the level of perfection that triggers off this activity on his behalf.

HASDAI CRESCAS. The late 14th-century Spanish philosopher, Hasdai *Crescas sought to restore to Jewish philosophy the notion of God's personal involvement in the bestowal of prophecy as well as the primacy of the prophetic mission. In short, he sought to counter the naturalistic approaches to prophecy that characterize Maimonides' and Gersonides' approaches by treating prophecy primarily as a supernatural phenomenon. In his philosophic treatise, *Light of the Lord*, he defines prophecy as follows [Book 2, Section 4]: “Prophecy is a spiritual emanation of knowledge. It emanates from God to the intellect of the person, with or without an intermediary. It informs him, even without [his possessing] the necessary premises, of a certain matter or matters of which he is ignorant. It extends to all subjects. Its purpose is to guide him or others properly.” For Crescas, prophecy categorically differs from divination which is received by the imagination. It does not entail the recipient possessing any previous knowledge of the subject of the message. Prophecy is a gift of God, who knows all particulars through all time including all contingent events, to the perfect individual with the purpose of correct guidance. In the case of Moses, the prophecy came directly from God, who is the Author of each word of the Torah. Crescas accepts Saadiah's notion that the voice heard by Moses and by Israel at Sinai was a created audible one. Even in those cases where prophecy came through the mediation of the Active Intellect and was received by the internal faculties of the individual, God determined the message to be received.

Crescas does not abandon the naturalistic approach to prophecy entirely. The attainment of prophecy in his view is contingent upon the attainment of perfection. Yet this perfection for Crescas, as for Halevi before him, does not lie primarily in one's level of theoretical knowledge but in the level achieved of love of God, which is dependent also upon observance of the commandments. As a result of the prophetic experience, the individual not only attains a specific message

but achieves an even more passionate love of God and ultimate felicity. This experience in turn leads to the overpowering desire to call upon others to serve and love God. For Crescas, even more than for Maimonides, the prophetic mission is integral to the prophetic experience itself.

BARUCH SPINOZA. In the *Tractatus Theologico-Politicus* by the 17th-century philosopher Baruch *Spinoza we find a reaction to the medieval Jewish philosophic tradition regarding prophecy at the same time that he incorporates into his treatise many of its ideas. For Spinoza there can be no “supernatural” activity or supernaturally attained knowledge, for the eternal laws of nature are inviolable. Spinoza depicts the prophets as simple-minded individuals, sharing with their contemporaries the same false beliefs about the world, but possessing a superior imagination that translates these beliefs into images. Hence their prophecies as presented in the Bible contain no theoretical truths, and Scripture should not be read as presenting such truths in figurative form. Moses, too, possessed a completely false conception of reality. The law that he laid down led to a well-ordered society of former slaves but certainly not to true virtue and felicity. In this manner Spinoza seeks to undermine completely the authority of the Bible (at least the Old Testament) as a source of knowledge beyond philosophy, and with it the authority of its religious interpreters. Only philosophers left unrestrained in their activity can attain true knowledge of the world. Only they are capable of achieving true virtue and the intellectual love of God. In a crucial sense they are for Spinoza the true prophets.

[Howard Kreisel (2nd ed.)]

Modern Jewish Thought

Depending on their attitude toward *revelation, modern Jewish philosophers treat prophecy either as a subjective experience or as a supernatural phenomenon. Those philosophers who regard prophecy as a subjective experience account for the phenomenon in a variety of ways. Some dismiss it as a form of psychological delusion; others view it as a mystical experience or an “inspired” insight, deriving from excellence of moral, intellectual, or imaginative faculties. Those who treat prophecy as a supernatural phenomenon differ over the nature of the prophetic experience. Of those philosophers who accept the notion that revelation constitutes a supernatural communication of content, some regard prophecy as the authentic disclosure of a message received word by word from God, a view referred to as “the doctrine of verbal inspiration,” and others regard it as the record of a human response to a divine revelation of content. According to the latter view, human and divine elements are intermingled in prophecy. Other philosophers, while accepting supernatural revelation, deprive it of any ideational or instructive content and restrict it to the manifestation of the Divine Presence; they look upon the words of the prophet as a personal response to a revelatory experience.

As a dogmatic rationalist, Moses *Mendelssohn maintained that reason could supply man with all the theoretical insights needed for salvation. Therefore, he restricted the

function of prophecy to the practical sphere, to the divine communication of instruction for human action (*Jerusalem* (1852), pt. 2, ch. 3).

The idealistic philosophers, emphasizing the cognitive aspects of prophecy, viewed it as a special aptitude for moral and religious insight. Hermann *Cohen regarded the prophets as pioneering thinkers who removed the mythical elements from religion and developed Judaism from a tribal religion into a universal ethical monotheism. The essence of the universal ethical monotheism is belief in God and adherence to the moral law (*Juedische Schriften*, 1 (1924), 310–6). Kaufmann *Kohler, like many other exponents of the doctrine of “progressive revelation,” viewed the “inspired” moral and religious insights of the prophets as important milestones in the evolution of the human spirit toward higher ethical and metaphysical truths.

Sharply reacting to idealistic theories that reduce prophecy to a function of the human spirit, Solomon Ludwig *Steinheim insisted that revelation cannot be explained solely in terms of rational or spiritual insight. The central religious affirmations of Judaism could not have originated within our own cognitive faculties because of their inherent limitations. The primary function of prophecy is to disclose religious truths that can be known only through supernatural revelation (*Die Offenbarung nach dem Lehrbegriffe der Synagoge*, 5ff.). However, Steinheim assigned reason an important function in determining which parts of Scripture represent the revelation of eternal truth.

Samson Raphael *Hirsch and other Orthodox thinkers subscribed to the doctrine of verbal inspiration of the Scriptures. Bitterly objecting to any form of biblical criticism, Hirsch insisted that one must look upon the Scripture as a basic datum in the same manner scientists look upon natural phenomena as given (*Nineteen Letters* (1960), note to letter 18). As a staunch exponent of the traditional view, he rejected the evolutionary theory, according to which the contributions of later prophets are an advance over earlier formulations (*Horeb* (1962), 7).

Naturalist thinkers, such as *Aḥad Ha-Am and Mordecai *Kaplan, ruled out all supernatural elements in prophecy. However, because of their positive attitude toward Jewish nationalism, they could not follow Hermann Cohen in treating the prophet merely as an exponent of ethical universalism. According to Aḥad Ha-Am, who regarded the nation as the bearer of true ethical universalism, the prophet personifies the finest manifestation of the Jewish national spirit.

Jewish existentialist thinkers characterize prophecy as a dialogic relationship between man and God, rather than as the disclosure of a message. Martin *Buber in his book *The Prophetic Faith* (1949) maintained that the prophet is involved in a divine-human encounter. The prophet’s message reflects the prophet’s personal subjective response to his encounter with God. In the view of Franz *Rosenzweig, although revelation is a supernatural event occurring at specific times to particular individuals, the words of the prophet are nonetheless a purely

human “interpretation” of a revelatory experience in which God reveals His love to man. Abraham J. *Heschel contends that the prophet experiences not merely the presence or the love of God, but a revelation of the “divine pathos.” However, although prophecy is a revelatory experience in which God’s concerns and designs for man are apprehended (*The Prophets* (1962), 307–23), the expression of this experience is affected by the cultural background as well as the personal style of the prophet (*God in Search of Man* (1965), 258–62).

Of the most recent Orthodox thinkers, Joseph B. *Soloveitchik, maintains in his article “The Lonely Man of Faith” (*Tradition*, summer 1965) that the prophetic encounter, a dialogue initiated by God, makes possible the establishment of a “covenantal community” between God and man. Unlike the mystical experience, however, prophecy cannot be limited to religious feelings or intuitions, but entails a normative content. Abraham Isaac *Kook’s treatment of prophecy, in his work *Orot ha-Kodesh* (pt. 1 (1963), 267–72), reflects his mystical orientation. Genuine metaphysical insights, according to Kook, cannot be obtained by reason alone. When properly cultivated by a life of piety and holiness, man’s imaginative faculties enable him to attach himself to the Divine Source and apprehend reality in the light of the **Shekhinah*, or “Divine Presence.” Illumination derived from union with the Divine reaches its highest level in prophecy. Thus, Kook regarded prophecy as the ultimate religious goal.

PROPPER, DAN (1941–), Israeli Industrialist, CEO of Israeli food giant Osem International Ltd., founded by his father in 1942. Propper and his brother GAD (1944–) hold 13% of Osem stock, with Nestlé the majority shareholder. The group produces more than 1,000 different food products in ten plants located throughout Israel. Exports went primarily to Europe. Net sales in 2004 reached nearly NIS 2.5 billion (\$550 million).

Propper studied food engineering and worked for a few years in the industry in England. He joined the firm in the age of 26, starting off in product development and becoming director-general at the age of 37. During the 1990s he served as president of the Israel Manufacturers Association, establishing himself as a highly visible spokesman for Israeli industry. In 2006 he announced that he was stepping down as Osem CEO while remaining chairman of the board.

[Shaked Gilboa (2nd ed.)]

PROSBUL (Heb. פְּרוֹסְבוּל or פְּרוֹסְבוּל), a legal formula whereby a creditor could still claim his debts after the *Sabbatical Year despite the biblical injunction against doing so (Deut. 15:2). The text of the prosbul reads, “I declare before you, so-and-so, the judges in such-and-such a place, that regarding any debt due to me, I may be able to recover any money owing to me from so-and-so at any time I shall desire.” The prosbul was signed by witnesses or by the judges of the court before whom the declaration was made (Shev. 10:4, Git. 36a). The principle underlying the prosbul was based on the passage “and this is the manner of the release: every creditor shall release that which he hath lent unto his neighbor; he shall not exact it of his neighbor and his brother... Of a foreigner thou mayest exact it; but whatsoever of thine is with thy brother thy hand shall release” (Deut. 15:2, 3). From this the law was deduced that the operation of the year of release did not affect debts of which the bonds had been delivered to the court (*bet din*) before the intervention of the Sabbatical Year (Shev. 10:2), since the Court was regarded as a corporate body to which the words “thy brother,” suggesting an individual, did not apply. The court would therefore collect its debts after the Sabbatical Year (Yad, Shemittah ve-Yovel 9:15). Through a slight extension of this precedent, the prosbul was instituted, which in effect amounted to entrusting the court with the collection of the debt. Without actually handing over the bond to the court as previously required, the creditor could

secure his debt against forfeiture by making the prescribed declaration.

The prosbul was instituted by Hillel. The Mishnah states that when he saw that the people refrained from giving loans one to another before the Sabbatical Year, thereby transgressing “Beware that there be not a base thought in thy heart,” etc. (Deut. 15:9), he instituted the prosbul (Shev. 9:3). The Talmud therefore explained prosbul as *pruz buli u-buti*, meaning an advantage for both the rich and poor. It benefited the rich since it secured their loans, and the poor since it enabled them to borrow (Git. 37a). The word seems, however, to be an abbreviation of the Greek expression πρὸς βουλῆ βουλευτῶν meaning “before the assembly of counselors” (cf. *Boule). The rabbis later explained that Hillel only abrogated the Mosaic institution of the release of all debts every seventh year since the law of release itself was only of rabbinic authority during the Second Temple period when the Jubilee was not operative because the land was not fully occupied by Israel (Git. 36a–b). It was only permitted to write a prosbul when the debtor possessed some real property from which the debt could be collected. The rabbis were very lenient with this rule, however, and permitted the writing of a prosbul even when the debtor possessed a minute amount of land such as a flowerpot or the trunk of a tree. The creditor was also permitted temporarily to transfer to the debtor a small parcel of land so that the prosbul could be written (Shev. 10:6, 7; Git. 37a). An antedated prosbul was considered valid, but a postdated one was void (Shev. 10:5).

During the Hadrianic persecutions, all religious practices were forbidden on the penalty of death and it was hazardous to preserve a prosbul. The rabbis therefore ruled that a creditor could collect his debt even if he did not produce a prosbul since it was assumed that he previously wrote one, but had destroyed it out of fear (Ket. 9:9). This temporary provision later became the established law, and the creditor was believed when he alleged that he had lost his prosbul (Git. 37b; Sh. Ar., ḤM 67:33). Orphans were not required to execute one since they were considered wards of the court. Money owed to them was therefore automatically considered as being owed to the court (Git. 37a). The *amoraim* debated the virtue of Hillel’s institution. Samuel declared that if he had the power he would abolish it, while R. Nahman held that even if no prosbul was actually written it should have been regarded as written. Samuel also maintained that only the leading courts of each generation could supervise the writing of a prosbul. Subsequent practice, however, entrusted all courts with this responsibility (Git. 36b; Isserles to Sh. Ar., ḤM 67:18). During the Middle Ages, the writing of prosbuls was widely disregarded since there was an opinion that the laws of the Sabbatical Years were no longer operative (Rema to Sh. Ar., ḤM 67:1 and commentaries). Nevertheless, meticulous individuals continued to write prosbuls even in modern times (e.g., *Pe’er ha-Dor: Hayyei Hazon Ish*, 2:245; see also *Takkanot; *Usury).

[Aaron Rothkoff]

PROSE, FRANCINE (1947–), U.S. novelist and short story writer. Prose was born in Brooklyn, New York, and educated at Radcliffe and Harvard. Among her works devoted to Jews and Judaism is *Judah the Pious* (1973), which is a story within a story. The work is a fable dealing with the religious quest that leads to moral transformation and a changed way of viewing the empirical world. *Hungry Hearts* (1983), with its homage to *An-Ski, focuses on a Yiddish theater troupe in which a dybbuk possesses an actress. In *Guided Tours of Hell: Novellas* (1997), the title story examines with caustic wit the uses of authenticity as a famed Holocaust survivor helps lead a tour of a concentration camp, spurring the envy of a minor American playwright. *A Changed Man* (2005) depicts with comic irony the ethical metamorphosis of a member of a neo-Nazi group; he becomes a spokesman for a Jewish organization promoting understanding and peace.

[Lewis Fried (2nd ed.)]

PROSELYTES. There is ample evidence of a widespread conversion to Judaism during the period of the Second Temple, especially the latter part of the period, and the word *ger*, which in biblical times meant a stranger, or an alien, became synonymous with a proselyte (see *Strangers and Gentiles).

Among the notable converts to Judaism may be mentioned the royal family of Adiabene, Aquila and/or Onkelos, Flavius Clemens, the nephew of Vespasian, and Fulvia, wife of Saturninus, a Roman senator. Unique, as the only case of forced conversion in Judaism, was the mass conversion of the Edomites by John Hyrcanus.

In addition to those outstanding figures, however, it is obvious that proselytism was widespread among the ordinary people. The statement of the New Testament that the Pharisees “compass sea and land to make one proselyte” (Matt. 23:15), suggesting a vigorous and active proselytization may possibly be an exaggeration, but on the other hand, the near pride which the rabbis took in the claim that some of their greatest figures were descended from proselytes (see below) point to an openhanded policy toward their acceptance. Such incidents as the different approach of Shammai and Hillel to the request to be taught the principles of Judaism by a potential proselyte (Shabb. 31a) and the incidental mention of “Judah the Ammonite proselyte” (Ber. 28a) point to the fact that the movement was not confined to the upper classes. In fact Josephus states explicitly that in his day the inhabitants of both Greek and barbarian cities evinced a great zeal for Judaism (Contra Ap. 2. 39).

It was during this period that the detailed laws governing the acceptance of proselytes were discussed and codified, and they have remained standard in Orthodox Judaism.

Laws of Conversion

The procedure, established by the *tannaim*, according to which a non-Jew may be accepted into the Jewish faith, was eluci-

dated as follows: "In our days, when a proselyte comes to be converted, we say to him: 'What is your objective? Is it not known to you that today the people of Israel are wretched, driven about, exiled, and in constant suffering?' If he says: 'I know of this and I do not have the merit,' we accept him immediately and we inform him of some of the lighter precepts and of some of the severer ones... we inform him of the chastisements for the transgression of these precepts... and we also inform him of the reward for observing these precepts... we should not overburden him nor be meticulous with him..." (Yev. 47a; cf. Ger. 1, in: M. Higger, *Sheva Massekhtot Ketanot* (1930), 68–69). This text refers to a person who converted through conviction. The *halakhah* also accepts a posteriori, proselytes who had converted in order to marry, to advance themselves, or out of fear (Yev. 24b, in the name of Rav, see TJ, Kid. 4:1, 65b–d; Maim. Yad, Issurei Bi'ah 13:17; Sh. Ar., YD 268:12). The acceptance of a proselyte "under the wings of the Divine Presence" is equivalent to Israel's entry into the covenant, i.e., with circumcision, immersion, and offering a sacrifice (Ger. 2:4, in: M. Higger; loc. cit. 72).

A proselyte had to sacrifice a burnt offering either of cattle or two young pigeons. R. Johanan b. Zakkai instituted that in those times when sacrifice was no longer possible, a proselyte was not obliged to set aside money for the sacrifice (Ker. 9a). Therefore, only circumcision and immersion remained. R. Eliezer and R. Joshua disagreed as to whether someone who immersed himself but was not circumcised or vice versa could be considered a proselyte. According to R. Eliezer, he is a proselyte, even if he performed only one of these commandments. R. Joshua, however, maintained that immersion was indispensable. The halakhic conclusion is that "he is not a proselyte unless he has both been circumcised and has immersed himself" (Yev. 46). The act of conversion must take place before a *bet din*, consisting of three members; a conversion carried out by the proselyte when alone is invalid (Yev. 46b–47a). There is a suggestion that the three members of the *bet din* must be witnesses only to his acceptance of the precepts but not to the immersion. Maimonides, however, decided (Yad, Issurei Bi'ah 13:7), that a proselyte who immersed himself in the presence of two members only is not a proselyte. The schools of Shammai and Hillel differed on the issue of a proselyte who had already been circumcised at the time of his conversion: "Bet Shammai states: 'One must draw from him the blood of circumcision'; Bet Hillel states: 'One need not draw the blood of circumcision from him'" (Tosef., Shah. 15:9; TB, Shab. 135a). Most of the rabbinic authorities decide in favor of Bet Shammai (Tos. to Shab. 135a; Maim. Yad, Issurei Bi'ah 14:5; Sh. Ar., YD 268:1), and "who hast sanctified us with Thy commandments and hast commanded us to circumcise proselytes and to draw from them the blood of the covenant" (Shab. 137b) is said in the circumcision benediction of proselytes.

A proselyte must observe all the precepts that bind Jews. The statement: "There shall be one law for the citizen and for the stranger that dwelleth amongst you" (Ex. 12:49), which refers to the paschal lamb, the sages interpreted to mean that the

stranger (proselyte) was the equal of the citizen concerning all the precepts of the Torah (Mekh. Pisha, 15). They tried to equalize the status of the proselyte and that of the Jew; certain differences stemming from the origin of the convert, however, remained. According to an anonymous Mishnah, a proselyte may not confess himself after taking out the tithes since the statement occurs in the confession "the land which Thou hast given to us"; nor does he read the section on the first fruits, where the statement is: "which the Lord hath sworn unto our fathers to give unto us." The proselyte, praying by himself must say: "the God of the Fathers of Israel"; in the synagogue he says: "the God of your Fathers" (Ma'as. Sh. 5:14; Bik. 1:4). According to one tradition, R. Judah permitted a proselyte to read the section on the first fruits, claiming that Abraham was the father of the whole world (TJ, Bik. 1:4, 64a; but in Tosef., Bik. 1:2 this permission is only extended to the Kenites). The Palestinian *amoraim*, R. Joshua b. Levi and R. Avihu, agreed with R. Judah. The authorities (particularly R. Samson in his commentary to *Bikkurim* (*ibid.*), and Maimonides in his letter to Obadiah the Proselyte, below) in permitting a proselyte to say "the God of our Fathers" in the prayers based themselves on the same rationale.

A proselyte terminates all former family ties upon conversion and "is considered a newly born child." His Jewish name is not associated with that of his father and he is referred to as "the son of Abraham (our father)." Later, it became the custom to name the proselyte himself after the first Jew who knew his Creator "Abraham the son of Abraham." According to the letter of the law, a proselyte may marry his relatives. The sages, however, decreed against this "So that they should not say: 'We have come from a greater sanctity to a lesser sanctity'" (Yev. 22a, Yad, Issurei Bi'ah 14:12). The disqualifications pertaining to testimony of relatives in judicial cases of family members do not apply to the proselyte; his relatives also may not inherit from him. If no heirs were born to him after his conversion, his property and his possessions are considered not to belong to anyone, and whoever takes hold of them becomes their owner (BB 3:3, 4:9; Git. 39a; Yad, Zekhi'ah u-Mattanah 1:6).

A proselyte may marry a Jewish woman, even the daughter of a priest (Kid. 73a; Yad, Issurei Bi'ah 19:11; Sh. Ar., EH 7:22). A female proselyte, however, cannot marry a kohen, unless she was converted during childhood, not later than the age of three years and one day (Yev. 60b; Kid. 78a). R. Yose permits the marriage of the daughter of a male or female proselyte to a kohen; R. Eliezer b. Jacob, however, disputes the matter. The statement "From the day of the destruction of the Temple, the kohanim have preserved their dignity and followed the opinion of R. Eliezer b. Jacob" shows that tradition tended toward the latter's opinion. The *amoraim*, however, decided that he be followed only in those cases where the marriage has not yet taken place. If a female proselyte is already married to a kohen, she is not bound to leave him (Kid. 4:7; TB, Kid. 78b; Yad, Issurei Bi'ah 19:12). A proselyte may also marry a *mamzer* ("bastard"). According to some opinions, the permission may

extend over ten generations, while others claim it should be only until his heathen origin is forgotten (Kid. 72b, 75a).

A proselyte cannot be appointed to any public office. The rabbis based their decision on the verse: "Thou shalt appoint over thee a king from among thy brothers – appointments shall be only from among thy brothers." This injunction does not apply to a proselyte whose mother or father are of Jewish origin (Yev. 45b; Kid. 76b; Tos. Sot. 41b, Yad, Melakhim 1:4). A proselyte may not hold the office of judge in a criminal court; he may act as such in a civil court (Sanh. 36b) and also judge a fellow proselyte, even in a criminal law case (Rashi to Yev. 102a). Unless one of his parents was born Jewish, most authorities bar a proselyte from acting as judge even in a civil court (Alfasi on Sanh. 4:2, Yad, Sanh. 2:9, 11:11). Others are of the opinion that even in a civil court he can only judge a fellow proselyte (Tos. Yev. 45b; Ra-Sh-BA on Yev. 102a).

Appreciation of the Proselyte

In the Talmud and the Midrashim, as well as in other contemporary literature, the accepted attitude toward proselytes is usually positive. There is, however, strong evidence in rabbinic sources that some authorities were opposed to the concept of conversion and proselytes. Those scholars who ignore or obliterate such evidence cannot be justified. The differences in outlook found in rabbinic sources can partly be explained by disparities in character and temperament. However, the deciding factors were usually contemporary conditions and the personal experiences of the rabbis. R. Eliezer b. Hyrcanus, who was under ban, objected to the acceptance of proselytes (Eccles. R. 1:8). When Aquila the Proselyte wondered and asked: "Is this all the love which the Lord hath given unto the proselyte, as it is written 'and He loveth the stranger to give him bread and clothing?'" R. Eliezer was angry with him, but R. Joshua comforted him, saying: "Bread means Torah... clothing means the *tallit*: the man who is worthy to have the Torah, will also acquire its precepts; his daughters may marry into the priesthood and their grandsons will sacrifice burnt offerings on the altar." (Gen. R. 70:5). It is possible that R. Eliezer's negative attitude may have been influenced by his contacts with the first Christians. He may have seen that many of the new heretics were proselytes who had relapsed and it is only concerning these that he said, "They revert to their evil ways" (BM 59b). The same R. Eliezer also states: "When a person comes to you in sincerity to be converted, do not reject him, but on the contrary encourage him" (Mekh. Amalek 3). From his time, proselytes out of conviction were mentioned in the benediction for the righteous and the pious in the *Amidah* (Meg. 17b). The bitter experience of Jews with proselytes in times of war and revolt influenced the negative attitude to conversion. Proselytes and their offspring became renegades, often slandering their new religion and denouncing the Jewish community and its leaders to the foreign rulers. In Josephus there is a description of Hellenist proselytes who apostatized and returned to their evil ways (Jos., Apion 2:123). Reference to the situation which existed after the destruction of the Tem-

ple and the abortive revolt which followed it is made in the *baraita* statement: "Insincere proselytes who wear *tefillin* on the heads and on their arms, *zizit* in their clothes, and who fix *mezuzot* on their doors – when the war of Gog and Magog will come... each one of them will remove the precepts from himself and go on his way..." (Av. Zar. 3b). At the time of the revolt of Bar Kokhba the expression "they impede the arrival of the Messiah" (Nid. 13b), referred to such proselytes. At the same epoch, R. Nehemiah taught: a proselyte who converted in order to marry or converted to enjoy the royal table or to become a servant of Solomon, proselytes who converted from fear of the lions (see: 11 Kings 17:24–28), proselytes who converted because of a dream, or the proselytes of Mordecai and Esther, are not acceptable as proselytes, unless they convert themselves (as) at the present time (Yev. 24b), i.e., by conviction in times of political decline, oppressions, persecutions, and lack of any material benefit. R. Simeon b. Yohai, upon seeing Judah b. Gerim ("a son of proselytes"), who was responsible for the rabbi's criticism of the Romans reaching the ears of the rulers, said: "Is this one still in the world!" and set his eyes upon him, turning him into a heap of bones (Shab. 33b–34a). This experience throws light on the commentary of R. Simeon: "Those who feared the Lord were a hindrance to Israel... the best of the gentiles, you should put to death..." (Mekh. Va-Yehi 2). His real opinions, however, found expression in the commentary (Mekh. Nezikim (Mishpatim) 18): "It is said – 'And those that are beloved by Him are compared to the sun when it rises in all its strength'; Now who is greater – he who loves the king or he whom the king loves? One must say – he whom the king loves, as the verse says: 'and He loves the stranger [proselyte]';" the statement of R. Hiyya: "Do not have any faith in a proselyte until 24 generations have passed because the inherent evil is still within him" (Mid. Ruth Zuta on 1:12); and other statements of *amoraim* who despised proselytes: "Proselytes are as hard for Israel [to endure] as a sore" (Yev. 47b) were prompted by the bad experiences Jews had with proselytes who had turned national or religious recreants. To these the rabbis referred: "The proselytes who left Egypt with Moses, made it [the Golden Calf] and said to Israel: 'These are your gods' (Ex. R. 42:6). The rabbis distinguished between three categories of proselytes: "Proselytes are of three types: There are some like Abraham our Father, some like Hamor, and some that are like heathens in all respects" (SER 27). In the teachings of the *amoraim* the basic tone is that of the tannaitic statement: "Proselytes are beloved; in every place He considers them as part of Israel" (Mekh. *ibid.*). They too made efforts "not to close the door before the proselytes who may come" (*ibid.*). In the third century, R. Johanan and R. Eleazar separately deduced from different verses that "the Holy One, Blessed be He, exiled Israel among the nations only in order to increase their numbers with the addition of proselytes" (Pes. 87b). R. Eleazar also said: "Whoever befriends a proselyte is considered as if he created him" (Gen. R. 84:4). There are numerous other statements which praise proselytes (e.g., Tanh. Lekh Lekha 6; Num. R. 8:9; Mid. Ps. 146:8). A tendency to in-

crease the honor of the proselytes and to glorify conversion can perhaps be found in the tradition which traces the origins of such great personalities as R. Meir, R. Akiva, Shemaiah, and Avtalyon to proselytes. They were descendants of such wicked men as Sisera, Sennacherib, Haman, and Nero (Git. 56a, 57b; Sanh. 96b). The name of R. Akiva's father does not appear explicitly in the Talmud, but *Dikdukei Soferim*, *ibid.*, 9 (1878), 283 and also Maimonides' introduction to *Mishneh Torah* relate that Joseph, the father of R. Akiva, was a proselyte by conviction. The last of the Babylonian *amoraim*, R. Ashi, said that the destiny of the proselytes had also been determined at Mount Sinai (Shab. 146a). Most of the rabbis of the Talmud observed the tradition: "When a proselyte comes to be converted, one receives him with an open hand so as to bring him under the wings of the Divine Presence" (SER 7; Lev. R. 2:9).

Two of the three paradigmatic biblical proselytes in midrashic tradition, Ruth and Rahab (Joshua 2), are female. *Pesikta Rabbati* 40:3 links these two women with Jethro, Moses's father-in-law, as examples of "upright" gentiles who chose to join the Jewish people. Ruth, the ancestor of King David, is praised for her loving-kindness and for her complete devotion to Jewish law and practice (Ruth R. 2:22, 2:23). Rahab, the beneficent Jericho harlot who preserved Joshua's spies from capture, became the pre-eminent rabbinic model of the righteous proselyte who went beyond all others in her proclamation (Josh. 2:11) of divine ubiquity and omnipotence (*Mekhilta* Amalek 3; Deut. R. 2:26–27). She is said to have married Joshua and their descendants became prophets and righteous men in Israel (Sifrei Numbers 78; Meg. 14b; Num. R. 8:9; Ruth R. 2:1). It may be that Rahab, a woman with a lurid past, assumed this special importance in a rabbinic setting looking for engaging female figures of repentance and conversion (Zev. 116a–b).

Post-Talmudic

During the following era the proponents of the two ruling monotheistic religions – in contrast to polytheism – regarded abandonment of their faith and transfer to another religion as a capital offense. The canons of the Church forbade proselytism and Christian rulers fiercely opposed any tendency to adopt Jewish religious customs. The number of proselytes diminished in Christian countries, and those who endangered their lives by adherence to Israel were generally compelled to flee to lands beyond the bounds of the rule of the Church.

At the commencement of this period, however, during the period of transition from polytheism to belief in One God, Judaism also succeeded in winning the hearts of the upper classes of two peoples, as formerly occurred with the kingdom of Adiabene. In the fifth century the kings of Himyar in southern Arabia adopted Judaism, and in the first half of the eighth century the upper classes of the Khazars. There is no information about Muslim proselytes, but the adoption of Judaism by Christians in Muslim countries was not forbidden, and even common. The sources chiefly mention Christian male and female slaves in the houses of Jews whose owners were enjoined by Jewish law to circumcise them and have them undergo rit-

ual immersion. The *geonim* Sar Shalom and Zemah Zedek b. Isaac were asked about a "gentile woman slave who was conversant with the idolatry of the Christians and was compelled to undergo ritual immersion by her owner;" and about "a slave woman who says I am a Jewess, but acts in all respects like a gentile" (*Ozar ha-Ge'onim*, Yev. 114). They also mention that there are some slaves "who become proselytes immediately and some eventually. Some of these do not want to convert at all; most are such and do not convert but there are some who say: 'Wait until we see your laws and learn them, and we shall convert...'" (*ibid.*, 199). It may be assumed that many of these slaves became assimilated into the Jewish community. Sometimes Jews became sexually involved with women slaves and had them undergo ritual immersion for the purpose of proselytism; their children were regarded as full-fledged proselytes. The best known of these cases concerns the Exilarch Bustanai b. Haninai (*ibid.*, 39–43, 173).

Besides such converts, there were also proselytes from conviction in Christian countries who voluntarily adopted Judaism out of love for Jewish law and about whom only fragmentary information has been preserved. Such proselytes were mainly members of the Christian clergy, whom theological study, and especially comparison of the New Testament with its roots in the Old, brought to Judaism. After becoming proselytes some even attempted to win over souls for their new religion. Bodo-Eleazar, court deacon of Louis the Pious in the ninth century, escaped to Muslim Spain and wrote sharp polemics attacking Christianity (B. Blumenkranz, in: *RHPR*, 34 (1954), 401–13). In 1012 the priest Vicilinus in Mainz became a proselyte, and he, too, wrote works to prove from the Bible the correctness of his course and the truth of the religion of Israel. Some scholars consider that his action was the cause of the expulsion of the Jews from Mainz by Emperor Henry II (Aronius, *Regesten*, nos. 144, 147). From about the same period record has been preserved about a wealthy Christian woman of distinguished family who became a proselyte, settled in Narbonne, and married R. David, a member of the family of the *nasi* Todros.

One remarkable case of proselytism in the Middle Ages concerns the Norman proselyte Obadiah (c. 1100), a member of a noble family of Oppido in Lucano, southern Italy. The events that befell him are known from a number of fragments preserved in the Cairo *Genizah*. This proselyte left notes in which he introduces himself by his gentile name Johannes and relates first concerning "the archbishop Andreas, chief priest of the province of Bari... in [whose] heart God placed love of the Torah of Moses. He left his land and priesthood, and all his glory, went to the province of Castantinia and circumcised himself. Troubles and evils befell him. He arose and fled for his life because the uncircumcised sought to kill him, and God delivered him from their hands... strangers arose after him, saw his deeds, and acted as he had done, and they too entered the covenant of the Living God. This man then went to Egypt and dwelt there until his death. The name of the king of Egypt at that time was Al-Mustanzir..." News

of the action of Andreas, bishop of Bari from 1062 to 1078, spread throughout Greece and Italy and reached the ears of Johannes while he was a youth. In the first year of his entering the priesthood he had a dream which influenced him to follow in the path of Andreas. In 1102 he was circumcised and began to observe the Sabbath and the festivals, and even wrote pamphlets calling upon all religious people to return to the religion of Israel. The authorities, however, imprisoned him and threatened to kill him unless he repented of his deeds. He succeeded in escaping, arrived in Baghdad, and dwelt in "the home of Isaac b. Moses, head of the Academy." He also visited Jewish communities in Syria, Erez Israel, and Egypt, and wrote the events of his life.

There were also proselytes who remained in Christian countries and apparently succeeded in concealing themselves from the vigilance of the Church by roaming from one country to another. There is also mention of a proselyte family at the time of Jacob Tam which originated in Hungary and was living in northern France or Germany. The father, Abraham the proselyte, interpreted the rabbinic dictum "Proselytes are as hard for Israel [to endure] as a sore" (Yev. 47b) in favor of proselytes: because they are meticulous in observing the precepts they are hard for the Jews since they recall their iniquities. He and his two sons Isaac and Joseph, engaged in biblical interpretation, taking issue with Christian exegesis, and also criticizing the Gospels and the Christian prayers. A pupil of Jacob Tam, Moses b. Abraham of Pontoise, tells of a proselyte who used to study "Bible and Mishnah day and night." Six *piyyutim* composed by the *paytan* Josephiah the proselyte who lived in France in the 12th century are known (Zunz, Lit Poesie, 469). Toward the end of the 12th century a proselyte living in Wuerzburg who knew "the language of the priests" (i.e., Latin) but not Hebrew made a copy of the Pentateuch for his own use from "a rejected book belonging to priests." R. Joel permitted this proselyte to act as reader for the congregation.

A talmudist who was a proselyte by conviction sent halakhic queries to Maimonides, who addressed him in respectful terms: "Master and teacher, the intelligent and enlightened Obadiah, the righteous proselyte," and wrote to him, "You are a great scholar and possess an understanding mind, for you have understood the issues and known the right way." In his letters to this proselyte, Maimonides expresses high appreciation of proselytism and the proselyte: he permits him to pray: "... as every native Israelite prays and recites blessings... anyone who becomes a proselyte throughout the generations and anyone who unifies the Name of the Holy One as it is written in the Torah is a pupil of our father Abraham and all of them are members of his household... hence you may say, Our God, and the God of our fathers; for Abraham, peace be upon him, is your father... for since you have entered beneath the wings of the Divine Presence and attached yourself to Him, there is no difference between us and you.... You certainly recite the blessings: Who has chosen us; Who has given us; Who has caused us to inherit; and Who has separated us. For the Creator has already chosen you and has separated you

from the nations and has given you the Torah, as the Torah was given to us and to proselytes.... Further, do not belittle your lineage: if we trace our descent to Abraham, Isaac, and Jacob, your connection is with Him by Whose word the universe came into being.

(Resp. Rambam (ed. Freimann), no. 42). Concerning the vexations and humiliating words violently addressed to this proselyte by certain Jews, Maimonides writes to him:

Toward father and mother we are commanded honor and reverence, toward the prophets to obey them, but toward proselytes we are commanded to have great love in our inmost hearts.... God, in His glory, loves proselytes.... A man who left his father and birthplace and the realm of his people at a time when they are powerful, who understood with his insight, and who attached himself to this nation which today is a despised people, the slave of rulers, and recognized and knew that their religion is true and righteous... and pursued God... and entered beneath the wings of the Divine Presence... the Lord does not call you fool [Heb. *kesil*], but intelligent [*maskil*] and understanding, wise and walking correctly, a pupil of Abraham our father... (*ibid.*, no. 369). There were proselytes who suffered martyrdom (*Kiddush ha-Shem*) and even those who became proselytes with this intention. Among those who suffered martyrdom during the massacres of the First Crusade in 1096 was a man whose "mother was not Jewish"; before his martyrdom he said: "hitherto you have scorned me." In 1264 the burning took place at Augsburg of "Abraham, son of Abraham our Father, of Ishpurk, who rejected the gods of the nations, broke the heads of the idols... and was tormented with severe tortures." This proselyte had conducted a campaign for Judaism among the Christians and attacked the symbols of Christianity. Elegies on his death were written by the great scholars of the generation; Mordecai b. Hillel ha-Kohen described how the man became a proselyte: "And Abraham journeyed, reaching the Hebrew religion, attached himself to the house of Jacob and cut his foreskin," and related that the words spoken by the proselyte in public against his former religion were the cause of his being burned at the stake: "when he proclaimed his ideas... in the town, he was taken to the stake." Another elegist spoke of his courage during his life and at his death: "He walked in purity and broke images... he revealed the glory of the Creator to the nations, denying belief in the crucified one; to martyrdom he walked like a bridegroom to the bride." In 1270 Abraham b. Abraham of France was burned in Wiesenburg. He was a respected monk and fled from his country after he became a proselyte: "he rejected images and came to take refuge in the shadow of the wings of the Living God." In 1275 it was noted that a monk, Robert of Reading, became a proselyte in England.

It is difficult to ascertain with certainty the extent of proselytism in the Middle Ages. The historical sources mention isolated cases only. However, the fact that such cases recurred in every generation, as well as the preachings and admonitions by the heads of Church against Judaizing and the many regulations and decrees they issued to prevent this danger, testifies

to the persistence of the phenomenon, at least to a limited extent. Some scholars regard proselytism as being of quantitative significance also during the Middle Ages and explain the marked anthropological differences between the various Jewish communities, and the resemblance of every community to the ethnic type of its environment, as being due in great measure to the inflow of external ethnic elements which continued at least throughout the first half of the Middle Ages.

With the decline in the number of proselytes by conviction, the fundamental attitude of the medieval Jewish scholars toward proselytism as a phenomenon of profound religious significance did not change, and some of them continued to consider that the purpose of Israel's dispersion among the nations was to gain proselytes. Moses b. Jacob of Coucy (mid-13th century) explains to his contemporaries that they must act uprightly toward gentiles since "so long as they [i.e., Jews] act deceitfully toward them, who will attach themselves to them?" (*Semag*, Asayin 74). Isaiah b. Mali di Trani the Younger permits the teaching of the books of the Prophets and the Hagiographa to gentiles, because he regards them as consolation spoken to Israel, "and as a result he [the gentile] may mend his ways" (*Shiltei Gibborim*, Av. Zar., ch. 1).

In Modern Times

The Jewish attitude to proselytism at the beginning of the modern period was inclined to be negative; aspirations to win over people of other faiths to Judaism dwindled. However, the *bet din* has no authority to repudiate proselytes wishing to convert despite the admonitions concerning the gravity of such a step; the Shulhan Arukh and the other *posekim* of the period left the laws concerning proselytism in force, but examination of the texts reveals, and at times it is even expressly stated, that it was only a formal duty to accept proselytes, and, indeed, attempts at active conversion were infrequent. However, isolated cases of conversion continued to occur. Proselytes were associated with the Hebrew press in Amsterdam, in various cities in Germany, in Constantinople and Salonika (see A. Yaari, in: *KS*, 13 (1936/37), 243–8). A Christian who visited Jerusalem in 1494–96 relates that he found there two monks "who had three years before gone over from the Christian faith to the Jewish religion" (*Die Pilgerfahrt des Ritters Arnold von Harft* (ed. by E.V. Groote (1860), 187). On the other hand, there is no real evidence to indicate attempts at actual conversion or proselytizing activity in the "Jewish heresy" (see *Judaizers) that was reported in the Orthodox Church in the principality of Moscow at the end of the 15th and beginning of the 16th century.

Solomon Luria warned against receiving proselytes, and the Jewish councils of Lithuania and Moravia even threatened to impose severe penalties on anyone who began to proselytize or gave protection to converts. The reason for this in part stemmed from the fear of the consequences and dangers this activity entailed, since it was severely prohibited by the authorities. The Jewish communities in Poland and Lithuania were more than once obliged to clear themselves of the charge of proselytizing,

and it is not always clear whether this was the result of a false accusation by agitators or of the prevalent public opinion in regard to actual occurrences.

When Lutheranism began to spread in Poland in the 16th century, many who inclined to "reforms" were accused by the Catholics of "Judaizing." In 1539 an old woman of 80, Catherine Weigel, the wife of a citizen of Cracow, was burned at the stake for having embraced Judaism; the clarification of her case took ten years. Before she perished she said: "God had neither wife nor son... we are His children and all who walk in His ways are His children." Jews were falsely accused of smuggling proselytes into Turkey, and an official investigation of this matter took place in Lithuania causing great harm to the Jews of that country. Nevertheless, it appears that most Jews not only refrained outwardly from engaging in proselytizing activities as the result of external pressures and penalties, but the attitude of Judaism itself in that period formed an important factor. The Jews increasingly withdrew from the outside world; the difference between Judaism and the other faiths was regarded as an inherent, radical distinction between two unbridgeable worlds with scarcely any points of contact. The general tendency of that entire period is expressed in the words of Solomon Luria: "Would that the seed of Israel continue to stand fast and hold its own among the nations throughout the days of our exile and no stranger be added to us who is not of our nation."

With the relative toleration that began to prevail in the ruling circles and among intellectuals in the 17th century, especially in Western Europe, the negative attitude to Christianity among Jews diminished. There was a growing tendency not to regard Christianity as an idolatrous religion but to look upon its adherents as Noahides who are absolved from the belief in absolute monotheism. Such a view left no room for conversion efforts to bring Christians under the wings of the *Shekhinah*. This abandonment of conversionary activity on the part of Jews was thus given a theoretical, intellectual basis. However, individual proselytes continued to find their way to Judaism by their own inner conviction. At the end of the 16th century a pious Christian who embraced Judaism on his own initiative is known (Moes Germanus). In 1716 two Christian women were put to death in Dubno because they became Jews; in 1738 the naval officer Alexander Voznitsyn was publicly burned to death in Russia for having become a Jew, together with the Jew, Baruch b. Leib, who persuaded him to take this step. The memory of the "Ger *Zedek* of Vilna," Count Valentine Potocki, who was allegedly burned in Vilna in 1746, is preserved in popular folklore. Another notable 18th-century proselyte was the English politician Lord George Gordon.

The Enlightenment strengthened this inclination to religious contraction. The slogan of religious toleration discouraged propaganda activities among the different faiths. The *maskilim* pointed with pride to the resemblance between the principles of Enlightenment and the aims of Judaism – which, in their opinion, were tolerance. Emphasis on Jewish tolerance

and abandonment of all active proselytizing became a fixed principle in modern Jewish apologetics. This apologetical attitude even influenced study of the past, and historical accounts tended to ignore that active Jewish proselytizing had occurred, as if Judaism had never desired to make converts. There was no change from the psychological point of view in the self-defensive attitude of Judaism even after it had been granted a status of juridical equality with the other religions of the state. Even though no legal obstacles now prevent proselytizing little attempt has been made to propagate conversion.

A certain number of proselytes came from the sects of the Sabbath Observers in Russia (see *Judaizers; *Somrei Sabbath), who adopted a number of Jewish customs and finally went over to Judaism completely. Others embraced Judaism because of an experience or religious conviction, but chiefly it was the result of unhampered social contacts that ended with intermarriage (see also *San Nicandro).

[*Encyclopaedia Hebraica*]

Recent Trends

Whereas in some countries of the Diaspora, particularly England and South Africa, there was a distinct tendency to adopt more stringent regulations for the acceptance of proselytes in the Orthodox community, it was generally appreciated that a greater leniency could be permitted in the State of Israel, since the prospective proselytes, most of whom were either partners in, or the children of, mixed marriages, would become much more integrated in the Jewish people than would be likely in the Diaspora. Despite this the rabbinical authorities were slow to alleviate the difficulties in the way of applicants for proselytization. They normally insisted on a year's postponement of consideration after making application, and on the ability and undertaking of the candidate to adhere to the requirements of Orthodox Judaism. From 1948 to 1968, 2,288 proselytes were accepted by the rabbinical courts of Israel, out of a total of 4,010 who applied. A tendency toward leniency became more pronounced at the beginning of the 1970s as a result of two factors. One was the expectation of an increased immigration from Soviet Russia where, owing to prevailing circumstances, intermarriage had taken place on an unprecedented scale; and the other was the situation created by the amendment to the Law of Return adopted by the Knesset in 1970. Two provisions made the need for an acceleration of proselytization urgent. The first was that the law was extended to include the partners, children, and grandchildren of mixed marriages who were not Jews according to *halakhah*, and the second that, whereas in Israel only those converted in accordance with *halakhah* were registered as Jews, in the case of immigrants, conversion by Reform and Conservative rabbis was accepted by the civil authorities for these immigrants to be registered as Jews. The resulting anomaly, that these non-Orthodox proselytes were regarded as Jews by the civil authorities while their conversion was not accepted by the Orthodox rabbinate, which was the only legal body determining personal status, had to be reduced as much as possible. In 1971

the Ministry for Religious Affairs, for the first time, established schools for prospective proselytes in Israel, at the Orthodox kibbutzim of Sa'ad and Lavi, where candidates may undergo an intensive course in Judaism.

There have also been a number of instances of the conversion of Muslims to Judaism (see A. Rotem, in: *Mahanayim*, no. 92 (1964), 159).

In 1955 a World Union for the Propagation of Judaism was established in the belief that the time had come for Jews to undertake conversionist activity, and it published a brochure, *Jedion*. There was, however, little response to this suggestion from the public, and some of the steps taken in that direction, particularly among the Chuetas, proved abortive.

[Louis Isaac Rabinowitz]

In the U.S.

In 17th-century colonial America Jewish slaveholders, following ancient custom, converted their slaves to Judaism. A number of Black Jewish congregations in the United States are made up, in part, of the descendants of these early proselytes. During the first quarter of the 18th century a community of German Baptists, in what is now Schaefferstown, Pennsylvania, voluntarily "Judaized." They observed dietary laws and the Sabbath, built a "schul" and a home for their *hazzan* from rough logs, and in 1732 laid out a cemetery. The community lasted from about 1720 to 1745. The cemetery – now destroyed – was still intact in 1885; the home of the *hazzan* still stood in 1926 but was destroyed later. Whether or not these "Judaizers" actually became Jewish proselytes is uncertain.

The earliest well-known U.S. proselyte was a Quaker, Warder Cresson, who became U.S. consul in Jerusalem in 1844. There, in 1848, he converted and assumed the name of Michael Cresson Boaz Israel. His American wife divorced him and he then married a Palestinian Jewess. He was a prominent member of the Jerusalem Sephardi community and is buried on the Mount of Olives.

The first incorporated Jewish missionary society in modern times, the United Israel World Union (UIWU), was established in New York City in 1944 by the journalist David Horowitz. Groups of UIWU proselytes have their own congregations in Wilbur, West Virginia, and West Olive, Michigan. Another such missionary society, the Jewish Information Society of America, was founded in Chicago in 1962. U.S. Reform Judaism has maintained that Jews have an obligation to teach their religion to all mankind and to attract like-minded non-Jews into the Jewish community. This theoretical determination was followed by the establishment in 1951 of a Committee on the Unaffiliated, by the Central Conference of American Rabbis, to develop "practical means for extending the influence and acceptance of the Jewish religion." The Conservative rabbinate declined to undertake such efforts, although it accepted prospective converts. The Orthodox remained extremely reluctant to accept converts, making stringent demands of all prospective candidates.

Reports from 785 U.S. congregational rabbis in 1954 regarding conversions to Judaism in the United States showed that approximately 3,000 persons were then being converted annually to Judaism. The number increased yearly. In 95 percent of the conversions, an impending or existing marriage to a Jew was involved; female proselytes outnumbered males five to one.

[David Max Eichhorn]

Non-Orthodox Views

Reform rabbis have insisted upon instruction in Judaism and study of selected books as prerequisites for conversion. However, in conflict with the traditional Jewish attitude they have stressed the importance of the declaration of faith by the convert, disregarding the ritual aspects of conversion to Judaism (*tevilah*, and in the case of male converts, circumcision). In 1892 the Central Conference of American Rabbis (CCAR) decided that any Reform rabbi in conjunction with two colleagues could accept as a convert any person without any initiatory rite, and also published manuals for guiding their rabbis in regard to conversion. Nor did Reform follow the *halakhah* with regard to children – children of converted parents born prior to their conversion are considered Jews if the parents declare they will raise them as Jews. With regard to children of school age their confirmation at the end of their schooling is considered the ceremony of their official entry into Judaism. Children past confirmation age are considered adults, and have to undergo instruction prior to conversion. However, attitudes were changing at the beginning of the 21st century. In 2001, the Central Conference of American Rabbis approved new guidelines recommending that all Reform rabbis require *bet din*, *tevilah* for all converts, and a symbolic circumcision for male converts.

The Conservative movement has always officially upheld the *halakhah* as regards the ceremonies of conversion. They demand that three rabbis be present, but they emphasize the preparation of the proselyte in Jewish sources and texts on Jewish history and customs. In 1970 the Rabbinical Assembly committee on Jewish Law and standards reaffirmed that its members “may not conduct a conversion *ab initio* without *tevilah*.”

PROSKAUER, JOSEPH MEYER (1877–1971), U.S. lawyer and community leader. Proskauer, who was born in Mobile, Alabama, was a partner in the law firm Elkus, Gleason, and Proskauer from 1903 to 1923, then served as judge in the Appellate Division of the First Department of the Supreme Court of New York (1923–30). A close associate of Alfred E. Smith, whom he first met through his political activities for the Citizens Union in New York, Proskauer served with Belle *Moskowitz and Robert *Moses on the non-Tammany faction of the “War Board” which helped Smith plan his gubernatorial campaigns, and later worked closely with Smith in his 1928 presidential campaign. In 1935 Proskauer served on the New York City Charter Revision Commission.

Early in the Nazi regime, he joined the *American Jewish Committee. He became its president in 1943 on the platform “Statement of Views with Respect to the Present Situation in Jewish Life,” prepared by him, Irving *Lehman, Samuel I. *Rosenman, and George Z. *Medalie, which proposed free Jewish immigration into Palestine and an international trusteeship status but opposed a Jewish state. From October 1947, however, the committee publicly supported creation of a Jewish state in the form proposed by the UN Special Commission on Palestine. Proskauer led it in the thrust for a Jewish state. Elected essentially as an anti-Zionist, his 1948 presidential address, “Our Duty as Americans – Our Responsibility as Jews,” marked his complete commitment to political Zionism. The desire to find a common Jewish front on settlement of the Palestine question and the need for continued support from the U.S. Jewish community for the committee’s primary interest in Jewish defense probably contributed to Proskauer’s change of direction. In his *Segment of My Times* (1950), he describes his pre-1943 anti-Zionist stand as based on instinctive opposition to a state identified with a religion; once he began to study the problem as committee president, he found that the U.S. form of national allegiance he was committed to could not apply in Eastern Europe, where Jews were accorded only partial rights. He thus came to believe that a state in which they could be free was essential. Proskauer remained committee president until 1949. He had served as consultant to the U.S. delegation to the 1945 UN Conference in San Francisco. Proskauer returned to private law practice as senior member of Proskauer, Rose, Goetz, and Mendelsohn. He was chairman of the New York State Crime Commission in 1951–53 and also served as director of the National Refugee Service.

PROSKUROV (from 1954 **Khmelnitzki**), capital of the Khmelnitski district, Ukraine. Jews are mentioned in 1629;

they suffered at the hands of the Cossacks of Khmel'nitski in 1648. In 1765 there were 750 Jews in the city who paid poll tax; by 1847 the number had risen to 3,107. After the town was linked by the railway, wholesale trade flourished, mainly in grain, timber, and textiles. Jews owned factories for sugar, bricks, roof tiles, ceramics, and tobacco. Toward the end of the 19th century, the Jewish population increased, reaching 11,411 (50% of the total population) in 1897. There were in town 18 *hadarim*, a *talmud torah*, a library, and a theater. After the February revolution some 24 Jews (out of 50 members) served on the local council. In February 1919, as Semosenko's Ukrainian troops retreated before the Red Army, they committed in Proskurov one of the most vicious pogroms of the civil war period. On February 15 Semosenko's forces marched into the city, methodically killing every Jew they could find. A local priest who begged the soldiers to stop was killed at the door of his own church. Three and a half hours after the soldiers had entered the city, a telegraphed order came from headquarters, calling a halt to the slaughter, but by then 1,600 people had been murdered and thousands wounded. Despite the demands made by representatives of the Jewish community to the Petlyura government, Semosenko was never punished. There were 13,408 Jews (42% of the population) in Proskurov in 1926. Yiddish was used in documents issued by the municipality and by the court of law. A Jewish school existed at this time. In 1939 the Jews numbered 14,518 (39% of the total population). The Germans occupied Proskurov on July 7, 1941, and by the end of August they had killed 800 Jews. Jews from the environs were brought into a labor camp in the town. In August 1942 8,000 were murdered, and on November 30, 1942, another 7,000 were killed. About 18,000 Jews were murdered in Proskurov. The 1959 census recorded 6,200 Jews (10% of the total population). In 1970 there was no synagogue but kosher poultry was available. In the 1990s most Jews left for Israel and the West.

A Pan Historic Synopsis of Hebrew Prosodic Systems

The Major Systems of Hebrew Rhyme

INTRODUCTION

Hebrew poetry throughout the ages has used many forms of verse, rhyme, sound patterns, and strophic structure which changed from period to period, often from country to country, and from genre to genre. Since the close of the Bible, an enormous number of Hebrew poems have been written in Palestine and throughout the Diaspora, most of them following strict forms which were often quite complex and elaborate. To date no history of these forms has been published and while for the major periods some central concepts are known, they are usually framed in normative terms. The following survey should therefore be considered merely as a tentative outline.

The term “form,” used here in a limited sense, refers to all poetic patterns which employ sound elements for the organization of the language material of a poem, such as rhyme, acrostic, meter, stanza, and other principles of composition. The term “poem” here refers to any text composed in such forms and does not necessarily imply aesthetic values in a modern sense. In the Middle Ages thousands of Hebrew texts, written as liturgy, chronicles, rhymed letters, dedications, etc., used the same formal norms employed in works which could be classified from a modern or aesthetic point of view as “poetic.”

Of the few ancient literatures that have continued uninterruptedly throughout the ages, Hebrew poetry is the most variegated and versatile in its forms, due to its permanent creativity and to its interaction with different systems of language and poetry: Arabic, Italian, German, Russian, Yiddish, English, and others. The pronunciation of Hebrew as well as the norms of writing have undergone considerable changes during the wanderings of the centers of this literature. On the other hand, there were strong tendencies of continuity and conservatism in Hebrew forms and poetic genres, as well as in the language itself.

Unlike other languages, Hebrew, as a semi-“dead” tongue, has never changed the core of its vocabulary, or the written form of its words, its basic morphology, certain patterns of syntax and of idiomatic formulations, or the fundamental framework of its historical, semantic, and mythological allusions. Hebrew poems separated by a time span of a thousand years are from the point of view of their language compa-

rable, and may be intelligible to the same reader. The major changes in the language (insofar as this survey) occurred in the field of pronunciation, but even these did not alter the basic form of the written word. However, due to its interaction with a variety of foreign prosodic and aesthetic norms, most known systems of verse have been created in Hebrew over the past 2,000 years.

The Variety of Formal Systems

The following prosodic systems are found in Hebrew poetry: (1) a purely *accentual* poetry with a free variation of the verse units (primarily in the Bible); (2) a meter based on a regular *number of accents* (in post-biblical poetry); (3) a meter based on the *number of words* (in the major tradition of liturgy); (4) a *quantitative* meter based on the opposition of short and long syllables (especially in medieval Spain and Italy); (5) a *syllabic* meter (in Italy since the Renaissance and in Central and Eastern Europe in the 19th century); (6) an *accentual-syllabic* system (in modern poetry in Eastern Europe, Israel, and the U.S.); (7) an *accentual meter with restricted syllabic freedom*, influenced by the verse of Russian modernism (in Israeli poetry since World War I); (8) a variety of *free verse* forms, based largely on a rhythm of phrase groups (which evolved in Europe in the 1920s during the vogue of Expressionism and in Israel since the 1950s under the impact of English imagism).

The earliest known systematic use of rhyme in poetry was invented in Hebrew sometime between the fourth and the sixth centuries C.E. It grew out of a cluster of principles of repetition, based on semantic, morphological, and sound elements. During its long history, Hebrew verse passed through a gamut of rhyme norms: terminal or accentual, continuous or discontinuous, grammatical or sound-autonomous, based on suffixes or on the lexical morpheme, using word repetition or excluding it. The same kind of variety runs through the rhyme patterns, strophic forms, and through the principles of composition of a poem.

The Specific Nature of Hebrew Literary History

A study of the changes in the forms of Hebrew verse should take into account the peculiar nature of its history. A Hebrew poet, regardless of his time, was at the crossroads of three lines of development. (1) There was the historical factor common to all literatures: the tension between synchrony and diachrony, i.e., trends of the poet’s generation as juxtaposed to norms of the immediate past as well as classical works. The other two factors are specific to the geographic and sociological situation of the Hebrew writer: (2) the influence of Hebrew poetry written in other countries; (3) the impact of non-Hebrew poetry of his own time and place.

The tension between the three systems, of which the Hebrew poet was aware, was of primary importance to the history of Hebrew poetic forms. Quite often cardinal differences existed between the three. Thus, the 13th-century Hebrew poets in Rome wrote in the strophic forms of Byzantine Erez Israel (canonized long before any Italian language existed) in

which words rather than syllables were counted and in which each rhyme had multiple members but did not alternate with other rhymes. But they were confronted with two other poetic systems as well: Contemporary Italian poets used stanzas with alternating rhymes and syllabic meters; the Hebrew poets in Spain used a purely quantitative versification mostly without any strophic forms. It took time until Hebrew poets in Italy changed their poetic system and, typically enough, they adapted quantitative meters (developed in Spain in genres of Hebrew secular poetry) to write Hebrew strophic poetry in the Italian sonnet form. Similar dilemmas faced Jewish poets in other generations and countries.

A Jewish poet was closer to each of the three traditions than poets usually are when experiencing influences of a foreign literature. Thus, the impact of Hebrew poetry written in other countries was enhanced by the closeness of the language and the mobility of men of letters and of written and printed texts. The influence of aesthetic norms dominant in other languages was particularly strong, in spite of traditional Hebrew conservatism, because most Hebrew poets did not speak primarily Hebrew, but were intimately acquainted with other languages which they read and used in everyday life. In many cases they knew at least one more Jewish language and one or two foreign languages, e.g., Arabic and Spanish (in Christian Spain), or Yiddish and Italian (in 16th-century Venice), or Yiddish and Russian (in 19th-century Eastern Europe), or Yiddish, Russian, and English (in America since the late 19th century). Shifts in the forms of Hebrew poetry, whether gradual or drastic, were wrought by such factors as the influence of literary authorities, changes in the relationship to another culture, or changes in the system of genres of Hebrew writing itself. Such changes were usually accompanied by a sudden leap from one way of writing to another, brought about by a realization of a potential influence from one of the three above-mentioned directions.

The influences, however, were implemented neither automatically nor immediately. There was a strong awareness of the peculiar Hebrew tradition, and there usually was neither eclecticism nor chaos of forms. Forms created under the influence of one culture were transposed by Hebrew poetry into the domain of quite a different foreign culture; e.g., (1) quantitative meters, developed in Spain under Arabic influence, were used for centuries in Christian Europe where no such meters had been employed; (2) syllabic versification, developed in Italy, dominated 19th-century Hebrew poetry in Germany and Russia where such meters were no longer used. Even adaptations of poetic elements and themes from other literatures were not automatically introduced in their original forms.

Moreover, there was not necessarily an acceptance of a whole system of forms from the influencing source, but quite often a reconciliation, or a readjustment, of several traditions. Thus, (1) *Immanuel (b. Solomon) of Rome combined the form of the Italian sonnet with the Hebrew-Spanish quantitative meter which was of Arabic origin; (2) Italian strophic forms were used for several centuries with their original

rhyme patterns but without the requirement of stress accord, which is compulsory in Italian rhyme.

Foreign influences on Hebrew poetry were not necessarily contemporaneous, e.g., while accentual-syllabic versification was introduced into Hebrew under Russian influence, it occurred only toward the end of the 19th century when this metrical system began to fall into disuse in Russian poetry. These influences should also not be considered as organic transplantations or imitations of a literary trend or poetic school. Belated as such an impact may have been, it was not necessarily accepted in all its aspects. Thus, Judah Leib *Gordon, though influenced by his Russian contemporary Nekrasov as to theme, genre, and even tone of language, did not accept the Russian verse system; the poetry of Abraham *Shlonsky of the 1920s and 1930s was strongly influenced by the imagery of Russian futurism, but in meter it was as classical as the verse of Pushkin. On the other hand, many Hebrew poets were very much aware of the relativity of prosodic systems. They knew how to use diverse, and sometimes even opposing, systems for different genres (such as religious and secular poetry) or for different languages (especially in the case of bilingual poets, such as Elijah Baḥur *Levita and J.L. *Gordon). Despite these complex circumstances and the great body of rhymed and versified Hebrew texts, the varying norms of Hebrew poetry can be described exactly, since in most ages these norms were conventional rather than individual and constituted a firm part of the language of Hebrew verse. The history of these forms epitomizes the worldwide scope of Hebrew poetry; the tensions between tradition and openness which were basic to its evolution; and the symbiotic, but autonomous, nature of Hebrew culture throughout the ages.

The Major Periods of Hebrew Prosody

The peculiar nature of Jewish history does not permit the development of Hebrew poetic forms to be divided into pure historical "periods," but rather into "areas," determined by a combination of historical, geographic, and generic factors. Since the close of the Bible, the following major areas of Hebrew poetic traditions may be distinguished:

(1) **POST-BIBLICAL POETRY.** This is a rather amorphous area consisting of several distinct trends: *Wisdom poetry (*Ben Sira), the poetry of religious sects, the formulation of the basic prayers, and the beginnings of liturgy. A variety of rhythmic formulae, occasional rhyme, patterns of sound, and parallelism were widely used, but no established formal system of any kind can be discerned.

(2) **THE RHYMED PIYYUT.** Created in Byzantine Erez Israel sometime between the fourth and the sixth centuries C.E., the rhymed *piyyut* comprehends some clearly defined poetic genres which have specific functions in Jewish liturgy. Fundamental to it are large poetic cycles of a complex structure in which the poems use strophic patterns and obligatory rhyme. This kind of *piyyut* spread to the East (Babylonia and Egypt) and to Italy and Ashkenaz (the German Rhine area).

A vigorous strain in this tradition, which used the difficult “Kallirian” rhyme, flourished in the 10th century and determined the formation of the Italian and Ashkenazi **mahzor*. The rhythm crystallized in this evolution was based on a strict number of words.

(3) **THE SPANISH TRADITION.** It is based on quantitative meters (under Arabic influence), which were used mainly in secular poetry but also in religious genres. Developed in Islamic Spain since the 10th century, it flourished in Christian Spain and Provence until the 15th century and dominated Hebrew poetry in Italy and throughout the Islamic East almost until the present time. Besides the long metrical poems which use one single rhyme, a peculiar strophic tradition evolved in Spain (“girdle” poems), as well as a major genre of rhymed prose (*maqāmat*).

(4) **ITALY.** Created from the 9th to the 20th century, Hebrew poetry in Italy passed through all possible stages of Hebrew poetic forms: several periods of forms stemming from the Palestinian *piyyut*; Italian strophic patterns; Spanish quantitative meters, which in time were transformed into Italian-like syllabic verse; and even onsets of accentual-syllabic iambs.

(5) **THE AREA OF ASHKENAZI JEWRY.** Hebrew poetry was written throughout the Middle Ages by Ashkenazi Jews, at first in Germany and France, then in the Slavic countries. The Palestinian-Italian tradition formed its early stages (10th to 12th centuries). A “weaker” line descending from the Palestinian *piyyut*, followed and continued until modern times, especially in several shorter genres (notably the **selihah* and the **kinah*). The forms of this tradition influenced other genres too, such as the Hebrew verse chronicle and some Yiddish poems.

(6) **THE EAST.** Babylonia, North Africa, and other countries under Islamic rule passed easily from the old *piyyut* forms to the Spanish tradition (similar to Arabic forms). In the 16th century, however, the influence of Turkish song forms may be discerned in the writings of Hebrew poets in the Ottoman Empire (including Erez Israel itself).

(7) **HASKALAH.** Toward the end of the 18th century in Central and Eastern Europe purely syllabic versification was introduced. It continued to be the medium of Hebrew verse until the end of the 19th century.

(8) **THE PERIOD OF “REVIVAL.”** Since the early 1890s Hebrew poetry in Russia, using the Ashkenazi pronunciation, accepted accentual-syllabic meters and became receptive to all forms of modern European poetry. The system spread immediately from its Russian center to all countries of Hebrew creativity: Germany, Erez Israel, the U.S., etc.

(9) **“CLASSICAL” VERSE IN ISRAEL.** Accentual-syllabic meters, transferred to the Israeli (basically “Sephardi”) pronunciation, appeared at the beginning of the 20th century, but started to dominate Hebrew poetry only since the late 1920s. The system spread from its center in Israel to other countries

where Hebrew literature was being written (Poland, U.S.S.R., U.S.).

(10) **FREE VERSE.** There are two varieties: (1) the Russian influenced strophic and rhymed free verse which is close to regular meters (the so-called Russian Dolnik); (2) free irregular verse beginning with some poems by H.N. Bialik (written in period 8), developed in Europe in the 1920s and in Israel and the U.S. especially since the 1950s.

These forms followed both foreign examples (English, German) and Hebrew antecedents (notably some of the so-called biblical verse of the Period of “Revival”).

Approaching the present day, the periods become shorter; different forms, traditions, and influences become more intermingled, frequently coexisting in time, in place, often in one literary journal, and even in the writings of one poet.

SOME PRINCIPLES OF BIBLICAL VERSE

The forms of biblical poetry constitute a world of their own, at the same time however, a discussion of post-biblical verse must consider the Bible which had an overpowering influence on Hebrew poetry of all periods. The language of the Bible has dominated the language of Hebrew poetry, more often than it did prose, in a variety of poetic conceptions, at least since *Saadia Gaon (10th century) and almost to the present. Despite this fact, however, post-biblical Hebrew poetry has not relied on biblical rhythm and verse forms. With few exceptions, post-biblical Hebrew prosody at every stage of its development was based on highly formal conventions, and it could not have been satisfied with the fluid, though rich orchestration of biblical verse. Nevertheless the patterns of biblical poetry, its syntactic-rhythmical tendencies, its typical word groups, its alliterations, loomed large behind the language of the Hebrew poets in subsequent generations. These patterns did not prevail or mold the new forms, but embellished and imbued Hebrew poems with the power of internal rhythm. The strength of the biblical example was not merely in its sanctified status, but in the very “weakness” of “impurity” which its rhythm had from any normative or classicistic point of view: the intimate, almost inseparable relationship between the semantic, syntactic, and accentual aspects of its rhymic patterns of language.

Though including writings which range nearly over a millennium, the Bible has been viewed by later ages as primarily a unified work with basically a common language. Whatever may have been the developments in phonetics and prosody during the time of its creation, the Bible for post-biblical readers was the canonized text with its system of stresses, intonation marks, and vocalization. In this survey of post-biblical poetry the major principles of biblical verse, as seen from the point of view of a reader of later times, shall merely be mentioned and illustrated.

Parallelism

The foremost principle dominating biblical poetry is parallelism. Usually two versets (sometimes three or even four) are

parallel to each other in one or several aspects. The parallelism may be either complete or partial; either of the verset as a whole or of each word in it; of words in the same order or reversed. It may be a parallelism of semantic, syntactic, prosodic, morphological, or sound elements, or of a combination of such elements. In most cases there is an overlapping of several such heterogeneous parallelisms with a mutual reinforcement so that no single element – meaning, syntax, or stress – may be considered as completely dominant or as purely concomitant. The parts of the parallelism may be equal or unequal in their size or form; they may be related to each other in a variety of ways: synonymous, antithetic, hierarchic, belonging to a category of some kind, etc. The principles of the parallelism used may change from verse to verse. The basis of this type of rhythm may be described as semantic-syntactic-accentual. It is basically a free rhythm, i.e., a rhythm based on a cluster of changing principles. Its freedom, however, is clearly confined within the limits of its poetics. The following is an example of a rather ordered type:

וְתִשְׁמַע הָאָרֶץ אִמְרֵי־פִי.	הָאֲזִינוּ הַשָּׁמַיִם וְאֲדַבְרָה
תִּזַּל כַּטַּל אֶמְרֹתַי;	יֵעֲרַף כַּמָּטָר לִקְחֵי
וְכַרְבִּיבִים עַל־עֵשֶׂב.	כְּשַׁעִירִים עַל־דָּשָׂא

Give ear, o, ye heavens, and I will speak;
And hear, O earth, the words of my mouth.
My doctrine shall drop as the rain,
My speech shall distil as the dew,
As the small rain upon the tender herb,
And as the showers upon the grass
(Deut. 32: 1–4).

There are 3:3 stresses in the first two pairs of versets, and 2:2 stresses in the last pair. But syntactically the last two pairs are linked. The words הָאֲזִינוּ (“give ear”), and וְתִשְׁמַע (“hear”) are synonymous in meaning though not in morphology; “I will speak” and “the words of my mouth” are not synonyms, but their meanings are parallel. “Heavens” and “earth” are parallel by opposition. “Rain” and “dew” both express fruition by water, but one is strong and the other is subtle, these are two poles of one scale. There is also a concatenation of the three parts: versets 3 and 4 unfold the theme of the first pair (“the words of my mouth”); versets 5 and 6 develop the images of 3 and 4. But the versets of the last pair are parallel only to one member of the previous pair (“the rain” or “the dew”).

The parallelism of meaning in the last four versets is chiasitic: the water is strong (3) – weak (4) – weak (5) – strong (6). In the last pair וְשַׁעִירִים and עֵשֶׂב are on one level, but רְבִיבִים and כְּרִיבִים, though morphologically alike, are quite different in degree. Some additional devices of rhythm and sound reinforce the effect of this passage.

Rhythm

If the equivalent meaning or syntactic pattern of parallel versets draws the reader's attention to the parallelism and its reinforcing quality, it is the rhythmical structure proper which embodies it. The major rhythmic element is stress. The rhythm is accentual, but the number of stresses in each verset is not

necessarily fixed or permanent. There may be an exact repetition: 3:3 stresses, or a freer relationship: 3:4, as well as changing numbers throughout the poem. The specific numerical relationship is however important. The numbers are quite often equal or similar. Moreover, whenever there is freedom it is confined within fixed boundaries. Each verset is usually a phrase, a basic syntactic and logical unit, consisting of 2, 3, or 4 stressed words. The smallness and compactness of the verset lends each stress conspicuous force. The condensed, laconic nature of biblical Hebrew also contributes to the prominence of each word within the line, the more so when it is reinforced by the parallel verset. The versets are static, independent units, well balanced against each other. This is supported by the nature of biblical syntax which favors parataxis to the subordination of clauses and phrases.

Is stress the only sound element determining biblical rhythm? For many generations scholars have argued over the “secrets” of biblical prosody; there have been attempts to correct or rewrite the text so that it might conform with pseudo-classic ideas of rhythm which require strict numbers of some kind: regularized “feet,” equalized hemistichs, or stanzas of recurring numbers of lines. Such attempts seem pointless today since no exact regularity of any kind has been found and since rhythm need not be based on strict numerical regularity. Considering the rhythm to be based on free variation, it is clear, however, that stress is not enough to describe the effects of biblical rhythm. The number of unstressed syllables between two stressed ones, though not fixed in the sense of modern accentual-syllabic versification, is certainly limited: By rule no two stresses are permitted to follow each other, on the other hand long words have secondary stresses. Thus, each stress dominates a group of 2, 3, or 4 syllables; there are 2, 3, or 4 such groups in a verset, and 2, 3, or 4 parallel versets in a sentence. It is a three-stage hierarchy of simple, indivisible, though flexible groups. Within this free framework there are clearly functional specific patterns, such as the so-called rhythm of elegy based on an opposition of 3:2 stresses. The rhythm of major stresses is so strong that sometimes it may be the only supporter of the parallelism of two versets, without any actual repetition of meaning or syntax.

Sound

Within this framework of rhythmical parallelism there is a whole gamut of sound repetition and sound patterns, freely distributed, but clearly embellishing the text. Whatever the origins of Hebrew rhyme and puns or sound patterns in later poetry, the later poets were able to draw on a variety of such devices in the Bible. There is (1) simple alliteration: (2) חֲנֹן וְחֶסֶד, חֵן וְחֶדֶר, הוֹד וְהִדָּר, a chain of one repeated sound: צַדִּיק מִצְרָה נִחְלָץ (Prov. 11:8); (3) a repetition of the same root which is syntactically justified: אֶחֱזֶנְהָ נָא לְכֶם חִידָה (“I will riddle you a riddle,” Jud. 14:12), חִידָה חִידְתְּךָ וְנִשְׁמָעְנָה (“riddle your riddle and we will hear,” *ibid.* 14:13); (4) puns on similar sounding roots: אֵל תִּחְרוֹשׁ עַל רַעְךָ רַעָה (Prov. 3:29); (5) גְּבַל – גְּבַל – פָּחַד – פָּחַת פָּח; אִישׁ – אֵשׁ – אֶשֶׁת

(cf. Gen. 11:9), צִדְקָה־צַעֲקָה (cf. Isa. 5:7); (6) occasional rhymes in modern sense שְׁלֹחַנָה – יִינָה (cf. Prov. 9:4), צְמַח־קָמַח (cf. Hos. 8:9), etc.

Rhyme is sometimes obviously linked to the parallel structure, e.g.,

וּשְׁנוֹתַי לְאַחֵרִי	פְּנֵי־תַתְּנוּ לְאַחֵרִים הַיּוֹדֵף
וְעֲצָבִי בְּבֵית־נֹכְרִי	פְּנֵי־יִשְׁבְּעוּ זָרִים כְּחֹף

Lest thou give thy vigor unto others,
And thy years unto the cruel;
Lest strangers be filled with thy strength,
And thy labors be in the house of an alien.
(Prov. 5:9–10).

The two sentences are similar in rhythm (3:2 stresses) and are linked by an anaphora, as well as by parallel syntax, meaning, morphology, and rhyme. Though the symmetry is pervasive and multiple, it is however neither regular nor permanent: the first versets of each line are parallel in meaning as a whole but not in each word; אַחֵרִים (“others”) and זָרִים (“strangers”) are parallel in morphology and rhyme but not in their syntactical function; וּשְׁנוֹתַי (“thy years”) and וְעֲצָבִי (“thy labors”) are not parallel in the same sense as אַחֵרִים (“others”) and זָרִים (“strangers”); אֲכֹזֵר (“the cruel”) and בֵּית־נֹכְרִי (“the house of an alien”) are not synonymous in the language but become so when enforced by this context. In the same way all parallel words rhyme with each other, except for the second word.

This is an extreme example of order; usually the patterns are less symmetrical and the sentence that follows may not have any of the above devices. Rhyme, as it is known at present, i.e., as a regular organizing principle of a poem which is not an internal ornament of a line but links lines together, was created as concomitant to an unequivocal strophic structure and a formalization of poetic patterns. This occurred centuries later in the Palestinian *piyyut* of *Yannai and Eleazar *Kallir.

THE CLASSICAL PIYYUT

Piyyut (from *paytan* (poet) from the Greek Ποιητής) is the common term applied to a variety of genres of Hebrew liturgical poetry which originated in Erez Israel under Byzantine rule. Some scholars distinguish between *piyyut* and *selihah* (a penitential prayer), including under the former all kinds of hymns and under the latter several types of elegies, supplicating or exhortative religious poems. For the purposes of this survey it is convenient to include the entire range of Hebrew religious poetry of the Middle Ages under the general term *piyyut*. The chronological division of the earlier periods of the *piyyut* from a formal point of view is as follows: (1) the so-called beginnings of the *piyyut*, primarily in Erez Israel and in Babylonia from the close of the Bible until the creation of the formal rhymed *piyyut*; (2) the formal period, employing formalized, strophic, and rhymed poems patterned in highly complex *piyyut* cycles, apparently originating in their complete form in Byzantine Erez Israel somewhere between the fourth and sixth centuries C.E. Only the latter will be discussed here.

The Formal Period

Various forms of rhythm, sound patterns, sporadic rhyme, acrostic, and strophic patterns have been developed in biblical literature and during the first centuries of the *piyyut*. But only by an act of formalization were the new complex structures created. Even if it were possible to trace every single device of the formal *piyyut* to earlier examples, there is no precedent to any of the complex structures as a whole. Rhyme, refrain, stanza, etc., whatever had been sporadic, was now formalized and organized in complex cycles of poems, governed by strict rules which set the formal conventions of all poems belonging to a given genre.

In the same way as the period is characterized by the introduction of unequivocal rules of formal structure, differences in genres are marked by differences in form. Moreover, some diversities between poets, or successive generations, or local traditions are marked by minor or major changes both in the complex structures, as well as in the use of particular devices or genres of the *piyyut*.

The large variety of genres, formal differences, and historical changes in these structures does not permit a complete, even schematic, description here. Since the complex structures are determined by the genre, it is preferable to describe the formal structure together with the thematic aspect of each genre, its liturgical function and the particular way of its inclusion in the basic text of the prayer book. The difficulty of such a detailed description is underlined by the present limited knowledge of the history of the *piyyut*. While there are many scattered studies and insights, there is no detailed up-to-date historical description of the whole field. The objective circumstances were a contributing factor to this state of scholarship: tens of thousands of poems and fragments, found in the Cairo *Genizah*, are in the process of being deciphered. These poems, written over many centuries, are by and large undated, often fragmentized or written in a cryptic language, and are either anonymous or only have the first name of the poet who in most cases is unknown from other historical sources. On the other hand a considerable number of *piyyutim* were known for centuries because they were included in the prayer book. More and more of them have been published in recent years. Below only the principles of some basic patterns employed in the complex structures will be outlined and only schematic examples of major formal principles will be given.

The Structure of One Cycle

The widespread forms of the older formal *piyyut*, especially the **kerovah* with its varieties and the **yozer*, are cycles of a complex nature, e.g., a *kerovah* by Yannai is a superstructure of nine parts with a permanent set of rules for each. Yannai wrote hundreds of *kerovot* – a different cycle for each week of the triennial cycle of the Torah reading. The structure of each of these poems is governed to the smallest detail by one set of rules. Other poets wrote cycles of poems for the Sabbath, the festivals, and often several different sets of poems for the

same purpose, apparently written for the services of different years or different synagogues.

Yannai's *kerovot* are mostly of the *kedushta* type. The *kedushta* is a poetic cycle incorporated in the prayer in which the *Kedushah* is recited. The *kedushta* has a fixed theme for every week based on the weekly biblical portion. The theme and its language are integrated into the poems of the cycle. It consists of the following parts:

(1) A poem to the first benediction of the *Amidah* composed of 3 stanzas of 4 versets each. Every stanza has a separate fourfold end rhyme, linking all its versets. Every verset begins with a separate letter following the order of the Hebrew alphabet; the poem is thus linked by an unfinished acrostic from the letters א to ז. The concluding verset alludes to the first sentence of the weekly portion which follows and introduces a series of biblical sentences in their original form, having neither rhyme nor meter. The biblical passage gives, as it were, authoritative support to the content of the poem. This chain of biblical sentences is linked to a closing stanza of 3 or 4 versets, with the last word of the chain of sentences repeated at the beginning of the closing stanza. The last verset of this stanza is again linked to what follows, alluding to the *Magen Avot* benediction (the second) recited after this poem.

(2) A poem to the second benediction which is similar in its strophic structure to the first poem. It continues the interrupted acrostic (from the letter ח to ט) and uses the last two letters twice in order to fit the 22-letter Hebrew alphabet into a framework of a series of four-verset stanzas (altogether 24 versets). This poem too is linked to the weekly portion with the final verset alluding to its second sentence. A chain of explanatory sentences also lead toward a closing stanza in which the final verset anticipates the following benediction, *Mehayyeh ha-Metim*.

(3) A short poem of 4 stanzas, each starts with a letter which is part of an acrostic of the poet's name יני. Every stanza consists of 4 short cola of 2 or 3 words each, rhymed either with a fourfold rhyme or with a twofold rhyme. The poem ends with an allusion to the first word of the *haftarah* which follows, together with an explanatory passage.

(4) A poem of a rather free structure, having no fixed rules for its rhyming though usually consisting of 3 fourfold stanzas. Concluding the first part of the *piyyut*, the poem is marked by the obligatory use of the final word – *Kadosh*.

(5) A poem traditionally called *asiriyyah* because it is composed of 10 stanzas which are linked by an acrostic of the first 10 letters of the Hebrew alphabet. The stanzas are rhymed couplets having quite often a large variety of internal rhymes.

(6) A poem consisting of 11 stanzas, each using a separate fourfold rhyme. Every couple of versets is linked to a complete alphabetical acrostic. The poem introduces a group of poems and is preceded by the biblical statement which it discusses. Frequently, the biblical statement or parts of it are interwoven into the poem either as beginnings of the first lines of the poem or of its stanzas.

(7) This part consists of 1 to 3 pattern poems (*rehitim*), each of which has an individual structure, usually of a complex form, which permeates the text in every detail. Variegated and individual in their composition, they follow a fixed set of rules (described below). Only in this category is the poet allowed to use strictly organized poems without rhyme.

(8) The *silluk*, a kind of free verse poem that introduces the *kedushah*. It has a free structure which varies from *kerovah* to *kerovah* and is richly rhymed in an unrestricted manner. In the poetry of Yannai's follower (or disciple), Eleazar Kallir, the *silluk* developed into a very long, exuberant, richly orchestrated, yet unrestricted poem. Yannai's *silluk*, however, is rather short.

(9) The *Kedushah*; it has neither rhyme, nor strophic structure. In the period of Yannai there was no fixed version as yet, and the poet was free to formulate his *Kedushah* in every cycle anew. It was based on an exegesis and elaboration of the formula *Kadosh, Kadosh, Kadosh (Holy, Holy, Holy)*.

The above is a simplified account of a poetic cycle, as described by M. *Zulay. It is impossible to delineate here in detail the forms of other cycles, their liturgical functions, and their development throughout the ages. Each cycle is determined by a combination of certain thematic, verbal, and formal elements. Though the intricate rules for each cycle changed from genre to genre, there was no free combination in each new creation: The basic forms used in these compositions were quite restricted. Some of these basic forms are discussed below:

Forms of Composition

Within a given cycle the form and length of each poem was restricted, depending on its place in the cycle, its use of acrostic, and its strophic form. The following strophic forms existed in the *piyyut*:

(1) AN UNDIVIDED POEM. One single end-rhyme runs throughout the poem (*haruz mavri'ah*). At the beginnings of the lines there is a compulsory acrostic which covers the whole Hebrew alphabet, each letter is repeated one or several times; the number of versets being either 22, 44, or 88.

(2) REGULAR STROPHIC STRUCTURE. Each poem is composed of a number of stanzas of a permanent form and length. Every stanza has its own independent rhyme both differing from and not interfering with members of other rhymes: *aaaa bbbb cccc*, etc. The length of stanzas may vary from 2 to 10 versets. A stanza of 4 versets became the major form of the *selihah*, especially in the variety created throughout the ages in Ashkenazi Europe. The multiple (fourfold or eightfold) repetition of each rhyme and the lack of rhyme alternation in the rhyming *piyyut* create an effect quite distinct from standard European strophic poetry which uses its rhymes in alternation.

Stanzas may have an additional internal structure and may be molded by means additional to rhyme, primarily meter, acrostic, and the refrain. Thus, in Kallir's *kerovah* to the **Musaf* prayer of the Day of Atonement (in the Ashke-

nazi prayer book), one of the poem *Essa De'i le-Meraḥok* is based on a stanza of 9 versets. The following is one stanza of the poem:

ישלגו אדמי שנים / של כל ימות השנים / חדשים וגם ישנים
 ילבנו כתמי שושנים / וישבו לתערם שוננים / בפלול אשר משננים
 רחצו והזכו מעשוננים / לאגלת מהיות שונים / ועל מבטחיו שעונים

Each verset has 3 words, 3 versets form a line, each line begins with a letter from the acrostic (in this case it is the end of the poet's name קליר, the ק repeated twice), 3 lines form a stanza by means of the particular rhyme which is repeated 9 times.

This particular poem belongs to the *kiklar* (from the Greek κύκλος, cycle) genre, in which there is a refrain-like shorter stanza of 3 versets after each regular stanza. There are 3 different refrains in the above poem, alternating between the 7 regular stanzas. In the following general scheme of the poem each verset of the regular stanzas shall be represented by letters from *a* to *g*, according to the rhyme patterns; the refrains by letters *p* to *r*; capital letters represent versets linked by an acrostic:

Aaa	Ddd	Ggg
Aaa	Ddd	Ggg
Aaa	Ddd	Ggg
PPP	PPP	ppp
Bbb	Eee	
Bbb	Eee	
Bbb	Eee	
qqq	qqq	
Ccc	Fff	
Ccc	Fff	
Ccc	Fff	
rrr	rrr	

The poem is organized, as it were, both vertically and horizontally. The triadic principle is dominant throughout: 3 words make a verset, 3 versets a line, 3 lines a stanza, 3 stanzas complete a refrain cycle. The third refrain cycle is, however, not completed since there are 7 stanzas.

(3) PATTERN POEMS. An unusual kind of formal poem – the pattern poem – was developed in the *piyyut*, especially by Yannai. A pattern of a line elaborated in all its details – syntactic, semantic, morphological, and sound devices – was established in the poem and was then repeated throughout its 22 lines (the number being determined by the acrostic). A great variety of such patterns appear in Yannai's poetry, all in the seventh part of the *kerovah* cycle. The following is an example of a very simple kind:

אם אהבתה מי ישניא? אם אהבתה מי ישניא?
 אם ברכתה מי יאיר? אם ברכתה מי יאיר?
 אם גדרתה מי יפרוץ? אם גדרתה מי יפרוץ?
 אם דבקתה מי יפריד? אם דבקתה מי יפריד?

Every line is a rhetorical pattern with two fixed and two free words. The initial letter of the first free word depends on the place of the word in the alphabetically arranged poem; this

word is a verb in the second person past, and its meaning has a positive connotation. The second free word is opposite in meaning, it has a strongly negative connotation, and is a verb in the third person future.

There are more complex patterns, such as this:

אהוב (...ל) חס ושנאוי למאס	תולדות אהוב ושנאוי
בחור לסגל ובזוי לסגר	תולדות בחור ובזוי
גדי לרצוי ונמר לניצוי	תולדות גדי ונמר

The story of a loved one and a hated one/
 loved for respect and hated for neglect
 The story of a chosen one and despised one/
 chosen for virtue and despised for rejection
 The story of a lamb and a tiger/
 a lamb for pleasing and a tiger for strife

Every line consists of two parts, of 3 and 4 words, respectively. The first part refers to a story of two personae: one positive, the other negative. The second part elaborates on the first, repeating the two personae and modifying the description of each. The first word is permanent, creating an anaphoric chain (“the story of...”); the second word is positive in meaning and is strung on an acrostic; the third word is either a direct or indirect opposite of the second. The other hemistich repeats words (2) and (3) and qualifies them, explaining the reason for the opposition: In what perspective are the personae to be cast. The modifiers do not provide a full explanation, but allude to a biblical text. Both modifiers – words (5) and (7) – are introduced by a preposition of purpose (-ל) and are linked to each other by some kind of rhyme, though the rhyming principle changes throughout the poem. It may be:

a terminal sound rhyme רצוי – ניצוי
 or an initial rhyme עזוז – לעזאזל, סגל – סגר
 or a semantic rhyme זכות – חובה, חיים מוות

Since the morphology of most words of the pattern is fixed, in all cases where suffixes are used the rhyme is inevitable, e.g.,

וירא אהובים ויאמל ואבה לאררם
 וירא באים ויבעת וביקש לבלעם
 וירא גרים ויגר וגמר לגרשם

The meaning of the pattern is “He saw (“positive personae”) and he was frightened (or shocked, or worried, etc.) and he wished (or planned, or hurried, etc.) to curse them (or swallow them, or uproot them, etc.)” All four changing words are linked to the acrostic, the second and the fifth, using plural suffixes, create each a chain of rhymes. In the rhyming chain of the second words there are, however, two exceptions: רבבה, המון – words which designate plurality but do not have the grammatical plural form. Indeed, rhyme is concomitant to grammatical parallelism but is not an absolute necessity. It is possibly the only structured poem in a Yannai cycle which may have no rhyme, if rhyme does not appear with the grammatical form. In most cases there is rhyme, but of a peculiar variety; a morphological rhyme based on a suffix.

The form of the pattern poem is derived from biblical parallelism, but two new principles were applied: (a) the symmetry of two versets was turned into a chain of synonymous sentences; (b) there was a rigorous formalization of the pattern, and all deviations are excluded.

(4) FREE STROPHIC FORMS. These are of two kinds: (a) the unrhymed *piyyut*, an exceptional form, fulfilling strict liturgical functions and employing phrases of a formulaic nature; (b) the rhymed free poem, especially the *silluk*, developed by Kallir into a long chain of rhymed versets, with changing rhymes and shifting rhyme principles and without any strophic structure or measure of length. Each rhyme usually has many members (e.g., 25 LAKH+20 MU+18 ŠEV+13 MEM, etc. – in Kallir's *silluk* to *Parashat Zakhor*). Besides sound rhyme there may be in the rhyming position semantic rhymes (names of rivers or of time periods), word repetition, words of one root, etc.

Rhyme

THE ORIGINS OF RHYME IN EUROPEAN POETRY. Rhyme, the great innovation of the *piyyut*, had impact on the history of world poetry. Since not many *piyyutim* were known before the recent studies of the *Genizah* (where over 50,000 liturgical poems were discovered), and also since the external circumstances of the *piyyut* were obscure and its language almost puzzling, it was not until recently that scholars have become aware of this original contribution of Hebrew poetry. All its aspects, however, have not yet been fully explored.

It is clear by now that rhyme grew out of the internal development of Hebrew poetry and became in Hebrew a permanent, even obligatory, feature of poetry earlier than in any other language. It is assumed that the principle of rhyme was then transferred to the poetry of the Syriac Church, written in Aramaic (a language closely related to Hebrew, spoken *inter alia* by Jews and written in the same area; i.e., in the Middle East) and through this mediation introduced into Latin poetry and then into all other languages of Europe.

THE MAJOR NORM: THE DISCONTINUOUS RHYME. Not one, but several kinds of rhyme existed in the *piyyut*, each associated with different strophic forms. The most important was the rhyme of the strophic poems. The basic norm of this rhyme is unknown in the poetry of other languages. Each rhyme of a strophic *piyyut* had to meet two requirements: (1) parallelism of all the sounds of the last syllable, beginning with the consonant preceding the last vowel; (2) parallelism of two consonants belonging to the root of each rhyming word, e.g., in Eleazar Kallir's stanza quoted above (from the *piyyut Essa De'i le-Merahok*), the rhyming words are: ŠaNIM – ha-ŠaNIM – ye-ŠaNIM – Šo-ŠaNIM – ŠenuNIM – meŠaneNIM – meiŠuNIM – So-ŠaNIM – ŠenuNIM – meŠaneNIM – meiŠuNIM – ŠoNIM – ŠenuNIM. For the sake of identification capital letters represent the rhyme (all the sounds repeated in all members of one rhyme).

The rhymeme in this system is both terminal and discontinuous. The principle of terminality implies that the rhymeme covers the final syllable of each rhyming member whereas in European or in modern Hebrew poetry its basis is the stressed syllable rather than the final one. In most cases in Hebrew, though, the two overlap, but in instances of discrepancy, stress in the rhyme of the *piyyut* is disregarded. The principle of discontinuity of the rhymeme is unique in rhyming systems and is based on the nature of the Hebrew lexical morpheme, which is discontinuous, consisting merely of consonants. Thus, the changes of vowels in such Hebrew words as Ša-Var – Še-Ve-R – Šo-Ve-R cause morphological differences only (Š+V+R is a root meaning "break," the vowels in the example creating: past, noun, present), whereas in English the differences between, e.g., "lever – liver – lover" are lexical.

Though rhyme may have had, as one of its sources the puns on words of one root, rhyme became an autonomous pattern, independent of grammar or word repetition. The discontinuous rhyme is merely similar in structure to the Hebrew root, but is not necessarily based on words of one root. In the above case the rhyme is S+NIM. Between the discontinuous sounds of the rhymeme there appeared changing vowels and even consonants, though usually consonants of the kinds found in the rhymeme (as in our case).

Thus, rhyme was based on sound parallelism of the roots of words as well as of their endings. Since a Hebrew root can have no more than three sounding consonants, only one (at most) is given to variation. In stanzas with many rhyme members, it is extremely difficult to find enough words which may meet such requirements, especially when the rhyming words are at short distances from each other. Such rhyming was possible in the *piyyut* due to the difficult "Kallirian" style which allowed, on the one hand, for an almost unlimited number of neologisms and, on the other hand, was abundant in allusions and ellipses which permitted the bringing together of words from quite distant semantic areas.

There are in this system five major forms of rhyme, dependent upon the morphological structure of the rhyming words:

(1) if the final syllable is open (e.g., LA), an additional preceding consonant was necessary, e.g., in Kallir's rhyme: GoLA – Geula – beGiLA – niGLA – GiLA – veeGLA – aGuLA – meGiLA – veGoLA (the rhymeme is G + La); (2) if the final syllable is closed (e.g., NIM) and one consonant belongs to a suffix, a root consonant has to be preceded as in the above case with plural endings: ŠaNIM – haŠaNIM – ŠenuNIM, etc. The rhymeme is Š+NIM; (3 and 4) if the final syllable has no root consonants, two discontinuous root consonants are added, e.g., מִצְרַיִם – יוֹצְרֵינוּ – נִעְצְרֵנוּ – צוֹרֵינוּ – ZuReNU – naaZReNU – yoZReNU – ZaRateNU (the rhymeme is Z+R+NU). The same holds for a suffix in a closed syllable (e.g., M+R+HEM); (5) if the final syllable is closed and includes no suffix, then it meets in itself both requirements. There is no discontinuity, but the difficulty in finding or inventing rhyme words remains, e.g.,

such as Kallir's rhyme of the word טל ("dew") (in his "prayer for dew" "תפלת טל"), repeated endlessly and interwoven with words ending with same sounds: נטל, טלטל, etc.

Rhythm

Biblical rhythm was accentual but with free variation of the numbers of stresses in parallel versets. It seems that later developments led in two directions:

(1) The rhythm as found in the poetry of Ben Sira where there are usually 2 versets to a line, with 4 metrical stresses being the optimal limit of a verset. A 4-stress pattern is achieved if long words are seen as having two metrical stresses (in a way quite similar to our reading of iambs in modern Hebrew poetry), e.g.,

וּמַחְמוּדוֹתֶיךָ הַמְנֹעַ	אֲחֵרֵי תְאוֹתֶיךָ אֶל תֵּלֶךְ
תְּשִׁיגְךָ שְׂמֹחַת שׁוֹנָא	אִם תַּעֲשֶׂה רִצּוֹן נַפְשְׁךָ

This was apparently a tradition of a poetry which sensed an inherent semi-regular meter, approaching syllabic regularity. (The syllabic principle is said to be underlying Syriac poetry of the early Christian centuries.)

(2) The tradition of early liturgical poetry which was based on the number of major stresses. Here, too, 4 stresses were a common optimal frame, but these were major stresses, each dominating a word or a group of words. Thus, *Yose b. Yose, in his famous *Avodah le-Yom Kippur* has regular stanzas of 4 lines each (determined by a fourfold repetition of each letter in the alphabetical acrostic). Each line consists of two versets (or hemistichs), each verset having 4 major stresses:

אֵתָהּ כּוֹנֵנֶת עוֹלָם בְּרוּב-חֶסֶד / וְבוֹ יִתְנַהֵג עַד קֶץ הַיָּמִים,
אֲשֶׁר לֹא יִמוֹט מֵעוֹן יִצְוִרִים / וְלֹא יִמְעַד מִכְבֵּד פְּשָׁעִים וְחַטָּאִים

In Ben Sira there are often two stresses on one long word; in Yose b. Yose two smaller words are linked by one stress. The number of stresses is similar, but the interpretation of the rhythm in the language is quite different.

Yannai usually has no regular rhythm, except for pattern poems in which the number of words is fixed by the pattern. Neither is there any syllabic regularity, similar to the one which is supposed to govern Syriac meters, discernible. But in Kallir's poetry there are already *piyyutim* (beyond the pattern poems) which have a fixed meter, based on the number of words, such as the meter of the *kiklar* analyzed above. In Italy, this meter became obligatory from the ninth century. While this meter may have grown out of earlier stress regularity, it was now strictly based on the graphic division of words, requiring a permanent number of words in each verset. It became the dominant form of the Ashkenazi *piyyut* in the Middle Ages. Some genres had norms peculiar to them, e.g., the *selihah* was usually written in Italy and in Franco-Germany in 5-word lines and 4-line rhymed stanzas.

MEDIEVAL HEBREW POETRY IN SPAIN

Hebrew poetry entered a new era with its emergence in Islamic Spain, in the 10th century. The Arabic rules of versifi-

cation were adopted by the Hebrew verse; quantitative meter became the dominant system in Hebrew poetry in Spain from its beginnings, through the "Golden Age," until the destruction of Jewish life in Spain at the end of the 15th century. Due to the authority and the achievements of Hebrew culture and poetry in Spain, its poetic language and metrical system spread to other countries. It dominated Hebrew poetry throughout the Islamic world – Egypt, Babylonia, Yemen, North Africa, the Ottoman Empire – until recent times. It ruled Hebrew poetry in Provence, spread throughout Europe, and reigned in Italy until the 19th century.

Hebrew literature in the East in the first centuries of Arabic rule, though flourishing in the very heart of Islamic culture and strongly influenced by Arabic science and literature, shows no trace of having come under the sway of the forms of Arabic poetry. *Saadiyah Gaon of Babylonia (10th century), a distinguished philosopher and linguist in Arabic, followed the norms of the pre-Islamic *piyyut* in his Hebrew poetry. He used the strophic structure of the *piyyut* in fourfold or manifold rhymes which change from stanza to stanza and there was no trace of any syllable-counting meter. However, Saadiyah Gaon's pupil, *Dunash b. Labrat, a native of Fez, who was educated in Baghdad and went to Cordoba, Spain, introduced there in the middle of the 10th century the Arabic quantitative metrical system into Hebrew poetry. Ben Labrat's innovation, which became the subject of a fierce polemic, was seen as violating the nature and grammar of the Hebrew language. But even Ben Labrat's opponents used quantitative meters in their caustic polemical poems against this very same system. Arguments against quantitative metrics, raised time and again, especially emphasized the biblical tradition and the accentual nature of the Hebrew language. The opponents themselves, however, notably *Judah Halevi, seldom strayed from this metrical system in their secular poetry.

Kinds of Verse

Hebrew literature in Spain was written in a variety of genres, secular as well as liturgical. Generic properties included theme, forms of composition, attitude of the speaker, use of language. But hardly any thematic genre had its own peculiar meter or rhyme scheme. On the other hand, there was a strong distinction between several kinds of literature, based on principles of meter, rhyme, and strophic structure. The following major types may be discerned: (1) Non-strophic poems using one single rhyme throughout, linking all the lines of the poem. In this type quantitative meter in one of the classical regular forms was obligatory (used in most of Spanish Hebrew poetry, especially secular poetry). (2) Strophic poetry of the type of the "girdle" poem, employing a quantitative metrical pattern which may be irregular in itself but permanent throughout the poem. (3) Poems with a plain syllabic meter, primarily in strophic forms. (4) Strophic poetry in "free" verse, i.e., without syllable counting, used primarily in liturgical genres. (5) Rhymed prose, used primarily in genres of Oriental storytelling.

The Hebrew Quantitative Meter

A quantitative meter is based on a regular pattern of short and long (rather than stressed and unstressed) syllables. Hebrew quantitative meters though derived from Arabic versification were quite different from their prototypes as well as from Greek quantitative patterns. This was basically due to the different properties of the Hebrew language.

Traditional descriptions of Hebrew verse in Spain did not distinguish between problems of diachrony and synchrony. The derivation of a particular meter from this or that Arabic prototype seemed to be more relevant than the assessment of its place in the synchronic system of Hebrew verse. The existing classification of medieval Hebrew meters, basically unchanged for the past 800 years, relies on medieval Arabic cataloguing. One finds usually long taxonomic lists of patterns rather than structural rules to explain the nature of the Hebrew quantitative meters.

Twelve of the 16 basic meters codified in the theories of classical Arabic versification were adopted by Hebrew poets (the other being impossible to imitate in Hebrew). With their many derivations, the number of particular regular meters runs into several dozens (Yellin's list has 67), whereas the irregular patterns of the "girdle" poems may account for several hundred forms. No explanation is usually given as to why no other meters existed.

The traditionally identified meters will not be enumerated here but rather an attempt will be made to explain the basic rules and tendencies. One reason for the large number of metrical types is that each is used as a label for a pattern of a whole line which has not been analyzed into its distinctive features. Three such features should be considered: (a) the basic metrical units, or recurring groups of syllables ("feet"); (b) the number and order of such groups (i.e., the length of the line); (c) the form of the final group – whether complete, short, or changed (cf., in accentual-syllabic poetry an analytical term such as "iambic pentameter" – one word signifies the basic foot, the other the length of the line, whereas the nature of the end of the line is described in terms of rhyme gender: "feminine" or "masculine"). Thus, the difference between the two traditionally distinct meters *ha-merubbeh* (/ 0 - - - / 0 - - - / 0 - - /) and *ha-marnin* (0 - - - / 0 - - -) (0 stands for a short syllable, – for a long, the direction of the symbols here is from left to right) is one of length of line only; whereas for a parallel difference between (- 0 - - - / - 0 - - - / - 0 - - -) and (- 0 - - - / - 0 - - -) only one term (*ha-kalu'a* a' and b') has been used. While a difference in the length of a line may be an important rhythmic factor, it should not justify the use of unanalyzed terms.

THE BASIS OF HEBREW QUANTITATIVE METERS. The Hebrew poets in Spain did not resort to the distinction between short and long vowels of the biblical vocalization. Only the mobile *šewa*, the *hataf*, and the conjunction ׀ (when pronounced *u*) were considered short vowels. All full vowels were considered long, e.g., in Ibn *Gabirol's poem (from right to left; short syllables are unmarked):

מְלִיצֵתִי בְדֹאגְתִי הָדוּפָה, / וְשִׁמְחֹתִי בְאֵנְחֹתִי הָחוּפָה

In comparison with Arabic or Greek quantitative meters, the number of short syllables in Hebrew is conspicuously small. Moreover, whereas in Greek verse a long (i.e., a strong) syllable constitutes the distinguishing element of a foot, in Hebrew it is a short (i.e., a weaker) element. It is hard to conceive how such a weaker element could provide a rhythmic basis for a foot. Indeed, there was a different way of describing this kind of meter, through use of another kind of contrast, namely that of cord (C = -) (*tenu'ah*, i.e., vowel) and peg (P = / 0 - /) (*yated*). A short followed by a long was called a peg. (In traditional Hebrew grammar a peg is considered one syllable.) All other syllables are cords. The above quoted line from Ibn *Gabirol can be rewritten (from left to right): PCC PCC PC/PCC PCC PC, the basic foot consisting of one peg and two cords (rather than one short and 3 longs). Besides the rhythmic factor considered above, this system of description is justified because in Hebrew there is practically no short "syllable" which is not followed by a long one, i.e., a short is not an independent unit (even though modern pronunciation may create such an illusion). Except for experimental poems, there are no meters of pegs only. Thus, a quantitative meter may be described as based on a regulated opposition of pegs and cords.

The basic group of syllables recurring several times in a line is called a foot. A foot may consist of either 2 or 3 syllables. The basic feet are:

Number of Syllables	Place of the Peg
Binary:	PC (initial)
	CP (final)
	CC (neutral)
Ternary:	PCC (initial)
	CPC (medial)
	CCP (final)

No foot has more than one peg. (In some meters there may be a substitute of 2 pegs: PP, but not as a regular recurring unit.) In Hebrew, as opposed to Arabic, there was a meter without pegs, the so-called *mishkal ha-tenu'ot* (meter of cords) of 8 long syllables, but it retained the quantitative opposition, since the text avoids all pegs in the language (i.e., all the mobile *šewa'im* and the like). No ternary foot without pegs may constitute a regular metrical scheme (though CCC may occur as a substitute within a meter with pegs).

The verse form of classical poetry is a distich (*bayit*) consisting of 2 lines identical or differing slightly at the end: the first line is called *délet*, the second *soger*. At the end of the *soger* there is a rhyme member linking it to the whole poem, which has one rhyme with a long chain of members, connecting the ends of the distichs as a string. A poem often consists of several dozens of distichs repeating again and again the same rhyme, with the typical effect

of emphasis and monotony. In the first distich usually both lines are rhymed.

Any meter in this system is based on the principle of rhythmic impulses of recurring groups of pegs and cords, combined with a tendency to repeat each group at least twice, but an exact repetition of the same group more than twice in each line is avoided in most meters. The variations are codified within the metrical pattern of a line. This pattern, however, is in all its details permanent throughout the poem.

In each line the basic foot is repeated several times, but the last foot may be incomplete. The feet of a line may be of one kind only (as in the accentual-syllabic system of modern poetry), or of two kinds, unknown in modern poetry. If the first two feet are identical, the meter is *regular*; if they are different, the meter is *variegated*.

The length of a line is not as varied as in Hebrew or European poetry of modern times. There is a strong interrelation between the nature of the feet and their number. The rules governing the length of a line are the following: (a) if one of the first two feet is binary, there are 4 feet in a line; (b) if both first feet are ternary, there are 2 or 3 feet in a line, and the third may be either complete, shortened, or changed.

The last foot of a line can be described separately; if it is the third foot, it is either complete, shortened, changed, or avoided. But for this element, the length of a line can be seen as automatic. Indeed, there are 5 basic regular meters. These can be illustrated by using the list of all meters and variants which appear in J. Schirmann's famous anthology of Hebrew poetry in Spain and Provence (see following table).

REGULAR METERS

PC binary initial	PC-PC-PC-PC	המתקרב	<i>ha-mitkarev</i>
CC binary neutral	CC-CC-CC-CC	משקל התנועות	<i>mishkal ha-tenu'ot</i>
PCC ternary initial	PCC-PCC-PC PCC-PCC	המרובה המרנין	<i>ha-merubbeh</i> <i>ha-marnin</i>
CPC ternary medial	CPC-CPC-CP CPC-CPC	הקלוע א' הקלוע ב'	<i>haa-kalu'a (a)</i> <i>ha-kalu'a (b)</i>
CCP ternary final	CCP-CCP-CCP CCP-CCP-CC-P/C CCP-CCP-CCC CCP-CCP-CPC CCP-CCP-CPCC	השלם א' השלם ב' השלם ג' השלם ד' השלם ה'	<i>ha-shalem (a)</i> <i>ha-shalem (b)</i> <i>ha-shalem (c)</i> <i>ha-shalem (g)</i> <i>ha-shalem (h)</i>
	CCP-CCP-CP CCP-CCP-CC CCP-CCP-C CCP-CCP -/C CCP-CCP-C	המהיר א' המהיר ב' השלם ד' השלם ה' השלם ו'	<i>ha-mahir (a)</i> <i>ha-mahir (b)</i> <i>ha-shalem</i> <i>ha-shalem</i> <i>ha-shalem</i>

(The symbol P/C shows two differing endings of the two lines in a distich.) In spite of the different labels, all the variations

are in the third foot and can be described separately. Binary meters have practically no variations (due to rule a) and there is practically no binary final meter. Only the rule of length (a) can explain why the meter of cords (binary neutral) uses 8 syllables. There is no regular ternary meter of cords. Moreover, the ternary medial meter is rare in Hebrew. No other regular meters are possible. In the ternary meters the third foot may be complete only if the peg is at the very end. But this weak position of the last peg calls for a great variety of substitutes.

VARIEGATED METERS. From the rules of length follows also the structure of the variegated meters of which there are two kinds:

(1) Alternating meters: if one of the first two feet is binary and one is ternary there are 4 feet in a line (according to rule a); the whole pattern is repeated twice (e.g., PC PCC PC PCC in the meter *ha-arokh*).

(2) Changing meters: if both first feet are ternary (and different) there cannot be 4 feet (according to rule b), i.e., there can be no repetition of the whole group within each line. In this case, if there is a third foot it either repeats the first or is changed (as the last foot of a line).

Alternating Meters. In alternating meters the following rules hold for the basic patterns: (1) there are 4 feet in a line; (2) the meter is based on a regular alternation between ternary and binary feet; (3) both kinds of feet are either initial or final; (4) in each hemistich, if there are 2 pegs they are removed from each other by only one cord. From rules (3) and (4) follows that there may be only 2 basic meters:

alternating initial PC PCC PC PCC הארוך *ha-arokh*
alternating final CCP CP CCP CP המתפשט *ha-mitpashet*

There can be no medial feet since there must be a common rhythmical denominator; if it is not the foot, it is its direction. Since each line has two symmetrical hemistichs, variations of the scheme may be accepted at the end of the line as well as in the second foot, e.g., the alternating falling meter has a variant PC CCC PC CCC (the meter of Dunash b. Labrat). The variants will not be listed here.

Changing Meters. If the first two feet are different but ternary, the whole group cannot be repeated twice. Only two ternary feet combine: the medial and the final. Hence the two basic metrical schemes are as follows:

medial and changing CPC CCP CPC א' הקל *ha-kal (a)*
final and changing CCP CPC הקטוע *ha-katu'a*

Variations occur in the third foot (the end of the line) and in the second (the end of the basic group). These meters are however rare and will not be enumerated here.

THE METERS USED IN HEBREW POETRY. All the basic meters practically used in Hebrew poetry may be summed up as in the following table.

Feet \ Meter	Regular		Variegated	
	binary	ternary	alternating	changing
Initial	PC	PCC	PC-PCC	–
Medial	–	CPC	–	CPC-CCP
Final	–	CCP	CCP-CP	CCP-CPC
Neutral	CC	–		

The structural symmetry is obvious. There are practically no meters beginning with a binary final foot; no medial foot in the alternating patterns, and no initial foot in the changing meters (rare exceptions may be found).

In actual poetry the situation is even simpler. Indeed, some poets liked experimenting. As Yellin has shown, *Samuel ha-Nagid used 57 different metrical schemes. The bulk of Hebrew poetry in Spain, however, employed only a small number of basic meters, with some variations, of which the most widespread are (in this order): initial and final ternary meters and the meter of cords. More precisely:

- (1) ternary initial, esp. PCC PCC PC הפרָבָה *ha-merubbeh*
but also PCC PCC הפרָנִין *ha-marnin*
- (2) ternary final, esp. CCP CCP CC P/C השֶׁלֶם ב' *ha-shalem* (b)
also CCP CCP CC המהיר ב' *ha-mahir* (b)
- (3) cords (binary CC CC CC CC התנועות *ha-tenu'ot*
neutral)

These three groups, with a few variations, account for 94% of Moses *Ibn Ezra's meters in his secular poetry. The major meter, *ha-merubbeh*, found in about half of the Hebrew poems in Spain, later gave way to *ha-shalem* (b).

Following these three groups, though far behind, are the alternating meters, initial (PC PCC PC PCC – *ha-arokh*), and final (CCP CP CCP CP – *ha-mitpashet*). The preference of initial over final meters is due to the structure of the Hebrew word; the majority of vocal *šewa'im* are at the beginnings of words and a *šewa* may easily be added before a word with a preposition or conjunction (א, ל, כ, ב). Medial or changing meters are quite rare.

The bulk of the poetry uses ternary meters, with 3 (incomplete) feet in a line. Since the length of the line is regulated, it varies only within narrow limits. There are only lines of 6 to 10 syllables. If the short syllables are also counted (as they were later, in Hebrew poetry in Italy), the limits are 8–14. Since in contemporary Israeli poetry about half of the *šewa'im* are considered syllables, those limits are comparable with 7 to 12 syllables today. If the special effect of the *ha-marnin*, which has the typical rhythm of a short line, is excluded, all other meters compare well with the variations given in modern poetry between 4 iambs and 4 anapests. Thus, the length of a line in Spanish Hebrew poetry as well as its rhythmic-syntactical form are similar to the length of typical lines in modern poetry. The optimal line has 8 to 9 long syllables (or 11, counting the short ones), which is similar to a line of 4 or 5 iambs.

VERSE ENDINGS. There are many variations of verse endings in the last foot of the basic metrical schemes. Any such variant

creates a permanent pattern, repeated in all the lines of a poem. As opposed to modern poetry or to Greek and Arabic quantitative meters, Hebrew poets allowed very rarely for changes from line to line (feet-substitutes) or deviations from a given metrical scheme (i.e., changes occurring only in some lines, e.g., in Hebrew in the changing meter CPC CCP CPC the second foot may be substituted by PP). The variations in Hebrew in the third foot are felt not against the pattern of the poem but against the rhythmic impulse of the first 2 feet of the same line.

Variations of feet in verse endings are of several kinds: (1) the last foot is short (catalectic), PCC→PC, CPC→CP; CCP→CC; this change occurs almost only in ternary meters where it is the usual case (unless it is the last peg which is shortened, as in the final *ha-shalem*);

(2) hypercatalectic: CCP→C which is very rare; (3) a peg substituted by a cord: CCP→CCC; CP→CC, which occurs quite often since short syllables are scarce in Hebrew; (4) two cords are substituted by a peg, CCP→PP; PPC→PP; a rare variation, occurring in changing meters, especially in the second foot; (5) a peg is advanced, CCP→CPC (or: CP), e.g., in *ha-shalem* (g) CCP CCP CPC. The most widespread changes are a catalectic foot (1) or a substitute by a cord (3) (cf., instances in the list of regular ternary meters).

RHYTHM. The quantitative opposition provides the Hebrew poet with a metrical framework rather than with a pervasive rhythmic movement. The role of short syllables in the Hebrew language is much less than in Arabic. Thus, the two major meters in Arabic, *tawil* and *basit* (equivalent to our alternating final and initial meters) are far from being major meters in Hebrew. Moreover, every possible substitution of longs for shorts is resorted to in Hebrew. Thus, the scheme of the Arabic *basit* is (from left to right):

/ ʊ - ʊ - / ʊ ʊ - / ʊ - ʊ - / ʊ ʊ - /
its Hebrew derivation: / - - ʊ - / - ʊ - / - - ʊ - / - ʊ - /
CCP CP CCP CP

Instead of 8 shorts to 6 longs, the proportion became 4:9. A common variation of this meter has even less shorts:

/ C̄C̄ Ǿ̄ - / C̄C̄ / C̄C̄ Ǿ̄ - / C̄C̄ /

No two consecutive short syllables are possible in Hebrew, therefore some Arabic meters could not be reproduced. There is also the favorite Hebrew innovation: the meter of cords in which all short syllables are avoided.

On the other hand, in many Hebrew poems can be distinguished a strong tendency of regulating stress order and word boundaries. Although no permanent laws hold in this area, the tendencies are clearly felt, e.g., in the poem by Solomon ibn *Gabirol (short syllables are unmarked):

נָחַד / בְּקֶדַי אֵי גְרוּנִי / דְּבַק לֶחַי כִּי לְשׁוֹנִי
הֵיה לֵב בִּי סָחָרְחָר מֵרֵב כֹּא בִי וְאוֹנִי

The formal division of the quantitative meter in this poem (*katua'*), though consistent, seems artificial. The language of the poem follows quite clearly a different pattern:

נָהַר / בְּקָרְאִי / גְּרוֹנִי / דְּבָק / לְחֵלִי לְשׁוֹנִי

The accents are clearly regulated, and so are the word boundaries. Though it is not an absolute rule in this poem, in 85% of the cases there are word boundaries in marked places (whereas only 36% observe the formal foot boundaries of the meter). This kind of regularity in stress order and word boundaries is partly due to the correlation between the following factors: (1) short syllables cannot be stressed in Hebrew; (2) short syllables are most common at the beginning of a word, therefore, a boundary usually precedes them. It seems, however, that the major force behind this tendency is the subconscious rhythmic sense for stress order felt especially in the works of the great poets, Ibn Gabirol and Judah Halevi.

Relative regularity in stress order may be felt as a rhythmic substitute in meters without the peg/cord alternation. Thus, in the meter of cords there are lines which are clearly “iambic” in the modern sense:

כְּתוּבָת פְּסִים לְבַשׁ הַגָּן / אֶכְסוּת רִקְמָה מְדִי דִשְׂאוּ

Girdle Poems

Though the bulk of Hebrew poetry in Spain used regular meters and one rhyme running throughout the poem (with as many as 60 or 80 rhyming members – distichs), several kinds of strophic forms also flourished.

The *muwaššah*, or “girdle” poem (שִׁיר אֶזוֹר, *shir ezor*), an original development of Arabic Andalusian poetry, was represented in Hebrew poetry almost from its beginnings (11th century) and was the form of some of the best Hebrew lyrical poems in the 12th century. Though originally used in love poetry, it was employed widely for religious poems. The girdle poem combines in its composition both the strophic principle of changing rhymes and the principle of the “running” rhyme, which runs through all parts of the poem in a refrain-like manner. There are two kinds of stanzas: (1) the changing stanzas with changing rhymes. Every stanza has one or several distinct rhymes, different from the rhymes of other stanzas;

(2) the girdle stanza, a strophic pattern recurring after every changing stanza, with the same rhyme or rhymes repeated in all girdle stanzas throughout the poem. A girdle stanza often appears at the beginning of the poem; it is the “guiding” stanza. In many poems the final girdle, the so-called *ḥarḡa*, is written not in Hebrew but in popular Arabic or in the old Romance language of Spain. Usually it is a quotation of a love conversation. The *ḥarḡa* thus determines the meter and rhyme of the girdle, as well as the melody (most girdle poems were apparently created as songs).

