Initial letter "P" of the word *Principio* in a Latin manuscript of *The Antiquities of the Jews* by Josephus Flavius, France, 12th century. The figure in the illuminated letter is wearing the medieval Jewish pointed hat. Paris, Bibliothèque Nationale, Cod. Lat. 5047, fol. 2, column 2. Photo Bildarchiv Foto Marburg, Marburg-Lahn.

PES-PY

PESAḤIM (Heb. פֶּסַחִים; "paschal lambs"), third tractate in the Mishnah, Tosefta, and two Talmuds, of the order *Mo'ed*. *Pesaḥim* deals, in ten chapters, with the laws concerning the *Passover festival.

Pesaḥ refers primarily to the paschal sacrifice, but was applied also to the festival itself. This tractate deals with both subjects, the sacrificial service (chaps. 5–9), leavened and unleavened bread (chaps. 1–4), and the *seder* (chap. 10). In geonic times the tractate was still divided correspondingly into two parts called *Pesaḥ Rishon* and *Pesaḥ Sheni*. The two parts were afterwards combined and given the name *Pesaḥim* (in the plural). In the Munich manuscript, the tenth chapter appears as the fourth, so that the "practical" chapters follow one another consecutively. There is clear evidence that the two parts of this tractate were not redacted in the same school, and there are definite differences between them. They contain conflicting topics and even those which are similar differ in details and even halakhically. The redaction of the tractate *Pesaḥim* took place relatively later than that of the other tractates and its Talmud already utilized the edited Talmud of many other tractates. The *mishnayot* of the second part are very old and refer to events from the time of the Second Temple and the early authorities. The Mishnah of the first part, though it is of later redaction, contains *halakhot* which were a subject of dispute between the latest of the *zugot and the first of the *tannaim*, as can be proved from the parallel passages.

The following are the contents of the chapters. Chapter 1 deals with the "search" for leaven (*bedikat ḥamez*) and its removal. Chapter 2 continues the subject and then goes on to discuss certain aspects of the making of the *matzah* and questions relating to *maror and *ḥaroset. Chapter 3 opens with a list of various foods containing *ḥamez* (e.g., beer made from barley), then reverts again to problems of the search for leaven and its removal, especially in the event of the eve of Passover falling on a Sabbath. Chapter 4 opens with the ruling that abstention from work on the eve of Passover depends on local customs. It then lists various *halakhot* which depend on local customs. Chapter 5 is mainly concerned with determining the time for slaughtering the paschal lamb and other aspects of the sacrificial service. Chapter 6 deals with the sacrificial arrangement when the festival falls on a Sabbath, and with related problems. Chapter 7 deals with the roasting of the paschal lamb, and discusses problems touching on ritual impurity affecting the persons participating in the sacrifices. Chapter 8 considers the question of a person slaughtering the paschal lamb on behalf of another person, and the qualifications of the persons involved. Chapter 9 touches first on the question of Second Passover (cf. Num. 9:10–11), but then discusses a variety of other problems, such as the interchange of a paschal lamb. Chapter 10 considers the arrangement of the *seder* night.

In the Tosefta, this tractate is also divided into ten chapters. An aggadic point of particular interest is how King Agrippa took the census of the people assembled in Jeru-

salem on the occasion of a Passover pilgrimage (4:3; also 63b). There is *Gemara* in the Palestinian and Babylonian Talmuds. The *Gemara* of the Babylonian Talmud contains a considerable amount of *aggadah*. The following are worthy of note: the insistence on refined language (3b); expressions of extreme antagonism between scholars and ignoramuses (49a–b); arrogance and anger make a scholar lose wisdom and a prophet his prophecy (66b); there is an advantage in the existence of a Diaspora, insofar as it makes a concentrated attack on Israel's existence impossible (87b, also 118b on the causes of Diaspora); and finally mention should be made of the story of the appointment of Hillel as *nasi* (66a). The English translation in the Soncino Talmud is by H. Friedman (1938).

[Arnost Zvi Ehrman]

PESAḤSON, ISAAC MORDECAI (1876–1943), a pioneer of the *Bund in Russia and Poland. Pesahson was born in Shklov but his family settled in Warsaw, where his father, a descendant of the founder of the *Ḥabad ḥasidic movement, officiated as rabbi. As a youth Pesahson belonged to a group of Jewish Populist and Marxist intelligentsia. In 1893 he assisted in the publication of the first Yiddish May Day manifesto. During the 1890s, in contact with I.L. *Peretz, he instructed circles of workers in socialist studies. In 1897 he was active in bringing about the merger of Polish-born Jewish members of the Polish Socialist Party (*PPS) and the Union of Jewish Workers in Warsaw led by J. *Mill, whose members came from Lithuania. After the establishment of the Bund, he worked for it in Lodz, utilizing his familiarity with Polish ḥasidic life. Subsequently, he was alternately imprisoned on various occasions or active for brief periods in Warsaw and Lodz. He escaped from Siberia and worked with the Bund “committee abroad.” During the 1905 Revolution, he worked again in Lodz, and was a Bund delegate at the Fifth Convention of the Russian Social Democratic Labor Party (London, 1907). From 1909 until his death he lived in Bedzin, western Poland. From 1917 he was a member of the central committee of the Bund in Poland. He was employed as secretary of the Jewish community in his town and pursued his activities for the Bund until he was murdered during the Nazi occupation. Under the pen name, *An Alter Bakante*, he published reminiscences on the beginnings of the Jewish workers' movement in Warsaw and Lodz in *Der Yidisher Arbeter*, 10 (1900), 27–36; 25 *Yor* (1922), 35–36; and *Royter Pinkos*, 2 (1924), 159–64.

BIBLIOGRAPHY: A. Brandes, *Kez ha-Yehudim be-Ma'arav Polin* (1945); I.S. Hertz (ed.), *Doyres Bundistn*, 1 (1956), 262–9; I.S. Hertz et al. (eds.), *Geshikhte fun Bund*, 3 vols. (1960–66), index.

[Moshe Mishkinsky]

PESANTE, MOSES BEN ḤAYYIM BEN SHEM TOV (d. 1573), author and self-appointed emissary of Safed who traveled in Turkey and the Balkans between 1565 and 1573. He was murdered in Greece.

Pesante was the author of *Ner Mitzvah*, a commentary on the *azharot* of Solomon ibn *Gabirol (Constantinople, 1567; second edition with additions, Salonika, 1569); *Yesha Elohim* (Constantinople, 1567), including an exposition of the *Hoshanot* and their relevant customs together with the laws of *lulav*, and the *piyyutim* for the Rejoicing of the Law; and *Hukkat ha-Pesah*, a commentary on the Passover *Haggadah* (Salonika, 1569). Among his unpublished works are a commentary on the order of *Zera'im* of the Jerusalem Talmud and novellae to the tractate of *Kiddushin*.

[Samuel Abba Horodezky]

PESARO, city in north-central Italy on the Adriatic Sea. A rabbinical responsum attests to the existence of a Jewish community there in 1214. We can assume that Jews had settled in the city even earlier, attracted by its commercial importance. Pesaro's Jewish residents were engaged in crafts, moneylending, and local and regional trade.

The establishment of a public loan bank (*Monte di Pietà) in 1468 caused only minimal harm to local Jewish enterprises. Moneylending to the poor was the most conspicuous but by no means the most important, of the manifold activities of Jewish bankers. In fact, Jews supplied floating capital to local artisans and merchants and provided financial support to farmers in anticipation of the crops. Jews also lent large amounts of money at low rates of interest to local municipalities, eminent personalities, and noblemen. These loans were generally granted solely on the basis of written receipts, and without a *pegno* (guarantee). In the second quarter of the 16th century, a few Levantine and Portuguese merchants settled in Pesaro and engaged in international and regional commerce in wool textiles and leather.

When the Jews were expelled from the Kingdom of Naples in 1541, a branch of the Sarfati family, related to the *Abrabanel, settled in Pesaro and engaged in local commerce and financial activities. They described themselves as Neapolitan Jews and joined the local “Italian” congregation.

In or around 1549, Leone (Yehudah), son of Samuel Abrabanel, moved to Pesaro from Ferrara, after a bitter quarrel with his mother, Benvenida, who opposed his relations with Luna, a Portuguese Jewess of exceptional beauty whom he later married. Amatus Lusitanus called her the “divina.”

In 1548, Manoel Lopes Bichacho, formerly a leader of the Portuguese Nation in Antwerp, settled in Pesaro, where he obtained a *condotta* (banking license) from Guidobaldo, duke of Urbino.

According to Samuel Usque, in 1549, when the duke of Ferrara expelled from his city all the recent arrivals, Manoel Bichacho persuaded Duke Guidobaldo to allow some of them to settle in his lands.

In 1550, Manoel was allowed to include up to 35 merchants in his *condotta*. This was the rather unusual beginning of the Portuguese Nation in Pesaro.

In 1556, in the wake of the persecutions against the former *Marranos of *Ancona, several of them fled to Pesaro. This group included the famous physician Amatus Lusitanus; the poet Diogo *Pires (*alias* Isaiah Cohen); Yom Tov Atias (*alias* Alvaro de Vargas) and his son Jeronimo, editors of the famous *Biblia Española de Ferrara*, and Rabbi Yuda Ibn Faraj who later acted as ambassador of the Portuguese Nation of Pesaro to the Jewish communities in the Levant.

After the death of the 26 martyrs of Ancona, Gracia and Joseph *Nasi conceived a famous plan to engage in an open commercial war against the Church, boycott the Ancona entrepôt, and develop the city of Pesaro as a new center for maritime trade between Italy and the Levant. Unfortunately, the port of Pesaro did not have adequate facilities and was not deep enough for big merchant ships to berth in it. Furthermore, there were bitter differences among the Jewish merchants in the Levant, some of whom did not participate in the boycott of Ancona. Consequently, the daring program failed.

The duke of Urbino was embittered and disappointed by the unfulfilled attempts at developing the port of his city. In March 1558, Guidobaldo, overwhelmed by diplomatic pressure from the Church, decreed the expulsion of all the former Marranos, including those who had already been living in Pesaro before the Ancona affair. The duke took revenge against Manoel Bichacho and seized all the properties and goods belonging to him and his family. The punitive provisions were carefully enforced. Italian Jews, however, were not persecuted and enjoyed a period of prosperity. Angelo, son of Zaccaria di Volterra, obtained the license of the bank which had formerly belonged to his family and later to Emanuel Bichacho. He also received the job of ducal cashier. Duke Guidobaldo was so pleased with Angelo's performance that he praised him publicly and granted him a "perpetual" exemption from local taxes.

Sephardi Jews were later readmitted and continued to engage, as before, in trade with the Levant. They built a richly decorated synagogue officially designated as "Spanish and Levantine," but commonly called "Portuguese."

After the expulsion of Jews from the Papal States in 1569, several refugees found shelter in Pesaro. In 1631, when the Duchy of Urbino fell under papal rule, the oppressive legislation that applied in the States of the Church was extended to Pesaro. In 1634, Jews were segregated in a ghetto and compelled to wear a yellow badge. The new regulations forbade the Jews to own real estate, and drastically reduced their permitted commercial activities to the *arte strazzaria* (i.e., trade in secondhand clothes). Jews were not allowed to employ Christians. Jewish physicians were no longer licensed to practice medicine among Christians. As a consequence, many Jews left the city. Their number shrank from 630 in 1628 to barely 500 in 1656. The Jewish population continued to decrease in the following century and totaled only 406 persons in 1747. However, in the 18th century, the enforcement of the oppressive legislation was somewhat relaxed. Several bankers ob-

tained, for a price, special licenses enabling them to establish commercial offices and their residences in the center of the city, outside the ghetto. Prominent among the new entrepreneurial class was Salvatore della Ripa, merchant, banker, and communal leader.

In 1797 when French forces occupied Pesaro, the gates of the ghetto were opened. The Jews were declared full citizens and replaced the yellow badge with the tricolor cockade. When the French army withdrew from the city, a mob attacked the Jewish quarter and ransacked the synagogues.

When the rule of Church was fully reinstated, the old restrictions were renewed, at least nominally. Nonetheless, several Jews were permitted to engage in various commercial and industrial activities. According to the 1824 National Industrial Statistics, Bonaiuto d'Ancona employed 60 women in his spinning factory with a yearly production of 1,400 pounds of extra-fine silk, most of which was exported to England. Alessandro Bolaffi and Iacob Foligno were engaged in the silk industry and grain trade. Other merchants dealt in wool garments, leather, and skins, and a variety of other goods. However, alongside a few rich families, many others were impoverished and received financial help from the Jewish community.

After his ascent to power, Pope Leone XII (1823–29) reinforced the oppressive rules with great obstinacy. All previous concessions were revoked. Jews were compelled to sell any real estate they had acquired. Many rich families left the States of the Church and moved to more hospitable places. The sons of Zaccaria della Ripa settled in Florence, where they had already established the headquarters of their banking activities. However, they kept their house and their offices in Pesaro and continued to support the local Jewish community, which faced serious economic problems as it had been deprived of most of its wealthiest members.

In 1860 Pesaro was annexed to the kingdom of Italy and the Jews were emancipated. Many families moved to the center of the city. In 1869 there were only 160 Jews in the area of the former ghetto. At the beginning of the 20th century the Jewish population of Pesaro numbered only 60. By 1940 there were only a few individuals. The building of the Italian Synagogue was severely damaged by an earthquake in 1930 and was later demolished.

During World War II no Jews were deported from the city of Pesaro. A few Jews joined the Italian partisans and fought in the war of liberation against the occupying German army. Small groups of foreign Jews lived scattered throughout the large province of Pesaro. Some of them had succeeded in reaching Italy from far-away localities in Germany and Poland. Others had handed themselves over to the Italian army in Croatia in order to find shelter from the Ustasha militias and German troops. They were arrested by the Italian military police, who did not hand them over to the SS but confined them to "internment camps" in Italy. However, such camps did not exist in the district of Pesaro. Jewish refugees lived in pri-

vate homes or hotels. They were nominally obliged to appear every day before the local police but, in truth, they enjoyed almost complete liberty with the tacit consent of the Italian police headquarters in Pesaro. When the German army retreated from the region, the SS arrested a group of Jews hidden in the hospital of Urbino. These prisoners were executed at the airport of Forlì.

In 1944 Pesaro was liberated by the Allied forces. The 7th British Army included an all-Jewish unit: the *Jewish ("Palestinian") Brigade, which fought the Germans under the blue and white Zionist flag. There were indescribable scenes of emotion in Pesaro, as everywhere else, when the surviving Jews met the soldiers displaying the Magen David and the word "Palestine" on their shoulder straps. The Jewish soldiers reopened the Sephardi Synagogue and celebrated religious services – the last ones to be held in a city with almost no Jewish population left. This synagogue is owned by the Jewish community of Ancona, which donated the magnificent wooden *Aron ha-Kodesh* to the Jewish community of Leghorn. Part of the *bimah* was moved to the Levantine Synagogue of Ancona. The remains of the prayer hall are considered a national monument. Complex restoration works have been executed by the local municipality, and the stucco ornaments of the vaulted ceiling were restored to their original splendor. Two ancient wall paintings depicting the city of Jerusalem and the encampment of the Jews at the foot of Mount Sinai were also restored.

The abandoned cemetery on the steep slopes of Mount S. Bartolo was cleared from rampant vegetation, its terraces rebuilt and reinforced, the sepulchral stones dug up.

[Aron Leoni (2nd ed.)]

Hebrew Printing

Pesaro occupies an important position in the history of Hebrew publishing. *Abraham b. Ḥayyim "the Dyer" worked in Pesaro before moving to Ferrara in 1477. In 1507 Gershom Soncino opened a printing house in Pesaro and worked there with some interruptions until 1520. He produced, besides books in Italian and Latin, an impressive range of classical Hebrew texts: some 20 Talmud treatises, a complete Bible (1511–17), Pentateuch or Bible commentaries by Bahya (reprinted three times), by Moses b. Naḥman (Naḥmanides), Levi b. Gershom, David Kimḥi, Isaac Abrabanel as well as an edition of Nathan b. Jehiel's *Sefer Arukh* (1517). Some of these works appear as issued by the "Sons of Soncino."

PESARO, ABRAMO (1818–1882), Italian revolutionary and communal leader. Pesaro was born in Ferrara where as a young man he established a cultural and vocational training center. In 1846 he belonged to the local committee which organized a rising against the papal government and was a member of the National Assembly of Mazzini's short-lived Roman republic of 1849. After the failure of the 1848 Revolution he lived in Venice until the establishment of the kingdom of Italy in 1861. Afterward he returned to Ferrara where he was active in both Jewish and general public life. He published various monographs on Italian Jewish history, in particular a work which is still the only history of the Jews of Ferrara (2 pts., 1878, 1880).

[Menachem E. Artom]

PESHAT (Heb. פֶּשֶׁט), word which came to mean the plain, literal meaning of a text, as opposed mainly to **derash*, the homiletical interpretation, but also to any other method than the literal. According to W. Bacher (*Die exegetische Terminologie der juedischen Traditionsliteratur*, 2 (1905), 112ff.) it was **Abbaye*, in the first half of the fourth century, who first made a distinction between *peshat* and *derash* as separate methods of exegesis, while Dobschuetz regards the word as the innovation of the academy of Pumbedita as a whole, including *Abbaye*, Joseph, and Rava. An examination of the one clear instance in which *Abbaye* advances two interpretations, one of *peshat* and one of *derash* (*Sanh.* 100b), however, does not bear out the assumption that the word indicates the literal meaning (cf. Loewe in bibliography, p. 163–4). Similarly, the frequently quoted statement, *ein mikra yoze middei peshuto*, "a text cannot be taken from the meaning of its *peshat*" – *Shab.* 63a; *Yev.* 11b, 24a – does not necessarily imply that *peshat* means the literal exegesis. In point of fact in parallel passages where one uses the verbal form *peshat*, the others use *darash*, or *shanah*, or *matne* (Heb. and Aramaic respectively for "studied," or "repeated"; *Num. R.* 18:22; *Gen. R.* 10:7 ed. Theodor Albeck p. 81, and notes), while in two interpretations given by R. Dimi to a biblical passage (*Gen.* 49:11–12) that which is called "the *peshat* of the verse" (*peshta de-kerā*) is much further removed from the literal meaning than the other interpretation given (*Ket.* 111b; cf. also *Kid.* 80b; *Er.* 23b; *Ar.* 8b). Actually the rabbis had only two major methods of biblical exegesis, that of *halakhah* and that of *aggadah*, neither of which depended upon literal exegesis and in most instances deviated from it.

The basic meaning of the root of the word *peshat* in biblical Hebrew is "to flatten out," with the secondary meaning "to extend" or "to stretch out" (hence the meaning "to make a raid" – *Job.* 1:17), and from this was derived the talmudic meaning of "to expatiate upon," or "to propound." In context, *peshat* in talmudic literature seems to mean not the plain meaning but "the teaching recognized by the public as obviously authoritative, since familiar and traditional" (Loewe) or "the usual accepted traditional meaning as it was generally

taught” (Rabinowitz). The present meaning of *peshat* is probably due to Rashi’s biblical commentary, in which he was the first sharply to differentiate between the homiletical interpretation which he called *derash* and the literal meaning to which he gave the name *peshat*.

[Louis Isaac Rabinowitz]

PESHER (Heb. פִּשְׁטָר), word meaning “interpretation.” It occurs only once in the Hebrew Bible: “Who is as the wise man? and who knoweth the interpretation of a thing?” (Eccl. 8:1). However, the Aramaic word *peshar* occurs 31 times in the Aramaic portion of Daniel, where it mainly refers to dream interpretation.

In Qumran texts, it usually occurs after a biblical quotation, introducing its interpretation. As such it refers to a particular technique of interpretation which may be paralleled to midrashic exegesis.

What is distinctive of Qumran is both the systematic application of such a technique to a given prophetic work and its specific purpose. On the one hand, it had the result of creating a fixed literary structure, mostly known from the “continuous” *pesharim*. Those works quote one “prophetic” book verse by verse, each verse being followed by its interpretation, aiming at giving the plain meaning of the Prophet’s words as a whole. On the other hand, their aim is to read historical and eschatological events into the biblical prophecies, understanding them as describing their own sect’s situation on the verge of the *eschaton*.

Such an attitude to the biblical text (i.e., God’s words) is already exemplified by the book of Daniel, where the term *peshar* is linked to the noun of Iranian origin *raz*, which appears nine times in the Aramaic portion of Daniel. Nebuchadnezzar’s dream of the great image of four metals is a *raz* which cannot be understood until the *peshar* is supplied. Both the *raz* and the *peshar* are given by divine revelation; the *raz* is the first stage of the revelation, but it remains a mystery until the second stage, the *peshar*, is forthcoming.

Raz and Peshar

Both *raz* and *peshar* are common terms in the Qumran texts. Repeatedly in the *Thanksgiving Psalms God is praised because He enabled the psalmist to understand His wonderful mysteries (*razim*), by which His eschatological purposes seem especially to be meant. In the Qumran commentaries on various biblical books or parts of books this *peshar* pattern is particularly manifest. The first stage of divine revelation was imparted to the biblical writer, but it remained a mystery (*raz*) until the second stage, the interpretation (*peshar*), was imparted to the Teacher of Righteousness (and by him to his disciples). Thus, in the *Habakkuk Commentary*, it says that “God commanded Habakkuk to write the things that were

coming on the last generation, but the fulfillment of the epoch He did not make known to him. And as for the words, that a man may read it swiftly; their interpretation (*peshar*) concerns the Teacher of Righteousness, to whom God made known all the mysteries (*razei*) of the words of His servant the prophets” (1QP Hab. 7:1–5, on Hab. 2:1ff.). This is completely in accordance with the statement at the beginning of the Damascus document, that God raised up for the righteous remnant “a Teacher of Righteousness to lead them in the way of his heart, that he might make known to the last generations what he was going to do to the last generation” (CD 1:10–12). Not until the two parts of the revelation, the *raz* and *peshar*, are brought together is its meaning made plain. The revelation, moreover, is predominantly concerned with the time of the end, the last generation of the current epoch. Three basic principles of Qumran interpretation have already shown themselves:

(1) God revealed His purpose to the prophets, but did not reveal to them the time when His purpose would be fulfilled; this further revelation was first communicated to the Teacher of Righteousness.

(2) All the words of the prophets had reference to the time of the end.

(3) The time of the end is at hand.

Contemporary Interpretation

Much then of what the prophets had to say was believed to be in a kind of code; it could only be decoded when the Teacher of Righteousness was provided with the key. Knowledge of the context of the prophet’s own day, which a modern exegete would regard as indispensable for understanding his message, was irrelevant; the historical context which made his words intelligible was the interpreter’s own situation and that of the period immediately following. Isaiah might prophesy the downfall of the Assyrian, Ezekiel might foretell the rise and fall of “Gog, of the land of Magog,” Habakkuk might describe the invasion of his land by the Chaldeans; but in these and other instances the reference is not to enemies of Israel in the respective prophets’ days but to the great gentile power which would oppress the people of God at the end-time, regularly designated the *Kittim in the Qumran texts. For example, in a commentary on Isaiah (4QP1s*), the advance and overthrow of the Assyrians in Isaiah 10:24ff., are interpreted as the eschatological “war of the Kittim.” The leader of the Kittim (or so it appears, for the manuscript is badly mutilated) goes up from the plain of Acre to the approaches of Jerusalem. This is followed by the quotation of Isaiah 11:1–4 which is properly interpreted as the “shoot of David” who is to arise in the latter days to rule all the gentiles, including “Magog,” but takes his directions from the priests. (This is in line with the Qumran picture of the age to come, in which the priesthood, and especially the “Messiah of Aaron,” will take precedence over the Davidic Messiah, whose main function is to lead his followers to victory in battle.) In line with the interpretation of the Assyrians as the Kittim in this commentary is the quota-

tion of Isaiah 31:8 in the *War Scroll (1QM 11:11 ff.) with references to the destruction of the Kittim (“Then shall Asshur fall with the sword, not of man, and the sword, not of man, shall devour him”).

The Habbakuk Commentary

The best-preserved of the Qumran commentaries is that on Habakkuk from Cave 1, and it provides the largest number of examples of this *pesher*-interpretation. The description of the Chaldeans in Habakkuk 1:6–17 is applied almost clause by clause to the Kittim. The Kittim, in their swift advance, overthrow all who stand in their way, and subdue them to their own dominion. They take possession of many lands and plunder their cities, “to possess dwelling places that are not theirs.” Nor do they rely on military power alone to accomplish their ends: “With deliberate counsel all their device is to do evil, and with cunning and deceit they proceed with all the nations.” “They trample the earth with their horses and their beasts; they come from afar, from the islands of the sea, to devour all the nations like vultures, and they are never satisfied... With wrath and anger, with hot passion and fury, they speak to all the nations.” They impose heavy tribute on the nations, to be paid year by year, and thus they denude the lands of their wealth. In war they are completely ruthless; their sword regards neither age nor sex. Yet, as the prophet says, they are the agents of divine judgment against the ungodly; in particular, they are sent to punish the wicked priesthood of Jerusalem, who oppressed the godly and plundered the poor; they will deprive these priests of their ill-gotten gain and afflict them as they had afflicted others. Other parts of the Qumran commentary on Habakkuk apply the prophet’s words to internal conflicts in Judea – especially to the conflict between the *Teacher of Righteousness and the *Wicked Priest, with some reference to other groups and leaders active at the same time as these. It rarely happens that the prophet’s words lend themselves so literally to the commentator’s purpose as do Habakkuk’s words about the Chaldeans. Elsewhere the text is atomized to serve that purpose; one variant will be preferred to another on the same principle. Where other procedures fail, the text is allegorized: if in Habakkuk 2:17 mention is made of the Chaldeans’ cutting down the cedars of Lebanon for military equipment and depriving the beasts there of their natural shelter, “Lebanon” is the council of the community and the “beasts” are “the simple ones of Judah, the doers of the law,” while their devastator is the Wicked Priest.

Other Examples

Another example of allegorization appears in the commentary on Micah from Cave 1, where the words of Micah 1:5b (“What are the high places of Judah? Are they not Jerusalem?”) are interpreted as “the Teacher of Righteousness, who teaches the law to his council and to all who offer themselves for enrollment among the elect of God.” Several instances of *pesher*-interpretation are found in the Damascus document: once the actual term is used, where the *pesher* of Isaiah 24:17,

“Terror (*paḥad*) and the pit (*paḥat*) and the trap (*pah*) are upon thee,” is said to be “the three nets of Belial... in which he catches Israel by making them look like three kinds of righteousness – namely fornication, wealth, and pollution of the sanctuary” (CD 4:12–19). The document called 4Q *Testimonia* quotes three passages from the Torah (Ex. 20:21, Samaritan text; Num. 24:15–17 and Deut. 33:8–11) with apparent reference to the eschatological prophet, prince, and priest respectively, and then quotes Joshua’s curse on the rebuilder of Jericho with reference to a son of Belial and his two sons; the text, unfortunately, is so fragmentary and allusive that the identity of the “son of Belial” remains in doubt: almost every member of the Hasmonean dynasty from Mattathias to Aristobulus II has been suggested, as have also Antipater, Herod, and even Vespasian. Alongside 4Q *Testimonia* the documents called 4Q *Florilegium* and 4Q *Patriarchal Blessings* provide examples of messianic interpretation. To those who had grasped the basic principles of the *pesher* received and taught by the Teacher of Righteousness, the sacred text was luminous; those who tried to understand it otherwise still groped in darkness.

The Historical Implication of the Pesharim

As already suggested above, the authors of the *pesharim* believed that the Prophets (including Moses and David) actually described the sect’s own times as being the end of days (or at the least, the last days before the end). As a result, they aimed at ascribing every feature derived from the biblical text to figures and groups that were their contemporaries.

Thus it is of the utmost importance to succeed in identifying these groups and figures. Unfortunately, they are recalled not by names but by sobriquets. And the most secure identifications are the vaguest from the chronological point of view. Hence, the “Yaḥad” is called Judah, while Ephraim points to the Pharisees and Manasseh to the Sadducees. The Chaldeans recalled in the book of Habakkuk are said to be the “Kittim.” The only exception is the “Lion of Wrath” mentioned by Nahum: from the historical event alluded to, it may be securely inferred that this figure is Alexander *Yannai having his opponents crucified, in 88 B.C.E. However, the *pesher* provides no further indication about the involvement of the “Lion of Wrath” in the history of the sect.

As a whole, the Teacher of Righteousness lived in the time of the Wicked Priest who persecuted him, and the sectaries saw the domination of the world by the Kittim as a sign of the coming of the end (cf. Nb 24:24). If we only knew who were the Kittim and who was the Wicked Priest, we would be able to reconstruct the history of the sect. Most scholars think the noun *Kittim* is a sobriquet for Romans (especially in Nahum), but they nevertheless usually assume that the sect was founded before Roman times. The Wicked Priest is variously identified with one Hasmonean ruler or another, if not with Herod, Jesus, or Paul. As a result, the Teacher of Righteousness’ time variously is ascribed to the 2nd century B.C.E.–1st century C.E.

[Frederick Fyvie Bruce / Emanuelle Main (2nd ed.)]

PESIKTA DE-RAV KAHANA (Aram. פְּסִיקְתָּא דְּרַב קַהָנָא), one of the oldest of the homiletic Midrashim. The word *pesikta* means “the section” or “the portion.” The *Pesikta de-Rav Kahana* contains homilies on portions of the Torah and *haftarah* readings for the festivals and special *Sabbaths. There are two editions of this text which are similar in the following order of contents: Chapter 1, on Torah readings for Ḥanukkah; Chapters 2–6, on Torah readings for the special *Sabbaths

and *Parashat ha-Hodesh*; Chapters 7–12, on Torah readings for *Passover and *Shavuot; Chapters 13–22, 24, 25, on readings for the 12 *haftarot* of the three Sabbaths of “reproof” (before the Ninth of *Av) and the seven Sabbaths of “consolation” (after the Ninth of Av); and an additional two (this section is often referred to in rabbinical literature as “The Midrash א”א”ר”ק”שד”א,” an acronym consisting of the first letters of each of the **haftarot* (see Tos. Meg. 31b)). Chapters 23 to the end consist of Torah readings for *Rosh Ha-Shanah and the *Day of Atonement; *haftarah* readings for the Sabbath of Repentance, *seliḥot*; Torah readings for *Sukkot, Shemini Azeret.

In 1832 L. *Zunz, in an ingenious work of scholarship, demonstrated the existence of *Pesikta de-Rav Kahana*, as distinct from the **Pesikta Rabbati* and the *Pesikta Zutarta*, although there was no text or manuscript available to him. On the basis of references and readings in the medieval *Yalkut Shimoni* and especially in the *Arukh*, Zunz even went so far as to propose an order of contents of 29 chapters. Chapter 1, on Rosh Ha-Shanah, was followed by the festivals and special Sabbaths in the normal cycle of the year. It has since been demonstrated, on the basis of its language and of rabbinic and place names mentioned, that the *Pesikta* is a Palestinian text, probably of the fifth century. In 1868 Solomon Buber published an edition of the *Pesikta* based on four manuscripts. The discovery of these manuscripts represented a remarkable confirmation of Zunz’s basic proposition – the existence of the *Pesikta*. However, the arrangement of chapters in Buber’s edition, as indicated above, begins the cycle of the year with the chapter on Ḥanukkah.

The confirmation of the original structure of the *Pesikta* was made possible by the discovery of a new Oxford manuscript of the 16th century. It is the only one of the manuscripts which has a table of contents beginning the cycle of the year with the chapter on Rosh Ha-Shanah, almost exactly as Zunz surmised in his arrangement of the order of chapters.

The name of the work is somewhat obscure. Zunz and Buber believe that the authorship was attributed to Rav Kahana because of a reading in the 12 chapters beginning with the Sabbath after the 17th of Tammuz. The first chapter in this unit opens as follows: “‘The words of Jeremiah’ (Jer. 1:1) R. Abba b. Kahana opened....” An alternative theory that is suggested now is based on the opening lines in the chapter of Rosh Ha-Shanah in two manuscripts which open with a reference to Rav Kahana. If the *Pesikta* begins with Rosh Ha-Shanah, it is correct to assume that the name *Pesikta de-Rav Kahana* was based on a version which made its first reference to this *amora* in its opening lines.

There are six known manuscripts of the *Pesikta* (three from Oxford, and one each in Carmoly, Casanatense, and Safed). An analysis of their contents in terms of the Palestinian tradition of the portion of Torah which is read on a particular festival, or the reading for a second day (non-Palestinian; see *Festivals), yields the conclusion that the new Oxford manuscript, which begins with Rosh Ha-Shanah, is a consis-

tently closer reflection of the tradition of Palestine where the *Pesikta* originated.

This manuscript, reflecting an old, original source, has many excellent readings on individual words and phrases. However, its special importance derives from the order of chapters which renders it possible to establish the original structure of the *Pesikta*. It is almost exactly the same as the remarkable prediction made by Zunz, at a time when a copy of the *Pesikta* was not available. However, in the new Oxford manuscript, an excerpt of the chapter on Shavuot and the chapter on *Simḥat Torah come at the very end of the manuscript, after the chapter for the last Sabbath of the year. This would indicate that these two chapters for the second day of a holiday, observed outside of Palestine, were not part of the original *Pesikta*, which is of Palestinian origin. In all probability, a later scribe came upon these two chapters, which are similar in style (although definitely of later origin) to the *Pesikta*, and attached them as an addendum to the manuscript. Each of the six manuscripts has such addenda within a chapter or complete chapters attached which are not to be found in the other manuscripts. This practice by scribes of adding material similar to the books which they were copying was not uncommon in ancient times.

It may therefore be concluded that the original order of the *Pesikta* chapters followed the cycle of the Jewish calendar, beginning with Rosh Ha-Shanah and concluding with the Sabbath before Rosh Ha-Shanah, as found in the new Oxford manuscript and anticipated some 130 years ago by Zunz.

[Bernard Mandelbaum]

PESIKTA RABBATI (Aram. פְּסִיקְתָּא רַבְתִּי), a medieval Midrash on the festivals of the year. It has been printed several times, and a critical edition, with introduction, commentary, and indices was published by M. Friedman (Ish-Shalom) in 1880. Further fragments were published by S.A. Wertheimer (in *Battei Midrashot*, 1 (1950), 260–4), and L. Ginzberg (in *Ginzei Schechter*, 1 (1928), 172–81; all future references are to Friedman’s edition). The word *pesikta* means “section,” and this Midrash consists of a series of separate sections, on the pentateuchal and prophetic lessons of festivals, unlike most other *Midreshei Aggadah* (e.g., some of the *Rabbot*) which are continuous commentaries to the Bible. It is called *Rabbati* (“the greater”) probably in contrast to the earlier **Pesikta* (de-Rav Kahana).

In Friedman’s edition, the *Pesikta Rabbati* consists of some 47 sections, but considerably more homilies, as some sections consist of (parts of) several homilies (e.g., section 10). Seven or eight sections deal with *Ḥanukkah (2–8 or 9); sections 10–15 (or 16) with the Sabbaths preceding *Passover; 17–18 with Passover itself; 20–24 are a Midrash on the Ten Commandments (*Shavuot); 26–37 deal with the Sabbaths

of mourning and comforting and the Ninth of *Av; while 38–48, bearing the superscription “*Midrash Harninu*,” deal with *Rosh Ha-Shanah and the *Day of Atonement. Thus this Midrash spans the year from the Day of Atonement, omitting only *Sukkot. Probably, in its original form, the Midrash covered the full year, but now the end has been lost.

It has five entire sections in common with the earlier *Pesikta* (15–18 and 33, and also part of 14), but otherwise is totally different both in style and structure. Thus, while the *Pesikta de-Rav Kahana* has no halakhic passages, no fewer than 28 homilies of the *Pesikta Rabbati* have halakhic exordia, many (1–14, 39–45, 47) beginning with the formula “*Yelammedenu Rabbenu*,” followed by proems beginning “*Kakh patah R. Tanhuma*.” This demonstrates clearly the *Pesikta Rabbati*’s relationship to the *Tanhuma-Yelammedenu* literature. Furthermore, it has been shown that the formula “*Kakh patah R. Tanhuma*” does not mean that what follows is a statement by R. Tanhuma, but merely that this passage is taken from the *Tanhuma (Yelammedenu)*.

So far it has been discovered that two major sources are represented in the *Pesikta Rabbati*: (1) the *Pesikta de-Rav Kahana*, and (2) the *Tanhuma-Yelammedenu*. Sections 20–24, which Ha-*Meiri calls *Midrash Mattan Torah* (“the Midrash on the giving of the Torah”), differ in style and structure from the rest of this work, and seem to form one unit. The proem in section 20 is strikingly individual in both its style and content. This work emerges, then, as a composite one, a compilation whose main body of source material is from the *Tanhuma-Yelammedenu*.

In the first homily, one of the *Yelammedenu* sections, 845 is indicated as the date of the composition of the work. (The other date there – 1219 – is clearly the gloss of a later reader or copyist, perhaps *Eleazar of Worms, who made much use of this Midrash.) However, since this work is considered a composite one, possibly reflecting several periods of editing, this date is evidence only for the composition of the *Tanhuma-Yelammedenu* stratum. The source material is all Palestinian, and though the precise date and place of compilation have not yet been fixed with certainty, modern scholarly opinion tends to view the *Pesikta Rabbati* as a Palestinian work of the sixth or seventh century.

The complete English translation of the *Pesikta Rabbati* by Braude (1968) takes into account, inter alia, the readings of Ms. Parma 1240 (completed in the year 1270) and Ms. Casanata 3324 (of the 17th century).

[Daniel Sperber]

PESOTTA, ROSE (1896–1965), third woman vice president of the International Ladies Garment Workers Union (ILGWU), anarchist, and labor activist. The second of eight children

(originally named Rachele), she was born in Derazhnya in the Ukraine to observant parents, Masya and Isaack Peisoty. Immigrating to the United States in 1913 to avoid an impending arranged marriage, she lived with an elder sister and became a seamstress. As an activist in Local 25 of the ILGWU she quickly became a leader, attending the Bryn Mawr Summer School for Women Labor Activists, Brookwood Labor College, and the Wisconsin Summer School. In 1933 Pesotta was sent to Los Angeles to organize union shops and in 1934 she was elected the only woman vice president of the Board of the ILGWU. Her charisma, rhetorical skills, and innate love and sympathy for the workers won her many ardent followers. Her leadership style was colorful; she encouraged seamstresses to model the clothes they sewed as they marched in picket lines and had children of striking workers carry protest signs in support of their parents. She provided food, music, and parties for striking workers. In Cleveland in 1937 Pesotta was slashed and beaten by anti-union thugs; she later became deaf in one ear from an altercation in Flint, Michigan. Her activism took her to Seattle, San Francisco, Milwaukee, Buffalo, Boston, and Montreal and she also assisted other unions in organizing efforts.

Pesotta became an anarchist activist early in life, writing for the journal *Road to Freedom* and working to overturn the convictions of Sacco and Vanzetti. She believed in decentralization and self-government for workers and found it hard to reconcile these beliefs with work in a union bureaucracy, where she felt marginalized as a woman and an anarchist. Her friend Emma *Goldman provided her with support and intellectual guidance for her labor and anarchist activism. Finally in 1942, after being undermined by a fellow vice president in her work in Los Angeles, Pesotta left the General Executive Board of the ILGWU. Eventually she returned to the sewing machine, working briefly for the Anti-Defamation League and the American Trade Union Council of the Histadrut. Pesotta was romantically involved for a time with Powers Hapgood, a labor organizer for the United Mine Workers Union and other unions, and she was married briefly to Albert Martin, also known as Frank Lopez, whom she met during the Sacco and Vanzetti case. Pesotta, whose books include *Bread upon the Waters* (1944; rep. 1987) and *Days of Our Lives* (1958), died in Miami, Florida. In her eulogy Gus Tyler wrote: “She was born to lead. She was fated to rise from the machine and to guide her fellow workers in the age old struggle for human dignity.”

[Elaine Leeder (2nd ed.)]

PESTSZENTERZSEBET (Hung. *Pestszenterzsébet*), town, formerly a suburb of Budapest, Hungary. A Neologist congregation was founded there toward the end of the 19th century. In 1901 a synagogue was erected and in 1903 a *talmud torah*

was founded. A school was opened in 1922 and existed until the Holocaust. B. Krishaber was rabbi of Pestszenterzsebet from 1900 to 1950. The Jewish population numbered 21,953 in 1910; 3,293 in 1920; 7,000 in 1929; 4,522 in 1936; and 3,978 in 1941. Most of the Jews in Pestszenterzsebet were laborers but some were occupied in commerce or were members of the liberal professions.

During World War II, after the German occupation (March 19, 1944), the 3,000 Jews in Pestszenterzsebet were among the last to be deported to Auschwitz, on July 8. Very few returned, and in 1969 only six Jews were living there.

[Baruch Yaron]

PESUKEI DE-ZIMRA (Aram. ܦܫܘܟܝ ܕܙܝܡܪܐ; lit. “verses of song/praise”; cf. Shab. 118b; Soferim 18:1, ed. Higger), in the Ashkenazi rite, the Psalms and cognate biblical passages recited in *Shaharit* immediately following the morning *benedictions; the Sephardi, Yemenite, and Italian designation is *Zemirot*. The liturgical pattern requires meditation prior to formal prayer (Ber. 32a, cf. Bet. 5:1) in order to achieve the required state of mind; the recitation of the *Pesukei de-Zimra* is in place of such meditation (Tosafot ad loc.). The Ashkenazi practice is to enclose the *Pesukei de-Zimra* between the two blessings, *Barukh she-Amar* and *Yishtabbah*. On weekdays, they comprise 1 Chronicles 16:8–36, plus a lectionary of 23 verses from Psalms; Psalm 100; another lectionary, mostly from Psalms, beginning *Yehi khevod*; Psalms 145–50; a doxology formed by the final verse of Psalms 89, 135, and 72:18–19; 1 Chronicles 29:10–13; Nehemiah 9:6–11; and Exodus 14:30–15:18, 19, plus three divine kingship verses. On Sabbaths and festivals, Psalm 100 is omitted while Psalms 19, 34, 90, 91, 135, 136, 33, 92, and 93 are added before *Yehi khevod*. Also the prayer *Nishmat kol ḥai is recited before *Yishtabbah*.

There is considerable variation in the other rites, especially for Sabbaths and festivals, reflecting the relatively late development of a custom not mandated by the Talmud. The expression *pesukei* (“verses”) rather than *pirkei* (“chapters”) suggests that “originally not whole Psalms but selections from them were prescribed” (J. Mann in *HUCA*, 2 (1925), 276). Liebreich distinguished two stages of evolution: before the inclusion of Psalms 145–50, and thereafter. The sages lauded “those who complete the *Hallel* [Psalms] daily” (Shab. 118b). Special merit was attached to reciting Psalm 145 (**Ashrei*). Psalms were publicly recited in both Temples, but *Pesukei de-Zimra* did not become integral to synagogue worship until geonic times. Only a reader and two respondents are required for their public recitation (Mid. Ps. 113:3).

[Herman Kieval]

PETAḤ TIKVAH (Heb. פֶּתַח תִּקְוָה), city in Israel’s Coastal Plain, 7 mi. (12 km.) E. of Tel Aviv. In the 1870s a number of observant Jews from Jerusalem decided to become farmers and establish a village called Petaḥ Tikvah (“Gateway of Hope”), after Hosea 2:17. They initially set out to purchase a tract of land near Jericho, but did not obtain the consent of the Turkish Crown to the transfer of ownership. Not abandoning their plan, in 1878 they chose an area of 3,400 dunams near the Yarkon River course, adjoining an Arab village called Mulabbis and owned by a Greek. The area looked attractive with its greenery, uncommon for the country in those days. Disregarding warnings of the danger of malaria there, the settlers acquired the land and thus laid the ground for the first Jewish village in the country, which later became known as “the mother of the moshavot.” The founders, Joel Moses *Salomon, David *Gutmann, and Yehoshua *Stampfer, succeeded in mobilizing additional settlers, but soon malaria wrought havoc, the first harvests were disappointing, and quarrels broke out within the group. In 1882 Petaḥ Tikvah numbered 10 houses and 66 inhabitants. As health conditions became unbearable, the settlers had to transfer to the neighborhood of the Arab village Yehud further south.

In 1883 *Bilu immigrants renewed settlement on the site of Petaḥ Tikvah itself. They again had to withstand immense difficulties caused by their own lack of farming experience and financial means, frequent raids of Arab neighbors, and the hostility of the Turkish authorities. Baron Edmond de *Rothschild soon came to their aid and enabled them to embark on the drainage of the swamps. The direction of the moshavah passed from the local committee into the hands of the Rothschild administration. This step soon became a source of tension between the officials and the settlers, until Rothschild decided (in 1900) to transfer the moshavah to the *Jewish Colonization Association (ICA). The danger of Arab attacks, causing bodily harm to settlers, damage to homes and other property, and the malicious practice of pasturing Arab flocks on Jewish fields prompted the settlers to organize a first guardsmen’s group, headed by Abraham *Shapira, which succeeded in securing the village and driving off the marauders. The drainage of the swamps and planting of citrus groves led to an improvement in the economic situation and attracted more settlers and Jewish laborers.

In 1891 Petaḥ Tikvah numbered 464 inhabitants, and in 1900 there were 818. The moshavah was regarded as a center by the nascent Jewish labor movement, and in 1905 the ground was laid there for the Ha-Po’el ha-Za’ir and Aḥdut ha-Avodah parties. In World War I, Petaḥ Tikvah came in between armies of the Central Powers (Turkey and Germany) and Allied lines before it was taken by the British in 1917. After the war, the moshavah absorbed many immigrants and in 1920 received municipal council status. In May 1921 an Arab attack on Petaḥ Tikvah was repulsed by a defense force consisting mainly of local youth, assisted by British troops, and four young men, among them Avshalom *Gissin, were killed. In 1930, it attained a population of 8,768. Its growth was accelerated further in the

1930s, thanks to its central location within the Jewish settlement zone, resulting in a population of 20,000 in 1938 and in the attainment of city status in 1939. Petah Tikvah became the marketing center of its region's farming produce and established industries, which, initially, were based mainly on agricultural raw materials. Also in the 1930s underground Jewish defense organizations had headquarters in Petah Tikvah.

With the expansion of its built-up area Petah Tikvah gradually absorbed adjoining workers' quarters and villages (e.g., Maḥaneh Yehudah, Ein Gannim, Kefar Gannim, Kefar Avraham, Sha'ariyyah). After 1948, the city's expansion proceeded at an even quicker pace, bringing the population to 45,000 in 1953, 54,000 in 1961, and 83,200 in 1970. In the mid-1990s the population was approximately 151,100, and by the end of 2002 it had increased to 172,600, making it the seventh largest city in Israel, ranging over an area of 15 sq. mi. (39 sq. km.). Its location on the outer ring of the Tel Aviv conurbation deeply influenced Petah Tikvah's character. Although industry, with large enterprises in metals, rubber tires, textiles, food, and other branches, constituted the city's main economic foundation, farming still played a role, as the environs belonged to Israel's central citrus-growing area. Today, there is little farming in the Petah Tikvah area. However, efforts to limit Petah Tikvah's expansion over additional farmland in the vicinity, which was among Israel's most productive soil, resulted, from the 1960s, in denser and higher building in the city. Petah Tikvah's industrial area has been expanded to include branches of some of the largest firms in Israel, such as Osem, ESI, Intel, IBM, etc.

Two large hospitals, Beilinson and Ha-Sharon, are within Petah Tikvah's city limits. An important cultural institution has been Yad la-Banim, which is dedicated to the fallen in all stages of Israel's defense. In 1980 the institution was awarded the Israel Prize for special contribution to the state and society, with its founder, Baruch Oren, receiving special mention. According to the Israeli statistics bureau, Petah Tikvah is rated medium-high socio-economic status. The average salary in 2000 was slightly below the national average.

[Shlomo Hasson / Shaked Gilboa (2nd ed.)]

PETEGORSKY, DAVID W. (1915–1956), political scientist, administrator. Born in Ottawa, Canada, to Leon and Beckie (Wolinsky) Petegorsky, he was valedictorian at his graduation from Yeshiva College, 1935, and was ordained rabbi in 1936 at the age of 21, receiving the highest level of ordination (*yore yore; yadin yadin*) from Dr. Bernard Revel. He earned a Ph.D. in Political Science at the London School of Economics in 1940 and was in London during the first year of the war. Petegorsky taught government at Antioch College in Ohio, 1940–1941. From 1942 to 1945, he returned to his native Canada for war-time service, first on the National Film Board and then as director of the industrial division of the Canadian Wartime Information Board. In 1945, he went to New York as executive director of the American Jewish Congress at the age of 30, supervising an experienced staff, many of whom were much

more his senior in both age and experience and tested by the war years. In this capacity he refined the Jewish position on civil rights, created imaginative ways to apply modern social research to intergroup relations, and charted new directions for the fight against antisemitism at a time in the immediate postwar period when, seemingly inexplicably, antisemitism was on a sharp decline and young American Jews, who had fought as Americans for their country expected full participation in American society. He wrote books and articles on history and political science, including *Left Wing Democracy in the English Civil War* (1940), *Strategy for Democracy* (with J. Donald Kingsley, 1942), *Combatting Racism* (1947), and *The Jewish Community* (1948). Petegorsky died July 15, 1956, just months after his 40th birthday. He was considered one of the most brilliant products of the first generation of Yeshiva College alumni (which was only established seven years before he received his degree) and among the most constructive minds in American Jewish public service. An endowed chair in the Political Science department at Yeshiva University was established in his name by many of the men with whom he went to college.

[Matthew Schwartz (2nd ed.)]

°**PETER OF BLOIS** (c. 1135–after 1204), Christian theologian. Born in France, Peter lived in England from 1169, writing there his treatise *Contra perfidiam Judaeorum* (c. 1200). The work was composed at the request of a friend who complained that he was surrounded by heretics and Jews with whom he was often compelled to engage in argument without always being able to refute them. The treatise is divided into 34 chapters and quotes as authorities not only the Bible but also the Church Fathers, and the *Sibyl. The final passages quote both Jewish and pagan authors, and include the apocryphal text on Jesus attributed to *Josephus. The prestige enjoyed by Peter, whom several of his contemporaries designated as a “new Church Father,” while his works came to be regarded as models of style, helped to gain his treatise a wide circulation.

[Bernhard Blumenkranz]

°**PETER OF CLUNY** (also named **Peter the Venerable; Petrus Venerabilis**; c. 1090–1156), abbot of Cluny, France. Peter was a contemporary of *Bernard of Clairvaux, a prolific author, and counselor of kings and princes. On the eve of the Second Crusade, because of his advice to King *Louis VII to adopt harsh measures against the Jews, the authority of the abbot of Clairvaux had to be exerted for their protection. Peter was associated with the translation of the Koran into Latin carried out in Spain. His travels to Spain resulted in two polemical treatises against Islam, and in an anti-Jewish polemic, *Adversus Judaeorum inveteratum duritiam* (completed c. 1140). This work is set in the form of a dialogue and refers three times to oral *disputations with Jews. It is based mainly on the views of *Petrus Alfonsi, from whom Peter was the first in France to

borrow criticisms alleging the “foolishness” and “insanities” of the Talmud and the midrashic texts. Peter, however, also refers to other texts not mentioned by Petrus Alfonsi. As he had no knowledge of Hebrew Peter could not have read the texts himself, but the source from which he drew them is unknown. The most important passage mentioning Jewish contemporaries is a reference to a “Jewish king” in Rouen. Thirty-four manuscripts of this work (some of them translations) have been preserved, testifying to its popularity.

[Bernhard Blumenkranz]

PETERS, ROBERTA (1930–), U.S. opera singer, recitalist, and master teacher. Peters was born in New York City, the daughter of Ruth (Hirsch), a milliner, and Sol Peterman, a shoe salesman. She began performing at 20 at the Metropolitan Opera, where she achieved the longest tenure of any soprano in the opera house's history, giving more than 500 performances in over 20 roles. Peters, who performed to great acclaim throughout the world, was known for a broad and varied repertoire which ranged from opera to lieder, and included both art and folk songs. Her famous roles included the Queen of the Night in Mozart's *The Magic Flute*, Rosina in his *The Barber of Seville*, and Gilda in Verdi's *Rigoletto*. She was heard frequently on the *Voice of Firestone* radio broadcasts and appeared for a record 65 times on television's *The Ed Sullivan Show*. Caught in Israel during the Six-Day War, she and her colleague Richard *Tucker performed for soldiers.

Peters, who was involved in many philanthropic efforts for general and Jewish causes, established a scholarship fund at Hebrew University. After a brief marriage to fellow opera star Richard Merrill in 1952, Peters married real estate investor Bertram Fields in 1955. Peters, who published a memoir, *Debut at the Met* (1967), with Louis Biancolli, received numerous awards and honorary degrees. In 1991, she received a presidential appointment to a five-year term on the National Council of the Arts.

[Judith R. Baskin (2nd ed.)]

PETHAHIAH OF REGENSBURG (12th century), traveler; son of Jacob ha-Lavan and brother of *Isaac b. Jacob ha-Lavan of Prague, both tosafists. His permanent home appears to have been in Regensburg (Ratisbon), although he was also connected with Prague. About 1175 he set out on his travels, making his way through Poland and Russia to Crimea, from there to Tartary, Khazaria, Armenia, Kurdistan, Babylonia, Syria, and Erez Israel. During his journey he made notes of his experiences. However, the contents of his book of travels were not written by Pethahiah but by others according to the stories they heard directly from him. The writer does not speak in the first person but relates the events in the name of the

traveler. Apparently the book was written by several people, one of whom was *Judah b. Samuel he-Hasid of Regensburg. The writers did not record the whole of Pethahiah's narrative, but a summary of what he related or those parts which they considered the most important.

The book says nothing on Pethahiah's journey to Crimea and little on Crimea and Tartary. The major part of the narrative is devoted to his travels in Babylonia, Syria, and Erez Israel. Some scholars consider that his destination was Babylonia, and that he was seeking a refuge there for his persecuted brethren in Europe. There is however no basis for this. The narrative indicates that Pethahiah was a wealthy man whose principal objective was to make a pilgrimage to Palestine and to pray at the tombs of the righteous. In a letter of recommendation which he requested of the *gaon* of Babylonia, the latter wrote that “in every place where he comes, they should guide him and point out the site of the tombs of the scholars and the righteous.” However, besides the holy tombs in Babylonia, he found a large and alert Jewish settlement with a flourishing spiritual life, a firmly established *exilarch, and a respected *gaon* who could implement his instructions by force. This autonomous power, and the methods of study at the great yeshivah there, left a tremendous impression on the German traveler, and he related all of this in detail. When he told of the Babylonian *gaon*, he emphasized, in addition to his erudition, his political power and princely deportment.

In contrast to Babylonia, he found only a poor and oppressed community in Erez Israel. The crusaders who had conquered the country in 1099 had annihilated the Jewish settlements in Jerusalem, Hebron, and other places, and the remnants had fled to Syria and Egypt. The traveler did not therefore dwell on at length or the writer did not note down the details of the Jewish population in Palestine. Of the country's settlements, principally mentioned are Tiberias, Acre, Jerusalem, and Hebron. In Jerusalem he found only one Jew, Abraham the Dyer, whose services were needed by the crusaders. Pethahiah's main descriptions of Palestine concern the holy places and the reports and traditions about them. He does not tell anything of his return journey, and it appears that he traveled by sea, passing through Greece.

The story of Pethahiah's travels was published for the first time in Prague in 1595 under the title *Sibbu*v (“Circuit”) and has been published in its original form 24 times. It has also been translated into Judeo-German, Latin, French, German, English, and Russian. The best editions are the first, and that of L. Gruenhut (1905, with German translation), which is based on manuscripts and on the first edition.

BIBLIOGRAPHY: E.N. Adler, *Jewish Travellers* (1930), 64–91 (includes excerpts from the *Sibbu*v); A. Yaari, *Mas'ot Erez Yisrael* (1946), 48–55, 762–3.

[Avraham Yaari]

PETHIAH (Heb. פְּתִיחָה; “opening”), the ritual of opening the Ark in the synagogue during services to take out the Torah scroll(s) for the reading of the Law, and (particularly in Ash-

kenazi synagogues) to recite prayers of special importance or solemnity, especially on the High Holidays (e.g., the prayer *Avinu Malkenu and the entire *Ne'ilah service on the Day of Atonement). In the Reform ritual other special prayers (e.g., for the welfare of the government) are also recited before the open Ark. The custom of the *petiḥah* may be a remnant of the ritual in the talmudic period when in times of danger and need (pestilence, drought), the Ark was carried to the town square where special penitential prayers were recited (see Ta'an 2:1, 2, etc.). Mordecai Jaffe (in his *Levush Tekhelet* to Sh. Ar., oḥ 133) explains the custom of the *petiḥah*: "The high priest entered the Holy of Holies in the Temple once a year, on the Day of Atonement, in order to stress the special sanctity of that day; therefore the most significant prayers are recited before the open Ark to stress their special importance." The congregants rise for all prayers which are recited when the Ark is open.

***PETLYURA, SIMON** (1879–1926), Ukrainian nationalist leader held responsible for not having stopped the wave of pogroms which engulfed the Jews in the Ukraine in 1919 and 1920. Petlyura, who was born in Poltava, was active in the Ukrainian Social Democratic Workers' Party. During the Russian Revolution in 1917, he was one of the leaders who organized Ukrainian soldiers into nationalist battalions. When the Ukrainian puppet state, set up by the Germans, fell in November 1918, Petlyura was among those who established the "directorium" (provisional government) to protect the independent Ukraine against its many enemies. From February 1919 he was chairman of the government and also chief *ataman* (commander) of its army. With the retreat of his forces before the Red Army in the winter of 1919, his units turned into murderous bands and perpetrated mass killings of Jews in the Ukrainian towns and townlets (*Zhitomir, *Proskurov, and elsewhere). Petlyura did little to stop the wave of mob violence which became endemic within the Ukrainian army and the gangs of rebellious peasants, connected with his government. In October 1919 the remnants of Petlyura's forces fled to Poland. The following year he made a treaty with the Poles, set up his headquarters in *Kamenets-Podolski, and joined in the Polish war against the Soviet Union. After peace was made between the U.S.S.R. and Poland, Petlyura continued to maintain his government and the remnants of his army in exile. In the summer of 1921, Vladimir *Jabotinsky conducted negotiations with Petlyura's representative for the establishment of a Jewish militia to defend the Jewish population, should Petlyura's forces return to the Soviet Ukraine (the "Jabotinsky-Slavinsky Agreement"). From 1924 Petlyura was a political émigré in Paris, where he headed Ukrainian anti-Soviet organizations. On May 26, 1926, he was assassinated in the street by a Jew, Shalom *Schwartzbard. In 1927, after a dramatic trial, in which the Jewish tragedy in the Ukraine was amply documented, Schwartzbard was acquitted by a court in Paris. Ukrainian nationalists consider Petlyura an outstanding leader and claim that he personally could not be held respon-

sible for the pogroms, because of the anarchical conditions of the revolutionary period.

[Yehuda Slutsky]

PETRA (Gr. "rock," a translation of the Heb. *sela*), a ruined site in Edom, 140 mi. (224 km.) S. of Amman, 60 mi. (96 km.) N. of Elath. It is assumed that the biblical Sela was situated farther north (11 Kings 14:7). In later sources (Jos., Ant., 4:161; Tosef., Shev. 4:11) it is called Rekem, a derivation of the Nabataean name *Raqmu*. Petra is situated in a broad valley, which is approached from the east by a long, narrow, and winding canyon, the Siq, also called the Wadi Mūsā, which has several confluents in the plain of the city. The valley is surrounded by steep rocks of reddish Nubian sandstone. The place is safe from attack once the Siq and its continuation to the west, the still narrower and more difficult Sayl al-Ṣiyāgh, are barred. The earliest settlement is indicated by Edomite pottery found at the top of a rock called Umm al-Biyāra in the southwestern part of the site. This rock served mainly as a place of refuge, the last time during the attack on the Nabateans by Antigonus. Owing to its secure position, Petra was adopted by the Nabatean kings as their capital; the caravan routes from the Syrian desert, Elath, Gaza, and the Mediterranean converged there. In 106 C.E. the city was incorporated into the Roman Empire, remaining the capital of the region – Provincia Arabia – until the time of Hadrian, who endowed it with the title of *metropolis*. Papyri discovered in the caves of the Judean Desert reveal that Petra had a senate and archives, and that it was visited by the Jewish inhabitants of the province; possibly, a number of Jews lived there. When the capital of Arabia was transferred to Bosrah, the city began to decline. In the time of Diocletian (late third century), it was included in Palestine and in the fifth century became the *metropolis* of the province of Palaestina Tertia. It disappeared from history in Arab times, apart from a brief Crusader interlude when it was known as *Li Vaux Moyses* ("the valley of Moses"). Its ruins were discovered by Burckhardt in 1812. It has since been explored by numerous scholars, in particular by R.E. Brünnow and A. von Domaszewski, G. Dalman, Th. Wiegand, S. and A. Hersfield, D. Kirkbride, and P.J. Parr. The first plan of Petra was made by W. von Bachmann in 1921, and a new accurate and measured map has been prepared in recent years by the architect C. Kanellopoulos. In the early 1980s Z. Muheissen made a study of the water-management systems of Petra and its vicinity. A major study of the architecture of Petra and its decorations was made by J. McKenzie and published in 1990. Excavations between 1988 and 1997 by B. Kolb have uncovered residential buildings close to ez-Zantur. Since 1993 major excavations have been undertaken at the Great Nabataean Temple and elsewhere by M.S.

Joukowsky. A number of Byzantine churches have been investigated in an ACOR project led by P. Bikai, with the discovery in 1993 of an amazing cache of Greek papyri from the sixth century in one of the churches (St. Mary).

In the center of the plain of Petra are the remains of the town, which is partly surrounded by a wall extending from the southern suburb of al-Katūte to the tower sanctuary on 'Arqūb al-Hisha in the east. The remains are mainly Hellenistic (Nabatean) and Roman, with additional Byzantine remains extending towards the north ridge. After 106 C.E., al-Katūte was abandoned and the town life was concentrated in the main colonnaded street (with shops) in the bed of the Wadi Mūsā. On the northern side of this street are, from east to west, two nymphaea and pool near the issue of Wadi al-Matāha, a "royal palace," and the Temple of the Winged Lions or Temple of Al-Uzza ("gymnasium"). On the southern side the "Trajanic Arch" leads to the "upper market" (agora) surrounded by a porticoe, with another market further west (the "middle market"), the Great Temple, with a lower temenos in front of it, and with an adjacent pool and garden complex (the so-called "lower" market) and a public bath. A triumphal arch (the "Temenos Gate") crosses the street not far from the bath, with towers to the north and south. Beyond it is the "Small Temple" and further to the west the Temple of Dushares, also known as Qaṣr al-Bint Far'un ("the castle of Pharaoh's daughter"), one of the best-preserved buildings at Petra; it is a temple *in antis* on a podium with pronaos, cella, and an adytum in three parts. Another remarkable structure is the rock-cut theater close to the Siq, which was excavated in 1963. It consists of three tiers of seats with a *scenae frons* resembling that of the theater at Beth-Shean. Of principal interest at Petra are the rock-cut facades. Some of these may belong to temples (as e.g., the famous al-Khazna in the Siq – recently additional chambers have been found at a lower level below the steps) and dwelling houses, but above all, they belong to monumental tombs of the kings and princely merchants of the city, including that of the Roman governor, Sextus Florentinus. At least 800 tombs are known. These facades are imitations of the *scenae frons* of the Hellenistic theater with several tiers of columns usually crowned with the type of capital known as Nabatean. The lowest tier has a doorway and mock windows and often, an inscription. The second tier is divided into round or square pavilions with broken gables and a tholos crowned by an urn in the center. There are also several "high places" and numerous rock carvings of a religious nature at and near Petra.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

°**PETRIE, SIR WILLIAM MATTHEW FLINDERS** (1853–1942). British archaeologist well-known for his work in Egypt, as well as in Palestine. In 1880 he visited Egypt for the first time and in 1882 he was engaged in establishing the exact measurements of the Giza pyramids. In Palestine he conducted excavations at Tell el-Ḥesī in 1890 on behalf of the Palestine Exploration Fund, pointing out for the first time that a mound was not a rubbish heap, as some scholars believed at that time (notably C.R. Conder), but represented the superimposed strata of ancient settlements with a sequence of identifiable cultural materials and pottery dating from different ages. Petrie did many of the drawings and plans himself, even going as far as making his own "pinhole" cameras. One of his invented cameras is shown at the Museum of Photography in Bath. Beginning in 1897, Petrie undertook excavations in Egypt on behalf of the Egypt Excavation Fund. He excavated and identified, among many others, a number of Pre-Dynastic sites (where he applied his method of sequence dating), the early royal tombs at Abydos, discovering the Sinaitic inscriptions and the Greek city of Naucratis. In the process Petrie also studied many aspects of ancient Egyptian life, such as the use of papyri in mummification. From 1893 to 1935, Petrie served as professor of Egyptology at University College in London. He excavated during the winter and published the results in the summer, eventually producing over 100 reports. In 1926 he founded the British School of Archaeology

in Egypt, which supported several excavations in Palestine. Among the sites excavated by Petrie in southern Palestine are Tell el-Jemmeh (1926), Tell el-Farah (south) (1927–29) and Tell el-‘Ajūl (1929–31), from which he achieved valuable results, despite his mistaken identifications of the sites. His works include, in addition to numerous excavation reports, *Hyksos and Israelite Cities* (1906); *Egypt and Israel* (1906); *Methods and Aims in Archaeology* (1904); *A History of Egypt* (6 vols., 1894–1905); *The Arts and Crafts of Ancient Egypt* (1909); *Social Life in Ancient Egypt* (1923); *Religious Life in Ancient Egypt* (1924); *Seventy Years in Archaeology* (1931), an autobiography. He was knighted in 1923 and spent the last years of his life in Jerusalem and at the American School of Oriental Research (now the Albright Institute). Petrie was a constant follower of the popular 19th-century eugenics movement that correlated human intelligence with measurement of skull size. He died in Jerusalem and was buried in the Protestant cemetery on Mount Zion (within the property of the present-day Jerusalem University College); his head, however, was removed, following his dying wishes, and taken to London, where it is now located in liquid preservative in a large glass jar within the collections of the Royal College of Surgeons.

PETROGRAD CONFERENCE, seventh national conference of the Russian Zionists and the first after the February 1917 Revolution. It opened on June 6, 1917. Five hundred and fifty-two delegates, representing 140,000 shekel holders from 680 cities and towns, took part in the conference. In the new Russia, the conference demonstrated the growing power of Zionism among Jewry and defined the Russian Zionists’ attitude toward the problems of the World Zionist movement and the upbuilding of Erez Israel. It discussed the specific problems of the Russian Jews under the democratic regime with the hope of expanding the movement, which up to that time had acted mainly illegally. Jehiel *Tschlenow and Menahem *Ussishkin were elected as presidents of the conference. In his programmatic address, Tschlenow said that the main task of the conference was to lay the foundations for Jewish national autonomy in Russia, as well as to emphasize the Jewish people’s aspiration to return to Erez Israel. Ussishkin spoke of the need to immediately mobilize Jewish capital for settlement work, especially for the purchase of land, and to train pioneer workers. Alexander *Goldstein proposed the holding of a referen-

dum in order to prove to the world that Erez Israel was the desired country of every Jew. The proposal was enthusiastically accepted. Isaac *Gruenbaum and Julius Brutzkus delivered speeches based on the *Helsingsfors Program for Zionist Diaspora activities in light of the new situation in Russia. There was a trenchant debate about the authority and character of the Jewish community as the nucleus of self-government. When the conference rejected Gruenbaum’s proposal to exclude religious matters from the control of the communal boards, a 40-delegate group of his followers declared that none of them would enter the movement’s executive bodies. According to one resolution a Zionist was allowed to be a member of another political party, as long as it was not Jewish and provided that it was approved by the local branch of the Zionist movement. Another resolution read that the Zionist Organization would participate in the elections as an independent party. The conference agreed that educational and cultural actions should be recognized as one of the main tasks of Zionist work, and the Tarbut society should be recognized as the only institution to do this work. This seven-day conference was the last free countrywide expression of the Russian Zionist movement before the October Revolution of the same year became the starting point of its persecution and liquidation.

PETROLEUM AND OIL PRODUCTS. In modern times Jews took part in the development of the oil industry, some in pioneering the extraction of oil and trade in its products in their respective countries, and some in financing the industry abroad.

Eastern Galicia

Oil prospecting and the development of the oilfields of eastern Galicia from the middle of the 19th century was due to a large measure to the initiative of Jews. In *Borislav the first attempts to find petroleum were made by a Jew, Schreiner, before the middle of the 19th century. Ozocerite, which became a substitute for the expensive beeswax in the manufacture of candles, was then discovered there. Ozocerite candles were soon extensively marketed in the region. The great demand for ozocerite led many Jews in *Drogobych to acquire plots of land in Borislav to extract it. Thousands of Jews streamed from surrounding townlets and villages to work there, in primitive conditions. The work was performed in two shifts of 12 hours each; women and children also were employed on the easier tasks. Abraham Schreiner, son of the discoverer of petroleum in Galicia, attempted to separate the petroleum from the earth admixture. After many failures, he succeeded in establishing the first petroleum refinery in Borislav in 1854. Many railway companies then ordered petroleum from him for lighting their carriages and stations. Thus he became the

world's first "petroleum king" until the destruction of his refinery in a fire in 1886.

In the 1880s the enterprise, capital, and modern methods of corporations drove out the Jewish entrepreneurs with their inadequate means and primitive methods. As a result, 5,000 Jewish workers in Borislav addressed themselves to the second Zionist Congress in Basle in 1898, described their plight, and requested assistance for *aliyah* to Erez Israel. Some Jews were still active in the oilfields of Galicia between the two world wars.

Czarist Russia

As the oil wells in czarist Russia were situated outside the *Pale of Settlement Jews were at first unable to participate in the industry. Later on Jewish chemists succeeded in entering the petroleum trade and subsequently also the industry. By 1910, 15% of oil extraction was carried out by Jews, as well as 44% of the manufacture of kerosene, 32% of the manufacture of lubrication oils, and 49.6% of the trade in oil products on the Baku exchange.

During the second half of the 19th century Jews were engaged in the transportation of petroleum. The Jewish petroleum company Dembo & Kagan, whose owners were A. Dembo of Kovno and Kh. Kagan of Brest-Litovsk, laid the first oil pipeline in Russia in 1870. They set up a petroleum refinery in a suburb of Baku and established relations with shipping companies of the Caspian region which transported the oil by sea, whence it was expedited by rail throughout Russia. Because of the monopolistic position of the Nobel Company in the Caucasus, Dembo & Kagan could only operate for five years, after which it was compelled to confine itself to the marketing of oil.

The brothers Saveli and Mikhail Polyak and the engineer Arkadi Beylin, in partnership with the Rothschild Bank, founded the Mazut Company of Baku, later amalgamated with the Shell Company. The Rothschild house also financed the Batum Oil Association, founded after the construction of the Trans-Caucasian railroad and owned mainly by Jews. The *Pereire family of Paris invested considerable sums in the oil fields of the Caucasus. A.M. Feigel, one of the initiators of the petroleum trade in Baku, organized, with A. Beylin, a syndicate of oil companies to compete with the American Standard Oil. The Dembat brothers succeeded in publicizing mazut as a cheap fuel oil for ships and locomotives. They were the first Jews to be permitted by the Russian government, in appreciation of their activities, to acquire oil wells. With Baron Horace Guenzburg, they established the Volga-Caspian Petroleum Company.

Czechoslovakia

In Czechoslovakia Jews were active in oil refining, and in general branches of the trade and industry. The Kralupy refinery on the river Vltava was established by Jindřich Eisenschimmel and Ludvik Heller. The refinery owned by David Fanto was prominent in the industry by 1924. The Vacuum Oil Company was headed by Charles Wachtel and Bedřich Stránský, who transferred their affairs to New York in 1939.

England

Marcus *Samuel, Viscount Bearstead, played a central role, sometimes in cooperation with the house of Rothschild, in developing the trade and transportation of petroleum and oil on a large international scale from 1897. In 1907 he founded the Shell Royal Dutch Company together with Royal Dutch, which launched England as an oil power. He was one of the first to initiate the haulage of petroleum through the Suez Canal. During World War I, he played a role of prime importance in the supply of oil to the British Navy. Sir Robert Waley *Cohen was active in the Shell Company from 1901, and in 1905 was appointed director of the Asiatic Petroleum Company. From 1907 he served as director of the Anglo-Saxon Petroleum Company. During World War I he served as adviser on oil affairs to the Army Council.

France

In addition to the investments of the house of Rothschild of Paris and the Pereire family, Alexandre Deutsch founded the Société de Pétrole, and his sons Emile (1847–1924) and Henri (1846–1918) *Deutsch de la Meurthe succeeded him. Henri published a work on petroleum and its use and headed the petroleum industry exhibit at the Paris International Exhibition in 1889.

United States

The role of Jews in the petroleum industry in the U.S. was negligible. The petroleum industry in the U.S. was in the hands of a small number of Protestant families which did not as a rule hire Jews. The Arab boycott after 1948 strengthened this tendency not to employ Jews so as to avoid friction with the Arab oil states. Exceptions were the *Blaustein family, founder of the American Oil Company and Armand *Hammer with his Occidental Petroleum Corporation.

°**PETRONIUS, PUBLIUS**, governor of *Syria, 39–42 C.E. Petronius was ordered by Emperor Caligula to place his statue in the Temple at Jerusalem and to use force if necessary to overcome the resistance of the Jews. When they learned of the order, the Jews flocked to Petronius' headquarters at Acre to plead for annulment of this decree. Realizing that the Jews were prepared to sacrifice their lives, Petronius wrote to Caligula advancing reasons for a delay in installing the statue. The response was an impatient command to carry out the imperial order immediately. Meanwhile, as a result of Agrippa I's intercession, Caligula was prevailed upon to rescind his instructions. Unaware of this, Petronius again wrote to Caligula, who, in a rage, ordered him to commit suicide: this order reached him, however, after the news of Caligula's

murder in 41 C.E. Petronius's friendship toward the Jews was demonstrated again when some Greek youths of the city of Dora set up a statue of the emperor in the local synagogue. In response to Agrippa I's remonstrance Petronius ordered the magistrates of the city to send him the offenders; he enjoined them to allow everyone freely to practice his ancestral faith. Petronius' conduct is indicative not only of a desire to preserve order in the Roman provinces but also of his favorable attitude toward Judaism, which is ascribed by Philo to his search for knowledge and to his close contact with Jews in the provinces of Syria and Asia, where he had previously been as proconsul.

[Lea Roth]

PETRONIUS ARBITER, GAIUS, Roman author and a companion of Nero in some of his pleasure ventures. Petronius links Jewish circumcision with the pierced ears of the Arabs and with the chalked faces of the Gauls (*Satiricon*, 102). In a poetic fragment he says that the Jews revered a porcine deity (*Fragmentum*, 97, in *Poetae Latini Minores*, ed. by Baehrens, 4 (1882), 98; = no. 24 in Loeb edition (1913), p. 354). This may be an allusion to Jewish abstinence from pork, or Petronius could be really ascribing a pig-god to Jews either out of ignorance or malice. He writes also of circumcision whereby Jews distinguish themselves from non-Jews and of the oppressive laws of the Jewish Sabbath. Some take this to refer to Sabbath observance, though most commentators regard it as an allusion to the mistaken notion, common to many Roman writers, that the Jews fasted on the Sabbath (cf. Strabo, Augustus, Trogus Pompeius, and Martial).

[Jacob Petroff]

PETROV, VALERI (Mevorakh; 1920–), Bulgarian poet, playwright, screenwriter, author of plays for children. Petrov was born in Sofia into a family of intellectuals. His father was Prof. Nissim Mevorakh, the outstanding Bulgarian jurist and diplomat. Petrov graduated from Faculty of Medicines at Sofia University and, after four years of work in Rome as a cultural attaché, finally abandoned the medical profession in favor of poetry, writing with great virtuosity in an accessible though highly poetic language.

Among his best-known poems are "Palechko," "Krajinoto more" ("Around the Blue Sea"), "Juvenes dum sumus," "Na pat" ("On the Way"), "Tavanski spomen" ("Attic Memory"), "Na smiah" ("For Fun"), "Dajd vali – slanze gree" ("It Is Raining – The Sun Is Shining"), "V mekata esen" ("In the Soft Autumn"), "Sbogom, tate" ("Good-bye, Dad"). These were collected in *Jivot v stihove* ("Life in Poems") and *Raztvoren prozoretz* ("Opened Window").

In the theater Petrov also sought new forms, combining prose and poetry, drama and music, the sad and the joy-

ful. His plays include *Kogato rozite tanzuvat* ("When the Roses Dance"), *Teatar, liubov moia* ("Theater, My Love"), and *Chestna musketarska* ("Honest Musketeer's"). For children he wrote *Biala prikazka* ("White Story"), *Kopche za san* ("Button for a Dream"), *Meko kazano* ("To Put It Mildly"), *V lunната staita* ("In the Moonlit Room"), and *Puk!*, which was an international success.

Petrov's cinema scripts helped create some of Bulgaria's best films, such as *Na malkia ostrov* ("On the Little Island"), *Slanzeto I siankata* ("The Sun and the Shadow"), *Rizar bez bronja* ("A Knight without Armor"), and *Lo-Ho-Ho*. Petrov also devoted his energies to poetic translation, including the complete works of Shakespeare in eight volumes and Goethe's *Faust*. He was the recipient of numerous awards, including Bulgaria's highest state honor, *Stara planina I class*, and the French *Ordre des Arts et des Lettres*.

[Emil Kalo (2nd ed.)]

PETRUS ALFONSI (Aldefonsi; b. 1062), Spanish Converso, physician, polemicist, and author, possibly born in Huesca. Known as Mosé or Moisés Sefardi before his conversion at the age of 44, he assumed the new name of Petrus Alfonsi (Aldefonsi) because his conversion took place on St. Peter's Day and his baptismal patron was King Alfonso I of Aragon. He spent the second half of his life in England, where he was physician to King Henry I. Petrus introduced the Oriental apologue to Western Europe through his *Disciplina Clericalis*, a collection of some 34 stories belonging to the traditional literature of the Orient (translated into English under the title *The Scholar's Guide*). He was also the author of a polemical treatise, *Dialogi... in quibus judaeorum opiniones... confutatur* (*Bibliotheca Patrum*, 22 (1677), 172 ff.), which he wrote to defend his conversion.

These dialogues, cast in the mold of classic apologetics, take place between a Jew and a Christian, named respectively Moses and Peter, the two figurations of the author before and after his baptism. The work, divided into 12 chapters, begins with an attempt to prove that the Jews were only partially observing the Law of Moses. The author also touches upon Islam, to demonstrate its falsehoods. From chapter 6 on, he explores the concepts of the Trinity, the Immaculate Conception, the Incarnation, and the supposed fulfillment of prophecies with the birth of Jesus. Chapters 10 to 12 treat of the crucifixion, resurrection, and ascension of Jesus of Nazareth. The final arguments are that Christianity is not contrary to Mosaic Law. Additionally, Petrus was a noted astronomer and translated scientific works from the Arabic.

[Kenneth R. Scholberg]

PETSCHKEK, Bohemian family of financiers and industrialists, for half a century owners of one of the leading coal mining companies in central Europe. **MOSES BEN ISRAEL** (1822–1888), its founder, moved from his native village, Pečky (hence the family's name), to nearby Kolin, where **ISIDOR** (1854–1919), **JULIUS** (1856–1932), and **IGNAZ** (1857–1934) were born. Moses made his fortune mainly in real estate. In 1871 he acquired stock in a lignite mining company in Most (Bruex) and in 1876 moved to Prague. The real pioneer of the Petschek family's entry into the coal industry was Ignaz, who began his career as a bank clerk. After an apprenticeship with J.E. *Weinmann in Ústí nad Labem (Aussig an der Elbe), he founded his own coal marketing agency there. In 1890 Ignaz was selling up to 7 million tons of lignite a year. In 1906 he bought his first mines. The business of Isidor and Julius, conducted from Prague, became known as "Grosser Petschek" while Ignaz's firm was known as "Kleiner Petschek"; they were competitors and acquired interests in many other branches of industry and finance throughout Europe. Both groups, but mainly Ignaz's, acquired coal mines during the post-World War I inflation years, and subsequently, with 50 other German mining firms, formed a syndicate, in which they themselves controlled 50% of all the output. After World War I the Prague group (Julius and Isidor) founded their own bank.

After Julius' death, the Prague group was owned by seven families, and in 1938 by 40, who transferred their property to a specially created British corporation, and as such in 1937 opened negotiations with their Nazi competitors. In May they succeeded in selling the property at a huge loss for \$4.75 million in hard currency. Subsequently they also sold the majority of their possessions in the Sudeten area, including 24 coal mines, their sales organization, and 30% of the north Bohemian coal output. All the Prague Petschek families moved to England in July 1938, and later to the U.S. The property of the Ústí branch, managed by Ignaz's son Karl, was too large to be acquired by the Germans and the family tried to withstand them. When the Nazis occupied Ústí (1938) they immediately appointed a German executor (trustee) and in spring 1939 the property was sold by the German Reich as restitution for 3 billion Reichsmark allegedly defrauded from taxes due in Germany. The Hermann *Goering Werke organized a special firm, known as Subag, to include both groups. During the German occupation of Prague the Petschek residence was taken over by the Gestapo. The Petschek possessions became state-owned after World War II.

[Meir Lamed]

PETTER BEN JOSEPH (12th century), tosafist. Petter came from Carinthia in Austria and was a pupil of *Samuel b. Meir and of his brother, Jacob *Tam. He participated in the editing

of R. Tam's *Sefer ha-Yashar*, to which he made additions. Petter maintained a halakhic correspondence with R. Tam and with *Isaac b. Melchizedek of Siponto and it is probable that the quotations from the latter in the *Sefer ha-Yashar* were included by Petter. He was also an associate of *Isaac ha-Lavan, who quotes him in his *tosafot*. Most of the statements of Petter in the printed *tosafot* also appear in the *Sefer ha-Yashar*. He met a martyr's death at an early age during the Second Crusade, and Jacob of Bonn eulogized him in the highest terms.

With regard to the unusual name of Petter borne by a pupil of R. Tam, it is interesting to note that R. Tam accepts the medieval legend that Peter (Simon Caiaphas) was a devout Jew who sacrificed himself in order to effect the separation between Judaism and Christianity, and is the author of the prayer *Nishmat, a legend whose authenticity had been rejected by R. Tam's grandfather, Rashi (see *Maḥzor Vitry*, ed. by S. Hurwitz (1923²), 282 n. 5, 362 n. 5).

PETUCHOWSKI, JAKOB JOSEF (1925–1991), U.S. rabbinic scholar and theologian. Petuchowski was born in Berlin and brought to England from Germany in a "children's transport" before the outbreak of World War II. Living in London from 1939 to 1947, he studied with Isaac *Markon and Leo *Baeck and earned a B.A. from the University of London while holding a variety of jobs in the Jewish community, including education director of the Youth Association of Synagogues in Great Britain, social worker in the Windermere DP camp, chaplain to the DP Tuberculosis Sanatorium, and Hebrew and religion teacher at the West London Synagogue. In 1948, Petuchowski immigrated to the United States, where he received his B.H.L. (1949), M.H.L. and ordination (1952), and Ph.D. (1958) from *Hebrew Union College. He served as rabbi of Temple Emanuel in Welch, West Virginia, and Beth Israel Synagogue in Washington, Pennsylvania, before returning in 1956 to HUC to join the faculty as a lecturer in Jewish theology. In 1974, he was appointed professor of theology and liturgy, and in 1981 he became the Sol and Arlene Bronstein Professor of Judeo-Christian studies. He was the first director of Jewish studies at HUC-JIR in Jerusalem (1963–64) and a visiting professor of Jewish philosophy at Harvard University Divinity School, Oxford University, Antioch College, Theologische Fakultät Luzern (Switzerland), and *Tel Aviv University.

Petuchowski's writings reflected a rather traditional theological perspective and thus served as a bridge between the Reform movement and the rest of the Jewish world. In his *Ever Since Sinai*, he articulated a belief in the authority of revelation and *halakhah, while interpreting both concepts in terms of the evolutionary process of Jewish tradition throughout the ages, of which Reform is simply another stage. Though initially severely critical of secular Zionism, particularly in his *Zion Reconsidered* (1966), Petuchowski's attitude toward Israel as a legitimate continuation of Jewish history became far more posi-

tive after the *Six-Day War. A fellow of the American Academy of Jewish Research, Petuchowski wrote more than 35 books and monographs and contributed to several encyclopedias and numerous periodicals. His thought exerted great influence within the U.S. Reform movement and in Germany, where he worked with Christian theologians to improve German-Jewish relations after the Holocaust. He encouraged the program of Judaic studies at the University of Cologne, which awarded him an honorary Ph.D. in 1979, the same year he received an honorary D.L. degree from Brown University. In 1985, 22 Catholic and Protestant theologians published a German volume in his honor, titled (in translation) *Judaism Is Alive – I Have Encountered: Experiences by Christians*.

Petuchowski's major works include *Ever Since Sinai: A Modern View of Torah* (1961, 1979); *Prayer Book Reform in Europe: The Liturgy of European Liberal and Reform Judaism* (1969); *Heirs of the Pharisees* (1970); *Understanding Jewish Prayer* (1972); *Theology and Poetry* (1978); *Studies in Memory of Joseph Heinemann* (1981); *When Jews and Christians Meet* (co-editor, 1989); *Studies in Modern Theology and Prayer* (published posthumously, edited by Elizabeth and Aaron Petuchowski, 1998).

[Bezalel Gordon (2nd ed.)]

PEVSNER, ANTON (Antoine; 1886–1962) and NAUM NEHEMIA (Gabo; 1890–1977), Russian sculptors. The two brothers were born in a village near Orel, south of Moscow. Anton Pevsner studied at the academies of art in Kiev and St. Petersburg, while Gabo went to Munich to work for a civil engineering degree. From 1911 to the outbreak of World War I Anton Pevsner was in Paris, where the painter *Modigliani was among his friends. In 1917, the brothers returned to Russia and were appointed professors at the Academy of Art in Moscow. They now emerged as the leaders of Constructivism, a movement related technically and aesthetically to architecture and engineering. In 1920, they published their Realist Manifesto, which set out the theoretical foundations of Constructivism. When the Soviet state began to demand that artists apply their talent to political propaganda, the Pevsner brothers refused. In 1923 they immigrated to Paris. Here they collaborated on settings and costumes for a Diaghilev ballet and repeatedly showed their work together. In 1931 Anton Pevsner was a cofounder of the Abstraction-Creation group in Paris, and from 1946 to 1952 was an active member of the Salon des Réalités Nouvelles. In 1948 Gabo, who had settled in the United States, lectured at the Graduate School of Design, Harvard University.

The work of these two sculptors is closely related. While in their early works figurative elements still appear, their mature work is entirely nonfigurative. Anton preferred to work in metal, usually bronze, to get the solidity and permanence that are lacking in the materials – plastic and nylon – often used by his brother. The creations of both are characterized by strong rhythm, and by the movement of free forms into dynamic new shapes.

[Alfred Werner]

PEVSNER, SIR NIKOLAUS (1902–1983), British architectural historian. Born in Leipzig, he studied at various German universities. After working as assistant keeper at the Dresden Art Gallery (1924–28) and as lecturer in art history and architecture at the University of Goettingen (1929–33), he emigrated to England when Hitler came to power. He was a lecturer and later (1959–69) professor of fine art at Birkbeck College, London, as well as Slade professor of fine art at Cambridge (1949–55) and professor of fine art at Oxford (1968–69), and was also an honorary fellow of St. John's College, Cambridge. Books such as his classic *An Outline of European Architecture* (1942) helped spread a knowledge of architectural history, and his *Buildings of England* series, published in many county volumes between 1958 and 1973, which called attention to the English architectural heritage, became one of the best-known series of works on Britain's heritage ever written. These made Pevsner a household name among educated people in Britain. Pevsner gave many talks on BBC radio, including the 1955 Reith Lecture. He was knighted in 1969. Pevsner was one among a surprising number of German Jewish refugees who not merely adapted to England but, in a sense, became British icons.

PEVZNER, SAMUEL JOSEPH (1879–1930), Russian Zionist and pioneer in Palestine. Born in Propoisk, Belorussia, Pevzner was a delegate to the First Zionist Congress (1897) and a member of the *Democratic Fraction. He contributed to *Ha-Shilo'ah and other Hebrew papers under the pen name Shemu'el Ben-Natan. Pevzner graduated as an engineer from the Berlin Technical College and in 1905 emigrated to Erez Israel. He settled in Haifa and was one of the builders and developers of the town. Together with N. *Wilbuschewitz and S. Itzkovitz, he established the Atid factory, the first modern enterprise for the manufacture of oil and soap. He was one of the founders of Hadar ha-Carmel, the central Jewish quarter in Haifa, and head of its development committee from 1922 to 1927. Pevzner was also active in the development of the *Technion and the Reali High School in the town; a member of the community council; and a delegate to the *Asefat ha-Nivharim*.

[Yehuda Slutsky]

PEWTER PLATES. Pewter vessels began to spread through Europe in the 16th century when the tin mines became more fully exploited. In the 17th century they were most commonly

found in the homes of peasants, laborers, craftsmen, and middle class merchants. At that time also, pewter vessels spread to Jewish homes in Western and Eastern Europe, both among the working classes and the middle classes. Only a few of the wealthy could afford to use silver, glass, or crystal plates, and Jews in distant villages in Eastern Europe and the impoverished Jewish town dwellers continued to use pottery and wooden dishes. The smooth surface of pewter and its malleability appealed to the artist. The non-Jewish artist decorated pewter plates with subjects taken from Greek mythology, Christianity, and the Old and New Testaments; and the Jewish artist drew his inspiration from his own world, from Jewish tradition, Jewish life, and biblical stories. On the Passover *seder* plate, he depicted scenes such as members of a Jewish family reclining at the *seder* table, the Paschal sacrifice, the sages reclining at Bene Berak, and the four sons of the *Haggadah*. A tradition of Jewish wooden plates apparently preceded the pewter, as a 15th-century plate from Germany has been discovered. The origin of the Passover *seder* plate can be traced through the dress and appearance of the reclining figures. The edge of the plate was generally decorated with Passover symbols, such as the order of the *seder* ceremony – the washing of the hands, etc. – or there were designs of the zodiac and various plants and animals of symbolic significance. Most Jewish pewter plates are full of self-expression, charm, and individuality. Pewter plates were also used for the Purim gift offerings (*mishlōḥ manot*). These were decorated with illustrations and quotations from the Book of Esther. Mordecai was depicted riding on the king's horse which was inscribed with the Hebrew passage, "and of sending portions one to the other" (Esth. 9:22), and the plate often bore the Pisces sign of the zodiac, the sign of the month of Adar. There were pewter plates for *Havdalah*, bearing the *Havdalah* benedictions. They often showed a Jew performing the *Havdalah* ceremony with his family. These illustrations are based on those in *minhagim* books and illuminated manuscripts. There are certainly pewter plates for *Kiddush*, showing the father of the house making the blessing over the wine, with the whole family sitting around the Sabbath table, but many of these have been lost. Though these pewter plates served their various purposes, throughout the year they decorated the Jewish home, adding to the Jewish sentiment and atmosphere. There were also plates which were mainly intended to adorn the Jewish home. The most popular subjects for these were biblical stories such as, for example, the selling of Joseph, and this too was common in Persia. The Hebrew letter was also improved upon through the decorating of pewter plates as it had been neglected to a great extent after the invention of printing. In the late 18th century, pewter vessels were replaced by earthenware and glass, which began to spread through Europe. These were easier to clean, shinier, and more suited to the tastes of the Rococo and later periods.

PEYREHORADE (Heb. פֵּינֵיָא אױרֶאדֶה), town in Landes department, S.W. France. A number of Marranos established themselves in Peyrehorade, at the latest by 1597. Under the name "Portuguese merchants," they formed a community around 1628, when they acquired a plot of land for a cemetery. In 1648, when a partial expulsion was decreed, there were 42 Jewish families (about 200 persons) in the town. In about 1700 only about 15 families remained there. Subsequently the number of Jews evidently increased because in 1747 the community, which from then on is openly referred to as Jewish, acquired a second site for a cemetery. The existence of a synagogue is confirmed about 1728 (at the latest, 1747). The community, by then well organized, had its own butchery and a ritual bath (*mikveh*), and supported three societies, the Sedaca, concerned with charitable activities, the Hebera, responsible for burial of the dead, and the Yesiba, dedicated to study. The Jews of Peyrehorade played an active role in the French Revolution. When the consistories were created, the community was at first attached to Bordeaux and later to Bayonne. In 1826 a third cemetery was acquired, which was also used by the Jews of the surrounding areas. (In 1970 all three cemeteries were still in existence.) From 1826 Jews began to leave the town, and the synagogue was sold in 1898, its furnishings being later removed to the synagogues of Biarritz and Bayonne. A few Jews were still living in Peyrehorade at the outbreak of World War II.

[Bernhard Blumenkranz]

PEZINOK (Slovak **Pezinok**; Hung. **Bazín**; Ger. **Poesing**, **Boesing**), town in Slovakia (part of Czechoslovakia 1918–1991; since then the Slovak Republic). In 1450 Jews were permitted to live in Pezinok, which was inhabited by Germans and Slovaks. In 1529 Counts Wolfgang and George von Pezinok and St. George, who were heavily in debt to Jews, began to imprison local Jews. When the mutilated body of a young boy was found, it was deemed an act of Jewish ritual murder. The imprisoned Jews were tortured in the main square until they confessed to the murder and other crimes. On May 21, 1529, some 30 men, women, and children were burned at the stake. Only children under 10 were pardoned and were converted to Christianity. The pardon granted to the victims by Emperor Ferdinand I reached them late. Jews were prohibited to live in Pezinok or even spend a night. In 1540 the Protestant reformer Andreas *Osiander published a booklet repudiating the Pezinok blood libels and incriminating the count who started it. The booklet was attacked by Johann Eck and repudiated by Martin *Luther.

In 1609 the counts of the Palfy family allowed Jews to settle on their land and in Cajla (Zeile). They allowed them to build a synagogue and to lead a communal life. The prohibition to live in Pezinok, except for the Palfy estates, continued until 1840; the community prospered but was forced to pay a

“toleration tax.” In 1843 a German-language private school was opened; in 1856 it was taken over by the Jewish community. In 1874 a new synagogue was built; it was destroyed in 1958.

In 1781 there were 88 Jews on the Palffy estate. The census of 1785/87 lists 304 Jews. In 1830, there were 220; in 1840 there were 271; in 1850 there were 280. In 1857 there were 540. In 1880 there were 321 Jews in Pezinok; in 1919, 359; in 1930, 418; and in 1940, on the eve of the deportations, the Jewish community numbered 235.

In spite of the economic prosperity and flourishing communal life (after the 1868 Hungarian Jewish Congress, the community chose the Orthodox path), the Jews were on shaky ground. In 1848–49, during the Spring of Nations, anti-Jewish disturbances swept the city. In 1918, at the end of the World War I, antisemitic demonstrations, abuse, and looting hit parts of Slovakia. Czechoslovak troops (the Legions) rescued the Jews of Pezinok and helped recover some of their property.