The meter of the changing stanzas and of the girdle may be identical, but often is not. Each line may consist of 1, 2, or 3 parts, rhymed or unrhymed. The metrical pattern may either be regular or highly irregular: Within the line there is a free combination of all kinds of feet, which seems often to be a kind of “free verse.” But the same irregular pattern is repeated throughout the poem, in the stanzas of each kind

separately. The two metrical schemes are often related to each other, in a variety of ways, e.g., one may include a partial repetition of the other. A simple example, in Judah Halevi’s song “בי הצבי בי אדוני” (*Bi ha-Zevi, Bi Adomi*)

the meter of the changing stanza is CCP CPC
and that of the girdle: CC CPC/CCP CPC

The stanza has a simple but irregular scheme. The metrical pattern of the girdle repeats the meter of the stanza in its second part, but the first part of the girdle is different (in this case a slight variation).

An example of a complex rhyme scheme can be found in a poem by Joseph ibn Jacob ibn *Zaddik (1075–1149), which begins with a guiding girdle,

נומי, אָהָה, נְגוּזַל – / בְּרַח, אָהָה, גּוּזַל / מִזְאֵהְלִי!
דְּמַעִי, אָהָה, יוּזַל – / עִפְרִי אָהָה, אָזַל – / מִי גּוּזְאֵלִי?
נוגֵן, שְׁלַח אֶצְבַּע / לְעוֹת חֲלִילֶךָ / טוֹב מַעֲנֶה!
אֵלֶם – אָבַל יַבַּע / צַחוּת, בְּקוֹלֶךָ / כֵּן יַעֲנֶה.
שְׁלַשׁ וְגַם אֶרְבַּע / עַל פִּי נְבִילֶךָ / בְּשִׂמְאֵל מְנַה.
שִׁירִים נָצַר עַל דָּל / שָׁפָה, וְאֵל יַחֲדַל / מִפִּי כְלִי-
שִׁיר – קוֹל, אֲשֶׁר יִגְדַּל עִתִּים, וְעַת יִדַּל – לֹא מִחֲלִי!

The rhyme pattern is seen in the following table (capital letters represent the girdle rhymes):

PPR	abc	def	ghi	jkl	mno
PPR	abc	def	ghi	JKL	mno
	abc	def	ghi	JKL	mno
	PPR	PPR	PPR	PPR	PPR
	PPR	PPR	PPR	PPR	PPR

The principles of the girdle poem were widely used in Hebrew religious poetry, especially by the great poets *Judah Halevi and Abraham *Ibn Ezra.

Other Metrical Principles Used in Strophic Poems

In the genres of religious poetry the metrical principles varied: (1) the quantitative principle, using regular or irregular patterns of pegs and cords; (2) patterns using free numbers of cords where no pegs appeared; (3) syllabic meter where the opposition P/C was disregarded (i.e., the short syllables *šewa* and *ḥataf* appeared irregularly, but were not counted); (4) a free verse in the vein of older Hebrew liturgy, though usually tending toward a syllabic semi-regularity.

Rhymed Prose

The *maqāma* is a genre of rhymed prose, usually written as a chain of stories in the Oriental manner, and interwoven with anecdotes, fables, and metrical poems. Many books in this genre were written during the Middle Ages or translated and adapted from Arabic (notably by Judah b. Solomon *Al-Ḥarizi and *Immanuel of Rome). Usually the prose text of the *maqāma* rhymes throughout, though it has no meter. The number of members of each rhyme is not fixed; the distance between the rhyming members constantly changes and the sound patterns of such rhymes also vary, from a mere mini-

mum to near-homonyms. On the other hand, the poems, which are frequently introduced into this rhymed prose, are clearly marked by their strict adherence to classical meters and rhyming.

A typical case of a different kind of rhymed prose is the religious philosophical poem “*Keter Malkhut*” by Ibn *Gabirol. Though rhyme and rhythm play an important role in this work, their use is neither permanent nor regular; it may be considered a kind of richly adorned free verse, changing its rhythmical tone from a densely rhymed sound-orchestration to mere prose employing parallelism.

Rhyme in Medieval Poetry

TERMINAL RHYME. Rhyme in Hebrew poetry in Spain, and throughout the Diaspora in the Middle Ages, was terminal. It disregarded stress or morphology. The rhymeme included all sounds from the consonant preceding the last vowel to the end of the line:

DO	נודו	- להגידו	- הודו
DOT	תודות	- תידות	- תמודות
DOD	ונודו	- כידוד	- מדוד

The norm is N=CV (C). The number of sounds (2 or 3) depends on the language: whether the final syllable is open or closed. The principle was obviously derived from the rhyme of the Palestinian *piyyut*, after it dropped the requirement of including two root consonants in the rhymeme.

In order to make rhyming easier, the poets made wide use of rhymemes with open syllables or with suffixes (as in the first two of the above examples), thus having to change only one root consonant. This tendency was motivated by other principles of medieval poetics. Since there was no requirement for individuality in imagery or theme, the poets could widely use the Hebrew plural suffixes throughout their long poems. The same holds for possessive particles, such as *קי* (yours, when addressed to God) *אייך* (to Zion), etc.

The obligatory requirement that a consonant precede the final vowel, similar to the French *consonne d'appui*, was peculiar to medieval Hebrew poetry and was not required in other languages. It was, as it were, a compensation for the missing stress principle required in modern Hebrew poetry. A typical example is found in the following table:

	Medieval Hebrew		Modern Hebrew	
	סורג	מדלג	סורג - מדלג	ÉG
REG	LEG			
	דרג	שגלג	שגלג - פלג	ÉLEG

In modern Hebrew ÉG is a perfectly sufficient rhymeme, in medieval poetry an additional preceding consonant had to be included in the rhyme. On the other hand, in penultimately stressed (feminine) rhymes in modern poetry the inclusion of one syllable is not enough. The principles changed, but the overall proportion between the vocabulary of the language and the rhyming patterns remained similar.

This relationship between modern and medieval Hebrew rhyme may be compared to the difference between English and French rhyme. Whereas in French *rime riche* (using *consonne d'appui*) was highly welcome, in English it was often excluded from rhyme. The situation is similar: French rhymemes are based practically on the last syllable, the words are longer, and an addition to the minimal rhymeme is welcome in order to avoid trite rhyming. Only in Hebrew, however, was the use of the *consonne d'appui* obligatory; hence it may be called the Hebrew terminal rhyme. Its peculiar impact was felt especially against the background of Italian, German, Yiddish, or Russian rhyme, where such enrichments were discouraged.

THE RULE OF MAXIMUM. If the final syllable was based on a suffix, the poets often strove to enrich the rhymeme, adding to it at least some part of the root. Though this was not a necessary rule (there appeared rhymemes of pure suffixes too), it was a strong tendency.

But rich rhyming was limited by unwritten rules:

(1) if the normally required final syllable (N) had two root consonants, no sound could be added to N; rhymemes such as *כל*, *דוד*, *מיד*, *קיד* are both minimal and maximal;

(2) if the final syllable (N) included one root consonant, a preceding vowel could be added; thus, there are rhymemes, such as: *רים*, *ליים*, *כי*, *לי*; but also *רים*, *לי*, etc.;

(3) if the final syllable (N) included no root consonant, one root consonant could also be added; thus, besides rhymemes such as *ני*, *נו*, *הם* there are: *נינו*, *הם* and *נינו*, *ליהם*, *ריך*.

“FEMININE” RHYME. Though stress was disregarded, in meter as well as in rhyme, a secondary tradition developed a “feminine” rhyme, which is based on penultimately stressed endings (which are a small minority in the language, but are represented in several suffixes and in word endings with *ח*, *ע* (*וח*, *ה*, *וע*, *ע*)).

Feminine rhyme became obligatory on one kind of meter composed of unequal hemistichs in which the final foot had a cord instead of a peg appearing in the first hemistich, e.g., the *ha-shalem* (b): CCP CCP CCP / CCP CCP CCC. The end presents a change in the regularity of the meter – where a P was expected a C appeared instead. As a compensation for this frustrated expectation, the poet used in this case feminine rhyme.

Feminine rhyme appeared occasionally in other meters too. But with the meter *ha-shalem* (b) it became prominent in Romance-speaking countries, especially in Italy, where feminine rhymes were the dominant rhyming form.

Elsewhere, i.e., in the majority of Hebrew medieval poems, stress was disregarded, words ultimately and penultimately stressed rhymed freely with each other.

The Dispersion of the Hebrew Terminal Rhyme

The Hebrew terminal rhyme originated in the Palestinian liturgy as an alleviated form of its “difficult” rhyme. It may be

found both in Erez Isael after Kallir and in ninth-century Byzantine in Southern Italy. It developed again, as a simplification of the “Kallirian” rhyme in 10th-century Babylonia (Saadia Gaon) and in 11th-century Germany. It was strengthened by the comparison with the Arabic rhyming norm (basically requiring a consonant and the vowel following it) and later with European terminal rhyme which knew no discontinuous rhymeme.

This norm persisted in Hebrew throughout the world until the end of the 18th century, except for Italy, where stress was accepted in rhyme since the 17th century (but in Italy, too, no violation of the Hebrew norm could be found). The norm also remained obligatory throughout the Ashkenazi domain (Germany, Poland), though Hebrew had become a penultimately stressed language there. The penultimate stress caused a neutralization of all final vowels. Nevertheless rhyme remained exclusively in the final syllable. Thus, Meir b. Samuel of Sczbrzeszyn in his historical chronicle rhymes in 8-line stanzas words such as: $\text{דָּוִד} - \text{דָּוִד} - \text{דָּוִד}$, apparently pronounced: *pokəd-nifkəd-oykəd*. Though the original *i, o, ey* (or *i, a, e*) were blurred in an unstressed position, rhyme remained terminal: a repetition of final sounds. This Hebrew conservatism is even more astounding in bilingual poems, such as the *Megillat Vinz* (1616), with regularly alternating Hebrew and Yiddish stanzas. In the Yiddish stanzas all rhymes are stress-bound (feminine and masculine), according to the standard European norm; even Hebrew words follow this rule. But in the Hebrew stanzas the same Hebrew words disregard stress: terminal rhyme is preserved.

Only in some cases under the influence of foreign poetry did Hebrew rhyme relinquish the requirement of the *consonne d'appui* (in closed syllables only), rhyming N=VC. Such was the case in some of the girdle poems (patterned on rhymes in a foreign language), e.g., Judah Halevi rhymes: $\text{מִלְכָּם} - \text{מִלְכָּם} - \text{מִלְכָּם}$, (AH). The same holds for the bilingual Hebrew-Arabic strophic poems of the Yemenite classical poet Shalem *Shabazi and for the strophic songs the 16th-century kabbalist poet of Safed, Israel b. Moses *Najara, who was apparently influenced by Turkish songs.

HEBREW POETRY IN ITALY

The Jewish community in Italy was probably the oldest in Europe; though small in number, it was an important center throughout the Middle Ages. Located in a central position, between Israel, Yemen, and Babylonia in the East and Spain in the West, between North Africa in the South and Germany and France in the North, Italy was on the crossroads of the major cultural trends in Jewish history. Hebrew poetry in Italy, the first examples of which are from the ninth century, continued to flourish uninterrupted until the 20th century. The changes of poetic systems in Italy may be representative of the shifts in Hebrew prosody throughout the centuries. The major formal periods in Italy will be briefly listed below:

(1) The poetry of Byzantine Southern Italy in the ninth century consisted of strophic *piyyutim*, from 2 to 10 lines in

a stanza, each stanza having one separate rhyme. The rhymes were simple (terminal norm). Usually an acrostic was required and sometimes a permanent refrain was used to close all stanzas of a poem. Contrary to the “Kallirian” *piyyut*, the early Italian *piyyut* required a compulsory meter, based on a constant number of words in a line.

Though strophic poems were known in Latin and in Greek-Byzantine poetry of the period, in these languages rhyme was not yet a required, regular, or permanent device. Only in Hebrew did rhyme serve as a criterion for strophic structure and was obligatory.

(2) In the 10th and beginning of the 11th centuries Italy accepted again the “difficult” “Kallirian” rhyme. It was, as it were, a “reversed evolution.” But strict meters were required too. *Solomon b. Judah ha-Bavli and other poets of this period composed in this vein. Their followers who moved to the Rhine area introduced this norm into the Hebrew *piyyut* of Franco-Germany. These circles edited the *mahzor* and apparently included in it only such rhymed strophic poems which were written by Kallir or followed his rhyming norm. A number of *yozerot* and a large number of *seliḥot* were created in this style.

(3) In the 11th and 12th centuries the norms of the ninth century were again revived: The *piyyut* used strophic poems with changing but separate rhymes, written in exact meters, based on the number of words. The simplification of rhyme was apparently due to a variety of factors, the foremost being (a) The influence of the Hebrew rhyme of Spain and Provence (though neither the pattern of one running rhyme nor the quantitative meter was accepted). The Spanish scholar and poet Abraham *Ibn Ezra propagated the simpler rhyme in Rome in the 11th century. (b) The decline of the difficult enigmatic style of Ha-Bavli, which occurred in Franco-Germany too. Without this style “Kallirian” rhyming was almost impossible.

In the 13th century Italian poetry in the vernacular emerged and flourished. Hebrew poets living in Rome could not have been unaware of the differences in the respective prosodic systems: (a) Hebrew strophic poems used changing but separate rhymes (*aaaa bbbb cccc*, etc.), whereas Italian rhymes were usually alternating (*abba; aba bcb*, etc.); (b) Hebrew meter was based on the number of words, Italian – on the number of syllables; (c) Hebrew rhyme was terminal but required a *consonne d'appui*: N=CV(C), whereas Italian rhyme was stressed, usually feminine: N=VCV. Thus, Hebrew rhyme was based on one syllable, Italian on two. Hebrew leaned primarily on consonants, Italian on vowels. In these three respects Hebrew poetry in Italy adopted the Italian norms, but it was done over a period of centuries, primarily through the transformation of forms existent in some Hebrew tradition.

(4) Alternating rhyme was introduced into Roman Hebrew poetry in the 13th century. The major poet who initiated this change was Benjamin b. Abraham *Anav. But Benjamin Anav did not directly imitate Italian forms; he switched to alternating rhymes, meeting thus an Italian aesthetic norm by

adopting the patterns of the girdle poem which had been developed in Hebrew poetry in Spain and Provence. However the poets of this generation did not transfer the system of quantitative meters from Spain; only a semi-regular syllabic meter, as in many a strophic *piyyut* of Judah Halevi or Isaac *Ibn Ghayyat, was employed. Many such poems, both of Italian and Spanish origin, were by that time absorbed into the Italian *maḥzor*.

(5) *Immanuel of Rome (end of 13th–beginning of the 14th century) was the major Hebrew poet who shifted to the use of both quantitative syllabic meters as well as of Italian strophic forms, primarily the sonnet. In both techniques he had predecessors, but the major achievement was his. With him Hebrew poetry in Italy switched from liturgy to secular poetry. It seems that in order to find an equivalent for Italian poetic forms, Immanuel had to seek a language for secular poetry in Hebrew; this he found in the Spanish tradition, which he accepted with its rhymed prose (*maqāma*), quantitative meters, Oriental storytelling, and imagery. Suddenly Hebrew poetry discovered exact syllabic meters, required by the Italian aesthetic taste, in its own language and tradition. Though the distinction between long and short syllables, a vestige of Arabic influence, was apparently disregarded in the Italian Hebrew pronunciation, its patterns persisted until the 20th century: Isaac Ḥayyim (Vittorio) *Castiglioni wrote his poem on the death of Theodor Herzl in 1904 in a quantitative meter.

Moreover, Hebrew poets in Italy found in the Spanish tradition meters which fitted the lengths of line favored in Italian poetry. The major meter, especially in the sonnets, was the endecasyllabic line for which a Hebrew poet was able to use either *ha-merubbeh* or *ha-shalem* (b), counting both “long” and “short” as whole syllables. *Ha-shalem* (b): / – – – – / – – – – / – – – – / – – – – / became the major meter of Hebrew poetry in Italy, due to its compulsory feminine rhyme which fitted both Hebrew-Spanish and Italian taste. Immanuel accepted it for his sonnets, breaking each distich into two lines, with a rhyme for each; lines with an even number of syllables had a masculine rhyme, and those with uneven numbers – a feminine rhyme.

But Immanuel introduced stressed rhyme and alternating rhyming only for his Italian strophic forms. In other parts of his book he completely accepted the Spanish Hebrew tradition, employed widely the running rhyme, rhymed prose, disregarded stress, etc. His was a combination of two systems with a common denominator: the quantitative metrical system.

(6) After Immanuel of Rome, Hebrew poetry adopted a variety of other Italian strophic forms (besides the sonnet which became the most popular), the ottava rima, Dante’s *terza rima*, the *sestina*, the *canzonetta*, and some others. Nevertheless, strophic forms of the *piyyut* on the one hand and the Spanish running rhyme on the other lived on for centuries:

(7) Despite the domination of the quantitative meter, a new syllabic meter evolved. Its first major poet was Moses b.

Isaac *Rieti (beginning of the 15th century) called “Il Dante Ebreo” for his book *Mikdash Me’at* written in the form of Dante’s *terza rima*. Rieti understood that Hebrew had to rhyme primarily in the ultimately stressed form (masculine rhymes) and accordingly reduced his line to 10 syllables.

Whereas previous Italian attempts at syllabic meters (13th century) disregarded short syllables altogether, according to their Spanish prototypes, Rieti counted short syllables as completely equivalent to long ones. Hence he abolished the limitation of short syllables to particular spots in the metrical scheme. But Rieti’s innovation, i.e., syllabic meters without quantitative distinctions, did not become prominent in Italian Hebrew verse until the 18th century.

(8) For several centuries Hebrew poets proceeded to retain in their rhyme forms the distinction between Italian strophic patterns and the Spanish or the liturgical tradition. On the whole, rhyme was terminal, stressed rhyme being reserved for the sonnet and other Italian patterns. Thus, *Joseph ha-Zarefati (12th century) writes his octaves in masculine rhymes but still follows the Hebrew rule of a required *consonne d’appui* (thus, פֶּר and פֵּר are for him two different rhymemes). Only in the 17th century was the change completed; stressed rhyme according to the European norm became compulsory. Despite the nature of the Hebrew language, which favored masculine rhymes, under Italian impact feminine rhyme became dominant. Since the 18th century feminine rhyme was almost exclusive. It was employed primarily in the *ha-shalem* meter, or in derivations of it: either dropping one or both short syllables, or shortening the line, e.g., in Moses Ḥayyim *Luz-zatto’s *La-Yesharim Tehillah* there are two kinds of verse line: (a) the 11-syllabic: – – – – / – – – – / – – – –, and (b) the 7-syllabic: – – – – / – – – – each retaining merely one short syllable. Some of his followers in Italy and in Amsterdam dropped this last vestige of quantitative metrics, thus paving the way for the forms of the new era, the Haskalah.

(9) Another Italian development of great interest should be noted: the earliest invention of accentual iambs in Europe was accomplished in Yiddish rhymed romances by the Venetian poet Elijah Baḥur Levita, about 1508/09. Northern Italy was at that time a center of Yiddish literature. Elijah Levita, a grammarian, a versatile scholar, and a poet was fluent in several languages. He wrote Hebrew verse both in the Sephardi pronunciation, using quantitative meters, and in the Ashkenazi vein, using free accentual verse. When adapting long Italian strophic romances, such as *Buovo d’Antona* (the *Bove Bukh*) and *Paris un Viene*, and creating stanzas in pure ottava rima in a quite modern Yiddish, he merged the Italian syllabic principle with the Germanic accentual principle (which ruled Yiddish poetry until his time) and developed his iambic tetrameter. The process of this invention is of major interest to comparative prosody, but with the decay of the Italian center, it did not last in Yiddish poetry. Accentual-syllabic meters reappeared in Yiddish and in Hebrew under Russian influence only as late as around 1890 (with the one exception discussed below).

(10) In the later centuries of Italian Hebrew poetry iambic pentameters began to appear.

The combination of principles from three metric systems in one verse line – the Hebrew quantitative, the Italian syllabic, and the biblical accentual – did not hamper but encouraged the creation of a fourth system in the same verse: the accentual-syllabic meter, in its iambic form. How did it come about? The major quantitative meter used in Italy was: – – ˘ – / – – ˘ – / – – –. Since short syllables cannot be stressed in Hebrew, the third and seventh syllables were unstressed. Italian poetry opposed a stress on the fifth syllable. On the other hand, the 10th syllable was stressed by the rule of rhyme. Since the biblical rule precluded two adjacent syllables from being stressed (if it happens, the first stress would move backward) and the ninth and 11th were also excluded from stress, the following pattern – with the third, fifth, seventh, ninth, and 11th positions unstressed – emerged: – – ˘ – – – ˘ – – – – –. Thus, only even syllables were allowed to receive a stress and a perfect iambic pentameter evolved. (The first foot only was free for variation, but this is the case in English or German iambs too.) Only when the Italian requirement for not stressing the fifth syllable was disregarded did these iambs not materialize.

Hebrew stress was apparently strong and this tendency was felt and spread to other meters too (primarily meters without fixed short syllables). Despite this obvious iambic tendency, it was never formulated as such, being rather an automatic, unintentional result of rules of quite a different nature. The 19th-century Haskalah poets were strongly influenced by late Italian Hebrew poetry, but having a different pronunciation (Ashkenazi as opposed to the Italian “Sephardi”), they could not feel this underlying iambic meter. Though they dropped entirely all distinctions of a quantitative nature, they interpreted this verse as purely syllabic. Only poets in Erez Israel of the 1930–40s, such as J. *Fichmann writing again in a “Sephardi” dialect, rediscovered the iambs of their Italian predecessors.

HASKALAH

The modern age of Hebrew literature began with the revival of Hebrew poetry in Germany in the second half of the 18th century. It is regarded as a “secular” period (though many of the poets were religious and some of their themes were of a religious nature) since there was a conscious creation of poetry and prose written in the genres of contemporary European literature which were conspicuously different from the genres of liturgy. Haskalah poetry was a direct descendant of Hebrew poetry in Italy and Holland. However, since this poetry emerged with a new social and cultural trend, the Enlightenment movement, and flourished closer to the center of the Jewish population in Eastern Europe, it expressed a re-orientation of Hebrew literature and may rightly be considered a new period.

Haskalah literature was written and published by small groups of writers and their followers in Germany, Austria, Hungary, and Russia (including Poland) throughout the 19th

century. Though their ideas were, to some extent, typical of the European Enlightenment of the 18th century, Haskalah poetry cannot be considered of a monolithic nature, but rather as an eclectic body of verse. This new poetry was indeed, from its beginnings, influenced primarily by 18th-century German literature, especially in the typical genres of epic and fable. It embraced, however, also genres developed previously in Hebrew, in Italy, such as allegorical drama, and absorbed themes and motifs from 19th-century European lyrical and social poetry.

It seems that Hebrew literature lagged considerably behind the evolution of European poetry, going into the stages of the development of neighboring literatures only after those had been established as “classical.” Thus, one of the major Hebrew writers of the Haskalah in Russia, Judah Leib *Gordon, who knew Russian well and lived for many years in the capital of Russia, wrote poetry in the vein of the Haskalah in the 1860s and 1870s, i.e., in the time of Tolstoy and Dostoevski and after Pushkin, Lermontov, and Tyutchev. But though Haskalah verse seemed to be a fossilized remnant of the 18th century, untouched by the poetics of Russian classical poetry, Gordon also absorbed some influences from the social and “civic” poetry of his Russian contemporary Nekrasov. On the other hand, he continued to use forms which antedated the Haskalah.

The meter of Hebrew poetry throughout the Haskalah was syllabic. Thus, the poets continued the basic form of Hebrew versification in Italy in spite of the fact that their prototypes in German and Russian were written in accentual-syllabic meters. Even translations from German poetry were transposed in Hebrew into syllabic meters, regardless of the German prototype, e.g., Schiller's *Glocke* (written in accentual-syllabic meters) was translated into Hebrew in syllabic meters, without stress regularity, and into Yiddish in accentual meters, without syllable counting. Stress, strangely enough, played no role in the Hebrew meters of this period, despite the fact that it was prominent in the speech of these writers and even dominant in the meter of folk song in their spoken language, Yiddish, as well as in the small amount of Yiddish poetry which they wrote, and despite the fact that it ruled the versification of German and Russian poetry which they strove to imitate. There was no traditional Hebrew poetic authority to back up this choice of syllabic versification – the venerated poetry of the Bible was accentual and relatively free in its verse forms. The only explanation could be the sense of continuity and the typical conservatism of Hebrew verse.

A few attempts were made in the second half of the 19th century to introduce accentual-syllabic meters (notably by A.B. *Gottlober). But only S. *Frug, well-known as a Russian poet, transferred the Russian system of versification into Yiddish when he started writing in this language. H.N. *Bialik in the 1890s, strongly influenced by Frug, was among the first to use predominantly accentual-syllabic versification in his Hebrew poetry.

The new meter, influenced by the Russian prototype, swept Hebrew and Yiddish poetry in the 1890s, paradoxically enough at the same time when the symbolist movement,

which tried to break away from meter altogether, emerged in Russia.

The Syllabic System of Versification in Hebrew

Haskalah poetry used the pure syllabic system, which had developed in Hebrew literature in Italy, after the last vestiges of quantitative versification have been dropped. Every poem had its own meter, i.e., a permanent number of syllables in each line, with a stress on the penultimate syllable. Otherwise, stress was not regulated. A permanent caesura was rarely implemented.

Apart from marginal uses of quantitative meters, inherited from medieval Spanish Hebrew poetry, the poetry of the Haskalah did not apply the distinction between short and long syllables. The traditionally short syllables, *šewa* and *ḥataf*, confused the poets and were considered sometimes as syllables and sometimes as non-syllables. Naphtali Hirz *Wessely, who introduced this system, used the *ḥataf* at the beginning of words as a syllable and in the middle of words as a non-syllable; the mobile *šewa* as a syllable in the middle of a word and as a non-syllable at the beginning. It seems that Wessely tried to avoid the mobile *šewa* at the beginning of words in order to eschew the problem. With time, however, it became impossible to refrain from using a whole group of words (beginning with the mobile *šewa*) in Hebrew poetry.

Shirei Tiferet, Wessely's epic, was the classical prototype of all the poetry of the Haskalah. The prologues to each of the 18 parts of his epic were written in 11-syllabic rhymed stanzas, but the epic itself was composed in 13-syllabic unrhymed verse. Wessely used feminine endings exclusively both in his rhymed and unrhymed poetry. Unrhymed feminine endings in his poem conformed with the Hebrew tradition inherited from Italy (where the penultimate syllable was stressed) and with Wessely's German prototype, Friedrich Gottlieb Klopstock's *Der Messias*. Wessely, however, in accordance with his Italian prototypes, resorted only to words which were penultimately stressed in the Sephardi pronunciation; these constitute a small and very specific part of the Hebrew vocabulary.

The firm grip of tradition led to the exclusive use of penultimately stressed (*mille'el*) endings in the Sephardi pronunciation in much of Haskalah poetry; it was an absolute rule in the higher genres of poetry, especially poetic drama and epic verse, and in the "higher" circles of the Haskalah, such as the centers of Germany and Vilna, though not in Galicia or Hungary. The paradox of this use of *mille'el* in the Sephardi pronunciation is underscored by the fact that in other respects Hebrew was obviously pronounced according to the Ashkenazi dialect, even in specific Ashkenazi subdialects. Thus in the poetry of Lithuania (a major center of Haskalah literature in the second half of the 19th century), the rhymes often betray the poet's pronunciation: *חַפֵּשׁ* – *נֶפֶשׁ* (both *ḥolam* and *segol* being pronounced as *ei*), *רַעַשׁ* – *כַּעַס* (*š* and *ṣ* being equal to *s*). Though Lithuanian Ashkenazi pronunciation is evident in their poetry and the penultimate stress was the general rule of

the Hebrew words in all varieties of the Ashkenazi dialect, the Haskalah poets did not dare use Hebrew in their own pronunciation as a natural resource for the compulsory use of feminine rhymes. Consequently most of the vocabulary of their language was excluded from final verse positions.

When the young poet Mikhal (Micah Joseph *Lebensohn) was negligent in this respect and rhymed words which were perfectly equivalent in his own dialect, but appeared as a mixture of *millera* and *mille'el* (masculine and feminine) to a distant Sephardi ear, he was scolded by the Italian scholar S.D. *Luzzatto. Both Mikhal and J.L. *Gordon, in his later period, broke the rule and on and off used words which are feminine only according to the Ashkenazi pronunciation. But even then the majority of rhymes were still based on words which are considered *mille'el* in the Sephardi pronunciation: What used to be a compulsory rule became a habit, or a matter of merit in poetic style.

This phenomenon had a strong effect on the style of Haskalah poetry. Words of the *mille'el* form exist only in several specific groups: (1) a small group of nouns penultimately stressed (*אֶרֶץ* – *פָּרֶץ* – *קֶרֶץ*) which recurred endlessly in the rhymes of the Haskalah and became trite symptoms of this poetry; (2) a variety of archaic forms (*בְּמוֹ, לְמוֹ, מְנִהוֹ*); (3) several forms of the verb (*אִמְרָתִי, אִמְרֵי, אִמְרָתִי*), notably in the biblical end-stop pronunciation (*יְהִירוּ, יְבַעְרוּ*); (4) a group of feminine endings (*אִמְרָתִי, תְּבִינִי*). Since other sources were limited, the penultimately stressed forms of the verb became prominent in the rhymes of Haskalah poetry. As a further result, the rules of rhyme caused sentence inversion, since the verb was closing a verse line, and enjambement was excluded; all complements of the verb, similes, etc., preceded the verb rather than followed it (as the usual word-order would require). The following is a typical stanza of this kind:

וּבִין כֹּה נִכַּח הַדְּמָמָה הַפְּרִיעוֹ
תּוֹפְשֵׁי הַמַּשׁוּט בְּפִימִם יִתְחַדְּרוּ;
גַּם קוֹל עַל הַמַּיִם עִם רֵב הַשְּׁמִיעוֹ,
גַּם דְּוֹד גַּם רַעוּ מִשְׁנַת גְּעוֹרוֹ.

Meantime the silence they interrupted,
The crew who in the water rowed;
A voice on the water a multitude emitted,
And David and his friend from their sleep awoke

Thus, in spite of the accepted Ashkenazi pronunciation in the later poetry of J.L. Gordon, most of the words in his poetry were excluded from rhyme position: a group of words constituting 8% of the normal language continuum was used in 90% of his rhymes. With the abolition of the restriction to the Sephardi stress, no revolutionary change occurred in the rhymes of the Haskalah since the typical rhymes became part of poetic style as such. Only a fundamental change in poetic style and in the very conception of poetic language, introduced by H.N. Bialik and his generation, was to alter radically the resources of Hebrew rhyme, making available for rhyme practically the whole range of the Hebrew language. During the Haskalah, this freedom was enjoyed only sometimes in

minor genres and by poets on the geographical “periphery” (poets from Galicia or Hungary).

Though the tradition of epic poetry in the Haskalah began with Wessely’s blank verse, in time rhyme became dominant in this domain too, especially in the Lithuanian center. The poets of the Haskalah used a variety of strophic forms very often of more than 4 lines, notably the stanza developed by Wessely consisting of 6 lines and rhyming *aabccb*, the ottava rima inherited from Italy, and other strophic patterns, especially of 6 or 8 lines. The 4-line stanza was also widespread, primarily in the form of *abab*, but it was not as predominant as in the poetry of later generations.

The strophic forms in all their variety usually used alternating rhymes, the members of one rhyme alternating with the members of another rhyme. Rarely did a Haskalah poet systematically use one rhyme more than twice without alternating. In this respect Hebrew poetry conformed to the prevalent European sense of rhyme variation. On the other hand, there was no alternation whatsoever or rhymes insofar as their rhythmical properties. Though Russian poetry alternated, as a rule, not only the rhymes, but also their rhythmic patterns, i.e., combining throughout a poem feminine and masculine, or masculine and dactylic rhymes, Hebrew poetry of this period did not accept this norm. Feminine rhymes were the absolute rule, except for sporadic, non-systematic uses of masculine-rhyming words.

In Italy such a restriction of the language could be understood as influenced by a taste formed through the reading of Italian poetry in which predominantly feminine rhymes are used; this is a concomitant of the structure of the Italian language. In Russia, however, the restriction made no sense and can only be explained through the compulsion exerted by the internal Hebrew tradition. Paradoxically enough, this requirement continued to obtain even at a time when feminine rhymes were drawn merely from the words regarded as feminine according to the Sephardi pronunciation, i.e., when the bulk of the language could have been used for the purpose of masculine rhymes. It was only the generation of Bialik that, again paradoxically enough, attempted to alternate between feminine and masculine rhymes, in spite of the scarcity of the latter in the Ashkenazi dialect, which became in this generation the accepted language of Hebrew verse.

Nevertheless, though stress was disregarded by the syllabic system, it may subconsciously have played a role in forming the rhythmic nature of Hebrew verse in the Haskalah period. The most widespread meters were 13 and 11 syllables. Such a length of lines conformed very well with the structure of 4 major accents, or 4 words, grouped mostly in 2 pairs. This condition may have played a role in the acceptance of Haskalah poetry, for there was, to the ear, as it were, an underlying quasi-biblical meter, felt even more because of the biblical language used in this poetry. A line of 11 or 13 syllables, using 4 major stresses, in a language in which the average number of syllables to each stress is about 3, can easily be brought to approximate an amphibrachic tetrameter, e.g., the first stanza of

A.D. *Lebensohn’s poem לְבַקֵּר רִנָּה in the Ashkenazi pronunciation can be read (unstressed syllables are unmarked):

קוֹל תְּשׁמֹעַ נִפְשִׁי // הָמוֹן צְבָאוֹת חִיל
 רִנָּת כּוֹכָבִים // וּבְרָאשׁוֹת יָרֵחַ;
 עַל מִשְׁמֵרֹת אֶרֶץ // עֲמֻדוֹ בְּלִיל;
 עֲתָה כִּי בָא שְׁחָר // לְבָם שְׁמֵחַ;
 גַּם נִגַּע זֶה // עַל עֵינַי וַיִּעֲוֹרֵי,
 וְנִמְלֵא כָל הָאֶרֶץ // אֶרְאָה כִּי אֲוֹרֵי

This is a typical Haskalah stanza (*aba bcc*), rhyming Sephardi *mille’eil*. But an Ashkenazi reading reveals the underlying dactylic-amphibrachic meter, sidestepped only in the first hemistichs of lines 3, 4, and in the second hemistich of line 5.

Toward the end of this period the unregulated stresses within the line became more and more often “ordered,” many lines approximating 4 amphibrachs (such were, for example, the poems of S.L. Gordon in the early 1890s).

Thus, for the second time in its history, Hebrew syllabic verse developed again toward an accentual-syllabic meter, dominated however by the amphibrach rather than the iamb, prevalent in Italy, and it followed the Ashkenazi rather than the Sephardi pronunciation.

Such is the story of the transformations of a major Hebrew metrical form: The quantitative meter of Spanish Hebrew poetry, originating in Arabic versification, was reinterpreted in Italy as syllabic, under the influence of Italian versification. Hebrew syllabic poetry stretched over a period of centuries (from the 12th to the 19th), adopting Italian strophic forms without relinquishing the quantitative patterns of the Arabic heritage, but shifting time and again into accentual-syllabic iambs. The Haskalah took up the same syllabic verse forms, continued to use them in spite of a literary environment which accepted exclusively accentual-syllabic meters and imbued them with an underlying semi-biblical (that is accentual) rhythm. It finally brought Hebrew poetry again to the verge of accentual-syllabic meters.

The development of Hebrew poetry should be considered as a chain in transformation rather than a series of totally opposed and separate periods. In regard to sentence structure and syntactical rhythm, there was no fundamental change: Similar groups of words could constitute a verse line, since a line of 11 syllables was the most frequent length in all these periods.

THE MODERN PERIOD

The Historical Setting

Though echoes of European literature and of European poetics of the modern age had reverberated in Hebrew poetry since the days of Dante in Italy, and throughout the literature of the Haskalah, Hebrew poetry had not accepted fully, until the very end of the 19th century, the consequences of the lyrical revolution accomplished by *Goethe, Pushkin, or the English romantics.

From the limited point of view of this survey, one can observe the striking fact that Hebrew meter was based, until the end of the 19th century, on syllable-counting rather than on the subtle and complex instrument developed in other languages with “free” stress in the form of accentual-syllabic (or tonic-syllabic) versification. English poetry since the 16th century, German poetry since Opitz (17th century), Russian poetry since the middle of the 18th century – the whole modern period of these poetics – cannot be imagined without the metrical system. It is an instrument whose exact structures made possible the clear-cut distinction of a large variety of forms and also provided the background for clearly pronounced effects of particular rhythmical variations. These two assets were of primary importance for a poetry characterized by the individuality of the writer, the individuality of the poem, the reliance on a living language, and the immediate appeal in concrete sensuous images to the imagination of the reader. Even free verse was rich and effective when playing on this background. Such a poetics was accepted and absorbed by the Hebrew poets who, through an externist’s secondary education, came to know the classical Russian heritage of Pushkin, Lermontov, and their followers. The first poet to write consistently in accentual-syllabic meters was H.N. Bialik whose first poem “*El ha-Zippor*” (“To the Bird”) was published in 1894, in the very year when Russian symbolism emerged, i.e., a movement which strove to break away from the regularities of this very same metrical system.

In Odessa before World War I where Hebrew poets wrote some of the best of Hebrew poetry in the poetic mode of Russian literature of the 1830s, young Jewish poets, writing in Russian, launched modernistic journals such as *The Flying Omnibus*. The beginning and end of the major cycle of modern Russian poetry seemed to meet at one time and in one place. Obviously, Hebrew poetry could not for long be excluded from the general developments, the more so because Yiddish poetry was sometimes written by the same poets in a language more alive and actual and therefore absorbed the waves of modernism more rapidly. Thus, in one generation Hebrew poetry not only caught up with the European classical heritage as conceived by the early 19th century, but at the same time landed, in one grand leap, into the European 20th century. The struggle and interaction between a variety of poetic trends – evolution turned into contemporaneity – make it one of the most panoramic and interesting periods of Hebrew poetry. But, as regards this survey, it is a handicap: It is difficult to keep apart the “generations” of poetry in which unequivocal norms persist. Free verse was developed almost contemporaneously with exact meters or Greek verse forms. Modernistic rhymes were intermingled with exact “classical” rhyming and with blank verse. Hence it is advisable to discuss forms and formal systems – “regular” or “modernistic” – rather than periods of poetry.

A second objective difficulty in discussing the rhythms of Hebrew poetry in the 20th century is due to the revolution in the pronunciation of the Hebrew language which under-

mined its whole prosodic foundation. The rhythm and sound orchestration, so essential to the concept of poetry of the classics of the last generation – H.N. Bialik, S. *Tchernichowsky, J. *Fichmann, J. *Steinberg, Z. *Shneour – is lost to the ears of Israeli readers. The poetry of the Hebrew revival in Russia at the end of the 19th century, which is concrete and sensuous and employed the Russian sensibility for subtleties of rhythm and sound, unfolded the sound values of the language in the Ashkenazi dialects. But almost at the same time there was in Israel a revival of Hebrew as a spoken language, which used the “Sephardi” or “Israeli” pronunciation. The clash between the two dialects was sometimes fierce. The changing laws of language will be discussed below. Here one example may suffice. The two words עִירָתָהּ were a perfect rhyme in the Lithuanian Ashkenazi Hebrew of U.N. *Gnessin E YS-rs-E YS (both *holam* and *zere* being pronounced *ey*; ת sounding like *s*; and *z = s* in rhyme, according to the Russian convention of neutralizing voiced consonants in an end position); but the same rhyming pair lost all sound identities to the ears of an Israeli who reads it: *oz-retét*. The Sephardi pronunciation was also employed in Hebrew meters in this period, as early as 1900 (not to count some experiments during the Haskalah period as well as the unintentional iambs of Hebrew poetry in Italy). The Ashkenazi pronunciation was still dominant in the 1920s and was alive with some poets until the 1960s. This coexistence again complicates our discussion.

The shift of dialects was a revolution in the sound system of a language, which did not occur elsewhere in such an abrupt manner. In this process most of the poetry of the period of Revival was lost from the point of view of its musicality and rhythm. But the poets who moved from one Hebrew tongue to quite a different one, despite the pangs of readjustment, remained the same, and so did the poetic ideals and norms. These had no time to change. It was simply a matter of readjusting to the new sound system, of regaining a *modus vivendi* with the spoken language. Therefore it is possible, despite the crucial shift, to discuss the prosodic norms, using at first illustrations from Hebrew poems in the contemporary Israeli pronunciation.

The Two Dialects of Modern Hebrew

When Hebrew became a spoken language in Erez Israel, it adopted the principles of the “Sephardi” pronunciation in which the location of stress is based on the accentuation marks of the Bible. The majority of words in this Israeli pronunciation have a stress on their final syllable. Only a small group of words are penultimately stressed; these are of two varieties; the so-called *segoliyyim* having two *e* vowels, patterned like *dégel*, and words with the furtive *pataḥ* ending in an originally guttural consonant, like תַּפְּוּיָהּ (*tappúyah*), רֵיחַ (*reiḥ*) לָנוּעַ (*lanuà*). A larger group of penultimately stressed words is provided by several suffixes, such as the feminine forms אֹמֶרֶת (*omeret* – versus the masculine *Omer*), verbs in some perfect forms: אִמְרָתִי, אִמְרָתְךָ, אִמְרָנוּ (*amarti, amarta, amarnu*), or nouns in the plural with some possessive pronouns

(דְּבָרֵיךָ, דְּבָרֵיךָ – *devarekha, devarayikh*). A new group of penultimately stressed words consists of foreign borrowings: *akadémya, gemnázya*, etc. On the other hand, several distinctions in the quality of sounds marked in the biblical vocalization system, are blurred in the Sephardi dialect. Thus, both *pattah* and *qameš* are pronounced *a*; *šere* and *segol* are pronounced *e*; ת and ט are both *t*.

The Ashkenazi pronunciation of Hebrew, developed in Europe since the 14th century, is based primarily on the penultimate stress. With a few exceptions, a penultimate stress is absent only when it is impossible to implement it: (a) in monosyllabic words (a small group in Hebrew); (b) in bisyllabic words, if the first syllable is a short one (*hataf* or *šewa*), e.g., אָנִי, אָנִי; (c) in longer words where the penultimate syllable is a short one, the stress moves to the third-to-last syllable, e.g., הַמְּחֹנְנִים (ha-mehónenim), נְאָרָה (náarah). In (b) and (c) there are exceptions, based on the fact that historically short syllables became normal and may be stressed, like in Hebrew words in Yiddish (e.g., חָלוֹם should be *khalóym*, but it is often pronounced as in Yiddish: *khólem*). On the other hand, there is in Ashkenazi a wider range of vowel qualities: *qameš* is distinguished from *pattah*; *holam* and *šere* are diphthongs. The weak ט is pronounced *s* (rather than the Israeli *t*). Within the Ashkenazi domain there were several dialects, on the whole resembling the dialects of Yiddish. In poetry these sub-dialects are felt not in the meter but in the rhyme.

Ashkenazi Hebrew with its diphthongs and penultimate stress was felt by the poets to be “softer” and more “musical” than the “harsh” Israeli Hebrew which is ultimately stressed and in which *a* makes up 50 percent of its vowels. Until the late 1930s some tried to keep poetry in the traditional Ashkenazi dialect, but finally they had to give in to the spoken language of Israel. Several poets attempted “translating” their poetry into the new dialect. On the whole they succeeded in making a mechanical meter, but in most cases the poem was severely harmed in the process. A variety of interesting transitional forms developed. Thus, U.Z. *Greenberg, though still writing in Ashkenazi Hebrew, let the Israeli workers in his poems speak in their authentic Israeli pronunciation.

Accentual Syllabic Meter in Hebrew

The dominant system of Hebrew prosody since the 1890s was accentual-syllabic, though throughout the period other forms also existed. Accentual-syllabic versification came to Hebrew poetry under the influence and in the forms of the Russian tradition of the 19th century. However, some rhythmical characteristics of these meters are due to the structural properties of the Hebrew language. Accentual-syllabic meters are based on the ordering both of the number of syllables and of the location of stresses in a verse line. But it is rare, especially in Hebrew poetry, that the actual stresses in the language of a line constitute a neatly ordered pattern, copying exactly the metrical scheme. There is a discrepancy between the units of the language and the units of meter: stress and word boundaries on the one hand and metrical accents and feet on the

other. A meter exists in a poem if its actual stresses and word boundaries meet certain rules of correlation with the underlying metrical scheme.

TYPES OF METERS. A meter is a permanent order of accented and unaccented syllables, underlying all lines of a poem (or part of it). The sign (–) represents a metrically accented syllable, the sign (◡) an unaccented one. The elementary recurrent group of syllables is called a “foot.” Thus, in a line of the type: ◡◡–◡◡◡–◡– there are three feet /◡◡–/. A foot is not a rhythmical unit; its boundaries do not mark any stop in reading; it is a mere abstraction of the basic principle underlying the pattern of a line. Each foot has one accented and one or two unaccented syllables.

There are two binary feet: iamb /◡–/
trochee /–◡/
and three ternary feet: anapest /◡◡–/
amphibrach /◡–◡/
dactyl /–◡◡/

A meter of a line is determined by the kind of feet and their number, e.g., an iambic pentameter is a line of five iambs. The number of feet is determined by the number of accents; the last foot may be incomplete and may vary throughout a poem. Thus, in an iambic pentameter there may be either 10 or 11 syllables: ◡–◡–◡–◡–◡– (◡) (depending on the gender of rhyme or on the line ending). Usually in Hebrew poetry there is only one kind of foot in a poem, i.e., one form of alternating accented and unaccented syllables (binary or ternary).

DEFINITION OF METER. A poem has a certain meter, when it can be read according to a metrical pattern without contradicting its language. The general rule of correlation is: If a word receives metrical accents, at least one of them must fall on the stressed syllable. This rule implies that a word (1) may be unaccented; or (2) may have an accent on its stressed syllable; or (3) may have several accents, one of them falling on the stressed syllable, e.g., *Nóshēv, ēřēv āfōr vē-ōř[◡]vim āl t[◡]řanáv*. This is a line of four anapests (by *Alterman) in which the stress (marked) of the first word is disregarded by the meter, the stresses of other words are employed by the meter as regular accents. The following is an example of a Hebrew stanza meter of 4 iambs (by Alterman):

Āz hīvvārōn gādōl hē'īř
Ēt ha-r[◡]hōvōt vē-hā-sh[◡]vākīm
Āmād nātūi āl p[◡]nēi
Nāhshōl šāmāyīm yērūkīm

The first word of the first line is unaccented by the meter, the second word has 2 accents (one of them on the stressed syllable). The second line provides only two stresses in its language.

RHYTHMIC VARIATION. Obviously, an expressive reading of a poem will consider language stress and word boundaries rather than the mechanical pattern of the metrical accents.

Thus, rhythmical variation is created primarily by the fact that not all accents of the meter are realized in the language, the division of actual stresses and word boundaries may vary from line to line, e.g., a trochaic stanza (Alterman):

Dumiyáh la-merhavím shoreket
Bóhak ha-sakkín be-éin ha-ḥatulím
Láylah, kámmah láylah! Ba-shamáyim shéket
Kokhavím be-ḥittulím

It has 5–6–6–4 trochees, but the number of stresses is 3–4–5–2, irregularly dispersed. When read according to its language, every line seems to be rhythmically different (every box represents a word, X denotes a syllable, Y an accented syllable).

X X·Y	X·X·X·Y	X·Y·X		
Y·X	X·X·Y	Y·Y	X·X·X·Y	
Y·X	Y·X	Y·X	X·X·Y·X	Y·X
X·X·Y	X·X·X·Y			

In modern Hebrew there is, on the average, one stress to each three syllables. In binary meters, which constitute the bulk of modern Hebrew metrical verse, rhythmical variation is based primarily on avoiding stresses in accented positions. This tendency usually follows the Russian symmetrical pattern of variation. Thus in a meter of four iambs or trochees, the fourth and the second accents are almost always stressed, the third and the first are quite often unstressed. (This is obviously different from English binary meters where variation is largely based on the opposite possibility: stressing unaccented syllables.) In short, Hebrew iambs and trochees are not based on a regular number of stresses to each line, but on changing deviations from a regular abstract scheme.

Limited Free Verse: The “Ternary Net”

Whereas in binary meters variation is built into the system (a 3:2 relationship between accent and stress), in ternary meters almost all accents coincide with stresses. In the Israeli pronunciation where in most words stress coincides also with word boundary, the effect becomes tedious, especially in the anapestic meters where almost every foot is a word and every accent a stress. Poets did their best to create variation here too, but the solution came in the form of a kind of free verse adapted from Russian modernist poetry (Blok, Akhmatova, Yessenin). In this system, the number of accents in a line remains regular, but the number of syllables is free to a certain extent. Usually an impulse of a ternary meter is created, to be disturbed on and off; instead of two unaccented there are occasionally one or none (and in some poets also three). The abstract pattern looks like a “net”: a ternary scheme with “holes” in it which appear without any regularity, but rarely enough, so as not to destroy the underlying ternary pattern. Beginnings of lines are usually free too, thus abolishing any distinction between anapest, amphibrach, or dactyl, e.g., two stanzas by the poetess Raḥel:

Hen damáh be-dami zorém	UU-UU-OU-
Hen koláh bi rán	UU-OU-
Rahél, ha-ro’áh zón laván	OU-UU-UU-
Rahél – em ha-ém	OU-UU-
Ve-al kén ha-bayit li zar	UU-OU-UU-
Ve-ha-ir zarah	UU-OU-
Ki hayah mitnoféf, sudaráh	UU-UU-UU-
Le-ruḥot ha-mid-bár	UU-UU-

The conversational tone is achieved here by breaking the anapestic flow. But the same principle may be used for a variety of rhythmic tendencies and poetic themes and tones. It became a major form of Hebrew poetry since the 1920s, developed by *Raḥel, Alterman, Zusman, Lea *Goldberg, *Bat-Miriam, and other poets of the Russian tradition.

Free Verse

Since the beginnings of Hebrew accentual-syllabic meters, varieties of freedom from their strictures were sought. Thus, Tchernichowsky used widely the dactylic hexameter, varying often two or one unaccented syllables. The effect was similar to the ternary net, but the “excuse” was an interpretation of the Greek meter followed by German poets, which varied the dactyls by using trochees (instead of the Greek spondee). Bilik developed his so-called biblical rhythms; but, unlike in the Bible, the number of accents was fixed and the number of unaccented syllables varied in a limited way: 1 or 2 (and occasionally 3) syllables in each interstress interval. About 10 years after the initiation of the accentual-syllabic meters, a Hebrew poet appeared who wrote purely free verse: Avraham *Ben Yizḥak. This trend, based on the balancing of small word groups and phrases, was enhanced by the influence of German expressionism (exerted on such poets as David *Vogel). It was renewed in some of the young poets of the Palmah generation (1948) and in the 1950s, under the influence of English modernism. The forms of free verse are too varied to be discussed here. Basically they lean on syntactic patterns, strengthened by parallelism and sound orchestration. At present the whole scale from strict meters to prose-like free verse is productive in Hebrew poetry.

Rhyme in Modern Poetry

Though rhyme in Hebrew was older than in any of the surrounding languages, and though its forms changed throughout the centuries, it was not before the 1890s that Hebrew rhyme accepted fully the European rhyme system. (As has been seen, the principle of stressed rhyme was adopted already in Hebrew poetry in Italy in the 17th century, but it actually applied to feminine rhymes only and did not involve the whole language until the end of the 19th century.)

In modern Hebrew poetry it is convenient to distinguish “exact” from “inexact” rhymes. In “exact” rhymes the rhymeme always extends to the very end of the rhyming members ($x=h$ or kh ; $c=z$): *sma MA-ey-MA*, *novÉYAX- KerÉYAX*; in “inexact” rhymes some of the final sounds are not identical, i.e., the rhymeme does not always reach the end of the verse line:

meso-RÉGET- baRÉGEV; la haDSÍ- kiDuŠIn; ba-xÓFEn- ha-OFEk, etc. The inexact rhyme, a symptom of modernism, should be discussed after the basic “exact” norm from which it deviated.

THE BASIC NORM OF THE EXACT RHYME. The rhymeme is the basic norm in modern Hebrew poetry, as it is in most European languages; it includes all sounds from the last stressed vowel to the end of the line: $N=\acute{V}$ (). (The parentheses represent all sounds, which may come after the stressed vowel.) As opposed to the terminal Hebrew rhyme of the Middle Ages, this is an accentual-terminal rhyme norm, e.g., *šovÁX- heÁX; šenavÓXA- kamÓXA; dÁY LA- LÁYLA; lirKOŠET- xarÓSET*. The rhyme in these cases includes 2, 3, or 4 sounds ($\acute{V}C$, VCV , $\acute{V}CCV$, $VCVC$). All of these are minimal rhymemes: they may be enlarged, but deducting one sound destroys the rhyme. Thus, the basic norm is not determined by the number of sounds but by their position. The number of sounds following the stressed vowel depends on the structure of the words; it is a matter of language rather than of rhyming norm. In this system, a *rime riche* is based not on the number of sounds in the rhymeme, but on the employment of sounds additional to the required norm. Thus, *tic-Nax – aNAX* (תִּצְנַח – אֲנַח) is a rich rhyme, though its rhymeme *Nax* has only three sounds, since *AX* would be good enough; whereas *ESET* in *IESET – noGÉSET* (לְעֵשֶׂת – נוֹגְעֵשֶׂת) is not rich, though it has four sounds, since it is the minimal sound group in such feminine rhymes.

SECONDARY NORMS. In addition to the basic norm, several secondary norms are at work, some are more general, others less obligatory or more restricted to certain poets or trends.

The Numeric Norm. Hebrew poetry in the Israeli pronunciation requires a minimum of two sounds in the rhymeme. In English, German, or Yiddish poetry, one stressed vowel is enough, if it comes at the end of the word: *free – tranquility – sea, be – we, go – snow* are perfect rhymes in English. But in Israeli Hebrew, as in Russian, in such cases, a consonant has to precede the final vowel: *bitfi-LÁ-leo-LÁ* is a minimal rhyme ($N_2 = CV$). Two sounds are enough, even when there is no consonant: *ligvÓA- elÓA*.

Hebrew poetry in the Ashkenazi pronunciation did not require this numeric norm. Bialik rhymed *lí – bní* (לִי – בְּנֵי), *hazE – hapE* (הַזֵּה – הַפֵּה), etc. The reason is obvious: there are in the Ashkenazi pronunciation very few ultimately stressed words (primarily monosyllables, a rather small group in Hebrew) and even fewer such words with open syllables. With the additional rule it would be almost impossible to rhyme these words. On the other hand, in the Israeli pronunciation most of the words are ultimately stressed, the number of vowels has been reduced to 5, and there are an enormous number of words which terminate in (resulting both from the historical *pataḥ* and *qameṣ*). The use of such an *á* as a rhyme would be too easy and trite to be effective.

The Historical Factor. There was a historical factor to this development, too. Bialik and many of his contemporary “Ashkenazi” poets at the end of the 19th and the beginning of the 20th century (Z. Shneour, I. *Katzenelson, Jacob Steinberg, J. Fichmann) wrote Yiddish as well as Hebrew poetry. Yiddish, as other Germanic languages, does not require the numeric norm. But the Israeli poets of the next generation (Raḥel, A. *Shlonsky, Lea Goldberg) were overwhelmingly influenced by Russian poetry where this norm is required.

The historical factor is felt again in the “young” Israeli poetry of the 1950s. Hebrew poetry now moved from the Russian to the English sphere of influence and away from rich “colorful” rhyming to a rather “prose-like” poetics. Here again rhymes appeared, based on a single stressed vowel: *kí-civoní; lezokhrÓ be-motÓ*, etc.

The Morphological Norm. In the Israeli pronunciation *sIR – kabIR, niM – alIM* (אִלִּים – נִים) are perfect rhymes, but *mex-usIM – alIM* (מְכוּסִים – אִלִּים) is not, since *IM* in this case is a morphological ending: the non-feminine plural suffix of nouns, verbs, and adjectives. This secondary norm requires the participation of at least one stem consonant in a rhyme: *mesuSIM – ma’aSIM* or *aLIM – keLIM* are minimal rhymes in this case.

Three Criteria of the Rhyming Norm. The basic norm with the secondary norms may now be combined: “exact” rhyme in modern Hebrew poetry in the Israeli pronunciation requires in its rhymeme all the sounds from the last stressed syllable to the end of the verse line, provided that there are at least two sounds and at least one is part of the root of the rhyming word. This complex rule makes three kinds of demands: (a) a norm for the *place* of the rhymeme; (b) a norm for its minimal *size*; (c) a norm concerning its *morphological* structure.

THE RELATIVITY OF THE MORPHOLOGICAL NORM. The three heterogeneous norms have different degrees of validity in different poets or generations. The morphological subnorm seems to be the most flexible. Some suffixes are less susceptible to this norm. Thus, Raḥel, a poetess of the 1920s who preceded the “young” generation in the use of “prosaic” language in her lyrical poetry (influenced not by English Imagism but by the Russian Acmeists, especially the poetry of Akhmatova), strictly applies the morphological norm to the non-feminine plural suffix *Im* (e.g., *raVIM – asaVIM*), but disregards this requirement for the feminine plural *OT* (*kallOT – netivOT*) and other suffixes. Some “young” poets of the 1950s use even obvious grammatical rhymes, with the plural suffix *IM* as a rhymeme.

On the whole, the more widespread the use of a suffix in a language, the stronger is the tendency not to rely upon that suffix alone. The opposition to grammatical rhyme, inherited from Russian poetry, was strongest in the plural *IM*. On the other hand, the requirement to add a root consonant is entirely weak in two-syllabic suffixes, which are penultimately stressed, such as the dual: *áyim*.

The “mistrust” of grammatical rhyme is often expressed in poetry far beyond the required norm. Thus, Shlonsky uses rich rhymes especially when a suffix occurs, as if to compensate for the very use of a suffix in rhyme: *DIRIM* – *aDIRIM*, *MeDuROT* – *MiDoROT* (where *RIM* or *ROT* would be sufficient), etc.

MINIMUM AND MAXIMUM. The norm described above concerns the minimal group of sounds required in a rhymeme. In Hebrew poetry in the Israeli pronunciation there is a wide discrepancy between the minimum sounds required and the maximum actually used. Some poets, such as Shlonsky or Alterman, influenced by the poetics of Russian modernism, employ rhymes as rich as possible: *tiKTEFÉNU* – *Ktefenu*, *AKuMÓT* – *hAKOMÓT*, etc. The words in modern Hebrew, having no secondary stress, are usually long (3 syllables and more). Most of the sounds in the rhyming words of the poets under discussion are employed in the rhymeme. This tendency is doubly connected with the poetics of Hebrew “imagistic” poetry: (a) It is part of the general “colorful” aesthetics which abounds in striking imagery, rich sound patterns, “strong” themes, etc. There is a strongly expressed “set toward the message,” a high “density” of the poetic language. (b) Since many sounds are involved in each rhyme, it is quite difficult to find words rhyming with each other; only a poetic language with a high degree of flexibility in imagery and elliptic combination could enable such freedom in connecting rhyming words drawn from distant spheres of meaning.

The maximal limit for a rhymeme consists in leaving a minimal difference between the rhyming members. In such rhymes as Yehudah *Karni’s *K’ILU MAT* – *KIL’UMAT* (כָּלְעוֹמַת – כְּאֵלֵי-מַת) or *YIFAM* – *YIF AM* (יִיף עָם – יִיף עָם), the difference may only be a junction between words. In Alterman’s rhyme אָת יִנֵּן הַלּוֹהֵט לְחַיִּיךָ – אֶת בְּגוּמַת לְחַיִּיךָ (*LEXAYAYIX*), the difference lies merely in the different morphological structure: in the first case (“your cheeks”) the *l* is part of the root לחי, in the second case (“for your life”) the *l* is a separate morpheme (“for”) connected only graphically with the word חייה.

A COMPARATIVE PERSPECTIVE. Rich rhyme in Israeli Hebrew can be explained not merely by the influence of one kind of modernist poetics. The properties of the language also encourage this trend. Most of the words in this pronunciation are stressed ultimately and most of the words are multisyllabic. Rhyming merely one syllable time and again would be tedious. Moreover, since most of the words are stressed ultimately, there is a multitude of words available for each rhyme ending. It may be compared to other languages. In Russian, where many words are also multisyllabic, stresses may occur on any syllable of a word, therefore the number of words rhyming ultimately is relatively smaller, and multisyllabic rhyme is usual. In Yiddish, too, the number of feminine and dactylic rhymes is incomparably higher.

In English the number of monosyllables is so high that masculine rhymes are usual, as in Hebrew. But the “neutral”

sounds of each number are not felt strongly, since they are few. In a usual Hebrew word one or three syllables do not participate in a minimal rhymeme: cf., the English *pARTS* – *mARTS* (though the rhymeme is monosyllabic most sounds of each member are covered by it) with the Hebrew *mešuxrÁR* – *veaxzÁR* where the nonparticipating, “neutral,” sounds of each member are conspicuous. Moreover, English has some 13 different rhyming vowels (as compared to the mere five of Israeli Hebrew) and many consonant clusters, preceding and following the vowel, which make the number of possible rhyme endings incomparably higher and the number of words available for each relatively much smaller. Since there are very few possible rhyme endings in Israeli Hebrew, it is much easier to meet the minimal rhyme requirements and also easier, and more necessary, to add sounds and “enrich” the rhymeme. French with its ultimate stress, though it is more abundant in rhyme endings than Hebrew, also tends to prefer *rime riche*.

RHYME IN THE ASHKENAZI PRONUNCIATION. The basic norm of the accentual-terminal rhyme is identical in the poetry of the “Sephardi” pronunciation (in Italy since the Renaissance) or in the Israeli, as well as in the Ashkenazi, pronunciation, which was accepted in European Hebrew from the 14th century, but entered rhyme only in the 19th century. But the realization of the norm differed strongly due to the difference in the rhythmic structure of the Hebrew word.

Since the Ashkenazi stress falls on the second or third syllable from the end, most rhymes were automatically polysyllabic and most sounds of a word were included in the rhymeme. Thus, *mÍDBOR* – *nÍDBOR* is a very common rhyme in Bialik’s poetry, but the same pair makes a very rich rhyme in the Israeli pronunciation: *mIDBÁR* – *nIDBÁR* (since *AR* would be enough). Therefore, rich rhymes are few in Ashkenazi but may abound in Israeli Hebrew (at least in the practice of some poets). Moreover, the necessity to include in most cases at least two syllables in the rhymeme leads the poets to search for alleviating devices. Thus, Bialik in his early poetry tends to use grammatical rhymes which have already one syllable given in the morphological suffix, and the poet has to find words which differ in one syllable only. This necessity also leads to the use of archaic endings, feminine forms, etc. In short: any *manqué* form of a word, e.g., the Israeli rhyme *נוֹזֵל* – *צוֹהֵל* is not a rhyme in Ashkenazi (*cohel* – *nozel*), but the feminine form, with an added syllable, is *נוֹזֵלַת* – *צוֹהֵלַת* (*coheles* – *nozeles*). Therefore Bialik uses not *אור נוֹזֵל* (“running light”) but a more archaic form, which is feminine *אורָה נוֹזֵלַת*. Feminine verbs or adjectives in rhyme position obviously bring about feminine nouns in the middle of the line. The same holds for plurals and archaic forms.

“Modernistic” Rhyme

THE “INEXACT” RHYME. Modernistic Hebrew poetry uses a large number of inexact rhymes, such as Alterman’s *ŠKuFÁ hI-miŠKaFAyIM*: *KoS Ha-MÁyIM* – *KSuMÁ hI*, etc. In such rhymes at least one member ends with a “neutral” sound not participating in the rhymeme. But the effect is strong, since

such rhymes usually have many sounds. There is a great variety of concrete forms, but in all cases the stressed vowel is constant, i.e., it is an accentual rhyme. In most cases the rhymeme is discontinued and the system may be called: *accentual-discontinuous*. The rhymeme, in addition to the fixed-stressed vowel, is based primarily on consonants. This phenomenon of the discontinuous rhymeme, particular to Hebrew poetry, is based on the nature of the Hebrew lexical morpheme, which is discontinuous and purely consonantal.

This system, representing a strong break from the standard European norm where rhyme is *accentual-terminal* and is usually continuous, had its forerunner in the earliest system of rhyme, in old Hebrew liturgy (the *piyyut*). But the concrete immediate influence which created this norm in Hebrew modernism came from the poetry of Mayakovski and *Pasternak, where rhymemes were also inexact in their endings and moved deeper into the middle of the line. While discontinuity in Russian rhyme was an occasional form of deviation rather than the rule, for Alterman and his contemporaries it became the norm, based on the characteristics of the Hebrew language. Alterman uses both exact and inexact rhymes in the same poems. The minimal requirement for a rhymeme now is: two sounds, at least one of which is the last stressed vowel. But only rarely was the minimal rhymeme employed (e.g., an exact rhyme: *zahÁV – yadÁV*; an inexact rhyme: *koXÓ harXÓv*). Most of the rhymes are very rich. The sound contrast between the rhyming members was strongly emphasized through the introduction of neutral sounds in between the sounds of the (discontinuous!) rhymeme, e.g., *SiPuNÉXA – kaSE PaNÉXA, LEORÉR – LEOR nER*; or by changing the order of the parallel sounds, e.g., *miTPARECET – TRAPE-Clo-T (TPAR Trap)*.

In short, modernist rhyme cannot be described merely in negative terms, as a deviation from a “classical norm.” The norm of the *accentual-discontinuous* rhyme creates a system as consistent and as effective as the *accentual-terminal* one, though the range of variation given to particular poets may be considerably wider now.

SUMMARY

A Pan-Historic Synopsis of Hebrew Prosodic Systems

The preceding historical survey, though simplified as much as possible, presents a long chain of changes. When pan-historical comparisons are made, one finds logical relationships; similarities and contrasts between systems which are distant in time and place, but created in the forms of one language and culture. The table below, The Major Systems of Hebrew verse, may present the basis of such a comparison. The major systems of Hebrew verse are arranged in this diagram clockwise, in the order of their emergence in the history of Hebrew poetry. Except for a meter based on pitch, all known verse systems were productive in Hebrew. As can be seen from the diagram, there is a logical pattern, a kind of cyclic movement in this history. The major basis of the meter moved from *phrase* to *word* to *syllable* and vice versa.

The earliest and the latest verse systems were based on a free rhythm of phrase groups, though in the Bible there was a strong symmetry of parallelism, whereas in modernist free verse there is a typical flow of continuity and lengths of lines may be highly varied. On the other hand, in modernist free verse poets often employ changing segments of accentual-syllabic meters as well as effects of irregular rhyme. It is not the freedom of “primitive” poetry, preceding any system, but the freedom of a “late” post-classical period, which is also free to employ any device developed in the “classical” rules of previous periods.

From biblical rhythm, based on semantic-syntactic-accentual free parallelism of phrases, the development of Hebrew verse moved toward basing its meters on more and more exact measures, i.e., ordering smaller elements of the language from phrases to the number of stresses, through the exact number of words, to the number of syllables, to a distinction of syllables according to their prosodic features.

Meters based on syllable counting ruled Hebrew poetry from about 950 almost to 1950. These were the most exact and variegated systems of Hebrew versification. Within this tradition, the change in the internal organization of the verse line from a quantitative principle to an accentual principle represented the general development of European poetry, but marked also the shift from the artificial “high” style of reading poetry to the intrusion of the cadences of the spoken language. (In religious poetry of Franco-Germany throughout the Middle Ages, a system based on the number of words persisted, i.e., a rhythm which, though numerically rigorous, was closer to representing some phrase patterns and clearly resembled the rhythm of medieval Yiddish and German poetry.)

In modernist poetry the movement of the early centuries of the Christian era was reversed: from strict syllable counting through a semi-regular meter, relying almost exactly on the number of major word stresses (though with a still limited freedom of syllable numbers 7), to a free verse system, based primarily on a rhythm of phrase groups, relying on the tension between the verse line and syntactic units. But in this period, even within the domain of free verse (8), the previous regular norms (6 accentual-syllabic and 7, accentual net) were still widely employed. On the other hand, the essential difference between the major systems of Hebrew verse should not lead to the overlooking of some basic consistent trends which cut across several systems. Within each system not all possibilities were equally employed. In any system, a rather small number of all possible forms were prevalent in poetry. Observing the syntactic possibilities of Hebrew verse in different periods, one finds a predilection for a certain optimal length of line, persistent throughout the ages: three or four major stresses in the Bible, four or five graphic words, 11 or 13 syllables (including short ones), three or four amphibrachs, and five iambs which are very similar in length of line and conveniently accommodate similar groups of words and phrases.

The Major Systems of Hebrew Verse (in their logical and chronological order)

Length of a line	Free	Fixed	
Major Basis of the Meter	Phrase	Word	Syllable
<i>Antiquity and Middle Ages</i> (From phrase to syllable)	I. <i>Bible: free accentual</i> (Phrase – parallelism group of stresses)	II. <i>Early Piyyut: accentual</i> Number of major stresses	III. <i>Rhymed Piyyut:</i> word meter Number of words
		IV. <i>Spain: quantitative</i> Number of syllables order of long/short syllable	
<i>Modern Age</i> (From syllable to phrase)	VIII. <i>Modernist: Free Verse</i> Changing balance of phrase groups	VII. <i>Modernist (“Russian”) accentual net</i> Number of major stresses (+ limited freedom of syllables)	VI. <i>Modern: accentual= syllabic</i> Number of syllables order of stressed/ unstressed
		V. <i>(Italy) Haskalah: syllabic</i> Number of syllables	

Regular Rhyme

No Regular Rhyme	Form of Rhymeme Decisive Vowel	Discontinuous	Discontinuous
I. <i>Bible</i> Free sound orchestration	final	II. <i>Kallirian Piyyut:</i> <i>terminal-discontinuous</i> RVR ריק R+RV מ + רי R+RVC מ + רים R+R+CV(C) מ + ר + הם (תי)	III. <i>Medieval: terminal</i> CVC ריק CV רי CVC רים CV(C) הם (תי)
VI. <i>Modernist</i> (“Free”) Scattered Rhymes	stressed	V. <i>Modernist (“Russian”):</i> <i>accentual-discontinuous</i> מבריק CV+ רי + מורי דברים V̇C (V)+ ור + ארת עורק) CV̇C(V) דר + (דר-ך קודר-אץ) C+C+CV̇+(V)+ ק + ס + מ + ? (Ko-S ha Malm-KSu-MAhl)	IV. <i>(Italy, Haskalah) Modern:</i> <i>accentual-terminal</i> V̇C יק CV̇ רי RV̇C רים V̇CVC ורק

The Major Systems of Hebrew Rhyme

A similar pattern can be discerned in the history of Hebrew rhyme norms. Here, again, Hebrew poetry completed a whole cycle in its development. But rhyme was not as obligatory as meter. The earliest and the latest periods have no regular rhyme, i.e., no rhyme in the strict sense of a sound device used regularly for the strophic composition of a whole poem. The Regular Rhyme section of the table Major Systems of Hebrew verse represents typical rhymemes, using the following symbols: V – vowel, C – consonant, R – root consonant (only where relevant), V̇ – stressed vowel, † – discontinuity in the rhymeme. When read clockwise, the diagram represents the history of Hebrew rhyme.

Disregarding some secondary developments, there were four major rhyme systems. The similarities and the differences between these systems are related to the form and location of the rhymeme. The upper part of the diagram is opposed to the lower part from the point of view of the decisive vowel: in the Middle Ages the rhymeme relied on the final vowel, in the mod-

ern age on the stressed vowel. On the left hand (the extremes of this history) the rhymeme could be discontinuous, whereas on the right hand (in the “classical” periods) the rhymeme had to be a continuous and a terminal chain of sounds.

There is also a correlation (though not overlapping) between the corresponding major systems of meter and rhyme, as may be seen from a comparison of both diagrams. At the extreme ends of this cycle, when rhythm was based primarily on phrases, i.e., was dominated by a balancing of syntactic and semantic patterns, no regular rhyme was necessary. In the “classical” periods, when meter was based on the number of syllables, rhyme, too, was syllabic: the medieval rhymeme was based on one (terminal) syllable; modern rhyme based its major distinction of rhyme gender (masculine-feminine) on the number of syllables. Typically enough, in verse systems in which the prominence of the word was basic, discontinuous rhyme developed, i.e., rhyme based on the nature of the Hebrew word. However, this parallelism, essential as it was, was

by no means automatic, e.g., word meter continued a long time after the suppression of the early discontinuous rhyme.

[Benjamin Hrushovski-Harshav]

PROSSNITZ, JUDAH LEIB BEN JACOB HOLLESCHAU (c. 1670–1730), Shabbatean prophet. Born in Uhersky Brod, he settled in Prossnitz (Prostejov) after his marriage. An uneducated man, he made his living as a peddler. About 1696 he underwent a spiritual awakening and began to study the Mishnah, and later the Zohar and kabbalistic writings. Believing that he was visited by the souls of deceased, he claimed that he studied Kabbalah with Isaac *Luria and *Shabbetai Zevi. Whether his Shabbatean awakening was connected with the movement in Moravia around *Judah Ḥasid, Heshel *Zoref, and Ḥayyim *Malakh is still a matter of conjecture. Possibly he was won over by Zevi Hirsch b. Jerahmeel *Chotsh, who spent some time in Prossnitz in 1696. Judah Leib first turned to teaching children but later his followers in Prossnitz provided for him and his family. Taking up residence in the *bet midrash* of Prossnitz, he led a strictly ascetic life; he became generally known as Leibele Prossnitz. Before long he started to divulge kabbalistic and Shabbatean mysteries and to preach in public in the manner of a revivalist preacher (*mokhi'ah*). He found many adherents, his most important supporter for some years being Meir *Eisenstadt, a famous rabbinic authority who served as rabbi of Prossnitz from 1702. At the same time his Shabbatean propaganda, especially since it came from an uneducated lay mystic, aroused strong hostility in many critics. Between 1703 and 1705 he traveled through Moravia and Silesia, causing considerable agitation in the communities. Along with other Shabbatean leaders of this period, he prophesied the return of Shabbetai Zevi in 1706. His open Shabbatean propaganda led to clashes in Glogau and Breslau, where the rabbis threatened him with excommunication unless he returned to Prossnitz and stayed there. As 1706 approached his agitation reached a pitch. He assembled a group of 10 followers who studied with him and practiced extravagant mortifications.

Judah Leib was widely credited with magical practices connected with his attempts to bring to an end the dominion of *Samael and is reported to have sacrificed a chicken as a kind of bribe to the unclean powers. The facts concerning this and his promise to reveal the *Shekhinah* to some of his followers, including Eisenstadt, are shrouded in legend, but they contain some kernel of historical truth. Since by then he was widely considered by his foes to be a sorcerer, Eisenstadt left him and Prossnitz was put under a ban by the rabbinical court and sentenced to exile for three years; however, he was allowed to return after several months. He persisted at the head of a secret Shabbatean group in Prossnitz, again working as a children's teacher. Maintaining connections with other Shabbateans, in

1724 he tried to obtain the appointment of one of his closest followers, R. Sender, to the rabbinate of Mannheim (L. Loewenstein, *Geschichte der Juden in der Kurpfalz* (1895), 198–9). Jonathan *Eybeschuetz, a pupil of Meir Eisenstadt in Prossnitz for several years, is said to have studied secretly with Judah Leib, who was then propagating teachings close to the radical wing of Shabbateanism. Along with others in this group, he supported heretical teachings regarding divine providence. When Leib b. Ozer wrote his memoir on the state of Shabbateanism in 1717, Judah Leib was refraining from public manifestations of Shabbatean faith and was said to be working on a kabbalistic commentary on the Book of *Ruth. With the resurgence of Shabbatean activities in 1724, in the wake of the emissaries from Salonika, Judah Leib again appeared publicly on the scene, claiming to be the Messiah ben Joseph, the precursor of the Messiah ben David. Once more, he found many followers in Moravia and even in Vienna and Prague. Some of his letters to Eybeschuetz and Isaiah Mokhi'aḥ in Mannheim were found among the papers confiscated from Shabbatean emissaries. In the summer of 1725 Judah Leib was again excommunicated by the rabbis of Moravia in Nikolsburg (Mikulov) and after that led a vagrant life. When he came to Frankfurt on the Main in early 1726 he was not allowed to enter the Jewish quarter, but he was given material assistance by one of his secret supporters. His last years were reportedly spent in Hungary. Whereas the friendly contact between Judah Leib and Eybeschuetz is well established, there is no conclusive proof of Jacob *Emden's claim that Judah Leib saw Eybeschuetz as the future leader of the Shabbateans (J. Emden, *Beit Yonatan ha-Sofer* (Altona, 1762 (?), 1b), or that he would even be the Messiah after Shabbetai Zevi's apotheosis (*Shevirat Luḥot ha-Aven* (Zolkiew, 1755), 18b). After Judah Leib's death a strong group of Shabbateans survived in Prossnitz during the 18th century.

[Gershom Scholem]

PROSSTITZ (Prossnitz), DANIEL (Steinschneider; 1759–1846), Hungarian rabbi. Born in Tobitschau near Prossnitz (Prostejov), Daniel studied first in Moravia and later in Pressburg under the rabbi of the town Meir b. Saul *Barby and was later appointed by Meshullam *Igra to his *bet din* there. Eventually he succeeded Rabbi M. Toska, the head of the *bet din*. In addition he was appointed rabbi to a society for the study of the Talmud (*Hevrah Shas*) established in Pressburg. He served the Pressburg community in these capacities for 50 years. Prosstitz recommended Moses *Sofer for the vacant position of rabbi of Pressburg and it was largely due to his conduct of the negotiations that Sofer was appointed. Prosstitz also occupied himself with Kabbalah and used to fast frequently, especially after a dream.

He published the *Sefer ha-Yashar* of Jacob Tam, and

left responsa and novellae to the Talmud in manuscript. Responsa addressed to him are found in the Resp. Ḥatam Sofer, in Ezekiel *Landau's *Noda bi-Yhudah*, and in the responsa of his other great contemporaries.

[Samuel Weingarten-Hakohen]

PROSTEJOV (Czech **Prostějov**, Ger. **Prossnitz**, Heb. פְּרוֹסְטִיץ), city in central Moravia, Czech Republic. From the Middle Ages Prostejov was a center for the textile and ready-made clothing industries, in which Jews played an important part. A Jew is mentioned in a document of 1445. The Jewish community, founded by people expelled from nearby *Olmouc (Olmuetz) in 1454, was, from the 17th to the 19th century, second only to *Mikulov (Nikolsburg) among the communities of Moravia. The Jews dealt in luxury goods and locally made textiles. In 1584 the Jews' right of residence was confirmed but the branches of trade open to them were restricted. The community then numbered 31 families. A minute book (*pinkas*) opened in 1587 began with the *takkanot* of *Judah Loew b. Bezalel regulating synagogal arrangements. A compendium of Sabbath hymns, *Kol Simḥah*, was printed in 1602 by a short-lived local printing house.

The Jewish community and its importance in local industry increased after the Protestant inhabitants had left when the town became Roman Catholic under duress. In 1639 there were 143 Jewish men in Prostejov and 64 houses in the town were owned by Jews. Prostejov absorbed many refugees after the *Chmielnicki massacres in 1648 and the Vienna expulsion in 1670. The community numbered 64 families in 1669. The synagogue was dedicated in 1676. The first known rabbi was Isaac Ḥayyut b. Abraham (d. 1639); among his successors were Meir b. Isaac Ashkenazi and Wolf Boskowitz. The Prostejov rabbinate was a steppingstone to the office of *Landrabbiner for Menahem *Krochmal and Nahum *Trebitsch. The names of almost 30 rabbis have been recorded since the late 16th century. In 1785–94 the local yeshivah was led by Rabbi Moses *Sofer (Schreiber), called Ḥatam Sofer (1762–1839). A compromise reached in 1677 (and supplemented in 1688) concerning the extent of trade between Jews and gentiles testifies to the importance of Jewish participation in the textile and clothing trades. The community numbered 318 families in 1713, 1,393 persons in 1787, and 1,495 in 1798. In 1804 the number was 1,704, representing about a quarter of the total population. The population continued to grow to about 2,000 in 1875 but then dropped to 1,553 and 1,442 in 1930. The number of families allotted under the *Familiants Law was 328. The Prostejov community was strongly influenced by the Shabbatean movement, and one of its leaders, Judah Leib *Prossnitz, lived in the town. The community was also affected by *Frankism and was one of the first to absorb the ideas of the *Haskalah. The first sermon in German in the Hapsburg

dominions was preached there by Loew *Schwab (1835). In 1843 a Jew founded a private elementary school for Jewish and Christian children. In 1831 Feith *Ehrenstamm founded a factory, the beginning of Jewish enterprise in modern textile industry. By 1842 there were 135 Jewish textile merchants in Prostejov. The first factory for ready-made clothes on the European continent was founded by Mayer and Isaac Mandel in 1859. The 200 Jews in the National Guard units were lauded for their conduct in fighting during the anti-Jewish riots in 1848. Prostejov became a political community (*politische Gemeinde) in 1849. In 1880 there were 1,804 Jews in Prostejov. The community absorbed many World War I refugees from Eastern Europe. Between the two world wars the community was one of the most active in Czechoslovakia and the first to arrange modern Hebrew courses. The clothing industry, represented mainly by the Sborowitz firm, which had 108 sales establishments throughout Czechoslovakia and a vast export business, brought affluence to the community which attracted many new members from *Sub-Carpathian Ruthenia (Carpatho-Russia). In 1930 the community numbered 1,442 (4.3% of the total). Among the natives of the town were Menahem Katz, rabbi of the *Deutschkreutz community and leader of Hungarian *Orthodoxy; Gideon Brecher, physician and author of a booklet on circumcision; his son Adolph, author and physician; and the bibliographer Moritz *Steinschneider. Jonathan *Eybeschuetz and Adolf and Hermann *Jelinek were among the pupils of the Prostejov yeshivah. The well-known philosopher and founder of phenomenology Edmund *Husserl (1859–1938) was born there.

Many refugees from the Sudeten area arrived in Prostejov in autumn 1938. After the German invasion (March 1939) Jews suffered from Gestapo raids, mainly in July when the synagogue also was closed. Many Jews left Prostejov during 1940. Those who remained were deported to the Nazi extermination camps in 1942. Over 1,200 local Jews perished in the Holocaust. The synagogue appurtenances were transferred to the Jewish Central Museum in Prague. In 1945 a small congregation administered by the Olomouc community was re-established, mostly by Jews from Sub-Carpathian Ruthenia. A memorial to the victims of the Holocaust was consecrated in 1950. The congregation was still active in 1980. Few Jews remained in the early 21st century.

Three synagogues were active in Prostejov: the first, from about 1676, was demolished before 1905; the second synagogue served as a *bet midrash* before being converted into a synagogue; it was in service until World War II; in 1953–64 it was used by the Orthodox church and in 1970 it was converted into an exhibition hall; the third synagogue was built in 1904; services were held there until World War II and from 1949 it was used by the Hussite church.

The prayer house established in 1945–46 has been used by the Plymouth Brethren's Church since 1982. Prostejov had three cemeteries: the first known from the 17th century and closed down after 1800; the second from about 1801 and destroyed by the Nazis in 1943; and the last founded in 1908.

[Meir Lamed / Yeshayahu Jelinek (2nd ed.)]

PROSTITUTION (Heb. זְנוּת, *zenut*), the practice of indiscriminate sexual intercourse for payment or for religious purposes. Prostitution was practiced by male and female prostitutes. The word *zenut*, applied to both common and sacred prostitution, is also often used metaphorically.

Biblical

The prostitute was an accepted though deprecated member of the Israelite society, both in urban and rural life (Gen. 38:14; Josh. 2:1ff.; 1 Kings 3:16–27). The Bible refers to Tamar's temporary harlotry and to the professional harlotry of Rahab without passing any moral judgment. The visits of Samson to the harlot of Gaza (Judg. 16:1) are not condemned, but conform with his picaresque life. Harlots had access to the king's tribunal, as other people (1 Kings 3:16ff.). Nevertheless, harlotry was a shameful profession, and to treat an Israelite girl like a prostitute was considered a grave offense (Gen. 34:31). The Israelites were warned against prostituting their daughters (Lev. 19:29), and priests were not allowed to marry prostitutes (21:7). The punishment of a priest's daughter who became a prostitute, thus degrading her father, was death through fire (Lev. 21:9). According to the talmudic sages, however, this law applies only to the priest's daughter who is married or at least betrothed (Sanh. 50b–51a). Prostitutes might be encountered in the streets and squares, and on street corners, calling out to passersby (Prov. 7:10–23); they sang and played the harp (Isa. 23:16), and bathed in public pools (1 Kings 22:38). Their glances and smooth talk were dangers against which the immature were warned (Jer. 3:3, Prov. 2:16; 5:3, 6:24–25, 7:5, et al.).

In the Ancient Near East, temple women, of whom one class was called *qadištu*, probably served as sacred prostitutes. Sometimes dedicated by their fathers to the deity, they had special statutes, and provisions were made for them by law (Code of Hammurapi, 178–82). Customs connected with them are likely to underlie Herodotus' lurid and misleading statement that in Babylon every woman was to serve once as a sacred prostitute before getting married, thus sacrificing her virginity to the goddess Mylitta (Ishtar; 1:199). In Israel the sacred prostitutes were condemned for their connection with idolatry. Deuteronomy 23:18–19 forbids Israelites, men and women alike, to become sacred prostitutes, and states that their wages must not be used for paying vows.

It has been supposed that "the women who performed tasks at the entrance to the Tent of Meeting," mentioned in 1 Samuel 2:22, were sacred prostitutes – though this hardly suits their other occurrence in Exodus 38:8. There were male

and female prostitutes in Israel and Judah during the monarchy, and in Judah they were, from time to time, the object of royal decrees of expulsion (cf. I Kings 14:24; 15:12; 22:47; II Kings 23:7; Hos. 4:14). Sacred prostitution, because of its association with idolatry, was the object of numerous attacks in the Bible, especially in the historical and prophetic books (cf., e.g., II Kings 23:4–14; Jer. 2:20; Ezek. 23:37 ff.). Terms connected with harlotry are used figuratively to characterize unfaithfulness toward the Lord (Num. 25:1–2; Judg. 2:17; 8:27, 33; Jer. 3:6; Ezek. 6:9; Hos. 4:12; et al.).

[Laurentino Jose Afonso]

Post-Biblical

The many warnings of Ben Sira against prostitution is evidence that it was widespread in the Hellenistic period. According to II Maccabees 6:4, Antiochus Epiphanes introduced sacred prostitutes into the Temple. Throughout the whole of the apocryphal and pseudepigraphical literature, in the Damascus Document, in the documents of the Dead Sea sects (Serekh ha-Yahad 1:6), in Josephus (Ant. 4:206), and by Philo (Jos. 43, Spec. 3:51), prostitution is vigorously denounced.

In Talmud and Halakhah

Different opinions are expressed in the Talmud with regard to the prostitute of the Bible, both concerning her hire and her marriage to a priest. Some were of the opinion that these references apply only to a professional prostitute, but there were also other opinions. With regard to her hire (Deut. 23:19) the *halakhah* was decided in accordance with the opinion of R. Judah ha-Nasi that it was not forbidden except to those for whom “cohabitation is a transgression” (Tosef., Tem. 4:8; see Prohibited Marriage). With regard to the unmarried woman who engages in prostitution, however, “her wage is permitted” (i.e., for use in the Temple; Maim. Yad, Issurei ha-Mizbe’ah 4:8). Some were of the opinion that her wage is forbidden only with regard to such reward “the like of which can be offered on the altar,” but not to money (Tem. 6:4; but Philo refers explicitly to a prohibition on money). The term *be’ilat zenut* (“intercourse of prostitution”) was, however, applied not only to those relations forbidden in the strict legal sense (see also Yev. 8:5) but also to any intercourse not expressly for the purpose of marriage (TJ, Git. 7:448d; Git. 81b), and even to a marriage not celebrated in accordance with the *halakhah*.

The *halakhah* imposed a general prohibition on the professional prostitute, and the term came to include any woman who abandoned herself to any man even if not for pay, and states that “Whoever hands his unmarried daughter [to a man] not for the purposes of matrimony,” as well as the woman who delivers herself not for the purposes of matrimony, could lead to the whole world being filled with *mamzerim* since “from his consorting with many women and not knowing with whom, or if she has had intercourse with many men and does not know with whom – he could marry his own daughter, or marry her to his son” (see *Mamzer*; Sifra, Kedoshim 7, 1–5). The ruling is based on the verse “Profane not thy daughter, to make her a harlot” (Lev. 19:29), as

well as the verse “There shall be no harlot of the daughters of Israel” (Deut. 23:18; *kedeshah* being taken as referring to every prostitute (Sanh. 82a)). The penalty for both parties is flogging (Maim. Yad, Ishut 1:4; Na’arah Betulah 2:17). Abraham b. David of Posquières in his gloss (*ibid.*) stressed that this law applies only to the woman “who is ready to prostitute herself to every man,” and he makes an express exception in the case of a woman “who gives herself solely to one man without benefit of marriage.” The rabbis were eloquent in their condemnation of the prostitute and her like, but in most cases their strictures apply to every kind of licentiousness. They warned particularly against approaching a harlot’s door (Ber. 32a; Av. Zar. 17a) and passing through a “harlots’ market” (ARN¹ 2, 14; ARN² 3, 13), such as were to be found in large cities (Pes. 113b; Ket. 64b), especially in Erez Israel, where the Romans “built marketplaces in which to set harlots” (Shab. 33b). Sometimes inns served as brothels. The Targum gives *pundekita* (“woman innkeeper”) as the translation of the “harlot” of the Bible (also Yev. 122a). After the destruction of the Temple and during the Hadrianic persecutions, the Romans placed Jewish women in brothels (ARN¹ 8, 37; Av. Zar. 17–18), and even men were taken captive for shameful purposes (Lam. R. 1:16, no. 45; cf. Or. Sibyll. 3:184–6, and 5:387–9). Some succeeded in maintaining their virtue and were ransomed; others committed suicide to avoid being forced into prostitution (Git. 57b). But there were also Jewish women who willingly engaged in prostitution (TJ, Ta’an. 4, 8, 69a) and Jews who were pimps (*ibid.* 1:4). There are even stories in the *aggadah* about sons of scholars who were very dissolute (BM 85a). The *halakhot* of ritual purity and impurity mention several garments which were peculiar to prostitutes: a “net” for the hair and a harlot’s shift made like net work (Kel. 24:16, 28:9). The sages, who realized that the urge to prostitution is greater than that to idolatry (Song R. 7:8), considered it one of the important causes of the destruction of the Temple, and its spread as a sign of the advent of the Messiah (Sot. 9:13, 15). But there are also stories about prostitutes who repented completely (Av. Zar. 17a; SEZ 22), as well as about a gentile prostitute who converted to Judaism out of conviction (Sif. Num. 115; Men. 44a). Extensive aggadic material about the biblical Rahab portrays both her dissolute behavior as a harlot and her complete spiritual and social transformation when she accepted the truth of Jewish beliefs (Zev. 116a–b; Sif. Num. 78).

[Moshe David Herr]

Post-Talmudic

Jews in the pre-modern world lived, with few exceptions, in Jewish communities and under the yoke of Jewish tradition and *halakhah*. This affected every aspect of their lives, including sexual relations. As stated above, every sexual act between a man and woman outside marital relations was considered as coming within the definition of prostitution (*be’ilat zenut*), and the rabbis strongly condemned manifestations of sexual license in the Jewish community. Many regulations were issued by the various communities to fight prostitution in all its forms. Relations between Jews and gentiles were regarded as

especially dangerous, because in most places they were against the laws of the land and the Church, and were therefore apt to evoke an undesirable reaction by non-Jews and involve the whole community.

Jewish communities were never reconciled to the existence of prostitution among them, especially organized prostitution on a commercial basis. They reacted energetically to every attempt to maintain a brothel in the Jewish quarter. There is mention of brothels actually being closed down by order of the communities in various German and French cities in the 17th and 18th centuries. Heavy fines were imposed on landlords who rented their houses for the purpose of prostitution. Anybody who knew of such a case was obliged to report it to the community. The Jews did not always manage to prevent brothels being opened within their neighborhoods, although protests against their establishment sometimes brought about their removal. In many places the laws of the country forbade their being maintained in the cities, so that they were relegated to the outskirts. Sometimes they were located in the vicinity of the Jewish quarter merely by chance, but in some cases they were established there deliberately, out of contempt for the Jews. At times the rabbis closed their eyes to the visits of unmarried men of the community to the brothels, in order to prevent other forms of lewdness.

There is evidence in the responsa literature that Jewish women engaged in prostitution, and no doubt there were also Jews who lived on pimping, but there is no data to the extent. The *halakhah* literature in the Middle Ages mentions several regulations against Jewish prostitutes and against Jews who frequented gentile prostitutes, but the prostitute was entitled to claim her fee (*Rema*). At the end of the Middle Ages it was laid down that a married man who frequented prostitutes was obliged to give his wife a divorce.

[Max Wurmbrand]

Modern Period

Prostitution is known to increase in times of chaos and upheaval and this was certainly true for East European Jews at the end of the 19th century. Violence and other forms of anti-semitism, economic deprivation, and massive emigration led to various forms of significant Jewish involvement in the white slave trade, a euphemism for the trafficking of women across international borders for the purpose of prostitution.

Drastic impoverishment had always led some Jewish women, especially widows or abandoned wives, to occasional or part-time prostitution. The sexual mores of the Jewish community also meant that young women who had been seduced or had chosen to have premarital sexual relations, as well as unmarried older women, often had difficulty finding marriage partners. As it was nearly impossible for an uneducated single woman to support herself by other means, prostitution was often the only viable option. With the increasingly difficult situation in Eastern Europe in the late 19th century, and the large and mostly unregulated movement of population, it was particularly easy for profiteers to induce or entrap Jewish women to travel abroad and serve as prostitutes.

Traffickers used local agents to point them to young widows, abandoned wives, spinsters, or “ruined women,” who were offered an escape from their poverty and shame and the promise of riches in distant lands. The procurers would then rely on a string of colleagues to obtain papers and tickets, arrange passage through borders, and accompany the women to their destinations. Upon arrival the women were usually placed in brothels where they had to work, initially without pay in order to pay back all of the fees incurred through their travels. Some professional procurers courted and married attractive women from poor families with promises of a prosperous new life abroad. The “groom” would then consummate the marriage and bring his “bride” to a large city before disclosing her fate. Procurers would often comb entire regions, collecting brides and depositing them with an agent in a larger city before transport abroad. The young women, even when not physically forced to serve as prostitutes, were often too ashamed to return to their homes and had no other alternative. Other procurers specialized in wooing and seducing young domestic servants working far from their families. Some Jewish women became prostitutes of their own volition to escape the drudgery of factory or domestic work or the grinding poverty of family life.

Jews neither controlled nor dominated the white slave trade but they did oversee the large and lucrative traffic in Jewish women. By the turn of the 20th century Jewish criminal gangs managed a complex system of routes, personnel, brothels, and corrupt officials. Obtaining accurate statistics on Jewish prostitution is nearly impossible. Although prostitution was legal in most European states in the late 19th century, it carried a social stigma and legal consequences, such as the need to submit to regular medical examinations. Additionally, many women engaged in prostitution only on an occasional basis. Nonetheless it is estimated that the proportion of Jews among prostitutes was never, even at its height, greater than the proportion of Jews in the population.

Jewish women from Europe were sent as far as southern Africa and the Far East, with England and Constantinople serving as major transit points, but one of the main destinations was South America. South American countries were eager to attract European immigrants and imported thousands of young men to serve in their growing economies. Open borders and underdeveloped law enforcement capacities led to rampant prostitution. In 1900, shortly after having been excluded by the local burial society, the Polish Jewish pimps of Buenos Aires chartered a mutual aid society and obtained their own cemetery. The groups that came to be known as the Zwi Migdal Society later had a synagogue as well. This was only the most infamous of a series of Jewish communal institutions established by and for criminal elements around the world.

America was another destination of the white slave trade, as well as a recruiting ground. Crowded and poor immigrant neighborhoods in cities across the United States provided ideal conditions. Polly *Adler, a prominent brothel-keeper

in the first half of the 20th century, described in her memoirs (*A House Is Not a Home*, 1950) how her rape by a co-worker, the extreme privations of working-class existence, and her attraction to the trappings of success led her gradually toward a career as a madam.

The uneasy alliance between official toleration of prostitution and public discomfort with its visible aspects began to deteriorate as prostitution, and especially large-scale trafficking, grew across Europe and the United States. Yiddish literature of the early 20th century contains a number of powerful portrayals of the social and personal costs of widespread prostitution including Sholem *Asch's *God of Vengeance* and Perets *Hirschbein's *Miriam*. A 1908 performance of the latter in Buenos Aires led to a bloody public riot.

Already in the 1880s outraged individuals involved in social purity movements in Britain and the United States had begun to sound the alarm about the problems of the white slave trade. By the beginning of the 20th century, the public began to listen. Sensational press stories about kidnappings of young girls contributed to raising public ire. Much of the press coverage focused on Jewish involvement. While major news outlets published unfounded reports of salacious deeds and hinted that Jews masterminded these events, the antisemitic press went even further in exploiting the association between Jews and the white slave trade. These antisemitic polemics gave the impression that Jewish men were raping and stealing Christian girls in a modern version of the ancient *blood libel. In fact, although Jewish involvement in the white slave trade is not in question, Jewish traffickers dealt almost exclusively in Jewish women. The trade in non-Jewish women was generally overseen by their own countrymen and correligionists.

Public opinion, however, was not limited to placing blame, and Jewish and non-Jewish organizations began to form to combat the white slave trade. In 1899, Britain's fiery evangelical campaigner William Coote toured Europe trying to raise awareness about the need to regulate cross-border traffic and protect women. His trip was financed in part by the Rothschild family. Only several years previously the formation of the Jewish Association for the Protection of Girls and Women had created a central agency for British Jewish action. The group was ably and energetically run by Arthur Moro for the next several decades.

In Germany, Bertha *Pappenheim tirelessly fought for the rights of women. Combating the trade in women was one of the central platforms of her *Juedischer Frauenbund, established in 1904. Hers and other voluntary association across Europe established travelers aid stations at major terminals and worked to have laws changed to prevent the free movement of human traffic. Equally important, they established international communication lines. The National Council of Jewish Women in the United States undertook similar initiatives in the American immigrant community. Although these networks were never as sophisticated as those of the traffickers, they were still able to cause disruptions by sending advance warning to law enforcement and other voluntary societies

around the world. The Jewish community in South America was particularly grateful for the monetary and informational support of their correligionists in Europe. At times Jewish and non-Jewish groups worked together on such projects but often their relations were soured by antisemitism.

In the early 20th century, the success of social work and legal activism in Western Europe, and the awareness that the root of the problem lay further east, led to calls to treat the blight of prostitution at its source. In 1913 a group of Jewish social workers and nurses were preparing to travel to Galicia and Romania to establish institutions to help Jewish women avoid the snares of poverty and the white slave trade. This work, however, ended as Europe descended into war.

The onset of World War I meant a severe deterioration in Jewish life in Europe, as well as the closure of escape routes. Both increased presence of soldiers and failing economic conditions led to an increase in non-professional prostitution among Jews and non-Jews on the continent. At the same time the international white slave trade routes were interrupted, and would never fully recover. World War I essentially put an end to the period of major Jewish involvement in prostitution. Jewish prostitution, and even small scale procuring and trafficking continued, but the conditions were no longer ripe for large-scale activities as emigration slowed down and Jews in western countries increasingly moved up the economic ladder.

Prostitution once again came to the fore in Jewish communal concerns following the collapse of the Soviet Union and the large-scale immigration of former Soviet citizens to Israel in the 1990s. Among the many immigrants was a small minority of individuals involved in a variety of criminal activities, including trafficking and prostitution. The relatively open immigration policies contained in the *Law of Return made Israel a useful hub for international criminal enterprise. Vulnerable women from all ethnic groups in the former Soviet Union were brought into Israel either voluntarily, or in some cases by deception, to serve as prostitutes in Israel or to be shipped elsewhere. Following time-tested methods, many of the women were forced to serve their procurers for lengthy periods to repay the cost of their travel. Others had their personal papers confiscated and were imprisoned in brothels or intimidated through the use of violence.

As the scope and size of the problem became clear, the Israeli government worked with internal non-governmental organizations and women's groups as well as international bodies to craft appropriate policies on judicial and criminal matters as well on as issues of rehabilitation and repatriation. Although these efforts did not end the international traffic in women, by 2004 they had proven effective in increasing both the prosecution of leaders of criminal rings and the rehabilitation of their victims.

PROSTITZ, ISAAC BEN AARON (d. 1612), Hebrew printer. Isaac was born in Prossnitz, Moravia, and learned the printing trade in Italy, working with G. Cavalli and G. Grypho in Venice. There he met the proofreader Samuel Boehm (d. 1588), who later joined Isaac in Cracow, where he printed from 1569. From Italy they had brought with them typographical material, decorations etc., and in the privilege issued in 1567 to Isaac by King Sigmund August II of Poland for 50 years he is called an “Italian” Jew. In spite of initial intrigues by the Jesuits, Isaac and later his sons – Aaron and Issachar – and grandsons were able to print for nearly 60 years some 200 works of which 73 were in Yiddish, using fish and a ram (symbol for the offering of Isaac) as printer’s mark. The productions covered a wide field: rabbinics, Bible, Kabbalah, philosophy, history, and even mathematics. The Babylonian Talmud was printed twice (1602–08; 1616–20); these were poor editions after an earlier and more auspicious beginning in 1579. The Jerusalem Talmud of 1609 has become standard in the form it was reissued in Krotoschin in 1886. Isaac was printer to the great scholars of the time: Moses Isserles of Cracow, Solomon Luria of Lublin, and Mordecai Jaffe of Prague and Poznan. In 1602 he returned to his native Prossnitz, where he printed some works until 1605, while his son Aaron remained active in Cracow to 1628 printing apart from the Talmuds, the *Zohar* (1603), and the *Shulḥan Arukh* (1607, 1618–20), Turim with Joseph Caro’s commentary (1614–15), and *Ein Yaakov* (1614, 1619). Isaac’s descendants were working as printer’s assistants until nearly the end of the 17th century.

PROTESTANTS.

Up to World War II

Seen in perspective, the attitude of the Protestant movement toward Jews and Judaism was ambivalent and unstable. For the earlier periods see *Luther, *Calvin, and *Reformation. By the beginning of the 18th century the Protestant churches had amassed a vast amount of material on the Jews and on Judaism. The traditional hostility of more than a millennium was fully recorded in books such as *Entdecktes Judentum* (1700), an immense storehouse of learning and abuse collected by

Johannes Andreas *Eisenmenger. The Jewish response in polemic and apologetic was equally comprehensively dealt with in *Tela Ignea Satanae* (1681) by Johann Christoph *Wagenseil. Of more interest was the appearance of material of a different kind – material which for the first time described Jews, Jewish customs, and Judaism sympathetically and objectively, and without either a controversial or theological bias.

In the historical field the most important work was *L’Histoire et la Religion des Juifs depuis Christ jusqu’à Présent*, by the Huguenot diplomat and scholar Jacques *Basnage. It appeared at the beginning of the century, and was immediately plagiarized by the Jesuits, who altered or omitted all his references to Christian responsibility for Jewish sufferings. The increase of travel led to an interest in Jewish customs, social, domestic, and religious; and books describing these customs in Europe, Africa, and the Middle East became part of the stock of any well-equipped library. But the most attractive field for Protestant study was rabbinic, and almost every university claimed a chair in Hebrew. Leiden and Franeker in Holland, Cambridge in England, and Jena in Germany were among the most distinguished. While the Christian Hebraists wrote much that was of little value, their studies of the Talmud removed the atmosphere of mystery and even blasphemy which medieval scholars had imparted to it. John *Selden in *De Synedriis et Praefecturis Juridicis veterum Hebraeorum* (1650–55) laid the foundation for the serious study of Jewish legal procedures. At the beginning of the 18th century, Wilhelm *Surenhuys of Amsterdam, in his introduction to a Latin edition of the Mishnah and in other writings, was the first to speak of rabbinic Judaism as the natural and proper development of the Judaism of the Bible.

Side by side with this interest in rabbinic Judaism was the concern of some of the Protestant sects with biblical Judaism as an ideal expression of natural law. John *Toland in *Nazarenus* (1718) made the first study of Judaic Christianity as something distinct from its gentile brother, and more valuable in that it retained the laws of Moses. But as the century progressed, this attitude of the free-thinking sects changed to violent hostility which saw “Jehovah” as the model of all tyranny. Hermann Samuel Reimarus (1694–1768) subjected the Scriptures to so detailed a critical examination that he can be regarded as the father of much of 19th-century biblical scholarship.

Missionary Activities

While these various developments helped to maintain a general interest in the Jews, it was not until the very end of the century that any organized approach to them evolved. Protestantism had been slow to develop missions in any field, and still slower to create organized missions to Jews. But individual authors, some of them converts from Judaism, exhorted the Jews to recognize the truth of Christianity. Traditionally such writings were filled with mockery and hatred; but in the 18th century, although there was a good deal of writing in the old style, a new approach of friendliness and respect appeared.

This contradiction was also manifested in the 18th-century view as to the general status of the Jews in a Christian society. In 1753 a bill was passed through the British Parliament to facilitate the naturalization of Jews. It provoked an immense flow of pamphleteering; of those pamphlets written from a Christian standpoint some were hostile and others favorable. When full political emancipation became an issue a hundred years later, the archbishop of Canterbury opposed it, while the archbishop of Dublin supported it. Even with individual Jewish converts to Protestantism the same contradiction was apparent, and in many cases they were received with scarcely veiled hostility and suspicion.

The leading figure in the emergence of organized Protestant missionary activity was Lewis *Way. He had unexpectedly inherited an enormous fortune upon the sole condition that he used it for the glory of God; and events led him to fulfill this condition in work for the conversion of the Jews. In 1809 the London Society for Promoting Christianity among the Jews had been founded, largely through the enthusiasm of a German Jewish convert, J.S.C.F. Frey. Way wished to increase his understanding of the whole question, and traveled extensively. He was horrified by the treatment that Jews received in Christian countries, and came to the conclusion that full emancipation was the fundamental preliminary to a missionary approach. He visited St. Petersburg and so impressed Czar Alexander I that he was invited to the Congress of Aix-la-Chapelle by the emperor, and succeeded in getting a resolution passed commending the idea of emancipation to the governments of Europe. Emancipation came slowly, but Way's influence brought into existence throughout the Protestant world societies which devoted themselves to sending missions to the Jews. Jewish life at that period was at a low ebb; and while actual conversions were few, many communities in eastern Europe, as well as in Palestine and North Africa, profited from the schools and hospitals established by the missions.

In 1910 an International Missionary Council was formed, and it included a special committee on missions to the Jews. (In 1961 the Council was incorporated in the World Council of Churches; and under its new name of "Committee on the Church and the Jewish People" it to some extent disavowed its proselytizing activity.)

Converts' Participation in Academic Life

Alfred Edersheim (1825–1889), the son of Viennese Jewish parents, first served the Scottish mission in Jassy, and then had a distinguished academic career at Edinburgh and Oxford. His *Life and Times of Jesus the Messiah* was the first scholarly picture of the Jewish environment of the Gospels. Even more distinguished was the son of a Jewish peddler of Goettingen by the name of Emmanuel Mendel, who on his baptism took the name of Neander (new man). As August Johann Wilhelm *Neander, he became a prolific historian of the Christian Church and professor of theology at Berlin University. More interesting than individual scholars was the group of distinguished converts who published a short book absolutely denying the

authenticity of the ritual murder accusation at the time of the Damascus Affair in 1840. The accusation had first originated with a converted Jew of Cambridge in the 12th century, but this was the first time that a group of Jewish converts turned to defend their old religion. The most valuable contribution to the scholarly work of the missions was made by social institutes for Judaic studies (1650 in Strasbourg and 1702 in Halle) and chiefly by Franz *Delitzsch, who wrote extensively on post-biblical Judaism; in 1880 the Institutum Delitzschianum was founded in his honor, and it continued to produce scholarly works until the time of the Nazis.

While the leadership in missionary work was largely British, in the field of scholarship it was unquestionably German. Freedom of criticism was inevitably more possible in the Protestant than in the Catholic universities, and from the end of the 18th century onward Protestant German scholars made great contributions to the understanding of the literature, history, and religion of the people of Israel. The list begins with Johann Gottfried *Eichhorn, professor at Jena, and continues down to the present day. Among many famous names those of Karl Heinrich *Graf and Julius *Wellhausen are conspicuous; and their theory of how different sources were combined in the Pentateuch held the field until the emergence of the contemporary "formcritical school" pioneered by Herman *Gunkel. While German scholarship often tends to extremes which others find unnecessary and unacceptable, it has immensely enriched knowledge by its research, even for those who reject its conclusions.

At the very end of the 19th century, the work of *Selden and Surenhuys in recognizing and defining the spiritual validity of Judaism was taken up by two scholars – George Foot *Moore in America, who published his two volumes on *Judaism in the First Centuries of the Christian Era* in 1927, and R. Travers *Herford, an English Unitarian, whose first work *Pharisaism* appeared in 1912, and was, during the next 30 years, followed by a whole series on talmudic Judaism.

Jewish Return to the Land of Israel

The 19th century witnessed a new understanding between Jews and Protestants in another field. As far back as the millenarians of the 17th century there had been a fluctuating interest in a Jewish return. John Toland predicted that this would lead to the creation of a society of unparalleled power and prosperity. Many other 18th- and 19th-century writers did so too. In 1839, under the influence of the deeply religious Earl of Shaftesbury, Lord Palmerston set up a British consulate in Jerusalem with a special mandate to protect Jews who had no other source of defense. From then onward until the Balfour Declaration in 1917, there were always some members and even whole sects of the Protestant churches who, motivated partly by eschatological beliefs, gave their support to Zionism.

To all this varied work there was a reverse side. The Protestant Church in Germany produced powerful support for the new *antisemitism in the Christian Socialist Workingmen's Union, founded and led by a court chaplain, Adolf *Stoecker;

and its failure to speak and act against Nazi antisemitism was a lasting disgrace.

[James W. Parkes]

From 1945

(For the 1939–45 period, see Holocaust and the Christian *Churches.) A new era in the development of relations between Protestantism and the Jewish people opened in 1945, and had four major causes:

(1) the influence of the Holocaust, which led many Christians to question the responsibility of the Church's "teaching of contempt" (Jules *Isaac's phrase) which had nurtured antisemitism;

(2) the establishment of the State of Israel;

(3) the general reconciliation between different churches and religions and the rise of ecumenism; and

(4) the consolidation of pluralism in Western culture.

Declarations Against Antisemitism

The foundations of the new attitude toward Jews were laid at the International Emergency Conference of Jews and Christians which was held in 1947 in Seelisberg in Switzerland and was attended by 64 theologians, educators, and thinkers, Jewish, Catholic, and Protestant. They deliberated on methods of fighting antisemitism through educational, political, religious, and social channels. At the conclusion of the conference, the "Ten Points of Seelisberg" were drafted and adopted. These were principles to assist the Churches "to show their members how to prevent any animosity toward the Jews which might arise from false, inadequate or mistaken presentations or conceptions of the teaching and preaching of the Christian doctrine, and how on the other hand to promote brotherly love toward the sorely-trying people of the old covenant." The conference thus established the lines for the new process of reconciliation between Jews and Christians, which was to be developed in two spheres: the struggle against antisemitism and a new form of dialogue.

At its foundation conference in Amsterdam in 1948, the World Council of Churches (wcc; the roof organization of the majority of larger Protestant, Anglican, and Orthodox churches) moved a resolution strongly condemning antisemitism. The organization again passed this resolution at its third world conference in New Delhi (1961), with the additional recommendation that Christians should repudiate the idea of the collective guilt of the Jews for the crucifixion of Jesus. However, the texts of both these resolutions are ambiguous, because there is an evangelist-missionary undertone in their attitude toward the Jews.

In 1964, further declarations condemning antisemitism were issued by several important Protestant organizations: the roof organization of the Protestant churches in the United States (National Council of the Churches of Christ in the United States) passed a "Resolution on Jewish-Christian Relations," calling among other things for the fostering of a dialogue between Jews and Christians. The Lutheran World Federation also made a declaration, following an international

consultation in Denmark on the subject of "The Church and the Jews"; and the House of Bishops of the Protestant Episcopal Church in the United States drafted a statement of condemnation of antisemitism in extremely strong terms. The Lutheran and Episcopalian declarations also contained expressions of regret for past persecutions of the Jews fomented by the churches.

Liquidation of Theological Antisemitism

As seen above, the Churches recognized that some of the roots of antisemitism were implanted in their religious literature and that it was their duty to uproot them. In a number of countries, a fundamental examination of religious literature, teaching manuals of the Church, prayers, and so on was carried out in order to assist the Church in purifying this material from all versions or commentaries which were liable to create hatred of Judaism or prejudices about it. The Protestants' most comprehensive research was carried out at Yale University under the direction of the sociologist B.E. Olson, who published his findings in *Faith and Prejudice* (1963). This work brings to light the various aspects of the "teaching of contempt" in the curriculum of the Fundamentalist, the Conservative, the Neo-Orthodox, and the Liberal Protestants in the United States. Further research into the religious roots of antisemitism, especially within Protestantism, was carried out by the sociologists Ch. Y. Glock and R. Stark of the University of California at Berkeley and published in their work *Christian Beliefs and Anti-semitism* (1966).

Church Committees for the Fostering of Relations with the Jews

The interest shown by Protestantism in a dialogue with the Jews led to the establishment of new Church bodies for this specific purpose. A special committee to the Jews known as the Committee on the Christian Approach already existed in 1932 as part of the International Missionary Council (IMC; the world roof organization of Protestant missions). In 1961, the IMC amalgamated with the wcc, and the committee for Jews became an integral part of the wcc, its name being changed to CCJP (Committee on the Church and the Jewish People). This committee, which considers that its aim is "to further the Church witness to the Jewish people by study and other appropriate means," has in fact principally taken upon itself the duty "to study the Jewish world in its various aspects in order to develop an effective program to combat antisemitism and arouse Christian responsibility toward the Jews." The CCJP has convened a number of international conferences (usually held at the Ecumenical Institute of the wcc at the Château de Bossey, near Geneva) which have been attended by theologians of many countries, in order to lay down a new theological standpoint toward Judaism and the State of Israel. However, to the regret of the promoters, the recommendations agreed upon at the end of these deliberations have never become official decisions of the wcc and are therefore not binding upon the member Churches. It should also be noted

that Protestant institutions have always shown reticence in adopting a clear theological stance toward the existence of the State of Israel. The declaration made in 1956 by the wcc is characteristic. It states: "We cannot say a plain yes, nor can we say a plain no, because the Church does not stand for a vague cosmopolitanism."

Special committees for the fostering of relations with the Jews have also been formed within the Protestant churches of a number of Western European countries, independently of the framework of the world organization. An outstanding example is that of the Reformed Churches of the Netherlands, which have concentrated their efforts for the strengthening of contacts with the Jews by means of a joint coordination committee ("Interchurch Contact for Israel"), which publishes its own bulletin. The Reformed Church of the Netherlands was also the first to mold a more positive theological approach to Judaism, in one of its publications, *Israel and the Church* (1960), and to advocate the adoption of a dialogue in place of missionary activities.

The Evangelical Church of Germany has also worked intensively toward a Jewish-Protestant reconciliation. During the national conferences of the Church (Evangelische Kirchentage) in 1961 (Berlin), 1963 (Dortmund), and 1965 (Cologne), study days were dedicated to the "Jewish-Christian problem" under the direction of joint working groups of Protestant delegates and specially invited Jews. The lectures and discussions were published by the German Church in two volumes which contain extensive documentation and an exhaustive bibliography on the Protestants' attitude toward the Jews since 1945 (*Der ungekuendigte Bund*, 1962; *Das gespaltene Gottesvolk*, 1966).

In comparison with the situation in Europe, organized Protestantism in the United States and Canada has shown less interest and initiative in furthering relations with the Jews; and activity in this field is led by a small group of "concerned Christians." Although their numbers include theologians and members of the clergy, they are not generally representative of the churches (see below).

The Protestant Mission

Most of the Protestant Churches view the "Christian witness to the Jewish people" as a fundamental religious obligation. However, as a result of a recommendation of the wcc that it was preferable for the mission to the Jews to engage in its activity "as a normal part of parish work, rather than by special agencies, and with avoidance of all 'unworthy pressures'" the majority of the member Churches, especially those of the United States, decided to abolish all organizations devoted especially to the evangelization of the Jews. The Lutheran, Reformed, and Anglican Churches of Europe continue to maintain separate missionary agencies in many countries, including Israel, for activities among the Jews. Even within these Churches, however, there is growing opposition to the antiquated methods of conversion, although Evangelicals and Fundamentalist Protestants still continue to attach the utmost

importance to the evangelization of the Jews. These denominations, as well as many organizations of converted Jews (Hebrew Christians), carry on intensive and sometimes even aggressive missionary activities.

In recent years a new conception has been evolved repudiating the theological value of the missions; but it has been expressed by only a limited number of Protestant thinkers, the most notable among them being Reinhold Niebuhr, Roy Eckhardt, and James Parkes. These theologians believe in the Jewish religion's right to independent existence as a road to Redemption, and they deny validity to all forms of evangelization of the Jews.

Development of the Interfaith Movement

The dialogue between Jews and Christians is also conducted independently of the organizational framework of the churches. In the British Isles, most European countries, in the United States, Canada, and Australia, as well as in Israel, councils composed of Jews and Christians have been formed for the advancement of understanding and for holding a dialogue between the two religions. These bodies function in many countries under various names and employ different methods. Some of them publish bulletins dedicated to the aims of their activities. In 1961, a roof organization of all these councils, the International Consultative Committee of Organizations for Christian-Jewish Cooperation, was established. A number of Jewish organizations, such as the World Jewish Congress, the Anti-Defamation League of B'nai B'rith, and the American Jewish Committee, have created special departments for the advancement of interfaith activities. Reform and Conservative Jews, especially in the United States, attach especial importance to the achievement of a deeper understanding between Jews and Christians and have set up their own organizational frameworks to this end.

Since 1950, there has been a growing tendency among the promoters of interfaith contacts to change the character of their interreligious relationships and to translate such expressions as "good will" and "brotherhood" into an honest and fruitful dialogue adjusted to the requirements of a pluralistic society. Upon the initiative of interested Jews and Christians, interfaith dialogues have been held in academic and theological institutions, with important religious and intellectual personalities of both faiths taking part. As a result of these numerous encounters, there has emerged a ramified literature on the question of dialogues in general and Jewish-Protestant relations in particular. Within Orthodox Judaism there are many reservations toward the movement, considered on principle unacceptable. Some other Jewish circles have also expressed their suspicions that these dialogues may become a means of disguised missionary activity on the part of some churches. Moreover, despite the extensive activity carried on by the promoters of the dialogues, the interfaith movement has only succeeded in winning over to its cause a limited elite among Protestant believers. This was no doubt one of the reasons for the crisis in Jewish-Protestant relations, which broke

out in 1967 after the Six-Day War. The silence of the Churches that had preceded the war and the unfriendly, even hostile, declarations of the Protestant leadership concerning Israel and her postwar policies proved that the dialogue, as conducted previously, was a disappointment. It also became evident that Christians who had participated in these dialogues, due to their ignorance of the true essence of Judaism as a synthesis of a people and a religion bound to the Land of Israel and the Holy City of Jerusalem, had no understanding of the way in which Diaspora Jews identified themselves with the Jews of Israel. Those Jews and Christians who despite all these setbacks insisted on continuing the dialogue arrived at the conclusion, expounded by Rabbi Marc Tanenbaum (d. 1992), one of the leaders of interfaith in the United States, that “no future dialogue will take place without Jews insisting upon the confrontation on the part of Christians on the profound historical, religious, and liturgical meaning of the Land of Israel and of Jerusalem to the Jewish people.”

[Yona Malachy]

In the U.S.

Throughout its history the vast but decreasing majority of the inhabitants of the United States was classed as Protestant (about 98% in 1776 and 66% in 1965), in contrast to the very small Jewish minority. Despite a strong evangelical and missionary outlook in American Protestantism, the two groups have maintained a relatively harmonious relationship. The reasons for this are embedded in the social and religious history of the U.S. Since U.S. independence (1776) was achieved in an age of religious laxity and suspicion of ecclesiastical authority, Jews were from the very first accorded a measure of hospitality. Constitutional guarantees of religious freedom and the separation of church and state assured U.S. Jews a legal security unprecedented in Western history. Concentrated in urban areas, Jews also possessed a regional influence disproportionate to their actual numbers. Creedal and denominational diversity within U.S. Protestantism also meant that this majority group could rarely approach U.S. Jewry, and Catholics, with a single voice.

Cognizant of their organizational weaknesses, spokespersons for U.S. Protestantism periodically made great efforts to strengthen and unify their position. Prior to the 20th century many Protestants believed that the U.S. was “chosen” to be a Christian light to the world; and because of the lack of official public support they were determined to lean upon their own resources to Christianize the U.S.

As long as Protestant efforts were aimed to “convert” the West, U.S. Jews, sparse in that region, were not seriously touched by their efforts. After 1870, however, when Protestant revivalism turned toward the more Eastern cities, its impact was felt more sharply. Protestant Christianizing programs included street corner preaching, distribution of Bibles and Christian tracts, efforts to inject Christian teaching into public education, the erection of Young Men’s and Young Women’s Christian Associations, institutional churches, and Christian-

oriented settlement houses. In part to counteract the possible influence of these efforts, U.S. Jews created their own settlement houses, YMHAs, Hebrew schools, and Jewish centers. Increasingly, U.S. Protestants began to associate social reform with the conversion of the U.S.

The years 1880–1914 witnessed the most intense involvement of the Church in social and economic problems. During these years Protestantism also adopted a new theological outlook, which emphasized the goodness of man rather than his depravity, a new view of God as an Immanent Deity directly involved in human history, and stressed the moral and ethical aspects of theology. A rising interest in comparative religious studies and Higher Criticism motivated Protestants to examine more critically ancient Jewish life. This period, referred to as the Social Gospel, elicited considerable interest, especially among Reform Jews, who believed that the Jewish tradition shared many similar social and theological beliefs. An ecumenical outlook, which first manifested itself in the World Parliament of Religions, held in Chicago in 1893, facilitated a dialogue between Protestants and Jews. During the early years of the 20th century some liberal spokesmen of both camps exchanged pulpits and joined in worship. Nevertheless, despite such outbursts of friendship, an undercurrent of suspicion persisted within both religious groups; and even the most liberal Protestants, be they Unitarians, Transcendentalists, Social Gospellers, or mid-Twentieth Century ecumenicists, continued to view Judaism as merely a bridge from paganism to Christianity.

Recent decades have witnessed the creation of new Protestant-Jewish bonds which, however, were periodically severed. Both have joined in opposing Communism, the outspoken enemy of all organized religions. Involvement in the 1960s in the Civil Rights movement and in the Vietnam debate forged ties between rabbis and ministers of all denominations. Among the leading voices of Protestantism, Paul Tillich and Reinhold Niebuhr evinced an abiding respect for Judaism. Yet Protestant silence in the face of Nazi destruction of Europe’s Jews was disturbing. Antisemitism persists among U.S. Protestants and continues to be disseminated in religious literature. As mentioned above, the response of Protestants to the Six-Day War was disappointing and disillusioning to U.S. Jews and seriously threatened the dialogue between the two faiths. On the theological level, Jews and Protestants have also parted roads. The “God-is-dead” theological movement among liberal Protestants, a group which in the past significantly influenced Jewish thought-to secularize theology, was completely rejected by virtually all Jewish religious thinkers.

[Egal Feldman]

Protestants and Israel

The World Council of Churches, a fellowship of mainstream Protestant churches, was established in 1948, a few weeks after the founding of the State of Israel. In 2005 the coalition numbered 347 denominations in 120 countries. However, the member bodies of the WCC have experienced a significant

decline in numbers the last half of the 20th century. As of the early 21st century, the constituencies of Evangelical and Pentecostal churches throughout the world comprise the majority of Protestant churchgoers.

Despite its gradually diminishing size, the wcc, headquartered in Geneva, continues to exert a strong influence in political and social justice issues throughout the world. In particular, since early 2005, the wcc has recommended divestment from Israel and opposition to the building of the security wall. A small group of Protestants, most notably the Presbyterians Concerned for Jewish and Christian Relations and the National Christian Leadership Conference for Israel, have opposed this stance, together with evangelical denominations who, on the whole, do not see these steps as an appropriate church response to the quest for stability in Israel-Palestinian relations. The wcc in addition has called for a return to pre-1967 borders and for an unlimited right of return for "Palestinian refugees."

Despite Israel's efforts, both in resuming serious negotiations with the Palestinian Authority and the withdrawal from Gaza, there has been no significant change in the wcc's position.

PROTESTRABBINER ("Protest Rabbis"), phrase coined by Theodor *Herzl (in an article in *Die Welt*, 1, no. 7 (July 16, 1897)), as a designation for the five German rabbis who had signed a trenchant protest letter against Zionism and the Zionist Congress in the name of the German Rabbinical Association. This association comprised two opposing wings – Orthodox and Reform (liberal) – united in their opposition to Zionism. Their attitude as formulated in the protest letter contained three postulates: the intention to establish a Jewish state in Palestine contradicts the messianic destiny of Judaism;

Judaism obligates all her believers to be faithful to their native land, serving it as best they can; philanthropic support for agricultural settlers in Palestine is permissible, since it is not connected with the establishment of a Jewish national state. The letter closes with the assertion that love for one's country obligates all those who care for Judaism to shun Zionism and in particular the Zionist Congress.

It was mainly because of this letter that the first Zionist Congress was held in Basle rather than in Munich, as was originally planned. The letter also aroused an unusual amount of agitation because of its hints about the Zionists' unfaithfulness to Germany. Herzl severely criticized the signatories (two Orthodox rabbis – M. Horowitz of Frankfurt and A. Auerbach of Halberstadt – and three liberals – S. Maybaum of Berlin, J. Gutmann of Breslau, and K. Werner of Munich) – and a great number of Zionist rabbis, Orthodox, and liberal, wrote letters and articles condemning the "protest rabbis." The protest letter was endorsed, however, by the general assembly of the Rabbinical Association, convened in Berlin a year later (July 1–2, 1898), with only one rabbi – Selig Gronemann (Samuel *Gronemann's father) – voting against it. Seventy years after the publication of the protest letter, a survey discovered that almost all the children, grandchildren, and great-grandchildren of the "protest rabbis" had settled in Israel.

[Getzel Kressel]

***PROUDHON, PIERRE JOSEPH** (1809–1865), French Socialist and anti-Jewish theorist. For Proudhon, the Jew was the "source of evil" as "incarnated in the race of Shem" (*Césarisme et christianisme*, 1 (1883²), 139). He accused the Jews of "having rendered the bourgeoisie, high or low, similar to them, all over Europe" (*De la justice dans la Révolution et dans l'Eglise* (1858), 458). In his "diary," published posthumously, he called them an "unsociable race, obstinate, infernal... the enemy of mankind. We should send this race back to Asia, or exterminate it" (*Carnets*, 2 (1961), 23, 337). Proudhon's unremitting hatred of the Jews was probably influenced by *Bonald and by *Fourier, but above all by his own xenophobic passion for France, which he saw as "invaded by the English, Germans, Belgians, Jews," and other foreigners (*France et Rhin* (1867²), 258). In the France of the first half of the 19th century, Proudhon was the mainstay of a grass-roots socialism, which has been seen as an early version of National-Socialism.

PROUST, MARCEL (1871–1922), French novelist. Proust was born in Paris to Adrien Proust, a successful non-Jewish physician, and Jeanne (née Weil), a member of an old Alsatian-Jewish family. Through his mother, Proust was related to the eminent statesman Adolphe *Crémieux and to the wife of Henri *Bergson, whose theories of time and memory were

a possible influence on him. By 1893 it became obvious that Proust's delicate health would not allow him to follow any profession, and he thereafter devoted himself to writing and to the pursuit of social advancement. His wealth and personal qualities gave him an entrée into the high society that was to form the background to his literary works. He became a contributor to literary reviews, helped to found the short-lived *Le Banquet* (1892) and in 1896 published two books – *Portraits de peintres*, a volume of poems, and *Les Plaisirs et les jours*, a collection of poems, stories, and sketches. Proust's outstanding work, *A la Recherche du temps perdu* (15 vols., 1913–27), one of the masterpieces of 20th century literature in its representation of the nature and texture of memory and its evocation of *fin de siècle* French society, consists of seven parts: *Du côté de chez Swann* (1913); *A l'Ombre des jeunes filles en fleurs* (1918); *Le Côté de Guermantes* (1920); *Sodome et Gomorrhe* (1921); *La Prisonnière* (1923); *Albertine disparue* (1925); and *Le Temps retrouvé* (1927). Though not strictly autobiographical, the novel cycle contains much material based on personal recollections and encounters. During the last 17 years of his life he was an invalid, and spent most of his time locked up in his Paris apartment, feverishly working on his manuscripts and revising his published work. Raised as a Catholic, Proust alludes to his Jewish ancestry in his writings, describing his mother and maternal grandparents, and mentioning his grandfather's practice of placing a pebble on his parents' grave. In *Du côté de chez Swann*, his grandfather admits a preference for his Jewish friends and Proust himself remained on the closest terms with Jews such as Léon *Brunschvicg, and the convert Daniel *Halévy. He always retained some Jewish sympathies, and it was he who persuaded Anatole France to intervene in the *Dreyfus Affair. *A la recherche du temps perdu* contains three major Jewish characters: the actress *Rachel; the aggressive unsympathetic intellectual Albert Bloch; and the assimilated Charles Swann, a member of the exclusive Jockey Club, who has been seen as Proust's own alter ego. The snobbishness of Proust's Jewish characters masks their basic insecurity and, like his creator, Swann finally discovers his identity when he sides with Dreyfus and detaches himself from high society. The contrasting titles of *Du Côté de chez Swann* ("the Side of Swann") and *Le Côté de Guermantes* ("the Side of Guermantes") reflect the conflicting Jewish and non-Jewish sides of Proust's own heritage. Other works published after his death include the fragmentary novel, *Jean Santeuil* (3 vols., 1952), and the critical study *Contre Sainte-Beuve* (1954).

C.K. Scott Moncrief produced the first English translation of *A la recherche du temps perdu* in the 1920s under the title *Remembrance of Things Past*, reworked by Terence Kilmartin and subsequently revised by D.J. Enright as *In Search of Lost Time*. Pléiade published its second, definitive French edition in 1987–89. *Correspondance de Marcel Proust* appeared in 1970–93 in 21 volumes (ed. Philip Kolb).

[Georges Cattavi]

PROVENÇAL, ABRAHAM BEN DAVID (16th century), scholar of Mantua. He was the son of David b. Abraham *Provençal. Abraham was the teacher of Azariah dei Rossi and Abraham Portaleone, who refer to him in terms of the highest praise and make mention of his extensive knowledge of Torah and Talmud, Latin, philosophy, and medicine. The titles of doctor of philosophy and doctor of medicine were conferred upon him, and from 1563 he started to become widely known as an outstanding physician. At the same time he served as rabbi in various Italian towns, including Ferrara and Mantua. With his father, he planned, in 1564, the founding of a university for the study of Judaism and the general sciences. Both David and Abraham Provençal belonged to a group of Italian scholars who aspired toward a beneficial merger between the curricula of Jewish religious studies and of general knowledge in order to strengthen religious education among Jews and to minimize the influences of general education.

Roth, *Jews in the Renaissance* (1959), 42f., 247f., 254, 331; S. Simonsohn, in: *KS*, 37 (1962), 106, 115, 118f.; M.A. Shulvass, *Hayyei ha-Yehudim be-Italyah bi-Tekufat ha-Renaissance* (1955), 239f.

[Yehoshua Horowitz]

PROVENÇAL, DAVID BEN ABRAHAM (b. 1506), rabbi of Mantua, preacher, and linguist. He was the brother of Moses *Provençal. Provençal had the idea of establishing a Jewish university in Mantua because he feared a decline in the study of Torah in Italy after the burning of the Talmud. In 1564 he addressed an appeal on this subject to the Italian communities (later published in *Ha-Levanon*, 5 (1868), 418f., 434f., 450f.). According to his plan the curriculum was to include the written and oral law, philosophy, Hebrew grammar, Hebrew poetry, Latin and Italian, grammar, medicine, and astronomy. There are differences of opinion as to the extent to which the proposed program was carried out. The traditional view is that many of the fundamental points were implemented, even though the atmosphere of intolerance on the part of the Catholic Church toward the Jews of Italy undoubtedly served to hinder the fulfillment of the university program.

Provençal was the author of *Ir David*, a commentary on the Pentateuch, and a commentary on the Song of Songs; *Dor Haflagah*, on the Hebrew words adopted in foreign languages;

and *Migdal David*, on Hebrew grammar. All three books have been lost, though they were seen by Azariah dei Rossi. Provençal's defense of Philo against Azariah dei Rossi's criticisms is not extant either. His commentary to *Avot* has been preserved in manuscript (N. Weisz, *Kataloge... D. Kaufmann* (1906), no. 131). He also proofread the Venice 1565 edition of the *Paḥad Yizḥak*.

[David Tamar]

PROVENÇAL, JACOB BEN DAVID (15th century), scholar of France and Italy. It is probable that Jacob was the ancestor of the Provençal (Provenzale) family that settled in Mantua in the 16th century. He resided first in Marseilles, where he engaged in maritime trade, but subsequently went to Naples, where he is mentioned in c. 1480 as one of its rabbis.

It was from Naples that he wrote a letter to Messer David b. Judah *Leon of Mantua, in which he expressed his opinion on the value of secular studies, particularly medicine (see *Divrei Ḥakhamim* (1849) edited by Eliezer Ashkenazi). He gave an approbation for the *Agur* of Jacob Baruch b. Judah *Landau which appears in the Rimini edition of 1526. He also seems to have written a commentary on the *Song of Songs which was published together with the commentaries of *Saadiah Gaon and Joseph ibn *Kaspi in about 1577.

BIBLIOGRAPHY: Ghirondi-Neppi, 215; Gross, *Gal Jud*, 383f.; M.A. Shulvass, *Ḥayyei ha-Yehudim be-Italyah bi-Tekufat ha-Renaissance* (1955), 75, 142, 238; C. Roth, *Jews in the Renaissance* (1959), 43n.

[Yehoshua Horowitz]

PROVENÇAL, MOSES BEN ABRAHAM (1503–1575), rabbi. He is sometimes referred to as Moses da Rosa from the town near Vicenza in which he was apparently born. Brother of David *Provençal, Moses was considered one of the greatest talmudists and one of the most illustrious scholars of Italian Jewry in the Renaissance period. For many decades he was rabbi of the Italian community of Mantua, which therefore became a center of talmudic study. Rabbis turned to him from all over Italy and beyond with halakhic problems. With the Catholic Counter-Reformation a sociocultural ferment was set off in Italy, which spread even to the ghettos, with the result that zealous rabbis began to persecute such liberally minded scholars as Moses. Matters reached a head when Moses introduced a new formula for the **Havdalah* when a festival immediately followed the Sabbath. The innovation so aroused the wrath of Meir *Katzenellenbogen of Padua and Moses Basilea that they secured his expulsion from office, although for some unknown reason they later repealed the ban. Another ruling, in which he invalidated Samuel Venturozzo's divorce of

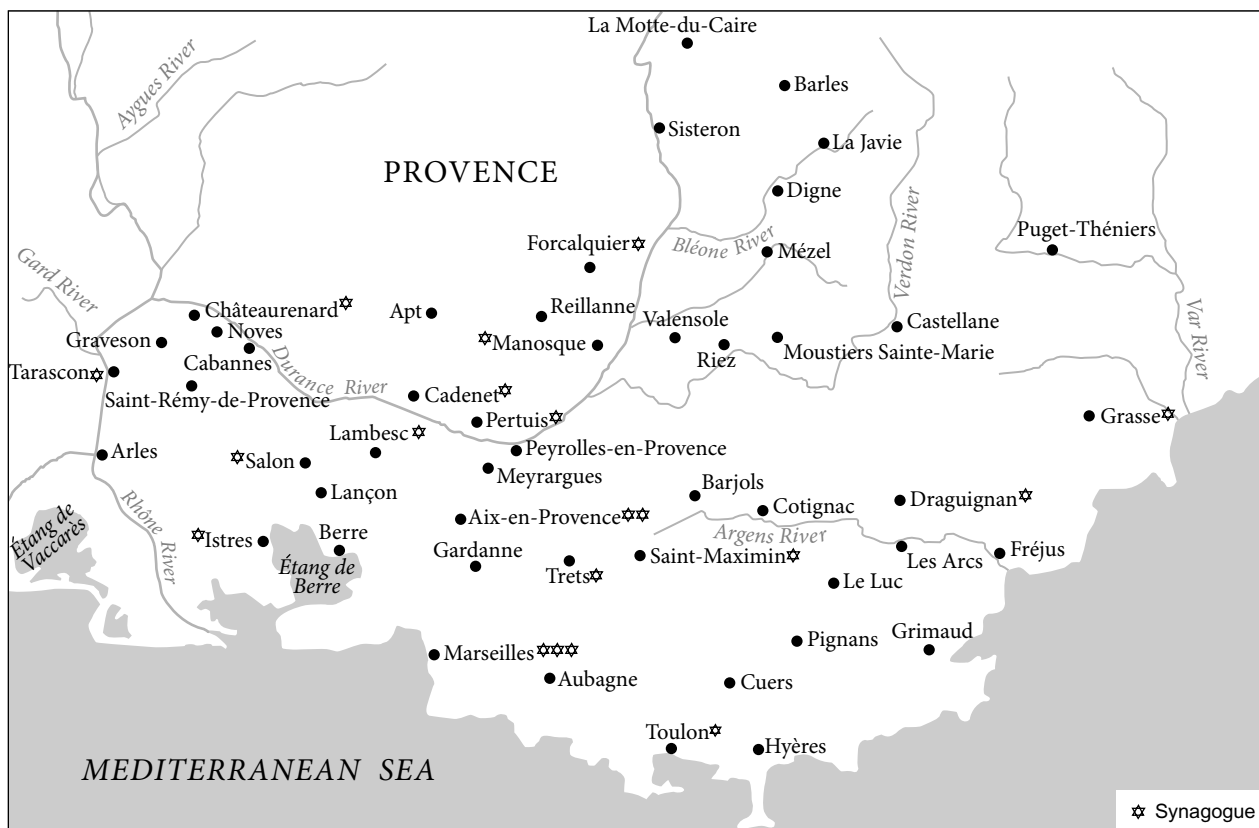

his wife, the daughter of Joseph Tamari, on the grounds of its having been given under duress – brought down upon him the censure of many Italian rabbis. He appealed with the help of the Court impresario Judah Leone *Sommo to Duke Guglielmo, who granted him a hearing before an impartial rabbinical tribunal. In 1566 he was banned by the rabbis of Venice from holding office for three years. Rabbis in Turkey and Greece also associated themselves with the ban, and even the scholars of Safed entered into the controversy. Moses *Trani supported the excommunication, but many of the outstanding rabbis of Safed, including almost certainly Joseph *Caro, supported Provençal. This was apparently the reason that his second dismissal also was not implemented, since he continued to act as rabbi of Mantua until his death. In 1560 he was asked to decide on the permissibility of playing tennis on the Sabbath. In his reply, which sheds much valuable information on the development of the game, he permitted tennis on the Sabbath provided that there was no betting, that rackets were not used, and it was not played at the time of the sermon. The approbation he gave to the Mantua (1558–60) edition of the *Zohar* shows him to have been in favor of the publication of kabbalistic works, which was the subject of a dispute in Italy at the time.

Moses' works include: *Be'ur Inyan Shenei Kavvim*, a dissertation on the Theorem of Apollonius, on two straight lines which never meet, which is discussed by Maimonides and published in the Sabionetta (1553) edition of Maimonides' *Guide of the Perplexed*. His commentary on this dissertation was translated into Italian by Joseph Shalit (Mantua, 1550) and from Italian into Latin with a commentary by F. Barocius (Venice, 1586); *Elleh ha-Devarim*, and a commentary, *Be'ur Zeh Yaẓa Rishonah* (Mantua, 1566), on the Tamari-Venturozzo divorce; *Hassagot* ("notes") to *Me'or Einayim* (Mantua, 1573) of Azariah dei Rossi, published at the end of the book; *Be-Shem Kadmon* (Venice, 1596), abridged rules of Hebrew grammar in poetic form; responsa published in various works. Moses' major literary legacy, responsa, and commentaries on various tractates of the Talmud, and a commentary to Maimonides' *Guide of the Perplexed* are almost entirely unpublished.

PROVENCE (Heb. פְּרוֹבֵנְצָה), region and former province of S.E. France corresponding to the present departments of Bouches-du-Rhône, Var, Basses-Alpes, and parts of Vaucluse and Drôme. In rabbinical literature the name of Provence is frequently applied simultaneously to a part of Languedoc, a practice also adopted by some modern scholars which has given rise to numerous confusions. *Comtat Venaissin and

Principal Jewish settlements in medieval Provence.

the county of *Nice were detached from Provence from the administrative point of view at an early date and are therefore mainly excluded from this survey. Recent archaeological discoveries prove that the settlement of Jews in Provence is of ancient date and goes back to at least the end of the first century c.e. The earliest documentary evidence for the presence of Jews dates from the middle of the fifth century in *Arles. They were to be found in large numbers in *Marseille at the close of the sixth century. It was not until the 13th and especially the 14th century that Jews were to be found in numerous localities of Provence, between 80 and 100, more particularly in *Aix-en-Provence, *Apt, Aubagne, Berre, Cadenet, Castellane, Châteaurenard, Cotignac, *Digne, *Draguignan, Forcalquiers, Fréjus, Grasse, *Hyères, Istres, Lambesc, *Manosque, Moustiers-Sainte-Marie, Pertuis, Peyrolles-en-Provence, Saint Maximin, *Saint-Rémy, Salon, *Tarascon, *Toulon, and Trets. The Jewish population reached a peak on the eve of 1348, when it probably numbered about 15,000.

Regulations governing the activity and administration of the communities in Provence are known from 1215 on, as evidenced from the community of Arles. Later the first sumptuary regulations appear in Provence, as well as charitable confraternities and the introduction of compulsory education. From at least the end of the 13th century an inter-community organization existed, though imposed by the government to facilitate the collection of the tax rendered by Jews to the sov-

ereign of Provence. From the beginning of the 15th century, a special official, the "Conservateur des Juifs," was responsible for their protection and adjudication; the office was coveted by the leading families of Provence, because of the considerable revenue it brought in.

The principal occupation of the Jews in Provence was *moneylending; the rate of interest charged was very low for that period, from 10 to 25%. However they only lent small sums destined for expenses and did not possess the capital required for commercial loans on a large scale; the latter was furnished by Christians of Provence and Languedoc, Italians, and Catalans. Hence, not a single Jew is found among the creditors of King René of Provence (1434–80) although members of the Forbin family of Provence and of the Doria family of Genoa are frequently recorded. Jewish participation in commerce was also dependent on this factor. Jews did not have the capital required to engage in large business upon their own initiative but often acted as brokers. They were therefore involved in most transactions of wheat and wine. They also traded in spices and textiles and the sale or lease of houses. The number of Jewish physicians in Provence was particularly great and in some towns they formed 5% of the Jewish working population; this would have amounted to one physician for every 100 persons if their services had been restricted to the Jewish community, but they also treated Christians, often holding the official function of municipal physician, and were

particularly in demand when epidemics broke out. Their fees were nevertheless far lower than those of their Christian colleagues. In agriculture, Jews in Provence often cultivated vineyards. They also owned and worked fields, as well as market gardens, especially in the vicinity of Digne.

From having been subject to the direct authority of local lords, particularly the bishops, the Jews were placed under the jurisdiction of the count from the time of Charles of Anjou's suzerainty (1246–85). In 1276 he limited the jurisdiction over the Jews which had been assumed by the Inquisition. In contrast, his successor Charles II (1285–1309) issued a regulation in 1294 which reintroduced several anti-Jewish measures of ecclesiastical origin: the employment of Christians by Jews was forbidden; the Jews were barred from public functions; they were compelled to wear the distinctive badge. At the time of the expulsion of the Jews from France in 1306, those of Provence were exposed to vexations of a fiscal nature. In 1310 King Robert (1309–45) ordered his officers to assist the Jews to collect the debts which were due them. He refused to consider a request of several ecclesiastics to expel the Jews, but stringently applied the separationist measures which had been issued against them. Jewish quarters had developed in various towns spontaneously, but from 1341 at the latest, Jewish residence was confined to a separate quarter in the towns of Provence. The first anti-Jewish disturbances on a large scale broke out in Provence in 1331. In 1340 other disturbances occurred in Moustiers and Forcalquiers. The severest anti-Jewish riots of the 14th century took place in 1348, at the time of the Black Death; in Toulon, the community was almost completely annihilated; there were also attacks in Apt and throughout Provence. The loss of life and property suffered by the Jews was so considerable that Queen Jeanne (1343–82) reduced the tax of the Jews of Provence to one-half of its usual rate for ten years. Before the end of this reprieve, new persecutions broke out in several towns in 1355.

The 15th century on the whole was an extremely favorable period for the Jews of Provence. In an edict of 1423, Queen Yolande extended protection to the Jews from arbitrary arrest if there were no reliable witnesses; every accuser of a Jew was required to identify himself by name and provide a surety; a Jew was not to be imprisoned if he could provide bail, unless for crime liable to corporal punishment. King René was known as "the good king," a sobriquet which applied to his treatment of the Jews as well. In 1443 he renewed the edicts of Queen Yolande which had been so favorable to the Jews. In 1454 he authorized the admission of Jews to every category of commerce, trade, and craft, as well as to certain public functions of a fiscal nature. He reduced the size of the Jewish badge and exempted the Jews from wearing it while traveling. He expressed his opposition to instances of forced baptism and even penalized those who had perpetrated such acts.

Within France

In 1481, after the death of René, Provence became united with the Kingdom of France, from which the Jews had been "defini-

tively" expelled in 1394. The privileges of the Jews of Provence were nevertheless renewed in 1482. However, from 1484, anti-Jewish disturbances broke out in Arles, Aix, and Marseilles. This looting and violence was perpetrated by bands of laborers hired for the harvest season from Dauphiné, Auvergne, and the mountain regions of Provence. In Tarascon, where they threatened the Jews, the latter were effectively protected by the officials of the town. Charles VIII, who, although aged only 14, already nominally governed France, took the Jews under his protection. However, a voluntary exodus began and was accelerated when similar disorders were repeated in 1485. On this occasion, the bands of seasonal workers were reinforced by the inhabitants of the town who took part in looting the Jewish quarter. The Jews once more took refuge in the castle. From 1484, one town after another called for their expulsion. In Marseilles, which had also demanded their expulsion, a veritable gang had been organized to rob the Jews, although protests were voiced against their departure. New anti-Jewish disorders broke out in Tarascon in 1489, in Arles before July 1493, and in Manosque in 1495, led by the Carmelites and Franciscans. Louis XI finally issued a general expulsion order against the Jews of Provence in 1498. Not enforced at the time, the order was renewed in 1500 and again at the end of July 1501. On this occasion, it was definitively implemented.

The only alternative to exile offered to the Jews of Provence was conversion to Christianity and a number chose such a solution. However, after a short while – if only to compensate partially for the loss of revenues caused by the departure of the Jews – the king imposed a special tax on them, referred to as "the tax of the neophytes." A roster dating from 1512 enumerates 122 to 164 persons (probably heads of families) subjected to this tax living in 16 important localities of Provence. These converts and their descendants soon became the objects of social discrimination, a situation against which the parliament of Provence reacted in 1542. The campaign of discrimination was nevertheless maintained. A pamphlet published in 1611 attributed the miserable condition of the parliament of Provence to the neophytes. Around the beginning of the 18th century a lampoon entitled "Critique du nobiliare de Provence," which accused a large number of aristocratic families of being of Jewish origin, gained notoriety. To this campaign must also be attributed the adaptation to Provençal of a forgery of Spanish origin: this was a mere literary farce in the form of an exchange of letters between the Jews of Arles and those of Constantinople. The correspondence was supposedly conducted at the close of the 15th century, when the Jews of Provence asked how they were to act in order to avoid expulsion. The Jews of Constantinople, according to this, counseled them to accept baptism while inwardly remaining Jews, stating that once they had attained the powerful positions to which the Christian religion admitted them, they would be able to avenge all the former miseries which they had endured.

During the second half of the 17th century a number of Jews attempted to reestablish themselves in Provence, following the edict issued by the minister Colbert in March 1669

which granted Marseilles the status of a “tax-free port.” However, on complaints of the chamber of commerce of that town the parliament of Provence renewed the prohibitions against the residence of Jews there. Although the parliament authorized their temporary residence during the 18th century to enable them to trade at the fairs, a further attempt by a number of Jews to settle permanently, on this occasion in Aix, was prevented. Before the French Revolution abolished the administrative entity of Provence, the first community outside the southwest, Alsace-Lorraine and Comtat Venaissin, was formed in Marseilles.

For later history see *France.

[Bernhard Blumenkranz]

Cultural Life

The fortuitous geographical circumstance in which Provence was situated between three great intellectual centers – Spain, Italy, and Franco-Germany – had a decisive effect on the development of Provence as a major center for Jewish learning and literature. The incorporation of Provence into the Christian Carolingian Empire severed it from contact with Jews in Muslim lands until the 12th century. As a result the early cultural life of Provence was closely allied with that of the Franco-German center. Unlike their contemporaries in Spain, Provençal scholars focused entirely on the Talmud in the development of their cultural life. Their achievements were of some importance. While scholars in Arles at one time turned to those in Lucca, Italy, for guidance, Torah centers in France, Germany, and Italy often looked to Provence for the solution of halakhic difficulties and exchanged responsa with Provençal scholars. Provençal halakhic traditions were expressed largely in oral rather than in written form. Provence had an important influence on the development of Midrash, both in their creation of new Midrashim and the editing of older ones; of equal importance were its *minhagim*, some merging Babylonian and Palestinian influences.

At the beginning of the 12th century a large part of Provence was incorporated into Catalonia, bringing Provençal scholars into contact with those of *Barcelona. The result was a greater spirit of enlightenment in Provence and the broadening of its intellectual horizon to include interest in the sciences and language. That development was speeded up considerably with the invasion of Spain by the *Almohads in the middle of the 12th century and the consequent flight of many Spanish thinkers to Provence when Jewish centers in Spain were destroyed. The cultural life of Provence was considerably enriched as a result. Major changes took place in biblical exegesis; scholars increasingly engaged in the natural sciences; there was a flowering of interest in poetry, lexicography, grammar, and philosophy. Major effort was expended on the translation of literature from Arabic to Hebrew. Nevertheless, the halakhic knowledge of Provençal scholars was not lost, Ashkenazi influences remained, and the contact with Ashkenazi scholarship was deepened. Through the work of Spanish scholars the influences of Isaac *Alfasi and the Bab-

ylonian *geonim* were deeply felt in Provence; Ashkenazi and Spanish approaches to the *halakhah* found a new synthesis in the work of Provençal halakhists. Unlike Spain it was in Provence that the philosophers and grammarians also wrote works on *halakhah*. Great interest was kindled in mysticism, also, and philosophical knowledge was profound enough to make Provence a major focus of the *Maimonidean controversy. Into the 14th century Provence remained the meeting point of different intellectual systems and an area of considerable intellectual ferment.

Prominent among the scholars of Provence were R. Moses of Arles, a correspondent of Kalonymus of Rome; R. Judah b. Moses of Arles, his son, mentioned by Rashi in *Sefer ha-Pardes*; *Gershon b. Solomon of Arles, author of the metaphysical work, *Sha'ar ha-Shamayim*; *Kalonymus b. Kalonymus (1281–after 1328), translator and author of *Even-Bohan*; Kalonymus b. David b. Todros, 14th-century Bible commentator; *Isaac b. Abba Mari of Marseilles (12th century), author of a commentary to the Code of Alfasi as well as *Sefer ha-Ittur*; Joseph of Marseilles, Bible commentator mentioned by Judah Messer Leon; Aaron b. Abraham b. Isaac and Shem Tov Falcon, the correspondents of Solomon b. Abraham *Adret; Samuel b. Judah, 14th-century scientist and translator of the commentary of Averroes on Aristotle's *Ethics*; Moses de Salon, philosopher and teacher of Kalonymus b. Kalonymus; Bonjudas Nathan Crescas, physician, noted through the medical work, *Sod ha-Sodot*; and *Nissim b. Moses of Marseilles, 14th-century author of a commentary on the Pentateuch entitled *Ma'aseh Nissim*.

PROVERB (Heb. מִשָּׁל, *mashal*; pl. מִשָּׁלִים, *meshalim*). The term “proverb” as a translation of the biblical Hebrew word *mashal* denotes certain specific literary forms, particularly of wisdom literature. Several of these forms are also referred to by the words *pitgam* and *mikhtam* in post-biblical Hebrew (although in the Bible these two terms have other connotations). The literary forms referred to in the Bible by the term *mashal* are of different types, and scholars are divided on the question of the connection between these forms, as well as on the basic meaning of the biblical term *mashal*. In post-biblical Hebrew, *mashal* signifies several poetic forms, i.e., figures of speech or types of ornate style. The nature of these poetic forms, which are found particularly in classical literature, has been elucidated in Western thought. Parallels to these poetic forms are found in the Bible, although its authors were not conscious of them. Discussions of the term *mashal*, therefore, may fall into two sections: the first, devoted to *mashal* in its

broader post-biblical sense, i.e., as referring to poetic forms in general, and the second, to *mashal* in its more limited sense, i.e., in its specific use in the Bible as a concept associated principally with wisdom literature.

Poetic Forms

Many examples of basic figures of speech, such as similes and metaphors, occur in the Bible. These are common in every language, and occur even in daily conversation. The complex literary forms known as *meshalim* in post-biblical Hebrew are structured on these basic figures of speech.

ALLEGORY. An allegory is a metaphor expanded to the dimensions of a narrative in which all the details reflect the actual subject of the metaphor. Examples of allegory in the Bible are to be found, in particular, in Ezekiel's account of the great eagle and the top of the cedar (17:3–12), of the lioness and her whelps (19:2–9), of the vine that was uprooted and withered (19:10–14), of the pot set on fire (24:3–5), of the cedar in Lebanon that was cut down (31:3–17), and of the shepherds who neglected the sheep (34:2–31), as well as others. The description of old age at the end of Ecclesiastes (12:2–6) is not allegorical, but consists rather of a series of metaphors which do not combine to form a narrative. On the other hand, there are expressions which, while they are not allegories, contain the elements of allegory, being extended metaphors which do not reach the proportions of an actual narrative, for example, Balaam's comparison of Israel to a lion (Num. 24:8–9).

PARABLE. A parable is an independent narrative in which a particular detail contains a moral that is applicable beyond the content of the narrative itself. Examples of parables in the Bible are Nathan's tale of the poor man's ewe lamb (II Sam. 12:1–4), and, to some extent, Jehoash's story of the thistle and the cedar in Lebanon (II Kings 14:9). Isaiah's song of the vineyard (5:1–6) may be either an allegory or a parable.

FABLE. A fable is a story whose figures are taken from the animal or vegetable realm and are endowed with human characteristics; it has a moral which is applicable beyond the content of the narrative itself. Examples of fables in the Bible are Jotham's tale of the trees that sought a king for themselves (Judg. 9:8–15), and, to a certain extent, Jehoash's account of the thistle and the cedar in Lebanon (II Kings 14:9). The sayings drawn from the animal realm in Proverbs (6:6–8; 30:24–31) and the descriptions of animals in God's reply to Job (38:39–39:30; 40:15–41:26) cannot be considered fables because they do not contain personification; they are rather didactic statements based on observation of natural phenomena.

Mashal in the Bible

The term *mashal* in the Bible can be elucidated either by means of etymological investigation or by examining its actual usage and combining the features common to all the literary forms to which it refers. These two methods have been accompanied by conjecture and differences of opinion among scholars, and neither has as yet produced any definitive results.

ETYMOLOGY. The root *mšl*, from which the word *mashal* is derived, has two etymologies, both of which have been used to explain the nature of the biblical *mashal*. Some scholars base their interpretation of *mashal* on one meaning of the root *mšl*, which is “resemblance” or “the equating of one thing to another,” found in the Arabic *mithl*, and the Aramaic *mtl*. While some scholars maintain that this meaning indicates the primary tendency of the *mashal* which is to compare and allegorize (Koenig, Eissfeldt, Johnson, et al.), others find it an allusion to the element of sympathetic magic prevalent in the ancient proverb (Godbey). This meaning of the root *mšl* does not occur in Canaanite, but a trace of it is to be found in the Bible: “Upon earth there is not his like” (Job 41:25[33]), although the absolute state of the noun here is *moshel* (לְמֹשֶׁל), not *mashal* (מְשָׁל). The Bible contains examples of *meshalim* that are not allegorical in character but simply songs (see below). Another meaning of the root *mšl* implies government and rule; equivalents are found in Canaanite inscriptions, and in the Bible *mšl* commonly has this meaning. On the basis of this meaning of the root, some scholars seek to explain the primary significance of the *mashal* as the statement of an influential man who is endowed with authority (Pedersen, Bostrom, Bentzen). However, this explanation, too, is forced and cannot be completely reconciled with the examples of *meshalim* in the Bible.

LITERARY FORMS. The following are the literary forms called *mashal* in the Bible:

The Folk Saying. The characteristic features of the folk saying are its widespread use and its pithy, concentrated formulation, which gives pointed expression to popular experience and wisdom. In the Bible, such sayings are prefaced by expressions attesting to their popular character. At times the identical saying occurs in two different passages, further evidence of its widespread use. The saying, “Is Saul also among the prophets?” is quoted in two narratives and is introduced by the statements: “Therefore it became a *mashal*” and “wherefore they say” (I Sam. 10:12; 19:24). A folk saying of the period of the Babylonian Exile, “The fathers have eaten sour grapes, and the children's teeth are set on edge,” is mentioned in two prophetic books (Jer. 31:29; Ezek. 18:2–3). Another contemporary saying current in Palestine is quoted by Ezekiel (12:22–23), while David repeats to Saul the *mashal* of the Kedemites, “Out of the wicked comes forth wickedness” (I Sam. 24:13). There are introductory expressions hinting at other folk sayings quoted in the Bible which, by analogy, may presumably also be regarded as *meshalim*, although they are not called such in the Bible, for example: “Like Nimrod a mighty hunter before the Lord” (Gen. 10:9). There are other statements which have the characteristics of folk sayings even though they are not prefaced by introductory expressions, for example, “For as the man is, so is his strength” (Judg. 8:21) and “Let not him that girds on his armor boast himself as he that puts it off” (I Kings 20:11).

The Literary Saying. The literary saying does not differ in form from the folk saying, except that it is not in common use, being coined by a wisdom writer who uses a fixed formula in which to cast conventional thoughts of his school. Compilations of literary sayings are extant in the second and fifth collections of the Book of Proverbs (10:1–22:16; chs. 25–29) and segments of them are embodied in other collections of that book (see *Proverbs). These sayings inculcate the particular outlook of wisdom literature. Groups of literary sayings have also been incorporated in Ecclesiastes as quotations from its author's wisdom compositions, their conventional contents frequently contradicting Ecclesiastes' essentially pessimistic reflections. One passage attests that Koheleth "also taught the people knowledge, weighing, and studying, and arranging proverbs [*meshalim*] with great care" (12:9), that is, he redacted and composed many *meshalim* that are not included in this book. At times it is impossible to know whether a saying is literary or popular, such as the following statement by Ezekiel concerning Jerusalem: "Everyone who uses proverbs will use this proverb about you saying, 'Like mother, like daughter'" (Ezek. 16:44), and Jeremiah's remark, "What has straw in common with wheat?" (Jer. 23:28). It cannot be determined whether in these passages the prophets are quoting current sayings or coining new ones. Sometimes a literary saying may be adopted and widely used by the people, as is the case with many biblical verses which in the course of time became popular sayings.

The Poetic Utterance. The poetic utterance is also called *mashal* in the Bible. Sometimes such an utterance contains obvious metaphorical and allegorical features, as in Ezekiel's statements about the great eagle and the top of the cedar (17:2–10), the forest of the South (21:1–5), and the pot set on the fire (24:3–11), all of which he calls *meshalim*. Sometimes, although the poetic utterance lacks these features it is still termed a *mashal*. It may have been popular – a sort of folk saying, like the song which the ballad singers uttered on the overthrow of Heshbon by Sihon king of the Amorites (Num. 21:27–30). In some cases the poetic utterance may not even have been popular and yet been called a *mashal*. The first collection in Proverbs (1–9) contains about a dozen poetical-rhetorical units, all of them literary compositions bearing the imprint of the wisdom school; most of these have no allegorical features; their contents are evident and explicit, yet all are called *meshalim* (Prov. 1:1). Two psalms that are referred to as *meshalim* have neither a folk character nor employ allegory – the one speaks of the fate of the wicked (Ps. 49), the other reviews the history of Israel from the Exodus until the building of the Temple in Jerusalem (Ps. 78). Job's last two monologues are similarly called *meshalim*, and from their superscriptions: "And Job took up his *mashal*, and said" (Job 27:1; 29:1), it seems that his earlier utterances during the discussion are also regarded as *meshalim*. At the same time, several poetic utterances that are called *meshalim* do not even seem to belong to wisdom literature, e.g., Balaam's songs (Num. 23:7–10, 18–24; 24:3–9, 15–24); the derisive elegy on the fall of the king of Bab-

ylon (Isa. 14:4–22); and the song of the ballad singers on the overthrow of Heshbon, referred to above.

CONCLUSION. To understand more fully the meaning of *mashal* in the Bible, the features common to all the above-mentioned literary forms may be combined and in this way the essential characteristics of the concept determined. The first, and indispensable, characteristic of the *mashal* is its poetic form. All the *meshalim* quoted or alluded to in the Bible take the form of a song, while the *mashal* and the song (*shir*) are mentioned as analogous concepts in 1 Kings 5:12. Folk sayings of a few words (see above) must thus be understood as versets of poetry. Prose statements are never termed *meshalim* in the Bible. Thus the story of Jotham in Judges 9:8–15 and that of Nathan in 11 Samuel 12:1–4 are not called *meshalim*. The difference between a *mashal* and a song (*shir*) apparently lies in the fact that the song was set to a tune and its recitation accompanied by musical instruments, whereas the *mashal* may have been associated with some melody, but was generally simply declaimed. The wisdom psalm is an exception, however, insofar as it has the form of a *mashal* and yet is at the same time a psalm (Ps. 49:5). Another characteristic of the *mashal* is its rhetorical aspect. It is intended for oral recitation only. Every *mashal* quoted in the Bible is accompanied by a statement indicating that it was, or was supposed to be, uttered aloud. Frequently it is prefaced by the phrase "to take up a *mashal*" (Num. 23:7, 18; 24:3; Isa. 14:4; Micah 2:4; Hab. 2:6; Job 27:1; 29:1). In Ezekiel, the usual phrase employed is "to use [or speak] a *mashal*" (Ezek. 12:23; 16:44; 17:2; 18:2–3, et al.). The Bible says that Solomon "spoke three thousand *mashal*" (1 Kings 5:12). Of the literary compositions assembled in Proverbs and called *meshalim* – the poetic units in the first collection (Prov. 1–9) and the literary sayings in the second and the fifth (10:1–22:16; chs. 25–29) – some bear a clear rhetorical stamp, and all were apparently intended to be declaimed and memorized in the wisdom schools (see *Proverbs). Also characteristic of the *mashal* is its essentially secular nature. It is not the word of God but specifically the product of human "wisdom." A prophetic statement in the name of God, even if in the form of a poem, is never called a *mashal*, unless the prophet is commanded to compose *meshalim*, as in Isaiah 14:4 and in Ezekiel. In such instances, the prophet employs, as it were, his own wisdom and creative talents to proclaim the word of God specifically in the form of a *mashal*. Balaam's *meshalim* are similarly to be understood as the product of his occult science, as the expression of his skill in cursing and blessing (cf. Num. 22:6; Josh. 13:22; see *Balaam). These characteristics lend probability to the view that the *mashal* originated either in wisdom circles, or in those close to it, or in ancient folk wisdom (as distinct from aristocratic wisdom whose compositions have been assembled in the Book of Proverbs), the occurrence of the *mashal* in the prophetic books being explained as the use by the prophets of ready-made formulas. The figures of Balaam and of the ballad singers who on important occasions expressed themselves in *mashal* (Num. 21:27) point to pre-Solomonic times. The figure

of Balaam also suggests that the ancient *mashal* was connected with sorcery and magic, those who practiced them being likewise included in the category of wise men (cf. Gen. 41:8; Ex. 7:11; Isa. 44:25; Ps. 58:6; cf. Isa. 3:3: “the skillful enchanter”). In the course of time the *mashal* apparently developed in several directions. Mention has been made above of the pithy saying and the poetic utterance. Other changes of nuance in the character of the *mashal* are expressed in the Bible by combining *mashal* with another word thus producing hendiadys or parallelism. The words *mashal* and *ḥidah* (“riddle”) in parallelism allude to a *mashal* whose contents are somewhat obscure and for whose comprehension some knowledge and ability are necessary (Ezek. 17:2; Hab. 2:6; Ps. 49:5; 78:2; Prov. 1:6). Accordingly, it may be inferred that the *ḥidah*, too, in particular one which is in the form of a poem and whose solution takes a poetic form (cf. Judg. 14:14, 18), is in essence close to the *mashal*. The combination of *mashal* and *sheninah* (“byword”; Deut. 28:37; 1 Kings 9:7; Jer. 24:9; 11 Chron. 7:20; and in elliptic form in Ps. 69:12) refers to a *mashal* marked by derision and irony. This characteristic is also alluded to in the combination of *’ot*, “sign,” and *meshalim* (Ezek. 14:8) and of *mashal* and *menod rosh* (“shaking of the head”; Ps. 44:15). An example of the derisive *mashal* occurs in Isaiah 14:4–23. Another term used in the Bible to express irony is *melizah*, “taunt,” and hence the combination of *mashal* and *melizah* (Hab. 2:6; Prov. 1:6). Some maintain that the *moshelim*, mentioned by the prophet in Isaiah 28:14, refer to composers of *meshalim*. According to this interpretation, they composed taunting *meshalim*, as is also evident from the verses that follow. The parallelism of *mashal* and *nehi*, “lamentation” (Micah 2:4), alludes to a *mashal* which has the characteristics of an elegy. An example of this type of *mashal* occurs in Isaiah 14:4–23, and to some extent in Numbers 21:27–30. Another possible tendency in the development of the *mashal* is the emphasis on metaphorical and allegorical features, which are the determining characteristics of Ezekiel’s *meshalim* and are found, to a certain extent, in other *meshalim* as well. The verse which says of Solomon that “he spoke of trees, from the cedar that is in Lebanon to the hyssop that grows out of the wall; he spoke also of beasts, and of birds, and of reptiles, and of fish” (1 Kings 5:13 [4:33]) may refer to *meshalim* of an allegorical and fabulous nature. On the other hand, it may simply refer to didactic sayings and poems. It is difficult to assume that originally the allegorical aspect determined the essential character of *meshalim*.

[Menahem Haran]

PROVERBS, BOOK OF (Heb. סֵפֶר מִשְׁלֵי, *Sefer Mishlei*), one of the three “wisdom books” of the Hagiographa, representing the affirmative and didactic element in wisdom (*hokhmah*), in contrast to the radical questioning of Job and Ecclesiastes. In its present form the book appears to have served as a manual for the moral and religious instruction of the young. Comprising materials of various kinds gleaned from the long tradition of wisdom, the book was used in schools by professional sages (cf. Eccles. 12:9–12; Ecclus. 6:23–28). The teacher’s objectives and methods are outlined in Proverbs 1:2–6, namely, cultivation of the mind and training in ethical principles by the use of *proverbs (*mashal*), epigrams (*melizah*), sayings of the sages, and riddles (*ḥidah*) or puzzling questions. The teacher’s basic theme is summed up in the motto with which he begins and ends the introduction to the older materials – “The fear of the Lord is the beginning [or first requirement, chief part] of knowledge [wisdom]” (1:7; 9:10).

Title

In the Masoretic Text the title *Mishle Shelomo ben David Melekh Yisrael* is usually abbreviated *Mishle* (so LXX, Vulg.). Solomon is here named as the traditionally supreme sage and patron of wisdom; this neither proves nor necessarily implies a claim of authorship. According to 1 Kings 5:12–13, Solomon authored 3,000 proverbs, which are said to have addressed the nature of trees and animals, presumably as fables illuminating the behavior of humankind. There are, however, very few examples of this genre preserved in the Book of Proverbs itself (e.g., 6:6–8; 30:24–31). Statements such as Proverbs 20:2, 8, 26 are not such as would come from a king’s own lips. Two divisions of the book are each headed *Mishle Shelomo*, which would be redundant if the title in 1:1 were intended to be comprehensive. Other authors are named in 22:17, 24:23; 30:1; and 31:1. It is therefore probable that the title of the book was taken over and adapted from 10:1 when chapters 1–9 were prefixed to the previously existing materials. The word *mashal*, literally “likeness, comparison” (cf. Akkadian *mašālu*, “to be similar to”), would most obviously refer to proverbial expressions employing similes (e.g., Ezek. 16:44, “like mother, like daughter”). In practice however, *mashal* is applied to a wide variety of compositions characterized by elevated language or rhetorical style, such as prophetic speeches, parables, and even extended series of oaths (e.g. Num. 23:7; Ezek. 17:2; Job 27:1). Indeed, in the Hebrew Bible itself, *mashal* appears alongside and is linked to such disparate designations as *kelalah*, “curse”; lit., “deprecation” (Jer 24:9), *neginah*, “(taunt) song” (Ps. 69:13), *nehi*, “lament” (Mic. 2:4), and *ot*, “sign,” “symbol” (Ezek. 14:8). In Proverbs 10–22:16 and chapters 25–29 the heading *Mishle Shelomo* may have designated the literary form characteristic of these sections, namely, a single-line proverb in poetic parallelism, as distinguished from the half-line or prosaic form of colloquial sayings (cf. 1 Sam. 10:12; 24:14).

The Wisdom Tradition

The cultivation of *hokhmah* as an understanding of the good

and satisfactory life had a long history in ancient Israel. In and of itself, the term has no ethical content, but means simply a special skill or superior ability. The moral and religious element, broadly speaking, is an expansion of its meaning. In Job 38:36 and 39:17 it denotes simply intelligence. The “wisdom” of Bezalel was his expertness as a craftsman (Ex. 35:30–35). The word is used even of the disgraceful cunning of Jonadab (11 Sam. 13:3). In 1 Kings it refers successively to Solomon’s cleverness (2:6), his moral discernment (3:12), his encyclopedic knowledge (5:9), and his special ability as a king (5:21). The wise women of Tekoa and Abel in 11 Samuel 14:2ff., and 20:16ff. are characterized chiefly in terms of their rhetorical skills and mastery of the art of persuasion. The “wise” with whom Isaiah and Jeremiah disputed were powerful courtiers (Isa. 29:13–16; Jer. 9:22). However, wisdom as embracing ethical qualities in personal and social life found expression in the divinely given moral obligations of the covenant people (Deut. 4:5–6), and in the prophetic picture of the ideal king (Isa. 11:1–2). It finally took literary form in the piety of wisdom psalms, e.g., Psalms 1 and 34, of the author of Proverbs 1–9 and of Ben Sira, and in the dogmatism against which the writers of Job and Ecclesiastes revolted (see also *Wisdom).

International Wisdom

Hebrew wisdom was distinctive but not unique, as is recognized in the Bible itself. Solomon’s wisdom is compared to his advantage with that of Egypt and of the people of the East (1 Kings 5:10–11). Edom was famous for its sages (Jer. 49:7; Obad. 8), as was Tyre (Ezek. 28:2ff., 12ff.). Surviving wisdom literature from Egypt and Mesopotamia exhibits the same kind of divergence as between Proverbs and Ben Sira on the one hand, and Job and Ecclesiastes on the other – the first conservative, affirmative, didactic, and practical, the second skeptical of traditional values and radically speculative. The lengthy “instruction” (Eg. *sbʾyt*) addressed by a pharaoh or high official to his son and expected successor was a well attested genre in Egypt from the Old Kingdom on. The oft-repeated warnings in Proverbs 1–9 against the danger posed by the “strange woman” find their parallel in the Instructions of Ani (New Kingdom). The influence of this form has been traced in the admonitory discourses in Proverbs 1–8, and more certainly in 22:17–24:22. The latter has a demonstrable literary connection with the Egyptian *Instruction of Amen-em-ope* (New Kingdom). A late example of the instruction, ascribed to *Onchsheshonqy*, contains many sayings and proverbs of which some recall those of Proverbs, including examples of antithetical parallelism. In Sumerian literature the instruction genre (NA.RI.GA) is attested as early as 2400 B.C.E. in the *Instructions of Suruppak*. This composition, which exists in a number of versions, as well as in an Akkadian translation, includes both positive instructions and prohibitions on a wide variety of subjects. These are introduced, and regularly reintroduced, with the formula “Suruppak gave instructions to his son.” Various kinds of advice offered here, some quite distinctive in content, are likewise found in Proverbs: warnings

against going surety for another (Prov. 6:1–5), involvement in quarrels (Prov. 25:8), drinking beer when administering justice (Prov. 31:4–5), or partaking of “stolen food” (metaphorical; Prov. 9:17). Study of the recensional history of this long-lived Mesopotamian wisdom collection may well have specific application for understanding how the biblical book of Proverbs was composed. Similar to the Sumerian *Instructions of Suruppak* is the later Akkadian composition referred to as *The Counsels of Wisdom*, which in some cases offers the identical advice, but more consistently favors longer, more extensive topical units. The discovery of an Akkadian tablet at Ras Shamra in Syria containing the *Instructions of Shubawilim*, itself related to the more ancient *Instructions of Suruppak*, attests to the availability of traditional Mesopotamian wisdom literature in the Canaanite cultural sphere as early as the 15th pre-Christian century. A millennium later a fifth-century Aramaic papyrus from the Jewish military colony at *Elephantine in Egypt contains the maxims of the famed Assyrian court sage Ahiqar. This collection presents numerous parallels in both content and form to the practical advice offered in the biblical Book of Proverbs. Particularly remarkable is the cluster in one column of the papyrus of close to 10 individual proverbs counseling caution in dealing with kings, whose unlimited power and volatile wrath are fraught with danger for the ordinary courtier. This topical cluster is most reminiscent of analogous groupings on the identical theme in Proverbs 16:10, 12–15; 25: 2–7 (cf. 20:2, 8, 26, 28).

Precepts and Proverbs

Inherent in the biblical idea of wisdom was that it could be taught to those capable of learning (Ex. 35:34). The *peti* in Proverbs 1:4 is “simple,” “untutored”; he is not a “fool” (*evil*) unless he despises learning (1:7). There were two methods of education – the authoritative *musar* (“training, precept”) of the parent and of the teacher in a parent’s role, and *ʿezah*, the “counsel” of the sage and of the teacher as sage. *Musar* is found in Proverbs in peremptory “dos and don’ts” (e.g., 3:25–32; 22:22ff.), and in longer discourses in chapters 1–9 and 30:1–9. *ʿEzah* is expressed in the sentence-long sayings about how life is lived well or badly, which form the substance of the “Solomonic” proverbs in 10:1–22:16 and chapters 25–19. The precept speaks in the imperative mood, the proverb in the indicative, with the occasional variant of a rhetorical question. The one seeks to impose the teacher’s will and knowledge on the student; the other to elicit from him a free and positive response. They have the same objectives of forming the mind, building the moral character, and training the judgment of the pupils (1:2–4). The form of extended instruction differs from that of the shorter precept by including a motive clause indicating the welcome or unwelcome results that would follow from obedience or disobedience respectively. In this it resembles many proverbs describing the character and behavior of men, and thus serving as indirect precepts encouraging virtue and holding up vice to contempt. “A little sleep, a little slumber, a little folding of the hands to rest – and poverty will come upon you

like a robber" (24:33–34) has the same effect as "Love not sleep lest you come to poverty" (20:13). The precept in 25:16 is the equivalent of the saying in 25:27a. Precepts reflect the imperatives of social order and religious values. Proverbs were rules of another kind, pointing to a right order in life which exists or should exist, expressed in the stylistic pattern: "this is like that," "this is better than that," "this results in that." Happy or unhappy consequences of actions occur in accordance with an unseen order of justice. The observations and counsels of the proverbs in 10–22:16 and chapters 25–29 are on two levels of moral and religious understanding. On one level they are exhortations to personal piety and probity, and affirmations that the Lord is master in human affairs and guarantor of the moral order (e.g., 10:3; 11:1; 12:2; 16:1). With these are associated the encomiums on wisdom and wise men, and the identification of the latter with "the righteous" and of fools with "the wicked" (e.g., 10:6–8; 12:1, 15; 13:20; 16:22). On the second level are the more secular sayings, caustic comments on antisocial behavior, and pathetic reflections on "the way things are" (e.g., 13:7; 14:13; 20:14; 26:6–16). Some short colloquial sayings seem to have been recast in verse form, as when an identical saying in 10:15a and 18:11a has been differently supplemented in the second half of the line. In 15:33 and 18:12, what looks like a simple parental admonition has been given different parallel lines. Other sayings possibly of popular origin are 11:2a; 12:4a; 17:14a; 22:8a; 27:7b, 10c. A special type of proverb compares phenomena in a culminating numerical series. "Three things are never satisfied, four never say, 'Enough!': Sheol, the barren womb, the earth ever thirsty for water, and the fire which never say 'Enough!'" (30:15b–16; cf. 30:18–19, 21–31). Since a whole number cannot have an exact synonym, it is paired with the number next lower when used in synonymous parallelism (see *Poetry). The form originated in the effort of early wisdom thinkers to classify phenomena by common characteristics. It is a kind of riddle: "What do such similarities mean for man's understanding of the world about him?"

Structural Outline of the Book

PART 1. Chapters 1–9. Didactic discourses and "wisdom poems."

Title, preface and motto: 1:1–7.

Ten instructional discourses: 1:8–19; 2:1–22; 3:1–12; 3:21–26 + 31–35; 4:1–9; 4:10–19; 4:20–27 + 5:21–23; 5:1–14; 6:20–21 + 23–35; 7:1–27.

Five poems:

(a) the rewards of wisdom: 3:13–20;

(b) personified Wisdom addresses men in rebuke, appeal and self-affirmation: 1:20–33; 8:1–36; 9:1–6 (+ Folly, 13–18).

Precepts, direct or implied: 3:27–30; 5:15–20; 6:1–19, 22; 9:7–12.

PART 2. Chapters 10–22: 16. First Collection of "Solomonic Proverbs."

PART 3. (A): Chapters 22:17–24:22. The "Thirty Precepts" of the Sages; an "Instruction" modeled on the Egyptian *Instruction of Amen-em-ope*.

(B): Chapter 24:23–34. Other Sayings of the Sages; an appendix to (A).

PART 4: Chapters 25–29. Second Collection of "Solomonic proverbs," transmitted by Hezekiah's scribes. Appendixes to the book:

(1) Chapter 30:1–9. The skepticism of Agur, and a believer's reply.

(2) Chapter 30:10–13. Warnings and numerical proverbs.

(3) Chapter 31:1–9. A queen mother's diatribe.

(4) Chapter 31:10–31. Acrostic poem on the Excellent Wife.

Subject Matter

Since none of the main divisions of the book is entirely homogeneous in spite of the clear distinctions from one another, some further comments are called for.

In Part 1 the points where each of the 10 discourses begins are clearly marked, but their extent and possible expansions are less certain. Each opens with an exhortation to learn wisdom because of its value for living. All except no. 2 have as their pivotal point a specific precept, with corresponding promises or threats. In no. 2 the casuist form ("if you... then") replaces the imperative. In nos. 3, 5, and 7 the counsel is positive and general: "learn wisdom, and keep to the right path." In nos. 1, 4, and 6 the pupil is sternly warned against casting his lot with evildoers, and in 2, 8, 9, and 10 against the seductions of adultery. The latter evidently has here both a literal meaning and a metaphorical reference to religious unfaithfulness. A notable feature in nos. 1, 6, 8–10 is the vividness of the descriptions of temptation and the fateful consequences of yielding to it. The poems in 1:20–33, 8:1–36, and 9:1–6 not only conceptualize Wisdom but personify her in striking fashion. Chapter 8, arranged in three strophes and an epilogue, is one of the most remarkable passages in the wisdom literature, picturing Wisdom as YHWH's associate in the creation of the world. This poem appears to be based on the shorter one in 3:13–20, which, however, speaks of Wisdom in the third person. The short poem on Folly in 9:13–18 is a companion piece to that on Wisdom in 9:1–6. Following the eighth discourse, four short warnings against particular vices are inserted, together with a numerical list of hateful sins (4:15–20; 6:1–19). Again in 9:7–9 three proverbs intrude into the context.

Part 2 brings together about 375 single-line metrical proverbs or "wisdom sayings," haphazardly arranged except for one or two small groups on related topics (16:1–15). Some formal differences can be noted between chapters 10–15 and 16–22:16, though the point of division is indefinite and the teaching of both halves of the collection is essentially the same. In 10–15 there is a much higher incidence of antithetical parallels than later; "righteous" and "wicked" are contrasted most frequently in chapters 10–12, and "wise man" and "fool" most often in 12–15. After chapter 15 synonymous and extended parallelism predominates, together with scornful descriptions of the fool. References to YHWH's overruling providence and to di-

vine sanctions on man's conduct are most frequent in 15 and 16. These may have been inserted by the teacher who prefaced 1–9 to the earlier collection of proverbs.

The literary relationship of Part 3 (A) to Amen-em-ope is clear, but difficult to spell out in detail. The structure of the two is the same: a summons to hear “thirty” (*sheloshim*, for MT vocalization *shalishim*) admonitions, a series of extended negative precepts. The first six and the ninth of these have topical and some verbal echoes of their Egyptian counterparts, but in a different order. The most striking verbal correspondence is the counsel against avarice in Proverbs 28:4–5: for wealth “grows wings, like an eagle it flies away into the sky.” Amen-em-ope gives the same counsel but uses the simile “geese” rather than an “eagle.” Because the order of corresponding sections is different, and 21 of the Egyptian precepts have no counterparts in the Hebrew work, it seems that the Hebrew scribe was depending on what he remembered from an earlier acquaintance with the Egyptian work. Part 3 (B) is a brief miscellaneous section attributed like 3 (A) to “the wise men,” that is, to tradition. The first seven verses have enough points of contact with (A) to raise the possibility that they were left over from an earlier or alternative form of (A).

Part 4, the second collection of “Solomonic proverbs,” resembles the first in some particulars and differs in others. It also falls into two parts unmarked in the text, 25–27 and 28–29. Chapter 25 opens with a series of precepts of double length, and chapter 26 has groups of sayings that pillory the fool and the sluggard. Throughout 25–27 precepts and similes predominate, rather than the declarative sentences common in the first collection. The tone also is more secular and less moralizing; the name ΥHWH occurs only once, and then in a supplementary line. The topical unit 27:23–27 is devoted to the seemingly unusual subject of animal husbandry, but similar subject matter appears in the Sumerian *Instructions of Suruppak* and in an Akkadian composition styled *The Counsels of a Pessimist*. This venerable tradition of combining advice on one's behavior together with helpful hints on the care of farm and flock survives in Hesiod's *Works and Days*, Virgil's *Georgics*, and beyond. In 28–29 the resemblance to 10–22:16 is greater both in form and content. Parts 2 and 4 have six proverbs in common, seven others are nearly identical, and four more have identical half-lines. The virtues extolled and the vices held up to scorn are much the same. The four appendices differ markedly from each other and from the rest of the book. In 30:1–9 the challenge of Agur the agnostic is answered (either in dialogue or as a later addendum) by a believer who affirms his faith and adds a humble prayer. In 30:10–33 there are five numerical sayings or riddles, a numbered list of sinners in the same style as 6:16–19, and some miscellaneous proverbs. In 31:1–9 the mother of an otherwise unknown King Lemuel cautions her son against dissolute behavior and neglect of his duties to his people. The fourth appendix is an acrostic poem on the excellent wife; it is remarkable for the light it throws on domestic activities in well-to-do homes and on the managerial responsibilities undertaken by the woman.

Text and Dating

The questions of the text and its dating are interrelated. The Hebrew text is relatively well preserved. The Septuagint seems to have been derived from essentially the same text, in spite of the idiosyncracies of that version. The only significant difference is in the order of some sections, indicating that the text was still not finally fixed in the first century B.C.E. One problem of dating is that an atomistic work, of which so much of Proverbs consists, was peculiarly susceptible to minor expansions. Hence the rare occurrence of Aramaic words may be meaningless for dating. There are no Persian or Greek words, and it is no longer necessary to posit the Greek period on philosophical or theological grounds. The customary post-Exilic dating of the book may have been influenced more than is realized by its association with Ben Sira. The book is composed throughout in classical Hebrew, with the exception of some Phoenicianisms, chiefly in chapter 8, which may have resulted from the use of older sources. Material as early as the time of Solomon may be included in the numerical proverbs of 30:15–31 and many of the more secular sayings. If reliable, 25:1 indicates that older materials were assembled in Hezekiah's reign. The activity of Wisdom teachers in the eighth century B.C.E. is evident in Isaiah (cf. Prov. 19:11–12; 21:2), in the prophet's adoption of a wisdom form for his oracle in Isaiah 28:23–29, and in apparent references to schools (Isa. 28:9–10; cf. 6:9–10). The literary influence of the Egyptian instructions and the optimistic serenity of tone point to a time when concern for individual conduct and education were not crowded out by alarm over national security. However, both older and later materials undoubtedly are included. Although the evidence is inconclusive, the late monarchical period seems as likely as any for the completion of the work in substantially its present form.

Ethical and Religious Teachings

The contents of Proverbs range from purely intellectual observations about natural phenomena, to “secular” comments on how men behave and life's occurrences, as well as a final positive association of right conduct with true wisdom and piety. The teacher's introduction in chapters 1–9 emphasizes the spirit in which the older wisdom materials are to be approached. Virtues and vices which had been discerned in the long experience of the community and by its older sages were still valid. The principal new emphasis is on resisting the temptation to fall into the ways of hardened evildoers and adulterous women. The “wise” and the “fools” have become the “righteous” and the “wicked” in newly composed moralistic couplets, inserted in the Solomonic collections. Whereas in the older wisdom it was asserted on grounds of experience that good conduct generally led to prosperity and its opposite to ruin, the reason for each now is seen to be that “the eyes of the Lord are in every place, keeping watch on the evil and the good” (15:3). In the older parts of the book, wisdom means simply the state of being wise. Its conceptualization begins with the idea in the Solomonic sayings that wisdom

is an inner fountain of life (13:14). The teacher in 1–9 further develops both ideas: The state of being wise is attained by training, but it is also a gift of divine grace (2:1–6), and will act as a personal guide through life. This personification of Wisdom is dramatically enhanced in 1:20–33 and 8:1–31, yet still within the limits of poetic imagery (cf. Ps. 85:11–12). Wisdom here addresses men in her own name and in the guise of a goddess; she is a living power in the order of the world and has been YHWH's associate in its creation. Scholars differ as to whether in 8:22ff. Wisdom has become a full-blown hypostasis of YHWH, or whether it is an imaginative image of what is said in 3:19: "YHWH [His] wisdom founded the world." The structure of the whole passage 8:12–31, when compared to 3:13–20, favors the latter alternative, though the picture may be colored to some degree by mythic language. However, the oft-posit identification of *hokhmah*, "Lady Wisdom," and the Egyptian goddess Maat has yet to be demonstrated beyond a superficial similarity. At the same time, the personification of Wisdom and her characterization as one who is herself not divine but nevertheless "dear to the gods" are found in the Aramaic proverbs of Ahiqar cited above.

[Robert B.Y. Scott / Murray Lichtenstein (2nd ed.)]

PROVERBS, TALMUDIC. The Talmud abounds in proverbs of all kinds. Important sources are the tractates *Avot*, *Avot de-Rabbi Nathan*, *Derekh Erez Rabbah*, and *Derekh Erez Zuta*, and numbers of proverbs occur together in several smaller collections (BK 92a–b; Bek. 17a; et al.), although they are scattered through all rabbinical literature.

Scholarly and Popular Proverbs

The proverbs of scholars are usually introduced with the words, "it was customary for A to say" or "he used to say," and their popular ones by "as the rabbis say." In most cases these proverbs have an ethical and didactic character. The Talmud also contains many popular proverbs which are quoted with the opening words "the proverb says" (in Hebrew and in Aramaic), "they say," "as people say," "the proverb says," "the common proverb says," and in "the language of the people." These popular proverbs are mainly expressed in Aramaic. In many cases there is no clear distinction between scholarly and popular proverbs, and it is then difficult to determine their source. For example, the saying of Rabban Simeon b. Gama-

liel, "One who gives bread to a child must inform its mother" (Shab. 10b), is also cited in the Midrash (Num. R. 19:33) as "a popular proverb." The words "he used to say" merely indicate that a particular scholar quoted it frequently. Thus the saying of Samuel the Younger, "Rejoice not when thine enemy falleth, and let not thine heart be glad when he stumbleth" (Avot 4:19), is a verse from Proverbs (24:17). The dictum of Shammai, "Receive all men with a cheerful countenance" (Avot 1:15), is quoted with a slight variation by Ishmael (3:13). The dictum of Hillel on the Feast of Water Drawing, "Whither I desire to go thither my feet lead me" (Tosef., Suk. 4:2), was originally a popular saying which Hillel applied to God (S. Lieberman, *Tosefta ki-Feshutah*, ad loc.). This is probably why Rashi quotes "walls have ears" as a popular proverb (Ber. 8b), although it is given in the Midrash in the name of R. Levi (Lev R. 32:2; Eccles. R. 10:21). Sometimes contradictory proverbs appear to be directed at one another. An example is found in the ethical dictum, "Be rather a tail to lions than a head to foxes" (Avot 4:15), which contradicts the popular saying, "The proverb says: Be a head to foxes rather than a tail to lions" (TJ, Sanh. 4:10, 22b), and indeed parallels to this popular version are found in Hellenistic literature.

The rabbis spared no effort to introduce beautiful popular proverbs into the world of scholarship. They sought authority for them in early sources, in the Bible and in the tannaitic literature (BK 92a–b), and also derived proverbs from the interpretation of biblical verses, although in these cases it is also possible that the proverb anticipated the interpretation (cf. "From here we see that the ignorant person pushes himself to the front" (Meg. 12b); "When wine enters, counsel departs" (Er. 65a; Sanh. 38a); "Woe is me because of my Creator [*yozer*], woe is me because of my [evil] inclination" (*yezer*; Ber. 61a)).

Proverbs and Halakhah

The sages did not hesitate to utilize the worldly wisdom in the proverbs for halakhic ruling. "Once a man borrowed a cat to deal with mice, but the mice killed the cat. The case came before Ashi for judgment. Thereupon a certain Mordecai, who was present, intervened, quoting Rava: A man killed by women gets neither judgment nor judge," i.e., the cat was itself responsible and the owner can have no claim (BM 97a). They applied the proverb "It is not the mouse that is the thief, but the hole" (Git. 45a) in halakhic discussions. From the ancient, pointed proverb, "An olive's bulk of the paschal offering, yet the rejoicing splits the roof," expressing the popular attitude toward an inflated ceremony, *Hiyya* inferred a *halakhah* in connection with ritual uncleanness (TJ, Pes. 7:10, 35b). The reverse also occurred, namely that the proverb was created through the halakhic ruling, as in the case of a ruling of Akiva expressed in a proverbial form: "You have dived into the depths and brought up only a potsherd" (BK 91a). The rabbis utilized the dictum: "That which made you unclean, did not make me unclean, yet you have made me unclean" as a mnemotechnic chain connecting a collection of *mishnayot* on the laws of ritual defilement (Par. 8:2–7).

Rabbinic Study of Proverbs

The sages engaged in the study of proverbs. Mention has been made of a series of dialogues in which *amoraim* searched for the classical source of popular sayings, and it is worth noting that for one of them (BK 92b) they discovered five possible sources. They also compared the dicta of Erez Israel and Babylon: "Here [in Babylon] they say, 'Tobias sinned and Ziggas was flogged.' There [in Erez Israel] they say, 'Shechem married and Mabgai was circumcised'" (Mak. 11a; i.e., because Shechem – Gen. 34 – wished to marry Jacob's daughter the whole population had to undergo circumcision).

Erez Israel and Babylon

Undoubtedly much use was made of proverbs in Erez Israel; but for some reason the number of them in the Jerusalem Talmud is relatively meager in comparison with those in the Babylonian, and most of those quoted in the Jerusalem Talmud are also found in the Babylonian Talmud.

Translations from Aramaic to Hebrew

In the late Midrashim there occur translations into Hebrew of the Aramaic proverbs in the Babylonian Talmud. At times the translation is inferior to the original. Thus the dictum (BK 92b), "Into the well from which you have drunk water do not throw clods," becomes in the Midrash (Num. R. 22:4), "Into the well... do not throw stones." The Aramaic word for "clod" is more suitable, since it suggests the defiling of the water.

Comparison with Biblical Proverbs

Talmudic proverbs surpass the biblical ones in pungency and appositeness but are inferior in sophistication and poetry. Thus the biblical (Eccles. 10:8), "He that diggeth a pit shall fall into it," parallels, "If a man spits into the air, it will fall on his face" (Eccl. R. 7:9, no. 1), and the verse (Prov. 17:10), "A rebuke entereth deeper into a man of understanding than a hundred stripes into a fool," parallels, "A hint is sufficient for a wise man but a fool needs the fist" (Mid. Prov. 22:15).

Animal Proverbs

The sages made extensive use of the animal world for their proverbs. The miser is compared to "a mouse lying upon the coins" (Sanh. 29b). Of a coward who treats harshly those subservient to him, it says: "One who cannot hit the donkey [lest it kick], hits the saddle" (Tanḥ. Pekudei 4). A warning against women occurs in the saying: "If the dog barks – enter; if a bitch – leave" (Er. 86a; from which Rav exemplified a *halakhah* in the laws of *Eruvin* based upon the difference in a man's relationship to his son-in-law and to his daughter-in-law). Of a weak character it says, "He never controlled two flies" (Deut. R. 1:5).

Stylistic Characteristics

Alliteration occurs in several dicta, such as "A man's character can be recognized in his cup, his purse, and his anger" (Heb. *koso, kiso, ka'aso* – Er. 65b). In some instances the alliteration is somewhat rhymed such as, "He who eats the fat tail [*allita*] must hide in the loft [*alita*], but he who eats cress [*kakule*]

may lie by the dunghill [*kikle*] of the town" (Pes. 114a); and "When a Jew must eat carobs [*haruva*], he repents [*tetuva*]" (Lev. R. 13:4). Ingenious homiletical interpretations of words occur: "Why are some coins called *zuzim*? Because they are removed [*zazim*] from one and given to another. Why are other coins called *ma'ot*, because they signify *mah la-et* [what of the future time?]" (Num. R. 22:8).

Eulogistic Dicta

The Talmud cites dicta uttered by professional mourners. Thus, "if the flame has fallen upon the cedars [the great] what avails the hyssop on the wall!" (the lowly; MK 25b); "Many have drunk the cup of death; many shall drink" (Ket. 8b). Tawiw noted that the Bible and the Talmud contain no derogatory proverbs about deformed persons such as occur in abundance in the sayings of other peoples.

Rabbinic Proverbs in Popular Parlance

Hundreds of rabbinic dicta have found their way into popular usage. In many of them changes have occurred which are worth noting. Very many others originally quoted in a halakhic or theoretical framework have become popular sayings with a meaning different from the original. Thus, "A man may see any leprous signs except his own" (Neg. 2:5), taught originally as a law that a leprous priest must be examined by some other priest, received the popular psychological meaning that no man is objective with reference to himself. The expression *dikdukei aniyut* ("the minutiae of poverty"; Er. 41b), first used of the sufferings of poverty, is used already by Ibn Ezra (Eccles. 12:5) with reference to a forced explanation, i.e., the writer is lacking imagination. "*Damim tarte mashma*," in the original means "the word *damim* [blood] applies to two kinds of blood" and is popularly used to express both "blood" and "money." Hundreds of rabbinic sayings found their way into the spoken language in the form in which they occur in more popular works, such as Rashi's commentary, *piyyutim*, etc. The expression, "The Omnipresent has many agents of death" (Ta'an. 18b), is current among people in the form it occurs in Rashi (to Ex. 16:32): "The Omnipresent has many agents." The dictum, "Four count as if dead: a poor man, a blind man..." (Ned. 64b), is better known in the abridged form of Rashi (to Ex. 4:19): "A poor man is regarded as dead." Akiva's dictum, "No pity may be shown in a lawsuit" (Ket. 9:2), is popularly known by the form in which it occurs in a *silluk* (type of *piyyut*) for the first day of the New Year: "[The Supreme King preserves the world through justice, for] there is no pity in judgment." The changes popularly introduced did not result from ignorance but from didactic grounds whether consciously or unconsciously. These changes gave greater clarity and accuracy to the dicta, furnished a general and abstract form to dicta that needed it, and also added interpretation where necessary. The talmudic dictum, "In the place where penitents stand, the wholly righteous do not stand" (Ber. 34a) was popularly revised into the clearer dictum, "In the place where penitents stand, the wholly righteous are unable to stand," stressing the superiority of the

penitent more clearly than in the original. The statement of Rava (Meg. 16a) that the help given Mordecai was given “not because of the love for Mordecai but because of the hatred for Haman” received a general abstracted meaning in the mouth of the people: “not from love of Mordecai but from hatred of Haman” (a version already found in the *Massekhet Purim* attributed to *Kalonymus b. Kalonymus, ed. by J. Willheimer (1871), 43). The expression “R. Yose always has his reason” (Git. 67a) became through the influence of Rashi, “his justification and reason are with him,” i.e., he always has good reason. During recent years many works have appeared comparing talmudic sayings with those of other peoples (see bibliography) which prove that among cultures and languages far from Erez Israel and Babylonia, such as the Far East, independent proverbs similar to those in the Talmud were common.

[Arie Strikovsky]

PROVIDENCE, in religion and philosophy, God’s guidance or care of His creatures, emanating from His constant concern for them and for the achievement of His purposes. Providence includes both supervision of the acts of men and the guidance of the actors in specific directions. Its object is also to deal out fitting retribution – in order to establish justice in the world, retribution itself often serving as a means of guidance (see below). Hence there is a connection between providence and the principle of *reward and punishment. The origin of the term providence is Greek (πρόνοια, lit. “perceiving beforehand”) and first appears in Jewish literature in the Wisdom of Solomon, 14:3; 17:2.

In the Bible

The basis of the belief in a constant and eternal divine providence is the biblical conception of God. In polytheism there is generally a belief in a fixed “order” of nature, which is above the gods. This “order” serves to some extent as a guarantee that right prevails in the world (this is the Greek θέμις or μοῖρα; the Egyptian *maat*; and the Iranian-Persian *artha*, “truth”). However, in this type of belief the right is, as it were, a product of action (this is also the Buddhist belief in “karma”) and is not dependent on a divine providence with a universal moral purpose. On the contrary, through the use of certain magical acts, man can even overcome the will of the god. In any case, there is a basic belief in fate and necessity. By contrast, the belief in providence is in the first instance a belief in a God who has cognition and will, and who has unlimited control over nature and a personal relationship with all men – a relationship which is determined solely by their moral or immoral behav-

ior. Biblical belief does not deny the existence of a fixed natural order – “the ordinances” of heaven and earth, of day and night (Jer. 31:35–36; 33:25) – but since God is the creator of nature and is not subject to its laws (e.g. Jer. 18:6 ff.), He can guide man and reward him according to his merit, even through the supernatural means of miracles. Such guidance may be direct (through divine *revelation) or indirect – through a prophet or other animate or inanimate intermediaries (“Who maketh His angels spirits; His ministers a flaming fire,” Ps. 104:4; cf. Joel 2:1 ff.; Amos 3:7; Ps. 103:20–22). God’s providence is both individual – extending to each and every person (Adam, Abel, Cain, etc.), and general-over peoples and groups, especially Israel, His chosen people. The guarding and guidance of the Patriarchs (Abraham, Isaac, and Jacob) and their families (Sarah in the house of Pharaoh, Hagar in the desert, Joseph in Egypt, etc.) aimed at the ultimate purpose of creating an exemplary people exalted above all other nations (Deut. 26:18). The whole history of the Israelites, beginning with the Exodus from Egypt, is, according to the biblical conception, a continuous unfolding of divine providence’s guidance of the people as a whole as well as of its individual members in the way marked out for them. Even the sufferings undergone by the people belong to the mysteries of divine providence (cf. e.g., the doctrinal introductions in Judg. 2:11–23; 3:1–8; 6:7–10, 13–17; 10:6–15; 11 Kings 14:26–27; 17:7 ff.).

It can be said that the entire Bible is a record of divine providence, whether general or individual. While the Pentateuch and the Prophets emphasize general, national providence, Psalms and Proverbs are based on the belief that God is concerned with the individual, hears the cry of the wretched, desires the well-being of the righteous, and directs man, even against his will, to the destiny which He has determined for him (“The lot is cast into the lap, but the whole disposing thereof is of the Lord,” Prov. 16:33; “The king’s heart is in the hand of the Lord, as the rivers of water; He turneth it whithersoever He will,” Prov. 21:1; etc.). Prophets (Jeremiah, Ezekiel, Habakkuk) and psalmists (Ps. 9; 71; 77; 88) sometimes question the ways of providence and divine justice, but they ultimately affirm the traditional belief in providence. In the last analysis, this position is also maintained by the author of Ecclesiastes, who otherwise expresses the gravest doubts regarding providence (“But know that for all these things God will bring thee to judgment,” Eccles. 11:9). This is true also of Job, but his doubts and misgivings are confined to the question of a divine providence which rules the universe, and particularly mankind.

The unlimited belief in providence would seem to conflict with the doctrine that man can freely choose good and evil (for which God rewards or punishes him), which is also integral to the biblical world view. This issue was grappled with only in later times, with the development of religious philosophy in the Middle Ages.

In the Apocrypha

In the Apocrypha, too, the belief is widespread that God watches over the deeds of mortals in order to requite the

wicked and the righteous according to their deserts. The suffering of the righteous is but a temporary trial in order that they be well rewarded in the end. Tobit, for instance, for dealing kindly with the living and with the dead is persecuted by the authorities. It appears as if the hand of God, too, was turned against him but his righteousness is rewarded. In the end he is vindicated and is vouchsafed the victory of righteousness. The same applies to the community of Israel – the enemy invariably receives his punishment and the righteous nation is saved, almost unexpectedly. According to 1 Maccabees (9:46), Judah Maccabee urged the people to pray because he knew that God pays attention to prayer (“Now therefore cry unto Heaven that you may be delivered out of the hand of your enemies”). Similarly, the inhabitants of Jerusalem were convinced that their prayer saved them in time of trouble (11 Macc. 1:8). As in ancient times, so too in the time of the Hasmoneans, God continued to save His people by means of angels sent by Him (Heliodorus, who went to desecrate the Temple, fell into a faint at the hand of angels: 11 Macc. 3; angels in heaven hastened to the assistance of Judah Maccabee: *ibid.* 10:29–30). Lysias also realized that the Hebrews were invincible because God helped them (*ibid.* 11:13).

In the concept of providence in the apocalyptic works, particularly in the writings of the *Dead Sea sect, one can detect a tendency toward an important innovation. In these works the idea is expressed that God, who has preknowledge of everything, also decrees everything in advance; both the wicked and the righteous are formed at their creation (“all the sons of light each one to his fortune according to the counsel of the Lord...; all the sons of darkness each one to his guilt according to the vengeance of the Lord,” – Manual of Discipline 1:9–10; “From the Lord of Knowledge, all is and was... and before they came into being he prepared all their thought... and it is unchangeable,” – *ibid.* 3:15–16; “and unto Israel and the angel of his truth [Michael?] [they] are a help to all the sons of light” while “the angel of darkness” rules over “all the dominion of the sons of wickedness,” – *ibid.* 20–24; and see Jub. 1:20 and 2:2). According to Jubilees everything is also written beforehand in the “tablets of the heavens” (3:10). Josephus, too (Ant., 13:171–3, 18:11f.; Wars, 2:119f.), distinguishes between the different sects that arose in the time of the Second Temple, primarily on the basis of the difference between them in the concept of providence. According to him, “the Pharisees say that some things but not all depend on fate, but some depend upon us as to whether they occur or not” (Ant., 13:172). “The Essenes hold that fate rules everything and nothing happens to man without it; while the Sadducees abolish fate, holding that it does not exist at all, that human actions do not occur through its power, and that everything is dependent upon man himself who alone is the cause of the good, and evil results from man’s folly” (*ibid.*; see also *Essenes; *Sadducees; *Boethusians; *Pharisees). If the definitions of Josephus are accurate, one may say that the Sadducees deviated from the biblical concept and believed in providence in general but not in detail; something of the same can be said of the Essenes in

what pertains to their belief in predestination, but judging from the writings found in Qumran, this belief was not without qualifications and exceptions.

In the Talmud

The outlook of the scholars of the Mishnah and Talmud on the nature and purport of divine providence is summarized in the dictum of Akiva (Avot 3:15): “All is foreseen, but freedom of choice is given; and the world is judged with goodness, and all is in accordance with the works.” It is apparent that the first part of this dictum expresses an attempt to reconcile the principle of providence on the one hand with freedom of choice on the other; but it is possible that the idea here expressed is identical with that contained in the dictum: “Everything is in the hand of heaven except for the fear of heaven” (Ber. 33b), which is intended to build a bridge between freedom of choice and the idea of predestination. From various dicta in the Talmud it is possible to infer that the idea of providence during this era embraced not only all men but even all creatures. For the gazelle that is wont to cast its seed at parturition from the top of the mountain, the Holy One prepares “an eagle that catches it in its wings and places it before her, and were it to come a moment earlier or a moment later [the offspring] would die at once” (BB 16a–b); in similar vein is: “The Holy One sits and nourishes both the horns of the wild ox and the ova of lice” (Shab. 107b). Of man it was said: “No man bruises his finger on earth unless it is decreed in heaven” (Ḥul. 7b); and all is revealed and known before God: “even the small talk of a man’s conversation with his wife” (Lev. R. 26:7). Similarly: “The Holy One sits and pairs couples – the daughter of so-and-so to so-and-so” (Lev. R. 8:1; Gen. R. 68:4; and cf. MK 18b), or: “He is occupied in making ladders, casting down the one and elevating the other” (Gen. R. 68:4).

The continuation of Akiva’s dictum (“and the world is judged with goodness”) accords apparently with the traditional outlook of the Talmud. Thus, for example, it was said that even if man has 999 angels declaring him guilty and only one speaking in his favor, God assesses him mercifully (TJ, Kid. 1:10, 61d; Shab. 32a); that God is distressed at the distress of the righteous and does not rejoice at the downfall of the wicked (Sanh. 39b; Tanh., be-Shallah 10) and does not deal tyrannically with His creatures (Av. Zar. 3a); and he sits and waits for man and does not punish him until his measure is full (Sot. 9a).

[Yehoshua M. Grintz]

In Medieval Jewish Philosophy

The treatment of providence (*hashgahah*) in medieval Jewish philosophy reflects the discussion of this subject in late Greek philosophy, particularly in the writings of the second-century C.E. Aristotelian commentator Alexander of Aphrodisias, and in the theological schools of Islam. The Hebrew term *hashgahah* itself was apparently first coined by Samuel ibn Tibbon as a translation of the Arabic word *ʿanāʾyah*. In his *Guide of the Perplexed* (trans. by S. Pines, 1963), Maimonides uses the latter synonymously with *tadbir*, the Hebrew equiva-

lent of which is *hanhagah* (i.e., governance of the world). In most Hebrew philosophical works, however, *hanhagah* designates the universal providence which determines the natural order of the world as a whole, while *hashgahah* is generally used to designate individual providence. For the latter, Judah *Al-Ḥarizi also used the Hebrew term *shemirah* (“safekeeping”), and it should be noted that originally Ibn Tibbon, too, preferred this, as is shown in a manuscript copy of a letter to Maimonides (see below).

*Saadia Gaon deals with the problem of providence in treatise 5 of his *Emunot ve-De'ot* (*Book of Beliefs and Opinions*, trans. by S. Rosenblatt, 1948), whose subject is “Merits and Demerits.” In chapter 1, he identifies providence with the reward and punishment meted out by God to the individual in this world, which is “the world of action”; though, ultimately, reward and punishment are reserved for the world to come. Echoes of the philosophical debate on the problem of providence may be found in other parts of Saadia’s book. Thus, he asks how it is possible that God’s knowledge can encompass both the past and the future and “that he knows both equally” in a single, eternal, and immutable act of knowing (*ibid.*, 2:13). His reply is that it is impossible to compare man’s knowledge, which is acquired through the medium of the senses, with God’s, which “is not acquired by any intermediate cause” and is not derived from temporal facts, but rather flows from His essence. This linking of the problem of providence with that of the nature of God’s knowledge originated with Alexander of Aphrodisias, as did the question of the reconciliation of God’s foreknowledge with man’s freedom of the will. Saadia’s solution to the latter problem is to point out that the Creator’s knowledge of events is not the cause of their occurrence. If that were the case, all events would be eternal, inasmuch as God’s knowledge of them is eternal (*ibid.*, 4:4). Abraham *Ibn Daud devotes an entire chapter of his book *Emunah Ramah* (6:2; ed. by S. Weil (1852), 93ff.) to the problems involved in the concept of providence. Ibn Daud, too, was considerably influenced by Alexander of Aphrodisias, who upheld “the nature of the possible,” thereby allowing for human choice, in opposition to the absolute determinism of the *Stoics. Like Alexander, he limits God’s knowledge to that which stems from the necessary laws of nature through natural causes, to the exclusion of the effects of accident or free will which are only possible. He argues that God’s ignorance of things that come to be as a result of accident or free will does not imply an imperfection in His nature, for whatever is “possible” is also only possible for God, and hence He knows possible things only as possible, not as necessary.

Maimonides deals with the question of providence in light of the philosophic teachings on “governance” (*hanhagah*, *tadbir*), which identify it with the action of the forces of nature (*Guide*, 2:10). He fully discusses *hashgahah* (*anāyah*; *ibid.*, 3:16–24), listing five main views on the matter: those of *Epicurus, *Aristotle, the Ash’arites, the Mu’tazilites (see *Kalām), and, lastly, of the Torah, which affirms both freedom of the human will and divine justice. The good and evil that befall

man are the result of this justice, “for all His ways are judgment,” and there exists a perfect correspondence between the achievements of the individual and his fate. This is determined by the level of man’s intellect, however, rather than by his deeds, so that it follows that only he whose perfected intellect adheres to God is protected from all evil (*Guide*, 3:51). Such a man realizes that governance, providence, and purpose cannot be attributed to God in a human sense, and he will, therefore, “bear every misfortune lightly, nor will misfortunes multiply doubts concerning God... but will rather increase his love of God.” Maimonides argues against Alexander of Aphrodisias and Ibn Daud that God’s knowledge instantaneously encompasses the numerous things subject to change without any change in His essence; that God foresees all things that will come to be without any addition to His knowledge; and that He therefore knows both the possible (“privation,” i.e., that which does not yet exist but is about to be) and the infinite (i.e., individuals and particulars which are unlimited in number). The philosophers, he states, arbitrarily asserted that it is impossible to know the possible or the infinite, but they overlooked the difference between God’s knowledge and human knowledge. Just as man’s intellect is inadequate to apprehend God’s essence, so it cannot apprehend His knowledge (*ibid.*, 2:20).

In his letter to Maimonides (published by Z. Diesendruck in: *HUCA*, 11 (1936), 341–66), Samuel ibn Tibbon calls attention to a contradiction between Maimonides’ treatment of providence in *Guide*, 3:17ff., and his discussion at the end of the *Guide* in chapter 51, where, departing from the philosophical approach that providence is relevant only to the welfare of the soul, Maimonides expresses the conviction that the devout man will never be allowed to suffer any harm. Shem Tov ibn *Falaquera (*Moreh ha-Moreh*, 145–8), Moses ibn *Tibbon, in a note to his father’s letter (ed. Diesendruck, *op. cit.*), *Moses of Narbonne, in his commentary on the *Guide* (3:51), and Efodi (Profiat *Duran), in his commentary on the same chapter, all dwell on this point. Shem Tov b. Joseph *Ibn Shem Tov, in his book *Emunot* (Ferrara, 1556, 8b–10a) and Isaac *Arama, in his *Akedat Yizhak*, take Maimonides to task for having made the degree of providence exercised over man dependent on perfection of the intellect rather than on performance of the commandments. The Karaite *Aaron b. Elijah devotes several chapters of his book *Ez Ḥayyim* (ed. by F. Delitzsch (1841), 82–90) to the subject of providence, and he, too, criticizes Maimonides. Once the position has been taken that God’s knowledge cannot be restricted, the activity of providence likewise cannot be made to depend only upon the degree of development of man’s intellect. Just as God knows everything, so He watches over all things (ch. 88).

Isaac *Albalag, in his *Tikkun De’ot*, discusses providence in the course of his critique of the opinions of *Avicenna and al-*Ghazālī. It is impossible, he contends, to comprehend God’s mode of cognition, but it is possible to attribute to Him a knowledge of things which are outside the realm of natural causation, i.e., free will and chance. God’s knowledge and

providence also provide the subject of a penetrating analysis in the *Milhamot Adonai* of *Levi b. Gershom (treatises 2 and 3), who returns to the Aristotelian position as understood in the light of Alexander of Aphrodisias' commentary. It is inadmissible, he states, that God should know the possible and the numerically infinite, that is, the particulars qua particulars, but He does know all things through the order embracing them all.

In contrast to this view, Hasdai *Crescas argues in his *Or Adonai* (2:1–2) that the belief in individual providence is a fundamental principle of the Mosaic Law, according to which God's knowledge "encompasses the infinite" (i.e., the particular) and "the non-existent" (i.e., the possible) "without any change in the nature of the possible" (i.e., without His knowledge nullifying the reality of free will). Crescas maintains that the biblical and talmudic faith in providence is based on a belief in individual providence. His disciple, Joseph *Albo, also deals extensively with God's knowledge and providence in his *Sefer ha-Ikkarim* (4:1–15), during the course of his discussion concerning reward and punishment.

[Alexander Altmann]

In the Kabbalah

The question of divine providence almost never appears in the Kabbalah as a separate problem, and therefore few detailed and specific discussions were devoted to it. The idea of providence is identified in the Kabbalah with the assumption that there exists an orderly and continuous system of government of the cosmos, carried out by the Divine Potencies – the *Sefirot* – which are revealed in this government. The Kabbalah does no more than explain the way in which this system operates, while its actual existence is never questioned. The world is not governed by chance, but by unceasing divine providence, which is the secret meaning of the hidden order of all the planes of creation, and especially in the world of man. He who understands the mode of action of the *Sefirot* also understands the principles of divine providence which are manifested through this action. The idea of divine providence is interwoven in a mysterious way with the limitation of the area of action of causality in the world. For although most events which happen to living creatures, and especially to men, appear as if they occur in a natural way which is that of cause and effect, in reality these events contain individual manifestations of divine providence, which is responsible for everything that happens to man, down to the last detail. In this sense, the rule of divine providence is, in the opinion of *Naḥmanides, one of the "hidden wonders" of creation. The workings of nature ("I will give you your rains in their season," Lev. 26:4 and the like) are coordinated in hidden ways with the moral causality determined by the good and evil in men's actions.

In their discussions of divine providence, the early kabbalists stressed the activity of the tenth *Sefirah*, since the rule of the lower world is principally in its hands. This *Sefirah* is the *Shekhinah*, the presence of the divine potency in the world at all times. This presence is responsible for God's providence

for His creatures; but according to some opinions the origin of divine providence is actually in the upper *Sefirot*. Symbolic expression is given to this idea, particularly in the *Zohar, in the description of the eyes in the image of *Adam Kadmon ("Primordial Man"), in his two manifestations, as the *Ariḳh Anpin* (lit. "The Long Face" but meaning "The Long Suffering") or *Attikah Kaddishah* ("the Holy Ancient One"), and as the *Ze'ir Anpin* ("The Short Face," indicating the "Impatient"). In the description of the organs in the head of *Attikah Kaddishah*, the eye which is always open is taken as a supernal symbol for the existence of divine providence, whose origin is in the first *Sefirah*. This upper providence consists solely of mercy, with no intermixture of harsh judgment. Only in the second manifestation, which is that of God in the image of the *Ze'ir Anpin*, is the working of judgment also found in the divine providence. For "...the eyes of the Lord... range through the whole earth" (Zech. 4:10), and they convey his providence to every place, both for judgment and for mercy. The pictorial image, "the eye of providence," is here understood as a symbolic expression which suggests a certain element in the divine order itself. The author of the *Zohar* is refuting those who deny divine providence and substitute chance as an important cause in the events of the cosmos. He considers them to be fools who are not fit to contemplate the depths of the wisdom of divine providence and who lower themselves to the level of animals (*Zohar* 3:157b). The author of the *Zohar* does not distinguish between general providence (of all creatures) and individual providence (of individual human beings). The latter is, of course, more important to him. Through the activity of divine providence, an abundance of blessing descends on the creatures, but this awakening of the power of providence is dependent on the deeds of created beings, on "awakening from below." A detailed consideration of the question of providence is set forth by Moses *Cordovero in *Shi'ur Komah* ("Measurement of the Body"). He, too, agrees with the philosophers that individual providence exists only in relation to man, while in relation to the rest of the created world, providence is only directed toward the generic essences. But he enlarges the category of individual providence and establishes that "divine providence applies to the lower creatures, even animals, for their well-being and their death, and this is not for the sake of the animals themselves, but for the sake of men," that is to say, to the extent to which the lives of animals are bound up with the lives of men, individual providence applies to them as well. "Individual providence does not apply to any ox or any lamb, but to the entire species together... but if divine providence applies to a man, it will encompass even his pitcher, should it break, and his dish, should it crack, and all his possessions – if he should be chastized or not" (p. 113). Cordovero distinguishes ten types of providence, from which it is possible to understand the various modes of action of individual providence among the gentiles and Israel. These modes of action are bound up with the various roles of the *Sefirot* and their channels which convey the abundance (of blessing) to all the worlds, in accordance with the special

awakening of the lower creatures. He includes among them two types of providence which indicate the possibility of the limitation of divine providence in certain instances, or even its complete negation. Also, in his opinion, things may happen to a man without the guidance of providence, and it may even happen that a man's sins cause him to be left "to nature and to chance," which is the aspect of God's hiding his face from man. In fact, it is uncertain from moment to moment whether a particular event in an individual's life is of this latter type, or whether it is a result of divine providence: "And he cannot be sure – for who will tell him if he is among those of whom it is said: 'The righteous man is as sure as a lion' – perhaps God has hidden His face from him, because of some transgression, and he is left to chance" (p. 120).

Only in the Shabbatean Kabbalah is divine providence seen once again as a serious problem. Among *Shabbetai Zevi's disciples was handed down his oral teaching that the Cause of Causes, or the *Ein-Sof* ("the Infinite") "does not influence and does not oversee the lower world, and he caused the *Sefirah Keter* to come into being to be God and *Tiferet* to be King" (see Scholem, *Shabbetai Zevi*, p. 784). This denial of the providence of *Ein-Sof* was considered a deep secret among the believers, and the Shabbatean Abraham *Cardozo, who was opposed to this doctrine, wrote that the emphasis on the secret nature of this teaching arose from the Shabbateans' knowledge that this was the opinion of Epicurus the Greek. The "taking" (*netilah*) of providence from *Ein-Sof* (which is designated in these circles by other terms as well) is found in several Shabbatean schools of thought, such as the Kabbalah of Baruchiah of Salonika, in *Va-Avo ha-Yom el ha-Ayin*, which was severely attacked for the prominence it gave to this opinion, and in *Shem Olam* (Vienna, 1891) by Jonathan *Eybeschutz. The latter work devoted several pages of casuistry to this question in order to prove that providence does not actually originate in the First Cause, but in the God of Israel, who is emanated from it, and who is called, by Eybeschutz, the "image of the ten *Sefirot*." This "heretical" assumption, that the First Cause (or the highest element of the Godhead) does not guide the lower world at all, was among the principle innovations of Shabbatean doctrine which angered the sages of that period. The Orthodox kabbalists saw in this assumption proof that the Shabbateans had left the faith in the absolute unity of the Godhead, which does not permit, in matters pertaining to divine providence, differentiation between the emanating *Ein-Sof* and the emanated *Sefirot*. Even though the *Ein-Sof* carries out the activity of divine providence through the *Sefirot*, the *Ein-Sof* itself is the author of true providence. In the teachings of the Shabbateans, however, this quality of the First Cause or the *Ein-Sof* is blurred or put in doubt.

PROVINS, town in the department of Seine-et-Marne, France. The earliest evidence of the presence of Jews in Provins dates from 1201. Concentrated in two streets, Rue de la Vieille-Juiverie and the Rue des Juifs, the Jews rapidly increased in number. They owned at least two synagogues and a cemetery. The importance of the market of the Provins Jewish community is described in the polemic work of Joseph "the Zealot" (*le Zélateur*). The extent of Jewish financial activity in Provins is apparent from the use of a special seal for ratifying documents in business transactions which involved Jews. The town itself, as well as the Jewish community – which disappeared entirely after the expulsion of 1306 – began to decline with the reign of *Philip the Fair and the transfer of the town (which had formerly belonged to *Champagne) to royal authority.

In the early 13th century, the yeshivah of Provins was under the direction of Jacob b. Meir author of a biblical commentary (not preserved) sometimes erroneously attributed to a certain Jacob of Provence. Some medieval remains have been found in a modern house on the Rue des Juifs; these include a hall with ogive vaults, which local tradition claims is the remains of a medieval synagogue.

[Bernhard Blumenkranz]

PRUEWER, JULIUS (1874–1943), conductor. Born in Vienna, Pruewer became a close friend of Brahms during his studies there. He worked as a conductor at Bieltz, in Cologne, and at the Breslau Municipal Theater (1896–1923), where he became director in 1920. At Breslau he gained a high reputation and produced many modern works. He later became professor at the Berlin Hochschule fuer Musik and conducted the popular concerts of the Berlin Philharmonic. In 1933 he left Germany and in 1939 settled in New York where he taught at the New York College of Music.

PRUSINER, STANLEY S. (1942–), U.S. medical investigator and Nobel laureate. Prusiner was born in Des Moines, Iowa, and graduated A.B. (1964) and M.D. (1968) from the University of Pennsylvania. He was trained in scientific methodology in Earl Stadtman's laboratory at the National Institutes of Health in Bethesda (MD) (1968–72) and in neurology at the

University of California, San Francisco (1972–74). From 1974 he was on the staff of UCSF, becoming professor of neurology and biochemistry and the founder and director of the Institute for Neurodegenerative Diseases. His lifelong interest in degenerative neurological diseases was initiated by clinical experience. He showed that certain neurodegenerative diseases of sheep and other species, formerly attributed to a “slow virus” infection, are caused by proteinacious infectious particles lacking nucleic acids, which he called “prions.” Because of Prusiner’s persistence the prion concept, once heretical, is now accepted. Prions cause disease by inducing structural changes in proteins of similar sequence to those found in normal brains. In man, prions cause disease in three ways: through genetic variation in the normal protein, sporadically from unproven causes (Creutzfeldt-Jacob disease), and probably through ingesting prions of other species (new variant Creutzfeldt-Jacob disease). The discovery of a human disease occurring on a genetic or an infectious basis was unprecedented. His discoveries have fundamental implications for other human neurodegenerative diseases, including Alzheimer’s disease. He was awarded the Nobel Prize in medicine in 1997. His many honors include the Gairdner award (1993), the Lasker award (1994), the Wolf Prize from the State of Israel (1996), and membership in the U.S. National Academy of Sciences as well as foreign membership in the Royal Society of London.

[Michael Denman (2nd ed.)]

PRUSSIA (Ger. **Preussen**), former dukedom and kingdom, the nucleus and dominant part of modern united *Germany (1870). The name came to signify a conglomerate of territories whose core was the electorate of *Brandenburg, ruled by the Hohenzollern dynast from the capital, *Berlin.

1300–1740

The order of Teutonic Knights, who ruled East Prussia from the 13th century, in 1309 expressly prohibited Jews from entering their territory. From the 15th century East Prussia was dominated by Poland and became economically dependent on it. As Jews constituted an important section of the merchant class in Poland, East Prussia acquiesced to the presence of Jewish merchants (exporters of furs, leathers, wax, and honey) although prohibiting them from settling and repeatedly threatening them with expulsions, which were rarely enforced. It was only with the complete secularization of the Teutonic order under Duke Albert I of Prussia (1522–77) that two Jewish physicians were allowed to settle temporarily in *Koenigsberg (1538–41). From the 17th century Jews came in ever increasing numbers to the then staunchly Protestant region, where they were welcomed by the ruling circles. In 1664 Moses Jacobson de Jonge of Amsterdam received very favorable commercial privileges (subsequently renewed) in *Memel, where he became the most important merchant, paying more customs dues than any of his Christian counterparts. He became a *Court Jew in 1685 and his sons inherited the function. In Koenigsberg, capital of East Prussia, Jews were permitted to

graduate in medicine from the university in 1658, and Jewish merchants were encouraged to settle soon after. A synagogue was built there in 1680 and a cemetery opened in 1703. The community grew during the 18th and 19th centuries, remaining the economic, social, and religious center of the region. In the latter half of the 18th century Jewish communities were founded in *Elblag, Marienwerder, *Lyck, and elsewhere.

Jews were expelled from Brandenburg in 1573 by Elector Joachim II. The great elector, Frederick William (1640–88), who became absolute master of East Prussia, inherited principalities in Western Germany where Jews had already settled (see *Cleves, Behrend *Levi); subsequently he acquired *Halberstadt and *Minden (1648), and at a later date *Magdeburg and *Halle (1680) where Jews were granted rights of residence soon after the annexation. Frederick William, anxious to repair the havoc wrought by the Thirty Years’ War and influenced by mercantilistic and tolerant ideas, encouraged foreigners to settle on his lands. In 1650 he permitted Polish Jews to trade in Brandenburg for seven years but not to settle there; this privilege was renewed in 1660. Israel Aron, a military contractor and purveyor to the mint (see *Mintmasters) received permission to settle in Berlin in 1663 and became Frederick William’s Court Jew.

The basis for a Jewish settlement, however, was created by the expulsion from Vienna (1670). Through his resident agent in Vienna, Andreas Neumann, the elector, declared that he was not opposed to receiving 40–50 “rich and wealthy persons, prepared to bring and invest their means here”; on May 21, 1671, he permitted 50 families to settle, buy houses and shops, and engage in trade almost unrestrictedly. They could not, however, open a synagogue. The leaders of the small and interrelated group, Benedict Veit and Abraham Ries, and the richer Jews were encouraged to remain in Berlin. Other families settled in the cities of *Brandenburg, *Frankfurt on the Oder, and Landsberg (*Gorzow Wielkopolski) where the first *Landrabbiner, Solomon Kajjem Kaddish, and his successor had their seat. The elector disregarded his subjects’ objections to Jewish settlement, being concerned with the economic benefits he derived from direct taxation of the *Schutzjuden and indirect taxation through customs, tolls, and excise, which the Jews paid at a higher rate. During his reign the Berlin Jewish community grew to 40 families, that of Halberstadt to 86, that of Frankfurt to 43, while 15 families had settled in Pomerania.

His son Frederick I (1688–1713; crowned king of Prussia in 1701) confirmed existing Jewish privileges on his succession; new communities were founded and existing ones grew. A noted collector of gems, Frederick patronized jewel purveyors such as Jost and Esther *Liebmann and Marcus *Magnus. Under his son Frederick William I (1713–40), a generally harsh regime was introduced. On his accession he ordered a thorough inquiry into Jewish affairs, the outcome of which was the law of 1714 restricting to one the number of sons who could inherit their father’s right of residence (*Schutzbrief*); to be granted this right the second son had to possess 1,000 ta-

Major Jewish communities in Prussia in 1871, with historic place names. Based on S. Neumann, *Zur Statistik der Juden in Preussen von 1816 bis 1880*, Berlin, 1884.

ler and pay 50, and the third son twice these amounts. Thus a dominant theme in Prussian-Jewish relations, the attempt to restrict and even to reduce the number of Jews, was formally introduced. In 1717 the king appointed Moses Levin *Gomperz as *Oberaeltester* (“chief elder,” *parnas*) of Berlin and Prussian Jewry, an appointment probably connected with the supervision of the just distribution of the tax load, conducted by representatives of communities and *Landjudenschaften. In 1728 the sum was fixed at 15,000 taler annually, to be reapportioned every five years. In 1730 a new Jewry law was promulgated: the eldest son was now obliged to own 1,000 and pay 50 taler and the second twice these amounts; all were subject to the condition that the number of protected Jews (*Schutzjuden*) in any given locality should not increase. Foreign Jews in possession of at least 10,000 taler were allowed to settle in Prussia. The law also prohibited Jews from engaging in all crafts (except seal engraving) competing with Christian guilds; it prohibited them from dealing in a large number of goods (mainly local produce). *Peddling, in particular, was suppressed. Commerce in luxury wares (expensive textiles, spices, etc.) was permitted, as was moneylending and dealing in old clothes. The law applied not only to Brandenburg but to all Prussian territories, creating uniform conditions for the Jews and defining (in article 24) their juridical relationship to the state. The regular tax load was raised, in addition to extraordinary exactions. Jewish merchants were encouraged to become entrepreneurs and invest in manufacture, particularly of tex-

tiles (silk, ribbons, satin, lace, etc.). These businessmen were granted highly favorable conditions. Thus the king passed on to his son a basically contradictory policy, at the same time mercantilist and anti-Jewish; needing and encouraging Jews for their economic contribution he attempted to restrict their rights and numbers.

From Frederick II to Emancipation

*Frederick II, the Great, enforced his father’s policies even more rigorously. By his conquest of Silesia (1742) his rule extended over a sizable Jewish population; appreciating their economic importance he exempted them from his otherwise obnoxious Jewish legislation. In 1750 Frederick promulgated his *Revidiertes Generalprivilegium und Reglement*, prompted by the results of an inquiry which showed the number of privileged Jewish families in Prussia (excluding Silesia) in 1749 at 2,093, almost double the 1728 figure. The preamble stated that the law was intended to help both Christians and Jews, whose livelihood was being threatened by the increasing number of Jews. It created two types of *Schutzjuden*: an unrestricted number of “extraordinary” ones whose rights could not be inherited, and a restricted number of “ordinary” *Schutzjuden* who could pass on their rights to one son only. As in 1730, Jews were excluded from almost all professions and expressly prohibited from brewing, innkeeping, and farming. Trade in livestock, wool, leather, and most local produce was prohibited; the permitted occupations were moneylending and dealing in

luxury wares and old clothes. The strictures against peddling were made more severe, as were those against beggars. During the Seven Years' War (1756–63) Frederick relied on monetary manipulations effected by Daniel *Itzig, V.H. *Ephraim, and other purveyors to the mint. His armies were provisioned by Jewish military *contractors (supplying horses, grain, fodder, wine, etc). After the war he encouraged a newly created, sparse layer of very wealthy Jews to invest their capital in industry and manufacture. Frederick levied onerous and distasteful taxes. In 1766 he introduced the *Silberlieferung*: 12,000 silver marks to be delivered annually at below face value to the royal mint; the 15,000 marks annual tax (from 1728) was increased to 25,000 in 1768. In 1769 he ordered every Jew to purchase and export a certain quantity of local porcelain (expensive, inferior wares produced by the royal factory) whenever he needed a royal concession or privilege (e.g., for marriage).

During Frederick's reign the Berlin community gradually became preponderant in Prussian Jewry. The *Landrabbinat* was occupied by such leading authorities as David Fraenkel (1742–62), Aaron Mosessohn (1762–71), and Hirschel *Levin. The dual office of *Oberlandes-Aeltester* was successively occupied by elders of the Berlin community, V.H. Ephraim (1750–75), Daniel Itzig (1775–99), and Jacob Moses (1775–92). In Berlin, Breslau, and Koenigsberg the upper strata of the Jews, who were rich and influential, took the first steps toward assimilation, acquiring the *General-Privilegium*, which granted them the rights of Christian merchants (such as freedom of movement and settlement). Through the First Partition of Poland (1772) Prussia's Jewish population had almost doubled, and Frederick feared above all an influx of Jews from the newly annexed province of West Prussia.

Frederick's nephew, Frederick William II (1786–97), inaugurated a period of liberalization and reform in Prussia. As crown prince he had borrowed large sums from Berlin's Jewish financiers. An admirer of *Mendelssohn and *Mirabeau, in the first years of his reign he abolished the porcelain law and repealed the **Leibzoll* for foreign Jews. On May 2, 1791, Daniel Itzig and his family received the first *Naturalisationspatent*, which granted them full citizenship. A year later the *solidarische Haftung* (collective responsibility and liability of the Jewish community for non-payment of taxes and crimes of theft) was abolished. The king nominated a commission to draft a new and liberal Jewry law but due to the procrastination of his counselors, his own hesitations, and his increasing preoccupation with foreign affairs this was never carried out. New problems were created by the Second (1793) and Third (1795) Partitions of Poland, which respectively added about 53,000 and 75,000 Jews to the Prussian realm. New legislation became urgent. Shortly before his death Frederick William II passed a Jewry law for the new territories, which was in some respects more progressive than previous laws. His early death and the conservative nature of his son, *Frederick William III, disrupted all reformatory activity until Napoleon's defeat of Prussia at Jena (1806), when far-reaching reforms were carried out under the leadership of Karl August von *Hardenberg and

Wilhelm von *Humboldt. In 1808 municipal citizenship and offices were opened to all, irrespective of religion.

The decisive step was taken with the promulgation in March 11, 1812, of an edict concerning the civil status of the Jews. The first article declared all legally resident Jews to be full citizens. All occupations were declared open to Jews, as were academic positions. Article 9, however, postponed the question of Jewish eligibility to state offices; the *oath *more Judaico* also remained in force. Marriage to a Prussian Jewess did not bestow citizenship and foreign Jews were prohibited from becoming communal employees. The edict was received with thanksgiving by the elders of the main Jewish communities, Berlin, Breslau, and Koenigsberg. A year later, during the War of Liberation, Prussian Jews expressed their patriotism by volunteering in large numbers (see *Military service). The high expectations of Prussian Jewry were not put to the test until after the Congress of *Vienna, at which Prussia was given back the province of Posen (*Poznan) and received the Rhineland and part of *Westphalia (where Jews had been fully emancipated).

As King Frederick William III had no intention of carrying out the 1812 edict, he repudiated his express promise that volunteers, irrespective of their religion, would be eligible for state offices. On Sept. 18, 1818, Jews were excluded from all academic positions (causing Heinrich *Heine, Eduard *Gans, and others to apostatize); the following January Jewish officials in Westphalia and the Rhineland were dismissed (including Heinrich Marx, father of Karl *Marx). The benefits of the 1812 edict had not been applied to Posen (where the laws of 1750 and 1797 remained in force), while its restrictions were applied to the western territories. Thus the Napoleonic "infamous decree," which by then had lapsed in France, was renewed by Prussia in 1818 to cover the Rhineland for an indefinite period. Prussian Jewry's legal position was encumbered by the coexistence of 22 different legislative systems with the various provinces. The king actively encouraged conversion to Christianity and prohibited conversion to Judaism; between 1812 and 1846, 3,171 Jews in Prussia converted. In addition he closed down Israel *Jacobson's private Reform prayer room in Berlin; on Sept. 12, 1823, he made the minister of the interior responsible for ensuring that "no sects among the Jewries (*Judenschaften*) of my lands be tolerated." The king's policy toward the Jews of Posen province – the historical *Great Poland (where they were 6.4% of the population and 42% of all Prussian Jews in 1816) – was even more restrictive. Severe steps were taken to keep them within the boundaries of the province. In 1833 a new Jewry law was promulgated for Posen; its main feature was the division of the province's Jews into naturalized citizens, whose rights were conditional on their economic, moral, and educational achievements (command and use of German), and the remainder, who remained deprived of basic rights. By 1846, 80% of Posen Jews were still not citizens and one-third of Prussian Jews had not attained that status.

The accession of *Frederick William IV (1840) was accompanied by rising hopes, which were soon dashed when he

took steps to implement his medieval conception of a corporatist “Christian state.” In this crisis Prussian Jewry, led by Moritz *Veit and Ludwig *Philippson, was supported by the liberal majorities in the provincial estates. Nevertheless, with the aid of the upper house and Friedrich Julius *Stahl, the king succeeded in passing the 1847 Jewry constitution which recognized the corporate status of individual Jewish communities. It permitted Jews to occupy “offices not carrying executive, juridical, or law enforcement powers”; at universities all chairs in the humanities were closed to them, as were the senate and rectorate; Jews owning landed estates could not enjoy the rights accorded the gentry. The law, introduced for the benefit of the Jews the king declared, was not applicable to Posen. It had barely been introduced when the 1848 revolution proclaimed the principles of religious freedom and equality for all, reconfirmed in 1869 for the whole North-German Confederation. In practice, however, discrimination in the army, bureaucracy, and university remained the rule.