Between the wars, Jewish communal life flourished, although the congregation was sometimes unable to pay its employees. The congregation had a variety of social, philanthropic, and religious installations. The Zionist movement and the Jewish party were active in Pezinok.

Everything changed after March 14, 1939, with the proclamation of Slovak independence. German SS units entered Pezinok. On May 18 the Hlinka Guard (the Slovak Storm Troopers) assembled Jewish men in the synagogue, forcing them to demolish it and destroy the holy books. Jews were attacked in the streets and in their apartments. They were subjected to discriminatory legislation – their property was appropriated by gentiles and their belongings were legally looted.

In 1941 there were 175 Jews. In the summer of 1942, the Jews were deported to Auschwitz. German troops blew up the ancient cemetery, and the pulverized tombs were used as gravel in highway construction. The Germans used the empty space to train their dogs. Only a lapidarium was left to symbolize the former cemetery.

Few Pezinok Jews returned. In 1947 there were 45 Jews. Sixteen local Jews participated in the anti-Nazi struggle. After 1948–49 most of the Jews emigrated, largely to Israel.

Maurice *Loewy, the French astronomer, member of the French Academy and for a time its president, was born in Pezinok.

[Yeshayahu Jelinek (2nd ed.)]

PFEFFER, LEO (1910–1993), U.S. professor of constitutional law and constitutional lawyer. Pfeffer, who was born in Hungary, the son of an Orthodox rabbi, was taken to the U.S. in 1912. He studied law at New York University and practiced pri-

vately from 1933 to 1945, when he accepted a position on the legal staff of the Commission of Law and Social Action, the legal and political arm of the *American Jewish Congress. In 1947 he became assistant-director of the Commission and in 1957 its director, as well as general counsel of the American Jewish Congress. In 1964 Pfeffer became special counsel of the Congress. From 1965 to 1980, he became professor of constitutional law and chairman of the political science department at Long Island University. He co-founded the Lawyers Constitutional Defense Committee (which later became part of the American Civil Liberties Union), an organization formed to provide legal services in defense of civil rights.

A noted lecturer on constitutional issues, Pfeffer was recognized as a specialist in the area of church-state relations and religious liberty. He participated as counsel in numerous cases decided by the U.S. Supreme Court and other of the nation’s appellate courts involving these issues. Pfeffer’s writings include: *Church, State and Freedom* (1967²); *The Liberties of an American* (1963²); *Creeeds in Competition* (1958; with Anson Phelps Stokes); *Church and State in the U.S.* (1964); and *This Honourable Court* (1965).

[Julius J. Marcke]

PFEFFERKORN, JOHANNES (Joseph; 1469–after 1521), apostate and anti-Jewish agitator. Originally from Moravia, Pfefferkorn claimed to have been educated by a relative, Meir Pfefferkorn, a *dayyan* in Prague. A butcher by profession, he was convicted of burglary and theft, but released on payment of a fine. After his release, at the age of 36, he and his wife and children were converted to Christianity in Cologne (c. 1504), where he found employment. He put himself under the protection of the *Dominicans, who were quick to make use of him in their campaign against the Jews and their literature. Between 1507 and 1509 Pfefferkorn wrote a number of anti-Jewish tracts: *Judenspiegel* (“Jews’ Mirror”), in which, incidentally, he spoke out against the *blood libel; *Judenbeichte* (“Jewish Confession”); *Osterbuch* (“Passover Book”); and *Judenfeind* (“Enemy of the Jews”). All were also published almost simultaneously in Latin translation. The treatises certainly betrayed a thoroughgoing ignorance of rabbinic literature. Pfefferkorn demanded the suppression of the Talmud; prohibition of usury; forced attendance at *Sermons to Jews (longstanding Dominican objectives); expulsion of the Jews from the last German cities which had sizable Jewish communities – *Frankfurt, *Worms, and *Regensburg – unless such attendance took place (they were in fact expelled from Regensburg in 1519); and their employment in the most menial tasks only.

Through the influence of Emperor Maximilian’s pious sister Kunigunde, and the support of the Cologne Dominicans, Pfefferkorn gained access to the emperor and in 1509 was empowered by him to confiscate any offending Jewish books, including prayer books, with the exception of the Bible. The confiscations took place on Friday, Sept. 8, 1509, in Frankfurt and subsequently in Mainz, Bingen, and other German cit-

ies. When the archbishop of Mainz, the Frankfurt city council, and various German princes intervened on behalf of the Jews, Pfefferkorn addressed a petition to the emperor (*Zu Lob und Ere* – “In Praise and Honor,” 1510, also in Latin) in defense of his cause. Though the vacillating emperor ordered the return of the confiscated books, six weeks later, on May 23, 1510, he was apparently influenced by an alleged *Host desecration and blood libel at *Brandenburg, and under pressure from his sister, he ordered the appointment of an investigating commission.

The Pfefferkorn-Reuchlin Controversy

The commission was headed by the archbishop of Mainz, who appealed to theological faculties of Cologne, Erfurt, Heidelberg, and the famous scholar and humanist Johannes *Reuchlin, whose aid Pfefferkorn had tried in vain to enlist earlier. Pfefferkorn was to communicate the results to the emperor. When Pfefferkorn learned that Reuchlin’s opinion would be favorable to the Talmud he assailed him in his *Handspiegel wider und gegen die Juden* (“Hand Mirror,” 1511). Reuchlin replied in his *Augenspiegel* (“Eye-glass,” 1511), strongly attacking Pfefferkorn and his backers, and thereby starting one of the great literary controversies of history, in reality a battle between the reactionary and the liberal parties within the Church. It occurred at a time when the tide of humanism was rising, and most German humanists rallied to Reuchlin’s side. Erasmus, the Rotterdam humanist, though not exerting himself on Reuchlin’s behalf, termed Pfefferkorn “a criminal Jew who had become a most criminal Christian.” In September 1511 Pfefferkorn preached against the *Augenspiegel* outside a Frankfurt church, but the main battle was now fought between Reuchlin and the Cologne theologians. When the emperor visited Cologne in 1512, Reuchlin’s enemies obtained from him an interdiction against the *Augenspiegel*, and in the same year Pfefferkorn issued his *Brandspiegel* (“Burning Glass”), an even more vituperative attack on Reuchlin and the Jews. Reuchlin submitted a further defense; the emperor imposed silence on both sides in June 1513.

The conflict echoed in the papal court and Pope Leo X set up a special ecclesiastical tribunal at Speyer to deal with the matter (November 1513). The judgment of March 1514, favorable to Reuchlin, was torn down by Pfefferkorn in Cologne, and in the same year he published a further tract, *Die Sturmglocke* (“Alarm Bell”); however, he was taken to task for breaking the silence imposed by the emperor. A scandal connected with another apostate named Rapp was used by Ulrich van Hutten, Crotus Rubianus, and other supporters of Reuchlin to discredit Pfefferkorn and in 1516 they issued the *Epistolae Obscurorum Virorum* (“Letters of Obscure Men”), a virulent but effective satire on Pfefferkorn, the Dominicans, and all they stood for. In retaliation Pfefferkorn published his defense (*Beschirmung...*, 1516, also in Latin) and a further attack on Reuchlin (*Streibuechlein* – “Polemic”) in the same year. In 1520 the pope finally decided against Reuchlin, though by this time the proceedings were so far removed from the original controversy

against Jewish literature that the decision did not interfere with David *Bomberg’s first printing of the Talmud, then in process in Venice. Pfefferkorn fired his last triumphant shot in 1521 with *Eine Mitleidige Clag* (“A Pitiful Complaint”), which Graetz describes as the most impudent and obscene of all his lampoons, and for which the printer, but not the author, was imprisoned. The outpourings from the other side were equally intemperate. Though his opponents were exaggerating somewhat when they described Pfefferkorn as a complete ignoramus, his knowledge of Jewish sources was minimal and his acquaintance with Latin nonexistent. Leading historians have come to the conclusion that Pfefferkorn received substantial help in the preparation of his treatises from his Dominican mentors. The effect of the episode was to bring about a considerable decline in the prestige of the Church. As S. Baron has pointed out, it was not merely by coincidence that Martin *Luther promulgated his thesis in 1517, at the height of the Pfefferkorn-Reuchlin controversy. The name Pfefferkorn became proverbial for unprincipled denigrators of their own origin and faith.

°PFEIFFER, ROBERT HENRY (1892–1958), U.S. Protestant Bible scholar and Assyriologist. Pfeiffer taught at Harvard University from 1922, after serving in the ministry of the Methodist Church from 1916 to 1919. He directed the Harvard-Baghdad School excavations at Nuzi, Iraq (from 1928), and from 1931 served as curator of the Harvard Semitic Museum.

Pfeiffer is mainly known for his *Introduction to the Old Testament* (1941, 1952²) and its sequel *History of New Testament Times, With an Introduction to the Apocrypha* (1949). These works and his *The Books of the Old Testament* (1957) show a marked influence of his major professors at Harvard, George Foot Moore and William R. Arnold. It was the influence of the latter and the writings of A. Klostermann that led him to isolate the earliest Hebrew historical source that includes 11 Samuel 9–20 and 1 Kings 1–2, published as *The Hebrew Iliad* with general and chapter introductions by William G. Pollard, and to claim that the priest Ahimaaz, the biographer of David, was “the father of history,” history being defined as a narrative of past events dominated by great ideas. Pfeiffer’s works in the field of Assyriology included *The Archives of Shilwateshub* (1932); *Excavations at Nuzi*, volumes 2 (1933) and 4 (with E.R. Lacheman, 1942); *One Hundred New Selected Nuzi Texts* (with E.A. *Speiser, 1936); and *State Letters of Assyria* (1935).

Pfeiffer wrote a number of papers on literary, philological, and historical critical problems of the Bible. His comments on New Testament subjects followed the methodol-

ogy of his teaching, which was distinguished by a traditional Christian approach. He was editor of the *Journal of Biblical Literature*, 1943–47.

[Zev Garber]

PFORZHEIM, city in Baden, Germany. The first reference to the presence of Jews dates from the 13th century. In 1267 the discovery of the corpse of a drowned girl gave rise to a *blood libel against the Jewish community, and their communal leaders were killed. Their martyrdom was extolled in religious verse and the day of their death (20th Tammuz) set aside as a fast day. The community was almost annihilated during the *Black Death persecutions of 1349. In the 15th century a few **Schutzjuden* lived in Pforzheim. In the early 16th century J. *Reuchlin, the renowned humanist, intervened on behalf of the Jews of Pforzheim with Margrave Philip I (1479–1533). Expelled with all the Jews of *Baden in 1614, they returned in 1670. The handful of Jewish families in Pforzheim in the 18th century dealt mainly in cattle, leather, and cloth. Prior to 1812, worship was conducted in a private home, but in that year a synagogue was built. It remained in use until 1893, when a new synagogue was built, later renovated in 1930. A cemetery was consecrated in 1846 and a school founded in 1832. The community increased from 101 in 1801 to 287 in 1875 and continued to grow, in part due to the flourishing jewelry industry; by 1900 it had reached 535, and by 1927 around 1,000. By June 1933 the Jewish population had fallen to 770 (1.1% of the total population). In the 20th century Jews were important in the financial and industrial life of the city. With the rise of Nazism, Jewish enterprises were boycotted and the community was further depleted through emigration, largely to the U.S. and Erez Israel. On Nov. 10, 1938, the synagogue was desecrated and partly demolished. One hundred and eighty-three Jews were deported to the *Gurs concentration camp on Oct. 22, 1940; 21 returned after the war. They were affiliated with the *Karlsruhe community and possessed a new cemetery. A memorial was erected in 1967 on the site of the synagogue. In 1976 there were 120 Jews in the city. In 1994 a Jewish community was founded in Pforzheim, which numbered 434 in 2004. The majority of the members are immigrants from the former Soviet Union. A new community center functioned from 2006.

PFORZHEIMER, CARL HOWARD (1879–1957), U.S. businessman, public servant, and bibliophile. Pforzheimer, who

was born in New York City, established in 1901 a brokerage business that became well known for its underwriting of oil securities at a time when the U.S. financial community generally regarded such issues as a poor risk. Active in Westchester County public affairs, he served as chairman of the Westchester County Emergency Work Bureau (1931–35); the Westchester County Commission on Government, whose work subsequently led to the promulgation of Westchester's Home Rule Charter; and the Westchester County Planning Commission. Pforzheimer was a trustee of the Jewish Publication Society of America and of Montefiore Hospital, and a supporter of the Jewish Division of the New York Public Library. He was a rare-book and manuscript collector who assembled one of the finest private collections in the U.S. (including a Gutenberg Bible). Pforzheimer compiled a three-volume catalog of his collection for scholarly use.

PHALSBOURG, little town in Moselle department, N.E. France. Between 1680 and 1691, Louis XIV's minister, Louvois, authorized two Jewish families to settle there; these increased to four in 1702, eight in 1747, and 12 in 1770; on several occasions they were threatened with expulsion. Two Jews acquired merchants' licenses in 1768 and this right was ratified by the Conseil d'Etat. The synagogue was erected in 1772 and rebuilt in 1857; the cemetery dates from 1796. From 1807 until around 1920 Phalsbourg was the seat of a rabbinate (which also served the neighboring communities of Sarrebourg, Mittelbronn, Lixheim, etc.) whose incumbents included Mayer Heyman (1827–37), the model for the Reb-Sichel of Erckmann-Chatrian, and Lazare *Isidor (1837–47), future chief rabbi of France. From the close of the 19th century the Jewish population decreased from 159 in 1880, to 89 in 1931, and 48 in 1970. During World War II, nine Jews of Phalsbourg died when they were being deported and two were shot.

PHARAOH. The Egyptian expression *per áo* (“the Great House”), transcribed and vocalized *pir'u* in Akkadian and *par'ó* in Hebrew, did not originally designate the king of Egypt, but rather his palace, and was used in this sense in Egyptian texts until the middle of the 18th dynasty (c. 1575–1308 B.C.E.). Circumlocutions were frequently used to specify the king in the texts of the 18th dynasty, and during the reign of the great conqueror and empire-builder, Thutmose II (c. 1490–1436 B.C.E.), *per áo*, i.e., the palace, began to appear as another such designation, just as in more modern times “The Sublime Porte” meant the Turkish sultan. The Egyptian texts never used this designation, however, as part of the official titulary of the king, although from the 22nd dynasty on (c. 945–730 B.C.E.), it was regularly added, in popular speech, to the king's personal name. In the non-Egyptian sources, particularly in the Bible where it occurs not infrequently, Pharaoh always means the king of Egypt, although frequently the earlier usage, without

the addition of the king's personal name, is followed. Attempts have been made by modern scholarship to identify the Pharaoh of the oppression and of the Exodus with various rulers of the 19th dynasty, but unanimous consensus on the identity has not yet been reached.

[Alan Richard Schulman]

PHARAOH AND THE EGYPTIANS IN THE AGGADAH

Influence of Jews' Experience in Roman Egypt

Rabbinic references to the biblical Egyptians are almost invariably hostile and they are probably strongly colored by the unfortunate experiences of the Jews in Roman Egypt. Ancient Alexandria was the birthplace of racial antisemitism and the scene of major pogroms in 38, 66, and 116–117 C.E. Egyptian Jewry outside of Alexandria was massacred toward the end of Trajan's reign. The Egyptians, even more than the Greeks, were, according to Josephus, the Jews' bitterest enemies and the originators of the worst libels against them.

The rabbis, accordingly, depicted the ancient Egyptians as uniformly evil and depraved – ugly both in appearance and character. Thus, when Abraham approached Egypt, he is said to have warned Sarah that Egypt was a center of sexual immorality (Sifra 7:11, end; Jos., Ant., 1:162). Moreover, Abraham pointed out, they were entering “a country whose inhabitants are ugly and black” (Gen. R. 40:4), evidently a reflection of the racial contempt harbored by the relatively fair-skinned Semites for the darkskinned Hamites.

When Pharaoh, “this wicked man” (Tanḥ. B., Gen. 33), took Sarah for himself, he was, according to the Midrash, duly informed by her that she was a married woman; but this did not deter him from trying to seduce her (Gen. R. 41:2). He was, however, whipped by an angel and stricken with leprosy.

Leper Motif

Leprosy figures repeatedly in the punishments inflicted or threatened on the Egyptians. The Pharaoh of the oppression became a leper and sought to cure himself by bathing in the blood of Hebrew children specially slain for this purpose (Ex. R. 1:34). Also, the Egyptian people were smitten with leprosy along with the inflammation of boils (*ibid.* 11:6). The leper motif was probably a literary vengeance for the Egyptian calumny that the Israelites of the Exodus were lepers (Jos., Apion, 1:229, 233ff., 305ff.), while the slaughter of the Hebrew children in Egypt evidently alludes to the atrocities committed in the course of the Jewish uprising and its suppression in 116–117 C.E.

Potiphar's Wife

Not surprisingly, Potiphar's wife becomes, in rabbinic literature, the seductress par excellence, a shameless, wicked woman (Ruth R. 6:1), who behaved “like an animal,” was willing to murder her husband (Gen. R. 87:4–5), and went to fantastic lengths to win Joseph's love (Yoma 35b; Sot 36b).

Potiphar and Pharaoh

Even Potiphar, who according to the biblical account, bestowed many favors upon Joseph, as well as the Pharaoh who

raised the Hebrew prisoner to the position of vizier and welcomed his family to Egypt, are treated by the rabbis with disdain and even outright hostility. Potiphar, “an Egyptian – a cunning man” (Gen. R. 86:3), had purchased Joseph for the purpose of sodomy, and was appropriately punished by castration (Sot. 13b). He was not even justified in having Joseph imprisoned, despite his wife's accusations, for he knew Joseph to be innocent, and, indeed, told him so (Gen. R. 87:9). When Joseph became ruler of Egypt, he sentenced his former master to lifelong imprisonment (Mid. Ps. to 105:7).

Pharaoh and Judah

Pharaoh, repeatedly consigned by the Midrash among “the wicked” (Gen. R. 89:4), was said to have been charged by Judah with making false promises and indulging in pederasty, and in his anger Judah threatened to kill both Joseph and Pharaoh and, indeed, to destroy all Egypt (*ibid.* 93:6). Judah's furious threats no doubt personify and reflect the savage fighting in Egypt and Cyrene during the Jewish rising in 116/117 C.E.

Pharaoh and Joseph

Even Joseph had scant respect for his royal benefactor. Whenever he wanted to make a false oath, he would swear in Pharaoh's name (Gen. R. 91:7). When presenting some of his brothers to Pharaoh (Gen. 47:2), Joseph chose the weakest among them in order to avoid having them drafted into Egyptian military service. This Midrash seems to reflect rabbinic opposition to Jewish mercenaries who for centuries had been serving Egypt's rulers.

Oppression and Enslavement of the Hebrews

In line with the anti-Egyptian attitude of the rabbis, the Pharaoh of the oppression was depicted by some as identical with the Pharaoh of Joseph's time. He was not “new” (Ex. 1:8), only his anti-Israelite decrees were new. It was not that “he knew not Joseph” but in his ingratitude he deliberately ignored the fact that Joseph had ever existed, and he gratuitously initiated the persecution of the Hebrews (Sot. 11a). Thus, even the best of the Pharaohs who had promoted Joseph and invited the Israelites to settle in Egypt, turned out to be a wicked rogue.

According to one rabbinic view, however, the initiative to oppress and enslave the Hebrews was taken not by Pharaoh himself but by his Egyptian subjects. At first he opposed this plan on the grounds that “were it not for Joseph we would not be alive”; but the Egyptians deposed him, restoring him after three months on the express condition that he would do as they wished (Ex. R. 1:8). This interesting interpretation was probably designed to justify the severe punishment of the Egyptian people.

Having cunningly enslaved the Israelites, Pharaoh imposed on them increasingly onerous tasks, often endangering their lives, and brutally burning or immuring infants and even adults in unfinished buildings whenever the Israelites failed to complete their work quota (Sot. 11a–b; Ex. R. 1:10–11, 18:9).

Casting of Hebrew Infants into River

The decree to cast the infants into the river (Ex. 1:22) applied

to the Egyptians, too, because Pharaoh was misled by his astrologers who were not sure whether the savior of Israel would be a Hebrew or an Egyptian (Sot. 12a), a legend which must have been influenced by the Egyptian stories that Moses was an Egyptian. The Hebrew girls who were to be spared were meant to be reserved to satisfy the sexual appetites of the Egyptians (Ex. R. 1:18).

Egyptian Immorality

Pharaoh is also charged with having claimed divine honors for himself (*ibid.* 8:12; Tanh. B., Ex. 16) – a normal practice among Egyptian rulers down to Roman times – and with an attempt to seduce the Hebrew midwives (Ex. R. 1:15).

Egyptian immorality is a constantly recurring theme in rabbinic literature, due presumably to actual observation of the contemporary Egyptian scene. The killing of the Egyptian taskmaster by Moses (Ex. 2:12) was justified by the rabbis on the grounds that the Egyptian had violated the wife of the Hebrew slave and, having been detected by her husband, was on the point of beating him to death (Ex. R. 1:28; Lev. R. 32:4; cf. Targ. Ps-Jon., Lev. 24:10). Even when the Egyptians were pursuing the Israelites into the Red Sea, they were like “inflamed stallions” driven on by expectations of sexual orgies.

Only Pharaoh’s daughter who rescued Moses from the river is given favorable treatment, and her bathing in the river is interpreted as ritual immersion for the purpose of proselytization (Sot. 12b; Ex. R. 1:23). Although a firstborn, she was saved because of Moses’ prayer (Ex. R. 18:3).

Legend of Moses’ Taking Pharaoh’s Crown

The legend of the infant Moses taking Pharaoh’s crown and placing it on his own head (Ex. R. 1:26, et al.) apparently alludes, not as is commonly believed, to the plagues that Moses was to bring on Egypt, but to the messianic redemption when the kingdoms of the gentiles – including that of the Egyptians – would disappear. Significantly, an early Midrash predicts that all the plagues of Egypt would be repeated in Rome (Tanh. B., Ex. 15b, 22a–b).

Moses’ Treatment of Pharaoh

Despite Pharaoh’s overweening arrogance, Moses was commanded by God to treat him with the deference and respect due to a king (Ex. R. 7:3), a widely current political concept promoted by those rabbis who favored cooperation with the Roman authorities as being ultimately in the best interests of the Jews. Nevertheless, Pharaoh cut a sorry figure during the Exodus when he was thoroughly humbled, being compelled to look for Moses and Aaron at night, mocked and derided by the Hebrew children, and begging Moses to take the Israelites out of Egypt (Mekh., Bo, 13; Tanh. B., Ex. 26). This humiliation as well as the ten plagues and the drowning of the Egyptian host in the Red Sea were, however, well-deserved.

Depiction of Plague of Firstborn

The plague of the firstborn, in particular, is depicted in lurid colors. None could escape, for even the lowest classes hated the Hebrews and desired their humiliation and persecution

(Mekh., Bo, 13; Tanh. B., Ex. 22). Only those Egyptians who joined the “mixed multitude” (Ex. 12:38), celebrated the Passover with the Israelites, and left Egypt with them, were saved from the plague (Ex. R. 18:10).

Jewish animosity toward the Egyptians found eloquent expression in the Passover *Haggadah*, where the plagues which befell the Egyptians – both in Egypt and at the Red Sea – were homiletically multiplied many times over (cf. Mekh., Amalek, 2; Ex. R. 23:9).

Conciliatory Spirit of Later Rabbis

In the light of such bitter Egyptian-Jewish enmity, it is all the more remarkable that within little more than a century after the bloodbath of Egyptian Jewry, R. Jonathan, a fervently patriotic rabbi, is reported to have said that when the ministering angels wished to chant a song of praise before God at the time when the Israelites were saved at the Red Sea, He rebuked them, saying, “The work of my hands [the Egyptians] is drowning in the sea, and you want to chant a song before me!” (Sanh. 39b; Meg. 10b). Although the parallel versions in the Palestinian Midrashim (Ex. R. 23:7; Tanh. B. 11, 60; Mid. Ps. to 106:2) transfer God’s concern from the Egyptians to Israel, it appears that R. Jonathan’s statement, as preserved in the Babylonian Talmud, is the original version. Indeed one of the reasons for which, on Passover, the entire *Hallel* is recited only on the first day is that on the seventh day the Egyptians were drowned (PDRK 189). In the same conciliatory spirit, some rabbis believed that Pharaoh was not drowned in the Red Sea, but lived to become king of Nineveh and lead the people in repentance in response to Jonah’s warning (PdRE 43; Mekh., Be-shallah, 6; cf. Jonah 3:4ff.).

[Moses Aberbach]

IN ISLAM

Pharaoh of the *Koran is the king who oppressed the people of Israel in *Egypt; Musā (*Moses) and Hārūn (*Aaron) negotiated with him. In accordance with the counsel of his advisors, among them Hāmān, Pharaoh ordered that all male children be killed (Sura 2:46; 7:137). Āsiya, the wife of Pharaoh, adopted Moses, who had been found in an ark (28:9). Pharaoh believed that he was god and therefore ordered Hāmān to erect a tower which would reach the heavens, thereby enabling him to wage war against the god of Moses (28:38; 40:38). He severely penalized those who returned to God, including his righteous wife (7:111; 26:45). A description of the mission of Moses and Aaron is found in Humayya’s. Several conversations which Moses and Aaron had with Pharaoh are given in the *Koran. There is a great degree of similarity in content between Humayya’s description and the dialogue of Sura 20:49–56. Pharaoh conspired to kill Moses (Sura 26:33). One of the believers, who is not mentioned by name, attempted to save Moses (40:29). The unbelieving wives of the believers Noah and Lot are contrasted with Pharaoh’s wife, who unlike her husband, was a believer (66:10–11). When Pharaoh saw his people drowning in the sea, he repented and believed in Allah (10:90–92).

Indeed, it is not explicitly stated in the Book of Exodus that Pharaoh drowned; this can be deduced from Psalms 136:15. Therefore, there is a suggestion in the *aggadah* that Pharaoh was saved. Humayya, however, knew that Allah did not take notice of Pharaoh's prayer and that he drowned (34:19). This view also appears in Muslim legend. After Pharaoh asked to repent, Gabriel closed Pharaoh's mouth with the mud of the sea, thus making him unable to repeat the verse: "I believe that there is no god but He in whom the people of Israel believe" (10:90). Muslim legends greatly influenced later Jewish *aggadah*. *Muhammad obviously was confused concerning Āsiya, since she plays the same role in the Koran as Pharaoh's daughter does in the Bible. Pharaoh was very cruel to her because she was an Israelite. Various stories are related about her death: she was cast down upon a rock; Pharaoh whipped her to death, but she did not feel the pain.

PHARISEES (Heb. פְּרוּשִׁים, *Perushim*), a Jewish religious and political party or sect during the Second Temple period which emerged as a distinct group shortly after the Hasmonean revolt, about 165–160 B.C.E. They were probably successors of the Hasideans (or *Ḥasidim), an earlier Jewish sect which promoted the observance of Jewish ritual and the study of the Torah. The Pharisees considered themselves the traditional followers of Ezra, whom they cherished, after Moses, as the founder of Judaism, maintaining the validity of the Oral Law as well as of the Torah as the source of their religion. They tried to adapt old codes to new conditions, believed in a combination of free will and predestination, in the resurrection of the dead, and in recompense for this life in the next. At first relatively small in number, the Pharisees came to represent, by the first century C.E., the religious beliefs, practices, and social attitudes of the vast majority of the Jewish people. They attempted to imbue the masses with a spirit of holiness, based on a scrupulous observance of the Torah, by spreading traditional religious teaching. So greatly did the religious values prevail over the political in the Pharisaic framework that, in contrast to the *Zealots, they were willing to submit to foreign domination – so long as it did not interfere with their inner way of life – rather than support an impious government of their own.

Origin of the Name

The meaning of the word "Pharisee" is uncertain. It is generally believed that the name derives from a Hebrew stem, *parash* ("to be separated"), hence "Pharisee" would mean "the separated ones" or the "separatists" (cf. Kid. 66a, where this meaning is clearly implied). According to some scholars, "Pharisee"

would mean "those who are set apart", i.e., avoiding contact with others for reasons of ritual purity, or those who "separated themselves" from the heathens (Gal. 2:12ff.) and from the heathenizing tendencies and forces in their own nations, such as the *Sadducees.

History of the Pharisees

The Pharisees' first bid for power was made in a period two centuries after the Babylonian exile during the struggle to remove the Temple and religious control from the sole leadership of the aristocratic Sadducees. The inception of the synagogue worship traced to this time is seen as an attempt by the Pharisees to undermine the privileged authority exercised by the Sadducees. Ceremonies originally part of the Temple cult were carried over to the home, and learned men of non-priestly descent began to play an important role in national religious affairs. While the priesthood exhausted itself in the round of Temple ritual, the Pharisees found their main function in teaching and preaching the law of God.

The conflict between the lay and priestly factions of the supreme council and tribunal, the Sanhedrin, regarding the interpretation of the Torah when decisions were required on questions arising in daily life, gave the Pharisees the opportunity to incorporate popular customs and traditions into the Temple cult and the religious life of the people. In general, the Pharisees admitted the validity of an evolutionary and non-literal approach toward the legal decisions and regarded the legal framework of the Oral Law as equally valid as the Written Law. A serious conflict eventually developed between the Pharisees and the Sadducees over the approach to these problems, and two distinct parties emerged, with theological differences entangled with politics. The antagonism between Pharisees and Sadducees extended to many spheres outside the religious domain and eventually became a fundamental and distinctive one. Under John Hyrcanus, the Pharisees were expelled from membership in the Sanhedrin and branded with the name *Perushim*, "the separated ones." They took the name as their own, but used its alternate Hebrew meaning, "the exponents" of the law. Pharisaic strongholds of learning were later founded by such "exponents" as Shammai and Hillel, and Ishmael and Akiva.

By the time of the Hasmonean revolt, it had become evident that the Pharasaic theological doctrines were giving utterance to the hopes of the oppressed masses and affecting the entire life of the Jews. This hope was especially seen in doctrines which included belief in the resurrection of the dead, the Day of Judgment, reward and retribution in the life after death, the coming of the Messiah, and the existence of angels, and also divine foreknowledge along with man's free choice of, and therefore responsibility for, his deeds. These beliefs touched on the theological foundations of life.

Concept of God

Based on the sayings of the prophets, the Pharisees conceived of God as an omnipotent spiritual Being, all-wise, all-knowing, all-just, and all-merciful. They taught that God loved all His

creatures and asked man to walk in His ways, to act justly, and to love kindness. Though all-knowing and omnipotent, God endowed man with the power to choose between good and evil. He created in him two impulses, a good one and a bad, advised him to do good, and gave him the Torah as a guide. Since God was transcendent, He could not be comprehended in anthropomorphic terms, nor could His totality of being be designated with a name. Several terms were used merely to describe some attributes of God. The Pharisees spoke of God as “The Creator of the World” (*Bore Olam*), “the Place” (*Ha-Makom*), “the Divine Presence” (*Shekhinah*), and so forth.

Free Will and Divine Retribution

In opposition to the Sadducean belief that God took little cognizance of and little interest in human affairs, the Pharisees held that everything in the world was ordained by God, but that man had it in his power to choose between good and evil. Although “fate does not cooperate in every action,” and although God could determine man’s choice of conduct, He left the choice open to man himself. In talmudic reports the followers of the Pharisees declare, “Everything is in the hands of God but the fear of God” (Ber. 33b), and although “everything is foreseen, yet freedom of choice is given” (Avot 3:16). As the Talmud puts it, “If man chooses to do good, the heavenly powers help him. If he chooses to do evil, they leave the way open to him” (Shab. 104a). This belief in man’s responsibility for his actions led to the Pharisaic doctrine of divine retribution. For the Pharisees, man would be rewarded or punished in the next life according to his conduct. This belief in divine retribution also rests on the more basic idea that man’s existence is not limited to this life alone.

Resurrection

According to the Talmud and the New Testament, the Pharisees believed in the resurrection of the dead. This belief in another world makes possible the belief in divine justice in the face of apparent injustices on earth. Ideas of immortality and resurrection are generally attributed to Greek or Persian origins, yet to the Pharisees it was a genuine Jewish belief based on passages in the Torah.

Place of the Torah

For the Pharisees, the Torah God gave to Moses consisted of the Written and the Oral Law, and both were truth. The divine revelations in the first five books of Moses were supplemented and explained by the prophets and the unwritten tradition, and were intended to guide men in the right way of life. The Torah, they felt, was the center of their teachings and sufficient for all men and all times. Their view of the law was that its commandments were to be interpreted in conformity with the standard and interpretation of the rabbis of each generation, and to be made to harmonize with advanced ideas. Therefore, when a precept was outgrown, it was to be given a more acceptable meaning, so that it would harmonize with the truth resulting from God-given reason. The law must be understood according to the interpretation of the teach-

ers who are endowed with God-given reason to do so. When the letter of the law seemed to oppose conscience, it was to be taken, accordingly, in its spirit. The Mosaic law of “an eye for an eye”, for instance, was interpreted to refer to monetary compensation and not retaliation. The Pharisees generated a ramified system of hermeneutics and found no great difficulty in harmonizing Torah teachings with their advanced ideas, or in finding their ideas implied or hinted at in the words of the Torah. It was due to this progressive tendency, therefore, that the Pharisaic interpretation of Judaism continued to develop and remain a vital force in Jewry.

For discussion of the evolution of the Oral Law and its relation to the Torah, see *Oral Law and *Talmud.

Synagogue Worship

The Pharisees believed that, since God was everywhere, he could be worshiped both in and outside the Temple, and was not to be invoked by sacrifices alone. They thus fostered the synagogue as a place of worship, study, and prayer, and raised it to a central and important place in the life of the people, rivalling the Temple.

Relation to the New Testament

While the Pharisees, as a whole, set a high ethical standard for themselves, not all lived up to it. It is mistakenly held that New Testament references to them as “hypocrites” or “offspring of vipers” (Matt. 3:7; Luke 18:9ff., etc.) are applicable to the entire group. However, the leaders were well aware of the presence of the insincere among their numbers, described by the Pharisees themselves in the Talmud as “sore spots” or “plagues of the Pharisaic party” (Sot. 3:4 and 22b). The apostle Paul himself had been a Pharisee, was a son of a Pharisee, and was taught by one of the sect’s most eminent scholars, Gamaliel of Jerusalem. Pharisaic doctrines have more in common with those of Christianity than is supposed, having prepared the ground for Christianity with such concepts as Messianism, the popularization of monotheism and apocalypticism, and with such beliefs as life after death, resurrection of the dead, immortality, and angels.

The active period of Pharisaism extended well into the second century C.E. and was most influential in the development of Orthodox Judaism. The Pharisees were deeply earnest in the religion of their forefathers, represented the most stable elements in their religion, and were most instrumental in preserving and transmitting Judaism. Unlike the Zealots, they rejected the appeal to force and violence, believing that God was in control of history and that every true Jew should live in accordance with the Torah. It is not surprising, therefore, that the Pharisees devoted much of their efforts to education. After the destruction of Jerusalem in 70 C.E., it was the synagogues and the schools of the Pharisees that continued to function and to promote Judaism.

[Menahem Mansoor]

PHAROS (near Alexandria), an island just over half a mile from *Alexandria, on which stood the lighthouse of Pharos, regarded as one of the wonders of the ancient world. According to the “Letter of Aristeas” (par. 301), the Septuagint was translated there, and there the Jewish community of Alexandria also assembled to hear the translation and accept it (*ibid.* par. 308–11). Philo stresses the excellent qualities of Pharos which were ideal for the needs of the translators – cleanliness, peace and tranquility, solitude, and closeness to nature. Philo also relates that a festive ceremony was held annually on the island in commemoration of the translation. Both Jews and non-Jews participated in the festivity where they gave thanks and prayed to God and then spent the whole day on the shore (Philo, *II Mos.* 35–44).

[Uriel Rappaport]

PHASAEEL (d. 40 B.C.E.), older brother of *Herod the Great. He appears to have been more moderate than Herod. Having received from his father, *Antipater, the governorship of Jerusalem when Herod was appointed governor of Galilee, Phasael exercised firm rule coupled with discretion. Notwithstanding Josephus’ generous appraisal of his character, Phasael, together with Herod, was twice accused before Mark Antony by Jewish deputations. The latter were singularly unsuccessful and on the second of these attempts Herod and Phasael were, in fact, appointed tetrarchs. Both he and Herod strove from the outset to remove the vestiges of Hasmonean domination in Judea. *Antigonos, who succeeded in gaining Parthian assistance in his efforts to reestablish his family’s rule over Judea, laid siege to Phasael and Herod in Jerusalem. Phasael, accompanied by the high priest Hyrcanus II, allowed himself to be inveigled into the Parthian camp in 40 B.C.E., and both were imprisoned by the Parthians. Hyrcanus was physically disfigured to prevent his serving in the priesthood, and Pha-

sael took his own life by dashing out his brains – this is the official Herodian account but it is more probable that he was killed in battle while trying to escape. The present-day Tower of David in Jerusalem’s Old City is probably the site of the Phasael tower of Herod’s palace.

[David Solomon]

PHASAEELIS, settlement and estate founded by King Herod in the Jordan Valley N. of Jericho and named after his elder brother Phasael, who died in 40 B.C.E. (*Jos.*, *Wars*, 1:418). The place was renowned for its palm groves and dates (Pliny, *Natural History*, 13:4, 44). Herod bequeathed Phasaelis to his sister Salome; she in turn willed it to the empress Livia, the wife of Augustus; from Livia, the estate of Phasaelis passed to her son Tiberius and remained imperial property throughout the period of the Roman and Byzantine empires. It is shown on the Madaba Map with an accompanying date palm. In Byzantine times, hermits lived there; a church of St. Cyriacus in Phasaelis is mentioned by Moschus (*Pratum spirituale*, 92) and Cyriacus of Scythopolis (*Vita Sabae*, 29). The site is identified with Khirbat Faṣṣa’il, which has remains of water channels, an aqueduct 1¼ mi. long, water mills, building foundations, and Roman roads.

[Michael Avi-Yonah]

PHEASANT, the game bird *Phasianus colchicus*. The pheasant was known in Greek as Φασιανός and hence in mishnaic Hebrew as פַּסְיוֹנִי (*pasyoni*). It is not mentioned in the Bible, although pseudo-Jonathan identified it with the biblical שֶׁלַב (*selav*; Ex. 16:13), which is, however, the *quail. The pheasant was originally found in Asia, from the shores of the Caspian Sea to Manchuria and Japan. It was brought to Europe and America where, acclimatized in forests, it became a notable game bird. The Romans set great store upon its flesh, and it is told that when the emperor Hadrian doubted whether there were also pheasants in Erez Israel, R. Joshua b. Hananiah produced some to prove to him “that Erez Israel lacks nothing” (Eccles. R. 2:8, no. 2). Whether these particular pheasants existed in a wild state in the country or were bred cannot be determined, although from other sources it is evident that they were bred together with peacocks (Tosef., *Kil* 1:8), this having been a sign of wealth (Eccles. R. 7:8). The pheasant is listed in the Midrash among those rare delicacies, the taste of which the manna could acquire should a person yearn for it (Num. R. 7:4). In connection with the command to honor one’s father, it was said: “One may give his father pheasants as food, yet this drives him from the world, while another may make him grind in the mill, and this brings him to the world to come” (Kid. 31a). In several communities in

Europe the Jews ate the pheasant, which has the characteristics of a *kasher* bird. An attempt was made in recent years to breed it in Israel, but the rabbinate cast doubt on its *kashrut* for lack of local tradition to that effect (see *Dietary Laws).

[Jehuda Feliks]

PHERORAS (d. c. 5 B.C.E.), son of Antipater and Cypros, younger brother of Herod the Great. During the war of Herod against Antigonus, Pheroras was put in command of the Roman soldiers and charged with fortifying Alexandrion, and was later appointed by Herod tetrarch of Transjordan. Pheroras was actively involved in the intrigues in the court of Herod. Together with his sister Salome, he did everything in his power to accentuate the differences between Herod and the sons of *Mariamne the Hasmonean. Herod hated Pheroras' wife and demanded that he divorce her. Unwilling to accede, Pheroras was compelled to return to his tetrarchy where he died by poisoning. After his death his wife testified that he had plotted to poison Herod.

[Edna Elazary]

PHILADELPHIA, fifth largest city in the United States, in the State of *Pennsylvania. The area's Jewish population (2001), sixth largest in the nation, was estimated at 206,000.

Origins of the Jewish Community

Jews came from New Amsterdam to trade in the Delaware Valley area as early as the 1650s, long before William Penn founded the colony of Pennsylvania in 1682. Several individual Jews were transient in Philadelphia by 1706. Permanent Jewish settlement began in 1737 with the arrival of Nathan *Levy (1704–53) and his brother Isaac (1706–77), who were joined in 1740 by their young cousins David *Franks (1720–93) and Moses (1718–89). Nathan Levy and David Franks established a successful mercantile firm known for its shipping and import-export activity. Barnard *Gratz (1738–1801) arrived in 1754 and went to work for David Franks. Gratz, with his brother Michael *Gratz (1740–1811), the two best known Philadelphia colonial Jews, created a prosperous business enterprise which specialized in western trade. Jewish communal life may be dated from 1740, when Nathan Levy secured a grant of ground on Spruce Street between Eighth and Ninth Streets for Jewish burial. Informal services were undoubtedly conducted early in the 1740s, but it is probable that no organizational structure existed until about 1761, when a Torah scroll was borrowed for the High Holy Days from Shearith Israel Congregation of New York City. At first, services were conducted in a rented house on Sterling Alley; after 1771, in a building on Cherry Alley. The oldest extant document utilizing the name Mikveh Israel Congregation is dated 1773, although the name was probably adopted prior to that.

Revolutionary Period

Nine or 10 Jewish merchants, led by the Gratz brothers, signed the Non-Importation Resolutions of Oct. 25, 1765. While a majority of Philadelphia's Jews supported the Revolutionary cause, a few were Tories, among them David Franks, who served as deputy commissary of prisoners and was expelled by the Continental authorities in 1780 for his pro-British sympathies. During the war Jews were active as suppliers to the troops, as brokers for the government (e.g., Haym *Salomon), and as military figures. The highest commissioned rank achieved by Jews was that of lieutenant colonel, held by both Solomon *Bush and David S. Franks, the latter having had the misfortune of serving as aide-de-camp to Benedict Arnold at the time of his treachery, but innocent of complicity. After the evacuation of the city by the British in 1778, Philadelphia became a center for Jewish refugees from Charleston, Savannah, and New York City. Gershom Mendes *Seixas became the community's hazzan in 1780. The city's first real synagogue building, 30 × 36 feet, was erected on the north side of Cherry Street between Third and Sterling and dedicated in 1782. After the end of the war, many of the out-of-towners returned home, including Seixas, who went back to his New York City congregation, and the Philadelphians were left holding a large mortgage, resulting in public appeals for funds in 1788 and 1790. Among the contributors were Benjamin Franklin, scientist David Rittenhouse, and political leader Thomas McKean, a signatory of the Declaration of Independence.

In 1783 the leaders of Mikveh Israel Congregation unsuccessfully attempted to change the requirement in the Pennsylvania constitution of 1776 that officeholders take an oath swearing belief in both the Old and New Testaments. Another effort led by Jonas *Phillips in 1789 was successful, and the 1790 state constitution prohibited only atheists from holding state office. Phillips was also the author of a communication to the Constitutional Convention of 1787 urging the recognition of full legal equality for members of "all Religious societies," later guaranteed by the First Amendment of the U.S. Constitution. The fact that both the Declaration of Independence and the Constitution were adopted in Philadelphia gave the Jews of the community a sense of close relationship to the founding of the nation which was the first in the modern world to grant the full range of rights and prerogatives of citizenship to Jews. President George Washington, answering a letter of congratulations sent to him in 1790 by Philadelphia's Manuel *Josephson on behalf of Mikveh Israel and its sister congregations of New York City, Charleston, and Richmond, also recognized that "the liberal sentiment toward each other which marks every political and religious denomination of men in this country stands unparalleled in the history of Nations."

Early 19th Century

The growth of the Jewish community of Philadelphia, like that of other major cities, was comparatively slow until about 1830. There may have been as many as 1,000 Jewish men, women, and children in the town at the time of Cornwallis' surrender,

but this swollen population swiftly scattered, and so large a number was not again reached until about 1830. It is estimated that at the time of the 1820 census there were about 500 Jews in Philadelphia, of whom a little less than half were immigrants. Some of these foreign born felt uncomfortable at the Sephardi services of Mikveh Israel and in about 1795 instituted their own Ashkenazi form of worship, under the name German Hebrew Society. In 1802 they formally organized themselves as Rodeph Shalom Congregation. Philadelphia thus became the first city in the Western Hemisphere to break the unitary pattern of one congregation in each community. In 1819 Rebecca *Gratz and women from Mikveh Israel established the Female Hebrew Benevolent Society, the first non-synagogue charity in the country, which is active today. By 1825 these two congregations had spawned a handful of independent benevolent societies. Rebecca Gratz, Simha Peixotto, Rachael Peixotto Pyke, and other women in response to Protestant missionaries founded The Hebrew Sunday School Society in 1838. In 1848 there were about 4,000 Jews in the city, a figure which probably doubled by 1860, when Mikveh Israel and Rodeph Shalom had been joined by five more congregations: Beth Israel (1840, merged into Beth Zion in 1964); Keneseth Israel (1847); Bene Israel (1852, disbanded 1879); Beth El Emeth (1857, dissolved about 1890); and Adath Jeshurun (1858).

National Influence of the Community During the 19th Century

Beginning with the election of Isaac *Leeser to the pulpit of Mikveh Israel in 1829, and continuing until about 1906 when the *American Jewish Committee was formed in New York City in partnership with Philadelphia Jews, the Philadelphia Jewish community was innovating, pioneering, and, in many ways, the most influential Jewry in the U.S. Religiously, the dominant pattern was a moderate traditionalism. In spite of New York City's numerical superiority – and perhaps because New York's Jewry was so immense and diverse as to be unmanageable, uncontrollable, and diffuse – it was in Philadelphia that new ideas for the shaping of U.S. Jewish communal life were tested. Such creative religious and lay leaders of Philadelphia as Leeser, Sabato *Morais, Abraham *Hart, Moses Aaron *Dropsie, Mayer *Sulzberger, and Joseph *Krauskopf were as concerned with the future and fate of Jewish life throughout the country as they were with developments on the local scene. Other factors which contributed to the achievements of Philadelphia's Jews were the city's tradition of intellectual and cultural excellence, which spurred its Jews to match the activity of their non-Jewish neighbors; the geographical location of the city and its commercial and financial links with the South and Midwest, which brought it into frequent and instructive contact with Jews in other parts of the country; and a less frenzied pace of life than New York City's, which perhaps granted the leisure and perspective necessary for intelligent assessment of current and future needs. At any rate, it was in this community that Leeser's *Occident*, prayer book, and Bible translations were published – sources of incalcula-

ble Jewish cultural and religious enrichment throughout the country. It was in Philadelphia that Leeser issued a call for an organized U.S. Jewish community in 1841. In 1845 he organized the American Jewish Publication Society in Philadelphia, and, upon its failure, and that of a New York-based successor organization, the present Jewish Publication Society was formed in 1888. Leeser's Hebrew Education Society high school, the first in the land, was founded in 1849. He also opened the first Jewish theological seminary in the country, Maimonides College, in Philadelphia in 1867. The first U.S. Jewish teachers' college, Gratz College, established under the provisions of the will of Hyman *Gratz (1776–1857), began in 1897. In Philadelphia, too, *Dropsie College (later University), the first postgraduate institution for Jewish learning in the world, was opened in 1907, bringing to Philadelphia as its president the learned Cyrus *Adler, who for several decades was the representative of U.S. Jewry. In New York the Jewish Theological Seminary was founded by a Philadelphia rabbi, Sabato Morais, who was its first president.

[Bertram Wallace Korn]

Mass Immigration and Communal Chaos

Philadelphia's concern for national Jewish undertakings was virtually overwhelmed by the East European immigration, which began to pour into the city toward the end of the 19th century. A fairly homogenous community of approximately 12,000 in 1880 was inundated by 15 times its number within 35 years: There were upward of 200,000 Jews in the city by 1915. A majority of Philadelphia's Jewish immigrants came from the Ukraine. East European Jews were the largest immigrant group in Philadelphia by 1920. The process of Americanization, adjustment, and integration began all over again, accompanied by a vast proliferation of lodges, landsmannschaften, synagogues, and societies, numbering more than 150 in 1904 and twice that in 1920. Most of the community energy was channeled into social welfare and personal aid. The Jewish Foster Home (1855) and the Jewish Hospital (1866), formerly fairly modest institutions, struggled to keep pace with incessant need. Jewish women formed the Jewish Maternity Hospital in 1871. Another Jewish medical institution, Mt. Sinai Hospital, was created in 1900 to serve the immense Jewish population in south Philadelphia. The Jewish Sheltering Home (1882) developed into the Home for the Jewish Aged (1899). Single middle-class women led by Fanny Binsingwanger established the Young Women's Union to assist the new immigrants, opening what eventually became the Neighborhood Centre, a settlement house at 4th and Bainbridge in 1900. In 1901, with Jacob *Gimbel of the department store family as its first president, the new Federation of Jewish Charities was formed through the merger of a number of societies, including the United Hebrew Charities (founded in 1869) which had been supported by the proceeds of an annual Hebrew Charity Ball since 1855.

Federation of philanthropic endeavor did not, however, connote communal unity. As wide a gulf as anywhere in the

nation existed between German and East European Jews, between Reform and Orthodox, and between Zionists and anti-Zionists. Within the field of philanthropy itself, family and business associations of the German Jews, and anti-, or at least non-Zionist views continued to dominate the Federation of Jewish Charities (FJC) until the end of World War II. The German Jews kept aloof from the newer immigrants in the Mercantile Club (1853) and Philmont Country Club (1906), where their social gatherings were held; only in the Locust Club (1920), beginning in the 1940s, were social distinctions overlooked and, ultimately, ignored. In religious life, leaders such as Orthodox Rabbi Bernard L. Levinthal and Reform Rabbi Joseph Krauskopf were personally friendly. However they rarely joined together except for specific causes as when they sold war bonds together during World War I, stood for election in the American Jewish Congress campaign of 1917, or supported expansion of Jewish education. Philadelphia, essentially a conservative city, preserved traditional characteristics dating back to colonial times; it also maintained social barriers that excluded Jews longer than in most other cities.

Toward a United Community: Post-World War I

After the war, Jews from the immigrant neighborhoods of Port Richmond, Northern Liberties, and South Street, relocated to heavily Jewish areas including South Philadelphia, Strawberry Mansion, and West Philadelphia. Organized Jewish education, largely community-sponsored, expanded after the war. The Associated Talmud Torahs, founded by the short-lived Kehillah (1911–early 1920s) in 1919 educated mostly boys and the Hebrew Sunday School Society enrolled mostly girls. In addition, numerous Yiddish supplementary schools, including Zionist, socialist, and communist branches opened by the 1920s.

The Reform and Orthodox movements were relatively weak. By the mid-1930s there were about more than 100 Orthodox congregations (many quite small); over 30 Conservative, and two Reform synagogues. English-speaking traditional synagogues, as well as some fairly liberal ones, identified as Conservative. With the exception of Mikveh Israel, few English-speaking Orthodox congregations existed until the late 1930s.

Overseas events provided the catalyst for cooperation. In June 1919, tens of thousands of Jews demonstrated against pogroms in the new state of Poland. In the 1930s under the impact of the depression, of overseas needs provoked by Hitlerism, and of the simultaneous rise of U.S. antisemitism, the Philadelphia Jewish community began to coalesce. In 1937, the first Allied Jewish Appeal campaign was conducted for funds to assist the *yishuv* and the victims of German oppression, supported by 9,000 donors raising \$258,000. In 1938 the second AJA drive, just after **Kristallnacht*, reached 37,000 donors, including many working class and lower-income Jews able to give small amounts, raising \$741,000. In 1939, there were 48,000 donors to the AJA, 74% of whom contributed less than \$10. A total of \$902,000 was raised that year.

Overseas needs drove the expansion of Jewish fundraising during and after World War II. For the first time, a community structure with mass participation was established on an ongoing basis. A council of local defense agencies was organized, resulting in the establishment of the Jewish Community Relations Council in 1938. Zionism, long only a small part of the Jewish scene, was growing in influence. Judge Louis Levinthal became head of the national Zionist Organization of America in 1943. Rose Bender (1895–1964) became the first woman executive director of a ZOA office in 1945. In the same period, the anti-Zionist American Council for Judaism (ACJ; 1943) was founded by Philadelphia rabbis and laymen, among them leaders of the Federation.

Post-World War II: Community Change

Throughout the post-war period, Philadelphia Jewish life centered on Jewish neighborhoods and the dominant pattern of moderate traditionalism. Unlike some American cities, even at the close of the century close to half the Jews lived in the city of Philadelphia itself, with others living in contiguous inner-ring suburbs. In these neighborhoods, informal interactions reinforced synagogues and Jewish organizations.

Following World War II, many Jews relocated to newer Jewish neighborhoods in the city (West Oak Lane, Mt. Airy, Overbrook Park, and especially the Northeast) or to inner ring suburbs such as Elkins Park–Old York Road and Lower Merion. Established synagogues moved, and new Jewish institutions were founded. Older Jewish neighborhoods, including Strawberry Mansion and South Philadelphia, declined due to the attractions of newer housing and in the former case racial conflict.

The merger in 1944 of several children's agencies into the Association for Jewish Children, was the first of a number of steps in the gradual restructuring of the community. The three Jewish hospitals merged into the Albert Einstein Medical Center in 1951. At the same time, many leaders were ambivalent about religious expression. The hospital's Frank Memorial Synagogue, opened in 1901, was closed in 1957. (An increased interest in Jewish identity led to its restoration in 1984.) Old hostilities and loyalties were overcome through the final merger of the Federation of Jewish Charities and the Allied Jewish Appeal into the Federation of Jewish Agencies (FJA) in 1956.

Jewish education began to shift from communal auspices to congregational ones, still largely neighborhood-based. Akiba Hebrew Academy, a community secondary school, opened amid controversy in 1946. An Orthodox day school opened the same year and a Solomon Schechter day school (Conservative) opened in 1956. Gratz College reorganized and moved from North Philadelphia into a new building in Logan in 1962.

The Young Men's Hebrew Association and the Neighborhood Center were united in 1965, with a projected network of leisure time agencies throughout the metropolitan area. By 1970 most of the old institutional rivalries had been forgotten.

The younger leaders did not know whose grandmother had been Ukrainian, or whose great-grandfather had been German. Money for Israel was raised and bonds for Israel were sold in the very synagogues whose former rabbis had created the anti-Zionist ACJ. Although a local Synagogue Council had failed in the 1950s, a flourishing Board of Rabbis testified to increased cooperation among Conservative, Orthodox, Reform and from the 1970s, Reconstructionist rabbis. The FJA itself had moved far beyond its conceptual origins as a fund-raising agency and was functioning vigorously in broad areas of social planning.

1970s and 1980s: Transitions and New Voices

Philadelphia Jewish life continued to be neighborhood-based, even with increasing dispersion. By 1970, the Jewish population was concentrated in the Center City, Greater Northeast, Old York Road Suburban, West Oak Lane–Mt. Airy, Wynnefield, and Main Line sections, with growing centers in Levittown and Norristown.

There were over 100 congregations in the Philadelphia area of which approximately 50 were Conservative, 45 Orthodox, and 15 Reform. Some of the Orthodox congregations were quite small, and some were served by Conservative rabbis. While two of the largest Reform congregations in the country were located in Greater Philadelphia, the dominant religious thrust of the community was Conservative. Since most Reform congregations were formed after the war, they had fewer internal struggles regarding modifying the more radical reforms instituted by some older Reform congregations. Several Conservative congregations (including Adath Jeshurun, Beth Hillel-Beth El, and Germantown Jewish Centre) include participatory *havurah minyanim* led by members, established in the 1970s and early 1980s. A resurgent interest in Orthodoxy was stimulated through work of branches of the Lubavitch movement and by a nationally known talmudic yeshiva established in Philadelphia by students of Rabbi Aaron *Kotler in 1952.

By the late 1960s, barriers to Jewish participation in civic and professional life were declining. Representative Jews were appointed to the boards of practically every bank in the city, as they had long served on the boards of the community's cultural and educational institutions. Many major corporations were actively soliciting applications for employment as executive trainees from young Jews, and almost every major law firm included a few Jews. In law, medicine, and other prestigious Philadelphia professions, Jewish leaders and pioneers were numerous. For example, in 1971, Martin Meyerson was named president of the University of Pennsylvania, the first Jewish head of an Ivy League college. Marvin Wachman served as president of Temple University from 1973 to 1982. Arlen *Specter served as district attorney (1966–74) and later as U.S. senator from 1981. His wife, Joan Specter, was a city council member (1980–1996.) David Cohen (1914–2005) was a formidable liberal member of city council from 1968 to 1971 and 1980–2005.

Although Jews occupied a significant place in the political and economic life of the area, Jews themselves were still rigorously and consciously excluded from most of the town and country clubs which represented the last strongholds of old Philadelphia “society.”

By the 1980s, declining social boundaries meant that Jews no longer needed to affiliate with Jewish social clubs or charities. Increasingly, a challenge was to bring younger participants and potential donors into Jewish life.

[Bertram Wallace Korn / Robert P. Taback (2nd ed.)]

Philadelphia continued national leadership in several areas. Local Holocaust survivors established one of the first outdoor public monuments in the U.S. in Center City in 1964. Local Jews played leading roles in the Soviet Jewry movement, and an annual rally each year was a prominent event in the 1970s and 80s.

The Jewish Renewal movement created one of its centers from the 1970s, stimulated by Rabbi Zalman *Schachter-Shalomi as well as by Rabbi Arthur *Green and Arthur *Waskow, all of whom lived in West Mount Airy. Other new organizations, including the National Havurah Committee, the Shomrei Adamah Jewish ecology movement, and the Shalom Center were based there. The Federation of Reconstructionist Congregations and Havurot joined the rabbinical college in Philadelphia in 1987.

By the 1980s, Jewish population had shifted again. In 1986, the Federation opened Mandell Education Campus in Melrose Park, including Gratz College (about 2 miles (3 km) north of its former home), the new Auerbach Central Agency for Jewish Education, day care, a Conservative day school, and other agencies.

A 1984 study estimated that about 53 percent of area Jews lived within the Philadelphia city limits. Sixty percent of the area's Jews were concentrated in four areas: Northeast Philadelphia, Center City, the City Line area, and the northern suburbs. The dominant religious group remained Conservative. Amy *Eilberg, the first woman Conservative rabbi, was from the city and served in Philadelphia congregational and chaplaincy positions in the 1980s.

The 1990s and Beyond: Dispersion and New Initiatives

Geographic dispersion increased by the 1990s. In 1996–97, 48 percent of Jewish households were within the city, a number in decline. A few urban neighborhoods such as Mt. Airy and Center City, and some inner suburbs such as Lower Merion and Elkins Park–Old York Road, maintained significant Jewish populations, as did the Orthodox enclaves in the city's Northeast and Overbrook Park. These were a declining percentage of the region's Jewish population. Outside these neighborhoods, most Jewish movement was to suburban areas marked by commuting synagogues rather than neighborhood synagogues – only a few members lived within a mile or two (1.6–3 km) of the congregation.

Philadelphia Jewish life has been neighborhood-based. Increasing population dispersal meant that fewer Jews had

neighbors or classmates who were Jewish. The Jewish community struggled to define itself with less geographic concentration. The Federation structure was changed to include four quasi-autonomous suburban regions, serving Bucks, Montgomery, Chester, and Delaware counties. The Jewish Community Centers determined that building new physical structures was no longer efficient after the 1980s and established four JCCs without walls in suburban counties. The Philadelphia Geriatric Center, renamed the Abramson Center for Jewish Living, relocated from urban Logan adjacent to Albert Einstein hospital, to suburban North Wales in 2002.

In 1990 the Federation of Jewish Charities adopted the name Jewish Federation of Greater Philadelphia. The Federation and some of its agencies began to place greater emphasis on Jewish values, education, and observance. The *Jewish Exponent*, founded 1887, is the official organ of the Federation, which also publishes *Inside*, a quarterly magazine.

The community showed continued vitality. Since 1990, several new Reconstructionist and Orthodox congregations opened in the city itself and in the suburbs. Existing congregations in the suburbs from all movements expanded, although there were closures and mergers, particularly in Northeast Philadelphia. Six neighborhoods had *eruvim* (Sabbath boundaries) in 2005. Both one Reform and one Conservative congregation opened *mikva'ot* after 2000. The Conservative movement continued a major role, with 38% identifying as Conservative, 28% as Reform, 12% as no denomination, 5% traditional, and 4% each as Orthodox, Reconstructionist, and secular humanist in 1997. Philadelphia was the only major U.S. city where the Conservative Rabbinical Assembly played a major role in *kashrut* supervision. Almost all Conservative congregations were formally egalitarian by the 1990s, but only a handful of women rabbis served that movement locally, unlike the Reconstructionist and Reform movements. There was a low level of formal affiliation. In 1997 only 37% of the population was affiliated with a synagogue.

A 2002 survey found 97 synagogues (excluding 8 in Chester county): 33 Orthodox, 28 Conservative, 21 Reform, 8 Reconstructionist, and 7 "other." Many of the synagogues and Jewish community centers have day care or nursery school programs. There are six elementary Jewish day schools, a middle school, and three high schools. Most children received their education in supplemental congregational schools. The Community Hebrew Schools, descendant of the 1838 Hebrew Sunday School Society, announced plans to close in 2006.

[Lillian Youman and Robert P. Taback (2nd ed.)]

Jews were prominent in the wider community and government, particularly from the 1990s onward. Judith Rodin, president of the University of Pennsylvania from 1994 to 2004, was the first woman to head an Ivy League university. Stefan Presser (1953–2005), a forceful advocate for the poor and disabled and for church-state separation, served from 1983 to 2004 as legal director of the Pennsylvania American Civil Liberties Union. Christie Balka served from 1997 as execu-

tive director of the Bread and Roses Community Fund, an umbrella group raising funds for local social change organizations. Shelly Yanoff, an advocate for health care for children, was executive director of Philadelphia Citizens for Children and Youth from 1986.

In the 1990s, Jews held the city's three highest elected offices, as well as serving in Congress, the state legislature, and as leaders in suburban communities. Edward *Rendell served as the first Jewish mayor of Philadelphia (1992–99), and later as governor. Lynne Abraham, a former judge, was district attorney of the city from 1991 and Jonathan Saidel was elected city controller four times from 1990. Allyson Y. Schwartz was a state senator representing the city and suburbs from 1991 to 2005, when she took office as a U.S. congresswoman for a city-suburban district. Businessman Sam Katz was the unsuccessful Republican candidate for Philadelphia mayor in 1999 and 2003.

Jewish population declined from an estimated 240,400 (256,100 people living in Jewish households, including non-Jews) in 1983–84 to 206,100 in 1996–97 (241,600 in Jewish households.) The decline (including some movement to Southern New Jersey) would have been greater had not some 30,000 immigrants arrived from the former Soviet Union, especially Ukraine. In 1996–97 12% of Jewish residents (15,200 people) lived in "poor" households with incomes under \$15,000. Including these, almost 23% of the population (57,000 people) lived in low-income households. There were many elderly Jews, new immigrants, and single parents among the poor and near poor.

Philadelphia remained a center for Jewish studies. In addition to Gratz College and the Reconstructionist Rabbinical College, opened in 1968, several other centers were established. Dropsie University, affected by the rise of Judaic studies in secular universities, closed in 1986, eventually becoming the University of Pennsylvania Center for Advanced Judaic Studies. Temple University established the Feinberg Center for American Jewish history in 1990. The Philadelphia Jewish Archives Center opened in 1972. The National Museum of American Jewish History, opened on Independence Mall in 1976, planned a major expansion in 2005.

PHILADELPHIA, JACOB (b. 1720 or 1735–after 1783), Colonial American physicist, mechanic, and kabbalist. Philadelphia's family name and the year when he assumed the name of his native city is unknown. He may have been educated by a Dr. Christopher Witt, a Rosicrucian mystic and anchorite survivor of the German Pietist mystic sect known as the "Women of the Wilderness." Witt was known to be a correspondent of the Duke of Cumberland, who later became Philadelphia's patron in England. After his patron's death in 1758, Philadelphia toured England, lecturing and conducting experiments to great acclaim, and later lectured throughout Europe. Considered a powerful magician by the ignorant, Philadelphia nevertheless refused to lecture at the University of Goettingen (1777) after a satirical poster campaign derided him as a miracle worker and magician. He supposedly last lectured in Switzerland in 1781. In 1783 he applied to the Prussian court for a license to form a Prussian-American trading company.

PHILANTHROPY.

Introduction

At the close of the 18th century the communal system of fund raising for charity with authority vested in the charity overseers (*Gabba'ei Zedakah*) – to tax members of the community in order to ensure appropriate giving – was on the verge of collapse in many European communities. The situation in Rome was typical. "The enormous indebtedness of the Roman community was, in part, due to these expenses for public welfare, which in the early decades of the 18th century equaled or exceeded the total income from communal taxation" (S. Baron, *Community*, 2, 346–50). The financial condition deteriorated with the rise of absolute states which imposed ever harsher taxes on their subjects. The spread of secularism and individualism, and the appearance of Haskalah (Enlightenment) and Reform also tended to weaken the cohesiveness of the community and reduce its authority to exact adequate sums for their communal functions. Moreover, there were duplication and waste in fund raising and in social services due to absence of coordination between the community, the benevolent societies, and the individual donors who espoused their own favorite projects – a situation which had grown apace (see *Finances*, *Autonomous).

State Taxation for Jewish Communal Services

In the 19th century states altered the procedures for tax collections for communal purposes. In Russia, which then included Poland, with the dissolution in 1844 of the **kahal* (the autonomous Jewish community) a Russian government ukase forced the Jewish communities to turn over to the municipalities control of their tax collections and administration of their

financial affairs and charitable institutions. A remnant of the authority left to them was the recommendation of tax collectors who frequently bade for these potentially profitable posts. The burden of caring for the needy, the poor, and the sick, and for the education of the children, became increasingly more difficult to bear as the number of expelled Jews and the mass emigration of breadwinners reached vast proportions in the 1880s. Revenue for charity and education became dependent primarily on the share given to the community from government taxes, of which they could never be sure, and on limited income from private donations and payment for synagogue honors. Among the taxes imposed by the government one of the most oppressive was the *kasher* meat tax (**Korobka*) and the *candle tax (see *Taxation). Revenues from these taxes were divided between the state and the community to cover expenditure for social welfare, maintenance of educational institutions, and other communal activities. Frequently the share of taxes due the community was diverted by the authorities to build a road or erect a church, and often an inordinate portion of the funds collected went into the pockets of the Jewish tax collectors.

Voluntary Associations or Benevolent Societies in Modern Times

Voluntary associations or benevolent societies continued in modern times to play the important part which they had had in the Middle Ages for raising funds for specific religious, social, and educational services. Where communal charity systems were weakened or broke down completely, voluntary associations filled their place as well as they could and frequently adapted themselves to changing conditions. In England, where plans to introduce state taxation in 1795 and 1802 were withdrawn, many of the voluntary associations in the 19th century were organized on the pattern of voting societies found in the general community. An annual subscription to the association of four or five shillings entitled a subscriber to one vote which could be used to vote for himself or for someone else when benefits were to be distributed. An alternative procedure to voting was drawing the winning ticket from a box or by using a special "wheel," made for that purpose. The Bread, Meat, and Coal Society (*Mashvah Nephesh*, founded in 1779 and still in existence in 1970) introduced an element of self-help for the poor by arranging that subscriptions could be paid weekly at the rate of one farthing. A total annual subscription of 4s. 4d. gave the subscriber the chance to draw 12 tickets, each of which entitled him to 1s. 9d. worth of bread, meat, and coal.

The *fraternal organizations or Friendly Societies, all mutual benefit associations, were an important form of voluntary association. Many older voluntary associations ceased to exist, as central welfare and fund-raising agencies took over their functions, and as governments assumed responsibility for direct aid to individuals. Nevertheless, many new voluntary associations rose to provide help to those afflicted by disease, supply funds for research in medicine and other vital fields,

provide care for the children of a growing number of working mothers, support programs for prevention of juvenile delinquency, ensure better facilities and more scientific treatment for the care of the aged, the chronic sick, or the convalescent, and help meet every humanitarian need which a changing world made urgent.

Fund Collectors on the Local Communal Level

In the early modern period communal collectors still made their rounds, as they had done in mishnaic and medieval times, to gather the obligatory contribution for the communal charity fund, and congregational collectors visited homes to ensure payment for synagogue honors. As in the Middle Ages, voluntary benevolent societies had collectors to collect dues or donations or the coins deposited in their boxes placed in the homes of members. Collectors for authorized societies were also permitted to use their collection boxes in front of the synagogue on Purim or the Ninth of Av. Burial societies assigned collectors at cemeteries at funeral or memorial services, and this practice is continued in traditional cemeteries. Until the middle of the 19th century the majority of communal collectors appear to have served without compensation, thus fulfilling their obligation to do charity.

In the second half of the 19th century many charitable organizations employed collectors, and the practice continued to grow until community leaders in the 1920s recognized its wastefulness. Though in 1970 fund collectors were still working for some local charity organizations, the number had been reduced sharply.

France

Coordination in the administration of charity and fund raising was first achieved in 1809 in the emancipated community of Paris, when seven benevolent societies in that city were amalgamated. At the direction of the Consistoire, they created the Société d'Encouragement et de Secours (from 1855 officially named the Comité de Bienfaisance Israélite de Paris). From the beginning the Comité recognized that it could not rely solely on the resources provided by the Consistoire, for although the Napoleonic regime had permitted the Consistoire to tax members of constituent congregations, it had not obligated every Jew to join a congregation and pay taxes to support the charitable and other services of the community. The offerings for the privilege of sharing in the Torah reading, the fees for other synagogue honors, and the collections from the charity boxes in the congregation, proved no adequate supplement to the limited tax revenues. Shortly after its establishment, the Comité undertook to secure annual subscriptions over a three-year period, with a minimum requirement of 18 francs payable monthly from regular members and 30 francs from those known as honorary members. After a good effort the first year, the campaign lagged, and it was only when the community began to see the benefits of coordination, substitution of preventive social techniques for palliative measures, training of the young for productive work, and building of es-

sential institutions such as an almshouse, a hospital, and an orphanage, that an increasingly larger number of members of the community began to subscribe more generously to the appeals of the Comité. Among the many new subscribers were those in the new voluntary associations founded after the Comité had been organized. When finally given representation in the Comité, they proved to be among the most enthusiastic contributors and workers. A lottery for raising funds from the general community was instituted in 1843, but this device became less significant as fund raising began to depend on annual subscriptions, large-scale donations, trusts, endowments, and legacies. Two significant endowments were made by the Rothschilds, one for the acquisition and maintenance of a hospital in 1841 and another for an orphanage founded by the family in 1855. Other Jewish philanthropists followed their example and made large-scale donations and endowments in succeeding years. After the liberation of France in 1944, the *American Jewish Joint Distribution Committee (JDC), with the cooperation of French Jewish leaders, established the Comité Juif d'Action Sociale et de Reconstruction (COJASOR); most of the resources were supplied by JDC. In 1946 the Comité de Bienfaisance resumed its full activities, including fundraising, but was still dependent in largest measure on the JDC and other foreign Jewish agencies. In 1949 the Fonds Social Juif Unifié de France was created as the national fund-raising and distributing body. Until 1964 the Fonds received additional large financial support from the Material Claims Conference and steadily diminishing aid from the JDC. In 1966, 1,600 heads of families in France contributed \$1,600,000. After the Six-Day War in 1967 the Fonds Social combined with Aide à Israël (*Keren Hayesod) to form the Appel Juif Unifié, a single national fund-raising agency to help meet the budgets of both the Fonds Social and the Jewish Agency.

England

The Sephardi community was the first to coordinate its charity work in England and established its Board of Guardians in 1837. In 1966 the name was changed to the Spanish and Portuguese Synagogue Jewish Welfare Board. This board acted independently of the Ashkenazi community and relied for its funds on a portion of the Finta (a tax levied on the class of membership known as Yehidim) and on donations, trust funds, and legacies.

In 1859 the Board of Guardians for the Relief of the Jewish Poor (renamed the Jewish Welfare Board in 1963) was established in London to coordinate charity work for the immigrant poor of the three oldest Ashkenazi congregations: the *Great Synagogue (1690), the Hambro (1706), and the New Synagogue (1761). To prevent poverty the Board immediately introduced new measures by granting loans to help poor Jews become self-supporting and by providing training for young Jews to work in handicrafts and industry. Conduct of the Board was gradually placed in the hands of professionally trained workers. The Board was subsequently called upon to supervise the work of a number of institutions, which in turn

made subventions to it. Aid societies, the first of which was the East End Aid Society (1902), budgeted either all or part of their income to finance the Board's operations. In 1968 there were 15 such societies. Despite its efforts to achieve coordination on a total community level, the Board had not succeeded by the end of 1969 in securing the assent of the voluntary associations and the many institutions which conducted independent campaigns, to the establishment of a fully centralized metropolitan fund-raising and distributing agency, or a fund-raising and distributing agency on a national basis, as in France.

Germany

Founded in 1869, the *Deutsch-Israelitischer Gemeindebund (Union of German-Jewish Congregations) was Germany's first federated but not all-inclusive body devoted to advancing Jewish education and performing charitable work, combined with guidance and material support to its member congregations. While its revenues were basically derived from the taxes which the government required every Jew to pay for support of his congregation's religious, educational, and social programs, it also benefited from private donations, etc. Simultaneously, *Unterstützungsvereine* (aid societies) and institutions raised funds and individual contributions for their special projects. World War I reduced the capability of the German Jewish community to give adequate aid to its members and to refugees from eastern European lands. Inflation wiped out the fortunes of many wealthy contributors, income from congregational taxes was reduced by 50%, and the coffers of the benevolent societies and institutions were emptied. Aid by the American Jewish Joint Distribution Committee (JDC) was forthcoming, but limited by its commitments elsewhere. To meet the crisis, the *Zentralwohlfahrtstelle* (Central Welfare Office) was established in 1917 as a roof organization covering many but not all social welfare agencies, voluntary associations, and institutions. Substantial savings resulted nevertheless from elimination of duplication in services and competition in fund raising. Following coordination, there were larger grants from synagogue tax funds (e.g., in 1926, 52% of the total congregational budgets in Berlin was allocated to charity and education) and greater contributions from individuals, institutions, and associations.

Hitler's rise to power in 1933 altered the situation drastically. The *Reichsvertretung der deutschen Juden* ("National Committee of German Jews"), formed in 1933, founded the *Zentralausschuss fuer Hilfe und Aufbau* ("Central Committee for Relief and Reconstruction"), as an all-embracing welfare organization, but the sharply reduced capacity of German Jewry to support its work is indicated by its revenue for 1936, namely \$1,287,500 of which \$737,500 came from JDC and other welfare agencies.

In 1938 the congregations which had been a primary source of funds were deprived of their privileges as public, legal corporations with authority to tax their members for upkeep of religious requirements, education, and social wel-

fare, and were denied the tax exemption previously enjoyed by all religious institutions. Voluntary membership dues and donations were their only source of income. Moreover, with emigration of the affluent, and increasingly vast requirements for relief and emigration, the congregations rapidly lost their capability to share significantly in bearing the communal burden. In 1938, both in Germany and occupied Austria, \$12,000,000 was spent on relief and emigration; a large share came from foreign Jewish sources and the remainder from the sale of communal and institutional property. In 1939 the *Reichsvertretung der deutschen Juden* was compelled to change its name to *Reichsvertretung der Juden in Deutschland*, and the government decree of July 4, 1939, forced upon it the responsibility, among others, for expediting emigration and providing social welfare assistance, a responsibility it bore until 1941, with the greatest difficulty, despite help from JDC which was permitted to carry on its relief and emigration work during this tragic period. The relief, rehabilitation, and emigration of the remnants of German Jews in the concentration camps after World War II, and of other displaced persons, were made possible by foreign agencies.

In the late 1960s there were approximately 38,000 Jews in the Federal German Republic and West Berlin. A central welfare office in Frankfurt handled the requests for help of the very few needy ones.

Russia

In August 1914, a coordinated fund-raising body, *Yekopo* (*Yevreiski Komitet Pomoshchi Zhertvam Voiny*; "Jewish Committee for the Relief of War Sufferers") was formed in St. Petersburg (Leningrad) to bring relief to Russian Jews, mainly those forcibly evacuated from the front areas to the Russian interior. In its first three years of operation it raised 32,000,000 rubles through contributions from 300 communities which taxed their members, individual donations, government subsidies, and in later years through assistance from JDC. With these funds it aided 250,000 Jews and, before ceasing its operations in 1921, had raised and spent over 50 million rubles to provide for the needs of most of Russia's charity-supported 1.5 million Jews, such as health services, social and economic assistance, educational programs for children, homes for refugees, and support of institutions. *Yekopo* cooperated with *ORT and *OSE in many of their endeavors. *Yekopo* ceased to exist in Soviet Russia in 1921, but a branch office functioned in Vilna until 1924.

[Morton Mayer Berman]

United States

The promise made to Peter Stuyvesant by the first boatload of 23 Jews who arrived at New Amsterdam in 1654, that they would care for their own poor, meant simply that they would act as did the other religious denominations in the village. The charitable activities of the few American Jews during the 17th, 18th, and early 19th centuries were centered in the synagogues. They consisted of the maintenance of cemeteries, aid to transients and a few needy local cases, and the freeing of Jewish

redemptioners and indentured servants. The few known instances of Palestinian emissaries (*meshullahim*) visiting the colonies and the early republic exemplify aid to Jews overseas. The first charitable institution was the Hebrew Orphan Asylum of Charleston, South Carolina, established in 1802.

During the German Jewish immigration of the mid-19th century, the scope of Jewish charity expanded and became structurally separate from the synagogue. Almost every local community had a Hebrew Relief Society, or Hebrew Benevolent Society, and a feminine counterpart. Fraternal orders such as B'nai B'rith, Brith Abraham, and Keshet shel Barzel provided scheduled assistance to ill or bereaved members and their families. Several institutions, such as B'nai B'rith's Jewish Orphan Asylum in Cleveland, reached beyond local boundaries, and there were occasional appeals for emergency aid in the U.S., and for overseas Jewry, especially from Sir Moses Montefiore; but before 1900 Jewish philanthropy was local.

The great historic coincidence was the encounter of the European Jewish tradition with the American idea of voluntarism. Early observers of the American scene commented on a distinctive characteristic of Americans, that voluntary groups take into their hands the creation of voluntary organizations to meet their own needs. Jewish communal traditions of autonomy and mutual assistance found fertile soil for growth in American voluntarism.

The great underlying force which created the distinctive American Jewish philanthropy was large-scale immigration from eastern Europe. Beginning in the 1880s, the immigrants coming in the tens of thousands yearly, with their special needs and their problems of adjustment to American life, molded American Jewish philanthropy. Its institutional structure derives from the expansion of earlier charitable organizations and the establishment of new ones. Thus, the numerous local Hebrew Relief Societies raised and spent far more money than earlier, and one by one changed their name to Jewish Social Service Association (or Bureau), reflecting the greater refinement and professionalization of their operations.

The American impulse toward efficiency and the Jewish conviction of communal responsibility coalesced disparate and often rival institutions into combined effort. This began with the establishment of the first Jewish philanthropic federation in Boston in 1895. It was a strikingly simple concept: funds would be raised and disbursed jointly to the agencies to meet the needs. The agencies, invariably supported by federations, included services to families and children, hospitals, free loans, settlement houses, and sundry aid groups. Jewish philanthropic federations were established in most American Jewish communities; New York City's was the largest and one of the last to be established, in 1917.

The few local agencies in the first federations joined on the common platform of efficiency in fund raising and coordination of local services. But the federation idea contained seeds of future development. The early federations began rudimentary social planning for the Jewish community, designed to explore the need for new services and old ones which could

be dispensed with. The founding and expansion of federations occurred during a period of professionalization of the art of helping and the emergence of social work as a new profession. Jewish social workers provided the professional skills for the expansion of services. During its existence from 1927 to 1936, the Graduate School for Jewish Social Work in New York City trained professional social workers for service in the Jewish community.

The National Conference of Jewish Social Service (later Welfare), founded in 1899, became the professional organization. Professional journals were published, beginning with *Jewish Charities* (1910) and progressing to the *Journal of Jewish Communal Service* (1956). The National Conference of Jewish Charities, established in 1900, became the Council of Jewish Federations and Welfare Funds in 1932, providing planning and statistical data and recommendations.

The "Great Depression" of the 1930s marked a watershed in American philanthropic history. The magnitude of impoverishment forced the government into granting material relief, and the voluntary agencies gave up this function. The 1920s and 1930s witnessed severe disputes between pro-Zionist advocates of higher allocations to Palestine, and non- or anti-Zionists dominating the Joint Distribution Committee and providing most of the funds, whose views prevailed that most of the money go to European relief and to projects in Soviet Russia. Yet it was during the 1930s that the scope of organized Jewish philanthropy expanded both geographically and functionally. As the world emergency grew with the rise of Nazism, disparate agencies aiding Jews were brought together in the *United Jewish Appeal and subsequently made the desperate condition of eastern European Jewry the dominant cause in local campaigns of Jewish federations. After 1941, the European Holocaust and the struggle of Israel brought about ever closer agreement on the allocation of funds overseas. At the same time most federations broadened to include within organized Jewish philanthropy the support of Jewish education, community relations activities, Jewish vocational services, and national agencies that served the entire American Jewish community. New York City remained the exception and maintained a separate Federation and United Jewish Appeal. This period's expansion of the budgeting and planning activities of local federations necessitated constant assessment of priorities, and required decisions on new programs.

At the close of World War II in 1945, when the full dimensions of the European Holocaust were revealed, American Jewish philanthropy faced its greatest challenge – to provide the vast sums required to rescue the survivors and to build up the Jewish state for the redemption of the Jewish people. It responded with funds unequalled in the history of philanthropy anywhere.

In 1946 the United Jewish Appeal raised approximately \$100 million, in 1948, \$150 million, in addition to approximately \$31,265,000 and \$43.6 million in the respective years for the needs of the larger federations. Between 1939 and 1968 the United Jewish Appeal raised \$2,035 billion for Israel

and overseas Jewry, largely through allocations from combined campaigns in local Jewish communities throughout the United States.

The Federation's role broadened to the point where it was widely recognized as "the organized Jewish community." Philanthropy began to serve as the organizing principle for the voluntary Jewish community, especially in cities where the federations and Jewish community councils merged during the 1950s and conducted a single campaign for local, national, and overseas needs. Debate mounted during the 1960s over the proper proportion of local funds to be divided among hospitals, social services, and recreational institutions on one hand, and Jewish educational and cultural services on the other. In 1968 the range of concerns stretched across the spectrum of local, national, and international Jewish needs, ranging from services to the individual and family to programs designed to insure the survival of Judaism. The dollar figures reflect the vastness of scope. In 1969 the annual campaigns of Jewish federations totaled \$266 million (including \$104 million in the Israel Emergency Fund). In addition approximately \$40 million were raised in endowment and capital funds campaigns.

Not all of American Jewish philanthropic endeavor in 1969 was within the federation orbit. Substantial groups remained outside either from choice or tradition; in 1969 these groups raised approximately \$100 million. They included institutions of higher learning, many national agencies, pro-Israel organizations and others, but not synagogues which collected and disbursed millions of dollars annually themselves.

The funds allocated by federations represented only a fraction of the money disbursed by the agencies which receive them. In addition, these agencies' expenditures derived from other sources of income: dues; tuition; fees; and various governmental bodies and third-party payments. Therefore, the Jewish gross national philanthropic product, inclusive of all of these funds, was substantially in excess of a billion dollars in 1969.

Contemporary philanthropic services under Jewish auspices utilized the highest professional skills of American society in medicine, social work, public relations, and other areas. The collection and disbursement of funds to support these services was elevated to a high art by the Jewish group in the U.S. Concepts of fund-raising became sophisticated, and efforts were skillfully elaborated to raise maximum sums. The result, however, was ultimately based on fundamental Jewish commitments to philanthropy and the growing affluence and homogeneity of the Jewish population which made possible a broad consensus on the needs.

One of the distinctive Jewish contributions to philanthropy in America was the recognition that federated fund-raising produced greater results for all participants. The general community also recognized this and the Community Chest movement used the Jewish Federation as its model.

Fund-raising goals were raised by the continuous education of the Jewish community to the dimensions of the needs and their responsibility to meet them. The capstone of the

structure resides in the development of the responsibility of leaders. Achievements in the philanthropic campaigns have been based on the willingness of leadership to elevate the levels of giving by setting the pace through their own contributions. When this "leadership by example" takes place, matching contributions follow. In this way the Jewish group has demonstrated that it can implement its high ethical imperatives with pragmatic programs.

For Federation and other activities in the last third of the 20th century, see *Foundations.

[Charles Zibbell]

Canada

The first central fund-raising campaigns in Canada were conducted in 1917–18 by *Montreal's Federation of Jewish Philanthropies (renamed the Federation of Jewish Community Services and the Allied Jewish Community Services) and by *Toronto's Federation of Jewish Philanthropies (now known as the United Jewish Welfare Fund of Toronto). Funds at that time were raised exclusively for local social welfare, health, and recreational services (Jewish centers and children's camps). In 1937–38 the United Jewish Welfare Fund of Toronto began to campaign also for local Jewish education, the national work of the Canadian Jewish Congress, and the Hebrew Immigrant Aid Society ("HIAS"), as well as for the operations of a number of overseas agencies, including those in Erez Israel.

In 1951 the United Israel Appeal and UJRA of the Canadian Jewish Congress combined their fund-raising activities in the United Jewish Appeal which then joined with the welfare funds in Toronto, Montreal, and other communities for raising funds in which they were to share. For this purpose Toronto and several other communities adopted the name of the United Jewish Appeal, and Montreal called its campaign the Combined Jewish Appeal.

Argentina

The Ashkenazi *Hebra Kadisha* ("The Holy Society"), founded strictly as a burial society in 1892, had evolved by 1949 into the Buenos Aires Kehillah, the central communal body. In 1956, it was renamed the *Asociación Mutual Israelita Argentina-Comunidad de Buenos Aires* (briefly *AMIA*) which became the community's central fund-raising and distributing agency, financing nearly all its religious, social, and cultural activities. Half of its 1967 budget of \$2,350,000 was devoted to support the Buenos Aires' Jewish educational system, in which 60% of the pupils were children of parents who paid low dues and were not enrolled in *AMIA*'s membership of 42,000. Its main income, however, came from the sale of burial plots in its cemetery, over which it had exclusive control. While always generous in serving the needy, *AMIA* demanded of the wealthy what they could afford to pay and, in the case of individuals who had failed in their obligation to support the community, its demands were extremely high.

Israel

In the State of Israel with its state financing of religious needs (of all denominations), as well as its social services as an evol-

ing welfare state, fund-raising of the usual Jewish Diaspora type became marginal. In 1970 there was no central local or national fund-raising body in Israel, with the result that much costly overlapping and duplication occurred in fund-raising campaigns. The Tel Aviv Council of Social Agencies, a consultative body, and the Israel Fund Raisers' Association in 1969 undertook, but without success, to coordinate the separate fund-raising efforts along the lines followed in western communities.

Fund-Raising by International Organizations

The traditional concern and sense of responsibility of Jews for the well-being of their people wherever they dwell prompted them in modern times to establish organizations which devoted themselves on an international level to one or more of the following activities:

- (1) seeking emancipation of Jews or protecting their rights;
- (2) helping them to overcome their economic and social plight by building schools for educating their children and training them vocationally, and giving immediate relief in grave situations;
- (3) facilitating their emigration when they suffered persecution from pogroms and insurmountable poverty.

The outstanding international organizations founded in the mid-19th century were the *Alliance Israélite Universelle, the *Anglo-Jewish Association, the *Israelitische Allianz zu Wien, and the *Hilfsverein der deutschen Juden.

The Alliance Israélite Universelle organized committees in western Europe and the United States, and later in the local communities where it carried out its programs, as well as in Jewish communities in other parts of the world. With the help of these committees it raised funds through dues or annual subscriptions, special appeals for donations, trusts, legacies, and endowments. For nearly four decades the principal sources of support were Baron Maurice de *Hirsch and his wife, Baroness Clara. The Alliance received from the baron 4,595 shares (at £100 per share) of the capital stock of the *Jewish Colonization Association (ICA) which entitled it to a voice in the direction of ICA's program, but these funds were used only for the work of ICA.

The *Anglo-Jewish Association (London, 1871) adopted aims similar to those of the Alliance Israélite Universelle. Its income came from dues, donations, trust funds, legacies, endowments, and earnings from an annual ball.

Four dominant organizations established in Europe set themselves one specific goal in their service to deprived, sick, or oppressed Jews. *ORT (St. Petersburg, 1880, with headquarters subsequently in Berlin, 1921, where it became the World Ort Union; Paris, 1933; and Geneva, 1943), directed its efforts initially to rehabilitating and retraining Russia's impoverished Jewish masses.

The Russo-Jewish Committee for Relief of Jewish Refugees (London, 1882) was organized to deal with the large-scale influx of immigrants after the outbreak of pogroms in 1881 and

the May Day Laws of 1882. The Committee required funds for settling a number of refugees in England and making it possible for a larger number to migrate to the United States and Canada. Other funds were raised by the Russo-Jewish Committee in cooperation with the Board of Jewish Guardians to deal with immigrants who settled in London. In 1891, with the outbreak of pogroms in Russia, funds especially raised for immigrant work were virtually exhausted. Another meeting was convened at the Guildhall and \$486,000 were donated to be used primarily but not exclusively for sending Jews westward. ICA provided additional resources to assist the Russo-Jewish Relief Committee, principally for the resettlement of immigrants in countries on both the North and South American continents. From 1890 to 1905 funds were raised for immigrants fleeing from famine in Galicia in 1890, economic and social restrictions in Romania in the early 1890s, and from pogroms in Russia in 1903 and 1905; but a year later when the Alien Act of 1905 went into effect, England ceased to be a transient center for mass Jewish immigration, and activity on behalf of immigrants was limited almost exclusively to help those who had reached English shores to be absorbed into the economic and cultural life of the United Kingdom.

The Jewish Health Society *OSE (St. Petersburg, 1912) moved its central committee to Berlin in 1922, where it was connected with ORT, embracing committees established in Berlin and London (1920) and in other communities in 1921 and 1922, Paris, 1934, and Geneva, 1943, and returned to Paris after World War II. It was founded to promote the health of Russian Jews by using preventive medical measures and giving instructions in hygiene, but was forced by the Soviet government in 1919 to liquidate its work in Russia. After World War I, it extended its work to Poland (where the organization was called TOZ), Lithuania, Latvia, and Romania, and secured additional support from its branches in those countries and from supporting committees which it established in a number of countries, but the largest measure of aid came from JDC.

The *Central British Fund for German Jewry (since 1944, the Central British Fund for Jewish Rehabilitation and Relief) was organized in London in 1933 to raise funds to help German Jews meet the crisis in Nazi Germany. It engaged in operations to help them emigrate and reestablish themselves in England, Palestine, and other countries open to immigration. From 1933 to 1935 the fund campaigned under its own name; from 1936 to 1939 as the Council for German Jewry; from 1940 to 1943 as the Central Council for Jewish Refugees; and from 1939 to 1943 again under the original name of the Central British Fund for German Jewry.

In 1944, the Central British Fund became the Central British Fund for Jewish Relief and Rehabilitation, extending its help to destitute Jewish communities in Italy and Greece, and made use of radio and television as well as other public-media to bring its appeal to the community.

Organizations which devoted themselves to one specific area of service but did not conduct independent campaigns for their work included:

(1) Emig-direkt (Berlin, 1921, the United Committee for Jewish Emigration) which was organized by the World Relief Conference (Carlsbad, 1920; this organization raised limited funds for relief and reconstruction work in central, eastern, and southeastern Europe), and HIAS. Emig-direkt drew its major financial support from JDC, ICA, and other organizations. It was succeeded by

(2) *HICEM (Paris, 1927, a name formed from the initials of the three agencies which established it, HIAS, ICA, and Emig-direkt, the last of which associated itself in 1934). HICEM gave assistance to Jews emigrating from Europe and found places for them in various countries.

(3) American Joint Reconstruction Foundation (1924), a joint operation of JDC and ICA for economic rehabilitation of Jews in central and eastern Europe through provision of loans and other constructive measures. Also treated as an American organization is AgroJoint (American Jewish Joint Agricultural Corporation, created by JDC in 1924 and liquidated in 1951) for resettlement of Jewish tradesmen and businessmen declassed by the Soviet government in agricultural colonies in Crimea and Ukraine.

Old Type Fund Collection for Erez Israel

On the international level, old-type emissaries and fund collectors for Erez Israel were known as *meshullahim* (see *Shelihei Erez Israel).

The excessive costs in the employment of *meshullahim* and their uneconomic use in Palestine of the funds collected by them have been reported on exhaustively (Proceedings of the U.S. National Conference of Jewish Charities, Cleveland, 1912). The costs were not less than those which had prevailed in earlier centuries. Some communities accepted responsibility for collecting the funds themselves. After the establishment of the State of Israel in 1948 the number of old-type fund-raising emissaries fell to a vanishing point. The state's program for social welfare, health, education, and social security, and the supplementary services of such agencies as the Jewish Agency, Hadassah, WIZO, Histadrut, Moezet Ha-Poalot, Malben-JDC, and others drastically reduced the need for old-type fund-raising for Erez Israel's philanthropic needs. The few *meshullahim* now turned their efforts chiefly to capital fund-raising for new buildings and expansion of their programs. Many local committees abroad continued to collect funds for maintenance of yeshivot, *talmud torahs*, orphanages, homes for the aged, hospitals, and other institutions and sent their collections directly to the institutions in Israel. Other committees abandoned their fund-raising in return for an allocation to their institutions by a community welfare fund agency. JDC, which is a partner in the *United Jewish Appeal, for some years made a sizable allocation through its Cultural Committee for Israel Institutions in Jerusalem for the support of yeshivot in Israel, refugee rabbis, scholars, and their dependents. It has also subsidized various research and publication projects on biblical and talmudic subjects. In 1969 JDC spent close to one million dollars to aid 132 yeshivot in Israel, with an enrollment of over 18,000

students. The charity box (*kuppah* of mishnaic origin) and the charity plate (*ke'arah*) were still in use in modern times. It was reported that in 1900 there were more than 250,000 *halukkah* boxes bearing the name of Rabbi *Meir Baal ha-Nes in homes, synagogues, and communal gathering places. From it evolved in the Zionist era the most widely used box in the Jewish world: the Jewish National Fund blue box for land purchase in Palestine (later, in Israel) which was introduced after the founding of the JNF in 1901.

Zionist and Modern Israel Fund Raising

The *Bilu, organized in the 1880s by a group of young Russian Jewish students committed to pioneer and settle on the land in Palestine, made the first modern effort to raise funds for Zionist purposes. They succeeded in establishing 25 branches with a total of 525 members, but achieved very little success in fund raising which depended on membership dues, earnings from literary and musical evenings, and meager donations.