During the 19th century the geographic, demographic, social, and economic makeup of Prussian Jewry underwent great changes. Their number increased from 123,823 in 1816 to 194,558 in 1840. In 1840 about two-fifths of Prussian Jewry were concentrated in Posen province (where they formed about 6% of the population), and another two-fifths in Silesia, the Rhineland, and West Prussia (where they constituted about 1% of the population). Posen had the largest Jewish community (6,748), with Berlin (6,458) and Breslau (5,714) following. The majority of Prussian Jewry lived in rural and semi-rural conditions; peddling, shop- and innkeeping, commerce, and the livestock trade were the main occupations. In 1816 Prussia contained 48.2% of German Jewry; in 1871, 325,000 Jews were natives of Prussia (69.2% of German Jewry), including the Jews of the recently (1866) annexed territories of *Hanover, *Schleswig-Holstein, *Hesse-Nassau, and *Frankfurt on the Main. Due to internal migration the percentage of Posen Jews had declined proportionately, to 22.8% in 1871, and also absolutely, so that by 1910 only 26,512 remained (about 7.7% of Prussian Jewry). A similar process of depletion occurred in West Prussia. As a result of industrialization and urbanization, Brandenburg (Berlin) attracted a greater proportion of Prussian Jewry, increasing from 6.5% in 1816, to 17.5% in 1871, and 43.9% (151,356) in 1910. In the other provinces, Westphalia, Rhineland, and Silesia, the number of Jews remained proportionately stable while increasing at a regular rate. Demographically, Prussian Jewry reached its peak around 1870–80. The process of urbanization continued, causing small-town communities to remain stable or decline while village communities gradually vanished. By 1925, 60% of Prussian Jewry (342,765) was to be found in the four largest communities and another 15% in communities with more than 1,000 persons.

Prussia within the German Empire

In spite of the noteworthy cultural, economic, and social achievements of Prussian Jews within the new German Empire, Prussia retained a specific conservative, anti-Jewish, so-

cial and political attitude, which found expression in the influence of the Prussian mentality within the empire and in its political parties (see *Bismarck, E. *Lasker, I.D. *Bamberger, and *Central-Verein). Until World War I the majority of Prussian communities were organized within the *Deutsch-Israelitischer Gemeinbund (DIGB). The organization's main difficulties were caused by differences between the numerous small, rural, and needy communities and the large wealthy ones, primarily Berlin. Thus, when a common communal organization did not immediately emerge after the war the Berlin community entrusted Ismar *Freund with organizing the Preussischer Landesverband juedischer Gemeinden. Its opening session (1921) was attended by 110 communities, who soon numbered 656 (96% of Prussian Jewry), making it the largest regional communal organization in Germany. Its charter and activities were modeled on the defunct DIGB; although a Prussian official was present at its founding and it received state subsidies, it was not officially recognized by the government of Prussia.

Throughout the late 19th and 20th centuries the Prussian reactionary mentality found a persuasive anti-Jewish argument in the “*Masseneinwanderung*,” the alleged mass immigration of unwanted East European Jews (*Ostjuden*) into Prussia, particularly into Berlin and the major cities. Their number was greatly magnified by antisemitic propaganda which eventually caused the expulsion of 30,000 Russian Jews, mainly refugees from the 1883 pogroms. In fact, the number of Prussian Jews was decreasing, due to a low birth rate and emigration. After World War I the problem of the unwanted East European Jews again became a political issue; in fact, the majority of these were Jews from Posen, then once more in Poland, who had preferred to be repatriated to Prussia (one-third of c. 45,000 Jews). When the Nazis seized power, H. *Goering was appointed prime minister of Prussia, where he enforced the Nazi anti-Jewish measures (see *Germany).

[Henry Wasserman]

PRUZHANY (Pol. **Prużana**), city in Brest district, Belarus. Situated on the road which leads from Brest-Litovsk to Mos-

cow, it was under Polish rule until 1795; in the third partition of Poland it was incorporated into Russia, and in 1919 regained by Poland until 1939. Jews lived in Pruzhany during the middle of the 15th century and around 1450 there was a *hevra kaddisha* which noted its activities in a register. In 1463 the first synagogue (destroyed by fire in 1863) was erected near the center of the Jewish quarter. In 1495 the Jews of Pruzhany were included in the general expulsion of Jews from Lithuania, but they returned after a few years. In 1563 there were 11 Jewish families and 276 Christian families. Both Christians and Jews earned their livelihood primarily from agriculture and livestock, although there were some engaged in commerce and crafts. In 1588 the town was granted autonomous rights according to the *Magdeburg Law. The rights of the Jews were formally drawn up and ratified by Ladislaus IV in 1644 and subsequently, on several occasions, by his successors. According to these rights Jews were authorized to reside in Pruzhany, to practice their religion and freely engage in their occupations. At the close of the 17th century there were 571 Jews (42% of the population); in 1868, during the period of Russian rule, there were 2,575 Jews (61% of the total), and in 1897 there were 5,080 (of a total population of 7,633). By the close of the 19th century the Jewish community enjoyed a vigorous social and cultural life in which all trends and parties were active. During German occupation (1915–1917) Jews were taken for forced labor, and suffered from a typhoid epidemic. In 1921 the Jewish population was 4,152 (about 57% of the total). With the establishment of independent Poland, Jews also participated in the municipal government. In 1927, 16 of the 24 delegates elected to the administration were Jews. In the elections of the Jewish community in 1928, M. Goldfein, a delegate of the merchants, was elected president. There were in town a Jewish orphanage, an old-age home, a Hebrew and Yiddish schools, and a yeshivah; two weeklies were published.

Distinguished rabbis served in the town. At the close of the 16th century, R. Joel *Sirkes, the renowned author of the *Bah* (*Bayit Hadash*), officiated as rabbi and *rosh yeshivah* for some time. R. *David b. Samuel ha-Levi, author of the *Turei Zahav* (*Taz*) also held the rabbinical office for a brief period. Among the last rabbis of the town, one of the most prominent was R. Elijah Feinstein (1842–1929) who was appointed in 1884. Active in the affairs of Polish Jewry, he wrote *Sefer Halikhot Eliyahu* ("Book of the Demeanors of Elijah," 1932), and a novella on Maimonides which was published in 1929. He was succeeded by his son-in-law R. David Feigenbaum, who perished in the Holocaust.

[Shimshon Leib Kirshenboim]

Holocaust Period and After

Under Soviet rule (1934–41) the Jewish communal bodies were disbanded. Private enterprise was gradually liquidated as merchandise was sold and no new stock made available. Cooperatives were set up for the skilled craftsmen. Educational institutions were reorganized, and a Yiddish-language school set up. The Jewish orphanage was combined with its

Christian-run counterpart and placed under the municipality.

On June 27, 1941, after war broke out between Germany and the U.S.S.R., the Germans entered Pruzhany. They immediately exacted a fine from the Jewish community of 500,000 rubles, 2 kg. of gold, and 10 kg. of silver, to be paid within 24 hours. A Judenrat was set up, first chaired by Welwel Schreiber and later by Yizhak Janowicz, which tried to cope with the emergency. The Germans set up a ghetto on Sept. 22, 1941. Workshops were created in the hope that the economic utility of the Jews to the Germans would forestall deportations. The Judenrat combated the decrees against the Jewish inhabitants, gaining the confidence of members of the community. The ghetto swelled when 4,000 Jews were brought in, 2,000 from Bialystok and 2,000 from towns in the vicinity. In the latter half of 1942 an underground resistance organization was formed in the ghetto. Cells were established, arms acquired, and contacts sought with the partisans on the outside. On Jan. 27, 1943, two Jewish partisans approached the Judenrat to strengthen contact with the underground. Germans caught them there by surprise, but with the help of some of the Judenrat members the partisans escaped. The Judenrat was then charged with collaborating with the partisans. The following day the Germans began the deportation of the 10,000 inmates of the ghetto, 2,500 being dispatched daily to *Auschwitz. Within four days the community was destroyed. Some groups of Jews fled to the forests and joined the Jewish partisans who operated in the vicinity. In the late 1960s there was a Jewish population of about 60 (12 families). The former Great Synagogue was turned into an electric power plant. A mass grave of Jewish victims massacred by the Nazis was repeatedly desecrated and a road was built through its site.

PRYLUCKI, NOAH (1882–1941), Yiddish philologist and journalist, and Polish political leader. Born in Berdichev, Ukraine, he grew up in Kremenets and in Warsaw, and practiced as a lawyer after 1909. Having published a collection of erotic lyrics, *Farn Mizbeakh* (1908), he gave up poetry and devoted himself to journalism and Yiddish philology. He was a pioneer of research into the Yiddish language and helped to classify the various dialects of Eastern, Central, and Western Yiddish. His closest collaborators were the linguist M. *Weinreich, the literary historian Z. *Rejzen, and the folklorist Shmuel Lehman. At the Czernowitz Language Conference of 1908, he fought unsuccessfully for an extreme resolution declaring Yiddish as the national Jewish language. In 1905, together with his father, Zevi *Prylucki, he founded the Warsaw Yiddish daily *Der *Moment*, which existed until the German occupation of Warsaw in 1939. Active in politics from 1916, he was the defender of the impoverished Jews and of the middle-class artisans. He founded the Folkspartei, which fought for Jewish autonomous rights in Poland. In 1918 he was elected as the par-

ty's representative in the Polish Sejm. Besides publishing philological studies, he influenced the modernization of Yiddish orthography, helped to found the *YIVO Institute for Jewish Research, edited YIVO's organ *Yidish far Ale* (1838–1939), and published articles and reviews in *YIVO Bleter*. When World War II began, he fled to Vilna, where he lectured on Yiddish philology until 1941. When the Germans marched into Vilna he was arrested, compelled to classify YIVO's treasures for the Gestapo, and tortured to death.

PRYLUCKI, ZEVI HIRSCH (1862–1942), Hebrew and Yiddish journalist, one of the first members of Hovevei Zion. Born in Kremenets, Ukraine, Prylucki began his journalistic career with a series of critical essays in Hebrew criticizing *Aḥad Ha-Am's "Truth from Erez Israel." From then on he wrote for Hebrew, Yiddish, and Russian-Jewish journals. In 1905 he moved to Warsaw, establishing the first Yiddish daily there, as well as a Hebrew daily, *Ha-Yom*. Both newspapers were of a Zionist and literary character. After several failures, at the end of 1910 Prylucki began to publish the daily *Der Moment*, whose circulation amounted to more than 60,000 copies on the eve of World War I. Prylucki, the editor, wrote the weekly political review. The newspaper was Jewish nationalist in a general sense, giving expression to non-Zionist opinions as well (Folkism, Yiddishim). Prylucki died in the Warsaw ghetto during the German occupation.

[Yehuda Slutsky]

°**PRYNNE, WILLIAM** (1600–1669), Puritan barrister and pamphleteer. Prynne first came to notice through his vehement opposition to the theater. A fierce tirade against the stage coincided, unfortunately for him, with Queen Henrietta Maria's appearance in a court play. After he had been imprisoned in the tower for one year, his ears were struck off.

While in the tower Prynne wrote an essay, published in 1654, entitled *A Briefe Polemical Dissertation*, concerning the "true time of the Inchoation and determination of the Lordsday – Sabbath... that the Lordsday begins and ends in evenings and ought to be solemnized from evening to evening: against the novel errors of such who groundlessly assert that it begins and ends at midnight or daybreaking..." At that time the question of the observance of Sunday was a highly controversial issue between Catholics and Protestants. The Church of England inclined toward the Catholic view, maintaining that Sunday, being essentially the commemoration of the resurrection of Jesus, had no connection with the Jewish Sabbath. This infuriated the Puritans, who insisted that Sunday had taken over the characteristics of the Jewish Sabbath. Prynne

contended that all days in Scripture begin and end at evening, the Sabbath being no exception. Furthermore, the beginning and termination of days is perpetual and was not altered by the resurrection of Jesus in the morning. These points were proved by a wealth of citations from the Bible, the Church Fathers, and subsequent medieval writers, among whom was the Franciscan *Nicholas of Lyra, whom Prynne declared to be a convert from Judaism, possibly because of his knowledge of Hebrew and his use of Rashi. But, as Prynne amply demonstrates, Puritans could admire Judaism while still hating Jews. At the time the sabbatical pamphlet was published, the question of the official readmission of the Jews into England was being discussed, and during the following year Prynne produced yet another pamphlet entitled *A Short Demurrer to the Jewes Long Discontinued Remitter into England, Comprising an Exact Chronological Relation of Their First Admission into, Their Ill Department, Misdemeanours, Condition, Sufferings, Oppressions, Slaughters, Plunders... With a Brief Collection of Such English Laws, Scriptures, as seem strongly to plead and conclude against their Readmission into England, especially at this Season*. The *Demurrer* is an important source for the study of medieval Anglo-Jewish history.

°**PRYSTOR, JANINA**, deputy in the Polish Sejm; wife of Alexander Prystor (1874–1941), premier of Poland from 1931 to 1933. With the growing influence of the reactionary anti-Jewish elements in leading circles after the death of Marshal Piłsudski (1935), Janina Prystor proposed in 1936 that *sheḥitah* should be prohibited, claiming that it contradicted Christian moral and religious principles. The proposal had an obvious economic aim for it would have broken the Jewish monopoly on trade in cattle destined for slaughtering. After a struggle in which the Jews boycotted buying meat and strong objections were voiced by all Jewish circles, the proposal, which would have prevented Jews from eating *kasher* meat, was rejected. After prolonged discussions the government adopted a compromise, allowing limited *sheḥitah* in areas of dense Jewish population and prohibiting it in districts where the Jewish population was less than 3% of the total. Although intended to reduce political tension, the compromise succeeded in breaking the Jewish livestock monopoly.

PRYWES, MOSHE (1914–1998), Israeli physician and medical educator, born in Warsaw, Poland, to a distinguished Jewish family. He studied medicine at the University of Tours, France, from 1931 to 1933 and at the University of Warsaw from 1933 to 1939. In 1939 he was mobilized into the Polish army as a medi-

cal officer and from 1940 to 1945 was a prisoner in the U.S.S.R. As a prisoner, he became the medical director of a 350-bed hospital. From 1945 to 1946, he was head of surgery in the Kherson hospital in Ukraine and later became a chief assistant in the department of surgery, University Hospital, Gdansk, Poland. In Paris, from 1947 to 1951, he headed the medical services of the Union OSE, international Jewish medical organization, and organized preventive and curative services for Jewish communities in Europe, Morocco, Tunisia, and Libya. He immigrated to Israel in 1951, joined the Hebrew University-Hadassah Medical School as assistant dean and later became associate dean (1955), and associate professor and head of the department of medical education in 1965. In 1968, he was appointed vice president, resigning in 1973 to take up his appointment as president of the University of the Negev (now the Ben-Gurion University of the Negev), to devote himself to acting as dean of the Faculty of Health Sciences of the university, as well as director of Health Services for the Negev region on behalf of both Kuppat Ḥolim and the Ministry of Health. Prywes was a delegate to the World Conference on Medical Education and a member of the World Health Organization's Advisory Board on Medical Research. He was chairman of the scientific subcommittee of the France-Israel Cultural Agreement, and was made a Chevalier of the Legion of Honor by the French government for his work in this capacity. He served as editor-in-chief of the *Israel Journal of Medical Sciences*, and edited a number of works, including *Medical and Biological Research in Israel* (1960), *Health Problems in Developing States* (1968; with A.M. Davies), and *Topics in Basic Immunology* (1969; with M. Sela). He was elected senior member of the Institute of Medicine, National Academy of Sciences, U.S., 1983, and in 1990, Prywes received the Israel Prize in life sciences for his pioneering work in medical education. In 1995 he was awarded the Ben-Gurion Foundation's Ben Gurion prize.

[Bracha Rager (2nd ed.)]

PRZEDBORZ (Pol. **Przedbórz**), town in Kielce province, S. central Poland. Jews lived in Przedborz from the time of the town's earliest development. At the beginning of the 15th century, urban population increased when King Ladislaw II Jagello granted the merchants of the town privileges according to the *Magdeburg Law. In the years 1550 and 1570 King Sigismund II Augustus further aided the town's Jews by exempting them from customs duties and certain other payments. In 1595 King Sigismund III restricted their rights to own houses. The restriction was lifted, however, in 1638 when a fire destroyed the town and it had to be rebuilt. A second fire destroyed Przedborz in 1834. The Jewish population increased during the 19th century when Jews established trade relations with markets of the Russian empire. In 1865 about 75% of the town's population were Jews; in 1921 Jews numbered 3,749 (63.6% of the total population).

[Shimshon Leib Kirshenboim]

Holocaust Period

Before the outbreak of World War II, there were about 4,500

Jews in Przedborz. The Jewish community was liquidated on Oct. 9–12, 1942, when all Jews were deported to *Treblinka death camp. After the war, the Jewish community of Przedborz was not reconstituted.

PRZEDBORZ, ḥasidic dynasty founded by ISAIAH OF PRZEDBORZ (d. 1830). He was one of the closest disciples of *Jacob Isaac, Ha-Ḥozeh ("the Seer") of Lublin, and a companion of Jacob Isaac, the *Yehudi ha-Kadosh* ("Holy Jew") of *Przysucha (Pshiska), with whom he studied at the renowned yeshivah of *David Tevele b. Nathan of Lissa (*Leszno). Rabbi in Przedborz from 1788, in 1815 Isaiiah became a ḥasidic *zaddik*. His son, IMMANUEL WELTFREID (1802–1865), officiated as rabbi in Przedborz from 1850, and was famed as a miracle worker. He married the granddaughter of Jacob Isaac Ha-Ḥozeh of Lublin and was a disciple of Dov Baer of Radoshits. His son, ABRAHAM MOSES OF ROZPRZE (d. 1918), became leader of the ḥasidic community after his father's death. He had three sons, EMMANUEL OF LODZ, ISAIAH OF KALISH (Kalisz; both d. 1939), and SOLOMON OF TOMASZOW who perished in the Holocaust.

[Esther (Zweig) Liebes]

PRZEMYSŁ (Pol. **Przemysł**), city in Rzeszow province, S.E. Poland; after the partition of Poland, it passed to Austria (1772–1919), subsequently reverting to independent Poland. In 1939–40 the German-Soviet borderline ran through Przemysl. A Jewish community existed in the city by 1367. In 1542 some 18 Jewish families were living there. The community numbered 1,558 by 1775. A Jew of Przemysl, Moses (Moshko) Shmuhler, was sentenced to death in 1630 following a *Host desecration libel. In 1638 the communities in the vicinity were ordered to pay their taxes through the Przemysl community, and from 1670 Przemysl became a leading community for the region of "Red Russia" within the framework of the *Councils of the Lands. Przemysl Jewry was granted detailed charters of rights by King Sigismund II Augustus (March 29, 1559) and King Stephen Báthory (June 27, 1576) enabling the Jews to trade despite opposition from the municipality. The economic position of Przemysl Jewry declined in the 18th century and the community fell heavily into debt. When in 1772 the community passed to Austrian rule its autonomy was curtailed, and the Jews in Przemysl, like the rest of the Jews in the territories incorporated into Austria, came under the Austrian system of supervision limiting their numbers and marriages (see *Familiants Laws). On the other hand they also benefited from the more favorable Austrian attitudes toward the Jews and legislation concerning them. The Austrian authorities gave support to the *Haskalah movement, directed Jews to attend government schools, and were inimical to *Ḥasidism. Half of the members of the Przemysl city council were Jews. Among

the heads of the Jewish community the most influential was Moshe Sheinbah, an active member of both the municipal and community councils before World War I. The Jewish population numbered c. 5,692 in 1870; 16,062 in 1910 (29.6% of the total population); 18,360 (38.3%) in 1921; and 17,300 (34.0%) in 1931. Wealthy Jews of Przemyśl engaged in the wholesale commerce of wheat and timber; some were purveyors to the Austrian army garrison in the town. Jews also engaged in banking, small- and large-scale industry, and agriculture. A large section of the Jewish population was impoverished.

Among rabbis of Przemyśl in the 19th century Samuel Heller and Isaac Judah *Schmelkes were prominent. In 1875 the Yishuv Erez Israel organization was founded, and from 1897 many Jews in Przemyśl joined Zionist organizations, prominent among them Agudat Herzl. The *Bund, *Agudat Israel, and the *Folkspartei were also active in Przemyśl. H. *Lieberman was active in organizing the Polish Socialist Party (PPS). In World War I Przemyśl was occupied for a short time in 1915 by the Russians. Many Jews then left the city and some were expelled by the Russians.

After the war Przemyśl was incorporated in independent Poland. In the municipal elections of 1928 the Jewish National bloc in coalition with the Polish Sanacja party won 18 seats out of 40; a Jew was elected deputy mayor. In the communal elections of 1928 Agudat Israel gained the majority. In the 1936 elections it was defeated by the Zionists whose representative, Jacob Rebhan, was elected president of the community organization.

[Shimshon Leib Kirshenboim]

Holocaust Period

There were approximately 20,000 Jews living in Przemyśl in 1939. When war broke out that year, many Jews from areas further west took refuge in the city. On Sept. 14, 1939, Przemyśl fell to the Germans and within a few days some 500 Jews, about half of them refugees, were murdered on a trumped-up charge that 12 Germans had been shot by Jews. On September 18 Przemyśl was handed over to the Soviet Union; two days prior to this, the Jews of Zasanie, which remained under German occupation, were expelled to the eastern sector of the city. Under Soviet rule all Jewish communal activities ceased. Jewish artisans were organized in cooperatives; Jews in the professions (except physicians) faced difficulties in finding employment. In April and May 1940, 7,000 Jews were deported to Russia. Most of them were refugees from the western parts of Poland.

Following the German attack on the Soviet Union in June 1941, Przemyśl fell to the Germans on June 28, 1941. Subsequently a Judenrat was set up, headed by Ignacy Duldig. In June 1942 the Germans shot 45 of the Jews from Zasanie. This was followed by the expulsion of 1,000 Jews to the camp of Janowska in *Lvov and the transfer, by Aug. 3, 1942, of 12,500 Jews to *Belzec extermination camp. On Nov. 18, 1942, a further 4,000 Jews were sent to the same camp. Some 10 months later, on Sept. 2–3, 1943, 3,500 Jews were sent to *Auschwitz.

In subsequent months the remaining Jews in Przemyśl – some 2,000 persons – about half of whom had been in hiding, were murdered by the Nazis.

The Jews made an attempt at armed resistance. In April 1943 a group of young Jews went to the nearby forests with the intention of joining the partisans. They were all captured and murdered.

The Soviet army reentered the city on July 27, 1944, and a few days later some 250 Jewish survivors gathered in Przemyśl. A Jewish council was established under the leadership of Mordechai Schatner and later of Zevi Rubinfeld to assist the survivors; in 1947 its activities were limited to religious needs only. Przemyśl Landsmannschaften had been established in Israel and in New York. A memorial book on the Jewish community of Przemyśl has been published (*Sefer Przemyśl*, Heb. and Yid., 1964).

PRZEWORSK, town in Rzeszow province, S.E. Poland. The town was overrun by the Turks in 1498, it endured the invasion of the Swedes in 1656 during the reign of John Casimir, and recovered after 1677 when the Polish *Sejm decided to lend its assistance in its development. From then on it enjoyed economic prosperity. In 1865 its total population was 4,000 and in 1921 it was 3,371 of which 1,457 were Jews. Moses *Sofer (d. 1805), a rabbi of the community, achieved fame in his lifetime and was regarded as a saint after his death. After World War I its library played a prominent role in the cultural life of the Jewish population. After the great fire of 1930 many of the town's Jews were left homeless and dependent on support from charitable institutions. With the increase of antisemitism during the 1930s the community organized a protest campaign and a self-defense group. Elections to the community were held in 1934. No information is available on later years.

[Shimshon Leib Kirshenboim]

PRZYSUCHA, city in Kielce province, S.E. central Poland. The Jewish population of the city increased during the 19th century. In 1865 there were 2,907 inhabitants; this number grew and in 1921, 3,238 inhabitants, including 2,153 Jews (66%) lived in Przysucha. The ancient synagogue, which stood in the town until the Holocaust, testified to the antiquity of the Jewish community. The Jewish settlement became renowned through its *zaddikim*. One such prominent ḥasidic leader, R. Jacob Isaac b. Asher *Przysucha (*ha-Yehudi ha-Kadosh*; see next entry), acquired a world reputation among Jews. Another renowned ḥasidic leader of Przysucha was R. *Simḥah Bunem, the disciple of the *Yehudi ha-Kadosh*. After World War I there was a considerable amount of communal activity. Upon the eve of World War II the Jewish community was headed by Joseph Meisels. Its rabbi was R. Elhanan Fuks.

[Shimshon Leib Kirshenboim]

Holocaust Period

On the outbreak of World War II there were about 2,500 Jews in Przysucha. The Jewish community was liquidated on Oct. 27–31, 1942, when 4,000 Jews from Przysucha and its vicinity were deported to *Treblinka death camp. After the war the Jewish community of Przysucha was not reconstituted.

PRZYSUCHA (Pshishkha), JACOB ISAAC BEN ASHER (ha-Yehudi ha-Kadosh, “the holy Jew”; 1766(?)–1814), ḥasidic rebbe, the founder of Pshishkha Ḥasidism, in Poland. R. Jacob Isaac was born in *Przedborz, Poland, to a rabbinic family. In his youth he was a student of R. David Tevele b. Nathan of Lissa and R. Aryeh Leib Halperin, whom he followed to Apta. His first wife was his confidant until her early death. His second marriage, to her sister Sheindel, the mother of his children, was bitter. He started teaching in the local yeshivah, after which he wandered in poverty, teaching children. It was in Apta that he joined Ḥasidism after becoming acquainted with R. *Moses Leib of Sasov and R. David of *Lelov. The latter became a life-long friend and their children married. It was David of Lelov who influenced him to travel to see to R. *Jacob Isaac Horowitz – “Ha-Ḥozeh” (the Seer) of Lublin – in what would be a decisive event in both of their lives. The Ḥozeh recognized him as his great disciple, and Ha-Yehudi ha-Kadosh accepted the Ḥozeh as his rebbe. It was probably then that he began to be called Ha-Yehudi ha-Kadosh, so that he would not be called by his rebbe’s name. The mutual admiration continued throughout their lives, nevertheless their relationship was tangled and complex.

Ha-Yehudi ha-Kadosh arrived in Lublin at a relatively young age but as a fully developed personality. The Ḥozeh asked him to become a mentor to the young elite students that arrived in Lublin. Soon brilliant youngsters along with older Ḥasidim were looking to him to guide them in their religious life. The very presence of a new charismatic teacher in the Ḥozeh’s inner circle attracted hostility from some of the older disciples who were overshadowed by him, and from the Ḥozeh’s family. A major cause of the opposition was his original religious teaching and leadership, which was in conflict with the Ḥozeh’s.

Under the influence of his surroundings the Ḥozeh’s dealings with him vacillated between intimacy and bitter hostility and even persecution. The schism was inevitable. Ha-Yehudi ha-Kadosh moved to Przysucha to become a rebbe and to found his own school. Some of the most distinguished Ḥasidim of Lublin joined him, among them R. *Simḥah Bunem of Przysucha and R. Menahem Mendel of *Kotsk. Ha-Yehudi ha-Kadosh died in Przysucha as he was in the midst of his ecstatic daily prayers. After his death, R. Simḥah Bunem of Przysucha was recognized by most of his disciples as his successor.

Teachings

The first expressions of Ha-Yehudi ha-Kadosh’s religious orientation can be traced back to his childhood and youth, when he concealed his acts of charity and engaged in diligent Torah

learning and fervent praying which led him to give up praying in a *minyān* as a child. Hiding his deeds should be understood as part of his emphasis on purifying one’s motives and eliminating socially influenced behavior from one’s actions so that they will express the inner-self. An individual should reexamine his intentions to cleanse them, so that they will be truthful. “God’s seal is ‘truth,’ it can not be forged, since if it is forged it is true no more” (*Tiferet ha-Yehudi*, 50). This inner process is the route that leads to repair (*tikkun*). It was in this respect that the religious dispute with the Ḥozeh manifested itself strongly. The Ḥozeh recognized the Napoleonic wars as the “War of Gog and Magog” and understood his religious duty to use kabbalistic means to bring about the redemption. Although the Ḥozeh put all of his weight on Ha-Yehudi ha-Kadosh to join this spiritual endeavor, the latter refused, believing that the road to redemption passes, rather, through personal struggle for perfection.

Humility is the characteristic virtue of a person who truly knows himself, recognizing his own imperfection. At the same time one should not be influenced by social conventions and public opinion: “Each person should have two figs (Yid. *feigen*), after showing one to himself he will not be troubled by others and will be able to show the other to the rest of the world” (*Tiferet ha-Yehudi*, 76). The search for a true path to God’s worship involves critical judgment of religious routine. In this spirit Ha-Yehudi ha-Kadosh understood that there are many routes in the search for God and taught that “all the rules that a person makes for himself to worship God are not rules, and this rule is not a rule either” (*Tiferet ha-Yehudi*, 93). Behaving in this unconventional way, he broke the halakhic rules, delaying the time of his ecstatic prayer, finding that he needed time to prepare for it. This conduct provoked great antagonism and fueled his opponents. His religiosity was both ecstatic and ascetic. He had outstanding physical strength but his intensive, ascetic life exhausted him. He removed himself from earthly desires, in particular eating, sex, and money, aiming at what he viewed as the end of all the *mitzvot* – *devekut*.

The Ḥozeh and other Polish rebbes of his time emphasized their duty to provide the masses with materialistic and spiritual comfort, by conventional means and through miracles. Though Ha-Yehudi ha-Kadosh did not oppose this altogether, he changed the emphasis dramatically, criticizing the ḥasidic leadership of his time. He understood their way as leading Ḥasidism to degeneration and mediocrity – subverting it under its very own principles. He taught that the main role of the rebbe was to guide his disciples in their struggle for spiritual depth, while responsibility lies primarily with the disciple. This teaching suited his followers, an elite group with outstanding mental and spiritual qualities who were willing to sacrifice their material well-being as well as their inner peace for a demanding religious quest.

R. Uri of Sterlisk described Ha-Yehudi ha-Kadosh’s innovation as “worshiping God by unifying Torah learning and praying” (*Imrei Kadosh*, 68). Learning Talmud became central

to the worship of God, as Ha-Yehudi ha-Kadosh taught that “learning Talmud and Tosafot purifies the mind and makes one ready for praying” (*Tiferet ha-Yehudi*, 29), stating that “through the learning of Torah one can attain all spiritual levels” (*Niflaot ha-Yehudi*, 1992, p. 60).

While his innocent mystical religiosity did not spawn successors in Pshishkha Ḥasidism, other aspects of his legacy marked the routes of the diverse branches of Pshishkha Ḥasidism, creating a new ethos in Polish Ḥasidism. This ethos is characterized by: (a) the critical search for truth; (b) a critical attitude to conventions; (c) understanding the rebbe’s main role as challenging his elite followers rather than comforting the masses with miracles; (d) the centrality of studying Talmud for religious growth.

Some of his teachings were collected and published, the earliest almost a hundred years after his death, in *Niflaot ha-Yehudi* (1909), *Tiferet ha-Yehudi* (1912), *Kitvei Kodesh* (1906), and *Torat ha-Yehudi* (1911). His figure stands in the center of Martin Buber’s novel *Gog u-Magog* (1941).

[Yehuda Ben-Dor (2nd ed.)]

PRZYTYK, town near Radom, E. central Poland. In 1936, 90% of its 3,000 inhabitants were Jews. Przytyk became notorious because of the pogrom which occurred there in 1936 and aroused sharp reaction from Jewish public opinion throughout the world. After the death of Marshal *Pilsudski in May 1935, the strength of his followers in the government weakened, and they were unable to check the virulent antisemitism which erupted as a result of reactionary and nationalist pressure from the *Endecja party. A series of bloody riots broke out against Jewish students in metropolitan universities and against small Jewish shopkeepers, who were regarded as competitors by impoverished peasants who had been driven to seek a livelihood in the cities. Anti-Jewish *boycott propaganda was followed by several attacks on Jews, which the authorities took no measures to prevent.

Against this background of tension, a pogrom broke out in Przytyk. In March 9, 1936, when the peasants came to the seasonal fair, they were incited to attack Jewish stallkeepers and even break into Jewish homes; three Jews were killed and 60 wounded. The Jews organized a self-defense group, and in the ensuing clashes one Pole was shot and killed. In the subsequent trial no attempt was made to distinguish between attackers and defenders. The Jew accused of the shooting was found guilty and given a harsh sentence. As a mark of Jewish protest, the Bund announced a general strike starting on March 18, 1936; the majority of Jews in Poland, as well as many Polish workers, joined in the strike.

[Moshe Landau]

Holocaust Period

On the outbreak of World War II there were about 2,500 Jews living in Przytyk (about 70% of the total population). The Ger-

man army entered the town on Sept. 4, 1939, and initiated persecution of the Jews. A decree of March 5, 1941, ordered the immediate evacuation of the Jewish population from Przytyk and about 160 surrounding villages. Their passive resistance prolonged the deportation action for over a month. The Jewish refugees settled in about 30 different places in the Kielce province, but within a short time were again ordered to concentrate in two towns only – Przysucha and Szydłowiec. All of them were afterward deported to Treblinka death camp and exterminated, in part together with the Jewish population of Przysucha (Oct. 31, 1942), and that of Szydłowiec (Jan. 13, 1943). The community was not reestablished after the war.

PSALMS, APOCRYPHAL. Syrian manuscripts have preserved a group of five apocryphal Psalms, one of which is also contained in the Septuagint version of the canonical Book of Psalms. This Psalm, which occurs as a “supernumerary” in the Septuagint, found its way into the *Vetus Latina* and the *Syro-hexapla* (see *Bible, Versions) as well. It was not known whether the five apocryphal Psalms were a translation from an original Hebrew version or whether they were originally composed in some other language in imitation of the Hebrew Psalms.

An answer to this problem came in 1962 with the publication of the Psalms Scroll found among the *Dead Sea Scrolls in Qumran Cave 11 (11QP^s^a), which included, among the canonical Psalms, three of the five apocryphal Syrian Psalms. This unexpectedly confirmed the supposition, of M. Noth, of the Hebrew origin of (at least some of) the Syrian Psalms. Moreover, the fact that the apocryphal Psalms were included in 11QP^s^a among the canonical Psalms raised the possibility that the members of the Qumran sect regarded them as part of the Canon. This assumption, if correct, would imply that shortly before the beginning of the Common Era – when 11QP^s^a was written – a great flexibility existed in the books of Psalms in circulation in Erez Israel both as regards the Psalms they included and as regards the internal arrangement of the biblical Psalms themselves. This is a further indication that the final crystallization of the Book of Psalms, in its present form, is comparatively late. Thus the boundary line between canonical and apocryphal materials – at least as far as the Book of Psalms is concerned – becomes rather blurred. Some scholars however maintain that 11QP^s^a does not represent the Book of Psalms, as generally understood, but rather a liturgical compilation used in religious services. This “liturgical theory” removes two major difficulties for those scholars rejecting such a late date for the final canonization of the Biblical Psalter:

(1) a compilation of this nature would naturally contain various non-biblical excerpts without any intention of ascribing to them a canonical status;

(2) the biblical chapters quoted in such a liturgical compilation would not necessarily follow the order in which they occur in the Bible. Hence the Qumran Psalms Scroll cannot, at this stage, confirm the canonicity of the apocryphal Psalms even among certain Jewish circles at the turn of the Common Era. It can however prove the existence of an original Hebrew text from which (some of) the Syrian Psalms were translated.

Date and Place of Origin

The content of these Psalms do not provide a clear solution for the problem of their date and place of origin, since they too exhibit those nontemporal features characteristic of the canonical Psalms. The attempts to find in them traces of “an Orphic influence” or indications of “an Essene origin” cannot be conclusively proved. Linguistic criteria, although insufficient for fixing any definite dating, at least furnish grounds for stating that in their present form the apocryphal Psalms (including the Septuagint Psalm 151, apparently the earliest of them) were possibly composed in Hellenistic times and certainly not before the Persian period. This is borne out by the use not only of characteristically postclassical Hebrew idioms and phraseology but also of terms and epithets typical of rabbinic and post-biblical literature: “sons of the covenant”; “a faithful judge” (*dayyan emet*); “the Lord of all” (but this reading is disputed). The apocryphal Psalms also display significant parallels to the Wisdom of Ben Sira and to Qumran post-biblical writings, as do other “Psalms” contained in other scrolls.

If it should be proved that the apocryphal Psalms are Hellenistic, and if it is true that none of those in the canonical Psalter originated after the Persian period, it may well be contended that (one of) the reason(s) for the exclusion of the apocryphal Psalms from the canonical Psalter is due to the fact that the rabbis did recognize the late origin of these compositions. This is however a question that can be clearly and unequivocally decided only on the basis of new facts and the discovery of further apocryphal writings.

TITLE

The English name Psalms is derived from the Latin Vulgate *Liber Psalmorum* or *Psalmi* for short. The Latin, in turn, was borrowed from the Greek ψαλμοί which is the title found in most Greek manuscripts and by which the book is cited in the New Testament (Luke 20:42; 24:44; Acts 1:20). It meant “a song sung to a stringed instrument” and seems to be a translation of the Hebrew term *mizmor* which occurs 57 times in the individual Hebrew captions of the book. A variant title, derived from the same Greek root, is ψαλτήριον, found in the fifth-century Codex Alexandrinus (GA), which is the source of the Latin *Psalterium* and the English Psalter. No Hebrew name which might have served as the origin of the Greek is known, but there is evidence of a Palestinian practice to refer to all psalms as *mizmorot*, even when the technical term *mizmor* is absent (cf. TJ, Ber. 4:3, 7d–8a; Shab. 16:1, 15c; Ta’an. 2:2, 65c). Closest to this is the Syriac title of the book, *Kethaba de-mazmūrē*.

The Hebrew Bible does not preserve any original title for the compilation as a whole. The editorial note, Psalm 72:20, would indicate that at some period “The Prayers of David son of Jesse” designated a smaller collection of psalms, although the Hebrew term *tefillah* in its usual supplicatory meaning would be inappropriate to much of the contents of the present Books I and II. Perhaps it was used in a more generalized sense of the articulated communication of man with God (cf. I Sam. 2:1; Hab. 3:1).

The universally accepted Hebrew name for the book in rabbinic and subsequent literature is *Sefer Tehillim* (cf. BB 14b), often contracted to *Tillim* (Av. Zar. 19a; TJ, Suk. 3:12, 53d; Ket. 12:3, 35a) or *Tille* and reflected in the transliterations of the Palestinian Church Fathers as Σφαρ θελλέιμε (Origen, in Eusebius, *Historia Ecclesiastica*, 6:25) and *Sephar Tallim* (Jerome, *Psalterium iuxta Hebraeos*).

This Hebrew title poses several difficulties. In the first place, there is the use of the normally masculine plural ending *-im* for a feminine noun as against the regular feminine plural *-ot* (i.e., *tehillot*), which the word *tehillah* takes in the Bible (cf. Ps. 22:4; 78:4; cf. Ex. 15:11; Isa. 60:6; 63:7). Then, only a single psalm (145) is actually entitled *tehillah* and this, curiously, is replaced by *tefillah* in the Qumran scroll (11QPs^a 16:1, 7). Lastly, a title based on *tehillah*, a song of praise, would seem to be applicable only to a selection of the compositions that make up the collection.

The oft-repeated assumption that *Tehillim* was artificially coined to differentiate the title of the canonical book (i.e., Psalms) from the ordinary plurality of *tehillah* (i.e., psalms) must now be discarded in view of the presence of *tehillim* in the aforementioned Qumran scroll (11QPs^a 27:1, 4) in the simple sense of liturgical compositions. It must be supposed that the masculine plural form represents an internal, post-biblical Hebrew development parallel to the development of *tefillim/n* as the plural of *tefillah* in the sense of “phylactery.” In any case, medieval Hebrew writers such as Mishael b. Uzziel (*Kitāb al-Khilaf*) and Abraham Ibn Ezra (*Iggeret ha-Shabbat*, 3) refer to the book as *Sefer Tehillot*, though whether they do so by some tradition or out of a desire to preserve the biblical Hebrew form, it is difficult to tell.

The Hebrew title itself was selected or emerged doubtless because the root *hll* in biblical usage is overwhelmingly characteristic of the language of psalms and, in fact, seems to have acquired in the post-Exilic books the specialized connotation of “Temple worship” (cf. Ezra 3:10–11; Neh. 5:13; 12:24; 1 Chron. 16:4, 36; 23:5, et al.). The popular liturgical refrain *Hallelujah, which is exclusive to the Book of Psalms, was probably an additional influence, as was the fact that the hymn plays a leading role among the categories of psalms (see discussion of technical terms, below).

PLACE IN THE CANON

According to an anonymous tannaitic source, the proper place of Psalms in the corpus of *Ketuvim* is second, following Ruth and succeeded by Job and Proverbs (BB 14b; see *Bible). The source does not give any explanation for the sequence, but the precedence of Ruth is undoubtedly due to the closing genealogy of David (Ruth 4:18–22), the reputed author of Psalms. For an exploration of the other features of the arrangement, see *Job, beginning. The importance of the book in the canon may be gauged by the fact that despite the great variety in the order of the books of the *Ketuvim* exhibited by the manuscripts, Psalms invariably either heads the list or is preceded only by Ruth and/or Chronicles. In the early printed editions the book always comes first and this has become the universal practice in Hebrew printed Bibles (see *Bible, table 2, cols. 829–30).

It is quite likely that this represents the oldest order of the *Ketuvim* for 11 Maccabees 2:13 refers to “books about the kings and prophets and the writings of David...” and Philo similarly speaks of “Laws and oracles delivered by prophets

and hymns and other writings” (Cont. 25). The New Testament likewise invokes “the law of Moses and the prophets and the psalms” (Luke 24:44). It is reasonable to infer from this early testimony that the Psalter was looked upon as being the most important among the books of the *Ketuvim*.

NUMBER OF PSALMS

Current editions of the Psalter universally contain 150 psalms. The ancient Greek version of the Jews of Alexandria has the same number even though it exhibits some different internal divisions, combining into single psalms the Hebrew 9–10 and 114–115, while dividing the Hebrew 116 and 147 each into two psalms. The Hebrew-Greek correspondences are as follows:

MT	LXX
1–8	1–8
9–10	9
11–113	10–112
114–115	113
116:1–9	114
116:10–19	115
117–146	116–145
147:1–11	146
147:12–20	147
148–150	148–150

The coincidence of 150 psalms in the two versions, despite the differences, would seem to be significant, particularly since the Greek contains an additional composition which it designates as “supernumerary,” thereby exhibiting a conscious desire to limit the canonical psalms to 150.

At the same time, there is a wealth of evidence for the existence of widely varying traditions. A Psalter of 147 chapters is mentioned as early as amoraic times (TJ, Shab. 16:1, 15c; cf. Sof. 16:11; Mid. Ps. to 22:4) and is to be found in manuscripts (C.D. Ginsburg, in bibl., 18, 777) and in the first edition of the *Yalkut Shimoni* (Salonica, 1521–26; cf. also Jacob b. Asher, *Ba'al ha-Turim*, Gen. 47:28). The Leningrad Codex B and the Brescia (1494) and Naples (1491–94) Bibles all feature a division into 149 psalms, an arrangement also known to Mishael b. Uzziel (*Kitāb al-Khilaf*) and to Samuel ha-Nagid (J.H. Schirmann, in bibl.) and present in some Hebrew manuscripts (I. Joel, in bibl.). Others comprise divisions of 148 (*ibid.*), 151, 159, and even 170 psalms (C.D. Ginsburg, in bibl., 583, 536, 725).

These variations have nothing to do with the content of the Psalter which remains the same in all the editions. They merely register differences in the divisions and combinations of psalm units. That our Psalms 1 and 2 were very early conjoined is explicitly attested in rabbinic sources (Ber. 9b–10a; TJ, Ber. 4:3, 8a; Ta'an. 2:2, 65c) and in New Testament manuscripts (Acts 13:33) and may possibly also be reflected in a Qumran scroll (4Q 174 col. 1). The truncated alphabetic acrostic that spans Psalms 9–10 shows that the two originally constituted a single psalm in the Hebrew just as they do in the Greek. It is very likely that such a combination is behind a Palestinian *amora's* citation of Psalm 20:2 as belonging to the 18th psalm (TJ, Ber. 4:3, 8a; Ta'an. 2:2, 65c), thus showing that a pair of our

short units apart from 1 and 2 must have counted as a single entity in his Psalter.

Other documented examples of the conjoining in earlier times of what appear in our texts as individual psalms are 42–43 (cf. 42:6, 12; 43:5; Yal., Ps. 745; C.D. Ginsburg, in bibl., 725); 53–54 (*ibid.*); 70–71 (*ibid.*, 18, 777); 93–94 (I. Joel, in bibl.); 94–95, 104–105, 114–115, 116–117, 117–118:4 (C.D. Ginsburg, in bibl., 18, 536, 777, 853, 873). In the case of 117, the idea of a two-versed psalm seemed preposterous (cf. Tos. to Pes. 117a) and led to its merging with either the preceding or following psalm. Yet, just as the Greek displays the breakdown of 116 and 147 each into two separate compositions, so there are manuscripts in which 118 and 119 are subdivided (C.D. Ginsburg, in bibl., 536–7, 583, 725–6).

All in all, it is quite clear that no fixed and uniform system of chapter divisions existed in ancient times. Except where a superscription intervenes, the manuscripts frequently do not in any way mark the transition from one psalm to another, thus easily permitting varieties of verse groupings. What is not clear is the significance to be attached to the variant numbers of the psalms. The most plausible explanation is that which relates them to the custom of reading the Torah each Sabbath in the Palestinian synagogues in a triennial cycle (cf. Meg. 29b). It is presumed that there also existed a similar cycle of weekly Psalter readings in association with the Torah and prophetic readings. Since the latter were not stable, but varied from community to community, this would account for the diversity in the numeration of the psalms.

VERSE DIVISION

In the Qumran scroll (11QP^s), all the psalms are written in prose form with nothing to indicate verse division, except for Psalm 119 where the alphabetic arrangement provides a natural indication. However, the verse division must be quite early. Other Qumran Psalms manuscripts, especially from cave 4, do reflect a practice of transmitting the text in a form in keeping with the verse structure.

According to a tannaitic report, the number of verses in the Psalter is 5,896 (Kid. 30a). This is over twice the sum of 2,527 specified in the western masorah's note at the end of the book. The eastern masorah details only three fewer due to the combination of each of the following two verses into one: 22:5–6; 52:1–2; 53:1–2; and 129:5–6, and the division of verse 1 in Psalm 90 into two (C.D. Ginsburg, in bibl., 101; Lewin, in bibl., 84). The great discrepancy between the masoretic and tannaitic traditions is to be explained by varying concepts of "verse." The former enumerates the larger poetic unit which may contain two or three stichs and which is marked off by a major stop or caesura; the latter is most likely based on a peculiar mode of writing biblical poetry in which the spacing of words and their alignment, column by column, was important (cf. Meg. 16b; TJ, Meg. 3:8, 74b; Sof. 12:9). The *tannaim* evidently counted as a "verse" each compact cluster of words and even a caption of one or two words (S.D. Luzzatto, in bibl., 281–2). In this connection, incidentally, it should be noted

that our printed editions, following the pattern fixed in the Torah (cf. Gen. 26:6), may accept three words, but not less, as a separate verse, so that a superscription of three words or more receives a separate enumeration. This is never the case in the English versions and accounts for the frequent difference of one between the Hebrew and English verse numberings.

One other distinction between the talmudic and masoretic traditions lies in the location of the middle verse of the book which is stated by the note at the end of the Psalter to be Psalm 78:36, but two verses ahead in the rabbinic computation (Kid. 30a).

DIVISION INTO BOOKS

The Psalter is divided into five books, each of the first four being marked off by a doxology, or formulaic expression of praise to God, as follows:

Book I, Ps. 1–41

41:14 Blessed is the Lord, God of Israel,
From eternity to eternity.
Amen and Amen.

Book II, Ps. 42–72

72:18–20 Blessed is the Lord God, God of Israel,
Who alone does wondrous things;
Blessed be His glorious name for ever,
And let His glory fill the whole world.
Amen and Amen. End of the prayers of David
son of Jesse

Book III, Ps. 73–89

89:53 Blessed be the Lord to eternity.
Amen and Amen.

Book IV, Ps. 90–106

106:48 Blessed is the Lord, God of Israel,
From eternity to eternity.
And let all the people say
Amen, Hallelujah.

Book V, Ps. 107–150

This last book bears no closing formula. It is likely that Psalm 150 was regarded as a doxology for the entire Psalter.

These liturgical formulas which distinguish the various books that now make up the Book of Psalms are present in the Greek and are therefore at least as old as the second half of the second century B.C.E., by which time that translation was certainly completed. They are also definitely post-Exilic in origin as can be determined by some stylistic and terminological peculiarities. Indeed, three of the four doxologies are not integrated with the psalms to which they are attached, but form an appendage to them. It is thus reasonable to assume that they signify the close of what were once independent collections. Further support for this inference may be derived from the colophon to Book II. It is hardly conceivable that an editor who was aware of the 18 psalms attributed to David in the subsequent books would have written that "the prayers of David son of Jesse" had come to an end (Ps. 72:20; cf. Jer.

51:64; Job 31:40). It is also unlikely that a single compiler would have duplicated individual psalms. If Psalm 14 appears again in Book II (Ps. 53) which also repeats Psalm 40:14–18 (Book I) in the form of Psalm 70, and if parts of two psalms of Book II (57:8–12; 60:7–14) become Psalm 108 in Book V then it should be conceded that the various books existed at some time or other as independent entities. In other words, the division of the Psalter into books may represent successive stages in the growth of the work as a whole.

There are good reasons for believing, however, that the doxology to Book IV (Ps. 106:48) constitutes the exception to the rule and that the division between Books IV and V is artificial. These books share certain characteristics which put them in contrast with the preceding ones. Eighteen of their 61 psalms bear no superscriptions as opposed to only six psalms without superscriptions in all the foregoing 89 psalms. On the one hand, not a single musical reference is to be found in the headings, while such otherwise characteristically technical terms as *La-Menazze'ah* and *Selah* are almost totally absent, the former occurring only three times and the latter four. On the other hand, Hallelujah appears exclusively in these two collections. In addition, the subject matter of the two is very much alike; they contain predominantly praise and thanksgiving psalms suitable for the public service in the Temple. Most telling is the fact that the doxology of Book IV seems really to be an integral part of the last psalm and need not originally have applied to the entire collection. The first and last two verses of Psalm 106 are cited in I Chronicles 16:34–36 together with the peculiar invocational rubric. Since the latter fits naturally into the situation there described it is likely that the presence of the rubric, slightly varied, at the end of Psalm 106 has been due to the influence of the Chronicles passage.

The cumulative effect of the evidence here presented is to cast grave doubt upon the originality of the book division after Psalm 106. In this connection it is of interest that the Qumran scroll (11QP^a) intersperses in Book V selections from Book IV, although in an order differing slightly from ours. While it is not at all certain that the scroll is not a sectarian liturgy or hymn book, rather than a canonical Psalter, the phenomenon may reflect a period of time before the division of Psalms 90–150 into two. At any rate, the extension of a fourfold into a pentateuchal arrangement was probably suggested by the analogy of the Torah, and may have been the result of the reading of the Psalms, week by week, in association with the triennial cycle of Torah readings. An echo of this is to be found in the rabbinic observation that “Moses gave the five books of the Torah to Israel, and David gave the five books of the Psalms to Israel” (Mid. Ps. to 1).

At all events, the liturgical character of the doxologies would seem to prove that the book divisions were originally fixed for purposes of public worship, and it can hardly be accidental that the Book of Psalms opens with a reference to the study of the Torah.

COMPOSITION OF THE PSALTER

From the foregoing data it becomes evident that the present pentateuchal division is only the crystallization of a long and complex history involving the emergence of several small collections and their combination into larger units. The process of development can only be partially discerned and any reconstruction must of necessity remain conjectural to a certain extent.

The earliest collection is undoubtedly Book I, or rather Psalms 3–41 within it. Except for Psalms 10 and 33 which are anonymous, every unit is “Davidic.” As has been pointed out above (on the number of psalms) the alphabetic arrangement, supported by contextual and stylistic considerations, confirms the tradition of the rabbis, the Greek translation, and several Hebrew manuscripts, that Psalms 9 and 10 originally were one. Psalm 33 has a “Davidic” superscription in the Greek which may have gotten lost in the Hebrew, although it is more likely that the psalm was inserted into Book I at a later date. (Perhaps it was influenced by the similarities between 32:11 and 33:1; *kōnes* (33:7) is a vocable characteristic of post-Exilic Hebrew and a late composition for Psalm 33 is also suggested by the fact that the summons to sing a new song to the Lord is put off to verse 3 instead of coming at the beginning as in Psalms 96, 98, etc.) The “Davidic” psalms would thus constitute the very first stage in the compilation of the Psalter.

The second collection is the group comprising Psalms 42–83 which is distinguished by the rarity of the use of $\Upsilon\text{H}\text{W}\text{H}$ and the frequency of the appearance of *Elohim* (in its absolute or suffixed forms) in its place, in striking contrast to the situation in the rest of the Psalter. Within this group of 42 psalms, the Tetragrammaton occurs some 45 times and *Elohim* 210 times. However, in the remaining 118 psalms (1–41, 84–150) *Elohim* appears only 94 times altogether, while $\Upsilon\text{H}\text{W}\text{H}$ occurs 584 times. This overwhelming preference for *Elohim* is so consistent that it even influences two psalms of Book I as they reappear in a second recension in this group. $\Upsilon\text{H}\text{W}\text{H}$ in Psalm 14:2, 4, 7 becomes *Elohim* in Psalm 53:3, 5, 7 and the same switch occurs between Psalm 40:14a, 17 and Psalm 70:2a, 5 (cf. also Ps. 50:7 with Ex. 20:2; Ps. 68:2, 8–9 with Num. 10:35 and Judg. 5:4–5). Furthermore, such otherwise unknown combinations as *Elohim Elohai* (Ps. 43:4) and *Elohim Eloheka* (Ps. 45:8; 50:7) make their appearance.

Since this phenomenon is restricted to Books II and III (up to Ps. 83), it is evident that the “elohistic” Psalms 42–83 once constituted an independent collection. Their superscriptions show, however, that this development resulted, in turn, from the combination of smaller “elohistic” groupings. Psalms 51–65 and 68–70 make up a second “Davidic” collection which quite probably once followed the first and to which the subscription of Psalm 72:20 was attached. Insofar as no additional psalms are ascribed to David in the “elohistic” Psalter, the colophon is accurate. The other constituents are the “Korahite” Psalms 42–49 (42–43 were originally a unit) and the “Asaphic” Psalms 50, 73–83, both collections internally arranged according to the technical terms of the

superscriptions. Four other psalms (66, 67, 71, 72) belong to the “elohistic” Psalter, three of which are anonymous in the received Hebrew text; Psalm 67 is ascribed to David in some Greek manuscripts; Psalm 71 is conjoined with Psalm 70 to form one psalm in many Hebrew manuscripts, but is “Davidic” in the Greek; Psalm 72 is “Solomonic.” The presence of the colophon at the end of Psalm 72 naturally influenced the bisection of the “elohistic” Psalter so that it marked off Book II and received a doxology. To the rest of the “elohistic” group was added an appendix (Ps. 84–89) consisting of four more “Korahite” psalms, one “Davidic” psalm, and one attributed to “Ethan” to complete Book III.

The distinguishing characteristics of Psalms 90–150 and their artificial bisection into Books IV and V have been discussed earlier. Here it may be added that this group of psalms must postdate the “elohistic” Psalter because Psalm 108 is constituted from it (Ps. 57:8–12; 60:7–14) and still retains its “elohistic” character despite its presence in a collection otherwise differentiated by the preferred use of YHWH as the divine name. Within the group of Psalms 90–150 some originally smaller collections are still discernible. The most obvious example is that comprising 15 psalms (120–134) entitled *Shir ha(la)-Ma'alot*. There also seems to have existed still another “Davidic” collection from which were extracted Psalms 101, 103, 108–110, and 138–145. In contrast, Psalms 90–100 are practically all anonymous and although some of them have features in common, they can hardly be said to derive from a recognizable source. Whether the “Hallelujah” psalms (104–106, 111–117, 135, 146–150) were once a separate hymnbook is a question impossible to decide with any degree of confidence.

It is extremely improbable that Psalm 1 or Psalm 2 originally formed part of Book I, if only for the reason that they are anonymous. It is far more likely that when Psalm 2 came to be messianically interpreted and associated with David it was affixed to the “Davidic” collection, just as Ruth was placed immediately before Psalms in many orders of the *Ketuvim* because of its concluding Davidic genealogy (see discussion on place in Canon, above).

After the Psalter had been completed, Psalm 1 was added as a sort of introduction to the entire work, for a combination of various factors made it an ideal choice for the purpose. In the first place, the psalm affirms the governance of the world by a divinely ordained moral order so that the operation of providence is both inevitable and effective. It thus gives expression to the fundamental and indispensable presupposition for all meaningful communication with God, in the biblical view. At the same time it formulates the basic Pharisaic notion of the preoccupation with Torah as the response of Israel to the Divine demand, with the consequent interdependence of study and piety. In addition, the canonical form of the Hebrew Bible indicates the supremacy of Torah over the other divisions by beginning the first prophetic book, Joshua, with an injunction to Joshua to keep the Torah of Moses and read it day and night (Jos 1:7–8) and concludes the last prophetic book, Malachi, with the injunction to be mindful of the Torah of Moses with its laws

and statutes (Mal. 3:22). As such Psalm 1 is the appropriate beginning for the third division of the Hebrew Bible.

The selection of what became Psalm 1 also proved to be felicitous from an external literary viewpoint, for it exhibits striking verbal associations with both Psalm 2 (Table 1) and Psalm 41 (Table 2). It could simultaneously be unified with the former, if need be (see discussion on the number of psalms above), and serve with Psalm 41 as a literary framework to Book II.

Table 1

Ps. 1	verse	1	אֲשֶׁרִי

Ps. 41	verse	6	תִּאֲבָד
		2	אֲשֶׁרִי
		12	חֵפְצָת
		9	לֹא-יִסְיֶיךָ לְקוּמִים
		6	אֲבָד

DATE OF THE PSALTER

Critical scholarship in the 19th century generally regarded the Psalms as the product of the Maccabean-Hasmonean era. This view was grounded in the conviction of the late development of pure monotheism in Israel with its concomitant that the Psalms postdated the prophets. The numerous traces of Psalms' language in the prophetic literature were explained by the influence of the latter on the former, while the extremely individualistic consciousness that is mirrored in the psalms was taken as sure evidence for a highly developed, and hence late, stage in the history of the religion of Israel. Granted these assertions, it was not difficult to interpret allusions to historic events in the Psalter as reflections of internal and external affairs in Judea in the course of the second century B.C.E.

The 20th century witnessed the weakening of this position on the part of biblical scholars for whom the convergence of several lines of independent evidence led to a far more conservative reevaluation of the problem of the age of the Psalter.

In the first place, renewed attention has been paid to the testimony provided by the Greek version. The unchallenged prestige and prominence of the Psalter among the books of the Hagiographa (cf. II Macc. 2:13; Philo, Cont., 25; Luke 24:44) would of itself have been a factor in its early translation into Greek. In addition, the known fact that this version was made in response to the needs of the synagogue worship

makes it virtually certain that the Psalms were turned into the vernacular in Alexandria even before much of the Prophets. Ben Sira itself amply attests a knowledge of the Psalms and it may be taken for granted that his grandson, writing around 132 B.C.E., had in mind a Greek Psalter when he referred to the translation into that language of “the law, the prophecies, and the rest of the books.” Since the Greek Book of Psalms is identical in order and number with the received Hebrew, the canonization of the corpus must have taken place well before the beginning of the second century B.C.E., by which date the Greek translation is now generally agreed to have existed. It is apparent, moreover, that the translators often encountered difficulty with the original language and were quite ignorant of the meaning of the Hebrew technical terminology which had become completely obsolete. This loss of the living tradition presupposes a considerable passage of time between the composition of the psalms and their rendition into Greek. It is significant that whereas Daniel 3:5ff. contains a list of characteristic musical instruments of the Hellenistic period, not one of these appears among the more than ten instruments referred to in the psalms.

All this, of course, precludes the possibility of any significant number of Maccabean psalms, influences, or historical references. Some Psalms use language that belongs to Late Biblical Hebrew (LBH). Among these are Ps. 119; 133; 144. Nonetheless, the Hebrew Psalter is completely free of Greek linguistic influences and its theology is wholly devoid of Hellenistic concepts.

This conclusion fits in precisely with the evidence to be derived from various types of literature recovered from the Judean Desert. A second-century B.C.E. Psalter (4QP^s^a), although fragmentary, clearly demonstrates that at least Books I and II of the Hebrew Psalms collection had been fixed by Hasmonean times. In fact, the Psalter had gained such wide currency that it had generated an imitative literature in the form of psalms (or hymns) of thanksgiving (4QH) which are replete with the phraseology of the canonical Psalter. Nevertheless, linguistic, stylistic, structural, thematic, and theological differences between the two bodies of literature are so large as to leave no doubt of the far greater antiquity of the biblical Psalms. Moreover, the recovery of parts of the original Hebrew version of the Ben Sira from Qumran and Masada has clearly shown that the style of the Psalms belongs to a much earlier stratum of the language than that of an educated Jew of approximately 200 B.C.E.

As to historic allusions, explicit references to national events are to be found in but a handful of psalms, e.g., Ps. 137 which refers to the Babylonian exile. Of the Judahite or Israelite kings, David alone is favored with a mention in the body of a psalm (Ps. 18:51; 89:4, 36, 50; 132:1, 11, 17). Otherwise, there are allusions to foreign invasions of Israel (cf. Ps. 2, 48, 74, 79, 83, 89), but no way of pinpointing the specific event. The references to “God-Fearers” as a group distinct from Israel and the (post-Exilic) “house of Aaron” (Ps. 115:11, 13; 118:4; 135:20) reflect the post-Exilic conditions of semi-conversion to Juda-

ism. The emphasis on Torah (Ps. 19:8–12) and its study (Ps. 1, 119) is likewise post-Exilic. In contrast, the picture of internal corruption and social injustice reflected in many of the psalms could as well mirror the same conditions inveighed against by the literary prophets as the state of affairs in Second Temple times. It is probably fair to say that the Book of Psalms has an ancient foundation, with additions made in the period of the Second Temple.

Above all, it is in the realm of the religious ideas of the Psalter, or rather in the inexplicable omission of certain concepts, that a late date for the collection becomes highly dubious. There is no clear notion of eschatological judgment upon the wicked and no trace of the characteristic eschatological terminology such as “the end of days,” “the day of the Lord,” “in that day.” The motif of national sinfulness is lacking, and the theme of the absolute supremacy of morality over the cult, which has no intrinsic worth without morality, does not find unambiguous expression. There are no prayers for the restoration of the Davidic line or for the ingathering of the exiles. Were the prophetic activities and teachings indeed the source of inspiration for the psalmist, and if he composed during the life of the Second Temple, then the absence of all these would be very strange, especially since they all appear as characteristically dominant features of the known literature of the period. There is an exception which proves the rule. The lateness of the Books IV and V of Psalms was stressed above; and near the very end of Book V it is found that Psalm 147, which, among other signs of lateness, borrows extensively from older psalms, is also replete with echoes of Deutero-^{*}Isaiah, including, at the beginning, praise of the Lord for rebuilding Jerusalem (cf. Isa. 44:28) and for healing the brokenhearted (cf. Isa. 57:15, 18; 61:1). But even when the other echoes from Deutero-Isaiah are added they fall far short of the extent to which Deutero-Isaiah and other prophets make use of various psalms, which are thereby proved to antedate them (see, e.g., Ginsberg, in bibl.).

The argument concerning the supposedly late date of the highly individualistic and personal spirit that animates the religion of Psalms has increasingly lost its validity in the wake of the progressive discovery of a huge psalms’ literature of the Ancient Near East. Most of it antedates by far the appearance of Israel on the scene of history, yet it exhibits exactly the same individualized and personal qualities as does the Hebrew Psalter.

Finally, there are several psalms and parts of psalms that combine genuinely archaic language with religious concepts that undermine the Jewish monotheism of the post-Exilic period. Psalm 29 has the *bene elim*, “the sons of the gods,” blessing Yahweh in phraseology at home in the cult of the ancient Syrian storm god (Ginsberg, 1969), while Ps. 19:2–7 uses sun-god imagery (Sarna).

ASCRPTION TO DAVID

The Book of Psalms contains neither superscription nor colophon and nowhere in the Hebrew Bible is there any indica-

tion of its Davidic authorship. Seventy-three of 150 psalms are designated *le-David*, but the precise connotation of this term is uncertain. It could well have reflected a tradition of authorship (“by David”); it might equally have related to some tradition connecting the content with an event in the life of David (“concerning David”; cf. *la-Nevi'im* in Jer. 23:9 and the headings of Jer. 46:2; 48:1; 49:1, 7, 23, 28). The existence of such exegesis is apparent in the superscriptions to Psalms 3, 7, 18, 34, 51, 52, 54, 56, 57, 59, 60, 63, and 142. That it was once more widespread is evident from the headings in the Greek version of Psalms 27, 71, 97, 143, and 144. However, such an interpretation of *le-David* might be of secondary origin and in any case does not of itself preclude an original understanding of the phrase as implying Davidic authorship of the individual psalms involved. Other possibilities include a dedication to David, a tune or style supposedly Davidic in origin, or a composition taken from the repertoire of a Davidic guild of singers.

If *le-David* indeed originally indicated authorship, then it is of interest that the form is unique to the psalms’ literature (cf. Hab. 3:1) for the ascription of no other biblical book to a historic personality ever involves the use of the *lamed* formula (cf. Song, Proverbs). Yet the Psalter is internally consistent in its employment of the same construction with other names such as the Korahites (Ps. 42, et al.), Asaph (Ps. 50, et al.), Solomon (Ps. 72), Heman (Ps. 88), Ethan (Ps. 89), and Moses (Ps. 90).

Whatever its original meaning, there cannot be any doubt that *le-David* was very early interpreted in the sense of authorship. This can be demonstrated by the heading of Psalm 18 which explicitly declares that David “addressed the words of this song to the Lord” (cf. the parallel in 11 Sam. 22:1 which lacks *le-David*). Another proof is provided by the editorial colophon to the second book of Psalms (72:20): “End of the prayers of David son of Jesse.” Since 56 of the 73 occurrences of the formula appear in the first two books, it must be assumed that this remark is a sure indication of how that term was understood very early in the history of the development of the canon of Psalms.

In the course of time, the claim for Davidic composition was extended to the entire Psalter. 11 Maccabees 2:13 mentions “the writings of David,” apparently in reference to the Book of Psalms. The Greek version extends the Davidic heading to psalms not so marked in the received Hebrew text (viz., 33, 43, 71, 91, 93–99, 104, 137). How the idea of Davidic authorship could be applied to the entire collection can now be illustrated by the epilogue of the large Qumran scroll (11QPs^a, 27:4–5, 9–10) which ascribes to David a library of 3,600 “psalms” (*tehillim*) and 450 “songs” (*shirim*), although its use of the Davidic superscription does not differ greatly from that of the standard Hebrew text. The first explicit claim to the Davidic origin of the entire Psalter is to be found in rabbinic literature which draws a comparison between the five books of Davidic psalms and the Pentateuch of Moses and was not perturbed by the incidence of other names in the headings (Mid. Ps. to 1:2; BB 14b, 15a; cf. Pes. 117a).

There can be no doubt that the association of David with psalmody rests upon very ancient traditions. The king had a reputation as a skillful player on the lyre in his early youth (1 Sam. 16:16–23), an inventor of musical instruments (Amos 6:5; Neh. 12:36; 1 Chron. 23:5; 11 Chron. 29:26–27), as a composer of dirges (11 Sam. 1:17; 3:33), and as a “sweet singer of Israel” (11 Sam. 23:1; cf. 6:5). His role in the establishment of Jerusalem as the supreme, national, religious center (6:2–17; 1 Chron. 13:3–14; 15:1–16:2) is beyond dispute, and although the sources making David responsible for the organization of the guilds of Temple singers and musicians and for the institution of the liturgy are post-Exilic (Neh. 12:24; 1 Chron. 6:16ff.; 16:4–7, 41–42; 25:1, 5; 11 Chron. 7:6; 8:14; 23:18; 29:26–27, 30), there is every reason to believe that they rest upon a solid kernel of historical fact. Indeed, other ancient Near Eastern kings were credited with the composition of hymns including Ammiditana (1683–1647) of Babylon and Assurbanipal of Assyria (669–627; COS 1, 445).

TYPES OF PSALMS

The Psalter presents a picture of unusual variety and complexity in its literary typology. Any attempt, however, to effect a systematic generic classification based upon considerations of a commonality of theme, mood, occasion, and style is bound to be more an exercise in convenience than precision. The choice of categories will be influenced by subjective or exegetical factors; sometimes the lines between one class and another cannot be clearly drawn; sometimes a single psalm can be simultaneously subsumed under more than one heading; many psalms are a fusion of two or more types; many are susceptible of diverse interpretations; the tense system, for example, is still imperfectly understood and it is difficult at times to decide whether one is dealing with a prayerful description of present troubles or grateful enumeration of afflictions now happily over; lastly, external criteria might favor one arrangement, whereas a determination of the original life-setting (*Sitz im Leben*) of a psalm might disclose an unsuspected generic affinity with other compositions.

The leading genre is the hymn. Broadest in scope, it invades other groups as well and its preeminence helped provide the most popular title of the book (see discussion on title, above). In essence, it is a poem of praise celebrating the majesty, greatness and providence of God. Examples of such include Psalms 8, 19a, 29, 33, 65, 66, 92, 100, 104, 113, 114, 117, 135, and 145–150. Several psalms specifically extol God’s royal role in the universe and so may be regarded as forming a special category within the hymn (Ps. 47, 93, 96–99). They are often referred to as “enthronement psalms.” Another group (Ps. 46, 48, 76, 84, 87, 122) glorifies God’s city, His holy mount in which He has placed His abode, and is thus designated “Zion Songs.” Two psalms (19b, 119; cf. 1) acclaim God’s Torah and laud its attributes and its beneficial effects on those who study and observe it.

About one third of the Psalter is given over to laments in which the speaker may be either the individual or the com-

munity. The latter type bewails situations of national oppression or misfortune (e.g., Ps. 44, 60, 74, 79, 80, 83, 89c, 94); the former comprises about 40 psalms in all and is distinguished by personal complaints of bodily or mental suffering which may frequently be accompanied by protestations of innocence and integrity and are usually coupled with a strong plea for divine help (Ps. 3, 5, 6, 7, 9–10, 13, 17, 22, 25–28, 31, 35, 36, 38, 39, 41, 42–43, 51, 52, 54–57, 59, 61, 63, 64, 69, 71, 77, 86, 88, 102, 120, 123, 130, 140–143). A distinctive feature of many of the laments is the expression by the worshiper of the absolute certainty that His prayers will be heard. These “psalms of confidence” may be both collective (e.g., Ps. 46, 125, 129) or individual in nature, the latter being more frequent (e.g., Ps. 4, 11, 16, 23, 27, 62, 91, 121).

Closely related to the hymn and the lament is the genre of thanksgiving psalms. Here, again, community songs are relatively rare (e.g., Ps. 66, 67, 118, 136). This may be due to the fact that many of the hymns may have had their origin in a national song of thanksgiving. Psalms in which the speaker is an individual are 9–10, 18, 30, 34, 40, 111, and 138. In Psalm 107 it is difficult to know whether the speaker is a single worshiper or the congregation as a whole. Similarly, in Psalm 144 the speaker employs both the singular and plural forms of address. Many psalms of thanksgiving also contain descriptions of the original misfortune which has now given way to new circumstances. They thus combine two or more types of psalmody into a cohesive union (e.g., 6, 13, 22, 28, 30, 31, 36, 41, 54, 55, 56, 61, 63, 64, 69, 71, 86, 94, 102, 130).

A class in itself is the “royal psalms” in which the center of attention is the anointed one of God, the earthly king of Israel. His relationship to God, his ideal qualities, the misfortunes that befell him, and the woes that afflict him may all be the themes of the song (Ps. 2, 18, 20, 21, 45, 72, 89, 110, 132, 144; cf. 28, 61, 63, 84). Psalms 44 and 101, which, in contrast to royal psalms in the greater ancient Near East contain no direct reference to the reigning monarch (see Starbuck) but which appear to have been liturgies recited by him, probably belong within this same category. The numerous royal hymns in the Psalter are in marked contrast to the scarce references to the king in the Torah (Deut. 28:14–20; 28:36).

One other major category is provided by those compositions which betray the influence of wisdom literature or which have a distinctly pedagogic function or character. They may be reflective or sententious (Ps. 1, 34, 36, 37, 49, 73, 78, 112, 127, 128, 133) or descriptive of the kind of conduct pleasing to God (Ps. 15, 24, 32, 40, 50). They may also be historical retrospectives which either directly or inferentially project the lessons to be derived from the past and which are deemed to be relevant to the occasion of the psalm (Ps. 78, 81, 105, 106, 114).

PSALMS AND THE CULT

The detailed and elaborate prescriptions of the Pentateuch's Priestly Code contain almost no reference to any recitations by the priest or the worshiper in the course of the performance of the daily and festival rituals. Conversely, none of the psalms

provides any explicit information on the type of cultic priestly ceremony to which it might have been attached. It is not clear whether this reflects differences in the cult as conceived respectively by the writers of the Torah and the psalmists, or whether the explanation for the difference is literary.

It is of interest that the Chronicler carefully and consistently differentiates the origin of the sacrificial system which he ascribes to Moses, from the institution of its musical-recitative accompaniment which is attributed to Davidic innovation (11 Chron. 23:18; see section on ascription to David, above). The Psalter, significantly, never associates any psalm with the Aaronide priests. Given the post-Exilic origin of the priesthood of *Aaron, this is a further argument for the early date of much of the book of Psalms.

There is ample evidence to show that the verbal element did constitute an aspect of the worship of both the pre-Exilic period and the post-Exilic periods. The pre-Exilic priestly benediction (Num. 6:22–26) is one example, the cultic liturgy of the first fruits offering (Deut. 26:1–11) is another. Hannah's personal prayer in the Sanctuary at Shiloh (1 Sam. 1:10–13) could not have been exceptional. Solomon's post-Exilic Temple dedication address repeatedly refers to “prayer and supplication” (1 Kings 8:28ff.), and both early and late evidence from Isaiah shows the Temple to have been, indeed, a place of a multitude of prayers (Isa. 1:15; cf. 56:7). Amos (5:23) makes it quite clear that song set to musical accompaniment was part of the cult at the temple at Beth-El. It is not regarded as illegitimate as such, and there is no reason to believe that it was unique to this place. Jeremiah describes the chanting of a well-known refrain during the bringing of the *todah* offering to the Jerusalem Temple (Jer. 33:11; cf. Ps. 100:1, 4–5; 107:1; 118:1, 29; 136:1ff.). The prophet of the late Babylonian Exile describes the Temple as “a house of prayer” (Isa. 56:7).

All this suggests a close and ancient connection between cult and liturgy. In fact, without some association between the two it would be extremely difficult to account for the preservation and transmission of the individual compositions over long periods of time until they became gathered into collections and ultimately canonized as a corpus.

Two basic forces operated simultaneously in anchoring the psalms to the cult. First, most of them clearly answer to specific situations in the life of the individual or the community. The ability to categorize them according to a relatively few major and minor types (see above) and to recognize a recurrent use of a limited number of fixed patterns and conventional modes of expression strongly suggest standardized liturgies available for recitation, when the need arose, either at the central Temple or at the provincial shrines that existed throughout most of the period of the Monarchy. The great national festivals which were fundamental to the religious life of Israel would have been the natural occasions for the public recitation of many of the psalms.

Once a liturgical tradition is assumed within the Israelite cult, and it must be so assumed, then the analogy of Near Eastern temples can be drawn upon. In Egypt, Mesopo-

tamia, Ugarit, and Canaan, guilds of singers and musicians connected with the temples enjoyed official status and were highly organized. There is good reason to believe that similar guilds existed in Israel, and there is ever-increasing evidence to support the view that the Davidic date for their establishment as claimed by the Chronicler may not be very wide of the mark (I Chron. 6, 15, 16, 25, 29; II Chron. 35:15), if anachronistic in detail.

Proof for the well-rooted and extensive tradition of music and psalmody in Israel in the period of the First Temple comes from several sources. King Hezekiah of Judah included male and female musicians among the tribute he paid to Sennacherib of Assyria (c. 701 B.C.E.; Annals of Sennacherib, 3:46–48; Pritchard, Texts, 288; COS II, 303) and no fewer than 200 lay singers of both sexes were among those who returned from the Babylonian Exile with Zerubbabel (Ezra 2:65, 70), apart from the 148 Asaphites (Ezra 2:41; Neh. 7:44). The latter are connected with several psalms (Ps. 50, 73–83) and are said to have been appointed by David to be in charge of the service of the song in the Temple at Jerusalem (I Chron. 6:16, 24). At any rate, their presence in the list of returnees can prove that they had functioned as professional singers in the First Temple. Another guild of Temple servitors from the same period is called “the Korahites” (I Chron. 6:7, et al.) and their name, too, appears in the superscriptions of several psalms (Ps. 42, 44–49, 84–85, 87–88). Their existence as Temple functionaries, in the times of the late Monarchy at least, is now attested by the appearance of their name among the inscribed Hebrew ostraca discovered in the temple of Arad.

There can be no doubt of the involvement of musical guilds in the public worship of Israel in the days of the kings. Inevitably, each guild would develop its own liturgical repertoire and thus constitute another important factor in the presentation and transmission of Hebrew psalmody, rooted in the cult as it naturally was anyway.

THE TEXT

It is unlikely that the standard Hebrew text is free of the corruptions that inevitably beset all ancient literature in the course of scribal transmission. Hundreds of years elapsed between the editio princeps of a given psalm and its earliest witnesses, and while the special circumstances of its connection with the cult must certainly have reduced its susceptibility to gross error, it cannot be gainsaid that many of the textual cruxes owe their origin to the carelessness of intermediaries. At the same time, so long as no autograph is available there can be no way of knowing the extent, if any, of editorial activity behind the smoothest text. That such occurred is the inescapable conclusion from a comparison of Psalms doublets (Ps. 14 = Ps. 53; Ps. 18 = II Sam. 22; Ps. 31:2–4 = Ps. 71:1–3; Ps. 40:14–18 = Ps. 70; Ps. 57:8–12 = Ps. 108:2–6; Ps. 60:7–14 = Ps. 108:7–14).

At the same time, there can also be no doubt that the consonantal text of Psalms has proved to be far more reliable than an earlier age of textual criticism had judged. Northwest

Semitic inscriptions and comparative Near Eastern literature have opened up new vistas in the understanding of the biblical poetic idiom and in ancient Hebrew orthography, lexicography, grammar, and syntax. The result has been a considerable diminution in the number of instances previously deemed to be corruptions of the text.

This conclusion intermeshes with the observation that, unlike the case with some other biblical books, a comparison of the received Hebrew of Psalms with the Greek, Latin, Aramaic, and Syriac versions shows that all known witnesses to the text basically constitute a single recension. This conclusion is, in turn, in perfect agreement with the evidence from the scrolls of the Judean Desert. About 30 exemplars in various stages of preservation have been uncovered in the library of Qumran, more copies than of any other part of the Scriptures. While numerous variations from the standard Hebrew text may be registered, the overwhelming number are merely orthographic in character and very rarely present significant differences in meaning or interpretation. In no instance can a recension different from that of the earliest Ben Asher manuscripts be detected. The text of the Massadah Scrolls is, in fact, virtually identical in content and orthography with the received Hebrew text.

It is clear that this latter enjoys a traceable history of over 2,000 years. Its great prestige and constancy must derive from its use in the liturgy of the Second Temple times, a powerfully conservative factor in the preservation of a text.

SUPERSCRPTION AND TECHNICAL TERMINOLOGY

Only 24 psalms have no headings of any sort. Psalms 1, 2, 10, 33, 43, 71, 93–97, 99, 104, 105, 107, 114–119, 136, and 137 may thus be termed “orphan psalms” (Av. Zar. 24b). In each instance, the LXX repairs the Hebrew deficiency, though in Psalms 105, 107, 114–119, and 135 the addition consists solely of an initial “Hallelujah.” In all but Psalms 115 and 118 this term belongs in the Hebrew to the preceding composition.

The titles of the psalms are for the most part obscure. For the sake of convenience they may be classified as follows:

Those Containing Personal Names (with Affixed *Lamed*)

Usually the preposition *le* must indicate either authorship or a collection identified with a guild. However, in Psalm 72 it must mean “about” or “dedicated to,” and Psalm 102 *le-ani* can only mean, “for [recitation by] the afflicted man.”

DAVID. Seventy-three psalms are connected with the name David, distributed as follows:

Book I, 37 (3–9, 11–32, 34–41).

Book II, 18 (51–65, 68–70).

Book III, one (86).

Book IV, two (101, 103).

Book V, 15 (108–110, 122, 124, 131, 133, 138–145).

The LXX omits the Davidic reference in Psalms 122, 124, 131, and 133, but adds it to Psalms 33, 42 (GA), 43, 67, 71, 91, 93–99, 104, and 137. It is of interest that 96, 105, 106, and 107 are connected with Davidic activity in I Chronicles 16,

yet they do not have Davidic superscriptions in the Hebrew text.

A unique feature of the Davidic ascription is the tendency, found 13 times, to connect a psalm with some event in the life of that king: Psalms 3 (II Sam. 15–19), 7 (? II Sam. 18:21), 18 (II Sam. 22), 34 (I Sam. 21:14), 51 (II Sam. 11–12), 52 (I Sam. 22:9), 54 (I Sam. 23:19; 26:1), 56 (? I Sam. 21:11; 27:2), 57 (I Sam. 22:1; 24:3), 59 (I Sam. 19:11), 60 (II Sam. 8:13; I Chron. 18:1–12), 63 (I Sam. 23:14; 24:1; 26:2), 142 (I Sam. 22:1; 24:3). Here, again, the LXX extends this practice by connecting Psalms 27, 71, 97, 143, and 144 with David's biography, but apart from 144 (cf. I Sam. 17) the references are indeterminate.

It should be noted that in some instances the connection between the Hebrew superscription and the body of the psalm is very tenuous. It is possible that the reference may often be to some tradition rooted in a biography of David not included in the biblical narratives and now lost.

ASAPH. Twelve psalms are associated with Asaph (50, 73–83). If the reference is to Asaph rather than to the Asaphites (Ezra 2:41; 3:10, et al.) it is probably because he was a contemporary of David, appointed by him to a prominent position in the leadership of the Temple (Neh. 12:46; I Chron. 6:24; 15:19, et al.).

THE KORAHITES. There are 11 Korahite psalms (42, 44–49, 84–85, 87–88). The Korahites (cf. Num. 26:11) are first recorded as participating in the public worship of the Temple in the time of Jehoshaphat (II Chron. 20:19). They are not listed among the returnees from Babylon (Ezra 2; Neh. 7), so that they operated only during the First Temple period. The appearance of the Korahites among the ostraca of Arad confirms the existence of the guild in the Monarchy period.

HEMAN, ETHAN. Only one psalm each is assigned to Heman and Ethan (Ps. 88, 89). Both are entitled “Ezrahite” (LXX, “Israelite”). They are both leaders of the Temple musicians under David (I Chron. 2:6; 6:18, et al.). Both names are otherwise mentioned as personages famous for their wisdom (I Kings 5:11). Psalm 88 is also ascribed to the Korahites, indicating a double tradition.

SOLOMON. It appears that in the case of Psalm 72 the reference to Solomon is to the content rather than the authorship and was so understood by the Greek translators. In Psalm 127 the presence of “Solomon” in the title (omitted in LXX) was conditioned by the mention of “the building of the house.”

MOSES. The attribution to Moses in Psalm 90 is probably based on the affinities between verse 1 and Deuteronomy 33:27, verse 10 and Exodus 7:7, and verse 13 and Exodus 32:12.

JEDUTHUN. At first sight Psalms 39, 62, and 77 appear to be ascribed to Jeduthun who, according to the Chronicler, was a levitical singer in David's time (I Chron. 16:38, 41, 42; 25:1, 3, 6; II Chron. 5:12). However, not only are the first two also attributed to David and the third to Asaph, implying a combination of variant traditions, but the preposition *ʿal* (62–77)

is difficult to reconcile with a personal name. It is possible, therefore, that a musical instrument is intended.

Another interpretation connects the term with the verb *ydh*, “to confess,” and presumes some confession liturgy or ritual.

Eight names are listed, at most, to which the Septuagint adds “Zechariah” in Psalm 137 and “Haggai and Zechariah” in Psalms 146, 147:1, 147:12, and 148.

Titles with Liturgical Application

The heading of Psalm 30 mentions “the dedication of the Temple” which must be an allusion to the occasion of its public recitation. The identification of the reference, however, is not clear (cf. Sof. 18:2). Psalm 100 implies a liturgy for the *today* offering (cf. Jer. 33:11). Psalm 92 indicates a Sabbath reading. The Greek Psalter further reflects liturgical traditions by affixing additional superscriptions indicating that Psalms 24, 48, 94, and 93 were read, respectively, on the first, second, fourth, and sixth days of the week (cf. Tam. 7:4; RH 31a). It also, strangely, designates Psalm 38 “for the Sabbath” and appends to Psalm 29 the notice, “on the going forth of the Tabernacle,” perhaps a reference to a custom of reading this hymn on the last day of the Feast of Tabernacles. However, the rubric may also allude to a tradition connecting Psalm 29 with David's bringing of the ark to Jerusalem, since the verses supposedly sung on that occasion (I Chron. 16:28–29) betray a close affinity with verses 1–2. Another possibility in explanation of the Greek annotation may be that the original Hebrew rubric containing the term *ʿazeret* was mistakenly identified with the eighth day of Tabernacles (cf. Lev. 23:36), whereas it is the rabbinic term for Pentecost. Indeed, the reading of Psalm 29 on this festival is attested (Sof. 18:3).

The Greek rubric to Psalm 96, “when the house was built after the captivity,” would imply some tradition not otherwise known. Totally obscure is the Septuagint annotation to Psalm 97, “when the land was established.”

Technical Terms in the Headings

The superscriptions are remarkably rich in the number and variety of technical terms, most of which are shrouded in obscurity. Their meanings were already lost in early times for the Greek translators were generally ignorant of them, even in the days of the Second Temple, and rabbinic literature and medieval commentators present an assortment of interpretations. The explanation for this severance of tradition may lie, at least partially, in the fact that the terminology was rooted in the technical jargon of the different guilds of singers and musicians who jealously guarded their professional secrets until they, themselves, went out of existence (cf. Yoma 3:11).

Mizmor. The term *mizmor* appears exclusively in the Book of Psalms, always as a title and never in the body of a psalm. It is never attached to those psalms found elsewhere in biblical literature. With a single exception (Ps. 98:1, but LXX adds “of David”) it is always used in conjunction with a proper name preceded by *lamed*. Why it is restricted to 57 psalms

cannot be known. It was translated *psalmos* by the Septuagint and by Theodotion and so came down in English as “psalm” lending its name to the entire book (see discussion on title, above). The verbal form appears outside Psalms only in Judges 5:3, II Samuel 22:50 (= Ps. 18:50), Isaiah 12:5, and I Chronicles 16:9 (= Ps. 105:2) and always in a liturgical context (cf. Isa. 51:3). It appears 44 times alone, 13 times together with *shir*, and also frequently in parallelism with that term (cf. Ps. 21:14; 27:6; 57:8; 68:5, 33; 104:33; 108:2; Judg. 5:3; Amos 5:23). It is also used in connection with the lyre (Ps. 71:22; 98:5; 147:7; 149:3), the harp (33:2; 144:9; cf. Amos 5:23), and the timbrel (81:3; 149:3). There can be no doubt that *mizmor* refers to liturgical music.

La-Menazze'ah. The title *la-menazze'ah* occurs in 55 psalms invariably in the initial position. Outside the book it appears only in Habakkuk 3:19, also a liturgy. Its absence from II Samuel 22 and its presence in Psalm 18 shows that it has to do with the liturgical performance. Medieval Jewish commentators generally point to the verbal usage in the sense of overseeing labor (Ezra 3:8, 9; I Chron. 23:4; II Chron. 2:1, 17; 34:13) and so understand the term to mean “director, overseer, choirmaster” or the like. Its connection with music is established by I Chronicles 15:21 and II Chronicles 34:12. However, the Septuagint took it to mean “eternity” (cf. Heb. *la-nezah*), the other Greek versions and Jerome connecting it with victory (cf. Heb. *nizzahon*). The Targum understood it to mean “to praise.”

Shir. Thirty psalms are entitled *shir*. The feminine *shirah* appears but once (Ps. 18:1; cf. Ex. 15:1; Num. 21:17; Deut. 31:19, et al.). *Shir* is not restricted to psalms and may be used for secular as well as religious songs (cf. Isa. 23:16). However, the invocation “sing ye!” (*shiru*) is exclusively liturgical. The term *shir*, unlike *mizmor*, may also appear in the body of the psalm itself (Ps. 18:1; 28:7; 33:3, et al.). Only in Psalm 46 is it found alone. In five instances it is followed by *mizmor* (Ps. 48, 66, 83, 88, 108) and in seven (or eight) others the order is reversed (30?, 65, 67, 68, 75, 76, 87, 92). The significance of the sequence is unknown. The emphasis in its use would be on the words set to a rhythm since the Hebrew uses the phrase “to speak a song” (Judg. 5:12; cf. 11QPs^a 27:9, 11), but whether it indicates a special mode of presentation is a matter of conjecture.

Shir ha-Ma'alot. *Shir ha-ma'alot* appears at the head of a cluster of 15 psalms (Ps. 120–134; Ps. 121 *la-ma'alot*). LXX and Jerome translate it “degrees” (cf. II Kings 20:911), but what was understood by that is not clear. Some assume a reference to some peculiar gradational style of musical execution. The rendering “ascents” assumes a connection with the return from Babylon (cf. Ezra 7:9), but only Psalm 126 would be suitable to such a context for in Psalms 122 and 134 the Temple is still standing. Similarly, only Psalm 122 would be appropriate to a “pilgrim psalm” interpretation which would better fit other psalms (e.g., 15, 24, 43, 84) not so designated. The Mishnah

appears to understand *ma'alot* as “steps” (cf. Ex. 20:26 [23]; I Kings 10:19, 20) and to find a connection with the 15 steps joining the court of the Israelites to the court of women in the Second Temple on which the levitical musicians used to stand during the ceremony of the “drawing of water” on Sukkot (Suk. 5:4; Mid. 2:5). These psalms may also have derived their designation from their use in some festal procession.

Maskil. Featured in the headings to 13 psalms, *maskil* never appears without a proper name with a prepositional *lamed* (Ps. 32, 42, 44, 45, 52–55, 74, 78, 88, 89, 142). The LXX understood it to mean “instruction” (cf. Ps. 32:8). It must be assumed to refer to some special skill required in the manner of musical performance (cf. Ps. 47:8). From the context of Amos 5:13 and the contrast between the *maskil* and the mourning rites (5:16–17), the term might well indicate some type of song.

Neginot. The term *neginot* appears six times (Ps. 4, 6, 54, 55, 67, 76) preceded by *la-menazze'ah* and with the preposition *be-* (cf. Hab. 3:19), and once in the singular preceded by *'al* (Ps. 61). From I Samuel 16:16, 23 it would clearly seem to indicate stringed instruments (cf. Ps. 68:33; Isa. 23:16; Ezek. 33:32).

Mikhtam. All six appearances of the term *mikhtam* are attached to *le-David* (Ps. 16, 56–60). LXX and Theodotion rendered it *stëlographia* which most likely represents its original meaning as “an inscription upon a slab.” It is probably interchangeable with the title *mikhtav* in Hezekiah’s thanksgiving psalm (Isa. 38:9). Some connect the word with the Akkadian verb *katāmu*, meaning “to cover,” “to conceal,” and assume a connection with some ritual.

Tefillah. Despite the epilogue to the second book of Psalms (72:20) which speaks of “the prayers [*tefillot*] of David” and the more than a score of appearances in the body of the psalms, the term *tefillah* is found only in the superscriptions to five psalms (17, 86, 90, 102, 142) and to Habakkuk 3.

Al Shoshannim. *Al Shushan Edut*, *El Shoshannim Edut*. *Al shoshannim* may be translated “On the lilies” (Ps. 45, 69), *al shushan edut* “On the lily of testimony” (Ps. 60), and *el shoshannim edut* “To the lilies of testimony” (Ps. 80). They may be cue-words, i.e., the incipits or titles of some well-known songs to the tune of which the psalm was sung. The reference may also be to a six-stringed or six-bell instrument shaped like the lily.

Al Tashhet. Found in the headings of Psalms 57–59, *al-tashhet* means “do not destroy” and may be an incipit, perhaps of some old vintage song (cf. Isa. 65:8). Since it is accompanied by *mikhtam* (see above) in three of its four occurrences, it has been suggested that it may be an adjuration against altering or destroying inscriptions.

Al ha-Gittit. The ancient versions generally connect the term *al ha-gittit* in Psalms 8, 81, 84 with the winepress (*gat*). It may indicate a tune sung by the grape treaders (cf. Isa. 16:10; Jer. 25:30), or it may be a musical instrument derived from the Philistine city of Gath (so Targum).

Al ha-Sheminit. Meaning literally, “on the eighth,” *al ha-sheminit* may refer to an eight-stringed instrument in Psalm 6, 12 (cf. Ar. 13b; Tosef., Ar. 2:7). It cannot mean an octave as the division into eight modes was unknown. The reference in 1 Chronicles 15:21, “with lyres on the *sheminit*” in parallel with verse 20, “with harps on *‘alamot*” (see below) has suggested a quality of the voice, perhaps a low bass.

Lehazkir. The appearance of the term *lehazkir* in 1 Chronicles 16:4 in a context of public worship strongly suggests a liturgical or cultic meaning in the headings of Psalms 38, 70. However, the precise circumstances cannot be determined for the verb is elsewhere used of invoking the divine name (cf. Ex. 20:21; Isa. 26:13; 48:1; 62:6; Amos 6:10; Ps. 20:8), of recalling sinfulness (cf. Gen. 41:9; Num. 5:15; 1 Kings 17:18; Ezek. 21:28, 29; 29:16), and in connection with the meal offering or incense burning (cf. Lev. 2:2; 24:7; Num. 5:15, 26; Isa. 66:3).

Al Maḥalat. If *al maḥalat* is not a cue-word identifying the tune to which Psalms 53, 88 were to be sung, it may indicate a wind instrument (cf. 1 Kings 1:40, et al.) or some choreographic direction (cf. Judg. 21:23, et al.). It might also be translated, “for sickness” (cf. 1 Kings 8:37) and imply some accompanying ritual.

Al Alamot. The term *al alamot* is found as a heading only once (Ps. 46). However, another occurrence of *al alamot* may be the obscure *al-mut* in our received Hebrew text of Psalm 48:15, which might belong to the next psalm, as well as in the title of Psalm 9 (see below *al mut la-ben*). Its connection with public worship is attested by 1 Chronicles 15:20. It could refer to a musical instrument such as a small flute or pipe or express a quality of the voice, i. e., “youthful” (cf. *almah*, “a maiden”), perhaps high pitched or soprano.

Al Mut la-Ben. *Al mut la-ben* could either mean “male soprano” or be a cue-word in its single appearance (Ps. 9).

El ha-Nehilot. Either a wind instrument (cf. *al-maḥalat* above) or a cue-word could be intended by *el ha-nehilot* in Psalm 5. The variant *‘el* for the frequent *al* cannot be explained.

Al Ayyelet ha-Shahar. *Al ayyelet ha-shahar* is almost certainly a cue-word, the psalm (22) being set to the tune of a well-known song entitled, “On the hind of the morning.”

Al Yonat Elem Reḥokim. *Al yonat elem reḥokim* too (Ps. 56) must be a cue-word that may be translated, “On the speechless dove far-off,” or, “On the dove of the far-off terebinths [*elim*].” The Septuagint seems to have understood “dove” as an epithet for the people of Israel and have read *elim*, and construed it as “gods” or “holy beings.”

Shir Yedidot. The title *shir yedidot*, “a love song,” is appropriate to the occasion of Psalm 45 which celebrates the marriage of an Israelite king to a Tyrian princess.

Lelammed. *Lelammed* means literally “to teach.” Its use in Psalm 60 is reminiscent of the similar introductions to songs in Deuteronomy 31:19 and 11 Samuel 1:18.

Le‘annot. The meaning “to afflict” indeed connects with the theme of Psalm 88. *Le‘annot* might refer to some ritual of penance (cf. Lev. 23:27, 29). It could also be an intensive form of the verb *anah* (“to chant”; cf. Ex. 15:21; 32:18), and might indicate some antiphonal arrangement in the performance of the psalm.

Shiggayon. *Shiggayon* (Ps. 7) also appears in the plural form in the heading to Habakkuk 3. On the basis of the Akkadian *šigū*, “lamentation,” “type of prayer” (CAD, š / II, 413–14) it has been understood as meaning a psalm of lamentation, and is an Akkadian loanword.

Tehillah. The term *tehillah*, which gave the book its most popular Hebrew title, occurs only in Psalm 145 (see discussion on title, above).

Hallelujah. Ten psalms begin with the term Hallelujah (106, 111–113, 135, 146–150) which is not strictly a title but an invocation (see *Hallelujah).

Technical Terms Within the Psalms

Two terms appear within the body of the psalms themselves.

Selah. The term *selah* occurs 71 times in 39 psalms mainly in the “elohistic” psalms, and three times in Habakkuk 3 (verses 3, 9, 13). In 31 of these psalms *la-menazze‘ah* also appears, as it does in Habakkuk 3. It is never to be found at the beginning of a verse, but occasionally comes in the middle (Ps. 55:20; 57:4; cf. Hab. 3:3, 9). Otherwise, its position is at the end of the verse and four times even at the end of the entire psalm (Ps. 3, 9, 24, 46). It may appear more than once in the same psalm (Ps. 3, 32, 46, 66, 68, 77, 89, 140). The LXX adds *selah* also at Psalms 34:11; 39:8; 50:15; 80:8; 94:15.

There is no agreement among the ancient versions and medieval Jewish commentators as to its meaning and function. There is no certainty that its current position in a psalm is always original and not sometimes the work of a later scribe or editor. The etymology is obscure and even the masoretic vocalization seems to be secondary.

The Septuagint, Theodotion (usually), and Symmachus all translated *selah* as διάψαλμά. However, the meaning of the Greek is as enigmatic as the Hebrew, and the usual rendering “interlude” is not at all sure. The Targum, Aquila, and Jerome all understood it as part of the text of the preceding verse in which it appears and rendered it as “always,” or “for eternity.” The present vocalization of the Hebrew word seems to reflect this tradition for it is the same as that of the usual word for eternity (*nezah*), and the accentuation connects the term with the preceding. The same interpretation is to be found in the Talmud (Er. 54a), and in the employment of *selah* in the Hebrew prayer book. It also finds support in the comments of Saadiah, Jonah ibn Janah, and Rashi.

A different explanation is given by Kimḥi (*Sefer Shorashim*) who connects it with the use of the Hebrew root *sll* in the sense of raising up (cf. Isa. 57:14; Ps. 68:5). The term would then be an instruction for the singers or musicians. Abraham

Ibn Ezra (to Ps. 3:3) believes it to be a liturgical response on the part of the worshipers, affirming the truth of the sentiments previously stated in the psalm.

Some scholars have suggested a derivation from *sal* (“basket”), concluding that at certain points in the service a basket-shaped drum was beaten. Others believe the term to be an acrostic. No solution to the enigma of *selah* is possible in the present state of our knowledge.

Higgayon. The term *higgayon* appears together with *selah* in Psalm 9:17 and with a musical instrument in Psalm 92:4. It is found as part of the text in Psalm 19:15 where it implies “utterance,” or “musings.” The basic root meaning seems to be “to make a sound” (cf. Isa. 16:7; 31:4; 39:14). *Higgayon* may therefore be an instruction to the musicians to produce a murmuring glissando or a flourish.

The Psalms, with their messianic references real and imagined, played a significant role in Jewish-Christian polemic as early as the New Testament (Matt. 22:21–46). The responses of the medieval Jewish biblical commentators to Christian Psalms interpretation, extremely valuable resources for the history of Jewish-Christian relations, were censored out of earlier editions of rabbinic Bibles but are now available in the excellent edition of M. Cohen (ed.), *Mikra'ot Gedolot “ha-Keter” Tehillim* (2 vols., 2003).

[Nahum M. Sarna]

IN THE TALMUD AND MIDRASH

The rabbis reduced the traditional number of psalms to 147 (Mid. Ps. 22:19; 104:2) merely for homiletical purposes as is evident from the passage in *Berakhot* 9b–10a. The Talmud explains that Psalm 19:15 was instituted to be recited after the 18 benedictions of the **Amidah* since it comes at the end of the 18th Psalm. Whereupon the Talmud asks, “But this is the 19th Psalm, not the 18th,” and answers that Psalms 1 and 2 constitute one psalm. It brings evidence for this in the statement that David first uses the word Hallelujah at the end of the 103rd Psalm, where in fact it is in Psalm 104:35. It is therefore evident that at that time Psalms 1 and 2 normally constituted two psalms, and Psalms 19 and 104 were numbered as they are today. That homiletical purpose seems clear. It is reflected in the statement “Moses gave the five books of the Torah to Israel, and corresponding to them, David gave the five books of the Psalms to Israel” (Mid. Ps. 1:2). In order to emphasize this relationship, the number of psalms was reduced to 147, probably in order to make it correspond to the number of *sedarim* in the Bible according to the triennial cycle current in Erez Israel. The other two cases of two psalms which were combined in one were probably 114 and 115 (see Kimḥi in loc.) and 117 and 118 (see Buber in Mid. Ps. 22 note 88).

The Book of Psalms includes the compositions of ten earlier authorities, Adam, Melchizedek, Abraham, Moses, Heman, Jeduthun, Asaph, and the three sons of Korah (BB 14b, 15a, variants are given in Eccles. R. 7:19.4). Nevertheless the Book of Psalms was called after David because “his voice was

pleasant” (Songs R. 4:4 no. 1 referring to 11 Sam. 23:1). All the psalms were inspired (Pes. 117a) and music helped to bring the inspiration: “A harp was suspended above the bed of David. When midnight came the north wind blew on it and it produced music of its own accord. Immediately David arose and occupied himself with Torah.” That “Torah” consisted of songs and praises, however, since “until midnight he occupied himself with Torah; and from then with songs and praises” (Ber. 3b). The psalms are both individual and general; those in the singular are personal, those in the plural are of general application (Pes. 117a).

Various psalms and groups of psalms are singled out for special mention in the Talmud. They are the **Hallel*, Psalms 113–118, the only psalms which formed part of the liturgy in talmudic times (see below; Psalms in Liturgy) and also known as the “Egyptian *Hallel*” (Ber. 56a), to distinguish it from Psalms 145–150 and Psalm 136 which are also variously referred to as *Hallel* (Shab. 118b), or, the latter, *Hallel ha-Gadol* (Pes. 118a); the seven psalms which were “the psalms which the levites used to recite in the Temple” (Tam. 7:4) and which have been included in the liturgy; and the Fifteen Songs of Degrees 120–134 (*shir ha-ma'álot*). Such importance was attached to the alphabetical Psalm 145, that it was stated that “he who recites it three times a day is certain to be vouchsafed the world to come” (Ber. 4b). Psalm 16 compresses into 11 principles the whole of the Torah (Mak. 24a). The *Tamnei Appei* (lit. “eight faces”), i.e., Psalm 119, the eightfold alphabetical acrostic psalm which in later ages is given a special importance (see below), is only mentioned en passant (*ibid.*).

The almost complete neglect of the psalms in the liturgy during talmudic times may give a wrong impression of the enormous importance with which the psalms were invested by the rabbis. A suggestion has been made that in some places there was a triennial cycle of the reading of psalms, corresponding to the triennial cycle of the reading of the Pentateuch, which would explain, inter alia, the comparison made between the Five Books of Moses and the Five Books of Psalms, and the equalization of the number of psalms with the pericopes of the Pentateuch. It was, however, in their homilies and preaching that the psalms were most heavily relied upon. The Midrash states that Ben Azzai “strung together [as a row of pearls] the words of the Pentateuch with those of the prophets, and of the prophets with the Hagiographa, and words of Torah rejoiced as on the day they were given at Sinai” (Lev. R. 16:4). Although it refers to the Hagiographa in general, there is no doubt but that Psalms was the favorite book of that section of the Bible employed. This method of “stringing together” the verses of Psalms with those of the Pentateuch is reflected in the proems to the classical **Midrashim*, the overwhelming majority of which are expositions of verses of the psalms which are linked with the pentateuchal verse under discussion. As a result, even disregarding **Midrash Tehillim* (*Midrash Psalms*), which is a running commentary on the whole Book of Psalms, and which in any case is largely a compilation based on earlier material, there is not a single chapter of Psalms and hardly a

single verse which is not expounded in the Talmud and Midrash (cf. A. Lavat, *Beit Aharon ve-Hosafot*, 1881).

IN THE LITURGY

The penetration of the psalms into the liturgy represents a gradual process extending over the centuries, the effect of which can be seen in the fact that whereas in the talmudic period the statutory prayers included no psalms whatsoever on Sabbaths and weekdays, and the only psalms recited were the *Hallel* on the three Pilgrim Festivals and Hanukkah, and later, despite a specific rubric to the contrary (Arukh 10a), on the *New Moon, the authorized Daily Prayer Book of the United Hebrew Congregation of England (Singer) gives an index of 73 psalms and part of another included in the various services. In part, at least, this inclusion of the psalms into the liturgy came as a result of popular demand. Of the Daily Psalm, for instance, there is the statement that “the people have adopted the custom of including it” (Sof. 18:1) and with regard to the choice of Psalm 136 as the psalm for the Passover “the people have adopted the custom of reciting this psalm, though it is not the best choice” (*ibid.* 18:2).

Statutory Prayers

The process whereby the recitation of psalms became an integral part of the statutory prayers consisted of regarding every reference to the recitation of psalms in the Talmud, either as acts of special piety performed by individuals, or as part of the Temple service, as a justification for making them part of the statutory service. To this class belong the **Pesukei de-Zimra* and the Daily Psalm. The *Pesukei de-Zimra* consisted originally only of the six last psalms, the Hallelujah Psalms 145–50. The process of inclusion is clearly seen in the fact that whereas their recitation is mentioned in the Talmud by R. Yose as an act of especial piety (Shab. 118b; and it is the later authorities who decide that the *Hallel* to which he refers are those psalms), in the post-talmudic tractate **Soferim*, they are called simply “the six daily psalms” which are already part of the statutory service (Sof. 17:11). Both these passages, however, confine the *Pesukei de-Zimra* to those six psalms. On the principle, however, that there was more leisure on Sabbaths and festivals, both the Ashkenazi and Sephardi rites add a considerable number on those days: the former adds nine (19, 34, 90, 91, 135, 136, 33, 92, and 93) and the Sephardi 14 (103, 19, 33, 90, 91, 98, 121–124, 135, 136, 92, 93; some rites include the first two in the weekday service).

The same process is seen with regard to the Daily Psalm. They are mentioned in the Midrash as “the psalms which the levites used to sing in the Temple” (Tam. 7:4). By the time of *Soferim* they are already part of the daily prayers, “the people having adopted the custom” (18:1). However, here again, once the transfer was made to the synagogue, it was extended to special psalms for every festival (for the text see *Soferim* 18 and 19 and for a variant, Baer, *Avodat Yisrael*, last unnumbered page). In the course of time a large number of individual psalms were added: Psalm 30 before the *Pesukei de-Zimra*,

Psalm 100 on weekdays in the *Pesukei de-Zimra*, Psalm 6 in the supplicatory prayers, Psalm 24 on weekdays when the *Sefer Torah* is returned to the ark, and 29 on Sabbaths and festivals. Psalm 20 was included in the last portion of the daily service. Some rites have psalms added to the evening service parallel to the Daily Psalm in the morning (see Singer, 133–40). Psalm 27 was instituted for the penitential period from the second day of Elul to *Hoshana Rabba, 144 and 67 for the Service of the Termination of the Sabbath, etc.

Two groups of psalms have to be mentioned: Psalms 104 and the Fifteen Songs of Degrees, included in the Sabbath afternoon service during the winter months, instituted in the 12th century, and the latest addition of all, which spread with remarkable rapidity, Psalms 95–99 and 20, for the Inauguration of the Sabbath. Instituted by the kabbalists of Safed in the 16th century – although the author of the liturgical work *Matteh Moshe* published in 1615 makes no mention of it, and 15 years later the author of *Yosef Omez*, while praising it as “a good and beautiful custom,” refers to it as “a new one, lately come up” – it has become standard in all Ashkenazi services (most Sephardi rites confine themselves to 29). This list, however, though incomplete, does not exhaust the inclusion of Psalms in the statutory service. Some of the prayers consist merely of a mosaic of single verses from Psalms of which the most notable are two passages which precede the Psalms of the *Pesukei de-Zimra*, called by their opening words *Romemu* and *Yehi Khevod*. Both consist entirely of verses from Psalms (except for one verse from Prov. 19:21 and one composite verse (*Adonai Melekh*) consisting of three parts, two of which are from Psalms) and of verses selected from the five books into which Psalms is divided. Only the second book has no verse in the *Yehi Khevod*, but the Yemenite rite adds Psalm 46:12 from this book, and this is probably the original version, already mentioned in *Soferim* (17:11). It would appear that this selection is deliberate. In all, no less than 250 individual verses from Psalms are thus added to the liturgy (A. Berliner, *Randbemerkungen*, p. 9).

Non-Statutory Prayers

It can safely be said that there is no special or non-statutory service which does not include one or more psalms. They include the introduction to the Grace after Meals, prayers for drought (Baer, appendix, p. 87), before going on a journey, the night prayer before retiring to rest, prayers for and by the sick, the burial service, the prayer in the house of mourning, the memorial service for the dead, and the service at the consecration of a tombstone which, apart from the memorial prayer, consists of a selection of psalms. The custom has been followed in all forms of service added in recent years, of which Singer includes the services on the occasion of making collections for hospitals, of thanksgiving of a woman after childbirth, and on the consecration of a house. They are naturally included in the prayers for Independence Day. Custom has developed, under the influence of the Kabbalah, especially in Israel, with regard to Psalm 119, the eightfold alphabetical psalm. At memorial

services the verses are recited which make up the name of the deceased and his father, with the addition of the verses the letters of which form the word *neshamah* ("soul").

Various

The regular reading of Psalms was not confined to services. The recital of the whole Book of Psalms is widespread, whether as an act of piety by saintly individuals, or by groups of unlearned people. For this purpose "societies of reciters of psalms" (*hevrot tehillim*) were formed, and in recent times a special society has been formed in Jerusalem whereby two separate groups recite the whole Book of Psalms daily at the Western Wall. The Psalms are included in their entirety in all large prayer books. A prayer has been composed to be recited prior to and at the conclusion of each of the five books as well as for its reading on Hoshana Rabba which specifically equates them with the Five Books of Moses (Baer, Introduction to Psalms in *Avodat Yisrael*, pp. 5–8). Baer concludes with a list of psalms which it is customary to recite on Sabbath to correspond with the weekly portion "in the manner of the *haftarah*," thus "stringing together" Pentateuch, Prophets, and Psalms (last page, unnumbered).

[Louis Isaac Rabinowitz]

IN THE ARTS

In Literature

From the early Middle Ages the Book of Psalms has had an incalculable influence on literature, art, and music. Its impact has, perhaps, been greatest on writers. J.G. *Herder stated that "it is worth studying the Hebrew language for ten years in order to read Psalm 104 in the original" and Israel *Zangwill even claimed that the psalms "are more popular in every country than the poems of the nation's own poets. Besides this one book with its infinite editions... all other literatures seem 'trifles light as air'..." (1895). Literary treatment of Psalms has taken several forms: translation and paraphrase in verse and prose, imitation, and the composition of hymns and epics inspired by the themes and style of the original. Many of the first European translations of Psalms possess considerable literary merit and importance and some helped to mold the languages in which the sense of the Hebrew was conveyed. Among the earliest known are the versions in Anglo-Saxon (eighth century), Old Church Slavonic (ninth century), and Old High German (tenth century). During the 13th–15th centuries many more versions of the Psalter appeared in lands throughout Europe; and translations of Psalms were among the first books printed in some countries, notable examples being Jacques Lefèvre d'Étaples' French Psalter (1509), Jan Kochanowski's *Psalterz Dawidów* (1578) and Maciej Rybiński's *Psalmi monarchy i proroka świętego Dawida* (1598) in Poland, and the Psalter of the Brasov friar Coresi (1578–80) in Romania. Together with other portions of the Old Testament, the Psalms were translated from the Hebrew by 15th-century Judaizing sects in Russia, and a version in Yiddish was published in Venice by the pioneer Hebrew grammarian and author Elijah *Levita (1545).

From the early 16th century the Psalms inspired the highest degree of literary creativity in England and France. Thomas Sternhold headed a team of scholars who published *The Whole Booke of Psalmes; collected into Englysh metre... conferred with the Ebrue...* (London, 1551², 1562), which ran to literally hundreds of editions during the 16th–18th centuries; and this version was first used for the Church of Scotland's metrical *Psalms of David* (Edinburgh, 1650), which has remained one of the standard collections for Protestants throughout the English-speaking world. Another verse translation of the 16th century was that by Sir Philip Sidney and his sister, Mary Herbert, Countess of Pembroke, whose *Psalms of David* was, however, only published in 1823. The pioneering French translation was that prepared by the poet Clément Marot (later in collaboration with the Geneva Reformer Théodore de Bèze): *Trente Pseaulmes de David mis en francoys* (1541) and *Cinquante Pseaulmes de David* (1543), which ran to dozens of editions from 1560 onward. Marot's version, with its "sober, solemn music," became an integral part of the French Protestant liturgy and enjoyed an extraordinary vogue, not only at the Protestant court of Navarre but even at the Catholic French court, where it was officially banned by the Sorbonne. French writers who paraphrased or reinterpreted the Book of Psalms include Agrippa d'Aubigné, Jean Antoine de Baïf, Jean Bertaut, Honorat de Bueil, Jean de la Ceppède, Jean Baptiste Chassignet, Philippe Desportes, Guy *Le Fèvre de la Boderie (whose works include many verse paraphrases from the Hebrew), and François de Malherbe.

During the 17th century, too, the Psalms retained their fascination for many writers. They inspired German hymns by Paul Gebhardt; the so-called *Teitsch-Hallel*, a Yiddish composition based, at least in part, on contemporary Protestant hymnology; and the first important work printed in New England, the *Bay Psalm Book* (Cambridge, 1640), a metrical (and highly literal) translation from the Hebrew for those who wished to "sing in Sion the Lord's songs of prayse according to his own wille." In the 18th century a Spanish verse paraphrase (*Especjo fiel de Vidas que contiene los Palmos de David in Verso*, London, 1720) was published by the ex-Marrano Daniel Israel Lopez *Laguna; and a German Jewish translation was prepared by the philosopher Moses *Mendelssohn (1783). Directly and indirectly many writers of the 19th and 20th centuries have been influenced by the Book of Psalms. Thomas Carlyle maintained that the Psalms of David "struck tones that were an echo of the sphere-harmonies." Even greater praise was expressed by the British statesman William Ewart Gladstone, who unfavorably contrasted "all the wonders of Greek civilization" with "the single Book of Psalms," claiming that the "flowers of Paradise... blossomed in Palestine alone" (*The Place of Ancient Greece*, 1865). The same source has provided perennial inspiration for Jewish writers, including Penina *Moise, whose metrical renderings of the Psalms were adopted by U.S. Reform congregations; Heinrich *Graetz; and Samson Raphael *Hirsch, whose German neo-Orthodox edition of the Book of Psalms appeared in 1882. Jewish writers of the 20th

century who dealt with the same theme included Nachman Heller, who published an edition of the Psalms together with a rhymed Hebrew paraphrase, English and Yiddish translations, and English notes (1923); Izak *Goller, whose original verse translation of Ps. 113–118, *Hallel – Praise*, was published in 1925; and the U.S. rabbi Gershon Hadas who published a new translation for “the modern reader” (1964).

[Godfrey Edmond Silverman]

In Art

Among Christians of the Middle Ages the Book of Psalms was the most popular section of the Hebrew Bible and it was frequently illustrated in illuminated manuscripts such as Psalters, Bibles, breviaries, and Books of Hours. A particularly popular subject was King David the Psalmist playing on his harp or, occasionally, on other instruments. In the English 13th-century Rutland Psalter he is shown playing the organ. Carolingian Psalters and Bibles and manuscripts of the following two centuries often depict David surrounded by Asaph, Heman, Ethan, and Jeduthun, his four musicians, symbolizing Jesus with the four evangelists. A charming representation of David the Psalmist is the introductory miniature to a 15th-century north Italian Book of Psalms, part of a Hebrew miscellany volume in the Israel Museum, Jerusalem. The king is shown seated in a garden near a wood from which deer emerge, charmed by his playing. The subject was revived in northern Europe in the 17th century. There are paintings by Rubens (Staedelmuseum, Frankfurt), Pieter Lastman (Gallery Brunswick), and *Rembrandt (Kaplan Collection, New York). Modern works include those by Dante Gabriel Rossetti (Llandaff Cathedral) and by Jozef *Israels (Stedelijk Museum, Amsterdam).

The Middle Ages have also left manuscript illuminations of other subjects taken from the Psalms; and these are often extremely literal in interpretation. Some illustrations to Psalm 27:1 (“The Lord is my light”) show David turning toward Jesus or the hand of God, and pointing to his own eyes. Psalm 53:2 (“The fool hath said in his heart: ‘There is no God...’”) is illustrated by a half-naked medieval jester with a bauble in his hand or wearing a jester’s long-eared cap. Sometimes he swallows a stone or bites a dog by the tail. In the 16th-century *Henry VIII Psalter* (British Museum) David is shown as Henry and the fool as his court jester. In some cases, however, the fool is David himself feigning madness before Abimelech. Psalm 69:2–3 (“Save me, O God; For the waters are come in even unto the soul...”) takes the form of a naked crowned monarch submerged up to the waist or shoulders, his hands raised in supplication. Psalm 81:2 (“Sing aloud unto God, our strength”) is illustrated by David striking on bells with a hammer, playing his harp, or dancing before the ark. Psalm 137 (“By the rivers of Babylon”) likewise formed the subject of manuscript illustrations, but also of paintings by the 19th-century French Romantic artist Eugène Delacroix (in the dome of theology of the Palais Bourbon, Paris) and the German academician Eduard Bendemann (Wallraf-Richartz Museum, Cologne).

Psalm 150:1 (“Praise God in His sanctuary”) inspired the bas-reliefs of choristers by Luca della Robbia (15th century; Florence Cathedral).