The Hovevei Zion ("Lovers of Zion"; Russia, 1882), members of the *Hibbat Zion movement, met relatively greater, but not startling, success in fund-raising. The Hovevei Zion organized societies – first in Russia and Poland and later in Germany, England, and the United States – to help existing settlements and establish new ones in Palestine. Their membership consisted of middle-class and poor Jews and was not able to provide large sums; some sold their belongings to add to the funds which would make possible their own settlement in Palestine. The Hovevei Zion collected dues, canvassed for donations in homes and shops, and, when permitted by the few not antagonistic rabbis, made appeals in the synagogues. Wherever possible they collected funds in the synagogue, on the eve of the Day of Atonement and the Ninth of Av. They established congregations of their own where they were free to propagate their ideas and raise funds, but fared no better than the Bilu in their efforts to persuade wealthy Jews to support their cause. The situation improved through the intercession of Rabbi Samuel *Mohilever, founder of the first Hibbat Zion movement in Warsaw, and after Baron Edmund de *Rothschild began to provide funds on a munificent scale to save struggling older settlements. Some of these had been founded by Hovevei Zion and new ones were organized. In 1890 came another favorable turn for the Hibbat Zion movement, when the Russian government gave its approval for the formation of a society for the support of Jewish tillers of the soil and artisans in Syria and Palestine (see *Odessa Committee), a step that made it easier to get some help from those who had been concerned about supporting the illegal movement.

It was not until the 1890s that Hovevei Zion was able to win the support and leadership of men of status in England like Elim *d'Avigdor, who in 1891 joined the Hibbat Zion movement and became its head; his kinsman, Colonel A.E.W. *Goldsmid, who succeeded him in the leadership; and others, among them Reverend Simeon *Singer, Sir Joseph *Sebag-Montefiore, and Lord Swaythling. These men, who contributed themselves, were able to persuade other well-placed people to do so.

The Jewish National Fund (Keren Kayemet le-Israel), the *World Zionist Organization's first instrumentality for fund-raising, was founded in Basle in 1901 by the Fifth World *Zionist Congress. It was created to raise funds for the purchase of land in Palestine and its development for settlement and agriculture. In its first decade the JNF introduced the blue box for coin collections in homes, synagogues, and wherever Jews met publicly; the Golden Book in Jerusalem for inscription of the names of men and women in return for specific contributions, or of individuals in whose honor contributions were given; stamps, of which there have been over 4,000 varieties, sold for use on letters, synagogue tickets, contract documents, and even used for postage in Israel immediately before the State of Israel postal system was established in 1948; and flags, tags, and flowers which contributors received as gifts on special occasions. The "sale" of trees for planting in Israel has proved to be one of the JNF's most productive fundraising methods. The *Keren Hayesod-*United Appeal was created in London in July 1920 at a Zionist conference convened by Chaim Weizmann to raise funds for the World Zionist Organization. The Zionist Executive and later the Jewish Agency Executive were responsible for the conduct of the activities generally performed by states, including security, until the founding of the State of Israel in 1948, when the operations of the Jewish Agency were limited chiefly to immigration, absorption, and settlement. The Keren Hayesod, which had first functioned directly under the aegis of the World Zionist Organization, became the financial arm of the Jewish Agency in 1929, with the formation of the enlarged Jewish Agency which included non-Zionists as members. At one time there were branches in 70 countries, and in 1970, owing to political changes in certain countries, there were 54, but this number did not include the U.S. where UJA campaigned independently of the Keren Hayesod.

In the years between 1920 and 1948 total Keren Hayesod UJA income in the United States amounted to \$143,000,000, of which UJA raised 70% and Keren Hayesod 30%. From 1948 to 1970, both organizations raised \$1,990,000,000 of which 65% came through UJA and 35% from other countries through Keren Hayesod.

Other fund-raising for Israel was conducted by various organizations such as WIZO and the *Histadrut (General Federation of Labor, Israel).

Fund-raising was also done in Diaspora countries by Israeli schools of higher learning, yeshivot, hospitals, general health and social welfare agencies, orchestras, museums, and many other groups. The principal schools of higher learning in Israel, namely, The Hebrew University, Technion (the Israel Institute of Technology), Tel Aviv University and Bar Ilan University, and the Weizmann Institute of Science do their fund raising through societies of friends or committees set up for this purpose.

*Magen David Adom ("Red Shield of David," Tel Aviv, 1930) is Israel's equivalent of the Red Cross. It meets its own maintenance and operating costs with income from an an-

nual lottery and from subsidies from the government of Israel and local authorities, which together provided from 15 to 16% of its budget.

Support from societies of friends, committees, and individuals in many countries took the form of contributions in kind (ambulances, medical supplies, and equipment) and contributions in cash for Magen David Adom's building program, which envisaged completion of 17 new structures early in the 1970s.

The Modern Campaigns and Their Goals

There are various kinds of major fund-raising campaigns, all of which are conducted annually, except for the biennial campaigns of the Israel United Appeal and the United Communal Fund in South Africa, which occur in alternate years. These include:

(1) The independent campaign conducted by a communal federation or welfare fund for local social welfare agencies, other local institutions, and at times also certain national organizations. The goals for these campaigns are set by the local federation or welfare fund.

(2) The independent campaign conducted by authorized representative local committees on behalf of national or international organizations (Keren Hayesod, Jewish National Fund, WIZO, ORT, Histadrut, and others). The goals set for an independent campaign in a community are determined by agreement between the authorized committees located in a country and the national or international organizations. The time of year to be devoted to the independent campaign is decided upon after consultation between the local federation or welfare fund and the local committee representing the national or international body. In Australian communities the Board of Jewish Deputies allots appropriate periods to various national or international campaigns.

(3) The combined campaigns for local, national, Israel, and overseas needs conducted by local federations and welfare funds or through their fund-raising agencies (e.g., United Jewish Appeal in Toronto, Combined Jewish Appeal in Montreal). The principal parties to these campaigns are the local federations or welfare funds and the Keren Hayesod. Allocations to national organizations and overseas agencies are made upon application. The goal is set by the local fund-raising body in consultation with the national committee representing the Keren Hayesod acting for the Jewish Agency (in Canada the national committee is the United Israel Appeal of Canada, Inc.), after taking into account the allocations to be granted to other beneficiaries whose applications have been approved.

(4) The Joint Campaign, which is limited strictly to Israel's needs, conducted in Great Britain and Ireland (Joint Palestine Appeal-JPA) and in Israel (United Appeal in Israel-HaMagbit ha-Me'uhedet be-Yisrael). Partners in these campaigns are the Keren Hayesod and the Jewish National Fund. In the JPA campaign, a limited number of allocations to other Zionist fund-raising agencies is made by the Keren Hayesod from its share. The campaign goal is set after consultation

between the administrative committee of JPA in London and the Keren Hayesod, the Jewish Agency, and the Jewish National Fund head offices in Jerusalem. For the Israel Joint campaign the goal is set by the two partners (the Keren Hayesod and the JNF) and neither makes any allocation to any other agency.

Women and Philanthropy

The Hebrew Bible establishes the precedent for women's charitable work, both in its commandments to help the needy and in narratives highlighting female acts of *gemilut ḥasadim* (loving kindness). Rebekah's kindness toward Eleazar, for example, results in her marriage to Isaac (Gen. 24: 12–27). Proverbs 31:21 praises the ideal wife who “gives generously to the poor;/Her hands are stretched to the needy.” According to the rabbis, women are naturally compassionate (Meg. 14b); they are also said to be more responsive to the needy than men (Ta'an. 23b).

Dedications and inscriptions in ancient synagogues provide early evidence of Jewish women's communal donations. Although these inscriptions give little insight into whether leadership and positions of power accompanied female philanthropy, they demonstrate that women, often independently, helped determine the financial life of their communities (Broeten).

The Cairo *Genizah* preserves the bequests of *Wuhsha, a 12th-century businesswoman. Her donations (10% of her estate) were designated for Cairo synagogues, Jewish charitable institutions, and needy individuals. Both in the Middle East and in Europe, medieval and early modern Jewish women of means contributed Torah scrolls and other sacred books to the synagogue, as well as funds for oil and upkeep. Although major donations may have come from prosperous women, often widows, women of more modest means regularly donated ceremonial objects and needlework in the form of Torah binders and Torah curtains.

*Dulcea of Worms (d. 1196) is described as preparing thread and gut to sew together books, Torah scrolls, and other religious objects. She is also said to have bathed the dead and to have sewn their shrouds, a quintessential act of loving kindness in Jewish tradition. At the end of the 17th century, organized groups of women assumed responsibility for preparing deceased members of the community for burial, mirroring already established male associations (see **Hevra Kaddisha*).

In the 19th century, middle class Jewish women in Europe formed charitable organizations, a shift from the largely individual nature of earlier women's philanthropy. These groups, which ranged from patrons of orphan asylums to free loan societies, to dowry clubs for poor brides, mirrored the social and philanthropic patterns of non-Jewish bourgeois women. The early 20th century saw the establishment of national women's organizations for philanthropic purposes, including the *Juedischer Frauenbund in Germany (1904) and the Union of Jewish Women in England (1902). Its predecessor, the Jewish

Association for the Protection of Girls and Women, was established in 1885.

Jewish women in the United States followed American models in defining their charitable organizations. The first formal American Jewish women's association, the Female Hebrew Benevolent Society of Philadelphia, was founded by Rebecca *Gratz, with her mother and sister, in 1819. Later, synagogue-based “Sisterhoods of Personal Service” were founded in response to the needs of the massive influx of Jewish immigrants from eastern Europe.

In 1893, the *National Council of Jewish Women became the first body to link local chapters into a national organization. Taking on women-centered issues like immigration, settlement, education, and the battle against white slavery, the NCJW connected middle class Jewish American women, primarily of central European descent, to their eastern European coreligionists. In 1995, more than a century after its founding, NCJW absorbed a feminist organization (U.S. Israel Women to Women) in an effort to expand its work in Israel.

By the end of the 19th century, when professional social workers increasingly assumed responsibility for serving the needy, earlier, local organizations gave way to more inwardly-focused synagogue sisterhoods or auxiliaries, where tasks were domestically linked and less public. Women raised funds for synagogue furnishings and education and were charged with expanding the reach of synagogue life. Reform leaders established the *National Federation of Temple Sisterhoods in 1913. The Conservative (*Women's League) and Orthodox movements followed suit in 1918 and 1926, respectively.

*Hadassah, the Women's Zionist Organization of America, was founded in 1912. Focusing on health initiatives in Palestine, Hadassah raised more funds and engaged more members (heavily eastern European) than any other American women's organization. In 1925, the predecessors of *Amit and *Pioneer Women (now Naamat) also formed Zionist groups. *ORT (Organization for Rehabilitation through Training), established in 1927, focused women's funds and voluntarism towards international education initiatives.

During World War I, American Jewish women formally became part of local Federation work. Women's Divisions were created in Boston (1917, reestablished in 1930), Philadelphia (1918), and New York (1920), paralleling the Businessmen's Divisions. Throughout the 20th century, Women's Divisions thrived nationwide, raising a large percentage of Federation, and eventually United Jewish Appeal, budgets. Despite their successes, these divisions were commonly considered a source of “plus giving,” providing funds over and above the male partner's gift. The 1970s witnessed a rejection of the parallel power structure represented by Women's Divisions; approximately ten Federations closed these fundraising vehicles, but all were reinstated in the 1980s.

Federation funds raised by Women's Divisions are ordinarily included in general allocations. During the late 1990s, concluding that issues important to women and girls were not being appropriately funded by community allocations, female

philanthropists established Jewish Women's Foundations. In their first ten years, more than 20 such funds have raised over \$35 million to fund services that are specifically directed to the needs of girls and women.

U.S. women's philanthropic impact also reaches beyond single gender organizations, although women remain poorly represented in the upper echelons of Jewish philanthropic leadership in the first decade of the 21st century. While a number of individual women were substantial contributors to the Jewish community, women accounted for only 25% of board memberships and 12% of presidents in North American Jewish communal organizations.

°PHILIP, name of six kings of France.

PHILIP II OR PHILIP AUGUSTUS, king of France from 1180 to 1223. All Philip's biographers agree that he detested the Jews, an attitude formed by stories he had heard in his childhood about Jews murdering Christian children. Soon after his accession, he ordered the imprisonment of all the Jews in the kingdom, and it was only in exchange for a large ransom that they were set free. Early in April 1182, in order to bolster the treasury before going to war, Philip ordered the expulsion of the Jews from his kingdom; Jewish real estate was confiscated and most of it sold on behalf of the royal treasury; synagogues were converted into churches (as was the case in *Paris and *Orleans); and debtors were absolved of their obligations to Jews on condition that they paid the treasury one-fifth of the monies owed. The king persecuted the Jews even beyond the borders of his kingdom: in 1190 he attacked in *Champagne the Jewish community of *Bray-sur-Seine (or Brie-Comte-Robert), putting to death almost 100 persons. When he authorized the return of the Jews to his kingdom in 1198, it was for purely financial reasons. At the same time as he guaranteed the Jews freedom to trade with Christians by forbidding priests to excommunicate those Christians who dealt with them, he also initiated the practice of assigning an official seal to every locality which contained an important Jewish community, for the purpose of regulating loans. An ordinance of February 1219 prohibited any loan to persons whose only source of income was their own labor. This was an attempt to put a stop to loans taken for personal consumption only; previously loans of this type were granted if paid back in three annual sums. Loans offered against pledges were not subject to compulsory registration, but the list of articles which could not be accepted in pledge was extended to cover not only church appurtenances but also agricultural tools and beasts of burden.

PHILIP III THE BOLD, king from 1270 to 1285. Shortly after his accession, Philip followed the example of his father and predecessor, *Louis IX, and in 1271 ordered his officers to enforce the wearing of the Jewish *badge. His father's policy is again reflected in an ordinance, probably issued in 1272, which prohibited the Jews from engaging in all kinds of moneylending and directed them either to pursue permitted commercial activities or to work with their hands. If there were any attempts by Jews to engage in agricultural work or handicrafts, these were in any event doomed in practice from 1280 when

Christians were forbidden to enter into their service. The most disastrous of Philip's decrees from the socioeconomic point of view was that issued in 1283, forbidding the Jews to reside in smaller places.

PHILIP IV THE FAIR, king from 1285 to 1314. The various changes in Philip's policy toward the Jews were all motivated by the sole purpose of furthering the interests of the monarchy and the kingdom. Thus, asserting royal power and challenging the Church, in 1288 he reminded his officers that the number of charges for which the Jews could be tried by the ecclesiastical courts was very limited, and he called upon them not to collaborate in any unjustified prosecutions. However, in February 1291 he ordered the expulsion of all the Jewish exiles who had arrived from England and *Gascony: Since they had been stripped of all their belongings before they arrived, the kingdom could not derive any profit from them. On April 1 of the same year, seeking to strengthen the economic status of the large towns, he renewed the order prohibiting the Jews to live in the small localities. As a step toward legal standardization, on September 23 he dismissed all the special judges of the Jews. He took action against Jewish moneylenders on Jan. 31, 1292, but only in order to expropriate the debts owed to them. When Philip decided to protect the Jews from extortion and hindrances in their trade, his measure applied to the Jews owned by the king, for he wished to be the only one to profit from them. The practical reasons for the compulsory concentration of the Jews in special quarters put into force in 1294 were revealed in 1306. Philip's only decree that arose from religious scruples and carried no material advantage was that of 1299 directed against missionary efforts on the part of the Jews and "their blasphemies and evil spells."

The king's essentially mercenary interest in the Jews was finally manifested on June 21, 1306. An oral command called on John of Nogaret, John of Saint Just, and the seneschal of Toulouse to organize the arrest of all the Jews of the kingdom, the seizure of their belongings, and then their expulsion. A written order of the same day required all the prelates, barons, and officers of every degree to lend their assistance to these three persons in the execution of their mandate. The date had been fixed for July 22 and the secret was so well guarded that not one Jew escaped. The Jews had not even left the kingdom when Philip issued his regulations for public auction of their real estate. In the eventuality that treasures hidden by the Jews in these buildings might be discovered, such finds were reserved for the treasury. Claiming that there was a judicial distinction between the Jews of the king and those of the lords, some of the latter resisted the order to expel "their" Jews. The king easily overcame their objections by promising them the lion's share of the spoils. Immediately after the expulsion of 1306, a number of Jews were given safe-conducts to return to the kingdom in order to cooperate in the recovery of their debts. Subsequently they too were driven out in 1311. It has been said that by expelling the Jews, Philip committed not only an evil act but also made a bad bargain. The second part of this statement can hardly be substantiated: nine years

later the Jews were once more to be found in France; they were again expelled in 1323, while the royal treasury continued, until 1325, to collect the debts due to the Jews which had been confiscated in 1306.

PHILIP V THE TALL, king from 1316 to 1322. Of this king's few ordinances concerning the Jews, the first (April 1317) was the most favorable: it protected them against abusive imprisonment, guaranteed their right to dispose of their own estates, and exempted them from wearing the Jewish badge outside their homes. In the course of Philip's brief reign, three major events affected the situation of the Jews. During the uprising of the *Pastoureaux in 1320, the king, together with the ecclesiastical authorities, exerted his power to the utmost to protect the Jews. In 1321 the Jews of several localities were accused of having poisoned the wells and fountains in collusion with the lepers. Philip appointed a commission of inquiry on July 21 and numerous trials ensued – as well as massacres without even the travesty of a trial. An enormous fine – at first established at 150,000 livres and consequently reduced to 120,000 – was imposed on French Jewry. Finally, Philip decided on a new expulsion of the Jews from France, although this measure was not enforced until 1323, during the reign of his successor.

[Bernhard Blumenkranz]

PHILIP OF BATHYRA (first century C.E.), son of Jacimus and grandson of Zamaris, rulers of Bathyra in the district of Trachonitis. He was a friend of Agrippa II, who appointed him commander of the army in Bathyra. Josephus describes him as "excelling in combat and... possessing other virtues which could bear comparison with any other man" (*Ant.*, 17:30). When war broke out in Jerusalem and the peace party requested help from Agrippa, Philip was dispatched at the head of 3,000 cavalry. They occupied the upper city, but with the arrival of the *Sicarii under *Menahem b. Judah, Philip's forces were driven out of the fortress of Antonia and compelled to take refuge in the palace of Herod. After a short time, they surrendered on receiving a promise that they would be permitted to leave the city in peace. Philip, fearing that he would be put to death, hid for four days in Jerusalem and by a subterfuge succeeded in escaping from the city and reaching Gamala. This saved him from the intrigues of Varus who

was plotting against him. After the dismissal of Varus, he returned with his troops to Bathyra where he was charged with the task of preventing the inhabitants from joining the revolt against the Romans. When Vespasian and Agrippa II visited Tyre, its inhabitants accused him of surrendering the palace of Herod and the Roman garrison to the Jews, and Vespasian ordered him to be sent for trial before Nero. Nothing more is known of him. Two of his brother's daughters were the only inhabitants of Gamala who escaped death by hiding from the Romans.

PHILIPPINES, island republic off the coast of S.E. Asia. Marranos are known to have lived in Manila among the early Spanish settlers, and they soon came under the surveillance of the Spanish Inquisition. The first public auto-da-fé was held in Manila in 1580, but it is not known whether there were Jews among the seven persons accused. In 1593 two Marrano brothers, Jorge and Domingo Rodriguez, old-established residents of Manila, appeared at an auto-da-fé held in Mexico City because the Inquisition did not have an independent tribunal in the Philippines. They were sentenced to imprisonment. At least eight Marranos from the Philippines are known to have been tried by the Inquisition by the end of the 17th century.

Significant Jewish immigration to the Philippines did not begin until the last quarter of the 19th century. The first Jews known to arrive on the islands were the three brothers Levy, natives of Alsace, who went to Manila in the early 1870s to establish a jewelry business and brought additional people for their store. They were joined by groups of Turkish, Syrian, Lebanese, and Egyptian Jews, by families from Russia and Central Europe (either directly or via Harbin and Shanghai), and by U.S. Jews in the first few decades of the 20th century. By the early 1930s the Jewish community numbered approximately 500. The Manila congregation, organized formally in 1922, purchased land for a synagogue and a burial plot, and in 1924 erected Temple Emil, named after a benefactor, Emil Bachrach. As a result of strenuous activity by the community, the friendliness of the then governor of the Philippine Commonwealth, Manuel Quezon y Molina (who donated some land for the purpose of refugee settlement), encouragement by the U.S. authorities, and the lack of better alternatives, the Philippines became a center for refugees from Nazi persecution. By the end of World War II the Jewish community had grown to more than 2,500. Among the refugees were a rabbi, Joseph Schwartz, and a cantor for the community. Late 1944 and the first two months of 1945 were calamitous for the Jewish community. The Japanese had used the synagogue and adjacent hall as an ammunition store, and both buildings were completely destroyed in the fighting. Ten percent of the Jews fell victim to atrocities perpetrated by the retreating Japanese or to the shelling of the advancing Americans. After the war

the community reorganized, and its temple was rebuilt. In 1968 the community numbered approximately 250, about a quarter of whom were Sephardim. In 2005 there were still around 250 Jews there, mostly Americans and Israelis. The community had a rabbi, *mikveh*, and Sunday school.

[Walter Zanger / Ernest E. Simke]

Relations with Israel

The Republic of the Philippines was the only Asian country to vote for the partition of Palestine in 1947, and it recognized the State of Israel in 1949. Relations between the two countries have been cordial. Formal diplomatic ties developed from the exchange of honorary consuls and honorary consuls-general in the early 1950s, to nonresident ministers in the later 1950s, the establishment of an Israel legation in Manila in 1958, and finally to the appointment of resident ambassadors in Manila and Tel Aviv in 1962. An aviation agreement was signed between the two countries in 1951, a friendship treaty was contracted in 1958, several consular agreements and a technical-aid agreement were signed in 1964. Technical cooperation includes the participation of Israeli experts in the establishment of a model village.

Israel has sent experts to the Philippines in the service of various UN agencies, and Philippine trainees in community development, agriculture, and cooperation studied in Israel. Tens of thousands of Philippine nationals work in Israel, most visibly as caretakers.

PHILIPPSON, German-Jewish family of prominent rabbis, scholars, educators, journalists, doctors, bankers, and scientists. Their family tree goes back to 16th-century Poland, where *Joshua Hoeschel ben Joseph (c. 1578–1648) had been chief rabbi of Cracow. His great-grandson was the Talmud scholar Jacob Joshua *Falk (1680/81–1756), chief rabbi of Berlin, Metz, and Frankfurt/Main, who strongly opposed the Shabbatean movement. After 1750, the family settled in Arnswalde (Neumark, Prussia). Falk's grandson, the Talmud scholar Reb Phoebus (Philipp) Moses Arnswald (d. 1794), moved to Sandersleben (Anhalt-Dessau) upon his marriage, earning his living as a peddler. His children were the first to change "Phoebus" into the German "Philipp" and called themselves Philippson.

Arnswald's son MOSES (ben Uri Phoebus) Philippson (1775–1814) received an Orthodox upbringing in Halberstadt, Brunswick, and Frankfurt/Main and, from 1790, became a tutor in Bayreuth and later Burgkunstadt. He was attracted to the works of Moses *Mendelssohn and German literature. In 1799, he was appointed teacher at the newly founded *Freischule* at Dessau. In order to supplement his meager income he began printing books and selling them at fairs; among them were various sermons and translations from the Bible, a Hebrew reader "*Kinderfreund*" (1808), the renewed *Me'assef* (1808–12), then edited by Shalom *Cohen, and other ventures. He died of

typhus, aged 39, before completion of his Hebrew-German and German-Hebrew dictionary, leaving behind four small children: Phoebus (1), Johanna, Ludwig (2), and Julius (3).

[Johannes Valentin Schwarz (2nd ed.)]

(1) Moses Philippson's eldest son, PHOEBUS MORITZ (1807–1870), was educated at the Franzschule and Gymnasium in Dessau, took his doctor's degree at Halle University, and practiced medicine at Magdeburg, from 1835 as a country doctor at Kloetze (Altmark). He published the first medical study on cholera (1831) and literary works, which he partly contributed to the periodicals of his brother Ludwig from 1834. His novel *Die Marannen* (1855) and his *Biographische Skizzen* (1864/66) are particularly worth mentioning. MORITZ Philippson (1833–1877) continued the medical career of his father Phoebus as an army-doctor, settling down in Berlin. Phoebus' granddaughter PAULA (1874–1949) became one of the first woman doctors in Germany but, from 1921, applied herself to classical studies where, from 1936, she made her mark in Greek mythology. In 1933, she moved to Basel where she died at the age of 75.

[Max Gottschalk / Johannes Valentin Schwarz (2nd ed.)]

(2) LUDWIG PHILIPPSON (1811–1889), the second son of Moses, achieved renown as the founder of the **Allgemeine Zeitung des Judentums* (AZJ, 1837–1922), which he edited until his death. Ludwig was an avid student of both Hebrew and classical literature in Dessau and Halle. After graduation from Berlin University (1829–33), aged 22, he took up the position of a preacher and teacher in the **Magdeburg Jewish community*. Though following the practice of **Reform Judaism* – he preached in German and introduced the organ and the rite of confirmation – he tried to steer a middle course between Reform and **Orthodoxy*. He was among the initiators of the **Rabbinical Conferences of Brunswick* (1844), Frankfurt/Main (1845), and Breslau (1846), but was critical of their decisions. One of his projects was the establishment of a modern institution for training scholars, rabbis, and teachers. From 1834 Philippson started editing several periodicals, first the monthly *Israelitisches Predigt- und Schulmagazin* (1834–36), followed by his famous AZJ, the most important Jewish weekly of the 19th century, which was also dedicated to the struggle for emancipation in all parts of Germany and Europe and fought discrimination and antisemitism. From 1839–53, he published a popular translation and commentary of the Bible, which went through three editions (1858², 1878³), together with a revised edition illustrated by Gustav Doré (1875). Along with I.M. **Jost*, A. **Jellinek*, and others he founded the *Institut zur Foerderung der Israelitischen Literatur* (1854–73), whose main achievement was the publication of H. **Graetz's Geschichte der Juden* (1853–76). In 1862, he had to resign as rabbi of Magdeburg because he had become almost blind. He moved to Bonn, where he continued his journalistic and literary work until his death. He was among the founders of the *Israelitische Bibelanstalt* (1862), the **Deutsch-Israelitischer Gemeindebund* (1869), and the **Hochschule fuer die Wissenschaft des Juden-*

tums (1872). Ludwig Philippson had nine children. Three of his sons attained fame in their respective fields:

[Johannes Valentin Schwarz (2nd ed.)]

(2a) MARTIN EMANUEL PHILIPPSON (1846–1916) was a historian and a communal leader in Berlin. Born at Magdeburg, he studied in Bonn and Berlin, where he later worked as a teacher, volunteered in the Franco-Prussian War (1870/71), and was finally appointed assistant professor at Bonn in 1875. However, when Emperor William I would not sanction the appointment of a Jew, he took a professorship at the Free University of Brussels (1878), and eventually became rector there. In 1890, he was forced to resign this post in the face of agitation by anti-German and radical students, and returned to Berlin as a private scholar. From 1891, he devoted his energies to Jewish communal affairs and to his writing. He was chairman of the **Deutsch-Israelitischer Gemeindebund* (1896–1912) which, in 1906, initiated the *Gesamtarchiv der deutschen Juden*; chairman of the **Gesellschaft zur Foerderung der Wissenschaft des Judentums* (1902), which commissioned his three-volume *Neueste Geschichte des juedischen Volkes* (1907–11, 1930²); and chairman of the **Verband der deutschen Juden* (1904). He also headed the **Hochschule (Lehranstalt) fuer die Wissenschaft des Judentums*. In all, he published some 12 studies in modern history, especially on Prussia, but their scholarship has been sharply questioned by fellow historians.

[Herbert A. Strauss / Johannes Valentin Schwarz (2nd ed.)]

(2b) FRANZ MOSES PHILIPPSON (1851–1929), the seventh child of Ludwig, was a Belgian banker, financier, and communal leader. Born in Magdeburg, he was sent to Brussels in 1865 to work as a clerk in the **Errera banking house*. In 1871, he established his own bank in Belgium and directed it for over 50 years until his death. Involved from the beginning in the Belgian colonization of Africa, he was an administrator of the Belgian Congo railways in 1889, becoming its president in 1924, and was founder of the *Banque du Congo Belge* (1909) and its vice president from 1911 to 1919. Philippson was president of the Brussels Jewish community and a leader of Belgian Jewry, from 1918 as president of the **Consistoire Central Israélite de Belgique*. He represented the Brussels community on the administrative council of the **Jewish Colonization Association (ICA)* from 1896, becoming vice president in 1901 and president in 1919. He made an important contribution to Jewish colonization efforts in Argentina and Brazil. He died in 1929 in Paris. Franz's first son, MAURICE (1877–1938), was professor of zoology and physiology at Brussels University; his second son, JULES (1881–1961), became head of the firm F.M. Philippson & Co. after the death of his father. PAUL PHILIPPSON (1910–1978), son of Maurice, was also a banker and Jewish leader in Belgium. Born in Brussels, he was an officer in the Belgian Forces (1940–45); president and founding member of the *Service Social Juif* (from 1945); president of the Jewish community of Brussels (1945–63); chairman of the *Consistoire Central Israélite de Belgique* (from 1963); and

chairman of the Social Service Commission of the European Council of Jewish Communities.

[Max Gottschalk / Johannes Valentin Schwarz (2nd ed.)]

(2c) ALFRED PHILIPPSON (1864–1953), the youngest son of Ludwig, born at Bonn, became a geographer and geologist. As a student of Ferdinand von Richthofen (1833–1905), the founder of modern geography, he followed his teacher from Bonn to Leipzig University, where he took his doctor's degree (*Studien ueber Wasserscheiden*) in 1886, aged 22. In the course of a distinguished career he specialized in the east Mediterranean region, particularly Greece and Asia Minor. In 1891, he was appointed university lecturer at Bonn, 1899 assistant professor. Since a full professorship was denied to him as a Jew, he accepted a chair at Basel University in 1904, finally becoming head of the department of geography. In 1906, he was called back to Halle, and in 1911 to Bonn. In 1929, upon his retirement, his pupils and admirers published a volume of geographical essays in his honor. Several of his many books have become classics of regional geography, among them: *Der Peloponnes* (1892), *Zur Morphologie des rheinischen Schiefergebirges* (1903), *Das Mittelmeergebiet* (1904, 1922⁴), *Europa* (1905, 1928³), *Grundzüge der allgemeinen Geographie* (1921/24, 1930/33), *Das fernste Italien* (1925), and *Das byzantinische Reich als geographische Erscheinung* (1939). In 1933, he was awarded the Great Gold Richthofen Medal by the German Geographical Society. He continued to play a leading role in German geographical research until he was banned from the university and all other scientific bodies by the Nazi regime. In 1942, at the age of 78, he was deported to *Theresienstadt but managed to survive. In 1945, despite terrible suffering, he returned to his scientific activities, which he continued to his death in Bonn, aged 89. In this last period he produced two of his best works: *Die Stadt Bonn. Ihre Lage und räumliche Entwicklung* (1947, 1951¹²), an outstanding work on urban geography, and *Die griechischen Landschaften* (1950–59).

[Mordechai Breuer / Johannes Valentin Schwarz (2nd ed.)]

(3) JULIUS PHILIPPSON (1814–1871), the younger brother of Ludwig, who was only three months old when their father Moses died, became a businessman at Magdeburg. Of his six children, HEINRICH (1849–1908) became a businessman at Magdeburg, too. EMIL (1851–1906) studied modern languages and comparative philology in Bonn, Berlin, and Leipzig, where he took his doctor's degree. Since he was barred from an academic career, he accepted an offer from the Philanthropin in Frankfurt/Main in 1874, till he became headmaster of the Jacobsonschule at Seesen in 1886. ROBERT (1858–1942) studied philosophy and classics in Bonn, Leipzig, and Berlin, where he took his degree in 1881. He followed his brother Emil to the Frankfurt Philanthropin, till he was admitted to the Wilhelmsgymnasium at Magdeburg as the first Jewish teacher in the Prussian province of Saxony. He retired in 1923. In 1942, aged 84, he was deported to Theresienstadt, where he died a week after his arrival. Robert's oldest son JULIUS (1894–1944), who was dismissed as a teacher in 1933, joined the Socialist un-

derground movement Internationaler Sozialistischer Kampfbund (ISK), until he was caught by the Gestapo in 1937. He was later deported to Auschwitz, where he died from exhaustion. JOHANNA PHILIPPSON (1887–1977), a daughter of Heinrich, chose a career as a teacher, from 1930 holding a senior position at the Elisabethschule in Berlin until she was dismissed in 1933. Thereafter, she taught at the schools of the Jewish community. In 1939, she immigrated to London, where she engaged in adult education and contributed to various periodicals. In 1962, she published a detailed study in the *Leo Baeck Institute Year Book* on "The Philippsons, a German-Jewish Family 1775–1933." Their history, as she wrote, "seems typical of many German Jewish families: the very rapid inhaling of German civilization, the high degree of assimilation, and the abrupt ending."

PHILIPSON, DAVID (1862–1949), U.S. Reform rabbi. Philipson was born in Wabash, Indiana, and received his early education in Columbus, Ohio. Entering Hebrew Union College, Cincinnati, in 1875, he was one of the first group of rabbis who received their ordination in 1883. After serving as rabbi of Har Sinai Congregation, Baltimore, from 1884 to 1888, Philipson returned to Cincinnati to become rabbi of the B'nai Israel Congregation in 1888, remaining there for the rest of his life. He became the leader and the embodiment of Classical Reform Judaism, believing in the Jewish mission and universalism. Philipson participated in the conference which drew up the Pittsburgh Platform (1885); he was a founder of the Central Conference of American Rabbis, serving as president in 1907–09; and he was an influential figure in – but never president of – Hebrew Union College, where he taught for many years, and in the Union of American Hebrew Congregations. He chaired the joint CCAR-HUC Commission on Jewish Education for 39 years (1903–43), which published widely used resource material and textbooks for the Reform movement. Not a profound thinker, Philipson was productive in the literary field. His most important work was *The Reform Movement in Judaism* (2nd ed. 1931; repr. 1967). He also wrote *The Jew in English Fiction* (5th ed. 1927) and edited *The Letters of Rebecca Gratz* (1929). He was a member of the board of translators of the Jewish Publication Society for the translation of the Holy

Scriptures (1916), an editor of *Selected Writings of Isaac M. Wise* (1900), and translator of *Reminiscences of Isaac M. Wise* (1901, 1945). An autobiography, *My Life as an American Jew*, appeared in 1942, and a volume of occasional writings, *Centenary Papers*, in 1919. *My Life as an American Jew* gave voice to the double-edged nature of American Judaism, Philipson was not just a Jew, but an *American Jew*. There was something uniquely American about his Judaism. Philipson verbalized and gave a universal dimension to the optimism of the prospering Midwest Jews among whom he lived and, surviving most of its exponents, came to be regarded as a representative spokesman of “classic” Reform Judaism.

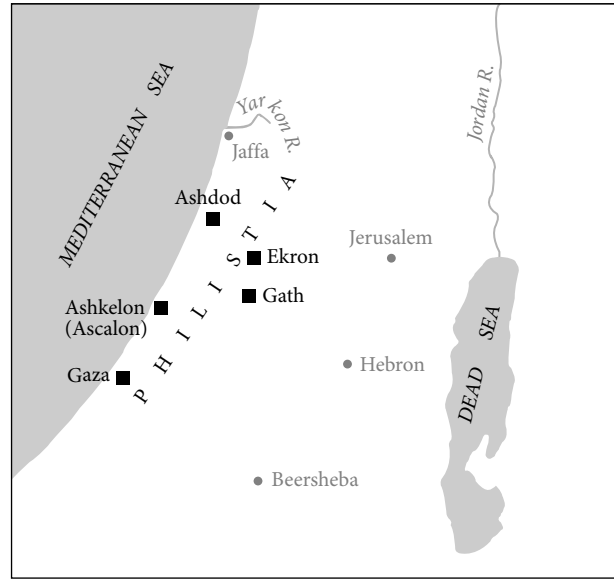

BIBLIOGRAPHY: D. Philipson, *Reform Movement in Judaism* (1967), introd. by S. Freehof.

[Sefton D. Temkin]

PHILISTINES (Heb. פְּלִשְׁתִּים), a people of Aegean origin occupying the south coast of Palestine, called Philistia (פְּלִשְׁתָּה, *peleshet*) in the Bible, and often at war with the Israelites. The name Philistine is first found in the Egyptian form *prst* as one of the “Sea Peoples” who invaded Egypt in the eighth year of Ramses III (c. 1190 B.C.E.). In Assyrian sources the name occurs as both *Pilišti* and *Palaštu/Palastu* (also *Palaštaya*). The Septuagint, when not translating it as “strangers” (*allospyloi*), usually renders it as *phylistiim* (i.e., in Genesis–Joshua).

In biblical tradition, the Philistines came originally from *Caphtor (Crete: Jer. 47:4; Amos 9:7; cf. Deut. 2:23). This tradition is buttressed by the fact that part of the Philistine coast was called הַנֶּגֶב הַכְּרֵתִי, “the Negeb of the Cherethites” (1 Sam. 30:14), and by the occurrence of Cretans in parallelism with Philistines (Ezek. 25:16; Zeph. 2:5), but there is no direct archaeological proof for it. The Philistines participated in the second wave of the “Sea Peoples” who, according to Egyptian reports, ravaged the Hittite lands, Arzawa, the Syrian coast, Carchemish, and Cyprus, and threatened Egypt during the reigns of Merneptah and Ramses III. The excavations at Hattusas (Boghazköy) and Ugarit have shown that these cities were destroyed at the end of the Late Bronze Age (c. 1200) and tablets discovered at Ugarit and archaeological finds on Cyprus give evidence of this troubled period. Of the “Sea Peoples” only the Philistines, who settled along the Palestinian coast, and the Tjeker, who occupied Dor according to the Wen-Amom story (c. 1050), can be positively identified. The others – Shekelesh, Denyen, Sherden, and Weshesh – have only been conjecturally identified. These peoples, displaced from their original homelands, assimilated the Minoan–Mycenean culture patterns of the Aegean world.

“Philistia” or the “Land of the Philistines” is that part of the coastal plain of Palestine which lies between Tel Qasile and the Wadi Ghazza, about 6 mi. (c. 10 km.) south of Gaza. (See Map: Philistine Pentapolis). The Philistine pentapolis consisted of Gaza, Ashkelon, Ashdod, Gath (Tell al-Šāfi = Tel Šafit; Rainey, Schniedewind, Dothan), and Ekron (Khirbat al-Muqannaʾ/Tel Miqne). The references to Philistia and the Philistines in Genesis 21:32, 34 and Exodus 13:17; 15:14;

The Philistine Pentapolis.

23:31 are anachronistic. The Greeks, familiar at first with the coastal area, gradually applied the name Palestine to the whole of the country. The Philistines depicted on the walls of the temple of Ramses III at Medinat Habu in Egypt are dressed in a kind of Aegean kilt and wear a plumed headdress with chinstraps. Similar depictions from Late Bronze Age Cyprus have been found. The Philistine ship is unusual while the wagon and chariot fit well-known forms. The clearest sign of Philistine presence is “Philistine pottery,” whose chief types are buff-colored craters, beer jugs with spouted strainers, cups, and stirrup vases with a white wash or slip on which are painted reddish-purple or black geometrical designs, or metope-like panels with stylized swans preening themselves. These are found from the beginning of the 12th century to the late 11th century B.C.E. in Philistia itself, in adjacent sites of the Negev (e.g., Tell el-Fāriʿa) and the Shephelah (ʿAyn Shams), and in cities occupied by them (e.g., *Gezer, Tell Belt Mirsim, Meggido, Afulah, and Tell al-Našba). Similar pottery was also found at Tell Deir ʿAllā in the Jordan valley. Analysis has shown that from the beginning Philistine pottery was a local product using local techniques with strong points of contact with the Mycenaean IIIc1 wares discovered at Enkomi and Sinda on Cyprus and the other sub-Mycenean wares of Cyprus and Rhodes. Anthropoid clay coffins also signal Philistine presence (e.g., Tell al-Fāriʿa and Beth-Shean). According to the Bible, the Philistines had a monopoly on metal working (1 Sam. 13:19–21) in the days of Saul, and smelting furnaces have been found at Ashdod, Tell Qasile, Tel Ḥamma, and Tell Mor. Archaeologically, however, it appears that during Iron Age I, iron was a precious metal that did not come into mass production until the tenth century, with bronze surviving as the main utilitarian metal (Rainey, 130).

The excavations at Ashdod have uncovered as yet undeciphered seals in the Cypro-Minoan script from the 12th–11th

centuries. Tablets in a related script were also found at Deir 'Allā. From the ninth century on, a variant of the Phoenician-Hebrew script was used in Philistia. A seventh-century temple inscription of Achish (Ikayaus; Gitin, Dothan, and Naveh; Rainey, 255) the ruler of Ekron (*šr 'qrn*) is written in a Canaanite dialect, and dedicated to a goddess Potgaya (Demsky reads Potnia, "Mistress" in Greek). A few words that may be native Philistine have been identified. These are *seranim*, used of the five princes of the Philistine confederacy which has been equated with the Greek *turannos*, of pre-Hellenic or Asiatic origin; *koba' / qoba'*, "helmet," connected with Hittite *kupakhi*; and *'argaz*, "chest," "ark." Two Philistine names in biblical accounts set in the period of the early monarchy have possible Asiatic connections – *Goliath with Alyattas and *Achish, king of Gath, a contemporary of David, with either the Homeric proper name Anchises (Esarhaddon and Assurbanipal refer to Ikaus[u] of Ekron), or with the sense "Achaean," i.e., "Greek." The spelling of "Achish" in the Ekron inscription is identical to the biblical spelling. The other names, from the later period, are usually Canaanite (e.g., Ahimilki, Sidqa (𐤀𐤓𐤐𐤕 on a seal), Mitinti (מתת on a seal), and Hanun). Soon after coming to Palestine, the Philistines adopted a Canaanite dialect, and this in turn gave way to Aramaic. Ashdodite (Neh. 13:24) refers to such a local (Canaanite?) dialect and an ostrakon from the late fifth century reading *krm zbdyh* was found at Ashdod. The recurrence of the non-Semitic name Ikayaus in the Assyrian sources and in the Ekron inscription may point to a cultural revival perhaps inspired by the presence of Greeks in Canaan, by nostalgia (cf. Hezekiah and Josiah's reforms), or both.

The Philistines were uncircumcised and were, therefore, despised by the Israelites (Judg. 14:3; 15:18; 1 Sam. 17:26; 18:25). Among other recognizable cultural traits are certain peculiar burial practices, with Mycenaean connections; the replacement of goat meat and mutton in their diets by pork and beef; the division of their cities into zones; and the development of a central city plan (Ashdod had a drainage system and a municipal garbage dump outside the city walls).

Various ritual objects found at Ashdod and Gezer are closely related to similar objects from the Aegean, but all the Philistines' gods known from the Bible have Semitic names. According to the Bible the Philistines had temples to Dagon in Gaza and Ashdod (Judg. 16:23; 1 Sam. 5:1–7), to Astarte (Ashtoreth) in Ashkelon (Herodotus 1:105), and to Baal-Zebub in Ekron (11 Kings 1:1–16). A Philistine temple discovered at Tell Qasile built about 1150 and rebuilt several times shows Aegean as well as Canaanite influence. Excavations at Ashdod revealed a stylized image of a female deity with small breasts, merged into a high-backed chair. Though the deity's name is unknown she is now commonly referred to as "Ashdoda." An elegant and monumental temple with a large hearth, reflective of Aegean practice, was found at Ekron. Literary sources refer to Philistine temples as late as the Hellenistic period (1 Macc. 10:83; Diodorus Siculus 2:4).

The Philistines also achieved a reputation as soothsayers (Isa. 2:6). The Philistine pentapolis, until its defeat by David,

was ruled by *seranim*, "leaders," who acted in council and were able to overrule the decision of any individual *seren* (1 Sam. 29:1–7). The Philistines were able to muster large, well-armed troops of foot soldiers, archers, and charioteers (1 Sam. 13:5; 29:2; 31:3) and also elements of the autochthonous population and mercenaries (David – 1 Sam. 27–29; the Rephaim – 11 Sam. 21:18–22). Individual combat (Goliath – 1 Sam. 17:4–10) and shock troops were used by the Philistines (1 Sam. 13:17–18; 14:15). In the later period they were ruled by "kings" (Jer. 25:20; Zech. 9:5).

After being repulsed by Ramses II, the Philistines first settled the coast of Palestine. Ashkelon, Ashdod, Gath, and Gaza, known from older sources, were captured by the Philistines from their Canaanite inhabitants, perhaps with the tacit permission of the Egyptians. They may also have served as part of the Egyptian garrison at Beth-Shean. The tradition concerning *Shamgar son of Anath's killing 600 Philistines may stem from this time (Judg. 3:31). Ekron may have been a newly founded Philistine city, and the excavations at the Philistine-founded Tell Qasile and at Ashdod attest their building activity during this period. There are no reports of any opposition to the Philistines on the part of the inhabitants of the coastal cities. The Philistine expansion into adjacent areas in the Shefelah and the Negev from about 1150 on is demonstrated by the abundance of their pottery found there. The ensuing pressure upon the Danites and Judahites is reflected in the *Samson saga (Judg. 13–16), and toward the middle of the 11th century, they were able to encroach upon the hill country, destroy Shiloh, and capture the ark. They devastated part of western Palestine, and occupied Gibeath-Benjamin, Megiddo, and Beth-Shean. Under Samuel (1 Sam. 7:7–14) and Saul, at the beginning of the latter's reign (c. 1020), some respite from the Philistines was obtained. The Philistine return to power is highlighted by the Goliath pericope (1 Sam. 17), but the freedom of David and his band as auxiliaries of Achish of Gath points up Philistine weakness (1 Sam. 27). After the defeat of Saul at Gilboa, the Philistines were able to reestablish control over part of the land as far north as Beth-Shean, but David, after being anointed as king over all Israel, was able to use his knowledge of Philistine strategy to defeat them and to drive them back to Gezer (11 Sam. 5:17–25). David subdued the city of Gath (1 Chron. 18:1) and imposed vassalage upon it; Gath supplied him with faithful warriors like *Ittai the Gittite (11 Sam. 15:18–22; 18:2). Mercenary troops from the other independent Philistine cities, such as the Cherethites and Pelethites (see below) under the command of Benaiah son of Jehoiada, joined the ranks of David's personal army.

Philistine history was now the history of individual cities, rather than that of a people acting in concert. It is quite possible that in the course of their battles with Saul and David, the ruling Philistine military class had been wiped out and that strong assimilation with the native Canaanite population had already taken place. Except for Achish of Gath, mentioned in 1 Kings 2:39–40, who is most probably the same person as the ruler of Gath under whom David served, and Ikausu of Ekron,

a contemporary of Ashurbanipal of Assyria, all the known subsequent Philistine rulers have Semitic names. The typically Philistine pottery of the Early Iron Age disappears, and the pottery and other artifacts found in the following Early Iron Age IIA levels is the same as that found elsewhere in Palestine. The Philistines were, on the whole, limited now to their pentapolis and the immediate coastal area. Reduced to a secondary role, their hold over the sea coast was broken, and Phoenician maritime expansion became possible. The vassal status of Gath remained unchanged at the beginning of the reign of Solomon (c. 960), as can be seen by the ease with which Shimei son of Gera moved into and out of that city (1 Kings 2:39–40). Toward the end of the United Monarchy and the early part of the divided Monarchy, Egyptian influence in Philistia may be surmised from the campaign of an unnamed Pharaoh of the 21st Dynasty at Gezer (1 Kings 9:16–17) and the use made by Sheshonk I (biblical *Shishak) of Gaza as the starting point of his campaign in Palestine (c. 917), as reported in his itinerary. During the next 50 years *Gibbethon (Tell Malāt, near Gezer), which was held by the Israelites, was the site of border battles, involving troops of relatively large numbers, between them and the Philistines (1 Kings 15:27; 16:15–17). During the reign of Jehoshaphat the Philistines paid tribute to Judah (11 Chron. 17:11), but were able to make incursions into Judahite territory and raid the king's household, carrying off his son Jehoram (11 Chron. 21:16–17). It is also clear, from these scant references, that Arabian tribes now occupied the territory to the south of Philistia.

During his raid into Judah in about 815, Hazael of Aram was able to capture the city of Gath (11 Kings 12:18). The first definite reference to Philistia in Assyrian sources dates from the reign of Adad-nirāri III (810–783), who boasts of having collected tribute from Philistia (Palastu) in his fifth year. Uzziah successfully raided Philistine territory and, according to the biblical report, tore down the walls of some cities (as shown archaeologically at Ashdod) and set up garrisons of his own (11 Chron. 26:6–7). Although no destruction of the city is reported, except in the enigmatic reference in Amos 5:2, Gath lost its former importance. Gath is not listed in the various prophetic condemnations of the Philistines (Jer. 25:20; Amos 1:6–8; Zeph. 2:4; Zech. 9:5–8), and had, in all likelihood, come under the rule of Ashdod. During the reign of Ahaz, the Philistines once again raided Judah and occupied cities in the Shefelah and the Negev (11 Chron. 28:18; cf. Isa. 9:11; 14:28–32). However, Tiglath-Pileser III invaded Philistia in 734, sacked Gaza, and forced vassalage on Hanun, its king, and upon Mitiinti of Ashkelon (text in Rainey, 229; Ehrlich, 176–89). *Sargon II stormed Gaza in 720, after Hanun had participated in the anti-Assyrian coalition, exiled Hanun, and made Gaza once again a vassal city. Tribute from various Philistine cities is recorded in Assyrian records of this period. In 713, Azuri of Ashdod was deported for treachery and was replaced by his brother, Ahimiti, but the Ashdodites placed a local usurper, Iamani, on the throne. Iamani fortified Ashdod and, by forming an alliance including Philistia, Judah, Edom, and Moab,

he precipitated an attack in 712 by Sargon. This campaign is referred to in Isaiah 20:1. The capture of Ekron and Gibbethon is portrayed on wall reliefs from Dur-Sharrukin; Ashdod, Ashdod-Yam, and Gath were also captured. Excavations at Ashdod have uncovered fragments of a basalt victory stele erected by Sargon and also show that the walls of the city were destroyed at this time. Ashdod was temporarily converted into an Assyrian province. According to 11 Kings 18:8, Hezekiah invaded Philistia and attacked Gaza. In Ashkelon, Sidqa replaced the loyal ruler while Hezekiah was in alliance with the people of Ekron who handed over their king, Padi, to him. The Ethiopian rulers of Egypt in all likelihood planned to move into the south of Philistia. In 701, Sennacherib invaded southern Palestine and captured the cities of Beth-Dagon, Jaffa, Bene-Berak, and Azor and their capital Ashkelon; deported Sidqa and his family and imposed a new king; and punished the patricians of Ekron, restored Padi to his throne, and rewarded the faithful kings of Ashdod, Ekron, and Gaza with a strip of Judahite territory in the Shefelah. The traditional dislike of the Philistines, reflected in both the Prophets and the Psalms, was intensified by their participating in the Phoenician slave trade during this period (Joel 4:1–8). During the rest of Sennacherib's reign Philistia served as a buffer zone between Assyria and Egypt. During the reigns of Esarhaddon and Ashurbanipal, the kings of Gaza, Ashkelon, Ekron, and Ashdod are listed among the loyal vassals of Assyria who supplied corvée workers and troops to the Assyrian army. The constant passage of Assyrian troops through Philistia in the campaigns against Egypt guaranteed the tranquility of the area.

After the breakdown of Assyrian might, the Philistine cities, particularly Ashdod, were under strong Egyptian pressure (Herodotus 1:157). Archaeological discoveries have made it probable that Josiah annexed part of northern Philistia near Yavneh-Yam. There is also a tradition of an invasion of Scythians who destroyed the temple of Astarte in Ashkelon (Herodotus 1:105). Philistia was overrun by the Egyptians under Neco, who conquered Gaza in about 609–608 (Herodotus 1:159; cf. Jer. 47:1). The Philistines were allied with Egypt against Nebuchadnezzar of Babylon, as is now clear from the Aramaic letter found at Saqqarah from Adon (of Ashkelon?) to Pharaoh, but Ashkelon was laid waste and her king exiled in 604 by Nebuchadnezzar. Nebuchadnezzar put out any remaining sparks of Philistine independence. He deported both rulers and people, as has been shown by the mention of the kings of Gaza and Ashdod and the princes of Ashkelon in various lists from Babylon (cf. Jer. 25:20; 47:2–7; Zeph. 2:4–7; Zech. 9:5–6). The later history of the cities Ashdod (Azotus), Ashkelon (Ascalon), and Gaza is of Persian and then Hellenistic cities with a highly mixed population. Only the territorial name *Palestine connected them with their Philistine past.

The Cherethites and Pelethites (הַכְּרִיתִי וְהַפְּלִתִי) were a section of David's personal army who joined him after he had defeated the Philistines. They were part of his retinue after he was established in Jerusalem. Their commander, *Beniah son of Jehoiaada, is listed as a member of David's admin-

istrative corps (11 Sam. 8:18; 20:23). Their absolute loyalty to David was proved by their accompanying him on his flight from Jerusalem (11 Sam. 20:7). Their faithfulness was again proved in their supporting the selection of Solomon as king (1 Kings 1:38–44). The name Cherethite most probably meant Cretan and alluded either to the Aegean origin of part of the “Sea Peoples” who settled along the south coast of Palestine with the Philistines or to a group of Cretans settled there by the Egyptians. They probably dwelt in the area to the south-east of Philistia proper, which is once alluded to as the Cretan Negev or the Negev of the Cherethites (1 Sam. 30:14). The Pelethites were, in all likelihood, recruited from the ranks of the Philistines with whom David had served during his stay in Ziklag. The form “Pelethite” (*peleti*) for “Philistine” (*pelishti*) is explicable as a formation modeled on “Cherethite” (*kereti*). In the two passages in which the Cherethites are in parallelism with the Philistines, it is not clear from the context whether the terms are synonymous or if separate peoples are meant (Ezek. 25:16; Zeph. 2:5). The Carians were a people originating in southwest Anatolia whose services as mercenaries in Egypt and elsewhere, from the early seventh century on, is well known. Their script has not yet been deciphered, nor is their history before this period known. There may very well be a connection between them and the enigmatic Carites (כַּרְיִי) of 11 Kings 11:4, 19 who were considered loyal to the royal house in the story of Joash. The variant reading “Carites” (כַּרְיִי) for Cherethites (כַּרְיִי) in the *ketiv* of 11 Samuel 20:23 is in all likelihood an error.

Archaeological excavation has revealed the Philistines to have been a highly sophisticated ancient people, both materially and commercially. They developed trading networks between Canaan and the rest of the Mediterranean world. Ekron produced both utilitarian and high-quality tableware as well as wine. By the seventh century B.C.E. Ekron was the largest producer of olive oil in the ancient Near East. Nonetheless, despite their impressive historical accomplishments, the Philistines, “because of their confrontation with the hill people known as the Israelites... acquired a negative historical image that still retains its symbolic power” (Dothan, *CANE II*, 1279).

[Jonas C. Greenfield / S. David Sperling (2nd ed.)]

In the *Aggadah*

Most Midrashim are concerned with the alliance made of Abraham and Isaac with Abimelech, king of the Philistines (Gen. 21 and 26). Abraham is criticized for concluding an alliance with him. The Midrash tells that as a punishment for the seven sheep he sacrificed in making this covenant, the Philistines would one day slay seven righteous men – Samson, Hophni, Phinehas, and Saul with his three sons; they would destroy seven holy places; they would retain the holy Ark in their country as spoils of war for a period of seven months; and, furthermore, only the seventh generation of Abraham’s descendants would be able to rejoice in the possession of the land (Gen. R. 54:4). Jacob did not stay in Philistia lest he too be compelled to make an alliance with the Philistines, thus

delaying the conquest of the Holy Land (*ibid.* 68:7). David was not bound by his forefathers’ covenant with Abimelech, since the Philistines’ stopping of the wells which Abraham had dug constituted a breach of this agreement (Mid. Hag. to Gen. 26:28). However, they came to him with the bridle of a mule, which Isaac had given to Abimelech as a pledge of this covenant (PARE 36). David commanded the Sanhedrin to investigate the claim carefully, but it was declared unfounded. Moreover, the Philistines of his day were not the descendants of the Philistines who had concluded the treaty; they had immigrated from Caphtor at a much later date (Mid. Ps. 60, 1).

After the capture of Samson the Philistines brought their wives to him in the Gaza prison in the hope that he might sire children who would be as strong as he (Sot. 10a). When they took the Ark, they said contemptuously: “The God of the Israelites had only ten plagues which he expended upon the Egyptians, and he no longer has it in his power to do us harm.” As a result they were afflicted with a new plague consisting of mice crawling forth out of the earth and gnawing their entrails (Sif. Num. 88).

PHILLIPS (originally **Pheibush**), early American family. The Phillips family was founded in America by JONAS PHILLIPS (1736–1803), born in Buseck in the Rhineland, who arrived in Charleston, South Carolina, in 1756 as an indentured servant of Moses *Lindo, a merchant. He became a freeman in 1759, lived in Albany, where he failed in business, and moved to New York where he was a *shohet*. Phillips subsequently engaged in business and was admitted as a freeman in New York City in 1769. A patriot who subscribed to the Non-Importation Resolution, Phillips left New York when it was threatened by the British and enlisted as a private in the Philadelphia mi-

litia in 1778. After the war Phillips continued as a merchant in Philadelphia and was elected president of Mikveh Israel Congregation. He took part in signing petitions addressed both to the governments of Pennsylvania and the United States asking civil rights for Jews. Phillips had 21 children, a number of whom died in infancy; a grandson was Mordecai Manuel *Noah.

MANUEL PHILLIPS (d. 1826), son of Jonas, studied medicine at the University of Pennsylvania and served as assistant surgeon in the War of 1812. He died in Vera Cruz.

NAPHTALI PHILLIPS (1773–1870), another son, was born in Philadelphia and became president of Mikveh Israel Congregation at the age of 25. He moved to New York in 1801 where he served Shearith Israel Congregation in a similar capacity for 14 terms. Naphtali Phillips was the first of a group of Jewish newspaper publishers in the United States, owner of New York City's *National Advocate*. He worked in the Customs House for 30 years. Phillips was the father of 15 children.

ZALEGMAN PHILLIPS (1779–1839), another son of Jonas, was a graduate of the University of Pennsylvania. Admitted to the bar in 1799, he was the first Jewish lawyer in Pennsylvania.

[Abram Vossen Goodman]

PHILLIPS, LAZARUS (1895–1986), lawyer, businessman and member of the Senate of Canada. Phillips was born into an establishment Montreal Jewish family. A member of Montreal's uptown Jewish elite, he graduated from McGill University in 1918, after service in the Canadian Officers Training Corps. He served on the Headquarters Staff of the Canadian Siberian Expeditionary Force in 1918–19 before returning to Montreal to practice corporate law, first in the offices of Sam *Jacobs, Liberal member of Parliament for Montreal's Cartier riding. In 1923 Phillips became a partner in the firm and was named King's Counsel in 1930. Phillips was also active in the Liberal Party, an able fundraiser and well connected in Ottawa. His one foray into electoral politics was ill-starred. He was the Liberal candidate in the hotly contested 1943 by-election in Montreal's Cartier riding, where he and CCF candidate David *Lewis were both defeated by Fred *Rose, the Communist (Labor-Progressive) candidate.

Phillips was active in various local Jewish philanthropies and served on the boards of numerous corporations. For the better part of 30 years Phillips was also chief legal counsel to Sam *Bronfman and was often the public face of the Seagram empire. In 1968 he was appointed a Liberal Party member of the Senate of Canada, the first Jew from Quebec appointed to the upper house. This was an appointment long coveted by Sam Bronfman and the Phillips appointment was something of a personal disappointment to Bronfman.

[Gerald Tulchinsky (2nd ed.)]

PHILLIPS, SIR LIONEL (1855–1936), South African financier and mining magnate. Born in London, he emigrated to South Africa (from England). He settled in Kimberley in 1875 and started work as a diamond sorter. In 1881 he became a director of the Griqualand West Diamond Company. He joined the leading mining house of Hermann Eckstein and Company in 1889 and succeeded Eckstein as head of the firm. In 1891 he was president of the Chamber of Mines and he played an important part in the financial organization and technical development of the gold mines. Phillips was one of the four members of the Reform Committee who, after the fiasco of the Jameson Raid (1896), were sentenced to death. The sentences were commuted to a fine of £25,000 and banishment. He returned to South Africa after the Boer War, was a member of the first Union Parliament (1910–15), and was created a baronet in 1912. During the disturbances accompanying the Rand strike of 1913 he was severely wounded. Phillips' views on contemporary affairs are given in *Transvaal Problems* (1905) and *Some Reminiscences* (1924). On his retirement he settled at the Cape. Phillips and his wife Dorothea Sarah Florence Alexandra Ortlepp laid the foundations of the Johannesburg Art Gallery collection and of the Michaelis Gallery in Cape Town.

PHILLIPS, MARION (1881–1932), British politician. Born and educated in Melbourne, Australia, the daughter of a solicitor, Marion Phillips moved to Britain in 1904, where she received a doctorate at the London School of Economics. She was employed by Sidney and Beatrice Webb as a researcher on the London poor and joined the Fabian Society as well as suffragette and pro-labor organizations. From 1912 she was actively involved in politics, serving as a Labour councillor in London. Phillips was especially concerned with Labour's policies towards women and was the author of a pioneering work, *Women and the Labour Party* (1918). In 1929 she was elected Labour Member of Parliament for Sunderland, one of the first woman Labour MPs and the first Australian woman to win a seat in any national parliament. She was also the first Jewish woman to serve in the British Parliament. Marion Phillips lost her seat at the 1931 general election and died of stomach cancer at the age of only 50.

[William D. Rubinstein (2nd ed.)]

PHILLIPS, NATHAN (1892–1976), Canadian politician. Phillips was born in Brockville, Ontario, the descendent of a pioneer Canadian Jewish family. He graduated from high school at 16 and in 1913 at age 21 graduated from Osgoode Hall Law School in Toronto. A member of the Toronto law firm of Phillips and Phillips, Phillips acted as crown counsel at various Ontario Assizes and in 1929 was appointed king's

council, the youngest in Ontario. Phillips was also a member of the Conservative Party and unsuccessfully ran for federal and provincial office. He was more successful in municipal politics. He was a member of Toronto City Council for 36 years, and won two back-to-back terms as mayor of Toronto, serving from 1955 until his retirement in 1962. Phillips' election as mayor was notable in that he was not only the first Jewish mayor of Toronto or any other major Canadian city, but he was also the first politician to break the Orange Order's iron hold on the political power of Toronto. His term as mayor marked a turning point in the city, a transforming moment when Toronto shifted from being a staunchly Protestant, Anglocentric, and conservative city to become a modern cosmopolitan and thriving metropolis. Fittingly, Phillips was popularly dubbed "mayor of all the people." Determined that his city should have a new showcase City Hall, he won approval for an international design competition that was ultimately won by Finnish architect Viljo Revell with a strikingly avant-garde design. The large public square in front of the building is named for Phillips. Phillips was a member of several service groups including the Masonic Order, the Order of Eagles, and the Lions and Kiwanis Clubs. He was president of Toronto Lodge B'nai B'rith and honorary president of the Holy Blossom Temple Brotherhood and was the recipient of the Human Relations Award from the Canadian Council of Christians and Jews in 1959.

[Frank Bialystok (2nd edition)]

PHILLIPS, PHILIP (1807–1884), U.S. congressman and jurist. The son of an immigrant from Germany, Phillips, who was born in Charleston, South Carolina, began studying law there in 1825, and was admitted to the South Carolina bar in 1828. As a delegate to the South Carolina "nullification convention" of 1832, Phillips, a unionist, strongly opposed Southern secession over the slavery issue. Phillips was elected to the South Carolina state legislature in 1834 but moved the following year to Alabama, where he served in the legislature from 1844 to 1853. In 1853 he was elected as a Democrat to a two-year term in the House of Representatives in Washington, thus becoming the second U.S. Jew to sit in Congress. Phillips was admitted to the bar of the Supreme Court in 1850 and during his stay in Washington argued many cases before the Court. With the outbreak of the Civil War in 1861, he and his non-Jewish wife were placed under house arrest in Washington because of the latter's openly pro-Southern sympathies. However, later that year they were permitted to move to New Orleans. After Lee's surrender Phillips returned to Washington, where he continued to practice law. Among his published legal works was his *Statutory Jurisdiction and Practise of the Supreme Court of the United States* (1872).

Although Phillips was secretary of the Charleston Reform Society of Israelites during his residence in that city, his association with Jewish life appears to have been tenuous. He did, however, head a Jewish delegation to President Buchanan

in 1857 to petition for the repeal of the anti-Jewish clauses contained in the American-Swiss treaty of 1855.

PHILLIPS, REBECCA MACHADO (1746–1831), pioneering American communal leader. Phillips was born in Reading, Pennsylvania, the eldest of two daughters of Maria Caetena (Zipporah), and Rev. David Mendes Machado, refugees of the Portuguese Inquisition who had returned to open Judaism in London. Her maternal grandfather, Samuel Nunes Ribeiro, had been a prominent court physician in Lisbon and later a founding member of Governor Oglethorpe's Savannah colony established in 1733, while her father served as cantor of New York's Congregation Shearith Israel and taught in its school. The family's Crypto-Jewish legacy was largely preserved by Rebecca's mother and female relatives, who transmitted accounts of escape from the Inquisition and maintained syncretic Catholic/Jewish rituals long after their return to open Judaism.

Rebecca's father died in 1747 and her mother subsequently remarried, producing a half-sister. In 1762, at age 16, Rebecca wed Jonas Phillips (1735–1803), an Ashkenazi merchant 11 years her senior, and moved with him to New York, where the first of their 21 children was born. Along with Zipporah Levy (1760–1832), daughter of Hayman Levy and wife of Benjamin Mendes Seixas, who also bore 21 children, Rebecca holds the fertility record among early American Jewish women. Most of her children survived to adulthood.

After some years of financial hardship, the Phillips family emerged prosperous from the Revolutionary War; by the early 1780s Jonas was the second wealthiest Jew in Philadelphia, where the family had relocated after the British occupation of New York. A staff of indentured servants, slaves, and a wet nurse permitted Rebecca to devote some of her energies to the synagogue and larger communal affairs. In 1782, she raised funds to purchase ritual objects for the newly founded synagogue, Mikveh Israel. Rebecca made several personal donations over the years, including a scroll of Esther. In 1801 she became a founding member of the Female Association for the Relief of Women and Children in Reduced Circumstances, a Philadelphia organization whose Jewish and gentile members provided food and clothing to indigent women and children. In 1820 she served as first directress and one of 13 managers on the board of the Female Hebrew Benevolent Society of Philadelphia, founded in 1819 to assist the Jewish poor. Rebecca assumed a more central role in household affairs after the death of her husband in 1803. Contemporary reports allude to the high status and respect she enjoyed during her latter years.

PHILLIPS, WILLIAM (1907–2002), U.S. editor and writer. Born in New York, Phillips attended City College and earned a master's degree at New York University (1930). He completed some graduate work at Columbia while an instructor in English at NYU. Phillips is best known as a co-editor of arguably the most influential of the "little" magazines, the *Partisan Review*. Phillips and co-editor Philip *Rahv founded the *Partisan Review* in 1933 as the literary modernist organ of the John Reed Club. The criticism, poetry, and fiction that appeared in the magazine was intended at first to complement the more overtly political magazine *New Masses*. After nine published issues associated with the John Reed Club, *PR* broke with the organization because of ideological differences related to the Moscow Purge Trials. Phillips and Rahv, who had refused to subordinate their literary standards to Communist Party ideology, reestablished *Partisan Review* as an independent journal in December 1937. After breaking from the John Reed Club, *PR* remained committed for a period to independent Marxist, anti-Stalinist principles. Circulation of the magazine never topped 15,000, but its profound influence on American intellectual life is undeniable. Historians have described *PR* as intensely urban, anti-Stalinist with a Trotskyist bent, New York-dominated, and overwhelmingly Jewish. The magazine brought together, in Phillips's words, "writers committed to modernism and literary innovation, and radical social and political thinkers, most of whom were either non-Communist or anti-Communist." Phillips himself wrote for *PR* and other magazines (sometimes under the penname "Wallace Phelps"), and his memoir, *A Partisan View*, appeared in 1983, but he is better known as an editor who brought to the public the works of influential writers including Hannah *Arendt, Saul *Bellow, Clement Greenberg, Irving *Howe, Delmore *Schwartz, Lionel *Trilling, and many, many others. Although *PR* had lost its central place of influence by the 1960s (Rahv left the magazine in the late 1960s and died in 1973), Phillips and his second wife, Edith Kurzweil, continued to edit the magazine until his death in 2002. The final issue of *Partisan Review*, a tribute to Phillips, was published in 2003.

[Daniel Greene (2nd ed.)]

PHILLIPSON, IRVING JOSEPH (1882–1955), U.S. Army officer. Graduated from West Point in 1904, Phillipson saw action in the Philippines in 1906–07 and in the Meuse-Argonne battles of World War I. In World War II he was chief of staff of the Second Corps Area and in 1941 was promoted to major

general. In 1942 he was sent to Washington to plan and administer the aid to be given to the wives and dependents of soldiers. Phillipson introduced many needed reforms in this field.

PHILO (The Elder), author of a Greek epic entitled *On Jerusalem*. He is sometimes identified with the Philo the Elder mentioned by Josephus (*Contra Apionem* 1:218) and Clemens of Alexandria (*Stromata*, 1:141, 3). If so, his presumed date can be conjectured from the fact that these list him after *Demetrius (fl. 221–204 B.C.E.) and before *Eupolemus (fl. 161–157). It is, however, by no means certain that the two are identical, since Philo was a common name. Of Philo's lengthy epic of 14 (or four) books, only three fragments consisting of a total of only 24 lines survive. About half of the lines are unintelligible, either because of faulty transmission of the text or because of the author's own obscurity. The view that the obscurity was intentional must be rejected.

Mras explains the first fragment as dealing with Abraham's circumcision and the binding of Isaac. Because the patriarch was the first to perform circumcision according to statute, God made a covenant with him. Gutmann rejects this interpretation, as based on a too heavily emended text. But Gutmann's own interpretation of the first four lines as a statement of the Torah's antedating the creation of the world has been questioned. The remaining six lines of Fragment I, however, appear clearly to deal with the binding of Isaac, the appearance of the angel, and the slaughtering of the ram, though the details are not quite clear. Fragment II depicts the remarkable fountains that watered Jerusalem. Similar accounts, contrasting the dry parched surroundings of the city with the wealth of water in the city itself are found in the Letter of *Aristeas (88–91) and in a fragment from Timochares, the author of a *Life of Antiochus* (IV?). Philo's poem can also be compared with that of Theodotus, a Samaritan epicist, describing the marvelous streams that watered the valleys of the holy city of Shechem. Philo's poem, however, does not restrict itself to Jerusalem, but ranges widely through biblical lore. Fragment III records Joseph's rule in Egypt. If the author of the poem *On Jerusalem* is identical with the historian mentioned by Clemens, it is reasonable to assume that Philo dealt with chronology in a manner similar to Eupolemus, and that perhaps again, like Eupolemus, wrote in Jerusalem.

[Ben Zion Wacholder]

PHILO (Pseudo-) or LIBER ANTIQUITATUM BIBLICARUM, conventional ascription and title of a Latin translation of an early Jewish chronicle. With extensive omissions, modifications, and additions, the chronicle retells biblical history from Adam to Saul's death (the archetype has lost its ending and how much followed remains uncertain). The length of the work makes it impracticable to list its chief innovations; for an outline see L. Cohn and G. Kisch (see bibl.). The pe-

riod until the Exodus is briefly treated; additions and omissions are so distinct from those of *Jubilees that it has been suggested that Pseudo-Philo was correcting and supplementing that book. Especially notable are the strangely sympathetic account of Balaam, Moses' apocalyptic testament, the revisions of Joshua 22:7ff. and Judges 17–21, the novel careers of the first judge (called Kenez, as in Josephus' *Antiquities*) and his successor Zebul, Phinehas' installation of Eli, his ascension (to return as Elijah), and additional prayers, speeches, and visions, etc. throughout.

The title *Liber Antiquitatum Biblicarum* is probably a late assimilation of "Philo's" historical work to Josephus' *Antiquities*. The author (Jewish, not Christian) does not adopt any pseudepigraphical mask. He is probably from Palestine, not the Diaspora, and is totally devoid of classical allusions. The manuscript's ascription to Philo of Alexandria is impossible.

Liber Antiquitatum Biblicarum is usually dated shortly after 70 C.E., the strongest argument being Moses' prediction (19:7) that the First Temple would be destroyed on the 17th of the 4th month; it is plausible, though not inevitable, that this presupposes the cessation of the *Tamid* ("the daily offering") on that date in 70. Such a date would suit the linguistic parallels with 11 *Baruch and 14 *Esdras, but the *Liber Antiquitatum Biblicarum* is demonstrably the source from which the other two have borrowed. Pseudo-Philo's Hebrew biblical text, furthermore, suggests an earlier date for at least much of the material. A few Septuagintal, Proto-Lucianic, and Palestinian readings have been noted by earlier scholars, but their number is far greater. That the translator, influenced by some form of Greek Bible, substituted its text for that of Pseudo-Philo is impossible, as such readings occur in passing allusions as well as in long quotations. More probably, the author himself used a notably pre-Masoretic form of Hebrew text – how late could he have done this? Further indications of date are unusable until the chronological system is explained.

Pseudo-Philo appears to be supplementing Chronicles with a history principally about Israel's cultic and national leadership from the Exodus until David. His real purpose is unclear, especially since the end is missing. The work is usually taken as a haphazard aggadic collection, with some unspecified educational or pious purpose, and the fact that many additions have parallels elsewhere suggest that not all the *aggadah* was created *de novo*. Its importance lies in the fact that it is one of the oldest substantive midrashic works extant. A. Spiro expounds it as a systematic attempt to replace the canonical history of pre-Davidic times by a version apter for anti-Tobiad and anti-Samaritan polemic. The anti-Tobiadism may be imaginary; some anti-Samaritanism is certain (there are even intriguing parallels with later Samaritan chronicles), but whether this controls the whole composition is disputable and the reason for the omissions is not yet apparent.

The affinities in Pseudo-Philo's theology and vocabulary need study; "mystical Jewish Hellenism" and "Essene Gnosis"

are not too helpful characterizations. A coincidence (23:2) with Jubilees-Qumran on the date of the Feast of Weeks could be important for identifying its background and praxis; but other analogous indicators have not yet been noted.

The work survives in whole or in part only in some 20 late Latin manuscripts, but is older, having been translated (second to fourth century C.E.) via Greek from Hebrew. No clear traces of either Greek or Hebrew survive; the Hebrew form in *Chronicles of Jerahmeel* was retroverted from an important lost Latin manuscript. Strangely enough the work appears to have been unknown to the *Church Fathers. After early printings, *Liber Antiquitatum Biblicarum* was almost completely neglected until 1898. Among Jewish writers until this period it was known only to Azariah de *Rossi. The work of emendation, begun by M.R. James and L. Ginzberg (*The Biblical Antiquities of Philo*, 1970), can be systematically perfected and a critical text established. Much of the work (including chronological data and proper names presumably important for Pseudo-Philo's purposes) is as yet obscure, though it is not irremediably corrupt.

[John Strugnell]

***PHILODEMUS** (c. 110–c. 40/35 B.C.E.), Epicurean philosopher from Gadara in Palestine. He founded a school at Herculaneum, Italy, and may have been a teacher of *Horace. He wrote Cynic diatribes. According to Hadas (see bibl.) his erotic poetry shows some parallels with the Song of Songs.

PHILO JUDAEUS (Philo of Alexandria; c. 20 B.C.E.–50 C.E.), Jewish exegete and philosopher of outstanding importance for Jewish Hellenism and early Christianity. Little is known about the details of his personal life. It is clear, however, that he belonged to an extremely wealthy and distinguished Alexandrian family with connections to the Herodian dynasty and the Roman court. His brother was the high official and banker Alexander, known through Josephus, and his nephew, Alexander's son, was *Tiberius Julius Alexander. In 40 C.E. Philo headed a delegation of the Jewish community of Alexandria to the Roman emperor Gaius Caligula, in order to alleviate the situation of the Jews after the outburst of violence in the city. Moreover, Philo once visited Jerusalem, offering a sacrifice in the Temple. Philo's works, which he wrote in Greek, show intimate familiarity with Hellenistic culture and education. His Jewish training seems to have derived from growing up in a traditional Jewish home, but apparently did not include knowledge of the Hebrew language.

Living at a crossroad of cultures in Alexandria, just before rabbinic Judaism emerged and Christianity became a vis-

ible phenomenon, Philo is highly significant for a variety of reasons. Initially, he made a clear statement on Jewish identity in the midst of a multicultural metropolis, indicating patterns of negotiating Judaism with general culture. Moreover, Philo's Bible exegesis was extremely rich and methodologically diverse, offering invaluable insights into the state of Jewish Bible interpretation before rabbinic exegesis became normative. His philosophy is intrinsically connected to his exegesis, having developed mostly in the context of interpreting Scripture. Philo engaged in the contemporary discussion, offering an original approach that became especially relevant for subsequent Christian thinkers. His eyewitness reports of the events under Tiberius and Caligula, as well as his descriptions of the *Essenes and the *Therapeutae, are precious and in many respects exclusive sources of information. The former two provide a particular Jewish perspective from the province of the Roman Empire, which complements Josephus Flavius' reports from the capital. Finally, Philo's statements on women are crucial for a proper understanding of the history of gender issues.

Writings

Most, but not all, of Philo's vast output has been preserved by the Christian Church in the original Greek. Some treatises have survived only in Armenian and Latin translations. Philo's works are usually divided into the following categories:

1. Philo's exegetical works, probably written for a Jewish audience.

These are again subdivided into three categories, which, however, should not be seen as absolute divisions, since each contains pieces of exegesis belonging to the other categories.

1) The Exposition of the Pentateuch, beginning with the creation story and leading through a treatment of the Patriarchs to a systematic discussion of the legal material. Philo explains that the Pentateuch, although a law code, opens with the story of creation, because this story shows that Mosaic Law is in harmony with the Law of Nature. Everyone living in accordance with the Torah thus becomes a "loyal citizen of the world."

2) The Allegorical Commentary on select biblical passages from the book of Genesis, consisting of 18 extant treatises. Disregarding the plot and context of the biblical stories, Philo progresses in a highly associative manner, transposing biblical verses into philosophical-mystical concepts.

3) *Questions and Answers on Genesis and Exodus* (preserved fragmentarily in an Armenian and Latin translation). Following the Hellenistic genre of Question and Answer Literature, which flourished in Alexandria, especially in connection with the interpretation of Homer, Philo closely follows the biblical text, raising difficulties on certain details and providing answers that confirm Scripture. These treatises are valuable also for their numerous references to other Jewish exegetes whose work has not survived in any other source.

II. General philosophical writings, probably addressed to a non-Jewish as well as a Jewish audience. In these treatises

Philo hardly ever refers to Scripture, instead discussing themes of topical concern, such as *The Eternity of the World* or *Providence*. In another work he focuses on the notion of *Every Good Man Being Free*. These treatises show intimate familiarity with Hellenistic genres of philosophical discourse, such as the dialectical style, which demands that divergent views be discussed before the writer presents his own ideas. These works moreover indicate Philo's desire to participate in the general discussion, reaching out to contemporary intellectuals in Alexandria.

III. Eye-witness reports of contemporary events. Two extant treatises describe the turbulent years of unrest and violence in Alexandria (*Flaccus, On the Embassy to Gaius*). These are not historical treatises in the strict sense, because they did not aim at describing contemporary reality or discussing the reliability of the sources at hand, but rather at encouraging fellow Jews by a theologically appealing narrative. Philo also described a group of Jewish philosophers, both women and men, who had settled near Alexandria (*On the Contemplative Life*). Highly sympathetic to their life-style, he provides the only extant information about this group (*Therapeutae).

Jewish Identity

It has often been assumed that Hellenistic Jews were confronted with an existential dilemma of having to choose between two diametrically opposite cultures: Jewish monotheism, commitment to a specific people, legal code, and revealed Scriptures, on the one hand, and Greek rationalism, sense of beauty, and universal individualism, on the other. This image has increasingly been challenged. It has become clear that ancient Jews living in Alexandria may not have felt such a dichotomy. Instead, they seem to have been proud of both their heritage and their participation in the general culture. They creatively modernized their Scripture and tradition, choosing from the diversity of the Hellenistic environment whatever seemed suitable.

Philo expressed his pride in the Mosaic tradition by claiming that it is the best constitution. The particular laws of Judaism, such as Sabbath observance and kosher food regulations, reflect in his view Natural Law (Opif. 1–5). Anyone seeking to live a rational life in accordance with Nature will come to accept the Torah. The Jews are thus placed at the top of a hierarchy of cultures. Next rank the Greeks whose culture and philosophy Philo deeply appreciated. His numerous references to the sports and theater suggest that he regularly participated in these activities. He was moreover familiar with Homeric, Platonic, Aristotelian, Stoic, and Pythagorean writings. These, however, were not seen as alternatives, challenging his own tradition, but rather as expressions of ideas akin to the highest truth which Moses had recognized. Of the Stoics Philo explicitly said that they copied certain ideas from the Torah (Lib. 57). Plato's *Timaeus* was quoted in his interpretation of *Genesis* as if it naturally belonged to the Jewish hermeneutic endeavor (Opif. 21).

At the bottom of humanity, in Philo's view, are the Egyptians. Reflecting contemporary Roman prejudice, he never tired of stressing their unreliability, the beastly nature of their religious life, their materialism, and their inherent tendency to political unrest (Dec. 79–80, Fuga 19, Mos. 2:194–95). The Egyptians became Philo's ultimate Other against whom he outlined the contours of Jewish identity. The Romans also played a special role. Unlike the Egyptians, however, they appear as benefactors, who brought civilization and proper government to the world. Philo praised especially Augustus, even to the extent of describing and celebrating the temple in his honor in the harbor of Alexandria (Legat. 143–51). Philo felt that the Jews are akin to the rulers of the world, sharing their values as well as their wide physical distribution throughout all civilized countries.

Philo defined Jewish existence in the Diaspora by reference to the model of the *metropolis*. For Jews, he writes, "the holy city where stands the sacred Temple of the most High God" is the mother-city whence they have gone to settle in numerous other places, which have become their "fatherland" (Flac. 46). Jews living outside the homeland thus have a two-fold commitment, namely to their place of living as well as to Jerusalem. This, however, does not imply a "Zionist" orientation, because Philo considered Diaspora Jews to be intellectually more at leisure and, therefore, better equipped to engage in the elevation of the mind commanded by Moses. He neither recommended living in Erez Israel nor did he look to Jerusalem for spiritual guidance. Other exegetes mentioned by him, as far as can be established, are fellow Alexandrians rather than teachers from Erez Israel. The Temple played a central symbolical role, uniting the Jews all over the world, but was also of concrete theological importance, as Philo did his best to prevent its desecration by Caligula's statue.

Philo was observant and encouraged his fellow Jews to be so as well. His treatises on the Decalogue and the Special Laws discuss the *mitzvot* under 10 headings, providing spiritual justifications for each one of them. Unlike medieval Jewish philosophers, such as *Saadia Gaon and *Maimonides, Philo did not yet distinguish between rational and revealed commandments, but stressed self-restraint (*enkrateia*) as the value underlying all of Mosaic legislation. Philo also confronted a group of radical allegorizers among the Jews of Alexandria, who argued that the law no longer needs to be implemented once its spiritual meaning is recognized (Migr. 89–93). Philo responded to this approach by stressing the need of community life based on the *halakhah*. The latter, however, was locally colored and not necessarily identical to the *halakhah* in Erez Israel. In Leg. 2:232, for example, Philo, in accordance with Roman law in Hellenistic Egypt, assumes that the death penalty for the stubborn and wicked son is to be decided by both parents rather than a law court.

Philo's construction of Jewish identity was only one of the many voices of Alexandrian Judaism. While the works of most other Jews have not survived and can only fragmentarily be reconstructed, Philo's writings are largely extant thanks to

his popularity among the Christians. His statement on Jewish identity, however, was unheard for many centuries. It was during the Enlightenment and the period of *Wissenschaft des Judentums that his position became relevant again. Isaac M. *Jost, Heinrich *Graetz, and others identified him as a paradigmatic "modern" Jew who successfully combined Jewish tradition and general culture, thus foreshadowing the Golden Age of Spanish Judaism in the Middle Ages. In the eyes of some he also appeared as a welcome alternative to rabbinic Judaism, providing an early example of the dichotomy that many German Jews felt between their own "enlightened" religion and the "primitive" traditionalism of Polish Jews. The philosopher Moses *Mendelssohn could thus appear as a "German Philo."

Exegesis

Philo's exegesis must be appreciated against the background of the ongoing hermeneutic efforts among Egyptian Jews. In the third and early second century B.C.E., the main types of Philonic exegesis are already visible in the sources: *Aristobulus is the first known interpreter who suggested an allegorical approach to Scripture which, he hoped, would solve the problem of the biblical anthropomorphisms; *Demetrius for the first time recorded difficulties in the biblical text for which he provided learned answers; *Artapanus wrote free paraphrases of biblical stories, adapting them to the ideals of his own time and environment. Philo also mentions numerous other interpreters without, however, identifying them more specifically. They seem to be contemporaries living in Alexandria and can be divided into two main groups: allegorical readers whose work Philo generally appreciates, and literal readers some of whom provoked Philo's anger, apparently because they adopted text-critical methods from Homeric scholarship. Philo thus assumes a relatively conservative position, insisting on the integrity of the biblical text and the absolute value of its contents. He is in fact the first Jew known to have formulated ideas of canonicity, suggesting that the Torah in its Greek translation (*Septuagint) was a perfect emanation of the Divine Logos.

Most famous and influential are Philo's interpretations of the story of creation and the Patriarchs. In both areas he enriched Scripture with motifs from Greek literature. Philo rewrote the story of creation by inserting a distinctly Platonic perspective. Relying on Plato's *Timaeus*, he argued that such a beautiful world could only have been created as a copy of an ideal model. Distinguishing between an active cause and the passive material, which is shaped into ever new forms, Philo describes the activity of God as initially creating the ideal cosmos in His own mind and then modeling the material cosmos in its image (Opif. 1–25). The question of *creatio ex nihilo* is not yet on the horizon, and Philo naturally seems to assume pre-existing matter on the basis of Gen. 1:2. Furthermore, raising the same question as the rabbis in Genesis Rabbah (chap. 8), Philo contemplates the expression "let us make man" (Gen. 1:26). He solves the problem of the plural expression "us" by

suggesting that God left the creation of man with his obvious imperfections to assistants, so as not to be responsible for the origin of evil (Opif. 72–76).

The stories of the patriarchs and Moses are retold with a view to producing biographies of ideal heroes. While the biographies of Jacob and Isaac are lost, the extant examples show a definite pattern. Philo distinguishes a main feature in each character and arranges the biblical material accordingly. Joseph, for example, is treated as the perfect statesman, whereas Moses is identified as the paradigmatic legislator and prophet of the Jews. This style of biography according to types of careers anticipates Plutarch's famous series of Greek and Roman biographies a generation later. In this framework particular attention is paid to the childhood of each hero, taken to indicate the talents that will later become publicly visible. Moses is thus said to have avoided any childish play or Egyptian dainties while growing up at Pharaoh's court. Fitting his future role, he was from the beginning drawn to serious learning, recollecting in his soul rather than acquiring outside knowledge from his teachers (Mos. 1:18–24). Abraham became the prototype of the person elevating himself above the material realm, recognizing God and even experiencing His gracious presence in what must be identified as a mystical experience (Abr. 68–80).

Worthy of particular attention are also Philo's allegorical interpretations. Sarah and Hagar, for example, are interpreted respectively as sovereign philosophy and servile school studies (Congr. 1–126). Anticipating some of Moses *Mendelssohn's thoughts in the *Biur*, Philo moreover interpreted the tree of knowledge as the virtues planted by God in man's soul (All. 1:56–62). The snake in the Garden allegorically represents lust (All. 2:59). Joseph's colorful coat is allegorized as a symbol of the politician's diversity and ultimate lack of principles (Somn. 1:210–20, 2:10–14). Sarah's pregnancy prompted by God symbolizes for Philo the soul's impregnation by the Divine spirit (Abr. 99–102). These examples show that Philo's allegorical exegesis usually translates biblical motifs into narratives about the human soul, which are meant to complement their literal sense. In this area Philo often refers to other interpreters, sometimes calling them "natural philosophers" (Abr. 99). He is thus in good company, providing his own particular perspective in a well-established field of Jewish Bible exegesis in Alexandria.

Philosophy

Living in the capital of Hellenistic scholarship, Philo was familiar with the philosophical discussion of the day. He was immensely well read, reaching even such minor treatises as Ocellus' still extant *On the Nature of the Universe* (Aet. 12). While he has often been described as an eclectic writer, who gathered more or less randomly ideas floating around, he actually has a special philosophical profile. His most outstanding characteristic is his enthusiastic appreciation of Plato as distinct from Aristotle. This position must be recognized as an unusual and novel preference in an environment overwhelm-

ingly dominated by a deep syncretism with a strong Aristotelian orientation. It was this preference for Plato that rendered Philo particularly popular among Christians. The Church historian *Eusebius relied on Philo when interpreting Christianity as a religion akin to Platonism, but diametrically opposed to Aristotle. These Platonic tendencies later also suggested to Azariah de *Rossi that Philo may be a proto-type of Medieval Jewish mysticism (Kabbalah).

Philo was familiar with the ongoing discussion of the classical philosophical works and hoped to make a lasting contribution to it. He took a particularly pronounced position on the hotly debated issue of the nature of the cosmos. Rejecting the Aristotelian notion of an eternal world and the Stoic assumption of ever recurring destructions and re-creations of the cosmos as well as Epicurean atomism, Philo emphatically called for a return to Plato's *Timaeus* (Aet. 7–16). He complained, however, that even among Plato's students this treatise was commonly read metaphorically, and thus taken as supporting Aristotle's notion of an eternal cosmos (Aet. 7–16). Philo dismissed such readings as "falsifying" Plato's original intention, which he hoped to recover. He stressed that, according to Plato, the world had really been created as an image of an ideal model, and under the "providence" of the creator god, who was therefore called "Father and Maker." This view of things, Philo insisted, closely corresponded to the Mosaic version, which, however, had been written down much earlier. Fending off Aristotelian influence was also a major concern when Philo interpreted the biblical creation account for a Jewish audience. Obviously fearing that Aristotle had already left a deep impression on the Jewish community of Alexandria, he urged his readers not to abandon the idea of a real creation. He urged that the assumption of an eternal cosmos eliminates the notion of Divine providence and thus renders true piety impossible (Opif. 9–11).

Philo's Platonic tendency is moreover visible in his distinction of a spiritual realm which is opposed to the world of the senses and material entities. Truth can only be attained on the upper, intelligible level, while the concrete world of common experience is governed by "opinion" or "probability." Given the imperfection of the material realm, Philo maintains an extreme transcendentalism regarding God whom he describes as "...transcending virtue, transcending knowledge, transcending the good itself and the beautiful itself" (Opif. 8) and as "...better than the good, more venerable than the monad, purer than the unit..." (Praem. 40). Whereas Philo sometimes speaks of God's goodness and other attributes (All. 1:5), he generally insists that God is "without quality," has no name, and is unknowable (ibid 36). This last tenet is not meant in an agnostic way. On the contrary, man has to strive to know God and God is the only object worth knowing. But whereas it is easy to know that God is, we cannot know what He is (Spec. 1:32).

Man can hope to make progress in this area when looking at God's intermediary powers and involvement in the world. God's foremost intermediary is the *Logos, His ratio-

nal part as well as His speech. Philo adopted this term from Stoic philosophy, where it referred to the Divine power immanent in the world and was sometimes identified with Zeus. Philo used this term in a new way, referring to that aspect of God which is active in the creation of the world and remains involved in earthly matters. At times the Logos is identified with the place in the mind of God where the ideal cosmos is created (Opif. 24), while on another occasion it is identified with the high priest (Somn. 2:185ff.). Similarly, the doctrine of God's two "powers," mercy and justice, is built up into a system of intermediaries. Abraham's three guests, mentioned in Gen. 18:2, are thus identified as God and His two powers (Q Gen. 4:2). Only at a close look does Abraham discover that they are one.

Man being created in the image of God, and thus with a divine spark, he can hope to encounter Him and, on occasion, even enter into a Corybantic trance which allows for a temporary union of the human mind with God. Following the example of Abraham, man has to leave for this purpose "his land, his kinfolk and his father's home," i.e., the body, the senses, and the whole material realm, as far as humanly possible (Migr. 1ff.). Unlike the moral struggle of the Stoic sage, which leads to "apathy" and freedom from the passions, Philo's student becomes jubilant and even surging into frenzy (Plant. 38). His soul becomes ecstatic, being filled with Divine spirit (Somn. 2:254) This experience is described in intensely erotic terms, which recall the terminology of contemporary mystery cults, namely as a union between God and the soul issuing forth Divine ideas in man's mind (Cher. 43–50).

Some Pythagorean features can be identified in Philo's philosophy. Foremost among these is his interest in numbers and their metaphysical significance. Philo, for example, makes a long excursion in his interpretation of the biblical creation account, devoting approximately 40 paragraphs to the meaning of the number 7 (Opif. 89–128). Adducing evidence from diverse realms, Philo thus hopes to show that the Mosaic account discloses the deeper structure of the cosmos, which can be expressed in numerical terms. Furthermore, Philo mentions some precious pieces of Pythagorean exegesis. Their original writings all having been lost, he is the earliest extant writer to mention Philolaus and the Pythagorean interpretations of Athena and Zeus as numbers (Opif. 99–100, Leg. 1:15). It has sometimes been suggested that Philo's ascetic tendencies may be Pythagorean in origin. Yet his position significantly differs from theirs: while they recommended asceticism as an end in itself, prescribing for their students long periods of abstinence from sex, food, and other instinctual needs, Philo never doubted the legitimacy of bodily needs. On the contrary, he recognized sexuality as a necessary requirement of marriage as well as reproduction, and therefore did not worry about an excess of lust within that framework (Spec. 3:32–63).

Eye-Witness Accounts of Contemporary Events

Philo witnessed important events of the Second Temple Period and, like virtually all upper-class intellectuals during the

Hellenistic period, he took an active part in politics. Philosophy and involvement in real life were by no means mutually exclusive, even though Philo once complained in an often quoted sentence that politics took him away from contemplation (Spec. 3:1). The titles of Philo's extant accounts, *The Embassy to Gaius* and *Flaccus*, suggest that they contain the proceedings of the embassy, which Philo himself headed, as well as a profile of the Roman governor. The truth, however, is that both treatises are focused elsewhere. In the *Embassy* Philo is overwhelmingly concerned to explain the benefits of Roman rule, while in *Flaccus* he shows Divine retribution effecting initially the punishment of Flaccus and then his religious conversion. Both reports are often seen as apologetic texts addressing a Roman audience, perhaps even the emperor himself. But it is rather obvious that they were not intended for foreign readers, but for Jews back home. Philo was confronted with increasing criticism from Alexandrian Jews, who even sent a second embassy in order to present a more militant view in Rome. Others altogether despaired of Roman rule and took to armed street fights. Philo made efforts to counter these trends, explaining how benevolent Rome was for the whole civilized realm. God, moreover, providentially protected the Jews and liberated them from such aberrations as Gaius and Flaccus.