In Music

The singing of psalms was the chief medium of personal and communal devotion during the formative period of Christianity and has retained an important position in its liturgy ever since. In both the old Eastern and Western denominations, as in Jewish traditions, the melodies of the psalms are built on the principle of psalmody and show many similarities (see Musical Rendition, below). In the Christian traditions they are correlated with a rigid system of melodic theory, that of the Eight Modes or Tones, i.e., eight basic melodic-scalar patterns. The roots of this system also lie in the Near East; the psalm-odic patterns have been the least affected by changes in style or creative initiative, since they were to all effect “canonized” no less than the liturgical texts. Their earliest notation in the West is found in the anonymous treatise, *Commemoratio brevis de tonis et psalmis modulandis*, dating from about the second half of the ninth century, and their final forms, preserved thereafter by notation and usage, are those established shortly after the turn of the first millennium. As in Jewish tradition, the performance of the Psalms in the Christian liturgies shows many forms of responsorial and antiphonal divisions (soloist-group, group-group) and various relationships and means of musical linkage with the hymns and prayers of the service. An important feature is the florid rendition of the *Alleluia*, interpolated between the half clauses or the verses (cf. *Hallelujah), often spun out into a long, wordless melisma on the final *a*, the so-called *Jubilus*, and the extension of the psalm-odic principle to form the very melismatic chants of the *Tractus* (“drawn-out”) category. Special psalm-odic formulas are also used for the rendition of certain hymns from the Bible and the New Testament, such as the Songs of Moses – *Audite coeli* (*Haʿazinu*, Deut. 32:1–43) – and the Song of Mary – the *Magnificat* (Luke 1:46–55).

The Protestant Reformation and its related movements, basing its liturgy on the vernacular, created rhymed paraphrases of the Psalms, which were furnished with new melodies, i.e., newly composed, taken over from secular songs, or reshaped to the meter from a traditional (“Gregorian”) melody. The major composers who took part in the creation of this new tradition were Loys Bourgeois (c. 1510–c. 1561), Claude Le Jeune (1528–1600), and Claude Goudimel (c. 1515–1572), in France and Switzerland, for the psalm paraphrases by Marot and Calvin; Jacobus Clemens Non Papa (c. 1510–c. 1556) in Holland, with his three-part arrangements of folk tunes to the Dutch rhymed Psalter (the *Souterliedekens* – “little Psalter songs”); and Martin *Luther and the members of his circle for the psalm paraphrases among the German chorales. The continental tunes were largely taken over into the English and Scottish repertoire (Sternhold Psalter, 1563), and then with local additions, migrated with the Puritans to North America, where the earliest book of music instruction pub-

lished was *A very plain and easy introduction to the whole Art of Singing Psalms* by John Tufts (1712, 1744¹¹). Almost from the outset, the Protestant and related movements linked their psalm and hymn collections with art music (and no doubt also popular harmonizing practices) by publishing them in three- or four-voice part settings, a practice which still continues.

Art music compositions for the Psalms appear much later than for the other parts of the service, in the early 15th century, since most of the Psalm texts appear in those parts of the service which are less frequently the occasion for artistic elaboration, such as Vespers. The polyphonic settings of the Psalms “do not constitute a musical category, but are the sum of all those musical categories and forms which stand in any relationship to the biblical Psalms, to their text (original, translated, paraphrased, rhymed, reinterpreted, or taken as the base for an instrumental interpretation), or, in a more narrow sense, to their liturgical melodies” (L. Finscher). It is therefore hardly possible to trace the history of these compositions separately from the mainstream of European art music, from the strictly liturgical-functional harmonizations of the Psalm tones, through the golden ages of the continental motet and the English verse anthem (16th–17th centuries), to the free settings of modern composers. The Psalms have always appealed to composers not only as the “essence of sacred music” but also through their balance of the individual and communal expression of joys and sorrows, which challenges each composer anew. Psalm settings are found in the works of almost all major composers from the 16th century onward. The tradition has been continued by such works as Igor Stravinsky’s *Symphony of Psalms* (1930, to the Latin text), and Leonard Bernstein’s *Chichester Psalms* (1965, specified by the composer to be sung only in Hebrew).

[Bathja Bayer]

MUSICAL RENDITION IN JEWISH TRADITION

Historical Sources

It is most probable that some of the components of the so-called psalm titles, i.e., the verses or half verses prefaced to many of the psalms, indicate certain musical aspects: *shir*, *mizmor*, and their combinations (see above; see also *Music). The simple recurring response *ki le-olam hasdo* (“For His mercy endures forever”) in Psalms 136, 118:1–4, 106:1, etc., may have been sung to an equally simple melodic formula (by the levitic choir or by the public) after the more elaborate rendition of the first part of the verse by a soloist or by the choir. The refrain or response verses did not have to be written out explicitly if the performers and the public knew them by tradition, and the same was true for the practice of interjecting the praise Hallelujah, once, or several times, after each verse or group of verses. Present-day traditional usages show many instances of the use of one verse as response or refrain, the intercalation of extraneous sentences as refrains, and the addition of Hallelujah in both Jewish and Christian traditions.

The version of Psalm 145 found in Cave 11 at Qumran (11QP^s^a) may be an early documentation of the practices. A refrain-like clause (“Blessed be God and blessed be His Name forever and ever”), not found in the masoretic text or in the versions, is added after each verse. This refrain is obviously related to verse 1 and could have been intoned as a response. The talmudic sources offer a number of fairly detailed references to psalm singing. Especially important are those references that refer to the various possible divisions of performance between soloist and choir (or public) in the *Hallel* (Sot. 5:4, elaborated in Tosef., Sot. 6:2; TJ, Sot. 5:6, 20c; Sot. 30b; Mekhilta Shirata 1). The discussion centers upon the rendition of the Song of the Sea which is said to have been performed “as the *Hallel* is sung.” The information may therefore be applied to the contemporary performance of the *Hallel*.

The historical notated sources begin rather late, as compared to the notations of masoretic cantillation (see *Masoretic Accents). A specimen of psalm-cantillation motives according to the masoretic accents was notated sometime during the first half of the 17th century by Jacob Finzi, cantor in Casale Monferrato. Four psalm melodies – three Italian-Sephardi and one Italian-German – were among the 11 synagogal melodies notated by Benedetto Marcello in Venice and published in his *Estro poetico armonico* (1724–27 and subsequent editions). More than half of the compositions in Salamone de’ Rossi’s *Ha-Shirim asher li-Shelomo* (Venice, 1622–23) are settings of psalms (for three or more voices) with Psalms 92 and 111 set for a double choir of four-plus-four voices. Many freely composed settings of *Hodu* (Ps. 136) appear in the early cantor’s manuals, beginning with the manuscript of Juda Elias of Hanover (1740). Similar to Rossi’s works, these also belong to the province of art music; but the cantoral specimens frequently feature the beginning of the traditional intonation as a point of departure for their late-baroque flights of fancy.

Since the practice of psalm singing was taken over by Christianity from the synagogues of the surrounding Jewish communities in the Near East (and not from the art music of the Second Temple), many fruitful – and often problematic – attempts have been made to discover the “common heritage” by comparative methods. A survey of the oral traditions shows that the melodic content of psalm singing is extremely varied. On the other hand, all the truly traditional styles and practices of psalm singing do fall into a very limited number of categories as regards the melodic structure, relationship between melody and text, response and refrain, usages, and the influence of external musical and non-musical factors.

Melody

About 90% of the existing melodies follow the pattern which musicologists call psalmody (Gr. Πσάλλμδία, “singing of psalms”), i.e., a simple two-wave melodic curve corresponding to the parallel-clause structure of the majority of the psalm verses (two hemistichs). According to the still accepted definition established by medieval European church-music theory, psalmody consists of the following: *initium*, the opening

rise; *tenor* (or *tonus currens*, or *tuba*) the holding tone for the recitation of the main parts of the verse; *mediant* (or *flexa*), the midpoint “dip” between the two hemistichs, with a kind of secondary *initium* leading to the reappearance of the *tenor* for the second hemistich; and *finalis* (or *punctum*), the closing formula (see ex. 1). The tenor may be repeated for as long as necessary to cover a varying number of words, and the system is applied with enough flexibility to cover even those psalm verses which are actually not bipartite but tripartite. The realization of the psalmodic principle in the Jewish traditions is frequently more complex than in the Christian ones in several respects:

(1) many melodies have not one but two tenors, and there are also some “double” melodic formulas (see ex. 2);

(2) the tenor, or tenors, are often covert, appearing as one or several long notes, or as the axis of a series of melismatic movements, or otherwise hidden beneath a florid elaboration;

(3) in the second half of the verse, the structure is often disturbed by subtraction, addition, or other departures from the pattern; the ending, however, will always come to obey the convention of the *finalis* (see ex. 3). On the other hand, there are also many very simple and presumably archaic melodies which follow the psalmodic pattern faithfully: examples are known from Tunisia, Morocco, Persia, Yemen, and even Europe.

The character and complexity of the melody are linked with the liturgical function. A certain psalm may thus be sung to various melodies. The exceptions are the two psalms of national mourning (“Asaph, O God the heathen are come into Thine inheritance”), and Psalm 137 (“By the rivers of Babylon”) and Psalm 79 (“A psalm of often Psalm 91 (“Psalm of the afflicted individual”). The traditional intonations these have acquired in each community are so strongly associated with their contents that they cannot be transferred to the more joyful and festive texts of other psalms. The daily reading in the synagogue, or in private devotions, is the simplest and most closely follows the principle of psalmody. For the group of psalms sung in the morning prayer (*Pesukei de-Zimra*), different melodies are chosen for weekdays, Sabbath, and feasts. With the increasing festiveness of the occasion, the melodies tend to become more elaborate, especially when the rendition is given to the *hazzan*. Examples are the *Hallel* in the synagogue and psalms sung at weddings (especially Ps. 45). On extraordinarily festive occasions, the ritual will consist mostly of appropriately chosen psalms, and here virtuoso composition and performance are given the freest rein – as in a festive prayer for the sovereign (which will feature Ps. 21 and similar texts) and in the ceremony for the dedication of a new synagogue (where Ps. 118 is prominent).

In home rituals, such as in the *Hallel* sung at the *seder*, or

Example 1. Simple psalmody, Ps. 105, Frankfurt tradition. From F. Ogutsch and J.B. Levy, *Der Frankfurter Kantor*, 1930, p. 4.

Example 2. Psalmody with two tenors (i.e., holding-notes), Ps. 114, Djerba tradition. The melodic pattern analyzed here has also been preserved in the Western Christian tradition, where it is called *tonus peregrinus*. Recorded in Jerusalem, 1955, by A. Herzog. Transcription by A. Herzog, from Yuval 1, 1968, music examples booklet, no. 14.

Example 3. Psalmody with free expansion of the second half-clause. Ps. 95, East Ashkenazi tradition for the Friday evening service. Verses 1–9 and the first half-clause of verse 10 are sung to the strict psalmodic pattern. The melody then takes over elements of the Adoshem malakh *shtayger, but returns to the psalmodic closing-formula. From Idelsohn, *Melodien*, vol. 8, no. 27.

for those parts of the above-mentioned ceremonies in which the congregation is expected to participate the simplest psalmodic melodies will retain their place by the force of tradition and for obvious practical reasons (cf. Volunio Gallichi’s manuscript score for the inauguration of the Siena synagogue in 1786 (ed. I. Adler, 1965)) which, in addition to an elaborate composition of *Open to me the Gates of Righteousness* (Ps. 118) and of various poems, has also preserved the traditional intonation for the “obligatory” prayers of the ceremony, including those for Psalms 32 and 95 (*Lekhu nerannenhah*).

The psalmodic pattern may be overlaid by non-psalmodic elements as an effect of liturgical function. In the Ashkenazi *Lekhu nerannenhah*, for example, the original psalmody seems to have been stretched by successive generations of *hazzanim* toward the *nusah* of the “Reception of the Sabbath” (cf. Idelsohn, *Melodien* 8, no. 27, and A. Baer, *Ba’al T’fillah*, no. 320). “If... a psalm was used as an introduction to or interlude between prayers in a certain mode, that mode was, as a rule, transferred also to the Psalms – a procedure called by the preceptors *me-inyana* [מעניינא – “of the relevant subject,” a talmudic technical term]” (Idelsohn, *Music*, p. 60). The all-important end clause in the Ashkenazi **nusah* intonation is truly psalmodic and it has been maintained that the *nusah* system

itself developed out of psalmody. Another instance of *me-inyana* is the singing of Psalms 92 and 93 in Yemen at the onset of the Sabbath, in the intonation of the study of the Mishnah, since the mishnaic passage *Ba-Meh Madlikin* is read there, as in many other communities, immediately preceding, as a kind of bridge between the afternoon and evening prayer.

Psalmodic melodies are also used for texts which are not psalms, as in the **Selihot* (of all communities) and in various prayers for Rosh Ha-Shanah and the Day of Atonement (among the Ashkenazim). Some of these may be better classified as a litany, which is an even simpler form than psalmody but closely related to it. In any case this again supports the contention of the relationship between prayer and psalmody.

Although the psalms are furnished with accents in the masoretic texts, the question, whether they were ever, or still are, sung according to the accents is still moot. Even the 17th-century Italian notation of accent motives for Psalms and the claims of present-day informants that they sing according to the accents are not conclusive. Most scholars think that the system of the accents is too sophisticated to be followed precisely or that there was a “lost art” of psalm cantillation. It may even be that some present-day practices of following the accents approximately are a back-formation phenomenon: since the accents were there, it was felt that they had to be obeyed somehow, and after many generations some characteristic motives became attached to the accent-signs in coexistence with the overall psalmodic line. Some modifications, such as those which occur in *Mizmor Shir le-Yom ha-Shabbat* (Ps. 92) in many communities, can only be explained by the influence of the accents.

Performance

In traditional group singing the psalm is sung in unison (or, as in Yemen, in the *organum*-like folk polyphony of that community). In most non-Ashkenazi communities the text is “metricized” in a precisely proportioned succession of the short and long syllables, as done with almost all prose or prose-like liturgical texts when sung by the congregation. As the oldest sources attest and contemporary practices still show, the psalms are also frequently sung in various forms of alternation: solo and group (responsorial psalmody), alternating or succeeding soloists, group against group (antiphonal psalmody), with response and refrain verses and intercalations of Hallelujah between the verses or even after each half clause (see **Music*, ex. 4). The point of alternation is not always at the end of the verse or after each half clause: often the performers alternate only at the half-clause point, apparently disregarding the primary verse divisions. In some cases a singer will end his part with the word bearing a masoretic accent of major divisive status inside the verse (not the *etnahta* at the half clause). For the waving of the *lulav* (palm branch) on **Sukkot*, verses of Psalm 118 are sung to an extended melody to allow for the waving in six directions (cf. Suk. 37b; A. Baer, *Ba’al T’fillah*, no. 814ff., for the Western and Eastern Ashkenazi melodies; and ex. 4 a melody from Djerba).

Example 4. End of Ps. 117 and beginning of Ps. 118, as sung during the waving of the palm branches on Hoshana Rabba, Djerba tradition. Recorded at moshav Berekyah, 1955, by A. Herzog. Parallel strict and simple transcription. From A. Herzog, *Renanot*, 10, 1963, p. 8.

Some communities are particularly rich in psalm melodies: Yemen, Morocco, Tunisia, Cochín, Syria, Turkey, Italy, and the “Portuguese communities” of Western Europe. In Yemen groups of psalms are sung most artistically in the prayer meetings called *ashmorot* (at dawn on the Sabbath), very similar to the singing of hymns by the Near Eastern communities in the **bakkashot*. The Egyptian repertoire is less varied, but many of the melodies are extremely florid and linked to the **maqāma* system; it is a moot point whether the practice is rooted in the same old tradition from which Christianity derived its extended “Jubilus” (the wordless prolongation of Hallelujah) or acquired more recently from Arabic art song. Among the Ashkenazi communities hardly any true psalms have survived, and the home rituals for the singing of the psalms have absorbed many folk tunes from the surrounding cultures. In the realm of the ḥasidic *niggun*, psalm verses furnish some of the texts, with no particular distinction as to the choice of melody (cf. the well-known “neo-ḥasidic” *Yismehū ha-Shamayim*).

In the “ordered *ḥazzanut*” of the 19th century in Western Europe, the psalms were set to music in a manner not different from the style of the prayers and often as showpieces for the choir, somewhat in the manner of the Anglican anthem. In Reform Judaism where the text was paraphrased as a rhymed poem in Western meters, the result followed the precedents of the Protestant chorale and even utilized its tunes. At this

stage the survey of the traditions of the musical rendition of the Psalms passes into the history of musical composition, discussed under Psalms in the arts (see above).

PSANTIR, JACOB (1820–1902), historian of Romanian Jewry. Born in Botosani, Romania, Psantir was orphaned in childhood and received no formal education apart from a few years in a Jassy *talmud torah*. He earned a meager living in a variety of occupations, including that of singer in a gypsy band. In this way he traveled throughout Romania and several other Balkan countries, and his great desire for knowledge coupled with an acute sense of observation enabled him to fill the gaps in his education. In his wanderings Psantir learned about the life of Jewish communities at first hand, investigating their history, their organization, their means of livelihood, and their relations with their non-Jewish neighbors. He supplemented his findings from communal and municipal archives and by deciphering inscriptions on gravestones. The results of his research are contained in two books written in Hebrew, *Divrei ha-Yamim le-Arzo Rumanyah* (“Chronicles of the Lands of Romania,” 1871) and *Korot ha-Yehudim be-Rumenyen* (“History of the Jews in Romania,” 1873), and the Yiddish *Sefer Zikhroynes* (“Memoirs,” 1875).

Although Psantir’s work lacks any scientific discipline, being the product of a self-taught writer whose imagination exceeds his critical faculty, it has important historical value because the sources completely disappeared after the Nazi Holocaust.

[Isac Beerovici]

°PSEUDO-LONGINUS, name ascribed to the author of the Greek treatise “On the Sublime.” The oldest manuscript of the treatise ascribes it to Dionysius Longinus. The only Longinus known, however, was named Cassius not Dionysius, and the opening of this manuscript notes the author as “Dionysius or Longinus.” The work must therefore be regarded as of uncertain date and authorship. The book tries to answer the question: “What are the characteristics of great writing?” In 9.9, the author cites Genesis as an example of greatness of thought: “Similarly, the lawgiver of the Jews, no ordinary man – for he understood and expressed God’s power in accordance with its worth [cf. Jos., Ant. 1:15 for similarity of language] – writes at the beginning of his Laws: ‘God said’ – what? – ‘Let there be light,’ and there was light; ‘let there be land,’ and there was land.” The fact that Longinus gives only the substance of the biblical passage suggests an intermediate source, and since Longinus’

treatise was written explicitly in answer to a work of *Caecilius of Calacte, who was apparently a Jew, the latter may well be the source. Another possible source is *Philo, whose language and sentiments resemble those of “Longinus” in chapter 44.

PSEUDO-PHOCYLIDES, a Hellenistic Jewish didactic poet, author of 230 hexameters falsely ascribed to the sixth-century B.C.E. Greek lyric poet Phocylides. The few fragments of Phocylides that have survived suggest a reputation for moral wisdom which Pseudo-Phocylides seems to have drawn upon to lend authority to his own moral apothegms. The poem of Pseudo-Phocylides was apparently considered an authentic work of the Greek poet from the time of its earliest citation in Stobaeus (fifth century C.E.). In the later Byzantine Empire this poem became quite popular and it was widely distributed as a school textbook in the period of the Reformation. There are many Byzantine manuscripts; the first printed edition is of 1495; there are many 16th-century translations and reprints. In 1856 Jacob *Bernays wrote a definitive study on the subject demonstrating that the author was Jewish and dependent on the Bible. Since then others have argued for Christian elements in the poem (A. Harnack), pagan elements (A. Ludwich, W. Kroll), and that the work is by a convert to Judaism (M. Roissbroich).

The contents are primarily ethical maxims of such general content that they might easily be taken to be the work of a non-Jew. Their Jewishness can be recognized occasionally as, for example, in the injunction to let the mother bird escape and keep only the young when a nest is taken (84ff.; cf. Deut. 22:6ff.) or the prohibition against eating the flesh of an animal killed by a beast of prey (147ff., cf. Ex. 22:30 and 139, cf. Deut. 14:21). Most of the poem, however, preaches a universal moral code rather than a particular theology or ceremonial law. Even though many parallels can be made between passages in Pseudo-Phocylides and the Pentateuch, the spirit of the poem as well as some of its phraseology is more akin to the wisdom literature in the Bible and the Apocrypha, especially the Apocryphal books of *Ben Sira* and *Wisdom of Solomon*.

Absent from the poem is any specific attack on idolatry, which Bernays ascribes to the cowardice or indifference of the author. There is also little or nothing which can be considered as anti-Christian, thus placing it in the period before the anti-Christian polemics, i.e., before 70 C.E., if it is assumed that the author was a Jew. Some verses (103ff.) speak of physical resurrection and say that “those who rise up again afterward become gods.” This is taken to be a Christian reference (Harnack), or a pagan reference (Kroll). Little else can be distinctly identified with any specific religious view. There are similarities between the moral admonitions of Pseudo-Phocylides and a moral manual of the early Church known as the *Didaché*. Rendel Harris, in his edition of the *Didaché* (1887, p. 46), suggests the possibility that both Pseudo-Phocylides and the *Didaché* go back to an earlier Jewish manual of morality. Part of Pseudo-Phocylides (5–79) was excerpted, with few variants and omissions, and incorporated into the *Sibylline Oracles

(2:56–148). Since the text is sometimes dependent on the Septuagint, the dating of the work would be in the second or first century B.C.E. (or, if Christian, in the first century C.E.). The metrics and the poetry are not very inspiring and the corruption of the text presents many problems. An exaggerated importance has been attached to the work.

[Marshall S. Hurwitz]

°PSEUDO-SCYLAX (fl. c. 350 B.C.E.), pseudonym of the Greek author of a seafarers' manual (*Periplus*), which includes a description of the Mediterranean and Black Sea coastlines. The work, entitled "Periplus of the sea of inhabited Europe, of Asia, and of Libya," refers to Scylax of Caryanda, a contemporary of Darius I (521–485 B.C.E.). However, the work was composed about the middle of the fourth century B.C.E. It has survived in almost complete form. The author charts, inter alia, the coastal cities of Palestine and Syria, such as Joppa (Jaffa), Doris (Dora), and Ascalon (Ashkelon). The latter two are described, respectively, as a city of the Sidonians and as a royal city of the Tyrians. He also mentions a mountain and temple of Zeus, which seems to refer to Mt. Carmel. He describes the boundaries of "Coele-Syria" as extending from Ascalon to the river Thapsacus, and states the distance between them.

[Solomon Rappaport]

PSYCHIATRY.

The Biblical Period

References to states of mental disturbance are frequently found in the Bible. Deuteronomy 28:28, 34 views madness as punishment for disobeying the commandments. The tragedy of Saul's last years is ascribed to an evil spirit that troubled Saul when the Lord departed from him. Saul's paranoid fears and jealousy of David could not be assuaged by David's attempts to help and reassure him by playing the harp (1 Sam. 16:14–23; 18:10ff.; 19:9–10). Later, David himself, in order to escape from Achish, simulated insanity, "scribbling on the doors of the gate and letting his spittle fall upon his beard" (21:11–16). The Bible does not speak of treatment of mental illness or recognize insanity as illness. On the contrary, it was enjoined that the person who was seen to be possessed by spirits should be stoned to death (Lev. 20:27); yet the Bible abounds in counsel for mental health, usually with an ethical intention. In Proverbs it is held that understanding is "a wellspring of life" (16:22) and that "a merry heart doeth good like medicine" (17:22).

In the Talmud

In the Talmud mention of mental illness is generally of a legal nature. The episodic nature of mental illness is taken into ac-

count on several occasions and there are references to periods when the person is of lucid or of unsound mind. There are also suggestions of a possible classification of mental illness such as a mental defect, confusion, acute and cyclical psychoses, and those which result from physical illness. The Talmud recognizes mental illness and is chary of accepting popular definitions such as: "he who goes out alone at night, who sleeps in the cemetery and tears his clothes" (Tosef., Ter. 1:3, and cf. Hag 3b). The word *shoteh* which contains the idea of walking to and fro without purpose is used to describe the mentally ill. The legal and social implications of insanity are frequently referred to in the Talmud. The mentally ill are not responsible for the damage they cause and those who injure them must bear the responsibility; the insane are not responsible for the shame they cause. They may not marry but, contrary to Greek concepts, in periods of lucidity the individual is considered healthy and capable from every other point of view. The Talmud sets very little store by magical medicines and cures for mental illness which were then current among the nations and were frequently found among Jews in the Middle Ages. It prefers to admit frankly the lack of effective treatment.

The Medieval Period

In the Middle Ages Jewish physicians no less than others were dependent on the humoral theories of Greek and Roman medicine (Hippocrates and Galen). Some Jewish physicians made original discoveries and contributions. *Asaph, the earliest Jewish physician known by name who lived apparently in the sixth or seventh century, felt that the heart is the seat of the soul and vital spirit. In his work, *The Book of Medicines*, he refers to the disturbed behavior of epileptics and to psychosis-phreneticus. Shabbetai *Donnolo, who lived in the tenth century, wrote in one of his medical books an analysis of the psychiatric conditions of melancholia and of nightmare. His description of mania contains a complex of conditions and undoubtedly included schizophrenia. Donnolo's psychiatric views while avoiding the magical element are derivative from the humoral theory of the Greeks. Nevertheless, though some of his explanations could be termed psychological his treatment was almost purely medicinal.

*Maimonides in the 12th century added to the genius of exegetical and philosophic work the brilliant practice of medicine and the exposition of it. His work *Pirkei Moshe* ("The Aphorisms of Moses") distinguishes clearly between motor and sensory nerves and voluntary and automatic activity. This book also deals with the anatomy of the brain and organic conditions such as epilepsy, weakness, contractions, and tremor. Maimonides' view of the influence of emotion on bodily function, in producing illness and retarding cure, was unique in his time. He was thus the father of psychosomatic medicine. In *Hanhagat ha-Beri'ut* ("The Regimen of Health") he sets out these views and instructions for attention to and the mitigation of the emotional state of the patient. He does, however, recognize the limitations of psychiatric care. *Sefer ha-Nimza*, which deals with mental illness, is questionably at-

tributed to him. The “*Sefer Madda*” in Maimonides’ Code sets out clearly his views on the promotion of individual mental health. His orientation to it is, of course, profoundly ethical, yet he relates mental health no less to the pragmatic functioning of the body and its appetites and effects. In essence this view recommends the middle road between indulgence and asceticism. He abjures all magical procedures.

The medieval flowering of Jewish medicine was followed by a prolonged period of folk medicine practiced by peripatetic healers. They acquired a reputation for healing as wonder-workers through incantations, amulets, etc. They treated mental patients as if they were afflicted by spirits, devils, and impure influences. The founder of the ḥasidic movement Israel ben Eliezer, in the 18th century, acquired his medical reputation by a rapid cure of a mental case. After him there ensued a further period of decadence in which the healers encouraged and exploited superstition.

The Modern Period

The reconstruction of psychiatry as a moral practice and a rational system after medieval times was accomplished in Europe only after a prolonged struggle against the demonological beliefs of the Church and the people. Phillippe Pinel’s work in France after the Revolution was a turning point. The 19th century saw the progressive definition and classification of mental illness, of the psychoses and the neuroses, and the humanization of treatment in hospital. The first Jewish medical psychologist to join this European movement was Cesare Lombroso who in 1864 published his *Genius and Insanity*. He described the delinquent personality carefully and related it to anatomical phenomena and genetic causes rather than moral factors. He thus became a pioneer in human and rational corrective measures for criminal behavior. His work also contributed much to the promotion of scientific thought and methods in psychiatry. Hippolyte Bernheim’s name is linked with the investigation of the neuroses which took precedence in the last two decades of the century. Although a careful observer, his interest was not in theory but in the cure of the patient. He was the first psychologist to advocate the principle of the “irresistible impulse” in legal medicine.

In 1889 Sigmund Freud was a spectator of Bernheim’s astonishing experiments in the treatment by hypnosis of mental hospital patients. Freud decided to use hypnosis in the treatment of neurotic patients and was associated in this task with Josef Breuer, a practitioner in Vienna. In 1895 their epoch-making book, *Studien ueber Hysterie*, appeared. This work embodied the discovery of the unconscious. Freud soon found that he could dispense with hypnosis by letting the patient talk at random and obtained better therapeutic results. This new method Freud called free association. With the publication in 1900 of his *Interpretation of Dreams*, Freud invaded the field of normal psychology, and the borderland between abnormal and normal psychology began to disappear. Freud’s theory and technique of psychoanalysis, after much resistance, not only revolutionized psychiatric therapy but was the final and deci-

sive medium in which education, child care, and the treatment of criminals was humanized and made rational.

Alfred Adler challenged the validity of Freud’s concepts of basic sexual drives and repression as prerequisites for neurotic symptom formation. In 1912 he coined the term “individual psychology.” He reduced the significance of childhood sexual factors to a minimum. For the school which developed around Adler, neurosis stems from childhood experience of over-protection or neglect or a mixture of both. This leads to a neurotic striving for superiority. His intuitive thinking may have been confirmed by thinkers subsequently who have defined the interaction between the goals of the individual and his social group and environment. Sandor Ferenczi made a singular contribution to psychoanalysis which has been considered second only to that of Freud with whom he was associated. He attempted to correlate biological and psychological phenomena in his scientific method – bioanalysis. Karl Abraham, one of the founders of psychoanalysis, contributed greatly through his researches to the clinical understanding of the neuroses and the psychoses especially of manic-depressive insanity. A.A. Brill was responsible for the introduction of psychoanalysis into the United States and into the practice of psychiatry there. Max Eitingon founded the first psychoanalytic training institute and polyclinic in Berlin in 1920. This became the model for all psychoanalytic training. He settled in Palestine in 1933 where he founded the psychoanalytic society and institute. Freud’s inner circle or “Committee” by 1919 comprised Ferenczi, Abraham, Eitingon, Otto Rank, Hans Sachs, and the only non-Jew among them, Ernest Jones. Jones has commented on the effect of Freud’s Jewishness on the evolution of his ideas and work; he attributed the firmness with which Freud maintained his convictions, undeterred by the prevailing opposition to them, to the “inherited” capacity of Jews to stand their ground in the face of opposition and hostility. That also held true for his mostly Jewish followers. Freud believed that the opposition to the inevitably startling discoveries of psychoanalysis was considerably aggravated by antisemitism. Early signs of antisemitism appeared in the Swiss analytic group. Freud felt that it was easier for Abraham to follow his thought than for Jung, because Jung as a Christian and the son of a pastor could only find his way to Freud through great inner resistance. Hans Sachs joined Freud in 1909. He abandoned law for the practice of psychoanalysis. Sachs was an editor and trained analyst whose main work was in the application of psychoanalysis to understanding the creative personality.

There were several other Jewish psychiatrists and lay psychoanalysts associated with the earlier phases of the development of psychoanalysis. Among them was Paul Federn who met Freud in 1902 and was the fourth physician to become an analyst. Theodor Reik was associated with Freud from 1910. Probably his major theoretical contribution was in the field of masochism. Helene Deutsch as a psychiatrist and analyst made the pioneer exploration of the emotional life of women and constructed a comprehensive psychology of their life cy-

cle. Melanie *Klein and Anna *Freud, both lay analysts, were originators of the psychoanalytical treatment of children, which they carried from the Continent to England.

In the United States, Erik Homberger *Erikson developed concepts of the development of the identity of the individual and his effort to maintain its continuity while seeking solidarity with group ideals and group identity. Margaret *Mahler added to the understanding of normal development in earliest infancy, describing the separation process from the mother. Perhaps the greatest contribution to child psychiatry was made in the United States by Leo *Kanner who, in 1943, first described and named the infantile psychosis, "early infantile autism." Lauretta *Bender believed that genetic factors determine the infants' vulnerability to a schizophrenic type of disorder and further related the onset of the psychosis to a biological crisis. Her visual Motor Gestalt Test was widely used to reveal organically based problems. Moritz *Tramer, the Swiss child psychiatrist, maintained that childhood schizophrenia exists as a hereditary entity in childhood and runs its course into the adult form. The psychoanalyst Paul *Schilder's dynamic concept of the "body image" contributed much to psychological thinking in the study of schizophrenia, especially in children. Beata Rank, while stressing the hereditary and constitutional factors in atypical emotional development, in therapy treated the early parent-child relationship. Rene *Spitz, a psychoanalyst, made important contributions in his studies of emotionally deprived infants and those separated from their mothers.

Many Jewish psychoanalysts, psychiatrists, and psychologists have been involved in the further development of child psychiatry and therapy especially in the United States. These include Phyllis *Greenacre, Herman *Nunberg, Ruth Eissler, Edith Buxbaum (c. 1895–1982), Bertha Bornstein (c. 1890–), Marianne R. Kris, William Goldfarb (1915–1995), David Levy (1892–1977), Stella Chess (1914–), Augusta Alpert, S.R. *Slavson, Peter B. Neubauer (1913–), Reginald Lourie, Fritz *Redl, and Martin Deutsch (1923–).

The effect of analytic theory and practice on psychiatry in the United States received an historic impulse after the Nazi accession and the transplantation of the psychoanalytic centers and practitioners from Europe. Franz *Alexander from Berlin had already added much to ego psychology and that of the criminal before developing, in his Chicago School, concepts of psychosomatic medicine and modifications of psychoanalytic treatment methods. Sander *Rado, who had studied drug addiction and developed "ego analysis" in New York, developed his modifications of it in "adaptational psychodynamics." Heinz *Hartman laid the foundations for the theoretical understanding of the interaction of the ego with personal, biological, and social reality. With Ernst *Kris and Rudolph *Loewenstein he explored the ways in which cultural differences produced variations of behavior. Géza *Roheim applied psychoanalytic principles to anthropological research. Otto *Fenichel is remembered as a teacher of psychoanalysis. Ernst Simmel was noted for his contribution on war neuroses and on antisemitism. Wilhelm *Reich made a basic contribution

in his analysis of character before his defection from psychoanalysis. Sander Lorand is noted for his teaching in technique. Kurt *Lewin made a notable contribution to the understanding of personality within its psychological environment; Erich *Fromm to the appreciation of the passions and behavior of men as determined by the creativity and frustrations of society; Kurt *Goldstein's studies have applied principles of perception and reaction of Gestalt psychology.

Among the U.S. psychiatrists and others who have contributed much to psychiatry the following should be mentioned here: F.J. Kallmann, for his genetic studies; Jules *Masserman, for his "biodynamic" methods; David *Rapaport, in his psychological researches; Melitta Schmideberg, for her treatment of major criminals; Manfred *Sakel who discovered insulin therapy; Roy *Grinker, for his integrative approach; and Nathan *Ackerman, for his family therapy. Other notable practitioners, teachers, and researchers were Eduardo Weiss, Milton Greenblatt (1914–), Paul Lemkau (1909–), Felix *Deutsch, Greta L. Bibring (1899–1977), Melvin Sabshin (1925–), Lewis *Wolberg, Theresa *Benedek, Lawrence S. Kubie (1896–1973), Leon Salzman (1915–), David A. Hamburger (1925–), David Shakow (1901–1981), Abraham *Kardiner, Frieda *Fromm-Reichman, Theodore Lidz (1910–2001), Thomas *Szasz, Samuel Beck (1896–), Bruno *Bettelheim, David Wechsler (1896–1981), J.S. Kasanin (1897–1946), Samuel Ritvo, Ralph Greenson (1911–1979), Rudolf Ekstein (1912–2005), Milton Rosenbaum (1910–2003), Eugen Brody (1921–), Eric D. Wittkower (1899–1983), Iago Galdston (1895–), M. Ralph Kaufman (1900–1977), Howard P. Rome (1910–1992), J.R. Linton (1899–), Frederick Redlich (1910–2004), and J.L. *Moreno who developed psychodrama.

Social scientists who contributed to mental health were Marvin and Morris *Opler, Melford Spiro (1920–), Leo Srole (1908–1993), Morris and Charleen Schwartz, Bert Kaplan (1919–), and Daniel Lerner (1917–1980).

In England the psychoanalytic approach was represented by Michael *Balint, Kate *Friedlander, Willie *Hoffer, Susan *Isaacs, August Bonnard, Joseph J. Sandler (1927–), W.G. Joffe, and Liselotte Frankl. Erwin Stengel (1902–1973) made remarkable contributions on suicide and M.D. *Eder, an early member of the movement, was also a devoted Zionist. Jews in psychiatry are ably represented by Sir Aubrey *Lewis, W. Mayer-Gross, Emanuel *Miller (1894–1970), and H.J. Eysenck (1916–1997), who represents the school of "behavior therapy" and psychology. In South Africa, Wulf Sachs (1893–1949) pioneered psychoanalysis and analyzed the first African subject. In France, Eugene *Minkowski was a pioneer in psychiatry and existentialist psychotherapy. In the Soviet Union L.M. Rozensteyn developed preventive methods in neuropsychiatry. M.O. Gurevich (1906–) shared the writing of a well-known textbook of psychiatry. The noted Soviet psychiatrist T.I. Yudin wrote an outline of the history of Russian psychiatry. O.B. Feltsman tried to popularize psychoanalysis through a psychotherapy journal and Moshe Woolf attempted this through his activities. The psychologist L. Vygotski and his coworker Luria

contributed fundamentally to the understanding of disturbed thought processes. Psychoanalysis was brought to Palestine by Eitingon Moshe Woolf and Ilya Shalitd. Its influence was extended into the practice of psychiatry by Henri Winnik, Ruth Jaffe, Eric Gumbel (1908–), and Shmuel Nagler (1914–). The establishment of the State of Israel led to a rapid expansion of psychiatric facilities, initially in the army and later in communities. Notable contributions were made in this respect and in others by Yeshayahu Baumatz (1897–1964), Erich *Neumann, Shmuel Golan (1901–1966), Janus Schossberger (1914–), Shlomo Kulcar (1901–), Abraham Weinberg (1891–1972), Julius Zeller Mayer (1910–), F.S. *Rothschild, Franz Bruell (1904–), Ludwig Tramer (1923–), Miriam Gay (1917–), Phyllis Palgi (1917–), and Nehama Barzilai (1918–).

The impact of Jews in modern Western psychiatry probably relates to their personal analytic gifts fostered by their own historic culture. Two events of the 19th century contributed to their entry into psychiatry in the 20th century: the political emancipation of Jews in Europe which permitted their entry into the universities and into the valued profession of medicine in which they had been involved in medieval times; and the freeing of psychiatry from its cloak of irrationality and prejudice, speeded by the discoveries of Freud. Ernest Jones has remarked that historically psychoanalysis was not a particularly Jewish movement in England. Neither psychoanalysis nor psychiatry in England are so even today. Psychoanalysis was not essentially attractive to Jews in the United States until the displacement to the U.S. of the largely Jewish Viennese and German schools and their attraction of Jews there to the profession. In psychiatry in Western countries, Jews were on the whole under-represented but they are especially today well represented in the U.S.

[Louis Miller]

PSYCHOLOGY, the science of the mind or of mental phenomena and activities.

Psychological Concepts in the Bible

“Psychology has a long past, but only a short history” (H. Ebbinghaus, *Abriss der Psychologie*, 1908). Nowhere is this aphorism better exemplified than in the many centuries during which Jewish physicians and thinkers dealt with the problems of behavior and behavior disorders. Many current notions on classification and therapy were foreshadowed in biblical and talmudic literature, and Jewish philosophers wrestled with the same psychological concepts that still occupy attention today.

The Jewish art of healing always emphasized mental as well as physical health. Behavior disorders were well known to the early Hebrews, who were noteworthy for their observance of the laws of preventive medicine and hygiene. From the beginning Jewish monotheism excluded all kinds of magic

practices. The Bible opposed occult healing as “Amorite customs” and prescribed as therapy for all mental and physical ills prayer to “God your healer” (Ex. 15:26) and the use of medicine (Ex. 21:19; I Kings 17:21; II Kings 4:32–35; Ezek. 30:21).

Cases of mental disorder described in the Bible include King Saul’s paranoia, depression, and epileptic seizures, treated by music therapy, and Nebuchadnezzar’s lycanthropy. Various types of insanity are cited in the Pentateuch, such as phobia and panic (Lev. 26:17).

Post-Biblical and Talmudic Period

The talmudic description of *shoteh* (“the mentally insane”) approaches the symptomatology of several psychoses (Ḥag. 2b; Sanh. 65b; Nid. 17a). The rabbis saw in the act of transgression a *ru'ah shetut* (“a mental deviation,” Sot. 3a). Other psychological conditions mentioned are: epilepsy (Yev. 64b); hysteria (Hag. 3a); phobias (Git. 70a); hereditary traits (Bek. 8a; Yev. 64b) versus environment (Suk. 56b), melancholia (Shab. 2:5; see Maim.), defense mechanisms such as repression, sublimation, and projection (Meg. 25b; Kid. 70a), and the concept of catharsis cited in both the Bible (Prov. 12:25) and the Talmud (Sanh. 100b). Talmudic and midrashic literature also discussed ideas related to individual and social behavior, attitudes and values, systems of learning, discipline, and punishment. The need for “group belongingness” in the spirit of Hillel (Avot 2:4) was always stressed, and social acceptance was considered an indicator of divine approval (Avot 3:10). In the realm of education, the Talmud approached the training of children in the light of an awareness of differing learning abilities and the relation of learning to stages of development (Ber. 28a; Kid. 30a; Yoma 27a; Avot 5:12). The Talmud understood and stressed such principles as the need for psychological understanding of the mentally sick, individual differences in personality assessment (Sanh. 38a; ARN¹ 4, 17), and the role of habit formation (Yoma 27a).

*Dreams were regarded as being of divine provenance. In antiquity Jews were famous as “dream interpreters,” from Joseph to Daniel, and later the Essenes. The Talmud considers the dream “a sixtieth part of prophecy,” that also contained irrelevant material, which “if not interpreted is like a letter which was not opened” (Ber. 55a). Halakhic literature deals with dreams related to oaths and promises, and with anxiety over a “bad dream,” for which one is permitted to fast a *ta'anit ḥalom* even on the Sabbath (Shab. 11a). Hebrew “dream books” similar to those of the old Egyptians and Greeks were written by R. Hai.

The nature and function of the *soul, reason, and intellect were treated by Jewish philosophers (under Greek influence) and in the Kabbalah. Judaism believes that the soul and the body comprise the total personality in the divine image and do not represent an essential duality. Although the biblical terms *ru'ah*, *nefesh*, and *neshamah* are used synonymously, the rabbis identified the *neshamah* as the human psyche – the higher spiritual substance. In recognizing the conflict between the *yezer ha-ra* (the orgiastic drive to sin) and the *yezer ha-tov*

(the positive inclination to control it), Judaism believes in the *liber arbitrium* (the principle of free choice), whereby man can master the id forces of the destructive *yezer ha-ra* (Suk. 52a) for the sake of the emergence of a healthy ego. *Maimonides attributed to the divine soul five different faculties: the nutritive, the sensitive, the imaginative, the emotional, and the rational (*Shemonah Perakim*, 1), the last being the distinctive, discriminating trait of man enabling him to apprehend and create ideas (*Guide* 1:70).

Medieval Period

Medieval Jewish philosophers who wrote on psychology included the eclectic Isaac b. Solomon Israeli who wrote *Sefer ha-Yesodot* ("The Book of Elements"), and discussed the interaction of mind and body and identified epilepsy and melancholia with insanity; Bahya b. Joseph ibn Paquda; Solomon ibn Gabirol; Joseph ibn Zaddik; Judah Halevi; Abraham ibn Daud; and the rationalist Maimonides.

The Jewish share in the spread and development of medieval culture and the sciences is well known. Jewish works in medicine and science became the ultimate source of European medicine in the schools of Salerno and Montpellier. *Asaph's earliest medical work in Hebrew contains the first medical notice of the hereditary character of mental diseases and of psychosomatics. A description of mania was given by the earliest Italian physician Shabbetai Donnolo who was born in 913 C.E. Although ideas about psychological illness were historically attributed to Hibat Allah ibn Jumay (c. 1180), who was the Jewish physician to Saladin, Jewish genius in this field really begins with that remarkable physician of mind and body, Moses Maimonides, the most modern in approach of all medieval physicians.

Maimonides advocated research through experiment. He emphasized the high regard a physician should have for the human mind, and stressed the psychosomatic approach in therapy (*Regimen Sanitatis*, 3:13). He also differentiated between constitutional and environmental sources of behavior, urging the mentally sick to avail themselves of a "physician of the mind" (Code, 1:2). He warned against excessive use of tranquilizers or any radical changes in behavior (*Shemonah Perakim*, 1). Quite modern from the psychotherapeutical point of view, Maimonides insisted on complete psychological harmony between couples during sexual union for the benefit of the offspring, and viewed "physical health as a prerequisite to mental health and excellence" (Code, 1:4). In his treatise on the manic-depressive state Maimonides proposed "a strict hygiene of the soul" based on self-discipline and mental calm (*Shemonah Perakim*, 3).

The 13th-century rabbi Gershon b. Solomon of Arles identified the brain as the center of motility and not the heart. He is said to have experimented by removing the heart of a monkey and to have made similar tests on birds. In the same century Shem Tov b. Joseph *Falaquera wrote *Battei Hanhagat Guf ha-Bari ve-ha-Nefesh* and *Sefer ha-Nefesh* dealing with the psychic forces. Philosophical and physiological psychology is

treated by *Hillel b. Samuel of Verona in *Tagmulei ha-Nefesh* ("Rewards of the Soul"). Moses Narbonni (11th century) and Nathan b. Joel Falaquera wrote on mental hygiene. Sleep was analyzed by the tenth-century Karaite Jacob al-*Kirkisani, and later by Jedaiah (ha-Penini) Bedersi as "a state when the sense of comprehension comes to a standstill" (*Ketav ha-Da'at*, "Treatise of the Intellect"). The medical works of *Amatus Lusitanus (16th century) and of Jacob *Zahalon (17th century) contain ample references to psychological issues.

Responsa Literature

The responsa literature also deals with mental diseases, in connection with matrimonial suits. Among the topics discussed were: melancholia, hysteria, "lunacy," manic-depressive states, megalomania, and character disorders. Isaac Lampronti of Ferrara permitted the desecration of the Sabbath "to prevent a state of emotional anxiety" (Resp. *Naḥalat Shivah*, 83). Music therapy, already used by King Saul and later treated separately by both Saadiah Gaon and Maimonides, is discussed by Ḥ.J.D. *Azulai in the Responsum *Hayyim Sha'al* (53), while hypnotism was noted by R. Jacob Ettlinger (d. 1871) in *Binyan Ziyon* (67). Prison psychology was first introduced by the 18th-century Marrano Ribeira Sanchez. Jewish religious law requires strict consideration and good care for the mentally deficient (Sh. Ar., YD 240:10; Sh. Ar., EH 119:6). Even before Pinel's pioneering work in France, Jewish law required communal care for the insane, who "are not held responsible for their actions, yet, injuring them is legally prohibited" (Sh. Ar., HM 924:8). Suggestive therapy "to pacify a patient's mind" is permitted by Maimonides and Caro on psychological grounds (Sh. Ar., YD 179:6).

Hasidism

The ḥasidic movement of the 18th century again introduced suggestive therapy. Mental disorders were often treated by early *zaddikim*. The Ḥasid's identification with his ego-ideal, the *zaddik*, a humane, divinely inspired messenger, and the strong belief in this spiritual leader, had phenomenal therapeutic effects. Much psychological insight is to be found in the writings of R. Israel Ba'al Shem Tov, R. Dov Baer, the Maggid of Mezhibezh, R. Naḥman of Bratslav, R. Shneur Zalman of Lyady, and their disciples. Ḥasidic teaching with its kabbalistic overtones and its strong emotional appeal and emphasis on the humane and mystical factors is the most psychologically oriented of all the expressions of Judaism.

[Menachem M. Brayer]

Modern Period

Psychology as a science and a profession emerged in the second half of the 19th century. Before the birth of psychology as an independent discipline, there had been a long period during which the subject matter of psychology – mental activity, human nature, and the relationship of mind and body – had been the province of philosophy. Jewish thinkers, ranging from Philo, who attempted to reconcile Greek and Hebrew thought, to the Jewish philosophers in the Arab countries

during the Middle Ages, and from *Spinoza and his laws of the mind to *Husserl and his phenomenology, played an important role in this history. But modern, scientific psychology could only come into being when the progress of physiology had provided the biological basis and physics, the methods to make psychology an experimental science.

PSYCHOLOGICAL PIONEERS. The last two decades of the 19th century saw the founding of academic departments of psychology in most major universities in Europe and the United States. As it was difficult for Jews to obtain university appointments because of official and unofficial discrimination, there were relatively few Jewish pioneer psychologists involved in the founding of laboratories. G.F. *Heymans participated in the establishment of a laboratory at Louvain in Belgium in 1891 and went on to found the first Dutch laboratory at Groningen in 1892. Hugo *Muensterberg founded the laboratory at Freiburg in Breisgau, Germany, and was called to Harvard in 1892 to reactivate and take charge of the laboratory there. Joseph *Jastrow received the first doctorate in psychology granted in the United States, at Johns Hopkins University in 1886. Doubly handicapped by the absence of academic departments and the fact that he was Jewish, he circularized the major university departments with his proposals for a psychology curriculum. He was successful in gaining an appointment at the University of Wisconsin, thus founding the second psychological laboratory in the U.S. in 1888. In England, where resistance to the new experimental psychology was especially strong, C.S. *Myers was the first psychologist to be in charge of the laboratory at Cambridge.

THE SCHOOLS. After its initial phase, psychology passed through a period in which various schools advanced their claims to be its true representative. Although most psychologists remained eclectic, it was the schools which provided the chief directions for the development of psychological theory. Joseph Jastrow of Wisconsin was typical of this trend. Otto *Selz was a prominent member of the so-called "Wuerzburg" school which investigated the psychology of thinking processes. The next generation of psychologists rejected many of the theoretical concepts and experimental techniques of the older schools. The European movement, in opposition to the older schools, successfully challenged the earlier elementaristic concepts, substituting an emphasis on relationships and phenomenological methodology. It was influenced by the work of David *Katz and Edgar *Rubin on perception. The founders of the new school, known as Gestalt psychology, were Max *Wertheimer and his associates, including Kurt *Koffka. Other important early members of this school were Kurt *Goldstein and Kurt *Lewin. Gestalt psychology was particularly affected by the fact that most of its founders were Jewish. It was originally primarily a European school, but the forced emigration of most of its important contributors to the U.S. (including Koehler, who was not Jewish, but in sympathy with his Jewish colleagues) with the advent of the

Nazis, introduced it into U.S. psychology. There it gained further support through the work of Hans Wallach in perception, Abraham Luchins in problem solving, and Solomon Asch in social psychology. In the 1920s and 1930s the acceptance of psychoanalytic and allied concepts in psychology grew rapidly and the ideas of Sigmund *Freud began to penetrate all facets of psychology, as well as literature, history, and the arts. The development of clinical psychology as a field of study and treatment of personality disorders can be traced primarily to the influence of psychoanalytic thinking.

Contemporary Period

Contemporary psychology has discarded the approach of the schools, with their attempt to bring all of psychology into one harmonious framework. It has substituted, in its systematic part, an emphasis on specific theories and models, and in its work, an emphasis on the investigation of specific problems and their applications. Many of the ideas of the schools have been incorporated into these modern approaches. Jewish psychologists have significantly contributed to the development of these theories. German and Austrian psychology was practically destroyed by the measures adopted by the Nazi regime, many of the displaced psychologists emigrating to the U.S. and making their contribution through teaching and research. Besides the Gestalt psychologists already mentioned, these included such important figures as Charlotte *Buhler, William *Stern, Heinz *Werner, Werner *Wolff, Erich *Fromm, Adhémar Gelb, and Else Frenkel-Brunswik (see Albert Wellek, "The impact of the German immigration on the development of American psychology," in *Journal of the History of the Behavioral Sciences*, 4 (1969), 207–29). A selective sample of prominent Jewish contributors to the development of present-day theoretical positions shows that practically all the psychological specialties are represented. Abram Amsel, Howard Kendler, Joseph Notterman, Leo Postman, William Schoenfeld, and Richard Solomon engaged in the study of learning with human and animal subjects. In the field of perception and sensory functions, leading names include Julian Hochberg, Hershel Leibowitz, Carl Pfaffman, and Irvin Rock. Comparative and physiological psychology are represented by Daniel Lehrman and David Krech, and by Murray Jarvik in the allied field of psychopharmacology. Jerry Hirsch made important contributions to psychogenetics, and Joshua *Fishman and Kurt Salzinger to the study of language. Melvin Marx worked in the field of learning, but is better known for his contribution to systematics. Abraham *Maslow figured prominently in the development of a humanistic psychology. The social field includes Leonard Berkowitz, Morton Deutsch, Leon Festinger, Otto Klineberg, and Daniel *Katz, with George Katona working in the allied area of the relation of economics and psychology.

Saul Rosenzweig, after work in personality and projective testing, became primarily interested in the history of psychology, as did Benjamin Wolman. In the development of projective testing Samuel Beck and Bruno Klopfer became known as

experts on the Rorschach test. Personality theory has gained through the work of Milton Rokeach. David Wechsler originated the standard tests of intelligence named after him, while Boris Levinson used intelligence tests to discover the characteristic patterns of the mental development of Jewish children. Joseph Zubin attempted to devise objective tests of abnormal behavior. Jewish psychologists constitute a large segment of the U.S. clinical field. Their various contributions to theory and practice can be exemplified by the work of Perry London, Emanuel Schwartz, and Hans Strupp in clinical psychology, and Morton Seidenfeld in counseling.

The Jewish contribution to all branches of psychology has been very important from the start, and Jews make up a disproportionate number of the profession. The diversity of viewpoints and the distribution of psychologists in the past indicate that psychology has attracted Jewish professionals because it presented an opportunity for intellectual advancement that was denied in some of the better-established fields. Without the Jewish contribution it may safely be said that psychology would not have reached its present state of development and would be seriously handicapped in its future course.

[Helmut E. Adler]

Women in Psychology

Jewish women are well represented in the field of psychology; they have been particularly prominent in clinical psychology and the social psychology of intergroup relationships, especially as it involves socially marginalized groups. Female Jewish psychologists hoping to work in the academic world, particularly prior to the 1960s, often faced both antisemitism and discrimination based on their gender that made it difficult to find tenured professorships. A number of Jewish women psychologists in the second half of the 20th century came from working-class households imbued with socialist political convictions; many of these women were advocates of social justice and equity in their scholarly work and in their lives. A disproportionate number of Jewish women have been active scholars and practitioners in the field of the psychology of women. Seven of the 12 recipients of the Association for Women in Psychology's distinguished career awards through 2005 have been Jewish women. These include sociologist Jessie Bernard in 1977; Ethel Tobach in 1979; Jean Baker Miller in 1980; Florence *Denmark in 1986; Rhoda Unger in 1994; Bernice Lott in 1998; and Lenore Tiefer in 2004. A number of these women also received distinguished publication awards from that organization. In addition, 10 of the 23 recipients of the Carolyn Wood Sherif Award, the most important award offered by the Division of the Psychology of Women of the American Psychological Association, are Jewish women whose work is mentioned in this article. Rhoda Unger received the first such award in 1984 followed by Barbara Wallston in 1986 (posthumously), Martha Mednick in 1988, Florence Denmark in 1991, Phyllis Katz in 1994, Bernice Lott in 1996, Sandra Schwartz Tangri in 1999, Michelle Fine in 2000, Judith Worell in 2001, and Laura Brown in 2004. A Jewish male, Arnold Kahn, received this award in 2002.

EARLY PIONEERS. The first major Jewish women psychologists were trained in Europe in the first few decades of the 20th century; many fled to the United States to escape the Nazis in the mid- or late 1930s. Like their male counterparts, many of these women, including Frieda *Fromm-Reichmann (1889–1957) and Else Frenkel-Brunswick (1908–1958), made their most important contributions in psychoanalytic and psychodynamic theory; others had an impact on the developing field of clinical psychology. These female refugees from Nazism helped to change the focus of American social psychology by giving it a more “outsider” perspective. These women, who were also early activists for various social causes, included the following:

Tamara Dembo (1902–1993) ultimately became a full member of the faculty at Clark University. Her major contributions were in the field of rehabilitation psychology, in which she advocated adapting environments to people rather than the other way around.

Erika Fromm (1910–2003) emigrated to the U.S. with her husband in 1938. Although confronted with gender discrimination that hampered her academic career, Fromm had an important impact on psychoanalysis through her work on dream interpretation and on hypnosis as a key to the unconscious.

Eugenia Hanfmann (1905–1983) studied conceptual thinking in schizophrenics and the role of projective tests in the assessment of personality. After a number of impermanent faculty positions, Hanfmann was invited to begin a counseling service for students at the newly formed Brandeis University in 1952.

Marie Jahoda (1907–2001) spent the war years in England but had an illustrious career in the U.S. beginning in 1945.

Margaret Mahler (1897–1985), a native of Hungary, worked in object relations theory.

Four U.S.-born Jewish women also made significant contributions to the field of psychology in the period directly after World War II:

Thelma Alper (1908–) was the 11th woman (and the first Jewish woman) to receive a psychology Ph.D. from Harvard University. After several years as a non-tenure track lecturer at Harvard, Alper accepted a tenured position at Wellesley in 1952. Her research combined elements of clinical and social psychology. She did a great deal of applied work with children and adolescents.

Mary Henle (1913–), who was born in Cleveland, was committed to experimental and theoretical issues involving Gestalt psychology. A member of the Graduate Faculty of the New School for Social Research in New York City, her research shifted to experimentation on perception and cognition in later years.

Bernice Levin Neugarten (1916–2001) received her Ph.D. from the interdisciplinary program on child development at the University of Chicago; this was the first degree in human development conferred by any institution.

Jane Loevinger (1918–) completed her graduate work at the University of California at Berkeley. Unable to obtain an

academic position in St. Louis, where her husband was on the faculty of Washington University, Loevinger conducted a variety of research studies in the areas of measurement and psychoanalysis supported by outside grants. In 1971, she finally became a tenured professor at Washington University. Well known as a pioneer in the study of the structure of personality, she published work on the construction of projective tests as well as on the meaning and measurement of ego development.

SOCIAL ACTIVISTS. This group of women (born in the 1920s or early 1930s) began their careers after World War II when discrimination against Jews and women had become less overt. Social activism, as well as research on the personal and social costs of societal inequities, was the central focus of their professional lives. As the feminist movement in the late 1960s and early 1970s made positions of leadership for women more acceptable, a number of Jewish women became presidents of the Society for the Psychological Study of Social Issues (SPSSI).

Cynthia Deutsch (1928–), who succeeded June Tapp as president of the SPSSI, received her Ph.D. from the University of Chicago in 1953. Deutsch was primarily concerned with the psychological consequences of early intervention in the lives of children at risk.

Marcia Guttentag (1932–1977), was born in New York City and received her Ph.D. from the clinical psychology doctoral program at Adelphi University in 1960. Her scholarship focused on mental health evaluation and gender and racial inequity in education. In 1972 Guttentag became the Richard Clarke Cabot Visiting Professor of Social Ethics in the Department of Psychology and Social Relations at Harvard University as well as Director of the Social Development Research Center and the Center for Evaluation Research at its School of Education.

Lois Wladis Hoffman (1929–), who was born in Elmira, New York, and received her Ph.D. from the University of Michigan in 1958, spent most of her professional career at the University of Michigan where she became a professor of psychology in 1975. Her earliest work was on child development, but she also investigated the effect of maternal employment on children. Her books include *The Employed Mother in America* (1963/1976) and *Working Mothers: Evaluative Review of the Consequences for Wife, Husband, Child* (1974). She later collaborated with Martha Mednick and Sandra Tangri on a book called *Women and Achievement: Social and Motivational Analyses* (1975).

Phyllis Katz (1938–), born in New York City, received her Ph.D. in developmental and clinical psychology from Yale in 1961. She founded and edited the feminist journal *Sex Roles* and edited the *Journal of Social Issues*. She was a professor at the Graduate School of City University of New York and went on to maintain her own research institute in Boulder, Colorado. Her major work in psychology was on the socialization of gender roles in children and she also edited two books on eliminating racism (1976; 1988).

Clara Weiss Mayo (1931–1981) received her Ph.D. in psychology from Clark University in 1959. After she joined the faculty at Boston University, Mayo was involved in one of the first studies to examine the effect of busing on school integration. She was also interested in the way nonverbal communication patterns helped or hindered relationships between individuals from different social groups.

Martha Mednick (1929–) was an influential pioneer in the study of women and gender.

June Tapp (1929–1992) was born in New York City but grew up in Los Angeles. After graduating from the University of Southern California, she completed her Ph.D. in social and political psychology at Syracuse University in 1963. A major researcher in psychology, law, and public policy, Tapp held a number of short-term positions before becoming a professor at the Institute of Child Development at the University of Minnesota in 1972. Her co-authored books include *Ambivalent America* (1971) and *Law, Justice, and the Individual in Society* (1977); she was also an effective social activist.

Ethel Tobach (1921–) is unique among this group, because of her field of comparative psychology as well as her European birth.

PROMINENT LATER PRACTITIONERS. Judith Alpert (1944–), who received her Ph.D. in school psychology from Teacher's College of Columbia University in 1973, did her research in school psychology and women and psychoanalysis. She was associated with the School Psychology Program in the School of Education at New York University for virtually all of her career.

Sandra Lipshitz Bem (1944–), a Pittsburgh native, moved with her husband Darryl Bem to University of Michigan, where she received her Ph.D. in developmental psychology in 1968. Bem did early collaborative work with her husband on the internalization of gender stereotypes as a source of gender inequality; she also originated the concept of "androgyny" – a measure of personality which views "masculine" and "feminine" traits as independent of each other. Her 1993 *The Lenses of Gender* examined the way gender is constructed by societal constraints.

Annette Brodsky (1938–) followed Florence Denmark and Martha Mednick as the fifth president of the APA's division on women (1977–1978). Born in Chicago, Brodsky received her Ph.D. in clinical psychology from the University of Florida in 1970. She initiated the first women's studies course at the University of Alabama and co-edited the first book on psychotherapy and women and also conducted important research on sexual contact between therapists and clients. She later lived in Los Angeles where she was director of clinical training for a large hospital and an expert witness on sexual abuse in psychotherapy.

Laura Brown (1952–), a Cleveland native, received her Ph.D. from Southern Illinois University in 1977. A clinical professor of psychology at the University of Washington and a private practitioner, Brown served as president of the APA

Division on the Psychology of Women following her term as president of the APA's Division on Gay and Lesbian Psychology. Brown is the author of *Subversive Dialogues* (1994) and other books on diversity issues in feminist therapy and feminist perspectives on personality and psychopathology.

Nancy Datan (1941–1987) emigrated to Israel in 1963, two years after receiving her master's degree from the human development program at the University of Chicago where she worked with Bernice Neugarten. She completed her Ph.D. from the same program while in Israel and returned to the U.S. in 1973. She taught at the University of Wisconsin at Green Bay with her second husband for the few years before her death. Datan and several colleagues conducted a pioneering study of aging among women from five subcultures in Israel, which ranged from traditional to modern in their conceptions of women's roles (Datan et al., 1981). She later reconsidered the research questions they had asked and their implications for gender roles within a religious and cultural framework (Datan, 1986). Datan also edited an important series of books on adult development and aging.

Florence Denmark (1932–) was the first Jewish woman to be elected president of the American Psychological Association (1980).

Michelle Fine (1953–), who grew up in suburban New Jersey, received her Ph.D. in 1980 from Teacher's College of Columbia University. A professor of psychology at the Graduate Center of the City University of New York, Fine's scholarship has focused on women and disability; black and Latina high school dropouts; and problematizing whiteness.

Frances Degen Horowitz (1932–), New York City-born, received her Ph.D. from the University of Iowa in 1959. Much of her professional career was spent at the University of Kansas where she rose from professor of psychology to dean of the Graduate School. She became president of the Graduate School of the City University of New York in 1991. Horowitz's research focused on early childhood development and children in poverty. President of the APA Division of Developmental Psychology in 1977–78, and president of the Society for Research on Child Development in 1996–97, she received the Weizmann Institute's Women in Science award in 1994.

Hannah Lerman (1936–), the twelfth president of the APA Division of the Psychology of Women (1984–85), was born in New York City and received her Ph.D. in clinical psychology from Michigan State University in 1963. A therapist in private practice in the Los Angeles area, she co-founded the Feminist Therapy Institute. Lerman wrote a well-received book critiquing Freudian theory (1986) as well as a critique of the psychodiagnosis of women in the late 20th century (1997). She also co-edited an important book on feminist ethics in psychotherapy (1990).

Bernice Lott (1930–), a president of the APA Division on the Psychology of Women (1990–91), taught at the University of Rhode Island. Her career shows discontinuities similar to those of other women who are/were married to prominent men in the field. Following her second marriage

to Albert Lott, she began to publish research regularly both in collaboration with him and by herself. Her work focused on prejudice and discrimination against women and on the social learning of gender.

Judith Seitz Rodin (1944–) was born in New York City and received her Ph.D. in social psychology from Columbia University in 1970. She did important work on obesity, aging, and social control while a professor of psychology at Yale where she became dean of the Graduate School before becoming president of the University of Pennsylvania. She made important contributions to research and policy issues involving women's health.

Marilyn Safir (1938–) moved to Israel shortly after receiving her Ph.D. in clinical psychology from Syracuse University. Born and raised in New York City, Safir was an activist on racial issues. Disenchanted with the treatment of women in the civil rights movement, she went to Israel because she believed that there would be more sexual equality there than in the U.S. In Israel, Safir was an early advocate of feminism and fostered dialogue between U.S. and Israeli scholars. Her research challenged myths of sexual equality in Israel.

Sylvia Scribner (1923–1991) worked as a union organizer and an anti-establishment activist for many years. After receiving her Ph.D. in 1970 under the direction of Mary Henle, Scribner became professor of developmental psychology at the Graduate Center of the City University of New York at the age of 59. Her extensive scholarly contributions were primarily in the area of cross-cultural psychology, cognitive science, and the history of science.

Sandra Schwartz Tangri (1937–2003) received her Ph.D. from the University of Michigan's interdisciplinary social psychology program in 1967. Tangri held faculty appointments at Douglass College of Rutgers University and Richmond College of the City University of New York. Between academic jobs, she was director of the Office of Research for the U.S. Commission on Civil Rights for four years and senior research associate at the Urban Institute for three more years. She later became professor of psychology at Howard University. Tangri conducted longitudinal research on women's careers and also investigated sexual harassment in the federal work force and ethical issues in population programs.

Rhoda Kesler Unger (1939–), who received her Ph.D. in experimental psychology from Harvard University in 1966, was the eighth president of the APA Division of the Psychology of Women (1980–81). Co-author of an early text on the psychology of women with Florence Denmark (1975), she became professor of psychology and director of the All-College Honors Program at Montclair State University in New Jersey in 1972. Her primary work was on the relationship between ideological values, theory, and methodology within psychology.

Lenore Walker (1942–), the 17th president of the APA Division of the Psychology of Women (1989–90), received her Ed.D. from Rutgers University and is best known for her groundbreaking work on battered women. She received a

Distinguished Award for Contributions to the Public Interest from the American Psychological Association for her lobbying efforts in this area.

Barbara Strudler Wallston (1943–1987) received her Ph.D. in social psychology from the University of Wisconsin in 1972. She spent her entire career as an academic researcher at George Peabody College of Vanderbilt University, where she served as chair of the Department of Psychology and Human Development and as coordinator of its graduate program in psychology. She was a leader in the Association for Women in Psychology and chair of APA's Committee on Women in Psychology in 1980; in 1987 she received the Carolyn Wood Sherif Lectureship Award for her achievements in and commitment to feminist scholarship, teaching, and mentoring and to professional leadership in feminist psychology (O'Leary, 1988). Wallston developed a health locus of control scale with her then husband, Kenneth Wallston, which is used internationally to measure people's beliefs about what controls their health status and she also worked in the area of dual-career couples, stereotyping (Wallston and O'Leary, 1981), and feminist methodology in psychology.

Naomi Weisstein (1940–), born in New York City, received her Ph.D. in cognitive psychology from Harvard University. Academic gender discrimination initially limited her employment to an adjunct lectureship at the University of Chicago. She finally joined the faculty at the State University of New York at Buffalo in 1973 where her research life was cut short by chronic fatigue and immune dysfunction syndrome. Weisstein contributed to the understanding of the neuropsychology of visual perception as well as to feminist scholarship.

Judith Worell (1928–) was born in New York City and received her Ph.D. in clinical psychology from Ohio State in 1954. She served as chair of the Department of Counseling Psychology at the University of Kentucky and edited *Psychology of Women Quarterly*. Worell's research interests focus on the development of a feminist model for counseling psychology; she also conducted extensive research on women's roles throughout their lifespan and on their satisfaction with their choices.

PTASHNE, MARK STEPHEN (1940–), U.S. biochemist. Born in Chicago, Ptashne graduated with a B.S. from Reed College in Portland, Oregon, and received his Ph.D. from Harvard University under the direction of Matthew Meselson. He joined the faculty of biochemistry and molecular biology at Harvard (1965) where he became professor (1971), chairman (1980–83), and Herschel Smith Professor from 1993. He was later a faculty member of the Molecular Biology Program at Memorial Sloan-Kettering Cancer Center, New York. His early research concerned the relationship between a virus called phage lambda and the bacteria it infects. There are two possible outcomes to infection. The virus may multiply and destroy the infected bacteria, a process termed lysis. Alternatively, the viral genetic information may persist without destroying the bacteria, a process called "lysogeny." However the quiescent phage DNA may subsequently be reactivated and lead to bacterial lysis. Ptashne identified and characterized the protein which determines the outcome of infection and he elucidated the mechanisms by which it operates. These discoveries were the basis for the new field of "transcriptional regulation" which explores the control of genetically determined programs in cells. It has crucially important implications for understanding the molecular basis of normal development and the abnormal events underlying cancer. He continued to work on gene regulation in normal and cancer cells. He reviewed his research in *A Genetic Switch: Phage Lambda Revisited* (2004³). His work has been recognized by many honors, including election to the U.S. National Academy of Sciences, the Gairdner Award (1985) and the Lasker Award for Basic Medical Science (1997). Ptashne is an accomplished violinist.

[Michael Denman (2nd ed.)]

PTOLEMY, the common name of monarchs of the Macedonian (or Thirty-First) Dynasty who ruled in Egypt from 323 to 30 B.C.E. It is unclear precisely how many such sovereigns there actually were; some scholars give a total of 14 and some 16. Most important for Jewish history were: PTOLEMY I (called Soter), reputed son of Lagus, founder of the dynasty. Ruler of Egypt as satrap from 323 B.C.E., he assumed the title of king in 305 and remained in power until his death in 283. Josephus states (Apion, 1:209 ff., and cf. Ant. 12:2 ff.) on the au-

thority of Agatharchides of Cnidus that Ptolemy, after gaining admittance to Jerusalem on the pretext of wishing to make a sacrifice, captured the city on the Sabbath day when the Jews did not fight (320 B.C.E.). Agatharchides comments derisively that the Jews “persevering in their folly” of not defending their city on this day, were given over to a “harsh master.” The second part of his statement is of especial interest, for scholars differ over whether Ptolemy was indeed a “harsh” master or whether his attitude toward the Jews was essentially benevolent. Whether the Jews in Egypt during his reign were indeed granted equal rights with Macedonian *clerouchoi* (“settlers”) must remain an open question.

PTOLEMY II (called Philadelphus) reigned from 283 to 245 B.C.E. According to the Letter of *Aristeas he was responsible for two important actions, the one of immediate and the other of lasting consequence: he freed numerous Jewish slaves (themselves evidence of his father’s military actions in Palestine) and initiated the Greek translation of the Bible – the *Septuagint. Both the foregoing statements may well have a historical basis. Philadelphus’ literary interests are attested from other sources, and the Bible project may conceivably have been begun during his reign. The construction of several cities in Erez Israel must also be attributed to his reign, including Philoteria (near Lake Kinneret) and Ptolemais, near present-day Acre (Arist. 115) as well as Philadelphia in Transjordan. He gained important victories in the first Syrian war against the Seleucid sovereign, *Antiochus I, and gave his daughter Berenice’s hand in marriage to Antiochus II upon completion of the second Syrian campaign (c. 253 B.C.E.).

PTOLEMY III (called Euergetes) reigned from 246 to 221 B.C.E. Some scholars identify this Ptolemy with the king of that name mentioned by Josephus with regard to Joseph the Tobiad (Ant. 12: 154ff.), while others are of the opinion that it was Ptolemy V (Epiphanes). If the king was Euergetes, then he must be credited with a favorable attitude toward his Jewish subjects. Josephus goes so far as to claim that after Euergetes’ great victory over the Seleucids during the third Syrian war (246–241 B.C.E.) he offered incense at the Temple in Jerusalem. A possible reference to some of the king’s actions during and after his campaigns in the Seleucid realm may be found in Daniel 11:7–9 where it is related that the Egyptian king removed idols from the conquered territories and restored them in his own country.

PTOLEMY IV (called Philopator) reigned from 221–203 B.C.E. A “wretched debauchee” according to E. Bevan, this monarch has fared less well than his predecessors in Jewish annals. Philopator is often associated with the following events described in III Maccabees: On the conclusion of the (fourth Syrian) war and his victory over Antiochus at Raphia (present-day Rafa) in 217 B.C.E., Philopator paid a visit to Jerusalem with the intention of entering the Temple. God intervened and he was felled to the ground. As revenge, when he returned to Egypt he ordered the Jews to be massacred in the Alexandrian arena by a horde of elephants, but the beasts turned on the royal troops instead. The day of deliverance

was commemorated by the Jews as an annual feast day, which seems to be the only historically verifiable aspect of the story, though Josephus places it in a later context.

PTOLEMY V (called Epiphanes) reigned from 203 to 181 B.C.E. This monarch irretrievably lost the whole of Palestine to Antiochus III at the battle of Paneas (present-day Bannias) c. 200 B.C.E.

PTOLEMY VI (or VII; called Philometor) reigned from 181 to 145 B.C.E. (from then on until the death of the last of the Ptolemies in 30 B.C.E., dates of birth and regnal years become increasingly uncertain). Philometor appears to have been generally well disposed toward the Jews, though he invaded Palestine to intervene in the disputes over the succession to the Syrian throne. His relations with *Jonathan the Hasmonean were cordial. II Maccabees 1–10 states that Philometor’s mentor was a Jewish philosopher and biblical exegete, Aristobulus by name. Under this same ruler the high priest *Onias IV, having fled from Jerusalem, built a temple at Leontopolis (c. 161 B.C.E.), while Philometor’s military garrisons were commanded by two Jews, Onias and Dositheus.

PTOLEMY VII (or IX; called Euergetes II) reigned from 145 to 116 B.C.E. According to Josephus the Jews were persecuted during his rule, yet a synagogue was dedicated to him by the Egyptian Jewish community. It was in the 38th year of Euergetes’ reign that the grandson of *Ben Sira went to Egypt where he translated his grandfather’s work into Greek.

PTOLEMY VIII (or X; called Lathyrus and Soter II) reigned intermittently from 116 to 80 B.C.E. He launched an attack on the Hasmonean Alexander *Yannai shortly after the latter had come to the throne, only to be driven back by his mother, *Cleopatra III, who, with his brother Ptolemy IX (or XI; called Alexander I), later planned their own assault on Yannai.

[David Solomon]

PTOLEMY (c. 135 B.C.E.), son of Ḥabub (Abubus) and son-in-law of *Simeon b. Mattathias (the Hasmonean). Ptolemy was *strategos* (i.e., military and local commander) at Jericho. Plotting to overthrow the Hasmonean House in 135 B.C.E., he invited Simeon and his entourage to a banquet while they were on a visit to the Jericho area, and treacherously murdered him and later two of his sons. He then sent messengers to Gazara (Gezer) to kill Simeon’s other son John *Hyrcanus. At the same time, he set out to capture Jerusalem, dispatching a message to the Syrian king, Antiochus Sidetes, to inform him of the developments and to enlist his aid. Hyrcanus succeeded, however, in killing his assailants and hastened to Jerusalem where he won the trust of the people, who remained loyal to

the Hasmonean dynasty. Having ensured his succession, Hyrcanus pursued Ptolemy and besieged him in a fortress in the vicinity of Jericho to which he had retreated. Ptolemy was able to defy Hyrcanus by holding his mother as a hostage. Eventually Hyrcanus had to lift the siege as a result of the onset of the Sabbatical year which led to a food shortage. Ptolemy fled to Philadelphia (Rabbath Ammon), after putting Hyrcanus' mother to death, and he is not heard of again.

[Lea Roth]

°**PTOLEMY (Son of Mennaeus)**, king of Chalcis, in the region of the Lebanon (c. 85–40 B.C.E.). *Josephus relates that the inhabitants of Damascus despised Ptolemy, and preferred as king of Coele-Syria the Nabatean king, Aretas. Ptolemy's position in the area, however, was firmly established, and the Judean queen *Alexandra's armed attempt to weaken that influence brought no results. During Pompey's campaign in Syria, the territory under Ptolemy was devastated, but Ptolemy held fast to his principality though he was compelled to pay a ransom of 1,000 talents to the Roman conqueror. Following the Roman conquest of Judea, Ptolemy assumed guardianship over *Antigonos, the son of the Hasmonean prince, Aristobulus, and his sisters. They were brought to Ptolemy at Ashkelon by his son, Philippion, who eventually married one of the princesses, Alexandra. Philippion, however, was subsequently slain by his father on account of Alexandra, after which Ptolemy married the princess himself. Meanwhile, with the gradual subjugation of Judea under Herod, Antigonos gathered an army and with Ptolemy's assistance returned to his country, only to be defeated by Herod and again driven out of Judea. Ptolemy was succeeded as king of Chalcis by his son, Lysanias, who continued to support Antigonos.

[Isaiah Gafni]

°**PTOLEMY THE BIOGRAPHER**, brother of *Nicholas of Damascus. Like his brother, Ptolemy was a highly esteemed member of the literary circle which surrounded Herod I. After Herod's death, he sided with Antipas (Jos., Ant. 17:225; Wars 2:21). A fragment of a work about Herod stating that the Idumaeans were Phoenician and Syrian in origin and were forcibly converted to Judaism (cf. Jos., Ant. 18:257–8) has been ascribed to him by Reinach (Textes, 88–89) but it may possibly belong to another Ptolemy.

°**PTOLEMY THE GEOGRAPHER** (second century C.E.), Alexandrian astronomer and geographer. Among his many works was a "Geography" in eight books in which he fixed the longitude and latitude of thousands of places, including many in Palestine: Ptolemais (Acre), Sycaminon (Haifa), Mount Carmel, Caesarea Stratonis (Caesarea), Iope (Jaffa), Ascalon (Askelon), Tiberias, Neapolis (Nablus), Gaza, Lydda,

Hierosolyma (Jerusalem). However, Ptolemy's locations are often in error.

°**PTOLEMY MACRON**, a general under *Antiochus IV (Epiphanes). The author of 11 Maccabees (10:12) explicitly states that Ptolemy "had taken the lead in preserving justice" for the Jews. As a result, he was accused before *Antiochus V (Eupator) and eventually took his life by poison. Some commentators accept the fact that the Ptolemy in question is synonymous with the Ptolemy son of Dorymenes, mentioned by Josephus (Ant. 12:298), in 1 Maccabees 3:38 and 11 Maccabees 4:45. The difficulty lies in equating this benevolent reputation with that in the foregoing passages (and cf. 11 Macc. 8:8–11). In these he is depicted as taking the field against *Judah Maccabee and being instrumental in the execution of a three-man Jewish deputation which had leveled charges against the Hellenizer *Menelaus. Polybius (27, 13) and Suidas (s.v. Πτόλεμαίος) refer to Ptolemy as former governor of Cyprus under Ptolemaic rule. He was later awarded the governorship of Coele-Syria and Phoenicia by the *Seleucids.

[David Solomon]

°**PTOLEMY OF CHENNOS** (early second century B.C.E.), of Alexandria, author of a lost "new" compilation of interesting facts, summarized in Photius. He derived Moses' supposed nickname, "Alpha," from the Greek word for leprosy, *alphi* (cf. Nicarchus).

°**PTOLEMY OF MENDE** (date unknown), an Egyptian priest who wrote in Greek a lost work on Egyptian chronology, quoted by Tatian in *Oratio ad Graecos*, 38, on the date of the Exodus. Apion made use of this work.

PUBERTY. It was estimated that puberty, defined by the appearance of two pubic hairs, began in women early in the 13th year, and in men about the start of the 14th year, and for that reason maturity was regarded as beginning legally from the age of 12 years and one day in the case of females and 13 and one day in the case of males (Nid. 5:6; Nid. 52a). The rabbis reckoned religious responsibility to begin with the onset of puberty. From this period onward one was recognized as an adult, responsible for the observance of the precepts and the discharge of communal obligations. In the case of females, the rabbis delineated several distinct stages: *ketannah* ("minor"), from the age of three to the age of 12; the *na'arah* ("young woman"), for six months following the initial period; and the *bogeret* ("adult"), which begins at the expiration of these six months (Nid. 5:7). No such distinctions were made for the males who were simply *ketanim* ("minors") before 13 and *gedolim* ("adults") after their 13th birthday.

The attainment of the age of maturity did not automatically render one an adult, since the physical characteristics of

puberty were also necessary in order to establish adulthood. However, when an examination for the signs of puberty was not made, it was presumed that a minor who reached the age of maturity had also developed the necessary signs (Nid. 46a). A young man past his *bar mitzvah is therefore counted for a *minyan even without an examination (Isserles to Sh. Ar., OH 55:5). A woman's maturity was deemed sufficiently established if she bore a child (Yev. 12b). In the event that signs of puberty did not appear by the age of maturity, the person retained the status of a minor until the age of 20. After that age, if signs of impotence developed, thus accounting for the absence of secondary sex characteristics, the person was considered an adult (Nid. 5:9). If such signs did not develop, the person retained the status of a minor until the age of 35, which was considered the major portion of a person's life-span (Nid. 47b).

After attaining the age of maturity, young adults were held responsible in ritual, civil, and criminal matters, and were held punishable by the courts for their transgressions or breaches of contract. It was believed, however, that heavenly punishment was not forthcoming for sins committed before the age of 20 (Shab. 89b, cf. BB 121b) and only those above the age of 20 were liable for military service (Num. 1:3) or obligated to pay the half-shekel when the people were counted (Ex. 30:14).

See *Child Marriage for marriages entered into by minors or arranged for them.

[Aaron Rothkoff]

PUBLIC AUTHORITY, in the context of this article, a term referring to an authoritative body composed of representatives of the public – whether appointed or elected by the latter – and entrusted with the duty and power to arrange various matters of common concern to this public. (For particulars concerning a personal authority, see *King and Kingdom; *Nasi; *Exilarch.) It has been stated that “the foundations of the community, as they remained in existence until the modern Enlightenment, were laid mainly in the first generations of the Second Temple period” (Y. Baer, in: *Zion*, 15 (1950), 1). Attributable to this early period are a number of tannaitic sources incorporating *halakhot* concerning the “townspeople” (*benei ha-ir* or *anshei ha-ir*, Shek. 2:1; BB 1:5), as well as certain *beitot* concerning the authority of the townspeople to compel each other toward the satisfaction of public needs in various fields (Tosef., BM 11:23ff.; BB 8a). At the head of such public authority stood the “seven good [elder] citizens” (*tovei ha-ir*, Jos., Ant., 4:214; TJ, Meg. 3:2, 74a; Meg. 26a). However, it was only with the rise of the Jewish community in various parts of the Diaspora from the tenth century onward that Jewish law came to experience its main development in the field of the laws concerning a public authority. This article deals with aspects of a public authority such as its legal standing, composition and powers, the legal relationship between itself and

individual members of the community, and so on. For further particulars concerning the legislative institutions of the community and the related administration of the law, see **Takkanot ha-Kahal*; as regards the legal aspects of communal administration in fiscal and financial matters, see *Taxation; **Hekdesh*.

Qualifications, Duties, and Standing of Communal Leaders

The qualifications and duties of public representatives are discussed in the Bible and in the Talmud, mainly from the social, moral, and ideological aspects. The ways of the Patriarchs and other leading Jewish figures – such as Moses, Aaron, Samuel, and David – in dealings with the people serve as a basic source of guidance for the relationship between the people and their leaders, between the citizen and the public authority. It has been stated that appointment of “a good public leader [*parnas tov*] is one of the three things proclaimed by the Almighty Himself” (Ber. 55a; Kal. R. 8); that the Almighty had already shown to Adam “every generation with its leaders” (*dor dor u-farnasav*, Av. Zar. 5a), and to Moses, “all the leaders destined to serve Israel from the day of its leaving behind the wilderness until the time of the resurrection of the dead” (Sif. Num. 139); that in time to come, “when the Almighty shall renew His world, He shall stand Himself and arrange the leaders of the generation” (Yal., Isa. 454).

The requirements demanded of the leader representing a public authority are many and stringent: “In the past you acted only on your own behalf, from now on [i.e., upon appointment] you are bound in the service of the public” (Yal., Deut. 802); “a leader who domineers over the public” is one of those “whom the mind does not tolerate” (Pes. 113b) and over whom “the Almighty weeps every day” (Ḥag. 5b). It is not only forbidden for a leader to impose undue awe on the community if not intended “for the sake of Heaven” (*le-shem shamayim*; RH 17a), but he must himself stand in awe of the public (Sot. 40a). The scholars described in various ways the mutual interdependence between the citizen and the public authority: “A leader shall not be imposed on the public unless the latter is first consulted” (Ber. 55a), but once appointed, “even the most ordinary... is like the mightiest of the mighty” (RH 25b), to whom the public owes obedience and honor. This interdependence is illustrated in the difference of opinion between Judah Nesi'ah (grandson of Judah ha-Nasi) and other scholars as to whether the stature of a leader follows that of his generation – *parnas le-fi doro* – or whether the generation is influenced by its leaders – *dor le-fi parnas*.

These, and other similar concepts scattered in halakhic and aggadic literature, guided the halakhic scholars in their determination of the principles of Jewish administrative law. A person engaged in public affairs is as one studying the Torah (TJ, Ber. 5:1). Moreover, “If he be engaged in studying the Torah and the time comes for recital of the *Shema* [“morning prayers”], he shall leave off studying and recite the *Shema*... if he be engaged in the affairs of the public, he shall not leave off but complete this work, and recite the *Shema* if there re-

main time to do so” (Yad., Keri’at Shema 2:5; Sh. Ar., OH 70:4; based on Tosef., Ber. 1:4, 2:6; see also Lieberman, *Tosefta ki-Feshutah*, Berakhot, p. 3). Hence it followed that it was not merely a privilege to represent the public but also a duty. Thus in a case where a member of the community was elected to public office, contrary to his own declared wishes in the matter (namely, appointment as a tax assessor; see *Taxation), it was decided that “no person is free to exempt himself... since every individual is bound in the service of the public in his town... and therefore anyone who has sought to exclude himself from the consensus has done nothing and is bound to fulfill the duties of his office because the community has not agreed that he be excluded” (Resp. Rashba, vol. 3, no. 417; cf. also vol. 1, no. 769; vol. 7, no. 490; *Tashbez*, 2:98).

In post-talmudic times the legal standing of a public authority was given precise definition based on the central legal doctrine accepted by the scholars of this period as the source of the community’s standing and authority to make enactments; namely, that the standing of the communal leadership is assimilated to that of a court (*bet din*; see **Takkanot ha-Kahal*). In a certain case a person sought appointment to a public office; he had previously sworn a false oath with regard to his tax declaration, was fined for so doing, and came to an arrangement with the community concerning this tax payment. It was held by Israel *Isserlein (15th-century scholar of Vienna) that since such a person was unfit for appointment as a *dayyan*, he was also unfit to be numbered among the leaders of the community: “the leaders of the community fulfill the role of a court when they sit in supervision over the affairs of the public and private individuals” (*Pesakim u-Khetavim*, no. 214). This principle set a guide standard for the qualifications required of communal leaders (see, e.g., *Terumat ha-Deshen*, Resp. no. 344): “communal leaders appointed to attend to the needs of the public or private individuals are like *dayyanim*, and it is forbidden to include among them anyone who is disqualified from adjudicating on account of his own bad conduct” (*Rema*, HM 37: 2). A further reason given by the scholars for assimilating the standing of communal leaders to that of *dayyanim* is that the duties of the former are largely concerned with providing for the social needs of the community, determination of the measure of support and relief for each being a task of a judicial nature (BB 8b and Rashi thereto; Sh. Ar., YD 256:3; *Mishpetei Uziel*, HM no. 4).

The assimilation of the communal leader’s standing to that of *dayyan* is naturally limited to such powers as he enjoys in his official capacity only. Hence communal leaders who have been empowered to elect a body to supervise public affairs must do so themselves, since they have no power to delegate this authority to others (see below), even though an ordinary court has authority to appoint an agent and entrust him with the execution of certain tasks (Resp. Ribash no. 228).

The Public Authority and Laws of Property and Obligation

The aforementioned assimilation facilitated the solution of a number of problems arising in Jewish law with regard to le-

gal relations between the public authority and the individual. Thus, for instance, the general requirement in Jewish law of a formal act of *kinyan* (see *Acquisition; *Contract) in order to lend a transaction legal effect would normally have constituted a serious obstacle to the efficient administration of a public authority’s multiple affairs. However, beginning in the 13th century, the new legal principle of the validity of any legal transaction effected by a public authority, even without a *kinyan*, came to be recognized. Apparently this was first laid down by *Meir b. Baruch of Rothenburg in a case concerning the hire of a teacher by the community (quoted in *Mordekhai*, BM 457. 8). Normally the parties would have been entitled to retract, since no formal *kinyan* had been effected and the teacher had not yet commenced his work (see *Labor Law), but Meir of Rothenburg decided that there could be no retraction from the contract of hire “because a matter done by the public requires no *kinyan* – although this would be required in the case of an individual.” He based this innovation on a wide construction of a number of talmudic rulings from which it may be inferred that the public has to be regarded differently from the individual, even though these contain no suggestion whatever that a *kinyan* might be dispensed with in a transaction effected by a public body (Meg. 26a; Git. 36a); in addition he compared the case of a transaction effected by a public body to that of a small *gift, although in this case withdrawal from the transaction is prohibited as amounting to a breach of faith and not because the transaction has full legal validity (i.e., when effected without a formal *kinyan*; BM 49a; Yad, Mekhirah 7:9; Sh. Ar., HM 2; see also *Contract). He further decided that a *suretyship for the fulfillment of the contract of employment between the community and the teacher was valid, even though it had been undertaken without a *kinyan* and in a manner in which the suretyship would otherwise be of no legal effect (*ibid.*). This decision is also given as the source of the rule that a gift by a public body is fully valid even if it is made without a formal *kinyan* (Sh. Ar., HM 204:9, and see also *Ha-Gra* thereto, n. 11). The law was similarly decided in regard to other legal matters affecting the public (see, e.g., Resp. Ribash no. 476; *Rema*, HM 81:1). This principle took root in the Diaspora: “The custom is widespread that whatever the communal leaders decide to do is valid and effective... and neither *kinyan* nor deed is required” (Resp. Rosh 6:19 and 21); similarly, in Constantinople in the 15th century it was held: “The widely accepted *halakhah* is that all matters of the public and anything that is done by or before the public is valid, even without *kinyan*, nor do the laws of alienation and acquisition [*hakna’ah*] apply in respect of such transactions” (*Mayim Amukkim*, no. 63); it was likewise decided by Isserles that “All matters of the public require no *kinyan*” (*Rema*, HM 163:6).

Other fundamental requirements of the law of *kinyan* were also relaxed with reference to a public authority. It was thus laid down, e.g., that the public may validly acquire something not yet in existence and alienate to someone not yet in existence (*Mayim Amukkim*, no. 63; see also *Acquisition, Modes of; *Contract); and also that in a public matter *as-

makhta constitutes no defect (Resp. Mabit, vol. 2, pt. 2, no. 228). One of the explanations given for this fundamental innovation was that it had to be assumed that in any transaction with which the public was connected the parties would make up their minds absolutely (*gemirut ha-da'at*), even without a *kinyan* and notwithstanding the fact of *asmakhta* and so on (see, e.g., Resp. Ribash no. 476; *Rema*, ח"מ 81:1; *Sma*, ח"מ 204, n. 14); However, the main explanation given for this innovation is the fact that the legal standing of a public authority has to be assimilated to that of a court, that is "because it is influenced by the rule of **hefker bet din...* and a public authority, in its dealings with the public, is as a court for the whole world" (Resp. Rashbash no. 566, also no. 112; cf. the statement of Meir of Rothenburg quoted in *Mordekhai*, ב"מ 457–8; *idem*, Resp., ed. Prague, no. 38). For the same reason it was held that a public body might not plead that it had not seriously intended a particular transaction, nor that it had erred and not properly understood the nature thereof (Rashbash, loc. cit.).

Relaxation of the requirements of the law of *kinyan*, of the rule of *asmakhta*, and so on, in the case of public matters naturally extended not only to the public body but also to the individual transacting with that body, so that he too was not free to withdraw from the transaction, even if it was effected without a *kinyan*, etc. (Resp. Rashbash no. 112; *She'ot de-Rabbanan*, no. 14; *Ba'ei H'ayyei* ח"מ, pt. 2, no. 81; PDR 6: 172f., 180f.).

The Public Authority and the Exercise of its Own Discretion

A basic question of administrative law concerning the power of a public authority to delegate authority in a matter requiring the exercise of its own discretion was extensively dealt with in a responsum of *Isaac b. Sheshet Perfet (Resp. Ribash no. 228). A certain Catalanian community was granted a royal privilege in terms of which three communal trustees, together with the court, were authorized to nominate 30 persons to supervise the affairs of the community, particularly tax matters. The trustees and the court were unable to reach agreement on the execution of their task and instead agreed to elect two persons and delegate to them authority to appoint the 30 communal leaders. When this was done, a section of the community objected on the ground that authority could not be delegated by a body required to exercise its own discretion. In upholding this objection Isaac b. Sheshet held that even if in general an agent could delegate his authority to another – in circumstances where it could be assumed that the principal was not particular about the matter (see *Agency, Law of) – this was not so in the case of a public authority, even though the latter is in a sense an agent of the public. The explanation offered is that no express power to delegate authority was given in the royal privilege, and the matter was of great importance since all the affairs of the community depended on selection of its 30 leaders, and those responsible for their selection had to choose leaders possessing suitable qualities; wise, just, and peace-loving persons, knowledgeable in the affairs of the community: "it is not the intention of the community that those who have

to select them [the 30] shall be able to appoint others to act in their own place, even if these others equal them in wisdom and standing"; if, however, the responsible parties had been given express authority to delegate their powers, "then it would be as if the community itself had chosen these two."

In the same matter Isaac b. Sheshet went on to give an important ruling concerning resort to the law of the land in the interpretation of the royal privilege. In his opinion, even if it were to be said that the privilege had been given with the intention that it be construed "only according to the law of the land," and even if according to this "anyone entrusted with a matter may in turn entrust this matter to anyone he chooses," yet in the case under consideration the delegation of authority remained invalid, because the rules of administrative law, so far as the Jewish community was concerned, derived their authority from Jewish law also, which did not allow for the delegation of authority in the case at hand. This ruling also involved no conflict with the law of the land in accordance with which the privilege had been given, since the general authorities were not concerned if the Jewish public failed to avail itself of the powers given under the law of the land, but were only concerned when the Jewish collective interpreted the privilege in such a manner as to lend itself wider authority than was available under this law: "the king is only particular about an extension of authority, not about a narrowing of it" (*ibid.*).

The Public Authority as an Employer

The great development of Jewish public law that followed on the rise of the Jewish community also made itself felt in the field of master and servant, in relation to employment by a public body. Special requirements relating to a public-service contract had already been emphasized in talmudic law. Thus, it was laid down that if a public-bath attendant, barber, or baker was the only one available and a festival was approaching, he could be restrained from leaving his employment until he provided a replacement (Tosef., ב"מ 11, 27; see also *Contract). In addition, in order to avoid harm to the public, it was laid down that an individual fulfilling his duties to the public in a negligent manner might be dismissed immediately, as in the case of a public gardener, butcher, or bloodletter, a scribe, a teacher of young children, "as well as other like artisans who may cause irretrievable harm, may be dismissed without warning, since they are appointed by the public for as long as they carry out their duties in a proper manner" (Yad, Sekhirut 10:7, based on ב"מ 109a and ב"ב 21b). The majority of the *rishonim* interpret the rule of the *Gemara* as also extending to a private servant, considering that he too may be dismissed during the duration of his service contract if he has caused irretrievable damage (*Hassagot Rabad*, Sekhirut 10:7; *Beit ha-Be'ahirah*, ב"מ 109a; Tur and Sh. Ar., ח"מ 306:8; *Rema* thereto; *Sma* thereto, n. 19). It was, however, laid down that a servant might not be dismissed without proper warning unless he was continually guilty of slackness in his work, and it must also be proved in the presence of the worker that he was indeed failing in his

duties (*Rema* loc. cit.; *Maggid Mishneh*, Sekhirut 10:7; *Nimukei Yosef*, BM 109a; see also below).

In post-talmudic times the halakhic scholars had to contend with the converse question: namely, whether it was permissible for a public authority to dismiss its servant without justifiable reason, on expiry of the agreed period of service, in the same way as could a private employer, who is free to refrain from renewing his servant's employment. (In modern times Jewish law has come to recognize the master's duty to pay severance pay to his servant on his dismissal: see **Ha'anakah*.) The talmudic rule that the high priest may not be dismissed from his office (TJ, Sanh. 2:1) did not serve as an analogy for public servants in general (see Assaf, *Mi-Sifrut ha-Ge'onim*, 73f.; *Sha'arei Teshuvah*, nos. 50, 51). From the 12th century, Jewish law consistently tended toward recognition of the principle that a public servant may not be dismissed from his employment except for justifiable reason. Maimonides laid down the general rule: "a person is not removed from a public position in Israel unless he has offended" (Yad, Kelei ha-Mikdash 4:21); also that "it is not proper to dismiss any officeholder from office on account of mere rumors concerning him; this cannot be done even if he has no enemies, all the less so if there are people in the town who are his enemies and have ulterior motives" (his Resp. (ed. Blau) no. 111; this was also the view of Meir ha-Levi and R. *Yom Tov b. Abraham Ishbili (Ritba), see Nov. Ritba to Mak. 13a). This principle was explained on the ground of "avoiding suspicion," that is, termination of the servant's employment with the public may arouse suspicion that the servant is being dismissed on account of his improper conduct (Resp. Rashba, vol. 5, no. 283; quoted also in *Beit Yosef*, Oḥ 53, conclusion).

At the same time, it is held to be permissible to dismiss a public servant whenever it is customary to appoint people in charge of public matters for a fixed period, "so that at the end of it these men depart and are replaced by others, whether they be appointed in charge of food supplies, the charity fund, tax, or any other public service, and whether or not they receive any remuneration for their service; even if no fixed period of service be stipulated for them, the terms of their appointment shall be similarly in accordance with the custom... because of their practice to replace [officials], the suspicion mentioned above is eliminated" (Rashba loc. cit.). In his responsum Solomon ibn Adret confirmed that such was in fact the custom in his time: "that the competent in each generation carry out tasks on behalf of the public, and thereafter depart to be replaced by others." The statement of this twofold principle – that a public servant may not be dismissed without justifiable cause except when it is the custom to hold office for a fixed period only – was accepted as *halakhah* in the Shulḥan Arukh (Oḥ 53:25–26) and was applied in the different centers of Jewish life in respect of all persons employed by a public authority (*keneset ha-gedolah*, Oḥ 53, *Beit Yosef*; *Arukh Ha-Shulḥan*, Oḥ 53:26; *Mishnah Berurah*, Oḥ 53, no. 73ff.; *Even ha-Ezer*, Sekhirut 10:7). In modern times attempts have been made to distinguish between different categories of public servants,

although there is no apparent justification for this in the halakhic sources (see PDR 3:94ff.).

The discussions concerning dismissal of a public servant also embraced the related and more far-reaching proposition that a public office be transmitted from father to son by way of inheritance. In this respect too there was already the tannaitic rule, on the analogy of a king succeeded by his son (Deut. 17:20), that "all the leaders [*parnasim*] of Israel have their places taken by their sons" (Sif. Deut. 162; cf. Sifra Z'av 5). Also Maimonides laid down that "Not only the kingship, but all offices and appointments in Israel are an inheritance from father to son for all time" (Yad, Melakhim, 1:7; Kelei ha-Mikdash, 4:20). In later times a trend toward restriction of this widely stated rule asserted itself. Thus, some scholars held that the rabbinate too was an office that could be passed by inheritance (Resp. Ribash no. 271; *Rema*, YD 245:22). Others disagreed, taking the view that "the crown of Torah is not an inheritance" (Reap. Maharashdam, YD, no. 85; Shneur Zalman of Lyady, Sh. Ar., Oḥ 53:33, et al.). This was also Moses Sofer's original opinion, which he later reversed (Resp. Ḥatam Sofer, Oḥ 12 and 13). It was laid down that local custom concerning inheritance of an office was to be followed (*Rema* loc. cit.). A son can in no event inherit a public office unless he is qualified for it and worthy of doing so (Sifra, loc. cit.; Maim. Yad, Melakhim, 1:7; *Rema*, Sh. Ar. YD 245:22; Ḥatam Sofer loc. cit.; for further details see OPD 46, 112; PDR 4:211; see also *Labor Law).

Election of Public Officeholders

Questions such as the nomination of candidates, their number, their manner of election, etc., are extensively dealt with in post-talmudic halakhic literature (see **Takkanot ha-Kahal*; *Taxation). In modern times, with the renewal of Jewish autonomy in Erez Israel and the establishment of the State of Israel, halakhic discussion has been resumed in relation to various problems arising in connection with the election of officeholders to representative state and municipal bodies. The primary sources relied upon in this discussion are found in the post-talmudic halakhic literature dealing with the leadership and administration of the community and its institutions; sometimes, when these sources do not deal specifically with the subject discussed by modern scholars, a conclusion is reached by way of analogy.

MAJORITY AND MINORITY. The principle of electing a public representative by majority vote was based by the scholars on the doctrine of *Aḥarei rabbim le-hattot* ("to follow a multitude": Ex. 23:2; see *Majority Rule), which was interpreted to mean "that in all matters to which the community consents the majority is followed" (Resp. Rosh 6:5; in talmudic *halakhah* the doctrine was interpreted as pertaining to a majority of the court in giving its decision, or to the concept of majority as a legal presumption; see **Takkanot ha-Kahal*; *Ḥazakah). At various times extensive discussions and sharp disputes centered around the question of the weight to be attached to the vote of individual members of the community. Many schol-

ars objected to a scale graded in accordance with social and economic standing: “and it makes no difference whether this majority was composed of rich or poor, of scholars or the common people” (Resp. Re’em no. 53). An illiterate person was held to be eligible even for certain public appointments (Resp. Rashba, vol. 3, no. 399).

An informative description of some such disputes is to be found in a responsum of Menahem Mendel *Krochmal (mid-17th-century leader of Moravian Jewry; *Zemah Zedek* no. 2). It had been the custom in a certain community for all taxpayers, regardless of their financial standing or education, to participate in the election of communal leaders and the appointment of public officials. Some of the “respected citizens” sought to depart from this custom and to have it laid down that only a person paying tax in excess of a certain rate, or a *talmid hakham* (“at least qualified as a *haver*”), could participate in the elections. Krochmal mentions that the “respected citizens” supported their demand with the argument that “most of the needs and affairs of the public involve the expenditure of money; how is it likely that the opinion of a poor man shall be as weighty as that of a rich man, or the opinion of an *am ha-arez* who is not wealthy be considered in the same way as that of a *haver*.” They further contended that what they were seeking was anyhow customary in “large and important communities.” The rest of the community objected to such a change in the system: “the poor, the masses of the people cry out against the derogation of their rights, since they also pay tax and contribute their share, and even if the rich pay more, the poor at any rate find the little they pay to be a greater burden than do the rich in paying much more.”

In his decision Krochmal strongly condemned the discriminatory nature of the proposed change in the election system and held that – at the very least – “the little of the poor is balanced against the much of the rich.” He nevertheless upheld the custom prevailing in most of the communities of striking a balance between a majority based on the number of souls and a majority based on financial contribution. He also rejected the proposition that those lacking in knowledge of the Torah be deprived of their vote, “lest they separate themselves from the public... which will lead to increased strife in Israel.” A change involving discrimination against any section of the public was forbidden except with the unanimous consent of all members of the community, and, added Krochmal, in communities where there was such discrimination it had to be assumed that this had been instituted with the unanimous approval of the entire community. In recent times halakhic scholars have accepted as binding the view that every vote is to carry equal weight (see, e.g., *Mishpetei Uziel*, חמ no. 3).

ELIGIBLE AGE. The question of the age at which the right to elect and be elected to public office is acquired has in recent times come to be discussed by analogy with the criterion of age in other fields of the law. The general view is that the usual age of legal capacity – namely 13 years and one day for a man and 12 years and a day for a woman – is not to be relied upon

as decisive with regard to the right to participate in elections, since in Jewish law the age of legal capacity is dependent on the specific nature of the legal act involved (see Elon, ILR, 1969, p. 121ff.) and exercise of the voting right carries with it legal consequences affecting the public as a whole – a factor calling for greater maturity on the part of the voter. According to one view, the active right to elect is acquired at 18 years: at this age a person has legal capacity to adjudicate in matters of civil law (*dinei mamonot*; Sh. Ar., חמ 7:3) and to perform public religious duties, for instance as a ritual slaughterer (*Rema*, YD 1:5). Another view is that the right to vote is acquired from the age of 20, paralleling the biblical military age (Ex. 30: 14; Num. 1:3) and the age of full majority, for instance for the purpose of the sale of paternal land which has been inherited (Yad, Mekhirah, 29: 13; Sh. Ar., חמ 235:9).

In the case of the passive right to be elected, the general view is that the minimal age is 20 years and over. At this age a person has the right to adjudicate in matters of criminal law (*dinei nefashot*; TJ, Sanh. 4:7) and even – for the purpose of permanent appointment as a *dayyan* – in matters of civil law (*Pithei Teshuvah*, חמ 7, n. 4). Other scholars arrive at this age (20) following the minimal age for permanent appointment as a cantor (Sh. Ar., OH 53:8) or as an *apotropos (cf. Resp. Ribash no. 20). There is also an opinion that distinguishes between a person elected to a state body, such as the Knesset (by virtue of whose far-reaching substantive powers the function of its representatives is held to be analogous to that of a *dayyan* adjudicating in matters of the criminal law), and a person elected to a municipal body (whose function is held to be analogous to that of the *dayyan* adjudicating in matters of the civil law, and who is therefore eligible from the age of 18 years).

WOMEN. A woman’s right to elect and be elected to public office has been the subject of much halakhic discussion in recent times. In particular a great deal of opposition has been expressed to granting women the passive right to be elected, such opposition being based on tannaitic and amoraic law (Sif. Deut., 157 and Ber. 49a, respectively): “A woman is not appointed to the kingship, as it is said, ‘set a king over thee’ (Deut. 17:15) and not a queen; similarly for all offices in Israel none but men are appointed” (Yad, Melakhim 1:5). Some scholars took a different view, basing themselves on the fact that Deborah “judged Israel” (Judg. 4:4), i.e., that she functioned not only as a judge but was also the leader of the people. The *rishonim* had already commented on the contradiction between the fact of Deborah’s leadership and the rule excluding women from public office, a contradiction they sought to reconcile by the qualification that the objection to a woman’s leadership is eliminated when she is accepted by the will of the people (Nov. Rashba and Ran, Shevu. 30a; cf. also Tos. to BK 15a and Nid. 50a). On this basis some latter-day scholars have decided that a woman is entitled to elect and be elected (see, e.g., *Mishpetei Uziel*, חמ no. 6), their conclusion being influenced by the consideration that under existing social conditions “men and women meet daily in business transac-

tions” (*ibid.*). Although at the time he gave this decision (in the 1940s) R. Uziel wrote that it was of a purely theoretical nature and was not to be applied in practice (*ibid.* and see p. 292), it has nevertheless been accepted in practice in the state of Israel by the decisive majority of religious Jewry so far as concerns Knesset and municipal elections.

PERIOD OF RESIDENCE. The period of residence qualifying a person to elect and be elected has generally followed the period laid down for tax liability (see *Taxation; see also Resp. Maharit, vol. 1, no. 569; *Mishpetei Uziel*, חמ no. 3).

PROPORTIONAL REPRESENTATION. In detailed decisions, scholars such as Rabbi *Kook, Jacob *Meir, and Ḥayyim *Brody expressed the opinion that the system of elections on a proportional basis answers the requirements of Jewish law, one of their main reasons being that in this way representation in the government of the state and its institutions is offered to all sections of the people (see *Sinai*, 14 (1943/44), 100–14).

In the State of Israel

IN THE SUPREME COURT. A number of Jewish law principles, concerning the legal standing of a public body and the relationship between the latter and its employees, have been considered and relied upon in decisions of the Supreme Court of Israel. In one case a municipal employee who had been dismissed on a charge of improper conduct applied to the Supreme Court – sitting as a high court of justice – to have his dismissal set aside on the ground that he had been given no opportunity to make himself heard and to answer the charge against himself prior to his dismissal. The court rejected the municipality’s plea that in terms of the municipalities’ ordinance it had been under no obligation to hear the employee prior to his dismissal and upheld the employee’s application, relying mainly on the following principles of Jewish law:

(1) a person appointed to a public office, or holding a position with a public institution, may not be dismissed without a reasonable cause;

(2) municipal councilors are as judges and therefore may not act arbitrarily but must consider a case on its merits;

(3) since the councilors are like judges they have to follow a procedure that accords with natural justice, and a basic principle of Jewish law is that a person subjected to an inquiry must be enabled to appear and state his case (see PD 20, pt. 1 (1966), 29; cf. Resp. Rema no. 108).

In another case the court applied the Jewish law principle that – for the good of the public – there is an obligation to dismiss a public servant who is proved to have neglected his duties after he has been given due warning (see PD 20, pt. 1 (1966), 41). In another instance the court, relying on the principle that a member of a public body is as a judge, concluded that no fault was to be found with a publicly elected official for not always following the opinions of those by whom he had been elected, since he has to act as a judge seeking the truth of a matter (PD 21, pt. 1 (1967), 59), provided only that he does so upon mature consideration and does not irresponsibly

and often change his views (PD 20, pt. 1 (1966), 651). Another principle of Jewish law which the court has applied precludes a judge from adjudging a matter from which he stands to derive personal benefit, and in terms of this the court set aside the decision of a local council which had been taken with the participation of a councilor who had a personal interest in the matter (*ibid.*, 102; see also PD 19, pt. 3 (1965), 393).

IN THE RABBINICAL COURTS. There is among others a decision of the rabbinical court on a basic problem that has arisen in recent years, touching on the above-mentioned rules of Jewish administrative law (the court in this instance sitting as an arbitral body since its jurisdictional authority is confined to matters of personal status; see **Mishpat Ivri*). Three political parties entered the municipal elections under a joint list, having agreed that if only two of their candidates were elected then the second one on the list resign in favor of the next candidate on the list; only two candidates were elected and the second one refused to resign as agreed. It was contended before the court that the agreement was invalid because it had not been effected by means of a *kinyan*, because it related to something not yet in existence (the agreement having been concluded prior to the elections), and because it was defective on account of *asmakhta* (i.e., since the parties had been confident that more than two of their candidates would be elected, there had been no *gemirut ha-da’at*). The court rejected all these contentions and upheld the validity of the agreement, relying on the principles discussed above governing a public authority. The court emphasized that these principles applied not only to a public authority administering municipal affairs, but also to the public constituting a political party: “If it is the rule that in public matters there is no need for a *kinyan*, and the power of the public in its doings is so great that it is not restricted by the limitations imposed on the legal act of an individual – for instance as regards something that is not yet in existence, *asmakhta*, etc. – then there is no matter that is more eminently of a public nature than the matter under consideration, namely the composition of the public leadership” (PDR 6:176). It was accordingly held that the second one of the elected representatives was obliged to resign, as undertaken in the agreement. The decision was confirmed on appeal (*ibid.* 178ff.) and in addition the following guiding principle in the field of Jewish administrative law was laid down: “We have to add and say to the litigants that public leaders should not, in the course of their public duties, avail themselves of the plea that they are not bound by their own undertakings because of their questionable legal validity. Statements and undertakings, particularly in public affairs, are sacred matters which have to be observed and fulfilled wholeheartedly, in letter and spirit... for the public is always bound by its statements and may not retract” (*ibid.*).

[Menachem Elon]

Court Rulings on Issues Relating to Public Authority

The courts in the State of Israel, particularly the Supreme Court, have on more than one occasion had recourse to Jew-

ish law when discussing various issues relating to public authorities. In this respect, one may draw a distinction between two different periods in time. Until the mid-1970s, the policy in this area was characterized by judicial restraint and moderation. The court limited its grounds for reviewing public authorities almost exclusively to those cases where the latter exceeded its authority, and avoided intervening in the decisions themselves or an examination of their reasonability.

During this period, Jewish law served as a reference for a number of legal procedures in the area of administrative law. Thus, for example, Justice Silberg laid down the obligation of the public sector to consult with the public prior to making appointments to public office (*Aboudi* case, see below). In a number of other cases, the court discussed issues of dismissal of public employees (see below).

In the late 1970s, a major change came about in Israeli public law. The public authorities, with all its institutions and employees, became one of the most conspicuous focuses of Supreme Court rulings in Israel. This effect also became apparent in other judicial instances. The broadening of the “right of standing” in the High Court of Justice and the development of additional grounds for judicial review of the actions of the public sector (such as reasonability, arbitrariness, discrimination, unlawful considerations and so forth) led to massive intervention on the part of the judicial authorities in the actions of the public sector, and to the development of many new laws in this field.

In view of the little legislation governing public law in Israel, it has developed mainly by means of court rulings. More than once, those sitting in judgment have taken into account sources of Jewish law when studying various related issues. In 1980 the Foundations of the Law Act was enacted (see **Mishpat Ivri: The Law in the State of Israel*), requiring the court to refer to the principles of “justice, freedom, integrity and peace of Israel’s heritage” in all those cases where no answer could be found in the standard legal sources (e.g., legislation, case law, analogy). In 1992, two Basic Laws were passed – Basic Law: Human Dignity and Freedom; and Basic Law: Freedom of Occupation – that also required that the sources of Jewish law be examined for the interpretation of various basic rights included therein in accordance with “the values of a Jewish state.” These acts of legislation made a very significant contribution to increasing the degree of recourse to the sources in Jewish law dealing in constitutional and administrative law.

In this context, a most important contribution was made by court rulings, especially those of the Supreme Court justices, who anchored many of the procedures they established in sources of Jewish law. The basis for this was the considerable quantity of material in the field of administrative law in Jewish law which, according to Justice Menachem Elon, saw “great development and rich creativity with the rise in power and status of the Jewish community from the 10th century onward. The Jewish community in various parts of the Diaspora enjoyed broad internal and judicial autonomy and, as a result

of the diverse activities of community leadership in various public and administrative spheres, numerous principles of Jewish administrative law were developed and formulated. In some cases this internal autonomy was given, not only to an individual community within its own borders, but to associations of communities in many parts of the Diaspora, or a large number of communities within the bounds of the same association” (HC 702/79, *Goldberg v. Ramat Hasharon Municipal Council Head*, 34 (4) PD 89; HC 376/81, *Lugasi v. Minister of Communication et al.*, 36 (2) PD 467; cf. M. Elon, *Ha-Mishpat Ha-Ivri*, 547ff; 558ff; HC 333/78, *Bank Leumi Le-Israel Trust Company v. Estate Duty Administration*, 32 (3) PD 1. 212; HC 323/81 *Wilozni v. Jerusalem Rabbinical Court of Appeals*, 36 (2) PD 741ff.). On the basis of this valuable material, the Israel Supreme Court had recourse to various aspects of Jewish law when establishing the procedures of Israeli public law. We shall present below a general review of the subjects discussed in these rulings, in the different judicial instances.

PUBLIC FIGURES AS “TRUSTEES.” One of the governing principles of administrative law in Israel is the conception of public figures as “trustees” of the community’s assets and rights. The status of “trustee,” is known in many legal systems, with its origin in the laws of trusteeship in private law, and it imposes special obligations on public employees and elected public officers.

With the large-scale creation and development of Jewish administrative law from the 10th century onwards, alongside the increase in strength and status of the community within the framework of internal Jewish autonomy, the concept of trusteeship as the essence of the role of the public official was also expressed in the terminology of Jewish public administration. Justice Elon (HC 4566/90, *David Dekel v. Minister of Finance et al.*, 45 (1) PD 34) pointed out that a foreshadowing of the application of the laws of trusteeship with regard to public figures is already found in Jewish law, in which community leaders and people filling public positions in different areas of community life were known as “trustees” or “trustees of the congregation” (*parnasim* or *parnasei ha-zibbur*; see, for example, the responsum of Rabbi Joseph Bonfils (Tov Elem) in Resp. Maharam of Rothenberg, 23; cf. Resp. Rashba, vols. 3:398; 4:112; 5:259, 7:353; Resp. Ribash, 33, 61, 198, 228, 399; Tashbez, 1.23; Resp. Rashbash, 287; and cf. *Digest of Responsa of the Sages of Spain and North Africa*, ed M. Elon, *Legal Digest*, vol. 2, s.v. Congregation, 414–15).

This quality of “trustee” was already identified by the Sages as attributable to Moses, the leader of Israel (see Prov. 28:20; *Exodus Rabbah* 51.1). As “trustee of the community,” according to the Midrash, he took care to ensure that two other people would calculate and supervise the money he expended from the people’s donations for the Tabernacle (see Ramban, Sforno, and *Ha-Emek Davar* to Gen 47:14). This title for public leaders and rulers in the Jewish community expresses the essential nature of their authority as being entrusted with power for the welfare of the community, and everything evolved from

the obligations of this trusteeship, in accordance with the principles of justice and integrity of the Jewish heritage.

THE OBLIGATION OF CONSULTING THE COMMUNITY PRIOR TO MAKING AN APPOINTMENT. In one case that came before it, the Supreme Court was asked to intervene in the actions of the Elections Committee for the Chief Rabbinate (FH 12/60 *Aboudi v. Minister of Religious Affairs et al.*, PD 14, 2084). In this context, Justice Silberg insisted upon the obligation of the public authority to consult with the community prior to appointing people to public positions (see below). This principle is derived from the work of the Tabernacle, prior to which God asked Moses to turn to the people of Israel for their opinion as to whether he was worthy of the exalted position of building the Tabernacle (Ber. 55b). The court quoted the response of R. Moses Sofer, who was fiercely critical of the appointment of a rabbi against the wishes of the community (Resp. *Ḥatam Sofer* חמ, 19). This principle was also discussed by the Supreme Court in a case relating to the appointment of a rabbi to the local council. The presiding judge, Justice Türkel, ruled that, given that the obligation of consulting the community is a fundamental principle in Jewish law for the appointment of public officials (see Ber. 55b; Sh. Ar., חמ. 3; Resp. Ribash, 271), and this obligation had not been fulfilled, the appointed rabbi should be disqualified from serving in the position.

Rights and Obligations of Elected Officials and Employees of the Public Authorities

With regard to the employees of the public sector, Jewish law applies the fundamental principle by which authority “was entirely created merely to serve the common good, and it has nothing of its own.” Consequently, the fundamental instruction given to those appointed to communal positions is: “In the past you were your own master; from now on you are enslaved to the community” (*Sifre*, at Deut 1:16); and therefore those receiving an appointment to serve in a public position are told: “Perhaps you think I am giving you a position of power? I give you slavery!” (TB Horayot 10a–b) and, according to Rashi’s interpretation (ad loc.): “Authority is bondage for a man, imposing on him the yolk of the public.” Consequently Justice Elon, speaking for the Supreme Court (in the above-cited Dekel judgment), drew attention to the Sages’ severe criticism of “those who accept authority in order to derive benefit from it” (*Pesikta Rabbati* 22.2, Ish-Shalom edition, p. 111). According to this, the Sages’ denunciation of the community leader and member of the public sector who “raises himself up above the community” is also understandable (Ḥag. 5b; cf. Maharal of Prague, *Netivot Olam*, pt. 2, *Netiv ha-Onah*, ch. 5 (Jerusalem, 5731), 12b). From all these, Justice Elon concluded there that: “Until a person becomes a public figure, he is his own master; from the time he becomes a public figure, he belongs to the community. He belongs to the community, but the community does not belong to him. The authority he undertakes is in order that the community may benefit from it, not for his own benefit. The appointed community leader must support the community, rather than himself, the com-

munity leader, being supported by the community and raising himself above the community.”

On the basis of these sources, the Supreme Court concluded that political appointments made by virtue of connections rather than talent are invalid, as:

A public authority that appoints an employee in public service acts as a trustee of the public. And it is an important rule that this trusteeship must act with integrity, without extrinsic considerations, and for the benefit of the community, by whose power and on whose behalf the mandate to make the appointment is given to the appointing authority... When a public figure appoints an employee to the public service on the basis of extraneous considerations of political interests, such an appointment is invalid and is a form of breach of trust with regard to the community that has empowered the appointing authorities (ibid.).

In one of its judgments (Cr. A 884/80 *State of Israel v. Grossman*, 35 (1) PD 412) the Court discussed the State’s appeal against the acquittal of a senior employee of the Bank of Israel charged with fraud and breach of trust after acquiring debentures, intended for banking institutions and further education funding, for members of his own family. Justice Tirkel, in a minority opinion, allowed the respondent’s acquittal to stand, but spoke at length of the obligation of members of public authorities to avoid any act that might cast suspicion on themselves or their actions. In this context, he cited the rules concerning the watchmen of the Temple Guard, who were enjoined from any action – even the most legitimate – which might cast the slightest suspicion of their defrauding the community’s trust, in order to fulfill the obligation “that you shall be clear before the Lord and before Israel” (Num. 32:22). From this verse, the sages inferred that “a man must perform his obligations to the community in the same way as he must perform his obligations to God” (TJ Shek. 3.2; BT Yoma 28a).

In another case, the special obligation of the public figure to be incorruptible and honest is discussed (HC 400/87 *Kahana v. Speaker of the Knesset*, 41 (2) PD 729). Based upon the words of Rabbi Israel Isserlein (*Terumat ha-Deshen, Pesakim u-Ketavim*, 214; Rema, Sh. Ar., חמ, 37: 22), Justice Elon derived this obligation from the analogy made by the Sages between the public figure and the judge sitting in judgment.

A PUBLIC FIGURE AS A WITNESS. The special status of the public figure dictates the upholding of his dignity. This matter was discussed in a Supreme Court case concerning a litigant’s request to call a judge as witness and to examine him on the stand in the course of a civil suit (LCA 3202/03 *State of Israel v. Hagai Yosef et al.*, 58 (3) PD 544–545). In rejecting the request, Justice Tirkel based his decision, inter alia, on Jewish law, which discusses the importance of maintaining the dignity of public figures. He quoted Maimonides’ ruling that “The community must act with respect towards judges, and be in awe of them, nor should he degrade himself or act frivolously in their presence, for when a person is appointed as a leader over the community, he may not engage in [manual] labor in

the presence of three people so as not to be degraded before them; all the more so may he not eat and drink in the presence of the public” (ḤM 8:4; and see also Yad, Sanh. 25.1, 4).

THE PUBLIC AUTHORITIES’ DUTY OF GOOD FAITH. One of the fundamental rules in law is the duty to act in good faith. This duty applies not only to the individual but also, and in particular, to the public authorities, who are required to act in good faith in their dealings with those who turn to them. In one of the appeals to the Supreme Court (HC 376/81 *Lugasi et al. v. Minister of Communications*, 36 (2) PD 465), Justice Elon based this obligation on the principles of Jewish law: “The principle of acting in good faith, both towards the individual and towards the community, is based on the ancient precept of ‘and you shall do that which is right and good’ (Deut. 6:18). By virtue of this precept, the principle of good faith crystallized in the legal system of the State of Israel in the aforementioned provisions of the Contract Law (General Section). The term ‘good faith,’ both in its Jewish sources and in ordinary contemporary usage, is synonymous with integrity, and represents an overall guiding principle, a kind of ‘royal decree,’ in the entire world of procedure.” Justice Elon further wrote that: “Assistance in understanding this concept may be found in the sharp and incisive words of Naḥmanides (one of the Spanish Sages at the end of the 12th century), defining the essence of behavior which is the opposite of that which is righteous and good: Namely, that anyone acting according to the technical and formal meaning of the laws of the Torah alone, that is, who takes care to adhere only to that which is explicitly stated and not to that which is not explicitly mentioned but is implied by the general spirit of the Torah is, in the words of the Ramban, a ‘scoundrel with the permission of the Torah’ (Naḥmanides, Torah Commentary, on Lev 19:2). Thus, a lack of good faith on the part of the public authorities in discharging an obligation is the behavior of ‘a scoundrel in the service of the public.’”

THE PUBLIC AUTHORITIES’ OBLIGATION TO KEEP THEIR PROMISES. The duty of good faith also obliges public authorities not to renege on promises they have made. Accordingly, the Supreme Court has ruled that even a “political agreement” binds its signatories, even if it is not treated in the same way as a private legal contract. Since no solution was found to this matter in the Contracts Law, the Supreme Court turned to sources of Jewish law and established this basic principle as derived from Jewish Law (HC 1635/90 *Jerczewski v. the Prime Minister et al.*, 45 (1) PD 780–781). Thus, for example, Ribash wrote that the community is not entitled to renege on a promise that has been given, “public authorities do not make statements in jest [i.e., act as a joker and recant]” (Resp. Ribash, no. 476), and this was the basis of the Rema’s ruling in the Shulḥan Arukh (ḤM 81:1). Justice Elon refers to a golden rule in this matter that appears in the response of the Rashbash (Rabbi Solomon ben Simeon Duran), who ruled: “If you examine the conduct of all the communities in such a matter, you will see that they never revoke or rescind [an agree-

ment] ... as it is unseemly for the community to say ‘we were mistaken’” (Resp. Rashbash, no. 566; and cf. the response of the Ra’anah, Resp. Mayim Amukim, Teshuvot, no. 63). Justice Elon found an instructive explanation of the binding legal validity of a public agreement in the words of Rabbi Joseph Colón, one of the greatest respondents of 15th century Italy: “that the agreement of many is pleasant and its paths are the paths of peace, and therefore it was said that their words would be fulfilled when all were in agreement and together, and none of them would be able to recant and destroy the state of truth and peace” (Resp. Maharik no. 179 in Lemberg 1797 ed.; in Warsaw, 1870 ed., no. 181).

THE DUTY TO GIVE REASONS FOR A DECISION. Like other legal systems, Israeli law also states that, apart from exceptional cases, all public authorities must give reasons for their decisions. One of the appeals before the High Court of Justice discussed a case in which one of the institutions of the Bar Association failed to give the reasons for a certain decision. Justice Kister, who discussed this matter (HC 142/70 *Shapira v. the District Committee of the Bar Association*, 25 (1) PD 333), based the public authority’s obligation to give reasons on the basis of Jewish law, and the duty of the law court to give reasons for its decisions. The source for this appears in the Talmud (Sanh. 31b), which says that if one of the litigants says “write and tell me for what reason I have been judged – you write and tell him.” The obligation and conditions of reasoned explanation are also set out in the literature of the rabbinical authorities (Yad, Sanh. 6.6; Tur & Sh. Ar., ḤM 14.4, in Rema).

A number of reasons are given for this in Jewish law: (a) to ensure the possibility of review by the *Bet Din ha-Gadol* (High Court) or by another body (*Bet ha-Va’ad*) that may be able to determine whether there has been an error in the decision or not; (see *Appeal); (b) the overall principle, guiding all persons, and especially those holding public office, “then you shall be clean before the Lord and before Israel” (Num. 32:22).

In view of these considerations, the rabbinical authorities ordered that, in those cases where both parties had agreed to be involved in litigation before any body, there was usually no reason to give an explanation, unless there was cause for suspicion that an error had been made. In addition, the rabbinical authorities distinguished between the duty to give a broader verbal explanation for the sake of the litigants, and the requirement to provide a written explanation.

With regard to written reasons, which for the most part are not necessarily intended to explain to the litigants the reasoning behind the judgment but rather to enable review, it is stated in the *Nimmukei Yosef Baba Mezi’a* (ibid): “One does not write ‘for this reason and for this evidence’ [i.e., in the sense of an argument or proof from halakhic literature], but one writes ‘so-and-so claimed this and so-and-so responded that, and as a result so-and-so was acquitted, and in the Court they knew the reasons.’” The same ruling was given by the Rema (R. Moses Isserles – in the Sh. Ar., ḤM 14: 4. One of the commentaries

on the Shulkhan Arukh, the *Sema* (ibid., 26), explains: “When they (i.e., the judges) hear the arguments, they know how to rule on them, because there is one law for all of us.”

On the other hand, Rabbi Jair Ḥayyim Bacharach, author of Resp. Ḥavvot Yair (whose comments are partially cited in *Pithēi Teshuvah* in Sh. Ar., ḤM 14:10), questioned the Rema’s ruling and ruled that a description of the argument or, as it might be described in modern legal terms – a description of the facts as presented in court, was not sufficient and that it was necessary to add the actual legal reasons for the decision. In Justice Kister’s opinion, the considerations mentioned in the above sources hold true today. Today, as in the past, authorities discussing the rights of the citizen – and not necessarily in the courts – should act according to the rule “then you shall be guiltless before the Lord and before Israel” or, as it is commonly said, “that justice must not only be done, it must be seen to be done.” In any event, today too it is difficult to provide appropriate review of any decision if the reasons for the decision are not known.

When translating the *posekim*’s dispute regarding the scope of the reasoned explanation into modern terms Justice Kister stated that in order to enable review of a particular decision, it is sufficient for the deciding authorities to provide the applicant the set of facts upon which the decision is based; the authority reviewing the case will then be able to determine whether the authority that decided was in error or not. This is the minimum requirement with regard to reasoned explanation; it may be expected that the authorities will also state its legal reasoning, at least in brief.

The regulations of the rabbinical courts in Israel state that “every judgment, in addition to the decision regarding the case, must also include: (a) a brief summary of the arguments of the parties; (b) determination of the important facts; (c) reasons for the decision.”

THE CLAIM OF ESTOPPEL IN ADMINISTRATIVE LAW. One of the governing principles of administrative law is that a person who was a partner to a particular act may not raise arguments against the legality of the act in which he himself participated. This doctrine is known as “estoppel,” and has implications for different areas of law, including public law. In one of the cases heard before the High Court of Justice, the court was required to hear an appeal of a company that had participated in the tender issued by a public authority, and complained that its bid was not accepted (HC 632/81 *Migda Ltd. v. Minister of Health et al.* 35 (2) PD 688). Contrary to the positions of Justices Barak and Netanyahu, who sat in judgment, Justice Elon was of the minority opinion that the appeal should be rejected, on the basis of the theory of *estoppel* set down in Jewish law: “In cases such as this, the Talmud of the Sages says ‘embellish yourself and then embellish others’ (BM 107b), and in the words of the ancient maxim, when one says to another: ‘take the toothpick out of your teeth, the other responds: first take the beam out of your eye’ (BB 15b; and see Rashi, BB ibid.).

ONUS ON THE PUBLIC AUTHORITIES EVEN IN THE ABSENCE OF A KINYAN. One of the characteristics setting the public sector apart from others is its obligation to keep promises it has made even in the absence of an act of acquisition (*kinyan*) (unlike private law, in which Jewish law demands an act of acquisition to create a legal obligation – see entry *Acquisition).

In a ruling dealing with the authority’s obligation to honor its undertaking to provide telephones to the country’s residents (HC 376/81 *Lugasi et al. v. Minister of Communications et al.* 36 (2) PD 449), Justice Elon based this obligation on the sources of Jewish law: “Beginning from the thirteenth century the principle was established that any legal transaction made by the community is binding, even if no such act of acquisition (*kinyan*): ‘for whatever is done by the public does not require a *kinyan*, even if it is something which for a *kinyan* is necessary in the case of an individual’” (Resp. Maharam of Rothenburg, cited in Mordechai, BM 457–458). This new principle was applied to various types of legal transactions, such as employee-employer relations, the laws of guarantee and gifts, and other legal matters in which the public is a party (see, for example, Resp. Maharam b. Baruch, Prague, no. 38; Resp. Ribash, no. 176; Rema, Sh. Ar., ḤM 163:6, in Rema; 204:9; Resp. Mayim Amukkim, section with Responsa of Resp. Ra’anah – R. Eliyahu b. Ḥayyim, no. 63). The rule that was laid down and accepted was: “It is a simple custom, that whatever the community leaders agree to do is completely valid even without a *kinyan*” (Resp. Ha-Rosh, 6:19, 21). In addition, a number of other fundamental requirements of the laws of acquisition in Jewish law, were drastically relaxed for public authorities. Thus it was settled that a public authority can purchase or transfer a thing that has not yet come into existence and, contrary to the rule in Jewish Law that an agreement affected by an *asmakhta* (i.e., absence of a deliberate and unqualified intent to be bound) is not valid, (see *Asmakhta) it was established that there is no defect in *asmakhta* where the public is involved (Resp. Mayim Amukkim, ibid.; R. Moses Di Trani, Resp. Mabit, vol.3, no. 228; and see *Contract, the Laws of Contract).

Based on this fundamental assumption, Justice Elon further states (HC 376/81 *Lugasi*, ibid, p. 470) that “a greater degree of seriousness, integrity, and propriety is demanded of the public authorities in fulfilling its undertakings than is demanded of an individual in the field of private law. For this reason, when a representative of a public authority agrees that an individual citizen is exempt from a certain payment, this admission is binding and has full legal force. If, however, an individual makes a similar admission, it is not binding unless he has made it before two witnesses to whom he says ‘you are my witnesses,’ because we presume that admissions given only in the presence of the two litigants themselves lacks the necessary resolve to constitute valid, admissions, as the party making the admission may claim ‘I made the admission in jest’ (Sanh. 29a). This is not, however, the case with regard to an admission made by a public authority. Why is this so? Because

‘although an individual making an admission may claim this, it may not be said... of the community making an admission, because the community does not make statements in jest’ (Isaac b. Sheshet Perfet, Resp. Ribash, no. 476 (14th century, a leading halakhic authority in Spain and Algiers; and see also Rema to Sh. Ar., חַמ 81:1). To support this, Justice Elon cited two incidents recorded in the responsa literature. In the first, a question was brought before Rabbi Solomon b. Simeon Duran (Rashbash; the spiritual leader of the Jewish community of Algiers, 15th century), with regard to “a community whose custom was to a particular kind of concession for one year, as was the practiced in all the communities; and the custom of that community was to sell it for one year, but on that occasion the treasurers of the community sold it for four years, and they wished to revoke the sale. May they recant or not?” (Resp. Rashbash no. 566). From the responsum, it appears that the leaders of the community wanted to revoke the sale because, in their opinion, the concession had been sold at a price lower than should have been obtained for such a period of time. Selling for either more or less than the accepted price is called in the Talmud “over-reaching” and when the deviation from the accepted price is more than one-sixth below the fair price, the seller, who is the injured party is entitled to rescind the transaction (BM 49b; and see *Ona’ah). It was further claimed that the concession was sold without an act of acquisition, and therefore is invalid, because it relates to something that has not yet come into existence. The Rashbash rejected the arguments of the community, and denied them the right to rescind their agreement:

A sale by the public, even without an act of acquisition, and even regarding something that is not yet in existence, and even to someone not yet in existence, is valid.... And even if it was their custom to sell it [the concession] for one year and they sold it for four [years], they cannot rescind the sale... And there is no ground for rescinding the sale for this reason, unless the treasurers sold it privately, not in the presence of the community, for then the community may rescind the sale, as they sold it contrary to their custom. But if the sale was made in the presence of the members of the community, or the majority of them, then it may not be rescinded and it is valid; and there is no element of over-reaching. If you examine the conduct of all the communities in this matter you will see that they never revoke or rescind [an agreement], neither because it concerns an object not yet in existence, nor because of over-reaching... because it is unseemly for the community to say: we were mistaken.

From these words of Rashbash, the High Court of Justice concluded, *per* Justice Elon, that the transaction would have been invalid had the treasurers not been authorized to engage in a transaction of this kind at their own discretion and without the explicit authority of the community. However, if the representatives of the public body did not deviate from their authority and are authorized, by the accepted practice of that body, to engage in transactions on behalf of the public body at their own discretion, then the transaction is valid and the public body may not rescind it, even though a transaction of

this kind, carried out by an individual, in the field of private law, may be rescinded for reasons of mistaken price under the laws of over-reaching. Why? Because a greater degree of integrity and propriety is demanded of a public authority and its representatives; they do not recant the undertakings they have made and for which they request the validity of a legal transaction, because it is unseemly for them to say that they were mistaken in their undertaking.

Justice Elon also finds support for this fundamental principle concerning the public authorities in another responsum by Rabbi Elijah b. Hayyim, the Ranaḥ (Resp. Mayyim Amukim, *ibid.*). In this case, the community leaders agreed with one of the town’s residents as to the amount of the tax to be paid on his father’s estate. After a while, the community requested to rescind the agreement made by its representatives, claiming that there had been a mistake in the evaluation of the estate made by the community representatives. The respondent objected to a reappraisal and argued that the agreement he had reached with the community leaders was binding with regard to the entire community. Ranaḥ first examined the duty imposed upon the court to be most meticulous in ensuring that public funds are not misused. Nevertheless, he rejected the arguments of the public authorities, by virtue of the fundamental principle that “every act undertaken by the leaders of the community to whom the affairs of the community are entrusted is valid, and the community may not retract, even if it is evident that the community leaders erred in the matter.” On the basis of this response, Justice Elon established a basic principle in public law: “The undertaking made by a public authority or its representatives within the framework of their powers, with the intention that it have legal force, is binding on the public authority, and it cannot retract it, even if such an undertaking, were it to be made by an individual in the area of private law, could have been rescinded and revoked. A public authority which has assumed an undertaking must fulfill it with a greater degree of integrity and propriety, over and above what the law requires of an individual as to such an undertaking in private law.” This guiding principle, based upon Jewish law, has served as the foundation for many other rulings in later years and determined the obligation of the administrative authorities to fulfill promises it has made, even if these are not accompanied by a formal undertaking as is customary in private law.

THE OBLIGATION OF PUBLIC AUTHORITIES TO ACT OVER AND ABOVE THE LETTER OF THE LAW. Alongside the obligation of the public authorities to uphold their undertakings even if given in the absence of any formal act of acquisition, there are other cases in which the public authority is relieved of fulfilling duties that exist in private law. In the *Lugasi* ruling mentioned above (HC 376/81 *Lugasi et al. v. Minister of Communications et al.* 36 (2) PD 449), Justice Elon further states that, notwithstanding the fact that in the world of Jewish law there is a duty, in special circumstances, to act over and above the letter of the law, even when the litigant is exempt from this

by the law (see, for example, ב"מ 83א; ב"ק 55ב–56א), this duty does not always exist in the case of a public authority. The reason is that the individual is required, in certain circumstances, to uphold the general rule “Favor him with your own property and give it to him” (Hul. 154a); but this is not the case for a public authority which, when exempted by the law, may not make payment to an individual from public funds on the basis of an extra-legal obligation. In this case, the public authority would be favoring an individual at the expense of the general public – since the public authority acts as a trustee for the funds and rights of the general public – and it is not entitled to do so. The rule is “Favor him with your own property and give it to him but not from public funds” (see also the discussion in the Rabbinical Court on this subject, in File 517/5714 (Jer) p. 171.)

CAPACITY AND DISMISSAL OF PUBLIC EMPLOYEES. The subject of the capacity of public employees to serve in a public position, and their dismissal, has come up before the Supreme Court on a number of occasions, and more than once the court has had recourse to the sources of Jewish law to support its rulings. Thus, for example, a particular case (HC 290/65 *Altgar v. Head of the Municipality*, 20 (1) PD 29) concerned a municipality employee dismissed from his position due to inappropriate behavior. Among other arguments, the employee claimed that he had been dismissed without being given an appropriate “right to plead” and to respond to the charges against him. In his discussion of this matter, Justice Kister set out the reasons for dismissal of a public employee in Jewish law. The talmudic rule is that “one never removes [a person] from leadership within Israel,” but this rule does not apply to an employee who has “sinned” – i.e., who was involved in a serious transgression or behaved in a way that is not fitting to his position – nor does it apply to one who was initially appointed for a fixed period of time.

On the basis of Maimonides’ rulings (*Klei Mikdash* 4:21), Justice Kister wrote that a public employee may not be dismissed merely because of a bad rumor that has been spread about him (Resp. Rambam no. 111), and that the public authorities should act with propriety and in good faith in the dismissal process (with regard to the public authorities obligation to act in good faith, see above). Since members of the public sector are like judges, they must be scrupulous in upholding legal procedure and in providing an appropriate opportunity for the employee to make his arguments heard before deciding in his case (see below).

In another case, the Supreme Court ruled, *per* Justice Kister, that in the interests of the public’s benefit there was a duty to dismiss a public employee who was negligent in his job and did not carry it out properly despite being cautioned, and to employ in his stead someone who was fair and honest. This rule is based upon the words of the Ḥazon Ish, Rabbi Abraham Isaiah Karelitz (second half of the 20th century) (HC 218/65 *Gabbai v. Jerusalem Municipality*, 20 (1) PD 48).

In discussing these issues, the Supreme Court included the obligation to consider, *inter alia*, the damage that may ensue to the family of an employee threatened with dismissal, who is dependent upon him for its livelihood. This consideration has an important place in the sources of Jewish law, and expresses the balance between the interests of the community and the interests of the individual (See HC 192/68 *Bashkin v. Mayor of Tel Aviv*, 22 (2) PD 748; Rabbi Avraham Halevi Horovitz, *Zur Yaakov*, end of §195).

Another case (ALA 1/68 *Anon. v. Attorney General*, 22 (1) PD 676), discusses the terms set in Jewish law for restoring a public employee to his position after serving a sentence. In this matter, the authority must be convinced that the employee has completely repented of his ill deeds (Ḥ"מ 34.33, in the words of Rema). In extreme cases, such as the case of a man who has committed murder, he is never returned to his position (Yad, Sanh. 17:8).

Justice Kister emphasized that, notwithstanding that Jewish law regards the rehabilitation of those who repent as an overarching principle (see *Punishment) and believes in the possibility of complete rehabilitation, it is cautious with regard to one who has transgressed and repented serving in a public position of trust. Rambam already ruled that people in various public positions who have failed in carrying out their position, even in error, “are dismissed without notice, for there is permanent notice upon them, as they act as public agents” (Yad, Sekhirut 10.7, according to ב"מ 109א; and see also Sh. Ar., Ḥ"מ 306). With regard to restoration to their former position, Justice Kister says that, according to Jewish law, when the case in question involves dismissal due to a crime, a particularly stringent examination is carried out, to assure that they may be regarded as trustworthy in the future, as to whether repentance is indeed complete, or whether the court is being deceived or not (Sh. Ar., Ḥ"מ 34.33, end of the Rema’s comments; and cf. *Bet Yosef* ad loc. See also the article by Justice Kister, “*Gishat ha-Yehadut la-Avaryan u-le-Shikkumo*” (“The Jewish Approach to the Criminal and his Rehabilitation” (Hebrew), *Ha-Praklit*, 25, 485–86).

This issue was discussed at length in another Supreme Court ruling dealing with the capacity of a criminal who has served his sentence to return and serve in public office (HC 1935/93 *Mahfoud v. Minister of Religious Affairs et al.*, 48 (1) PD 768–769). Based on Jewish law, Justice Elon writes about the duty to balance between the desire to prevent a stain on the reputation of the public service and a loss of public trust in it, and the basic principle of rehabilitation in Jewish law, which has even been anchored in legislation by the Knesset in the Crime Register and Rehabilitation of Offenders Law, 5741 – 1981 (on this issue, see also: ALA 18/84 *Carmi v. State Prosecutor*, 44 (1) PD 373–381).

RULES OF NATURAL JUSTICE AND THE RIGHT TO PLEAD. One of the basic rules in the theory of administrative law requires the public authorities to uphold “the rules of natural justice” – among which, the right to hear a person’s arguments

before making a decision liable to affect his rights. Justice Silberg, who discussed this issue (HC 3/58 *Berman v. Minister of Interior*, 12 PD 1493), noted that English law of the 18th century (*The King against the Chancellor, Master and Scholars of the University of Cambridge* (1723), 93 ER 698, 704) already regarded the Torah as the source of this obligation, in the words God spoke to Adam before his expulsion from the Garden of Eden (Genesis 3: 9–11). Justice Silberg expanded and extended this obligation to “hear the other party” when talking about a judicial or quasi-judicial authorities, based upon many sources in Jewish law, including the words of Rabbi Moses Isserles (leading rabbinic authority in Poland, 16th century), who discussed it at length in his responsa (Resp. Rema, no. 108). The Rema saw this principle as already well-established in the Torah precept of “hearing your brothers.” In addition to the aforementioned proof from Adam, the Rema adds that it is also possible to learn this principle from other cases: e.g., God calling upon Cain to hear his arguments before imposing the punishment. Similarly, in the case of Sodom the Sages derived from God’s words “I will go down and see” (Gen. 18:21), that the judge may not make his ruling until he has heard and understood the arguments of the accused (HC 10/59 *Vicky Levy v. The Rabbinical Court*, 13 PD 1187; and see the High Court judgment in *Altgar* cited above. Judge Leron of the Beersheba District Court also based his decision upon the source in App.31/81 *Ben-Simon v. State of Israel*, PSM 5742 (1) 438).

The basic principle of the “duty to hear” was among the reasons invoked by Justice Elon in stating the husband’s right to be a party to his wife’s application to terminate a pregnancy, as one liable to be affected by a decision on this matter (CA 413/80 *Plonit v. Ploni*, 35 (3) PD 88). (See *Abortion). Justice Elon based this decision, among other things, on a statement by the Sages to the effect that “there are three partners in the creation of man: God, his father and his mother” (Kid. 30b), which requires that the husband’s position be heard prior to taking a decision with regard to aborting the fetus.

PROHIBITION AGAINST CONFLICT OF INTEREST. One of the basic rules in the theory of public authority and administrative law, arising from the “rules of natural justice,” is the prohibition against a public employee being in a position of “conflict of interest” when coming to decide on a certain matter. This conflict of interests may arise from a personal interest that he has in a particular matter under discussion, or from an institutional interest on the part of the entity he is representing. In a number of Supreme Court rulings (HC 291/72 *Rubinstein v. Elections Committee for the Chief Rabbinate Council*, 26 (2) PD 279; HC 91/74 *Gabara et al. v. The District Court*, 28 (2) PD 526; HC 21/66 *Katabi v. Chairman of Kiryat Ekron Local Council*, 20 (2) PD 108), the Supreme Court (per Justices Haim Cohn and Kister) referred to the sources of Jewish law in order to highlight this prohibition, and in particular to a ruling concerning judges, by which a judge cannot sit in judgment on any issue in which he has any kind of benefit (Sh. Ar., ḤM 8.12). The Talmudic sages went to the extent of disqualifying a judge whose

interest in the case was no more than that of any other inhabitants of a town whose Torah scroll had been stolen:

If a scroll of the Law belonging to the inhabitants of a town has been stolen, the judges of that town must not try him [the alleged culprit]. If a man says: Distribute a *maneh* to the inhabitants of my town [and it is stolen], the judges of that town must not try him [the alleged culprit] (BB 43a). And Rosh ruled that if a person avoided paying tax, the town’s judges, to whom the tax was paid, were not entitled to judge him: “it is obvious that he should not be judged by them, because how can they judge themselves as they have a part in the claim” (Resp. Ha-Rosh, 58.7). The analogy between elected public figures and judges implies that the obligation to avoid conflict of interest applies both to employees in public services and to elected public figures.

In another case (SSA 2/73, *Ploni v. State of Israel*, 28 (1) PD 370), Justice Kister stated, again on the basis of sources in Jewish law, that every public employee must avoid making use of his subordinates for his own personal purposes. According to Rabbi Jonah Gerondi (a contemporary of Naḥmanides) in his book *Sha’arei Teshuvah*, (Sect. 3. 60), one who is in charge of others is entitled, and even required, to demand of these employees that they carry out their work in the service, and no more than that.

PROHIBITION AGAINST “LEAKS.” In one case (HC 264/70 *Mizrachi v. the Committee for Appointing Dayyanim*, 24 (2) PD 229), the High Court of Justice, per Justice Kister, established the obligation on the part of the public authorities to maintain confidentiality with regard to information, which if disclosed might harm another. Justice Kister based this obligation on the verse “He that goes about as a talebearer reveals secrets” (Prov. 11:13), and on the words of Rabbi Israel Meir Ha-Cohen of Radin, in his famous book *Hafez Hayyim (Hilkhoh Lashon ha-Ra*, 2.11).

NON-JUSTICIABILITY. Alongside judicial review of the actions of the implementing authorities by the court, there are certain areas that “are not justiciable” and which the court avoids dealing with, such as military considerations, foreign policy and so forth. In one case, the High Court of Justice discussed the question of the judicial review of orders issued by the security authorities (HC 302/72 *Abu Hilu v. Government of Israel*, 27 (2) PD 184–185). In rejecting the petition, the Supreme Court, in a decision by Justice Kister, ruled that the Court would not pass issues of this kind under its judicial review. Among other things, he based this position on the distinction that exists in Jewish law in this respect: alongside the provision that the king may embark on a voluntary war only with the consent of the Sanhedrin, in the case of a just war, such as “saving Israel from a foreign power,” he does not require the permission of the Sanhedrin, and his decision is not subject to judicial review (Yad, Melakhim 5:1–2; S. Arieli, *Mishpat ha-Milḥamah*, pp. 96, 179; E.Y. Waldenberg, *Hilkhoh Medinah*, vol. 2, chs. 4–5).

DEVIATING FROM AUTHORITY. One of the most important grounds for judicial review is *ultra vires*. The basic rule

in public law, known as the “principle of legality,” states that, unlike a private individual, a public authority may not carry out any action whatsoever unless it has obtained explicit authority to perform this action by law or by virtue of the law. In an appeal hearing in the Supreme Court, the issue of the ability of a local authority to impose imposts on a resident without explicit authorization to do so by law was discussed (Cr. A 656/76 *Ha-Giva ha-Aduma Co. v. Rishon le-Zion Municipality*, 30 (3) PD 823). Justice Haim Cohn stated that not only was this impost improper, as a deviation from authority, but that it even involved an element of robbery. He supported this position with Maimonides’ words with regard to the King’s Law: “that the king may cut down trees and destroy houses, and even more so collect taxes so as to build roads or bridges. In what case? That of a king whose coin is valid... But if his coin is not valid, then he is like a robber with a strong arm or a gang of armed bandits whose laws are not law, and this king and all who work for him are robbers in every respect’ (Yad, Gezeilah ve-Aveidah 5.18). The king’s ‘coin is valid’ when he carries out actions and decrees with the authorization of the people of that land; consequently, one can say that the municipality’s ‘coin’ is valid when it imposes taxes and collects money, either with the authorization of the legislator or with the consent of the taxpayer. Without explicit and unequivocal authorization and without the agreement of the taxpayer, a requirement to pay for the sake of providing a deposit is a form of ‘royal robbery’ which does not justify taking money from its owner.”

DELEGATION OF AUTHORITY. Administrative law has developed various rules relating to the right of a public figure to delegate authorities to another person. The basic principle is that, so long as the authority in question is mainly technical (such as the erection of signposts) there is nothing to prevent one person from delegating authority to another. By contrast, an authority involving an element of discretion may not be delegated, as it has been granted to a particular person and not to another. The Supreme Court had recourse a number of times to the sources of Jewish law in this matter. In one case (HC 380/74 *Salman v. National Labor Court in Jerusalem*, 30 (1) PD 501) the issue of the dismissal of an employee was discussed. Justice Berenson held that where a local authority has a number of panels authorized to make decisions, not every matter needs to come before the highest instance. He anchored this decision in a verse from the Torah, regarding the advice given to Moses by Jethro (Exod. 18:22): “and it shall be, that every great matter they shall bring unto thee, but every small matter they shall judge themselves.”

In another ruling (HC 702/79 *Goldberg v. Sherman*, 34 (4) PD 85), discussing the ability of the head of a local authority to delegate authority to his deputies, Justice Elon developed the doctrine of “delegation of authority” in administrative law, utilizing the response of Rabbi Isaac ben Sheshet Perfet (Ribash, halakhic authority, Spain–North Africa, end of 14th century–beginning of 15th century) to a question asked by

the leaders of the Barcelona community (Resp. Ribash 228). The question concerned a public regulation (see *Takkanot ha-Kahal) enacted in a particular community in the Catalonia district, in which three of the community’s leaders, called “trustees,” were authorized, along with the community’s court, to select a group of 30 people to supervise various community matters, in particular matters relating to the division of the tax burden and the manner of its collection. The trustees, who did not succeed in reaching an agreed position, attempted to delegate their authorities to two other people, but certain members of the community objected to this. Ribash accepted the arguments of those who objected to the delegation, stating that the authority conveyed upon a person elected by the community, whose performance involved a degree of “reasoning and consideration,” must be carried out by that individual, unless there is an explicit provision enabling the position holder to delegate his position to another (see also HC 2303/90 *Philpovitz v. Ministry of Justice*, 46 (1) PD 425–426).

ADMINISTRATIVE DISCRETION. One of the most important issues in administrative law concerns the obligation of a public authority to exercise its discretion before taking a decision on any matter. The components of this discretion and the scope of judicial review over the manner in which it is exercised are frequently discussed in court rulings. In one case, the basic principle of independent exercise of discretion was established, based upon sources of Jewish law. The court held that the obligation of trust imposed upon an official elected to a given institution, required it to act in accordance with relevant considerations and in accordance with his convictions, even if this contradicted the partisan interests of the body that elected him and sent him to that elected institution (HC 24/66, *Malkah v. Seri Levy*, 20 (2) PD 657); cf. Elon, *Authority and Power in the Jewish Community* (Hebrew) p. 29).

INCORRUPTIBILITY AND SINCERITY. One of the laws concerning public administration states that the court will not review an action involving an appellant wishing to appeal the decision of a public authority if he appears before the court with “unclean hands” – that is, if he is himself a criminal or is concealing facts from the court. Justice Tirkel based this ruling on a passage from Psalms (24:3–4): “Who shall ascend into the mountain of the Lord, and who shall stand in his holy place? He that hath clean hands and a pure heart; who hath not taken my name in vain and hath not sworn deceitfully” (LCA 5072/00 *Izzy Yogev Industries Ltd. v. Abu Bros. Locksmiths*, 55 (2) PD 309).

Takkanot Kahal (community enactments) and the Responsa Index

A major contribution to the rules and laws concerning public authorities in Jewish law was made by a number of digests appearing in recent years. Among these, we should particularly note the *Legal Digest of Responsa Literature from Spain and North Africa* (edited by M. Elon), and its counterpart from Ashkenaz, France, and Italy (edited by B. Lifschitz and

A. Shochetman), containing many entries (such as community, community regulation) dealing with various aspects of public administration law. An important source concerning the legal status of the public authorities and its employees are the community records (see *Takkanot ha-Kahal) which have been published in recent years, containing rich material on the history of public authority, its rules and procedures, rights and obligations.

PUBLIC RELATIONS. Public relations as a profession developed in the 20th century, mainly in the U.S. Until the beginning of the 20th century public relations was a refined form of propaganda employed almost exclusively to defend a movement, cause, or individual or institution, regardless of merit or social significance. Among the first Jews in the field were Moses Lindo of South Carolina, who made skillful use of publicity to promote the export of American indigo in the years before the Revolution, and Henry Castro, a French Jew who publicized Texas among European Jews in 1844 as an agent of the Republic of Texas. Henry Zeltner was a U.S. government press agent in New York City during and after the 1863 draft riots. Twenty years later his son, Louis, served as publicity man for Theodore Roosevelt when he was police commissioner of New York City. The country's first financial publicity agency was founded by Albert Frank in 1872 to obtain free newspaper space for stockbrokers. Rudolph Guenther set up a similar agency in 1892, and later the Albert Frank-Guenther law firm became the leading financial publicity organization. Gus J. Karger (1866–1924), a vice president of the firm, was the press chief of William Howard Taft's 1908 presidential campaign and director of the Republican Party's press bureau in the 1912 presidential election.

Modern public relations took shape during World War I with the formation of the U.S. Committee on Public Information. This first organized use of all the tools and techniques of publicity as an offensive measure for mobilizing the power of mass opinion demonstrated to business, industry, government, and private institutions the value of public relations. This committee was the training ground for two young men, Carl Byoir (1888–1957) and Edward L. *Bernays, who became major forces in raising public relations to a profession. Byoir helped distribute 40,000,000 of the famous red, white, and blue texts on war aims abroad, publicized the draft, interpreted American war objectives throughout the world, and was on Woodrow Wilson's press staff at the Versailles Peace Conference. He also served as public relations adviser to Thomas G. *Masaryk, first president of Czechoslovakia. He was the originator of the Franklin D. Roosevelt birthday balls that raised millions for polio victims and led to the establishment of the National Foundation for Infantile Paralysis.

It was Bernays who coined the term “public relations counselor” and gave the profession its first code and set of principles. He also wrote the first book on the subject, *CrySTALLIZING Public Opinion*, in 1923, and taught the first college course in public relations at New York University in 1930. Before his retirement in the late 1950s, Bernays represented some of the nation’s largest corporations and newspapers as well as government agencies and social and health organizations.

The Europe of World War I was also the training ground for Benjamin Sonnenberg (1901–), who began his flamboyant career as a writer of publicity stories for the *American Jewish Joint Distribution Committee. He launched his own firm in 1924 and became a highly successful adviser to corporations, entertainment and literary personalities, and big businessmen. George Weissman (1919–1978), who rose from public relations director to president of the Philip Morris Co., learned the art in the Sonnenberg office. Out of the Byoir firm came Kalman Druck, later head of his own firm, and Edward Gottlieb. Druck was one of the key figures in uniting the Public Relations Society of America and the American Public Relations Association (APRSA) into a single professional organization. He headed the committee that developed the system for accrediting practitioners. Gottlieb, famed for coining the permanent-wave slogan “Which twin has the Toni?” was responsible for popularizing French champagne in the U.S.

Public Relations in Entertainment and Sport

In the 1920s and 1930s, most Jews in public relations were not in industry but in the world of entertainment, in the film industry. One of the earliest motion picture press agents was Mike Newman, promotion director for Columbia Pictures, who made Mary Pickford an international celebrity. Howard Dietz was the publicity agent who in 1917 devised Leo the Lion as the Metro-Goldwyn-Mayer trademark. He spread the malapropisms of Samuel *Goldwyn for many years before becoming press chief for *Loew’s. Another film public relations pioneer was Charles Einfeld (1901–1974) of Warner Bros. Studios, who trained scores of people in motion picture promotion. He introduced the movie trailer and the premiere junket. Harry Reichenbach was an outstanding press agent from 1915 to 1930, as was Irving Strouse in the 1930s. Bernard Sobol was the man who made Flo *Ziegfeld’s Follies a national institution before World War II. Sydney Eiges and Sid Garfield were publicity chiefs for the National Broadcasting Company and Columbia Broadcasting System respectively. Many of the leading stage and movie personalities were represented by Henry C. Rogers of Hollywood. The public relations resourcefulness of Henry Meyer converted Miami Beach from a winter playground for the rich to a year-round resort for people of modest means. The bathing beauty contests that became internationally famous were Meyer’s brain children. Hal Cohen, Meyer’s successor, built up the Florida resort even more.

Many of the best-known professional sports enterprises had Jewish public relations directors. Haskell Cohen was the public relations chief of the National Basketball Association.

Robert Fishel and Harold Weisman were the public relations directors of the New York Yankees and the New York Mets respectively. Joe Goldstein, who promoted Roosevelt Raceway, began as a publicity man at the old Madison Square Garden. Irving Rudd, who handled public relations at Yonkers Raceway, grew up in small-time boxing club publicity. Harry Markson was for years the public relations man for Mike Jacobs, the leading fight promoter of Madison Square Garden. Joe Reichler handled public relations for the Baseball Commissioner of America.

Public Relations in Politics and Public Affairs

Events flowing from the depression of the 1930s and the New Deal, and later from World War II, were responsible for the immense expansion of public and private public relations in which Jews came to play an increasingly significant role. Charles Michelson (1869–1947), brother of the scientist Albert A. *Michelson, who became press director of the Democratic National Committee in 1929, was the ablest political publicist of his time. Mike Straus, who went to Washington with the New Deal, was the highly effective public relations director of the Department of the Interior under Harold C. Ickes.

One of the founders of the American College Public Relations Association in 1917 was Bernard Sobel, information director of Purdue University. An early president of this oldest organized group of publicists was Louis Boochever, public relations director of Cornell University in the 1920s, and later national public relations director of the American Red Cross. George Hecht, publisher of *Parents Magazine*, was the founder in 1919 of *Better Times*, the first publication to publicize social work. Six years later he established the Social Legislation Information Service as a public relations lobby. Louis Resnick (1892–1941), for 15 years public relations director of the National Society for the Prevention of Blindness, set many of the standards used in social welfare publicity during his years as information director of the National Safety Council. In 1935 he became the first information director of the newly established U.S. Social Security Administration. Harold Levy, for many years on the staff of the Russell Sage Foundation, was one of the pioneers of social work publicity. Irving Rimer was the third executive director of the National Public Relations Council on Health and Welfare, and his successor was Harold Weiner. Rimer later became public relations director of the American Cancer Society. Sol Lifson was for a long time director of public information for the National Tuberculosis and Respiratory Diseases Association. Another pioneer in social work publicity was Viola Paradis, who headed public relations for the *National Council of Jewish Women. Bernard Roloff introduced the “crusade for mercy” theme as public relations director of the United Fund for Chicago, one of the largest community chests. Victor Weingarten made the Child Welfare League widely known. From 1923 to 1936 Herbert Seligman was public relations director of the National Association of Colored People, and Frances Adlerstein directed public relations for the Travelers Aid Association.

Anna Rosenberg, who served as assistant secretary of defense under President Truman, later became a highly successful public relations expert for big business. When he retired from newspaper work, Herbert Bayard Swope, the renowned managing editor of the *New York World*, was public relations adviser to Bernard M. Baruch and to many government agencies and business firms. In the 1950s, Sydney S. Baron was the publicity director of Tammany Hall. The CIO Political Action Committee's public relations director was Allan Reitman, and David B. Charney had the same post with the International Teamsters' Union. Frank Mankiewicz was the press director for Senator Robert F. Kennedy, and held the same post in the unsuccessful effort of Senator George McGovern to win the 1968 Democratic presidential nomination.

Public Relations in the Jewish Community

The rise of the public relations man in Jewish communal life was a post-World War I phenomenon directly attributable to major events and developments in Jewish history. The relief campaigns on behalf of war-stricken European Jewry, the struggles against the antisemitism of Henry Ford and the Ku Klux Klan in the 1920s, the growth of national membership organizations and Jewish federations, the building-fund campaigns for synagogues, Jewish community centers, old folks homes and institutions of Jewish higher learning, the fight against Nazism, and the dramatic efforts to establish the State of Israel, all called between 1917 and 1948 for the unprecedented mobilization of Jewish public opinion as well as the winning of support from the general population.

The first public relations bureau serving the Jewish community was formed in 1919 by Louis Popkin (1894–1943) and his wife Zelda (née Feinberg). A reporter on the *American Hebrew*, Popkin had been drafted in 1914 to handle publicity for the newly-organized American Joint Distribution Committee. In 1917 he took on the same job for the wartime National Jewish Welfare Board. After the war the Popkin established Planned Publicity Service, which did public relations for a number of Jewish organizations. Their first assignment was the drafting of the cable to Woodrow Wilson at the Versailles Peace Conference asking for the protection of Jewish rights. For the New York Federation of Jewish Philanthropies they set up the first organized permanent public relations department in any Jewish agency. In 1922 Abraham H. Fromenson (1874–1935), editor of the English page of the Yiddish-language daily, the *Tageblatt*, who had been publicity head of the Zionist Organization of America when Louis D. Brandeis controlled it, joined the Popkin firm, which trained many of the people who later became the first public relations directors of major Jewish organizations. David A. Brown, the Detroit business executive who turned into the leading Jewish fund-raiser of the 1920s and 1930s, pioneered many of the public relations techniques on which later public relations experts built.

As public relations chief of the Federation of Jewish Philanthropies from 1934 to 1945, Elliott Cohen, founder of *Com-*

mentary, introduced to the field of public relations people of professional competence and familiarity with Jewish life and traditions, who were able to interpret health and welfare with intelligence, style, and clarity. He established the high standards of production and art that set the pattern of fund-raising literature for the whole Jewish community. One of Cohen's predecessors was Isidore Sobeloff (1899–), who went on to become a Federation executive in Detroit and Los Angeles.

Henry Montor (1905–1982) became publicity director of the United Palestine Appeal in 1931, and was a genius in persuading American Jewish communities to provide unprecedented sums for Palestine by the use for the first time of all the tools and techniques of modern public relations. In 1939, when the JDC and UPA joined forces in the United Jewish Appeal, Montor was elevated to national campaign director. He and his successor, Meyer Steinglass, broke new ground by running full-page advertisements in the daily press and using radio for campaign publicity. When Montor left UJA to assume direction of the Bonds for Israel campaign, Steinglass went with him as public relations director. Raphael Levy and Ben Hanft (d. 1985), Steinglass' successors at UJA extended their methods to television and films.

The public relations techniques first tested by UJA and Bonds for Israel were adapted with some modifications but equal success by the American offices of Israel organizations as well by virtually every other national Jewish agency. The American Jewish Committee, the Anti-Defamation League, and the American Jewish Congress varied in approach and emphasis, but they all saw public relations as a significant element of their overall educational role in bringing to public attention the nature of prejudice, the evils of antisemitism and bigotry, and the importance of understanding among men of all races and ethnic groups.

A unique public relations instrument created by the Jews of America was the Jewish Welfare Board Public Relations Committee, formed during World War II by the American Jewish Committee, the Anti-Defamation League, the American Jewish Congress, the Jewish War Veterans, and the Jewish Labor Committee. This combined operation developed within the Jewish community an understanding of the war issues, and built up support for a program of religious and morale services to Jewish military personnel.

Through public relations of the most dignified character, the Jewish Theological Seminary of America helped establish Judaism as one of the major religious traditions in America. The Seminary's radio and TV program, "The Eternal Light," was a highly effective public relations instrument. Skilled public relations played significant roles in the expansion of Yeshiva University, Albert Einstein College of Medicine, Brandeis University, the growth of mass Jewish membership organizations such as Hadassah and B'nai B'rith, and the raising of hundreds of millions of dollars for new synagogues, community centers, hospitals, and other communal institutions.

By 1940 there were enough people professionally employed as public relations specialists by Jewish organizations

to warrant the organization of the Jewish Publicity Directors Council. In 1956 this was reorganized as the American Jewish Public Relations Society. In 1968 it was estimated that more than 500 people were engaged in some phase of public relations for local and national American Jewish organizations and by international Jewish agencies with offices in the U.S. In the 1960s a number of commercial public relations firms headed by Jews were called in as short-or long-term consultants by several Jewish organizations. Ruder and Finn served the Jewish Theological Seminary in this capacity, while Kalman Druck's firm took over full public relations responsibility at UJA in 1968. Of the more than 15,000 public relations firms operating in the U.S. in 1968, some twenty percent were reported to be Jewish in ownership or management.

[Bernard Postal]

In the latter years of the 20th century, Howard J. Rubenstein became one of the most influential public relations practitioners in the country. As an individual and with his firm he represented important political figures, winning recognition as an adviser to Mayor Abraham *Beame of New York City. At the same time, he became close to the governors and successor mayors of New York State and City and he advised politicians of both major parties. Among his clients were such controversial figures as George Steinbrenner, principal owner of the New York Yankees, who was constantly in the news during that time. Other public relations practitioners of note were Richard Manoff, who had many clients in the theater, and Morton Yarmon, who became one of the highest officials in the American Jewish Committee.

[Stewart Kampel (2nd ed.)]

In Israel

The Public Relations Association of Israel was established in 1958 in Tel Aviv as the Public Relations and Tourism Coordinators. Each of the three major cities set up their own organization designed to serve the special interests in that area. Jerusalem members called their organization "The Spokesmen's Circle" and limited membership to government public relations and information officers.

In 1961 it was decided to create a national organization with all three branches maintaining a special autonomous status covered by a new constitution and the national body run by an Executive Committee drawn from all three branches. There are national conventions every year, professional activities on both a local and national scale, and courses either sponsored or controlled by the organization. In 1970 the Israel Association was host to the Fifth Public Relations World Congress. There were over 200 members in the Public Relations Association of Israel.

[Zvi Harry Zinder]

With the introduction of television in Israel in the late 1960s, and the understanding of the power of its images, the role of the media adviser became central in all campaigns geared to a viewing audience, particularly in politics. By the 1990s, leading candidates could be divided into those who un-

derstood the medium and those who did not, understanding often coming courtesy of advisers imported from the United States. And as in the United States, though the viewer recognized the artificiality of the presentation, he was often taken in by it in spite of himself. The handling of public relations was also thought to be a central element in the way Israel was perceived around the world in its clashes with the Palestinians. Generally, Israel was given poor marks, for using ineffective spokesmen, failing to have a comprehensive PR plan, and failing to accommodate foreign media representatives. However, some would argue that the management of news and the manipulation of images might not necessarily make Israel a more popular country, for clearly the eagerness with which many attacked Israel might lead one to believe that their views were not necessarily a response to good or bad public relations, not to mention simple facts.

GENERAL PUBLISHING

Jews joined the European publishing industry little more than three decades after its pioneering efforts, notably in Italy, Spain, and Portugal. The first recorded Jewish printer of non-Hebrew books (possibly Abraham b. Garton of Reggio di Calabria) published the outstanding fourth edition of Dante's *Divina commedia* (Naples, 1477), as a result of which he was bitterly attacked by a Christian rival who appended *Erubescat Judeus infelix* ("Let the unhappy Jew blush for shame") to his own edition of the *Purgatorio* (c. 1478). By this time Jews were evidently active in the Naples book trade, as they had been for some years as Hebrew printers in Italy as a whole. In its early stages, the printing industry was combined with book publishing, printers accepting, printing, and selling their works in one commercial venture. Prior to the expulsion from Spain (1492), Jews probably played an equally important part in printing there. During the 1470s, Juan de Lucena issued a prayer book (*cituri*, i.e., *siddur*) in Spanish, for which he was years later (as a New Christian) persecuted by the Inquisition. A more significant publishing achievement was that of Solomon b. Maimon Zalmati of Jativa, who in 1483 entered into partnership with two Christian printers with the aim of producing Christian theological works for the general market. They subsequently published Jaime Perez's commentary on Psalms (Valencia, 1484) and other works by the same writer, including his antisemitic *Tractatus contra judaeos* (1485). In neighboring Portugal, Jewish printer-publishers also attained eminence as pioneers before the general expulsion of 1497. Samuel de Ortas issued *Tabulae tabularum coelestium motuum: sive almanach perpetuum* (Leiria, 1496), a classic by the great astronomer Abraham Zacuto.

Jewish activity in the sphere of general publishing was centered in Italy from the beginning of the 16th century. The Soncino family, famous in early Hebrew printing, also produced a host of works in other languages. Gershom Soncino the elder, who studied the art of printing in Mainz, published a series of books in Latin and Italian from 1502 and for 25 years thereafter issued about 100 titles – about as many as he published in Hebrew over a longer period. As Hieronymus Soncinus, he produced only non-Hebrew works in Ancona and Cesena. Gershom's new edition of Petrarch (Fano, 1503) was dedicated to Cesare Borgia, and his literary editor, the humanist Lorenzo Abstemio (Bevilaqua), urged other Italian scholars to patronize the Soncino press. Gershom Soncino later published the statutes of the cities of Fano (1508), Jesi (1516), and Rimini (1525), as well as many other works for Christians, including the "Rules of the Franciscan Order" (Pesaro, 1507). Gershom Soceino produced his non-Hebrew books for non-Jewish readers. He was, however, compelled to abandon this activity in about 1527.

From the early 1550s onward, Yom Tov b. Levi Athias (Jeronimo Vargas) published Spanish versions of Jewish liturgical works at Ferrara and, in collaboration with Abraham Usque, issued the famous Ferrara Bible (1553) which appeared in separate editions for Jews and Christians. Abraham Usque later published other liturgical books for Jewish immigrants as well as works by Bernardim Ribeiro, Alfonso de la Torre, and his kinsman Samuel Usque. The self-imposed Jewish censorship of Hebrew books after the burning of the Talmud in Rome (1553), the temporary persecution of newly arrived Marranos, and Church interference in Jewish affairs all led to the eventual abandonment of vernacular publishing by Italian Jews. However, the physician Jacob Marcaria, who operated a Hebrew press in Riva di Trento (1558–62), was the unofficial publisher of speeches and works by many of the churchmen assembled at the Council of Trent (1545–63). The scene of Jewish activity in general publishing thereafter shifted to Amsterdam, where a host of works in Spanish and Portuguese was written and published from the beginning of the 17th century.

The "Dutch Jerusalem"

The earliest Jewish vernacular publications in the Netherlands were written in Spanish for Marrano immigrants unfamiliar with Hebrew and often took the form of translations of biblical and liturgical texts. The first work of this type was a reissue of Yom Tov Athias' Ferrara prayer book (1552), published at Dordrecht ("Mainz") in 1584 and evidently intended for the crypto-Jewish community of Antwerp. The first work in Spanish to appear in Amsterdam dates from 1612 and during the next two centuries hundreds of books in Spanish and Portuguese were issued by the city's Jewish publishers. These included Manasseh Ben Israel, whose press, founded in 1626, produced books in Spanish and Portuguese as well as Hebrew; Joseph Athias; and Isaac Cohen de Lara, a leading bookseller. The messianic frenzy roused by the claims of Shabbetai Zevi led to a spate of publications in Spanish in 1666. Spanish substituted for Hebrew as the language of study and prayer among Marranos, while Portuguese was reserved for poetry and other secular literature.

In time, however, Dutch Jews began writing and publishing works in the vernacular. Two of the oldest Jewish publishing houses of Amsterdam, both noted for their Hebrew printing, also engaged in producing books in Dutch for the Jewish reader: the firms of the brothers Proops, which flourished during the 18th–19th centuries, and J.L. Joachimsthal, which was still active in the 1970s and issued the Dutch Jewish weekly *Nieuw Israëlietisch Weekblad*. The bookseller L. Simons (1862–1932) founded the *Wereldbibliotheek*, while Isaac Keesing established the firm of N.V. Keesing, noted for its production of reference books and archive material. Another Amsterdam Jewish publisher was the minor writer Emmanuel Querido (1871–1943), a victim of the Nazis, whose brother was the novelist Israël Querido.

[Godfrey Edmond Silverman]

In Germany and Austria

During the Middle Ages, Jews played an active part in the European book trade, which assumed increasing importance in the German-speaking lands after the introduction of printing. From the 16th century onward, Jews naturally promoted Hebrew publishing, of which Frankfurt became the principal center, and from the early 19th century they were active in the general sphere of German book production (Berlin, Breslau, Frankfurt, Koenigsberg, Leipzig, Prague, and Vienna). Probably the earliest such enterprise was the Prague firm of Taussig (founded in 1783), which ceased its activities under the Nazis. Other pioneering firms were those of Julius Eduard *Hitzig (Berlin, 1808–14); Friedrich Cohen (Bonn, 1829); Joseph and Felix Lehmann (1832); and Moritz *Veit, president of the Berlin Jewish community, whose scientific publishing house, Veit & Co., flourished between 1834 and 1858. Also prominent in Berlin was the Schlesinger'sche Buch- und Musikalienhandlung (1810), headed by Adolf Martin Schlesinger (1768–1848), which issued some of the compositions of Beethoven.

In general publishing, however, Jews only achieved real importance from about 1835 during the heyday of the *Jung Deutschland* literary group. The leading literary publisher of this era was Karl (Zacharias) Loewenthal, who changed his name to Loening after abandoning Judaism. A close friend and admirer of Karl Gutzkow, the leader of *Jung Deutschland*, Loewenthal founded his publishing house in Mannheim in 1835 and published Gutzkow's periodical *Deutsche Revue* and his novel *Wally, die Zweiflerin* (1835). When the works of the *Jung Deutschland* group, including those of Heinrich *Heine, were proscribed and their authors and publisher brought to trial, Loewenthal did not abandon his friends, despite antisemitic slanders. In 1844 he moved to Frankfurt and, together with the apostate author Joseph Jacob Ruetten (Rindskopf, 1805–78), reestablished his firm under the name of Ruetten und Loening, producing philosophical and sociological books as well as fiction. The firm still operated in Munich in the 1970s. Other 19th-century enterprises included those of R. Levi (Stuttgart, 1840), J. Guttentag (Berlin, 1842), Moritz Perles (Prague, 1844; later moved to Berlin and Vienna), M. Glogau (Hamburg, 1850), J. Taubeles (Prague, 1861), Albert Goldschmidt (Hamburg, 1863), S. Cronbach (Berlin, 1867), R.L. Prager (Berlin, 1872), and the Enoch Brothers (Hamburg, 1875). In Vienna, a literary firm was established by Leopold Rosner (1838–1903).

During the 1880s, the champion of the school of realism was Otto *Brahm, who in 1889 founded the Freie Buehne, which later became the literary periodical *Die Neue Rundschau*. Closely connected with this new literature was the Berlin publishing house of Samuel *Fischer. The S. Fischer Verlag (1886) rapidly became a center of avant-garde literary life. Under the Nazis, this publishing house moved overseas but after World War II reopened in Frankfurt. In 1895 George Bondi (1865–1935) established a firm in Berlin specializing in works by members of the Stefan George circle, such as Friedrich *Gundolf, Ernst Bertram, and Ernst Kantorowitsch (*Bla-*

etter fuer die Kunst). When George decided to make his own poetry available to the general public, Bondi became his publisher. Paul *Cassirer founded a publishing house in 1908 as a branch of his art gallery. He issued books mainly about modern artists (Herman *Struck, Ernst Barlach, Max Pechstein, Oskar Kokoschka), but also published literary works by Else *Lasker-Schueler, Ernst Barlach, Walter *Hasenclever, René Schickelée, and Kasimir Edschmid. Another field in which Cassirer became interested was cultural socialism, represented by the works of Ferdinand *Lassalle, Kurt *Eisner, and Gustav *Landauer. His cousin Bruno Cassirer (1872–1942) also founded a publishing house in 1898. Bruno Cassirer's book production, which was of the highest intellectual standard, ranged through art, philosophy, and literature. His art books were written by leading historians and critics of the fine arts; his journal, *Kunst und Kuenstler*, edited by Karl Scheffler, became the leading German art journal during the early 20th century. Bruno Cassirer also published all the writings of another cousin, the eminent philosopher Ernst *Cassirer. He issued the complete edition of Kant's works, edited by Ernst Cassirer, and those of Hermann *Cohen, the founder of neo-Kantianism. During the years before the rise of Hitler, he turned to modern fiction, where he was assisted by Max *Tau, who introduced several modern Scandinavian authors to the German reader. Bruno Cassirer finally immigrated to England. His publishing house, refounded in Oxford, now specializes in illustrated books about foreign countries.

Erich Reiss founded his Berlin publishing house in 1908 and was a keen enthusiast of the beautiful, well-printed book. He published German editions of Jonathan Swift's works, the writings of Georges *Brandes, and the political essays of Maximilian *Harden. For a time Reiss also issued Siegfried *Jacobsohn's periodical *Die Schaubuehne* (later *Die Weltbuehne*) and *Blaetter des deutschen Theaters*. After 1933 he tried to publish books of Jewish interest only, but soon abandoned the project and immigrated to New York.

All attempts to make Vienna a center of the publishing trade on a par with Leipzig and Berlin failed until Paul von Zsolnay established the Paul Zsolnay Verlag in 1924. In a very short time, this firm assembled the works of some of the most distinguished European novelists, including Sholem *Asch, Henri Barbusse, Max *Brod, John Galsworthy, Heinrich Mann, and Franz *Werfel. After the *Anschluss* of 1938, Zsolnay immigrated to England; his firm was refounded in Vienna after World War II. The Austrian capital was also the home of the Internationaler Psychoanalytischer Verlag, established by the *Freud family and later transferred to London, and of E.P. Tal (1919), a firm specializing in modern German and foreign literature.

Bela Horovitz (1898–1955), who was devoted to the study of Greek, Roman, and Jewish antiquity, established his Phaidon Verlag in Vienna (1923) with the aim of popularizing works on the ancient world. His publications included Plato, Petrarch, Shakespeare, Klabund, Friedell, and Unamuno. In later years, the Phaidon Verlag republished illustrated editions

of the great German historians, such as Mommsen, Grimm, and Ranke. Assisted by Ludwig Goldseider, Horovitz also issued many low-price art books which appeared in several languages and made Phaidon known in many countries. After 1938 he established the Phaidon Press in London, following the same line as in Vienna. The Nazi onslaught on the Jews led him to establish a new publishing house in London, the East and West Library, entirely devoted to Jewish literature. From 1955 onward, his family continued to run both publishing houses until these were sold to other companies in the late 1960s.

Other firms active between the world wars were Ernst Salter's literary Verlag die Schmiede in Berlin, which introduced Marcel *Proust to the German public; Erich Lichtenstein's Weimar house, devoted especially to new editions of classic writers (e.g., Annette von Droste-Huelshoff); and Victor Fleischer's Frankfurter Verlags-Anstalt, which published books on literary criticism and history.

Salman *Schocken, who headed a chain of department stores, founded the Berlin Schocken Verlag in 1931. This firm's publications dealt largely with Jewish philosophy, theology, Hebraica, and poetry, but also included the works of Franz *Kafka and Alfred *Mombert. Wide popularity was achieved by the "little Schocken books" and the works of Martin *Buber, particularly his German Bible. In 1933, Schocken, a leading German Zionist, emigrated to Jerusalem and his publishing house now operates in New York and in Tel Aviv, where it published, among others, the works of the Nobel Prize winner S.Y. *Agnon. In scientific publishing, firms like Carl Heymann (1815), Julius Springer (1842), S. Karger (1890), and the Akademische Verlagsbuchhandlung (1906) were in Jewish hands.

The Jewish publishers of the great liberal newspapers such as the *Frankfurter Zeitung* and the *Berliner Tageblatt* also entered book publication. Rudolf *Mosse established his firm in 1867 and, apart from his newspaper empire (*Berliner Tageblatt*, *Berliner Volkszeitung*, *8-Uhr Abendblatt*), produced books of a popular character. The entire business was confiscated by the Nazis. Leopold *Ullstein founded the Ullstein Verlag in 1877. Besides a vast number of newspapers and magazines, the firm published popular fiction. Ullstein's Propylaeen Verlag (1919), under the direction of Emil Herz, who later emigrated to the United States, grew into a versatile publishing house of the highest standard, publishing an edition of Goethe's works in 45 volumes. It also issued the serialized *Klassiker des Altertums*, *Propylaeen-Weltgeschichte*, *Werke der Weltliteratur*, and *Klassiker des Altertums*, as well as the works of Brecht, Remarque, and *Zuckmayer. After World War II the corporation returned to family ownership, but it was eventually sold to Axle Springer in 1960. The Frankfurter Societaetsdruckerei, publishers of the liberal *Frankfurter Zeitung*, which was founded in 1856 by the democratic Jewish politician Leopold *Sonnemann, also published works by modern German writers.

[Rudolf Kayser]

In Scandinavia

The only major house in Scandinavia was the Albert Bonniers Förlag of Stockholm (established in 1837). Its founder, Albert Bonnier (1820–1900), was the son of a Dresden Jew who settled in Copenhagen. Albert and his brother Adolf moved to Sweden, where they set up a publishing and printing enterprise that became the largest in the country. It was subsequently run by Albert's son, Karl Otto Bonnier (1856–1941), and, with associated firms, remained under family control. In Denmark, the Gad publishing house of Copenhagen specialized in Judaica, while Norway's leading publishers included the German refugee Max Tau, who began his career with Bruno Cassirer in Berlin.

The Swedish-Jewish publishing house Hillel started offering books on the subject of Judaica in 1963. For the first couple of decades, Hillel worked closely with the Chinuch educational organization. In those early days, the publishing house's foremost purpose was to produce Swedish-language educational materials for use in Stockholm's Hillelskolan Jewish school. As of 2001, Hillel is housed on the premises of the Stockholm Jewish Community. With its sights set firmly on a wider reading public, Hillel produces Jewish literature of a religious, historical, and socio-political nature.

The Megilla publishing house started up in 1990 and has published several Swedish-language books since then, all with a specifically Jewish connection – novels, poetry anthologies, and fact books.

Megilla has also published a number of books on the subject of Yiddish as well as books in Yiddish, in the form of textbooks, songbooks, books of proverbs, etc. Megilla is run on a purely voluntary basis.

In Italy

As mentioned above Italian Jews were among the pioneers of general publishing activity in the country, but Jewish participation in the trade declined sharply from the mid-16th century. It was not until the 1840s that Jews again became prominent in the general sphere, with the establishment of the Florence publishing house of Felice Paggi (1823–1895) and his brother Alessandro (1818–1893). This issued many works of popular education and other books by leading authors, including Carlo (Lorenzini) Collodi's children's classic, *Pinocchio* (1880). The firm was joined by Alessandro Paggi's son-in-law, Roberto Bemporad (d. 1891), whose son, Enrico *Bemporad, eventually assumed control, changing its name to R. Bemporad & Figlio. Under his direction it soon became one of the most important publishing houses in Italy. A firm associated with Bemporad was that founded by Simone Lattes in Turin.

Italy's greatest publishing house, however, was that established in Milan by Emilio *Treves and his brother Giuseppe (1838–1904). Fratelli Treves (1864) published newspapers and works by leading Italian and foreign authors. In 1886, Leo S. Olschki (1861–1944), a Prussian immigrant, established himself in Florence, where he later became the leading antiquarian bookseller and publisher of scholarly works in Italy. After his

death the business remained under family control. Jews continued this close association with Italian publishing during the 20th century. Among them was Angelo Fortunato *Formiggini, a staunch anti-Fascist, whose firm was first established in Bologna (1908) and who published Italy's first "Who's Who." Luciano Morpurgo (b. 1886) founded his Casa Editrice Dalmatia in 1928, and this publishing house was still operating under the name in the second half of the 20th century.

In France

Jews only began to achieve prominence in the field of general publishing toward the middle of the 19th century. The two pioneering firms were those established by the *Alcan and *Lévy (Calmann-Lévy) families. Moysé Alcan's publishing house was active in Metz from about 1840 and was later headed by his son Félix, who specialized in works on philosophy. The brothers Michel, Alexandre-Nathan, and Calmann Lévy founded their enterprise in Paris in 1842 and, as Michel Lévy Frères, succeeded in building up one of the leading French publishing firms, issuing the works of writers such as Balzac, Dumas, Heine (in translation), and *Renan. From 1875 the business changed its name to Calmann-Lévy. Paul Ollendorf, the Paris-born son of a Polish immigrant, published *Gil Blas*, a political and literary newspaper that flourished between 1880 and World War I. In 1881 Fernand Nathan established a firm (still under family management) specializing in classics, reference works, and educational and children's books. Four other modern firms were Rieder (Crémieux), Bernheim-Jeune, Camille Bloch, and Fernand Hazan (1945).

[Godfrey Edmond Silverman]

In Czechoslovakia

Although, compared with Germany and Austria, Jewish publishing firms in what was Czechoslovakia were few and limited in scope, they included some pioneering enterprises, such as Taussig und Taussig (see Germany and Austria, above). The first Jewish bookseller and antiquarian in Prague was Wolf (Zéev) *Pascheles, who founded S. Pascheles & Son in 1836. A branch of this famous house was established in Breslau (1899) by his son-in-law, Jacob B. Brandeis (relative of Louis D. *Brandeis). Both firms specialized in Judaica, but also published biographies and fiction in German (Sacher-Masoch, M.G. Saphir, M. Rosenfeld, etc.) under the imprint of the Juedische Universal-Bibliothek. Also active in Prague was the firm of Josef Flesch, which produced scholarly works between the world wars, while Julius Fuerth managed the Melantrich publishing house and the liberal paper *Lidové noviny* at about the same period, later transferring his interests to London. Outside of Bohemia, the influence of German diminished, and most Jewish publishing enterprises were founded only from the late 19th century onward.

In Yugoslavia

The first translations and editions of world classics issued in Croatia were by the pioneer Jewish publisher and bookseller Lavoslav Hartmann (1813–1881). The Yugoslav book trade was

later revolutionized by Geca Kon (1873–1941) of Belgrade, who headed the country's greatest publishing house between the world wars.

In Romania

From about 1880 until 1940 Jews made an outstanding contribution to the development of the Romanian publishing industry. In Jassy, Elias Şaraga established an important firm, in partnership with his brother Samuel, in 1878. Three other Jewish publishing houses in the same town were those of A. Berman, Cuperman, and H. Goldner. The family business of Samitca in Craiova (c. 1895) specialized in low-cost editions and books of Jewish interest. In Bucharest, low-price books were also produced by Leon Alcalay (1900–34). Other firms included Simon Benvenisti, I. Ciornei, H. Steinberg, Carol Segal, and Emmanuel Ocneanu. Literary works were also published by the house of Virgil Montaneanu, which later transferred its activities to Israel.

In Hungary

Jews played an important part in the Hungarian publishing industry from its very inception. A pioneer in the field was Sámuel Révai (Rosenberg; 1833–1908), who began trading as a bookbinder and later as a bookseller in Eperjes (now Prešov, Slovakia). In 1869, he and his brother Leó established the Budapest publishing house of Révai Testvérek, which was later run by Sámuel's sons. In time, this became one of the leading firms in Hungary, its publications including the works of such eminent writers as Mór Jókai and Kálmán Mikszáth and an important reference work, *Révai Nagy Lexikona* ("Révai's Great Encyclopedia"). Earlier still, the Wodianer family, late 18th-century immigrants from Wodian, in Moravia, had achieved prominence when Fülöp Wodianer, a printer turned publisher, became the official publisher of the revolutionary government of Kossuth in 1848. He acquired the R. Lámpel firm in 1874 and was ennobled for his services to the state. Wodianer's business remained under family control after his death, the Lámpel house issuing books on a wide variety of subjects and publishing various newspapers. A firm specializing in the publication of musical works and scores was that founded by Gyula Rózsavölgyi (1822–1860), whose father was the eminent composer Márk Rózsavölgyi. Other leading Jewish publishers were József Wolfner, Lipót Hirsch de Örményes, and Andor Miklós, who took over the Athenaeum publishing house, which issued books by modern Hungarian writers. One of Athenaeum's directors was Viktor Ranschburg (1862–1930), who later moved to the firm of Pantheon. His brother, Gusztáv Ranschburg, was the editor of the *Műveltség Könyvtára* ("Library of Culture") and of the Athenaeum Könyvtár ("Athenaeum Library"). Izidor Kner (1860–1935) of Gyoma specialized in belles lettres and was awarded the gold medal at the Leipzig Exhibition of 1914 for his publications, mostly works by contemporary writers. His son, Imre Kner (1890–1944), a victim of the Nazi Holocaust, published the historical series *Monumenta Litterarum*, as well as other Hungarian and European classics, and gained first prize at the

Paris Exhibition of 1937. As in Romania, Jewish publishers in Hungary were subjected to increasing restrictions from the late 1930s onward.

[Baruch Yaron]

In Poland

One of the earliest Jewish influences in Polish literary life from the first quarter of the 19th century was the activity of Jewish, or converted Jewish, publishers. Side by side with the Jews who pioneered the printing and publishing of Hebrew and Yiddish works, there were a few who achieved distinction in the general field, notably Nathan Gluecksberg (1780–1831) and sons, Samuel Orgelbrand (1810–1868) and son, and S. Lewental. Orgelbrand is mainly remembered for the first modern Polish encyclopedia, which he issued in 28 volumes (1859–68). In the 20th century, particularly between the world wars, Jews made an increasingly important contribution to the Polish publishing industry with firms such as those headed by H. Altenberg, M. Arct, J. Mortkowicz, J. Przeworski, K. Wild, and W. Zukerkandel. Others, notably the well-known firm of Rój, had important Jewish managing interests, although they did not bear recognizably Jewish names. Even after the Communist takeover following World War II, there were Jews among the founders and directors of state publishing houses, of whom J. Borejsza of Czytelnik was one of the most prominent.

[Moshe Altbauer]

In Russia

During the last decades Jews published on specifically Jewish topics in Russian, as well as Hebrew and Yiddish. After the Bolshevik Revolution, these activities tended to be transferred overseas. In the general sphere of pre-Revolutionary Russian publishing, the outstanding names were the brothers I.N. and A.N. Granat, who issued an important encyclopedia, and Ilya Abramovich *Efron, who began his activity in 1880. Efron's enterprise, which became one of the largest in Russia, mainly produced scholarly works and is best remembered for its massive 86-volume *Novy entsiklopedicheskiy slovar* (1907) and for the 16-volume Russian-Jewish *Yevreyskaya Entsiklopediya* (1907–13), in which the publisher himself took an active interest. (For Russian-language publishing in Israel from the 1990s see "In Israel" below.)

[Godfrey Edmond Silverman]

In Spain and Latin America

Despite the numerical insignificance of Spain's Jewish population in the 20th century, Jewish activity in the book trade was seen in the establishment of the Madrid firm of Aguilar (1923), which also operated in Latin America. It was only after World War I that Jews began to figure in the Latin American publishing industry (mainly in Argentina, Brazil, and Mexico). In Argentina, the Buenos Aires firm of Candelabro, established by Abrahám Mibashán and specializing in Judaica, was taken over by José Mirelman and Máximo G. Yagupsky, who also controlled the firm of Israel. Jews have played a more important role in the general publishing life of Brazil. Here the major names were Aizen, Bloch, Iussim, Koogan, and

Weissman, with Adolfo Aizen publishing comic books and strip cartoons (*Brasil, América*), Nathan Waissman heading the Rio de Janeiro publishing house of Guanabara, and Henrique Iussim (who was also a writer) controlling the Biblos firm. Abrahão Koogan published literary, medical, and scientific books and, through the firm of Delta, world classics and encyclopedias. Almost all of the Jewish enterprises were based in Rio de Janeiro, one exception being Perspectiva of São Paulo. The largest Brazilian publishing firm under Jewish control was run by the Bloch family (Adolfo, Arnaldo, and Boris Bloch) and incorporated Fatos & Fotos and Manchete. It was later managed by Oscar Bloch Sigelman, Pedro Jack Kappeller, and H.W. Berliner.

In Great Britain

Three 19th-century pioneers were Samuel Lewis (d. 1865), who published topographical dictionaries and atlases; John Wertheimer (1799–1883); and William Swan Sonnenschein (1855–1931). The latter, son of a refugee Hungarian revolutionary, founded Swan Sonnenschein & Co. (1878), which specialized in reference books, and also traded under his non-Jewish mother's name of Stallybrass, becoming senior managing director of the Routledge publishing firm. The Franklin family subsequently obtained a controlling interest in Routledge's (George Routledge and Kegan Paul, 1934).

Two prominent figures, both with marked Socialist leanings, were Leonard *Woolf and Sir Victor *Gollancz. Woolf co-founded the Hogarth Press (1917), which issued works by modern writers (including his wife, Virginia Woolf); while Gollancz, who established the firm bearing his name in 1928, also co-founded the Left Book Club (1936) and helped to stimulate the production of low-cost quality literature. Gollancz specialized in modern fiction and religious books and threw his prestige behind several unpopular causes. Oliver Simon (1895–1956), the typographer, was a director of the Soncino Press and managed another house, Curwen Press, from the 1930s until his death. He was succeeded by his brother Herbert Simon. Another printer and publisher was Ellis Paul Howe. Among those who established publishing firms between the world wars were John *Rodker (Ovid Press, Imago Press), who issued works by Freud, T.S. Eliot, and Ezra Pound; Frederick Muller (1933); Michael Joseph (1935), a specialist in general fiction and mysteries; and *Frederick J. Warburg of Secker & Warburg, founded in 1936.

Soon after World War II Jewish activity in the British publishing world increased with the establishment of many new publishing houses catering for a wide variety of interests. *André Deutsch (1917–2000), who had immigrated from Hungary as a youth, entered the trade in 1942 and, after operating as Allan Wingate (1945–50), founded his own company in 1951, specializing in history, biography, and paperback editions. Deutsch founded African publishing firms in Nigeria (1962) and Kenya (1964). Sir George *Weidenfeld, Baron Weidenfeld, an Austrian refugee, founded *Contact* (1945), a journal of contemporary affairs and arts, and three years later established

the firm of Weidenfeld and Nicolson in association with Nigel Nicolson. Weidenfeld, a keen Zionist, published many books by Israel writers and founded a subsidiary company in Jerusalem (1969). His firm specialized in books on literature, art, and archaeology (many in illustrated editions). Another post-war publisher of importance was Anthony Blond (1930–), who established his publishing house in 1958, specializing in new writers, paperbacks, and works for young people. Blond is the author of an autobiography, *Jew Made in England* (2004). Other names in postwar British publishing were Sidney Bernstein, Baron Bernstein (1899–1993), the television pioneer, whose enterprises included the Granada Publishing company; Robert *Maxwell, who headed Pergamon Press (1948) and built a publishing empire; and Paul Hamlyn, Baron Hamlyn (1926–2001), who controlled Ginn & Co., Newnes, Odhams, and Spring Books, Temple Press, the Paul Hamlyn “coffee table books,” and (in association with EMI) Music For Pleasure Records. Other British publishing firms under Jewish management or with important Jewish interests include H. Pordes (1947), Thomas Yoseloff, W.H. Allen, Frank Cass, Peter Owen, Paul Elek, and a large group containing Cresset Press, Berrie and Rockliff, and Hammond, Hammond.

[Godfrey Edmond Silverman]

In the United States

Before the 20th century, Jews played an insignificant part in the general book publishing industry of the United States. In 1897 the bookselling firm founded by August *Brentano in 1858 started a publishing division. Brentano was the original U.S. publisher for the plays of George Bernard Shaw, but the firm discontinued publishing in 1933. Another pioneer, Ben[jamin] W. Huebsch (1873–1964), son of Adolph *Huebsch, began publishing under his own imprint from 1900 and introduced the writings of Hauptmann, Strindberg, Chekhov, and Gorki to the American public. He also published works by James Joyce and Sherwood Anderson. In 1925 his firm merged with the Viking Press. Alfred A. *Knopf began publishing in 1915 and quickly established a reputation for excellence in design and materials. His list featured many prominent authors, both foreign and American. The firm merged with Random House in 1960. Boni and Liveright was established by Albert Boni (1892–1981) and Horace Briabin Liveright (1896–1933). Their most successful project was the Modern Library, a reprint series now issued by Random House. Boni soon left the firm, but the original name was retained until 1928. In 1923 Boni became a partner in Albert and Charles Boni, a pioneer of paperback books. Albert Boni, who founded the Washington Square Players (now the Theatre Guild), invented Microprint and the Readex reading projector and from 1940 was president of the firm that produced these devices. Horace Liveright was a lavish promoter of authors such as Theodore Dreiser and Eugene O’Neill, but later worked mainly as a stage producer.

Men who had worked for Boni and Liveright established several important publishing firms. Thomas Seltzer formed

his own firm in 1920 and Richard L. Simon organized Simon and Schuster with M. Lincoln *Schuster in 1924. In 1925 Liveright sold the Modern Library to Bennett A. *Cerf and Donald S. Klopfer (d. 1986). Two years later they and Elmer *Adler formed Random House. In 1965 when Cerf became chairman of the board, the presidency was assumed by Robert L. Bernstein. The poet and literary critic Joel Elias *Spingarn was a founder of Harcourt, Brace & Co. and the firm’s literary adviser from 1919 to 1932.

Other book publishing firms established by Jews in the 1920s and 1930s included that of Greenberg Publisher (1924) by Jacob Walter Greenberg (1894–1976); Viking Press (1925); and the short-lived Covici-Friede, which specialized in limited editions. When this last firm was dissolved, Donald Friede joined the World Publishing Company as a senior editor, and Pascal Covici became an editor for Viking Press. William Bernard Ziff (1898–1953), a founder of the Ziff-Davis Publishing Company (1933), was also president of the Zionist Revisionist Organization of America. From Greenberg, Nat Wartels and Robert Simon bought the Outlet Book Company, which disposed of publisher’s overstocks, and they began publishing under the imprint of Crown Publishers. Max Salom of the Harlem Book Company, who pioneered the sale of publishers’ overstocks through drugstores, acquired the Dial Press in 1934. George W. Joel was editor-in-chief of Dial Press (1939–51) and president and publisher from 1951 until his death in 1959. Stanley Burnshaw (1906–2005) was founder, president, and editor-in-chief of Dryden Press (1936).

Several other publishing houses were established by Jews or had Jews in leading managerial positions. Roger W. Straus, Jr. was founder and president of Farrar, Straus, and Giroux (1945); Abelard-Schuman was headed by Lew Schwartz; Arthur J. Rosenthal was president editor-in-chief of Basic Books, Inc. (1952); Oscar Dystal was president of Bantam Books, a subsidiary of Grosset and Dunlap whose president from 1944 was Manuel Siwak; Joseph Gaer (1897–1969) served as editor-in-chief of the Federal Writers Project. With Charles Boni, Gaer formed Boni and Gaer (1946), which soon changed its name to Gaer Associates. Jeremiah Kaplan, an executive of the Free Press of Glencoe from 1947, became president of the Macmillan Company in 1965. Harry N. Abrams, Inc., specialized in art books. Robert Salomon headed Citadel Press; Paul Steiner, Chanticleer Press; Arthur B. Frommer headed Arthur Frommer, Inc.; Harold H. Hart, Hart Publishing Co.; A.L. Furman, Lantern Press; Philip F. Cohen, Oceana Publications; Jacob Steinberg, Twayne Publishers; Milton Gladstone, Arco Publishing Co.; Richard L. Grossman, Grossman Publishers; and Sol Stein, Stein and Day.

The decades in which American Jews became active in book publishing saw tremendous changes in the book world in the United States. Alfred A. Knopf and Simon and Schuster did much to invigorate book promotion and advertising. Huebsch, Knopf, Seltzer, and their successors introduced many new European authors, but at the same time sought fresh American and British talents. The new publishers had

high production standards, Knopf and Viking in particular insisting on attractive, well-made books.

BOOK CLUBS, REPRINTS, AND CHILDREN'S LITERATURE. Three publishing developments during the first half of the 20th century greatly expanded the market for books and in these Jews were prominent. The basic idea of membership in a club for the publication and distribution of books was not new. The *Jewish Publication Society of America (1888) was the successor to at least two earlier membership schemes, and several other groups had been established to publish special editions for members. Harold K. *Guinzburg, founder of the Viking Press (1925), was impressed by the popularity of recently-formed book clubs in Germany. He developed a plan for an American book club, The Literary Guild, which began active operations in 1927; it was sold to Doubleday in 1934. Harry Scherman (1887–1969) who was born in Montreal, Canada, had successfully promoted the Little Leather Library (1916), a mail-order firm, and felt that people living far from bookshops would subscribe to books as to magazines. With Robert K. Haas (1890–1964) and Maxwell B. Sackheim, he organized the Book-of-the-Month Club (1926), which by 1970 had distributed 250 million books. In 1929 George Macy started the Limited Editions Club, limited to 1500 members; and he also founded several others (Heritage Club, Junior Heritage Club, Readers Club). Thomas Yoseloff (1913–) has operated many book clubs, including the Jewish Book Guild, Military Science Book Club, Natural History Book Club, Book Collectors' Society, Art Book Guild, and the Science Book Club. He also established or bought several publishing houses (Beechurst Press, A.S. Barnes and Co., Sagamore Press, Thomas Yoseloff, Inc.) and was the U.S. publisher of the Ben-Yehuda Hebrew dictionary.

Another important development was in the area of low-price reprints, many publishers issuing inexpensive editions of popular works with several firms specializing in this field. The Modern Library was a notable addition to the hard-cover reprint world, and the World Publishing Co. of Cleveland, founded by Alfred Cahen as the Commercial Book Bindery (1905), became prominent, particularly after Benjamin David Zevin (1901–1984) joined the firm. However, the revolution in the industry really began with paperback books. As editor and publisher of Little Blue Books, Emanuel Halderman-Julius (1889–1951) had issued and distributed millions of small paperbound books through the mail for as little as five cents a copy. Occasionally, too, Simon and Schuster had issued a book in paper binding, while the paperbacks published by Albert and Charles Boni and by the *New Republic*, though praised for their content and format, made little impact on sales. In 1939, Pocket Books Inc. was organized by Robert F. de Graff, an expert in the cloth reprint field, with H. Lincoln Schuster, Leon Shimkin, and Richard L. Simon (1899–1962). The first printing of each of the ten titles in the initial list was about 10,000 copies. Twenty years later, 1,000,000 paperbacks a day were sold in the United States. By 1957 only Leon Shimkin re-

mained active in Pocket Books. Others who entered the field were Joseph Meyers, who founded Avon Publications in 1940, and Ned L. Pines, who published under the Popular Library imprint. Doubleday opened a new era in paperback publishing in 1953 with its Anchor Books. The first editor of this serious fiction and non-fiction series was Jason Epstein, later an editor with Random House. Other higher-priced, serious paperback series were the Viking Press's Compass Books and those issued by Schocken Books.

During the 20th century, children's books became one of the most important divisions of American publishing. Knopf, Viking, and Random House were all leaders in the field, but the establishment by Simon and Schuster of Little Golden Books in 1942 brought low-cost books to young people for the first time. More than 400,000,000 Golden Books were sold in the first 13 years. Golden Press Inc., headed by Albert R. Leventhal, formerly a Simon and Schuster executive, became a division of Western Printing Co.

[Israel Soifer]

AFTER THE 1970S. The huge changes that continue to engulf the general book publishing field in the United States, and indeed throughout the world, also had a sharp impact on the specialized area of Jewish publishing. In 1950 it was thought that there were some 600,000 Jewish youngsters attending some kind of Jewish school in the U.S. and Canada, offering a market for textbooks and supplementary reading books that attracted substantial numbers of Jewish publishers. In 1970, it was estimated that the number of such students was closer to 300,000, of whom one-third were enrolled in largely Orthodox yeshivot. The results were almost predictable: the innovative Orthodox house, Artsroll, serviced the Orthodox market; Behrman House continued to be the leader of modern texts for the Conservative area; and the publishing arm of the Reform movement, the Union of American Hebrew Congregations, provided books for the Reform congregations' school needs.

The one area in Jewish school enrollment that saw a steady rise remained the pre-school nurseries, where children aged three and four are introduced to Judaic concepts through a wide variety of educational material, including video cassettes. It was this slice of the Jewish market that seemed to attract both general and Jewish publishers, as the number of full-color illustrated books for very young children continued to mount.

Although an estimated 700 new Jewish books appear every year in the United States, many of these are highly specialized titles meant for limited academic or professional library use. While the number of general Jewish books remains relatively high, and the number of Jewish-theme novels, biographies, general non-fiction, books on Israel, the Holocaust, etc. remains impressive, many publishers are not at all certain how much longer this phenomenon will last, especially as the total number of Jews in the United States is declining for various reasons.

This is not to say that publishers – both general houses and Jewish houses – have given up on Judaica publishing. Jews still buy books in disproportionately large numbers, and every publisher is trying to turn out titles that will capture the community's imagination and become perennial bestsellers. Jewish Book Month, which is sponsored by the Jewish Book Council, an affiliate of the National Jewish Welfare Board, takes place annually in November, with many hundreds of book fairs being held throughout the country.

In New York, a major fair attracted some 15,000 visitors. Some of the authors featured had written general books but since they were themselves well-known Jews, they helped bring in people. A number of authors spoke about such esoteric topics as “The Jewish Detective,” “The Jewish Voter” (the fair was held just before the national elections in the U.S.), “How to Care for Your Parents,” and “The Jewish Holiday Kitchen.” The new books featured at 1988 fairs ranged from a new coffee table volume on Israel published on the state's 40th anniversary, with text by A.B. Yehoshua, to a new volume by Israel's Lova Eliav, titled *New Heart, New Spirit: Biblical Humanism for Modern Israel*, plus a series of new first-person memoirs of the Holocaust, a new series of brief biographies of Rashi, Buber, Bialik and Heine, the autobiography of a former Soviet dissident, fiction by Leon Uris, Amos Keinan, and David Grossman, and scholarly works with such titles as *Jewish Values in Psychotherapy: Essays on Vital Issues of Man's Search for Meaning* by Rabbi Levi Meier.

Although the trend in the last quarter of the 20th century was toward smaller numbers of vast publishing empires (Doubleday, once a major general publisher of large numbers of Jewish titles, is now part of the German-owned Bertelsman-Bantam-Doubleday group, while Random House has absorbed Crown, and Macmillan was taken over by Britain's vast Maxwell empire), the number of tiny one or two-man publishing houses has exploded, and now numbers in the thousands. Modern computer technology and desktop publishing have attracted literally thousands of people to set up shop in their homes, basements, and garages, where they issue local, regional or national titles at the rate of two or three a year. This radical new concept has also caught on in the Jewish community.

In addition to the well-known Jewish houses like the Jewish Publication Society, Behrman, Hebrew Publishing, Bloch Publishing, Feldheim, Ktav, Artscroll, and the publishing arms of various religious/educational/rabbinical organizations, one can now find a growing number of small, new Jewish houses: Micah Publications, Alpha Publishing, Bet Shamai Publications, Biblio Press, Bezalel Art, Jewish Historical Society of Oregon, Kar-Ben Copies, Hunter Publishing, Markus Weiner Publishing, Quartet Books, Madison Books, Edwin Mellen Press, Wandering You Press, Mensch Makers Press, Judaica Press, Peartree, Jason Aronson.

The number of Jewish titles appearing on the regular lists of large and small university presses, as well as in the offerings of Christian religious houses, remains high. Abingdon

Press, a noted Christian house, issued *A Grammar for Biblical Hebrew* by C.L. Seow in 1988, while Wayne State University Press published a study by Amnon Linder titled *Jews in Roman Imperial Legislation*.

The Jewish Publication Society of America celebrated its 100th anniversary in 1988, noting that it had issued more than 700 titles in that period aggregating more than nine million volumes that it had distributed to its members and the public at large.

A glance at the catalogs of general houses and Jewish houses will quickly demonstrate that certain broad subjects remain on top of the community's reading agenda: Israel, the Holocaust, antisemitism, assimilation, Jewish ethics, culture, and philosophy. From the last quarter of the 20th century, a number of publishers began to issue titles dealing with a subject that is often peripheral in Jewish life – Kabbalah, or Jewish mysticism. Whether this was a reflection of the times or a deep spiritual hunger is hard to say.

A major problem in Jewish publishing in America – distribution – was not fully resolved in the traditional manner. Books of Jewish interest reviewed in daily or Jewish media, recommended by friends or referred to by a rabbi during a Sabbath sermon, were often very hard to come by in general book stores. Although there were some 250 strictly Jewish book shops in all parts of the U.S., and many hundreds of (primarily Conservative and Reform) congregations sold limited numbers of Judaica titles from their volunteer-manned “gift shops,” no one was able to work out an effective method of getting Jewish books into the hands of book buyers on a nationwide scale.

With the coming of the Internet in the 1990s Jewish books became available online at innumerable sites, obviating the longstanding problem of distribution among publishers of Jewish books.

[David C. Gross]

PUBLISHING OF HEBRAICA AND JUDAICA

Central and Western Europe

The first publishers – in the modern sense – of Judaica were in Germany, which for a long time remained the center of Jewish (mainly non-Hebrew) publishing. The pioneer was W. *Heidenheim, who was succeeded by M. Lehrberger, in Roedelheim, the producer of famous editions of the Jewish liturgy. In the first half of the 19th century Jewish bookshops were opened in the larger towns and many of their owners later became publishers. M.W. Kaufmann established himself in Leipzig in 1828, later specializing in publishing synagogue music. J. *Kaufmann established himself in Frankfurt on the Main in 1832 and his firm was the leading Jewish publisher (and bookseller) in Germany for three generations, taking over Lehrberger in 1899. In Prague W. Pascheles was active from 1836. Several firms were established in Berlin in the course of the 19th century, some of which, like *Asher and Co., later gave up Jewish publishing; others did not stay the course (A. Cohn, J. Sittenfeld, Springer and Co., Veit and Co.,

and others). M. Poppelauer (est. 1860) and C. Boas (est. 1863) remained of importance for some decades. The firm of B.L. Monasch was active in Krotoschin from 1835 to 1910 and that of Zirndorfer published works in Fuerth.

In the 20th century the most important publishing house became the *Juedischer Verlag, which not only produced Zionist literature but also a great variety of Hebrew and Yiddish works in the original and in translation. After World War I the concentration of Jewish writers and scholars from Eastern Europe in Germany, in Berlin in particular, produced a Jewish intellectual revival, and many publishing houses sprang up, producing both Hebraica and Judaica. Louis Lamm was already established in 1903; the Weltverlag followed it in 1919. The *Philo Verlag (1919–38), the publishing arm of the *Centralverein deutscher Staatsbuerger juedischen Glaubens, fought against the rising antisemitism, but its activities covered a wide range of Jewish literature, including the publication of periodicals like *Der Morgen and Zeitschrift fuer die Geschichte der Juden in Deutschland*. The Akademie Verlag was a branch of the Akademie fuer die Wissenschaft des Judentums. The Eschkol Verlag published the *Encyclopaedia Judaica* in German (10 vols., to 1934 unfinished) and in Hebrew (2 vols., 1929–32, also unfinished) and other important works such as J. Klatzkin's *Thesaurus Philosophicus Linguae Hebraicae* (4 vols., 1928–33). Other firms included Reuben Mass in Berlin, who later continued publishing in Jerusalem; Schocken Verlag, also in Berlin (see above); Saenger und *Friedberg (the bibliographer) in Frankfurt; the Hermon Verlag, which was connected with the Orthodox weekly **Israelit*; the Juedischer Verlag (1901); and the *Soncino Gesellschaft (1924). After 1938 Schocken Verlag published in Israel and the U.S. Some Hebrew publishers, like *Devir, *Moriah, and *Stybel, transferred to Germany, later moving to Erez Israel or the U.S. Similarly, the Omanut Hebrew publishing house, established in Moscow in 1917 by H. *Zlatopolski and his daughter Shoshannah *Persitz, moved to Odessa in 1918, Homburg (near Frankfurt) in 1920, and Tel Aviv in 1928. Other firms include Chorev, which published small-size reproductions of the great rabbinic texts, Yavneh, Ayyanot, and Yuval, the latter specializing in Jewish music. Klal and Vostock published Yiddish literature. The economic conditions in post-World War I Germany led to the closing of several smaller firms.

In Vienna Benjamin Harz republished, among other works, L. Goldschmidt's Talmud edition and German translation. The firm of R. Loewitt, active there from 1833, later issued mainly Jewish belletristic works. Joseph Schlesinger founded his firm in 1858 – with a branch in Budapest at a later date – and became a leading publisher of prayer books and other items, supplying several European countries as well as North Africa.

In Leghorn, Italy, the house of *Belforte was active from 1838 to 1939 as publishers of liturgical literature for the Italian, North African, and Levantine market. In France (Paris), E. Durlacher and M. Lipschuetz published Hebraica and Judaica; the former was still active in 1970.

NON-JEWISH PUBLISHERS OF JUDAICA. In pre-Hitler Germany a number of non-Jewish publishers were responsible for some works of Hebraica and Judaica: the Insel Verlag (Brody-Wiener's *Anthologia Hebraica*, 1924), Langenscheidt (Eliezar Ben-Yehuda's *Thesaurus*), O. Harrassowitz in Leipzig, Toepelmann, Giessen, and others. In Holland the house of Brill in Leiden has been active for nearly 100 years. In France some general publishing houses published books dealing with Jews and Judaism, e.g., F. Rieder, Fernand Nathan, Albin Michel, Payot, Au-bier Montaine, Flammarion, and Presses Universitaires de France.

In Great Britain

The pioneers of Jewish publishing in Great Britain were members of the London Sephardi community who issued works on philosophy, literature, and Jewish liturgy in Spanish and Portuguese from the early 18th century onward. Daniel Israel Lopez *Laguna's *Espejo Fiel de Vidas* ("Faithful Mirror of Life"), a Spanish metrical version of Psalms planned in the cells of the Inquisition and completed in Jamaica, was published in London in 1720. Long after Marrano immigration had virtually come to an end, Spanish and Portuguese remained the official languages of the Sephardim, with the result that Isaac *Pinto's English translation of the prayer book had to appear in New York (1761–66) because of the disapproval of the London *mahamad*. One of the first Anglo-Jewish publishers whose name has survived was Alexander b. Judah Loeb Alexander (d. 1807), who issued a *Haggadah* (1770) and a Sephardi prayer book with English translation (1788), as well as other works of a liturgical nature. This activity was maintained by his son, Levy Alexander (1754–1853), who also proved to be an indifferent translator with his pioneering, but defective, Hebrew-English Bible (1824). Levy, however, did not confine himself to religious publications, producing an account of Anglo-Jewish social scandals in 1808.

By about the middle of the 19th century Jews were becoming more prominent in the general field of publishing, founding several important family business concerns. Isaac Vallentine (1793–1868), the Belgian-born son of a rabbi, was a leading communal figure as well as a printer, publisher, and bookseller of note. In 1841 he founded the predecessor of the weekly *Jewish Chronicle* and also established *The Hebrew Almanack and Calendar* (1848), a forerunner of the *Jewish Year Book*. The firm of Vallentine & Co. later underwent a merger, becoming the bookselling and publishing firm of Shapiro, Vallentine, which remained in business until 1971.

[Godfrey Edmond Silverman]

Other Jewish publishers of Hebraica and Judaica, who became active from the late 19th century included the booksellers M. Cailinggold, R. Mazin (later Jack Mazin), and Edward Goldston. In the 1920s Jacob Davidson founded the Soncino Press, which was responsible for the publication of classic Jewish texts in English. They issued (35- and 11-volume editions) the Talmud edited by I. *Epstein, Midrash Rabbah (10 vols.), Zohar (5 vols.), the Bible (text, translation, and commentary,

13 vols.), a one-volume edition of J.H. Hertz's Pentateuch and Haftarat, the minor tractates of the Talmud (2 vols.), a collection of S.R. Hirsch's essays (2 vols., edited by I. *Grunfeld), and Hirsch's *Horeb* (2 vols.; also edited by I. Grunfeld). From the 1930s onward the East and West Library (see above) brought out a series of Jewish classics. In the 1940s and 1950s a number of books in Hebrew and Yiddish, as well as the journal *Metsudah*, were produced by the Ararat Publishing Company. Since World War II the firm of Valentine Mitchell (associated with the *Jewish Chronicle*) has published a large variety of books of Jewish interest. Literature pertaining to Anglo-Jewish history was published by the *Jewish Historical Society of England.

General publishing firms as well, some of them owned by Jews, have published Hebraica and Judaica. George Routledge and Sons published the Davis-Adler *Maḥzor* (6 vols., 1904), which has gone through many editions and reprints, and other books of Jewish interest. Eyre and Spottiswoode have issued the popular Singer's *Prayer Book* since 1890; it has sold over half a million copies.

In Eastern Europe

In Eastern Europe publishing gradually emerged as distinct from Hebrew printing. Great printing houses signed contracts with authors, e.g., Romm in Vilna with I.M. *Dick and K. *Schulman. Important booksellers also began to publish works, e.g., A. Zuckermann and A.J. Shapiro in Warsaw; I. Ginzburg in Bobrisk; and Rawnitzki in Odessa. Newspaper owners, learned societies, and patrons published works, hitherto in manuscript or unsatisfactory editions. The first non-commercial publishing house was Aḥiasaf, founded in Warsaw in 1892–93 on the initiative of the *Bnei Moshe and under the direction of E.E. Kaplan and the guidance of *Aḥad Ha-Am. Aḥiasaf, which was active until 1923, published works of modern Jewish scholarship and youth literature as well as the annual *Luḥ Aḥiasaf* and the periodicals *Ha-Shilo'ah* and *Ha-Dor*. One of the founders of Aḥiasaf, A. Ben-Avigdor, set up the Tushiyah company in 1895, which extended its activities to Hebrew belles lettres, both original and translated, works in the natural and social sciences, and modern school books.

In 1899, in Warsaw, J. Lidzki founded the "Progres" publishing firm for Yiddish literature. B. Schimin, also in Warsaw, brought out books both in Hebrew and Yiddish as did S. Scherberk in Vilna (established 1901–02), who published the popular Bible commentary *Mikra Meforash*. In order to further original Hebrew literature P. Lachower set up the Sifrut company in Warsaw in 1908. In 1910 in Vilna B. Klatzkin began to publish scientific books, as well as original and translated literature in Yiddish. A year later Tushiyah, Progres, Schimin, and Scherberk merged under the name of Merkaz ("Zentral"). In 1901 H.N. Bialik, S. Ben-Zion, and Yehoshua Hana Rawnitzki founded the *Moriah publishing house in Odessa for classical Hebrew literature and textbooks for schools, while Turgeman concentrated on translations from other languages.

World War I brought with it a severe crisis in the Jewish book market in Russia, which was aggravated by an edict in 1915 prohibiting all printing in Hebrew types. After the March 1917 revolution two Hebrew publishing houses were set up in Moscow: *Stybel, under the direction of D. *Frischmann, for classical world literature in Hebrew, and Omanut (see above). Moriah also renewed its activities. After the October Revolution and the subsequent anti-Jewish measures of the Soviet government, all these ceased. Stybel moved to Warsaw and later to Berlin, New York, and finally Tel Aviv. In the early years of the Soviet regime some private Yiddish publishing continued, e.g., by the Kultur-Lige (founded in 1917 in Kiev), but these businesses were soon absorbed by the state corporation Der Emes in Moscow; the Ukrainian state publishers and the Belorussian state publishers year after year issued many hundreds of Yiddish books, most of them propagating communist ideology. With the outbreak of World War II this output was severely reduced, ceasing altogether with the liquidation of Jewish writers in the years 1942–48. From 1958 onward only very few books in Yiddish were published in Soviet Russia.

In Poland the centers of Jewish publishing between the two world wars were Warsaw and Vilna. In Warsaw "Zentral" continued its activities; S.L. *Gordon published his Bible commentary, and Stybel *Ha-Tekufah*, and hundreds of books. A Kultur-Lige, founded in 1921, issued the best of Yiddish literature, school books, and Dubnow's "World History of the Jewish People." B. Klatzkin moved from Vilna to Warsaw and expanded its activities. Other publishers include A. Gitlin, H. Bzoza, S. Goldfarb, Katzanellenbogen, and Armkraut and Freund (Przemysl). The brothers Lewin-Epstein, who had published religious literature from 1880, began to issue belles lettres in Hebrew as well as in Yiddish. In Vilna "Tomor" produced I. Zinberg's history of Jewish literature. The various political parties also published books, as did newspapers (*Literarische Bleter*) and scholarly societies such as *YIVO. With the invasion of Poland by Nazi Germany this activity came to an end. After the war a state corporation under the control of Jewish communists, Dos Yidishe Bukh, produced some important studies on the Holocaust.

[Yehuda Slutsky]

In the United States

Until the early 19th century, Jews in the United States imported books of specifically Jewish interest (chiefly Bibles, prayer books, and instructional material for the young) from Europe. However, a Hebrew Bible, a reprint of Joseph *Athias' unpointed text, was printed in Philadelphia in 1814. In 1845 Isaac *Leeser established the American Jewish Publication Society for the dissemination of Jewish literature. Fourteen books were published under the general title "Jewish Miscellany," but the society collapsed in 1851 when a fire destroyed the building in which the books and plates were stored. The firm now known as the Bloch Publishing Co. was founded in Cincinnati in 1854 by Isaac M. *Wise and Edward Bloch (1816–1881) to print and publish books on Jewish subjects. The *Bloch family has retained control of the firm, which has been

in New York since 1901. Edward H. Bloch (1899–), grandson of the founder, was president from 1940, and Solomon Kerstein (1901–1969), a founder of the Jewish Book Council, was vice president from 1947 onward. By 1970 over 1,000 titles had appeared on the firm's catalogs. The Hebrew Publishing Company came into being in New York in 1883, when Joseph L. Werbelowsky and some associates began to publish prayer books and school texts. In 1901 the firm was known as Rosenbaum and Werbelowsky, Inc. Menahem Menschel, an agent for the Stybel (Hebrew) Publishing House and a partner in the Jewish bookselling firm of Reznick, Menschel and Co., was manager from 1938. The firm published new Hebrew-English editions of the *siddur* and the *maḥzor* by Philip *Birnbaum. The third of these pioneering Jewish publishing houses, the Jewish Publication Society, was established in Philadelphia in 1888, and its many titles include authoritative translations of the Bible (1917; 1963–). Unlike the others, this is a membership organization with many features of the modern book clubs. The *Jewish Encyclopedia* (1901–06) was issued by the non-Jewish publishing house of Funk and Wagnall (see *Encyclopedias: Jewish).

National Jewish organizations in the United States have sponsored various publication programs. The *Union of American Hebrew Congregations (Reform) developed an extensive program under its own imprint. Emanuel *Gamoran, educational director of the UAHC and its Commission on Jewish Education (1923–1958), developed text and reference books catering for all age groups. The Conservative movement (*United Synagogue of America) also established its own publishing divisions. Burning Bush Press and the United Synagogue Book Service serve the needs of the affiliated synagogues and schools. The *Union of Orthodox Jewish Congregations of America has also published text materials, while many works for both adults and children have appeared under the imprint of the Ḥabad ḥasidic Merkos l'Inyonei Chinuch of New York. The viewpoint of *Reconstructionism is presented in the bound books and paperbacks of the Reconstructionist Press. The Herzl Press has issued Zionist classics, handbooks, and yearbooks. In 1967 the *B'nai B'rith Commission on Adult Education contracted with the W.W. Norton Co. for a 50-book series of "Jewish Heritage Classics."

The Anti-Defamation League of B'nai B'rith usually employs a general publisher for its major works, pamphlets and shorter publications normally appearing under the organization's own imprint. The B'nai B'rith Hillel Foundation has also published books and pamphlets, while *Commentary*, the monthly sponsored by the American Jewish Committee, operates its own book club. Other publishers active in the field include Pardes, the Jewish Agency, various Zionist bodies (ZOA, Farband, Mizrahi) and university presses (Dropsie College, HUC, JTS, Yeshiva University, Brandeis) and the National Jewish Welfare Board. The *Histadrut Ivrit publishes Hebrew literature and *YIVO, the Yiddish Scientific Institute, has issued several important Yiddish works. Several regional educational bodies have also entered publishing. The JEC Press of the Jew-

ish Education Committee of New York has issued a library of Hebrew story books for American children, while the bureaus of Jewish education of Chicago and Cleveland also have their own publishing divisions.

Establishing these institutional publishing firms or the sponsoring of individual books under the imprint of a general publisher has tended to discourage privately owned publishing houses from specializing in the Jewish field. Indeed, practically all the privately owned Jewish publishing firms also run bookshops where Jewish books under various imprints are sold. They include Behrman House (1920), founded by Louis Behrman and later directed by his son, Jacob; the Ktav Publishing House, which issued text and story materials from 1924 (with Asher Scharfstein as president), and which has latterly published and reprinted serious scholarly works; the Furrow Press (1933), which issued festival plays and literature for Jewish schools; and the U.S. branch of Schocken Books (1945), known particularly for its serious paperback program. Other privately owned firms specializing in Judaica are Shengold Publishers (Moshe Sheinbaum); the Jonathan David Publishing Co. (Alfred J. Kolatch); Philipp Feldheim, which published English translations of the works of Samson Raphael *Hirsch; and Hermon press. The established firm of Shulsinger Brothers also prints Jewish publications. Morris *Silverman, a Conservative rabbi in Hartford, edited and published a series of Conservative prayer books with English translations under the Prayer Book Press imprint. Most publishers active in the Jewish field belong to the Association of Jewish Book Publishers. The chief publication of Yiddish works include *YIVO, *Congress for Jewish Culture, and Der Kval, a private firm.

Several general publishers have displayed continuous interest in Jewish books and their authors. Rinehart (now Holt, Rinehart, and Winston) issued a series of Jewish anthologies edited by Leo W. Schwarz, and Abelard-Shuman operates a separate division, Ram's Head Books, for Jewish books. Maurice *Samuel's books have been published by Knopf, and those of Isaac *Bashevis Singer and Bernard *Malamud by Farrar, Straus, and Giroux. Meridian Books (established by Arthur A. Cohen) first distributed the paperbacks of the Jewish Publication Society, a function later performed by Harper and Row. Another area of cooperation is the joint issue of a title by a Jewish and a general publisher. Many JPSA titles appear under the joint imprint of the Society and a general publisher. Thus Columbia University Press collaborated in Salo W. *Baron's multivolume *Social and Religious History of the Jews*, while Herzl Press and Doubleday have also cooperated on several publications.

In 1925, Fanny *Goldstein, a librarian, organized a Jewish Book Week in Boston. The movement grew gradually, and the Jewish Book Council, sponsored by the *National Jewish Welfare Board, was established in 1942. Jewish Book Week was later expanded to Jewish Book Month. The *Jewish Book Annual* has been issued since 1942 and a series of annual prizes for authors in the Jewish field was established.

[Solomon Kerstein]

IN ISRAEL

Printing and publishing developed slowly in Erez Israel. Eliezer ben Yitzhak *Ashkenazi, a printer of Hebrew books from Prague, together with his brother Abraham, established the first printing plant in the Upper Galilee city of Safed in 1577. Their first publication was *Lekah Tov* (“A Worthy Inspiration”), a commentary on the biblical Book of Esther by R. Yom Tov Zhalon. The Ashkenazi press remained in Safed for some 10 years during which time only five books were printed, and in 1605, the type was sold to a printer in Damascus. It took another two and a half centuries before a printing house was again established, that of Israel *Bak, in 1831, also in Safed. The publishing and printing business was subsequently transferred to Jerusalem where it continued to function until 1878. With the growing Jewish immigration to Palestine in the latter half of the 19th century, Jerusalem began to develop into a center for the printing of religious and liturgical works in Hebrew. By the turn of the century, more than a dozen Jerusalem printers – most of whom also acted as booksellers – were producing Hebrew books and periodicals, most of them in the field of Judaica, rabbinic studies, and prayer books.

Professional publishing in the modern sense really began only during the period of the British Mandate in the 1920s and 1930s, with the move to Palestine of some of the major Jewish imprints of Europe. Moriah, which had been established in Odessa early in the century by H̄ayyim Nah̄man *Bialik and Yehoshua *Rawnitzky merged in 1923 with *Dvir, which had been founded in Berlin by Bialik, Rawnitzky, and Shmaryahu *Levin a year earlier. The workers’ periodical *Ha-Poel ha-Za’ir* introduced the writings of contemporary luminaries of Hebrew literature such as Asher *Barash, A.D.*Gordon, and Moshe *Smilansky among others and issued a series of books under the title “The People’s University Library.” Shlomo Sreberk, a publisher in Vilna and Warsaw, moved to Palestine in 1933 reestablishing his imprint and founding a new one named Izrael. Omanut, specializing in the arts and books for children, was founded in Moscow in 1916 by Shoshanah *Persitz (who subsequently became a member of the Israel Knesset) and was transferred to Tel Aviv in 1925. Rubin Mass, founded in Berlin in 1927, moved to Palestine in 1933. The Schocken publishing house, founded in Berlin in 1927, moved to Palestine in 1938, where it also established Israel’s leading daily newspaper, *Haaretz*. Most of the publishing houses mentioned above still exist in one form or another (for details see below).

At the same time that many of the old-established European houses were being reborn in Palestine, new indigenous publishing houses were also being set up. Three veterans of the *Jewish Brigade of the British Army in World War I, Joshua Chachik, Mordechai Newman, and Joseph Sreberk, inaugurated Mitzpeh in 1925; in 1944 the partnership dissolved and each of them set up their own imprint. In 1930, one of the pioneers of early Tel Aviv, Nahum Twersky, established his own publishing house as did Z. Zack in Jerusalem in the same year. Schachna Achiasaf founded his eponymous publishing house in Jerusalem in 1933. Joshua Orenstein’s Yavneh Pub-

lishing House has been active in Tel Aviv since 1932. One of the most important publishers in pre-state Palestine and during the first four decades of the state was Massadah, founded in 1931 by Bracha Peli, who had left Russia with her family and immigrated to Palestine 10 years before. The company, which began as a lending library in 1922, then becoming a chain of bookstores, eventually developed into one of the dominant publishing houses in the Israeli book trade and it also owned one of the biggest printing plants in the Middle East. The company was split up and its assets disposed of following the death of Bracha Peli in 1986. Under the direction of Alexander Peli, the son of Bracha, Massadah was publisher of the 38-volume *Encyclopedia Hebraica*, unquestionably the single most important and complex publishing project in the history of the state.

Israel has had a tradition of publishing by institutions with a strong ideological motivation. From 1939, the two major kibbutz movements Ha-Kibbutz ha-Arzi and Ha-Kibbutz ha-Me’uḥad operated their own publishing houses (respectively Sifriat Poalim and Ha-Kibbutz ha-Me’uḥad) combining general publishing with books having a clear ideological affinity with their respective kibbutz movements. Another institutional publisher is Am Oved, founded and owned by the Histadrut (the General Federation of Labor in Israel). For details of these publishing houses, see below.

While the Hebrew language is by far the dominant force in Israeli publishing, there is a certain amount of quality Arabic publishing in the country, some of it sponsored by institutions and there are also several independent publishers, including Dar el-Huda of Kafr Kara, Al-Mushreq of Shefaram, and al-Aswar of Acre. In addition there is a limited amount of original publishing of books and journals in English and other languages (much of it of a scholarly and academic nature).

With the influx of nearly one million new immigrants from the former Soviet Union between 1989 and 2000, the cultural face of Israel has been transformed in many ways, and the Russian influence is very apparent in music, theater, dance, and, of course, literature. There has been a flowering of newspapers and magazines, and some 250 outlets throughout the country sell books in Russian. It has been asserted that Israel has one of the world’s largest publics for Russian language books and magazines – second only to Russia itself. Among the leading Russian language publishers are Gishrei-Tarbut (“Cultural Bridges”) based in both Jerusalem and Moscow, which publishes an extensive list of original and translated books in Russian including the works of many contemporary Hebrew writers. Its main publication is the multi-volume *Bibliotheca Judaica* published in cooperation with the Center of Jewish Studies in Russian of the Hebrew University, Jerusalem. Other leading Russian-language publishers include Mahanayim, for religious publications including the Bible, Talmud, and prayer books. Merkur, Beseder, and Moskva/Kfar Saba are three general publishers. Sifriat Aliya has published the *Shorter Jewish Encyclopedia* in Russian, based on the *Encyclopaedia Judaica*.

Although official government statistics with reference to the book trade have not been compiled for several years, it is estimated that some 4,500 new books were being published annually in Israel in the early 21st century – the overwhelming majority of which in Hebrew. While there are hundreds of individuals, companies and institutions who publish the occasional book or two, there are approximately 100 publishing houses which can be considered as “professional” (those publishing from 15 to 100 or even more new titles a year). A brief account of some of the leading publishers is given below.

Some 90 publishers belong to the Book Publishers’ Association of Israel founded in 1939. In addition to acting as a lobby for the promotion of Israeli books, the Association also organizes and administers Hebrew Book Week (see below). It also operates a joint paper-purchasing company which negotiates reduced prices for its members. Another smaller group of about 25 publishers is organized in the Israel Publishers’ Union. The Book and Printing Center of the Israel Export Institute promotes Israeli publishing and printing abroad and is responsible for organizing Israel’s national stand at the Frankfurt Book Fair and other international book trade events.

The major event in the Israeli publishing world is the annual Hebrew Book Week. This event, first held in 1952, takes place in the early summer in all of the country’s major cities. It takes the form of open-air markets and is a very popular occasion attended by hundreds of thousands of people who take advantage of the many special offers and bargains that the publishers display on their own stands. The event in effect lasts a whole month with all the local bookstores participating and offering books at the same reduced prices as on the publishers’ stands.

The Jerusalem International Book Fair is a biennial event that began in 1963. Over the years it has become one of the most popular events on the international publishing circuit and is attended by publishers from all over the world who seek new projects and authors in Israel or who wish to sell Hebrew rights or make distribution arrangements. A key event of the Fair is the Editorial Fellowship Program, which is internationally regarded as the most important forum in the world today for young editors. Since its establishment in 1985, more than 250 editors from some 25 countries (as of 2005) have participated in the program. Today many of its alumni hold key positions in publishing houses the world over. The Fair is also the occasion of the awarding of the Jerusalem Prize for the Freedom of Mankind in Society – Israel’s premier international literary award. Prominent past recipients of the Jerusalem Prize include Bertrand Russell, Isaiah *Berlin, Jorgé Luis Borges, Simone de Beauvoir, Milan Kundera, Mario Vargas Llosa, Don DeLillo, and Susan *Sontag.

While some of Israel’s leading writers are represented by literary agents abroad, two agents in Israel represent the bulk of Israeli authors. The Institute for the Translation of Hebrew Literature is a public company founded in 1962 for the purpose of promoting Hebrew literature including po-

etry and children’s books into other languages. It represents a wide range of Israeli writers of quality fiction. The Institute also publishes the highly regarded magazine, *Modern Hebrew Literature*, edited by Gershon *Shaked, which features short stories, extracts, and chapters from important recently published or forthcoming books. It also publishes catalogues of Israeli books, biographies of leading writers, and a series of bibliographies of Israeli publications both in the original and in translation.

The Harris/Elon Agency, founded in Jerusalem by Deborah Harris in 1991, also represents an important cross-section of Israeli authors of both fiction and non-fiction, as well as those writing in languages other than Hebrew. Three agencies specialize in the marketing of foreign rights to Israeli publishers for translation into Hebrew: the Harris/Elon Agency referred to above; the Pikarsky Agency in Tel Aviv, founded in 1975 by the American/Israeli writer, Barbara Rogan; and a literary agency belonging to the Israel Book Publishers’ Association, which caters to its members.