Philo's reports are often compared to those of the historian Flavius *Josephus. Scholars argue which one is the more authentic and original, some opting for Josephus' copying from Philo, while others suggest that Josephus' account, even though written later, is closer to the truth. One example may suffice to illustrate the difficulty. Philo tells us that Gaius was so adamant about his plan to set up his statue in the Jerusalem Temple that Agrippa's intervention only produced a feigned reversal, while in reality Gaius continued to make preparations until God caused his assassination (Legat. 333–37). Josephus, on the contrary, reports that Agrippa's intervention was truly successful (AJ 18:289–304). Philo's version may well have originated from his overall desire to stress Divine providence, reassuring his readers that patience was called for. In any case, Philo's account perfectly fits his overall story of a beneficial Roman government that was temporarily deranged by an emperor who had given in to Egyptian lures.

Gender Issues

Philo has sometimes been identified as the "father of Western misogyny," because he embedded Classical Greek prejudices in authoritative Scripture and thus transmitted them to the Church Fathers as well as the rest of European culture. Such judgment can rely on Philo's acceptance of Aristotelian biology. He assumed that the role of the female in procreation is merely passive, providing a material and nourishing environment for the active sperm donated by the male (Ebr. 73, 211). Philo applied this concept to the spiritual realm, suggesting that virtue and *enkrateia* belong to the masculine and thus active realm (Abr. 100–1). God is conceived of as masculine, while the soul of the male student is "impregnated by His

sperm" (Cher. 43–45). Philo's view of Eve was anything but egalitarian: he considered her to be the addition of sense-perception and lust to a mind that had hitherto enjoyed the bliss of pure spirituality and masculinity (Opif. 151). Philo moreover had little sympathy for contemporary Jewish women, whom he was happy to confine to the culturally and inferior *gynaikon* (Flac. 89). His position in this respect is especially remarkable, since the Classical ideal of a wife never leaving her quarters had in Hellenistic Egypt been replaced by a far more open atmosphere, where women could assume public roles, such as queen, priestess, and even head of a philosophical school.

On the other hand, however, one must appreciate that, within an obviously patriarchal framework, Philo showed a relatively great interest in biblical women. Sarah, for example, was treated by him with remarkable empathy and respect. He praised her for her stoic endurance of hardships (Abr. 245–46) and suggested that she immediately grasped the Divine nature of the visiting "messengers" whom Abraham still took as regular guests (Abr. 111). Josephus, by contrast, consistently minimized all references to Sarah (as well as other biblical women), taking her, for example, altogether out of the scene with the messengers by stressing the presence of other servants who prepared the cakes for the guests (JA1:197). Moreover, we owe to Philo the earliest extant testimony to Jewish women philosophers, who were part of the Therapeutae. These women were not only versed in reading and writing, but also participated in the regular spiritual and exegetical activities of the group. Philo, on the whole, was highly sympathetic to this group. Nothing in his description suggests ambivalence concerning the women's activities.

Influence

Apart from Josephus, no ancient Jewish source mentions Philo, although there may be traces of Philonic influence in rabbinic Midrash, such as R. Oshaiah Rabbah's saying in *Genesis Rabbah* 1:1 echoing Philo, Opif. 16. The medieval Midrash Tadshe (in: A. Jellinek, *Beit ha-Midrash*, 3 (1967), 164–93) draws largely on Philonic material, while the first Jewish writer who mentions him is Azariah dei Rossi. Philo had a much greater influence on Christianity, not on the New Testament itself but on the Church Fathers, such as Clement of Alexandria, Origen, Ambrose, and many others. They eagerly drew on his exegesis and adopted many of his concepts. However, owing to their different approach, many of his distinctly Jewish notions were translated into Christian terms. H. Wolfson estimated Philo's influence to be very significant, arguing that his reconciliation of philosophy and revelation resurfaced in all monotheistic religions, whether it was with or without direct knowledge of his texts. This thesis, however, can hardly be proven, since Philo is not directly mentioned and the "Philonic" structure of thought which Wolfson identifies may well have developed out of a parallel synthesis of the Bible and Greek philosophy.

[Yehoyada Amir and Maren Niehoff (2nd ed.)]

PHILO OF BYBLOS (also called **Herennius Philo**, 64–161 C.E.), Greek author of a Phoenician history. Philo claimed that his history was a translation from the Phoenician of Sanchuniathon, whose sources go back to before the Trojan War. Many quotations from his history concerning religion are found in Eusebius' *Praeparatio Evangelica* (1:9, 22–10; 8). He is also said to have written, among other works, a history of the Jews in which he criticized Hecataeus of Abdera. Only fragments of his work survive.

PHILOSOPHY. In his article on the Jewish involvement in philosophy in the *Dictionnaire des sciences philosophiques*, written over a century ago, Solomon Munk pointed out that the Jewish mission to know God and to make Him known to the world was not basically involved with philosophy. After surveying the part played by Jews in philosophy, he concluded that "the Jews, as a nation, or as a religious society, play only a secondary role in the history of philosophy." As a nation or as a religious society this may be true, but even when Munk wrote it was not the case that Jewish participation in philosophy had been insignificant. Since his day the participation of Jews in philosophical activities has become extremely important.

It used to be said that the peculiarly Jewish role in philosophy had been that of middleman, transmitting the ideas of one culture to another, as some Jewish scholars had done in Spain, translating Arabic thought into forms available to Christian Europe. This, of course, was only part of the Jewish involvement in philosophy in the Middle Ages. Since the Renaissance many thinkers of Jewish origin have made central contributions to philosophy, and have played seminal roles in the development of modern Western thought. Some have played roles as Jews; others, who are of Jewish descent,

have functioned as individual intellectuals, or sometimes as Christian thinkers.

14th to 17th Centuries

It may have been because they could not function within the Jewish nation or the Jewish religious society that many intellectuals of Jewish origin from Spain and Portugal, functioning in Iberia, Italy, France, and Holland, developed crucial philosophical views. Being spiritually dispossessed, and forced into an alien Christian intellectual world, the Marrano intellectuals may have been led into a more profound philosophical examination of their situation, and through it to a new evaluation of man's place in the cosmos. The drama of the forced conversions, the expulsion of the Jews from Spain, and the terror of the Inquisition created a class of Marrano thinkers trying to find their place in the world, trying to find meaningful values, and trying to use the intellectual tools of the Christian world they found themselves in to justify their appreciation of the nature and destiny of man. In Spain and Portugal, the efforts of many Jewish Conversos now went into explorations of theology and philosophy to find a viable and significant theory. From the time of *Pablo de Santa Maria (converted in 1390), until well into the 17th century at least, Iberian intellectuals of Jewish origin were in the forefront in developing creative interpretations of the human scene, trying to define a Christian view that they could participate in. Most of the novel theories developed during Christian Spain's Golden Age were the product of this group. Spanish scholasticism, with its emphasis on universal law and natural rights, started from the views of Francisco de *Vitoria, and was developed by the humanists, Las Casas and Alonzo de la Vera Cruz. Spanish Erasmianism, with its emphasis on liberal Christianity, Christianity without theology, and a Christianity based on moral teachings rather than doctrines, was mainly a convert view. The Jesuit obedience theory was set forth by Diego Lainez, a theologian of Jewish ancestry. Christian kabbalism as a justification of the position of the New Christians was developed by Luis de *Leon, showing the role of Jewish Christians in an apocalyptic age.

Outside of Spain, exile thinkers of Jewish origin played an important role in philosophical thought. Judah *Abrabanel in Italy provided a major statement of Renaissance Platonism that was influential all over Europe. Juan Luis *Vives in the Lowlands was one of the chief exponents of humanism. It has been suggested that Montaigne's closest friend, the French humanist Etienne de la Boétie (1530–1563), was of Marrano origin. His *Discours de la servitude volontaire* (1576; Eng., *Anti-Dictator*, 1942) is a plea for human freedom and dignity against the tyranny of rulers and is the first modern statement of nonviolence as a means of protest.

The Marranos who settled in Amsterdam in the 17th century had been trained in Christian philosophy, and debated their problems in terms of European philosophical thought. *Manasseh Ben Israel, known as the Hebrew philosopher, provided the main perspective through which philosophers like

Mersenne, Grotius, and Cudworth saw Jewish ideas in philosophical terms. Within the Jewish community of Amsterdam, Marrano intellectuals like Uriel da *Costa and Juan de *Prado raised basic philosophical challenges not only to Judaism, but to the whole framework of revealed religion. Coupled with the radical biblical criticism of Isaac *La Peyrère, their criticisms led to the formulation of a new basic metaphysical ideology for a naturalistic nonreligious world in the theory of Baruch *Spinoza. Spinoza, starting from issues raised by heretical thinkers within the Jewish world in Holland, quickly developed a rationalistic, scientific metaphysics to explain the cosmos in terms of logic, psychology, and the 'new science.' Spinoza's naturalism soon became one of the fundamental presentations of the ideology of modern man, greatly affecting the materialists of the Enlightenment, the German idealists, and other movements. Spinoza has become the symbol of the pure modern philosopher, persecuted by religious orthodoxy, but preserving his philosophical ideals and mission. One of his opponents, *Orobio de Castro, tried to provide a philosophical defense of Judaism against Prado, Spinoza, Catholicism, and the liberal Christianity of Limborch and John Locke. Orobio de Castro, originally a professor of metaphysics in Spain, played a significant role in late 17th-century thought, influencing Locke, Bayle, and Fénelon.

18th to 19th Centuries

Philosophical activity in Amsterdam died out in the 18th century. The last thinker of note was Isaac de *Pinto who challenged *Voltaire's antisemitism, and Enlightenment atheism. His most influential work was in proposing the theory of modern capitalism against Hume and Mirabeau. He was one of the very first to understand the role of credit and circulation in the modern economic world.

The Enlightenment world, starting in Germany, led to another level of Jewish participation in philosophy. As Jewish intellectuals were emancipated and could participate in the full range of gentile society, they began to apply themselves to philosophical problems, especially of an ethical and general religious nature. The first to make his entry into the general philosophical scene in Germany was Moses *Mendelssohn. His writing on aesthetics, psychology, metaphysics, and philosophy of religion made him a central figure in Enlightenment thought, influencing his close friends, Theodor *Lessing and Immanuel *Kant. Mendelssohn sought to show that 18th-century Deism, the universal religion of reason, was the same as essential Judaism. In the spirit of the Enlightenment, he advocated religious toleration and equality for the Jews. Mendelssohn became a symbol in the general philosophical world of the enlightened and liberated Jew, who could contribute greatly to the mainstream of culture.

A Jewish doctor, Marcus *Herz, a friend of both Kant and Mendelssohn, played an important role in the development of Kant's philosophy. He was Kant's official "advocate," and discussed the latter's theories with him as they were being formed. Lazarus *Bendavid, at the end of the 18th century,

became one of the major expositors of Kant's philosophy. One of the first, and most important, critics of Kant's views was the Lithuanian émigré, Solomon *Maimon, who came to Germany, learned philosophy, and offered a skeptical critique of Kant. Kant considered Maimon's views to be the most astute of any of his opponents, and some of his theories regarding the creative function of the mind became important in the development of German idealism.

People of Jewish origin only begin to play a role in the course of the development of 19th-century German thought around the middle of the century. Moses *Hess and Karl *Marx redirected German idealism into a materialistic socialist ideology. Julius *Frauenstadt became Schopenhauer's main follower, exponent, and editor of his writings. Adolf *Lasson was one of the very few advocates of Hegelianism. One of the founders of neo-Kantianism, Otto *Liebmann, attacked the various metaphysical theories after Kant, and urged a return to the master. As a result of his efforts the neo-Kantian movement developed, and one of its most important leaders was Hermann *Cohen, head of the Marburg school. Cohen emphasized a panlogistic transcendental version of Kant's thought, as opposed to some of the speculative metaphysical interpretations. Cohen stressed the objective side of Kant, and sought to justify a priori knowledge of nature and values. He also tried to identify Kantian ethics with liberal socialism. Cohen played a very significant role in the development of German philosophy. One of his students, Arthur *Liebert, edited the journal *Kantstudien*, in which many of the discussions of neo-Kantianism took place.

In the course of the 19th century, Jews were gradually able to attend the universities and hold positions in them (often only if they were converts). They began to participate in the full range of intellectual activities. Jacob *Freudenthal of Breslau became one of the foremost scholars of ancient thought, both Greek and Hebrew, as well as one of the most important Spinoza scholars. Adolphe *Franck in France, the first Jewish professor at the Collège de France, a follower of Victor Cousin, made important contributions in the history of thought, philosophy of religion, and philosophy of law. Xavier *Léon founded the *Revue de métaphysique et de morale* to combat positivism and encourage speculative philosophy. The reform rabbi, Felix *Adler, started the *Ethical Culture movement, and played an important role in formulating and advocating a humanistic nonreligious ethical view.

20th Century

By the end of the 19th century secularization and assimilation had proceeded to the point where large-scale participation by Jews in philosophy was possible since antisemitic barriers were gradually being removed. Jewish intellectuals could devote their energies to trying to give philosophical interpretations of man's situation and his achievements. Many of the most original theories in 20th-century philosophy are the products of thinkers of Jewish origin, who have come to play a larger and larger role in European thought.

Starting with Henri *Bergson at the end of the 19th century, some of the major speculative philosophers have been Jews. Bergson's *Creative Evolution* and Samuel *Alexander's *Space, Time and Deity* have been two of the most prominent efforts to develop metaphysical systems in terms of modern knowledge. Vladimir *Jankélévitch in Paris, starting from Bergsonism, continued to try to find metaphysical meaning in human existence. Léon *Brunschvicg devoted himself both to historical scholarship and to maintaining the idealistic tradition in France. Karl *Joel developed a system called "the new idealism" in Germany. In America Paul *Weiss has been developing an original metaphysics influenced by Whitehead, and Mortimer *Adler has been advocating neo-Thomism. Nathan *Rotenstreich, in Jerusalem, has been setting forth a theory about human nature and the bases of values. The neo-Kantian movement in its many forms was led by Jewish thinkers, the most prominent of whom were Ernst *Cassirer and Leonhard *Nelson. Cassirer set forth a developmental Kantianism. Nelson, founder of the New Fries School, emphasized the psychological side of Kantianism. Other major figures who came out of the neo-Kantian movement were Emil *Lask, Franz *Rosenzweig, Samuel Hugo *Bergman, and Fritz *Heinemann. The phenomenological movement, which has been so important in 20th-century thought, was started by Edmund *Husserl. Seeking an unshakable foundation for human knowledge, he developed his phenomenological method and transcendental phenomenology. Max *Scheler applied the phenomenological approach to Catholic doctrines and to social psychology. Edith *Stein (who became a nun), influenced by Scheler, combined Thomism with phenomenology and existentialism. Aron *Gurwitsch has emphasized the application of phenomenology to psychology, Adolf *Reinach to the philosophy of law, and Moritz *Geiger to aesthetics. Herbert *Spiegelberg wrote the history of the phenomenological movement, and was a leading exponent of it in America along with Fritz *Kaufmann. Emanuel *Levinas, one of those who introduced phenomenology into France, played an important creative philosophical role in the contemporary European scene. Jewish thinkers, and some of Jewish origin, have played important parts in the existentialist movement. Jean *Wahl in France was a leading spokesman and theoretician. Martin *Buber was one of the most important figures in religious existentialism. The writings of Simone *Weil have played a significant role in postwar Christian existentialism. Jacques *Derrida was the founder of postmodern deconstructionism. George *Simmel was one of the most important figures in the naturalistic movement, both for his biological and Darwinian interpretation of Kant, and for his theory of sociology. Wilhelm *Jerusalem followed out some of the implications of pragmatism, Darwinism, and positivism. In America, Morris Raphael *Cohen, Horace *Kallen, and Sidney *Hook have developed some of the naturalistic ideas of James and Dewey.

In radical philosophy some of the major figures have been Jewish thinkers who have developed new interpretations of Hegel and Marx. Gyorgy *Lukacs, Ernst *Bloch, and Walter

*Benjamin set forth creative versions of Marxism, extending its insights into many cultural fields. Alexandre *Kojève has played a most important role in reinterpreting Hegel's thought. Herbert *Marcuse combined *Freud's and Marx's views, including those of the early Marx, into a powerful critique of modern society that was very influential on New Left thinkers. On the other side, two thinkers of Jewish origin were leaders of Russian Orthodox thought in Russia. Semyon *Frank, originally a Marxist, developed a metaphysical defense of Christianity. Lev *Shestov was a leading anti-rationalist fideist. Among non-Marxist social philosophers and social critics, Jewish thinkers have also made significant contributions. Julien *Benda criticized the role of the intellectuals. Elie *Halévy wrote against the tyrannies of fascism and communism. Hannah *Arendt analyzed the bases and nature of totalitarianism, and the nature of political freedom. Chaim *Perelman has done important work on the nature of justice.

In the analytic philosophical movement, which has been important in the English-speaking world, philosophers of Jewish origin have been in the forefront. One of the first proponents of linguistic analysis was Fritz *Mauthner. Leaders of the logical positivist movement included Herbert *Feigl, Philipp *Frank, and Friedrich *Waismann. Ludwig *Witgenstein established himself as one of the towering figures of 20th-century philosophy. The work of the logician Alfred *Tarski was also most important in this movement. Among the important American analytic philosophers are Max *Black, Nelson *Goodman, Arthur *Pap, and Morton *White. Thinkers of Jewish origin have played basic roles in 20th-century work in the philosophy of science and logic. Emile *Meyerson developed a philosophical view of the world based on modern science. Sir Karl *Popper has been one of the most important in evaluating the nature of science and the problems involved in gaining scientific knowledge.

In the area of historical studies and interpretations of philosophy, Jewish scholars have been in the forefront throughout this century. They have developed the best of European scholarship and have provided some of the most important ways of understanding various philosophical traditions, as well as editing some of the basic texts. Raoul *Richter wrote an important history of skepticism from antiquity onward. George *Boas wrote on Greek philosophy and on French thought. Hans *Jones, through his demythologizing method, helped in the understanding of Gnosticism. Richard *Waltzer examined the transition of Greek thought into Arabic philosophy. Shlomo *Pines wrote on Arabic and Jewish medieval philosophy. Harry Austryn *Wolfson examined the religious philosophical tradition from Philo, through the Church Fathers and medieval Islamic, Jewish, and Christian thought up to Spinoza. Raymond *Klibansky was influential in medieval and Renaissance studies. Paul O. *Kristeller was a leading figure in the many areas of Renaissance studies. One of Ernst Cassirer's contributions was a monumental study of the development of the modern problem of knowledge from the Renaissance onward. He also wrote on English Platonism and the philosophy

of the Enlightenment. Alexandre *Koyré was a leading figure in the study of the history of science from the Renaissance onward, as well as an important Descartes scholar. Leon *Roth wrote important interpretations of Descartes and Spinoza and showed their relationship to Maimonides' thought. R.H. Popkin wrote on the history of skepticism from the Renaissance to the Enlightenment. David *Baumgardt did important work on the philosophy of Jeremy Bentham, and Elie Halévy wrote the basic study of British philosophical radicalism.

The historical scholarship done on German thought from Kant onward is too copious to mention in detail. Neo-Kantians, especially, have studied the development of German philosophy extensively, and much of the basic work on Kant, Fichte, Hegel, and Schelling, has been done by scholars of Jewish origin.

Participation in philosophy by Jews has grown rapidly, especially in this century. Jewish concern with fundamental issues about man and the world has, no doubt, contributed to this, as has the growing toleration in academic-intellectual circles, especially in the West. The decline of Christianity as a central factor in European philosophy has also made it more possible for Jews to play a role in this area. At the present time in America, and to a lesser extent in England and France, among younger philosophers there are many important figures of Jewish origin who will probably play a most significant role in the decades to come. In Central Europe there are few Jewish intellectuals left, and in Eastern Europe they are being driven from their positions.

Jewish philosophy is described or defined in various ways, depending on the philosopher's or historian's understanding of both Judaism and philosophy. In general, the question of "what is Jewish philosophy?" would have been alien to the medieval Jewish philosophers, who saw themselves as engaging not in something particularly "Jewish" in a cultural sense, but in philosophy as a science, indeed as the "mother of sciences." As "lovers of wisdom," they understood the truth to transcend cultural or religious boundaries, and had no problem agreeing with and borrowing from the classical Greek and medieval Arab philosophers. Moses *Maimonides thus states explicitly that he borrows from "the words of the philosophers, ancient and recent, and also from the works of various authors, as one should accept the truth from whoever says it" (Introduction to the *Eight Chapters on Ethics* (Commentary to Mishnah Avot)), an attitude reiterated by Shem Tov ibn *Falaquera (13th century): "A person should learn whatever he is capable [of learning] from those who speak the truth, even if they are non-believers, just as one takes honey from a bee" (*Epistle of the Debate*, p. 13); "It is appropriate to accept the truth from any person, even if he is on a lower level than oneself or from another nation ... It is not proper to look at the speaker, but

rather at what is said" (*Book of Degrees*, pp. 11–12). These positions reflect similar views expressed by Islamic thinkers, such as the early Arab philosopher al-Kindi ("We ought not to be ashamed of appreciating the truth and of acquiring it, wherever it comes from, even if it comes from races distant and nations different from us. For the seeker of truth, nothing takes precedence over the truth" (*Al-Kindi's Metaphysics*, ed. A. Ivry, pp. 57–58)) and Maimonides' contemporary Averroes, who regarded the study of philosophy, including that of the non-Muslim ancients, "regardless of whether this other one shares our religion or not," as a religious obligation, and that to forbid the study of philosophy because of its foreign source is like denying a thirsty person water, so he dies of thirst, just because some people have choked on water (cf. *Averroes on the Harmony of Religion and Philosophy*, ed. G. Hourani, pp. 46–49).

The customary modern assignment in universities of philosophy to the humanities, rather than to the natural sciences, would also have violated the classical and medieval self-perception of the philosophers. It is, however, precisely that categorization of philosophy as one of the humanities, and not as an empirical, natural science, which renders philosophy subject to particular cultural influences and forms of expression, such as literature, history and the arts, and makes possible the historical and cultural question, "What is Jewish philosophy?"

There is no clear consensus among Jewish philosophers and scholars of Jewish philosophy regarding the proper definition of the field. The approaches to our question are not necessarily mutually exclusive, and, therefore, we find thinkers and scholars who may support more than one approach. The responses to "what is Jewish philosophy" include a denial of "Jewish philosophy" as an oxymoron; purely biographical or linguistic criteria; religious "philosophy of Judaism"; harmonizing Judaism and philosophy; essentialist message vs. method; and contextual criteria, including Jewish sources, motives, audience, and impact. All of these approaches, in turn, raise further questions.

For some philosophers, including Leo Strauss and Emmanuel Levinas, and for some scholars, like Joseph Sermonea and Zev Levy, philosophy (at least when it deals with purely philosophical questions of logic, ethics, aesthetics, epistemology and the like) is essentially a universal discipline, like physics, and therefore "Jewish philosophy" is an oxymoron. Levinas, for example, accordingly regarded his philosophical and his Jewish writings to be different and basically unrelated genres (although many of his interpreters and readers, Levy included, question that dichotomy in Levinas' self-evaluation).

When moving to biographical or linguistic criteria, presumably a non-Jew cannot produce Jewish philosophy – but is any philosophy produced by a Jew *ipso facto* Jewish philosophy? A Jew who plays football is not usually considered to be playing Jewish football, so does the accident of Jewish birth automatically mean that a Jew who philosophizes is engaging

in Jewish philosophy in any meaningful sense? Or should the thinker's Jewish identity be regarded as a necessary but not sufficient criterion for determining the Jewishness of his or her philosophy? Similarly, is the fact that philosophy is written in Hebrew or another Jewish language a sufficient criterion for determining the Jewishness of the philosophy, as suggested by no less of a scholar than Jacob Klatzkin (whose *Ozar ha-Munahim ha-Filosofiyim (Thesaurus Philosophicus Linguae Hebraicae*, 1928–33) remains a classic reference book for students of medieval Jewish philosophy)? Does translating works of non-Jewish philosophers into Hebrew "convert" their philosophy and make it Jewish? Are the Greek works of Philo, the Arabic works of all the medieval philosophers from Saadia Gaon to Maimonides, and the books written by modern Jewish philosophers in European languages, not to be considered Jewish? Returning to the biographical criteria, how are we to regard such philosophers as Abner of Burgos, who wrote some of his works in Hebrew, but converted to Christianity; Abu al-Barakat al-Baghdadi, who converted to Islam; or free-thinkers like Hiwi al-Balkhi, who attacked all religion, including Jewish; or Baruch Spinoza, who was excommunicated? Is their philosophy Jewish in some sense, and if so, only prior to their apostasy, critique or excommunication?

Jewish sources, audience, motivation and impact have also been suggested as criteria for defining Jewish philosophy, but raise similar difficulties. Jewish philosophers frequently and explicitly cite non-Jewish sources (as mentioned above); they may intend to be read by one group but in fact be read by another; and in some cases (among 20th-century thinkers, notably Martin Buber and Abraham Joshua Heschel), although their thought is overtly Jewish in content, it frequently has a significant impact upon certain trends in Christian thought.

Emil Fackenheim is among those who have suggested that Jewish philosophy refers to the combination of an essential Jewish message with the general philosophical method; the message is the ethical teaching of the classical prophets of ancient Israel, and the method is that of Socrates, Plato, and Aristotle. While undoubtedly accurate when applied to such philosophers as Fackenheim himself, such a definition has less obvious application when the subject of the philosophizing is something other than ethics, and deals with questions such as cosmology or creation vs. eternity, which may be hinted at in various books of the Bible, but are by no means central to the concerns of the prophets.

The idea that Judaism has some identifiable and definable essence, presumed by Fackenheim, becomes much more pronounced in the essentialist approach of such scholars as Julius Guttman and Alexander Altmann, for whom Jewish philosophy is the religious philosophy of Judaism, in other words, where Judaism has a religious essence and is the subject of the philosophical inquiry. Guttman's classic book, still unrivaled in its scope as the work of a single author surveying Jewish philosophy in all its periods, is, therefore, deliberately called *Philosophies of Judaism* (although in the German

original, and in the expanded Hebrew translation from which the English was prepared, the title appears in the singular, *Die Philosophie des Judentums*), and not a “history of Jewish philosophy.” For Guttman, “Since the days of antiquity, Jewish philosophy was essentially a philosophy of Judaism... This religious orientation constitutes the distinctive character of Jewish philosophy” (*Philosophies*, p. 4). “The great majority of Jewish thinkers made the philosophic justification of Judaism their main subject” (*ibid*, p. 55). As R.J.Z. Werblowsky points out in his introduction to the English translation of Guttman’s *Philosophies*, “The very title of the book contains a programme and betrays its basic orientation – that of the philosopher of religion. The philosopher of religion philosophizes about religion, just as the philosopher of law philosophizes about law ... Judaism is something given, a datum, something that is there before the philosophers begin to philosophize about it” (*Philosophies*, pp. viii–ix). In Guttman’s view, the unique character of Jewish life in the Diaspora prevented the development of a “Jewish philosophy” in the way that French or German philosophy evolved. This view was explicitly shared by Alexander Altmann: “It would be futile to attempt a presentation of Judaism as a philosophic system, or to speak of Jewish philosophy in the same sense as one speaks of American, English, French or German philosophy. Judaism is a religion, and the truths it teaches are religious truths. They spring from the source of religious experience, not from pure reason” (“Judaism and World Philosophy,” in: L. Finkelstein (ed.), *The Jews: Their History, Culture and Religion*, 2 (1949), 954). Guttman’s and Altmann’s essentialist definition is shared by such scholars as Leon *Roth, S.B. *Urbach, and Eliezer *Berkovits. It also underlies the approach of Arthur Hyman, who served as editor of the Jewish philosophy division of the first edition of the *Encyclopaedia Judaica* (1971) and who wrote the original Jewish Philosophy entry: “Jewish philosophy may be described as the explication of Jewish beliefs and practices by means of general philosophic concepts and norms. Hence it must be seen as an outgrowth of the biblical and rabbinic traditions on which Judaism rests as well as part of the history of philosophy at large.”

Hyman then recognized the need to modify this essentialist position to make it more flexible: “This description must, however, be expanded to include the general philosophic literature in Hebrew produced by Jews in the latter part of the Middle Ages and the various secular philosophies of Jewish existence formulated by modern Jewish thinkers. General philosophers who happened to be Jews or of Jewish extraction are not considered part of the tradition of Jewish philosophy. Whereas the biblical and rabbinic traditions were indigenous products of the Jewish community, Jewish philosophy arose and flourished as Jews participated in the philosophic speculations of the external culture. Significant religious and philosophical differences distinguish ancient and medieval from much of modern Jewish thought; nevertheless, the subject matter of Jewish philosophy may be divided into three parts. First, as interpretation of unique aspects of Jew-

ish tradition, Jewish philosophy deals with such topics as the election of Israel; the revelation, content, and eternity of the Torah; the special character of the prophecy of *Moses; and Jewish conceptions of the Messiah and the afterlife. Second, as philosophy of religion, it investigates issues common to Judaism, Christianity, and Islam (as well as to certain kinds of metaphysics), such as the existence of God, divine attributes, the creation of the world, the phenomenon of prophecy, the human soul, and general principles of human conduct. Third, as philosophy proper, it studies topics of general philosophic interest, such as the logical categories, the structure of logical arguments, the division of being, and the nature and composition of the universe. Historically, Jewish philosophy may be divided into three periods: (1) its early development in the Diaspora community of the Hellenistic world, from the second century B.C.E. until the middle of the first century C.E.; (2) its flourishing in Islamic and Christian countries during the Middle Ages from the tenth until the early 16th century; and (3) its modern phase beginning in the 18th century and continuing to the present. Its prehistory, however, begins with the Bible.”

The essentialist approach to defining Jewish philosophy clearly and unequivocally answers our question of what is Jewish philosophy: it is a philosophy of Judaism (i.e., a philosophy whose subject of inquiry is Judaism), and it is a philosophy which verifies, or in the very least, accords with, Judaism, which is understood to be an invariable given, prior to and transcending changing philosophies, whether its essence is presumed (as in Guttman) or defined explicitly (as in Berkovits).

A modification of the essentialist approach is offered by Colette *Sirat, who maintains both of these essentialist conditions, and according to whom “only the combination of philosophy and Jewish tradition forms Jewish philosophy ... The essence of Jewish philosophy is the harmonizing of a particular system of thought with the Jewish sources” (*Jewish Philosophical Thought in the Middle Ages* (Heb.), 1975, p. 8). Sirat further modified her definition a decade later, in the revised and expanded English edition of her book, to provide greater recognition of the manifold spectrum of Jewish opinions: “One can say that the history of Jewish philosophy in the Middle Ages is the history of the efforts of Jews to reconcile philosophy (or a system of rationalist thought) and Scripture... The harmonizing of these two systems of thought in one unique verity was the theme of almost all Jewish medieval philosophy” (*A History of Jewish Philosophy in the Middle Ages*, p. 5).

Despite its clarity, the essentialist approach, even in its modified harmonizing form, presupposes a Jewish essence, or a definitive Jewish tradition, although it generally avoids defining that essence and tradition. As with the *via negativa* to the divine attributes, it seems far easier to determine what Judaism is not (eg., it is not Christianity or Islam) than what it is, and attempts at a positive definition, like that proposed by Berkovits (the irreducible facts of the events of revelation) are far from universally accepted and tend to be more

prescriptive than descriptive. Moreover, limiting philosophy to an explication or verification of given truths undermines the openness which is basic to the philosophical method and weakens, if not eliminates, the distinction between philosophy and theology – a distinction Maimonides insisted upon in his critique of the *Kalām (Islamic theology), which attempts to make reality conform to its hypotheses, rather than adapting its hypothesis to reality (*Guide of the Perplexed* 1:71). The essentialist approach also makes it difficult to account for a richness of varied and even opposing points of view in Jewish philosophy on many questions, for example on such questions as creation, free will and proofs of God, and for Jewish philosophers disagreeing with each other (Maimonides vs. Saadiah Gaon) while agreeing with much of non-Jewish thought (respectively Aristotelianism or Muʿtazilite Kalām). Furthermore, the assumption of the essentialists that there is a continuous and uniform tradition that we may call “Judaism” or “the Jewish tradition,” which must then be harmonized with foreign philosophy, does not provide an adequate paradigm for dealing with the prior encounters in each generation or period of that “Judaism” or “Jewish tradition” with foreign cultures, and the ways in which foreign elements were always adopted by Judaism and adapted to its needs. The ideas or values perceived as novel, foreign, or heterodox in one period came, in later periods, to be an integral and organic part of what was perceived to be orthodox Jewish tradition, as the case of Maimonides himself demonstrates.

A third approach to defining Jewish philosophy – between the formalism of purely biographical or linguistic criteria on the one hand, and essentialism on the other hand – suggests that Jewish philosophy is to be understood as philosophy in a Jewish context. The contextual approach shares with essentialism a rejection of external formalist criteria which indicate nothing of the content of the philosophy, and shares with formalism a rejection of the essentialist reduction of Jewish philosophy to philosophy of Judaism and agreement with Jewish tradition. Zev Levy, who regards “Jewish philosophy” as an oxymoron when the philosopher is dealing with universal and purely philosophical questions, acknowledges that a philosophy can be Jewish contextually, when it relates to the destiny of the Jewish people and expresses Jewish cultural creativity. The contextual criteria for making such an assessment include sources and influences (the dimension of the past, whether the philosopher’s ideas grew out of the collective experience of the Jewish people), the intended audience or the philosopher’s motivation (the dimension of the present, whether the philosopher is attempting to address Jewish concerns, or whether Jewish concerns motivate the philosophizing), and impact (the dimension of the future, whether the philosopher’s ideas had an impact on subsequent Jewish thought) – questions for which there may not always be a clear and unequivocal answer, especially for recent philosophers whose impact cannot yet be gauged. Such philosophy may be Jewish in a narrow sense, if it deals with overtly Jewish issues, or in a broader sense, if it deals with any questions,

but does so within a Jewish context. As Aviezer *Ravitzky suggests, what is common is the question, not the answer. Jewish philosophy, he suggests, “is a philosophy which deals with a certain *problem* (or more precisely, a certain type of problem), namely the confrontation or encounter of the nonphilosophic Jewish sources and the non-Jewish philosophic sources ... That is, it deals with the problem of the existence of the Jew as a Jew confronted by his universal philosophic knowledge and consciousness... The problem which motivates the rise of Jewish philosophy is the encounter of two *traditions*, the Jewish tradition and the philosophic tradition” (“On the Study of Medieval Jewish Philosophy,” in *History and Faith: Studies in Jewish Philosophy* (1996), 4, 7).

RECENT HISTORIES OF JEWISH PHILOSOPHY

An essentialist approach to defining Jewish philosophy was possible so long as histories were written by one author with a consistent overview of what is Jewish philosophy. Julius Guttmann’s *Philosophies of Judaism* retains its unique status as the only attempt by a single author to provide such a total and consistent survey of Jewish philosophy in all its periods. Subsequent scholars (such as Harry Wolfson, Shlomo Pines, and Alexander Altmann) focused their scholarly attention on particular thinkers and specific issues, and did not write general histories. Others (such as Jacob Agus, Raphael Jospe, Nathan Rotenstreich, Norbert Samuelson, Eliezer Schweid, Kenneth Seeskin, Colette Sirat, S.B. Urbach) generally wrote only histories or text books relating to a given period (medieval, modern, or contemporary), although Joseph Blau wrote a popular overall survey, *The Story of Jewish Philosophy* (1962) and Norbert Samuelson also wrote a general text book, *Jewish Philosophy: An Historical Introduction* (2003), presenting at least a few representatives of different periods.

With the rapid growth in recent decades of interest in, access to, and availability of Jewish philosophy, including previously unknown or unpublished manuscript material, and with increasing emphasis on specialization, the kind of total overview achieved by Guttmann is unlikely to be replicated, and recent overall histories and anthologies, not limited to one period or one topic, have been collective efforts of teams of scholars, and have appeared with accelerated frequency, as have recent encyclopedias.

Earlier 20th-century histories of Jewish philosophy, written by single authors, appeared once every generation – roughly once every 35 years. Isaac *Husik’s *History of Medieval Jewish Philosophy* was published in 1916. Guttmann’s *Philosophies of Judaism*, which first appeared in German in 1933, was revised and expanded in Hebrew and published posthumously in 1951 (and the Hebrew was the basis for the 1964 English translation). The expanded and revised English version of Colette Sirat’s *History of Jewish Philosophy in the Middle Ages* appeared in 1985. These later works do not share Guttmann’s essentialist approach, and, as collective works, have tended to a more inclusive, contextual presentation. Colette Sirat’s 1975 Hebrew and 1985 English histories already broke new ground

by devoting a chapter to astrology. The 1997 *History of Jewish Philosophy* (Routledge *History of World Philosophies*, Vol. 2), edited by Daniel H. Frank and Oliver Leaman, which includes a team of 35 authors, takes this inclusivistic trend further by incorporating under Jewish philosophy discussions of its historical, social and cultural contexts (chapters 6, 13, 22, 23, 25); political philosophy (ch. 18); mysticism (ch. 19); Jewish nationalism (ch. 31), and Zionism (ch. 32); the Shoah (ch. 36); and Jewish feminist thought (ch. 38).

The loss of a consistent theoretical overview provided by a single author may, therefore, prove to be a gain for our understanding the history of Jewish philosophy. Research in recent decades has tended to blur the already unclear demarcations between strictly philosophical and other types of thought. Moreover, the historical fact is that, in some cases, the more purely philosophical and theoretical works exerted less influence on the Jewish community of their day and on subsequent Jewish history and thought than did works which, while including philosophic terminology and doctrines, are not themselves strictly philosophical.

In the paradoxical tradition of 19th-century German-Jewish *Wissenschaft des Judentums, which (in the words of Leopold *Zunz) sought to provide a scientific “account of what has already been sealed away,” while rapidly disappearing Jewish books could still be found, and thereby contributed to a renaissance of Jewish literature and learning, Isaac Husik concluded his early 20th-century history with the pessimistic comment, “There are Jews now and there are philosophers, but there are no Jewish philosophers and there is no Jewish philosophy.” Husik had little idea how his own book, and those which came after it, would play a role in the revitalization in the 20th century of the study and practice of Jewish philosophy.

[Raphael Jospe (2nd ed.)]

BIBLICAL AND RABBINIC ANTECEDENTS

Although the Bible and the rabbinic literature contain definite views about God, man, and the world, these views are presented unsystematically, without a technical vocabulary, and without formal arguments in their support. Hence, it is more appropriate to speak of biblical and rabbinic theology rather than philosophy. Nevertheless, Jewish philosophers of all periods held that their opinions were rooted in the Bible and the rabbinic writings, and they quote these literatures extensively in support of their views. Interestingly, quotations from the Bible far outnumber those from the rabbinic writings, so that one may speak of a certain “Bible-centeredness” of Jewish philosophy. In quoting the Bible, Jewish philosophers often imposed a philosophic rigor on its vocabulary and thought that is not immediately apparent from the literal reading of the text. However, besides quoting the Bible, certain philosophers also had a theory concerning the nature of this document. Aware that the world view of the Bible is rather simple and unphilosophical, they found it difficult to accept that the Bible lacked philosophical sophistication. If God created man with reason, the discoveries of the human mind

must be related in some fashion to the content of divine revelation. Hence, they viewed the Bible as twofold: on its literal level it was addressed to philosophers and non-philosophers alike, and thus it had to speak in a manner intelligible to all; but behind its rather simple exterior it contained a more profound meaning, which philosophers could discover by proper interpretation. This esoteric content is identical, fully or in part, with the teachings of philosophy. In assuming this methodological principle, Jewish philosophers resembled Jewish mystics, who discovered secret mystical teachings behind the literal biblical text. We may now examine some representative biblical passages which Jewish philosophers cited to support their views. (For a fuller picture the reader may refer to the indexes of biblical passages appearing in Saadiah Gaon, *The Book of Beliefs and Opinions*, tr. by S. Rosenblatt (1949); Judah Halevi, *The Kuzari*, tr. by H. Hirschfeld (1964); Moses Maimonides, *The Guide for the Perplexed*, tr. by M. Friedlaender (1904²; repr. 1956); Joseph Albo, *Sefer ha-Ikkarim*, ed. and tr. by I. Husik, 4, pt. 2, 1930).

Bible

Of verses concerning God that were cited by Jewish philosophers, perhaps the central one was “Hear, O Israel: the Lord our God, the Lord is one” (Deut. 6:4), which was held to refer to God’s uniqueness as well as to His simplicity. The opening of the Decalogue – “I am the Lord thy God” (Ex. 20:2, Deut. 5:6) – was understood as a declaration of God’s existence, and, by some, even as a positive commandment requiring the affirmation of the existence of God. God’s omnipotence was indicated by the verse: “I know that Thou canst do all things, and that no purpose of Thine can be thwarted” (Job 42:2), and His omniscience, by the verse: “His discernment is past searching out” (Isa. 40:28). That God is incorporeal was derived from the verses: “... for ye saw no manner of form” (Deut. 4:15) and “To whom then will ye liken Me, that I should be equal?” (Isa. 40:25), and that His essence is identical with His existence, from the verse: “I am that I am” (Ex. 3:14). How God can be known was derived from a story concerning Moses. Moses had asked God to show him His ways and then he had requested that He show him His glory. God granted Moses the first of these requests, but denied him the second (Ex. 33:12ff.). This story was interpreted to mean that God’s glory, that is, His essence, cannot be known by man, but His ways, that is, His actions, can be known.

Of passages and verses concerning the universe, the creation chapters (Gen. 1–2) were interpreted as stating that the world was created out of nothing and in time. The creation of the universe was also derived from the verses: “I have made the earth, and created man upon it; I, even My hands, have stretched out the heavens, and all their hosts have I commanded” (Isa. 45:12) and “It is He that hath made us, and we are His” (Ps. 100:3). That the celestial spheres are animate and rational was deduced from the verse: “The heavens declare the glory of God” (Ps. 19:2), and the verse: “The sun also arises, and the sun goes down, and hastens to his place where he

arises" (Eccles. 1:5) was seen as a description of the daily motion of the uppermost celestial sphere, which produces day and night. That the heavens and the earth are finite was derived from the verses: "... from the one end of the earth even unto the other end of the earth" (Deut. 13:8) and "... from the one end of heaven unto the other ..." (Deut. 4:32). From four terms appearing in Genesis 1:2 it was deduced that the sublunar world consists of the four elements: earth (*erez*), air (*ru'ah*), water (*mayim*), and fire (*hoshekh* – ordinarily darkness, but here interpreted as fire). Reference to the composition of these four elements of matter and form and to the succession of forms in matter was seen in the verses: "Then I went down to the potter's house, and, behold, he was at his work on the wheels. And whensoever the vessel that he made of clay was marred in the hand of the potter, he made it again another vessel, as seemed good to the potter to make it" (Jer. 18:3–4). Somewhat more fancifully, Abraham and Sarah, respectively, were identified with form and matter.

Other verses provided a description of human nature. The verses: "See, I have set before thee this day life and good, and death and evil ... therefore choose life, that thou mayest live ..." (Deut. 30:15–19) were frequently quoted in support of the notion that man possesses freedom of choice. That man's essential nature is his reason was derived from the verse: "Let us make man in our image..." (Gen. 1:26), and that wisdom distinguishes him from other creatures, from the verse: "He that teaches man knowledge" (Ps. 94:10). That man has five senses is indicated by the verses "They have mouths, but they speak not; Eyes have they, but they see not; They have ears, but they hear not; Noses have they, but they smell not; They have hands, but they handle not ..." (Ps. 115:5–7). "For the life of the flesh is in the blood ..." (Lev. 17:11) refers to the nutritive faculty of the human soul, and "Notwithstanding thou mayest kill and eat flesh within all thy gates, after all the desire of thy soul ..." (Deut. 12:15), to the appetitive. Some interpreted that man's ultimate goal in life is to understand God from the verses: "Know this day, and lay it to thy heart, that the Lord, He is God in heaven above and upon the earth beneath ..." (Deut. 4:39) and "Know ye that the Lord He is God" (Ps. 100:3); but others invoked the verse "And thou shalt love the Lord thy God ..." (Deut. 6:5) to show that man's final goal is the love of God. That man should be modest in his conduct is indicated by the verse: "The righteous eateth to the satisfying of his desire ..." (Prov. 13:25), and that the middle way is the best is shown by the verse: "... and thou shalt walk in His ways" (Deut. 28:9). While many other verses and passages were cited in support of these and other teachings, Jewish philosophers were also interested in whole chapters and complete biblical books. The theophany in Isaiah 6 and the account of the divine chariot in Ezekiel 1 and 10 were used as descriptions of God and the angelic realm. Of special interest were the more philosophical books of the Bible, including Proverbs, Job, Song of Songs, and Ecclesiastes, on which numerous philosophical commentaries were written, especially in the late Middle Ages.

Rabbinic Literature

Since the Greek philosophers had appeared by the time the rabbis of the Talmud formulated their teachings, it may be asked whether the rabbinic literature reveals any Greek philosophical influence. While the rabbis had some acquaintance with Greek philosophical ideas, particularly with those of the Stoics (in popular versions), it has now been shown that the rabbis were not familiar with formal philosophy (see S. Lieberman, in: *Biblical and Other Studies*, ed. by A. Altmann (1963), 123–41). The names of the major philosophers are absent from the rabbinic writings, and the only philosophers mentioned by name are Epicurus and the obscure, second century cynic Oenomaus of Gadara. In the tannaitic literature the term "Epicurean" (*apikoros*) is used, but it seems to refer to a heretic in general rather than someone who embraces Epicurus' doctrines. H.A. Wolfson, the modern historian of philosophy, stated that he was unable to discover a single Greek philosophic term in rabbinic literature (Wolfson, *Philo*, 1 (1947), 92). Talmudic scholar Saul Lieberman replied to Wolfson: "I want to state more positively: Greek philosophic terms are absent from the entire ancient Rabbinic literature" ("How Much Greek in Jewish Palestine?," in: A. Altmann (ed.), *Biblical and Other Studies* (1963), 130). In his *Greek in Jewish Palestine* (1942) Lieberman wrote that "Certain elements on most of the Greek sciences of that time were known to the rabbis in Palestine, and the formulations and the definitions in natural sciences are very similar to those of the Greek scholars. But here again there is no evidence for rabbinic quotations from first-hand sources; all their information may have been derived from secondary sources" (pp. 1–2). In the case of the rabbis and the Gnostics, according to Lieberman, the situation is similar: "Certain basic teachings of the rabbis were not entirely foreign to the rabbis ... However, even in this domain the early rabbinic literature never mentions a single Greek 'philosophic' term used by the Gnostics" (*ibid*, pp. 132, 141).

This conventional view has been challenged by Jacob Neusner in a series of studies. While acknowledging that there are no overtly philosophical terms in rabbinic literature, that the rabbis never cite any Greek philosophical text, and that it is unlikely that they had direct personal or literary contact with philosophy, Neusner argues that "a sizeable portion of the Mishnah is philosophical in method, manner of formulating results, and ... in specific philosophical program," and that when read philosophically, the Mishnah's arguments coincide with Aristotle's rules of classification, and its issues and positions are congruent with those of Greek philosophy. Neusner concludes, therefore, that the Mishnah is philosophical in method (which he sees as similar or parallel to Aristotelian classification), medium and message (which he compares to the Neoplatonic unity of being) (*Judaism as Philosophy*, 1990; reissued as *The Method and Message of the Mishnah*, 1997). In Neusner's analysis, Wolfson and Lieberman, by looking only at the trees, thus missed the forest. The Mishnah, in his view, is philosophy and not theology because it doesn't

merely cite Scripture, but analyzes its truths rationally. In the Mishnah, as in Aristotle, God serves as a principle but is not involved in the system of classification of natural reality. But what follows the Mishnah is theology, not philosophy, because the later rabbinic literature appeals to citations of Scripture and of the Mishnah for authority, not to reason (*The Transformation of Judaism*, 1992). Neusner later extends the argument to the *Gemara* as well. He sees the Mishnah as philosophy (especially natural history) in form of a law code, and the *Gemara* also as philosophy, specifically dialectical analysis, in the form of a commentary on the Mishnah, but reiterates that his claim is “congruity,” i.e., similarity, and not direct continuity or contact between the rabbis and Greek philosophy (*Jerusalem and Athens: The Congruity of Talmudic and Classical Philosophy*, 1997). In Neusner’s view, the concrete cases of law, at least in some cases, thus reflect a “philosophical template,” in which diverse subjects yield an orderly system of abstract thought (*Intellectual Templates of the Halakhah*, 2006).

Jewish philosophers cited rabbinic sayings, as they did biblical quotations, for support of their views, once again imposing a philosophic rigor that the sources, on literal reading, lacked. To indicate that attributes describing God in human terms must be interpreted allegorically, philosophers invoked the saying: “The Torah speaks in the language of the sons of man” (Yev. 71a; BM 31b). How circumspect one must be in describing God is shown in the following story:

Someone reading prayers in the presence of Rabbi Ḥanina said “God, the great, the valiant and the tremendous, the powerful, the strong, and the mighty.” Rabbi Ḥanina said to him, “Have you finished all the praises of your Master? The three epithets ‘the great, the valiant, and the tremendous,’ we should not have applied to God, had Moses not mentioned them in the Law, and had not the men of the Great Synagogue followed and established their use in prayer; and you say all this. Let this be illustrated by a parable. There once was an earthly king who possessed millions of gold coins; but he was praised for owning millions of silver coins. Was this not really an insult to him?” (Ber. 33b).

To show that the substance of the heavens differs from that of sublunar beings the philosophers cited R. Eliezer’s saying: “The things in the heavens have been created of the heavens, the things on earth of the earth” (Gen. R. 12:11). Similarly, that the heavens are animate beings was derived from a passage in *Genesis Rabbah* (2:2) which states in part “... the earth mourned and cried on account of her evil lot saying, ‘I and the heavens were created together, and yet the beings above live forever, and we are mortal.’” The saying “The world follows its customary order” (Av. Zar. 54b) was taken as confirmation that a natural order exists in the world.

Other rabbinic sayings deal with human nature. The saying: “All is in the hands of heaven except the fear of heaven” (Ber. 33b; Nid. 16b) is interpreted to mean that, while certain natural dispositions are fixed in man, his actions are free. That there is a correlation between what man does and the fate he suffers is supported by the sayings: “There is no death with-

out sin, and no sufferings without transgression” (Shab. 55a) and “A man is measured with the measure he uses himself” (Sot. 1:7). The spiritual nature of the afterlife is taught in the saying of Rav: “In the World to Come, there is no eating, no drinking, no washing, no anointing, no sexual relations, but the righteous sit, their crowns on their heads, and enjoy the radiance of the *Shekhinah*” (Ber. 17a). Many other citations could be added to this list.

Of special interest are two esoteric rabbinic doctrines known respectively as “the account of creation” (*ma’aseh bereshit*) and “the account of the divine chariot” (*ma’aseh merkavah*). While it is clear that, historically speaking, these two doctrines were forms of Jewish gnosticism (see Scholem, *Mysticism*, 40ff.; idem, *Jewish Gnosticism, Merkavah Mysticism, and Talmudic Tradition*, 1960), philosophers saw in them philosophical truths. Maimonides goes so far as to identify *ma’aseh bereshit* with physics and *ma’aseh merkavah* with metaphysics, holding that the rabbis were conversant with philosophic doctrines but presented them enigmatically.

For editions and translations of philosophic works described below, the reader is referred to the entries appearing under individual philosophers’ names. The modern scholarly literature concerning individual philosophers is also listed there.

HELLENISTIC JEWISH PHILOSOPHY

Jewish philosophy began, as has been noted, in the Diaspora community of the Hellenistic world during the second century B.C.E. and continued there until the middle of the first century C.E. It arose out of the confrontation between the Jewish religion and Greek philosophy (particularly the Stoic-Platonic tradition) and had as its aim the philosophic interpretation of Judaism. It also had an apologetic purpose: to show that Judaism is a kind of philosophy, whose conception of God is spiritual and whose ethics are rational. Jewish philosophers polemicized against the polytheism of other religions and against pagan practices. In spite of their philosophic interests they maintained that Judaism is superior to philosophy (see H.A. Wolfson, *Philo*, 1 (1947), 3–27). Philo of Alexandria is the only Jewish Hellenistic philosopher from whom a body of works has survived; all the other materials are either fragmentary or only allude to philosophic or theological topics. The dating of these other materials also presents considerable difficulties. The language of Hellenistic Jewish philosophy was Greek. Jewish Hellenistic culture may be said to have begun with the Septuagint, the Greek translation of the Bible. The translation of the Pentateuch dates from the third century B.C.E. Some scholars have held that this translation already manifests philosophic influences (*ibid.*, 94, n. 39).

The first Jewish philosopher appears to have been *Aristobulus of Paneas (middle of second century B.C.E.), who wrote a commentary on the Pentateuch, fragments of which have been preserved by Christian Church Fathers. He argues that Greek philosophers and poets derived their teachings from the wisdom of Moses, and he interpreted the Bible alle-

gorically. He held, for example, that the expression “hand of God” refers to God’s power. He maintained that wisdom (the Torah) existed prior to heaven and earth and that God’s power extends through all things. He gives a symbolic interpretation of the Sabbath and comments on the symbolic character of the number “seven.” The letter of *Aristeas, a pseudepigraphic account of the history of the Greek translation of the Bible, which incidentally polemicizes against paganism, states that God’s power is manifested throughout the world, praises the mean as the best course of action, holds that the help of God is necessary for the performance of good deeds, and advocates the control of passions. The author also presents moral interpretations of the ritual laws, holding that such laws are designed to teach man righteousness, holiness, and perfection of character. II Maccabees mentions cryptically resurrection and creation out of nothing. IV Maccabees, evidently written by someone familiar with Greek philosophy, particularly with the teachings of the first-century B.C.E. Stoic Posidonius, maintains that reason can control the passions, illustrating this theme through examples from Jewish history. The author cites the Stoic definition of wisdom and identifies wisdom with the Law. The Sibylline Oracles (in their extant form a combination of Jewish and Christian teachings) denounce paganism and mention the resurrection and the messianic age. The Wisdom of Solomon, which is patterned after Hebrew Wisdom Literature, contains occasional philosophic terms and arguments. The work polemicizes against idolatry, holding that it is a source of immoral practices. H.A. Wolfson (*Philo*, 1 (1947), 287–9) maintains that the author’s conception of wisdom is the same as Philo’s conception of the logos (see below), although others have argued that the two conceptions are different. According to Wolfson, wisdom first existed as an attribute of God, then as an independent being created by God prior to the creation of the world, and, finally, as immanent in the world. God created the world out of formless matter. Man can love righteousness, God, and wisdom, and the love of wisdom is manifested in the observance of the Law. The attainment of wisdom also requires the help of God. The righteous are rewarded with immortality, while the wicked shall perish.

Philo of Alexandria

*Philo (c. 20 B.C.E.–c. 50 C.E.), who was well versed in Greek philosophy and poetry, presented his views in a series of commentaries on passages of the Pentateuch, works on biblical topics, and independent philosophic treatises. He was influenced largely by Platonic and Stoic ideas, and his philosophy also has a mystical streak. Because of its unsystematic presentation, his philosophy has been interpreted in several ways. Some consider Philo merely a philosophic preacher, others a philosophic eclectic, still others a mystic. H.A. Wolfson, in his *Philo* (on which what follows is based), presents him as a systematic philosopher who is the founder of religious philosophy in Judaism, Christianity, and Islam. Wolfson describes philosophy from Philo to Spinoza as essentially

Philonic (*Philo*, 1 (1947), 87–115). (For a discussion of Philo’s knowledge of Hebrew and of Palestinian Jewish traditions, see *Philo*, 1 (1947), 88–93.)

BIBLICAL EXEGESIS. The Bible for Philo was the revealed word of God which had an apparent and a hidden meaning: the apparent meaning was addressed to the masses, while the hidden meaning was reserved for students of philosophy. To discover these two meanings Philo used the literal and allegorical methods of interpretation. Most biblical passages lend themselves to both kinds of interpretation, but Philo insists that anthropomorphic descriptions of God must be interpreted allegorically. While he interprets certain parts of the creation story only allegorically, and while he allegorizes biblical names, persons, and events, he also appears to accept biblical narrations in their literal sense. Philo’s attitude toward the laws of the Pentateuch is complex and depends on one’s evaluation of the nature of Alexandrian *halakhah*. In some passages he maintains that one must observe the totality of Mosaic law, but in others he states that such laws as that requiring the return of a pledge before sunset (Ex. 22:25–26) are trivial in their literal sense and must be understood allegorically.

GOD, LOGOS, AND THE WORLD. Philo’s conception of the world is based on Platonic notions, particularly as interpreted and systematized by Posidonius. Characteristic of this approach is the opinion that there exist intermediary beings between God and the world. God, according to Philo, transcends the world. He is one (both in the sense of unique and simple), self-sufficient, eternal, incorporeal, and unlike His creatures. He is good, but He is not identical with the idea of the good of which Plato spoke. In His essence He is unknowable, indescribable, and unnamable; the terms used by Scripture to describe Him are properties referring to His actions. To explain creation and the structure of the world, Philo uses the Platonic notion of “ideas.” These ideas, according to him, exist first as patterns in the mind of God, then as incorporeal beings between God and the world, and finally as immanent in the world. Since ideas must inhere in a mind, Philo posits a logos (also called wisdom) in which the ideas inhere. Like the ideas, the logos exists in three forms: as an attribute of God, as an incorporeal being existing between God and the world, and as immanent in the world. The ideas are patterns of things, but they are also causes producing these things; in the latter sense they are called powers. God created the world because He is good, and He created it freely and by design. He first created the incorporeal logos, also called intelligible world, and then the perceptible world. The perceptible world was created out of matter, but it is not clear whether Philo held that this matter was created or uncreated. Creation is not a temporal process, and when it is said that God is prior to His creation it is meant that He is its cause. To create the world God used the self-existent logos, but everything is said to have been created by God Himself except man’s body and his irrational soul. The immanent logos, while inhering in the material world, is still immaterial. It produces the laws of nature; but since God cre-

ated these laws, he can change them if he so desires, and this makes miracles possible.

SOULS. When God created the world, He created with it incorporeal rational souls of varying degrees of impurity. The souls which had greater purity remained incorporeal and became the angels which are God's messengers; the less pure souls were joined to bodies and became the souls of men. The human soul is active in sensation and cognition and it possesses free will. Upon death, the human soul may ascend to the upper realm, where it may come to rest among angels, in the intelligible world, or even beyond this, close to God, Immortality is the gift of God.

KNOWLEDGE AND PROPHECY. Basing himself on Plato, Philo speaks of three kinds of knowledge: sensation or opinion, rational knowledge derived from sensation, and the knowledge of ideas. However, whereas Plato describes knowledge of ideas as recollection, Philo identifies it with prophecy. Prophecy, which is said to come from God, can come in three possible ways: through the Divine Spirit, through a specially created divine voice, or through angels. Prophecy can be accompanied by frenzy and ecstasy, and it is here that Philo's mystical inclination comes to the fore. There are also three kinds of prophetic dreams which correspond to the three kinds of prophecy. Prophecy through an angel can come to a non-Jew, prophecy through the Divine Spirit can also come to a non-Jew provided he has attained moral and intellectual perfection, but prophecy through the voice of God is reserved for Jews. Prophecy has a fourfold function: prediction of the future, expiation of the sins of the people, promulgation of law, and vision of incorporeal beings.

ETHICS AND POLITICS. Philo accepts the philosophic notion that happiness comes through the acquisition of the moral and the intellectual virtues; but he holds that human laws achieve this purpose only imperfectly, whereas the Law of Moses, divine in its origin, achieves it perfectly. The good life is not so much life in accordance with virtue but life in accordance with the Law. The Law contains the philosophic virtues, but adds to them additional ones of its own, such as faith, humanity, piety, and holiness, as well as prayer, study, and repentance. Obedience or disobedience to the Law leads to reward or punishment, respectively, which are, for Philo, individual. Philo presents Jewish law in the light of Greek political theories. The Law of Moses is the constitution of a state initiated by Moses. In this state there live citizens and noncitizens of various kinds. The state is ruled by a king, a high priest, and a council of elders. However, since this state is based on God's Law, God is the real ruler, and earthly rulers only administer and interpret the divine Law. This state was originally only a state for the Jewish people, but it also provides the pattern for an ideal society (still composed of states) which will come to be in messianic times. Philo influenced the teachings of Church Fathers such as Clement of Alexandria, Origen, and Gregory of Nyssa, but his works remained unknown

to Jewish philosophers of the Middle Ages. Whatever influence he may have had on them came through the indirect transmission of his ideas. It was only in the 16th century that, through Azariah dei Rossi, his works became known once again among Jews.

MEDIEVAL PERIOD

Medieval Jewish philosophy began in the early tenth century as part of a general cultural revival in the Islamic East, and continued in Muslim countries – North Africa, Spain, and Egypt – for some 300 years. The Jews of the period spoke, read, and wrote Arabic and thus were able to participate in the general culture of their day. Although Jews produced a rich literature on biblical and rabbinic subjects and much poetry, they did not produce an extensive scientific and philosophical literature of their own. The extant literature was adequate for their needs, and their major speculative efforts were devoted to investigating how Judaism and philosophy were related. Most of their philosophic works were written in Arabic. Toward the end of the 12th century the setting of Jewish philosophy began to change. The Jewish communities in the Islamic world declined, and communities hospitable to philosophic and scientific learning developed in Christian lands, particularly Christian Spain, southern France, and Italy. As a result, Arabic was gradually forgotten, and since, with some notable exceptions, Jews had little occasion to learn Latin, Hebrew became the language of Jewish works in philosophy and the sciences. Thus, whereas in Muslim countries Jews were part of the mainstream of general culture, in Christian lands they had to foster a general culture of their own. In this period, while Jews continued to write works investigating the relationship of Judaism and philosophy, they now also produced an extensive literature devoted to purely philosophic topics. As a first step they translated into Hebrew the extensive Arabic philosophical literature of the previous period. Then they commented on the newly translated works, summarized them in compendia and encyclopedias, and composed their own treatises and books. Jewish philosophy during this period was largely based on sources from the Islamic philosophic tradition, but some Jewish philosophers were also influenced by the views of Christian scholastics. The second period in medieval Jewish philosophy lasted until the early 16th century.

Sources and Translations

The philosophic literature available during the Islamic period was based on works studied in the late Hellenistic schools. As the Islamic empire expanded, these schools came under Muslim rule, and the works studied in them were soon translated into Arabic. At times these translations were made from Greek originals, but more often from intermediary Syriac translations. A number of works were translated more than once. The translators, most of whom were Nestorian and Jacobite Christians, were active from about 800 until about 1000. (For an account of these translations see R. Walzer, *Greek into Ara-*

bic, 1962.) Of Platonic works translated, the most important were the *Timeaus*, *Republic*, and *Laws*, but Arabic translations of some other dialogues are extant. Perhaps the most important influence was exercised by the works of Aristotle, all of which were known, except for the *Dialogues* and *Politics*. Together with the works of Aristotle there were translated works by his commentators *Alexander of Aphrodisias, *Themistius, Theophrastus, Simplicius, and John Philoponus. There were also translations of works by Galen, some of which are no longer extant in the original Greek. The neoplatonic tradition was represented by the *Theology of Aristotle*, a collection of excerpts from Plotinus' *Enneads*, and the *Liber de Causis*, a collection from Proclus' *Elements of Theology*, as well as by other neoplatonic writings, some of which have been discovered only recently. There were also translations of the Hermetic writings. In addition, philosophers of the period were familiar with Epicurean, Stoic, and skeptic teachings (see *Epicurus, *Stoicism, and *Skeptics), which, however, reached them through the reports of other authors rather than through translations of original works. Jewish philosophers were similarly influenced by the works of Islamic philosophers of the period, including Al-Kindī Al-Rāzī, *Al-Fārābī, *Avicenna (Ibn Sīnā), Al-*Ghazālī, *Avempace (Ibn Bājja), and *Averroes (Ibn Rushd). However, Averroes influenced medieval Jewish philosophy during its second period rather than its first. Jews were familiar, also, with the collection known as the "Epistles of the *Brethren of Sincerity," and they knew the writings of Sufi mystics.

Main Schools

Paralleling Islamic philosophers, Jewish philosophers of the Islamic period may be divided into four groups: followers of the Mu'tazilite branch of the *Kalām, Neoplatonists, Aristotelians, and philosophical critics of Aristotelian rationalism. In the work of one philosopher, at times doctrines from several schools were mixed. Before expositions of the opinions of individual philosophers are given, the characteristics of each of the four groups will be briefly described.

MU'TAZILITE KALĀM. Mu'tazilite Kalām arose in Islamic circles toward the end of the eighth century. Its views developed out of reflections on problems posed by Scripture. The two major problems were the unity of God and God's justice, and because of their concern with these problems, Mu'tazilites were also called "Men of Unity and Justice." The first problem arose from the observation that the Koran affirms that God is one, yet describes Him by many attributes; the second, from the observation that God is omnipotent and omniscient (which seems to imply that God causes everything in the world including man's actions), yet punishes man for his wrongdoing. To solve the first problem, the Mu'tazilites set out to show that God can be described by many attributes without violating His unity; to solve the second, that, although God is omnipotent and omniscient, man's freedom and, hence, responsibility for his actions are not precluded.

These two interests were broadened to include discussions of other aspects of God and human nature. Mu'tazilites also addressed themselves to more theological problems, such as the nature of different kinds of sinners and the afterlife. Since the Mu'tazilites' speculations derived from a concern with scriptural problems, they did not formulate a systematic philosophy as the neoplatonists and later the Aristotelians did. Philosophy was for them a way of solving scriptural difficulties, and they made use of any philosophical argument that might be of help. Hence, their philosophic speculations were eclectic, and a philosopher would make use of Platonic, Aristotelian, or Epicurean arguments as the need arose. Characteristic of Mu'tazilite works is their division into sections devoted to the unity of God and His justice. Also characteristic are proofs of the existence of God based on proofs of the creation of the world and the division of scriptural commandments into rational and traditional. In reaction to the Mu'tazilites, a more orthodox kind of Kalām, known as Ash'arite (founded by Al-Ash'arī, d. 935), arose. While Ash'arite Kalām was known to Jewish philosophers and is cited by them, it appears that there were no Jewish Ash'arites. The Ash'arites were known for their insistence on the absolute omnipotence and omniscience of God, which led them to deny the existence of laws of nature and human free will. However, to safeguard God's justice and man's responsibility, they formulated the doctrine of "acquisition," according to which man, while not causing his acts, can do them willingly or unwillingly.

NEOPLATONISM. Neoplatonism was characterized by the doctrine of emanation, which states that the world and its parts emanated from a first principle, God, in a manner analogous to the emanation of rays from the sun or streams of water from a living fountain. To safeguard the absolute unity of God, Neoplatonists posited a first emanation, identified by some with wisdom (logos) and by others with will, which was between God and the world. Drawing on an analogy between man, the microcosm, and the world, the macrocosm, Neoplatonists posited a number of spiritual substances, such as intellect, soul, and nature, between the first emanation and the world. Some Neoplatonists also held that the spiritual world, no less than the visible, is composed of matter and form. Neoplatonism is marked by the insistence that God is completely above the created order and thus can be described only by negative attributes. Some Neoplatonists held that the world proceeds by necessity from God and is contemporaneous with Him, while others, making concessions to Scripture, affirmed that the world is the product of God's will and is posterior to Him. In their conception of man, Neoplatonists subscribed to the duality of body and soul. The soul originates in the upper region and in some way is forced to join the body. It is man's purpose in life to free the soul from the body, thus making it possible for it to rejoin the upper region from which it came. This "purification" is accomplished through practice of the moral virtues and through philosophic speculation. Neoplatonic ethics generally are ascetic.

ARISTOTELIANISM. *Aristotelianism was based on the premises that the world must be known through observation and that this knowledge is gained through study of the various speculative and practical sciences. The speculative sciences, which deal with the nature of reality, are divided into physics, mathematics, and metaphysics; the practical sciences, which deal with human conduct, are divided into ethics, economics, and politics. Logic is the prerequisite instrument of all the sciences. The physics of the Aristotelians is based on an analysis of the many changes taking place in the world. These changes are explained through the four causes – the material, efficient, formal, and final causes. The world is divided into the celestial and the sublunar regions. The sublunar world is one of generation and corruption, and everything in it is ultimately reducible to the four elements – earth, water, air, and fire. Sublunar beings are divided into minerals, plants, animals, and rational beings, and all of them are composed of matter and form. By contrast, the celestial region, not subject to generation and corruption, is immaterial, and the only motion occurring within it is the locomotions of the celestial spheres. The celestial region is made up of its own element – the so-called fifth element. It consists of the various celestial spheres in which are set the sun, moon, planets, and fixed stars. Each sphere consists of a body governed by an incorporeal soul and intelligence. The earth is fixed at the center of the universe and the celestial spheres revolve around it. All organic beings – plants, animals, and human beings – are governed by an internal principle of motion called a soul. In man, the most complex organic being, the soul possesses nutritive, sensory, appetitive, imaginative, and rational faculties, or powers. The highest faculty is the rational, and to develop it is the purpose of human life. The rational faculty starts as the potential intellect and through exercise becomes the actual intellect and, finally, the acquired intellect. The agent in the production of human knowledge is the active intellect, which in the Islamic and Jewish traditions is identified with the lowest of the celestial intelligences. The active intellect also produces prophecy in men who have the required preparation. While there are some variations in particulars, Islamic and Jewish philosophers subscribe to this general scheme. Metaphysics is viewed as the study of being qua being, that is, of the highest categories, and also as a study of the incorporeal beings, that is, of God and the incorporeal intelligences, which are identified with the angels of Scripture. Morality is viewed as the acquisition of the moral and intellectual virtues. The moral virtues, which, generally speaking, consist of following the mean, are acquired by habituation and thereby become second nature. They are a prerequisite for the attainment of the intellectual virtues, the final goal. While in their ethics Aristotelians followed the traditions of Aristotle, in their political philosophy they followed Plato. They accepted the notion Plato set forth in the *Republic*, that mankind may be divided into three classes – men of gold, men of silver, and men of bronze – and identified the first class with the philosophers, who can understand by means of demonstration, and the other two classes with those

who can only follow arguments of persuasion. For Plato, the state is founded by a philosopher-king, who in the Islamic and Jewish traditions is identified with the legislative prophet.

Critics of Aristotelianism

The critical reaction to philosophy was marked by the attempt to show, on philosophic grounds, that philosophers had not made good their claim to have discovered physical and metaphysical truths. The fact that philosophers could not agree on these truths was taken as evidence that they had failed. However, while the critics rejected physics and metaphysics, they accepted the principles of Aristotelian logic.

Saadiyah Gaon

The first Jewish philosopher of the Middle Ages was *Saadiyah Gaon (882–942), head of the rabbinical academy of Sura (near Baghdad). Influenced by the Mu'tazilites and relying on Platonic, Aristotelian, and Stoic notions, he undertook to formulate a Jewish Kalām. His major philosophic work, which, in Mu'tazilite fashion, is divided into a section on divine unity and a section on divine justice, is his *Book of Opinions and Beliefs* (*Emunot Ve-De'ot*; *Kitāb al-Amānāt wa al-l'tiqādāt*), but his philosophical opinions are also found in his commentary on *Sefer Yeẓirah*, his commentary on the Bible, and in his polemics against Hiwī al-Balkhī. Saadiyah wrote his *Book of Opinions and Beliefs* to rescue his contemporaries from the doubts that had befallen them and to lead them from being men whose beliefs were based on religious authority alone to becoming men whose beliefs were also confirmed by arguments of reason. Since these were his goals, he began with a methodological preface devoted to an analysis of doubt and how it may be remedied, a definition of belief (the opposite of doubt), and a description of sources of knowledge – sense perception, self-evident first principles, inference, and reliable tradition – which enable one to distinguish true from false beliefs. In typical Mu'tazilite fashion, Saadiyah began the book proper (treatise 1) with four proofs for the creation of the world; from the finiteness of the world, from its composition, from accidents, and from the nature of time. Typical of these proofs is the one from finiteness. According to this argument, the finite nature of the universe requires a finite force preserving it, and everything possessing a finite force must have a beginning in time. Saadiyah goes on to show that from the creation of the world it follows that it was brought into being by a creator who is distinct from it, and that this creator made it out of nothing. It was part of Saadiyah's method to refute current opinions which differed from his own, and thus he adds the refutation of 12 other cosmogonic theories which he considered wrong. Saadiyah next demonstrates that God is one (treatise 2). However, despite His unity, God is described by a multiplicity of attributes, such as life, power, and knowledge. According to Saadiyah, these attributes only serve to explicate the divine nature and do not suggest that any multiplicity exists in God. God must be described by many attributes because human language cannot find one word describing them all. In his discussion Saadiyah takes issue with dualistic

and trinitarian conceptions of God. God's kindness toward His creatures requires that He provide them with a law, adherence to which will guide them to earthly happiness and to eternal bliss (treatise 3). This law, the Torah, contains commandments of two kinds: rational, such as the prohibitions against murder and theft, which reason can also discover on its own, and traditional, such as the Sabbath and dietary laws, which must be revealed through the will of God. Rational commandments are general and require particular traditional commandments for their implementation; and traditional commandments upon examination are also found to have certain reasons. The promulgation of the divine precepts requires the existence of prophets, whose mission is confirmed by the miracles they perform. However, the prophecy of Moses is confirmed not only by miracles but also by the reasonableness of the law he brought. This law is unchanging and cannot be abrogated.

Man, Saadiah held, is the goal of creation, and divine justice requires that he be free. He offers two kinds of arguments for the existence of human choice: first, man experiences himself to be free, and there is no evidence that his acts are compelled; second, holding man responsible for his acts requires that he be free. Since man is free, God justly rewards and punishes him. God's foreknowledge is compatible with human freedom, for to foreknow something is different from causing it. Invoking Mu'tazilite models again, Saadiah (treatise 5) discusses different categories of righteous and wicked men. Among them is the penitent, who accomplishes repentance in four steps: renunciation of sin, remorse, the quest for forgiveness, and the assumption of an obligation not to sin again. The sufferings of the righteous are explained as "sufferings of love" (*yissurin shel ahavah*), that is, their sufferings in this world will be compensated by the reward they will receive in the next. (Maimonides later attacked this doctrine.) Man's soul originates at the time of the formation of the body, and its place of origin is the human heart (treatise 6). The substance of the human soul is akin to that of the celestial sphere. The latter section of the *Book of Opinions and Beliefs* is devoted to eschatological issues, and Saadiah's discussion follows traditional Jewish lines. He accepts the doctrine of the resurrection of the body and offers numerous arguments in its support (treatise 7). The resurrection will occur after Israel has been redeemed. The redemption (treatise 8) may take place in two ways. If the time appointed for the Exile passes before Israel repents, God will first send the Messiah from the house of Joseph. Great calamities will befall the Jews, but in the end they will be redeemed by the Messiah from the house of David. Should Israel repent before the completion of the appointed time, the Messiah from the house of David may come right away. In the messianic era, Israel will return to its land and the Temple will be rebuilt. The Christian claims that the Messiah has already come are false. The final stage is the world to come (treatise 9), in which the righteous will be rewarded and the wicked punished. Man's body and soul will remain together in the world to come, and life in that world is eternal. Saadiah

concludes his book with an appendix (treatise 10) describing how man should conduct himself in this world.

Other Rabbanite Followers of Kalām

Although Saadiah remained the major Jewish exponent of Mu'tazilite Kalām, other Jewish philosophers made use of kalam teachings. In Rabbanite circles, kalam influences were evident until the rise of Aristotelianism in the 13th century, while among Karaites, Kalām provided the dominant philosophy throughout the Middle Ages. David ibn Marwān *al-Mukammiš, probably an older contemporary of Saadiah, combined kalam, Platonic, Aristotelian, and Neoplatonic teachings in his *Ishrūn Maqālāt* ("Twenty Treatises"), a work only partially preserved. His views are also cited in *Judah b. Barzillai al-Bargeloni's commentary on *Sefer Yeẓirah*. Al-Mukammiš cites the kalam formula: "God is knowing, but not with knowledge; living, but not with life," interpreting it to mean that God's attributes are identical with each other and with His essence. Following the Neoplatonists, he adds that God's attributes must be understood as negations. Kalam and Greek philosophic influences are also found in the Bible commentary (extant in fragments) of *Samuel b. Hophni (d. 1013), head of the academy of Sura. He also held that God's attributes are identical with His essence, and, again following the Mu'tazilites, he teaches that only prophets can work miracles. *Nissim b. Jacob b. Nissim ibn Shahin of Kairouan, a younger contemporary of Samuel b. Hophni, uses Mu'tazilite doctrines at the beginning of his introduction to his commentary on the Talmud. *Hai Gaon (d. 1038), last head of the academy of Pumbedita, was also acquainted with Mu'tazilite doctrines, but took issue with some of them. For example, he criticized Samuel b. Hophni for limiting miracles to prophets, holding that pious persons can also perform them.

[Arthur Hyman]

Karaites

Karaite speculative thought has generally mirrored Rabbanite speculative thought, and discussions of philosophical interest can be found both in treatises fully devoted to the subject, of which there are not many, as well as in works belonging to other genres, such as exegesis, law, and poetry. The first Karaites generally did not formulate clearly their theological views, and there is some indication that some objected to rationalism. By the 10th century, Karaites came under the influence of Mu'tazilite Kalām, and both the legalist, Ya'qub al-Qirqisani, and the exegete, Japheth ben Eli, incorporated Kalam ideas into their works. Only in the late 10th and early 11th century did Karaites write separate speculative treatises incorporating fully the ideas and terminology of the Basran Mu'tazilites, most notably Abd al-Jabbar. In the 11th century, the outstanding Karaite philosophers were Joseph b. Abraham al-*Bašir (author of *Kitab al-Muhtawi* and *Kitab al-Mansuri*) and his disciple *Jeshua b. Judah, whose views were similar. They believed that rational knowledge of God precedes belief in revelation; only after it has been established that God exists, that He is wise, and that He is omnipotent, is the truth

of revelation guaranteed. A similar rationalism is manifest in their conception of ethics: they maintained that various specific moral principles are self-evident upon reflection, e.g., that good should be done and evil avoided, that one should be grateful, and that one should tell the truth. This awareness is independent of revelation, since even those who deny God and revelation adhere to these principles. The moral law is binding not only for man but also for God, a point which is central to their theodicy. They also adopted the Kalam view that the world is composed of atoms, and the atomic theory can be used to prove the creation of the world, and, thereby, the existence of God.

Al- Baṣīr's influence among Karaites remained strong for almost 300 years, kept alive by Byzantine Hebrew translations of his works and a number of independently written Hebrew treatises, which propounded his ideas. In the late 13th century, Maimonidean Aristotelianism began making inroads into Karaite thought. The main figure to attempt an accommodation between the Karaite tradition of Kalām and Maimonides' *Guide of the Perplexed* was *Aaron ben Elijah of Nicomedia, author of *Ez Hayyim* ("Tree of Life," written in 1346). Although he ostensibly objected to Greek philosophy as undermining Judaism, he incorporated many Aristotelian ideas (form and matter, separate intellects, causality) into his work. Aaron defended the intellectual honesty of his Karaite predecessors, against Maimonides' assertion that those Jews who adopted Kalām did so for theological, not scientific, reasons, but on many issues, such as prophecy and theodicy, he followed Maimonides' lead. Like some Rabbanite post-Maimonideans, Aaron also criticized Maimonides for positions which he felt were too radical, such as negative theology and the assertion that creation of the world cannot be demonstrated. By the late 15th century, Karaite Kalām had all but disappeared from Byzantine Karaite thought, but traces of it remained in more popular Karaite presentations of theology.

Karaite thinkers also engaged in dogmatics, generally listing ten articles of faith. The first such list was written by Judah *Hadassi (fl. 1149); a similar, but eventually more authoritative, list was presented by Elijah *Bashyazi (Bashyatchi; d. 1490). Dogmatics was especially important since ritual slaughterers were obligated to hold clear conceptions of Karaite theology in order for their meat to be ritually acceptable.

[Daniel J. Lasker (2nd ed.)]

Isaac Israeli

Neoplatonism in Jewish philosophy appeared at the same time that Kalām did. The first Neoplatonist was the renowned physician Isaac b. Solomon *Israeli (c. 855–c. 955), who flourished in Kairouan. Influenced by the Islamic philosopher al-Kindī and various Neoplatonic writings, he composed *Kitāb al-Ḥudūd* (*Sefer ha-Gevulim*; "Book of Definitions"), *Kitāb al-Jawāhir* ("Book of Substances"), *Sefer ha-Ru'ah ve-ha-Nefesh* ("Book on Spirit and Soul"), *Sha'ar ha-Yesodot* ("Chapter on the Elements"), and *Kitāb al-Ustuqṣṣāt* ("Book on the Elements"). In Latin translations some of these works influenced

Christian scholastic thought. According to Israeli, God, the Creator, in His goodness and love created the world in time and out of nothing. The means of creation were His power and His will, which for Israeli are attributes of God, not separate hypostases. Two simple substances, first matter and first form, or wisdom, come directly from God. It appears that these two principles combine to form the next hypostasis, intellect; but Israeli also affirms that first matter and form have no separate existence but exist only in the intellect. Intellect is followed by three distinct hypostases of soul – rational, animal, and vegetative. The next hypostasis is nature, which Israeli identifies with the sphere or heaven. This hypostasis is the last of the simple substances and holds a position intermediate between these substances and the perceptible world. The four elements of the lower world are produced from the motion of the sphere or heavens. Israeli distinguished three stages in the creation of the world: creation proper, which produces only first matter, first form, and intellect; emanation, which produces the four spiritual substances; and causality of nature, which produces the world below the heavens. Israeli's philosophy of man is based on the Neoplatonic notion of the human soul's return to the upper world from which it came. The soul's ascent proceeds in three stages: purification, which consists of turning away from appetites and passions; illumination by the intellect, which produces wisdom defined as knowledge of eternal things; and union with, or adherence to, supernal wisdom (not God), at which stage the soul becomes spiritual. Union with supernal wisdom can be accomplished even in this life. Israeli identifies union with the religious notion of paradise, and he holds that the punishment of sinners is that their souls cannot ascend to the upper region but are caught in the fire extending below the heavens. Israeli distinguishes between philosophy, which is the quest for wisdom, and wisdom, which is the final goal. Discussing the prophet, Israeli sees no sharp distinction between him and the philosopher: both are concerned with the ascent of the soul and with guiding mankind toward truth and justice. Israeli distinguishes three kinds of prophecy, which are in ascending order: voice (*kol*), spirit (*ru'ah*), and speech (*dibbur*). Many of Israeli's ideas are cited and developed in the commentary on *Sefer Yeṣirah* by his disciple, *Dunash ibn Tamim.

Solomon Ibn Gabirol

The most important Jewish Neoplatonist was Solomon ibn *Gabirol (c. 1020–1057, possibly 1070); beginning with him the setting of Jewish philosophy shifted to Spain. Also an important Hebrew poet, Ibn Gabirol presented his philosophy in *Mekor Ḥayyim* ("The Source of Life"; *Fons Vitae*), *Tikkun Middot ha-Nefesh* ("The Improvement of the Moral Qualities"), and his Hebrew philosophical poem, *Keter Malkhut* ("The Kingly Crown"). The Arabic original of *Mekor Ḥayyim* is no longer extant, but the work was preserved in a full Latin translation and in a Hebrew paraphrase of the 13th century by Shem Tov b. Joseph *Falaquera. The Latin translation was circulated widely in Christian scholastic circles, and, possibly because the work

was a pure philosophic treatise lacking biblical and rabbinic citations, its author, known as Avicbron or Avemcebrol, was considered a Muslim or an Arab Christian. Divided into five treatises, *Mekor Hayyim* deals mainly with different aspects of the principles of matter and form, though it also contains incidental accounts of other aspects of Ibn Gabirol's thought. It reveals influences of Neoplatonic writings as well as of the pseudo-Empedoclean writings. Ibn Gabirol's conception of God is Neoplatonic in that it emphasizes that God is beyond the world and can be known only through negations. According to *Mekor Hayyim*, from God, called First Substance, emanates the divine will or wisdom (logos); but, according to *Keter Malkhut*, wisdom and will as successive emanations are distinct. Next come universal matter and form. According to some passages, universal matter emanates from God, and universal form, from the will; according to others, both principles emanate from the divine will. Three spiritual substances, intellect, soul, and nature, and then the perceptible world follow. According to some interpreters, Ibn Gabirol introduced the notion of the will to give a voluntaristic complexion to the doctrine of emanation, while according to others, he subscribed to the view that emanation proceeds by necessity from God. Another characteristic doctrine of Ibn Gabirol is the notion that all beings other than God, including the spiritual substances, are composed of matter and form. Ibn Gabirol's account of matter and form is ambiguous. There are passages in which he accepts the Aristotelian notion that matter is the substratum for change, while form determines the essence; but there are other passages in which he maintains that the essence of something is determined by its matter, while the forms produce differences between substances having the same material principle. In typical Neoplatonic fashion, Ibn Gabirol presents the goal of human life as the soul's return to the upper sphere, which is accomplished through proper conduct and philosophic speculation. In his *Tikkun Middot ha-Nefesh*, he discusses 20 moral qualities (four for each of the five senses) and tries to relate them to the four humors of the human body. Ibn Gabirol's philosophic views influenced later kabbalistic thought.

Bahya Ibn Paquda

Toward the end of the 11th century, *Bahya b. Joseph Ibn Paquda wrote his *Sefer Torat Hovot ha-Levavot* ("Guide to the Duties of the Hearts"; *Kitab al-Hidaya ila Farai'd al-Qulub*), a devotional manual which achieved great popularity among Jews. The work was influenced by Neoplatonism, Kalām, the *hermetic writings, and Sufi literature, and Bahya readily quoted stories and sayings from Islamic, as well as Jewish, sources. Bahya's work rests on a distinction between "duties of the limbs" (*hovot ha-evarim*), religious commandments that require overt actions, and "duties of the hearts" (*hovot ha-levavot*), those commandments which require specific beliefs and inner states (intentions). He holds that the latter are commanded by the Torah no less than the former. In the ten chapters of his work he discusses the following duties of the

hearts: belief in God's unity; examination of created beings, which leads to an understanding of the divine goodness and wisdom manifest in nature; service of God; trust in God; sincerity in serving God; humility; repentance; self-examination; abstinence; and, finally, love of God. Bahya defines and describes these traits and provides practical guidance for their attainment. Using a Kalām distinction, Bahya divides the duties of the limbs into rational and traditional commandments, while the duties of the hearts are all rational. Although Bahya's work is largely practical, he also insists on theoretical knowledge, holding that knowledge of God is a necessary prerequisite for practicing the other duties of the hearts. Hence, he devotes the first chapter of his work to kalamic proofs (based on Saadiah) demonstrating the creation of the world and the existence and unity of God. Of the proofs for the creation of the world, Bahya prefers the one from composition. God's unity, he holds, is different from all other unities, and His essential attributes (existence, unity, and eternity) are to be considered as descriptions of God's actions. Similar views were later expressed by Maimonides. Of special interest is Bahya's discussion of abstinence, one of the most extensive in Jewish philosophic literature. Bahya acknowledges that there is a general abstinence for all mankind that is practiced to improve man's physical, moral, and political conditions, but maintains that there is also a special abstinence required of the adherents of the Torah. This special abstinence requires the rejection of everything that is not necessary for the satisfaction of man's natural desires and has as its goal the control of man's desires and the subsequent development of his intellect. However, Bahya's asceticism is moderate. Disapproving of those who separate themselves from the world or confine themselves to their homes, Bahya recommends that one participate in the social endeavors of his fellow men and restrict asceticism to his personal life. The final goal is the love of God, which Bahya defines as the soul's turning to God so that it may cleave to His upper light. The soul is a simple spiritual substance, which was implanted by God in the body, but which wants to free itself from bodily desires and pain in order to attain a spiritual state.

PSEUDO-BAHYA. A work written between the middle of the 11th and 12th centuries entitled *Kitab Ma'ani al-Nafs* ("On the Nature of the Soul") was attributed to (Pseudo-)*Bahya, but it is not by him. Influenced by Neoplatonic and hermetic (Gnostic) teachings, the work describes the origin of the world by emanation and the nature of the soul. The soul is a spiritual substance, independent of the body, which comes from the upper world to which it wants to return. In its descent, the soul acquires influences from the various regions through which it passes, and they account for differences between the souls. It is also polluted by the body in which it inheres. Return to the upper world is accomplished by practicing moral virtues and acquiring knowledge. The book contains a description of the afterlife, including the punishments of various kinds of sinners.

Abraham bar Ḥiyya

*Abraham b. Ḥiyya (first half of the 12th century), who lived in Spain and was the author of works on mathematics and astronomy, was the first to write philosophical works in Hebrew. His philosophic ideas, influenced by Neoplatonism and Aristotelianism, are found in his *Hegyon ha-Nefesh ha-Azuvah* (“Meditation of the Sad Soul”) and in his messianic treatise *Megillat ha-Megalleh* (“Scroll of the Revealer”). Central to the former work is a discussion of repentance; in general, his interests are more ethical and theological than philosophic. Abraham b. Ḥiyya subscribes to the doctrine of emanation, but, differing from earlier Neoplatonists, he interposes a world of light and a world of dominion between God and the three spiritual substances. His conception of matter and form is Aristotelian: he holds that these principles exist only in the corporeal world, not in that of the simple substances. In *Hegyon ha-Nefesh*, Abraham b. Ḥiyya divides the fates of souls after death into four categories: souls that have acquired intellectual and moral perfection will ascend to the upper world; souls that have acquired intellectual, but not moral, perfection will ascend only to the sphere below the sun, where they will be afflicted by the sun’s fire; souls that have acquired moral, but not intellectual, perfection transmigrate to other bodies until they have acquired knowledge; and souls that have neither perfection will perish with their bodies. However, in *Megillat ha-Megalleh*, he denies the transmigration of the soul and makes the afterlife more dependent on moral perfection. In *Megillat ha-Megalleh*, Abraham b. Ḥiyya formulates a theory of history reminiscent of Judah Halevi’s theory and of Christian speculation. The history of the world can be divided into six periods corresponding to the six days of creation. There is also an analogue to the Christian notion of original sin: God created Adam with three souls, rational, appetitive, and vegetative. Before Adam sinned the rational soul existed independently of the other two souls, but afterwards it became dependent on them. After the flood, God freed the rational soul from its dependence on the vegetative soul, but not from its dependence on the appetitive soul. However, in each generation the rational soul of one man achieved independence, and this was the state of affairs until the time of Jacob. In Jacob the rational soul was so pure that all of his descendants, first his 12 sons and later all of Israel, received a rational soul independent of the lower two souls. This is Abraham bar Ḥiyya’s explanation of the election of Israel, though he does not deny that there may also be righteous persons among the gentiles.

Joseph Ibn Ṭaddik

*Joseph Ibn Ṭaddik of Cordova (d. 1149) was the author of *Sefer ha-Olam ha-Katan* (“Book of the Microcosm”), an eclectic Neoplatonic work with Aristotelian and kalam influences, apparently written as a handbook for beginners. In the four parts of the work he discusses the principles of the corporeal world and its constitution, the nature of man and the human soul, the existence of God (derived from the creation of the world) and His attributes, and human conduct and reward

and punishment. His thought shows similarities to that of Saadia, Israeli, Baḥya, Pseudo-Baḥya, and Ibn Gabirol, though he does not mention them, and he attempts to refute opinions of the Karaite Al-Baṣīr. With Ibn Gabirol, he affirms that spiritual beings are composed of matter and form, but he defines the matter of spiritual beings as the genus of a species rather than as a distinct principle. However, he does not mention Ibn Gabirol’s universal matter and universal form. Like Ibn Gabirol, Ibn Ṭaddik mentions the divine will, but for him, it appears to be identical with the essence of God rather than a separate hypostasis. He criticizes Al-Baṣīr’s notion that the divine will is a substance that God creates from time to time. For his proof of the creation of the world he selects the Kalām proof from accidents, but he describes God in Neoplatonic fashion as an absolute unity beyond the world and as incomprehensible. Yet, he also holds that God can be described by attributes that are identical with His essence. These attributes in one respect describe God’s actions, and in another, His essence; as describing His essence, they must be understood as negations. The attributes of action are important for providing models for human conduct. For example, as God is good and merciful, so man should be good and merciful. A similar orientation is found in his account of human happiness. He begins by saying that the knowledge of the supernal world and God is the goal of human life; but then he seems to consider this knowledge only as preliminary to proper conduct. Ibn Ṭaddik’s account of the soul’s fate after death is derived from Israeli (see above).

Moses and Abraham Ibn Ezra

Moses *Ibn Ezra (c. 1055–after 1135) was important mainly as a poet and critic, but he presented some philosophic opinions in his *al-Maqāla bi al-Ḥadiqa fi Ma’nā al-Majāz wa al-Ḥaqīqa* (partially translated into Hebrew as *Arugat ha-Bosem*). Ibn Ezra was fond of quoting sayings (often incorrectly attributed) of such authorities as Pythagoras, Empedocles, Socrates, and Aristotle, and he preserved some Arabic quotations from Ibn Gabirol’s *Mekor Ḥayyim* (see S. Pines, in *Tarbiz*, 27 (1957–58), 218–35). His orientation was Neoplatonic, and he employs the notions that man is a microcosm and everything in the upper world has its counterpart in man; the soul’s knowledge of itself leads to the knowledge of the Creator; God is a unity above all unities, and unknowable as He is in Himself, He can only be known by metaphors; the rational soul is a substance which must take care of the body; and others.

Abraham *Ibn Ezra (c. 1089–1164) was important as a grammarian, as an author of works on arithmetic and astronomy (including astrology), and as a biblical commentator. He was the author of *Sefer ha-Shem* and *Yesod Mora*, on the names of God and on the commandments, but his philosophic views are scattered throughout his biblical commentaries. He often presented his opinions in enigmatic language. Ibn Ezra was profoundly influenced by Neoplatonic doctrines, which in his formulation have at times a pantheistic ring; for example “God is the One; He made all and He is all.” Like Ibn Gabirol,

he held that everything other than God is composed of matter and form, and he alludes as well to the divine will. Speaking of creation, Ibn Ezra affirmed that the world of the intelligences and angels, as well as that of the celestial spheres, is coeternal with God, and only the lower world was created (through emanation). The human soul comes into being from the spiritual substance known as the universal soul, and, if worthy, it can become immortal by being reunited with that soul and being absorbed by it. Destruction is the punishment of unworthy souls. Like the Islamic Aristotelians, Ibn Ezra held that God's knowledge extends only to species, not to individuals. God's providence, also general, is transmitted through the influences of the heavenly bodies, but individuals who have developed their souls and intellects can foresee evil influences caused by the celestial spheres and avoid them.

Judah Halevi

*Judah Halevi (before 1075–1141), ranking with Ibn Gabirol as one of the two most important Hebrew poets of the Middle Ages, wrote a philosophic work whose full title is *Kitāb al-Hujja wa al-Dalīl fī Naṣr al-Dīn al-Dhalīl* ("The Book of Argument and Proofs in Defense of the Despised Faith"); but it is popularly known as *Sefer ha-Kuzari*. Like the Islamic philosopher al-Ghazālī, with whom he seems to have shared a common source, he is critical of Aristotelian rationalism. (By Judah Halevi's time, Aristotelianism was important in Islamic philosophy, but not yet in Jewish philosophy.) For Judah Halevi, historical experience, rather than physical and metaphysical speculations, is the source of truth, and religious practices are more important than beliefs and dogmas. Composed as a narrative, Judah Halevi's book has as its subject the conversion of the king of the Khazars to Judaism in the first half of the eighth century. Judah Halevi's views emerge in a dialogue between the king and the *haver*, a Jewish scholar who acts as the author's spokesman. Judah Halevi relates that the king had a dream in which an angel appeared to him telling him that his intentions were pleasing to the Creator, but not his deeds. At first the king interpreted the dream to mean that he should be more zealous in his observance of the Khazar religion; but when the angel appeared with the same message a second time, he understood that he was to look for a new way of life. He invited an Aristotelian philosopher, a Christian, and a Muslim; only after he had found their presentations unsatisfactory did he feel compelled to invite the Jew, a member of the "despised faith" (*Kuzari*, 1:10). His conversation with the *haver* convinces the king to convert to Judaism (2:1). Most of the five treatises of Judah Halevi's book are devoted to the *haver's* explanation of the Jewish religion.

GOD. Judah Halevi's point of view emerges from the *haver's* opening statement that Jews believe in the God of Abraham, Isaac, and Jacob, who publicly performed many miracles for them and who gave them the Torah. When the king asks the *haver* whether he should not have begun with such speculative principles as "God is the creator and governor of the

world," the *haver* replies that to begin with such principles bring one to a rational religion, which is subject to many doubts. Only a religion based on the experience of God's manifestation in historical events is certain and free from doubt (1:11–29).

PROPHECY. Closely related to his conception of God is Judah Halevi's account of prophecy and the nature of the Jewish people. Unlike Neoplatonists and Aristotelians, who tended to describe prophecy as a natural activity of the rational faculty or of the rational and imaginative faculties combined, Judah Halevi views prophecy as the activity of a separate faculty beyond the natural faculties of man (1:31–43). God created Adam with this faculty, and it was transmitted by heredity first to individuals such as Noah, Abraham, Isaac, and Jacob; then to the 12 sons of Jacob and their descendants; and, finally, to the Jewish people as a whole (1:95). Possession of the prophetic faculty is the distinguishing feature of Israel's election, and even a convert, though equal to the born Jew in all other respects, cannot attain the prophetic gift (1:27). A sign of the inadequacy of philosophy is that no prophets were found among the philosophers (1:99). While for Judah Halevi prophecy is primarily a gift of God and not the result of natural processes, he attaches two conditions to its attainment: prophecy can be attained only in Erez Israel or (to account for prophets who prophesied outside Erez Israel) the content of the prophecy, at least, must be about Erez Israel; and only those who observe the divine commandments can be prophets (2:8–14).

PIETY. Piety is the main theme of Judah Halevi's philosophy of man. Man does not attain closeness to God, his goal in life, by pursuing philosophic speculations, but by faithfully adhering to the commandments of God. Accepting the Kalām's distinction between rational and traditional (divine) commandments, Judah Halevi holds that all men must observe the former; however, in his view they have only a preliminary function, and true guidance to human happiness is provided only by the latter (2:45–48). The servant of God is like a ruler: he apportions to each part of his body and soul its due (3:1ff.). While Judah Halevi advocates moderation in eating and drinking and control of appetites, his outlook is not ascetic. Man's joy on the Sabbath and the festivals is no less pleasing to God than his affliction on fast days (2:50). Prayer is the nourishment which sustains the soul from one prayer time to the next (3:5).

ATTITUDE TOWARD PHILOSOPHY. Judah Halevi is against philosophy as a way of life, but he is not against philosophic speculations altogether. It has already been noted that he accepts the philosophic notion of rational commandments. Philosophic distinctions appear also in his discussion of God. As YHWH, God can be known only through revelation, but as *Elohim*, the ruler and guide of the universe, He can be discovered also through philosophic speculation (4:1–3). Like the philosophers, Judah Halevi holds that anthropomorphic and

anthropopathic terms applied to God must be interpreted, and he states that divine attributes must be understood as negations, relations, or attributes of action (2:2). Judah Halevi holds that philosophy was known among Jews in ancient times, as can be seen from *Sefer Yezirah*, which tradition attributed to Abraham; but Abraham wrote this book before he received his revelation (2:66; 4:24–25). At the request of the king, the *haver* explains the principles of Aristotelian philosophy and of the Kalām (treatise 5), but he points out once again the superiority of revelation. The *haver* also discusses human free will (5:20), and at the end of the book (5:22ff.) he declares his intention to go to Erez Israel.

Hibat Allah

*Hibat Allah Abu al-Barakāt al-Baghdādī (second half of 11th century–first half of 12th century; flourished in Baghdad), whose philosophy has only recently been studied by S. Pines, was the author of a commentary on Ecclesiastes and of a philosophical work *Kitāb al-Mu'tabar* (“The Book of What Has Been Established By Personal Reflection”). He converted to Islam at the age of 60, but the two works mentioned seem to have been written while he was still a Jew. Subjecting the doctrines of the Aristotelian philosophers to a critical review, he presents novel notions of his own on physical, psychological, and metaphysical questions.

Nethanel al-Fayyūmī

*Nethanel al-Fayyūmī (d. about 1165; flourished in Egypt or Yemen) composed a work entitled *Bustān al-'Uqūl* (“Garden of Intellects”), which attempts to introduce doctrines of the Islamic Ismā'īliyya sect into Jewish thought. It is notable in particular for its unusual pluralistic views of religion (Ch. 6).

Abraham Ibn Daud

By the middle of the 12th century Jewish philosophy entered its next phase and, under the influence of the Islamic philosophers, Al-Fārābī, Avicenna, and Avempace, turned toward Aristotelianism. Abraham b. David ha-Levi *Ibn Daud (c. 1110–1180), was the first Jewish Aristotelian. He wrote his major philosophical work, *al-'Aqida al-Rafi'a* (“Sublime Faith,” translated into Hebrew as *Ha-Emunah ha-Ramah*, and a second time as *Ha-Emunah ha-Nissa'ah*, 1161) to explain the doctrine of free will to a friend; but, in fact, he discusses a variety of philosophical and theological topics. The work was strongly influenced by Avicenna and highly critical of Ibn Gabirol. Asserting that Judaism and philosophy are identical in their essence, Ibn Daud begins with an explanation of Aristotelian metaphysical, physical, and psychological notions (treatise 1). Having explained these notions philosophically, he cites scriptural verses that in his view allude to these notions. He proceeds to use them for an exposition of six topics: the existence of God, His unity, divine attributes, God's actions (including creation), prophecy, and the allegorical interpretation of terms comparing God to creatures (treatise 2). The work concludes with a brief discussion of ethical matters (treatise 3). To prove the existence of God, Ibn Daud uses the

Aristotelian proof from motion and the Avicennian proof from necessity and contingency. According to the first proof, the analysis of motion in the world leads to a prime mover; according to the second, the contingent character of the world leads to a being necessary through itself. God, as necessary existent, is one both in the sense of being unique and of being simple. The attributes applied to God cannot have any positive meaning, but must be understood as negations or relations. Following Aristotle he holds that every change or process requires an underlying matter, but differing from Aristotle (for whom the world is eternal), he holds that God created a first matter, out of which he subsequently created the world. In a different vein, he cites aspects of the doctrine of emanation to explain the creation of the world, insisting, however, that emanation occurs not by necessity but by the free will of God. In psychology, Ibn Daud, like Avicenna, taught that the human intellect is an individual substance, not just a corporeal predisposition, as other Aristotelians believed. It is this substance as a whole that becomes immortal, not only that part known as the acquired intellect. The active intellect, the lowest of the celestial intelligences, is a cause for the actualization of the human mind, and it is also the effect of the active intellect on the mind of man that enables him to prophesy. Unlike Maimonides, who assigns to the imagination the important role in the prophetic inspiration, Ibn Daud, like Judah Halevi, restricts prophecy to the Jewish people and limits it to the land of Israel. Most difficult from the theological point of view is Ibn Daud's account of the knowledge of God: in order to safeguard man's freedom of choice, he willingly admits that God's knowledge is limited.

Maimonides

Ibn Daud was soon overshadowed by Moses *Maimonides (1135–1204), the greatest Jewish Aristotelian and the most prominent figure of medieval Jewish thought. Maimonides discusses his philosophy in popular fashion in parts of his halakhic works, his commentary on the Mishnah and *Mishneh Torah*, and in some treatises; but he reserves its technical exposition for his *Guide of the Perplexed* (*Dalālat al-Ḥā'irin; Moreh Nevukhim*). In formulating his views he drew on Aristotle and his Hellenistic commentators, and on the Muslims Al-Fārābī, Avicenna, and Avempace. Maimonides wrote his *Guide* for a faithful Jew, who, having studied philosophy, was perplexed by the literal meaning of biblical anthropomorphic and anthropopathic terms applied to God and by parables appearing in the Bible. Maimonides shows this person that his perplexities can be resolved by correct interpretation. Hence, the *Guide* is devoted in part to the philosophic interpretation of the Bible, but beyond that, to revealing the inner, i.e., philosophic, meaning of the Torah – as Maimonides puts it, to “the science of the Law in its true sense,” or to the “secrets of the Law.” Maimonides believed that the philosophic content of the Bible should be revealed only to an intellectual elite, not to the masses, and thus he wrote his work in an enigmatic style (*Guide*, 1: Introd.).

DIVINE ATTRIBUTES. In accord with his exegetical program, Maimonides begins his *Guide* (1:1–49) with an interpretation of difficult biblical terms, showing that even such terms as “to sit,” “to stand,” and “to eat” (applied in the Bible to God) have a spiritual sense. From exegesis he proceeds to exposition, selecting as his first topic the attributes of God (1:50–60). Medieval philosophers held that attributes applied to substances are of two kinds: essential, such as existence and life, which are closely related to the essence; and accidental, such as anger and mercifulness, which are incidental to the essence. The Avicennian tradition, which Maimonides followed, maintained, in addition, that both kinds of attributes are distinct from the substances to which they are applied, and, hence, introduce multiplicity into that which they describe. How, then, can attributes be applied to God, Who is one in the sense of being simple? After considering a number of possibilities of how attributes may be applied, Maimonides comes to the conclusion that essential attributes in the case of God must be understood as negations and accidental attributes as descriptions of His actions.

GOD. Before presenting his own views concerning the existence, unity, and incorporeality of God and the creation of the world, Maimonides offers a summary and critique of the Kalām’s discussion of these four topics (1:71–76). His exposition rests on Aristotelian physical and metaphysical principles (2: Introd.), and he sets down four proofs, current in his day, for the existence of God: the proofs from motion, from the composition of elements, from necessity and contingency, and from potentiality and actuality (casuality). All of them start with some observable property of the world and conclude that a prime mover, a necessary existent, or a first cause (all of which are identified with God) must exist. These proofs for the existence of God lead in turn to proofs for His unity and incorporeality (2:1).

CREATION. Maimonides next discusses the incorporeal intelligences, which he identifies with the biblical angels, the celestial spheres (2:2–12), and then the creation of the world (2:13–26). A good part of his exposition is devoted to showing that the Aristotelian arguments for the eternity of the world are not conclusive demonstrations; they only attempt to show that eternity is more plausible than creation. Maimonides’ own position is that the human mind is incapable of conclusively demonstrating the eternity of the world or its creation and can only present plausible arguments for either view. An examination of these arguments reveals that those for creation are more plausible, and on this basis Maimonides accepts the doctrine of creation *ex nihilo* as his own. He finds additional support for his opinion in the teachings of Scripture. Although the world has a beginning in time, it will not have an end (2:27–29).

PROPHECY. In the introduction to the *Guide* Maimonides incidentally discussed the nature of the prophetic experience, likening it to intellectual illumination; in the present section

(2:32–48) he is interested in the psychology of prophecy and in its political function. Prophecy, for Maimonides, appears to be a natural phenomenon occurring when man’s psychological faculties, particularly his intellect and imagination, have reached a certain perfection. God’s role is limited to keeping someone who has met all the prerequisites from becoming a prophet. The prophet requires a well-developed imagination, because besides being a philosopher, he is also a statesman who brings a law, as in the case of Moses, or admonishes the people (who must be persuaded by arguments of the imagination) to adhere to a law, as in the case of the other prophets. Moses as a prophet is singular and so is his law, since through it one can attain intellectual as well as moral perfection. Maimonides concludes the portion of the *Guide* devoted to physical and metaphysical topics with an interpretation of the divine chariot (*merkavah*) described in Ezekiel chapters 1 and 10 (3:1–7).

EVIL AND DIVINE PROVIDENCE. The first topic of practical philosophy is the existence of evil (3:8–12), which Maimonides defines as the absence or privation of good. There is more good than evil in the world; of the three kinds of evil – natural evil, such as earthquakes, political, such as wars, and moral, such as the various vices – the majority, i.e., political and moral evils, can be remedied by man. Closely related to the question of evil is that of divine providence (3:16–21). Maimonides rejects the opinions of the Epicureans that everything is due to chance; the Aristotelians that there is no individual providence; the Ash’arites that there is only individual providence, extending even to animals and minerals; and the Mu’tazilites that individual providence includes animals but not minerals; and he presents instead the views of the Torah. All Jews are agreed that God is just, that man is free, and that individual providence extends only to man. According to Maimonides’ understanding of the Jewish view, individual providence depends on the development of the human mind, that is, the more a man develops his mind the more he is subject to the providence of God. Maimonides also holds that any suffering in this world is punishment for some prior sin, rejecting the doctrine of *yissurin shel ahavah*, according to which God may afflict man in this world in order to reward him in the next. Maimonides interprets the Book of Job in the light of his discussion of providence, showing how the characters of the book symbolize the various viewpoints about providence that he had discussed (3:22–24).

ANALYSIS OF THE TORAH. Rejecting the Mu’tazilite distinction between commandments produced by reason (*mitzvot sikhliyyot*) and those coming from the will of God (*mitzvot shimiyyot*), Maimonides maintains that all the commandments of the Torah are the result of the wisdom of God. Hence, all are intelligible, some (*mishpatim*) easily, others (*hukkim*) with difficulty. However, Maimonides adds that particular commandments, which by their very nature are not subject to reason, were stipulated by the will of God. The Torah has two pur-

poses: the well-being of the soul (intellect) and the well-being of the body, by which he means man's political and moral well-being. The well-being of the soul is achieved through assent to true beliefs, such as the existence and incorporeality of God, which are true in themselves. However, there are also necessary beliefs, such as that God gets angry at those who disobey Him, whose main function is to motivate men to obey the Law. Reasons for moral laws can easily be found, but it is more difficult to explain the numerous ritual laws found in the Bible. Maimonides explains many of them, for example, the biblical prohibition against wearing garments made of wool and linen combined, as reactions to ancient pagan practices (3:25–50). He concludes his *Guide* with a supplementary section on the perfect worship of God and man's perfection (3:51–54).

THE MESSIAH. Maimonides barely refers to eschatology in the *Guide*, but he develops his views on the subject in other works. The Messiah is an earthly king descended from the House of David, who will bring the Jews back to their country, but whose main task will be to bring peace and tranquility to the world, thereby facilitating the full observance of the Law. The Messiah will die of old age; he will be succeeded by his son, and the latter, by his son, and so on. No cataclysmic events will take place in messianic times; the world will continue in its established order. In that time the dead will be resurrected with body and soul united, but later they will die again. The central notion of Maimonides' eschatology is *olam ha-ba* ("the world to come"), where the intellect will exist without the body and contemplate God.

Hebrew Translators of the 13th Century

When, after the period of Maimonides, the setting of Jewish philosophy shifted to Christian countries and its language became Hebrew (see above), the philosophic literature produced by Jews during the preceding period was translated from Arabic into Hebrew, as were many scientific and philosophic works written by Muslims (see Steinschneider, *Uebersetzungen*). Among the translators of this vast literature were Judah, Samuel, and Moses ibn Tibbon, Jacob Anatoli, Jacob ben Makhir, and *Kalonymus ben Kalonymus. Maimonides' *Guide* was the most influential work translated; next in importance were Averroes' commentaries on the works of Aristotle. Of the 38 commentaries that Averroes composed, 36 were translated into Hebrew (see H.A. Wolfson, in: *Speculum*, 38 (1963), 88–104). Under Averroes' influence, Jewish philosophy turned toward a more extreme rationalism (for details see below), and some Jewish philosophers attempted to harmonize the opinions of Maimonides and Averroes on topics on which these two philosophers differed.

Maimonidean Controversies

Maimonides' attempt to formulate a rationalistic account of Judaism produced controversies between his followers and their opponents that lasted throughout the 13th and into the early 14th century. The controversy reached such intensity that the two sides excommunicated each other, and they even

went so far as to call in the Church authorities, who burned the *Guide* and *Sefer ha-Madda* in 1232. Another highlight was the ban of Solomon b. Abraham *Adret, issued in 1305, which prohibited the study of physics and metaphysics before the age of 25 (for an account of these controversies, see *Maimonidean Controversy). During the early 13th century, some philosophers were still active in the Islamic world. Joseph b. Judah ibn *Aknin (flourished in Morocco), Maimonides' younger contemporary, composed a number of talmudic and philosophic works, among them a commentary on the Song of Songs, a commentary on *Avot*, and a work on moral philosophy, *Tibb al-Nufūs al-Salīma wa Mu'ālahat al-Nufūs al-Ālima* ("The Hygiene of the Healthy Souls and the Therapy of Ailing Souls"), which contains an interesting account of the content and order of religious and secular studies among Jews. Joseph b. Judah ibn Sham'un (d. 1226), the disciple for whom Maimonides wrote his *Guide*, composed a small metaphysical work on the necessary existent, how all things proceed from it, and on creation. The early portion of the work follows Avicennian Aristotelianism, and the latter portion, the teachings of Kalām. It is likely that the kalam section predated Ibn Sham'un's acquaintance with Maimonides. *Abraham b. Moses b. Maimon (1186–1237), Maimonides' only son, followed the teachings of his father and defended them against opponents. However, in his *Kitāb Kifāyat al-'Abidīn* ("Comprehensive Guide for the Servants of God"), he advocates a Sufi-like Jewish pietism.

SAMUEL IBN TIBBON. In southern France, Samuel ibn *Tibbon, the translator of the *Guide* and other works, composed *Perush me-ha-Millot ha-Zarot*, a philosophical glossary for the *Guide*, philosophical commentaries on Ecclesiastes and Song of Songs, and *Ma'amar Yikkavu ha-Mayim* (on Gen. 1:9), devoted to physical and metaphysical topics. He favored the allegorical interpretation of the Bible, and is said to have held that the Bible was primarily for the masses.

JACOB ANATOLI. Jacob *Anatoli (13th century), active as a translator at the court of the emperor Frederick II, wrote *Mal-mad ha-Talmidim*, a philosophical commentary on the Pentateuch. In this work he quotes the Christian scholar Michael Scot (he even cites the emperor), and he shows acquaintance with Christian literature and institutions. He followed the allegorical interpretation of Scripture and preached philosophical sermons publicly. This earned him the anger of the anti-Maimonists.

SHEM TOV BEN JOSEPH IBN FALAQUERA. Shem Tov b. Joseph ibn *Falaquera (c. 1225–c. 1295), translator and author of many works devoted largely to ethics and psychology, also wrote *Moreh ha-Moreh*, a commentary on Maimonides' *Guide*. In this commentary he corrects Ibn Tibbon's translation of the *Guide* on the basis of the Arabic original, and he cites parallel passages from the works of Islamic philosophers, particularly from Averroes. In his *Iggeret ha-Vikku'ah*, a dialogue between a philosopher and an opponent of philosophy, he justifies the study of philosophy. In his *Sefer ha-Nefesh* he follows Avi-

cenna, but in his encyclopedic work *De'ot ha-Pilosofim* he follows Averroes. He translated and condensed Ibn Gabirol's *Mekor Hayyim* from Arabic into Hebrew.

JOSEPH IBN KASPI. Joseph ibn *Kaspi (c. 1279–c. 1340), prolific author of biblical commentaries, lexicographic works, and books on philosophy, wrote a commentary on the *Guide*, consisting of an exoteric and esoteric part entitled, respectively, *Ammudei Kesef* and *Maskiyyot Kesef*. This commentary was influenced by that of Shem Tov b. Joseph ibn Falaquera and in turn influenced later commentaries on the *Guide*. He accepts doctrines associated with the teachings of Averroes, such as the identity of religion and philosophy, the eternity of the world, and the natural interpretation of miracles, but he tries to modify these doctrines in a way that distinguishes him from such extreme rationalists as Moses of Narbonne and Levi b. Gershom.

Hillel ben Samuel

*Hillel b. Samuel (c. 1220–1295), one of the first Jewish philosophers in Italy, translated from Latin to Hebrew the Neoplatonic work *Liber de causis* and composed *Tagmulei ha-Nefesh* (“The Rewards of the Soul”). Since he knew Latin, he was able to draw on the opinions of Christian scholastics, particularly those of Thomas Aquinas. In Aristotelian fashion, Hillel defined the soul as the entelechy of a natural organic body, but, following Avicenna and the Neoplatonists, he held that the soul is a substance that emanates from God through the intermediacy of the supernal soul. He also cites Averroes’ opinion that there is only one universal soul for all men, from which individual souls emanate like rays from the sun. However, on the question of the material or potential intellect he criticizes Averroes, using arguments offered by Aquinas. Averroes had argued that there exists only one such intellect for all men, but Hillel argued that each person has his own material intellect. On the question of the active intellect, Hillel accepts the opinion of the Islamic and Jewish Aristotelians, for whom the active intellect was the lowest of the celestial intelligences; in this he differed from Aquinas, who held that each person has his own active intellect. According to Hillel, only the rational part of the soul is immortal, and its ultimate happiness consists in union with the active intellect. In its immortal state the soul retains its individuality. Hillel also composed a commentary on the 26 propositions appearing at the beginning of the second part of Maimonides’ *Guide*.

Isaac Albalag

Isaac *Albalag (second half of 13th century, probably lived in Spain) translated Al-Ghazālī’s *Maqāṣid al-Falāsifa* (a compendium of the teachings of Avicenna) into Hebrew and presented his own views in a commentary on the work entitled *Tikkun ha-De'ot*. A follower of Averroes, who accepted such doctrines as the eternity of the world, he has also been described as a proponent of the theory of the “double truth,” advocated by Latin Averroists. Like the Latin Averroists he distinguished between two coexistent independent truths, philosophic truth

and prophetic truth, and he held that the two can contradict one another. However, he does not cite in his work any instance of such contradiction (see G. Vajda, *Isaac Albalag* (1960), 251 ff.). His outlook is not completely clear, but it seems that his own view on a given topic is always that of philosophy. He maintained that speculative truths are the province of philosophy, not of Scripture. The Torah has as its sole purpose the moral and political guidance of the masses and contains no speculative truths, even by implication. Nevertheless, Albalag offers philosophic interpretations of the Bible; for example, he explained the story of creation in accordance with the doctrine of the eternity of the world. In a somewhat different vein, he states that if philosophic and prophetic truths contradict each other, both should stand, and one should say that the prophetic truth is unintelligible.

Abner of Burgos and Isaac Pollegar

The first half of the 14th century saw a debate concerning the freedom of the will initiated by *Abner of Burgos. Abner, who converted to Christianity, presented his views in *Minḥat Kenā'ot*; although the work was written after his conversion, it seems clear that he held the same views when he was still a Jew. Following Avicenna, whose opinions he knew through their summary in al-Ghazālī’s *Maqāṣid al-Falāsifa*, he held that human acts no less than natural occurrences are causally determined. Although the will has the ability to choose between alternatives, any given choice is determined, in fact, by causes influencing the will. Causal determination of the will is also required by God’s omniscience and omnipotence: were human actions undetermined until the moment of decision, God could not foreknow them, and, also, His power would be limited. Abner tried to justify the existence of divine commandments and reward and punishment: divine commandments can be among the causes affecting the will, and reward and punishment are necessary consequences of human actions. Abner viewed biblical and rabbinic statements affirming freedom of the will as concessions to the understanding of the masses. Isaac *Pollegar, who knew Abner personally, attacked his determinism in his *Ezer ha-Dat*. According to Pollegar’s solution, which contains difficulties of its own, there is a correlation between the divine and human wills, such that at the moment man wills to do a certain act, God also wills that it be accomplished. In willing that the act be accomplished, God also knows it. Yet, although this knowledge begins in time, there is no change in God. Whatever the difficulties of this position, it is clear that Pollegar tried to defend the freedom of the will by limiting God’s foreknowledge. Levi b. Gershom (see below) solved the problem in a more radical fashion. Holding that God’s knowledge extends only to species and not to individuals, he excluded man’s action from God’s knowledge, thereby safeguarding human freedom.

Moses of Narbonne

Moses b. Joshua of Narbonne (d. after 1362) was another participant in the debate. He wrote commentaries on works by Averroes and other Muslim philosophers (including al-

Ghazālī's *Maqāsid*) and also an important commentary on Maimonides' *Guide*. Although he held Maimonides in high esteem, he criticized a number of his doctrines, which under the influence of Al-Fārābī and Avicenna had a Neoplatonic complexion; he opposes these doctrines with the more strictly Aristotelian teachings of Averroes. His critique of Abner is found in *Ha-Māamar bi-Vehirah*, and he also discusses human freedom in other works. However, his position is not completely clear. In some passages he holds in agreement with Maimonides that God's knowledge extends to particular human acts without determining these acts; in others he holds that God knows only species, not individuals. The latter opinion was probably Moses' real view.

Levi ben Gershom

*Levi b. Gershom (1288–1344), also known as Gersonides, mathematician, astronomer, and biblical commentator, wrote supercommentaries on many of Averroes' commentaries on Aristotle (still unpublished) and was the author of a philosophical work, *Sefer Milḥamot Adonai* ("The Book of the Wars of the Lord"). The most important Jewish Aristotelian after Maimonides, he was influenced by Averroes, though he is also critical of some of his views (see below). In *Milḥamot* Levi discusses in great detail and with scholastic subtlety topics that in his view Maimonides had not discussed sufficiently or had solved incorrectly. In the six parts of his work he deals with immortality of the soul; foretelling the future; God's knowledge of individual contingent beings; the celestial bodies, their movers, and God; and the creation of the world. *Milḥamot* is formally devoted to these six topics, but, together with his other works, it indicates Levi's general philosophy.

IMMORTALITY. Levi begins his discussion of immortality (treatise 1) with an extensive review and critique of various theories concerning the intellect. The Aristotelian philosophers had distinguished between the material or passive intellect, the active intellect, and the acquired intellect. Rejecting Themistius' and Averroes' opinions concerning the passive intellect, Levi accepts an opinion close to that of Alexander of Aphrodisias, namely, that the passive intellect is a predisposition inhering in the sensitive soul and comes into being with each individual man. Under the influence of the active intellect, the lowest of the incorporeal intelligences, the passive intellect is actualized and becomes the acquired intellect. While the passive intellect dies with the body, the acquired intellect is immortal. Differing from Averroes, for whom immortality was collective, Levi holds that each acquired intellect retains its individuality in its immortal state.

PROPHECY. The ability to foretell the future was accepted as an established fact by the adherents of religion and philosophers alike, and Levi set out to explain this fact (treatise 2). Maintaining that there is a continuity between the celestial and terrestrial world, Levi holds that terrestrial events, particularly those related to man, are caused by the celestial spheres. Since the events of human life are thus ordered, it is possible that

there are certain individuals who can foretell them. However, Levi is not a complete determinist. Discussing the problem of celestial (astrological) influences from another perspective, he holds that man is free in choosing his actions and that those who understand the laws of the celestial spheres can avoid the evil influences they may have. Since the active intellect both actualizes the human intellect and is a cause in the production of sublunar substances and events, it also causes knowledge of the future. In men who have strongly developed intellects the active intellect produces prophecy; in men who have strongly developed imaginations it causes (indirectly) divination and true dreams.

PREDESTINATION AND DIVINE PROVIDENCE. Discussing God's knowledge of individuals in the sublunar world (treatise 3), Levi is critical of Maimonides. Maimonides held that God knows particulars and met the objection that this seems to introduce a change in God by holding that God's knowledge is completely different from ours. Levi took this objection seriously and denied that God knows particular individuals. God only knows the order of nature. Closely related to God's knowledge of individuals is the question of providence (treatise 4). Levi rejected the theories that God's providence extends only to the species or that it extends equally to all men; he maintained that it extends only to those individuals who have developed their intellect. Like Maimonides, he held that the more an individual develops his intellect, the more he is subject to providence.

DIVINE ATTRIBUTES. Levi's account of the celestial spheres, their movers, and God (treatise 5) need not detain us, except for one aspect of his account of God, namely divine attributes (5:2, 12; see also 3:5). Maimonides, following Avicenna, had denied that attributes applied to God can have any positive meaning. Levi, following Averroes, accepted the alternative that Maimonides had rejected. Holding that essential attributes are identical with the essence to which they belong, Levi maintained that to understand such attributes positively does not introduce a multiplicity into God. He also held that such attributes (life, knowledge, and so on) whether applied to God or man have the same meaning, though they are applied to God primarily and to creatures derivatively.

CREATION. In his account of creation (treatise 6), Levi agrees with Maimonides that Aristotle's proofs for the eternity of the world are not conclusive arguments, though Aristotle's arguments are the best offered so far. However, against Aristotle, Levi presents a number of arguments designed to show that the world is created, among them one from the finiteness of time and motion. (Levi also rejects the Neoplatonic theory of emanation.) However, Levi differs from Maimonides and most Jewish philosophers in denying creation *ex nihilo*, holding that the world was created out of a formless matter coexistent with God, though this matter is not a principle paralleling God. He concludes his *Milḥamot* with a discussion of miracles and prophets, which reflects his general rationalistic temper.

Hasdai Crescas

Judah Halevi and Ḥibat Allah Abu al-Barakāt al-Baghdādī had criticized the doctrines of the Aristotelians, but the most significant critique within the mainstream of Jewish philosophy was that of Ḥasdai Crescas (d. 1412?). Although Crescas was critical of certain Aristotelian notions, he did not oppose philosophic speculations altogether; in fact, he proposed philosophic notions of his own to replace the Aristotelian notions he rejected. Nevertheless, in his conception of Judaism he emphasized observance of commandments and love of God rather than intellectual accomplishments. His critique of Aristotle as well as his own philosophy are found in *Or Adonai* ("The Light of the Lord"); he also wrote a work in Spanish criticizing Christianity, which has been preserved in Hebrew as *Bittul Ikkarei ha-Nozerim* ("Refutation of the Dogmas of the Christians").

BASIC PRINCIPLES OF JUDAISM. Maimonides' formulation of 13 principles of Judaism sparked a lively debate in the late Middle Ages. Taking issue with Maimonides, Crescas uses his own account of such principles as the framework of his book. According to Crescas, the basic principles of all religions are the existence, unity, and incorporeality of God (treatise 1). These are followed by six principles required for a belief in the validity of the Torah: God's knowledge of existing things, providence, divine omnipotence, prophecy, human freedom, and purpose in the Torah and the world (treatise 2). Next come eight true beliefs, which every adherent of the Torah must accept, and a denial of which constitutes heresy: creation of the world, immortality of the soul, reward and punishment, resurrection of the dead, eternity of the Torah, superiority of the prophecy of Moses, efficacy of the Urim and Thummim (worn by the high priest) in predicting the future, and the coming of the Messiah (treatise 3). The book concludes with 13 questions on topics ranging from whether there exists more than one world to the existence of demons.

SPACE AND INFINITY. Crescas' critique of Aristotle is found largely in an exposition and critical evaluation of the 26 physical and metaphysical propositions with which Maimonides had begun the second part of his *Guide* (see H.A. Wolfson, *Crescas' Critique of Aristotle*, 1929). Of special interest are Crescas' conception of space and infinity. The Aristotelians had defined place (rather than space) as the inner surface of a surrounding body; they had argued that there are no empty spaces (vacuum) in the world, and that the universe is finite and unitary. They also had held that an actual infinite cannot exist. Taking issue with them, Crescas set out to show that empty space without bodies can exist (it is identical with extension), that a vacuum can and does exist, that space beyond our world exists, and that there can be more than one world. He also differed from the Aristotelians in maintaining that an actual infinite (space, quantity, magnitude, time) can exist.

EXISTENCE OF GOD. Crescas' acceptance of the existence of an actual infinite raised questions concerning the Maimoni-

dean (Aristotelian) proofs of the existence of God. Since the proofs rested on the proposition that an actual infinite is impossible, Crescas rejected them. However, he retains the proof from necessity and contingency, which to his mind is independent of the disputed principle. In view of difficulties, he also substitutes proofs of his own for the unity and incorporeality of God. Against Maimonides, Crescas affirms the possibility of positive attributes applied to God.

PROVIDENCE AND FREEDOM. God's knowledge, according to Crescas, extends to particulars; He knows the nonexistent and He knows future contingents without removing their contingent character. Crescas also upholds individual providence and states that man's true reward or punishment, dependent on obedience or disobedience of God's will, is given in the hereafter. A similar attitude also determines Crescas' conception of prophecy. God can inspire whomever he wishes, but the one chosen for prophecy is someone who follows the Torah and loves God. Of special interest is Crescas' conception of human freedom. While Maimonides and Levi ben Gershom in different ways safeguarded the freedom of human actions, Crescas' solution is more deterministic. He holds that everything in the world is the result of prior causes and affirms that God's omniscience requires that the object of His foreknowledge come to pass. Human actions are caused by a will determined by other causes, not by an undetermined will. Crescas tried to mitigate this position by stating that commandments, training, and other factors are among the causes influencing the will and that, despite being determined, the will in its own nature is contingent. Crescas' anti-Aristotelian stance is also apparent in his doctrine of man. In place of development of the intellect as the main purpose of human life is the observance of God's commandments; not philosophic speculation but the love and fear of God bring immortality to man. It is the soul that is immortal, not the acquired intellect.

Simeon ben Zemah Duran

After the period of Crescas, medieval Jewish philosophy declined. It became more eclectic and most philosophers accepted a more orthodox religious position. Simeon b. Zemah *Duran, talmudist and author of a philosophic theological work, *Magen Avot*, generally followed the moderate rationalism of Maimonides, though, like Crescas, he maintained that divine attributes can have a positive meaning, that immortality comes through observance of the commandments, and that divine providence extends to all men. In the introduction to his commentary on Job, entitled *Ohev Mishpat*, Duran also contributes to the discussion of dogmas. Emphasizing the centrality of a belief in revelation, Duran listed three dogmas, the existence of God, revelation, and reward and punishment, which became the foundations of Joseph Albo's philosophy.

Joseph Albo

Joseph *Albo (15th century), a student of Crescas, presented his views in *Sefer ha-Ikkarim* ("Book of Principles"), an eclectic, popular work, whose central task is the exposition of the

principles of Judaism. Albo, following Duran, held that there are three basic principles (*ikkarim*) necessary for the existence of a divine law: the existence of God, revelation, and reward and punishment. From these principles follow eight derivative principles (*shorashim*): from the existence of God there follow God's unity, incorporeality, timelessness, and perfection; from revelation, God's omniscience and prophecy and authentication of the prophet; from reward and punishment, individual providence. The denial of these principles, no less than the denial of the first three, makes one a heretic (*kofer*). There are, furthermore, six branches (*anafim*): creation *ex nihilo*, the superiority of Moses as a prophet, immutability of the Torah, guarantee of immortality through the observance of any one commandment, resurrection of the dead, and the coming of the Messiah. Although it is proper that every Jew accept these branches, and although their denial makes him a sinner, it does not make him a heretic. Albo also criticizes the opinions of his predecessors concerning principles of Judaism. *Sefer ha-Ikkarim* is divided into four treatises. The first deals with the general principles of laws, the three *ikkarim*, and how a genuine divine law can be distinguished from a spurious one; each of the other three treatises is devoted to an exposition of a basic principle and of the principles derived from it. In his preliminary discussion (*Ikkarim*, 1:7ff.) Albo distinguishes three kinds of law: natural, conventional, and divine. Natural law is the same for all persons, times, and places; conventional law is ordered by a wise man in accord with reason; divine law is given by God through a prophet. It is only divine law that can lead man to true happiness and immortality. Albo's work contains explicit and implicit polemics against Christianity (for example 3:25), which are very likely the result of his participation in the debates at Tortosa and San Mateo (1413–14).

Shem Tov Family, Abraham Shalom, and Isaac Arama

The tension of the age is well illustrated by the Shem Tov family. Shem Tov b. Joseph *Ibn Shem Tov (c. 1380–1441), a kabbalist and opponent of Greek philosophy, attacked in his *Sefer ha-Emunot*, not only such extreme rationalists as Albalag and Levi ben Gershom, but even more fiercely Maimonides himself. His son Joseph b. Shem Tov *Ibn Shem Tov (d. c. 1480), who greatly admired Aristotle and Maimonides, tried to rehabilitate philosophy by improving its rapport with religious Orthodoxy. He attempted to show that Aristotle really believed in individual providence, and that when Aristotle stated that man's happiness comes through contemplation, he had in mind only happiness in this world, leaving room for happiness in the next dependent on the observance of the Torah. Shem Tov b. Joseph *Ibn Shem Tov, who bore the same name as his grandfather, continued his father's philosophical interest in a commentary on Maimonides' *Guide* (composed 1488), in which he defends Maimonides against the attacks of Crescas. His contemporary, Abraham *Shalom, in his work *Neveh Shalom*, also defended Maimonides against Crescas. Isaac b. Moses *Arama (1420–1494) wrote a

philosophic-homiletical commentary on the Pentateuch, entitled *Akedat Yizhak*.

Isaac and Judah Abrabanel

The last Jewish philosopher in Spain was the statesman Isaac *Abrabanel (1437–1508), who went into exile with his fellow Jews in 1492. He admired Maimonides greatly (he wrote a commentary on the *Guide*); nevertheless he opposed the rationalistic interpretation of Judaism. Thus he held, for example, that prophecy was caused by God Himself, not by the active intellect. His attitude also emerges in his work *Rosh Amanah*, in which he defends Maimonides' 13 principles with great subtlety against all those who had taken issue with them; but in the end he states that only the commandments of the Torah count. Abrabanel's account of history and political life was novel. In his commentary on the beginning of Genesis he held that God willed that man be satisfied with what nature provides and concentrate on cultivation of his spirit. However, men were dissatisfied and produced civilizations to gain further possessions. These civilizations distracted them from their true goal. Abrabanel had a similar attitude toward the state. Man's condition, as ordained by God, was to live in loose associations, but as man's desires increased, he organized states. States are evil in themselves, since they detract man from his true goal. After the expulsion of the Jews from Spain, Jewish philosophy continued in Italy, where it had begun in the 13th century. Abrabanel, in fact, wrote his most important works in Italy. His son Judah *Abrabanel, known as Leone Ebreo (c. 1460–after 1523), under the influence of Renaissance Platonism, wrote a general philosophic work entitled *Dialoghi di Amore* ("Dialogues of Love"). Earlier, an Italian Jew, *Judah b. Jehiel (Messer Leon; 15th century), had written a work on rhetoric in Hebrew, which drew on Aristotle, Cicero, and Quintillian. He also wrote on logic.

Elijah Delmedigo

Elijah *Delmedigo (c. 1460–1497), born in Crete, lived for a time in Italy, where he exchanged views with Christian Platonists. He had lectured at the University of Padua, and at the request of *Pico della Mirandola he translated works by Averroes from Hebrew into Latin. He also wrote independent works on philosophic topics, including *Behinat ha-Dat* ("The Examination of Religion"), a work based on a treatise by Averroes, in which he investigated the relation of philosophy and religion. Like Averroes, he held that the masses must accept Scripture literally, while philosophers may interpret it. However, he denied philosophers the right to interpret the basic principles of Judaism. Like the Latin Averroists, he envisaged religion and philosophy as independent disciplines that may be mutually contradictory. If this should happen, the philosopher must accept the teachings of religion. He modified this position by maintaining that it is permissible to interpret philosophically doctrines which do not affect a basic principle and by affirming that, in fact, basic principles do not conflict with reason.

Joseph Delmedigo

Joseph Solomon *Delmedigo (1591–1655), a descendant of Elijah, was influenced by the theories of Galileo; but he did not free himself completely from certain medieval notions. He accepted the heliocentric theory of the universe and also denied that there is any distinction between the celestial and terrestrial realm. He criticized the Aristotelian notion of form, holding that material substance and its qualities are adequate to explain the world. He also rejected the Aristotelian notion that incorporeal movers of the spheres exist. His conception of the soul follows the Platonic notion that the soul is a substance joined to the body, and his view of the active intellect follows Aquinas' view that it is located within the individual human soul. In addition to defending these philosophic views, Delmedigo also defended the Kabbalah, though he mocked its superstitions.

Influences on Christian Thought

Two Jewish philosophers, Gabirol and Maimonides, influenced Christian thought extensively through Latin translations of their major works. Gabirol's *Mekor Hayyim* was translated into Latin as *Fons Vitae* in the middle of the 12th century; Maimonides' *Guide* was translated as *Dux (Director) Neutorum (Dubitantium, Perplexorum)* about a century later. Gabirol's *Fons Vitae*, together with the writings of Augustine and of Islamic philosophers, molded the Neoplatonic component of Christian scholastic thought. *William of Auvergne, while disagreeing with some of his views, described Gabirol as "one of the noblest of all philosophers," and he identified Gabirol's (divine) will with the Christian logos. Gabirol is also considered a proponent of the doctrine of the multiplicity of forms, according to which several substantial forms exist within a given substance. However, by far the best known of Gabirol's teachings was his notion that spiritual substances (the angels and the human soul), no less than corporeal substances, are composed of matter and form. This doctrine became the subject of a lively debate among scholastics. Among those who accepted Gabirol's view were *Alexander of Hales, Bonaventure, and *Duns Scotus; among those who rejected it were *Albertus Magnus and Thomas *Aquinas. In general the Franciscans accepted this doctrine, the Dominicans rejected it. Among Christian scholastics who were influenced by Maimonides were Alexander of Hales, William of Auvergne, Albertus Magnus, Thomas Aquinas, Meister *Eckhart, and Duns Scotus. Aquinas, for example, was influenced by Maimonides in his account of the relation of faith and reason, in his proofs for the existence of God, and in his opinion that the creation of the world in time cannot be demonstrated by philosophic arguments. However, he polemicized against Maimonides' opinion that all essential attributes applied to God must be understood as negations, against his description of the celestial movers, and against his identifying angels with the incorporeal intelligences.

Christian Scholastic Influences on Jewish Thought

Islamic philosophy and its Greek antecedents provided the

foundations for medieval Jewish philosophy during its two phases. There were also Christian scholastic influences on Jewish philosophers who knew Latin: for example, Hillel b. Samuel was influenced by Aquinas and Albalag, by the Latin Averroists. But even those Jewish philosophers who did not know Latin had, in time, access to scholastic thought through Hebrew translations. As was to be expected, the works translated dealt with philosophical rather than theological topics. Among the scholastics from whose works translations were made were Albertus Magnus, Thomas Aquinas, Aegidius Romanus, Peter of Spain, and William of Ockham. Among the translators were Judah *Romano, Elijah *Habillo, and Abraham Shalom. S. Pines has advanced the view that, while Jewish philosophers do not cite works by late medieval scholastics, they were familiar with the problems they discussed. He has argued that physical and metaphysical notions of Duns Scotus, Buridan, Oresme, Albert of Saxony, and William of Ockham influenced Jedaiah ha-Penini Bedersi, Levi b. Gershom, Joseph ibn Kaspi and Hasdai Crescas (S. Pines, *Scholasticism after Thomas Aquinas and the Teachings of Hasdai Crescas and his Predecessors*, 1967).

MODERN PERIOD

Introduction

Modern Jewish philosophy shared with Hellenistic and medieval Jewish philosophy a concern for relating general philosophy to Judaism, and it discussed some of the same problems that had been discussed in earlier Jewish philosophy; but, at the same time, it differed from Hellenistic and medieval Jewish philosophy in several respects. For one thing it differed in its conception of Jewish tradition. For Hellenistic and medieval Jewish philosophers, Judaism, with its Oral and Written Law, was the revealed word of God which was binding in its totality for all times. While there were modern Jewish thinkers who accepted the traditional position, most of them considered Judaism a creation of human thought, intuition, or feeling, which had developed in history and, which, while containing a perennial core, also contained parts which could be discarded in modern times. Then again, it differed in its conception of science and philosophy. Hellenistic and medieval Jewish philosophers accepted the notion of a geocentric universe with a sharp distinction between its terrestrial and celestial parts – a universe that manifests design and purpose. Modern Jewish philosophers accepted the notion of a heliocentric universe with no distinction between its terrestrial and celestial parts, a universe governed by the necessary laws of nature. Moreover, pre-modern Jewish thinkers saw no sharp distinction between science and philosophy, had strong metaphysical interests, and emphasized that the development of the human mind was the purpose of human life and morality was only a prerequisite for the fulfillment of this goal. Modern Jewish philosophers saw science as distinct from philosophy, and while those following the idealist tradition retained metaphysical interests and emphasized the primacy of intellectual cognition, there were many who denied the possibility (or at least the importance)

of metaphysics, emphasizing instead the study of ethics and the centrality of proper conduct for attaining the goal of human life. It can readily be seen that it was easier to reconcile pre-modern philosophy with Jewish teachings than modern philosophy. The Enlightenment and the Emancipation also had a significant impact on modern Jewish thought. For example, the Enlightenment notion of a religion of reason which, consisting of rational beliefs and practices, was addressed to all men, was adopted by a number of Jewish philosophers of the modern period. Some, Mendelssohn for example, accepted this notion and investigated to what extent historical Judaism was identical with the religion of reason and to what extent different. Others, such as Hermann Cohen, went so far as to maintain that Judaism was the ideal embodiment of the religion of reason. The process of secularization initiated by the Enlightenment also had its impact on Jewish thought. While modern Jewish philosophy was still largely a religious philosophy, there arose Jewish thinkers who attempted to formulate secular philosophies of Judaism, and for whom Judaism was a culture or a social philosophy rather than a religious tradition (see also *Haskalah).

The impact of the Emancipation was felt in Western rather than in Eastern Europe, for in the East the Jewish community retained its social (even its political) identity into the 20th century. The progressive political and social emancipation of the Jews posed special problems for Jewish thinkers, one of these being the nature of the Jewish group. While pre-modern Jewish thinkers had no difficulty in accepting the notion that the Jews were a people, many modern Jewish thinkers considered Judaism a religion and the Jews a religious society (*Religionsgemeinschaft*), thereby emphasizing that only their religion distinguished Jews from other citizens. The Emancipation also influenced the concept of the Messiah. Whereas in classical Jewish thought the Messiah was a king from the House of David who would bring the Jews back to their own land, most modern Jewish thinkers gave up the belief in a personal Messiah, speaking instead of messianic times when all mankind would be united in justice and righteousness.

Another factor that influenced modern Jewish philosophy was the emergence of distinct religious groups within Judaism. While in former times, too, there were different groups within Judaism, e.g., Sadducees and Pharisees, and Rabbanites and Karaites, Jewish philosophy for the most part moved within the mainstream of classical rabbinic tradition. However, in the 19th century there developed three distinct groups within Judaism, each of which had its philosophers. *Neo-Orthodoxy upheld the classical formulation of Judaism but attempted to make modern culture relevant to Jewish concerns. The positive-historical school (which was to become in the United States in the 20th century the *Conservative movement) was committed to classical Jewish tradition but at the same time studied Judaism from a historical-critical perspective, maintaining that Judaism was subject to evolutionary development. Liberal (*Reform) Judaism was committed to a program of change, holding that the core of Judaism was

ethics (ethical monotheism) and that ritual was subject to abrogation and change.

One further factor was the rise of modern antisemitism. In the case of some Jewish thinkers (Hermann Cohen is a notable example) it was antisemitism that aroused their interest in Jewish thought. Antisemitism also produced in certain thinkers a despair of the promise of emancipation, which, together with the emergence of modern nationalism and classical Jewish messianic expectations, produced Zionism which advocated the reestablishment of a Jewish state, preferably in Erez Israel. In its philosophic component modern Jewish thought followed the main currents of modern and contemporary Western philosophy, rationalism, Kantianism, idealism, existentialism, and pragmatism. There were also influences derived from British empiricism and positivism. Whereas medieval Jewish philosophy consisted of movements which had a certain continuity and structure, modern Jewish thought represents mainly the efforts of individual thinkers. In Western Europe the language of Jewish philosophy was the language of the country in which the philosopher lived, while in Eastern Europe its language was largely Hebrew.

Spinoza

Baruch (Benedict) *Spinoza (1632–1677) has sometimes been described as the first modern Jewish philosopher, but he cannot be considered part of the mainstream of the Jewish philosophic tradition. When in his *Theologico-Political Treatise* he set out to separate philosophy from religion (Introd., ch. 7, 14), he denied the possibility of a religious philosophy of any kind. Moreover, the pantheistic system of his *Ethics*, with its identity of God and nature, cannot be said to be in harmony with Jewish beliefs. Nevertheless, there are good reasons for including him in an account of Jewish philosophy: his ideas were influenced by medieval Jewish philosophers, particularly Maimonides and Crescas; he polemicized against the medieval understanding of such ideas as prophecy and miracles; modern Jewish philosophers discussed his ideas (pro and con); and his biblical criticism became one of the foundations of the liberal interpretation of Judaism to which many modern Jewish philosophers subscribed. From his medieval predecessors Spinoza accepted the distinction between a philosophic elite which can understand through reason and the masses which can understand only through imagination. Spinoza wrote his *Ethics* for philosophers, its object being to show that the good life and human happiness can be attained through reason without recourse to historical religion. (In the five parts of the *Ethics* he discusses God (1), mind (2), passions (3, 4), and human freedom (5).) Spinoza rejects the notion of a personal God who acts by will and design. Instead, God is an impersonal being who acts out of the necessity of His (Spinoza often retains theistic language) own nature and determines everything through His infinite power. God possesses an infinity of attributes, of which thought and extension are known to man; He also possesses modes. Everything that exists appears to be an aspect of God. The world and man

lack any purpose other than to function in accordance with their necessary causes. Man also lacks free will. The greatest obstacle to the good life is enslavement to the passions, but man can free himself from this enslavement by understanding and controlling the passions. Philosophic understanding is the goal of human life, and Spinoza describes its highest form as “the intellectual love of the mind toward God.” In his *Theologico-Political Treatise* Spinoza manifests a twofold interest in religion. He attempts, on the one hand, to show that philosophy is independent of religion, and, on the other, to show the ruler that he may enforce religious practices while granting the philosopher the freedom to philosophize. To show philosophy’s freedom from religion, Spinoza develops a new method for interpreting the Bible. Holding that the Bible is a human document composed by different authors, at different times, and under different circumstances (a critical view he attributes to Abraham ibn Ezra), he maintains that it must be interpreted in accordance with ordinary canons of historical and literary exegesis. The new method brings him to the conclusion that the Bible is intellectually rather naïve (a product of the imagination rather than of reason), so that one should not expect to find any philosophical profundities in it. In spite of this evaluation, Spinoza does not reject the Bible altogether. While he held that the biblical religions had sunk to the level of superstition, and while he maintained that most of the biblical precepts could be discarded, he also stated that the Bible contains a viable core useful for the instruction of the masses. The Bible in its noblest core teaches “obedience to God in the singleness of heart and the practice of justice and charity.” The Bible also contains seven dogmas of universal faith – God’s existence, unity, omnipresence, power and will, man’s obligation to worship God, salvation, and repentance – belief in which leads the masses to proper actions. While some of the dogmas reflect philosophic notions discussed in the *Ethics*, Spinoza presents them in the *Treatise* as products of the imagination. Spinoza applies his critical method primarily to the Hebrew Bible, but it can be applied to Christian Scripture as well. It appears that he considered Christianity a better embodiment than Judaism of the purified biblical religions which he favored. Jewish ceremonial law, political in its function, lost its validity with the destruction of the Jewish kingdom and hence was no longer obligatory. In passing he envisages the possibility that under the right conditions the Jews may once again establish their state.

Moses Mendelssohn

Moses *Mendelssohn (1729–1786), champion of Jewish emancipation, translator of the Pentateuch into German, and biblical commentator, is generally considered the first Jewish philosopher of the modern period. Born in Dessau, where he was trained in traditional Jewish learning, he came to Berlin in 1743 and there acquired, through private study, knowledge of classical and modern languages, mathematics, and modern philosophy. His traditional training provided him with extensive familiarity with the medieval Jewish philoso-

phers (whom he cites in his writings), and his modern training acquainted him with the thought of Locke, Leibniz, and Christian Wolff. As philosopher, Mendelssohn followed the pre-Kantian German Enlightenment, sharing with it the conviction that metaphysical knowledge is possible. He wrote on metaphysics, psychology, aesthetics, and also literary criticism. His main philosophical works were *Phaedon* (patterned after Plato’s dialogue of the same name; 1767) and *Morgenstunden* (1785). In the former work he offered arguments for the immortality of the soul, and in the latter he discussed proofs for the existence of God.

Mendelssohn might never have presented his views on Judaism had it not been for the challenge of the Swiss theologian Johann Kaspar Lavater. In 1769 Lavater published his German translation of Charles Bonnet’s *La Palingénésie philosophique* under the title *Untersuchung der Beweise fuer das Christenthum*, and in his introduction he challenged Mendelssohn to refute Bonnet’s arguments or accept Christianity. Mendelssohn, who was not given to polemics, reluctantly accepted the challenge and in his reply professed his unshakable belief in Judaism and pointed out that Judaism tolerantly held that salvation is possible for all men, while Christianity limited salvation to its adherents. Mendelssohn presented his views on religion and Judaism more fully in his *Jerusalem* (1783), a work influenced by Spinoza’s *Theologico-Political Treatise*. Like Spinoza, Mendelssohn (in the first part of the work) advocated the separation of state and church, holding that, while both contribute to human happiness, the state governs man’s relation to his fellow man and the church man’s relation to God. Ideally, the state should govern by educating its citizens, but practically it must compel them to obey the laws. The church should not possess secular power or own property and should promote its teachings only through instruction and admonition. Religion is a personal matter, and both state and church must guarantee freedom of conscience. In the second part of *Jerusalem*, Mendelssohn discusses the nature of religion and Judaism. Religion, for him, is the Enlightenment religion of reason which consists of rational and moral truths discoverable by all men. It is inconceivable to Mendelssohn that a benevolent God should restrict salvation to the adherents of a particular historical religion; salvation must be available to all men. Judaism, then, is not a revealed religion but revealed legislation. Insofar as it is a religion it is the religion of reason. However, whereas Spinoza had held that Jewish law had lost its validity with the cessation of the Jewish kingdom, Mendelssohn maintained that it was still binding for Jews; what has changed since the destruction of the Temple and the ancient Jewish state is only Jewish law’s political enforceability, not its inherent divine authority. If there were to be changes, only a new revelation from God could make them. It is the purpose of Jewish law to preserve pure religious concepts free from idolatry, and it still fulfills this purpose in the modern world. It also serves to keep the Jewish community together. The Law compels man to action but also stimulates him to contemplation. Judaism consists of three parts: religious truths

about God, His rule, and His providence, addressed to man's reason (but these are not presented as compelled beliefs); historical truths disclosing the purposes of the Jew's existence; and laws, precepts, commandments, and rules of conduct, the observance of which will bring happiness to individual Jews as well as to the Jewish community as a whole.

Kant, Schelling, Hegel

The two most important general philosophic influences on 19th- and (to some extent) 20th-century Jewish thought were the critical philosophy of *Kant and the idealistic philosophies of *Schelling and *Hegel. Kant was important for his denial of speculative metaphysics; for his sharp distinction between theoretical and practical (moral) philosophy; for making God, freedom, and immortality postulates of practical reason; for his account of duty, the categorical imperative, and the autonomy of the will; and for closely connecting ethics and religion. The idealist philosophers were important for affirming the spiritual nature of all reality and for their notion that history presents the progressive self-realization of spirit. Jewish philosophers used these philosophies in varying ways and combinations, holding that Judaism is the best embodiment of the religion of reason (Kant) or the religion of spirit (idealists).

Solomon Formstecher

Solomon *Formstecher (1808–1889), rabbi and leader of the Reform movement, developed his philosophy in *Die Religion des Geistes* (1841), a work combining idealist philosophy with a special concern for ethics. From Schelling he accepted the notion of a world soul which is manifest in the phenomena of nature; but, whereas for Schelling the world soul was bound to nature, Formstecher emphasized its transcendence and identified it with God. However, there is another manifestation of the world soul, and that is spirit, whose main characteristics are self-consciousness and freedom. When spirit becomes conscious of nature it produces physics; when it becomes conscious of itself it produces logic. There exists an ideal for spirit in each realm: aesthetic contemplation in nature; moral action in the realm of spirit. Corresponding to the two realms there are two forms of religion: the religion of nature, which considers the world as containing divine forces or which identifies nature with God; the religion of the spirit, which considers God as transcendent. There are also two corresponding goals for human life: for religion of nature it is to become one with God; for religion of the spirit it is to become like Him through moral actions. Historically, paganism embodied the religion of nature, Judaism, the religion of spirit. There exist two kinds of revelation: prehistoric revelation which consists of the ideal that spirit can attain, and historical revelation which is the gradual attainment of this ideal. Historical revelation occurs in natural religion as well as in the religion of the spirit; but in natural religion it comes to an end with the cognition of a God bound to nature, while in spiritual religion it tends toward the cognition of the transcendent God. The religion of the spirit is identical with absolute truth. (Formstecher does

not succeed very well in harmonizing the idealist notion that man's final goal is understanding, with his emphasis on ethics.) The religion of the spirit is the religion of the Jews, but it had a historical development. Since Judaism developed in a pagan world, the religion of the spirit had to be the religion of a specific people. However, as Judaism progressed from objectivity to subjectivity (which consisted in the spirit's becoming more and more conscious of itself), it gained greater universalism. This occurred at first through the destruction of Jewish national life. However, since the world was still hostile, Judaism had to maintain its identity, but now as a theocracy of law. Formstecher maintained that the process of becoming more and more universal was about to come to an end in the modern world which was marked by the emancipation of the Jews, and the absolute truth of spiritual religion was about to emerge.

But spiritual religion also had to penetrate natural religion, and this occurred through Christianity and Islam. Since Christianity addressed itself to the pagan world, it combined the religion of the spirit with the thought of paganism. The history of Christianity is the struggle between Jewish and pagan elements. As Christianity developed historically, it freed itself more and more from its pagan elements. Since Christianity, even in the modern world, has not completely freed itself from these accretions, there is still room for Judaism as a separate religion. However, both religions strive toward the realization of the religion of the spirit. Judaism can prepare itself by stripping itself of its particularistic elements and its ceremonial law.

Samuel Hirsch

Samuel *Hirsch (1815–1889), rabbi and Reform leader, presented his views in *Die Religionsphilosophie der Juden* (1842), a work influenced by Hegel. Hirsch considered it the task of philosophy to transform the content of religious consciousness into the content of spirit (mind), and for him religious and philosophic truth are identical. Central to Hirsch's thought is the notion of freedom. Man, by understanding himself as an "I" standing over against nature, becomes aware of his freedom. However, this freedom is abstract and must be given content. One such content is natural freedom, his ability to do whatever he desires. Hegel held that abstract and natural freedom were in conflict and that this conflict was ingrained in man. Not so Hirsch. He tried to preserve abstract freedom for man by holding that alternate courses of action are open to him. Man may sacrifice his freedom to nature, or he may control nature by means of his freedom. These courses of action have as their concomitants two kinds of awareness of God. According to both, God is the giver of freedom, but according to the first view nature becomes the divine principle; according to the second view God transcends nature. Understanding nature as divine produces paganism; understanding God as transcendental produces Judaism. Hirsch now analyzes the history of religion in a manner reminiscent of Formstecher. But whereas for Formstecher, paganism, be-

ing the partial recognition of spirit, has some redeeming features, for Hirsch, it does not. Whatever development paganism has, it is only to show its nothingness. Judaism also had a development, but only because it originated in a pagan world (Abraham lived in that world); but once it had become free by recognizing that the true nature of religion is moral freedom, no further development was necessary. In early times Judaism required prophecy and miracles to show that God is master of nature; but once the threat of paganism had passed these were no longer necessary. The only miracle still apparent is the continuous existence of the Jewish people. There is, however, a kind of development in Judaism, for once one has discovered the truth of ethical freedom for oneself one wants to spread it to others. This Judaism attains, not by missionizing but by bearing witness to its faith. There existed, however, a tendency to bring Jewish beliefs to the pagan world in an active fashion, and Jesus made this his task. Jesus still moved within the world of Judaism, but a break came with Paul. When Paul formulated a doctrine of original sin and redemption through Jesus, Christianity severed its ties with Judaism. Only when the work of Paul is undone will Christianity be able to fulfill its true mission. When Christianity reaches that stage it will be essentially identical with Judaism. However, even in messianic times, when Israel will become one with all mankind, it will retain a structure of its own.

Nachman Krochmal

Nachman *Krochmal (1785–1840), a representative of the East European Haskalah, presented his philosophy in his posthumously published (1851) Hebrew work *Moreh Nevukhei ha-Zeman* (“Guide of the Perplexed of the Time”). In this work Krochmal does not present his views in any great detail, and a good portion of the work is devoted to an analysis of Jewish history and literature, but his thought may be gathered from the introductory chapters (1–8) and from his discussion of the philosophy of Abraham ibn Ezra (ch. 17). Krochmal was influenced by German idealism, but scholars have debated whether the primary influence was Hegel or Schelling. He differed from Formstecher and Hirsch by emphasizing the speculative rather than the ethical content of religion, and he also differed from them in not accepting the distinction between nature and spirit, and between the religion of nature and the religion of spirit. For Krochmal all religions are concerned with the self-realization of human consciousness and all religions accept a belief in spiritual powers. Even the idolator does not worship the physical likeness but the spiritual power it represents. All religions are religions of the spirit and they differ only in degree. Yet there is a distinction between Judaism and other religions: Judaism is concerned with infinite “absolute spirit” (Krochmal’s term is “the absolute spiritual”), while other religions are only concerned with finite spiritual powers. Krochmal affirms the identity of religious and philosophical truth, the only difference between them being that religion presents this truth in the form of representation, while philosophy presents it in conceptual form. There is, however, a

distinction between Judaism and the other religions: Judaism had an awareness of absolute spirit from its beginnings, while the other religions were only aware of partial spiritual powers. Judaism underwent development; but this development was only a progression from a representational understanding of the absolute spirit to a conceptual understanding of it. The world for Krochmal is a world of spirit, and even inanimate nature is only a concretization of spirit. Since all existence is spirit, and since true existence can only belong to absolute spirit, i.e., God, the world is said to exist in God. This gives a decidedly pantheistic complexion to Krochmal’s thought. He mitigates it somewhat by affirming that the world is descended (emanated) from God. This descent is the true meaning of the biblical account of creation. God creates the world by limiting Himself, thereby separating Himself from the world; nevertheless, His being, as has been noted, still permeates the world. The act of divine self-limitation appears to be a spontaneous act. Krochmal also interprets prophecy within the framework of his thought. Prophecy is the connecting of the human spirit with the divine and it can exist in all men; those in whom the connection exists strongly become prophets in actuality. The prophets also have the ability to predict the future, but they can only predict the future close to their own time. Thus Krochmal denies that the second part of Isaiah was written by the same prophet as the first; the author of the first was too far removed in time from the events described in the second part. He also professes a belief in miracles in the sense of direct divine intervention, but how this can be reconciled with the rest of his philosophy is not too clear.

Corresponding to his general philosophy, Krochmal also develops a philosophy of history. Each of the historical nations is subject to a spiritual power which determines its history and its culture. The gods in which each nation believes are an embodiment of this spiritual principle. Each nation undergoes a three-stage development: growth, maturity, and decline. Decline sets in when desire for luxury and power increases. Once a nation has declined, it ceases to exist and another nation comes to the fore. The accomplishments of the nation which has ceased to exist are often absorbed by the nation which takes its place (for example, the accomplishments of Greece by Rome); however, the Jewish nation manifests the triad – growth, maturity, and decline – it is the eternal people, exempt from extinction. Once a triadic period has come to an end a new one begins. Israel is exempt from the fate of other nations, because it had a belief in absolute spirit from the beginning. This belief makes Israel the teacher of all mankind and this is Israel’s mission in the world. The spirit of the Jewish people flows from absolute spirit, and it is said that God dwells in Israel and that God’s spirit rests on Israel. Krochmal divides Jewish history into four periods: the first extended from the period of the Patriarchs to the Babylonian Exile; the second from the Babylonian Exile to the revolt of Bar Kokhba; the third, which is not too clearly described, ended in the 17th century; and the fourth cycle was still going on in Krochmal’s time.

S.D. Luzzatto

While Formstecher, Hirsch, and Krochmal attempted to harmonize idealism and Judaism, Samuel David *Luzzatto (1800–1865), translator of the Bible into Italian and biblical commentator, was an outright opponent of philosophic speculation. He agreed with Mendelssohn that Judaism possesses no dogmas, but, unlike Mendelssohn, he affirmed that moral action leading to righteousness is the purpose of all (even the ritual) commandments. While he does not hold that Judaism lacks beliefs altogether, he considers it the function of religious beliefs to induce moral actions. It is conceivable to him that some religious beliefs may be false. Ethical activity, according to Luzzatto, springs from the feelings of honor and pity. In his *Yesodei ha-Torah* (“Foundations of the Torah,” published posthumously in 1880) he enumerates three principles of Judaism: the feeling of pity, reward and punishment, and the election of Israel. The first of these is the basic principle; the other two have only an auxiliary function. A belief in reward and punishment is necessary because without it man would be governed by the evil part of his nature; the election of Israel is important for motivating Jews to ever higher ethical practices. Luzzatto distinguishes between Judaism, which aspires to moral action, and “Atticism,” which has understanding as its goal. He maintains that cognition of God lies beyond the capacities of man, but he also holds that the existence of God can be demonstrated philosophically.

S.L. Steinheim

Solomon Ludwig *Steinheim (1789–1866), physician, poet, and philosopher, was also an outright opponent of philosophic rationalism. In his *Offenbarung nach dem Lehrbegriff der Synagoge* (4 vols., 1835–65) he defended the thesis that religious truth is only given through revelation. This meant to him not only that reason is inferior to revelation, but that when reason examines the contradictions contained within its content, it must recognize its own insufficiency. Revelation is not the product of human consciousness but comes from without, from God. (Steinheim does not deny that religion possesses cognitive content; but this content can only come through revelation, not through rational processes.) The truth of revelation is not confirmed by external signs but by reason, which clearly recognizes the superiority of revelation, and also that revelation meets human needs better than philosophy. Philosophy differs from religion in that philosophy conceives of all reality in terms of necessity, while religion understands it in terms of freedom. Corresponding to these approaches are two kinds of religion: natural religion which conceives of God as subject to the necessity of His own nature and as dependent on the matter on which he acts; revealed religion which understands God as the Creator Who, unbounded by necessity, creates the world freely and out of nothing. Creation, according to Steinheim, is the first principle of revelation; other principles are freedom, immortality of the soul, and (very likely) the unity of God. Steinheim applies the two conceptions of religion to the historical religions: paganism is the embodi-

ment of natural (philosophical) religion; Judaism is the embodiment of revealed religion; and Christianity is a mixture of the two. As revealed religion, Judaism emphasizes, besides the cognitive principles mentioned before, human freedom and moral activity. Hence in his conclusions concerning the content of the Jewish religion, Steinheim differs little from Formstecher and Hirsch; but whereas the latter two philosophers saw Judaism grounded in reason, Steinheim sees it grounded in revelation.

Moritz Lazarus

Moritz *Lazarus (1824–1903), writer on psychology and philosophy, devoted *Die Ethik des Judentums* (*The Ethics of Judaism*; vol. I, 1898; vol. II, published posthumously, 1911) to the philosophic interpretation of Jewish ethics. The avowed purpose of the work is to use philosophy to give a structured account of Jewish ethics; but he also uses philosophic concepts to analyze its content. He derives his main notions from Kant, but he gives these notions a psychological interpretation. From Kant, Lazarus accepts the notion of the autonomy of ethics, but to Lazarus this only meant that the sphere of ethics is independent. Whereas for Kant the autonomy of ethics further implied that ethics is independent of the emotions, Lazarus maintained that ethics is grounded in the emotions of duty and obligation. Religious ethics differs from philosophical ethics in that it recognizes God as the author of ethical imperatives. However, if ethical imperatives are given by God, ethics is no longer autonomous but heteronomous. Lazarus tries to solve this difficulty by stating that God is also subject to ethical imperatives. What God commands is right, but not because He commands it: rather He commands it because it is right. Judaism is essentially religious ethics, and even the ritual commandments have an ethical purpose. Jewish ethics are ethics for the individual, but even more for society. Lazarus also interprets the idea of holiness. God is holy, not because He is mysterious or remote but because he represents moral perfection. Man becomes holy through ever increasing moral activity.

Hermann Cohen

Hermann *Cohen (1842–1918), founder of the Marburg school of neo-Kantianism, presented his views on religion in *Der Begriff der Religion im System der Philosophie* (1915) and his views on Judaism in *Die Religion der Vernunft aus den Quellen des Judentums* (published posthumously in 1919). While, in accordance with the development of his thought, Cohen’s works on religion and Judaism were written only after he had retired from the University of Marburg (where from 1873–1912 he had a distinguished career) and had moved to Berlin (1912), he had strong Jewish loyalties throughout his life. As the title of Cohen’s last work shows, he considered Judaism as the religion of reason, that is, in the Kantian sense, of practical reason; but, as will be seen, he tried to introduce into this conception the more personal aspects of the religious life. During the Marburg years Cohen wrote works commenting on the philosophy of Kant and also systematic works of his own. In

his views on ethics, he followed Kant in holding that ethics is only concerned with the general category of man as a moral being, not with individual man in his singularity. In Cohen's Marburg system there is no room for religion as an independent sphere; it is merely a primitive form of ethics which will disappear once ethics has developed sufficiently. While Cohen always maintained that Judaism should preserve its religious identity, during the early years at Marburg he found little difference between it and liberal Protestantism. While Cohen left no special place for religion in his early thought, he did speak of God. God, for him, is not a metaphysical substance but an idea bridging the gap between morality and nature. Man's moral reason tells him that his ethical task is unending, but he has no guarantee that nature is eternal, so that he can fulfill this task. The idea of God provides this guarantee. Cohen is well aware that this conception of God has little to do with the scriptural notion of a personal God, but he praises the Hebrew prophets for contributing to the progress of mankind through their non-mythological conception of God, through their concern for ethics, and through their belief in the coming of the Messiah, which for Cohen is the symbol for mankind's advance toward ever greater moral perfection. Cohen conceived of ethics more as social ethics than personal ethics.

Cohen's conception of religion underwent a marked change. Whereas in his previous writings he had denied the independence of religion, in his *Begriff der Religion* he assigns to religion a separate domain. Ethics only knows humanity (moral man), but it does not know individual man. Yet the individual's feeling of sin and guilt possesses a reality of its own, and this feeling must be removed, so that man may recapture his moral freedom. Religion accomplishes this task by teaching that man can free himself from sin through remorse and repentance and by fostering a belief in a merciful God who is ready to forgive. Cohen emphasizes that atonement is gained through human efforts and not, as in Christianity, through an act of grace on the part of God. He praises the latter prophets, primarily Ezekiel, for having formulated these religious truths. Cohen's conception of God underwent a change as well. Whereas in his early thought he had described God as an idea, he now identifies God as being. In fact only God is being; the finite changing world standing over against Him, is becoming. Though being and becoming, God and the world, always remain distinct, there exists between them a relation, described by Cohen as "correlation." The world cannot exist without God; but God also has no meaning without the world. Cohen considers God as the origin of the world and man, and he uses this thought to explain creation and revelation. Creation refers to the dependence of the world on God (Cohen does not conceive of creation in temporal terms); and revelation refers to the dependence of the human mind on God. (Redemption refers, as has already been seen, to mankind's progress toward the ethical ideal.) Cohen's notion of "correlation" is well illustrated by his understanding of the "holy spirit." He rejects the Christian belief that the holy spirit is a

separate substance, describing it instead as a relation between man and God. God's holiness is the model for human action, and man becomes holy by imitating God. "Correlation" is also illustrated by the saying that man is God's partner in the work of creation. In his final work Cohen applies all these distinctions to an interpretation of Jewish beliefs and practices which combines a concern for ethics and the unity of God (ethical monotheism) with the more personal elements of religion which have been described.

Franz Rosenzweig

The first half of the 20th century saw the emergence of Jewish *existentialism, whose major proponents were Buber and Rosenzweig. Franz *Rosenzweig (1886–1929) studied the philosophy of Hegel as part of his university education, and his doctoral dissertation was a substantial scholarly work entitled *Hegel und der Staat* ("Hegel and the State"). However, even during his student days Rosenzweig became dissatisfied with the rationalism of Hegel and looked for the meaning of life in the existence of the concrete individual and in religious faith. He contemplated converting to Christianity, but resolved to remain a Jew (1913) and embarked upon the intensive study of Jewish sources which he continued throughout his life. (During the year that followed he came under the influence of Hermann Cohen.) During the first World War he fought in the German army, and during those years he sent his philosophic reflections home on postcards to his mother. These became the basis for his major work *Der Stern der Erlösung* (1921; *The Star of Redemption*, 1971). In 1921 he was struck by a disabling disease, but he continued a creative life until his death. Rosenzweig formulated his philosophy in opposition to Hegelian rationalism. According to Hegel thought preceded being, and humanity was more important than the individual man. By contrast Rosenzweig maintained that being (existence) was primary, and that the concrete individual was of supreme importance. He advocated a "new thinking" which, standing between theology and philosophy, began, not with abstract concepts, but with the suffering, anxiety, and the longing of the individual man. Philosophy, Rosenzweig states, had claimed to still man's fear of death; but death is still real and man is still afraid. Philosophy up to Hegel, according to Rosenzweig, had attempted to describe the world as a unitary whole, trying to show that the three elements given in human experience – God, the world, and man – share one essence. The various periods of philosophy differed in that ancient philosophy derived God and man from the world, medieval philosophy, the world and man from God, and modern philosophy, God and the world from man. All these attempts to unify the world, according to Rosenzweig, have failed, and the three elements of experience remain distinct. But while none of these elements is reducible to one of the others, reflection discloses that they stand in relation. God's relation to the world is creation, God's relation to man is revelation, and man's relation to the world is redemption. In creation, which for Rosenzweig is not a unique but an ongoing event, God

shows that He is not a hidden God; in revelation He shows His love for man, which, in turn, leads man to a love of his fellowman; and man's love for his fellow leads to the redemption of the world. While Rosenzweig thought of redemption as occurring at the end of time, he also held that redemption may be experienced in the here and now. The three elements of experience, which so far have been discussed without reference to the historical religions, also provide the substance of these religions. In paganism God, man, and the world remain distinct, but in the scriptural religions they stand in relation. When speaking of the scriptural religions, Rosenzweig has in mind Judaism and Christianity, both of which are in his view valid. They differ, however, in that Judaism is conceived as the "eternal life," Christianity as the "eternal way." The Christian is born a pagan, who, through baptism, becomes a Christian. He is joined to other Christians through a common faith and he must go out to convert the world to his belief. The Jew is born a Jew, and it is his task to lead the "eternal life" of his people. Whereas the Christian is immersed in history, the Jew is beyond it. At present, Judaism and Christianity possess only partial truth, but God's full truth will be revealed at the end of time. While the relation between God and man is marked by love, for the Jew this relation is also governed by law. Rosenzweig advocates that the Jew must study the traditional body of law with seriousness and respect, but he does not demand blind obedience to it. He upholds the right of the individual to decide which laws to obey, maintaining that each Jew must appropriate of the Law whatever he can; however, his criterion should not be ease of life. (It is interesting to note that throughout his life Rosenzweig observed more and more of traditional Jewish law.)

Martin Buber

Martin *Buber (1878–1965) is perhaps best known for his philosophy of dialogue, a form of existentialism. In formulating his philosophic views he drew on his extensive knowledge of the Bible, Hasidism, and comparative religion, and he applies his philosophic findings to contemporary social and political issues. His dialogical philosophy is described in his *Ich und Du* (1923; *I and Thou*, 1937). Buber begins by holding that man has two attitudes toward the world, and these two attitudes are determined by two "primary words" – I-Thou and I-It, which refer to relations, not to their component parts. An I-Thou relation is one between two subjects (persons) and is marked by reciprocity and mutuality. An I-It relation is one between a subject (person) and an object (thing) and is one in which the subject dominates and uses the object. Buber also envisages that there can be I-Thou relations between men and animals and even inanimate beings; while I-Thou relations between men often deteriorate into relations of I-It. In fact, Buber considers human life dynamic: I-Thou relations deteriorate into I-It relations, and a new effort is required to make them I-Thou relations once more. Buber also evaluates critically much of modern social and economic life; for in the modern world human relations have often sunk to the level of I-It. While human

I-Thou relations cannot be sustained continually, there is one I-Thou relation that suffers no deterioration: it is the relation between man and the Eternal Thou, God. Buber does not attempt to demonstrate by philosophic proof that there is an Eternal Thou, for the Eternal Thou can only be recognized by one who is sensitive to it. God, the Eternal Thou, is not hidden but is present in every dialogic situation and speaks through it; He is not encountered in supernatural occurrences but in the events of everyday life. Buber finds this view of the Eternal Thou in Hasidism. The dialogue between man and God is not accomplished in isolation from life, but is best attained in the life of a community. To establish a community is a central Jewish task. Judaism is to be the community within which God dwells and it is to be the bearer of the kingdom of God. Buber's dialogic stance can also be seen in his account of revelation. He rejects the traditionalist view according to which the biblical account of revelation is literally true; but he also rejects the critical view according to which it is only symbolic. Revelation contains both history and symbol; it is the record of the meaning that the historical event had to the one experiencing and reporting it. Perhaps one of the most problematic parts of Buber's thought is his attitude toward Jewish law, on which he exchanged letters with Rosenzweig. As has been seen, Rosenzweig requires the serious study of Jewish law and the appropriation of as much of it as possible. Buber sees no such necessity. Since man's existential response to any given situation is primary, he can refer to a particular commandment if it speaks to that situation; but in itself the commandment has no special claim. Buber also differs from Rosenzweig in his conception of Christianity. Whereas Rosenzweig considered Judaism and Christianity parallel, Buber cannot accept the Christian claim. That the Messiah should have come, as Christianity claims, is inconceivable to the Jew; just as the Jew's stubborn refusal to believe that the Messiah has already come is unintelligible to the Christians.

[Arthur Hyman]

Developments in the Late 20th Century

THE JEWISH PEOPLE. The focus of Jewish philosophy in the late 20th century was neither God nor the individual, but the Jewish people. A generation after the Holocaust and the proclamation of the State of Israel, Jewish thinkers – in the Diaspora and in Israel – are urgently inquiring into the meaning and purpose of Jewish peoplehood.

TWO DIASPORA THINKERS. In North America Emil *Fackenheim published a bold programmatic work, *Encounters Between Judaism and Modern Philosophy: a Preface to Future Jewish Thought* (1973). In it he charges that modern Western philosophy – in its British empiricist, Kantian, Hegelian, and existentialist traditions – has, despite its aim of universality and impartiality, been prejudiced in favor of Christianity and against Judaism. To liberate Judaism from such Christian prejudices, Fackenheim stages a series of merciless encounters between Judaism and modern philosophy. The result of these encounters is not only a critique of modern Western philoso-

phy, but an indictment of modern Western civilization. Fackenheim vigorously turns the tables on modern Western civilization, which had assumed that it could fairly judge Judaism. “Ever since the Nazi Holocaust,” he declares, “it is Western civilization that is on trial” (p. 5).

Fackenheim argues, among other things, that modern Western philosophy has generally failed to recognize that Judaism, unlike Christianity, is a religion not of individuals but of a people, and that unlike Christianity its driving eschatological hope is not the salvation of souls in the hereafter but the Messianic redemption in history. The faith of the Jewish people, he emphasizes, has its stake in history.

It is precisely on the grounds of history that Fackenheim launches his frontal attack on modern Western philosophy. He contends that modern Western philosophy, with its notions of “enlightenment” and “progress,” has been unable to come to terms with modern history: it has been wholly unable to comprehend the radical evil of Nazism. Even Hegel, “the greatest modern Christian philosopher” (p. 81), left no room in his description of the modern world for the appearance of radical anti-Spirit (p. 157).

Judaism, however, with its biblical and rabbinic categories, can recognize Nazism for what it is: idolatry, the idolatry of *Volk* and *Führer*, “the most horrendous idolatry of modern time and, perhaps, of all times” (p. 175). Citing the rabbinic dictum, “one who repudiates idolatry is as though he were faithful to the whole Torah,” Fackenheim describes Judaism as the “uncompromising opposition to idolatry” (pp. 173, 189). It follows for him that the radical manifestation of idolatry in Nazi Europe demands one clear Jewish response: a radical commitment to remain a Jew, which constitutes a witness against modern idolatry. According to Fackenheim, such a post-Holocaust commitment to remain a Jew, whether “secular” or “religious” demands a *secular* self-reliance in the face of God’s inaction and silence, but it also demands a *religious* hope, if not in the traditionally awaited Messianic redemption, then at least in a future in which no second Holocaust will occur. The faith of the Jewish people thus continues to have its stake in history. Fackenheim further argues that the “commingling of religiosity and secularity” today characterizes not only the individual Jew, but also the State of Israel, which is “collectively what the survivor is individually” (p. 167).

In a number of passionate lectures and essays, Fackenheim elaborated on his conviction that the Jewish response commanded by the Holocaust is the *commitment of the Jewish people to life*, a commitment whose chief expression is the existence of the State of Israel, and whose theme is “I shall not die but live, and declare the works of God” (Ps. 118:17). (See “Israel and the Diaspora or The Shofar of Rabbi Yitzchak Finkler of Piotrkov,” *The Yaacov Herzog Memorial Lecture*, McGill University, Montreal, 1974.)

In France, Emmanuel Lévinas published a revised edition of his *Difficile Liberté* (1976). This second edition contains several new essays and omits some dated material. Lévinas’ discussion of the place of Judaism in contemporary society

is similarly connected with a severe judgment on modern western civilization. He speaks of “a crisis of humanism” in the West brought on by the inhuman events of our century. Post-Hitlerian man, in his desire for autonomy, has indiscriminately sought liberty everywhere, until he has finally liberated himself from responsibility to others and has fallen into a lawless, egoistic anti-humanism. Judaism, by contrast, is the “extreme humanism of a God who demands much of man.” This humanism of Judaism is founded on the biblical doctrine of “the irreducibility and the supremacy” of man, and on the difficult liberty “engraved on the Tablets of the Law” (see Avot 6:2). Judaism, Lévinas insists, is intransigently ethical and social. “Jewish man [unlike Heidegger!] discovers man before he discovers landscapes...”: he first encounters Being when he encounters the naked human *face* of the other (pp. 40, 45, 364–65). Understood so, Judaism represents a defiant challenge to contemporary anti-humanism.

Lévinas’s focus on ethics and society leads him to emphasize the significance of Jewish peoplehood. Judaism, he explains, does not mean a spiritualized or interiorized “humanism without nation” or “idealism without danger” (p. 288); rather, it is the destiny, the responsibility, the obligation of the Jewish people. The State of Israel, built out of the passion to recommence after all had been consumed, bears witness to the will of Jews to expose themselves to danger, and to sacrifice themselves, in order to confront their responsibility and obligation. “The Zionist dream – which issued from the most faithful, the most durable, and the most improbable of nostalgias – went back to the very sources of Revelation, and was an echo to the highest expectations” (p. 286).

Judaism, concedes Lévinas (p. 42), may today refer to a “culture” or even to a faint “sensibility,” but he insists that in its foundation Judaism remains a religion, whose divine – and therefore humanistic! – Law, the Torah, is making supreme ethical and social demands, here and now on the individual Jew, on the Jewish people, and on the State of Israel.

FIVE ISRAELI THINKERS. In Israel, several thinkers emerged, addressing themselves mainly to questions concerning Jewish peoplehood in general, and Zionism in particular.

The book which caused the most controversy was Yeshayahu Leibowitz’ *Yahadut, Am Yehudi, u-Medinat Yisrael* (“Judaism, Jewish People, and The State of Israel,” 1975), a collection of essays and topical lectures from 1943 to 1974. Leibowitz, whose approach to Judaism is heavily influenced by Maimonides, has argued consistently throughout the years that Judaism knows only one value: the service of God out of love, as expressed in the Torah and the commandments. It therefore follows, for him, that the Jewish state is not a value in itself. He even goes so far as to contend that “seeing the state as a value is the essence of the fascist conception” (pp. 181, 243, 270). To his mind, no state should ever be considered as more than an instrument. Similarly, he argues, the Jewish people should not be considered a value in itself. He thus freely criticizes “the sacred cow of national unity” (pp. 188,

273), noting that the Jewish religion – that is, the Torah and the commandments – has always divided the Jewish people (prophets vs. kings, pietists vs. Hellenists, Rabbinites vs. Karaites, religionists vs. secularists).

Zionism, as understood by Leibowitz, is a political, not a religious phenomenon. Its aim was to liberate the Jewish nation from the rule of the Gentiles and to achieve for it independence in its Land. This political aim having been spectacularly achieved, the only meaning today of Zionism lies in the strengthening of the bonds between the independent nucleus of the Jewish people and the majority of the people who still live dispersed among the nations (pp. 245–48). Zionism, according to Leibowitz, cannot be considered a religious phenomenon, since its adherents – many of whom were heretics or atheists – were not as a whole motivated by the intention of serving God. Religious significance, he stresses, presupposes intention, and thus cannot be assigned retroactively (p. 404). Denying religious significance to Zionism, he also denies Messianic meaning to the State of Israel. Time and again he quotes Maimonides' admonition (*Hilkhot Melakhim* 12:2) that one ought not to preoccupy himself with the rabbinic homilies concerning the Messiah since "they lead neither to fear [of God] nor to love [of Him]." He ferociously polemicizes against the "modern Sabbateanism" of those who turn religion into a means to justify nationalistic interests (e.g., the claim to all of Judea and Samaria), and for whom the "nation has become God, and the homeland Torah" (p. 271).

Yet, notwithstanding his denial of religious significance to Zionism and of Messianic significance to the State of Israel, Leibowitz declares that the renewal of Jewish independence in the Land of Israel has brought about a religious revolution. The religious significance of the Jewish state lies not in the political fact of its existence, but in the task with which it confronts and challenges the Jewish nation. He explains that in the Diaspora the Jews were not responsible for the political, social, and economic factors of the world in which they lived, and so the Torah did not have the opportunity to deal with the fundamentals of actual human existence. "Now – and only now, with the attainment of the independence of the Jewish nation – will Judaism be tested, as to whether indeed it has a 'Torah of life' in its hand" (p. 96).

For Leibowitz, therefore, the religious significance of the State of Israel lies in the fact that it provides a framework for the struggle on behalf of the Torah. It is the struggle, not the state, which has intrinsic value. "Certainly there is no guarantee ... that the struggle on behalf of the Torah within the framework of the state will be crowned with success, but even so we are not free to desist from it, for this struggle is itself a supreme religious value, independent of its results" (p. 208).

Detesting Messianic euphoria, Leibowitz teaches a hard-nosed political Zionism, and a heroic, infinitely demanding Judaism.

Another book which has roused wide discussion in Israel on the question of Jewish peoplehood and Zionism is *Devarim Bego* ("Explications and Implications," 1975), a potpourri of es-

says written over a span of more than half a century by Gershom G. Scholem, the world-renowned expert in the history of Kabbalah and Jewish mysticism. Among these essays are not only erudite studies on various aspects of Jewish thought, but also recent original enquiries into the meaning of Judaism and Zionism. Some of the essays appeared also in an important English collection, *On Jews and Judaism in Crisis* (1976).

In "Israel and the Diaspora" (which appears in both volumes), Scholem asks whether Zionism ought to be seen as a rebellion against the previous life of the Jewish people, or as the historical continuation of that life. His answer is that though Zionism is both, its most important aspect is that of continuation. "We [Israelis] are first and foremost Jews, and we are Israelis as a manifestation of our Judaism." He calls for "a synthesis between tradition and the new values growing out of the reality of the Jewish people in Israel." As a corollary to his giving precedence to Jewish peoplehood over Israeli nationhood, he sees Israel and the Diaspora as "two partners," and he pleads for the building of bridges between them. The strongest bond today between them, he believes, is not tradition or religion, but the unfathomable trauma of the Holocaust. It follows that the "common denominator" of Israel and the Diaspora is education, which must create a living Judaism, the synthesis of tradition and reality.

In "Reflections on Jewish Theology" (also included in both books), Scholem explores what such a "synthesis" would mean. Traditional Judaism, as he sees it, unfolded in three stages: The Bible, the rabbinic tradition, and the Kabbalah. He pointedly does not include the philosophic tradition (e.g., Saadia, Maimonides, Crescas, Mendelssohn) which he considers to be merely "apologetic." According to him, Judaism is characterized by "religious concepts" like Creation, Revelation, and Redemption, and by "moral concepts" like the love and fear of God, humility, and sanctity. These "moral concepts" underlie the commandments of the Torah and constitute religious ethics. Secularization conflicts not only with the "religious concepts" but also with the "moral concepts," the latter being based on – or at least related to – the former. For example, sanctity has no secular meaning, for it points to "a teleology of Creation."

The implication of Scholem's analysis is that the decision for or against secularism determines whether it is possible to retain the traditional "religious ethics" of Judaism. Moreover, according to him, it also determines whether the goal of Zionism should be for Jews to be "a nation like all the nations" or "a holy nation." Scholem's position is unequivocal; he decides for religion against secularism; he argues in favor of retaining the religious ethics; and he champions a Zionism whose goal is "a holy nation" (cf. *On Jews*, pp. 36, 55).

Scholem, to be sure, does not advocate any current Orthodoxy, nor does he believe that the "religious concepts" of Creation, Revelation, and Redemption – which must be given meaning if Jewish religious ethics is to be founded – can be sustained today on the basis of the Bible, the rabbinic tradi-

tion, or even the Kabbalah. However, he seems to suggest that a fourth stage of Judaism is possible. This stage would come about in Zion out of the dialectic between Judaism and the secularized world. Judging from hints in Scholem's writings, this stage will be a new – previously unimaginable – kind of mysticism, which will be able to re-interpret audaciously the “religious concepts” for tomorrow even as the Kabbalah had audaciously reinterpreted them for yesterday.

Scholem's Zionism is revolutionary in its vision of a new kind of holy community in Zion, while it is conservative in that the religious ethics of that community will at root be those of traditional Judaism. His Zionism is, indeed, fundamentally the historical continuation of the previous life of the Jewish people, but it is still in a meaningful sense a rebellion against that life. In his works on the Kabbalah, Scholem has shown how the great Kabbalists conservatively maintained the traditional religious concepts while reinterpreting them with a radical novelty which bordered on heresy. What he has found to have happened in the Kabbalah, he hopes will happen once again in Zion.

If Leibowitz's discussion of the fateful national questions confronting Jews today is propelled and guided by a mighty religious vision derived from Maimonides, and if Scholem's is propelled and guided by one derived from the Kabbalah, Nathan Rotenstreich's – in sharp contrast – is controlled by sobriety, cautiousness, and a determination to avoid one-sidedness or tendentiousness. An eminent Kantian scholar and for many years recognized as one of the most serious Zionist theorists, Rotenstreich – always a prolific writer – published in the 1970s three books on contemporary Jewish issues: *Al ha-Kiyyum ha-Yehudi ba-Zeman ha-Zeh (On Contemporary Jewish Existence, 1972)*; *Iyyunim ba-Ziyyonut ba-Zeman ha-Zeh (Studies in Contemporary Zionism, 1977)*; and *Iyyunim ba-Mahashavah ha-Yehudit ba-Zeman ha-Zeh (Studies in Contemporary Jewish Thought, 1978)*.

At the center of Rotenstreich's discussions is the desire to understand the relationship between Jewish tradition and present Jewish existence. In order to do this, he seeks in *On Contemporary Jewish Existence* to clarify just what is Jewish tradition. Defining “tradition” as the network of beliefs, ideas, and lifestyles which precede the man living in the present, Rotenstreich notes the danger that, the more man identifies with tradition, the more he denies independent meaning to his present. Modern secular Judaism, including Zionism, is according to Rotenstreich a reaction against the dominance of the religious tradition in the Jewish community: it is an attempt to free the present from the domineering religious past, and to assert the present as an active independent historical factor. However, he argues, this reaction was an overreaction, for the religious elements in the Jewish tradition cannot be wholly denied if one wishes fully to participate in Jewish culture. Indeed, according to Rotenstreich, merely speaking Hebrew and living in the Land of the Bible force the modern Israeli to confront the Jewish religious tradition. But what elements in this tradition are indispensable? What meaning can

this tradition have today for would-be “secular” Jews in the Diaspora and, more especially, in Israel?

In his *Studies in Contemporary Jewish Thought*, Rotenstreich tries to throw light on these questions by examining the approaches of several modern Jewish thinkers, including such major Orthodox figures as Abraham Isaac Kook, Joseph Dov Soloveitchik, and Yeshayahu Leibowitz. Ultimately, Rotenstreich – like Scholem – speaks about a dialectic between the religious past and the secular present. However, the weight he gives to the religious past is not nearly as great as that given it by Scholem. Rotenstreich speaks about “a modest, not a total, Renaissance of Judaism” (p. 37). He calls for an examination of the traditional Jewish sources in order to determine what elements in them are “relevant” to present Jewish existence. Since the determination of relevance to present Jewish existence presupposes an understanding of that existence, Rotenstreich maintains that the task of modern Jewish philosophy cannot be only, as in the past, the interpretation of the Jewish sources, but also the interpretation of present Jewish existence.

This interpretation of present Jewish existence is the purpose of *Studies in Contemporary Zionism*. Directing his attention to the relationship between Israel and the Diaspora, Rotenstreich argues that the brute facts of contemporary Jewish existence in the 1970s render problematic the time-worn metaphor of Israel's “centrality.” From the cultural point of view, he explains, it is not clear that Israel is the center of the Jewish world, and in any case it has not become the ideal “spiritual center” envisioned by Aḥad Ha-Am. More significantly, he argues, Diaspora Jews in liberal democratic societies like the United States, who enjoy freedom and material comfort, and who on the whole have no desire to leave their homes and to immigrate to Israel, have – especially since the Yom Kippur War – come more and more to see their relationship to Israel as being based on their support for their brethren in distress. These Jews, notes Rotenstreich, are identifying not with the State of Israel, but with the plight of the Jews in Israel. They are, in other words, increasingly coming to think that Israel needs the Diaspora as a support more than the Diaspora needs Israel as a cultural center. Instead of the unrealistic metaphor of centrality, Rotenstreich advocates that of the birthright; Israel's right to priority over the Diaspora is not dependent on whether or not it happens to be seen as the cultural center but on the unequivocal fact that it alone represents the great effort of Jews to reenter history as a collective. Rotenstreich contends that the metaphor of the birthright is closer to classical Herzlian Zionism than that of centrality, because it stresses the significance of national sovereignty. Immigration to Israel, he concludes, is to the advantage even of the free and prosperous Western Jews, “if they want to serve the historical existence, and to prefer the struggle for the place of the Jewish people in the world over their own everyday existence” (pp. 50–51).