Israel’s printing industry measures up to the most rigorous and advanced modern standards and several publishers specialize in packaging co-productions for publishers overseas. The availability of advanced digital printing processes has led to the short-run reissuing of many rare books, especially in the fields of Judaica and rabbinic studies.

Israel’s retail book trade is dominated by the Steimatzky chain. Founded by Ezekiel Steimatzky in Jerusalem and Beirut in 1925, this is the oldest and most diversified bookselling enterprise in Israel. It imports books and magazines, videos and CDs and its business extends to over 160 shops throughout the country. It also acts as a wholesaler to another 1,000 retail outlets. Steimatzky also acts as a publisher and issues co-editions of books having a particular reference to Israel, such as illustrated albums, books by prominent local personalities, etc. While Steimatzky still enjoys a near monopoly over imported general books and magazines, the Tzomet Sefarim chain, founded in 1996 and owned by the Kinneret/Zmora/Dvir publishing conglomerate, is a major force for Hebrew books with some 30 shops mostly but not exclusively situated in the country’s shopping malls.

A relatively small, third chain, Tamir, has seven shops in the Jerusalem area. The main sources for scientific, medical, and academic books are Academon, belonging to the Hebrew University of Jerusalem, and Dyonon, belonging to Tel Aviv University and with branches in the Ben-Gurion University of the Negev in Beersheba and the Multi-Disciplinary Center of Herzliyyah. Despite the competition from the chains, there are still many smaller traditional bookstores throughout the country, although their numbers are declining. There are electronic companies selling books through the internet, including dbook and Mitos. Gefen, a primarily English-language publisher, has a subsidiary company called Israbook, with a branch in New York, which supplies libraries, institutions and individuals throughout the world with Israeli publications.

The Publishers

The following brief list gives some of the leading, most prolific, or best-known Israeli publishers (the list is by no means exhaustive nor does it imply any value judgment).

AM OVED. One of Israel's leading publishers of quality literature and non-fiction. Founded by the Histadrut (the General Federation of Labor) in 1942, it publishes in an exhaustive range of subjects. As a major publisher of paperback books, it promotes new and classical Israeli and world literature in Hebrew through its series *Sifriyyah le-Am* ("The Peoples' Library").

BIALIK INSTITUTE. This distinguished non-profit making institution, was established by the World Zionist Organization in 1935 and was named in honor of the national poet Hayyim Nahman Bialik. Its aim is to promote Hebrew literature, particularly in the field of Jewish studies, biblical research, philosophy, and sociology. Its publications cover scholarly and popular editions of classical Jewish works, archaeology, Judaica, art and art history, and Hebrew literature.

CARTA. Founded in 1958, the company specializes in the publication of maps, atlases, encyclopedias, and other reference books in Hebrew, English, German, Russian, and other languages, many of them in co-production with overseas publishers, concentrating on the geography, history, and archaeology of the Bible, the Holy Land, and the Land of Israel today.

HA-KIBBUTZ HA-ME'UḤAD/SIFRIAT POALIM. A merger of two publishing houses owned respectively by the National Federation of Collective Settlements (kibbutzim) and the Kibbutz Artzi movement. Sifriat Poalim was founded in 1939 and Ha-Kibbutz ha-Me'uḥad in 1945. Both are public cultural institutions with a broad general publishing vision and a prolific and eclectic list with a strong emphasis on children's books, as well as books of an ideological nature representing the social and political beliefs of the two pioneering movements. The series *Ha-Sifriyyah ha-Ḥadashah* ("New Library") is one of the country's most distinguished lists of original and translated fiction. The two houses merged their publishing activities in 2000.

THE INSTITUTE FOR THE TRANSLATION OF HEBREW LITERATURE. The Institute for the Translation of Hebrew Literature (ITHL) was founded in 1962 to create a bridge between modern Hebrew literature and the non-Hebrew-speaking world. Over the years its range of activities has expanded far beyond translation (into 66 languages). ITHL's current activities include publication of author/book directories and catalogues; a unique bibliographic center listing all published translations of Hebrew literature; a website including an index of Hebrew authors in English (about 450 to 2006); yearly publication of *Modern Hebrew Literature*, a journal in English; literary agency services to more than 200 leading authors of adult, young adult, and children's literature; participation in major book fairs, financial support to foreign publishers; initiating anthologies of Hebrew literature in a variety of languages (about 200 to 2006); organizing international translation and literary events in Israel and abroad.

JERUSALEM PUBLISHING HOUSE. Founded in 1966, the company initiates and packages co-publishing projects with leading publishers overseas under whose imprints the books are published. Its profusely illustrated publications, concentrating on biblical research, archaeology, and general history, have made it a world leader in the production of Jewish English-language encyclopedias and dictionaries. Among its major publications are the *Dictionary and Concordance of the Bible*; *Guide to Biblical Holy Places*; *Archeological Dictionary of the Holy Land*; *Continuum Political Encyclopedia of the Middle East*; *Encyclopedia of the Holocaust*; *New Encyclopedia of Judaism*; *Encyclopedia of the Jewish Life Before and After the Holocaust*; and *Encyclopedia of the Righteous Among the Nations*. It is co-publisher of the second edition of the *Encyclopaedia Judaica* (2006), responsible for all editorial content.

KETER. The company began as the Israel Program for Scientific Translations, established in 1958 by the U.S. National Science Foundation in Washington and the Israel Prime Minister's Office to translate scientific literature from Russian and other languages into English. In the 1960s it began to diversify its publishing activities under the imprints Israel Universities Press and Keter Books. Keter was purchased from the government in 1966 and has been a public company since 1987. It is Israel's largest integrated publishing, manufacturing (with its own printing plant), and book marketing concern and one of the country's major publishers in a wide range of genres. Its Israeli authors include Amos *Oz, Aharon *Appelfeld, Savyon *Liebrecht, and Uri *Orlev, and foreign authors include Paul *Auster, Paolo Coelho, Boris Pasternak, Salman Rushdie, Susan Sontag, and Mario Vargas-Llosa. Keter's major achievement was the magisterial English-language *Encyclopedia Judaica* first published in 16 volumes in 1971. The revised and updated second edition was co-published by Thomson Gale (Macmillan) in 2006.

KINNERET/ZMORA/DVIR. This house is a merger dating from 2002 of three well-known publishers and is today Israel's most prolific publisher in terms of annual number of titles. The group is also part owner of the Tsomet Sefarim bookselling chain (see above). Kinneret was founded as a general publisher in 1979 and Zmora (previously Zmora/Bitan/Modan), founded in 1973, was a leading publisher of original and translated fiction, as well as a broad general list. One of the most distinguished names in Israeli publishing, Dvir was established in Berlin in the early 20th century by some of the leading Hebrew literary figures of the time and moved to Palestine in 1924. It has published many of the classics of Modern Hebrew literature, several of which are now being re-issued.

MAGNES PRESS. Founded in 1929, the publishing house of the Hebrew University of Jerusalem is the oldest and largest scholarly publishing house in the country. It publishes books and journals, in English and Hebrew, on Jewish studies, Bible, history, contemporary Jewry, archeology, law, mathematics, among other subjects. Many of its publications are pub-

lished in cooperation with academic and university publishing houses overseas.

MODAN. The successor to the Lewin-Epstein publishing house founded in 1930, Modan, established in 1974, is a large general publisher specializing in cookbooks, general fiction, and “how-to” books.

RAV KOOK INSTITUTE. This scholarly publishing house was founded in 1936 to perpetuate the memory of the chief rabbi of Palestine, Abraham Isaac Kook. It is a non-profit institution whose aim is to publish scholarly works in traditional religious Jewish studies, especially Bible commentary, the Talmud, Jewish history, philosophy, and Jewish law. Among its major publications are several editions of the Bible, a Bible commentary in 30 volumes, and the collected works of Maimonides.

SCHOCKEN. Schocken Verlag was founded in Berlin in 1931 by Salman *Schocken, owner of a chain of prosperous department stores. He immigrated to Palestine in 1934 and established two publishing houses: Schocken Tel Aviv for books in Hebrew and Schocken New York for books in English. The Israeli company is one of the most distinguished publishing houses in the country and numbers among its writers some of its leading literary figures such as Yehuda *Amichai, Yeshayahu *Leibowitz, Meir *Shalev, A.B.*Yehoshua, and Shmuel Yosef *Agnon, Israel’s only winner of the Nobel Prize for literature (in 1966). Among its foreign authors are Franz *Kafka, Herman Hesse, Ted Hughes, D.H. Lawrence, Dylan Thomas, Gabriel Garcia Marques, Philip *Roth, and Alexander Solzhenitsyn. Schocken has acquired the rights to reissue a new and updated edition of the monumental *Encyclopedia Hebraica*, originally published by Massadah.

YEDIOTH AHARONOTH. Wholly owned by the mass-circulation daily newspaper of the same name, the publishing house, established in 1952, began with the publication of basic Jewish texts including the Bible, but since then has branched out into a wide range of subjects with a strong emphasis on books on the history of the State of Israel, political and military affairs, biographies of prominent individuals, encyclopedias, and children’s books. The house has an imprint called Proza for quality original and translated fiction, philosophy, psychology, etc.

PUERTO RICO, island in the Caribbean 1,000 miles southeast of Miami. In 2005 there were 1,500–2,000 Jews in Puerto Rico among its population of 4,000,000. The Jewish experience in America begins with the actual “Discovery” in 1492. The first Jews to come to Puerto Rico were mainly Spanish and Portuguese. The existing Jewish community consists mainly of immigrants who had arrived in the United States during the post-World War II years and Cuban families who settled there in the 1960s and 1970s.

In the 19th century several records were located in the form of anecdotes in personal letters mentioning Jews of the 19th century. Sources dating back to 1898 confirm that there were a number of American Jews residing in Southern Puerto Rico at the time. A census conducted for that year includes the names of Jacob Benjamin and Samuel Levi as the Ponce residents.

Jews then arrived in Puerto Rico most often in conjunction with war. Among the soldiers who took part in the Spanish American War, there were several Jews.

Between 1899 and 1905, Rabbi Adolph Spiegel tried to organize the first Jewish congregation in the island. There was a slight increase in Jewish immigration when, as a result of the Spanish American War, Puerto Rico became a territory of the United States. During this period and before World War I, several Jewish men were involved in the drafting of the Island’s first legal and fiscal codes. They aided in the creation of the court system and recruitment for it. Their contributions were crucial in the forming of the island’s infrastructure.

World War I added to the presence of Jewish soldiers in the military bases. But at the end of the war the Jewish population once again decreased. Still, several government workers remained along with a pioneering group of businessmen who saw the island as a fertile ground for building their home and future.

Among the most prominent of the Island’s Jews was Louis Sulzabacher, president of the Supreme Court of Puerto Rico and a strong supporter of United States citizenship for the Puerto Rican people.

The end of the 1920s and early 1930s brought a new surge of Jews from Central and Eastern Europe suddenly excluded from the United States by quotas. Other Jews continued to arrive on the Island; many represented American companies such as the Consolidated Tobacco Company. The 1930 generation consisted of men and women with a desire to make Puerto Rico their permanent home. They organized the first Jewish Community Center and the first synagogue in San Juan.

By 1940, there were only 150 Jews living in Puerto Rico. World War II brought a large number of soldiers to Puerto Rico and they included some Jews. About 400 Jewish soldiers were living in military bases in Puerto Rico at the time. The Jewish Welfare Board coordinated the rental of various meet-

ing halls around San Juan in order to provide the soldiers with the opportunity to celebrate Sabbath services. They held the first Passover Seder in 1942.

The beginning of the 1950s was marked by the creation of Operation Bootstrap, an initiative by the local government based on the concept of “industrialization by invitation.” The program indirectly encouraged the arrival of more Jews to the island. They were attracted by a series of incentives offered to American manufacturing companies. Jews were among the architects of the economic development of the Island and also prominent in the legal and medical professions. Cecil Snider was named by President Roosevelt associate justice of the Supreme Court of Puerto Rico. Eleven years later he was named by Governor Luis Muñoz Marín chief justice of the Supreme Court.

The emergence of the Cuban communist regime in 1958, headed by Fidel Castro, produced the third migration of Jews to Puerto Rico. Thousands of families abandoned the island of Cuba. Many of them wanted to move to the United States eventually, while others sought a social and cultural environment similar to that of Cuba.

Upon their arrival in Puerto Rico, most of these Jewish families joined the Jewish Community Center. At the time, the center embraced 200 families and the Hebrew school had 125 registered students. The inclusion of Cuban families gave the Jewish Community Center a new Hispanic outlook. These Orthodox families exerted a significant influence in the development of the Shaare Zedek Synagogue and the Hebrew school. They came to stay in Puerto Rico.

In the 1970s and the 1980s a new Jewish migration arrived in Puerto Rico. Close to 200 Israeli farmers came to the Island as part of an agricultural program developed by companies such as April-Agro, Isprac, HDC, and Fruits International. This project utilized 2,500 acres in the Santa Isabel region. A new revolutionary irrigation system was introduced by a group of agronomists from Israel. In the 1960s a new group of Argentinean Jews began to arrive in Puerto Rico.

Synagogues in San Juan

The first attempt to establish a Jewish congregation in Puerto Rico proved unsuccessful. The second effort in 1935 gathered some 26 families. They would meet in private homes and commercial spaces, such as the offices above La Esquina Famosa store in Santurce, the San Juan Casino, and El San Juan Hotel.

In 2005 there were three synagogues in San Juan, representing the three ideologies within Judaism: Orthodox, Conservative, and Reform Judaism.

In 1953 the Jewish Community acquired a private residence and transformed it into a synagogue and site of the first congregation. Nowadays, the Shaare Zedek Temple is the largest synagogue in the Island. The first religious school was started in 1952.

The Shaare Zedek Temple, founded in 1953, became the first Conservative synagogue. Its name means “Gates of Jus-

tice,” and was taken from a synagogue that was destroyed in Leipzig, Germany. It is headed by Rabbi Gabriel Isaías Frydman, originally from Argentina. The Jewish Community Center also operates as a Hebrew and Judaic studies school as well as a pre-school center and meeting facility. It houses the Morris Rothenberg Library, the most complete Judaic library in the Caribbean. The center currently has 255 members.

The second Jewish organization established in Puerto Rico is Temple Beth Shalom, the Reform Jewish Congregation of Puerto Rico, which was established in 1967. The synagogue has among its Torahs one that had been rescued from the Holocaust. For most of its congregational life, Temple Beth Shalom has relied on retired rabbis from the mainland who have served for all or part of the period from Rosh Hashanah to Shavuot. Currently a series of distinguished rabbis serve for six weeks at a time. The congregation owns a beautiful building on the corner of Loiza and San Jorge Streets in the Condado section of San Juan. Many of its members are “snowbirds,” who spend their winters in Puerto Rico. There are, however, enough all year around attendees to hold services every Friday evening and Saturday morning, maintain a flourishing Religious School and provide a very active Adult Education Program. Tourists and other visitors are always made to feel very welcome.

The third synagogue, Sharei Torah, was founded in 1999; it is one of the Chabad Lubavitch synagogues and educational centers around the world. During its early period, the group would rent meeting rooms in the Marriott Resort to conduct prayers and activities. The synagogue was officially inaugurated on February 2, 2000. A few years later a larger property was purchased in Isla Verde, making it more accessible for Jewish tourists and communities from nearby Caribbean islands.

The Chabad Lubavitch Center and its synagogue Sharei Torah operate under the direction of Rabbi Mendel Zarchi and his wife Rachel Zarchi. Chabad Lubavitch of Puerto Rico features a school to educate children and adults. It also offers religious services and coordinates community activities such as visits to hospitals, activities related to Jewish festivities, assistance in the immersion rituals of *mikveh*, lectures and provision of kosher food products. The Center is to expand to accommodate the first and only *mikveh* in Puerto Rico.

[Museum of San Juan Staff (2nd ed.)]

PUGLIESE, EMANUELE (1874–1967), Italian soldier. His military career began when he took part in the Italo-Turkish war (1911–12). With the entry of Italy into World War I, Pugliese rose rapidly. In 1917, he took part in the battle of Vittorio Veneto. At the end of the war, he became a divisional commander and as such he fought in the war in Albania in 1920. In 1931, he was appointed military commander of Sardinia and in 1934 reached the rank of lieutenant general and corps commander. Pugliese received the highest military decoration of his own country and many foreign honors.

[Mordechai Kamrat]

PUGLIESE, UMBERTO (1880–1961), Italian-Jewish patriot and scientist, a genius in the field of naval architecture. Pugliese was born in Alessandria, Piedmont, and joined the Italian navy in 1898, later being transferred to the naval corps of engineering. After various positions both in the royal arsenal and aboard ship he served for ten years on the committee for naval projects, and was appointed general inspector of the Naval Corps of Engineers. Pugliese planned and was responsible for the construction of most of the great Italian battleships (“Garibaldi,” “Vittorio Veneto,” “Roma,” “Impero,” “Littorio,” and others). His most remarkable invention was a device known as the Pugliese Water-Line capable of enabling bombed battleships to float and, in many instances, to resume service.

On December 31, 1938, while his battleships were still in the dockyards, Pugliese was dismissed from the navy because of his Jewish origin, in compliance with the new racial laws. He nevertheless remained in Italy and, when the British bombed the Italian Navy out of service in November 1940, the chief of staff, Admiral Cavagnari, did not hesitate to appeal to Pugliese for his assistance in refloating the battleships. Pugliese fulfilled the mission and, when asked what reward he demanded for his services in saving the Italian Navy, he requested the honor to don his naval uniform again. His request was partially granted in 1942.

In 1943, he was arrested and questioned by the Germans, who had hoped to use his valuable knowledge in Germany, but Pugliese was adamant in his refusal, declaring that he was, and would stay faithful to, the oath he had given to the monarchy. When the Germans occupied Rome in 1943, they sent the Jewish Admiral Augusto *Capon to Auschwitz, where he was gassed despite the fact that he had a personal letter from Mussolini, but Pugliese was spared. When he died in Sorrento in 1961, Pugliese was buried with full military honors.

[E.L. Touriel]

PUKHACHEWSKY, MICHAEL ZALMAN (1863–1947), pioneer of Jewish agriculture in Erez Israel. He was born in Brest-Litovsk in 1885. Pukhachewsky was one of six young men chosen by Hovevei Zion in Russia (at Baron Edmond de *Rothschild's suggestion) to specialize in agriculture in the Baron's settlements and become agricultural instructors for settlers. He established a farm in Rishon le-Zion and worked for many years as an agricultural instructor, specializing in viticulture in the Jordan Valley, the Jezreel Valley, and other areas. He published articles in Palestinian agricultural journals and wrote his memoirs on the early days of Jewish settlement (*Bustanai*, 1 (1929/30), nos. 6–44). His wife, NEHAMAH (1869–1934), was a writer active in the public life of Palestine. She joined Hovevei Zion at the age of 17 and went to Erez Israel together with her husband. She wrote essays under the pen name Nefesh.

[Yehuda Slutsky]

PUKHOVITSER, JUDAH LEIB (c. 1630–after 1700), rabbi, scholar, and preacher in Lithuania, Poland, and Germany. His father had settled in Pinsk by the end of the 1620s. Judah Leib studied under Naphtali b. Isaac Katz, the rabbi of Pinsk (1639–44). His surname appears to have been derived from the townlet of Pukhovichi, near Minsk. In 1659, when he was rabbi of *Bykhov, he was an eyewitness to the conquest of the town by Muscovite soldiers, who massacred the Jews and killed one of his daughters. After 1667 Pukhovitser returned to his native Pinsk where he acted as rabbi and preacher. From time to time he left Pinsk, preaching in the communities of Pinsk province and the large communities of Lithuania and Poland. In 1681–82 he stayed in Frankfurt on the Oder, where he published his homiletic works in two parts, *Keneh Hokhmah* and *Derekh Hokhmah*. His work *Divrei Hakhamim* (in two parts) on Shulhan Arukh was published in Hamburg (1692–93), and *Kevod Hakhamim* in Venice (1699–1700). Leaving Venice, he went to Jerusalem, where he died after 1700.

Pukhovitser lived during a period which saw tremendous changes in the lives of the Jews of Poland and Lithuania as a result of the massacres of 1648–49 and 1666–67. One of the fundamentals of his homiletic teaching is that the study of the Torah for its own sake must lead to good deeds and repentance. In his sermons, he urged that *battei midrash* in which Torah would be permanently studied should be maintained and every Jew obliged to fix regular times for Torah study; he thus gave a great impetus to the formation of study groups in Lithuania. Criticizing the prevailing methods of study in the *hadarim* and yeshivot, he called for a gradual progression from easier subjects to more difficult ones. He also attacked the situation which prevented the poor from studying in the yeshivot and demanded that several well-established members of the community provide for the upkeep of a Torah student. At the same time he condemned the method of study based on *pilpul*. Pukhovitser's works are imbued with kabbalistic motifs, containing many Lurianic elements. In a letter to the scholars of Jerusalem (Hamburg, 1692), he developed the idea that the future redemption of Israel would be effected by the community of Jerusalem when it had reached the degree of *kenishta hada* (“a unified community”).

[Mordekhai Nadav]

PULAWY (Pol. **Pulawy**; Yid. **Pilev**; Rus. **Novaya Aleksandriya**), a town in Lublin province, Poland. The first Jews to settle in Pulawy came from the neighboring townlets (mostly Wlostowice) at the beginning of the 19th century when the area developed rapidly upon the initiative of its owner, Prince A.K. *Czartoryski. There was an organized Jewish community in Pulawy from 1820. In 1897 it numbered 3,883 (about 73% of the

population). The principal Jewish occupations were shoemaking, gardening, furniture-making and shopkeeping. From the middle of the 19th century, the influence of Ḥasidism became widespread among the Jews of Pulawy; they were attached to the ḥasidic courts of *Lublin and *Kotsk and later to those of Gut (*Gora Kolwariya) and *Sokolow. From 1875 to 1884 the rabbinical seat of Pulawy was held by Elijah Lerman, the author of *Devar Eliyahu* (1884). In 1888, Ḥayyim Israel Morgenshtern, the grandson of Menahem Mendel of *Kotsk, founded a ḥasidic court in Pulawy. At the close of the 19th century, enterprises established by Jewish initiative included iron industries, machinery and shoe manufacture. Jewish workers found employment in them and organized themselves into trade unions. From 1875 Jewish students studied at the Higher Institute of Agriculture of Pulawy; many of the students participated in revolutionary social democratic activities. From 1907 a Jewish cooperative bank functioned in Pulawy with much success. In 1910 there were 6,111 Jews (61% of the population). During World War I, the Jewish population of the town decreased because of persecutions and a fire. From 1917 branches of all parties then active on the Jewish scene were organized in Pulawy. At first, the *Bund and *Agudat Israel wielded the greatest influence, but *Po'alei Zion circles, other Zionist parties, and communists soon grew strong. Jewish craftsmen and merchants established unions in 1920. In 1921 there were 3,221 Jews (45% of the population) living in the town. Between the two world wars there was a private Hebrew secondary school, as well as *Tarbut, Yavneh and Beth Jacob schools, and a Jewish library.

[Arthur Cygielman]

Holocaust Period

At the outbreak of World War II there were 3,600 Jews in the town. At the end of October 1939, an open ghetto was established. On Dec. 29, 1939, the entire Jewish population was expelled to the nearby town of Opole Lubelskie, where all were in turn deported to the *Sobibor death camp in May 1942 and exterminated. No Jewish community was reconstituted in Pulawy.

PULCELINA OF BLOIS, 12th-century female moneylender to the court of Blois. Pulcelina (also Pucellina) was implicated in the first ritual murder accusation in France and was burnt at the stake along with her two daughters and 30 other co-religionists in 1171. These events are documented in a variety of Hebrew sources, including five surviving letters, a chronicle, two memorial lists, and eight poems; this literary productivity indicates the degree to which this tragedy shocked the Jews of Ashkenaz. In his account in *Sefer Zekhirah* ("Book of Remembrance"), the chronicler and liturgical poet Ephraim ben Jacob

of Bonn (1132–c. 1200) used the verb *ohav* ("love") to describe the affection of Count Thibaut of Blois (1152–1191) for Pulcelina; most historians have assumed that the two were involved in a romantic relationship. (See the translation in J. Marcus, ed., *The Jew in the Medieval World* (rep. 1990), pp. 127–30.) This theory has been challenged by S. Einbinder (1998), who suggests that *ohav* in this instance implies that the count "favored" Pulcelina as a lender and perhaps as a trusted financial advisor. Einbinder believes that Thibaut's wife, Countess Alix, who is described as hating Pulcelina and swaying the count against her, was motivated not by sexual jealousy but because she herself, and others close to her, owed significant sums to Pulcelina and resented her influence over the Count. The surviving documents make it clear that Pulcelina behaved arrogantly and was widely disliked by members of Thibaut's court. That a ritual murder accusation could be brought against Pulcelina, and Blois Jewry, when there was no corpse and no missing child, also indicates the level of animosity her position of power had generated. Ephraim wrote that once she was arrested she was prevented from speaking with the count for fear that she might convince him to change his mind and release the Jews. Although Jews from other communities attempted to ransom the prisoners, they were unable to offer sufficient funds to prevent their martyrdom. While in many ways this catastrophe represents a cautionary instance of the fall of a court Jew, with tragic consequences for the larger community, Pulcelina's gender and the possibility that she had an intimate relationship with Count Thibaut give the story added dimensions as an extreme example of the independence and entrepreneurship of Jewish women in Askenaz in the 11th and 12th centuries. The tragedy was the subject of a Hebrew drama by S.D. *Goitein, *Pulzelinah* (1927).

[Judith R. Baskin (2nd ed.)]

PULITZER, JOSEPH (1847–1911), American editor and publisher who bought declining newspapers and restored them to national influence. Born in Mako, Hungary, son of a Jewish father and a Roman Catholic mother, Pulitzer emigrated to the U.S. at the age of 17 to serve in the Union Army during the Civil War. Discharged from the cavalry in 1865, he went to St. Louis and in 1868 became a reporter for the German-language daily *Westliche Post*. Three years later he bought an interest in the paper, became managing editor, and sold back his shares at a vast profit. In 1878 Pulitzer took his first big step toward creating a newspaper empire when he bought the St. Louis *Dispatch* at an auction for \$2,500 and merged it with the St. Louis *Post* into the *Post-Dispatch*. By 1881 it was yielding profits of \$85,000 a year. He left for New York in 1883 and bought *The World* from Jay Gould, the financier, for \$346,000.

Three years later, revived by Pulitzer's innovations in mass appeal journalism, *The World* was earning more than \$500,000 a year. He established a sister paper in New York, the *Evening World*, in 1887. All three newspapers succeeded on a formula of vigorous promotion, sensationalism, sympathy with labor and the underdog, and innovations in illustration and typography. In 1869 Pulitzer served in the lower house of the Missouri legislature, and in 1885 was elected to the U.S. House of Representatives from New York, but served only briefly. A man of intellect and energy, he worked himself into a condition which compelled him to live his last years as a totally blind invalid. However, he still directed his newspapers. He endowed the Pulitzer School of Journalism at Columbia University and the famous Pulitzer Prizes for journalism. His son, JOSEPH JR. (1885–1955), continued the policies of his father with success as the publisher of the St. Louis *Post-Dispatch*, but under his other two sons, Ralph (1879–1959) and Herbert (1897–1957) the two New York papers declined and were sold in 1931 to Scripps-Howard.

[Irving Rosenthal]

PULKAU, small town in Lower Austria; it became notorious in the 14th century as the scene of a *Host desecration libel, which was followed by a wave of massacres of the Jews. A bleeding Host was allegedly found concealed in front of a Jew's house on Easter Sunday, April 12, 1338, the day following the last day of Passover. Rumors spread that the Host had performed miracles; crowds came to venerate it, and on April 23 they burned the Jews at the stake and plundered their property. The disorders spread, and Jews were massacred in 27 localities as far away as *Jindrichuv Hradec (Neuhaus) in Bohemia, *Trebitz (Trebitsch) in Moravia, and St. Poelten. Duke *Albert II expressed his doubts about the accusation and asked Pope Benedict XII for an investigation. The pope ordered the bishop of Passau to conduct an inquiry, but its results are unknown. A church called Zum Heiligen Blut ("The Holy Blood") was built on the site; decorated with representations of the alleged occurrence, it attracted many worshipers throughout the years. The pictures were later painted over. The site where the Jews were burned is well marked. At the time of the massacres, Jewish books were confiscated; possibly some of the parchment manuscripts confiscated in 1338 were utilized for binding city records in 1622 and 1623.

PULTUSK (Pol. **Pułtusk**), town in Warszawa province, Poland. Although there were some Jews in Pultusk in 1486 a settlement as such did not develop because of the privilege *de non tolerandis Judaeis* granted to the Masovia region during the 16th century by the Polish king, Sigismund II Augustus. Even temporary residence for Jews was authorized only

by special permit. The prohibition was temporarily abrogated after the Grand Duchy of Warsaw was created in 1807 but renewed with the establishment of the Polish kingdom in 1815, according to the decision of the Congress of Vienna. The decree was finally abolished in 1866. During the 19th century the Jewish population increased; there were 118 Jews in 1810 (5.1% of the total population), 4,769 in 1856, and 6,950 (45.7%) in 1909. During World War I many Jews fled to Warsaw, so that by 1921 the number had decreased to 5,919 (about 46% of the total population). In independent Poland the Jewish population rose again and by 1931 there were 8,300 Jews (49.2% of the total) in the town.

Despite its proximity to Warsaw, Pultusk did not develop as a center of commerce and crafts mainly because it was removed from railway junctions. Nevertheless, a considerable number of Jews were craftsmen, particularly tailors. Because of the surrounding forests, there were a number of sawmills so that carpentry as well as trade in wood and furniture developed. However, economic difficulties led many Jews to emigrate. In 1894 many wealthy Jews left when a cholera epidemic broke out. During the 19th century the community supported various activities, the most important of which was social relief to the needy. Between the two world wars a Jewish educational program was developed. It attracted most of the community's elementary and secondary school students. Jews were represented in the municipal administration; about one-half of the delegates elected in 1922 and 1927 were Jews. The leadership of the Jewish community itself was elected democratically for the first time in 1927. The oldest synagogue was erected between 1805 and 1815. It burnt down and was rebuilt in 1854. Of the rabbis of Pultusk, the most renowned were R. Joshua *Trunk (from 1853 to 1861), R. Ḥanokh Zundel b. Jacob Grodzinski, who belonged to the **Mitnaggedim* (appointed in 1878), and R. Ḥayyim Meshullam ha-Kohen (1909–1929), known for his Zionist tendencies. The last rabbi of Pultusk was R. Israel Ber Lowenthal, who immigrated to Palestine at the outbreak of World War II and died there in 1942.

[Shimshon Leib Kirshenboim]

Holocaust Period

The city was captured by the Germans on Sept. 7, 1939, and by September 11, 14 Jews had been shot. During the holiday of Sukkot 1939, the Germans deported all the Jews to the other side of the Narev River, in the Soviet zone of occupation. All Jewish property was looted, and on the way to the border Jews were maltreated and many were killed. Many of the deportees found temporary shelter in Bialystok and surrounding cities under the Soviet administration, where they were subjected to administrative restrictions and met with difficulties in finding housing and work. In the summer of 1940 many were deported to the Soviet interior.

PULVERMACHER, OSCAR (1883–1958), British editor. Pulvermacher's father came to England from East Prussia. Oscar Pulvermacher was born in London and started work with the

London *Daily Mail* at the age of 17, rising to be editor in 1929. Pulvermacher apparently remained editor for only one year, although he continued to be employed by the *Daily Mail* in a period when the paper achieved what was then the highest circulation in the world. In 1933 he disagreed with the sympathetic policy toward Hitler of the paper's owner Lord Rothermere and resigned. A month later he was engaged by the *Daily Telegraph* to reorganize its news services and during World War II was its northern editor in Manchester.

[William D. Rubinstein (2nd ed.)]

PULZER, PETER G.J. (1929–), British political historian. Born in Vienna, Pulzer was a lecturer in politics at Oxford University from 1952 and, in 1985–91 was Gladstone Professor of Government and Administration at Oxford and a fellow of All Souls College. Pulzer's best-known work, *The Rise of Political Antisemitism in Germany and Austria* (1964), was a pioneering study of the emergence of modern political hostility towards the Jews in German-speaking Central Europe. He wrote widely on German and German-Jewish history, in such works as *Jews and the German State* (1992) and *Emancipation and Its Discontents: The German-Jewish Dilemma* (1997). A *Festschrift* in his honor, edited by Henning Tewest and Jonathan Wright, *Liberalism, Anti-Semitism, and Democracy* (2001), includes a biography.

[William D. Rubinstein (2nd ed.)]

PUMBEDITA, town in Babylonia. Pumbedita was situated on the bank of the River Euphrates on the site of the Shunya-Shumvata (Git. 60b), the most northerly of the canals joining the Euphrates and the Tigris. A canal called Nehar Papa also passed through Pumbedita itself (Yoma 77b), and situated near it was the town of Peruz-Shavur. The area had an exceptionally abundant water supply and a pleasant climate, and commerce flourished there, the caravan route to Syria passing nearby. Crops included cereals and fruits, dates being especially plentiful (Pes. 88a), and the flax grown there (Git. 27a; BM 18b) was the basis of the local textile industry. The Jewish settlement in Pumbedita apparently already existed during the period of the Second Temple and was included by Sherira Gaon among those settlements which were centers of the study of Torah during that period (*Iggeret Ray Sherira Gaon*, ed. by B.M. Levin (1921), 40). However, its importance as a communal and religious center dates only from the middle of the third century C.E. In 259, after Nehardea was destroyed by Papa b. Naser (see *Odenathus and Zenobia), commander in chief of Palmyra, Judah b. Ezekiel founded an academy there. This academy and its *bet din* were the central religious authority for Babylonian Jewry until the middle of the fourth century C.E. During that period some of the best known **amoraim* of Babylonian Jewry headed the academy – Rabbah b. Nahamani, Joseph, Abbaye, and Rava. During the time of Rava the academy was transferred to Maḥoza, where Rava resided. During this period, when the academy began to flourish, exceptionally strong ties were established between it and its sis-

ter academy at Tiberias through the medium of the **nehutei*. The aforementioned heads of the academy, with the exception of Joseph, were distinguished for their teaching methods which were marked by acumen and even casuistry (Hor. 14a; BM 38b). As a result of this intellectual acumen, which in their opinion was an efficient method to discuss *halakhah* and arrive at correct decisions, they came to be called “uprooters of mountains,” and it was said of them that “they could draw an elephant through the eye of a needle” (BM 38b).

From the death of Rava in 352 until the first half of the geonic period, the Pumbedita academy did not occupy a central place in the scholastic and halakhic world. It was subordinate to *Sura, which was granted more privileges than Pumbedita. Life in a large, bustling, commercial city full of connections with foreign merchants had a deleterious influence on the character of the Jews of Pumbedita. The Babylonian Talmud has preserved many adverse evaluations of their moral character. Mention is made of the cheating by workers (BB 46a; Hul. 127a), and Rava refers to the thieves who would come to the city, as well as the resident thieves (Av. Zar. 70a). In fact, the dishonest practices of the people of Pumbedita became a byword among the Jews of Babylon (Ket. 82a), and it is therefore not surprising that scholars were not popular among them, since the scholars rebuked them for their deeds (Shab. 153a). One scholar advised his son not to dwell in affluent Pumbedita (Hor. 12a).

[Moshe Beer]

During the Post-Talmudic Period

Sherira Gaon related that as the result of religious persecution under Persian rule, the Pumbedita academy was transferred to Peruz-Shavur, in the vicinity of Nehardea. It remained there during the period of the **savoraim*; when the Arabs conquered Babylonia (c. 634 C.E.), it returned to Pumbedita. R. Isaac, the *Gaon* of Pumbedita, who lived in Peruz-Shavur, went out to welcome the conquering caliph 'Alī ibn Abī Ṭāleb. During the Arab period Pumbedita was known as Anbar, and the academy was called *yeshivah shel ha-golah* (“academy of the Diaspora”). Until the beginning of the ninth century Pumbedita was overshadowed by *Sura. During the 830s the *hakhamim* of the Pumbedita academy backed the candidacy of David b. Judah as exilarch against Daniel, who had the support of the *hakhamim* of Sura. The former's election as exilarch also resulted in the consolidation of the Pumbedita academy. From his time the Jews gathered in Pumbedita on the occasion of the *Shabbeta de-Rigla* (*Iggeret R. Sherira*, p. 93). In an extant letter of his son, the exilarch Judah, he seeks contributions for the academy, which is described “as having many **allufim*, *hakhamim*, elders, Mishnah scholars, Talmud scholars, and *tannaim*: there are seven *allufim* ...” (Abramson, Merkazim, 18).

An important head of the academy in this period was *Paltai b. Abbaye (842–52), the first to be styled *Gaon* of Pumbedita, who maintained contacts with the communities of Spain and North Africa. From Spain, they turned to him “to write the Talmud and its interpretation down for them,

and upon his order it was written for them” (Sherira Gaon, *Iggeret*..., ed. by M.N. Adler (1907), xxiii (2nd Roman pagination)). During his son *Zemaḥ’s (872) lifetime these ties were strengthened and the status of the academy surpassed that of Sura. In the *Kaddish* the name of Zemaḥ b. Paltoi was mentioned before that of the *gaon* of Sura, *Zemaḥ b. Hayyim.

During the days of the *Gaon* Hai b. *David (890–98), who had previously been a *dayyan*, the academy was transferred to Baghdad. In the first half of the tenth century contributions to the academy decreased – the centers of the Diaspora established their own Torah institutions and their attachment to the Babylonian center was thus weakened. The contest for the *gaonate* between R. Aaron Sargado and R. *Nehemiah b. Kohen Zedek from the 940s to 960s and the dispute between the latter and R. Sherira were also responsible for the decline in the status of the academy. The situation changed under Sherira *Gaon, a powerful personality, who renewed the contacts with the communities of North Africa and called upon them to support his academy. The period of office of Sherira Gaon (968–98) and that of his son *Hai Gaon (998–1038) was the period of Pumbedita’s efflorescence. The greatest number of extant responsa to the Diaspora, especially to the communities of North Africa (e.g., Kairouan, Fez, etc.), was written by these two *geonim*. Students came from abroad to study with R. Hai and later went on to hold important positions. These included *Shemariah b. Elhanan of Egypt, who was “the first in the ‘great’ [first] row of the three rows of the academy”; Mazliaḥ b. Albazak of Sicily; the *gaon* Solomon b. Judah’s son from Palestine; and students from Byzantium and Italy. After R. Hai’s death the exilarch *Hezekiah b. David headed the Pumbedita academy for 20 years (until 1058).

According to sources found in the Cairo *Genizah*, the *divan* of Eleazar b. Jacob ha-Bavli, and Arab sources, it appears that the Baghdad academy continued in existence until the 13th century. The names of nine *geonim* who lived during the 12th and 13th centuries and considered themselves the heirs of the Pumbedita academy are known. The last *Gaon* was Samuel b. Daniel ha-Kohen (1288). According to Benjamin of Tudela, who visited Babylonia in the 1170s, there were about 3,000 Jews in Pumbedita. Even though this number seems to be exaggerated, it appears that an important community still existed there.

PUNISHMENT. While there is no modern theory of punishment that cannot, in some form or other, be traced back to biblical concepts, the original and foremost purpose of punishment in biblical law was the appeasement of God. God abhors the criminal ways of other nations (Lev. 20:23) whose practices the Israelites must not follow (*ibid.*) and from whose abominations they must not learn (Deut. 20:18); by violating His laws, His name is profaned (Lev. 22:31–32); and not only are criminals abhorrent to God (Deut. 18:12; 22:5; 25:16; 27:15), as well as crimes (Lev. 18:27–29), but God’s own holiness obliges man to be holy like Him (Lev. 19:2). By taking “impassioned action” (Num. 25:13) to punish violators of His laws, expiation is made to God and God’s “fierce anger” (Deut. 13:18) turned away from Israel (Num. 25:4). Closely related to the appeasement of God is another expiatory purpose of punishment: a crime, and more particularly the shedding of blood, pollutes the land – “and no expiation can be made for the land for the blood that is shed therein but by the blood of him that shed it” (Num. 35: 33). Excrement must be covered because the land being holy demands that “thy camp be holy,...” (Deut. 23:15), so that God would “see no unseemly thing” occurring there (*ibid.*).

Still another aspect is reflected in the talionic punishment of death for *homicide, as originally formulated: “Whoso sheddeth man’s blood, by man shall his blood be shed; for in the image of God made He man” (Gen. 9:6). Man being created in the image of God, it is an affront to God to kill him and killing the killer is the only acceptable expiation to God. Similarly, purging Israel of the blood of the innocent (Deut. 19:13) by killing the killer appears to be necessary in order to avoid blood guilt attaching to the land and to the people forever (cf. Deut. 21:9; 19:10); and it is for this reason that a murderer must be taken even from God’s very altar to be put to death (Ex. 21:14).

All talionic punishment as such reflects its underlying purpose, namely the apparent restitution of the *status quo ante* by inflicting on the offender the injury inflicted by him (Lev. 24:20) and by doing to him what he had done to another (Lev. 24:19). This sort of sanction (see *Talion), where the character and measure of punishment is precisely commensurate with those of the crime, is intended to represent exact justice. It was, indeed, by proving that this kind of “exact justice” necessarily involved unavoidable injustice, that some talmudical jurists justified the abolition of talionic punishment except for murder (BK 84a). And while they did not abolish it for murder, whether by reason of the many express biblical injunctions that murderers must be killed (especially Num. 35:31), or in order to retain the deterrent effect of the death penalty, many

of them held that judges must do everything in their power to avoid passing death sentences (cf. Mak. 1:10), e.g., by rigorously cross-examining the witnesses long enough to have them contradict themselves or each other in some particular (Mak. 7a) and thus render their evidence unreliable (see *Evidence, *Witness). The warning was already sounded then that any reticence in imposing capital punishment would result in an increase of crime and bloodshed (Mak. 1:10). Maimonides comments on the talmudical discussion, that while it was true that the courts must always satisfy themselves that the incriminating evidence was credible and admissible, once they were so satisfied, they ought to order the execution even of a thousand men, day after day, if that is what the law (the Torah) prescribes (his commentary to the Mishnah, Mak. 1:10).

The most common purpose of punishment, as found in the Bible, is “to put away the evil from the midst of thee” (Deut. 17:7, 12; 19:19; 21:21; 22:24; 24:7). While such “putting away” is applied in the Bible to capital punishment only (which indeed constitutes the only effective total elimination), the principle underlying the elimination of evil, as distinguished from that of the evildoer (cf. Ps. 104:35 and Ber. 10a), provides a theory of punishment of universal validity and applicable to all criminal sanctions. It means that the act of punishment is not so much directed against the individual offender – who is, however, unavoidably its victim – as it is a demonstration of resentment and disapproval of that particular mode of conduct. By branding that conduct as worthy of, and necessitating, judicial punishment, it is outlawed and ostracized. Similarly, punishment is inflicted on the offender not so much for his own sake as for the deterrence of others: that all people should hear and be afraid (Deut. 17:13 – rebellious elder; 19:20 – perjury; 21:21 – rebellious son). From the point of view of criminal law enforcement policies, the deterrent aspect of punishment in Jewish law is already the most important of all: people who hear and see a man heavily punished for his offense are supposed to be deterred from committing the offense and incurring the risk of such punishment (they “will do no more presumptuously” – Deut. 19:20). Hence the particular injunction to have the offender impaled on a stake after having been put to death (Deut. 21:22), so as to publicize the execution as widely and impressively as possible; but note that the corpse must be taken off the gibbet before nightfall, “for he that is hanged is a reproach to God” and defiles the land (Deut. 21:23) – and no concession made to policies of law enforcement can derogate from the affront to God involved in killing and impaling a human being.

It is not only the principle known in modern criminology as “general prevention,” the deterrence of the general public, but also that of “special prevention,” the prevention of the individual offender from committing further crimes, that is reflected in Jewish law. It has been said that the imposition of capital punishment on such offenders as the rebellious son (Deut. 21:18–21), the rebellious elder (Deut. 17:12), the abductor (Ex. 21:16), and the burglar (Ex. 22:1) is justified on

the ground that these are all potential murderers (cf. Maim., Guide 3:41); and rather than let them take innocent human lives, they should themselves be eliminated. That the deterrent effect of punishment on the offender himself was a consideration which weighed heavily with the talmudical jurists is illustrated also by the rule that where punishment had proved to have had no beneficial deterrent effect on the offender and he has committed the same or some similar offenses over and over again, he would be liable to be imprisoned and “fed on barley until his belly bursts” (Sanh. 9:5).

The talmudical law reformers also achieved the substitution for the ever-threatening divine punishment by the judicial punishment of *flogging, making it clear that whoever underwent judicial punishment would not be visited with any further *divine punishment (Mak. 3:15). They went so far as to lay down that even though God had Himself expressly proclaimed that a criminal would not be “guiltless” and escape divine wrath (Ex. 20:7; Deut. 5:11), the judicial authorities in imposing the flogging were authorized by the Torah itself to clear him: if God would never clear him, a court of justice could (Shevu. 21a). The measure of punishment must always conform to the gravity of the offense on the one hand, and the blameworthiness of the individual offender on the other: “according to the measure of his wickedness” (Deut. 25:2). Even here the talmudical law reformers found cause for some mitigatory improvement: they interpreted “wickedness” as the yardstick for the measure of punishment, as including also the physical capacity of the offender to undergo and suffer punishment (cf. Maim., Comm. Mak. 3:10 and Yad, Sanhedrin 17:1). In several instances, the particular turpitude of the offense is expressly stressed as reason for heavy penalties (e.g., “because she hath wrought a wanton deed in Israel” – Deut. 22:21; “it is wickedness” – Lev. 20:14); and in post-talmudic times, the imposition of severe punishments (such as *capital punishment) was always justified by stressing the severity of the particular offense and the public danger of mischief thereby caused.

Maimonides laid down that the gravity and measure of punishment are to be determined, first, by the gravity of the offense: the greater the mischief caused, the heavier must be the penalty; second, by the frequency of the offense: the more widespread and epidemic the offense, the heavier must the penalty be; third, the temptation prompting the offense: the more easily a man is tempted to commit it, and the more difficult it is for him to resist the temptation, the heavier must the penalty be; and fourth, the secrecy of the offense: the more difficult it is to detect the offense and catch the offender, the more necessary is it to deter potential offenders by heavy penalties (Maim., Guide 3:41).

[Haim Hermann Cohn]

In the Framework of Jewish Autonomy

Within the framework of the Jewish *autonomy structure, a great variety of penalties could be imposed on wrongdoers, including *fines, *imprisonment, *herem, and – extremely rarely – capital punishment, according to judgment passed by

a *bet din* under the ordinances of the community or a *hevrah*. New and previously unknown penalties were resorted to in the Middle Ages, sometimes for crimes not provided for in talmudic law. This development was especially evident in Muslim and Christian Spain. Capital punishment was openly imposed in Spain with the sanction of the state authorities, and somewhat clandestinely in other countries on rare occasions; the death penalty was reserved mainly for *informers, and it was imposed with the aid and often the urging of the very authorities to whom the denunciation had been made. The manner of execution usually followed that obtaining in the host country, such as bloodletting from an arm, drowning, strangulation, or stoning. Some of the talmudic rules of evidence were waived. In 1380 the Jews of Castile were denied the right of capital punishment. Other bodily penalties – again mainly in Spain – were amputation and mutilation of limbs (mainly for sexual offenses), cutting off the nose and ears, cutting out the tongue (in the case of informers), gouging out the eyes, shaving of head and beard, and stripes. Flogging was most common, particularly in lands like Germany where capital punishment was not resorted to. There were two kinds of lashes: the biblical statutory 39 stripes and the discretionary rabbinic penalty, which could be severe or very light, aimed at inflicting not pain but rather public shame. In Babylonia the person punished in this way had his hands and feet tied as he lay on a bench in the courtroom. More customary was the symbolic penance at the threshold of the synagogue between the afternoon and evening daily services. Shaving the head or beard, which was dreaded more than bodily mutilation, was reserved mainly for assault and battery, adultery, or fornication with a gentile maiden.

The most severe social penalty was the *herem*, with its associated “donkey’s burial,” interment by the fence of the cemetery, far from respectable graves. Another punishment was expulsion – most customary in Spain and Poland-Lithuania – from the town or even from the country for a stated period or permanently. Sometimes a man’s entire family was banished with him. This penalty was imposed on suspected murderers who had only one witness to testify against them, for assault and battery resulting in death, for wife-beating, fornication, stealing, and forgery. The *Mahamad community council of the Sephardi Jews of Hamburg expelled moral or business offenders for several years to Amsterdam or elsewhere. For card-playing and similar offenses German Jewry was accustomed to banish the recalcitrant from the local synagogue. A bankrupt was sometimes ordered to sit for three years behind the *almemar*. For libeling a friend, a woman was ordered to change her seat periodically in the women’s gallery of the synagogue. Various penalties involving loss of title or prestige were imposed. For insulting a fellow Jew the culprit would be denied the title of *morenu* or *haver* in Ashkenazi Jewry. The right to be called to the reading of the Torah was withdrawn in certain cases. Often an announcement would be made in all synagogues that for a stated offense a person could not be trusted as a witness or to take an oath.

Institutionally imposed punishment ran parallel to punishment self-inflicted by people who wanted to do penance for their sins. The *Ḥasidei Ashkenaz, in particular Eleazar b. Judah of Worms, developed a detailed and exacting system of penance, the *teshuvat ha-mishkal*. Throughout the Middle Ages and early modern times such offenders as mothers who smothered their infants in sleep, people who killed unwittingly, or persons who committed undetected sexual transgressions would ask the rabbi to impose on them strict penances, which included public confession and self-vilification. Denial of participation in and benefit from communal and religious services was considered a severe penalty. The sinner could also be deprived of certain citizenship rights, such as membership in the plenary assembly and the right to vote. Most damaging socially and economically – especially in Eastern Europe – was expulsion from a *hevrah* by the *kahal*, since expulsion from a guild could also mean the loss of livelihood. The *kahal* was especially strict with its own employees or other communal functionaries. A **badhan* (“jester”) would be forbidden to perform at weddings and musicians to solicit their customary holiday gifts. The *kahal* possessed much more serious weapons against persons who refused to cooperate: exorbitant taxes, frequent billeting of troops, and, in Russia during the *Cantonist troubles, drafting the son into military service. Fines and confiscation of property were very common.

With the weakening of Jewish autonomy in modern times these penalties became, in various stages in different countries, obsolete and inoperative.

[Isaac Levitats]

Forms of Punishment: Biblical Law; Extra-Legal Punishment; “The King’s Law”

Jewish criminal law as crystallized in talmudic literature, includes, inter alia, the following characteristics:

1. Before commission of an offense, the prospective offender *must have been admonished by two witnesses*, who explain to the prospective offender the specific offense he is about to commit, and the offender must answer them, stating that he is aware of the offense and that he is nevertheless deliberately committing the offense (Yad, Sanhedrin 1–2);
2. Strict evidentiary law, which prevents the admission of many forms of testimony and evidence (see *Witness; *Evidence). These two requirements made it very difficult to maintain a system of criminal judgment that could realistically deter criminal behavior. In order to cope with these difficulties, in both the societal and legal arenas, Jewish law recognizes two additional tracks of judgment and punishment. The first is that of “punishment not in accordance with Torah law” (*anishah shelo min ha-din*), which authorizes the court, in accordance with the exigencies of the times, to impose punishment, as well as to legislate enactments with regard to punishment, on a far broader scale than that prescribed by biblical law (for an extensive discussion regarding the implementation of this power by rabbinic courts throughout various periods of

history, see: *Capital Punishment). The second track is “the King’s Law” (*mishpat ha-melekh*), which was defined in great detail by Rabbi Nissim of Gerona (*Derashot ha-Ran*, no. 11). The “King’s Law” is a legal system that operates concurrently with biblical law, and that complements the law of the Torah by adjudicating and punishing those offenses or cases regarding which punishment cannot be imposed and enforced under strict biblical law. If such a parallel system did not exist, says Rabbenu Nissim, “the social order would collapse entirely, and murderers would proliferate without fear of punishment; therefore God, may He be blessed, commanded that Kings be appointed, so that public order might be maintained ... a king may judge a case without [prior] admonition, as he sees fit, for the benefit of the public” (*ibid.*).

These two tracks – punishment not prescribed by the Torah, and the King’s Law – are characterized by the fact that they grant considerable discretionary authority to the courts both in prescribing punishment in specific instances, and in legislating general enactments in criminal law. One important distinction between these two systems and the Torah’s penal system is that, when the law of the Torah prescribes a specific punishment for a particular transgression, the rabbinic court may not deviate from the prescribed punishment (Yad, Sanhedrin 14.1). In the extra-legal system of punishment and in the King’s Law, on the other hand, the judges are not limited by any such restriction. It follows, therefore, that these two legal systems enable the courts to adjudicate and punish even in those situations not punishable under biblical law, as well as to impose more lenient sentences than those prescribed by the Torah, in accordance with the specific circumstances.

Instructions to Judges in Imposing Sentence

Once this broad authority has been bestowed on the courts, the judges are instructed, with regard to each and every case presented to them, to carefully consider the appropriate punishment, and the degree to which it should be imposed. Maimonides affirms that rabbinical judges are indeed vested with the authority to impose punishment which deviates from the strict law of the Torah, and proceeds to summarize a judge’s obligations in exercising that authority:

All these matters are carried out in accordance with what the judge deems necessary in accordance with the exigencies of that time, and his acts should always be for the sake of heaven and he should not take a frivolous attitude to human dignity... This applies with even greater force to the dignity of the children of Abraham, Isaac, and Jacob, who adhere to the true Law. The judge must be careful not to do aught calculated to destroy their dignity, but his sole concern should be to enhance the glory of God... (Yad, Sanhedrin 24:10).

Similarly, Rashba warned judges that the law should be adjusted and imposed in a manner appropriate to the situation of the public. A judge needs to take into account the public’s ability to accept the punishments imposed on offenders, rather than be carried away by the passion for revenge: “moderation, consideration, and consent are required, and then the public

will be led in the name of Heaven; the greater the act, and the more powerful its execution, the greater the need for consideration, observation and controlled anger; the judge must be on guard lest he be consumed by the heat of his zeal for the Holy God that may have caused him to abandon the appropriate path” (Resp. Rashba, 5: 238).

The Israeli Supreme Court was guided by Rashba’s comments when considering the appropriate punishment for criminals (CA 212/79 *Anon. v State of Israel*, 34 (2) 421, 426–428; Cr. A. 156/80 *Binyamin v. State of Israel*, 35 (4) PD 744, Justice Menachem Elon.)

Avoiding Discrimination in Imposing Punishment

The discretionary authority enjoyed by the judges in imposing punishment does not release them from their responsibility to refrain from discrimination between offenders in doing so. This obligation appears repeatedly in the Torah and in rabbinic literature, in various contexts. Judges are warned not to discriminate for socioeconomic reasons – neither on behalf of the rich, in deference to their dignity, nor in favor of the poor, out of inappropriate compassion (Exod. 23:6; Lev. 19: 15; Deut. 24:17). The Torah certainly grants special consideration to the poor man, even when he has broken the law in order to deal with his predicament, as in the words of King Solomon, “Do not despise a thief if he steals to satisfy his appetite when he is hungry” (Prov. 6:30). This is, however, not a legal instruction, but a moral one: “It is written: ‘justify the poor and the downtrodden’ (Ps. 82:3). What is meant by ‘justify’? If this were meant to justify him legally, is it not written, ‘you shall not show preference to a poor person in his suit’?! Rather, exact justice [by giving him] from your own property and give it to him.” That is, the judge must bestow his own property to the poor person, after the legal process has been completed, as an act of charity.

The Torah emphasizes that there must be no discrimination between man and woman with regard to punishment. The Torah states, “when a man or woman may do any in transgression” (Num. 5:6), which the Rabbis understood to mean that “Scripture considers women equal to men with regard to all of the punishments in the Torah” (Bava Kamma 15a; Yad, *Genevah*, 1:7; Tur, Sh. Ar., ה"מ, 349:1). Similarly, discrimination between Jews and proselytes as it states: “you shall not pervert the judgment of a proselyte” (Deut. 24:17).

Talmudic *halakhah* determines that public figures are not immune from the law or from punishment. A high priest is not punished differently than a layman in any respect (Sanh. 18a), and a president (*nasi*) who sins may be flogged (JT Horayot 3:1). The same applies to a rabbinic scholar (*talmid ḥakham*). The one exception to this rule is the king who, according to the Mishnah, may not be judged (Sanh. 2.2). According to the Babylonian Talmud, this exception was introduced as a rabbinic enactment in wake of an episode in which King Yannai was summoned to court but the members of the Sanhedrin would not judge him because they were afraid of him (Sanh. 19a–b; Yad, Sanh. 2:5). This exceptional enactment applies

only to “kings of Israel,” i.e., to Hasmonean Kings, to their contempt for the Sanhedrin’s authority, and not to the kings of the Davidic dynasty, who are judged as any other individual would be. According to the Jerusalem Talmud (Sanh. 2.3), the exemption from judgment applies to any king, whether or not from the House of David, because the king is not subject to any authority whatsoever, other than that of God Himself. It would seem that in our era the president or prime minister of the State of Israel would not be included in this classification, and that they would be judged as any other individual, according to Jewish law. This is because, first, they are not “kings,” but rather, at best enjoy a status similar to that of the “*Nasi*”; second, because they are indeed governed by other institutions, unlike the king who is subject to God alone (see bibliography, Fogelman, and editors notes, *ibid.*).

Sentencing in Accordance with the Offender’s Circumstances

The obligation to avoid discrimination does not mean that the personal circumstances of an offender may not be taken into account when imposing punishment. While the same punishment might be meted out to different offenders, it may not have the same implications. Thus, when imposing flogging, for example, the rule is that the degree of the punishment should correspond to the physical capacity of the offender (see *Flogging). This rule was cited by the Israeli Supreme Court in when establishing a fundamental principle in sentencing policy (CA 419/81, *Kalman Feibish v. State of Israel*, PD 35(4)701; per Justice Shilo). In discussing the tension between the need to impose punishment appropriate to the offender, and the desire that punishment be perceived as being consistent and uniform – i.e., that all offenders receive the same punishment for the same offense – Justice Shilo pointed out that “the origin of the concept of setting the degree of punishment in accordance with the offender’s circumstances” is indeed to be found in the principle discussed above, i.e., that an offender may not be flogged to a greater degree than he is able to tolerate (p. 708 and 709 of the judgment).

Collective Punishment

The rule in Jewish law is that the offender, and he alone, is liable for his actions, and that he alone may be punished for his behavior. Since the era of the Tannaim, this rule has been clear and unequivocal. In the Bible, however, we find seemingly contradictory statements in this respect. On the one hand, the Bible warns that “The fathers shall not be put to death for the children, neither shall the children be put to death for the fathers: every man shall be put to death for his own sin.” (Deut 24:16). During the era preceding the Destruction of the First Temple, the prophets confronted the complaint that the people were being punished by God for the sins of their fathers; the prophets rejected those accusations, and attempted to convince the people that, according to Divine law, only the sinner himself, and not his offspring, could be punished (Jer. 31:28–29; Ezek. 18:2–3). On the other hand, Scripture describes God as “visiting the iniquity of the fathers upon the children,

and upon the children’s children, unto the third and to the fourth generation.” (Exod. 34:7), implying that He indeed punishes descendants for the sins of their fathers. The Rabbis, however, interpreted this as applying to descendants who “continue to perform the actions of their fathers” (Sanh. 27b).

An additional case in which the Torah ostensibly mandates collective punishment is the law of the “condemned city” (*ir ha-nidahat*; Deut. 13:13–19), a city in which, according to the Biblical description, all of the city’s inhabitants are punished because certain individuals incited the other inhabitants to worship idols. But according to the rabbinic interpretation of these passages, this is not a case of collective punishment at all; the halakhic Midrash interprets the verses as requiring a standard legal process, in which each and every individual among the city’s inhabitants receives his punishment by a court of law, and even then only after testimony and admonition by witnesses (*Midrash Tannaim*, ed. Hoffmann, 13.15; *Sifre Devarim*, 93) – that is to say, punishment identical to that of any other case of capital punishment (see *Capital Punishment). The dissenting opinion in this regard is that of Maimonides (Yad, Ove-dei Kokhavim 4:6), who rules that it is sufficient that the majority of the city be idolatrous for all of its inhabitants be sentenced to death. Maimonides’ ruling was the subject of heated debate among the leading scholars of the generation that followed him. It is also important to note that a view was expressed in the Talmud, that a condemned city ever actually existed, and that its laws were never intended for concrete application, but rather as a hypothetical concept for the sake of theoretical study and drawing moral lessons alone (Sanh. 71a).

The Appropriate Attitude Toward the Offender During and After His Punishment

The obligation to respect the dignity of every individual applies even when the individual in question is an offender who is serving a sentence, and this obligation applies even during the process of the sentence itself. The rabbis ordered that even the execution of a person sentenced to death must be carried out in such fashion that minimizes suffering and does not include humiliation. The well-known great principle of the Torah, “you shall love your fellow as yourself” (Lev. 19:18; *Sifra*, *Kedoshim* 2) was interpreted by the rabbis of the Talmud as obligatory even with regard to an offender awaiting punishment, even capital punishment. The rabbis ruled: “choose (i.e., rule in favor of) a pleasant death for him” (Ket. 37b). Even an individual sentenced to death is considered “your fellow.” The rabbis also taught that the dignity of an individual who is sentenced to imprisonment must be preserved. In a responsum by Rabbi Hayyim Palaggi (19th century – Resp. *Hikei Lev*, vol. 2 חמ 5), we find a ruling that prisoners may not be incarcerated in “dirty and desolate cells,” because “even though they have sinned, they are still Jews,” and they must therefore be kept in a “dignified prison.” This requirement of Jewish law formed the basis for the Israeli Supreme Court’s judgment in the *Tamir* case, which dealt with conditions of imprisonment of prisoners in the State of Israel (CAA 4/82, *State of Israel v. Tamir*, PD 37(3)201; Justice

Elon; for further information and additional legislation regarding this matter, see *Imprisonment; *Human dignity).

Jewish law seeks to prevent any offender being permanently stigmatized. Rather, after being punished the offender once again becomes a regular citizen for all intents and purposes. This reflects his position in relation to his Creator: the truly repentant offender is accepted by God as pure and unblemished: “Yesterday, this one [i.e., the offender] was hated by the Holy One blessed be He – and was considered a detestable outcast, rejected, and abhorred... but today, he is beloved, near to him, and a friend... Yesterday he was separated from the God of Israel... he cries [prays] and is not answered...; today he is cleaved to the *Shekhinah*... he cries out and is answered immediately...” (Maimonides, *Hilkhot Teshuvah* 7:6–7), and this is similarly the case in human criminal law. Regarding punishment by flogging, the Torah states that an offender may not be flogged more than is necessary, so as not to create a situation in which “your brother shall be debased before your eyes” (Deut. 25:3). The rabbis expounded this verse as meaning that “once he has been flogged – he is to be considered as your brother” (M. Makkot 3.15). In another source, we read: “all day the Torah calls him as “a wicked person,” as it is stated “If the wicked one is to be flogged” (Deut. 25:2). However once he has been flogged, the Torah refers to him as ‘your brother’ as it is stated ‘Lest your brother be degraded’” (*Sifre Devarim*, 286).

This fundamental rule served as the basis for a set of laws and *halakhot* intended to rehabilitate offenders who have borne their punishment, a concept known as “the Enactment for the Encouragement of Penitents” (*Takkanat ha-Shavim*: Mishnah Gittin 5:5). The Mishnah cites the testimony of Rabbi Johanan ben Gudgada (end of 2nd century, C.E.) concerning a law stipulating that one who stole a wooden beam and built it into his house is not required to dismantle his house in order to return the actual beam to its rightful owner, but rather may restore its monetary value, “so as to enable the encouragement of penitents.” The reasoning behind this enactment is that if the thief is required to destroy his house in order to return the specific beam to its owner, he might refrain from repentance altogether (Rashi, on Gittin 55a). This enactment was accepted as legally binding, in accordance with the opinion of the School of Hillel, and in opposition to the dissenting view of the School of Shammai, who maintained that the thief must in fact take down his home in order to return the original beam to its owner.

There are exceptions to this rule: where the offense is particularly grave, or involves a position demanding an especially high level of moral integrity and reposition of trust in the position holder, the offender may not continue to serve in that position even if he has served his sentence and repented. Maimonides (Yad, 17:7–9) rules that:

Whoever sins and has been flogged returns to his state of propriety, as it is stated: “Lest your brother be degraded before your eyes” (Deut. 25:3) – once he has been flogged, he is to be considered [again] as your brother... If the High Priest sins, he is flogged and is reinstated to his high position... But if the

head of the academy [i.e., the President (*nasi*) of the Sanhedrin] sins, he is flogged, and he does not return to his position, and cannot even resume a position as an ordinary member of the Sanhedrin....

The same holds true for crime of involuntary manslaughter. An individual who killed another involuntarily must flee to a city of refuge. The Mishnah (Makkot 2:8) records a dispute between the Sages regarding the status of the prisoner exiled to the city of refuge: May an exile who has served his punishment and returned from the city of refuge, return to a position of authority he formerly held? The halakhic ruling cited by Maimonides (Yad, *Roze'ah u-Shemirat ha-Nefesh* 7:13–14) is that the individual may not return to his former position for the rest of his life “since it was through him that this great misfortune came about” (cf. Nov. Ritba to Makk. 13a; and see *City of Refuge).

In addition, it is forbidden to remind an individual who has served his sentence and/or repented of his former offenses; this is considered “oppression by means of words” (*ona'at devarim*; Mishnah, BM 4:10; Yad, *Teshuvah* 7:8; Mekhirah 14:13). Rabbenu Gershom Meor ha-Golah actually imposed a ban on any person who reminded a former offender of his bygone deeds. The reason invoked by Rabbenu Gershom for this prohibition is the desire to make it easier for offenders to reform their ways and to reintegrate into society as honest citizens (*Teshuvot Rabbenu Gershom Meor ha-Golah*, 4; see also under *Apostate).

The “Rehabilitation of Penitents” in the State of Israel

Jewish law’s basic approach – that the past life of an offender who has been punished is to be forgotten – is the basis of the legislation of the Rehabilitation of Offenders and Crime Register Law, 5741 – 1981. This law imposes restrictions on divulging information from the Crime Register regarding crimes committed by an individual after the period of limitations has passed as well as ordering the deletion of such information from the Register after an additional period of time has passed. Nonetheless, the law regarding the aforementioned statute of limitations differentiates between various offenses, depending on their severity, and it also differentiates between various bodies to whom such information may be divulged. During the parliamentary debate that preceded the enactment of the law, the justice minister emphasized that “the proposed law is consistent with the principles of Jewish law as mentioned above, i.e., on the one hand, it forbids the use of information regarding an individual’s past history when it is possible to conclude – without harming the public interest – that for certain purposes and under certain circumstances, the past history of an individual who has transgressed, but did not return to his former ways, is immaterial; on the other hand, it allows use of information concerning the individual’s past history in those cases where preserving the public interest is of greater importance than rehabilitation of the offender. For this reason it allows for preserving the information, without erasure, even after the passage of time (*Divrei ha-Knesset* 75 (5736) 301).

In the *Carmi* case (ABA 18/84, *Carmi v. Attorney General of the State of Israel*, 44(1) PD 53; Justice Menahem Elon), the issue of the interpretation of the Crime Register and Rehabilitation of Offenders Law was raised before the Israeli Supreme Court in the wake of an appeal submitted by a lawyer who, long after he had been found guilty of criminal activity, was suspended by the disciplinary court of the Israel Bar Association. The court conducted an extensive study of the sources of the law, which are rooted in Jewish law and part of which have been cited above, with particular attention to the matter in general, as well as to cases in which exceptions were determined.

PUNON (Heb. פּוּנוֹן), encampment of the Israelites in Edom, between Zalmonah and Oboth (Num. 33:42–43). It is identified with Khirbat Faynān, the Greek Phainon, in the Arabah. Remains of ancient copper mines abound in the area, the richest being at Umm al-‘Amad. The copper ore of Punon was exploited from Chalcolithic times onward. There is evidence of extensive settlement at the end of the Early Bronze Age and in Iron Age I. The name of the Edomite prince Pinon (Gen. 36:41; 1 Chron. 1:52) may be connected with the locality. The mines were reopened in Nabatean times and continued to be exploited throughout the Roman and Byzantine periods. They were worked by condemned criminals, as well as Christian

martyrs and bishops. Remains at the site include the foundations of a basilica and an inscription mentioning a bishop Theodorus. According to the Madaba map, the place where the Israelites were saved by the *copper serpent was located near Punon. The place was included in the fortifications of the Roman *limes*, Ala Prima miliaria Sebastena being stationed there (*Notitia dignitatum*, 73:32).

[Michael Avi-Yonah]

PURIM (Heb. פּוּרִים), the feast instituted, according to the Book of *Esther (9:20–28), by *Mordecai to celebrate the deliverance of the Jews from *Haman’s plot to kill them. Purim (Akk. *pūrū*, “lots”) is so called (Esth. 9:26) after the lots cast by Haman in order to determine the month in which the slaughter was to take place (Esth. 3:7). Purim is celebrated on the 14th of Adar, and in Hasmonean times it was known as the “Day of Mordecai” (11 Macc. 15:36). The Jews of Shushan celebrated their deliverance on the 15th of Adar (Esth. 9:18), and this day became known as Shushan Purim. Out of respect for Jerusalem, it is said, the day is still kept by Jews living in cities which had a wall around them “from the days of Joshua” (Meg. 1:1). Thus in present-day Israel Purim is celebrated in Jerusalem on the 15th, but in Tel Aviv on the 14th. In leap years Purim is celebrated in the second month of *Adar.

The chronological difficulties such as the identity of King *Ahasuerus and the absence of any reference in the Persian sources to a king having a Jewish consort; the striking resemblance between the names Mordecai and Esther to the Babylonian gods Marduk and Ishtar; the lack of any reference to Purim in Jewish literature before the first century B.C.E.; the language of the Book of Esther, which suggests a later date – all these have moved the critics to look elsewhere than the account in Esther for the true origin of the festival. Various conjectures have been made (see *Scroll of Esther) but the problem still awaits its solution. In any event the festival had long been established by the second century C.E. when a whole tractate of the Mishnah (*Megillah) was devoted to the details of its observance, especially to the rules governing the reading of the Scroll of Esther, called in the rabbinic literature the *megillah* (“scroll”). Purim is a minor festival in that work on it is permitted, but it has been joyously celebrated in Jewish communities as a reminder of God’s protection of His people. However, the widespread acceptance of the festival as only minor is reflected in the popular Yiddish saying that as a high temperature does not denote serious illness neither is Purim a festival.

The main feature of Purim is the reading of the Book of Esther, the *megillah*, with a special cantillation. *Megillot* are frequently decorated, sometimes with scenes from the narrative. Since according to the midrashic interpretation the word *ha-melekh* (“the king”), when it is not qualified by Ahasuerus, refers to the King of the universe, some *megillot* are so written that each column begins with this word. It would seem that originally the *megillah* was read during the day, but eventu-

ally the rule was adopted to read it both at night and during the day (Meg. 4a). It is customary to fold the *megillah* over and spread it out before the reading since it is called a “letter” (Esth. 9:26, 29). The four verses of “redemption” (2:5; 8:15–16; and 10:3) are read in louder voice than the other verses. The custom of children to make a loud noise with rattles and the like whenever the name of Haman is read, in order to blot out the “memory of Amalek” (see Deut. 25:19; and Esth. 3:1 and 1 Sam. 15:8–9 for Haman was a descendant of Amalek) is ancient and still persists, though frowned upon as undecorous by some authorities. It is the practice for the reader to recite the names of the 10 sons of Haman (Esth. 9:7–9) in one breath (Meg. 16b) to show that they were executed simultaneously. The custom has also been seen, however, as a refusal by Jews to gloat over the downfall of their enemies (C.G. Montefiore and H. Loewe (ed.), *A Rabbinic Anthology* (1938), 53). The Torah reading for Purim morning is Exodus 17:8–16.

The Book of Esther (9:22) speaks of “sending portions” (*mishlo’ah manot* – abbreviated to *shelakhmones*) to friends on Purim and of giving gifts to the poor. The rule is to send at least two “portions” of eatables, confectionery, and so forth, to a friend and to give a present of money to at least two poor men. A special festive meal is eaten on Purim afternoon toward eventide. Among the special Purim foods are boiled beans and peas, said to be a reminder of the cereals Daniel ate in the king’s palace in order to avoid any infringement of the dietary laws, and three-cornered pastries known as *hamantashen* (“Haman’s ears”). There has been much discussion around the saying of the Babylonian teacher Rava (Meg. 7b) that a man is obliged to drink so much wine on Purim that he becomes incapable of knowing whether he is cursing Haman or blessing Mordecai. The more puritanical teachers tried to explain this away, but the imbibing of alcohol was generally encouraged on Purim and not a few otherwise sober teachers still take Rava’s saying literally (see, e.g., H. Weiner: *9½ Mystics* (1969), 207). The laws of Purim and the reading of the *megillah* are codified in Shulḥan Arukh, OH 686–97. Various parodies of sacred literature were produced for Purim, the best known of which, *Massekhet Purim*, is a skillful parody of the Talmud with its main theme the obligation to drink wine merrily and to abstain strictly from water. The institution of the Purim rabbi, a kind of lord of misrule, who recites Purim Torah, the frivolous manipulation of sacred texts, was the norm in many communities. Some have seen in all this an annual attempt to find psychological relief from what otherwise might have become an intolerable burden of loyalty to the Torah (Druyanow, *Reshumot*, 1 and 2). Under the influence of the Italian carnival it became customary for people to dress up on Purim in fancy dress, men even being permitted to dress as women and women as men. The *Adloyada carnival in Tel Aviv has been a prominent feature of Purim observance in modern Israel.

In the kabbalistic and ḥasidic literature much is made of Purim as a day of friendship and joy and as the celebration of God at work, as it were, behind the scenes, unlike Passover which celebrates God’s more direct intervention. (God

is not mentioned in the Book of Esther.) The “lots” of Purim are compared with the “lots” cast on the Day of Atonement (Lev. 16:8), what human beings call “fate” or “luck” being, in reality, only another manifestation of God’s providential care. So highly did the kabbalists esteem Purim that they reported in the name of Isaac Luria that the Day of Atonement is “like Purim” (*Yore ke-Furim*).

While some Reform congregations abolished Purim, others continued to celebrate it as a day of encouragement and hope, some even arguing that it helped Jews to express their aggressive emotions and to sublimate their feelings of wrath and hatred (W.G. Plaut, *The Growth of Reform Judaism* (1965), 224).

[Louis Jacobs]

PURIM KATAN (Heb. פּוּרִים קָטָן; “minor Purim”), the name given to the 14th and 15th days of the first month of *Adar in a leap year, when *Purim is celebrated during the second month of Adar. (The Karaites were the only sect to celebrate Purim during the first Adar in a leap year.) According to talmudic tradition, Purim should be celebrated in the second Adar because that was the date of the original Purim (which occurred in a leap year). The rabbis also wanted to bring the period of the redemption of Esther closer to that of the redemption of the Israelites from Egypt celebrated in the following month of Nisan (Meg. 6b). Purim Katan has none of the ritual or liturgical features of Purim: The *megillah* is not read, and no gifts are sent to the poor (Meg. 1:4). The *Al ha-Nissim prayer is not said, but fasting and funeral eulogies are prohibited (Meg. 6b). Also, *Taḥanun is not recited on these days, which are considered a minor occasion of rejoicing (Sh. Ar., OH 697:1).

BIBLIOGRAPHY: Eisenstein, *Dinim*, 337; G. Ki-Tov, *Sefer ha-Toda’ah*, 1 pt. 1 (1958), 297.

PURIM MESHULLASH (“Triple Purim”). As stated in the article on *Purim, Purim is celebrated on the 15th of Adar (“Shushan Purim”) in Jerusalem, which “has been a walled city from the days of Joshua ben Nun,” whereas elsewhere it is celebrated on the 14th of the month. When, however, the 14th of Adar falls on Friday, the celebration in Jerusalem and other cities said to be “walled cities from the time of Joshua” extends over three days, and is thus called Purim Meshullash. The *megillah*, the Scroll of Esther, is read on the 14th but the additional prayers for Purim are included in the Sabbath service on the 15th and the *haftarah* of the previous Sabbath, *Shabbat Zakhor* (1 Sam. 15. 2–34), is repeated. The special festive meal however is held on the Sunday, so as to distinguish it from the normal Sabbath festive meal, and it is on this day gifts are exchanged (“*mishlo’ah manot*,” popularly called “*shelakhmones*”) and donations to the poor are made.

PURIMS, SPECIAL. Following the talmudic injunction that one must recite a special thanksgiving benediction on returning to the place where one was once miraculously saved from danger (Ber. 54a), the custom evolved for Jewish communities or families to celebrate the anniversary of their escape from destruction by reciting special prayers and with a ritual similar to that of Purim. (See: A. Gumbiner's note to Sh. Ar., OH 686.) These special communal Purims are called *Purim Katan ("minor Purim"), or Mo'ed Katan ("minor holiday") or Purim... (followed by the name of the community or the special event). In many cases special Purims were preceded by a fast comparable to the Fast of *Esther. In addition, on the Purim Katan itself the story of the personal or communal salvation was often read from a scroll (**megillah*) in the course of a synagogue service in which special prayers of thanksgiving,

in the style of *piyyutim*, were offered. Sometimes the *Al ha-Nissim prayer and the *Hallel were inserted into the ritual. The traditional Purim observances of enjoying a festive meal and giving charity to the poor were also applied to special Purims. (See Table: List of Special Purims.)

The Karaites observe a special Purim on 1st Shevat, in memory of the release from prison of one of their leaders, Yerushalmi. The exact date of the event is unknown. The followers of Shabbetai Zevi observed a special Purim on 15th Kislev, because on this day in 1648 Shabbetai Zevi proclaimed himself Messiah.

List of Special Purims

Purim of...	Observed on	Established in	Reason for Observance
Algiers (called Purim Edom)	4th Heshvan	1540	Saved from destruction in Spanish-Algerian wars of 1516–1517 and 1542.
Algiers (called Purim Tammuz)	11th Tammuz	1774	Saved from danger.
Alessandria Della Paglia (Italy)	25th Av	1779	Saved from massacre.
Ditto	2nd Heshvan	1797	Saved from riots during revolutionary war.
Ancona	21st Tevet	1690	Saved from earthquake.
Ancona	15th Tishri	1741	Synagogue escaped destruction by fire.
Ancona	24th Adar	1775	Jewish quarter saved from conflagration.
Ancona	12th Shevat	1797	Saved from riots in revolutionary war.
Angora/Ankara/(called: Purim Angora or Purim Sari-Kiz)	21st Elul	?	Saved from blood libel accusation.
Angora, called Purim Abazza	11th Iyyar	?	?
Angora, called Purim de la Turquito	14th Tammuz	1775	Saved from blood libel accusation.
Avignon	24th Tammuz	?	?
Avignon	28th Shevat	1757	Escaped dangers of a riot.
Baghdad	11th Av	1733	Relieved from Persian oppression.
Belgrade	19th Sivan	1822	Saved from destruction during Turko-Serbian war.
Breche (Champagne, France)	14th Adar	1191	Chief Jew-baiter executed.
Cairo	18th Shevat	?	?
Cairo, called Purim Mizrayim	28th Adar	1524	Saved from extermination.
Candia (Crete)	18th Tammuz	1583	Saved from collective punishment for treason, during Turco-Venetian conflict.
Carpentras	16th Kislev	1512	Saved from riot.
Ditto	9th Nisan	1692	Saved from annihilation.
Ditto, called Yom va-Yosha	21st Nisan	1651	Saved from threat of massacre.
Casablanca, called Purim Hitler	2nd Kislev	1943	Escape from riot and Nazi occupation.
Castille (Spain) called Purim Martinez	1st Adar	1339	Saved from annihilation following accusations by Jew-baiter Gonzales Martinez, king's adviser.
Cavaillon (Provence)	25th Iyyar	1631	Plague ended.
Ditto	29th Sivan	1677	Saved from blood libel accusation.
Cento (Italy)	12th Av	1820	Escaped from fire.
Chieri (Italy)	1st Av	1797	Saved from danger of war.
Chios (Greece), called Purim de la Senora ("Purim of the Good Lady")	8th Iyyar	1595 (or 1820)?	Saved from death during Franco-Turkish war.
Cuneo (Italy)	5th Kislev	1799	Synagogue saved from destruction by shell.
Ettingen (Germany)	18th Iyyar	1690	Saved from destruction by enemies.
Ditto	29th Sivan	1713	?
Ferrara	24th Kislev	?	Saved from destruction by fire.
Ditto	18th Iyyar	1799	Escaped war riots.

List of Special Purims (cont.)

Purim of...	Observed on	Established in	Reason for Observance
Fez	22nd Kislev	1840	Saved from destruction.
Florence	27th Sivan	1791	Escaped sacking and riots.
Fossano (Italy)	18th Nisan	1796	Saved from bomb explosion during war.
Frankfurt on the Main, also called: Purim Winz or Purim Fettmilch	20th Adar	1616	Expelled Jews readmitted to town and chief Jew-baiter, Fettmilch, executed.
Fulda	15th Elul	?	?
Gumeldjina (Thrace) called: Purim de los ladrones ("Purim of the thieves")	22nd Elul	1786	Saved from collective punishment for instigating robbers to sack town.
Hebron	1st Av	?	Saved from collective punishment and execution by Ibrahim Pasha.
Ditto, called Purim Takka ("Window Purim")	14th Tevet	1741	Saved from annihilation by miraculous ransom money on the windowsill of synagogue.
Ivrea (Italy)	1st Shevat	1797	Escaped plundering during revolutionary war.
Komotini (Gumurjina, Gumuldjina) (Greece)	22nd Elul	1768	Saved from destruction during Turkish suppression of Greek revolt.
Kovno	7th Adar (II)	1783	Privileges of civic freedom granted by King Stanislaus II
Leghorn	12th Shevat	1742	Saved from destruction in earthquake.
Ditto	25th Tevet	1810	Plague ends.
Ditto	16th Adar	1813	?
Lepanto (Greece)	11th Tevet	1699	Saved from destruction during Turkish war.
Medzibezh (Poland)	11th Tevet	1648 or 1649	Saved from annihilation by Chmielnicki's bands.
Morocco	13th Nisan	1771	Saved from annihilation.
Mstislavl (Russia)	4th Shevat	1744	Saved from slaughter by Cossacks.
Ditto	3rd Kislev	1844	Saved from collective punishment for alleged rebellion against authorities.
Narbonne	20th Adar	1236	Saved from riots.
Oran	6th Av	1830	Saved from massacre before arrival of French troops.
Ostraha	23rd Nisan	1734 or 1768	Saved from pogrom.
Ditto	7th Tammuz	1792	Saved from destruction during Russo-Polish war.
Padua called Purim di fuoco ("Fire Purim")	11th Sivan	1795	Saved from fire.
Ditto, called Purim di Buda	10th Elul	1684	Saved from massacre during Austro-Turkish (in Budapest).
Ditto, called Purim dei Sassi (?)	Shabbat "Bo"	1748	?
Pesaro/see also: Urbino and Senigallia	?	1799	Escaped damages of war.
Pitigliano (Italy)	15th Tammuz	1757	Collapse of school roof, no casualties.
Ditto	15th Sivan	1799	Saved from damages during revolutionary war.
Posen	1st Heshvan	1704	Saved from death during Polish-Swedish war.
Prague	14th Heshvan	1620	Saved from sacking and riots by protection of Emperor Ferdinand.
Ditto, called Vorhang Purim ("Curtain Purim")	22nd Tevet	1622	Beadle of synagogue saved from hanging for keeping stolen curtains.
Purim Byzanc (observed by Jews of Thrace)	14th Adar	1574	Saved from extermination.
Ragusa	?	1631	Saved from accusation of blood libel.
Rhodes	14th Adar	1840	Saved from annihilation.
Ritova (Lithuania) called Purim Jeroboam b. Nebat.	14th Adar	1863	Jew-baiter Count Aginsky died.
Rome	1st Shevat	1793	Ghetto saved from assault and fire.
Sa'na	18th Adar	?	Saved from extermination.
Sarajevo	4th Heshvan	1819	10 leaders of Jewish community freed from prison and saved from execution.
Senigallia (Italy)/see also: Urbino and Pesaro	15th Sivan	1799	Saved from annihilation during war by escaping to Ancona.
Sermide (Italy)	25th Tammuz	1809	Saved from earthquake.
Shiraz, called Purim Mo'ed Katan	2nd Heshvan	1200 or 1400	Permitted to practice Judaism after having being forced to convert to Islam.

List of Special Purims (cont.)

Purim of...	Observed on	Established in	Reason for Observance
Sienna	15th Sivan	1799	Saved from destruction during revolution.
Spoieto	21st Sivan	1797	Saved from annihilation during revolutionary war
Ditto	7th Adar	?	?
Syracuse (Sicily), called Purim Saragossa	17th Shevat	1425	Saved from destruction for alleged treason by honoring King Alfonso with empty cases of Torah Scrolls.
Tetuan and Tangiers, called Purim de las bombas, or Purim de los Christianos	2nd Elul	1578	Saved from destruction during Moroccan Portuguese war.
Tiberias	7th Elul	1743	Saved from danger of war.
Ditto	4th Kislef	?	?
Trieste	14th Adar	1833	Leading Jew-baiter died.
Tripoli and Tunisia	25th Shevat	?	?
Ditto, called Purim Sheriff or Purim Kadebani ("False Purim")	24th Tevet	1705	Saved from destruction by hostile ruler, Khalil Pasha.
Ditto, called Purim Borghel	29th Tevet	1793	Saved from destruction during occupation by Bourgel Phasa of Turkey.
Tunisia, called: Purim Sheleg ("Purim of Snow")	24th Tevet	1891	Jewish quarter saved from natural disaster
Tunisia	15th Shevat	?	?
Turino	1st Av	1797	Saved from war and sacking.
Urbino	11th Sivan	1799	Saved from war and riots.
Verona	20th Tammuz	1607	Permission granted to lock ghetto gates from inside instead of from outside.
Vidin, Bulgaria, called Purim de los borrachones ("Purim of the Drunken")	4th and 5th Heshvan or 9th–10th	1806	Saved from annihilation following accusation that the ruler had been poisoned by his Jewish physician.
Ditto	2nd Adar	1878	Saved from destruction during Russo-Turkish (Balkan) war.
Vilna	15th Av	1794	Saved from destruction during Russo-Polish war.
Zborow (Galicia)	12th Tevet	?	Saved from annihilation because of blood libel accusation.
Family Purims			
Altschul family of Prague	22nd Tevet	1623	Head of family, Hanokh Moses, saved from death.
Brandeis family of Jungbunzlau (Bohemia), called Povidl Purim "Plum Jam Purim"	10th Adar	1731	David Brandeis and family saved from accusation of having killed gentiles by poisoning plum jam.
Danzig family of Vilna, called Pulverpurim ("Powder Purim")	15th Kislef	1804	Family of Abraham Danzig author of "Hayyei Adam" saved from explosion of magnesium.
Elyashar family of Jerusalem	2nd Nisan	?	Saved from death.
Heller family of Prague	1st Adar	1629	Head of family, Yom Tov Lipman, rabbi of Prague saved from death sentence.
Jonathan ben Jacob of Fulda (Germany)	17th Tammuz	?	?
Maimon family of Lithuania	?	1750	Grandfather of Solomon Mimon saved from death sentence for blood libel.
Meyuhas family of Jerusalem	16th Adar	1724	Head of family, Raphael Meyuhas, escaped death by highwaymen.
Samuel Ha-Nagid of Spain	1st Elul	1039	Saved from death plot of conspirators.
Segal family of Cracow	1st Iyyar	1657	Family saved from drowning in river while escaping from pogrom.
Treves family (?)	Shabbat "Va-Yeze"	1758	Escaped from fire.

PURIM-SHPIL (Yid. lit. "Purim play"), monologue or group performances given at the traditional festive family meal held on the festival of *Purim. There is definite evidence that use

of the term *Purim-shpil* was widespread among all Ashkenazi communities as early as the mid-16th century. The earliest written record in which the term appears is at the beginning of a

lengthy poem relating the events of the Book of Esther with the aid of appropriate midrashic material, composed about 1555 in Venice by a Polish Jew (*Lieder des Venezianischen Lehrers Gumprecht von Szczebrszyn*, ed. by Moritz Stern (1922), 18). From the context it appears that the poem was intended as a *Purim-shpil*. However, there are extant manuscripts of Yiddish poems on the Purim story dating from at least the 15th century, and from the start of the 16th century printed versions began to circulate. Well into the 19th century this type of poem continued to be defined as a *Purim-shpil* (e.g., *Purim-Shpil*, Warsaw, 1869 and 1874). At first the term *Purim-shpil* was used to define a monologue during which the performer sometimes appeared in costume. The monologues were mostly rhymed paraphrases of the Book of Esther, as well as parodies on liturgical and other holy texts, such as a “kiddush” or a “sermon” for Purim, composed to entertain the audience. Together with the more complex forms, the monologue form of *Purim-shpil* continued to appear in Eastern Europe until World War II.

Manuscript fragments and other evidence from the second half of the 16th century attest to the gradual enlarging of the *Purim-shpil* to include presentations by several performers. One such fragment includes a contest between cantors from Poland, Italy, and Germany; it may be assumed that this is a combination of three earlier satirical monologues. Other fragments show evidence of growing complexity in dramatic expression blended with the traditional parody. Judging from the extant material it is probable that during the 16th century and until at least the mid-17th century, the subject matter of the *Purim-shpil* was drawn from contemporary Jewish life and was based on well-known humorous tales. This type of *Purim-shpil* also survived in Eastern Europe until World War II (16 *Purim-shpil* texts of this non-biblical type were published in the collection, *Yidisher Folklor* (1938), 219–74). In its initial and developing stages, the *Purim-shpil* often parallels the German *Fastnachtspiel*, as evidenced from texts of the 15th and 16th centuries. The *Purim-shpil* in all its varieties was usually presented in private homes during the festive family meal; the performers, who wore masks or primitive costumes, were generally recruited from among yeshivah students. In the course of time the *Purim-shpil* became the object of competition between groups of performers recruited not only from among students but also from among apprentices, craftsmen and mendicants; even professional entertainers saw in the *Purim-shpil* a field for their activity. By the 16th century, the prologues to the *Purim-shpil* had developed a conventional form, which included blessings for the audience, an outline of the contents of the performance, and an introduction of the actors; conventional epilogues had also developed, including parting blessings and appeals for an ample reward. (One of the shorter prologues reads in part: “Good Purim, good Purim, my worthy audience! And do you then know of Purim’s significance?...” And an excerpt from an epilogue reads: “Today Purim has come in, tomor-

row it goes out. Give me then my single groschen and kindly throw me out!...”) Like the *Fastnachtspiel*, the Purim performance was introduced, conducted, and concluded by a narrator (leader of the performance), traditionally called *loyfer*, *shrayber*, or *payats*, and, as in the *Fastnachtspiel*, profanity and obscenity of an erotic nature are outstanding elements of the humorous effects.

Well-developed texts on biblical themes presented as *Purim-shpils* began to appear in the late 17th century. Naturally, the subject of the oldest surviving text of this type, a manuscript of 1697, is the story of the Book of Esther, popularly known as the *Akhashverosh-shpil*. In the 18th century the repertoire expanded to include *The Selling of Joseph* and *David and Goliath*, and in the 19th and 20th centuries East European performers presented *The Sacrifice of Isaac*, *Hannah and Penninah*, *The Wisdom of Solomon*, etc. (A collection of this genre of *Purim-shpil* was edited by Noah Prylucki in *Zamlikher far Yidishn Folklor* (1912), 125–88; (1917), 143–5.) Most of these biblical works retain the conventional form of *shpil* with prologues, epilogues, parodies, vulgar language, the traditional narrator, and, often, stories unconnected with any biblical theme. These older forms are very apparent in the above-mentioned text of 1697 and in a similar version of an *Akhashverosh-shpil* printed at Frankfurt in 1708 (which appears in J.J. Schudt’s *Juedische Merckwuerdigkeiten*, 3 (Frankfurt and Leipzig (1714), 202–25). The printed version of the *Akhashveroshshpil* was burned by the city fathers of Frankfurt presumably because of the play’s indecent elements. This was probably the reason for a public notice of 1728 in which the leaders of the Hamburg community banned the performance of all *Purim-shpils*. To assure compliance with the ban, fines were threatened and special investigating officers were posted.

As early as the beginning of the 18th century, the biblical *Purim-shpil* reflected many trends of the contemporary European theater in its literary style, choice of subject, and scenic design. Previously marked by extreme brevity, not exceeding a few hundred rhymed lines, and by the limited number of performers, the *Purim-shpil* became a complex drama with a large cast, comprising several thousand rhymed lines performed to musical accompaniment in public places for a fixed admission price. Nonetheless, the plays maintained a connection with Purim and were performed during the appropriate season. From the early 18th century there are extant texts of such plays and evidence of performances in Frankfurt, Hamburg, Metz, and Prague, and, later in the century, in Amsterdam and Berlin. Although there is an historical tie between the traditional *Purim-shpil* and the more developed biblical dramas of a later era, the term *Purim-shpil*, if strictly applied, refers only to those early, short performances at family gatherings.

[Chone Shmeruk]

PURITY AND IMPURITY, RITUAL (Heb. טְהוּרָה וְטֻמְאָה, *tumah ve-toharah*), a symbolic system according to which a pure person or object is qualified for contact with the Temple and related sancta (holy objects and spaces) while an impure person or object is disqualified from such contact. Ritual impurity arises from physical substances and states associated with procreation and death, not in themselves sinful. Ritual impurities are in general permitted (if not unavoidable or obligatory) and in this they can be distinguished from moral impurities, which arise from prohibited acts. Both types of impurity are denoted by Hebrew terms of defilement (forms of *tame*) but context and associated terms indicate that different kinds of impurity are intended.

Ritual, or permitted, impurity is distinguished by the following features: (1) it is contagious, transferred from one person or object to another in a variety of ways, such as physical contact or sharing space within a covered area; (2) impurity contracted from a source of ritual impurity is impermanent and can be reduced and removed by some combination of ablutions, time, and/or the performance of specified rituals; (3) ritual impurity can defile sancta and must be kept separate from it. More severe forms of ritual impurity can also defile common (non-sacred) objects as well, and thus may require isolation or exclusion.

By contrast, moral impurity arises from the commission of certain heinous sins, specifically idolatry, bloodshed, and sexual transgressions. These sins are said to generate a moral impurity that symbolically defiles a range of sancta including the land of Israel itself and the sanctuary. In addition to originating in sin, moral impurity differs from ritual impurity in that it is not contagious (one does not contract impurity by touching a murderer), and it is not generally removed by rituals of bathing, laundering, and the like. Moral impurity is sometimes removed through a process of atonement. In some cases, a repentant sinner may bring a sacrificial offering to purge the sanctuary of the defilement caused by his sins. In severe cases, however, moral impurity is absolved only with punishment and/or death. The Yom Kippur rite is designed to purge the sanctuary of the defilement caused by unrepentant sins of the community at large.

The concept of ritual – as distinct from moral – purity and impurity is by no means exclusive to the Jewish religion; indeed it was a central and integral feature of most, if not all, ancient religions (see below). It is generally believed that impurity is a concurrent of the belief in evil spirits and a part of the taboo concept. Whatever its origins, the system of ritual purity and impurity as crafted in the priestly writings of the

Hebrew Bible represents an attempt to “monotheize” the community’s purity practices. In these writings, impurity is generally divorced from any association with evil spirits and functions as a symbol of that which is anathema to the holy.

In the Bible

The main source for the biblical laws of ritual purity and impurity is Leviticus 11–17 and Numbers 19. Other specific purity laws are also found in Leviticus 5:2–3; Numbers 31:19–20, Deuteronomy 14:3–21; 23:10–15; 24:8; 26:14. The ritual purity system limned in the priestly writings of the Hebrew Bible does not reflect a concern with health or hygiene. Only one set of diseases generates ritual impurity and many substances widely considered unhygienic, such as human and animal excrement, are not deemed to be ritually impure. While there is no theoretical definition of purity and impurity in the Bible, its function and symbolism can be readily deduced from the antithetical relationship between impurity and holiness (Lev. 11:43–47). Only God is inherently holy. Things that are non-holy, or common, may acquire holiness by being brought into God’s realm (being sanctified or consecrated). The realm of the common is subject to two possible states connoting compatibility and incompatibility with holiness: purity and impurity. Under normal circumstances, common objects are pure and compatible with the holy. However, contact with certain sources of ritual impurity will defile common objects and render them incompatible with the holy. That which is holy is by definition pure and must never come in contact with the impure. If defiled, a sanctum loses both its holiness (becomes common) and its purity (becomes ritually impure). To be fully restored, it must first be purified (making it pure but common) and then resanctified (making it holy once again).

What are the sources of ritual impurity that are incompatible with the holiness of God? The three main sources of impurity are (1) corpses and certain animal carcasses, (2) *zara’at* – skin diseases in humans (a decomposition of the flesh associated with death; see Num. 12:12, Job 18:13) and fungal growths in fabrics and houses, and (3) genital discharges. Many scholars have noted that the physical substances and states labeled impure, and thus deemed to be anathema to God, are associated with death and procreation. The God of the Hebrew Bible does not die and does not have sexual relations. These are characteristic of humans. To be eligible to approach the sanctuary, God’s residence among the Israelites, humans must separate from that which makes them least God-like: death and procreation. The ritual purity laws requiring separation from sources of impurity are thus essential to the frequent priestly exhortation to be like God (*imitatio dei*) and to strive for holiness.

According to Leviticus 10:10, the priests must teach Israel the distinction between pure and impure on the one hand, and holy and common (or profane) on the other, in order to prevent impermissible contacts between the holy and the impure. Maintaining a ritually pure and holy area in the community (the sanctuary compound) is essential if God is to dwell in Is-

rael's midst. During the wilderness period, the entire camp of the Israelites was a kind of holy war camp with the ark in the center; thus, it was subject to stricter purity regulations than the ordinary settled habitation. This accounts for the exclusion of severe impurity bearers from the camp (Num. 5:2–3 and 31:13–44), even though such persons are not excluded from their communities in the laws for ordinary settled habitation (see below).

CORPSES AND CARCASSES. The most severe source of ritual impurity is the human corpse, which communicates to persons and objects that contact it or enter an enclosed space with it (Num. 19:14 ff.) an impurity that lasts seven days and can in turn defile others with a milder one-day impurity. Human bones and graves also convey ritual impurity. Corpse impurity is so severe that some sources exclude the corpse-defiled from the holy camp for the period of impurity (Num. 5:2–3, Num. 31:13–24). Numbers 19, which reflects the situation in settled communities generally, rather than the holy camp, does not. The corpse-defiled are purified by a ritual process that includes sprinkling with a mixture of water and ashes from a ritually burned red heifer on the third and seventh days, bathing, laundering and waiting till sundown. Corpse-defiled objects are purified by fire or immersion in water as appropriate, though defiled earthenware cannot be purified and is simply destroyed.

The carcasses of all large land animals and eight types of smaller land animals (e.g., mice, lizards) convey a one-day ritual impurity. One who touches or carries them becomes impure until nightfall (Lev. 11:24 ff.). The purity laws pertaining to animals are complicated by the fact that many defile by ingestion (see *Dietary Laws). The only living beings to contract corpse impurity are humans, both Israelite and non-Israelite (Num. 19:11). Food may also become impure if it has first been in contact with water (which makes it "receptive" to impurity; Lev. 11:34).

SCALE-DISEASE OR "LEPROSY". "Leprosy" is a conventional but erroneous rendering of Hebrew *zara'at*. The term covers a set of skin lesions in humans that feature scaling of the skin as well as fungal growths in clothes and residential buildings; these are detailed in Lev. 13–14. Skin lesions of human beings generate a most severe impurity (defiling to both sancta and common objects) and can be subdivided: one type is immediately declared as impure, another as pure (including a case where the symptoms appear over the whole body). A third type requires isolation for a week or a fortnight, and if there is no deterioration the bearer is considered pure. Because the scale-diseased person can defile even common objects and persons, he is either restricted within or excluded from the community (Lev. 13:46; Num. 12:14–15). Scale-disease of clothes and buildings always requires isolation of the afflicted entity for a week or a fortnight and only following this period is it decided whether it is pure or not. The purification ritual for persons is carried out by the priest only after healing is complete (hence, the ritual is not curative). It is more

intricate and complicated than for other impure persons, and bears certain similarities to the Azazel (scapegoat) ceremony on the Day of Atonement (Lev. 16:5–11). Impurity is removed by sprinkling a mix of bird blood and water, and then carried away by a live bird. The person bathes, launders, and shaves, waits a week, and then bathes, launders, and shaves again before offering a special sacrifice at the sanctuary. Houses from which *zara'at* has been removed are purified by sprinkling and dispatch of a live bird; fabrics are purified by washing.

In many narrative texts of the Hebrew Bible, *zara'at*, like death, can be deployed as a divine punishment for sin (Ex. 4:6; Num. 12:10–15; Deut. 28:27, 35; II Sam. 3:29; II Kings 5). Nevertheless, the priestly discussion of scale-disease impurity makes no mention of a state of sinfulness, only of ritual impurity preventing contact with sancta. There is slight evidence for a biblical association of scale-disease with death (Num. 12:12, Job 18:13), supporting the claim that biblical impurities arise from substances and conditions associated with procreation and death.

ISSUE FROM THE SEXUAL ORGANS. Emissions of semen, pus, or blood from the genitals of either sex convey ritual impurity. Emissions may be divided into two main classes: normal emissions (discharges of semen from the male and menstrual blood from the female) and abnormal emissions (diseased discharges of non-menstrual blood or pus).

Normal emissions are less severe, conveying impurity only for the period of the discharge itself: one-day for an emitter of semen and (an idealized) seven-days for a menstruant. Semen (the least defiling genital flux) defiles clothing, but since emitters of semen do not convey a secondary impurity, the semen-defiled are restricted only from the sphere of the holy (the sanctuary area and holy items outside the sanctuary such as sacrificial meats). Purification for a semen emitter is achieved by bathing, laundering, and waiting until evening. Sexual intercourse conveys a one-day semen impurity to the female partner as well as the male. This is removed by bathing and waiting until evening. The ritual impurity of a menstruant (*niddah*) is slightly more severe, defiling both persons and objects for one day. The bed and chair of the menstruant are defiled (probably due to the possibility of actual contact with the flux) and can convey a one-day impurity to persons or things by contact. Objects or furniture on which a menstruant sits or lies can convey impurity by contact. Sexual intercourse with a menstruant conveys an equivalent seven-day impurity to the male partner (Lev. 15:24; but Lev. 18:19 prohibits sex with a menstruant). Purification from menstrual impurity does not require a sacrifice; we may deduce that the menstruant bathes and launders on the seventh day and waits until evening although this is not explicitly stated. Lev. 15, which contains the impurity regulations for genital emissions, normalizes and regularizes menstruation on analogy to the emission of semen. These regulations do not banish the menstruant from her home and they contain none of the rhetoric of disgust for menstruation evidenced in other bib-

lical texts (such as Isaiah 30:22 which suggests a practice of physical expulsion for menstruants; or Ezekiel 7:19–20; 36:17) and in ancient literature generally (see Pliny, *The Natural History*, Book VII, chapter 13).

Abnormal emissions convey a more severe form of ritual impurity that resembles in its effect the other severe impurities of *zara'at* and corpse contamination. First, the impurity continues for a period of seven days beyond the time of the discharge itself (similar to the week between healing and purification of scale-disease). Second, the purification ritual, like that prescribed for *zara'at* and corpse contamination, requires sacrificial offerings. Third, the *zav* and *zavah* (male and female with an abnormal emission) are excluded from the sanctuary camp (Num. 5:2–3). The regulations in Leviticus 15, presumably intended for settled habitation, do not include expulsion from the community. The *zav/ah* conveys to a bed, chair, or saddle on which he sits or lies a one-day impurity that can defile other persons or things. Touching a *zav/ah* or being touched by a *zav/ah* with unwashed hands leads to a one-day impurity. The spittle of a *zav* also conveys a one-day impurity. Purification from abnormal genital emission, beginning seven days after the condition has healed, involves bathing in “living water” (*mayyim hayyim*; (Lev. 15:13)), laundering, waiting until evening, and bringing a burnt offering and a purification offering (*hattat*) on the eighth day.

Lochial discharge (genital emissions attending and following the birthing process) also convey ritual impurity. For seven days after the birth of a male and fourteen days after the birth of a female, a woman defiles like a menstruant. For an additional 33 or 66 days (for a male or female child respectively), the mother bears a lesser impurity and is restricted only from contact with sancta, not ordinary objects or persons (presumably sexual intercourse is permitted). The new-born child is not considered impure. Purification from post-partum impurity is not detailed and must be deduced from comparable impurities, but likely included bathing and laundering after both the first and second stages. When the purification period is over, the woman brings a burnt-offering sacrifice and a purification (*hatta't*) sacrifice to the sanctuary (Lev. 12:6–8).

Other permitted ritual defilements occur in the context of the cult when those engaged in certain purification rituals absorb or otherwise incur a one-day impurity.

PURIFICATION FROM PERMITTED (RITUAL) IMPURITIES REGARDING PERSONS AND OBJECTS. Common to all purifications for ritual impurity is the time factor. One must wait until the evening for the lesser degrees of impurity (e.g., Lev. 11:24, 25, 27) and seven days for the greater degrees (e.g., Lev. 12:2). Rituals increase with the severity of the impurity. Thus, ablutions, bathing for persons and washing for objects, are a basic purification rite for all permitted ritual impurities even where not expressly specified. Slightly more severe forms of contact with a source of impurity (carrying rather than mere touching) and impurities lasting longer than one-day also require laundering (Lev. 11:25, 28). Sprinkling, another form of

cleansing, is prescribed for the severe impurities (sprinkling with water and blood for the scale-diseased, with water and the ashes of a red heifer for corpse-defilement). The more severe ritual impurities of abnormal genital emissions and scale-disease require a *hattat* (purification offering) to purify the sanctuary, not the offerer, of impurity generated by his or her condition. (The offerer's personal impurity has been removed by the passage of time and by ablutions following the healing of his or her condition.) On occasion, additional sacrifices are prescribed as appeasements that enable the full reintegration of the offerer (e.g., a burnt offering for the *zav/ah*, Lev. 15:14–15, 29–30). The *asham* offering required of the scale-diseased person is normally brought for cases of sacrilege and may reflect an ancient idea that scale-disease is a punishment for sacrilege.

Objects defiled by contact with a corpse are passed through fire if they can endure it; if not they are immersed in water (Num. 31:19–24). Earthenware vessels cannot be purified but must be broken, as must even stoves and ovens. Various modes of destruction or disposal are prescribed for other impurities that cannot be removed. For example, corpses must be buried outside the settlement, fabrics infected by *zara'at* are burned and *zara'at* infected building materials are deposited in an impure place outside the camp.

Defiled sancta are fully restored with a two-step process of purification followed by reconsecration. Purification rituals also elevate persons to positions of increased access to the sacred. Priests undergo ablutions (washing hands and feet) before serving in the sanctuary and special ablutions attend the high priest's performance of the Yom Kippur ritual. Levites are purified by shaving, laundering, and sprinkling with “waters of purification” (*me hattat*; Num. 8:6–7, 15, 21) before assisting the priests and performing sanctuary labors.

PROHIBITED (MORAL) IMPURITIES AND THEIR PURIFICATION. Leviticus 18, 20, and related texts (most belonging to a set of writings known as the Holiness Code) employ impurity terminology in a moral context. (In addition to the term *tame*, the terms *to'evah* and *hanaf* are used in reference to moral, and not ritual, impurity.) According to these texts, moral impurity arises from the commission of sin and defiles the sinner himself (with a non-removable degradation) and the sanctuary. Unlike ritual impurity, moral impurity is not conveyed to others; it is not subject to rites of purification (such as ablutions). Moral purity of persons can be achieved only by punishment for heinous sins (such as *karet*, the divine penalty of “cutting-off”), atonement for lesser sins, or abstinence from defiling immoral acts in the first instance. Where ritual impurity defiles persons, some objects, and the outer altar of the sanctuary, severe moral impurity defiles the innermost areas of the sanctuary as well as the land. Land that is repeatedly defiled by sexual transgressions will eventually “vomit out” those who dwell upon it, a reference to exile (see Lev. 18:25, 28).

Three classes of heinous moral transgression are singled out as sources of a moral impurity that defiles the land. These transgressions, which incur severe punishment, include various sexual sins, homicide, and idolatry. According to Leviticus 18 and 20, sexual sins such as incest (18:6–18), adultery (18:20), homosexuality (18:22), bestiality (18:23), and intercourse with a menstruant (18:19, 20:18), result in *karet* for the offender and defilement of the land (exposing the community to the danger of expulsion). In other texts, victims of sexual violations incur a personal moral defilement (a non-contagious condition of degradation), as in the case of rape (Gen. 34:5, 13, 27) and incest (Ezek. 22:11). So, too, do those who remarry after an intervening union (Deut. 24:1–4).

Illicit (i.e., non-judicial, non-military) homicide, whether intentional or unintentional, also defiles the land (Num. 35:33–34). The manslayer bears “bloodguilt,” a kind of moral impurity, and his life is forfeit. In cases of murder, the personal defilement of the murderer and the defilement of the land are removed only by the death of the murderer. In instances of accidental homicide, the death of the perpetrator at the hands of the victim’s blood avenger also removes bloodguilt and impurity from the land. However, the accidental manslayer may take refuge in one of five cities designated for this purpose until the death of the high priest, which serves to remove the impurity of the homicide.

Two idolatrous actions are described as defiling in Leviticus (offering a child to Molech in Leviticus 20:2–5 and consulting the dead in Lev. 19:31). However, numerous biblical texts speak of idolatry, idols, and idolatrous utensils more broadly as defiling the worshipper (e.g., Josh. 22:17, Jer. 2:23, Ezek. 20:7, 18, 26, 31), the sanctuary (Jer. 7:30, Ezek. 5:11), and the land (Jer. 2:7–9; Ezek. 36:17–18). Offenders are subject to stoning and the divine penalty of *karet* (cutting off). In many passages, idols and their cultic appurtenances must be destroyed or disposed of (for burning see Ex. 32:20, Deut. 7:5, 25, 11 Kings 10:26; for burying see Gen. 35:4).

In addition to the three classes of heinous sin, lesser transgressions generate a moral impurity that defiles the sanctuary. The defiling effect of these transgressions is calibrated to the sinner’s intentionality (deliberate or inadvertent sin) and the presence or absence of repentance. The sanctuary defilement of inadvertent sins is purged by bringing a *hattat* sacrifice. Repentance reduces deliberate sins to a status equal to that of unintentional sin, allowing the removal of sanctuary defilement by *hattat* also. Brazen, unrepented sins and unintentional sins of which the perpetrator is unaware remain unremedied. Thus, Leviticus 16 describes an annual ritual process designed to purify the sanctuary from the accumulated defilements accruing to it as a result of these trespasses. On the Day of Atonement (or Yom Kippur) a *hattat* sacrifice is brought on behalf of the community. The high priest confesses all of the sins of the Israelites over the head of a goat which is then dispatched into the wilderness.

Although ritual impurities are not sinful, failure to purify oneself from a permitted ritual impurity (e.g., corpse-defile-

ment) is sinful and defiles the sanctuary with a moral impurity. If inadvertent, the situation can be rectified by bringing a *hattat* (purification offering) in addition to the normal purification procedures for the ritual impurity. If deliberate and unrepented, the punishment is *karet*.

The purity requirements for Nazirites and priests are higher than those for ordinary Israelites because of the greater holiness of the former. Thus, while Israelites may become impure from any corpse, priests may not defile themselves by any corpse but that of close kin. The high priest and Nazirite must avoid corpse-defilement altogether. Nazirite contact with a corpse is a sin that defiles the sanctuary. If done inadvertently, a *hattat* must be offered to purify the sanctuary, but if done deliberately the Nazirite is punished with *karet*.

Both ritual and moral impurity appear in biblical sources as real and potent forces. While their sources and modes of transfer differ, they are deemed to have real (albeit different) effects in the world. There are, however, secondary non-literal applications of terms of impurity that should be understood as mere metaphor. For example, “a pure heart” (Jer. 4:14, Ps. 24:4, 51:12, 73:1) and “pure hands” (Gen. 20:5, 11 Sam. 22:21, Ps. 18:21, 25) are clearly metaphors for righteousness while “impure lips” (Isa. 6:5) is a metaphor for impious speech.

GENERAL. Several scholars have stressed the similarity between the laws of purity and impurity in the Bible and those of the ancient Near East, including Egypt, Mesopotamia, and the ancient Hittites. According to Herodotus (1,198), it was customary in Babylon to bathe in water after cohabitation and it was forbidden to touch any utensil prior to this. According to an ancient Babylonian text, a man touching a menstruating woman was unclean for six days. The pig was considered unclean, although it was not considered forbidden food. In Egypt it was forbidden for a man to enter the temple after cohabitation unless he first bathed, and the priests bathed twice daily and twice nightly. The king of Egypt purified himself every morning (cf. Ex. 7:15). Among the Hittites a corpse was considered impure and there is evidence of a detailed ritual for the purification of a mother after giving birth. Despite these significant similarities and the ancient, pre-monotheistic roots for many Israelite purity practices, any effort to understand the purpose and meaning of these practices as systematized by the monotheizing priestly writings in Lev. 12–16 must attend to the larger symbolism of impurity and holiness in those writings. Thus, although Babylonian purity rites are accompanied by healing incantations, it cannot be assumed that biblical purification rites as crafted by the priestly writers are designed to heal, since they occur only *after* the diseased condition (abnormal genital emission, *zara'at*) has already ceased.

In some cultures purity regulations serve as tools of subordination. There is little evidence to suggest that Israelite purity regulations served this function. Ritual impurity is not a permanent or long-lasting stigma applied to certain groups selectively. The biblical system of ritual impurity is imperma-

ment and applies to all Israelites – priests and lay Israelites, men and women.

In the Halakhah

A general concern for ritual purity is attested in the Second Temple Period. Ritual purity was important when handling consecrated food or objects and impurity had restrictive consequences, such as disqualification from eating sacrificial food, or participating in the Passover celebration. Purity observance, however, was important for reasons that extended beyond cultic practice and access. For example, groups like the Essenes and Pharisees voluntarily adopted the purity regulations of priests, striving to eat their food in a state of purity, as part of their quest for holiness. Moreover, strong biblical sanctions attended the failure to purify from severe impurities (e.g., Num. 19:13 threatens those who do not purify from corpse impurity with *karet* or “cutting off”). Finally, the larger Hellenistic milieu was one in which corpse impurity was feared and avoided. In Greek tradition, priests could not attend funerals and were defiled by even looking at a corpse. Houses of the dead contracted impurity and were to be cleansed with sea water. Tombs, bones, and uncovered graves were to be avoided. According to Roman law, corpse impurity traveled along blood lines so that relatives of the dead were defiled even if physically distant. For Jews to observe their own ritual purity laws in such an environment would be rather unremarkable, as evidenced by passages in Philo and Josephus. All of these non-cultic inducements to the observance of purity regulations while the Temple still stood, help explain rabbinic interest in the laws of purity in a post-Temple world.

The *tannaim* continue the biblical distinction between ritual impurity and moral impurity, recognizing that ritual impurity arises from natural, unavoidable and even obligatory circumstances and not from sin. While the biblical laws of ritual impurity and purity are systematized and extended in rabbinic *halakhah* (at least 1/3 of the Mishnah deals with the laws of ritual purity in some fashion), moral impurity and the consequences of sin are matters of moral instruction rather than legal formulation; they are treated in aggadic rather than halakhic texts. (The rabbis expand on the list of morally defiling transgressions, as in *Mekhilta, ba-Hodesh* 9: “anyone who is arrogant causes the land to become impure”).

The following discussion of rabbinic and later halakhic impurity regulations focuses exclusively on the treatment of ritual impurity.

RABBINIC SYSTEMATIZATION OF BIBLICAL IMPURITY REGULATIONS. Twelve complete tractates in the Mishnah and the Tosefta, scores of *mishnayot* in other tractates, and many *beraitot* in the halakhic Midrashim and in the two Talmuds, as well as the studies of *amoraim* connected with them, are devoted to these *halakhot*. The rabbinic authors assume that the biblical regulations are not random, but form a system whose principles can be discerned and extrapolated. Through exacting exegesis, comparison of parallel passages and logical

inference, they fill the gaps in the biblical material and produce a fully elaborated scheme of ritual purity and impurity. For example, as regards purification, rabbinic authors realize that: (1) the requirement of bathing can be assumed even where not specified (supported by such parallels as Lev. 11:39–40, Lev. 17:15, and Lev. 22:5–6); (2) ablutions or immersion of some kind are a minimal purity requirement for any defiled person or object even when not specified; (3) more intense contact with impurity (carrying and eating rather than merely touching a carcass; lying down or eating rather than merely stepping in a *zara'at* afflicted house) necessitates laundering as well as bathing (compare Lev. 11:39–40 with 17:15; Lev. 14:36,46 with 14:47); (4) since more intense contact with impurity necessitates laundering as well as bathing, the requirement to launder assumes the need to bathe even where not specified (supported by such parallels as Num. 19:19 and Num. 31:24); (5) logic demands that females with genital discharges of any description must bathe even where not specified since (a) bathing is required of those they defile and (b) the bathing requirement indicated in the first case of genital discharge discussed in Leviticus 15 (the *zav*) extends to all cases, male and female, subsumed thereunder (see Lev. 15:33); (6) for more severe impurity bearers ablutions remove layers of impurity (supported by Lev. 14:8, Lev. 15:11), a biblical idea that generates the rabbinic category of *tevul yom* – one who has undergone immersion and is awaiting sunset for complete purification. The *tevul yom* is no longer defiling in the common sphere (hence he may reenter the camp; cf. Lev. 14:8) and is a threat only to sancta and food that must be eaten in purity,

The Categories of Impurity. Rabbinic systematization may also be seen in the categorization of the biblical impurities. The ritual impurities mentioned in the Torah (corpses, carcasses, genital emissions, and scale-disease) are regarded in rabbinic texts as “fathers of impurity” (*avot ha-tumah*). Impurity affects persons, vessels, clothing, food, liquid, and, in some cases, beds and chairs. Entities that contract ritual impurity from a father of impurity are called “children” (*yeladot*) or “offspring of impurity” (*toledot ha-tumah*) and are impure in the first degree. These offspring of impurity render only foods and liquids impure in the second degree (BK 2b; Yad, Tumat Met 5:7). In the common sphere the chain of impurity ceases in the second degree, but hands, food and liquid which are impure in the second degree still transmit impurity to dedicated or sacred produce. *Terumah* contracts a third degree impurity but does not transmit impurity further. Sacred produce (*kodoshim*, dedicated to Temple use) can contract a third degree impurity and transmit an impurity to foods and liquids to the fourth degree (Sot. 5:2; Toh. 2:3–5; Yad, Avot ha-Tumah 11:1–4). The exception to this descending series is that which contracts impurity from a corpse, which (based on an ambiguity in Num. 19:22) is deemed by the rabbis to be a father of impurity which is itself able to defile both persons and objects. In order to differentiate the corpse from the corpse-defiled, the corpse itself is called a “father of fathers” (*avi avot*) of im-

purity by Rashi (Pes. 14b, 17a, et al.) and other commentators (R. Samson to Kel. 1:1; Oho. 1:2).