No holds are barred in Rotenstreich's thought, and classical Zionism is forced to grapple both with the traditional Jewish past and the difficult Jewish present.

Leibowitz, Scholem, and Rotenstreich, born in Europe, had formed their basic ideas on Judaism and Zionism before they arrived in the Land of Israel. Eliezer Schweid, on the other hand, is a sabra, and he has given eloquent and thoughtful expression to the crisis in Jewish identity which is acutely experienced by many native-born Israelis.

Schweid, who taught Jewish philosophy for years at The Hebrew University of Jerusalem, published numerous essays and books, among them: *Le'umiut Yehudit* ("Jewish Nationalism," 1972); *Ha-Yehudi ha-Boded ve-ha-Yahadut* ("Judaism and the Solitary Jew," 1974); *Beyn Ortodoksiah le-Humanizm Dati* ("Orthodoxy and Religious Humanism," 1977); *Toledot ha-Maḥashavah ha-Yehudit ba-Et ha-Ḥadashah* ("A History of Jewish Thought in Modern Times: Nineteenth Century," 1977); and *Demokratiah ve-Halakhah* ("Democracy and Halakhah," 1978).

In *Judaism and the Solitary Jew*, Schweid describes the predicament of the modern Jew who – like most Israelis – has been given a secular education and is largely ignorant of traditional Judaism. A typical modern man, the modern Jew is at first happy to be an individual, an atom in and of himself. He seeks freedom from external limitations, from commitments to his family, to his nation, to his past, to his Jewishness. His atomism, however, is soon undermined by such existential questions such as, "How shall I educate my children?" He then realizes that his break with his Jewishness has caused him to be limited by a lack of cultural plenitude, which in turn limits his freedom, his creativity, and his self-respect. He realizes, in short, that in his striving to free himself from limitations, he has paradoxically been limiting himself!

It is, thus, the awareness of cultural deprivation which, according to Schweid, leads the modern Jew to reject individualism, and to seek out the Jewish community. He discovers, however, that there is today no one Jewish community, but many fragmented communities, none offering the cultural wealth he needs. Frustrated in his vital search for community, the modern Jew – no longer happy to be an individual – experiences dire alienation, and becomes "the solitary Jew."

In trying to recover his national identity, the modern solitary Jew, according to Schweid's analysis, finds himself in at least one respect in a better position than his modern solitary European counterpart. For his Jewish nationalism, like other ancient nationalisms, is rooted in religion, that is, it is essentially cultural and spiritual; while European nationalisms (having been deprived of their distinctive religious content by the supra-national medieval Church) are rooted in nothing but the state. However, just because it is essentially religious, Jewish nationalism poses a problem for the modern solitary Jew which European nationalism does not pose for the modern solitary European. The modern Jew seeks to embrace his Jewish national tradition, but finds it beyond reach, because it is a religious tradition, and he – as modern man – has no faith. The existential predicament of the modern solitary Jew thus turns into a problem of faith in God. Here, however, Schweid argues dramatically that the very decision of the solitary Jew

to break out of his individualism and to affirm his familial, communal, and national commitments is already an expression of faith in God because it is an expression of faith in life in its totality, and the beginning and the end of all true faith is itself faith in God!

Having argued that religion is possible for the modern solitary Jew, Schweid now finds himself faced with the same question posed by Scholem and Rotenstreich: What is Judaism? His answer is: "Judaism is Scripture, Mishnah, Talmud, Midrash, medieval scriptural and rabbinic exegesis, the responsa literature, the philosophic and kabbalistic speculative literature, and even modern literature in all its genre, including the belletristic, to the extent that it is based on the previous sources and related to them" (p. 91). All these sources are, for Schweid, "Torah," and Judaism is, in one word, Torah.

It is a fact, however, contends Schweid, that the Torah and the national life have in modern times been tragically ripped asunder. To reunite them requires audacious innovation, no less audacious than the innovation of the Mishnah over against the Bible, or of the Gemara over against the Mishnah, or of the medieval speculative literature over against biblical and rabbinic literature. His call for an audacious revival of Judaism is thus similar to Scholem's (but without the kabbalistic bias), and in obvious contrast to Rotenstreich's measured call for "a modest renaissance."

But whence is this audacity to come? Orthodoxy, Schweid laments, has not been sufficiently open to the new life of the Jewish nation, and thus has been incapable of the audacity requisite for renewing the Torah. In an attempt to understand whether such audacity might be possible, Schweid has investigated the history of modern Orthodox thought. He believes that he has found an example of openness to modernity and *halakhic* audacity in Ḥayyim *Hirschensohn, whose views he analyzes in *Democracy and Halakhah*.

Schweid's thought, which begins with modern secular individualism and moves through secular nationalism toward a yet unrealized religious nationalism, poses a powerful challenge both to the Jewish secularist and to the Jewish religionist.

If Schweid raises questions of Judaism and Zionism from the point of view of a sabra, André Neher's *U-ve-khol Zot: Nevertheless* (1977) raises them from that of a recent immigrant. *Nevertheless* is the first Hebrew collection of essays published by the noted French-Jewish existentialist, who immigrated to Israel after the Six-Day War. It contains analyses of biblical and contemporary themes and reflections on his *aliyah*.

In France, he remarks, he had loved Jerusalem from afar, as one dreams of a distant fiancée, but now he has joyously consummated the marriage (p. 216). Having left the rich universal culture of France, Neher asks whether the move to Jerusalem might not cut him off from humanity as a whole and harness him to "the particularism of the solitary Jew" (p. 218). His reply, citing Judah Halevi, is that the Jewish people is the heart of universal human history, and Jerusalem the heart of the Jewish people. In Jerusalem, where God is worshipped by

Jews, Christians, and Muslims, the utopian, Messianic, universalistic vision of Isaiah is being realized every day: "My house shall be called a house of prayer for all peoples" (Isa. 56:7). The culture of France is a universal one, but that of Jerusalem is much more so!

Neher's discussions of contemporary Israel are permeated with a powerful consciousness of Jewish history and vocation. In immigrating to Israel, he chose to go up on the King's highway, "the highway of the God who acts in world history and in the history of the Jewish people" (p. 57). According to him, the Six-Day War – preceded by days of anxiety and concluded with victory – wrought a revolution in modern Jewish existence by uniting Jews and strengthening their ties to Judaism. Again, according to him, the Yom Kippur War – which began when Israel's enemies, after the old antisemitic pattern, struck on the holiest of Jewish days, and throughout which Israel stood in dreadful isolation, and which in all this recalled the horror of the Holocaust – painfully emphasized that the State of Israel must be seen in the perspective of "the metaphysics of Jewish history." However, the awareness that in Jewish history holiness has often been bound up with tragedy does not, for Neher, mean that hope should give way to fatalism. We, the builders of the Third Commonwealth, must, like our forefathers who built the Second Commonwealth, affirm "Nevertheless" (Neh. 10:1), and apply ourselves to our task in faith (p. 19).

Neher does not think that any good will come of the current attempts to find a definition of Jewishness. Judaism cannot be defined, because it points to the infinite. "I am a Jew not only in accordance with how I see myself. Nor only in accordance with how I am seen by others. I am a Jew in accordance with how I am seen by God!" (pp. 29, 45).

Common to the thought of Leibowitz, Scholem, Rotenstreich, Schweid, and Neher is the conviction that Israeli nationhood has meaning only within the framework of Jewish peoplehood. This conviction, moreover, seems to reflect popular feeling in Israel today. Israelis seem more and more to be defining themselves as "Jews first, Israelis second." The once fashionable slogan "I am an Israeli not a Jew" is rarely heard today. Israelis now generally see their future as tied not to that of their Arab neighbors but to that of Diaspora Jewry. The Aḥad Ha-Amian vision of Zionism as the evolutionary continuation of previous Jewish history and traditional Jewish values seems to have almost completely obscured the Berdyczewskian vision of Zionism as the revolutionary break with previous Jewish history, the transvaluation of Jewish values, and the creation of something radically new. Over the past half-dozen years, there hardly has been any serious effort to argue the primacy of Israeli nationhood over Jewish peoplehood. One notable exception is A.B. Yehoshua's essay, "A Return to Ideology" (*BiTefuzot ha-Golah*, Winter 1975). Needless to add, the Canaanite movement of Yonatan Ratosh has today no appreciable following. It is not yet clear whether the growing assimilation of Israeli nationhood to Jewish peoplehood is to be understood as a negative or a positive phenomenon.

It may, of course, be understood as a sign of Israeli insecurity and weakness, that is, as failure of nerve, whose etiology is in the trauma of the Holocaust, but which was aggravated by the awful days of isolation before the Six-Day War, and which was brought to a critical state by the shock of the Yom Kippur War. However, it may also be understood as a sign that the Jews in the Land of Israel, having achieved political independence, are now ready to recapture and to renew their ancient, sacred heritage.

JEWISH LAW – HALAKHAH. A second question which, after that of Jewish peoplehood, has occupied Jewish philosophers over the past half dozen years, is that of Jewish law, the *halakhah*. To some extent, the current interest of Jewish philosophers in the *halakhah* has itself grown out of their interest in Jewish peoplehood. Rotenstreich, for example, was led by his analysis of Jewish peoplehood to examine some problems concerning the *halakhah* in his *Studies in Contemporary Jewish Thought*, and Schweid was led by his analysis of Jewish peoplehood to write his *Democracy and Halakhah*. However, it would surely be an exaggeration to say that the current philosophic interest in the nature of the *halakhah* is entirely the product of a prior philosophic interest in the nature of Jewish peoplehood. In recent years, particularly in North America, there has been a growing interest among many Jews in the spiritual significance of the *halakhah*. This interest has manifested itself even in the Reform camp, where various attempts are now being made to create a "Reform *halakhah*."

Recent philosophic discussion concerning the nature of the *halakhah* has been largely inspired by the work of Joseph B. Soloveitchik and Yeshayahu Leibowitz. Soloveitchik has sought to describe the *halakhah* as a conceptual system which, analogous to mathematical physics, is both related to the world and yet self-contained, and he has sought to describe the halakhist as autonomous, creative, and free (see e.g., Lawrence Kaplan, "The Religious Philosophy of Rabbi Joseph Soloveitchik," *Tradition*, vol. XIV, Fall 1973). Leibowitz has sought to distinguish the *halakhah* from other phenomena, particularly from ethics and secular civil law.

One stimulating contribution to the philosophic discussion of the *halakhah* is *Maimonides: Torah and Philosophic Quest* (1976), by David Hartman, a student of Soloveitchik, who served for 15 years as a rabbi in Montreal and then taught Jewish philosophy at The Hebrew University of Jerusalem, during which time he also founded and headed the Shalom Hartman Institute. His book, ostensibly about Maimonides, is better seen as a new Maimonidean attempt to recapture the spiritual sensitivity of the *halakhah*. According to Hartman's Maimonidean analysis, the *halakhah* is based on the universal human aspirations of the love and knowledge of God, and seeks to create a moral, historically conscious *community* in which these aspirations may be realized. The *halakhah* is thus seen as operating simultaneously on spiritual and political levels. Hartman believes that the philosophic analysis of the *halakhah* has particular significance in the light of the politi-

cal renaissance of the Jewish people in the land of Israel and expresses the hope that his book “will encourage renewed discussion on the political implications of halakhic thought” (p. x). He has pursued the themes of *halakhah* and community in several essays (see, e.g., his “*Halakhah as a Ground for Creating a Shared Spiritual Language*,” *Tradition*, vol. 16, Summer 1976).

However, philosophizing about *halakhah* has not been confined to its advocates. In his highly polemical *Teokratiah Yehudit* (“Jewish Theocracy,” 1976), Gershon Weiler, professor of philosophy at Tel Aviv University, and a zealous secularist, argued that the *halakhah* is in irreconcilable opposition to the modern state, and that consequently the Jewish religion is subversive to the State of Israel. Not surprisingly, Weiler’s book roused violent antagonism among religionists, who charged that Weiler, who has no formal training in rabbinics, should never have written a book about a subject of which he is flagrantly ignorant. Criticism of the book, unfortunately, became in the main a hunt for errors of fact, misunderstandings of texts, and other mistakes, and thus avoided confrontation with Weiler’s main thesis. Yet it cannot be denied that *Jewish Theocracy* is – despite its author’s intent – an invitation to renew discussion on the political implications of halakhic thought.

Recent philosophic interest in the *halakhah* has also been connected with new developments in the discipline of the philosophy of law, which in the past two decades has been given increasing attention, especially in Britain and America, but also on the continent. Several young Jewish philosophers, involved in the fruitful work going on in this discipline, have begun to apply its methodology to the study of the *halakhah*. They are raising questions concerning obligation, responsibility, rights, intention, freedom, justice, fairness, equity, and so on (see, e.g., Yehuda Melzer’s essay and Yeshayahu Leibowitz’s reply to it in *Iyyun*, 23 (Oct. 1975)). Mention should be made here of the excellent work being carried out in the clarification of legal concepts of the *halakhah* by Aharon Lichtenstein, an eminent disciple (and son-in-law) of Soloveitchik and head of the Har-Ezion Yeshivah in Israel (see, e.g., his essay in Marvin Fox, ed., *Modern Jewish Ethics*, 1975). Yet the analysis of the *halakhah* in terms of the philosophy of law remains an almost virgin field. Perhaps it will have to be plowed before any progress can be made toward the audacious renaissance of Judaism called for by Scholem and Schweid, or maybe even before any progress can be made toward the “modest renaissance” called for by Rotenstreich.

MAN’S RELATIONSHIP WITH GOD. With Jewish philosophic activity focused primarily on the question of Jewish peoplehood and secondarily on that of Jewish law, the existential questions concerning man’s relationship with God have during the past half-dozen years receded into the background. Yet it has been precisely these questions which until recently have most occupied 20th century Jewish philosophers, and which indeed have most enriched 20th-century Jewish phi-

losophy. Ever since Martin Buber’s early publications more than 70 years ago, modern Jewish philosophy has been in large measure under the dual influence of Ḥasidism and existentialism. One of the most popular and compelling of those Jewish philosophers to write under the influence of Ḥasidism and existentialism was Abraham Joshua Heschel (1907–72). Himself a descendant of distinguished ḥasidic rabbis, Heschel developed an exciting philosophy of Judaism rooted in ḥasidic mysticism and Kierkegaardian existentialism. His writings ranged over Bible, rabbinics, medieval Jewish philosophy, Kabbalah, Ḥasidism, Yiddish culture, religious existentialism, and Zionism. Yet it may be that there is no more suitable introduction to his lifework than his two posthumous publications: *Kotzk: In Gerangl far Emesdikeit* (“Kotzk: The Struggle for Integrity,” 1973), a two-volume study in Yiddish of the mysterious ḥasidic master, Rabbi Menahem Mendl of Kotzk, known as “the Kotzker”; and *A Passion for Truth* (1973), an English condensation of the Yiddish study. In these works, Heschel recalls the ḥasidic teachings which he had learned as a youth, and which underlie his mature thought. It seems proper to conclude this summary of the past half-dozen years of Jewish philosophy with a discussion of Heschel’s portrait of the Kotzker.

Heschel speaks of a struggle which has raged within him since his youth between the Ba’al Shem Tov (c. 1690–1760), the founder of Ḥasidism, and the Kotzker (1787–1859). The Kotzker, he writes, was both the climax and the revolutionary antithesis of the ḥasidic movement (*A Passion*, p. 10). To Heschel, the Ba’al Shem Tov meant love, while the Kotzker meant truth. The Ba’al Shem Tov meant “emphasized love, joy, and compassion for this world,” while the Kotzker “demanded constant tension and unmitigated militancy” and “insisted ... that to get to the truth a man must go against himself and society” (pp. 10–11). The Ba’al Shem Tov “dwelled in my life like a lamp, while the Kotzker struck like lightning” (p. xv). The Kotzker reminded Heschel of the Prophets of Israel (pp. 10, 15, 307–10), or perhaps it would be more accurate to say that the example of the Kotzker taught Heschel how to appreciate the Prophets. The image of the Kotzker which arises from Heschel’s study is similar to the image of the prophet which arises from his celebrated work, *The Prophets*. The Kotzker was “anti-social, shocking, an enemy to all established convention and propriety”; he sought “to jolt minds out of their complacency ... to unsettle, to question accepted habits of thought”; he “held moral cowards in contempt”; he was ruthless in his demand for honesty and justice; he was disgusted by egoism and had no patience for those who sought in religion their own personal salvation; and he insisted that “man was created to exalt Heavens!” (pp. 263–67, 310–11). In *The Prophets*, Heschel had written of the phenomenon of “moral madness,” and he reverts to this theme. He explains that the man of moral and religious sensitivity, who refuses to ignore the mendacity and cruelty of society, and who seeks to bring about radical social change, lives under unbearable tensions, and finds it impossible to be comfortable and happy while others are suf-

fering and oppressed. Moral and religious sensitivity, argues Heschel, may thus cause madness, a madness which might be the only normal reaction to “the madness that has overtaken so-called normal society” (pp. 205–08, 313).

Heschel also compares the Kotzker with his contemporary, the Danish Christian existentialist Søren Kierkegaard. He observes that both took the concrete existence of individual man as the basis of their approach to reality; both gave the will predominance over the intellect; both “knew that faith constituted a demand rather than a consolation or comfort; both held that the goal and requirements of faith must not be adapted to the weakness of human nature, but that human nature must be raised to a level of greatness; and both contended that “the essence of religion is warfare ... against spiritual inertia, indolence, callousness” (pp. 108, 120, 124–25, 183). Heschel also calls attention to differences between the Kotzker and Kierkegaard, and argues that these are mostly due to differences between Judaism and Christianity. For example, while both suffered intense agony, the Christian Kierkegaard’s agony was rooted in a sense of guilt due to Original Sin, while the Jewish Kotzker – who, of course, did not accept the dogma of the Original Sin – was “plagued by a more radical agony, the awareness that God was ultimately responsible for the hideousness of human mendacity” (p. 256). Heschel seems here to be suggesting that the doctrine of Original Sin prevents the Christian from radically confronting existence, and thus true religious existentialism is impossible in Christianity, but possible in Judaism. Throughout all his writings, Heschel has presented a Judaism which teaches man to love life and to rejoice in the world, but which at the same time exposes him to existence in all its agony and sublimity. Judaism, for Heschel, is at one and the same time the Ba’al Shem Tov and the Kotzker.

A Passion for Truth, like Heschel’s other English works, is written in an aphoristic, poetic style, whose easy readability contrasts with the difficult, sometimes frightful, thoughts it expresses. The two-volume Yiddish work is written in a beautiful Yiddish, rich in rabbinic Hebrew elements, and is an expression of Heschel’s love for the language and his desire to contribute to its philosophic literature.

[Warren Zev Harvey (2nd ed.)]

WOMEN AND GENDER IN JEWISH PHILOSOPHY

Gender has not been considered relevant to Jewish philosophy, even though Jewish philosophers held strong beliefs about women and some philosophers employed “the feminine” as a central trope of their philosophy of Judaism. Under the impact of feminism, however, new attention has been paid to gendered language in Jewish philosophy, its hidden philosophical assumptions, and socio-cultural implications. The new research has documented the extent to which philosophy contributed to the negative perception of women, thereby adding to the marginalization of women in traditional Jewish society. In addition to exposing the gender inflection of Jewish philosophy, a few feminist Jewish philosophers have also

proposed new approaches to *halakhah* that call for inclusion of women in the interpretative process and prescribe egalitarianism. Despite these innovative efforts, a systematic engagement of Jewish philosophy with feminist philosophy is still in its early stages, and only time will tell if feminist philosophy will enrich Jewish philosophy as an academic discipline and as a constructive endeavor.

Jewish Philosophy in Antiquity

Interestingly, gender stood at the foundation of the Jewish philosophical tradition, because in the Bible wisdom (*hokhmah*) was personified as a female. Feminine wisdom is the ideal which the male lover of wisdom seeks to obtain through the devotion to learning. Given the gender difference between the pursuer of wisdom and his goal, the pursuit of wisdom was couched in erotic terms and obtaining wisdom was expressed in metaphors of conjugal union. The feminization of wisdom reflected a certain social reality of patriarchy in ancient Israel as much as it prescribed certain social norms and attitudes. Because the pursuit of wisdom was perceived as masculine activity, in ancient Israel the learned elites of priests, scribes, and sages comprised men only.

The origins of the feminine portrayal of Wisdom cannot be determined with certainty. It is very possible that the Egyptian belief in Maat, the cosmic order of the universe which was identified with the goddess Isis, was the immediate source of Proverbs 8 and Ben Sira 24, because the cult of Maat/Isis was very popular in the Ptolemaic period during which the biblical canon received its final form. However, Ben Sira gave it a Jewish coloration when he equated Wisdom, who was with God at the creation of the world, with the Torah of the sacred tradition. In the Wisdom of Solomon, Lady Wisdom was depicted as a principle of order that “reaches mightily from one end of the earth to the other, and She orders all things well” (8:1). In a language that suggests familiarity with Neo-Pythagoreanism and Middle Platonism, the author turns wisdom into a hypostasis, an emanation of God’s glory that acts as His agent in creation, pervading the entire cosmos while remaining intimately close to God (7:24; 8:1, 3). Wisdom is identical with the divine mind through which God acts (9:9) and contains the paradigmatic patterns of all things (9:8). In this sense, Wisdom is identical with divine providence over the created cosmos. Because Wisdom is personified as a female, the male lover of wisdom makes her his “bride” and “spouse,” enjoying intimate kingship with her (8:9; 7:28; 8:16). Since Wisdom is an attribute of God, intimacy with her entails a mystical union with God. Earthly women, however, could either hamper the attainment of this lofty goal or assist it. Thus Proverbs 7:6–21 depicts the “strange woman” as a seductive female who steers the young student of wisdom away from the “straight path,” while her antagonist, the “woman of virtue” (Pr. 31:10–31), represents the diligent woman with good managerial skills who frees her husband to study Torah and devote life to the pursuit of wisdom. These negative and positive stereotypes of women were perpetuated throughout

the Jewish philosophical tradition in commentaries written on Proverbs during the Middle Ages.

*Philo of Alexandria (15 B.C.E.–ca. 50 C.E.) drew on Jewish Wisdom tradition while being immersed in Greek and Hellenistic philosophy. Philo was the first to offer a systematic allegorical interpretation of the Bible in light of Greek philosophy. With Philo began the allegorical reading of the creation narrative in Genesis whose inner meaning was understood in psychological categories: biblical “Adam” and “Eve” represent the powers of the human soul (*Allegorical Interpretation of Genesis*, II, 18.37; Sarah Pessin “Loss, Presence, and Gabirol’s Desire: Medieval Jewish Philosophy and the Possibility of a Feminist Ground,” in *Women and Gender in Jewish Philosophy* (2004), pp. 34–38). For Philo, “Adam” is a figurative expression of the rational part of the soul, whereas “Eve” represents sense perception that gives rise to the passion, hence she is referred to as “the mother of passion.” The main passion, pleasure, is symbolized by the serpent (*nahash*), who is the main obstacle for the pursuit of wisdom. For Philo both sense and passion are irrational aspects of the soul that must be subordinated to reason, whose activities are portrayed in masculine terms. As ruler, the reasoning aspect of the soul emerges as authoritarian and controlling, the “husband” and “father” who as lord of the household must keep the wife and children in line, namely Eve and her daughters, the passions.

According to Philo not only is the pursuit of wisdom the exclusive domain of men, reason itself is masculine in contrast to the feminine aspects of humanity, sensation and desire. These gender paradigms pertain not only to the powers of the human soul but also to society: reason belongs to the intellectual few, whereas the passions are associated with the vulgar masses. As much as the philosophical life necessitates the control of the (feminine) passions by (masculine) reason, so do the masses need to be controlled by the philosopher-ruler, because they are prone to fall under the sway of the passions. All hierarchical relations (in the individual, the society, and the cosmos) are expressed in gender categories where the ruler is always male and masculine traits constituted the ideal, and, conversely, the ruled is always female and feminine traits are viewed necessarily as short of the ideal. Despite these hierarchies, and almost against his will, Philo discusses an actual egalitarian community of Jewish contemplatives, the Therapeutae of Lake Mareotis in which women devoted themselves to the life of wisdom alongside men (*The Contemplative Life*, VIII: 68–69).

Medieval Jewish Philosophy

While Jewish philosophers in the Middle Ages did not have direct access to Philo’s works, they perpetuated many of the themes and assumptions of his gendered metaphysics and anthropology. When Jewish philosophers reflected about the human species they referred to it by the universal ‘Man,’ taking for granted that the male of the species is the standard of the human species as a whole. The female of the human species was deemed to be less than the male on account of her

defective rationality. Whether the perception of women as intellectual inferior was caused by the exclusion of women from Torah study in rabbinic Judaism, or rather by the influence of Greek and Hellenistic philosophy (for example, Aristotle in *Generation of Animals* I, 20:727a 15; II, 4:737a 25; *Politics* I, 13:1260a 12–14) cannot be easily determined. Nevertheless, even though medieval Jewish philosophers assumed that the philosophical life is for men only, their use of gender categories, “femininity” and “masculinity,” was rather flexible. A given entity could be regarded as “feminine” in one context and as “masculine” in another, determined by its function: whatever was active was considered to be “masculine,” while that which was passive, or being acted upon, was considered “feminine.” This gendered metaphysics was presupposed by all medieval Jewish philosophers, whether they endorsed a Neoplatonic schema or an Aristotelian one.

In the Neoplatonic strand of Jewish philosophy gender configured in psychological theories. Since the seeker of wisdom was always male, it is no coincidence that the human soul of the male philosopher was always referred to as female. This gendered language was further exacerbated by the fact that in Hebrew all nouns referring to the soul (i.e., *nefesh*, *ruah*, and *neshamah*) are feminine terms. Nonetheless, even though the human soul was always taken to be female, it could function in “masculine” or “feminine” ways: toward the body, the soul acts as a masculine power, ruling it and governing it so as to ensure proper behavior. By contrast, vis-à-vis the (masculine) God of Israel, the human soul in a “feminine” way when she receives the divine efflux by virtue of which one acquires knowledge and wisdom. Not surprisingly, Neoplatonic Jewish philosophers such as Moses *Ibn Ezra, *Solomon ibn *Gabirol, and *Judah Halevi, who developed systematic philosophical anthropology, also produced powerful religious poetry that expresses the yearning of the feminine soul to unite with God. However, in regard to corporeal women, Neoplatonic Jewish philosophers saw them *as a class* to be intellectually deficient. For example, *Bahya ibn Pakuda explains the revelation of the Law as follows: the revealed Law is necessary for the “education and management [of Man] to help him overcome his desires until he grows up and his mind strengthens. The same is true of women and the weak-minded among men, both of whom cannot be easily managed by the mind because its rule is impotent over them. They need a moderate rule, one they can bear without being impossible for them to grasp.” (*Duties of the Heart*, ed. Menachem (1973), p. 187) For Bahya, and Saadia Gaon before him, all women are intellectually deficient and require divine revelation to make known truths that are beyond their limited intellectual competence.

In medieval Jewish Aristotelian philosophy the binary relationship between the active vs. passive principles was given a general abstract formulation in the metaphysics of matter and form. All existents are comprised of matter and form, where matter signifies that a thing is, namely its corporeality, and form signifies what a thing is, namely, its essence. By identifying form with male and matter with female, the Jewish

Aristotelians made gender categories more rigid, shaping an entire range of gender stereotypes. Matter was believed to be inherently unstable and unable to exist by itself without form, and in turn, form was said to give matter its identity. When this gendered metaphysics was applied to men and women, it lent support to the claim that men must rule over women and that marriage is the ideal institution for the social relations between the sexes.

*Maimonides was the first Jewish philosopher to apply this gendered metaphysics to Scriptural interpretation, beginning with the creation narrative of Genesis. Reading Scripture allegorically, Maimonides identifies “Adam” as the form of the human species, whereas “Eve” stands for matter. Prior to the sin of disobedience Adam was engaged in contemplation of truth, but the separation between matter and form in the sin entailed an epistemic shift to moral distinction between good and bad (*Guide* 1, 2; 1, 6; 1, 17). “Eve,” the material dimension of the first being represents the cause of the sin and, more broadly, the life governed by passions which is characteristic of ordinary human beings. In *Guide* 11, 30 Maimonides elaborated on his philosophical anthropology identifying the imagination with femaleness. Reading the Genesis narrative in light of Genesis Rabbah 8:1 and Midrash Pirqey Eliezer 13, Maimonides suggests that the “serpent” is the appetitive power that was controlled by the imagination (represented in the Midrash as Samael), that tempted Eve (i.e., matter) to irrationally desire and even lust after the fruit of the forbidden Tree of Knowledge Good and Evil (Sarah Klein-Braslavy, *Maimonides’ Interpretation of the Adam Stories* (1986), pp. 209–26). In Maimonides’ interpretation of Genesis, when Eve was separated from Adam, the power of imagination was no longer controlled by reason. As a result, Adam shifted away from contemplation of truth to moral knowledge of good and bad, which is of lower epistemic level. The goal of human life, therefore, is to regain the form of the human species, which had been lost in the sin of disobedience, by perfecting the human intellect through the study of philosophy. The resulting intellectual perfection ensures entry into the “world-to-come,” a cognitive state of contemplation.

While all human beings are born with the capacity to reason, which Maimonides identified with the “image of God” (Gen. 1:26), not all humans actualize that capacity. Those who do not cannot be considered fully human. On the intellectual capacity of women, however, Maimonides’ left for posterity an ambiguous legacy. On the one hand, he states categorically that women possess a “feeble mind” (*Guide* 111, 37) that makes them more prone to be governed by the emotions and desires, but, on the other hand, he included the prophetess Miriam among the very few who reached intellectual perfection (*Guide* 111, 51). Maimonides was equally ambiguous on the question of women’s education: on the one hand, he treats women as a group whose rationality, like that of children, is defective and excludes them from the performance of certain *mitzvot* (*Mishneh Torah*, Talmud Torah 1:1; Keriat Shema 4:1; Berakhot 5:6; Sukkah 6:1; Edut 9:1). But, on the other hand, he envisions a

situation in which women study Torah and even teach Torah (Talmud Torah 1:13), even though they should not be compensated for it. Mainly Maimonides was concerned with women in the context of the institution of marriage whose primary purpose was reproduction. Within the marital institution, sex should be carefully regulated according to the strictures of *halakhah*, because sexuality and sensual pleasures in general are obstacles for the attainment of the ultimate end of human life, the contemplation of God (*Guide* 111, 33). While sexual intercourse between husband and wife must be free of coercion, between husband and wife there is no equality: he must rule over her and the children, and she must strive to function as the ideal “woman of virtue.”

In post-Maimonidean philosophy the association of women with matter, the belief that they are rationally inferior, and their exclusion from the study of philosophy were further accentuated, resulting in full blown misogyny. A typical example was Shem Tov ibn *Falaquera whose *Sefer ha Mevakesh* (The Book of the Seeker) used the trope of the young seeker of wisdom to introduce the reader to the various sciences, as well as to promote the values of the philosophical life. The characters in the novels stand for specific professions (e.g., merchant, soldier, artisan, physician, rabbi, or poet), and all of them are men. Similarly, the persons who represent various intellectual disciplines (e.g., ethics, grammar, poetry, arithmetic, geometry, optics, astronomy, music, logic, physics and metaphysics) are all men. Falaquera’s allegorical tale accurately represents the social reality of his time: these professions were not practiced by women, who were largely excluded from the public spheres and from cultural pursuits. But Falaquera further contributes to the denigration of women by portraying them as the cause of men’s sins and transgressions. Under the influence of ibn Bajja, Falaquera depicted the perfect man as a solitary philosopher who is estranged from society and who attains intellectual perfection because he subdues his appetites, controls his emotions, and lowers his human interaction to the necessary minimum. In his philosophical reflections on human perfection, *Sefer ha-Ma’alot*, and *Sefer Shelemut ha-Ma’asim*, Falaquera made clear that attainment of moral perfection does not constitute the ultimate end of human life (Raphael Jospe, “Rejecting Moral Virtue as the Ultimate Human End,” in: *Studies in Islamic Judaism Traditions* (1986), pp. 185–204). Even if women attain such perfection, they are categorically excluded from the final perfection of the intellect.

The negative perception of women was further developed in the semi-philosophical literature written in rhymed prose for the amusement of men. Written in rhymed prose, the literary debate on the merits and demerits of women portrayed the woman as either totally beautiful or utterly ugly; perfectly virtuous, or vicious and hateful; loyal and nurturing wife or a licentious seductress, a facilitator of the pursuit of wisdom or an obstacle to it (Talyah Fishman, “A Medieval Parody of Misogyny: Judah ibn Shabetai’s *Minhat Yehuda Sone ha-Nashim*,” in: *Prooftexts* 8 (1988), 89–111). The grotesque depiction of women highlights negative traits such as greed, possessive-

ness, vanity, foolishness, fickleness, and untrustworthiness. Designed to produce comic relief, for which purpose it employed exaggerations and distortions, Hebrew rhymed prose treated the woman as the rejected Other, thereby expressing the fears, anxieties and aspiration of Jewish men in a Christian-dominated society. In Christian polemical literature of the Middle Ages, circumcised Jewish men were viewed as feminized aberrations of nature and were even said to menstruate (Joshua Trachtenberg, *The Devil and the Jews* (Philadelphia, 1941), pp. 50, 149). The feminization of a group was just one way of denigrating and invalidating it.

A similar dynamic operated during the *Maimonidean Controversy of the 13th century about the legitimacy of philosophy within traditional Jewish society. Especially during the last phase of the controversy (1303–06), when the question was no longer whether or not to study philosophy but rather how to define the appropriate relationship between traditional Jewish topics and the various branches of philosophy in the context of the Jewish curriculum (Gad Freudenthal, “Holiness and Defilement: The Ambivalent Perception of Philosophy by Its Opponents in the Early Fourteenth Century,” in: *Micrologus*, 9 (2001) (= *The Jews and the Sciences*) (Florence, 2001), pp. 169–93). In a male-dominated society, where women were the ever-present “Other within,” both sides of the controversy imaged philosophy as a “foreign woman,” and both framed the relationship between Torah and philosophy in terms of power relations between a mistress and her female servant. Philosophy is commonly referred to as an “alien women” and the students of philosophy as the “children of alien women” (Abba Mari of Lunel, *Minhat Qenaot* (Pressburg, 1838)). It follows that a Jew who studies philosophy is like one who enters an illicit sexual union with a foreign woman. The offspring of this form of idolatry offspring must not be allowed to enter the community. The idolatrous nature of the study of philosophy is conveyed most forcefully by images taken from the prophecy of Hosea, in which Israel is likened to a disloyal licentious wife, who whores after other men and whose shame is exposed by the prophet “in front of her lovers” (Hos. 2:12). Studying philosophy is portrayed as a sexual sin as well as a sin of disobedience and betrayal of God. Less severe are the pronouncements that portray philosophy as Hagar, the boastful concubine of Sarah, who improperly challenged the lawful wife, Sarah, and was forced to flee from Sarah’s justified wrath. In this imagery, there is nothing wrong with philosophy per se, but with the brazen character of the philosophers who challenge the proper hierarchy between philosophy and Torah.

The Maimonidean Controversy ended with a ban on the study of philosophy under the age of 25, but the study of philosophy continued unabated as philosophy became more technical. In the 14th century, gender categories continued to inform Jewish philosophy especially in biblical philosophical commentaries that followed the guidelines of Maimonides’ hermeneutics. Commentaries on the Song of Songs (e.g., by Moses ibn *Tibbon, *Immanuel ben Solomon of Rome, and

*Levi Ben Gershom) identified the female beloved not with the community of Israel but with the human soul. For Gersonides, for example, the Song of Songs was a philosophical parable about the pursuit of ultimate felicity that culminates in the knowledge of God (Menachem Kellner (ed. and trans.), *Commentary on Song of Songs: Levi ben Gershom (Gersonides)* (1998), pp. xv–xxx). The biblical text is understood as two simultaneous dialogues: one between the human material intellect and the Active Intellect, and the other between the faculties of the soul and the material intellect. The two dialogues are connected: as the material intellect desires to conjoin with the Active Intellect it must enlist the aid of the other faculties of the soul in this quest. In these hierarchical relations, that which is superior ontologically or epistemologically is always masculine, and that which is inferior always feminine.

From the 13th to the 16th centuries Jewish philosophers (e.g., Zerachiah She’altiel *Gracian Hen, Judah *Romano, *Immanuel of Rome, Levi ben Gershom, *Shemariah ben Elijah of Crete, Benjamin ben Judah ben Joab of Rome, Isaac ben Moses *Arama, David *Ibn Yahya and others) perpetuated the dichotomy between the “strange woman” and the “woman of virtue” in their commentaries on Proverbs. Lady Wisdom was identified with theoretical wisdom, whose knowledge (by the male philosophers) led to the immortality of the soul; the perfect wife illustrated practical reasoning and the cultivation of moral virtues, necessary for the attainment of theoretical knowledge, and the “strange woman” symbolized the desires of the body and other material pursuits that hinder the lover of wisdom (Julia Schwartzmann, “Gender Concepts of Medieval Jewish Thinkers and the Book of Proverbs,” in: *Jewish Studies Quarterly*, 7 (2000), 183–200). The philosophical commentaries on Proverbs perpetuated the view of women as intellectually imperfect and inferior to men and made normative the subordination of women to their husbands. A marked departure from this negative perception was Judah *Abrabanel’s Italian best-seller, *Dialogi di amore*, in which the female protagonist, Sophia, engages in a philosophical dialogue with the male protagonist, Philo, acting as a teacher of wisdom. Abrabanel’s positive portrayal of a female seeker of wisdom reflects both the conventions of Renaissance courtier literature as well as a new social reality in which patrician women had greater access to education in the liberal arts (Merry E. Wiesner, *Women and Gender in Early Modern Europe* (2000²), 143–74).

Toward Modernity

Ironically, it was the very otherness of philosophy in traditional Jewish society that enabled a few Jewish women to study the liberal arts (in preparation for the study of philosophy) long before they were allowed to study halakhic texts. In Renaissance Italy, women of merchant-bankers families received such learning, and some of them functioned as patronesses of learning. To one such woman, Laura, the wife of Jehiel of Pisa, David ben Judah Messer *Leon composed his commentary on Proverbs, *Shevah Nashim* (Praise of Women). After his forced departure from Naples in 1494 he asked her to provide for

his livelihood in Constantinople. To make his plea effective, he praised her along with other illustrious women of Greek and Roman mythologies and Dante's beloved, Beatrice, and identified her with the industrious and generous Proverbial "woman of virtue" (Hava Tirosh-Rothschild, *Between Worlds: The Life and Thought of Rabbi David ben Judah Messer Leon* (1991), pp. 73–77). A more famous patroness of learning was ex-converso Doña García *Nasi, who supported many educational institutions in the Ottoman Empire. In eulogizing her and other illustrious women, Moses Almosnino praised female learning and had no qualm asserting that the departed soul of these women will enter the "world-to-come" (*Me'amez Ko'ah*, Venice 1588). Contrary to Maimonides, for whom inclusion in the "world-to-come" was predicated solely on attainment of intellectual perfection, Almosnino posited the perfection of the will as a condition of religious perfection. Although women lacked formal philosophical training, they could experience religious perfection, because it was predicated not on the intellect but on the will and on acts of faith.

With the dawn of modernity and the Emancipation of the Jews in the 19th century, Jewish society and culture underwent profound transformation through processes of acculturation and assimilation. As Jews acquired the basic markers of the larger society such as language, dress, and values, they gradually dissolved their minority status through intermarriage or conversion (Paula E. Hyman, *Gender and Assimilation in Modern Jewish History: The Roles and Representations of Women* (1995)). Modernity offered the Jewish female greater access to secular education, entry into the liberal professions and the sciences, and participation in political movements such as socialism and communism (Harriet Freidenreich, *Female, Jewish, Educated: The Lives of Central European University Women* (2002)). While women in traditional Jewish society of Eastern Europe remained relatively uneducated, in western and central Europe daughters of assimilated Jewish families enrolled in the philosophy faculty of secular universities, and very few of them (e.g., Edith *Stein, Simone *Weil, and Hannah *Arendt) became professional philosophers. However, it is debatable whether these philosophically-trained Jewish women composed Jewish philosophy: Edith Stein and Simone Weil converted to Catholicism, and Hannah Arendt, who was committed to Zionism, was also deeply critical of traditional Judaism.

Arendt's case in particular illustrates the complexity of defining Jewish philosophy. On the one hand, she grew up in an assimilated Jewish home and had little knowledge of Judaism, but when she began her philosophical career she was concerned about "how to do [philosophy] if one is a Jewish woman." Defining herself as a political theorist rather than a philosopher, she regarded her Jewishness as a matter of ethnicity rather than religion. On the other hand, Arendt developed her distinctive method of doing philosophy through storytelling as a critique of western philosophy. Her biography of Rahel Levin *Varnhagen (1771–1809), a Jewish woman who converted to Christianity and held an intellectual salon in Berlin,

was a deliberate attempt to philosophize in a new way (*Rahel Varnhagen: The Life of Jewess* (1957)). While Arendt did not produce a philosophy of Judaism, she was a Jewish philosopher. Yet, for most Jewish women in the first half of the 20th century, to be Jewish and educated in Jewish philosophy was a contradiction in terms. This was the case at least until Jewish Studies began to flourish as an academic discipline first in the State of Israel and later in North America. Several women (e.g., Sara Heller-Willensky, Rivkah Schatz-Uffenheimer, Rivkah Horwitz, Collette Sirat, and Edith Wyschogrod) helped establish Jewish philosophy as academic field, but, with the exception of Wyschogrod, they wrote history of Jewish philosophy rather than constructive philosophy.

Modern Jewish Philosophy

While Jewish philosophy remained the exclusive domain of men until the end of the 20th century, at least two of them – Franz Rosenzweig and Emmanuel Lévinas – made the category of "the feminine" central to their philosophical project. These philosophers were either closely associated with Martin Buber (i.e., Rosenzweig) or deeply influenced by Buber (i.e., Lévinas), and all three philosophers took for granted the bourgeois model of female domesticity which dominated Europe in the late 19th and early 20th centuries. Against this cult of domesticity it is not surprising to find that early 20th century Jewish philosophers use the category of "the feminine" in their analysis of Judaism and in their reflections on the human condition. More intriguingly, the three Jewish philosophers employed the category of "the feminine" as a Jewish critique of Western philosophy, which is both Christian and masculine. Buber, Rosenzweig, and Lévinas proposed a new approach to philosophy (*Das Neue Denken*), which challenged the universalizing and totalizing tendencies of western philosophy and offered an alternative, dialogical philosophy. In this regard, their philosophy parallels that of Hannah Arendt.

Buber's alternative was philosophy as an art of living a life of dialogue through an I-Thou relationship. The philosophy of dialogue rejects all forms of objectification, abstraction, or logical constructs, characteristic of traditional philosophy. By contrast, scientific knowledge, including metaphysical knowledge, is typified as an I-It relation, but it falls short of grasping reality because the Thou escapes rational inquiry. Since Buber's philosophy rejected objectification, his dialogical philosophy could not recognize gender differences. I-Thou relationship is not limited to men, and in fact it often occurs in heterosexual love relationship, although this relationship too reverts to I-It mode. In a philosophy of dialogue there is room for women as equal partners of dialogue, as persons who must never be objectified and treated as the means to an end. Socially speaking, the ideal arrangement is the egalitarian communities of the early kibbutzim in which men and women were (in theory at least) equal. Notwithstanding his egalitarian vision, Buber's language to describe relational self was carried out in androcentric terms: the "interhuman" was "between man and man" and the "I" in the I-Thou relations

was always “a *man* who needs the other in order to be *himself*.” Gender differences were subsumed under the category of “the human” expressed in masculine language.

Buber’s colleague and co-translator of the Bible, Franz Rosenzweig, creatively built on medieval poetry of Judah Halevi, medieval commentaries of Song of Songs, and Western philosophy to articulate a novel philosophy of Judaism. In *Star of Redemption*, Part II, Book Two, Rosenzweig applied the category of “the feminine” to the Jewish people as a whole (Leora Batnitzky, “Dependency and Vulnerability: Jewish and Feminist Existentialist Constructions of the Human,” in: *Women and Gender in Jewish Philosophy*, pp. 127–52, esp. 138–42). The Jewish collectivity, like real women, has a special ontological share in revelation: as an eternal people the Jews have one task only, to worship God in prayer. Unlike other nations that are still moving toward the accomplishment of this goal, the Jewish People has already achieved it, because, like the “most feminine woman,” they are naturally disposed to revelation. As much as a woman is a-priori ready for eternity (a view for which Rosenzweig can offer no empirical proof), so are the Jewish people a-priori eternal. In the case of both actual women and the actual Jewish People, the “natural” provides a kind of transcendental condition for the supernatural. As a woman embodies a natural openness to the supernatural realm of love, so the Jews embody in their blood God’s revelation to them. Rosenzweig constructs Judaism as the feminized rootless Other that has contributed to the creation of Christian masculine culture. Batnitzky shows that for Rosenzweig, “Judaism is not just ‘feminine,’ but in remaining ‘homeless,’ she, namely, Judaism, makes Christianity and the nations of the world more ‘feminine.’ By not allowing Christianity to become totalitarian, Judaism forces Christianity to remain somewhat rootless and thereby more ‘feminine,’ Jewish and ethical” (ibid, p. 142).

The category of “the feminine” is even more central in the philosophy of Lévinas, who was deeply indebted to Buber and Rosenzweig but attempted to go beyond them. For Lévinas the relation to the Other is irreducible to comprehension; it takes place in acts of speech, in a face-to-face relation with the Other. To learn to acknowledge what one cannot know and to respect the separateness of the other person is to acknowledge the transcendent of the other person. The task of ethics is the fundamental obligation to the Other. Lévinas’s ethics is genderized because he identified the feminine with radical alterity. The feminine is presented as an exemplar or ideal figure of alterity; she is the Other *par excellence*. This claim means first that the feminine is not defined in terms of its opposition to the masculine; it has its own positive essence, and second that this positive essence is alterity. Lévinas did not sufficiently distinguish between these two meanings of alterity, but he definitely presented the alterity of the feminine as irreducible and absolute; it cannot be bridged or diminished; it cannot be negated or reduced. Lévinas defines the very mode of being of the feminine as “withdrawal into mystery” as “hiding” and “modesty” (*Time and the Other*,

trans. Richard Cohen (1987), p. 87) The relation to the feminine is a relation with what “slips away from the light” with what escapes comprehension and understanding. The Other escapes knowledge or understanding because the recognition that the relation to the Other (a form of transcendence) is irreducible to comprehension.

Lévinas’s celebration of the feminine has generated a lot of attention among feminist (mostly non-Jewish) philosophers, while also posing a challenge to feminists. Should feminists endorse it because Lévinas privileges the feminine and gives her a certain priority, or should feminists note that his portrayal of the feminine functions in a way that ultimately re-inscribes feminine in a traditional trope that benefits men more than it does women? Or perhaps feminists should reject Lévinas’s appeal to feminine alterity as too much mystification? The feminist engagements with Lévinas are not conclusive on this point. Simone de Beauvoir (*The Second Sex*, trans. H.M. Parshley (1952) and later Luce Irigaray (“Questions to Emmanuel Lévinas, in: *The Levinas Reader*, ed. Margaret Whitford (1991), pp. 178–89; “The Fecundity of the Caress: A Reading of Lévinas, *Totality and Infinity*, ‘Phenomenology of Eros,’” in *Feminist Interpretations of Emmanuel Lévinas*, ed. Tina Chanter (2001), pp. 119–44) took Lévinas to task precisely because he posited the woman as the paradigm of the Other. These feminist critics argued that his analysis of the Woman and his use of the feminine as a trope in his philosophy of the Other perpetuated the negative perception of women in traditional patriarchal society, considering them always as an object rather than a subject and viewing them as that which the (male) Self is not. To construe the woman as the “absolute Other” was no bonus to women but a continuation of patriarchy; the Self is always defined by men who speak from their located perspective but universalize it as the norm of humanity.

Recently some philosophers, such as Tina Chanter, Catherine Chaler, and Clair E. Katz, have offered more positive readings of Lévinas showing how Lévinas’ philosophy of the Other could be useful to feminist thinking. Contrary to many feminist readers of Lévinas who ignore his Jewishness, Claire E. Katz argues that knowledge of Lévinas’ Jewish sources (biblical, rabbinic, and philosophical) is necessary if one is to correctly understand how the feminine functions in his philosophy. According to Katz, Lévinas “uses the feminine as a transcendental structure. The feminine creates the dwelling, the welcoming, and habitation, thus providing the means of enjoyment and sensuality that are interrupted by the ethical” (“Reinhabiting the House of Ruth: Exceeding the Limits of the Feminine in Levinas,” in: *Feminist Interpretations of Levinas*, p. 147). Elsewhere Katz explains why Lévinas chose the trope of maternity as the epitome of ethical relations which goes beyond the eros of philosophy, uniting enjoyment and responsibility (“From Eros to Maternity: Love, Death, and ‘the Feminine’ in the Philosophy of Emmanuel Levinas,” in: *Women and Gender in Jewish Philosophy*, pp. 153–75). Lévinas’s ethics, with its focus on maternity, was a Jewish alternative

to Western philosophy's conception of life as being-toward-death, exemplified by the philosophy of Heidegger. Katz concludes that Lévinas did not exclude woman (or women) from ethical relationship. In fact it was "his Hebrew roots [that] give him profound insight into the obligation and responsibility of the Other, for those who are most vulnerable. And yet it is his Judaism that precisely allows his inadequate view of women to merge and take hold." Lévinas's project, therefore, is of use to feminists but not in a straightforward and simplistic manner. He offers feminists "an opportunity to see feminist concerns in a different light and to see a wider range of what those concerns might be" (*ibid.*, p. 171).

Lévinas's philosophy of the Other has generated as well non-feminist philosophical engagements by two female Jewish philosophers, Catherine Chalier and Edith Wyschogrod. By juxtaposing Lévinas and Kant, Chalier implicitly endorses Lévinas's critique of Kant's understanding of the moral subject and moral autonomy on the basis of the Jewish sacred tradition (*What Ought I To Do?: Morality in Kant and Levinas*, trans. Jane Marie Todd (2002)). Lévinas' ethics as first philosophy arose from his personal experience of the barbarism and savagery of the 20th century manifested "through nuclear, chemical and biological warfare, through death camps, through concentration and labor camps and by means of conventional weapons," which Edith Wyschogrod appropriately labeled as the "death event" (*Saints and Postmodernism: Revisioning Moral Philosophy* (1990), p. xiv). She responded to the "new historical horizon" not only by subjecting the modern "kingdom of death" to close philosophical analysis in her *Spirit in Ashes: Hegel, Heidegger, and Man-Made Mass Death* (1985), but also by articulating a postmodern ethics that is grounded in the lives of saints. Deliberately moving away from moral theory into the specific "pathways" or "journeys" of saints' lives, Wyschogrod's narrative philosophy, which is informed by literary theory and comparative literature, offers "a three pronged critique of theory: a pragmatic criticism of moral theory; an ontological criticism of its infrastructure; and a criticism of normative reason as belonging to the philosophy of reflection" (*Saints and Postmodernism*, p. xxv). While Wyschogrod's philosophy engages mostly non-Jewish philosophical and literary texts and includes no hermeneutics of Jewish sacred texts, her philosophical project emerges from the problematics of the Shoah, making her the most important post-Holocaust female Jewish philosopher.

Feminist Jewish Philosophy

During the last two decades of the 20th century, Judaism and Jewish philosophy were transformed by the rise of feminism, including Jewish feminism. Jewish women demanded and largely received an end to centuries of discrimination and exclusion and gained access to formal religious education, communal leadership roles, and participation in public ritual. At the forefront of feminist Jewish thought stood the theologian Judith Plaskow who insisted, contrary to other Jewish feminists, that the problem of women in Judaism is primarily theo-

logical rather than sociological. She charged that Judaism is a male-centered tradition because women were deliberately excluded from the process of interpretation. The sacred texts of Judaism do not express the will of God, but rather the interpretation of the will of God by men who deliberately excluded women from the process of interpretation. In order to address the injustice done to women by the Jewish tradition itself, Plaskow re-envisioned Judaism when women take their rightful place in the community of interpreters and offer new readings of Scriptures and the rabbinic tradition (*Standing Again at Sinai* (1981)). Plaskow's feminist critique of traditional Judaism was indebted to non-Jewish feminist theologians, to Liberal Christian theologians such as Paul Tillich, and to Buber's dialogical philosophy. However, precisely because Plaskow construed the Jewish feminist critique as a theological and midrashic discourse, Jewish philosophers did not take her critique to be sufficiently philosophical and did not engage her philosophically.

In the 1980s and 1990s Jewish feminist theologians (e.g., Ellen Umansky and Laura Levitt) followed Plaskow's lead, engaging the Jewish tradition both critically and constructively. Early feminist writings reexamined biblical and rabbinic sources, highlighted the presence of women that the tradition ignored, explored the historical development of the tradition in regard to perceptions of women, and constructed their own feminist Midrashim in which women were the main actors. Although this work articulates a distinctive Jewish feminist discourse that changed the practice of Judaism (especially in North America), scholars of Jewish philosophy regarded feminism as a political ideology that has little to do with Jewish philosophy. The reluctance to engage feminist philosophy reflects a deeper debate about the meaning of philosophy as an intellectual inquiry in the postmodern age and about the discipline of Jewish philosophy within Jewish Studies (Hava Tirosh-Rothschild, "'Dare to Know': Feminism and the Discipline of Jewish Philosophy," in: Lynn Davidman and Shelly Tenenbaum (eds.), *Feminist Perspectives on Jewish Studies* (1994), 94–117). Only a handful of (male) Jewish philosophers (e.g., Kenneth Seeskin, Steven Katz, Michael Oppenheim) recognized the merits of feminist philosophy and its implication to the future of Jewish philosophy.

Two feminist thinkers, Rachel Adler and Tamar Ross, articulated a systematic theology of Judaism informed by philosophical models. Rachel Adler's *Engendering Judaism: An Inclusive Theology and Ethics* (Boston, 1998) engages Judaism from the perspective of philosophy of law. Inspired by the work of the legal theorist, Robert Culver, Adler seeks to articulate a theory of *halakhah* that includes women and honestly deals with the historical development of Judaism over time. For Adler, the task of "engendering Judaism," namely, of honoring gender differences as equal in value, will have to engage men and women cooperatively, and its primary mode is the narrative. She endorses the values of "equal respect, inclusivity, diversity and pluralism," and not only re-reads rabbinic sources in light of them but also

proposes new rituals that reflect them. As a Liberal Jew who is committed to halakhic life, Adler defines the task for feminist praxis and theory as an articulation of “a world of legal meaning in which the stories, dreams, and revelations of Jewish women and men are fully and complexly integrated” (p. 35). This task includes not only new readings of revelatory stories but also new rituals to inculcate equality between men and women.

Tamar Ross shares Adler’s goal but offers philosophical arguments for it within the boundaries of Orthodox Judaism. Inspired by Wittgenstein’s philosophy of language, *Expanding the Palace of Torah: Orthodoxy and Feminism* (2004) presents a theory of revelation as “cumulative.” For Ross, revelation is a product of an interpretative community that selectively treats the received tradition. It is the community that determines which meaning is normative and/or authoritative, and it is the entire community that determines what the will of God is. *Halakhah* is not the mechanical application of eternal pre-existing legal principles to changing conditions, but the ever-changing interplay between texts, social reality, and shifting hermeneutic and moral assumptions. Community practice and social reality are thus part of the process by which the collective negotiates its normative consensus (Yoel Finkelman, “A Critique of *Expanding the Palace of Torah: Orthodoxy and Feminism* by Tamar Ross,” in: *The Edah Journal*, 4:2 (2004): 1–10). Ross calls on contemporary Orthodox feminists to gradually alter not only the place of women in Orthodoxy but the very texture of interpretation and religious life. Feminists can help forge a new religious language that is less biased, but to do so they must become learned in every area of sacred tradition. As women make their voices and concerns more central as the interpretive community, they will gradually rewrite the ground rules by which Orthodox Jewry plays the language game of Torah and *mitzvot*.

While feminist Jewish philosophy is still in its infancy, the number of women who study, teach, and construe Jewish philosophy is quite impressive, including Francesca Alberitini, Leora Batnitzky, Ruth Birenbaum, Almut Bruckstein, Jean Cahan, Catherine Chalier, Idit Dobbs-Weinstein, Amirah Eran, Barbara E. Gali, Resianne Fontaine, Yudit K. Greenberg, Ruth Glassner, Hannah Kasher, Claire Katz, Sarah Klein-Braslavy, Gitit Holtzman, Nancy K. Levene, Diana Lobel, Sandra M. Lubarsky, Sarah Pessin, Heidi Ravven, Randi Rashkover, Tamar Ross, T.M. Rudavsky, Susan Shapiro, Julia Schwartzmann, Suzanne Last Stone, Hava Tirosh-Samuelson, Edith Wyschogrod, and Laurie Zoloth. Some of these scholars (especially in Israel) define themselves strictly as historians of Jewish philosophy and attest little interest in or even hostility to feminist philosophy, while others (especially those who focus on modern Jewish philosophy in the U.S.) engage feminist philosophy in their own work as constructive Jewish philosophers. A recent anthology, *Women and Gender in Jewish Philosophy*, edited by Hava Tirosh-Samuelson (2004), includes many of the women listed above. Retaining

a critical posture toward Jewish philosophy as well as toward feminist philosophy, the participants of the volume demonstrate the possibility of a fruitful dialogue between Jewish philosophy and feminist philosophy. The volume engages past Jewish philosophers (e.g., Philo, Ibn Gabirol, Maimonides, Gersonides, Baruch Spinoza, Hermann Cohen, Buber, Rosenzweig, and Lévinas) and the sub-disciplines of philosophy (e.g., epistemology, metaphysics, ethics, political theory, philosophy of law, and theology) in light of feminist philosophy. Without reaching consensus about Judaism, Jewish philosophy, and feminism, the volume demonstrates that when women are allowed to philosophize they can and do enrich Jewish philosophy.

°**PHILOSTRATUS** (b. c. 172 C.E.), a native of the island of Lemnos, he studied rhetoric in Athens and later joined the literary and philosophic circle in Rome of Empress Julia Domna, wife of Septimius Severus. She commissioned him to write a literary life of Apollonius of Tyana, whom he presented as a divinely inspired sage, prophet, and reformer along Pythagorean lines. The work has several comments on the separateness of the Jews and on their bloody revolt against the Romans under Vespasian.

PHILO VERLAG (named after *Philo of Alexandria), German-Jewish publishing house (1919–38), founded in Berlin as the publishing arm of the *Central-Verein deutscher Staatsbürger jüdischen Glaubens (C.V.). The originally intended name, “Gabriel-Riesser-Verlag,” was rejected by the *Riesser family. According to the C.V.’s ideology, the Philo Verlag was to publish apologetic literature, both in a scientifically reliable and outwardly attractive form, in order to fight antisemitism and broaden the knowledge of Judaism among Jews and non-Jews, focusing on the description of Jewish history and the contribution of Jews to German life and culture. The Philo Verlag was first managed by Ludwig *Holländer (1877–1936), then syndic of the C.V. and editor of its monthly organ, *Im Deutschen Reich* (1895–1922), which was continued by the Philo Verlag as a weekly under the title *C.V. Zeitung (1922–38). From 1923–38, Holländer and his successor Alfred Hirschberg (1901–1971) were assisted by Lucia Jacoby (1889–1944). Within 20 years, more than 100 pamphlets and books of both Jewish and non-Jewish authors appeared

and, besides a press information service, several periodicals were published, including *Der Morgen* (1925–38), first edited by Julius *Goldstein (1873–1929), and the revived *Zeitschrift für die Geschichte der Juden in Deutschland* (1929–37), edited by Ismar *Elbogen (1874–1943) and others. In 1933 however, when fighting antisemitism became both hopeless and dangerous, the Philo Verlag changed its strategy, concentrating on publications which could deepen Jewish knowledge and consciousness and give both intellectual and practical orientation. The Philo “Library” (*Kleine Philo-Bücherei*) and handbooks like the *Philo-Lexikon* (1935–37, 1–4, reprinted 1982), the *Philo-Zitaten-Lexikon* (1936), and the *Philo-Atlas* (1938, reprinted 1998), a guide to Jewish emigration, served these various purposes. The Philo Verlag was closed by the Gestapo on November 10, 1938.

[Ernst Gottfried Lowenthal / Johannes Valentin Schwarz (2nd ed.)]

PHINEHAS (Heb. פִּינְחָס), name of three biblical figures:

(1) Son of *Eleazar, son of *Aaron the priest (Ex. 6:25; cf. genealogies in Ezra 7:1–5; 1 Chron. 5:28–41; 6:35–38). When the Israelites suffered a plague in punishment for indulging in the orgiastic Baal-Peor cult, Phinehas slew Zimri son of Salu and Cozbi daughter of Zur, a prince of Midian, and thereby stopped the plague. By virtue of this act, Phinehas and his descendants were granted “a pact of priesthood for all time” (Num. 25:1–18). The memory of this event is reflected even in later sources (e.g., Ps. 106:30–31; Ecclus. 45:23–24; 1 Macc. 2:26, 53). Phinehas is encountered next in the war against the Midianites when, equipped with sacred utensils, he was sent by Moses to act as priest in the campaign (Num. 31:1–6). At the period of the Conquest, Phinehas, together with ten of the princes of the tribes that had settled west of the Jordan, formed a delegation to Reuben, Gad, and the half-tribe of Manasseh who had erected an altar on the east bank of the Jordan. There had been some suspicion that these tribes had defected from the Lord (Josh. 22:9–34). Phinehas appears to have been selected for this task because of his battle against the cult of Baal-Peor. At any rate, the issue was settled amicably. In the story of the Israelite war against the tribe of Benjamin over the incident of the concubine in Gibeah, it is stated that Phinehas served before the ark in Beth-El, and that through him the Israelites received an affirmative answer from God to their question as to whether to continue the war (Judg. 20:27–28). Many scholars believe these verses not to be part of the body of the narrative but additions by a later editor. It is related of Phinehas that he had been superintendent of the gatekeepers (1 Chron 9:20). This is probably to be understood as indicating that Phinehas was considered to have been their patron. Phinehas’ death and burial place are not recorded, though Joshua 24:33 does state that “Eleazar the son of Aaron died, and they buried him in the hill of his son Phinehas... in

Mount Ephraim.” This passage may have been reworked by a later editor. The formula is surprising since the usual statement about the dead is that he was buried “with his fathers.” E. Auerbach believes that originally the site was known as the grave of Phinehas, and that Eleazar’s name was attached to it as a result of a later tradition. Indeed, according to both Jewish and Samaritan tradition, Phinehas is also buried at this hill. Eusebius (Onom. 2:14) identified the location as being 5 mi. (8 km.) from Gophna on the way to Shechem (see *Aaron for genealogy of the house of Aaron). A family of priests named Gershom, directly related to Phinehas, existed as late as the time of Ezra, returning with him from the Exile (Ezra 8:2; cf. *Gershom). According to 1 Esdras (5:5), the priests Jeshua son of Jehozedek and Joiakim son of Jeshua were associated with the house of Phinehas.

(2) A priest, one of the sons of Eli, at Shiloh, brother of Hophni (e.g., 1 Sam. 2:34). See *Hophni and Phinehas.

(3) The father of Eleazar, who was one of the assistants of Meremoth son of Uriah the priest. This priest weighed the sacred vessels brought by those who returned with Ezra from the Exile (Ezra 8:33; cf. 1 Esd. 8:62).

The name Phinehas derives from the Egyptian *panḥśj*, meaning “the Nubian,” which was also employed as a proper name in Egypt, especially for residents of Nubia.

[Ephraim Stern]

Phinehas (1) in the *Aggadah*

Because of the major problems arising out of occasional cases of apostasy (TJ, Ḥag. 2:1) or fornication with pagan women (Sanh. 9:6; Sanh. 82a), Phinehas is, for the most part, highly praised in rabbinical literature for the “zeal” which he displayed in slaying Zimri and the Midianite woman whom he had caught in the act (cf. Num. 25:6ff.). While Moses, who had himself married a Midianite woman (albeit before the Sinai covenant), was humiliated and unable to cope with the situation (Sanh. 82a; Gen. R. 96:3; Num. R. 20:24, et al.), Phinehas remembered the *halakhah* that “he who cohabits with a gentile woman is struck down by zealots” (Sanh. 9:6). Seeing that even the most warlike tribes refused to punish the transgressor, Phinehas resolved to take the law into his own hands (Sif. Num. 131; TJ, Sanh. 10:2, 28d). The rabbis could not agree whether Phinehas had acted with or without Moses’ permission – the issue at stake being whether a disciple could, in an emergency, decide a case without reference to his master (Sanh. 82a). In view of the unequivocal biblical approval of Phinehas’ deed (Num. 25:10ff.), the legitimacy of the act could not be seriously questioned. Indeed, no less than 12 miracles were said to have been wrought in aid of Phinehas – otherwise he could not have successfully accomplished his mission (Sif. Num. 131). The rabbis, moreover, interpreted Psalms 106:30 in the sense that Phinehas had argued with God concerning the injustice of inflicting a plague on Israel which carried off 24,000 people (cf. Num. 25:9). When the angels wanted to push Phinehas away, God defended him: “Let him be; he is a zealot and the descendant of a zealot” (viz. Levi; cf. Gen.

34:25ff.). The Almighty also bestowed high praise on Phinehas when the tribes of Israel, especially Simeon, tried to cast aspersions on him, taunting him with his descent from Jethro (through Putiel; cf. Ex. 6:25) who had “fattened calves for idolatry” (Sanh. 82b; Sif. *ibid.*).

There were, nevertheless, rabbis who had some legal reservations concerning the summary execution carried out by Phinehas. According to one view, Phinehas had acted “against the will of the Sages,” who had therefore intended to put him under the ban but were restrained by “the holy spirit” which proclaimed “the covenant of a perpetual priesthood” (cf. Num. 25:13) for Phinehas and his descendants (TJ, Sanh. 9:9, 27b). Both Palestinian and Babylonian rabbis stated explicitly that anyone consulting them about how to act in a similar situation would not be instructed to emulate Phinehas’ example (Sanh. 82a). The implied disapproval is evident in the rabbinic speculations on hypothetical events which might have had an adverse effect on Phinehas’ legal position: “If Zimri had separated (from his Midianite mistress) and Phinehas slain him, Phinehas would have incurred the death penalty, and if Zimri had turned upon Phinehas and slain him, he would not have been liable to the death penalty, since Phinehas was a pursuer [seeking to take his life]” (*ibid.*).

Notwithstanding the legal irregularities of Phinehas’ unauthorized zeal, the rabbis accorded Phinehas a prominent place in Jewish history. He was chosen to accompany the Israelites in their campaign against Midian to complete the good deed he had begun by slaying the Midianite woman (Num. R. 22:4), and also to avenge his maternal grandfather Joseph, who had been sold into slavery by the Midianites (Sif. Num. 157; Sot. 43a; cf. Gen. 37:28, 36). It was Phinehas who miraculously slew Balaam (Sanh. 106b; cf. Num. 31:8 and Targ. Ps.-Jon. ad loc.). He was also one of the two spies sent by Joshua to Jericho (cf. Josh. 21:1ff.), where he managed to make himself invisible like an angel; and he was in fact identical with the angel sent to the Israelites at Bochim (Num. R. 161:1; cf. Judg. 2:1ff.). This must probably be connected with the identification of Phinehas with Elijah (both having been distinguished for their “zeal and their peacemaking missions”; cf. Num. 25:11ff.; 1 Kings 19:10, 14; Mal. 3:23ff.), whose transformation into an angelic being is predicated in Malachi 3:1, 23 (PdRE 47; Targ. Ps.-Jon. to Ex. 6:18; Num. 25:12; Num. R. 21:3, et al.). He is, accordingly, the forerunner of the Messiah (Targ. Ps.-Jon. to Num. 25:12, et al.). The criticism leveled against Phinehas for failing to annul Jephthah’s fatal vow, thereby causing the death of Jephthah’s daughter (Gen. R. 60:3; Lev. R. 37:4, et al.), in all probability reflects the rabbinic attitude to certain priests in the talmudic age and has no bearing on Phinehas’ personality even as viewed through rabbinic eyes.

[Moses Aberbach]

PHINEHAS, guardian of the Second Temple treasury in the last days of the Temple. Josephus (Wars, 6:387–91) relates that with the seizure of Jerusalem and the Temple (70 C.E.) Phinehas, taken prisoner, “disclosed the tunics and girdles worn by the priests, an abundance of purple and scarlet kept for necessary repairs to the veil of the Temple, a mass of cinammon and cassia, and a multitude of other spices mixed and burnt daily as incense to God. Many other treasures were also delivered up by him, with numerous sacred ornaments.” Phinehas was not the sole Temple custodian to disclose the sacred treasures of the Sanctuary. He was joined by one of the priests, Joshua (Jesus) son of Thebuthi. Both officials were granted pardons by the Romans in reward for their services. The mishnaic list of officials in the Temple (Shek. 5:1) includes a Pinhas al ha-Malbush (“Phinehas, the guardian of the wardrobe”), who is probably the same person.

[Isaiah Gafni]

PHINEHAS BEN ḤAMA HA-KOHEN (mid-fourth century), Palestinian *amora*. In the Jerusalem Talmud and *Genesis Rabbah* he is known as R. Phinehas, while in the later Midrashim he appears with his full name: Phinehas (ha-Kohen) b. Ḥama. Though born and brought up in Palestine, he was familiar with the genealogy of both Babylonian and Palestinian families (Kid. 71a), and showed his preference for the former (*ibid.*). He appears to have resided in the town of Sikhnin where his brother Samuel is recorded to have died (Mid. Sam. 9:3), and he probably lived to an old age (Kid. 71a and Rashi *ibid.*).

In the *halakhah*, Phinehas was primarily a pupil of R. Jeremiah, details of whose ritual practice he records (e.g., TJ, Kil. 4:4, 29b; TJ, MK 1:2, 80b; TJ, Ket. 6:7, 31a). He was a colleague of R. Yose, with whom he often debated halakhic points (TJ, Yev. 1:2, 2d, et al.), and his main pupil in *halakhah* was Hananiah (of Sepphoris) who handed down most of his halakhic statements (see TJ, Dem. 3:1, 23b). Phinehas transmitted many aggadic aphorisms in the name of earlier *amoraim*, especially those of the previous generation – Hilkiah, Ḥanin, Reuben, and others. His own *aggadot*, both aphorisms and homiletic exegesis, are also extensive, and he often added a light anecdote to his homily to bring home the moral. In what appears to be a polemical reference to Christianity he declared, “While other laws decree that one must renounce one’s parents to pledge allegiance to the king (cf. Matt. 10:35–37), the Torah says, ‘Honor thy father and thy mother’” (Num. R. 8:4). His deduction from Job that “Poverty in a man’s house is worse than 50 plagues” (BB 116a) may well be a bitter reflection on current economic conditions, and he laments the moral decline of the nation in its contemporary promiscuity (Lam. R. 1:11, no. 39) and gambling (Mid. Ps. to 26:7). His maxim that only one who does not leave after him a son of his own caliber is truly dead (BB 116a) is indicative of his keen concern for right education; and his best-known maxim is that “the

name a person gains for himself is worth more than the one endowed him from birth” (Eccles. R. 7: 1, no. 4).

[Benjamin Cohen]

PHINEHAS BEN JACOB HA-KOHEN (Kafra), eighth century Palestinian *paytan*. He is apparently the last in the list of the “early poets” given in *Saadia Gaon’s *Sefer ha-Agron*. As the acrostic to one of his *piyyutim* implies, he came from Kafra, near Tiberias, and his connection with Erez Israel is further indicated in his *piyyutim* by the representation of a number of customs in force only in that country. His assumed identification with R. Phinehas, head of the academy, who is mentioned among the early masoretes, is possible, but not sure. A prolific poet, Phinehas wrote his works approximately in the second half of the eighth century, at least after 748. Most of his compositions were found in the Cairo *Genizah*. The critical edition of Sh. Elitsur (2004) includes more than 140 *piyyutim* of many diverse genres. Outstanding among them are *Kiddush Yeraḥim*, *piyyutim* for all the months of the year, a series of *piyyutim* concerning the 24 divisions of kohanim, and two monumental *kedushta* for Shemini Azeret. The *Kedushta* contains an important and colorful amount of midrashic matter; the sources of some of these Midrashim are unknown. Phinehas’ style places him in the school of Eleazar *Kallir, but his expression is usually simpler and his poetry original. In only a few compositions does he use many neologisms and an obscure style, with typical strange *paytan* forms.

[Ezra Fleischer / Angel Saenz-Badillos (2nd ed.)]

PHINEHAS BEN JAIR (second half of second century), *tanna* renowned both for his saintliness and his ability to work miracles. He was a son-in-law of *Simeon b. Yoḥai, with whom he studied, and achieved a reputation as a keen halakhist (Shab. 33b). Nonetheless, few of his halakhic statements are recorded, and he is better known as an aggadist. Indeed his legendary saintliness made him, like his father-in-law, a prominent aggadic personality. His place of residence was “a city in the south,” probably Lydda, from where he testified that he used to go down with his friends to Ashkelon (TJ, Yev. 7:3). In several passages, Phinehas is reported as traveling to redeem captives and being deflected from his mission neither by a river in flood (which he is said to have parted miraculously),

nor by a pressing invitation to dine with Judah ha-Nasi (Ḥul. 7a; 7b). Phinehas was famed for his great independence, and it was said of him that from the day he grew up he would not eat from his father's table, let alone that of another. "Not that I have taken a vow to that effect," he protested wryly to Judah ha-Nasi, "Israel is a holy nation, and worthy for one to break bread with it. But one wants [to give] and has not, and another has but does not want to give. You both have and want, so with you I shall eat!" However, even here, when he saw that Judah had white mules on his estate, which were regarded as dangerous, he turned away and would not eat (Ḥul. 7b). The grandeur of the court was not for him.

Phinehas took a gloomy view of the moral and material state of Israel in his time. "Since the Temple was destroyed," he lamented, "learned and free men are put to shame, the mighty and the informers have vanquished, and none seeks Israel's welfare, and we have no one to rely upon but our Heavenly Father" (Sot. 49a). He was strict not only in his personal discipline but also in halakhic decisions for others, and would not join with Judah ha-Nasi in allowing work on the land in the Sabbatical Year (Ṭ), Ta'an 3:1). Even Phinehas' donkey was celebrated for its piety and the tale that it refused to eat untithed corn is developed by the Talmud into a general proposition, "If God does not bring a stumbling block through even a beast of the righteous, how much more will He not bring a stumbling block through the righteous themselves!" (Ḥul. 5b). A number of tales told about him, including the one about his donkey, are also told of his contemporary, *Ḥanina b. Dosa. *Midrash Tadshē*, a late Midrash dealing with symbolic interpretations of the vessels of the Tabernacle, was also attributed to Phinehas as it opens with one of his sayings. In the Zohar, Phinehas appears as a particularly revered member of Simeon b. Yoḥai's mystic circle, though here he is represented as Simeon's father-in-law and not his son-in-law (Zohar 3:240, 2 and 288).

Fittingly, Phinehas is the author of the famous ladder of saintliness: "Caution [against evil] leads to Eagerness [for good], Eagerness to Cleanliness, Cleanliness to Purity, Purity to Asceticism, Asceticism to Holiness, Holiness to Humility, Humility to Fear of God, Fear of God to Attainment of the Holy Spirit [divine inspiration], and Attainment of the Holy Spirit to Resurrection of the Dead" (Sot. 9:15). A millennium and a half later, this dictum was amplified as the path to holiness by Moses Ḥayyim *Luzzatto in his classic ethical work *Mesillat Yesharim*, and in this way it became the guiding principle of the *Musar movement.

[Benjamin Cohen]

PHINEHAS BEN JOSEPH HA-LEVI (13th century), Hebrew poet and *paytan* in Toledo. According to some scholars Phinehas was the brother of *Aaron ha-Levi of Barcelona to whom the *Sefer ha-Hinnukh* is attributed. He was one of the

rivals of Todros b. Judah *Abulafia in the court of Don Caq de la Maleha. To entertain Don Caq, Todros from time to time conducted a poetic controversy with Phinehas in the course of which they exchanged with one another 35 short poems, generally filled with contempt and faultfinding. While the poems themselves have little literary value, they are of great importance for knowledge of the contemporary mode of life and society. In one of his poems, published in Abulafia's *Gan ha-Meshalim ve-ha-Ḥidot*, Phinehas addresses Don Caq and attempts to persuade him to renew his benefactions toward him; he had been driven away, in his opinion, through the effort of Todros, and had fallen victim to a base charge. His **azharot* for the Sabbath preceding Rosh Ha-Shanah, *Elohim Nizzav ba-Adat El* ("God stands in the divine congregation"), together with their *reshut*, *Asir Tikvah le-Kez Yamim* ("Prisoner of hope for the end of days"), was published in the *mahzor* according to the custom of Catalonia (Salonika, 1526). It is not known whether he is identical with the poet Phinehas ha-Levi, also called Don Vidal Profiat, who lived in Spain in the 13th century and who forsook poetry, devoting himself to agriculture. His friend, the poet Abraham *Bedersi, who regarded agriculture as degrading labor, derided him with great contempt in one of his poems, and even rejoiced at his misfortune when all his produce went up in flames.

[Abraham David]

PHINEHAS BEN SAMUEL (known also as "the man of **Ke-*far Habta***"; first century C.E.), high priest before the destruction of the Temple, 67–70 C.E. Phinehas was appointed to his office by the casting of lots. Until then the appointment was made only from among the families of distinguished birth. However, within the framework of the democratic reforms introduced by the Zealots, the selection of the high priest was made by casting lots in order to abolish the rule of these families (in this they relied on the ancient tradition in 1 Chron. 24:5). The lot fell on Phinehas who belonged to the watch of Jachin. Josephus censures him and says that "he scarcely knew what the high priesthood meant," for he was a farmer who tilled the earth (Wars, 4:155). This statement is to be treated with caution, however. In talmudic sources Phinehas is mentioned as a son-in-law of the house of the *nasi* (Tosef. Yoma 1:6), and the view that he was not learned in the affairs of the priesthood cannot be accepted (Klausner). This act of the Zealots gave rise to great bitterness and was the cause of civil war between them and the other parties among the people.

[Edna Elazary]

PHLORINA (formerly **Florina**), city in Greek Macedonia, near the former Yugoslav border. In the 17th and 18th centuries there was a Jewish community in Phlorina, of which little is known.

In the 17th century Phlorina had a Sephardi community whose members maintained economic relations with Salonika, Kastoria, and Karditza. At the end of the 18th century, Rabbi Joseph Baruch stood at the head of the community and consulted with Rabbi Yitzhak Samuel of Salonika on halakhic matters. It is not known when the Jewish community ceased to exist. The community was reestablished in 1912. In that year many Jews from Monastir migrated to Phlorina. Additional Jews arrived in World War I, especially when Monastir was under siege in 1916/17. In sum, some 60 families from Monastir established themselves in Phlorina, and Baruch Kamhi, a butcher from Monastir, became community president. In 1914, the Phlorina Jewish community numbered 100 families. In 1917 a Jewish school was established. At the beginning of the 1920s, the Jewish community turned to Salonikan Chief Rabbi Ben Zion Meir Hai *Ouziel, who, together with other influential Jews in Salonika, influenced the Ministry of National Economy to change the market day from Saturday to Wednesday, but in Phlorina the local Greek-Orthodox population ignored the ruling. In 1921–22, local Muslims and Greek-Orthodox attacked the Jews over this issue. The events were covered in the world and Jewish press. In 1923, while many Jewish merchants began working on the Sabbath; others were prompted to emigrate. In 1924–25, the Greek government banned work on Sunday and the Jews of Phlorina were further pressed to earn a living. Only some 50 families remained, with most leaving for Monastir. The Jews were merchants, dealers in old clothes, greengrocers, cobblers, etc. In the mid-1920s, the local Zionist organization, Achdut B'nai Zion, was formed and in the 1930s the Theodor Herzl Club was active. Blood libels erupted annually at Easter time from 1925 to 1927. Three local Jews fell in the Greek army in the Albanian campaign against the invading Italians in late 1940–early 1941. In 1940 there were 400 Jews in Phlorina; 372 of them were deported by the Nazis. On April 30, 1943, the Jews were arrested, sent to Salonika, and from there by train to their deaths in Birkenau, where they arrived in mid-May 1943. Some 60–70 Jews had fled previously, in early 1943, to the nearby mountains, and several Jews fought in the resistance. In 1948 the number of Jews was 64, and in 1958 it was seven. Small enclaves of Phlorina Jews concentrated in Tel Aviv and Jerusalem; Brooklyn, New York; and Sao Paulo, Brazil. An annual ceremony for the community's Holocaust victims is conducted at the Cave of the Martyrs on Mount Zion, Jerusalem.

[Simon Marcus / Yitzchak Kerem (2nd ed.)]

PHOENICIA, PHOENICIANS.

Names

(a) The Greek name *Phoinike* (*Phoinix*) is first mentioned by Homer, and is subsequently well attested in the writings of

Greek historians who consistently refer it to the eastern Mediterranean coast; in Homer, Phoenician is synonymous with Sidonian. Though the exact extent of the region called Phoenicia cannot be determined, the name is clearly the Greek equivalent of Canaan. One should also compare the Septuagint's at times mechanical translation of Canaan(ite) by Phoenicia(n) in Exodus 6:15; 16:35; Joshua 5:1, 12; and Job 40:30; as well as the parallel passages Mark 7:26 (Syro-Phoenician) and Matthew 15:22 (Canaanite); and the replacement of Canaan by Phoenicia in coins of the second century (see below). Some scholars derive the Greek name from *phoinix*, “crimson, purple,” so that *Phoinike* is “the land of purple” (see *Canaan). Another possibility is to derive the Greek from Egyptian *fenkhu*, “loggers,” “woodcutters,” in keeping with the Phoenician foresting of the cedars of Lebanon. The Bible (1 Kings 5:20) informs us how skilled the Sidonians were at lumberjacking (Scandon and Xella apud Krings, 632).

(b) The name Canaan(ite) is first attested in sources from *Mari in Syria in the 18th century B.C.E. (J. Sasson, BA, 47 (1984), 90) down to the early 12th century B.C.E.; after that, except in the Bible or writers under its influence, it virtually vanishes. Exceptions are a Babylonian lexical text (c. 1100 B.C.E.), a final Egyptian reference (c. 900 B.C.E.), and two coins of the second century B.C.E. (in what is probably the corresponding Greek version of these coins, Phoenicia replaces Canaan; see above). These last witnesses prove that the name was not forgotten among the natives; besides, Greek writers are familiar with *xna* both as the eponymous hero of the Phoenicians and as the latter's name for their native land, and Augustine testifies that even in his day Punic peasants still called themselves *Chanani*.

Though the interpretation of the evidence is disputed, in its earliest occurrences Canaan is a region along the Levantine coast, and its borders were probably around the Nahr el-Kebir (Eleutheros River) in the north, and the area above Carmel in the south; only in northern Galilee around Hazor does it seem to have reached inland to any extent. Biblical usage, though it occasionally reflects the original restriction to the coast (Num. 13:29; Deut. 1:7; Josh. 5:1), commonly refers the name Canaan(ite) to all of Palestine and part of Syria (e.g., Gen. 10:15 ff.; Num. 13:17 ff.); however, this represents a later development, which was probably connected with colonization of the interior. The beginnings of this broader reference can be observed in Egyptian sources of the late 14th and 13th centuries; it is doubtful, however, whether Canaan was ever the name of an Egyptian province either embracing all of the Egyptian territory in Syria and Palestine, or, in the el-Amarna period, located in the south with its center at Gaza, though both views have their proponents (see *Canaan).

The origin of the name, a problem intimately associated with its etymology, remains a non liquet (“unclear”). Certainly Canaan was associated very early with one of the land's principal industries, the manufacture of purple dye from the Murex shellfish so plentiful along the coast; already in the Nuzi documents “Canaanite” is the designation of a variety of purple-

dyed wool. This association is also reflected in the Greek name Phoenicia (see above). The problem is whether this connection with purple dye is primary (so W.F. Albright, hypothetical *kn*^c, “Murex”; otherwise B. Mazar, “merchant” (*kn*^c + Hurrian suffix), whence “merchant of purple [his staple],” etc.; S. Moscati, geographical term (origin unknown), whence derived meanings). No solution is without its difficulties; the last is best supported by parallels (cf. morocco, cordovan, etc.).

The Land

Geography played a very important role in the political and cultural history of Canaan. Lying between Egypt, Asia Minor, and Mesopotamia, and opening Asia to the Mediterranean world, Canaan was a confluence of cultures and of necessity deeply involved in the political ambitions and struggles of its neighbors. Its topography, however, led to political fragmentation; Canaan was never a state, and it was destined to centuries of vassalage under one or other of the surrounding colossuses.

To the east, most of Canaan was locked in by Lebanon, and the long, thin strip of coastal lowlands (c. 125 mi. = 200 km.) was often broken by gorges or promontories. Only at the mouth of the Eleutheros was there a plain of any size. There was one river, the Litani, besides a number of perennial streams; none of them was of use agriculturally. The climate, however, was warm (present monthly lowest median 50° F), with ample rainfall from October to April (annually in modern times, c. 40–24 in. from north to south). The climate and soil were favorable for the cultivation of wheat, barley, olives, figs, grapes, and other fruits. The densely forested hills and mountains provided excellent timber – the famous cedars, junipers (*Juniperus excelsa*, Heb. *berosh*; cf. 1 Kings 5:22, 24), firs, cypresses, and oaks. Sand from the shore would be the basis of a glassmaking industry, while from the sea itself came the source of the precious dye.

People and Language

Though there is much evidence for human habitation of Canaan as far back as the Paleolithic period, fixed settlements were apparently founded only in the pottery-Neolithic period, and, therefore, relatively late in the Syro-Palestinian picture. The lag was probably due, in part at least, to the necessity of clearing this section of the coast of forests before cultivation of the land was possible. Relics of the earliest settlers are the non-Semitic place-names in early written sources, like Uzu/Ushu (Palaityros on the mainland), Ammia, and Ullaza. However, most Canaanite cities bear names which certainly, or very probably, are Semitic: Tyre (the island city), Sidon, Beirut, Byblos, Batron, Irqata, Yarimuta, Sumur. In view of the tenacity of place-names, which tend to survive despite ethnic shifts in population, Canaan must have first been settled on a large scale by Semites. They were probably an offshoot of the Semitic inhabitants of Palestine and southern Syria, whose occupation of these areas goes back to the fourth millennium, and the penetration into Canaan proper was probably not much later – roughly, around 3000 B.C.E. Racially,

as far as can be judged from the meager evidence, these Semites were mixed and, in this respect, indistinguishable from their predecessors; later, around 1500 B.C.E., a shift from the prevalence of a dolichocephalic to a brachycephalic type is observable, thus reflecting the more complex cultural relations of the period.

Of the language of the first settlers, except that it was Semitic, nothing is known. There is a stratum in the *Ugaritic lexicon which for a West Semitic language has an unusually close affinity with Akkadian; perhaps it is a survival of the earliest speech in the Syro-Palestinian area. The first real evidence for the language spoken in Canaan comes from the Execration Texts, shards (c. 1900 B.C.E.), or figurines (c. 1825 B.C.E.) inscribed with the names of rebellious rulers and their localities in Palestine and Canaan. These newcomers, another wave from the Syro-Arabian desert, usually called *Amorites, were also Semites and constituted another level of Semitic settlement. Their language, with dialectal differences, was identical with that of the Semites, who, in a long process of infiltration and finally invasion, seized power and set up a string of local dynasties from Babylonia to the borders of Egypt. Classification of this language in terms of the later developments which produced Canaanite and Aramaic is impossible; it is best simply called West Semitic. The question as to what happened to this language, i.e., whether it became the language of the earlier inhabitants (cf. *Aramaic), or disappeared, as in Babylonia, in favor of the established local language, unfortunately remains unanswered. The answer is crucial for the history of the Canaanite language which first emerges around 1400 B.C.E. At this time, “the language of Canaan” (Isa. 19:18) began to develop those specific features which would distinguish it from Aramaic. Their center of diffusion seems to have been Canaan itself; many of them appear only later, and then sporadically, in the north (Ugarit). The process of evolution continued – somewhat in contrast to Hebrew, a related dialect, which tended to be more conservative – and produced Phoenician. This was the language which was brought by the colonists to the western Mediterranean and became Punic.

History to 1200 B.C.E.

Canaanite history falls into two periods: approximately 3000–1200 B.C.E., and approximately 1200–332 B.C.E. In the first, Canaan, by and large, was in language, religion, art, and social and political institutions indistinguishable from Palestine and a large part of Syria. With the coming of the Philistines, and Arameans, and the emergence of the Israelites, the situation was profoundly changed, and the coastal Canaanites, who carried on the Late Bronze Age city system which had mostly been swept away by the 13th century catastrophe, had an identity thrust upon them such as they had never known. They became, as this new situation may be conveniently designated, Phoenicians. They maintained this identity until they were submerged by Hellenism, an event that may be dated to Alexander the Great’s conquest. The date of course is too exact; such a change is never effected in a single blow, and there

are always survivals, especially in religion; besides, the erosion of the old order had begun before the appearance of the conqueror. However, Hellenism, best symbolized by Alexander, was new, pervasive, and a turning point.

Early in the third millennium, Canaan was already in close contact with Egypt, which was to dominate so much of its history; Byblos became the center of an intense trade in timber, and by the Sixth Dynasty (c. 2305–2140 B.C.E.) was virtually an Egyptian colony. Such it remained with little or no interruption, despite periods of Egyptian weakness, until approximately 1740 B.C.E. Though the point is controversial, the political control evident at Byblos probably extended, though somewhat loosely and with some oscillations, to the rest of Canaan and Palestine. It probably continued during the *Hyksos rule of Egypt (c. 1670–1570 B.C.E.), and then after a brief period of independence following the expulsion of the Hyksos, it was resumed again with Egyptian expansion under Thutmose I (1525–c. 1512 B.C.E.) and its consolidation under Thutmose III (c. 1504–1450 B.C.E.). Within little more than a century, most of Canaan fell to the state of Amurru, which eventually became a Hittite vassal, and thus part of the Hittite empire (see *El-Amarna). However, under Seti I (c. 1318–1301 B.C.E.) and Rameses II (c. 1301–1234 B.C.E.) it was reconquered once more, probably in its entirety. Finally, with the invasion of the Sea Peoples, in approximately 1200 B.C.E., the Egyptian yoke was broken forever.

Internal Development to 1200 B.C.E.

In this long period there were other influences on Canaan besides the Egyptian. Contacts with the Aegean world are demonstrable by 2000 B.C.E., and they became particularly close in the 14th–13th century when, after the fall of Cnossus, the Mycenaens conducted a vigorous trade with the entire eastern Mediterranean littoral. Relations with Mesopotamia go back even further, probably to the early third millennium, but almost certainly to around 2400 B.C.E.; and three centuries later one hears of a messenger of the “governor” of Byblos at Drehem in Babylonia (though the title should not be taken as implying the suzerainty of the Sumerian Third Dynasty of Ur). The arrival of the Amorites, already noted, added the deep cultural tie of language and religion, which commerce only strengthened; in the *Mari texts of the 18th century, Byblos is involved (along with Aleppo, Carchemish, Qatna, and Ugarit) in the movement of timber, resinous substances, wine, olive oil, and grain from Syria and Canaan to the kingdom on the Middle Euphrates.

The Amorite invasion also marks an important stage in the formation of the system of small city-states which became so characteristic of Syro-Palestine in the second millennium, and then, after the rise of the nearby national states in the Iron Age, continued in Phoenicia. The Execration Texts show the transition from a semi-nomadic stage – which is reflected in the earlier group – when the cities were probably not yet taken, and two or three sheikhs divided the authority over the environs, to a completely settled stage – attested in the later

groups – when the cities had fallen and, with a couple of exceptions, there was a single ruler. Since the shift to monarchy is so widespread and so quick, it suggests the adoption and diffusion of an already prevailing institution. Acceptance of the institution, however, was hardly effected without important concessions, mainly in the form of land grants to the sheikhs who had helped in the conquest; at first, therefore, the king may have been only *primus inter pares*, as in early Assyria. The roots, therefore, of the city-state system probably go back to the third millennium; its feudal character began with, or was strongly reinforced by, its adoption by the Amorites.

This development may have received in Canaan, as in other parts of Syria and Palestine, further impetus in the period between approximately 1700 and 1500 B.C.E., when the Indo-Iranian chariot warriors, called *maryannu*, were introduced to the area and their services secured for the crown by grants of fiefs. At least in the following period all Canaanite kings still bear Semitic names, and never is a *maryannu* associated with the coastal cities of Canaan. However, for whatever the causes, by the 14th century B.C.E. one finds strong social unrest in Canaan as attested by the el-Amarna Letters; the half-free class who worked the land are escaping, and popular revolutions with assassination of the king are not unknown.

[William L. Moran / S. David Sperling (2nd ed.)]

The Transition

With the rise of a new dynasty in Egypt (the 19th), the southern part of Phoenicia fell again under Egyptian dominion. Seti I (c. 1318–1301 B.C.E.) speaks of conquering Asia, and mentions, among others, Tyre and Uzu (Ushu = Palaityros). Although Seti advanced as far as Kadesh on the Orontes, there is no evidence that Egypt could retain its hold on that vast Asian territory, for in the time of Seti’s son, Rameses II (c. 1301–1234 B.C.E.), Kadesh was firmly in Hittite hands. Yet Egypt continued to rule the southern part of Phoenicia. In a famous treaty, the Egyptian and Hittite kings divided Syria and Phoenicia into two spheres of influence. The borderline may have passed north of Byblos (cf. Papyrus Anastasi I; Pritchard, *Texts*, 475ff.). The following peace was of great importance for the cultural and material development of Phoenicia, and its overseas trade reached a peak.

1200–1000 B.C.E.

In the last years of Merneptah (1234–1224 B.C.E.), there is reference to the first waves of the invasions of the Sea Peoples into the countries of the Fertile Crescent. In the days of Rameses III (1182–1151 B.C.E.), these invasions brought with them the destruction of all the coastal towns of the eastern shore of the Mediterranean Sea. The archaeological evidence shows the total destruction of Ugarit, and the Egyptian sources speak about the conflagration of Arvad. According to a Tyrian source preserved by Josephus, there were 240 years from the founding (of Tyre) until the reign of Hiram (Ant., 8:62). This date is confirmed by Justin, who says that the king of Ashkelon (= Philistines) defeated the Sidonians, who fled and founded

the town of Tyre, one year before the fall of Troy (Justin, *Trogi Pompei Historiarum Philippicarum Epitoma*, 18:3, 5). These independent sources agree that Tyre was refounded at the very end of the 13th century or the very beginning of the 12th century B.C.E. Certainly there was no new foundation, but the tradition teaches us that a juncture occurred in Phoenician history. It may be suggested further that from now on the name Sidonian was applied to the Phoenicians generally.

Emergence – First Contacts with Israel

At the beginning of the 11th century, Tiglath-Pileser I (1114–1076 B.C.E.) of Assyria arrived at the Phoenician coast. He mentions Lebanon and the towns of Arvad, Byblos, and Sidon. The story of Wen-Amón (in the first quarter of the 11th century B.C.E.; Pritchard, *Texts*, 25ff.; COS I, 89–93) shows the low political prestige of Egypt in the coastal towns at that time, a fact which is clearly expressed by the king of Byblos. Also the comparison of Byblos with Sidon shows Sidon's political and mercantile position. The first suggestion of contact between the tribes of Israel and the Phoenicians comes from about half a century earlier. In the Song of Deborah, the tribe of Dan already lives in the north (cf. the sequence of the tribes which did not participate in the struggle, Judg. 5:16–17), and the close relationship between the tribe of Dan and the Phoenicians can be seen from the verse: "And why did Dan remain in ships?" (Judg. 5:17), which Taeubler (*Biblische Studien...*(1958), 89ff.) interprets to mean that the Danites were seasonal workers in the harbors of Phoenicia. In the days of David there were already intermarriages with the Phoenicians (II Chron. 2:13). Similarly, there must have been intermingling between the tribe of Asher and the Phoenicians, for it says, "The Asherites dwelt among the Canaanites...for they did not drive them out" (Judg. 1:32), while the whole of the Valley of Acre and the southern Phoenician coast remained in Phoenician hands. It appears that at the end of the period of the Judges, Tyre rose to the position of the leading city on the Phoenician coast, and in the following 300 years it exercised a certain supremacy over the southern Phoenician coastal towns; W.F. Albright suggests that from this time Tyre became the capital of Phoenicia. Furthermore, Albright has propounded that it was Abibaal, the father of Hiram, who in a kind of alliance with David, destroyed the sea power of the Philistines, while David defeated them on the mainland. An alliance was formed between Hiram and Solomon (I Kings 5:15ff. = II Chron. 2:2[3]ff.), though given the superiority of Phoenician seamanship it is likely that the Phoenicians were the dominant partner (Cogan). Archaeological support is provided by finds of Phoenician wares in Israel in tenth–ninth-century contexts (Kuhrt, 408). This included the supply of Phoenician lumber and technology in exchange for Israelite agricultural products, and led to a joint venture by sea to Ophir (see *Trade and Commerce).

Height and Decline – 1000–750 B.C.E.

From the days of *Hiram the Great (c. 969–936 B.C.E.) Phoenician history, as known, becomes the history of Tyre. The ex-

ternal proof is the change of title: while Hiram is still called "king of Tyre" in the Bible, Ethbaal (c. 887–856 B.C.E.), the father-in-law of Ahab, is called "king of the Sidonians" (I Kings 16:31). The reign of Hiram also saw the beginning of the Phoenician colonial mercantile empire, which culminated in the foundation of Carthage in North Africa (c. 814–813 B.C.E.). By the marriage of Ahab with Jezebel, daughter of Ethbaal, the culture and religion of Phoenicia penetrated Samaria (I Kings 16:32ff.), and later by the marriage of Athaliah with Joram of Judah they also penetrated Jerusalem (II Kings 8:18; 11:18). Yet Phoenicia proved to be a haven to Elijah (I Kings 17:10). Among the allies who banded together with Hadadezer of Damascus, Irhuleni of Hamath, and Ahab of Israel, against Shalmaneser III of Assyria at the battle of Karkar (853 B.C.E.), were the northern Phoenician towns, Arvad, Arka, Usanata, Shian, but not Byblos, Sidon, or Tyre. It may be assumed that the king of the Sidonians, ruling over the whole coast from Byblos to Acre, was behaving exactly like his predecessors and successors and avoiding a fight on the continent; his strength was in his fleet. The poem on the "Ship Tyre" in Ezekiel 27, though from a later period, may preserve some memories of Tyre at the zenith of her power. From the first years of Adad-nirari III (810–783 B.C.E.), Tyre and Sidon were among the tributary countries. The question is whether Tyre and Sidon formed a single unit, or were two different states. Tyre's leading position on the Phoenician coast is shown by the fact that it is always mentioned first in all the Assyrian lists from the days of Ashurnasirpal II (883–859 B.C.E.), even after the Assyrians definitely set up an independent kingdom of Sidon in the third year of Sennacherib, and it is also always mentioned first in all the pre-Exilic biblical sources (cf. Isa. 23; Jer. 47:4; Zech. 9:2).

750–538 B.C.E.

From the days of Tiglath-Pileser III (744–727 B.C.E.), a change in the Assyrian policy toward its neighboring states can be observed. One after another, the states were turned into Assyrian provinces (on the Phoenician coast, Sumuz became the main seat of the Assyrian governor). Only the main Phoenician city-states, such as Arvad, Byblos (the name of whose king is mentioned for the first time after a gap of 140 years), and Tyre, still remained "independent," certainly because of their commercial importance. In those days, another formidable enemy appeared – the growing colonial power of the Greek city-states in Cyprus, southern Italy, Sicily, and Sardinia. However, in the eyes of the prophets, Tyre was the "crowning city, whose merchants are princes, whose traders are the honorable of the earth" (Isa. 23:8; cf. Zech. 9:3).

While Shalmaneser V (726–722 B.C.E.) tried to break the power of Tyre by "liberating the subjugated towns (like Sidon, Acre, etc.)," Sargon II (721–705 B.C.E.) came to an understanding with "the king of the Sidonians," i.e., the king of Tyre. Sennacherib separated Sidon from Tyre and set it up as an independent kingdom (in 701 B.C.E.), but after an unsuccessful revolt in the days of Esarhaddon, Sidon became an As-

syrian province (in 677/76 B.C.E. for about 45 years). Again the whole struggle against the imperialistic Assyrian forces was borne by Tyre alone. After a short interlude, when the Egyptian pharaoh Neco tried to reestablish Egyptian suzerainty in Greater Syria, including Phoenicia, he was defeated by Nebuchadnezzar at Carchemish (605 B.C.E.), and thus Babylon became the overlord of the Phoenician coast. At the beginning of the sixth century B.C.E. the west again revolted, with Egypt's support. After the fall of Jerusalem (586 B.C.E.), Nebuchadnezzar turned to the Phoenician cities and laid siege to Tyre as the main city of the coast (cf. Ezek. 26ff.). This siege lasted 13 years (Jos., Apion, 1:156), and ended in a conditional surrender (cf. Ezek. 29:18). At this time, the Phoenician colonies in Spain and Sicily, looking in vain for help from the mother-city against the growing Greek colonization, turned to Carthage, and with this move the real independent history of Carthage began. The contact with Tyre still continued, but now it took only a religious form. An annual tribute was sent from the daughter colony to the mother Tyre for Melkart (Melqart), literally, "the king of the city," i.e., the lord of Tyre (for the possibility that "city" in the god's name means "netherworld" see S. Ribichini, DDD, 563–65).

538–64 B.C.E.

According to Herodotus, the Phoenician towns opened their gates to Cyrus the Great of their own free will (*Persian Wars*, 3:91). From this time, Sidon, where the Persian king had one of his palaces, became the leading city of the Phoenician coast (cf. Ezra 3:7; 1 Chron. 22:4). The hegemony of Sidon is shown by the hierarchy of the command of the Persian fleet, since the king of Sidon is mentioned before the kings of Tyre and Arvad (Herod., *ibid.*, 7:96, 98). Territorial rights to parts of the coast (mostly to the south, in Palestine) were granted to the main Phoenician towns, and Sidon, Tyre, and Arvad together, founded the city of Tripolis. Here the Phoenician cities now held assemblies, and together dealt with the Persian government. The cruel suppression of the great revolt of Sidon (about 350 B.C.E.) by Artaxerxes III was not forgotten by the Sidonians, who opened their gates to Alexander the Great. Tyre, in contrast, sustained a siege of nine months before it was conquered (332 B.C.E.) by Alexander, who built a dike from the coast to the island. Since that time, Tyre has been situated on a peninsula. During the wars of the successors of Alexander, the Diadochoi, the Phoenician coast not only changed hands from the Seleucids to the Ptolemies but the main cities also exploited these quarrels to become independent and counted the years accordingly (Tyre from 274 B.C.E., and a new era from 126 B.C.E., Sidon from 111 B.C.E., Beirut from 81 B.C.E.). In 64 B.C.E. the Phoenician coast was incorporated into the Roman Empire, with certain special rights for both Sidon and Tyre. In the last years of the Second Temple in Jerusalem, the Phoenicians are called anti-Jewish by Josephus (Apion, 7:70). Still, from the time of the Maccabees until the destruction of the Temple, the Tyrian coinage (*keseḥ šōri*) because of its purity and reliability was the official standard for

specific payments whose amounts were defined in the Bible (Tosef., Ket. 13:3).

Phoenician Colonization

The Phoenician colonization – which was, in fact, Tyrian colonization, for none of the other Phoenician cities established colonies – was quite different from that of the Greeks. Its main purpose was the securing of trading posts. It may be assumed that it started with the establishment of such centers in Cyprus. One of the oldest, if not the oldest, Phoenician settlement there was the town of Citium/ Kition (modern Larnaka), the *Kittim of the Bible (cf. Gen. 10:4), which may have been called Utica (cf. Jos., Ant., 8:146). It is said that its inhabitants revolted against the mother-city, Tyre, and were subdued by Hiram, the contemporary of King Solomon. From Cyprus, the Phoenicians penetrated, via Rhodes, to the Aegean Sea (according to Greek mythology Cadmus of Tyre came to Boeotia and introduced a number of arts, of which the most important was writing – Herod., *Persian Wars*, 5:57–58; cf. also the Phoenician merchantmen in the poems of Homer). According to Thucydides (*Peloponnesian War*, 6:2), the Phoenicians at one time had settlements all around the island of Sicily, although later they withdrew to the southwest. From Sicily they spread out to Sardinia in the north, and by way of the islands Malta and Gozo, southward to North Africa (Utica and Carthage), and from North Africa westward to Spain. It is possible that the Phoenician merchants reached Spain as early as the tenth century during the reign of Hiram (W.F. Albright, 1961, in bibl. against B. Mazar who thinks they date from the time of Ethbaal, about the middle of the ninth century). Josephus has preserved a notice that Ethbaal founded two colonies, one on the Phoenician coast itself and one in Lybia (Ant., 8:324). This Phoenician colonization of North Africa is not only reported in the classical literature, but also reflected in the Talmud and Midrash, and much later in the early Christian historiography as "an expulsion of the Canaanites by Joshua" (cf. H. Lewy, in: MGWJ, 77 (1933), 84ff.). The climax of Phoenician colonization was the foundation of Carthage according to tradition in 814/813 B.C.E. Thus far archaeological evidence is found no earlier than the second half of the eighth century. About the middle of the seventh century, the Carthaginians, the descendants of the Phoenicians, and the native populations took under their protection the Tyrian colonies, which were now endangered by the Greek colonization. Unlike the Greek colonial movement, Tyre's greatness rested on her mercantile colonies, which remained subjects of the mother-city. They paid their annual tithes to Melkart in Tyre, for Melkart, or the Tyrian Baal, now became also the chief deity in each colony.

EXPLORATION AND COMMERCE. The geographical conditions of Phoenicia dictated the pursuits and undertakings of its inhabitants; sea trade, fishing, and small industry. The Phoenicians claimed that they invented the building of ships and the art of fishing. The magnificent forest of Lebanon provided the wood for the ships, and the introduction of iron

made it possible to build larger and more seaworthy ships, called “ships of Tarshish,” which gave an impetus to more distant voyages. From the beginning of the tenth century, we can trace Phoenician colonization via Cyprus, to the western part of the Mediterranean – Sicily, Malta, North Africa, Sardinia, Corsica, and Spain – but it appears that the dates of the classical historians, who ascribe Phoenician colonization to the beginning of the 11th century, must be lowered by more than 100 years. Many Semitic names, however, have preserved the memory of Phoenician colonization, e.g., Cition (= Kittim) in Cyprus, Utica (= Watiga) and Carthage (qart-Hadasht) in North Africa, Cadez (= Gadar) and Tartessos (= Tarshish) in Spain. The Phoenicians actually founded only trading posts (this is the original meaning of Tarshish according to Albright) which engaged not only in trade, but also in a search for raw materials. The Phoenicians brought their own manufactures to the West, but to a far greater extent they acted as middlemen, transporting incense and spices from Arabia. These overseas expeditions were undertaken by guilds of merchantmen, with the king acting as representative both of the state and of the merchants (cf. *The Journey of Wen-Amon*; Pritchard, Texts, 25ff.; COS 1, 89–93). The trips to *Ophir undertaken by Hiram and Solomon in partnership are the most famous examples of these expeditions. Ophir was apparently on the African coast, in the general region of Somaliland (Albright, Arch Rel, 133; cf. 1 Kings 9:28; 10:11, and for Jehoshaphat’s aborted attempt, 1 Kings 22:49). The daring of the Phoenicians as sailors is shown by the expedition they made at the command of Pharaoh Neco, circumnavigating Africa by sailing south from the Red Sea and home through the Pillars of Hercules. Herodotus, who writes about this (*Persian Wars*, 4:42), discounts as incredible what in fact is the proof of its truth, namely, the fact that the Phoenician sailors claimed to have seen the sun on the right, i.e., to the north. Another famous voyage was made by Hanno from Carthage to Central Africa (approximately, Ivory Coast), at the beginning of the fifth century B.C.E.

INDUSTRY AND ART. The most famous industry of the Phoenicians was the manufacture of purple dye (it is possible that the name “Phoenicia” was derived from the industry; see above). Second in importance was weaving; the multicolored garments of the Phoenicians are mentioned in nearly all tribute lists of the Assyrian kings. Furthermore, the Phoenicians excelled in handicrafts: ivory objects, metalwork, metal statuettes and small stone sculptures, jewelry, and seals. Although the Phoenicians are credited with the invention of glass, it appears that they only developed the technique of its manufacture, for which they became famous in classical times. The purpose of all these handicrafts was not aesthetic but commercial. This is one of the reasons for the mixed styles, mostly borrowed from the neighboring countries and adapted to the taste of the customers. The Phoenicians were also famous as builders and architects (cf., e.g., the Temple of Solomon).

Religion

Little is known about the Phoenician religion (C. Bonnet and P. Xella apud Krings, 316–33; P. Scmitz, ABD, 5:357–63). Although over 6,000 inscriptions in Phoenician and Punic (overseas Phoenician) are known, there are no hymns, prayers, or god lists. Mostly, the inscriptions mention some specific deities, clients, and rituals. The excavations at *Ugarit in northern Syria of the late second millennium B.C.E. have brought to light many religious texts, myths, and rituals, which have enriched modern knowledge. The head of the pantheon was El, and his wife was Asherat of the Sea. In the poems about Baal and his sister Anath, their war against the gods of the underworld is recorded. These Ugaritic texts confirm to some extent the short notes of Philo of Byblos, which are quoted by Eusebius (*Praeparatio Evangelica*, 1:10, 7), about the Phoenician religion, and show a certain amount of continuity. At the same time much changed over a millennium thanks to Phoenician colonization resulting in increased contact with other cultures and the penetration of Hellenistic culture. In general each city-state had its own chief deity: El in Ugarit, Dagon in Arvad, the Lady of Byblos in Byblos, Eshmun in Sidon, Melkart in Tyre, Baal (Melkert)-Hammon in Carthage. The most important goddesses were Astarte, in the east, and Tanit/Tinnit, in the west. B. Mazar has noted that from the first half of the tenth century, a new deity appears in the pantheon, Baalshamem. Baalshamem may be identified with the Greek Zeus, whose temple is mentioned by Menander and Dios (Jos., Apion, 7:113, 118). Mazar suggests that this new deity should be connected with the colonial movement (cf. also the group of gods connected with navigation in the seventh-century treaty between Esarhaddon and Baal, king of Tyre: Baalshamem (Roellig, DDD, 149–51), Baalmadge (“Lord of Fishery”), and Baal-saphon (Niehr, DDD, 152–54)). The gods Eshmun (Ribichini, DDD, 307–9) and Melqart (Ribichinini, DDD, 563–65) are also newcomers unknown in the second millennium. There is no doubt that the Phoenician temples bore similarities to the Temple of Solomon, with two main pillars in front (cf. Jos., Apion, 1:118; Herod., *Persian Wars*, 2:44; and graphically, Harden, in bibl., *The Phoenicians*, pl. 50). The Phoenicians buried their dead in coffins as a rule, but there is also some archaeological evidence that they burned them. It is known that in Carthage the custom of infant sacrifices prevailed, which may have some connection with the cult of *Moloch (cf. 11 Kings 23:10). An inscription found at Incirli in Turkey may contain a reference to Moloch and human sacrifice (Kaufman and Zuckerman apud Holm).

Language and Literature – Later Period

The Phoenician language, which was spoken for more than 2,000 years, belongs to the northwest Semitic group. It is strongly related to Hebrew. As late as the fifth century C.E. there was to be found in North Africa a rustic dialect based on the Punic language, which is a descendant of Carthaginian, itself a descendant of the Phoenician language. The earliest Phoenician alphabetic text comes from the 11th century

B.C.E.; we already find here the *alphabet of 22 consonants. Greek tradition tells us that the Phoenicians invented the alphabet, since it was from the Phoenician merchants that the Greeks learned alphabetic writing. At the courts of the Phoenician kings, archives were kept, dealing with historical events (cf. Jos., Ant., 8:144ff., 324; 9:283ff.; Apion, 1:159ff.) and mercantile accounts (cf. *The Journey of Wen-Amun* (Pritchard, Texts, 25ff.); the correspondence between Hiram and Solomon (1 Kings 5:15ff.)). The Phoenician merchants were opposed to any descriptions of their voyages, with one exception: “The Periplus of Hanno,” which has come down in its Greek translation (*Hannōnis Periplus*). The epigraphic material from Phoenicia and from its colonies is very scarce. The most famous inscriptions are the sarcophagus of Aḥiram, king of Byblos (beginning of the tenth century B.C.E.); the Yehawmilk stele (about the middle of the fifth century); the sarcophagi of Tabnit and of Eshmunezer of Sidon (generally dated to the middle of the fifth century, but probably from the times of the Ptolemaic kings). Yet the longest Phoenician inscription on stone was discovered not in Phoenicia itself but in Cilicia at Karatepe. It is a bilingual (Hittite and Phoenician) building inscription, of 62 lines (probably mid-eighth century B.C.E.). Another Phoenician inscription comes from Zinjirli, in northwest Syria (the building inscription of Kilamuwa, king of Yʿdy), and dates from the second half of the ninth century. Other Phoenician inscriptions (some of which are bilingual) have been discovered in Cyprus, Rhodes, Sicily, Sardinia (e.g., the so-called Nora stone), Malta, Egypt, and even Attica. Examples of Phoenician writings occur on the coins of the main Phoenician towns, such as Arvad, Beirut, Byblos, Marathus, Ptolemais-Acre, Sidon, and Tyre. For a survey of Phoenician inscriptions see D. Vance, in: BA, 57 (1994), 110–20.

PHOENIX, capital and largest city of Arizona. Its Jewish population in 2002 was 83,000, the 13th largest in the United States and growing. The first known Jew in Phoenix was Dr. Herman Bendell, who arrived in 1871, a year after the town was laid out, as Superintendent of Indian Affairs for the Arizona Territory. The first Jewish settlers came in 1872: Emil Ganz, a Civil War veteran, who was elected Mayor of Phoenix in 1887; Michael and Joseph *Goldwater (Goldwasser), who founded a family mercantile dynasty that grew from a wilderness outpost into a statewide chain; Other early arrivals were Hyman Goldberg, his sons Aaron and David, and his brother Isaac (1875); Adolph, Leo, and Charles Goldberg (1879); Wolf Sachs; Joe Melczer; Selig Michelson, postmaster from 1908 to 1912; Gus Hirschfield; Harry Friedman; Pincus Kalsman; I.J. Lipson; and Isaac Rosenzweig. Aaron Goldberg, sat in the ninth and tenth territorial legislatures (1899–1901,) authored the bill that made Phoenix the capital, and his brother, Hyman was elected to the 19th and 20th legislatures. Barnett E. Marks, a young lawyer, who also organized the first Sunday school, later became assistant U.S. attorney for Arizona (1927–28.) Both Barnett and his wife, Freeda, were elected to the state legislature (1922.) Jews have been active in the political and civic life of the city. Rabbi Abraham Krohn of Beth Israel was memorialized in the city in 1958 when it named a public housing development for him. The mayor of Phoenix in 2006, Phil Gordon, was an active member of the Jewish community.

Informal Jewish worship services began in 1906 in a room over Melczer’s saloon under the leadership of Barnett Marks. Temple Beth Israel was begun in 1921 as the first synagogue in Phoenix with funds raised by local sections of B’nai B’rith and the National Council of Jewish Women, which had been organized in 1917. Temple Beth Israel relocated to a new building in 1949. The original sanctuary was used as a Baptist church until 2002 when it was acquired by the AZ Jewish Historical Society with plans for restoration. Jews began coming to Phoenix for their health around 1920. The Jewish population increased dramatically after World War II as soldiers who had been stationed in Arizona returned to the state with their families. The city became one of the fastest-growing cities in the country, a major southwest trading center, and a haven for winter residents from all parts of the U.S. It is estimated that 2,000 Jewish families move to the Phoenix area yearly. There are over 40 congregations – Orthodox, Conservative, Reform, Humanistic, and Jewish Renewal. The Jewish Federation of Greater Phoenix supports 11 constituent agencies including the Bureau of Jewish Education, Council for Jews

with Special Needs, Greater Phoenix Va'ad HaKashrut, Hillel at Arizona State University, Jewish Community Foundation, Jewish Family and Children's Service, King David School, Kivel Campus of Care, Pardes Jewish Day School, and two Community Centers. The community also has two other day schools: Phoenix Hebrew Academy and Jess Schwartz Community High School. The Federation has a very strong Israel office stressing programming, travel opportunities, and economic partnerships. The Phoenix Sister City Commission accepted a partnership with Ramat Gan in Israel (2005.) Cities of Scottsdale, Tempe, Chandler, Gilbert (all east of Phoenix) and Surprise (west of Phoenix) have growing Jewish communities. Surrounding retirement communities are Sun City, Sun City West, Sun City Grand, and Sun Lakes. (Other organized congregations in Arizona are in Flagstaff, Kingman, Lake Havasu, Prescott, Sedona, and Yuma.) According to a demographic study conducted in 2002 the Jewish population in Greater Phoenix included approximately 83,000 in 44,000 Jewish households, a 138% increase since 1984.

PHOENIX. The Greek legend of the phoenix, the fabulous bird that lives forever, is mentioned in apocalyptic literature with various addenda, as for example that “its food is the manna of heaven and the dew of the earth, and from its excrement the cinnamon tree grows” (III Bar. 6: 13). Some contend that the *hol* mentioned in Job 29:18 is the phoenix. It is so translated in the Septuagint, while the Midrash explains it as referring to that bird “which lives for a thousand years. At the end of a thousand years fire comes out of its nest and consumes it, and leaving behind of itself about the size of an egg, it reproduces limbs and lives again.” Another view holds that after a thousand years “its body is consumed, its wings moult,” and it renews itself (Gen. R. 19:5). This idea of a bird's renewing itself after a great age is applied elsewhere to the griffon *vulture (Ps. 103:5). However, it is not definite that in Job *hol* refers to the phoenix, since it may mean sea sand which is “eternal.”

PHOTIS, village marked on the Madaba Map between Orda and Elusa on the Gaza-Elusa road. It has been identified both with the Aphtha of Josephus (Jos., Wars 4: 155) and with the Aphta of Johannes Rufus (*Plerophoria*, 48; in *Patrologia orientalis*, vol. 8, p. 100), the more likely identification. The ancient site of Photis has been established at Khirbat Fuṭays, east of Gaza, with the remains of a settlement and a church; close by is the Monastery of Silvanus. In the Wadi Fuṭays are the remains of Byzantine silos. The moshav Pattish was founded on the site in 1950.

PHOTOGRAPHY. The first photographer known to be of Jewish birth was Solomon Nunes *Carvalho, an American who in 1853–54 served as artist-photographer with John C. Frémont's expedition to the Far West. However, the 19th century did not produce many photographers with Jewish backgrounds. Jews took their place as photographers on the world scene in the 20th century. Among the inventors, the names of Leopold *Mannes and Leopold *Godowsky, the musician-scientists who in 1933 produced Kodachrome, and five years later Ektachrome, rank high. Polaroid, one of the most ingenious of all photographic devices, was invented by Edwin H. *Land. The list of distinguished Jewish photo-journalists, beginning with Erich *Salomon, who originated candid photography with the first of the miniature cameras invented in the early 1920s, through John Heartfield (1892–1968), who, in montage photographs of vitriolic satire, blasted the Nazi hierarchy in various German publications until he was forced to flee for his life in the early 1930s, to the ubiquitous magazine photographers, is an extensive and impressive one.

The biggest pool of talented recorders of big world stories is to be found among the staff of *Life* magazine. Alfred *Eisenstaedt, who joined *Life* in 1936 when it was founded, had, by 1969, covered more than 2,000 assignments, and more than 90 of his photographs had been used as *Life* covers. Other famous Jewish staff members included Eliot Elisofon (1911–1973), Fritz Goro (1901–1986), Dmitri Kessel, Ralph Crane, Yale Joel, Ralph Morse, David E. Scherman, and Bernard Hoffman. The equally gifted free-lance photographers whose pictures regularly appear in the pages of *Life* as well as its sister magazine, *Time*, have also included extraordinarily gifted photographers such as Cornell Capa, Bruce Davidson (1933–), Elliot Erwitt (1928–), Burt Glinn (1926–), Philippe *Halsman, Archie Lieberman, Arnold *Newman, and Arthur Siegel (1913–1978). *Look Magazine* had on its staff such brilliant photographers as Arthur Rothstein (1915–1985), while Alex Liberman became the photographer-artist-art director for *Vogue*. Free-lance photojournalists work through photo agencies. Two of the leading ones in 1970 were Rapho-Guilumette, directed by one of the ablest administrators in the field, Charles Redo, and Magnum Photos by Inge Bondi. Among the great number of Jewish photo-journalists belonging to these two agencies have been Joe Rosenthal (1912–1981), of the Associated Press, who took the dramatic “Raising of the Flag on Mt. Suribachi in Iwo Jima, 1943”; Diane Arbus (1923–1971), whose photographs of transvestites were exhibited at the Museum of Modern Art, New York, in 1968; Morris Rosenfeld, photographer of yacht races; Robert Frank (1924–), known for his pictures of the seamy side of U.S. life; Ben *Shahn, whose photographs for

the Farm Security Administration were later used as themes for his famous posters and paintings; and Arthur Rothstein, Edwin Rosskam (d. 2006), and Charles Rotkin (1916–2004), who all photographed the American dust bowl for FSA during the depression years of the 1930s.

Photography has dominated fashion and product photography since the 1940s. The remarkably versatile Irving Penn (1917–) had a flair for graceful, bold compositions, and like Richard Avedon (1923–2004) and Eliot Elisofon was an adventurous explorer and unique stylist in fashion photography. Through unconventional lighting, exaggerated poses, startling costumes, and exotic backgrounds, fashion photographers all over the world have created eye-catching images that have more than once changed female attire everywhere. Two emerging talents in fashion photography at the end of the 1960s were Melvin Sokolsky and William Klein (1926–). Architectural photography, which requires a highly developed sense of design, and the ability to plan a series of photographs from strategic vantage points at exact moments during the day or night, found an exceptional practitioner in Ezra Stoller. Abstract images, found in objects ordinarily ignored, became the “new reality” of Aaron Siskind, who, as head of the photography department of the Illinois Institute of Technology and founder of the Society for Photographic Education, exercised considerable influence as teacher-photographer. A gifted student of Siskind’s at IIT, Len Gittleman, became head of photography at Carpenter Center, Harvard University. Other members of the Society for Photographic Education have been Martin Dworkin of Columbia University, Bernard Freemesser of the University of Oregon; Jerome Liebling (1924–) of the University of Minnesota; Jerry Uelsmann (1934–) of the University of Florida; and Ralph Kopell of the State College of Iowa. It is not surprising that photographers of war and battle should rank as distinguished cameramen. David Seymour (Chim; 1911–1956) was such a person – he died in the Sinai Campaign of 1956; Robert Capa was another – he died in 1954 in the Indochina War; and among the first casualties in the Six-Day War of 1967 was Paul Schutzer (1930–1967), a staff photographer of *Life*. Combat photographers have inner discipline, and it was this same quality which caused the death in an air crash of Dan Weiner (1919–1959), who flew out in a storm to cover an assignment in the Kentucky mountains, and of Camilla Koffler (Ylla), the famous photographer of wild animals, who was killed in an accident in 1970 while photographing a wild bullock in India.

Photography, which unites art and science, was a child of the Industrial Revolution. It was the first art in history to owe its very existence to a scientific instrument. However, it would be wrong to think of science-minded Fritz Goro or Roman Vishniac as cold and factual reporters of the modern world. They are poets who have drawn upon technology at its most advanced to reveal the poetry of an emerging world of thought and feeling. Photography was born largely as a result of the efforts of portrait painters to find some reliable means of getting an accurate likeness.

Portrait photography has been a big industry for over a century. The giants in portrait photography are few, but Arnold Newman and Philippe Halsman, two Jews, are certainly among them. So too are Eliot Elisofon, Alfred Eisenstaedt, Izis in France, and Alfred Stieglitz. They all share the one essential quality that makes a portrait photographer, the ability to interpret a complex personality creatively, discovering something fresh and important to say. Newman is a master of symbolism that underlines and reinforces his central message. Halsman is a brilliantly inventive and witty graphic artist whose chosen medium is light.

There have been some distinguished Jewish curators, editors, journalists, and critics of photography, especially in the last three decades. Among these are Grace Mayer, curator of photography, the Edward Steichen Memorial Collection, at the Museum of Modern Art, New York, from 1962; Jacob Kainen (1909–2001), curator of prints and drawings, The National Collection of Fine Arts, Washington, DC; Eugene Ostroff, curator of photography, Smithsonian Institute, Washington, DC; Lewis Walton Siple (1897–1968), director, American Museum of Photography, Philadelphia, Pennsylvania; Margaret Weiss, photography critic for the *Saturday Review*; Jacob Deschin (1900–1983), photography critic for the *New York Times*; David B. Eisendrath, science-oriented columnist of *Popular Photography*; Helmut Gernsheim (1913–1995), photography historian of London, England; and Albert Boni, who assembled and edited the comprehensive photographic bibliography published in 1962, *Photographic Literature*.

[Peter Pollack]

While no definitive “Jewish” photography style emerged, many of the practitioners of landmark photographic images were Jewish. Among them were Nan Goldin, Annie Leibovitz, Garry Winogrand, and Helen Levitt, who continued to be active into her nineties. At least two European-born photographers, Helmut Newton and Andre Kertesz, did significant work as Americans.

In Israel

The early photographers in Erez Israel included Yaakov Ben Dov, Alfred Bernheim, and Shemuel Josef Schweig. Among the contemporary photographers working in Israel are many doing press work and producing picture books on the Holy Land. Among them are Werner Braun, David Rubinger, Micha Bar Am, Peter Merom, and David Harris.

CAMERA JUDAICA

Introduction

The great upsurge of interest in photographing Jewish subjects and in the understanding of photography as documenting the many facets of Jewish life in the past is a phenomenon of more recent years. More exactly, one could speak of a wave of renewed interest, a reinforced presence of photographs aimed at recording Jewishness and Jewish existence, and of a more outspoken use of old photographs as an instrument to safeguard Jewish memory. One feels today a more conscious

and concerted involvement of photographers, photo-editors, and curators in an effort to interpret Jewish life through photography than ever before. The age of Jewish photography has arrived.

Moreover, and complementarily, in our age of the three-fold domination of the cultural and social life by the camera – through photography (and photojournalism), through film (fiction and documentary), and through television and video – Jewishness itself seems to strive to express its presence in an image-oriented, visible dimension. The emancipated appearance on the one hand, and on the other the admired “sabra with an ‘Aryan’ look” (cf. the Paul Newman-alias-Ari ben Canaan ideal in the film “Exodus”) evolves into a more expressive “Jewish is Beautiful” ideal. The latter is sometimes characterized by an ungroomed haircut-cum-beard often adorned with a big “Chai” sign (or a larger-than-life *Magen David*) and sometimes crowned with a *yarmulke*. Photogenic Judaism of the 1970s and 1980s is more visually aggressive than its 1950s–1960s predecessor. The once most powerful expression of the attitude to photography of Orthodox Jews, the refusal to be photographed, is today increasingly limited to the narrowest fringe. The “we have the right to be different” expression of Judaism has become more outward-projected and less abstract. The cameras were there, among other factors, and played their role.

The beginning of the New Wave in Jewish photography could be set in 1974. Three important photographic books, all relating to contemporary Jewish history, appeared in that year, independently of each other. In the German-speaking area, photographer and photo-editor Franz Hubmann published his *Jewish Family Album*. Germanic and bourgeois in its spirit and composition, the album mainly represented the West European Jewish Family. A photographic social history, it ended (significantly, as we will see) before 1939. In New York, journalist and writer Abraham Shulman compiled and created another family album, *The Old Country*. His book focused on the poor cousin, eastern European Jewry. Also in New York in 1974, Leyzer Ran compiled and composed a two-volume documentation about pre-war Vilna, *Jerusalem of Lithuania*. Here the photographs and other documents represented mostly the organized Jewish life, including its destruction and the resistance. Hubmann, Shulman, and Ran, the three compiler-authors, created, through photographs, different views of the Jewish experience. And yet, the books share certain traits that remain discernible in photographic books and exhibitions of later years.

In 1976, Abraham Shulman, perhaps encouraged by the reception of his *Old Country*, published *The New Country*, depicting Jewish immigration and early days in America. Also in 1976, the Jewish Museum in New York exhibited *Image Before my Eyes*, a photographic history of Jewish life in Poland between 1864 and 1939 (again), prepared by the YIVO Institute of Jewish Research in New York. Lucjan Dobroszycki and Barbara Kirshenblatt-Gimblett turned it into a book in 1977; a year later, the book was itself turned into a film. By the same

time, a collective of young American Jews sponsored an amateur-photography contest that led to the publication of a book entitled *Behold a Great Image*, published by the Jewish Publication Society of America in 1978. In the same year, the Diaspora Museum in Tel Aviv opened its doors to the biggest Jewish photography exhibit/slide show/gallery ever created. This was the year in which the introduction of the image into the realm of representing Jewishness reached its culmination. To the more traditional and religious reader, this statement might sound like a heresy; in reality, there is a transformation. The process goes on, both in compilation and new photography. In 1980 and 1984, the sociologist Gerard Silvain published in Paris, in French, two large volumes based on his collection of (mostly photographic) postcards. The first, *Jewish Images and Traditions*, includes a thousand postcards illustrating Jewish life. The other, *Two Destinies in the Diaspora*, juxtaposes two fictional life stories, one Ashkenazi, the other Sephardi, also based on postcards. Also in the 1980s, the Diaspora Museum initiated three worldwide contests in photographing Jewish life. At the same time, the Museum assigned several photographers to take pictures relevant to contemporary Jewish history and sociology. In 1985 Yeshayahu Nir’s book *The Bible and the Image, the History of Photography in the Holy Land 1839–1899* appeared; its popularized Hebrew version *Jerusalem and Erez Israel: In the Footsteps of Early Photographers* appeared in Israel in 1986. In both editions, Jewish attitudes toward photography are discussed; the latter focuses on Jewish life in pre-Zionist and pre-Mandatory Palestine.

There is little doubt that these books and exhibitions represent less than a carefully orchestrated effort, more than a fad or a fashion. They embody a spontaneously growing cultural movement that arises from certain needs, that focuses certain energies, responds to certain realities. They demonstrate that Jewish photography is a fact, definable as the body of photographic images of Jews and of their culture taken, “encoded,” by Jews integrated in it and meaningful to a Jewish audience able to “decode” it. There exists, undeniably, a photographic discourse on Jewish life. It has its themes, motifs, tendencies, and ideologies.

Motifs, Past and Present

TYPES AND FACES. *Behold a Great Image*, the photography book that has contemporary Jewishness as its theme, offers perhaps the best starting-point for an introduction to a taxonomy of Jewish motifs in photography. The book is a clearly shaped statement that presents its theme in clearly delimited, ideologically charged terms; it was edited by a team of Jewish activists and militants who used pictures taken by many photographers, most likely all Jewish. Finally, it was published by a representative and prestigious Jewish publishing house.

One opens the book and sees, first and foremost, faces: a first reaction is, “These faces are me, these are my people, they received the Law together with me on Mount Sinai, we were together through the Inquisition and the ghetto, it is for them that we have taken to guns and have built a country.”

The fact that one might be as far from religion as the authors are from atheism and still identify with these images may serve as evidence as to the validity of the opening sequence. Of the 28 faces depicted, the opening double spread and 11 more pictures do not carry any unequivocal graphic sign of Judaism. Faces in this context serve as signs of identity, and identification is axiomatic to photography. The act of recognition of the Self (or its part) in photographs of the other is the most general and basic function of photography in society and in culture.

The first section, "Faces," is followed by sections on "Children" and "Elderly"; this reads of course that Judaism is a family, a tribe, first and foremost. True, the book represents the editors' specific ideas influenced by "Zedakah collectives," engaged in voluntary social work. It draws both on feelings of compassion and on sentimentality, also axiomatic to much of photography. But the book's message goes beyond its narrow and immediate aims. In "Children" and "Elderly" and the following sections – "Hasidim," "Trade," "Food," "Demonstrations," "Cemeteries," and "Holocaust" – Family and Tribe become an ethnicity with its own garment, gastronomy, alphabet, political interest, and history. Many of these are perennial motifs in Jewish photography that can be found in retrospective photography books and in modern photographic monographs, and they invite a more detailed discussion.

Whoever enters the permanent exhibition at the Diaspora Museum is first touched by the show-window "Faces" that seems to welcome the visitor. It is a never-ending audiovisual display of Jewish "types," similar in its conception and impact to the opening sequence of *Behold a Great Image*. Gerard Silvain's *Jewish Images and Traditions* also opens with "types." And, as Silvain implies, the "Jewish type" is a problematic image. At the beginning of his compilation, there are three postcard-photographs entitled "The Eternal Jew," showing poor, bearded, French ambulant merchants and vagabonds. The photographed "types" that is to say, the models, are not Jewish; yet, they may "seem Jewish," especially in antisemitic eyes. According to Silvain, it was the oral tradition that assimilated such French "types" to Jews, the eternal wanderers. But ambiguities of perception are present even in responses to authentic images. A typical postcard brought later by Silvain shows a "Jewish type." Such postcards, having Jews and other "types" as subjects, were very popular in their time and had nothing denigrating in them. And yet one of the postcards carried an inscription and signature handwritten by the sender: "The town of Leopol (?) is half populated by these dirty Jews. Germaine." Silvain brings another postcard, from Algiers, that also shows in a characteristically typical and neutral manner a young Jewish woman. The handwritten note is quite different in spirit: "Pas mal. Hein! Levy." ("Not bad, isn't it! Levy.") As the signatures indicate, the images – in both cases – were created in the beholders' eyes, and so were the connotations. However, although antisemitic propaganda richly used photographs of Jewish faces, none of the portraits used in *Behold a Great Image* or the Diaspora Museum slide show would attract

antisemitic editors today. Jewish photography is actively and consciously involved in the de-caricaturization of the Jewish stereotype. True, very often this tendency leads to an excessive beautification and romanticization of the distinctive traits of the Jewish face. Nevertheless, many photographers of the past and the present portrayed "Jewish types" with sensitive eyes and minds. Some did it with a touch of greatness.

CELEBRATIONS, CUSTOMS AND STUDY: RITES. Few subjects seem as obviously belonging to the field of Jewish photography as weddings (the universally most preferred subject of the trade) and bar mitzvahs. Theirs is a powerful link: they are both memorable family events and graphically expressive rites. Weddings and bar mitzvahs are perceived as prestige-conferring social events in the time they occur, and the value of their depiction rises with time, as they find their way onto walls and into family-albums. The canopy above the bride and groom, the *tallit* on the youngster's shoulder, provide the Jewish color. It was no miracle that this subject developed into a full-fledged photographic genre.

New Year greeting cards are one of the oldest "holidays" and "Jewish Year" subjects in Jewish trade photography. For the amateur's camera Hanukkah candles are among the most favorite subjects of the Jewish year, with their light preferably reflected on children's faces. The environment of study, the yeshivah, the *heder* and the Jewish scribe belong to this order of subjects. Jewish study and scripture is a religious practice, a celebration, one rite among others. Other powerful links are at work here: *heder* means children, yeshivah and scribes – most often – elderly, all "graphic" types. Unfortunately, photography of rites became the very realm of schmaltz, with children, brides, and scribes, and without them.

An interesting innovation in this field was, a few decades ago, the clash between objects of rite with objects of modern life. Photography is profane, and so are most of its subjects. Images such as truck drivers in *hasidic* garments, a *yarmulke* on the head of a laboratory specialist, a *lulav* in the hands of a man in overalls, *tefillin* on the forehead of a tank commander have at once secularized Judaism and by the same token have spiritualized its secular dimension. Today, even this relatively new genre seems overworked and outworn, one kitschy cliché among others.

Greatness, authentic belief, and real cultural values are best served with straight, "documentary" or "anthropological" photographs, or with subdued, somewhat enigmatic images. Roman Vishniac's pictures from 1938 eastern Europe mostly belong to the first category. Nahum T. Gidal's photograph entitled, "The Night in Meron" (taken in 1935), which shows in semi-darkness a traditionally dressed man half leaning, half lying on a building's arched roof, is perhaps the best example of the second. Vorobeichic's 1931 constructivist photo-montage of bookshelves in the Vilna rabbinical library also touches the realm of mystery.

TRADES AND STREETS. The shtetl – wooden houses, twisted lanes, Jewish artisans and poor storekeepers – preserves the

ever present images of our past. To be sure, in a few streets and in some trades the shtetl is well and alive even in our days. Jewish photographers detect and depict it as a curious mixture of relics from the past and of present-day decay, which it, most often, is. But then, photography has this curious power to pictorialize rubbish and romanticize poverty. If rites are the realm of schmaltz, the shtetl is the realm of nostalgia. The fact that old photographs survived the vagaries of time provides them with an additional aura – as if time itself survived with them. Nothing feeds nostalgia as exquisitely as old photographs. Given the extreme hardships, misery, and martyrdom of the old days, one must admit that old pictures feed warm feelings toward a world that never existed in reality.

The beauty of nostalgia, in spite of the appearances, is not a celebration of the past, a real longing to live again, in the future within the conditions of the past. It is a self-assuring celebration of memory itself. To turn old photographs, vital evidence of bygone times, into historical documents, therefore, necessitates a demystifying reading. This means to analyze and deconstruct the idealizing photographic techniques on the one hand, and the falsifying connotations of a selective memory on the other.

It is easy to enjoy the heartwarming old images, knowing that the “golden” olden days when Jewish poverty – often, utmost poverty – was a fact of life, are over. This is not the case when poor socio-economic status and low prestige persist. In 1975 Jerusalem’s Israel Museum organized a large scale representation of Jewish life in Morocco. Some of the photographs that were to be included displayed poverty and connoted, moreover, “underdevelopment” and “primitiveness.” A prominent Israeli investigator of folklore born in Morocco and involved in the preparation of the exhibition threatened to demonstrate violently his opposition to the enterprise should these photographs, whose authenticity he did not deny, be exposed. One senses behind this opposition an anxiety that they may have confirmed negative stereotypes concerning the Moroccan immigration still current in the more established strata of Israeli society. That such an opposition was never recorded among descendants of eastern-European poor Jews does not imply that the shtetl was less poor than the mellah, the Moroccan Jewish quarter. It indicates that it belonged, already, to a more distant past. It also indicates that the mellah did not find its Vorobeichic, Vishniac, and Gidal.

CEMETERIES. Cemeteries exercise a powerful attraction for Jewish photographers. There is hardly an illustrated book or an exhibition about Jewish communities where a photograph of tombstones – mostly taken from middle distance – is absent. Paradoxically they signify survival and continuity of the ethnic group. Old tombstones are signs of life, albeit of life gone, but they represent people and a people. With their Hebrew inscriptions, old Jewish tombstones signify survival of a culture, both in the eyes of Jews and of their opponents. Antisemites do not analyze signs. Their instincts tell them that

by destroying and desecrating Jewish cemeteries they pose a potent threat to Jewish culture and life.

Nature, always present in photographs of cemeteries, plays a double role, of both adversary and catalyst. The photogeny of tombstones, even half-broken and half-lying, consists of their victory over grass and thistle that threaten to overgrow them and to condemn them to disappearance and oblivion. They signify victory of a cultural artifact over the surrounding nature. On the other hand, adorning the stones and their Hebrew letters with wild greenery, nature embraces them, “naturalizes” them, and turns them in to part of nature. The photogeny of old cemeteries consists of the dialectics of struggle and fusion of culture with nature, of memory with eternity. It adds to the Hebrew inscriptions – a symbol in itself – an immensely powerful second symbolic dimension.

SYNAGOGUES. *Behold a Great Image*, the starting point of our analysis, has almost exclusively in its synagogue section, photographs of wrecked synagogues and of synagogues converted into churches. None of the high-class houses of prayer or of other *shuls* in popular quarters is represented. This is an exceptional representation of the subject, a wrecked synagogue, in the Jewish repertory of symbols, means destruction, pogrom, *Kristallnacht*, Holocaust. An abandoned synagogue, in opposition, could mean disappearance of a Jewish community through emigration to another or more affluent country, perhaps *aliyah* to Israel; and in American inner cities, urban exodus toward better ecologies of a wealthy suburb. The particular treatment of synagogues in this book implies ideology. The message is that the latter exodus weakens the coherence of Jewish communities. This may be a plausible point, but the almost exclusive use of images of abandon and decay in living and prospering Jewish America seems to be a textbook case in photographic rhetoric and propaganda.

History, and its more recent chapters, turned the destroyed synagogue into a clearly determined and conventionally decipherable, decodable sign. It turned all old photographs of synagogues in eastern and central Europe from a view of a building of prayer into a view of a monument. The shift can be exemplified by one of Silvain’s postcards, printed in his *Jewish Images and Traditions*. It is a photograph of the Great Synagogue in Frankfurt. Sent on October 22, 1899, it carries the following handwritten inscription and signature in French: “My dear Joseph, for an Israelite this card is a pleasure to have. Your brother, Isaac.” Never again will this photograph generate a similar feeling of joy over Jewish presence. The meanings that it carries today are of a more complex order. It is nostalgia, but also mourning, pride, anxiety, sorrow, elements of Jewish memory.

A synagogue also remains, of course, in all its aspects, a work of architecture and of decorative art. As such, it represents Jewish art, with all the ambiguities of this concept. It also represents the search for identity and status of a community, an ethnic community in a foreign and not always friendly world. Photographers can capture and differently emphasize

any of these connotations. A symbol of Jewish religion, a subject charged with Jewish history and sociology, synagogues are and will remain a permanent motif in Jewish photography.

VANISHING COMMUNITIES. Since the 1940s, thousands of Jewish communities have ceased to exist. Many of these disappeared as the result of the Holocaust; some in mass emigration to Israel; others have been gradually abandoned as the Jews have slipped away to other homes, sometimes in the metropolitan areas of the same country. Often the descendants of these communities or other photographers have been motivated to photo-document the material remains. Some of this has been initiated by Beth Hatefutsoth.

The following extracts are taken from the descriptions of Temporary Exhibitions held in the Gallery of the Beth Hatefutsoth (the Diaspora Museum in Tel Aviv). They speak for themselves and the subject.

Radauti, a town in northeast Romania, was once a busy trade center with a community of 6,000 Jews. By the late 20th century, only about 200 remained and their numbers continued to diminish as the older generation died and the younger generation left. This is one of the last places in Europe where many of the characteristics of the shtetl life still survive. The American photographer, Laurence Salzmann, spent two years in Romania, preparing his photographs on Jewish life in contemporary Radauti. His work portrays the Jewish life cycle, from circumcision to burial, religious life and cemeteries, economic life and community functions, and he follows two families as they leave Radauti and start a new life in Israel.

Several centuries ago, Jewish life in the Caribbean thrived with activity. Descendants of Marranos, from Spain and Portugal, came to the region in the 17th century and established a chain of flourishing settlements. Today only a few remnants survive; Jewish community life is limited to a few centers. Elsewhere all that remains are ruins, tombstones, and memorial tablets. Beth Hatefutsoth sent out a small expedition to locate and document the remains. They visited Surinam, Curaçao, Coro (Venezuela), Barraquila (Colombia), Panama, Jamaica, Barbados, St. Thomas and St. Eustatius.

Ethnophotography of a people that had never stopped migrating and perhaps never will.

HOLOCAUST. There is a world of difference between the vanished Jewish communities of Radauti and the Caribbean on the one hand, and the vanished Jewish community of Poland on the other. Whatever remains of Polish synagogues or of the terrible sites on which death machinery had left its traces will most likely be photographed again and again by Jews who attempt vainly to apprehend the unacceptable. In contrast, such photographs will also be taken as an outcry to be turned into an ever-accusing evidence, an expression of protest of a people revolting against its historical conditions of existence.

Photographs taken during the Holocaust by Jewish photographers (only those are considered here) are of a different and unique kind. In one sense, they simply are historical documents, reports, and records of an event of unique dimensions. In another, they constitute a personal testimony of a photog-

rapher-eyewitness. In a third and utterly exceptional sense, they depict the photographers' own path toward death, a path shared with their portrayed subjects. "Doomed Photographers Reporting about Their Doomed Community" would be the appropriate title of their exhibition. Research, disclosure of official material, and state archives of all Allied powers, and accidental discoveries may lead to the uncovering of more such pictures than those presently known and published. And it is under the above mentioned title that such photographs will have to be studied and incorporated into the pantheon of Jewish Photography.

ISRAEL. The Jewish homeland is certainly the most diverse and most problematic subject of Jewish photography. Vested ideology is perhaps nowhere as powerful and influential as in this case.

The authors of *Behold a Great Image* again provide an interesting example of a clearcut and significant choice. Most of the photographs in their concluding chapter, entitled "Israel, the Land," show Orthodox Jews in their own secluded quarters. It is not difficult to fill in the verbal equivalent of their visual statement: Even in Israel, Jewishness is first of all a religion, and it is picturesque and ultraconservative.

Israel, the land, the state, the people, is in all its facets unique in Jewish history, culture, and experience. It is an important, perhaps central, though not yet fully crystallized, part of it. A Jewish photographer who depicts Israel, and this includes any theme and motif in Israeli life, is operating inside the culture. A controversial work may best exemplify this problem. Some of Joel Kantor's photographs of Israel exhibited at the Israel Museum in Jerusalem in the late 1980s (Kantor, born in Canada, had lived in Israel for some 15 years) show Israeli security forces brutalizing young Arabs. By their subject matter, esthetics and ethics, they belong to Jewish photography at its best.

Conclusion

First, a single photograph can only exceptionally express a culture's particular point of view by its formal organization. Only exceptionally can a single photograph disclose a photographer's approach to his subjects. Even more rarely will it reveal whether the photographer has operated within his own culture and was intimately acquainted with its values and points of view. But a photographic discourse of larger dimensions, such as an exhibition, a book, or a lifetime work, reflect these characteristics. Photography is vision of things, of people, of life, of the world, and as such, culturally determined. Even the most universalistic and universe-embracing photographic show ever created, "Family of Man," represented the Family in a perceptibly American, "WASP-ish" perspective. To bring another example of the influence of the photographers' cultural background on their work, British/Protestant 19th-century traveling photographers who visited the Holy Land depicted its biblical sites in the open countryside more often, and included in their pictures of famous landmarks more of the surrounding nature than their French/Catholic

counterparts, who focused more closely on monuments and architecture. It is appropriate to observe this relation from another direction. Few audiences were as sensitive to Alter Kacyzne's photographs from the 1920s of Jewish Poland, or to Roman Vishniac's images from eastern European Jewish life in the 1930s, as the Jewish audience. And no gentile photographer has produced on this subject a collection as powerful and as penetrating as Kacyzne and Vishniac. True, Vishniac's collection owes part of its impact to its date – the eve of the Holocaust. But then, precisely, the close relationship to reality is typical of and inherent in the camera's work.

Second, preliminary definitions concerning Jewish photography may now be suggested. The first definition has to be restrictive and limited and formulated in the following manner: The basic body of Jewish photography is constituted by the pictures taken by Jewish photographers who explore and record Jewish life from an insider's point of view, and which appear to Jewish viewers as meaningfully expressing their shared concerns. The second definition has to provide Jewish photography with a broader perspective. It has to leave space for "unpopular" images, which like Kantor's, while relating to present-day Jewish concerns and values, might be rejected by a Jewish audience as too critical. It has also to leave space for more universal concerns of Jewish photographers, since such concerns are part of Jewish experience and culture. Last but not least, it has to leave space for gentile photographers who feel affinity toward Judaism and Jewish culture, perhaps the space English literature had for a Joseph Conrad, and American literature for a Vladimir Nabokov.

Golden is theory, and green the tree of life. The growth of Jewish photographic work during the coming decades and centuries, and the growth of a Jewish audience perceptive to it, will confirm – or reject – the ideas here suggested.

PHRYGIA, district in central Asia Minor, part of the Roman province of Asia after the death of Attalus III (133 B.C.E.), the last king of *Pergamum. A Jewish community was established in Phrygia no later than the end of the third century B.C.E.

According to Josephus, Antiochus III (the Great) transported 2,000 Jewish families from Mesopotamia and Babylonia to "the fortresses and most important places" of Phrygia and Lydia. These Jews were to serve as military settlers in support of the Seleucid monarchy, as the inhabitants of Phrygia had risen in revolt (cf. II Macc. 8:20: Babylonian Jews in the service of the Seleucid army against the Galatians). Favorable terms were granted the Jewish settlers. They were permitted to live in accordance with their own laws, and each was allotted land on which to build and cultivate. Generous exemptions from taxes were also granted, and Josephus thus considers the episode ample testimony to the friendship of Antiochus toward the Jews. The Jews of Phrygia undoubtedly had strong ties with Jerusalem and the Temple. On two occasions large sums of money which had been gathered in two cities of Phrygia, Apamea, and Laodicea, to be sent to the Temple were confiscated in 62–61 B.C.E. by the Roman governor Flaccus on the charge of illegal export of gold (Cicero, *Pro Flacco*, 28:68). A number of Jews from Phrygia resided in Jerusalem during the first century C.E. (Acts 2: 10). Several important Jewish inscriptions in Greek have been discovered in Phrygia, mostly from graves. One, dated 248–49 C.E. warns that if anyone should desecrate the tomb, "may the curses written in Deuteronomy [cf. ch. 27–29] be upon him." Nearly all the personal names are Greek, but the epithet "Joudaeos" is used several times and a *menorah* is carved on one stone. A tomb from Hierapolis, of the second or third century, states that the fee for any future additional internment is a donation to the Jewish community in Jerusalem.

PHYSICS. The material presented in this entry emphasizes those contributions which were important in arriving at verified present-day scientific results, rather than those that may have appeared important at the time. Unavoidably it will overlap in parts with material presented in the separate *Astronomy entry.

Introduction

Though rich, innovative, and highly creative, the Jewish intellectual contribution to civilization was initially an essentially humanistic and non-scientific "program," staying that way for more than 25 centuries, from the Patriarchs and Moses in the second millennium B.C.E. in the eastern Mediterranean to the great Jewish astronomers in the 10th–15th centuries C.E. at the other end of that sea. There was one exception, namely a marginal interest in astronomy, the "intercalation" sub-program motivated by repeated efforts aimed at the construction of an ever-improved calendar. Technically, this was a quest for better synchronization between the agriculturally important solar year and the timekeeping advantages of the lunar month, an aim which was indeed achieved in the

present Jewish calendar, finalized by the end of the first century C.E.

It was only in the 10th century C.E. that a major change appears to have occurred involving the Jewish communities in Europe along the western Mediterranean, from the Iberian Peninsula and southern France to Italy, with science gradually approaching (but not achieving) the status of Torah studies. These regions constituted the interface between the crystallizing Christian national dynastic states of the western Roman Empire, as parceled out by its Germanic conquerors, and the Ummayyad and Abbasid caliphates and other Muslim states established in Northern Africa.

The Jewish interest in science was part of a general regional reawakening some four centuries after the almost complete eradication of Greek science with its remarkable achievements over the one thousand years from Pythagoras to Diophantus – e.g., the realization that the earth is round and measurement of its radius by Eratosthenes with a better than 0.5% precision, the understanding by Aristarchus of Samos of the heliocentric structure of our planetary system 1,800 years before Copernicus, or Archimedes' derivation of the laws of mechanics and hydrostatics – just to mention three examples from the third century B.C.E. All this would have been lost forever upon the closure of the Academy in Athens on the orders of Justinian in 550 C.E., if not for the transplantation of nine Academy scholars with some of their documentation to Mesopotamia at the invitation of Persian emperor Khushru Anushirvan and the founding of an academy outside of Christianity's reach. The institution survived the Muslim conquest, developed under the Ummayyads, and flourished under the Abbasids, who established the central school in their palace. Their Spanish Ummayyad rivals responded by creating a similar academy in Cordoba. The preservation and consolidation process had thus lasted almost half a millennium, when science made its re-entry into western Europe from the Muslim bridgeheads in Sicily and Spain. Being neither Christian nor Muslim, Jewish scholars for a while enjoyed the advantage of having access to the research centers on both sides of the divide, but the religious zeal in England and France throughout the Crusades and their aftermath brought about the total expulsion of Jews from these countries, which thereby remained “*judenrein*” for several centuries.

The second millennium C.E. did witness two periods of peak Jewish creativity in the sciences, separated by a figurative “black hole,” the Dark Age of European Jewry, lasting from the 16th to the mid-18th centuries.

Jewish involvement in the physical sciences can thus be summarized as follows:

- (1) Creative Humanism, no physical sciences: 15th century B.C.E.–10th century C.E.
- (2) First creative era in science (astronomy and physics): 11th–15th century (Spain, S. France)
- (3) Jewish Dark Age (Europe): 16th–mid-18th century.
- (4) Second creative era in science (physics and astronomy): 19th century to present.

This can be further divided into two phases, according to the limitations on Jewish access to scientific research facilities, namely,

- (a) a *restricted phase*, either
 - (a1) *formal* (through the Oath of Allegiance), or
 - (a2) *patronizing* (“they do not know how to behave ...”);
- (b) *the fully emancipated phase*.

The transitions occurred at different periods in each of the western democracies (e.g., 1950 for full emancipation in the United States).

This chronology is followed in the present entry, with the Second Era section including three subsections dealing with special episodes: Nazi “Jewish Science” (1933–45), Nazi Germany and the Jewish initiative in the development of nuclear weapons (1938–46); and the “Scientists’ Freedom of Movement” struggle in the U.S.S.R. (1971–91). It concludes with a survey of physics in modern Israel (from 1928).

From Antiquity to Sepharad (Humanism)

In its first 25 centuries (1500 B.C.E.–1000 C.E.), the creative Jewish cultural contribution effectively centered on humanism and its ethical, social or juridical realization, e.g. the idea of a weekly day of rest, moral codes (as in the Ten Commandments), the treatment of slaves, support for the weak, etc. Very little was achieved in the sciences, where both motivation and methodology remained purely pragmatic, whatever the activity. An example is the biblical value (1 Kings 7:23) of $3 = \pi$ for the ratio between circumference and diameter in a circle, a value indicating that it must have been determined experimentally, namely averaging between results of very rough measurements of the ratio in several round objects; the Masoretic editors (8th–10th century C.E.) noted the lack of precision and inserted an improved value in a footnote. Another example is R. Nehemiah's *Sefer ha-Middah*, a book which played an important role in the preservation of Greek geometry and its revival in the East under the Abbasid caliphate, yet without a single proof, only prescriptions. Compare this with Greek culture, where Archimedes provided a mathematical *proof* that the value of π , an important geometrical constant, lies between $22/7$ and $223/71$ (or between 3.1408 and 3.1428), while using a method that could be further extended to any degree of precision.

There is no real principle making it incompatible to be creatively involved both in humanistic culture and in science. There is even evidence that the conception of science as a worldview, i.e., the idea which emerged in sixth century B.C.E. Greece, that the physical world might be describable by laws of nature, was inspired by its humanistic analog, namely by the adoption of Solon's ethical code (human law), itself an imported offspring of the Middle Eastern ethical codes (Hammurapi, Moses, etc).

Returning to pragmatic scientific activity in early Jewish tradition, there is talmudic evidence in two cases for marked astronomical erudition, namely the *tanna* R. Joshua b. Hananiah in Judea (c. 40–100 C.E.) and the *amora* Mar Samuel of

Nehardea in Babylonia. Such erudition was essential to the establishment of the Jewish calendar. On the other hand, there is no evidence for any systematic observation and recording of astronomical data. Such recording was performed by the Sumerian, Egyptian, and other priesthoods and was directly related to their cults. This is still universally reflected in the seven-day week, established for the seven deities identified with the seven astronomical “wanderers” (Sun, Moon, and five planets seen with the naked eye – Mars, Mercury, Jupiter, Venus, Saturn; notice the strange order).

The strong biblical injunction against “worship of stars and zodiac signs” notwithstanding, there was no hesitation about applying the data to evaluate the various intercalations required to fit a lunar calendar to the solar year, a pragmatic task that was indeed performed efficiently.

The First Active Scientific Age: Sepharad and Provence

The first Jewish scientific era lasted from 1000 to 1500 C.E., with major contributions in astronomy and physics (as well as *medicine), all by scholars residing in Spain and southern France. It began with R. *Abraham bar Ḥiyya ha-Nasi (“the Prince”) of Barcelona (d. 1136), author of three books on astronomy (in Hebrew) and continued with his pupil R. Abraham *Ibn Ezra (1089–1164).

A formal dimension was acquired by this “dynasty of learning” between 1152 and 1156, when a team headed by R. Isaac *Ibn Sa’id and R. Judah ben Moses Cohen, working in Toledo in the service of King Alphonso X of Castille, calculated and published the Alphonsine Tables. These tables were designed to track the movement of the planets, mainly for high-seas navigation.

The two most original and effective Jewish contributions were those of R. *Levi ben Gershom in Provence in the 14th century and R. Ḥasdai *Crescas in Aragon in the 15th. The last astronomer in this sequence was “Zacut,” namely R. Abraham ben Samuel *Zacuto (1452–1515), a leading scholar at Salamanca in Castille, who, at the expulsion, was welcomed for a while in Portugal and was given the responsibility for the scientific work at Sagres. Four years later, however, he was expelled with all other Jews in Portugal.

The Portuguese Marrano Jewish philosopher Baruch *Spinoza (1632–1677), working in Holland, where his family returned to the Jewish faith, can be considered as an extension of the Iberian age. Although the Amsterdam Jewish community leadership eventually excommunicated Spinoza (1656) because of his position on religious dogma, his overall views in several contexts are now not far from those of non-fundamentalist modern Jewish religious thinkers, such as R. Abraham Isaac *Kook.

R. Levi ben Gershom of Bagnols (1288–1344) lived in Avignon in the south of France, a city which at that time was the seat of the papacy. Jewish scholars and historians generally designate Levi by the acronym RaLBaG – while to the gentiles he is Maestre Leo de Bagnols, Leo Hebraeus, Gersonides – but the crater on the moon named after him by the Interna-

tional Astronomical Union reads “Rabbi Levi.” (It is situated in a “Jewish quarter” which also has craters named after Ibn Ezra, Zacuto, and Einstein. In the Jewish world, Gersonides is generally cited for his teachings in religious philosophy – sometimes with a footnote stating “he also wrote 118 chapters in astronomy” (these works were translated from the original Hebrew into Latin by Mordecai Finzi, astronomer to the duke of Mantua). Levi earned his living as “mathematicus” (astrologer) in the service of the popes, the same function filled by Johannes Kepler at the emperor’s court in Prague 200 years later, or by Galileo Galilei at the duke of Tuscany’s court in Florence.

Rabbi Levi was one of the greatest astronomers (and one of the greatest scientists) in the Middle Ages after the lights of science were turned off in the Greek centers along the shores of the Mediterranean. The following are but a few of his accomplishments: He invented the sextant (naming it Jacob’s staff, a term used in the British Merchant Marine until the early 18th century). He improved the camera obscura – the camera’s ancestor. Predominantly, and contrary to social norms during the Middle Ages, R. Levi did not blindly accept dogma but tested every assumption with his instruments. He was criticized for this both in the Jewish world and by the secular astronomy establishment. In a brilliant experiment, in the spirit of 20th century philosopher Karl *Popper’s (1902–1994) invalidation (“falsification”) doctrine, R. Levi measured variations in the luminosity of Mars over a period of five years. He proved that there was no correlation between the observed variations in the luminosity and the variations which would be expected if the planet Mars were following the path according to the then current version of Ptolemy’s (Claudius Ptolemaeus of the second century C.E.) geocentric model with its epicycles – a theory universally accepted in the Middle Ages. He therefore disproved that model, and thereby paved the way for the adoption of the Copernican system two centuries later.

The greatest Jewish medieval non-mathematical theorist in physics and cosmology was R. Ḥasdai Crescas (d. 1412) of Barcelona. Better known for his philosophy, which argued against mixing science with religion (in itself a view, close to modern approaches), his impact on the rebirth of physics was unique. Plato had discussed vacua, but Aristotle had then stated that “nature does not tolerate a vacuum,” and throughout the Middle Ages physical thinking was non-reductive, always “effective,” a priori assuming the presence of friction, air resistance, etc. Without a vacuum, however, one cannot define inertia and mass. In his book *Or Adonai* Crescas refuted Aristotle’s arguments against the vacuum and presented an infinite empty space as the scene on which the physical world is enacted. Like Gersonides, he also assumed continuous creation and a multiplicity of worlds.

Pico della Mirandola (1463–1494), the one-man encyclopedic “team” who prepared the philosophical and scientific transition to the Renaissance, and who taught himself Hebrew and Arabic for that purpose, included an abstract of Crescas’

book in his “900 theses.” It was picked up by Giordano Bruno (1548–1600), who was burned at the stake specifically for spreading Crescas’ notion of an infinite empty (presumably absolute) space. Galileo, however, could now “place” a moving body in this vacuum and invent inertia, while Newton could have a force act on the body and measure velocities and accelerations with respect to that space and define the concept of mass as a measure of inertia.

The Dark Age

CAUSES. The 15th and 16th centuries are among the darkest in Jewish history. It is not that the previous 400 years in western Europe had been an idyll. On the contrary, the Jews in France suffered several expulsions and three countrywide massacres (1214, 1251, and 1320), by the Pastoureaux, sweeping peasant rebellions that struck almost only the Jews because they were the only unprotected group in the population. And yet there were a few quieter spots, in particular in the papal possessions in and around Avignon, where a Jewish presence lasted until the area was annexed to France during the Revolution. But the 15th and 16th centuries represented a regression. Two physical catastrophes followed by spiritual letdowns in the four movements they inspired, as well as the mystically oriented transformation of Judaism which they brought about, all contributed to the regression in Jewish participation in the development of science. The two major disasters were (1) the expulsion from Spain and other territories ruled by the Spanish monarchs (1492) and from Portugal (1497), and (2) the massacres in southeastern Poland (with about 600,000 dead), by the rebel Ukrainian Cossacks (1648) under the leadership of hetman Bogdan *Chmielnicki.

To these we may add the four pseudo-Messiahs (David *Reuveni, 1490–1538; Solomon *Molcho, 1591–1532; *Shabbetai Zevi, 1636–1676; Jacob *Frank, 1726–1791) with the despair and conversions which followed the failure of each movement. Finally, there was the boost enjoyed by the mystic interpretation of Judaism with the rise of Ḥasidism, following the teachings of R. *Israel ben Eleazar Ba’al Shem Tov (1700–1760), a trend which lasted about a 100 years and which was not inductive to scientific thinking.

HASKALAH. One development running counter to these trends occurred in Berlin, namely the rise of the *Haskalah (Enlightenment) movement, following the lead of Moses *Mendelssohn (1729–1786). This was an attempt to develop a westernized interpretation of Judaism, emphasizing modern approaches to the study of Jewish classics (also as a shield against conversion), coupled with an assimilationist approach regarding dress, language, and other everyday aspects of life to produce “Germans of the Mosaic persuasion.” It was made possible in Berlin by the relative liberalism in matters of culture and science of Voltaire’s friend, the scholarly King Frederick II (the Great), whose academy included the key scientists of the era.

Moreover, while the norm throughout central Europe was for Jews to be confined to the ghettos and restricted to

peddling as a “profession,” 18th-century Germany with its heterogeneous multitiered political structure offered a number of channels – “protected” Jews who could go anywhere because they were paying their “protection taxes” to the emperor, other taxes to the various kings, etc. In 1763, Mendelssohn won a prize offered by the Prussian Royal Academy of Sciences in a competition consisting in an essay on a question in metaphysics, with Immanuel Kant coming in second. The event had an impact on Jewish youth, attracting them to the sciences. The intellectual transformation was shaped and polished in the salons of several Jewish ladies (Rahel Levin *Varnhagen, Henriette *Herz, and others). The movement started by Mendelssohn thus played an important role in the return of Jews to science, literature, etc., but it failed badly in the prevention of conversion. It is rather tragic to note that much of the creative cultural harvest would have lost any trace of its Jewish origins had it not been for its rejection by the Nazis, together with their reclassification of the authors as Jews even at a distance of two generations.

MITNAGGEDIM. The ḥasidic movement’s rapid spread seemed to replace the “religion of learning” by one of hereditary dynasties of miracle-rabbis leading a following of ignoramuses. The spiritual leadership of classical Judaism in Lithuania, under the inspiration of *Elijah Gaon of Vilna (1726–1791), a leader revered for his spiritual creativity and his learning, organized a campaign aimed at stemming the growing mystical flood. After several decades of a bitter struggle, the conflict lost its “either/or” aspect and new trends appeared on the ḥasidic side, with a reemphasis on learning.

The Gaon was interested in science, considered himself fully knowledgeable in this matter, and promoted scientific studies as useful additions to Torah. However, the Jewish isolation and loss of contact were so great that what the Gaon meant in 1780 by “science” was Euclid’s geometry and Aristotle’s physics, having never heard of Descartes, Galileo, or Newton.

The Second Creative Period: Restricted Approach

To understand what happened to European Jewry around 1800, the reader should bear in mind the effective status of the Jewish population in central Europe, constrained to ghettos and to marginal professions. This state of affairs ended as a combined result of two roughly simultaneous “revolutions,” namely the French Revolution (with its Napoleonic sequel) on the one hand, and the Industrial Revolution on the other. Napoleon’s army reached every capital in Continental Europe at some time or other, and the reforms it either imposed or indirectly induced included the cancellation of employment and residence restrictions on the Jews. The Industrial Revolution created work and new white-collar jobs for bankers, financiers, accountants, clerks, lawyers, but also engineers of various specialties, etc. The autochthonous population generally preserved family traditions – nobility serving as professional army officers, peasants receiving farms from their parents and transferring them to their own children, etc. The white-col-

lar jobs required literacy, but intellectual types in the nobility generally joined the Church.

The situation on the Jewish side was just the opposite: to the extent that anybody had risen above peddling and had some traditional family training, it was in moneylending, jewelry, or commerce, a preparation for banking and other financial professions. Males were all literate and with some preconditioning for logical structures, somewhat facilitating the study of law and mathematics. As a result, the 19th century established an emancipated Jewish middle class throughout central Europe, and yet this did not include a serious academic or scientific component, mainly because of the customary Oath of Allegiance required upon becoming an ordinarius (full professor), a throwback to medieval times. The Oath was taken with one's hand on a New Testament and was thus considered *de facto* religious conversion.

One way of participating in academic activities without swearing allegiance was to have a parallel occupation outside the academic world and occupy it after resigning from the university before the oath stage, and whenever possible to return after a few years and repeat the cycle. This was somewhat easier in mathematics and mathematical physics, which did not require special equipment for the professor to continue his research and preserve his knowledge in the non-academic phase.

Prominent examples are the mathematicians John Joseph *Sylvester (1814–1897) in England and Leopold *Kronecker (1823–1891) in Prussia. England was still in its “formally restricted” stage as far as Jewish emancipation went, and Sylvester, who studied at Cambridge, could not even get his B.A. until 1871, when he received it together with his M.A. He “meandered” between academic life and working in an insurance company, and later as a lawyer. By 1883, though, progress in emancipation had reached a level which enabled Sylvester to become a full professor at Oxford without converting. Kronecker's line was commerce and banking, with short appointments in academe, until progress in emancipation allowed him to receive a professorship in 1883. In a somewhat bizarre twist, Kronecker converted to Christianity shortly before his death.

The mathematician and theoretical physicist Karl Gustav Jacob *Jacobi (1804–1851) was the first Jewish scientist to be appointed to a special royal chair without having to take the Oath, which had just been abolished by Prussian Minister of Culture Wilhelm von Humboldt (brother of the geographer). Intellectually, the von Humboldt brothers had grown up in the intellectual salons of the ladies of the *Mendelssohn family and its periphery, a liberal milieu, and it was natural that they should regard the Oath as a medieval vestige. However, this was not the end of the story. In 1848 politically liberal Jacobi signed a petition calling on the king to put an end to his absolute rule. The king put an end to Jacobi's chair and Jacobi found himself in the street with his wife and seven children. One year later, Alexander von Humboldt intervened and the king reestablished the chair. However, Wilhelm had died and

the new minister had reestablished the Oath, so that Jacobi took it and converted shortly before his demise.

By the end of the 19th century formal restrictions had been abolished almost everywhere, but they had been replaced by an unwritten numerical restriction policy. This was often represented as protection of the academic milieu against Jews in academe who “do not know how to behave,” a phrase found in most appointment committee reports, such as the one dealing with Einstein's appointment in 1909 as professor at the University of Zurich, or that of the Princeton University Graduate School's admissions committee dealing with Richard Feynman's application (backed by his MIT professor): “We do not like to have many Jews in the graduate school because it is difficult afterwards to find jobs for them.”

In the United States, the restrictive policy lasted till the mid-1960s when an incident involving MIT President Vannevar Bush and British mathematician G.H. Hardy (1877–1947) exposed the procedure and held it up to ridicule. Bush had fixed a ceiling of one Jew per department. In mathematics this position was occupied by Norbert *Wiener (1894–1964), but sometime in the 1950s the Department of Mathematics wanted to hire Norman Levinson, recommended by Hardy. This was vetoed by Bush in view of the restrictive policy of the institution. Some time later MIT awarded Hardy an honorary doctorate. In the ceremony, Hardy thanked “the Mass. Inst. of Theology” for the award and, when corrected, insisted, explaining, “Why else would a professor's religious appertenance matter at all?”

Further Advances

The restrictions notwithstanding, the children and grandchildren of the earliest white-collar Jewish generations gradually replaced *heder* or yeshivah schooling with state education and found their way to the universities as students and then as temporary teachers, etc. The formalities constituting the obstacles in the admission threshold for Jews were sometimes more flexible in medicine and pharmacy, perhaps a vestige of the traditionally high reputation enjoyed by medieval Jewish medicine. In Austro-Hungary, this extended to chemical engineering, which is why famous theoretical physicists such as E. Wigner, E. *Teller, etc., were originally trained as chemical engineers. The combination of talent, intellectual curiosity, and the willingness to be satisfied with temporary and somewhat insecure positions resulted in the emergence of a sizable Jewish component in most European countries' research setup. Towards the end of the 19th century there were in the forefront of physics at least two future Jewish Nobel laureates, both experimentalists, Albert Abraham *Michelson (1852–1931) and Heinrich Hertz (1857–1894). Both of them, and more so, more recently, Dennis *Gabor (1900–1979) were investigating electromagnetic radiation in its overlap with optics, i.e., a field very remotely related to the traditional occupational expertise in lenses (itself probably an extension of diamond cutting and jewelry making) as exemplified by Spinoza. In France, the advance was more in the conceptual and abstract domain as

represented by Henri *Bergson (1859–1941) in philosophy and Jacques *Hadamard (1865–1963) in mathematics.

The Einstein Era: Quantum Theory and Relativity

The more distinguished the Jews were, the greater their mark both within the system and outside it. Then a young German Jew, an employee of the Swiss Patent Office in Bern, published within the same year (1905) five articles in theoretical physics, each of which was a scientific high-water mark of the order of Newton's papers. This was Albert *Einstein (1879–1955), and his reputation grew accordingly after the experiments verifying his theory of gravity (1916), namely the general theory of relativity. His success attracted many a young Jew to physics.

Two conceptual revolutions occurred in physics in the first half of the 20th century, namely relativity and quantum mechanics. Einstein spearheaded both, almost single-handedly in relativity and with M. Planck and Niels *Bohr (1885–1962) in the quantum maze. Aside from Michelson's initial experimental exposure of the failure of classical mechanics for velocities close to light-velocity, Einstein was assisted at the mathematical end by the perception of his former teacher Hermann *Minkowski (1864–1909) and by his former classmate Marcel Grossmann; the first interesting application was achieved by astronomer Karl *Schwarzschild (1873–1916). All three were Jewish.

On the quantum front, aside from Niels Bohr, there was Max *Born (1882–1970), who led in the initial understanding of the mathematical results, John von *Neumann (1903–1957), who provided the mathematical consolidation of the new formalism, and Wolfgang *Pauli (1900–1958), whose "Pauli Principle," forbidding having at any one time more than one electron for any set of quantum numbers, provided a master-key to understanding atomic physics and the Periodic Table in Chemistry and applications in electronics.

The growing sophistication both in the conceptual toolkit of mathematical physics – and even more so in the rapidly evolving technological potentialities at the disposal of experimentation – forced 20th century physicists to split according to a two-dimensional repartition, namely theorists versus experimentalists in the abscissa and the ordinate going from high-energy nuclear physics (or the physics of particles and fields), to (low-energy) nuclear physics, atomic physics, molecular, nanotechnology, condensed matter, astrophysics, and cosmology (plus the environmental refocusing – geophysics, oceanography, etc.). A glance at the list of Nobel laureates in physics shows that they are evenly distributed on the above chessboard. In theory, Lev *Landau (1908–1968) and Richard *Feynman (1918–1988) have both covered several areas and produced the deepest insights. Eugene *Wigner (1902–1999) (and Giulio Racah) developed algebraic methods which played an important role in atomic, nuclear and particle physics. Feynman's impact was mostly in particle physics; other theorists who made important contributions in that area are Julian *Schwinger (1918–), Murray *Gell-Mann (1929–) (and Yuval *Ne'eman), Steven *Weinberg (1933–),

Sheldon *Glashow (1932–), and David *Gross, also Maria Goeppert-Mayer in nuclear physics. The leading experimentalists in this field are Donald *Glaser (1926–), Leon *Lederman (1922–), Fred *Reines, Jack *Steinberger (1931–), Melvin *Schwartz (1932–), Martin *Perl (1927–), and Jerome *Friedman. In condensed matter physics, among the leading theorists are Vitaly *Ginsburg and Abrikosov. Isidor I. *Rabi (1898–1988) measured particle magnetic moments, while Felix *Bloch (1905–1983) turned them into a scientific and medical tool. Claude *Cohen-Tannoudji (1933–) developed methods of trapping single atoms, David *Lee (1931–) and Douglas *Osheroff advanced superfluidity.

One of the founders of modern cosmology was Alexander Friedman in the 1920s in the U.S.S.R., while Herbert Friedman was a pioneer in X-ray astronomy. Arno *Penzias discovered the cosmic background radiation. Ed Salpeter contributed to astrophysics and Jesse *Greenstein in astronomy.

Nazi Germany

The growth in size and in importance of the Jewish contribution to physics continued throughout the 20th century, yet it was also especially marked by several momentous events belonging to both Jewish and general history. As against the gradual opening of the world of science (and physics in particular) to Jewish students, teachers, and researchers, the coming to power of the Nazis in Germany in 1933 acted more like lightning. All Jewish professors in German state universities were fired immediately, with only Max Planck and David Hilbert protesting – admittedly Germany's two top gentile scientists, which may also partly explain their civic courage (Planck's son later participated in the officers' plot to kill Hitler and was executed). Two prominent experimental physicists, Philip E.A. von Lenard (1862–1947) and Johannes Stark (1874–1957), both of them Nobel laureates, and two leading mathematicians, Ludwig Bieberbach, best known for the "Bieberbach conjecture," and Oswald Teichmullern, an important topologist, identified with Nazi policy and actively joined the campaign for the eradication of "Jewish physics" and "Jewish mathematics." The exodus of Germany's Jewish scientists was complete, from Albert Einstein, who left in 1931, settling in at the Princeton, to Max Born, who went to Scotland instead of moving to Jerusalem, Einstein's entreaties notwithstanding.

Three remarkable female Jewish physicists provide a typical sample of Jewish destinies reminiscent of 1492: Emmy *Noether, mathematical physicist, worked with F. Klein at Erlangen and with Hilbert at Goettingen, and was famous for "Noether's theorem" linking conservation laws (e.g., energy, linear and angular momentum, electric charge, etc.) to invariance under symmetry transformations (for the above examples these are, respectively, time translations, spatial translations, rotations, phase modifications). Barred from getting a professorial appointment by the double barrier of her sex and religion, she immigrated to the United States in 1933.

Mariette Blau of Vienna, who developed the detection of cosmic radiation with emulsions, fled Austria with the *An-*

schluss (1938) for Sweden and later reached Mexico and the United States. Lise *Meitner (1878–1968), a physicist, collaborated with the chemist O. Hahn until 1933, then fled to Sweden. For many such cases, including that of her physicist nephew O. *Frisch, the Bohr Institute in Copenhagen served as a first stop when fleeing – until the start of World War II and the German invasion of Denmark. Between 1933 and 1938 Nazi de facto domination spread over central and southern Europe, causing the flight of most Jewish physicists, as well as non-Jews married to Jews (e.g., E. Fermi, H. Weyl) or children of one Jewish parent (e.g., H. Bethe, N. Bohr, W. Pauli). In Italy, formal racist legislation was decreed in October 1938.

Conceiving Nuclear Weapons – a Jewish Response to the Nazi Threat of Annihilation

Scattering neutrons off uranium, and having detected the presence of elements resembling barium and iodine, Enrico Fermi announced the production of new elements (93 & 94 in the Periodic Table) and was awarded the Nobel Prize in 1938. The Fermi family fled to the United States after the Nobel ceremony, except for wife Laura's father, a Jewish admiral, who returned to Italy and indeed died in a concentration camp. The other Jewish members of the Fermi group were Emilio *Segre (1905–1989), who left for the United States, and Giulio Racah, who immigrated to Israel.

Around that time (Christmas 1938), Lise Meitner was visited by her nephew O. Frisch. They discussed a letter from her former partner O. Hahn, who had redone Fermi's experiment and was certain that these new products were not new elements but indeed true barium and strontium! Meitner and Frisch then recognized nuclear fission.

The news arrived in Copenhagen upon Frisch's return and was brought to the United States by N. Bohr and Leon Rosenfeld. Here it caught the attention of Leo *Szilard (1898–1964), a Hungarian Jewish engineer turned physicist (eventually also one of the founders of molecular biology), who had earlier considered the possibility of fission in nuclei and now realized its military potential. Meanwhile, Frisch moved to England, so that early in 1939 two alarmed groups of Jewish physicists ("Central European refugee scientists" in the textbooks), now refugees in the United States and England, were going through a nightmare as they considered the possibility of German physics and an eventual nuclear weapon joined to Evil as personified by Adolf Hitler. In America, the Szilard group included Edward Teller (1908–2003), John von Neumann, and Enrico Fermi; in England, Otto Frisch, Rudolph *Peierls (1907–1995), and Joseph *Rotblat (1908–2005). Both groups tried to alert the respective governments. In the United States, Szilard used Jewish contacts, in particular financier A. Sachs, to get to President Roosevelt; at Sachs' request, they informed Einstein and got from him a signed letter explaining the danger and calling for preempting Germany in developing the new weapon, in order, at least, to achieve through deterrence some protection against its use. The entire effort resulted in the allocation of \$6,000 for Fermi, for

an experimental study of an eventual chain reaction. In England, however, the lobby reached and convinced Winston Churchill, who wrote to Roosevelt. Less than a week before the Japanese attack on Pearl Harbor, which drew America into World War II, the president, now convinced, authorized the Manhattan Project.

The Manhattan Project, an R&D and production ensemble, was directed by American Jewish physicist J. Robert *Oppenheimer (1904–1967), with Hans *Bethe (1906–2005) heading the Theoretical Division and E. Segre and R.P. Feynman, members of the original initiating group, and others participating.

A 1995 study of the project by A. Makhijani (*Bulletin of Atomic Scientists*) reports that the Pentagon decided a priori that the new weapons would not be used on the European front, for fear of Germany's capability for nuclear retaliation, but that they could be used on the Japanese front, as Japan was not considered as scientifically capable of developing nuclear weapons – but it was also decided not to inform the scientific leadership of the project "because they are Jewish and singly motivated by fear of Hitler's Germany"; eventually, Germany surrendered before the weapons were ready, and when President Truman weighed their use in Japan, several of the Jewish physicists signed a letter to the president suggesting they be used in a harmless demonstration rather than on a target, whether military or civilian. The Dutch Jewish physicist Samuel Goudsmit (1902–1978), co-discoverer of the electron spin, was put in charge of ALSOS, a military unit whose task was to find out what Germany might be doing in the nuclear weapons context.

Of course, other war needs continued in parallel, with important roles played by Isidore I. Rabi working on microwave radar, Theodore von *Karman (1881–1963) on aeronautics, etc. In all of these developments, including the Manhattan Project, Jewish physicists were doing their duty as American patriots. The frantic concern of the two refugee groups on both sides of the Atlantic and the resulting initiative should be counted as an intrinsic part of Jewish history, a response to Germany's extermination program, in the same category as the Warsaw ghetto revolt or the Jewish maquis in France.

The second nuclear confrontation was the Cold War (1950–90). Edward Teller initiated the development of the H-bomb, a nuclear fusion weapon based on an idea of Teller and S. *Ulam, a Polish Jewish mathematician.

Physics in Israel

BEGINNINGS. The first academic appointment in physics in modern Israel was that of Samuel *Sambursky in 1928 as assistant for physics in the Department of Mathematics at The Hebrew University of Jerusalem. Einstein had joined the founders' group in 1921 when he traveled with Weizmann to the U.S. to collect the basic funds, then in 1923 when he visited Palestine under the British Mandate.

The head of the Department of Mathematics was A.H. Fraenkel of Set Theory fame, and helped by Einstein and L.

Ornstein (Leyden, then Utrecht), he tried to attract quality personnel. The number of serious candidates rose considerably in 1933, when the Nazis came to power in Germany and all Jewish faculty members in all German universities were fired. For reasons of economy, however, HU President Magnes did not assign any priority to physics, and various candidates (F. London, F. Bloch, G. Placzek – who had planned to bring along his student – E. Teller) were effectively rejected. E. Wigner did stay one year, but left in order not to be in the way when a single position was made available for either him or L. *Farkas, a physical chemist (married with one child while Wigner was single). Farkas had arrived from Fritz *Haber's lab (Haber, of World War I chemical warfare repute, had been prevailed upon by Einstein to go to Jerusalem and was on his way, when he fell ill and died).

Finally, E. Alexander, an arrival from von Hevesy's Freiburg X-ray crystallography lab, with parallel theoretical experience in the study of symmetry in crystals, launched both the Physics Department at HU and a line of research which developed in all physics departments in the country, achieving important results, such as J. Zak's work, and culminating in D. *Shechtman's 1984 discovery of non-periodic ordering (pseudo crystals), both at the Technion. Alexander and Farkas created laboratories which fulfilled an important role in the defense of the eastern Mediterranean in World War II. Another physicist whose role was extremely useful in World War II and in Israel's War of Independence was E. *Goldberg, the former founder and director of Zeiss-IKON, the leading optics firm in Europe, and yet another refugee immigrant scientist fleeing Nazi rule. He founded Goldberg Instruments, the first high-tech firm in the country (renamed El Op after its merger with A. Jaffe's Rehovoth Instruments).

Condensed matter physics developed with the arrival of several key researchers: Cyril Domb, FRS, who joined Bar-Ilan University in the 1960s; Guy Deutscher from France; Alexander Voronel and Mark Azbel arrived from the U.S.S.R. after a difficult struggle, joining Tel Aviv University (TAU), which had been active in support of their struggle; M. Gitterman (Bar-Ilan) also arrived from the U.S.S.R., while Isaak Khalatnikov (TAU) and Pitaievski (Technion) arrived in the early 1990s, after Glasnost.

Racah, arriving in 1938, launched theoretical physics and, in particular, atomic physics and spectroscopy in the country. On the experimental side, research in nuclear chemistry (as the experimentation in the production of elements and isotopes came to be called) was initiated at the Weizmann (formerly Sieff) Institute by Israel Dostrowski, who had worked on these subjects in England in the early 1940s. He developed techniques for the separation of isotopes of hydrogen and oxygen. The Weizmann Institute soon became an important supplier of the latter, much in use in the study of organic processes.

Sometime after the founding of the state in 1948, the government established an Atomic Energy Board, with E.D. *Bergmann, a distinguished organic chemist and the direc-

tor of the Weizmann Institute, as chairman. Bergman, Racah, and Dostrowski selected good students and placed them in high-quality research centers and under good tutors. Amos *de-Shalit and Igal *Talmi (nuclear structure), G. Yekutielli (cosmic rays), I. Pella (reactors), and U. Habersheim (physics education) were selected and were joined by H.J. Lipkin, who had immigrated from the United States after receiving a Ph.D. in physics. They returned in 1954, but Ben-Gurion had meanwhile resigned and retired. His successors, Prime Minister Sharett and Defense Minister Lavon, did not share Ben-Gurion's enthusiasm for science and transferred the group to the Weizmann Institute against a payment of \$100,000, the estimated investment in their studies (U. Habersheim returned to the United States).

De-Shalit and Talmi produced important results, and the Weizmann Institute had thus become a bridgehead for nuclear physics in Israel, soon to become the most active center for nuclear structure studies after the Bohr Institute in Copenhagen. By the end of 1957 it was "natural" to have a well-attended International Conference on Nuclear Structure in Rehovot, discussing the hottest topic of the decade, namely parity non-conservation, and with W. Pauli, T.D. Lee, Mme C.S. Wu, and Ben Mottleson of Copenhagen in attendance.

Theory needs to be close to experiment for good balance and this came next – a Tandem Van de Graaff electrostatic accelerator was started up, with Gvirol Goldring in the lead.

Ben-Gurion returned from his Sedeh Boker retreat in 1955 and the IAEA returned to its program, with two nuclear labs, and two reactors – a 1–5 MW "swimming pool" AMF enriched uranium reactor at Sorek, supplied by the United States and under its surveillance, and a 24 MW natural uranium "heavy-water" cooled one in Dimonah, purchased in France. In reactor physics, experiment (I. Pella) preceded theory (S. Yiftah). Members of the former team now served as advisors, sometime after taking specific courses in France.

ROSEN, RELATIVITY, AND QUANTUM FOUNDATIONS. At the *Technion (Haifa, founded 1912) the Physics Faculty was established around 1955, after Nathan Rosen immigrated to the country. Rosen had worked for many years with Albert Einstein on a variety of subjects: gravitational radiation, "worm-holes" (the "Einstein-Rosen bridge"), etc., in general relativity and "entanglement" in quantum mechanics (the Einstein-Podolski-Rosen ("EPR") paper). He had developed his own modification of GR (the "two fields" theory). The study in Haifa of the non-intuitive aspects of quantum mechanics, inspired by Rosen's continuing interest in EPR, strengthened with the arrival in Israel of David *Bohm, fleeing Senator McCarthy's House Un-American Activities Committee. Bohm left a year later for Bristol in the UK, but the seeds were planted. Two leading researchers in the foundations of quantum mechanics grew out of this, Yakir *Aharonov (TAU after 1967) and Asher Peres (Technion), the latter also a leading researcher in GR. Among the next generation in this "school," Lev Veidman (TAU) and Avshalom Elitzur (Bar-Ilan) have made im-

portant contributions. Michael Marainov (Technion) arrived from the USSR.

In general relativity and cosmology, the impact of Rosen's presence was felt in most physics departments, either through his students, as in Beersheva with Moshe Carmeli, or by the attraction of immigrant scientists, such as Gerald Tauber in Tel Aviv and his student Tsvi Piran or Jacob Bekenstein first in Beersheba and later in Jerusalem, a leader in the intersection of GR with thermodynamics, where his identification of a contribution to entropy generated by the gravitational field of a "black hole" opened up an entirely new chapter with profound conceptual aspects, as discussed in recent years by S. Hawking, L. Susskind (the "holographic" universe), S. Coleman ("Black Holes as Red Herrings"), and others.

Sometime in the 1970s new lines of research appeared: neural networks at HU, with David Horn at TAU. Chaos was treated by Ittamar Procaccia at Weizmann, Shmuel Sambouriski (HU), and Max Jammer (Bar-Ilan).

COSMIC RAYS, PARTICLES, AND FIELDS. Cosmic ray physics developed with Y. Eisenberg, who had observed in 1958, in an emulsion that had been exposed to cosmic radiation, an "event" which was to be identified in 1962 with the omega-minus hyperon. He joined the Weizmann Institute in 1959; at the same time and in the same subdiscipline, Dan Kessler joined Sorek. At the Technion, Kurt Sitte, an experienced experimentalist, started an experimental cosmic ray group, short-lived because Sitte was arrested and tried for crimes against the nation's security. Paul Singer, joining in 1959–60, studied the theoretical issues involved, thus entering particle physics. While research in cosmic rays in Israel thus focused in the early years on the particle physics aspect, a new group was led by L. Dorman, who had immigrated from the USSR in the 1990s; their interest lay in the Earth's environment, the radiation belts, and the solar wind. The Emilio Segre Observatory collaborates with the Italian CR community.

Yuval Ne'eman (1925–2006), scion of several of the founding families of the modern Jewish resettlement (c. 1800, prior to organized Zionism, founded in 1897) and of the city of Tel Aviv (1909), after a career in the Israel Defense Forces, turned to physics at the age of 33, combining graduate studies at Imperial College with the duties of defense attaché in Israel's London embassy. Resigning from this position in May 1960 he "embarked on a highly speculative program" (in the words of A. Salam, his advisor, who advised against it), namely a search for a symmetry of the hadrons providing both a classification and dynamical couplings. The result, arrived at in October 1960, was submitted for publication early in February 1961. This was $SU(3)$ symmetry (now renamed flavor- $SU(3)$) in a version based on the identification of the spin $\frac{1}{2}$ baryons as an octet. It provided a hadron classification and an exact global-symmetry, also an effective local gauge-symmetry (mediated by a spin-1 massive vector-meson octet). The most elegant visualization of these octets sets them as 3×3 matrices. The octet's main competitor was the Sakata model, using the

same $SU(3)$ group, but with a different and a priori more popular algebraic normalization, namely assigning the best-known multiplet $\{p, n, \Lambda\}$ to the group's defining representation.

The octet global symmetry was tested in hundreds of predictions relating to the couplings and based on the Clebsch-Gordan coefficients of the group, but the final verdict was supplied by the discovery of the omega-minus hyperon, fitting the predictions exactly. The classification and symmetry were discovered simultaneously and independently by M. Gell-Mann, who called them "the Eightfold Way."