Methods of Contracting Impurity. Corpses and related matter (bones, graves). Rabbinic texts are careful to define and prescribe minimum specifications for corpse matter, graveyards, and bones that convey impurity according to Num. 19:16. They also define the “tent” that conveys the impurity of a corpse reposing within it according to Num. 19:11. The rabbis recognize that the power of a tent in which a corpse reposes to convey impurity lies in its overhang and declare other overhangs capable of conveying impurity (a tree or awning for example). Impurity by overshadowing (Kel. 1:4) is caused whether the corpse or corpse related item (such as a bone) overshadows the person or utensil, these overshadow the corpse, or something a handbreadth wide overshadows both the corpse and the object (Oho. 3:1; Naz. 53b; Maimonides, Yad, Tumat Met 1:10). However, significant limitations of the corpse impurity law are effected by the rabbinic determinations that (1) corpses defile in a vertical direction only and (2) the only items in a corpse-defiled house susceptible to defilement are unsealed vessels, foods, and liquids (interpreting Num. 19:11 in light of Lev 11:32 and Num. 31:20). The latter leniency stands in stark contrast to Qumranic law in which every single item in a corpse-defiled house contracts impurity.

Zara'at Impurity. The rabbinic material pertaining to the scale-diseased person (*mezora*) reveals a desire to reduce the incidence of *zara'at* as far as possible. The rabbinic definition of the disease is narrowed to exclude certain persons (e.g., resident aliens) and places (e.g., Jerusalem in Tosef., Neg. 6:1 and later all of Babylonia in Ket. 77b). Certification of a *mezora* is subject to stringent criteria concerning minimal size, time of examination, location of affliction, and so on. *Zara'at* for garments is limited by excluding all naturally colored or dyed fabrics, and houses are susceptible to *zara'at* only if the original stone or wood is affected (Sifra, Neg. 5:3). An extra week is added to the quarantine period for *zara'at*, and doubtful cases must be decided leniently (in opposition to the general rule that doubts in matters of Torah law are decided stringently; cf. Neg 7:14). That the purpose of these rules is to reduce the incidence of *zara'at* impurities is attested by the pronouncement in Tosefta, *Nega'im* 6:1 that “there never was and never will be a case of a *zara'at* infected house.”

At the same time, the actual impurity of a *mezora* is elaborated in a relatively stringent manner in rabbinic *halakhah*. The biblical text offers very little on the conveyance of impurity by a *mezora*, and the rabbis fill in this gap by comparative exegesis. Thus the *mezora* is said to defile others present in the same house on analogy with the *zara'at* affected house, which defiles its contents. The *mezora's* defilement by overhang is analogized to that of a corpse. Since the spittle and shifting (see below) of the less severely defiled *zav* conveys impurity, the rabbis rule that the spittle and shifting of the more severely defiled scale-diseased person must also convey impurity. Thus

a *mezora* defiles others by touching, shifting, carrying without contact, spitting, and according to *Zav* 5:6, breathing. According to *Niddah* 34, all fluids of a *mezora* are impure. Rabbinic sources also define legal minima for the conveyance of impurity. For example, a scale-diseased person must put his head and the greater part of his body into a house in order to defile by overhang; a person must put his head and the greater part of his body into a house afflicted with *zara'at* in order to contract impurity from it; a *zara'at* diseased garment must be the size of an olive or more to defile a house in which it is put (Neg. 13:8); building materials from a house afflicted by *zara'at* must be the size of an olive or more to convey impurity to humans and vessels by contact, carrying, and overhang (Neg. 13:6; Tosef., Neg. 6:11; Yad, Tumat *Zara'at* 16:1).

The *mezora* is subject to some restrictions. He is not allowed within walled cities, and the Mishnah states that a partition 10 handbreadths high and four cubits wide was made in the synagogue to segregate the *mezora* from other congregants, and he was required to enter first and exit last (Neg. 13:12). The Mishnah shows greater stringency in its treatment of the *mezora* than the *Sifra* or the Babylonian Talmud (the latter declaring that there is no *zara'at* in Babylonia at all). Some aggadic traditions express the older view that *zara'at* is a divine punishment for transgression (Lev R. 15:5, 16:1, 17:3).

Genital Emissions. The rabbinic systematization of impure genital emissions is complex and there are differences among the sources. In general, the semen emitter is distinguished from other dischargers in that the former conveys impurity to persons only through sexual intercourse and not by contact. This is because the semen, and not the semen emitter, is an *av tumah* (the semen emitter being impure in the first degree). The other dischargers are analogized by virtue of their having a flux. While rabbinic texts recognize a hierarchy among the *zav*, *zavah*, *niddah*, and first-stage *yoledet*, they nevertheless equate their potential to defile to a large degree. A unique feature of discharge impurity is the ability of its bearers to defile by pressure (*midras*), based on the attention in Lev. 15 to the impurity of items upon which these persons have sat or lain. Because Lev. 15 specifically mentions seats and beds, the rabbis limit *midras* impurity to items used for sitting or lying (Nid. 49b). However, Lev. 15:10 attributes impurity to “all that is under” (the *zav*), and not merely beds and seats. The rabbis choose to read this verse as attributing impurity to “all that [the *zav*] is under” (a grammatically possible reading), generating the concept of “*maddaf*” (impurity of items located above the *zav*). Although it is not clear what these items are in tannaitic texts, the Babylonian Talmud limits *maddaf* to the bed covering of the *niddah*. *Maddaf* uncleanness is understood to be of rabbinic origin and is considered a light impurity. Persons with a genital discharge also defile by shifting or being shifted (*heset*). *Heset* is when an object is supported or carried by one with a flow without direct contact.

While rabbinic *halakhah* extends the defiling power of bodily discharges by systematic analogizing, there is evidence

of a simultaneous desire to limit impurity. Susceptibility to *midras* impurity by flux-bearers is limited to beds and seats. Earthenware and items that cannot be purified are not considered susceptible to defilement by flux-bearers. In addition, comparison with Qumranic exegesis of the same biblical laws reveals a lenient tendency on the part of the rabbis. At Qumran, all women, not merely menstruants, are excluded from Jerusalem; excrement is also viewed as a defiling discharge, and semen-emitters contract a three-day impurity. Although the reference to “places of impurity” in Mishnah *Niddah* 7:4 may point to a custom in tannaïtic times of isolating menstruants in special places, the practice is not robustly attested in rabbinic *halakhah*. In general, while sectarian exegetes fill scriptural gaps in a stringent manner, creating a purity system that ultimately requires separation and isolation in a desert community, the rabbis fill scriptural gaps in a less stringent manner, enabling observance to continue in the course of everyday existence.

Things susceptible to impurity are Israelites, utensils, food, and drink. Although biblically, a *ger* (gentile resident alien) can contract corpse uncleanness (see Num. 19:10b–14), the rabbis understand the term *ger* to refer to a proselyte, and conclude that only a convert and not a gentile contracts corpse impurity (Naz. 61b; Yad, Tumat Met 1:13). All human corpses convey impurity, but whether a gentile corpse defiles by contact and carrying only (Yev. 61a; Maim. *ibid.*, 1:12) or also by overshadowing (Oho. 18:7) is disputed. All utensils, except those made of stone, unfired clay, or dung, are susceptible to impurity no matter what their shape. Some, however, such as flat wooden or bone utensils, contract impurity by rabbinic law only (Men. 69b; Kel. 11:1; 15:1; Yad, Kelim 1:6, 10). Glass vessels are the subject of a special decree (Shab. 14b, 15a, 16b; Yad, Kelim 1:15). Metal vessels that contact a corpse take on its degree of impurity (based on exegesis of Num. 19:16). Utensils can contract impurity only when they are completed and the sages defined what stage of manufacture marks completion for the different types of vessels. Broken vessels likewise are not susceptible to impurity but some, on being repaired or reassembled, revert by a special rabbinic decree to their original impurity (Shab. 16b).

Purifications. As in the Bible, impurity is removed by sacrifices, immersions or ablutions, waiting for sunset, and in some cases special cultic acts. An individual with a genital discharge counts seven pure days and then has to bathe in living waters, i.e., a spring (Mik. 1:8). A *mezora* whose signs of impurity have disappeared brings two birds that have lived in freedom, and the priest (or in another view, any person) slaughters one over a new earthenware bowl, then takes cedar wood, hyssop, and scarlet wool and binds them together. He then brings the tips of the wings and the tail of the second bird near to them, dips them in the blood and sprinkles it seven times on the back of the hand (and some say also on the forehead) of the *mezora*. After sending away the living bird the priest shaves the *mezora*. After seven days, during which the *mezora* may enter within

the wall of Jerusalem but is still regarded as a “father of impurity,” the priest shaves him a second time and the *mezora* must then wash his garments and bathe (Neg. 14:1–2; Yad, Tumat Zara’at 11:1–2). He who contracts impurity from a corpse is sprinkled on the third and seventh days of his impurity with purification-offering water, and after the sprinkling on the seventh day is obliged to bathe. Bathing alone is sufficient for all others who are impure and can be purified. Wherever bathing is mentioned in connection with those who are impure, except in the case of one with a flux, the bathing takes place in a **mikveh*. The purification of the impure is completed at the going down of the sun (Lev. 22:6–7). On the day the impure individual bathes, he is called a *tevul yom* (immersed that day) and is disqualified from *terumah* and hallowed things. The bathing of the hands for (the eating of) hallowed things also requires a *mikveh*. Otherwise those needing to wash their hands must pour a quarter *log* of water (about a quarter liter) over the hands (see **Ablution*).

The priest who was to burn the red heifer and the high priest who was to serve on the Day of Atonement were separated from their households seven days beforehand and sprinkled with the purification-offering water (Par. 3:1). The duty of every Israelite to purify himself for the festival (Sifra, Shemini 4; RH 16b) is also because of the pilgrimage to the Temple (Yad, Tumat Okhelim 16:10). Immersions are sometimes required even of the ritually pure to mark the transition to a sacred context: “None may enter the Temple court for the service, even though he is pure, until he has immersed himself” (Yoma 3:3; TJ, Yoma 40b). Certain sects habitually immersed themselves even though they were not impure. According to Josephus (Wars, 2, 129), the Essenes used to immerse their bodies in cold water before their communal meals at noon and in the evening. The immersion of the “morning bathers,” too, was unconnected with seminal impurity, but was a regular daily immersion. The Pharisees opposed this custom, and responded to the complaint of the morning bathers that “they mention the Divine Name in the morning without immersion,” to the effect that, “I complain against you morning bathers who mention the Divine Name out of a body in which impurity resides.”

Food. All foods set apart for human consumption can contract impurity, once they are detached from the ground and have been made susceptible through being moistened, to the satisfaction of their owners, by one of the following seven liquids: water, dew, oil, wine, milk, blood, honey (Uk. 3:1; Makhsh. 1:1; 6:4). These liquids themselves also contract impurity (Yad, Tumat Okhelim 1:4 and commentaries), in an even stricter degree than foodstuffs (Par. 8:7; Toh. 2:6; Yad, Avot ha-Tumah 10:10). Liquids are the most potent conveyers of impurity. If defiled by an item, even in the third degree, they contract and convey a first degree impurity.

Fathers of Impurity on the Authority of the Scribes. In addition to the Pentateuchal sources of ritual impurity, the rab-

binic sages ascribed irregular forms of ritual impurity to the *bet ha-peras* (“burial area,” see below), to gentile countries, to idols and related items, and to gentiles. These impurities bear the signs of rabbinic innovation, including controversy over the details, sporadic enforcement, resolution of doubtful cases on the side of leniency, conceptual irregularity, and the use of analogical formulations (“x conveys impurity *like* a menstruant or *like* a corpse”).

Burial Area. A burial area (*bet ha-peras*) is defined as land in which a ploughed-over bone, a lost grave, or burial niches (*kukhim*) may be present. By rabbinic decree, such areas are deemed to be impure by reason of the doubt that attaches to them. These fields have special laws for building, sowing, planting, and impurity removal (Oho. 17:1, 18:1–5; Tosef., Oho. 17:1–2).

Gentile Countries. Gentile lands are decreed by the rabbis to be ritually impure (the decree is attributed in later sources to Yose b. Yoezer and Yose b. Yohanan; see b. Shab. 14b; Tosef., Par. 3:5). In the Mishnah and Tosefta, the juxtaposition of the impurity of gentile lands with the impurity of the *bet ha-peras* indicates that gentile lands were likewise deemed impure because of doubt about the possible presence of bones, corpses, and graves (Tosef., Ahilot 17:6–7, 18:1–5, 14–17, Tosef., Kel. 7:1). In the Hebrew Bible, land is defiled *morally*, by sinful deeds such as idolatry, but not ritually. The few biblical verses that refer to gentile lands as impure (Amos 7:17 and Josh. 22:18) should be understood as references to moral impurity (stemming from the idolatry that occurs there). Thus, the rabbinic decree of *ritual* impurity is a true innovation. The degree to which and the precise manner in which gentile lands convey ritual impurity is not explicit in the halakhic sources (see Maimonides, Yad, Tumat Met 2:16; Rashi, Shah. 14b s.v. *Al ha-Arez*). The conjecture that the purpose of this decree was to discourage emigration from Erez Israel following the persecutions and exterminations in the time of Antiochus has no basis in the sources. The decree did not prevent emigration: not only do we find scholars in Alexandria (Joshua b. Perahya and Judah b. Tabai), but the Mishnah also assumes that people could be in foreign countries legitimately. Frequent contact with various countries and the existence of Jewish settlements outside the land of Israel made the observance of this decree a burden and in consequence it was lightened in various ways (Tosef., Oho. 18:2; Yad, Tumat Met 11:6). The paths taken by the pilgrims from Babylon on their festival pilgrimages, even in gentile lands, were declared pure (Tosef., Oho. 18:3; Yad, Tumat Met 11:12; see Maim. comm. to Oho. 18:7). Gentile towns within the land of Israel (Tosef., *ibid.*, 18:4; Yad. *ibid.*) were also declared free from impurity. Similarly, gentile dwellings are declared to be impure, pending inspection, because of doubt about the possible presence of a buried fetus (Ohal. 18:7–8; see the Temple Scroll, 11 QT 48:11–12, for the sectarian belief that gentiles bury their dead indiscriminately and even in the middle of their houses).

Idols/idolatry. In the Bible, idols and idolatry are strictly prohibited. While idols are strongly associated with moral impurity capable of defiling persons, land, and sanctuary, they are not among the biblical sources of ritual impurity. However, by the rabbinic period, idols and associated items are deemed to be ritually impure and to convey ritual impurity to sacred and profane places, objects, and persons. Rabbinic sources explicitly assert that the ritual impurity of idols and related items is rabbinic rather than from the Torah, as seen by the lack of consensus on the nature and degree of the impurity, the leniency governing the construction of these laws (Shab. 9:1, 11d and b. Shab. 83b), and the use of analogies to express this impurity. Drawing on biblical metaphors, R. Akiva asserts that, like a menstruant, the idol defiles by carriage. The sages, on the other hand, assert that an idol defiles only by physical contact, like a dead creeping thing (Shab 9:1). Elsewhere, the idol is said to defile by overhang like a *mezora* (Tosef., Zav 5:5). The law that one passing under an *asherah* (idolatrous tree) becomes impure (Av. Zar. 3:8) is explained in conformity with this view, i.e., the likely presence of an idolatrous offering beneath it (Av. Zar. 48b).

Gentiles. According to the biblical purity system, all humans are subject to moral impurity arising from certain heinous sins, but only those under the covenant (Israelites and gentiles who join the covenant community) are subject to ritual impurity from the physical states and substances detailed in Lev. 12–15. Rabbinic texts are consistent and unanimous in asserting that biblical law excludes gentiles from the ritual purity system of Lev. 12–15 (Sifra, Zavim 1:1; Sifra, Tazria 1:1). Gentiles neither contract nor communicate ritual impurity through genital emissions (Mik. 8:3–4, Zav. 2:1, 2:3, Nid. 4:3, Ed. 5:1, cf. Tosef., Nid. 5:5, Nid. 7:3); nor are they, their houses or their garments susceptible to scale-disease impurity (Neg. 1:1, 3:1, 7:1, 11:1, 12:1). The consensus of rabbinic texts is that gentiles are also not susceptible to corpse impurity. Nor do gentiles bear an intrinsic ritual impurity, as some scholars have argued, as evidenced by the fact that they may separate *terumah* (Ter. 3:9) and make sacrificial offerings and donations to the sanctuary (Sifra, Emor 7:2, Shek. 7:6, Zev. 4:5, Men. 5:3, 5:6, 6:1 and 9:8). Many rabbinic passages assume commensality of Jews and gentiles without concern for ritual impurity (Ber. 7:1, Av. Zar. 5:5) and others assume other interactions (Shab. 1:9) and even collaboration in the production of wine (a liquid that is very susceptible to defilement; Av. Zar. 4:9–12). The exclusion of gentiles from the Temple rampart is not due to an alleged intrinsic ritual impurity but to a hierarchical gradation of holiness in the sanctuary precincts that determines different degrees of access even for the pure (ranging from pure gentiles who have the least access to pure Israelite women, followed by pure Israelite men, Levites, priests, and finally the high priest who has the most intimate access).

Nevertheless, some rabbinic sources hold that gentiles bear a ritual impurity by rabbinic decree. “Israelites defile by *zav* and not gentiles, but the rabbis decreed concerning them

that they defile like *zavim*” (Sifra, *Zav* 1:1). Later sources suggest that this decree dates to the early first century C.E. All sources agree that the ritual impurity of gentiles is not biblical but rabbinic. Doubtful cases are decided leniently, observance appears to have been sporadic, and the impurity itself is irregular. Specifically, the gentile does not defile like a *zav* in every respect. Scattered traditions assume the gentile can convey impurity by carriage, *hesset*, or *madrās*, but in most instances this statutory impurity is understood to mean that the spittle and urine of a gentile convey impurity (*Zav*. 5:7, *Mak.* 6:6, *Shek.* 8:1, *Toh.* 5:8, *Tosef.*, *Toh.* 5:4, *Mak.* 2:3, *Toh.* 5:2, and *Tosef.*, *Mik.* 6:7). Some scholars believe that the rabbinic decree of statutory impurity for gentiles was a political decree intended to segregate the Jews from Romans and neighboring peoples during the time of the war. However, the mild impurity contracted from the spittle or urine of a gentile would not have been a major inconvenience and would not have prevented interaction between Jews and Romans (as evidenced by many laws regulating everyday transactions with gentiles). The rabbinic position seems lenient when compared with the sectarian rule of bathing after any contact with an alien.

Impurity of Hands. The idea that hands should be washed before contacting sacred items is probably quite ancient. Rabbinic tradition attributes a decree concerning the impurity of hands to Shammai and Hillel (early first century C.E.) (*TJ Shab.* 1:7, 3d; *Shab.* 14b). Despite the Babylonian Talmud’s assertion that Hillel and Shammai were merely extending to *terumah* an older Solomonic regulation requiring hand washing before contact with holy things (in view of the fact that “hands are fidgety” and may be presumed to contact impure things; *Shab.* 15a), the nature and extent of this decree is not clear. Tannaitic sources do refer to hand washing before eating *terumah* (*Sifrei Num.* 116; *Bik.* 2:1). However, in Second Temple times, some Jews strove not only to maintain the purity of priestly food, but also to eat their own ordinary food in a state of purity. Josephus (*Wars* 2:129) relates that the Essenes were wont to bathe before their meal. In non-sectarian circles hand washing was more common. New Testament sources attest to the Pharisaic practice of washing hands before consuming ordinary food (*Mark* 7; *Luke* 11:38; washing the hands before a meal is referred to in *Matthew* 15:2 as a “tradition of the elders.”). In some tannaitic traditions, the impurity of hands is assumed even for ordinary meals (*Ḥag.* 2:5, cf. *TJ Ḥag.* 78b, *Ḥag.* 18b). That Bet Shammai and Bet Hillel are said to have debated the timing of the hand washing rite at ordinary meals, suggests the ritual was accepted practice in the first century C.E. (*Ber.* 8:2; but cf. *Tosef.*, *ibid.* 6 (5):3, and S. Lieberman, *Tosefta ki-Feshutah*, *ad loc.*). However, other tannaitic sources indicate that only the pious considered hands to be impure, even for ordinary food. Thus, one who eats ordinary food in purity is called a *haber*, and one who does not is called an *am ha-arez* (*Tosef.*, *Av. Zar.* 3 (6):10; *Tosef.*, *Dem.* 2:2–3; *Tosef.*, *Dem.* 2:20–22). By eating ordinary food in the same state of purity required for priests who were eating sa-

cred food, Pharisees and *haberim* aspired to a higher level of holiness. Pouring water over the hands before a meal may reflect the influence of a similar ancient Greek custom (*Yad* 1:2 and *Tosef.*, *Yad* 1:12).

In a number of cases, the sages decreed a statutory ritual impurity upon the hands as a protective measure. For example, it was decreed that all sacred writings and *tefillin* with straps render hands impure (*Yad*, *Avot ha-Tumah.*, 3:3–5; and see *Kel.* 15:6). The desire to discourage (mis)handling and storage near food are cited as reasons. Of the sacred writings, “their importance is the cause of their impurity, that they not be made into covers for animals” (*Tosef.*, *Yad* 2:19 and cf. *Shab.* 14a). To prevent the loss of sacred meats, it was said that hands do not render impure in the Temple (*Pes.* 19a–b, *Rashi*; *Yad*, *Avot ha-Tumah* 8:6).

THE CONSEQUENCES OF IMPURITY. The most immediate and direct consequences of ritual impurity attach to the realm of the sacred. According to rabbinic sources, priests in Second Temple times were especially strict about the purity of the Temple. If a dead reptile was found in the Temple “a priest may remove it with his girdle even on the Sabbath” (*Er.* 10:15). “If a priest served [at the altar] in a state of impurity, his fellow priests did not bring him to the *bet din*, but the young priests took him outside the Temple court and split open his brain with clubs” (*Sanh.* 9:6; cf. *Tosef.*, *Kel.* 1:6). In Jerusalem itself, precautions were taken to guard the hallowed things and the priests from impurity. No burials were permitted there, and corpses were not allowed to be kept in the city overnight. In conformity with this view, the biblical requirement to send severe impurity bearers out of the camp was understood as meaning the area of Jerusalem and the Temple Mount (*Kel.* 1:8–9; *Sifre Num.* 1). The *mezora* was sent out of walled cities only (*Kel.* 1:7) but “they may go throughout the land” (*Sifrei Zuta* to 5:2). Impure persons were expected to take care not to impart impurity to the people of Jerusalem and lenient rulings made it possible for pilgrims to maintain purity during pilgrimage festivals (e.g., *Shek.* 8:1: “any spittle found in Jerusalem may be deemed free from impurity excepting what is found in the upper market” frequented by gentiles). The verse (*Lev.* 11:8): “of their flesh you shall not eat, and their carcasses you shall not touch; they are impure for you,” directed to all Israel, is explained as referring only to the time of the festivals (*Sifra*, *Shemini* 4, 9; *RH* 16b), “since they must be ready to enter the Temple and eat of the hallowed things” (*Yad*, *Tumat Okhelim* 16:10).

Nevertheless, there is considerable evidence that impurity was deemed to have consequences outside the Temple context, though to what extent is unclear. Certainly, the *haber* was obliged to undertake “to eat [even] common food in purity” (*Tosef.*, *Dem.* 2:2). This *halakhah* might be regarded as merely the custom of individuals who were strict with themselves, something like the report of Johanan b. Gudgada that “he always ate [even common food] in accordance with the purity of hallowed things” (*Ḥag.* 2:7; cf. *Tosef.*, *Ḥag.* 3:2–3). On

the other hand, some sources teach the *halakhot* of common food purity with no differentiation between *haverim* and others (Hul. 2:5; Tosef., Ber. 6:2–4; et al.). The prohibition against causing impurity to common food in the land of Israel is also taught as incumbent upon all people (Tosef., Maksh. 3:7). In addition to their impact on the eating of common food, certain impurities had an effect in regard to prayer (Ber. 3:4–6; Ter. 1:6). The prohibition against praying where there is corpse impurity is inferred from the *baraita*, “If he were busy with a dead body in a grave and the time of reading the *Shema* arrives, he removes himself to a pure place, puts on *tefillin*, reads the *Shema* and says his prayers” (TJ, Bet. 2:3, 4c). The practice of bathing after sexual intercourse and before Torah study mentioned in some rabbinic sources has been mistakenly interpreted as a ritual purity requirement. However, there is no blanket prohibition against studying Torah in a state of ritual impurity. Tosef., Ber. 2:13 states explicitly that severe impurity bearers are not prohibited from Torah study: “males and females who have an abnormal genital discharge, menstruants, and women after childbirth are permitted to read the Torah, and to study Mishnah and Midrash, *halakhot* and *aggadot*, but men who have had an emission of semen may not” (Tosef., Ber. 2:13). The prohibition of the semen emitter and the Palestinian practice of immersion after sex and before Torah study is linked to a perceived incompatibility between sexuality and holy activity (TJ, Ber. 3:4, 6c; Ber. 22a states that the requirement of immersion is to ensure that scholars do not frequent their wives like roosters). Some sages in the land of Israel were so meticulously careful to comply with bathing before their learning, that Ḥanina, who came from Babylon, ridiculed them with the title “morning bathers” (TJ, *ibid.*). In the Babylonian Talmud the practice of immersion after sex and before Torah study was abolished. During the geonic era it was considered a point of difference between Erez Israel and Babylon (M. Margalioth, *Ha-Hillukim she-Bein Anshei Mizrah u-Venei Erez Yisrael*, pp. 78 and 108ff.). The view attributed to R. Judah ben Bathyra, that “the words of Torah are not susceptible to impurity,” (b. Ber 21b) was eventually normative in this respect. As regards menstruants, however, more restrictive views prevailed and in a later period some local customs included prohibitions against menstruants praying or entering the synagogue or being present as blessings are recited (see the late source *Baraita de-Messekhta Niddah*, ed. Horowitz pp. 3 and 17; and see **Baraita de-Niddah*; **Niddah*). Such extensions of the laws of impurity and purity liken prayers to Temple sacrifices, and extend the sanctity of the priesthood to all Israel.

Despite such extensions, some maintain that the laws of impurity and purity have no relevant consequences of any substance except for priests and the affairs of the Temple and its hallowed things. This view has been summarized in the words of Maimonides (Yad, Tumat Okhelim 16:8–9): “Whatever is written in the Torah and in traditional teaching about the laws relating to things impure and pure is relevant only to the Temple and its hallowed things and to heave-offering and second tithe, for it warns those impure against entering

the Temple or eating anything hallowed, or heave-offering, or tithe. However, no such prohibition applies to common food, and it is permitted to eat common food that is impure and to drink impure liquids.... Similarly, it is permissible to touch things that are impure and to incur impurity from them, for Scripture warns none but the sons of Aaron and the Nazirite against incurring impurity from a corpse, thereby implying that for all others it is permissible, and that even for priests and Nazirites it is permissible to incur impurity from other impure things, but not from a corpse.”

REASONS FOR PURITY AND IMPURITY. There is not a great deal of discussion of the reasons for purity and impurity in rabbinic literature. It is certain that the rabbis did not regard the impurities as infectious diseases or the laws of purification as quasi-hygienic principles. In a late narrative Johanan b. Zakkai is described as denying any efficacy to impurity and rites of purification: “By your lives! The corpse does not cause impurity, nor do the waters purify, but it is a decree of the Supreme King of Kings” (*Pesikta de-Rav Kahana* 40a–b). Ritual purity is a religious ideal. It is said of the patriarch Abraham that he ate common food in purity (BM 87a). In describing the ideal era of the time of King Hezekiah, Isaac Nappaḥa says, “Search was made ... from Gabbat to Antipris and no boy or girl, man or woman, was found who was not well versed in the laws of impurity and purity” (Sanh. 94b). In Avodah Zarah 20b, purity is listed as one of the grades on the path to holiness.

Impurity and Purity at the Present Time.

The cessation of most of the laws of impurity and purity in the contemporary era is the consequence of a prolonged process, which is only in part connected with the destruction of the Temple. Already in rabbinic times, the laws of *zara'at* in houses was weakening and even in the laws concerning the *mezora* a clear trend to limit and lighten their impact is noticeable (Neg. 3:1–2; 5:1; “Any condition of doubt in leprous signs is deemed pure,” in opposition to the rule: “Doubts in Torah law are decided stringently”; cf. 7:4). The law that when a *mezora* enters the synagogue “they must make for him a partition ten handbreadths high and four cubits wide; he must enter first and come out last” (Neg. 13:12 and cf. Tosef., Neg. 8:2) is not directed especially to the era of the Temple. The laws of scale-disease were not in force in Babylon in the geonic era, as can be inferred from the summary of an unknown *gaon*: “Nowadays if a disciple or scholar is *mezora*, he is not thrust forth from the synagogue or *bet midrash*, for there is not now the law that thy camp shall be holy” (*Sha'arei Teshuvah*, no. 176 and S. Assaf (ed.), *Teshuvot ha-Ge'onim* (1942), 123). Although immersion after sex and before learning was abolished in the Babylonian Talmud, the *geonim* in Babylon, under the influence of Muslims who were accustomed to bathe before every prayer, were also strict “because of cleanliness and in order to sanctify the Name before gentiles” (*Sha'arei Teshuvah*, no. 298). It became “the common custom in Shinar and Spain that none from whom semen issues prays before washing his

whole body in water” (Yad, Tefillah 4:6). The custom was not followed in Christian Europe “and all Jews among the uncircumcised are not accustomed to wash” (*Teshuvot ha-Ramban* (Leipzig, 1859), no. 140; see Tur, OH 88 and 613). Some were strict, however, even in those countries, and required bathing at least for the reader and the priest reciting the priestly blessing (Resp., Maharam of Rothenberg (Berlin, 1841), 137). The ḥasidim reintroduced the duty of bathing for one from whom semen issues (see *Ablution). For various reasons, including the biblical prohibition against intercourse with a menstruant, halakhic prohibitions and practices designed to preserve men from contracting ritual impurity from their menstruating and post-partum wives, have continued in traditional Judaism (see *Niddah). This is the only element of the biblical ritual purity system that retains serious contemporary relevance.

Purification from corpse impurity was possible as long as purification-offering water prepared from the ashes of a red heifer was available. Mishnah Parah 3:5 claims that some red heifers were burnt in Second Temple times. Some of the ashes of the red heifer were distributed to each of the priestly courses (*mishmarot* – Par. 3:11) and Israelites were sprinkled with it (Tosef., *ibid.*, 3:14). In Galilee there may have been purification-offering water even in the time of the *amoraim* (Nid. 6b; see also Tj Ber. 6, 10a). With the cessation of purification-offering water, all Israel are assumed to have incurred corpse impurity. Priests are forbidden to contract corpse impurity even today (Sh. Ar., YD 369), but even so they are not pure, since they cannot guard against impurity from a metal utensil overshadowed by a corpse (see comm. Samson of Sens to Hül. 4:8). These facts have consequences also in the laws of *terumah* and *hallah* (*ibid.*; Sh. Ar., YD 322:4), and are the reason for the prohibition against entering the Temple area even nowadays (*Yere'im ha-Shalem*, no. 297; *Magen Avraham* to Sh. Ar., OH 561:2).

PUT (Heb. פּוּט), one of the sons of Ham, son of Noah. In the Table of Nations, Put is mentioned, along with Cush, Egypt, and Canaan (Gen. 10:6; 1 Chron. 1:8). However, whereas the genealogies of the other three are recorded, nothing further is said of Put. However, the people is mentioned several times in the prophetic literature. Referring to the impending conquest of Egypt by Nebuchadnezzar, Jeremiah mentions the “men of Cush and Put, who handle the shield, men of Lud, skilled in handling the bow” (Jer. 46:9). Ezekiel mentions Put along with Persia and Lud as serving in the army of Tyre (Ezek. 27:10). In his prophecy against Egypt, he cites Put, together with Ethiopia (Cush), Lud, Arabia, and Cub (Gr. Libya), as doomed to

fall by the sword (Ezek. 30:5), and in his oracle against Gog, he again places Put alongside Persia and Cush (Ezek. 38:5). From the passages cited the exact identity of Put cannot be decided, but an African location is strongly suggested. In all the prophetic passages cited above, except Ezekiel 30:5, the Septuagint translates Put by “Libyans.” It would seem then that Put was identified with Libya or possibly some neighboring area such as Cyrene.

PUTIEL (Heb. פּוּטִיֵּאל). The name Putiel occurs only once in the Bible (Ex. 6:25), where it is stated that Eleazar the son of Aaron married one of Putiel’s daughters, and that their son was Phinehas.

The rabbis identify Putiel with Jethro and give two homiletical interpretations of the name, one praiseworthy and the other derogatory. The first one, connected with the view that he became converted to Judaism, is that he “emancipated” (*patar*) himself from idolatry (Mekh., Amalek 1) and the other that he fattened (*pittem*) calves for the purpose of idolatrous worship. The same passage, however, also makes it refer to Joseph, who overcame (*pitpet*) his passion, and concludes that Phinehas was descended from both (Sot. 43a). It has been suggested that Putiel is in fact a Hebraized version of Poti-Phera, the “priest of On” whose daughter Joseph married (Gen. 41:45), “ph” being the definite article in Egyptian, and Ra the Egyptian god.

PUTNAM, HILARY (1926–), U.S. scholar. Born in Chicago, Putnam is the son of Samuel Putnam, a writer and translator. Hilary Putnam received his bachelor’s degree from the University of Pennsylvania in 1948 and his Ph.D. from the University of California at Los Angeles in 1951. He was a Rockefeller Foundation research fellow in 1951 and 1952.

From 1952 to 1953 Putnam taught at Northwestern University as an instructor in philosophy, then joined the faculty of Princeton University as an assistant professor, becoming an associate professor in 1960. From 1961 to 1965 he was a professor of philosophy at the Massachusetts Institute of Technology.

In 1965 Putnam became a professor of philosophy at Harvard. He was named the Walter Beverly Pearson Professor of Modern Mathematics and Mathematical Logic in 1976. In 1995 he was appointed the Cogan University Professor in the department of philosophy; he became professor emeritus in 2000.

Putnam wrote extensively on the philosophy of mathematics, the philosophy of natural science, the philosophy of language, and the philosophy of mind. His many notable works include *Philosophy of Logic* (1971); *Meaning and the Moral Sciences* (1978); *The Many Faces of Realism* (1987); and

Realism with a Human Face (1990). In the philosophy of mathematics, Putnam advanced the view that mathematics does not use only strictly logical proofs but “quasi-empirical” methods, and he contributed to the resolution of Hilbert’s tenth problem. In the philosophy of language, Putnam addressed external, as opposed to inherent, meaning. His work on the philosophy of mind has evolved through an early embrace of functionalism, which he later recanted.

Putnam was actively involved in the antiwar movement of the Vietnam era and for a time was a member of the Progressive Labor Party (PLP), a left-wing political organization. He received numerous awards and honors. He was a fellow of the National Science Foundation (1957 and 1968–69), a Guggenheim Foundation fellow (1960), and a fellow of the National Endowment for the Humanities (1975–76). He was a fellow of the American Academy of Arts and Sciences and a president of the American Philosophical Association.

PUTTERMAN, DAVID (1903–1979), U.S. cantor. Born in New York, Putterman was one of the first American-trained cantors to establish a reputation for himself. In his youth he sang and studied with the leading cantors of the time, including Zeidel Rovner (Jacob Samuel *Morogowsky) and Josef *Rosenblatt. From 1921 to 1933 he was cantor of Temple Israel, Washington Heights, New York, and then moved to the Park Avenue Synagogue. He had a pleasing tenor voice and was a popular soloist in concert and radio programs. Putterman strove to interest Jewish and non-Jewish composers alike in composing for the synagogue, and commissioned a series of “Services of Contemporary Liturgical Music.” An anthology of 38 of these works, *Synagogue Music by Contemporary Composers*, was published in 1951 and includes compositions by Leonard *Bernstein, Darius *Milhaud, Morton Gould, Kurt *Weill, Mario *Castelnuovo-Tedesco, Alexander Gretchaninoff, Roy Harris, and the African-American composer William Grant Still. Putterman was also instrumental in the establishment of the Cantors Assembly of the United Synagogue of America and the Cantors Institute of the Jewish Theological Seminary.

[David M.L. Olivestone]

In 1979 the Cantor’s Assembly of New York issued *Mizmor le-David*, containing compositions by Putterman which he sang during his 43 years (1933–76) as cantor to the Park Avenue synagogue.

PUY (-EN-VELAY), LE, town in the department of Haute-Loire, S. France. The Jewish quarter of Le Puy, on the site of the Rue de la Juiverie, is first mentioned in 1212. There is no other information available on the early medieval community there. Following the return of the Jews to the kingdom in 1315

after the expulsion of 1306, a Jew of Le Puy was accused in 1320 of having killed a chorister of the church of Notre-Dame, the murder having been revealed by a miracle. The accused was murdered by the populace, and the other Jews were banished from Le Puy. In 1325 Charles IV granted the choristers of Le Puy the jurisdiction over any Jew found within the town.

PYE (Mendez), JAEL HENRIETTA (c. 1737–1782), English writer. Apparently the daughter of a wealthy London merchant named Mendez and the niece of Moses *Mendez (c. 1690–1788), the playwright and poet, in 1762 she married John Neil Campbell, a barrister, and, in 1766, Robert Hampden Pye, the son of a member of Parliament and the brother of the Poet Laureate Henry Pye. Her anonymous book of verse, *Poems. By a Lady* (1767), and her novel, *Theodosius and Arabella* (1768), are the earliest recorded contributions of a Jewess to English literature. She lived much of her life in France, where she died.

PYRRHUS, DIDACUS (originally **Diogo Pires**; also known as **Pyrrhus Lusitanus** and, from his birthplace, Évora, as **Flavius Eborensis**; 1517–1607), Portuguese Marrano poet. He is not to be confused with the more famous Diogo Pires (Solomon *Molcho) who was martyred in 1532. In order to escape the Portuguese Inquisition, Pyrrhus left Évora for Salamanca in Spain, where he began to study medicine in 1535 and eventually qualified as a physician. His movements during the following two decades are relatively confused, but he is known to have fled to Antwerp in about 1540. From there he made his way to Venice and Ferrara, and then lived for a time in Ancona; but the persecution of the local Marrano colony in 1555 obliged him to take refuge in the Dalmatian town of Ragusa (Dubrovnik), where he formally reverted to Judaism under the name of Isaiah Kohen. Pyrrhus, who had first achieved literary distinction with his volume of *Carmina* (Ferrara, 1545), spent about 50 years of his life in Ragusa, then a center of Neo-Latin poetic culture, and was mainly active as a teacher and writer. According to some authorities, Pyrrhus made a pilgrimage to Jerusalem in his last years before returning to Ragusa, where he died.

He published two humanistic works in praise of his new home: *De illustribus familiis quae hodie Rhacusae exstant* (Venice, 1582; 1709²) and *Excerpta ex Flavii Jacob Eborensis Carminibus ad Historiam Sacram Rachusinam aliquo modo facientibus* (1596); *Cato Minor* (Venice, 1592), moralizing verse for children; and *Jacobi Flavii Eborensis seu Didaci Pirrhi Lusitani Elegiarum Libri Tres...* (Venice, 1596). Pyrrhus ranks among the outstanding Neo-Latin poets of the Renaissance. One of his rare works of Jewish interest was a Latin elegy composed

for the tombstone of *Amatus Lusitanus in Salonika, but unfortunately no trace of it survives.

°**PYTHAGORAS** (late sixth century B.C.E. (?)), Greek philosopher. Pythagoras founded a religious community incorporating strict rules of ritual and ethical purity. This perhaps led ancient Jewish, Christian, and pagan authors to claim that he owed his theories to the Jews and other Eastern peoples with whose teachers he had studied during his travels. The idea seems to have originated with *Hermippus of Smyrna

(late third century B.C.E.), who only referred to the Jews. The idea that Greek philosophers were indebted to the East for their views was popular in Hellenistic times. Conversely, it has been suggested by Levy that the legends surrounding the life of Pythagoras influenced the account of Moses' life found in *Philo and *Josephus. Influence of the Pythagorean brotherhood on the Essenes and on the Dead Sea Sect have likewise been postulated. The five-pointed star found on some Pythagorean coins and in some Jewish inscriptions probably derives from a common Babylonian source.

QA-QU

QAL'AT HAMMĀD, city formerly situated S.W. of *Constantine, *Algeria. It was founded in 1007 by a branch of the *Zirids (Banu Zīrī) who reigned in *Kairouan. Its population included Christians, Jews, and members of the Jerāwa tribe, *Berbers formerly converted to Judaism. Qal'at Hammād received the majority of the inhabitants of Kairouan when that city was sacked by Arab nomads in 1057, and it inherited the importance of the former metropolis. As capital of a vast kingdom in the 11th century, it possessed a Jewish elite among whom was Solomon ha-Dayyan b. Formash. Abraham *Ibn Daud knew of Solomon and also reported the tradition which stated that Isaac *Alfasi was born in Qal'at

Ḥammād. The city was completely destroyed by the *Almohads in 1152.

[David Corcos]

QAŞR IBN HUBAYRAH (Kasr ibn Hubayrah), town that was situated south of the ruins of ancient Babylon, west of the Euphrates (i.e., then its eastern arm, which was known as the Sura River). Qaşr ibn Hubayrah was founded by Omar ibn Hubayrah, the last governor of Babylonia appointed by the

*Umayyad caliphs; the town bears his name. A report by the Arab geographer al-Muqaddasī, dating from the end of the tenth century, states that Qaṣr ibn Hubayrah had a large Jewish community. According to *Nathan ha-Bavli, it was the original home of *David b. Zakkai, the *exilarch who had a bitter controversy with R. *Saadia Gaon. At the beginning of the 12th century, when the town of *Hilla was founded and became a transit point for the district's caravans and its trade center, Qaṣr ibn Hubayrah lost its importance and eventually fell into a state of ruin.

[Eliyahu Ashtor]

QAYNUQĀ', BANŪ, a large, strong Jewish tribe in *Medina (pre-Islamic Yathrib) that became famous in Islamic historiography through its conflict with *Muhammad in the battle of Bu'āth several years before Muhammad's arrival at Medina. The Qaynuqā' fought against the other two large Jewish tribes of Medina, *Naḍir and *Qurayza. Before *Islam the market of the Qaynuqā' was the central market of Medina. But when Muhammad attempted to gain a foothold there, it was the Naḍir leader *Ka'b ibn al-Ashraf who prevented him from doing so. The Qaynuqā' were goldsmiths; their *bayt al-midrās* was located in their town, al-Quff. They owned at least two fortresses as well as an unknown number of date orchards (*amwāl*, sing. *māl*) that were seized by Muhammad. Unlike the Naḍir and Qurayza', the Qaynuqā' did not own large agricultural lands.

The Qaynuqā' lived in the *Sāfila* of Medina or Lower Medina, close to Muhammad's first territorial basis. Consequently, when the conflict between Muhammad and the Jews began, they found themselves in a precarious situation, the more so since they were allied with the strong Arab tribe of Khazraj that was far more loyal to Muhammad than the other large Arab tribe, the Aws. The sources provide a variety of reasons for Muhammad's attack on the Qaynuqā' where one good reason would have sufficed. But one has to bear in mind that Muhammad's biography is not only a history book and that for its compilers justification of Muhammad's actions was at least as important as historical fact. The fall of the Qaynuqā' is connected to internal Arab tribal politics. Qaynuqā's allies from among the Khazraj were the 'Awf ibn al-Khazraj, who were divided into two subsections led respectively by 'Abdallāh ibn Ubayy and 'Ubāda ibn al-Ṣāmit. 'Abdallāh, arguably the strongest Arab leader in Medina before Muhammad's arrival, was steadfast in his support of his Jewish allies, reportedly reasoning that he feared that the Jews might gain the upper hand over Muhammad. 'Ubāda, who was younger, repudiated his alliance with them. This left them exposed to Muhammad's attack, because internecine fighting within the 'Awf over the alliance with the Qaynuqā' would have been inconceivable. However, Ibn Ubayy managed to prevent the execution of the Qaynuqā' men, literally compelling Muhammad to let them go into exile. The many weapons found in their fortress included

some fine items that are often listed among Muhammad's own weapons. One of them was a coat of mail called al-Sughdiyya or "the Soghdian" that had belonged to 'Ukayr al-Qaynuqā'; allegedly it had been carried by David when he killed Goliath. With regard to the expulsion of the Qaynuqā', Muhammad's biography is probably not nuanced enough, since there are indications that a significant number of them lived in Medina after the supposed expulsion of the whole tribe. One assumes that part of the Qaynuqā', perhaps even a whole subsection, was not expelled. Jews from the Qaynuqā' participated in Muhammad's expedition against Khaybar in 7/628, receiving a modest share of the spoils. In due course they converted to Islam, although some of them were branded hypocrites who had embraced Islam outwardly only.

QAZZĀZ, MANASSEH BEN ABRAHAM IBN (AL-) (tenth century, also known as **Menashe b. al-Farrar**), Jewish silk trader and governor in *Damascus from 990 to 996. In the year 980 he engaged in administering Ya'qūb ibn Kilis' property. He must have played a leading part in the military administration of Syria. Al-Qazzāz was appointed by the *Fatimid caliph al-'Azīz (975–96) as deputy to the Coptic Christian vizier 'Īsā b. Nestorius (995–96), whose seat was in Cairo. These two high officials made use of their positions for the benefit of their coreligionists. The discontented Muslims complained to the caliph, and he imprisoned the two officials and their subordinates. After some time the Christian vizier was reinstated. The fate of al-Qazzāz is unknown. A poem discovered in the *genizah* praises his son, 'Adiya (d. after 1037). It describes the exalted position of Manasseh and his activities, including his support of the Palestinian *geonim* and the exilarchs. Another source mentions that he was one of the opponents of the Jerusalem *gaon* R. *Salomon b. Judah. Al-Qazzāz' son 'Adiya, who also held an important position in Damascus and protected his coreligionists, was employed as government secretary (*kātib*). 'Adiya's sons Samuel and Ishmael held the position of **nagid*.

QITTNER, ZSIGMOND (1857–1918), Hungarian architect. After studying in Munich and traveling in three continents he settled down in Budapest. In collaboration with L. and J. *Vago he designed the Gresham Palace for an English insurance company (1907), a landmark in Budapest and an example of

early Secessionism. Among other public appointments he was also president of the Association of Hungarian Architects.

[Eva Kondor]

°**QUADRATUS, UMMIDIUS CAIUS**, Roman governor of *Syria (50–60 C.E.). During the administration of Quadratus a series of disturbances erupted between the Jews and Samaritans of Palestine. *Cumanus, the Roman procurator of Judea at the time, was unable to cope with the situation, and the leaders of both camps presented their arguments before the Syrian governor at Tyre. Whereas the Samaritans accused Jewish bands of sacking their villages and thus taking the law into their own hands, the Jewish delegation, including the high priest J *Jonathan b. Anan, alleged that Cumanus had been bribed by the Samaritans to ignore the murder of Jewish pilgrims on their way to Jerusalem through Samaritan territory. According to Josephus, Quadratus at first deferred judgment. He subsequently proceeded to Caesarea where he crucified the prisoners taken by Cumanus from both sides. From there he went to Lydda and granted a second hearing to the Samaritan case. As a result of this, several Jews, including Doetus, were executed for their part in the rising. Numerous Samaritan and Jewish dignitaries, among them the high priest *Ananias, were ordered to appear before the emperor Claudius and account for their actions. Quadratus then left for Jerusalem, found the people peaceably celebrating Passover and returned to Antioch (52 C.E.).

[Isaiah Gafni]

QUAIL (Heb. **לָרְוֵי**), the bird *Coturnix coturnix*, the smallest of the pheasant family. The quail is approximately seven inches (about 18 cm.) long and weighs some 3½ ounces (100 gr.). The color of its plumage is like that of the house sparrow, a fact indicated in the Talmud, which also states that the quail is one of four species of pheasant (the other being the *pheasant and two species of *partridge), that its flesh is very fatty and its taste inferior to that of the other species (Yoma 75b). Large flocks of quail provided food for the Israelites in the wilderness having been blown across the sea by a wind which “let them fall by the camp, about a day’s journey on this side, and a day’s journey on the other side, round about the camp, and about two cubits above the face of the earth.” Some were eaten fresh, the rest being spread out on the ground to dry in the sun (Num. 11:31–33; cf. Ex. 16:3–4; Ps. 78:26–27; 105:40). According to Josephus, flocks of quails from the Arabian gulf “came flying over this stretch of sea, and, alike wearied by their flight and withal accustomed more than other birds to skim the ground, settled in the Hebrews’ camp” (Ant. 3:25). This description is factual. The phenomenon repeats itself in spring and in fall when large flocks of quail pass over the Mediterranean Sea on their migration from northern countries to Africa in fall and on their return in spring. Weary from their lengthy flight, the flocks settle on the southern coast of the country (between

Gaza and El-Arish), to be caught in nets spread out before they settle, into which they fall exhausted. The local population eats them, selling most of them in city markets. Until the 1930s and 1940s millions of quails were caught in this way at these seasons but their number has since decreased. In addition to the migratory flocks of quails, some of them breed in cereal and fodder fields in various regions of Israel, building their nests on the ground. Their grayish-brown color conceals them from human sight and only when approached do they rise in noisy flight, coming to rest in a nearby field, since their comparatively short wings make it difficult for them to fly high.

[Jehuda Feliks]

°**QUARESMIUS, FRANCISCUS**, a 17th-century Franciscan friar. Quaresmius was born at Lodi, Italy, and from 1619 to 1626 was custodian and apostolic commissary for the Holy Land. He later served as the general procurator of the Franciscan Order and from 1637 as custodian of St. Angelo, Milano.

He was the author of two folio volumes *Elucidatio Terrae Sanctae historica, theologica et moralis* (1639) which contain the most complete survey of the remains and legends of the Holy Land as accepted in Catholic circles. Quaresmius painstakingly copied inscriptions and used the archives of the Mt. Zion monastery for his description of the traditions and monastic institutions of 17th-century Palestine.

[Michael Avi-Yonah]

QUASTEL, JUDAH HIRSCH (1899–1987), British biochemist. Quastel, born in Sheffield, was a fellow of Trinity College, Cambridge (1924). Quastel was a descendant of Solomon Judah Leib *Rapoport (Shir). He was director of research at the Cardiff City Mental Hospital from 1929 to 1941, and director of the soil metabolism unit of the Agricultural Research Council from 1941 to 1947. In 1947 he went to Canada to become professor of biochemistry at McGill University and director of the McGill-Montreal General Hospital Research Institute. In 1966 he became professor of neurochemistry and biochemistry at the University of British Columbia, Vancouver. Quastel is recognized as a founder of modern neurochemistry. His fields of research were the chemistry of enzymes, microorganisms and soils, phytochemistry, and the biochemistry of mental disorders. In 1970 he was made a Companion of the Order of Canada (COC), Canada’s highest decoration. In 1974 he was the recipient of the Gairdner International Award for Medical Research, and from 1976 to 1977 was visiting professor at the National Hospital for Nervous Diseases, London, and in 1979 was appointed honorary president of the International Congress of Biochemistry, Canada.

He was editor and coauthor of *Neurochemistry* (1955, 1962²), *Methods in Medical Research*, vols. 8–9 (1960–61), *Metabolic Inhibitors*, vols. 1–2 (1963–64), vol. 3 (1972) and vol. 4 (1973), and coauthor of *The Chemistry of Brain Metabolism in*

Health and Disease (1961). Quastel was a fellow of the British Royal Society and of the Royal Society of Canada, and president of the Canadian Biochemical Society. He was on the Board of Governors of The Hebrew University of Jerusalem from 1950 and honorary secretary of the Canadian Friends of The Hebrew University for 19 years.

[Samuel Aaron Miller]

QUE, the Assyrian (*Quwe*) and biblical Hebrew (קְוֵה, קְוֵה), name of Cilicia, the classical name of the Mediterranean littoral south of the Taurus Mountains in Turkey, from Paphlagonia in the west to the Amanos Mountains in the east. At its eastern end, this littoral broadens into a fertile valley watered by the rivers Pyramus (Ceyhan), Sarus (Seyhan), and Cydnus (Tarsus); this portion was known in classical times as *Cilicia Pedias* or *Campestris*, or simply *Cilicia* proper, to the Egyptians as *Kode* or *Qedi*, to the Hittites as *Kizzuwatna* (*Kizwatna*), and to the neo-Babylonians as *Ḥume*. According to some Egyptologists, the western portion of Cilicia (*Cilicia Aspera* or *Tracheia*) was called *Keftiu* (the biblical Caphtor), though this name is more generally held to designate Crete and perhaps the Aegean coasts as well. The name Cilicia is probably derived from that of the Ḥilakkû people who were the dominant ethnic group in the neo-Assyrian period (as identified by Herodotus). Like much of the surrounding littoral, Que was an important link in the trade routes of the ancient Near East and subject to influences, by land and sea, from all its neighboring cultures (see below).

Political History

The political history of Que begins in about 1650 B.C.E. Kizzuwatna, eastern Que, was clearly under Hittite control, for Ḥattušili I and Muršili I, the outstanding Old Hittite kings, seem to have moved freely down the Pyramus River (Hittite *Purna*) on their campaigns into Syria. However, with the death of Muršili about 1590 B.C.E., the Hurrians asserted themselves in Que, as elsewhere, and Que enjoyed two precarious centuries of independence. The first attested king of Que, Išputaḥšu, son of Paria-watri, is known both from his own inscription and from a Hittite record. His bilingual bull from Tarsus proclaims him a “great king.” In the time of Arnuwanda I (c. 1440–1420 B.C.E.), Kizzuwatna even expanded beyond the borders of Que as far east as Uršu and Wašukanni (see *Hittites). However, the increasing power of the new Hittite Empire and the rise of rival Hurrian states, particularly Mitanni, soon put an end to these pretensions.

An interesting light is thrown on western Que at this time. Texts from *Ugarit in the 14th and 13th centuries mention a number of merchants from Ura, the capital of the later Pirindu (see below). One in particular regulated their status at Ugarit, where they apparently enjoyed “extra-territorial” rights under Hittite protection.

Que After Hittite Times

With the collapse of the Hittite Empire under the onslaught of the Sea Peoples (c. 1200 B.C.E.), Que too was plunged into

obscurity. It is conceivable that as the remnants of Hittite culture and population sought refuge in northern Syria, those of Kizzuwatna migrated into Anatolia, and that the later name Katpat-uka (Cappadocia) preserves the ancient tribal name of Kizwatna. Que-Cilicia (or better, a part of it) reemerged into history at first through biblical sources. 1 Kings 10:28 and 11 Chronicles 1:16 state that royal merchants imported, and perhaps even transported and resold, horses from Que and *Mizrayim* (= Muṣri, a neighbor of Que) for the king's personal use and for the other northern kings of Aram and of the Hittites (the petty successors of the Hittite Empire; cf. 11 Kings 7:6). The word *mi-qweh* (“from Que”) in these passages was generally misunderstood. From the ninth century on, Que and the other parts of Cilicia are taking part in northern coalitions against Assyria. At this period, Que appears to have been settled by new ethnic elements, known to the Assyrians collectively as Ḥilakkû, though many individuals, including particularly the petty princes who ruled various parts of the area, still bore Luwian names comparable to those of the second millennium. The name of Kizzuwatna survived in the name of the city Kisuatni, but the principal site of Que in this period is Karatepe at Ceyhan (classical Pyramus in the Amanus mountains). According to the monumental bilingual inscriptions of Azittawda, the contemporary king, in Phoenician and Hittite hieroglyphics, this site was the capital of Awar(a)ku king of the Danunites (Homer's Danaeans?) of Que (identical with the Urikki king of Que in Tiglath-Pileser III's annals). The growing involvement of Que with Assyria began in Shalmaneser III's time, when the northern coalition was crushed by him. On the other hand, Que did not participate in the southern coalition (see *Karkar where the corrected lines of the inscription are cited). Que's connections with Assyria continued through *Esarhaddon's time down to that of Neriglissar.

QUEBEC, Canadian province. Quebec is Canada's second largest province and the only one of Canada's provinces with a French-speaking majority. It is also home to Canada's longest-established Jewish community. In 2005 it has a Jewish population of approximately 94,000, making it the province with the second largest Jewish community in the country.

Quebec's first Jewish settlers accompanied the British military during the Seven Years' War when it captured the vast territory from the French in 1760. While Jews concentrated in Montreal, they were also present in other parts of what was then known as Lower Canada. Mainly involved in the fur trade and other commercial activities, as many as one out of 10 merchants in the city were of the Jewish faith. Canadian Jewish communal and organizational life traces its origins to Montreal, where in 1768 the first congregation was

established – Shearith Israel – more commonly known as the Spanish and Portuguese Synagogue. By 1830 there were about 100 Jews in Lower Canada.

Because they enjoyed British legal status, Jews benefited from the privileges of the early colonial regime. But their status became the object of debate. The first major test emerged in 1807 with the election of the first Jew, Ezekiel Hart, to the Legislature by the voters of Trois-Rivières. Hart's right to sit was challenged by French Catholics who argued that a Jew could not legitimately take an oath of office which included the words "on the faith of a Christian." As a consequence he was prohibited from assuming office. It took some 25 years but on January 31, 1831, the Bill of Equal Rights was adopted by the Assembly of Lower Canada granting Jews the right to hold public office. Championed by the prominent French Canadian political reformer Louis Joseph Papineau, the Bill was received favorably by England's Parliament and became law within a year. The granting of freedoms to Jews proved to be a catalyst for the freedoms of others within the colony, directly resulting in the abolition of certain religious restrictions for Catholics.

The Jewish population continued to grow slowly and in middle of the 19th century, institutions were established to facilitate the absorption of Jewish settlers. In 1847, the Hebrew Philanthropic Society of Canada was founded and replaced in 1863 by the Young Men's Hebrew Benevolent Society (YMHB). In the 1870s Jews from Eastern Europe began arriving in Montreal. By 1886 there were some 3,000 Jews in the province and by 1890 the imminent influx of immigrants prompted the established Jewish community to enhance relief efforts. With significant financial aid from Maurice Baron de *Hirsch, the YMHB was renamed the Baron de Hirsch Institute with a mission to provide services to the new immigrants.

In the early 20th century, Montreal's Jewish leadership was confronted by the challenge of assisting a large influx of East European Jewish immigrants. Between the mid-1890s and the onset of World War I in 1914 the Jewish community of Quebec, largely centered in Montreal, increased nearly fourfold from 7,600 to 30,000. The fast-growing numbers contributed to rising demands for service from Montreal's existing Jewish community. In 1916 the established Jewish leadership consolidated the major Jewish community institutions with the creation of the Montreal Federation of Jewish Philanthropies.

By far the largest percentage of the early 20th century immigration was Yiddish speaking and such individuals often looked to their own **landsmannschaften*, labor and political organizations and congregations, for support rather than to the Federation. The massive immigration of the Yiddish-speaking group not only altered the composition of the Montreal Jewish community but the city on the whole. By the 1920s, Yiddish had become the third most widely used language in Montreal after French and English. Based in Montreal, the country's only daily Yiddish newspaper, the *Keneder Odler*

("Canadian Eagle") was established in 1907 with a growing readership. Conflicts emerged between the predominantly immigrant working-class Yiddish speakers (commonly referred to as "downtowners") and the mainly English-speaking community establishment (referred to as "uptowners").

Given the demographic and political importance of the "downtowners" their views could not be ignored. Within the province's biconfessional structure of Catholics and Protestants, Jews were considered Protestant for educational purposes. This situation resulted in certain limits on the rights of Jewish students in publicly funded schools. In the late 1920s, the downtowners pressed for the creation of a publicly funded Jewish school board alongside the existing Catholic and Protestant school systems, a proposal to which the established Jewish leadership was less favorable. Although the Quebec government submitted a bill in support of the initiative, the negative reaction from the province's Catholic hierarchy prompted the administration to reverse course.

By 1931 the Quebec Jewish population grew to nearly 60,000. The economic depression of the 1930s was characterized by a significant rise in antisemitism in the province. Elements within the Quebec Catholic hierarchy disseminated antisemitism through various publications. Influenced by European fascism Catholic intellectuals such as Lionel Groulx propagated anti-Jewish sentiment. A concrete expression of the antisemitism of the decade was the "*achat chez nous*" ("buy from your own kind") movement which under the guise of promoting French Canadian economic progress urged a boycott of Jewish-owned businesses. Antisemitism was not confined to the French Canadian population, as certain programs at McGill University imposed quotas on the admission of Jewish students.

Despite the challenges of the 1930s, Jewish community leaders aimed to address the problem of badly needed services. The construction of the Jewish General Hospital with a substantial financial contribution from Sir Mortimer B. *Davis ensured quality health care for subsequent generations of Jews. Today the Jewish General is Quebec's most multiethnic hospital.

During the 1930s, conflict within the Jewish community appeared to wane as the growing threat of antisemitism both locally and abroad drew the community together. In 1934 the reactivation of the Canadian Jewish Congress (which first convened in 1919) under the leadership of Montreal's Samuel *Bronfman aimed to reinforce the political influence of the Canadian Jewish community to help address the plight of European Jewry. Locally, the already strained relations between Jews and French Canadians suffered a further setback around the issue of military involvement in World War II. While the Jewish community was committed to greater involvement in the war effort, French Canadians were overwhelmingly opposed to military conscription.

In 1943 the persistent ideological divisions within the Quebec Jewish community surfaced around the election of the Communist candidate, Fred *Rose (Rosenberg), in the

federal riding of Cartier. Rose contended that a vote for the Communist Party would support Russia and the war effort and was thus a vote in support of the Canadian war effort. After the war, political divisions within the Jewish community diminished further as the leadership turned its attention to providing relief to East European Jews. Between 1947 and 1952, more than 4,500 Holocaust survivors settled in Montreal and benefited from the assistance of Jewish immigration aid services.

As in the rest of Canada in the aftermath of World War II, there was some reexamination on the part of the Quebec Catholic hierarchy of its attitude towards the Jewish population. Dialogue between Jews and French Catholics were organized through the Council of Christians and Jews. But the dialogue encountered ongoing difficulties and thus initiatives aimed at fostering interfaith and intergroup understanding were spearheaded by Quebec intellectuals, writers, and elected officials. The postwar period and the challenges to which it gave rise proved a source of great cultural inspiration for Quebec Jews. Based in Montreal, such writers as Leonard *Cohen and Mordechai *Richler achieved international status with their literary works. In his popular book *The Apprenticeship of Duddy Kravitz*, Richler offered some insight into the often difficult relationship between Jews and both English and French Canadian communities in Montreal.

During the 1950s through the 1970s, the Quebec Jewish community welcomed yet another wave of immigrants. Jews from Middle Eastern and North African countries, mainly French-speaking, further modified the composition of the community. Aside from their largely Sephardi religious traditions, these Sephardi Jews often brought with them the customs of their particular countries of origin. As well as the adaptation effort put forward by the institutions of the predominantly English-speaking Ashkenazi Jewish population, the process of integration of the Sephardi population also involved the creation of a series of parallel organizations directed at specific needs of the new immigrants.

During the 1960s the Jewish community witnessed a significant expansion of its Jewish day schools, a network that existed since the early 20th century. The provincial authorities did not offer these Jewish schools public status equal to the Catholic and Protestant sectors, but in 1968 the Quebec government did declare that the funding of private Jewish schools was in the public interest and thus assumed the majority of Jewish school costs. Although funding diminished somewhat in the decades that followed, approximately half of the Quebec Jewish student population are today enrolled in Jewish schools. The Jewish schools are characterized by significant internal diversity and differences in affiliation and include Sephardi establishments and a number of educational institutions for the growing ḥasidic segment of the community.

By 1971 the Quebec Jewish population reached more than 120,000 persons, but declined quite sharply thereafter. During the 1970s the Quebec provincial government was more and

more challenged by French-Canadian nationalists to protect and expand French language primacy in Quebec. The government responded by passing legislation aimed at making the French language the province's common language. But this was not enough for the growing body of support for Quebec independence amongst the French-speaking majority. Strongly supportive of Quebec's remaining part of Canada, many in the province's Jewish community were uneasy with the rise in nationalism and the threat of separatism. In the growing atmosphere of political uncertainty, the overwhelming number of Jews in Quebec endorsed the federalist Quebec Liberal party. Certainly the Jewish community in Quebec was unprepared for the 1976 provincial electoral victory of the separatist Parti Québécois. Quebec Jewish community leadership had few contacts with the new government and thus tensions occasionally emerged. During the 1980 referendum on sovereignty, the Canadian Jewish Congress (CJC) chose to remain officially neutral though community members voted massively in favor of Canadian unity. During the 1995 referendum on Quebec sovereignty, the CJC chose to officially endorse the federalist position. In both cases the federalist side won, but only by the slimmest of majorities in 1995. Despite the often difficult political climate in Quebec, relations between Jews and increasingly urban, secular, and educated French Quebecers have much improved and although antisemitic expression has not altogether disappeared, it is but a pale shadow of what it was less than a generation ago.

However, political uncertainty has cost the Quebec Jewish community dearly. During the 1970s through the turn of the century, as many as 35,000 Jews left the province, notably the younger, better educated, and more mobile segment of the community. By 2001 the number of Quebec Jews dropped below 95,000. This out-migration had significant consequences for the demographic condition of the community and the establishment of priorities. Amongst other issues, the departure of so many younger Jews has contributed to the aging profile of the population and the need to direct greater attention to service provision for the elderly. More than one out of five Quebec Jews are over the age of 65. Other priorities included trying to stem the departure of young Jewish professionals through enhanced youth employment services.

In 2001, immigrants constituted some one-third of the Quebec Jewish population. More recently efforts have been directed at attracting Russian and Argentinian immigration. The community profile continues to possess characteristics that set it apart from Jewish communities elsewhere in Canada and for that matter in North America. While most Quebec Jews are English speaking, Quebec has both the largest French-speaking Jewish population on the continent and the largest share of Holocaust survivors of any Jewish community in Canada. Moreover it is one of the few Jewish communities in the world where Yiddish is still spoken almost as much as Hebrew. As a result of the pressure on the population to acquire the French language, Quebec Jews are the most trilingual group in North America.

On a national scale, the exodus of many Quebec Jews, a large number to Toronto, resulted in the decline of the Jewish population of Quebec. It dropped from around 40% of the total Canadian Jewish population in 1971 to just above one-quarter in 2001. As a result, the center of national Jewish decision-making has increasingly shifted away from Montreal as witnessed by the move of the national headquarters of the CJC from Montreal to Ottawa. Still, the Jewish historic contribution of Jews to Quebec life qualifies Jews as one of the province's founding peoples.

[Jack Jedwab (2nd ed.)]

QUEEN OF SHEBA. The biblical account of the queen of Sheba (1 Kings 10:1–10, 13; 11 Chron. 9:1–9, 12) describes how when the queen of Sheba heard of the fame of Solomon, she went to Jerusalem with a great train of camels, bearing spices, gold, and precious stones, “to prove him with hard questions,” all of which Solomon answered to her satisfaction. They exchanged gifts, after which she returned to her land. For details, see *Solomon.

In the Aggadah

Talmudic references to the queen of Sheba are sparse. A most elaborate account, however, is given in *Targum Sheni* to Esther, which can be supplemented by details found in the Alphabet of Ben Sira and Josephus (Ant. 8:165–73). A hoopoe informed Solomon that the kingdom of Sheba was the only kingdom on earth not subject to him and that its queen was a sun worshiper. He thereupon sent it to Kitor in the land of Sheba with a letter attached to its wing commanding its queen to come to him as a subject. She thereupon sent him all the ships of the sea loaded with precious gifts and 6,000 youths of equal size, all born at the same hour and clothed in purple garments. They carried a letter declaring that she could arrive in Jerusalem within three years although the journey normally took seven years. When the queen arrived and came to Solomon's palace, thinking that the shining floor was a pool of water, she lifted the hem of her dress, uncovering her legs. Solomon informed her of her mistake. When she arrived she asked him three (Targ. Sheni to Esther 1:3) or, according to another source, 19 riddles to test his wisdom.

In Islam

Sheba (Ar. Sabāʾ) was the most important kingdom in ancient southern *Arabia with its capital Mārib (in inscriptions: Mayrab, east of Sanʿa), the largest city in that area. This kingdom existed from the beginning of South Arabian civilization, and the oldest stone inscription dates back to the eighth century B.C.E., already referring to the kingdom as quite an established one. Its history is divided into two periods: (a) from its beginning until the first centuries B.C.E., dominated by caravan economy linked with Mesopotamia and the Land of Israel; (b) from the first century B.C.E. until the sixth century C.E., when it was controlled in general by the highland kingdom of Ḥimyar. Owing to the frankincense and many other spices exported to ancient lands, Sheba was quite known

in the classical world, and its country was called Arabia Felix. Its disappearance resulted from the destruction of the Great Dam built seven kilometers north of Mārib, by which it had been possible to irrigate up to 10,000 hectares.

The biblical story, unattested by any other source, including hundreds of inscriptions from the Kingdom of Sheba, was adopted by the Ethiopian Church claiming that Ethiopian kings were descendants of the kingly couple King Solomon and Queen of Sheba. The Muslim sources, especially the *Koran, just copy the Bible and other Jewish sources, although they call this queen Bilqīs and add the tradition that the first Jews arrived in Yemen at the time of King Solomon, following the politico-economic alliance between him and Queen of Sheba. However, this tradition is suspected to be an apologetic fabrication of Jews in Yemen later transferred to Islam, just like many other traditions. The ancient Sabaic Awwām Temple, known in folklore as *Mahram* (the Sanctuary of) *Bilqīs*, was recently excavated by archaeologists, but no trace of Queen of Sheba has been discovered so far in the many inscriptions found there.

QUELER, EVE (1936–), U.S. conductor. Born in New York City, Queler studied horn and piano at Mannes College and conducting with Joseph *Rosenstock, Carl Bamberg, Walter *Susskind, Leonard *Slatkin, Igor Markevich, and Herbert Blomstedt in Europe. Her career was temporarily interrupted following her marriage in 1956 but she later returned to study conducting and she became a rehearsal pianist for the New York City Opera. Her conducting debut in opera came in 1966, at Fairlawn, N.J. Because of the few opportunities offered to women conductors, she founded the Opera Orchestra of New York in 1968 with the aim of giving opera in concert performances and it met with increasing success and popularity. A leading exponent of forgotten opera, she worked to make them known with the participation of many major singers, including June Anderson, Carlo Bergonzi, Montserrat Caballé, Plácido Domingo, Jane Eaglen, René Fleming, and Renata Scottó. A combination of determination in the face of great odds and a natural flair for opera gained Queler a position in the front rank of women conductors. She also appeared as a guest conductor at the New York City Opera, the Kirov Mariinsky Opera, the Hamburg Staatsoper, and the Frankfurt Opera as well as with the Philadelphia Orchestra, Montreal so, and Honolulu so. Queler also wrote a number of journal articles and

supervised critical editions of three Donizetti operas. She made recordings of *Jenůfa*, Strauss's *Guntram* and Boito's *Nerone*.

[Max Loppert / Israella Stein (2nd ed.)]

QUERIDO, ISRAËL (1872–1932), Dutch novelist and author. He belonged to an Amsterdam Sephardi family and displayed a generally ambivalent attitude toward his Jewish background. In an early novel, *Levensgang* ("Life," 1901), he vividly portrays the diamond workers and merchants of Amsterdam and contrasts virtuous Christians with venal Jews. His autobiographical novel *Zegepraal* ("Triumph," 1904) was less successful. *Aron Laguna* (1916) is a lively recreation of Sephardi life which preserves the everyday speech of Sephardi Jewry of his generation.

His most important work was the cycle of novels published as *De Jordaan* (4 vols., 1912–25), a study of life in an Amsterdam working-class neighborhood. He wrote a number of novels and plays on biblical themes, including the lyrical drama *Saul en David* (1914) and a trilogy entitled *De oude waereld* ("The Old World"), which comprises three novels: *Koningen* ("Kings," 1918), *Zonsopgang* ("Sunrise," 1920), and *Morgenland* ("The Orient," 1921). Another biblical work was the novel *Simson* ("Samson," 2 vols., 1927–29). Toward the end of his life Querido published another novel cycle dealing with the Sephardim. It consisted of two books, *Van armen en rijken* ("Of the Rich and the Poor," 1931) and *Menschenharten* ("Human Hearts," 1932). They reappeared together as *Het volk Gods* ("God's People," 2 vols., 1932). Other works by Querido include *Misleide Majesteit* ("Misled Majesty," 1926), an animal story based on an Indian epic, and volumes of criticism.

His brother, the publisher EMANUEL QUERIDO (1871–1943), wrote a semi-autobiographical novel dealing with the development of Amsterdam during the years 1880–1910. This work, *Het geslacht der Santeljano's* ("The Santeljano Family," 10 vols., 1918–29), contains much important biographical material on his brother. After the Nazi occupation, Emanuel Querido was deported and died in the Sobibor death camp.

[Gerda Alster-Thau]

QUERIDO, JACOB (c. 1650–1690), Shabbatean leader in *Salonika. The son of R. Joseph Filosof, he was later generally known as Jacob Querido (Sp. "the beloved"). His sister became *Shabbetai Zevi's last wife. When she returned to Salonika after Shabbetai's death in 1676, she allegedly claimed that her brother was the recipient of her late husband's soul. Querido's father and R. Solomon Florentin supported his assertions which led, in 1683, to the mass apostasy of a large group of Salonika families. Together with the earlier converts to Islam among Shabbetai's followers, this group formed the nucleus of the *Doenmeh sect. Taking the Turkish name Abdullah Yacoub, Querido became the most prominent leader of the

sectarians. An apocryphal letter attributed to Shabbetai confirmed his claims. His extravagant leadership led to dissension within the group as earlier converts had become dissatisfied with his innovations and therefore opposed his leadership. Insisting on outward demonstration of strict Muslim piety, he undertook a pilgrimage to Mecca in 1688, accompanied by one of his leading followers, Mustafa Effendi. Returning from Mecca, he died in Egypt, in either Alexandria or Bulak. When his companion returned, the schism among Querido's followers became final; according to tradition 43 families formed a subset called Jacobites. As Querido had no male children, his adherents were led by chiefs who maintained a very strong control over the affairs of their group. They treasured several relics of Shabbetai Zevi and Querido and administered the personal fortune left by Shabbetai. The members of their subset were mostly merchants and lower officials. No writings by Querido and his followers have survived, but one of the pamphlets written against him by another apostate between 1690 and 1695 is extant. Querido's followers took no part in the further divisions within the *Doenmeh sect that led to yet another schism. Their organization existed down to the 20th century.

[Gershom Scholem]

QUETSCH, SOLOMON (1798–1856), Moravian Orthodox rabbi. A native of *Mikulov (Nikolsburg) and pupil of Mordecai *Banet, he officiated as rabbi at Piesling and *Lipnik (1832–54). He was the last representative of the old Orthodoxy and the chief opponent of Samson Raphael *Hirsch as Moravian *Landesrabbiner. In May 1855 he became rabbi of Mikulov, but the position was not combined with that of *Landesrabbiner*. His death in January 1856 caused the closing of the Mikulov yeshivah.

A few of his novellae were published as *Hokhmat Shelomo* together with the Prague edition of Mordecai Banet's *Har ha-Mor* (1862). S.J. Rapoport wrote a commemorative poem on him in *Kokhevei Yizhak*, (22, (1856), 3).

[Meir Lamed]

QUIETUS, LUSIUS (second century C.E.), Roman general. Quietus, who was of Moorish origin, was commander of the Moorish cavalry in the Roman army as early as the time of Domitian. He especially distinguished himself in the wars during Trajan's reign and was one of his principal commanders in the Parthian campaign. Among his activities in Mesopotamia was the subduing of the Jews there, who were hostile to Rome. Trajan ordered Lusius Quietus to crush them. He conducted the attack craftily, killing many. As a reward for this success

he was appointed ruler of Judea in 117 C.E. (Eusebius, *Historia Ecclesiastica*, 4:2). Apparently Quietus also subdued the Jews in Judea who revolted against Rome. Details are lacking of this action, but a reference to them has been preserved in the talmudical accounts of “the war of Quietus.” When Hadrian became emperor he removed Quietus from his command of the Moors and from the army, and shortly after he was executed for participating in a conspiracy against the emperor.

[Uriel Rappaport]

QUINCE, name of both a tree, *Cydonia oblonga*, and its fruit. It is not mentioned in the Bible, but in rabbinic literature it is referred to under three names: *havush*, *parish*, and *aspargal*. *Havush* (Aram. *havusha*) is mentioned as being given to the sick (Tosef., Ter. 7:13). It is an aromatic fruit and is enumerated together with the *etrog* among the fruits over whose fragrance a blessing should be recited (Ber. 43b). The name *parish* is found in a discussion as to the permissibility, in time of emergency, of substituting some other large and beautiful fruit for the *etrog* in order to fulfill the precept of the Four Species, and it was decided in the negative (Tosef. Suk. 2:9, 31a–b). According to the Jerusalem Talmud (Kil. 1:3, 27a), it was so called because it is the only fruit reserved (*parush*) for the pot, i.e., it is inedible in its raw state and must be cooked. The same passage notes that its Aramaic name is *aspargal* which is the Arabic name for the quince. The Mishnah lays down that the quince belongs to the same species as the hawthorn (*uzrar*). Apparently the ancients took the latter to be a degenerate quince.

[Jehuda Feliks]

°QUINTILIAN (Marcus Fabius Quintilianus; first century C.E.), Roman rhetorician. In language reminiscent of Tacitus he berates the founder (Moses?, though some have thought, probably wrongly, that Jesus is meant) for having concentrated his people in cities as a curse to others (*Institutio Oratoria* 3:7, 21).

[Jacob Petroff]

°QUINTILIUS VARUS (d. 9 C.E.), Roman consul in 13 B.C.E. and governor of Syria from 6 to 4 B.C.E. Varus first appeared in Judea during the last years of *Herod the Great, and on that occasion he participated in the king's trial of his son Antipater, accused of attempted patricide. After hearing lengthy denunciations of the prince and verification that the poison allegedly prepared for the plot was in fact potent, Varus went into private consultation with Herod, drafted a report to Augustus, and departed for Antioch. Antipater was put into chains, and it was assumed by the populace that Herod in so doing was

acting upon the advice of the Syrian governor, although Antipater was eventually executed. With the death of Herod in 4 B.C.E., his primary heir Archelaus was unable to control the serious disturbances that broke out throughout the country. Following a bloody attempt on Passover at quieting the unrest, Archelaus departed for Rome and disturbances reached a new peak with the appearance of Sabinus, finance officer (procurator) of Syria, for the purpose of taking charge of Herod's estate. During the festival of Pentecost the Jews in Jerusalem rose up in open rebellion, which eventually spread to all of Palestine, Sabinus, realizing his inability to cope with the situation, was forced to appeal to Varus for help. The Syrian governor appeared at Acre with the three legions at his disposal, together with auxiliary troops supplied by the citizens of Berytus, and from there proceeded to subdue the whole country. Cities such as Sepphoris and Emmaus were reduced to ruins, and thousands of rebels were crucified. The invasion under Varus was so devastating that Josephus lists it together with the wars of Antiochus Epiphanes, Pompey, and Vespasian (Apion 1:34). The rabbinic chronology *Seder Olam Rabbah* also cites a *pulum shel Asveiros* taking place 80 years before the war of Vespasian, and since Graetz historians have interpreted this as “the war of Varus.” Varus was eventually killed by the Germans at the battle of the forest of Teutoburg.

[Isaiah Gafni]

°QUIRINIUS, P. SULPICIUS, Roman commander and administrator at the beginning of the first century C.E. Quirinius did not belong to an aristocratic family; his rise to power was due to his own abilities and the support of Augustus and his stepson Tiberius with whom he enjoyed a relationship of unwavering friendship. He achieved his reputation as a result of his military exploits in Africa and Asia Minor. He reached the peak of his public career in the year 6 C.E. when he was appointed governor of Syria. He was responsible for laying the foundations of the organization of the new province of Judea, after *Archelaus, son of Herod, had been dismissed from the post of ethnarch of Judea. Quirinius himself, accompanied by Coponius, newly appointed governor of Judea, arrived in order to conduct a general census of property in the new province, and to deal with the possessions of Archelaus (Jos., *Ant.*, 18:1ff.). The census aroused widespread opposition among the Jews, but thanks to the influence of the high priest, *Joezer b. Boethus, it was carried out without serious disturbances. However, extremist circles, headed by *Judah the Galilean and *Zadok the Pharisee, who incited the people to rebellion maintained that the institution of the census symbolized servitude to the Romans. Quirinius also introduced changes into the high priesthood. He dismissed Joezer b. Boethus and replaced him by *Anan b. Seth (Jos. *Ant.*, 18:26), the first high priest of the house of Anan. Scholars dispute the passage in Luke 2:1–2 where the census of Quirinius is mentioned in connection with the birth of Jesus. An inscription

discovered in Tibur Tivoli, Italy, has been regarded as referring to Quirinius and as a result an attempt has been made to maintain that Quirinius served twice as governor of Syria, the first time being during Herod's lifetime. But even if the inscription refers to Quirinius, it fails to prove that he served twice as governor of Syria.

[Menahem Stern]

QUISLING, VIDKUN ABRAHAM LAURITZ JONSSØN (1887–1945), Norwegian who openly met the conquering Nazis as their collaborator; since he was the first to do so, the British press used his name as the symbol of all collaborators and traitors during World War II. Born in Fyresdal (southern province of Telemark), where his father was a priest, he graduated with distinction from the military academy of Norway and served as an officer in the General Staff (1911–18). His special interest in Russia – and his fluent Russian – brought about his appointment as military attaché to the Soviet Union and a diplomatic post in Petrograd (St. Petersburg, 1918–19) and Helsinki (1920–21). He became an assistant to Fridtjof Nansen fighting starvation in Ukraine in 1922 and after fulfilling humanitarian tasks on behalf of the League of Nations returned to Norway after Nansen's death in 1930. In his politics he veered from the Soviet-oriented left to the fascist right. He was minister of defense in 1931–33 in the government of the Farmers' Party. In 1933 Quisling founded his own party, Nasjonal Samling (National Union), which never gained popular support. The Nazi leaders took an interest in him while the invasion into Norway was planned, when he was received by Hitler on whom he made a favorable impression. On the day of the invasion he declared himself prime minister but was removed six days later by the German authorities, who installed Josef Terboven as a military police governor. In February 1942 Quisling succeeded in being named prime minister, but although his influence was nil, he committed enough crimes, including the preparations for the deportation of the Jews, to be condemned to death by a Norwegian tribunal in 1945, and was executed on October 24. The Norwegian government earmarked the mansion in which Quisling lived during World War II and until his arrest for a Center for Holocaust and Minorities Studies, comprising a research center and a museum. The Center is financed by Norwegian Holocaust restitution funds and was opened in 2006.

[Leni Yahil]

QUMRAN, region on the northwest shore of the Dead Sea, which has become famous since 1947 as the site of the discovery of the *Dead Sea Scrolls. The name belongs more particularly to Wadi Qumran, a precipitous watercourse which runs down to the sea from the west, and to Khirbet Qumran,

a ruin standing less than a mile west of the sea on the marl terrace north of the wadi. Visitors to the region in earlier days, impressed by the fortuitous similarity of names, thought that Khirbet Qumran might be all that was left of Gomorrah. In 1873 C.S. *Clermont-Ganneau inspected the ruin, but was more interested in a cemetery lying between it and the sea. He came to no positive conclusions as a result of his inspection.

Occupation of Khirbet Qumran

In 1949, the possibility was raised of a connection between the discoveries in the first manuscript cave and Khirbet Qumran. A trial excavation was made on the site, but nothing was found which suggested any connection. In November and December 1951, three rooms were excavated. In the floor of one of them was found a jar of the same type as those in which the scrolls in Cave 1 had been placed, and along with it was a coin bearing a date equivalent to 10 C.E. Systematic campaigns of exploration were mounted in 1953, 1954, 1955, and 1956, in which the Jordan Department of Antiquities, the Palestine Archaeological Museum, and the French Dominican Ecole Biblique collaborated.

It soon became evident that the building complex had formed the headquarters of a fairly large and well-organized community. R. de Vaux, soon after the excavations began, expressed the belief that these were the headquarters of the *Essenes referred to by *Pliny the Elder in his *Natural History* (5:73), partly on the ground that nothing else in that region could correspond to Pliny's description. Pliny says that "below" the Essene headquarters lies *En-Gedi; since he is describing the Jordan Valley and Dead Sea region from north to south he may mean that En-Gedi lies south of the Essene headquarters; En-Gedi in fact lies some 22 miles (34 km.) south of Khirbet Qumran. But the identification of the community or *Yahad that occupied Khirbet Qumran cannot be determined on archaeological grounds alone.

The cemetery to the east of Khirbet Qumran proved to contain about 1,200 graves, laid out in parallel rows lying north and south, with the head to the south. The burials were as simple as possible; the bodies were neither placed in coffins nor accompanied by funeral offerings. In an eastern extension of the cemetery, skeletons of four women and one child were found. Skeletons of women and children were also identified in two other subsidiary cemeteries lying north and south respectively of Wadi Qumran. Pottery in the earth-filling of the graves indicated that the burials belonged to the same general period as the community occupation of Khirbet Qumran.

The site of Khirbet Qumran had been occupied at various times in antiquity. At a low level were found the remains of walls and pottery of Iron Age II (8th–7th centuries B.C.E.). A potsherd inscribed with Phoenician characters and a royal seal stamped on a jar handle belonged to this period, as did also a deep circular cistern which, centuries later, was incorpo-

Chief interest attaches to the abundant evidence for the occupation of the site in the Greco-Roman period. In this period Roland de Vaux, the excavator, distinguished the following phases of occupation:

IA. May have been constructed by John Hyrcanus I (134–104 B.C.E.) or more likely by one of his predecessors, i.e., Jonathan (152–142 B.C.E.) or Simon (142–134 B.C.E.), due to the presence of a relatively significant number of coins of John Hyrcanus I and Antiochus VII (138–129 B.C.E.). It was occupied at that time by a people who cleared the circular cistern, built two rectangular stepped pools beside it, constructed a few rooms around these, and installed two pottery kilns in the Iron Age enclosure.

IB. Occupation of a much enlarged area, with two- and three-storey buildings, and an elaborate system of ritual immersion pools and cisterns (incorporating the earlier ones) connected by channels and supplied by an aqueduct from a dam built to store the water which runs down Wadi Qumran in the rainy season. This phase began quite possibly during the reign of John Hyrcanus I and was terminated by a severe earthquake (almost certainly the famous one of 31 B.C.E.) followed by an extensive fire.

II. After about a quarter of a century of abandonment, the building complex was reoccupied and was restored following the lines of phase IB but was reinforced at various points against earthquake damage. Based upon numismatic evidence this phase came to an end during the First Revolt, in the year 68 C.E.

III. Non-Jewish coins ranging from 67/68 C.E. until 72/73 C.E. seem to indicate that a Roman garrison was stationed among the ruins of the site from 68 until 73 C.E., and withdrew immediately after the fall of Masada.

The site was again abandoned until the Bar Kokhba War (132–135 C.E.), as evidenced by coins, when the site served revolutionaries as a hiding place or center of resistance.

Description of Khirbet Qumran

The main building of the complex in phases IB and II was roughly 37 meters square, of large undressed stones, with a strong tower at the northwest corner. There were several large rooms suitable for assembly rooms or refectories. Adjoining the largest of these rooms (on the south side of the building) was a smaller room containing over 1,000 earthenware vessels – all the varieties necessary for kitchen and refectory use. They may have been manufactured on the spot, since the excavations brought to light the best preserved pottery factory thus far found in ancient Palestine, complete with kilns and levigating pit. A first-storey room in the southwest part of the building (upper loc. 30) was evidently furnished with inkwells and plastered writing tables as a writing room (*scriptorium*). Flour mills, storage bins, ovens, a laundry, a stable, furnaces, and workshops with metal implements were also uncovered. The occupants apparently aimed at being as self-sufficient as possible. The building complex does not seem to have included sufficient sleeping quarters; tents

or the neighboring caves may have served the occupants for rest and shelter.

The elaborate series of pools, designed to ensure a plentiful water supply, has excited special interest; there has been a tendency to relate these to the prescriptions regarding cleansing in water laid down in the Manual of *Discipline found in the Qumran caves. It is especially in one of these pools that the damage from the earthquake is still most clearly visible. The 14 stone steps of the largest pool (loc. 85/86), to the east of the site, show a central crack running down from top to bottom, so that their eastern half has sunk nearly half a meter below the level of the western half. When the site was reoccupied some 30 years after the earthquake, this pool could not be used as it no longer held water; a new one was excavated southeast of the building. Other major repairs were effected at the same time: the walls were strengthened and the northwestern tower was reinforced.

Chronology of Khirbet Qumran

The record of the phases of the occupation of Khirbet Qumran is indicated most clearly by the coins found in the course of excavations on the site. About 650 coins of the Greco-Roman period have come to light. The coin record starts with Antiochus VII of the Seleucid dynasty (139–129 B.C.E.) and his contemporary John Hyrcanus (135–104 B.C.E.) and goes on without a break to Antigonos, the last Hasmonean king (40–37 B.C.E.). Coins of Alexander Yannai (103–76 B.C.E.) are especially frequent. Only five coins from Herod's reign (37–4 B.C.E.) have come to light. The record is resumed with coins of Archelaus (4 B.C.E.–6 C.E.) and continues with those of the procurators and a particularly large number of Herod Agrippa's coins (37–44 C.E.). There are 73 coins from the second year of the war against Rome (67–68 C.E.) and several from the following year, contemporary with these are coins minted in the coastal cities of Caesarea, Dora, and Ashkelon; later are a coin of Agrippa II (86 C.E.), one of Vespasian (69–79 C.E.), three of Trajan (98–117 C.E.), one of the type struck by the liberation leaders during the second revolt. It is doubtful whether a hoard of 563 silver coins hidden in three pots in a floor to the west of the building can be related to the occupation of Khirbet Qumran. The hoard was comprised primarily of tetradrachmas and didrachmas of Antiochus VII (earliest dated 139/138 B.C.E.) and Demetrius II (later reign) along with shekels and half shekels of Tyre, the latest of which was dated 10/9 B.C.E. These coins may have been hidden there toward the end of the period of abandonment between Phases IB and II or at the very beginning of Period II.

A sample of charcoal from the room where the large number of earthenware vessels (Loc. 89) was found was subjected to the radiocarbon test, which yielded a date of 16 C.E. (with a margin of deviation of 80 years either way) for the age of the wood, and a date of 66 C.E. (with a similar margin of deviation) for the burning. Phase II of the occupation of Khirbet Qumran was brought to an end not by earthquake but by fire and sword. The destruction was much more thorough than that caused by

the earthquake 100 years earlier. The walls were demolished, a layer of black ash covered the site, and a quantity of arrowheads added their silent testimony to the picture. De Vaux concluded that the building was attacked and stormed by the Romans in the summer of 68 C.E. because of the paucity of First Revolt bronzes which date to that year. (However it should not be discounted that perhaps the site was destroyed by revolutionaries, who were known for their “scorched earth” policy, on the eve of the Vespasian’s scourge of Judea.)

A few rooms were built over the ruins and occupied by a Roman garrison which appears to have been stationed there for a few years. The brief occupation of the site by an insurgent garrison during the second revolt was followed by the complete destruction of its surviving fortifications.

The chronology of the occupation of Khirbet Qumran, archaeologically established, agrees remarkably well with that of the nearby manuscript caves and their contents, paleographically established. (The paleographical evidence is supplemented by the application of pottery dating to the jars in which the manuscripts of Cave 1 were placed and by the application of the radiocarbon test to some of the linen in which these manuscripts were wrapped before being placed in the jars, although the radiocarbon test involves too large a margin of deviation to be helpful when precise dating within decades is required.) A close connection between the occupants of the building and the manuscripts in the caves is cogently indicated; the community described in the “community documents” and the community which manifestly occupied Khirbet Qumran must have been one and the same community; at least, it would require specially conclusive arguments to make it probable that they were two separate communities.

Additional Phases

After 50 years, the time has come to reassess De Vaux’s proposed phases, based on data from recent excavations of Qumran’s immediate periphery (sequentially: Y. Magen and Y. Peleg; M. Broshi and H. Eshel; O. Gutfeld and R. Price), in which refuse dumps and agricultural terraces were examined in the immediate vicinity. Along with these investigations, a fresh review of De Vaux’s excavation and its associated material culture by Donceel, Humbert, and Chambon, along with new light from recent scientific analyses (Humbert and Gunneweg (eds.), *Khirbet Qumrân et ‘Ain Feshkha*, vol II., 2003) provide evidence for three additional phases at the site, and at least four separate sources in the caves.

INTERIM PERIOD. De Vaux’s “Period of Abandonment” (ca. 31–10 B.C.E.), during which the site was *not* entirely abandoned. A large pit containing hundreds of carbonized dates which cuts through the southern drainage system suggests that date farmers (perhaps lay Essenes), occupied the site during this period.

PERIOD IIB. During the last years of Period II (ca. 66–68 C.E.), during a period of social upheaval, political strife, and war,

Qumran was taken over by another group, likely revolutionaries. Hoards of Revolt coins, stoneware, new pottery forms (differing in form and proportions from the communal pantries of loci 89 and 114), and light weapons (including knives and arrow heads) were recovered from this period, which preceded the Roman occupation of the site.

PERIOD IIIB. Another “Period of Abandonment” according to De Vaux (ca. 73–132 C.E.). Numerous items, including late first and early second century coins (Vespasian and Trajan), numerous shards of glass, a spindle whorl, a stone vase and white strainer jugs indicate that a non-military occupation at the site extended well beyond that of the Roman garrison (which ended ca. 73 C.E. according to De Vaux), an occupation that seems to have extended into the early second century.

The Caves of Qumran

After the first two “scroll caves” were discovered in 1947 (Cave 1Q) and 1952 (Cave 2Q), a survey of the cliffs in the vicinity of Qumran was conducted during March 1952. Upon completion of the survey, the caves and sites which contained archaeological remains were numbered, from north to south, “Survey Cave GQ1” through “Survey Cave GQ40.” Certain scroll caves that were found in the cliffs (specifically, 1Q, 2Q, 3Q, and 6Q) were also assigned Survey cave numbers (GQ14, GQ19, GQ8 and GQ26, respectively). Subsequent caves in which manuscripts were discovered were numbered in the sequence of their discovery, yielding Scroll caves 1Q through 11Q, the last being discovered in January 1956. These two separate numbering systems were conceived at that time and continue to be used for all Qumran caves of archaeological import identified between 1947 and 1956. However, the two categories of caves and their numbers have often become confused in the literature. In April 1956 two adjacent caves without manuscripts were discovered and excavated to the northeast of cave 3Q (= GQ8) and were called “Cave A” and “Cave B.” In 1963, an additional cave with abundant remains, but no manuscripts, was discovered by John Allegro and his team as part of the “Copper Scroll Expedition” and was dubbed “The Christmas Cave,” since King Hussein of Jordan visited the cave on that day. A third system of enumeration has arisen with the cave surveys and excavations of Y. Patrich between 1984 and 1991, for which we will use the numbers “PQ1–PQ24.”

The Caves of Qumran can be divided into five distinct clusters:

Cave Cluster of the Marl Terrace Adjacent to the Qumran Site. Southwest Caves 4 Spur. Qa, 4Qb, 5Q and 10Q. The complex is located 80 meters southwest of the buildings of Qumran on a spur of the marl formation separated from the site by a narrow ravine. The Bedouin discovered caves 4Qa and 4Qb simultaneously, with the result that the fragments from the two caves arrived at the museum mixed and indistinguishable. Thus these adjacent but separate caves were delineated “4Q” by de Vaux with regard to the manuscripts and other items collected by

Phases of Occupation at Qumran and their Character

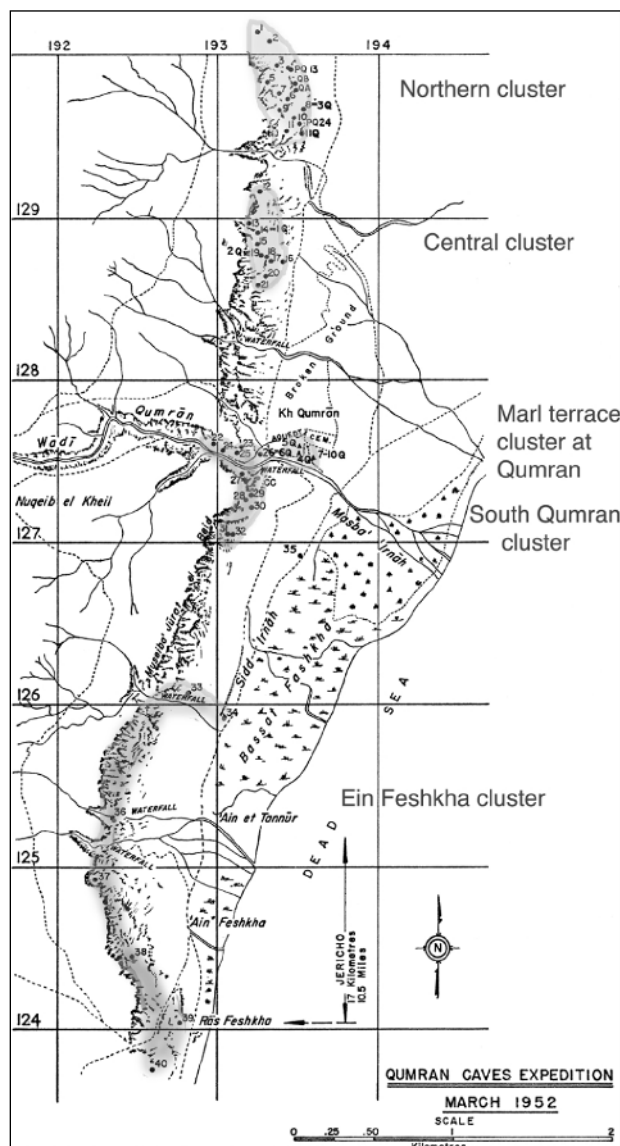

Dates	De Vaux's Phases	Modified de Vaux	Nature of Occupation	Datable Loci	Coins	Lamps	Pantry	Characteristic Material Culture	Cave/Manuscript Collection (Time of Deposition)
8 th –6 th cent. B.C.E.	Iron II	Iron II	Settlement, perhaps farmstead; cf. II Chron. 26:10	Below 73, 80, 68, 86, 88; outside 6, 40; north of 38	Not applicable	Late Iron Age	(unknown)	LMLK jar handles; hole mouth jars	11Q; GQ6, 13, 27, 39; GQA, B; Christmas Cave
c 150–130	la	la	Pre Essene, farmstead	Under 30; under 66	Demetrius I (early reign)	Hellenistic: Tr A, delfiniform; west trench (Broshi/Eshel)	(unknown): includes fish plates (cf. loc. Under 30)	Villa rustica with agricultural terraces	(unknown)
c 130–31	lb	lb	Essene (mainly Yahad)	89, 48/49, 52, 53, 16	Antiochus VII, John Hyrcanus I	Qumran type: loc 130, 1Q.1; Hellenistic Radial	Communal: loc. 86/89; 1 cup : 3 dishes : 10 bowls	Ritual communal meals; numerous mikvaot; lots	1Q Phase A (part of 4Q, 5Q)
31–4	Abandoned	Interim	Lay Essenes? Date farmers	South 75 (pit with dates)	Shekel hoards A, B & C	Herodian Radial	(unknown)	Pit full of dates	(unknown)
4 B.C.E.–66 C.E.	II	IIa	Essene (first Yahad then Lay)	114	Procurators, Agrippa I	Herodian A and B	Communal: loc. 114; 1 cup : 3 dishes : 10 bowls	Ritual communal meals; numerous mikvaot; lots	1Q Phase B; 6Q (part of 4Q, 5Q)
66–68	II	IIb	Revolutionaries	2, 4, 30, 45a–c, 59, 61	1st Revolt coin hoards	Herodian C	Personal: loc. 2, 4, 45a–c, 59, 61, upper 77; 10 cups : 10 dishes : 10 bowls	Stoneware; numerous spherical juglets; carinated bowls	2Q; ostracon 1 (Year 2)
67–83	III	IIIa	Roman Outpost (none)		Roman provincial coins 67–73 CE	(none)	(unknown)	Hob nails (on paths)	Northern Cluster; includes 3Q, 11Q (c 70 C.E., likely Zealot); not associated with Qumran site.
c 73–132	Abandoned	IIIb	Post-Essene occupation	14, 15, 16, 20, 21, 24, upper 34	Vespasian, Agrippa II (86 CE), Trajan	Discus lamp 4Q, molded lamps	(unknown)	Glass, stoneware, pseudo-Nabatean painted; white strainer jugs, spindle whorl	None
c 132–135	Bar Kokhba	IIIc	Revolutionaries	29	Second Revolt coins	(unknown)	(unknown)	(unknown)	Christmas Cave

the Bedouin. However, when describing the findings from his own excavations, De Vaux was able to distinguish them as “4Qa” and “4Qb”.

Southern Spur: Caves 7Q, 8Q and 9Q. The complex is located at the southern end of the same marl terrace, 90 meters directly south of the building complex of Qumran and connected to it by the southern enclosure. The three caves, whose roofs had

collapsed, are accessible only from within the confines of the enclosure wall.

Cave Cluster of the Northern Cliffs. Caves 3Q and 11Q; Survey Caves GQ1–11; Caves A and B; PQ13, PQ. The northern cliffs lie between the wadi that divides the cliffs two kilometers to the north of Qumran and the Rijm al-Asbah “the rock of the thumb,” about one kilometer further north.

Map of Cave Locations

Cave Cluster of the Central Cliffs. Caves 1Q, 2Q; Survey Caves GQ12–21. This cluster stretches for one-half kilometer along the cliffs, about one and one-half kilometers to the north of Qumran.

Cave Cluster of Qumran's Wadi and Southern Cliffs. Cave 6Q, Survey Caves GQ22–32, "Christmas Cave." The caves of the southern cliffs lie along a one-half kilometer stretch south of the Wadi Qumran.

Cave Cluster of the Ein Feshkha Cliffs. Survey Caves GQ. This stretch of cliffs begins 33–40. 2.75 kilometers south of Qumran and extends southward for 2.5 kilometers, ending at Ras Feshkha, with the spring of Ein Feshkha at the center.

Pottery and Dating of the Caves

The caves in the cliffs contained material from the Pre-Pot-

tery Neolithic B (flint blades), Chalcolithic (pottery sherds), Iron II (lamps and bowls), Hellenistic, Roman, Byzantine, and Islamic periods. The most substantial and widespread remains were from the first century C.E., including the typical cylindrical jars and, less commonly, lamps, cooking pots, tableware and, of course, the scrolls themselves. Many of the caves were visited on more than one occasion in antiquity, providing remains from more than one period in the same cave. Most periods represented by the remains from the caves have counterparts in the stratified remains of Khirbet Qumran.

In certain cases, the date of the remains in the cliffs reflects a time of hiding and transition in the occupation of the site. This is also true of the various hidden scroll deposits, the approximate date of the deposition being concurrent with the latest paleographically dated manuscript in the collection. On the other hand, the remains from the caves in Khirbet Qumran's marl terrace have a different history of use than those in the cliffs. The deposition of manuscripts there took place continuously over a long period of time and can be dated within a limited frame: no earlier than the late second century B.C.E. and no later than the end of the first century C.E. (roughly concurrent with periods 1B and 1I).

On occasions when domestic pottery has been found in a cave – including collections of lamps, cooking pots, tableware, and food remains – this would indicate that individuals hid in or used the caves as temporary lodging (although these occupants should not necessarily be identified as those who hid the scrolls). Domestic pottery, especially lamps, provides an important means toward pinpointing periods of occupation, as in Iron II lamps (caves 11Q and GQ39), Hellenistic lamps (1Q), and lamps from the second half of the first century C.E. or First Revolt (caves 1Q, 3Q, 4Q, 8Q, 10Q, 11Q, GQ29, GQ39, PQ13, PQ24).

Cylindrical Jars

From the initial moment that the first scrolls were said to have been found in a certain, cylindrically shaped jar in Cave 1, it was assumed that those hitherto unknown jars were manufactured specifically to store scrolls. Even though the original excavator consistently called the jars "cylindrical jars," scholars preferred to utilize the term "scroll jars" whenever a new jar of this type was found. The facts, however, show that the jars were not all intended for carrying scrolls. This is clear from the fact that most of these jars were not found with scrolls in them and very few scrolls that were discovered were actually found in jars. Also, most caves which contained cylindrical jars or their lids had no trace of even a single manuscript inside the cave (e.g., GQ1–3, 7, 10, 12, 15, 17–18, 21, 22, 28–32, 39, 40; PQ13, PQ24).

It also has been assumed that these jars were manufactured at Qumran. However, after recent chemical analyses of the cylindrical jars by Gunneweg and Bala, it was concluded that at least 75% of the cylindrical jars from the caves, and more than 50% of those from the site of Qumran, were derived from the Jerusalem area, having been made from clay

from the Jerusalem/Motsa flow. The remainder were proven to derive primarily from the regions of Qumran and Jericho and were further distinguished by detectable variations in form, color and manufacture. Those in the caves which derived from Jerusalem were often accompanied by lamps or domestic wares dating to the second half of the first century C.E., indicating that they were most likely hidden there during the period of the First Revolt.

The fact that most of the jars were found empty, and yet had been purposely hidden, seems to indicate that they were valued aside from their contents. Furthermore, it appears that most of the jars, especially the tall cylindrical jars, were not originally intended to contain scrolls. Rather, they were intended for the collection of levitical tithes. They are designated by the term *kelei dema'*, "tithe jars," and are frequently listed among the hidden treasures in the Copper Scroll (3Q15) without any reference to their actual contents (if they had any). One of the jars from cave 3Q was marked twice with the letter *tet* which characterizes certain jars of this type as similarly found at Masada. (Cf. M. *Ma'aser* 4:11, "If a vessel was found on which was written a *kof*, it is *korban*; if a *mem*, it is *ma'aser*; if a *dalet*, it is *dema'*; if a *tet*, it is *tevel*.") It is more likely that only the shorter jars with handles were used for archival purposes. The handles were actually used as anchors for tying down the lid; parallels of such practices have been found in Egypt. However, the scrolls of an active community library were not placed in archive jars for extended periods of time but were normally stored on shelves inset into the walls of a room (compare, e.g., the Celsus library at Ephesus, the library at Nizanna, and, apparently, Qumran loc. 2). The only reason the contents of a library might be found in a cave, whether in jars or not, would be to set aside worn or damaged scrolls in a *genizah* or to temporarily hide the scrolls from imminent danger. If the latter case is true for the cliffs of Qumran, those who hid them did not survive to retrieve them according to plan.

Diverse Caves and Libraries of Qumran

It has been generally assumed that the numerous manuscripts from the Qumran caves (and those from Masada!) were once part of a single library, produced and kept by a singular movement of people, known within the scrolls as the "Yahad" or the "Sons of Light" (and by their contemporaries as the "Essenes"). The various manuscript deposits, however, when examined by content and context, by what unites them and what divides them, tell a different story. Their unique and dissimilar features reveal that their owners actually came from diverse groups, who hid the scrolls at different times.

A survey of the contents of each manuscript collection confirms that, in all cases, the Books of Moses were central to each collection, reflecting the common Jewish background of the peoples who deposited the manuscripts. However, the Torah manuscripts were supplemented in each collection by other Jewish writings, which reveal the views of its owners and help to define each group. This feature along with certain variations in material remains from each scroll cave provides

evidence as to the identity of individual groups who harbored each manuscript collection.

The general character of a group, whether priestly or lay, is indicated by a number of predictable elements. If, for example, a library predominantly contains works such as rulebooks, liturgies, and multiple copies of the Book of Psalms – a collection which helps to define and support the role of priesthood – then priests must have comprised the core group (e.g., the collections of caves 1Q and 11Q). If the supplemental material contains rule books, copies of the "five *megilloth*" (pocket scrolls read by the laity during the feasts), and legendary texts which define and support the role of the laity, then the collection likely belonged to a lay group (e.g., the collections from caves 2Q, 3Q, 6Q and perhaps 5Q). If the collection contains a mixture of these features, then it might represent a *genizah* for both priestly and lay communities (e.g., the contents of cave 4Q and perhaps 5Q), or the library of a community which composed of both priestly and lay elements (e.g., Masada).

The specific sectarian leanings of the owners can be discerned by the contents of their rulebooks and the supplemental literature they preserve within the collection, or even possibly by which texts are excluded. These leanings appear to go in two directions: (1) Caves 1Q, 4Q, 5Q and 6Q, which as a group preserve libraries of the two divisions of the "Sons of Light," the priestly *Yahad* "Community" and the laity Israelites (both divisions of which are, by nature, ideologically and typically "Essene" as described by Josephus; the term "Qumran Community" is inappropriate since the movement, as described in the scrolls, was not confined to this site), and (2) Caves and sites which preserve libraries which ideologically support and belong to various groups involved in the First Revolt (potentially including especially the Sicarii, the followers of Simon bar Giora, the Zealots and others described by Josephus in his *Jewish Wars*).

CAVES 1Q, 4Q, 5Q, AND 6Q. Cave 1Q: This *Yahad* collection, in addition to being of a priestly character, is all written on parchment, and contains one copy each of all of the major works identified with the Yahad and its founder the Moreh Zedek, especially the *Rule of the Community*, two copies of the *Thanksgiving Hymns* and most of the community's commentaries (lacking, however, the *Temple Scroll* and *Ben Sira*, which support divergent views). The group also avoids authoring pseudepigraphic works. 1Q contained at least 75 manuscripts from about 125 B.C.E. to 25 C.E., with two peaks in accession (14% from c. 100–75 B.C.E. and 43% from 31–1 B.C.E.). Since accessions ended by 25 C.E., this must be the approximate date that this library was removed from Qumran and hidden in the cave. This may provide a *terminus ad quem* for the presence of the priestly *Yahad* at Qumran. The textiles from 1Q were of unbleached, "off-white" linen, often with blue dyed indigo or *tekhelet* pin-stripes woven into the fabric.

Cave 6Q: This Essene collection of lay character (including a *megillah* of the Song of Songs) is written primarily on

papyrus and contains one copy of the lay rule book, the *Damascus Document*.

Cave 4Q: The special case of cave 4Q is that, as a *genizah*, it contains more than 700 worn copies of parchment and papyrus scrolls, sometimes from diverse sources, copied over long periods of time (in this case, dating from the late third cent. B.C.E. to the late first cent. C.E., with at least 70% deriving from the period between 75 B.C.E. and 25 C.E.). The cave contains books of Essene institutional interest, both from a priestly and a lay perspective. There is a broad and mixed offering of scrolls topically (Bible, Apocrypha, parabiblical, liturgical, legal, calendrical, and legendary texts), yet an avoidance of works which would be considered errant, such as *Ben Sira*, the *Books of Maccabees*, and all works of the Pharisees and the Sadducees.

Cave 5Q may also belong to the adjacent cave 4Qa/4Qb *genizah* complex, as it contains parchment scrolls (including both the *Community Rule* and the *Damascus Document*), though of a more limited age span. (If it is not a *genizah*, then a lay character might be assigned to this collection, since it contains two *megillot* of the book of Lamentations)

CAVES 11Q AND 3Q. Cave 11Q: A non-Essene collection of a priestly character, located in the northern cave cluster, Cave 11Q contains three copies of the pseudepigraphic rulebook the *Temple Scroll*, a chapter of *Ben Sira* (in 11Q Psalms^a), and promotes Ezekiel among the prophets (perhaps due to its emphasis on the future temple and its promotion of the Zadokites). The library contains no certain works that promote the history or views of the Moreh Zedek and his followers. The textiles derived from this cave were almost exclusively bleached white (as opposed to the usual natural off-white, as in Cave 1Q and elsewhere) and often with blue indigo pin-stripes woven in.

Cave 3Q, located in the same cave cluster as 11Q, is of non-Essene, lay character (including a Lamentations *megillah*). It is likely connected with the Zealots, the self-appointed protectors of the Temple and its treasures, since it contained the *Copper Scroll*, which enumerates the locations where priestly paraphernalia, Temple treasures, and tithe jars were hidden.

Sixty-five percent of the at least 46 manuscripts from caves 11Q and 3Q come from the last 25 years before the fall of Jerusalem and 90% of the manuscripts come from the 1st century C.E. It would seem that these, and the other caves of the northern cluster, were inhabited briefly at the end of the First Revolt. The best candidate for ownership of these manuscript collections would seem to be the group of rebels led by the Zealot general Judah ben Jair who came down from Jerusalem to the jungle of the Jordan to take their last stand, along with another group of refugees from Machaerus (Jos., Wars, 7:210–15).

CAVE 2Q. Cave 2Q, although it is in the same cluster as cave 1Q, is not likely connected with the Essenes since it contains no community documents and includes *Ben Sira*. It is of lay character (containing two *megillot* of the Book of Ruth) and

is likely connected with the revolutionaries (perhaps with Simeon bar Giora's group).

THE CASE OF MASADA. Early during the revolt Masada became the sole stronghold and residence of the Sicarii. The founder Judah the Galilean and his successors were called "teachers" by Josephus (Wars, 2:118). There is no reason to believe that this group would not keep an institutional library. The cache of scrolls found at Masada that once were thought to connect with the Qumran scrolls are no longer considered to be either Yahad or Essene in character. The corpus of manuscripts from Masada should be viewed as the remnants of a Sicarii library, written mainly on parchment, with certain lay and priestly components. (The various extraneous papyrus documents derived from the Roman occupation of the site must be treated separately.)

CAVES 7Q, 8Q, 9Q, AND 10Q: The remains from cave 7Q, which contained only Greek manuscripts, and cave 8Q, which contained Psalms, a liturgical work, a phylactery and a *mezuzah*, although having a definable character, are too sparse to be able to connect them with the other caves. The manuscripts from Caves 9Q and 10Q are not definable. However, in light of the food remains and lamps from all four of these caves, they all appear to have been used at the end of period 11b as residences for the rebels. This is also true with respect to most of the caves throughout the cliffs. In the Ein Feshkha cluster most of the caves contain remains from the post-70 C.E. period.

QUNAYṬIRA, AL- (Kuneitra), central town in *Ramat ha-Golan, at the crossroads where the highway connecting the Benot Ya'akov bridge with Damascus intersects roads to Mt. Hermon and Lebanon, to Sheikh Miskin and the southern Bashan, and to *Ḥammāt Gader on the Iarmuk River. The town lies in a shallow valley, approximately 2,950–3,100 ft. (900–950 m.) above sea level. Remains from the Byzantine period were found there, e.g., a granite column and three tombstones with legends in Greek. An archaeological survey in 1968 revealed additional Greek inscriptions, some of which testify to a Jewish population there in the Byzantine period, e.g., the legend "Archelaus ben Hananiah" on a tombstone. Until the mid-19th century al-Qunayṭira was only a wayfarers' inn (*khān*). With the settlement of Circassians in Golan the town became a regional center, and by the end of the 19th century had 1,800 inhabitants, almost all Circassian Muslims. Water from a spring was collected in a reservoir dating from the Byzantine period and conducted to ponds at several places in the town, and the houses were built along broad, paved roads. The Circassians regarded al-Qunayṭira as their national center. The economy was based on administrative services, commerce, small workshops, and auxiliary farming. In the 1950s, when the town belonged to Syria, it began to lose its Circassian character as Arab merchants settled there. In the 1960s al-Qunayṭira was made the district town of Golan, when the population approached 15,000 and the economy was increasingly geared to the Syrian military installations. A large headquarters for the "Palestinian Front" was erected at the town's western entrance. The Circassians by then constituted no more than 15–20% of the total population. When al-Qunayṭira was captured by Israel forces on the last day of the *Six-Day War (June 11, 1967), it was found abandoned by almost all its inhabitants. According to the Israel census (1967), there were still 206 people, but they subsequently left. Kibbutz Merom Golan was established at the town's western entrance. Al-Qunayṭira has a place in Theodor *Herzl's prophetic novel *Altneuland*. The town, which he envisioned as accessible by an electric train rising from the shores of Lake Kinneret, became a junction of Transjordanian railways.

QURAYZA, BANŪ, One of the three major Jewish tribes in *Medina (pre-Islamic Yathrib) that became famous in Islamic historiography through their conflict with *Muhammad. Their defeat in 627 came after that of the *Qaynuqā' and the *Naḍir.

Following Qurayza's siege and unconditional surrender, hundreds of their men were beheaded and their women and children were sold into slavery. The tribe of Qurayza was divided into two subdivisions, the 'Amr and the Ka'b, each having its own assembly (*majlis*). They had tower-houses used for residence that were owned by leaders such as al-Zabir ibn Bāṭā, "the last of the Qurayza" in Saul *Tchernichowsky's famous poem, and Ka'b ibn Asad, their chief at the time of Muhammad. In addition, they had a central fortification, al-Mu'riḍ, which was large enough to shelter the whole tribe in wartime. As was always the case in a settled tribal society, Qurayza's defense was also based on alliances. When these alliances collapsed, their fall was only a matter of time.

The dramatic events surrounding Qurayza's demise dominate the reports about them in Islamic literature. They were preceded by the Battle of the Ditch (Khandaq) in which Medina was besieged by a coalition of Muhammad's enemies that included his own tribe, Quraysh, and several nomadic tribes. The Qurayza who had a non-belligerency agreement with Muhammad – not to be confused with the so-called "Constitution of Medina" in which they did not participate – probably remained neutral: they lent the Muslims tools for digging the defensive ditch, but also sold provisions to the besiegers. After their surrender their fate was reportedly decided not by Muhammad, but by the fatally wounded Sa'd ibn Mu'adh of the Aws. His decision was met with opposition among the Aws with whom the Qurayza had an old alliance. One of the Qurayzi women taken captive was Rayḥāna, who became Muhammad's wife or concubine. The Qurayzi boys who were spared because they had not yet reached puberty were literate, and hence an asset for the emerging Islamic culture. When we read Qurayza stories "from within" that favorably describe certain Qurayzi leaders, otherwise known as Muhammad's enemies, they should be attributed to the role of these survivors as Muslim informants. The son of one such survivor achieved great fame a century after Muhammad: it was Muhammad ibn Ka'b al-Qurayzi who was a leading authority on *Koran exegesis.