Back in Israel, as scientific director of the Sorek Laboratory, Ne'eman also organized a group combining technical service in the establishment with research in particle physics. With H. Goldberg of that group, Ne'eman constructed a mathematical model yielding precisely the observed set of representations; this model consisted in fixing as the basic "brick" the 3-dimensional defining $SU(3)$ representation with a baryon-number $B = \frac{1}{3}$ assignment (and fractional electric charges). We would also have to prepare the 3^* anti-brick with $B = -\frac{1}{3}$. The $B = 1$ baryons are then in $[3 (\times) 3 (\times) 3] = 1 + 8 + 8 + 10$. The model was again discussed two years later as to the physical nature of these "bricks" by M. Gell-Mann (who named the "bricks" quarks) and by G. Zweig (who named them "aces").

Soon after this consolidation of the quark model it was tested and scored nicely through algebraic treatments based either on a nonrelativistic approximation, initiated by F. Gursey and L. Radicati, or applying an asymptotic limit, a method used by E. Levin and L. Frankfurt in Leningrad (1965; both were professors at TAU by 1990).

In the first two years after his return to Israel, Ne'eman lectured on particle physics at the Technion, Hebrew University, Weizmann Institute. C. Levinson and S. Meshkov, who were guests from the United States, worked with H.J. Lipkin on the $SU(3)$ Elliott Model in nuclei, "transferred" to particle physics, and produced many of the predictions for both the Sakata and the Ne'eman/Gell-Mann models.

The first group of graduate students who worked with Ne'eman in particle physics then spent 1–2 years in leading centers – D. Horn and Y. Dothan at Caltech, H. Harari at SLAC, J. Rosen at BU, etc. – while a flux of guests and post-docs in particle physics arrived in Israel, L. Susskind, J. Rosner, J. Yellin at the new TAU, H. Rubinstein, M. Virasoro, at Weizmann, D. Lurie at the Technion, etc.

Generally speaking, an internal symmetry, and even more so a global one, is an extension of the kinematics and has to be grafted onto a dynamical theory. In London in 1958–60 this was Relativistic Quantum Field Theory (RQFT), which had been successfully applied to quantum electrodynamics in 1946–48, producing the most precise theory in physics.

Ne'eman was a guest at Caltech in 1963–65 and was impressed by the apparent rejection of Quantum Field Theory. R.P. Feynman, one of the heroes of that theory's success in the 1940s, had tried to extend it to quantum gravity and, encountering difficulties, had decided to do it first on the Yang-Mills gauge theory as a simplified model. He had then come

across violations of unitarity off mass shell. The news spread to Berkeley, and G.F. Chew, the charismatic leader of particle physics in the 1950s and 1960s on the West Coast and sometimes everywhere in the United States, proclaimed Quantum Field Theory to have been a lucky accident of the 1940s, worthless beyond some special conditions. That verdict was accepted by the rank and file.

Luckily, QFT could still be used for leptons, and the first important step in unification, the Weinberg-Salam theory, was presented in its leptonic dress (1967–68). For the hadrons Gell-Mann had then invented current algebra, a way of preserving those features onto which one could apply the symmetry. Neëman himself developed similar structures in the mid-1960s (e.g., “the algebra of Regge residues” in the work with N. Cabibbo and L.P. Horwitz). Hadron dynamics now moved on to “S-Matrix theory” and the Bootstrap hypothesis. Between 1966 and 1970, Israel – the local group and its guests – was in the lead internationally: D. Horn (with C. Schmid and R. Dolan) provided the bootstrap with a mathematical embodiment, the “Finite Energy Sum Rules.” Gabriele Veneziano, an Italian-Jewish graduate student at Weizmann, solved these equations, L. Susskind (at that stage a prospective immigrant from the U.S.) at TAU and Y. Nambu in Chicago showed that the Veneziano representation describes a quantum string. Harari at Weizmann with P.G.O. Freund in Chicago and G. Zweig at Caltech further developed the methodology, and M. Virasoro and H. Rubinstein at Weizmann enriched the string formalism. An international conference on “Dual Models” held in 1970 in Tel Aviv embodied the centrality achieved by particle physics in Israel in one decade. It was also a milestone in this first role of String Theory, here as a candidate theory for the Strong Interactions (1968–73).

The year 1970, however, was another “refocusing” year, when G. ‘t Hooft in Holland completed the renormalization of the Weinberg-Salam electroweak theory. That “infamous” breakdown of the unitarity of mass shell had been cured by its discoverer around 1962, when Feynman introduced ghost fields. Further work by B. deWitt, Slavnov, Taylor, Faddeev, and Popov had completed the cure, and now not only had ‘t Hooft finished the Yang-Mills case, he had also cleaned up the case of a spontaneous breakdown of that local gauge theory. Quantum Field Theory was now back with a vengeance.

In Israel, research in experimental particle physics is mostly done at CERN (Israel was granted Associated Membership in 1991, together with Russia, after a weaker association starting from 1971) and at DESY (Israeli formal association since 1983), with active groups at the Technion (J. Goldberg), TAU (G. Alexander, A. Levy, Y. Oren, G. Bela, E. Etzion, S. Dagan, O. Benary), Weizmann (G. Mickenberg, U. Karshon) plus medium energy groups at HU (A. Gal) and TAU (A. Yavin, P. Alster), etc. Theory groups are active in all these institutions.

GEOMETRICAL DEVELOPMENTS. In 1971, Yu. Golfand (who later immigrated to Israel) and E. Likhthman in Russia intro-

duced supersymmetry, which was then “sharpened” by J. Wess and B. Zumino and by A. Salam and J. Strathdee. This was a new opening both in mathematics and physics. The Harvard mathematician S. Sternberg, visiting Tel Aviv University yearly and bringing in other visitors such as B. Kostant of MIT, etc., had already collaborated with Neëman on topics in current algebras, etc. In 1974, L. Corwin, Neëman, and Sternberg published a major exploratory study of “Graded Lie Algebras” which cleared the field and was soon followed by V. Kac’s classification of the Simple Lie Superalgebras (the new name for the “Graded Lie Algebras”). Superalgebras avoided some of the “no-go” theorems forbidding mergers between spacetime and “internal” symmetries. One such application was supergravity, discovered in 1976 by D.Z. Freedman, S. Ferrara, and P. von Nieuwenhuizen and by S. Deser and B. Zumino. Gell-Mann and Neëman showed in 1976 that the gauge supersymmetry models with $N = 4h$ (max) (N the number of internal degrees of freedom, h (max) the highest helicity) are so severely constrained algebraically as to be possibly renormalizable or even finite. The $N = 4$ supersymmetric Yang-Mills ($h = 1$) is indeed finite and the $N = 8$ (built by E. Cremmer and B. Julia in 1978) is still the great hope in the “M-theory” of 1997 as the field theory limit of a string theory embedded in a Membrane.

Moreover, Neëman’s work with T. Regge in 1977 introduced a new geometrical approach, the group manifold method. Neëman’s French student J. Thierry-Mieg then showed (1979–81) that the “ghost fields” have a very useful geometrical interpretation (in a Yang-Mills theory) as the vertical component of the connection 1-form, while the unitarity-guaranteeing equations (BRS, etc.) just reproduce the Cartan-Maurer equations guaranteeing the horizontality of the curvature 2-forms. It also led Neëman (1979) to the concept of a “superconnection” – a concept independently introduced in mathematics by D. Quillen in 1985.

As a matter of fact, the geometric features present in much of algebraic physics – perhaps the most interesting aspect of Felix Klein’s and Sophus Lie’s (1872) Erlangen Program – first emphasized in GR, pervade gauge theories and spectrum generating algebras and have led both the string theorists and Neëman from the strong Interactions to gravity and back, though along different paths.

Neëman’s collaboration with the Cologne group of F.W. Hehl, with D. Sijacki (Belgrade), R. Kerner (Paris), E. Mielke and A. Macias (Mexico), and others is the outcome of his discovery (1977) of world spinors, the infinite unitary spinorial reps of the double-covering of the $SL(N, R)$ and of the covariance group, for long wrongly thought of as nonexistent. These have been used to describe Regge excitation sequences in strong interactions (“chromogravity”), where they are the only clear link, to date, between QCD and the features that characterized the S.I. in the S-matrix analytical continuation formalism. All of this may find applications in gravity too and has also somewhat overlapped with mathematical work by Shmuel Kaniel’s group in Jerusalem and the cosmological studies of Eduardo Guendelman’s group in Beersheba.

Ne'eman's 1979 superconnection introduced an internal supersymmetry $SU(2/1)$ constraining the electroweak $SU(2) \times U(1)$; the same theory (though derived differently) was suggested independently and simultaneously by D. Fairlie. It predicts the Higgs mass to be $M(H) = 2M(W)$, prior to radiative corrections. We note that with his various collaborators at Harvard, Cologne, Turino, Belgrade, etc., Ne'eman's TAU chair has been a source of innovative mathematical physics throughout the 1965–2005 period.

ASTRONOMY, ASTROPHYSICS, AND COSMOLOGY. There was no astronomy in Israel until 1965, although there were two young men who studied astronomy – Elia Leibowitz at Harvard and Raphael Steinitz in Holland – assuming that some day there would be such activity in Israel. At TAU, Ne'eman started to develop several programs in parallel. Solar astronomy was undertaken, using a telescope on a roof at the TAU campus working in full conjunction with a Caltech telescope at Great Bear Lake in California under the guidance of H. Zirin. This was one of the first combined instruments providing 24-hour full coverage and thereby making it possible to follow eruptions, etc., throughout the entire season.

This small success (1967) was followed by a series of failed attempts in 1968–71. Still in solar astronomy, a special telescope – static and with a rotating mirror following the sun – was installed in a specially designed observatory (following advice from Kippenheuer) on another TAU campus roof, and another Israeli who had studied and now worked in France under Michard undertook to operate it, but “defected” for family reasons, and this initiative collapsed. A second attempt failed some years later, when an excellent instrument in an observatory in California became available due to the closure of that base. One of the main supporters of TAU, Raymond Sackler, undertook payment, and it was purchased at full price, but then the State of California authorities passed a law restricting the sale of scientific instrumentation belonging to the state, a restriction which included this case. In radio-astronomy, Arno Penzias, co-discoverer of the 30K “background radiation,” spending a semester at TAU, developed a collaboration with a millimeter radioastronomical observatory at Bonn for N-S interferometry, but this scheme also collapsed due to the operators defecting, this time as a result of industry offering very much higher salaries.

Finally, after these three failures, a triumph was achieved late in 1971 with the inauguration of the George and Florence Wise (Optical) Observatory at Mitzpeh Ramon in the Negev at an altitude of 1000 m., with a 40" wide angle Ritchie-Chretien reflector telescope with a Cassegrain mirror. The site was selected after a survey which covered the peaks from Mt. Sinai (where Abbott measured the solar constant around 1900) to Mt. Hermon. The Smithsonian Institute, under the leadership of F. Whipple, and with the active participation of M. Lecar, collaborated by supplying much of the auxiliary instrumentation for the project; the Israeli govern-

ment paid for the building and TAU President Dr. George Wise and Mrs. Wise contributed the telescope. The outcome was beyond expectations: within the first three years there were three fairly spectacular results: John and Neta Bahcall produced the first optical identification of an X-ray pulsar (Hercules HR); Peter Wehinger and Susan Wykopf produced a spectroscopic validation of F. Whipple's conjecture that comet tails are made of water and hydroxyl by direct analysis of the comet Kohoutek and an on the spot collaboration with Herzog in Canada and Herbig in California; the discovery of clouds of sulfur and phosphorus around Jupiter, announced by Wise Observatory (TAU) astronomers A. Eviatar, I. Kupo, and Y. Mekler was met with skepticism until NASA's Voyager radioed pictures of the fuming volcanoes on Jupiter's moon Io.

In the 1980s, H. Netzer and D. Maoz achieved the first precise measurements of the mass of black holes in active galactic nuclei. The Wise Observatory was then involved in several international collaborations that pursued these measurements extensively. Netzer, Maoz, and S. Caspi have since studied some of the largest black holes known to date. N. Brosh was involved in the discovery of extra-solar planetary systems by international collaborations in the 1990s. TAU VEX, a major instrumental setup for the exploration of the UV sky (quasars, etc.) built by EL-OP for TAU in 1991–95, was due to be orbited in 1996 on Soviet satellite together with 13 other experiments, but changes in the USSR first caused a postponement and finally a cancellation in 2000. The instrument is now due to be raised on an Indian satellite in 2008.

Israel Dostrovsky at Weizmann designed and built the gallium-germanium neutrino-detector for the International experiment at the Gran Sasso tunnel in Italy. This experiment brought the first solid verification of John Bahcall's claim about missing solar neutrinos.

In radio-astronomy, work on the sun is done by D. Eichler at Ben-Gurion University in the Negev and by L. Pustilnik at the Jordan Valley College.

Research in theoretical astrophysics was done by A. Finzi at the Technion, by G. Rakavy, Z. Barkat, Z. Cinnamon at HU, G. Shaviv, M. Livio (TAU, later at the Technion), M. Contini, J. Refa'eli, B. Kozlovski, A. Yahil, U. Feldman, I. Goldman A. Kowacz at TAU, Y. Avny and M. Milgrom at Weizmann. M. Gelman (Technion) leads in space physics. Work in cosmology started with the discovery of the first quasars, when I. Novikov in the U.S.S.R. (1964) and Y. Ne'eman (1965) independently suggested that quasars are lagging-cores in the cosmological expansion. Ne'eman and G. Tauber further developed this model, while it became clear that it does not fit the quasars. This model was in fact a very simple precursor of the presently used Eternal and Infinite Multi-core Inflationary Cosmology suggested by A. Linde after A. Guth's inflation hypothesis. In recent years, work in cosmology is mainly conducted at HU under the leadership of Avishay Dekel.

[Yuval Ne'eman (2nd ed.)]

PIACENZA, city in northern Italy, formerly in the duchy of *Parma. Jewish moneylenders lived there in the 15th century and were attacked by the friars who condemned usury in their sermons. When **monti di pietà* were established here and in Parma in 1488–90, the Jews from both towns scattered throughout the country districts in order to carry on their business there. Thus, around Piacenza, the small communities (now extinct) of Monticelli d'Ongina, Fiorenzuola d'Arda, and Cortemaggiore came into being and were able to carry on even after 1570, at which date Jews were forbidden to live in Piacenza.

PIAMENTA, MOSHE (1921–), linguist and Orientalist, professor emeritus of the Hebrew University of Jerusalem in Arabic language and literature. Piamenta distinguished himself in the research of colloquial Arabic and its dialects (chiefly of the syntax of Jerusalem Arabic) as well as of socio-anthropological aspects of Arab linguistics. Noteworthy, also, are his investigations of the Judeo-Arabic of Yemen and Baghdad, of expressions of the Islamic religion in Arabic words, terms, and ways of expression.

He received the Jerusalem Award (1994) and Israel Prize for scholarship in Oriental Studies in 1996.

Among his main works are *Shimmush ha-Zemannim, ha-Aspektim ve-ha-Derakhim ba-Lahag ha-Aravi ha-Yerushalmi 2* (1964); *Studies in the Syntax of Palestinian Arabic* (1966); *Islam in Everyday Arabic Speech* (1979); *The Muslim Conception of God and Human Welfare as Reflected in Everyday Arabic Speech* (1983); *Dictionary of Post-Classical Yemeni Arabic* (1990–91); *Jewish Life in Arabic Language and Jerusalem Arabic in Communal Perspective: Lexico-Semantic Study* (2000).

PIASECZNO, town in Warszawa province, Poland. During the 18th century there was a Jewish settlement in the town, but in 1740 King Augustus III prohibited the residence of Jews. In 1789 they were also forbidden to trade or be innkeepers in the town. After the abolition of this decree by the Russian government, the population of the town increased from 1,328 in 1865 to 5,604 in 1921. The latter figure included 2,256 Jews. An active Jewish life began after World War I and in 1932 a Zionist delegate was elected to head the community. Among the *zaddikim* of Piaseczno, R. Israel Jehiel Kalish (whose father R. Simḥah Bunem Kalish of Otwock died in Tiberias in 1907) was renowned at the beginning of the 20th century.

[Shimshon Leib Kirshenboim]

Holocaust Period

Before the outbreak of World War II, there were about 3,000 Jews in Piaseczno. The Jewish community was liquidated on

Jan. 22–27, 1941, when all the Jews were deported to *Warsaw and shared the fate of that community. After the war the Jewish community was not reconstituted.

PIATIGORSKY, GREGOR (1903–1976), cellist. Born in Yekaterinoslav, Ukraine, Piatigorsky became first cellist at the Imperial Opera. He left Russia in 1921 and from 1924 he was leading cellist of the Berlin Philharmonic Orchestra. He resigned in 1928 to tour as soloist, often appearing in recitals with Serge Rachmaninoff, Arthur *Schnabel, and Vladimir *Horowitz. He also formed a trio with Nathan *Milstein and Horowitz. In 1929 he settled in the U.S. and taught at the Curtis Institute in Philadelphia and later at Boston University.

One of the leading cellists of his generation, Piatigorsky made many arrangements for the cello and commissioned cello concertos from several composers – Paul Hindemith, Mario *Castelnuovo-Tedesco, and Serge Prokofiev. He visited Israel in 1954 for concerts with the Israel Philharmonic Orchestra and returned in 1970 for concerts together with Jasha Heifetz. His autobiography, *Cellist*, was published in 1965.

[Uri (Erich) Toeplitz]

PIATRA-NEAMT (Rom. **Piatra-Neamț**, or **Piatra**), town in Moldavia, N.E. Romania. According to a local Jewish tradition, a synagogue existed there by the middle of the 16th century, and during the war against Turkey (1541–46), the Jews of Piatra-Neamt hid the ruler of Moldavia. The oldest tombstone dates from 1627 and the first entries in the *pinkas* (minute book) of the *hevra kaddisha* date from 1771. The *hevra* maintained a *talmud torah* and directed various communal activities. The Jews' Guild (see *Romania) was in charge of communal affairs. In 1819 the head of the guild was the assistant of the chief commissioner of the local police. There were 120 Jewish taxpayers in 1802. The number of Jews had risen to 3,900 (33% of the total population) in 1859 and 8,489 (c. 50% of the total) in 1907. In 1930 there were 7,595 Jews (24% of the total).

Antisemitism was prevalent from the 19th century on, and in 1821 the community suffered from Greek rebels who appeared in the area and robbed and murdered Jews there. The arrival of the Turkish army prevented a complete massacre of the community. In 1841, 48 Jews from the surrounding villages were arrested following a *blood libel. They were released by special order of the sultan on the intervention of Sir Moses *Montefiore.

The abolition of the **hakham bashi* system in 1834 and of the Jews' Guild was followed by a long period of chaos in Jewish public life; attempts to form a community failed because of quarrels among different Jewish groups and institutions which attempted to assume communal responsibility and leadership. In 1868 the police closed the *talmud torah* and the private *hadarim*, obliging the community to establish a modern school. A primary school was founded by the local *B'nai

B'rith in 1882 and functioned until 1885 when the *talmud torah* was reopened. In 1899–1900 the *Jewish Colonization Association contributed to the building of two schools, one for boys and another for girls, which in 1910 had 810 pupils.

In addition to the “Great Synagogue” there were 16 prayer houses, some of them belonging to specific craftsmen. A *hek-desh* (hostel for travelers) was turned into an old-age home in 1898 and a Jewish hospital was established in 1905.

Most of the commerce in Piatra-Neamt was conducted by Jews: in 1891 there were 417 Jewish commercial firms. Many Jews dealt in the agricultural products of the area, such as timber, cereals, and cattle. The majority of craftsmen were also Jews and some industries were also owned by Jews.

In 1894 a branch of Hovevei Zion was founded in the town. After 1897 groups of supporters of Herzl's political Zionism were formed there. The Hebrew weekly *Yizre'el* was published in Piatra-Neamt from 1882, as well as a Yiddish journal *Di Hofnung* (published three times weekly). Another Hebrew magazine, *Ha-Mekiz*, edited by the Hebrew author and teacher M. *Braunstein-Mibashan, and A.L. *Zissu, who was born in Piatra-Neamt, was published there from 1909. Jean *Juster and the historian of Romanian Jewry, M.A. Halevy (1900–1972), were also born in Piatra-Neamt.

Antisemitism was especially virulent in Piatra-Neamt between the two world wars. In 1925 synagogues, Jewish schools, and other institutions were looted, and in 1926 and 1928 the cemetery was desecrated. Corneliu *Codreanu, head of the *Iron Guard, was elected to Parliament as deputy for Piatra-Neamt in 1931. In 1937, 26 out of 28 Jews practicing at the bar were dismissed. Despite these problems the community itself was more firmly organized between the two world wars. The two primary schools, serving 400 boys and girls in 1936–37, were amalgamated, and the community also supported a boarders' annex for 250 children. There were Zionist organizations of all shades.

The community of Piatra-Neamt survived World War II. In 1947 Jews numbered 8,000, declining to 5,000 in 1950. In 1969 about 300 Jewish families remained. There were two synagogues. About 100 Jews remained in the early 21st century.

[Theodor Lavi]

°**PIATTOLI, SCIPIONE** (1749–1809), Italian clergyman who later became a Polish statesman. He was born in Florence and lived in Poland from 1783. In 1789, on a tour of France, he supported the political demands of the third estate and was deeply impressed by the suggestion of *Malesherbes for an improvement in the situation of the Jews in Alsace. On his return to Poland in 1790, he made contact with the reformists in the Sejm, and took an active part in the formation of the constitution of May 3, 1791. His diplomatic qualifications

led to his appointment as adviser to Stanislaus Augustus, the last king of Poland. Piattoli strove to rectify the unstable legal situation of Polish Jews, combining practical suggestions on behalf of the Jews with an effort to solve the king's personal financial debts. In September 1791 he proposed that Jews be given the right to buy land and houses, and juridical autonomy and the status of a separate urban class. For these rights the Jews were to pay the king's debts (about 20 million zlotys) in 10 annual installments. Piattoli first addressed his proposal to the leaders of the Jewish communities, then in Warsaw, asking them for their support. He also convinced certain statesmen, H. Kollątaj, A. Linowski, J. Jezieński, and others, to discuss his plan in the Sejm. In 1792, however, Piattoli's proposal was opposed by urban representatives and those aristocrats who inclined toward Russia. The Sejm was dissolved on May 26, 1792 with the outbreak of war between Russia and Poland, and Piattoli's proposal lapsed.

Balaban, *Historja i literatura żydowska*, vol. 3 (1925) 424–28; A. Eisenbach et al., *Materiały do Sejmu czteroletniego*, vol. 6 (1969), 544–45.

[Arthur Cygielman]

PICA (The Palestine Jewish Colonization Association), society for Jewish settlement in Palestine, active between 1924 and 1957. In 1923, as a result of the rapid development of his settlement projects in Palestine, Baron Edmond de *Rothschild decided to establish a separate body to achieve his ideal. The new association, headed by his son James, took over from the *Jewish Colonization Association (ICA), which had managed the villages assisted by the Baron since 1900. PICA was officially recognized by the Mandatory authorities in 1924.

PICA founded and assisted Jewish settlement in the moshavot Pardes Hānannah and Binyaminah, in moshavim such as Naḥalat Jabotinsky, Bet Hānanyah, Shadmot Devorah, and Sedeḥ Eli'ezer, and in kibbutzim such as Ashdot Ya'akov, Ma'yan Zevi, and Kefar Glickson. It also engaged in swamp drainage (e.g., at Kabarah in 1925), afforestation (at Hāderah), stabilization of sand dunes, and agricultural research and modernization. It gave financial support to cultural institutions, including the Hebrew University and the Technion, and developed the industrial enterprises started by Baron de Rothschild, though it always tried in some way to link its efforts in industry with agriculture or land. After 1948 it modernized and expanded the Grands Moulins flour mill, Haifa, and the salt works at Athlit, as well as acquiring shares in Fertilizers and Chemicals, Haifa, and other enterprises. On the death of James de Rothschild in 1957, PICA wound up its operations and transferred its considerable property to the State of Israel.

[Avital Levy]

PICARD, EDMOND (1836–1924), Belgian lawyer and anti-semitic. Picard became an active advocate of socialism, then of antisemitic racialism, and attempted to forge an alliance between the two ideologies. He fought for the socialist cause between 1866 and 1907, when he left the Socialist Party, although he continued to call himself a socialist. In 1888 Picard visited Morocco on a diplomatic mission and from then on turned his talents as a writer to outright racialist propaganda. Observing Arabs and Jews there, he concluded that Semites and Aryans were irreconcilable races. In the following years he wrote *La Bible et le Coran* (1888), *Synthèse de l'antisémitisme* (1892), which was reprinted during the German occupation of Belgium in World War II, and *L'Aryano-Sémitisme* (1899), a collection of 19 articles previously published in the socialist daily *Le Peuple* under the bizarre title *L'Antisémitisme scientifique et humanitaire*. Picard abhorred any intermingling of races and urged Aryans to protect themselves from the "Semitic invasion." He presented Jesus as an Aryan and the Jews as Asians. Seeing no contradiction between antisemitism and socialism, he believed that brotherhood of the oppressed did not necessarily imply equality between all races. He was influenced by *Proudhon's anti-Jewish *ouvriérisme* and by *Gobineau, as well as by his Catholic education which provided a receptive ground for animosity toward the Jews. He succeeded in infecting the minds of leading socialists like Hennebicq (1871–1940) and Destrée (1863–1936); but thanks to the efforts of E. Vandervelde, L. De Brouckère, and C. Huysmans, the Socialist movement in Belgium officially proscribed antisemitism. Yet the Socialist Party newspaper, *Le Peuple*, never refused to print Picard's articles.

PICARD, JACOB (1883–1967), German author and poet. Picard was born in Wangen, Wuerttemberg, and practiced law in Konstanz. He published two collections of verse, *Das Ufer* (1913), and *Erschuetterung* (1920), but turned seriously to literature when his legal career ended with the advent of the Nazi regime in 1933. He fled to New York via Soviet Russia and Asia in 1940. His lyrics expressed a traditionally religious outlook.

In 1936 he published his most important work, a collection of short stories entitled *Der Gezeichnete* (1936, reissued as *Die alte Lehre*, 1963; *The Marked One and Twelve Other Stories*, 1956), which described the folklore, piety, and traditions of Jews settled for centuries in the towns and villages of southern Germany. Some of his later poems were collected in *Der Uhrenschlag* (1960). A short autobiography, entitled "Childhood in a Village," appeared in the *Yearbook of the Leo Baeck Institute* (vol. 4 (1959), 273–93) and under the title "Erinnerung eigenen Lebens," in *Allmend*, 25/25 (1989) 5–38). In 1991 there appeared his *Werke* (in 2 vols., ed. by M Bosch).

PICARD, LEO YEHUDA (1900–1996), Israeli geologist. Born in Konstanz, Germany, he earned his Ph.D. in geology from the University of Freiburg (1923). After a period of study at the University of Florence, he immigrated to Palestine in 1924. After initial employment by the Keren Kayemet, in 1925 he joined the staff of the Natural History Department of the newly founded Hebrew University of Jerusalem as the sole geologist among the three young staff members supervised by Otto *Warburg. During the period of this appointment he carried out research in Paris (1926) and, supported by the Royal Society, at Imperial College, University of London where he obtained his D.Sc. He returned to the Hebrew University where he was appointed lecturer (1934), head of the department of geology (1936), and professor in 1939. When Picard arrived in Palestine, Jerusalem was the only area in the country that had been fully surveyed. He carried out the first geological surveys of the Jezreel valley (the "Emek") and Haifa region and contributed to the first study of the mineral deposits of the Judean Desert. He later directed the comprehensive geological survey of Israel (1950–54). In addition to his general geological skills, he had special expertise in surveys for petrochemical and water resources. He also carried out research and teaching in paleontology. He played a major part in organizing the study and teaching of geology and geography after the establishment of the state and in insisting on high academic standards. There was great national and international demand for his services, and he made geological surveys for governments and organizations throughout the world including Europe, Africa, Asia, and South America. He also served as chairman or adviser on many national and international committees including UNESCO, the UN, and geological conferences, especially those concerned with the problems of arid regions. His publications on basic and applied geology were universally recognized for their research and educational distinction. His many awards included the Israel Prize for natural sciences (1958), election to the Israel Academy of Sciences and Humanities (1961), and membership in many national geological societies.

[Michael Denman (2nd ed.)]

PICART, BERNARD (1673–1733), French artist and engraver. Picart settled in Amsterdam in 1710, partly to escape the restrictions to which, as a Protestant, he was subjected in Catholic France. He earned a place in the history of Jewish art by his realistic portrayal of Jewish religious rites. These constitute an invaluable record of Dutch Jewry in the early 18th century. Unlike Rembrandt and his circle, who were chiefly interested in the facial expressions of individuals, Picart sought out Jews in the synagogue and in their homes in order to acquaint himself with their ceremonies. In his picture of a Pass-

over celebration the artist himself can be seen, hatless, participating in the meal. Picart used his sketches, the originals of which are in the Stedelijk Museum, Amsterdam, to make etchings with which he illustrated the section devoted to Jews in the first volume of an 11-volume work, *Cérémonies et Coutumes Religieuses de tous les Peuples du Monde* (Amsterdam, 1723). The engravings were often reproduced in various editions, and served as the basis for a series of imitations published by F. Novelli in Venice in 1789. Picart also engraved the title pages for some Hebrew works, such as the Amsterdam Pentateuch of 1725.

[Alfred Werner]

PICCIOTTO, family of merchants and community leaders from Leghorn, Italy. Of its members HILLEL HAYYIM (d. 1773) traveled to *Aleppo for the first time in 1732 and settled there in 1771. His son, HAI MOSES (d. 1816), author of *Va-Yehal Moshe* (Vienna, 1814), a collection of sermons and ethics, also died in Aleppo. He was the father of RAPHAEL (d. 1827), the Austrian consul in Aleppo for about 50 years; in 1818 he emigrated to Tiberias, where he died. In 1806 he was honored by Austria with the title of “Ritter von Picciotto.” He was also the Russian consul in Aleppo. His son, Ezra (d. 1822), was the Austrian consul from 1818 until his death in the earthquake of Aleppo. He was then replaced by his brother ELIJAH, who held his position until 1840. A third brother, HILLEL, was Prussian consul in Aleppo from 1824. When Wolf Shorr visited the town in 1875, he found that this family provided “most of the envoys of Europe’s kingdoms, such as Germany, Austria, Belgium, Sweden, Holland, and others.” MOSES BEN EZRA (1818–1894) acted as Austrian, German, and Danish envoy in Aleppo and defended his brethren in 1875 at the time of the blood libel brought about by the Armenians.

MOSES HAIM (1806–1879) emigrated from Aleppo to London in 1843 and died there. He played an active role in the affairs of the Sephardi Bevis Marks community and was also its president. He was also a member of the Board of Deputies over a long period. During the Spanish-Moroccan War of 1859, when a great number of Jewish refugees fled to Gibraltar and the situation of the Jews in *Morocco worsened, a committee of support was formed in England and Moses Haim was its emissary to report on the exact conditions of the Jews. His report was published under the title *Jews of Morocco Report* (London, 1861). His son, James (1830–1897), was a historian of English Jewry and also a hymnologist. He was for many years secretary to the Morocco Relief Fund. From 1872 onward he published in the *Jewish Chronicle* a series of discursive historical essays based to some extent on original sources. These were republished in volume form in 1875 under the title *Sketches of Anglo-Jewish History* – the earliest popular work on Anglo-Jewish history. He was among the founders of the Jewish Historical Society of England. Another member of the family, Joseph (1872–1938), was the first Jewish senator

to be appointed by King Fuad of *Egypt (1924). He was also a member of the Chamber of Commerce in *Alexandria and a member of the Economic Council of the Egyptian government. As a Zionist, he was vice president of the “Pro-Palestine” Society founded in Egypt in 1918. For many years he was also the vice president of the Alexandrian Communal Board and president of the local B’nai B’rith.

[Haim J. Cohen]

PICHO (or **Pichon**), **JOSEPH** (d. 1379), *contador mayor* (“auditor general”) of Henry II of Castile, Spain. He gradually rose in rank from being an adviser to Henry, before the latter seized power, to one of the foremost officials at court. In 1366 his signature appears on official documents, and a year later he was entrusted with an important mission, probably financial, to the king of Aragon. In 1369 Picho was appointed chief tax collector and made responsible for the crown revenues, while in 1371 he appears as chief tax farmer of Castile. In consequence of his governmental position he was vested with much authority which he abused at times. In 1379 certain Jews who were jealous of Picho’s position obtained a writ issued in blank authorizing them to punish *informers. On the authority of this document Picho was convicted and executed. According to the evidence of the contemporary Spanish historian, Lopez de Ayala, the only available source for this episode, these events took place in Burgos, at the time of the coronation of Pedro III, the son of Henry. This angered the young king, and as a result the Cortes, at its session in Soria in 1380, abrogated the rights of criminal jurisdiction previously held by the Jews of Castile.

PICK, ALOIS (1859–1945), Austrian army medical corps general, university professor, and president of the Vienna Jewish community. He was born in Karlin near Prague, studied medicine in Prague and Vienna, and graduated in 1883. After 1887 he served as army surgeon and military hospital director; in 1891 he became head of the ward for stomach and intestinal diseases in the Vienna General Hospital. He was appointed to the position of lecturer and professor at Vienna University after 1890. During World War I he was attached to the general staff, and attained the highest rank in the army medical corps. From 1920 to 1932 he headed the Vienna Jewish community, assisted by two vice presidents of the non-nationalist and Zionist groups. His respected and kind personality helped to reconcile party differences. He wrote books and numerous articles on internal medicine, among them *Vorlesungen ueber Magen und Darmkrankheiten* (1895–97) and, with Adolf Hecht, *Klinische Semiotik* (1908), both translated into English.

During his service in Herzegovina he was the first to describe a form of pappataci fever. He also wrote plays and poetry.

PICK, ERNST PETER (1872–1960), Austrian pharmacological chemist. Born in Jaromer, Bohemia, Pick worked until 1899 at the University of Strasbourg. He was head of the biochemistry department of the Serum Institute of Vienna from 1899 to 1911, and professor of pharmacology at the University of Vienna from 1911 to 1924. He was chief of the drug control department of the Austrian government from 1914 until the advent of the Nazis. In 1938 he went to the United States and was appointed professor of pharmacology at Columbia University (1939–46), as well as being attached to Mount Sinai Hospital, New York.

Pick's papers were largely concerned with serology, the breakdown of proteins, poisons, and various other fields of experimental pathology and pharmacology. He wrote *Biochemie der Antigene* (1912), *Biochemie der Antigene und Antikörper* (1928), and co-edited *Die experimentelle Pharmakologie als Grundlage der Arzneibehandlung* (1933).

[Samuel Aaron Miller]

PICK, HAYYIM HERMANN (1879–1952), Assyriologist and Mizrahi leader. Born in Schildberg, Poland, Pick was a pupil of F. Delitzsch at the University of Berlin. His doctoral dissertation was entitled *Talmudische Glossen zu Delitzschs assyrischen Handwoerterbuch* (1903). He was also ordained as rabbi by David Z. Hoffmann at the Rabbinerseminar fuer das Orthodoxe Judentum. Pick joined the Zionist movement in 1898 and the Mizrahi upon its foundation, serving as a delegate to several Zionist congresses. In 1904 he joined the department of Middle Eastern studies at the Prussian State Library, and in 1918 was appointed professor and *Bibliotheksrat* (library counsellor). He was the first Jew in the Prussian civil service to be permitted not to work on the Sabbath. Concurrently he acted as headmaster of the Lippmann Taus Hebrew College in Berlin.

Pick was very active in Mizrahi affairs in Germany until 1914. In World War I, he acted as chief military censor of the Jewish press in Poland. After the war he was temporarily attached to the German Foreign Office. In 1920 he was elected a member of the Mizrahi World Executive, serving for a time as its chairman. From 1921 to 1927 he was a member of the Jerusalem Zionist Executive and was appointed to its Immigration Department. At the height of the “*Grabski *aliyah*” he kept up an impassioned fight with the British high commissioner, Sir Herbert Samuel, over the politically motivated cutbacks in the allotment of immigration certificates. Pick was among the initiators of the Mizrahi Bank. Though unable to pursue his scientific work, he was able to found, together with S.H.

Bergman, **Kirjath Sepher*, the bibliographical publication of the Jewish National Library.

From 1928 to 1934, upon returning to the Prussian State Library, he was again extremely active on behalf of the Mizrahi in the Berlin Jewish Community Council. The Nazis pensioned but did not dismiss him, on account of his wartime service. After returning to Jerusalem he was again elected to the Mizrahi World Executive (1935), heading its Erez Israel Fund. Later he initiated and headed the Council for Refugee Rabbis that looked after hundreds of people. Pick's last years were darkened by a crippling illness, and by the confiscation by the Germans of his unique Assyriological library, including all the cuneiform texts that were to be the basis of his life's work – an Assyrian-Aramaic-Hebrew dictionary.

PICK, JIŘÍ ROBERT (1925–1983), Czech author of satirical poetry and prose, publicist, playwright. Born in Prague, Pick spent 1943–1945 in the Theresienstadt concentration camp. He contributed to dozens of literary magazines and published many aphorisms, satirical sketches, fables, parodies, and avant-garde poetry for children. Some of his short stories, such as “Association of Animal Protection” (1969), and his plays *A Dream of Distant Lakes* (1981) and *An Unlucky Man in the Yellow Cap* (1982) are based on his time in Theresienstadt.

[Milos Pojar (2nd ed.)]

***PICO DELLA MIRANDOLA, GIOVANNI** (1463–1494), one of the most remarkable figures of the Italian Renaissance. Pico was an influential thinker, a humanist scholar of note, a pioneer of Oriental studies, and the father of Christian *Kabbalah. Contemporaries with whom Pico associated include, among others, Elijah *Delmedigo, Flavius *Mithridates, Johanan Alemanno, Marsilio Ficino, Angelo Poliziano, and Girolamo Savonarola. Delmedigo translated several Averroist treatises for Pico. Mithridates instructed him in Arabic and Aramaic (“Chaldean”), and translated for him a considerable number of kabbalistic writings; his translations survive and are the likeliest literary sources of Pico's Christian Kabbalah. The most striking and, in the long run, most influential outcome of Pico's encounter with Jewish esoterism are his kabbalistic theses “according to his own opinion” (*Conclusiones cabalisticæ secundum opinionem propriam*), which set out to confirm the truth of the Christian religion from the foundations of Jewish Kabbalah. They are included among the 900 theses derived from all branches of knowledge which he offered, in 1486, for public debate in Rome. The debate never took place, but the kabbalistic theses made a lasting impression, and may truly be considered to mark the beginning of Christian Kabbalah. What they amount to is as much a kabbalistic interpretation of Christianity as a Christian interpretation of the Kabbalah.

The Kabbalah, touched upon in Pico's *Oration on the Dignity of Man*, is discussed at great length in his *Apologia* (in *Commentationes*, 1496), where he defended 13 of his theses specifically condemned by the Church, one of which was the thesis that "no science can make us more certain of Christ's divinity than magic and Kabbalah." The *Heptaplus* (1489), a sevenfold interpretation of the biblical account of Creation, also shows kabbalistic traits. Pico owned many Hebrew books, and in his writings, particularly in his refutation of astrology (*Disputationes adversus Astrologiam Divinatricem*, 1495), he mentions various Jewish authors besides the kabbalists, notably Maimonides, Ibn Ezra, and Levi b. Gershom. The precise extent of Pico's knowledge of Hebrew and of his acquaintance with the Kabbalah are still open questions.

Editions of his works are *Opera Omnia* (Basle, 1572); *Opere*, ed. by E. Garin, vol. 1, *De hominis dignitate, Heptaplus, De ente et uno*, and *Scritti vari* (1942); vol. 2–3, *Disputationes adversus Astrologiam Divinatricem* (1946–52).

[Chaim Wirszubski]

PICON, MOLLY (née **Maragret Pyckoon**; 1898–1992), U.S. actress in Yiddish and English. Born in New York, she made her name playing Yiddish roles on 2nd Avenue. She was at Kessler's Theater for several years and in 1935 went touring in vaudeville with her husband, Jacob Kalich. From 1942 she managed the Molly Picon Theater in New York. After World War II she visited the DP camps, went touring in Australia, South Africa, and Europe. In 1960 she was back on the English stage playing the lead in *A Majority of One* in London and appeared on TV and in films. In 1961 she scored a success on Broadway in the musical *Milk and Honey*, and in 1967 appeared in *How to be a Jewish Mother*. She appeared in the film *Fiddler on the Roof* in 1970, while in 1982 she won an Emmy Award nomination for her performance in the television drama *Grandma Didn't Wave Back*. Picon also appeared in the films *Cannonball Run* (1981) and its sequel *Cannonball II* (1984). As well as being an actress, Picon was also a songwriter and lyricist with nearly 100 songs to her name. Her book *So Laugh a Little* (1962) was written as a family biography.

[Rohan Saxena (2nd ed.)]

PIEDMONT, region in N. Italy which comprised the duchy of *Savoy (a kingdom since 1713), the duchy of Montferrat

(under Savoy rule since 1709), the marquisate of *Saluzzo (under Savoy rule since 1598), and the municipalities of *Asti, *Chieri, Cuneo, and *Alessandria. The Jewish communities of Piedmont were formed or expanded following the expulsion of Jews from France in 1306, 1332, and 1394. Loan bankers were among the prominent people who settled in Piedmont. In 1430 Amadeus VIII determined the judicial status of the Jews in the duchy of Savoy, stipulating that in each city they were to live in closed quarters. The Jews were frequently subjected to special taxation: in 1551 the annual toleration tax was 500 gold crowns, increased to 14,000 in 1626, but subsequently reduced. In 1708 the Jews were ordered to file a complete inventory of their property every three years. About the middle of the 16th century there were 3,000–4,000 Jews in Savoy, somewhat less in Montferrat, and about 100 in Saluzzo. For a considerable payment, Emmanuel Philibert granted them the monopoly on *moneylending, which continued under his son Charles Emmanuel I. In 1624 there were about 100 Jewish loan-banks in Piedmont. The communities and the loan-bankers were often subjected to demands for exorbitant "gifts." Against a payment of 60,000 ducats a decree was issued in 1603 granting Jews permission to bear defensive weapons when outside the city of *Turin, in addition to the freedom to practice every profession including banking, commerce, and medicine (subject to the bishop's approval). In 1723–29 new enactments were issued, renewing the statutes of 1430 in a milder form, but extending the area to which they applied as a result of the extension of the state of Savoy. The Jews then formed a General Council of Jews (università generale degli ebrei) of Piedmont with branches in Turin, Casale *Monferrato, and Alessandria. In 1723 the Jews were forbidden to own real estate (the prohibition was slightly relaxed in 1729), and were compelled to live in the ghetto, which had been in existence in Turin since 1679. In Casale, *Vercelli, Chieri, Carmagnola, and Saluzzo, the outer walls of the ghettos were completed in 1724, while in Cherasco, *Acqui, and *Moncalvo, the walls were completed in 1730, 1731, and 1732 respectively. The dwellings in the Piedmont ghettos were generally arranged around a central courtyard (*hazer*), and every ghetto had a synagogue.

The constitution issued under Charles Emmanuel III in 1770 reenacted the statutes of 1430, 1723, and 1729, and during this period the voices of non-Jews, such as the publicist Giuseppe Compagnoni, were first raised in defense of Jews. In 1798 emancipation was introduced into Piedmont by French revolutionary forces, and in 1807, 13 rabbis from Italy attended the French *Sanhedrin in Paris. But after a short interval of well-being, Victor Emmanuel I restored almost *in toto* the 1770 constitution; in 1816 the re-creation of the ghetto was decreed. By then, however, attitudes had changed and men like Vincenzo Gioberti, Roberto and Massimo *d'Azeglio, Carlo *Cattaneo, and others pressed for Jewish emancipation. With the promulgation of the Piedmontese Constitution (Statuto) of 1848 by Prince Charles Albert, the Jews obtained full emancipation and began to participate more actively in political and cultural life. The rabbi of Turin, Lelio *Cantoni, started to re-

organize the Jewish communities, and the Jewish publications *L'Educatore Israelita* (Vercelli, 1853–74), followed by *Il Vessillo Israelitico* (Cuneo, 1874–1922), made their appearance. In the middle of the 19th century a famous controversy arose over Rabbi Samuel Olper's project to introduce changes in Jewish religious practice. In 1840 and 1881 there were about 6,500 Jews in Piedmont; in 1911, 6,000; in 1931, 4,900; and in 1961, 6,618; and by 1970 this number dwindled to 1,820.

[Alfredo Mordechai Rabello]

PIERLEONI, ex-Jewish family who first appeared in Rome shortly after the year 1000. The founder of the family, **BARUCH**, lent large sums of money to church dignitaries, thereby assuring himself of their protection. He and his son, **LEO**, became converts to Christianity. Leo's son, **PIETRO DI LEONE** (hence the name Pierleoni), continued to give financial backing to successive popes. Among his numerous sons was one, also called Pietro Pierleoni, who entered the Church. Thanks to his family influence, he became a cardinal in 1120 and pope in 1130, taking the name *Anacletus II. A turreted mansion in the vicinity of what was to become the Rome ghetto still bears the name of the Pierleoni family.

[Attilio Milano]

PIERRE-BLOCH, JEAN (1905–1999), French Socialist politician, writer, and Resistance leader. Pierre-Bloch, who was born in Paris, contributed to the left-wing journal *Populaire* and in 1936 was elected Socialist deputy for the Aisne department. In 1937 he was vice president of a commission of enquiry into the problem of Algeria, which unsuccessfully advocated the consideration of the special demands of the Algerians, then under French tutelage. Pierre-Bloch volunteered for military service on the outbreak of World War II and was taken prisoner by the Germans in 1940. He escaped and joined the Resistance, becoming one of the leaders of the clandestine French Socialist Party. In 1941 he was condemned to death by the Vichy regime for helping to parachute arms into occupied France. Again he succeeded in escaping and in 1942 reached London, where he became chief of French counterespionage. Later in the war he went to Algiers, where he was appointed assistant commissioner for the interior. After the liberation he was a leading figure in the French Socialist Party (SFIO) and became director of the Société Nationale des Entreprises de Presse. From 1968 to 1992, he was president of the International League Against Racism and Anti-Semitism (LICRA).

A prolific writer, Pierre-Bloch was the author of *L'Affaire Frankfurter* (1937), *Charles de Gaulle, premier ouvrier de France* (1945), *Liberté et servitude de la presse en France* (1952), *Carnet d'un voyageur en Israël* (1958), and *De Gaulle, ou le temps des méprises* (1969).

[Shulamith Catane]

PIESTANY (Slovak. **Piešťany**; Hung. **Pöstyén**; Ger. **Pistyan**), town in Slovakia (part of Czechoslovakia, 1918–1991; since then the Slovak Republic). Piestany's hot springs were already known to the Romans. In 1736, there were 12 Jewish families from Moldavia living on the estate of Count Forgacs. In 1774 there were 22 families, and in 1795 about 50. Religiously and administratively, they were part of the Vrbov congregation. In 1840 there were 105 Jews in Piestany; 375 in 1880; and 850 in 1910. In 1930 they numbered 1,344. In 1940, on the eve of the deportations, there were 1,559.

The mineral springs attracted many visitors. Jews were not permitted in the common bath but were relegated to the "Jewish bath house." The first congregation was founded in 1795. There were many visitors and they needed services, hence Jews discovered a source of income. They also rented estates, where they grew fruits and vegetables. Grateful to the Hungarian government, they displayed strong Magyar patriotism. During the Spring of Nations (1848–49), some volunteered for the Magyar army. After the Hungarian Jewish Congress of 1868, the congregation joined the Orthodox. Including the neighboring villages, the congregation numbered 1,800. By 1870 they had their own school, synagogue, *mikveh*, cemetery, and a *shohet*. In 1895 they built a new synagogue. They also established a *talmud torah* and a *hevra kaddisha*. After World War I the congregation expanded, adding a yeshivah; a kosher restaurant – mainly for guests of the spa; a home for the aged and a Beth Jacob school for religious girls.

During World War I, Jews were recruited into the army. At the end of the war, Piestany was hit by the wave of disturbances that beset Slovakia. A militia was able to handle the situation. When more violent disturbances erupted in 1910, the congregation appealed to President *Masaryk. In 1889 the Winter family took over management of the springs, turning it into a world-renowned spa. Alexander Winter developed the sleepy town into a first-rate health resort.

But there was no peace in the Jewish community. Rabbi Koloman Weber (1871–1931), who served as the president of the Orthodox Chancellery for Slovakia in Bratislava, encouraged extremist policies. Internal disturbances led to a split in the congregation in 1926. In addition to the Orthodox body, a Yeshurun congregation was established. They built their own synagogue, a *hevra kaddisha*, and other Jewish institutions. Quarrels between the two congregations continued until the deportations of 1942.

Delegates of Slovakian Jewry met in Piestany on March 13, 1919, to discuss their conditions in the new republic. The convention led to political and social reorganization of Jews in Slovakia. The Zionist movement flourished in Piestany in

spite of Rabbi Weber's efforts to hinder it. The Zionist organization Ahavat Zion was founded in 1919 and, subsequently, the local branch of the Jewish party. Jews were regularly elected to the municipal board. The Jewish adult and youth movements included all major organizations active in the country. The writer Gieze *Vamos, who wrote in Slovak, gained national fame. His book, *The Broken Branch* (1934), bitterly criticized Jewish life in Slovakia.

Piestany was one of the centers of the Hlinka Guard, a Slovak form of Fascist storm troopers. When Slovakia's autonomy was proclaimed in September 1938, Jews without valid citizenship were expelled to the harsh wasteland of the Hungarian-Slovak border. Slovakia's proclamation of independence under the aegis of the Third Reich on March 14, 1939, was accompanied by violence in the streets. Anti-Jewish legislation and activities culminated in 1942 with the deportation of Jews to Poland. Some 1,500 Jews from Piestany and its environs were sent to extermination camps.

After the war, 250 returned. In June 1945, they established a single congregation. They elected a committee to conduct community life and reconstruct community buildings, such as the synagogue, *mikveh*, and kosher restaurant. During the wave of emigration from Slovakia in 1948–49, most of the Jews left Piestany. In 1959 there were 90 Jews in the city. In the late 1970s the synagogue was torn down. One of the three cemeteries was turned into a public park. In 1958 a kosher restaurant was opened for guests of the spa.

[Yeshayahu Jelinek (2nd ed.)]

PIETY AND THE PIOUS. Because of its theocentric orientation, Judaism regards piety as the supreme virtue leading to man's highest good. Moreover, according to the Mishnah, the *zaddik* ("righteous person") is credited with contributing to the preservation of the world (Avot 5:1). Although the term *zaddik gamur*, "the perfectly pious man" is found in talmudic literature (cf. RH 16b) and is contrasted with the *zaddik she-eino gamur*, "the imperfectly pious man," it is largely a theoretical designation, and on the principle that "there is none righteous upon earth who doeth only good and sinneth not" (Eccles. 7:20): no human being is regarded as the perfect paragon of piety.

In rabbinic literature a variety of terms is employed to distinguish between different types or degrees of piety. There is, however, no uniform system of ranking such terms as *yere het* ("sin-fearing"), *yere shamayim* ("God-fearing"), *zaddik* ("righteous"), and *hasid* ("pious"). For example, *Maimonides, explicating the term *hasid*, asserts that it carries overtones of excess or extremism not found in other terms describing piety (commentary to Avot 5:7; *Guide of the Perplexed*, 3:53), but in fact this is not always so. There are many instances when the term *hasid* describes what elsewhere would be called *zaddik* or *yere het*.

Notwithstanding the wide range of definitions of piety one encounters in rabbinic literature, the emphasis on the service of God and the imitation of His ethical attributes appear to be a constant component of all the different types.

Although obedience to halakhic norms represents a necessary condition of piety, it is far from representing its perfection. It was expected that obedience to the law would inculcate such virtues as the *love and fear of God. R. Johanan, a Palestinian *amora*, attributed the destruction of Jerusalem to the failure of the Jews to observe the moral demands that extend beyond the strict requirements of the law. His contemporary, the Babylonian *amora*, Rav, indicated that even in civil litigation one must take into consideration the ethical-religious imperative of Proverbs 2:26, "to walk in the ways of the good and to keep the path of the righteous" (BM 83a). Moreover, abundant references to the special standards of piety, or the "Mishnah of the pious," are found in talmudic literature (BM 52b; Hul. 130b; Ter. 8:10). *Naḥmanides cites the talmudic statement "Sanctify yourself within the domain of the permissible" as evidence for his contention that even an individual who has not violated any of the specific and detailed rules set forth in the Torah may still be branded a scoundrel (commentary on Lev. 19:1).

Man's total commitment to the service of God, according to Judaism, extends over all areas of life. For example, R. Yose stated that all our actions should be performed for the sake of God (Avot 2:12). Rabbinic Judaism believed that performance of a religious act could be disciplinary, leading to higher religious sensitivity. This idea was manifested in the relatively positive attitude taken toward deeds inspired by impure motives. In contrast to Christianity's despair over the worthwhileness of human effort, resulting from the Pauline emphasis on original sin, Judaism holds an optimistic view of human nature. The individual is encouraged to perform an act even though it may originate in unworthy motives, because, ultimately, these motives may be transformed and the act performed for the sake of God (Pes. 50b).

The aim of all piety is the sanctification of life, not the withdrawal from it. There is relatively little endorsement of asceticism in rabbinic Judaism. A widely prevalent attitude is represented by the statement of the medieval philosopher, *Judah Halevi, that "contrition on a fast day does nothing to bring man nearer to God than joy on the Sabbath" (*Kuzari* 2:50). Similarly, Judaism generally recoils from tendencies designed to remove the pious from involvement with the community. Man's confrontation with God is not meant to lead to self-centeredness or a sense of isolation, but to participation in a holy community. This attitude is reflected in Hillel's maxim "Do not separate thyself from the community" (Avot 2:5). Moreover, according to a talmudic comment, the overall objective of the entire Torah was to promote peace and thus contribute to the improvement of society (Git. 59b).

Although rabbinic Judaism produced a number of extraordinary individuals endowed with special capacities for mystical union, apocalyptic visions, and saintliness, these as-

pects of piety were never recognized as displacing the normative component, which stressed faithful adherence to the Covenant as interpreted by the Oral Law. It was felt that the practice and, especially, the study of the Torah are not merely intrinsically valuable activities, but are also instrumental in refining man's character and lifting him to higher levels of piety. According to *Phinehas b. Jair, spiritual development reaches its climax when the individual becomes so attached to God that *Ru'ah ha-Kodesh* is conferred upon him (Av. Zar. 20b).

Maimonides held that faithful observance of the commandments is needed to inculcate the fear of God in man, while the contemplative virtues, climaxing in the intellectual apprehension of God, lead to the love of God (*Guide*, 3:52). Maimonides redefined the rabbinic notion of the *talmid hakham*, the scholar of the law, who, as early as the talmudic period, was regarded as the supreme religious model (see I. Twersky, in: *Jewish Medieval and Renaissance Studies* (1967), 106–18). For Maimonides, the true Torah scholar is not merely knowledgeable in *halakhah*, but is also proficient in science and philosophy. Accordingly, only he who combines obedience to the commandments with contemplative perfection can aspire to the state of true union with God.

For the medieval German *hasid*, *Judah he-Hasid, the love of God manifests itself in an entirely different fashion. It impels him to go beyond the legal requirements of the Torah, which makes concessions to human frailties and weaknesses. Instead, the truly pious will govern themselves by the “law of heaven,” which makes far stricter demands than the “law of the Torah,” addressed to the average individual.

The kabbalists' notion of piety stresses the craving for the mystical ideal of *deveikut* (adherence to God), which to them represents the pinnacle of religious achievement. Unlike the complete mystical union which seeks the absorption of the self in the divine, the state of *deveikut* preserves the separateness and self-identity of the individual. It is an act of communion, not a merger, for the self is not divested of its responsibilities toward God. It is the function of the righteous individual to help bring about the *tikkun* (redemption of the world; see *Kabbalah).

In the *hasidic* movement special emphasis was placed on such personal components of piety as *kavvanah* (“intention” or “purposefulness” in prayer) and *hitlahavut* (“enthusiasm”) in the attainment of the ideal of *deveikut*. The charisma of the *zaddik*, renowned for his *deveikut* rather than his knowledge of Torah, played a decisive role. It is for this reason that Gershom *Scholem observed that in the *hasidic* movement “personality takes the place of doctrine” (*Mysticism*, 344). The *zaddik*, by virtue of his special spiritual status, serves as the channel for the transmission of divine grace and plays a unique role in the redemption of the world. In the *hasidic* scheme, through attachment to the *zaddik*, the ordinary individual can participate in this task and achieve union with the “upper worlds.”

[Walter S. Wurzburger]

PIG (Heb. חֲזִיר, *hazir*). Included in the Pentateuch among the unclean animals prohibited as food is the pig which, although cloven-footed, is a nonruminant (Lev. 11:7; Deut. 16:8). It is the sole unclean animal mentioned as possessing these characteristics. There are archaeological evidences (figurines and relics of bones) that the pig was eaten by the inhabitants of Canaan before the Israelite conquest. It was also offered as a sacrifice in idolatrous worship, provoking a protest from Isaiah (66:3), while those “eating swine’s flesh, and the detestable thing, and the mouse” (66:17) apparently did so in a cultic ceremony. The pig symbolized something repulsive, and hence “as a ring of gold in a swine’s snout, so is a fair woman that turneth aside from discretion” (Prov. 11:22). Other peoples, too, such as the Egyptians and the Sidonians, refrained from eating pig, which was also later prohibited to the Muslims. Abhorrence of the pig entered so deeply into the consciousness of the Jews that the expression *davar aher* (“another thing,” i.e., something not to be mentioned by name) was used for it, at least as early as talmudic times (Ber. 43b; Shab. 129a) and in Aramaic as “that species.” As early as *Antiochus Epiphanes it was decreed that the eating of swine’s flesh was to be a test of the Jews’ loyalty to Judaism (11 Macc. 6:18). Following the incident in the days of Hyrcanus II when, instead of an animal fit for sacrifice, a pig was sent up the walls of Jerusalem during a siege, it was decreed: “Cursed be he who breeds pigs” (Sot. 49b; TJ, Ta’an. 4:8, 68c), and this prohibition was incorporated into the Mishnah (BK 7:7). Since the pig eats everything and finds its food everywhere, there arose the saying: “None is richer than a pig” (Shab. 155b). The pig suffers from various maladies: “Ten measures of diseases descended to the world, of which the swine took nine” (Kid. 49b). During a plague that afflicted pigs, R. Judah decreed a fast in Babylonia since “their intestines are like those of human beings,” the fear being entertained that the plague would spread to people (Ta’an. 21b).

The domesticated pig, *Sus scropha domestica*, is descended from the wild boar, *Sus scropha*. Its domestication was a lengthy process, going back to ancient times. The pig formerly found in Erez Israel differed from the present-day one whose various breeds were developed from strains brought from China about the middle of the 18th century. The wild boar (*hazir ha-bar*), which is found in Israel especially in Upper and western Galilee, damages plants and vegetables, and uproots the bulbs and tubers of wild flora. It is the “boar out of the wood” in Psalms (80:9–14), where reference is made to the ravages it causes to vines. The Tosefta (Kil. 1:8) states that “although the pig and the wild boar resemble each other, they are heterogeneous.”

[Jehuda Feliks]

In Halakhah and Aggadah

In a *baraita* mentioned three times in the Babylonian Talmud (Sot. 49b; BK 82b; Men. 64b), the prohibition against rearing

pig is joined with the prohibition against studying “Greek wisdom,” and some scholars have queried the trustworthiness of this tradition and tend to the opinion that the incident referred to there – when the besiegers of Jerusalem sent up a pig to the besieged in place of the two lambs for the daily sacrifices – occurred during the siege of Jerusalem by Titus, when the subsequent prohibition against rearing pigs was decreed (cf. Tj, Ber. 4:1, 7b, where a similar story occurs about sending up a pig at “the time of the wicked kingdom”). It seems, however, that the prohibition against rearing pigs was already known in the days of the early Hasmoneans; it is possible that its source is to be found in a reaction to the decrees of Antiochus Epiphanes, who ordered a pig to be offered as a sacrifice (1 Macc. 1:47) and pig’s flesh to be eaten (11 Macc. 6:18–7:42) and that the incident in the time of the Hasmonean brothers caused the prohibition to be stressed with greater emphasis.

The phrase “Cursed be the man who rears” is worthy of attention. It would appear that, with the increase of the non-Jewish population, Jews in Erez Israel apparently engaged in the business of pig rearing. Of interest is the combination “pig-breeders and usurers” (Ber. 55a, and Rashi, ad loc.) both of which were regarded as providing an easy means of livelihood. Although there are many references in the *aggadah* to a feeling of revulsion and disgust toward swine flesh, the rabbis refrained from connecting the prohibition with this feeling. Eleazar b. Azariah expounded, “Whence do we know that a man should not say, ‘I have no desire to eat swine’s flesh,’ but rather should he say ‘I would like to eat it, but what can I do seeing that my Father in Heaven has decreed against it’” (Sifra, *Kedoshim*, Perek 11:22). A substitute was even given in a fish called *shibuta* “which resembles the pig” in taste (Hul. 109b; Tanh. *Shemini*, 12).

In the Midrash the Roman kingdom is called *ḥazir* (“pig”). It is possible that the name originated in the fact that the symbol of the Roman legion in Erez Israel was the boar (see ARN¹, 34:100: “The... boar out of the wood doth ravage it” [Ps. 80:14], refers to the Roman kingdom”; and cf. Mid. Ps. to 80:6). The Midrashim explain the name with reference to the characteristics common to Rome and to the pig: “and the swine because he parteth the hoof” – why is [Rome] compared to a swine? – To teach that just as a swine when it lies down puts out its hooves as if to say, ‘see, I am clean,’ so too the kingdom of Edom [Rome] acts arrogantly, and plunders and robs under the guise of establishing a judicial tribunal” (Lev. R. 13:5). Another “etymological” explanation states: “Why is [Rome] called *ḥazir* [‘pig’]... because it will eventually restore *haḤazir* [‘the kingdom’] to its rightful owner” (Eccles. R. 1:9; Lev. R. 13:5). This statement was quoted in the Middle Ages by the people with the reading, “Why is it called a pig? – Because the Holy One will restore it to Israel” (i.e., declare it clean), and in this form it became a topic in Jewish-Christian polemics.

In Israel

The raising of pigs in the Holy Land was always regarded with abhorrence not only by Jewish religious circles but also

by many outside the strictly religious camp. The Jewish National Fund’s leases forbade pig raising on its land. The religious parties pressed for the prohibition of pig breeding by law, but in the early years of statehood it was left to local authorities to pass their own bylaws in this matter. When the Supreme Court, in a test case, ruled that such regulations were *ultra vires*, the religious parties pressed for, and secured, the passage of a special authorization law (5717/1956) to give the local authorities the necessary authority. There was still pressure for the prohibition of pig breeding on a national basis and in 1962 a law was passed forbidding the breeding, keeping, or slaughtering of pigs, except in Nazareth and in certain other named places with a sizable Christian population. In the early 2000s Kibbutz Lahav and Kibbutz Mizra were among the few Jewish pig breeders in the country.

PIGIT, SAMUEL BEN SHEMARIA (1849–1911), Karaite scholar from Chufut-Qaleh, who was a descendant of Simhah Isaak *Luzki. He studied in Chufut-Qaleh and afterwards in Yevpatoria. He was a *ḥazzan* and a teacher of Torah in the communities of Karasubazar (1868–78), Simferopol (1878–82), and in Yekaterinoslav from 1882 until his death. Pigit was one of the last Crimean Karaite scholars who wrote Hebrew. He had a wide knowledge of Rabbanite literature and used in his pure Hebrew a great number of words, expressions, and quotations from the Talmud and from rabbinic literature. He was also interested in the research of Jewish studies. Some of his works were published: *Iggeret Nidhei Yisrael* (St. Petersburg, 1894), which contains sermons and liturgical poems in Hebrew and the Karaite language, his own memories, and some information on the history of Crimean Karaites; *Davar Davur* (Warsaw, 1904; reprint Ramleh, 1977) includes Oriental fables and Karaite proverbs in his Hebrew translation from the Karaite language. He also published two poems in the Karaite language (K. Zh., 5–6 (1911), 15–16). Other works by Pigit that remained in manuscript and never published were lost. He had a large collection of manuscripts.

PI-HAHIROTH (Heb. פִּי הַחִירוֹת, Hahiroth), town E. of Baal-Zephon, near Migdol, in the East Delta of Egypt (Num. 33:7). At the beginning of the Exodus the Israelites encamped near Pi-Hahiroth, whose site is yet to be identified. A.H. Gardiner (see bibl.) suggests that the town’s name is an alteration of Pr-

Ḥṯḥr (“the house of Hathor”), mentioned in various Egyptian documents. The Septuagint translates Pi-Hahiroth either as “the mouth of Hiroth” – i.e., considering פִּי as the Hebrew word for “mouth” and not as part of the name – (cf. Num. 33:8, where the Hebrew text also omits פִּי), or as “the encampment” (cf. lxx, Ex. 14:2, 9), as though the Hebrew text did not use the name (Heb. פִּי הַחִירֹת), but rather a word meaning encampment.

PIJADE, MOŠA (1890–1957), Yugoslav revolutionary and politician. Born in Belgrade, Pijade studied painting in Munich and Paris and returned to Belgrade as an art teacher. He joined the illegal Communist Party in 1920 and was imprisoned by the authorities the following year. On his release he continued his revolutionary activities and in 1925 was imprisoned for a further 14 years during which time he translated Marx's *Das Kapital*.

In 1940 Pijade was arrested for a third time but released shortly before the German invasion of Yugoslavia. Following the German conquest of Yugoslavia he organized the Communist partisans and set out the tasks of the People's Liberation Committee in a document known as the *Regulations of Foča*. Pijade was one of the closest associates of the Yugoslav leader Josip Broz Tito, and when the latter came to power after the liberation of Yugoslavia, Pijade was made president of the Serbian Republic, chairman of the Yugoslav National Assembly, and a member of the political bureau of the party central committee. He was helpful in allowing the departure of Jews to Israel with all their personal property and gave occasional advice to the leaders of the Federation of Jewish Communities.

PIKE, LIPMAN EMANUEL (Lip); “The Iron Batter”; 1845–1893), U.S. baseball player, considered the first professional baseball player for openly receiving money to play. Pike was born in Manhattan, the second of five children to Emanuel, a haberdasher of Dutch origin, and Jane. The family moved to Brooklyn, where Pike and his siblings became engrossed in the newly invented American game of baseball. One week after his bar mitzvah in 1858, Pike appeared in a box score playing first base, while his older brother Boaz played shortstop. The Pike brothers played for various teams, including the renowned Brooklyn Atlantics. In 1866, the Philadelphia Athletics offered the 21-year-old Pike \$20 per week to play third base. It exposed for the first time the widespread though hushed up system of paying supposedly amateur players to play baseball, thereby legitimizing the practice of play for pay.

Pike played from 1866 to 1881, switching teams often throughout his career: he also played for Irvington, New Jersey (1867), New York Mutuals (1867–68), Brooklyn Atlantics (1869–70), Troy Haymakers (1871), Lord Baltimores (1872–73), Hartford Dark Blues (1874), St. Louis Brown Stockings (1875–76), Cincinnati Reds (1877–78), Providence Grays (1878), Worcester Ruby Legs (1881) for five games, and one last appearance with the New York Metropolitan of the American Association for one game on July 28, 1887, at the age of 42. While no statistical records exist of his career through 1870, Pike appeared in 425 National Association and National League games beginning in 1871, hitting .321 with a .465 slugging average. Standing only 5' 8" and weighing 158 pounds, Pike was known as both a powerful batter and the fastest base runner of his time. He led the league in home runs four times, including 1872, when his six home runs accounted for a sixth of the National Association's 35 home runs. So fast was Pike that on August 16, 1873, at Baltimore's Newington Park, he raced in a 100-yard dash against a horse named Clarence, and won. After his career was over, Pike followed his father and became a haberdasher in Brooklyn, but he remained involved in the game as a part-time umpire. One of his younger brothers, Jay (Jacob), played one game in the major leagues on August 27, 1877, and became the first Jewish umpire when he officiated in 1875 in the National Association.

[Elli Wohlgeleerter (2nd ed.)]

PIKKU'AH NEFESH (Heb. פִּקְּוּאָה נֶפֶשׁ; “regard for human life”), the rabbinical term applied to the duty to save human life in a situation in which it is imperiled. The danger to life may be due to a grave state of illness or other direct peril (*sakkanat nefashot*), or indirectly, to a condition of health which, though not serious, might deteriorate and consequently imperil life (*safek sakkanat nefashot*). *Pikku'ah nefesh* is a biblical injunction derived from the verse “Neither shalt thou stand idly by the blood of thy neighbor” (Lev. 19:16), and according to the Talmud it supersedes even the Sabbath laws (*pikku'ah nefesh doheh et ha-Shabbat*; Yoma 85a). One should be more particular about matters concerning danger to health and life than about ritual observances (Ḥul 10a). The strict rules of hygiene codified in the Shulḥan Arukh center around the principle of *pikku'ah nefesh* (YD 116). The rabbis interpreted the verse “Ye shall therefore keep my statutes and my ordinances which if a man do he shall live by them” (Lev. 18:5), that man shall “live” by these commandments, and not die as a result of observing them (Yoma 85b; Sanh. 74a).

The Talmud (BM 62a) discusses the problem of an individual faced with the choice of saving his own life or that of his companion, and mentions the example of two men in a desert with a supply of water sufficient for one only. Although *Ben Peturah advocated that neither should attempt to save his own life at the expense of the other but that both share the water, R. *Akiva, whose opinion prevailed, ruled that one should save one's own life and not share the water. Only when faced with a choice between death and committing idolatry,

unlawful sexual intercourse, or murder is martyrdom to be preferred (Sanh. 74a–b). One must also sacrifice one's life rather than submit to what may be taken for a renunciation of faith through the violation of any religious law in public (Sanh. 74a–b; Sh. Ar., YD 157). In all other cases, the rule of *pikku'ah nefesh* takes precedence (Sanh. 74a–b; Maim., *Iggeret ha-Shemad* 3).

The rule that one may profane one Sabbath in order to save the life of a person and enable him subsequently to observe many others (Yoma 85b) is inferred by the rabbis from the verse "The children of Israel shall keep the Sabbath to observe the Sabbath" (Ex. 31:16). Thus, on the Sabbath (or a festival), every type of medical treatment must be accorded to a dangerously ill person, to the extent of even putting out the light to help him sleep (Shab. 2:5; Sh. Ar., OH 278). Equal efforts must be made even where there is only a possibility of danger to life (*safek sakkanat nefashot*, Yoma 8:6; *ibid.* 84b). Only in cases of minor illnesses or physical discomforts should violations of the Sabbath be kept to the minimum; if possible a non-Jew should perform these duties (Sh. Ar., OH 328:17). In all other instances, the medical treatment should be administered by a Jew, and those who are assiduous in their help, comfort, and work for the sick on the Sabbath, are deemed worthy of the highest praise (*ibid.*, 328:12–13). If a dangerously ill person is in need of food on the Sabbath, one should slaughter animals and prepare them according to the dietary laws, rather than feed him ritually forbidden food (*ibid.*, 328:14). If, however, it is deemed necessary for the recovery of the patient that he eat forbidden food, he is allowed to do so (*ibid.*, 328). A woman in confinement is considered dangerously ill for a period of three days after delivery. Should one of these days be a Sabbath, everything possible must be done to ease her pain and lessen her discomfort, including the kindling of a fire to warm her (Maim. Yad, Shabbat 2:13–14; Sh. Ar., OH 330:1, 4–6). A sick person is forbidden to fast on the *Day of Atonement if it is thought that this would seriously endanger his recovery. Moreover, even a healthy person seized by a fit of "ravenous hunger" which causes faintness (*bulmos*), must be fed on the Day of Atonement with whatever food is available (including ritually forbidden food (Sh. Ar., OH 618:9)) until he recovers (Yoma 8:6; Sh. Ar., OH 618).

PILCH, JUDAH (1902–1986), U.S. Jewish educator. Born in the Ukraine, he received a traditional Jewish education in Europe and his ordination as a rabbi in Turkey. He went to the United States in 1928. He received his M.A. degree from Columbia University and his Ph.D. at Dropsie College. He was on the faculty of the College of Jewish Studies at Chicago from 1929 to 1939; for the following five years he was director of the Jewish Education Association in Rochester, N.Y. After serving with the Jewish Education Committee of New York City and the Jewish Education Association of Essex County, N.J., in 1949 Pilch became associated with the American Association for Jewish Education (now the Jewish Educational

Services of North America), and from 1952 to 1960 was the executive director. In 1960 he became the founding head of the Association's National Curriculum Research Institute. After his retirement, Pilch moved to Los Angeles, where he was on the faculty of the Institute of Religion at HUC/JIR.

In the early 1950s Pilch organized and led the first Jewish teachers' seminar to Israel. He was president of the National Council for Jewish Education (1945–1950), vice president of the Religious Education Association of the U.S. and Canada in 1953, and president of the National Conference for Jewish Social Service (1954–55). He was vice president of the Histadrut Ivrit (1934–38). Without compromising his devotion to Hebrew, he was also interested in Yiddish literature and served as dean of the Graduate Division of Herzlia–Jewish Teachers' Seminary in New York.

Pilch was a prolific writer in Hebrew, English, and Yiddish. Among his works are *Jewish Life in Our Times* (1943), *Teaching Modern Jewish History* (1948), *Between Two Generations: Selected Essays* (1977), and *The Weak Against The Strong* (1973). He edited the Jewish education department of the *Encyclopaedia Judaica*.

Pilch was widely recognized as one of the great leaders of Jewish education in the United States, belonging in the same echelon as Alexander *Dushkin, Israel *Chipkin, and Samson *Benderly. Like them, he combined a European, traditional Jewish education with Western culture, and expertise as a teacher and administrator. He brought to his positions and work an extraordinary single-minded devotion to the furtherance of Jewish education; he sought to pioneer in methodology and stimulated the preparation of newly designed textbooks and the exploration of teaching through technological advances.

PILCHIK, ELY EMANUEL (1913–2003), U.S. Reform rabbi. Pilchik was born in Baranowicz, Poland, and immigrated to the United States in 1920. He earned a B.A. from the University of Cincinnati in 1935 and was ordained and received his M.H.L. from *Hebrew Union College in 1939. HUC-JIR awarded him an honorary D.D. degree in 1964. In 1939, Pilchik joined the faculty of the University of Maryland, where he established a *Hillel Foundation, serving as its first director. He became assistant rabbi of Har Sinai Temple in Baltimore, Maryland (1940–42), before being appointed rabbi of Temple Israel in Tulsa, Oklahoma (1942–47), where his tenure was interrupted by service overseas as a chaplain in the United States Navy during World War II (1944–46). In 1947, Pilchik assumed the pulpit of Temple B'nai Jeshurun in Newark, New Jersey, becoming emeritus in 1981. He quickly became a regional Jewish leader, serving as president of the Essex County, N.J., Synagogue Council (1949–51) and Board of Rabbis (1951–52), as well as of the New Jersey Board of Rabbis (1955–57) and of the Association of Reform Rabbis of New York (1958–59). In the general community, he was appointed by the governor to serve on the New Jersey State Council on Economic Opportu-

nity and served as chairman of the Newark Citizen's Housing Committee. On a national level, Pilchik was president of the Jewish Book Council of America (1954–58), and in the Reform movement, a member of the Executive Board of the *Central Conference of American Rabbis (1951–53) and of the Board of Governors of HUC-JIR. In 1977, he was elected president of the CCAAR (1977–79). Pilchik is the author of *Hillel* (1951), *Maimonides' Creed* (1952), and *Duties of the Heart* (1953).

[Bezalel Gordon (2nd ed.)]

PILGRIMAGE. In Hebrew the term *aliyah* (lit. “going up”) has been used since ancient times for pilgrimages to Jerusalem on the three festivals known as *shalosh regalim). The Torah prescribes that all males must go up to Jerusalem “three times a year” on the three festivals – Passover, Shavuot, and Sukkot (Ex. 23:17; 34:23; Deut. 16:16; 11 Chron. 8:13).

For pilgrimages in the biblical period see *Passover; *Shavuot; and *Sukkot.

Second Temple Period

Hundreds of thousands of pilgrims from within Erez Israel, as well as from the Diaspora, streamed to the Temple at each of the three festivals. The pilgrimage affected the life of every Jew, who might have to prepare for the occasion, and the journey and the accompanying sacrifices involved a not inconsiderable financial outlay. The inspiration derived from “the sojourn in the Temple courts,” and from attendance at the rabbinical academies in Jerusalem, remained a powerful stimulus to the pilgrim after his return: “His heart prompts him to study Torah” (TJ, Suk. 5:1, 55a). Many of the new trends in Jewish spiritual life were ventilated in Jerusalem, and the pilgrim served as the vehicle for disseminating the ideas that were in constant ferment during the period. The pilgrimage had a considerable influence upon the life of the capital in a number of spheres; in the social sphere, from the presence there of Jews from every part of the Diaspora, and in the economic, from the vast sums spent by the thousands of pilgrims both for their own needs and on charity. It also had a national-political influence. The *aliyah* from all parts of Erez Israel and the Diaspora strengthened the consciousness of national and social solidarity (Jos., Ant. 4:203–4). This national consciousness reached a new peak with the presence of the throngs of pilgrims in Jerusalem and made them even more sensitive to the humiliation entailed in their subjection to a foreign yoke. As a result of this sensitivity disorders and revolts were of frequent occurrence in Jerusalem during the festivals (Jos., Wars 5:243–4; Ant. 13:337–9).

The biblical injunction on the subject states: “Three times in the year shall all thy males appear before the Lord God” (Ex. 23:17; 34:23, Deut. 16:16). These passages were apparently not construed as mandatory, requiring *aliyah* thrice yearly, but as meaning that on these occasions it was a meritorious act to make the pilgrimage and in so doing offer up sacrifices, “and none shall appear before me empty” (*ibid.*). The tannaitic sources speak of the obligation of *aliyah le-regel* but not of a

commandment to go up on every festival (Ḥag. 1:1, 6a). In any event it is clear that not all the male population of Erez Israel, and certainly not of the Diaspora, made the pilgrimage three times yearly. Although both from the Talmud (Pes. 8b) and from Josephus (Wars 2:515) one might infer that the whole population of a city would participate in the pilgrimage, it was not general that the cities, even those near to Jerusalem, would be entirely emptied as a consequence of their Jewish population going on pilgrimage. On the other hand, there can be no doubt that a considerable number went up, especially from Judea (Wars 2:43). There is ample evidence of *aliyah le-regel* from Galilee, and it may be assumed that the number who came from the Diaspora was not as great as those from Erez Israel. Philo mentions that “countless multitudes from countless cities come to the Temple at every festival, some by land, and others by sea, from east and west and north and south” (Spec. 1:69). Sources in the Talmud, Josephus, and the New Testament yield a long list of places, including Babylonia, Persia, Media, Alexandria, Cyrenaica, Ethiopia, Syria, Pontus, Asia, Tarsus, Phrygia, Pamphylia, and Rome, whose residents were to be found in Jerusalem during the festivals (ARN², 27, 55; Meg. 26a; Jos., Ant. 17:26; Acts 2:9–10). Both the inscription of Theodotus found in Jerusalem and the literary sources indicate that sometimes the inhabitants of a particular city would establish synagogues in Jerusalem and hospices for the pilgrims who required such facilities (Tosef., Meg. 3:6; Acts 6:9; M. Schwabe, in *Sefer Yerushalayim*, ed. by M. Avi-Yonah, 1 (1956), 362).

The Pilgrimage

The pilgrims often traveled in caravans which mustered in the cities of Erez Israel and the Diaspora. The ascent of the joyful throng of celebrants to Jerusalem is already mentioned in a number of Psalms, such as Psalms 42, 84, and 122, which are songs of the pilgrim companies, and it is reflected in many rabbinic passages (cf. Lam. R. 1:17, no. 52). The procession on the occasion of the first fruits of Shavuot was particularly impressive: “Those who lived near brought fresh figs and grapes, but those from a distance brought dried figs and raisins. An ox with horns bedecked with gold and with an olive crown on its head led the way. The flute was played before them until they were near Jerusalem” (Bik. 3:3). Josephus relates that the pilgrims from Babylonia used to assemble in *Nehardea and *Nisibis and accompany the convoys transporting the annual half-*shekel* Temple dues on the journey to Jerusalem (Ant. 18:311–2). Women also took part, the biblical passage “all thy males shall appear” being understood merely as referring only to the duty of the men who alone were obliged to bring the obligatory sacrifices (Ant. 11:109; Luke 2:41–43).

The Rituals

The pilgrims arrived in Jerusalem several days before the festival; this was especially true of those from the Diaspora who had to undergo purification for over a week from the defilement incurred in alien lands (Jos., Wars 1:229; 6:290). The essence of the pilgrimage was the entry of the individual, or the

group, into the Temple to worship there on the festivals, and the offering of the obligatory sacrifices enjoined in the precept that, “None shall appear before me empty.” The tannaitic tradition expounded that the celebrant was obliged to offer the pilgrim’s burnt offering, the festal offering which is counted as a peace offering, and the offering of rejoicing (Hag. 6b). The sacrifices were offered both on the first day or during subsequent days of the festival.

The Stay in Jerusalem

According to the *halakhah*, not only did the scriptural verse, “and in the morning you shall turn and go to your tent,” enjoined with regard to the Passover pilgrim, oblige him to remain overnight in Jerusalem, but “in the morning” was interpreted as the morning after the last day of the festival. The pilgrim was thus obliged to stop over for the entire Passover week, and for the eight days of Sukkot (Zev. 11:7 and 97a; Tosef. Hag. 1:5). The celebrants used to stay in the capital itself, or in the adjoining villages, or encamp in tents erected in the surrounding fields (Jos., Ant. 17:217; Wars 2:12). During their sojourn in Jerusalem the pilgrims engaged in study of the Torah and participated in the common festive meals at which they ate the permitted sacrificial food – the peace offering, as well as the second tithe which had to be consumed in Jerusalem (Jos., Ant. 4:205). Greater leniency was applied to the law appertaining to ritual defilement during the festival, in order that the laws of ritual purity would not prevent social intercourse. Jerusalem was regarded as the common possession of the entire Jewish people, and householders in the capital were forbidden to take rent from the pilgrims, who however left them the hides of the sacrificial animals as a token of gratitude (Tosef., Ma’as Sh. 1:12 and 13; ARN¹ 35, 1 and 3). The sources indicate that a convivial atmosphere prevailed in the capital during the days of pilgrimages: “Nobody ever had occasion to say to his neighbor ‘I have been unable to find a stove for cooking the paschal meals in Jerusalem,’ or ‘I have been unable to find a bed to sleep in Jerusalem’” (ARN *ibid.*).

[Shmuel Safrai]

Post-Temple Period

Pilgrimages to Jerusalem continued after the destruction of the Temple (cf. Ned. 23a). However, the joy that previously characterized these events was now combined with sorrow. When the pilgrims encountered the site of the ruined Sanctuary they rended their garments as a sign of mourning and recited the verse, “Our holy and our beautiful house, where our fathers praised Thee, is burned with fire and all our pleasant things are laid waste” (Isa. 64:10; MK 26a). Some even abstained from meat and wine on the day they saw Jerusalem in its destruction (Shevu. 20a). The rabbis, commenting on the verse, “These things I remember, and pour out my soul within me” (Ps. 52:5), compared the pilgrimages before and after the destruction. Previously, the Jews went up to Jerusalem along well-kept roads, the trees forming a covering over their heads, and under the protection of a government committed to God. Now they went through thorny hedges, exposed to

the sun, and under the sovereignty of oppressive governments (Lam. R. 1:52). Nevertheless, the Jews continued their pilgrimages to the Temple site, and in 333 “the traveler of Bordeaux” described Jews pouring oil on a stone. In 392 Jerome related that Jews came to lament the destruction of the Temple, after paying for a permit to enter the Temple grounds (commentary on Zeph. 1:16). A fifth-century testimony reported a pilgrimage of over 100,000 Jews, made possible as a result of the sympathetic attitude of Athenais Eudocia, wife of the emperor Theodosius II.

These pilgrimages continued throughout the Middle Ages, although on many occasions the Jewish pilgrims were subject to taxes and discriminatory regulations which were enacted against them by the Christian or Muslim overlords of the holy places. The ninth-century pilgrimages of Rabbi *Ahimaaz the Elder, of Venosa, Italy, are well known. The Persian traveler Nāṣir Khosraw (1047) stated that he saw Jews from Roman lands (Byzantium) coming to visit their houses of worship. The testimony of a pilgrim from Babylonia, Phinehas ha-Kohen (c. 1030), has also survived.

After Erez Israel was conquered by the Muslims under Saladin (1187), the Jews were once again permitted to visit their holy places freely. Numerous pilgrims came from Damascus, Babylonia, and Egypt, and they remained in Jerusalem over Passover and Shavuot. Naḥmanides, in a letter to his son, wrote: “Many men and women from Damascus, Babylon, and their vicinities come to Jerusalem to see the site of the Holy Temple and to lament its destruction.” The commandment of pilgrimage was also a factor in motivating the journeys of *Benjamin of Tudela and *Pethahiah of Regensburg in the 12th century, and *Jacob b. Nethanel and Judah *Al-Ḥarizi in the 13th. In his writing, Benjamin referred to the Dome of the Rock, standing “opposite the place of the holy Temple which is occupied at present by [a church called] Templum Domini... In front of it you see the Western Wall, one of the walls which formed the ancient Temple... and all Jews go there to say their prayers near the wall of the courtyard.”

The number of pilgrims was greatly increased by the many exiles who settled in Turkish territory following the 1492 expulsion of the Jews from Spain. The tomb of Samuel the Prophet at Nabi Samwil (thought to be the biblical Ramah) was also a goal of their pilgrimages. Here they held annual celebrations similar to those which were instituted in Meron on *Lag Ba-Omer, a century later. In 1634, Gershom ben Eliezer Ha-Levi of Prague visited the Holy Land, and later recorded his experience in *Gelilot Erez Yisrael* (Prague, 1824⁴). The most famous pilgrimage made to the Holy Land by early ḥasidic leaders was that of *Naḥman of Bratslav. His visit (1798–99) left such a profound impression upon him that, when he later returned to Poland, he remarked, “Wherever I go, I am still in Erez Israel.”

In modern times, the pilgrimages most beneficial to the Holy Land were those of Sir Moses *Montefiore. He made his first visit in 1827, and returned in 1838, 1849, 1855, 1866, and 1875. He made his last pilgrimage when he was 91 years old,

and after each visit he intensified his financial support for the new *yishuv*. With the continuing development of the Jewish resettlement in Erez Israel and the improvement in the means of long-distance transportation, Jews continued in ever-increasing numbers to visit the Holy Land.

With the conclusion of the armistice agreement following the Israel War of Independence (1949), it was agreed between Jordan and Israel that talks would follow immediately to enable "free access to the holy places" in Jerusalem, and the "use of the Jewish cemetery on the Mount of Olives." However, nothing ever came of this and Jerusalem remained a divided city. This caused difficulties for pilgrims who desired to visit the shrines in both countries. While Jordan finally did make some arrangements for Christian pilgrims to enter or leave through one of the crossing points (the main one being the Mandelbaum Gate in Jerusalem), Jewish pilgrims were not allowed into Jordan at all. Most distressing to Jews was the denial of access to the Western Wall. The main goal of the pilgrims then became the traditional Tomb of David on Mount Zion, from where they viewed the Old City of Jerusalem. Following the Six-Day War and the reunification of Jerusalem, the Western Wall was again reopened to Jews and became a magnet of pilgrimage.

Christian Pilgrimages

Christian pilgrimages to Erez Israel became an established institution from the fourth century on and have continued almost uninterrupted to the present day. The reports of the pilgrims had a wide influence, stimulating religious piety and curiosity about the Holy Land. They also provide an important source of information for the history of Erez Israel, the political situation in various periods, its communities, sects, settlements, and social life. Despite its occasional anti-Jewish bias, the pilgrim literature also gives a general picture of Jewish settlement in Erez Israel, supplementing and augmenting the Jewish sources in many details.

HISTORY. Erez Israel became the Holy Land to Christians as the cradle of Christianity and because of its associations with the life of Jesus and the apostles. Nevertheless the Church never aspired to make Jerusalem the center of Christianity, and its symbolic significance was in its mystic-heavenly sense (see Gal. 4:24–26 and Rev. 21). The primacy of the mystical, heavenly Jerusalem in Christian thought on the one hand, and the concrete association of the Holy Land with the life and death of Jesus on the other, resulted in an ambivalent attitude to pilgrimages (see *Jerusalem, In Christianity). While popular piety and devotion naturally tended toward a veneration of the *holy places, many writers warned against the danger of a "carnal" and material misunderstanding of essentially spiritual realities. In fact, many early Church Fathers at first discouraged pilgrimage. Jerome declared that the gates of heaven were open to believers equally in Britain as Jerusalem (Ep. 58 *Ad Paulinum*). He mentions that St. Hilarion, who lived in the Holy Land for 50 years, prided himself on the fact that

he had visited the holy places only once. However the ardent wish of Christians to visit the Holy Land was eventually accepted by Jerome, who settled in a cave near Bethlehem. In practice pilgrimage was first stimulated under Constantine (306–337), with the announcement by his mother *Helena of the discovery of the cross in Jerusalem, and the erection by Constantine of the magnificent rotunda at the traditional sepulcher of Jesus with an adjacent basilica (the *martyrium*). Christians thereupon readily identified other places mentioned in the New Testament associated with Jesus and the apostles. The sites were immediately sanctified, and shrines or churches built near them (cf. E. Robinson, *Biblical Researches in Palestine* [1841], 371). Some of these sites contained holy relics which also attracted an increasing stream of pilgrims, interrupted only by political insecurity or pestilence, and reaching huge proportions in the Middle Ages. The *Crusades were preeminently a pilgrimage of armies, aimed at liberating the holy places from the Muslims, whatever their accompanying political motives. The duty of caring for the protection and needs of pilgrims gave rise to the influential hospitaller orders, such as the Knights Templar and the Knights of Malta. In the later Middle Ages the religious factor diminished, to be replaced increasingly by commercial motives. Even in the ninth and tenth centuries the Muslim rulers had encouraged trade there, and Jerusalem became a large entrepôt between East and West. One result of the trading contacts between Europe and the East was the extension of the maritime power of the Italian republics, especially Venice and Genoa, during the Fourth Crusade (1202–04).

CHARACTER OF THE PILGRIMAGES. Jerusalem and Bethlehem remained the main centers of Christian pilgrimage, but there were others, especially in Galilee. However places in Galilee such as Nazareth, Capernaum, Magdala, or Kefar Kanna are not mentioned by early pilgrims, such as the Bordeaux pilgrim whose *Itinerarium Burdigalense* (written before 333) is the first pilgrim guide extant. This was probably because Galilee then still had a mainly Jewish population.

The chief incentive to pilgrimage remained religious. Pilgrimages were organized to gain remission of sins, as set penances, in fulfillment of vows, for atonements for crimes, for cures, and for the acquisition of relics. However they also fulfilled other purposes: the desire to see foreign lands, people and customs, love of adventure, and commercial profit. Thus, besides the thousands of the pious, the pilgrim movement attracted a bevy of adventurers, sick persons, and paupers. The journey of the pilgrim was fraught with danger. He faced local wars, attack by pirates or brigands, epidemics, bad sanitation, or arbitrary imprisonment by the local authority. In Venice in the 15th century he was given facilities to make his will before embarking. The departure of a pilgrim also posed a problem for the Church. It meant disruption of family life and the absence of a breadwinner or worker, while the conditions of the journey frequently brought a lowering of moral standards. The Church therefore insisted that pilgrims should obtain written

authorizations from the bishop or abbot for their journey. If he met the Church's requirements, the pilgrim received its blessing and assistance.

THE LITERATURE. Once home, the pilgrim reported the glories of the holy places and the wonders he had seen and heard. These accounts circulated both by word of mouth and in written records or itineraries for the guidance of future pilgrims. Although until the end of the Middle Ages the oral accounts were predominant, as the vast majority of pilgrims were uneducated, a growing number of travelers recorded their journey and impressions. Roehricht's bibliography of Palestinian in the main European languages lists 38 authors between the years 333 and 1000, 517 up to the year 1500, and nearly 2,000 between the years 1800 and 1878. Subsequently there has been an inordinate increase of such records.

The record usually followed a set scheme, providing a description of the Holy Land and the spiritual experiences of the pilgrims for those who had never been there. From the end of the 17th century, much was written for the purposes of religious propaganda. The authors frequently catered to their audience and supplemented their descriptions with embellishments and imaginary adventures, where reality and legend intermingle. However, many present an accurate if limited record, often closely resembling one another. The records fall into several different categories. Some are on-the-spot accounts of events as they occurred. Many were written down after the pilgrim's return, often on the basis of notes taken on the journey, which contained details omitted from his book. A large number were written on the basis of previous works, including many passages merely copied from them or with deliberate variations. The German cleric Ludolf von Suchem (1336–41) states that he did not see all that he wrote with his own eyes, but drew on ancient history books. *The Travels of Sir John Mandeville* (in the Holy Land, 1336) is a collection of earlier sources. Some writers quote their sources, and some copy them without acknowledgment. A number, especially in the early period, related their accounts to a third person who recorded them in turn. The account of the French bishop Arculfus (670) was recorded by an abbot in Iona, off Scotland.

Educated pilgrims and scholars later made independent investigations, instead of accepting everything they were told. Many, who reveal wide learning, relate the old traditions, but with reservations. Fynes Moryson (16th century), although criticizing the credibility of the tales told by the monks of the Latin monastery, was still deeply impressed and moved by what he saw. The pioneer of modern researches was the U.S. theologian, philologist, and geographer Edward Robinson (1838), who voiced a much stronger and well-founded criticism of the credulity accorded by the pilgrims down the ages, who had always seen the holy places through the eyes of their monastic cicerones. He considered that many sites had no historical basis and even contradicted the evidence of the New Testament. He also cast doubt on the traditions associated with Eusebius and Jerome, from which others had origi-

nated. Robinson therefore carried out his pioneer researches independently of the Christian orders in Erez Israel.

[Yvonne Glikson]

Information on the Jews

Much of the information available on Jewish life in the Holy Land in earlier periods comes from the Christian pilgrim accounts. Thus, Jacobus de Verona (1335), an Augustinian friar, speaks of Jewish guides. Ludolf von Suchem states that Jews, but not Christians, were allowed on payment to enter the cave of Machpelah in Hebron, where the Patriarchs are buried. An anonymous Englishman (1345) tells of Jews living in caves near Jerusalem. Arnold von Harff, a German nobleman from Erft, though as prejudiced against the Jews as most of the early pilgrims, showed a more intelligent interest in them. Among "the very many" Jews in Jerusalem, with some of whom he entered into learned discussion, he found several natives of Lombardy knowledgeable about Christianity, three from Germany, and also two monks who had converted to Judaism. He learned some Hebrew, and his book reproduces the *alef-bet* and also a number of words and phrases in common use, from his transliterations of which it is clear that he learned them from people of central European origin. Pierre Belon (1547), a French physician of Mans, saw in Galilee Jews engaged in fishing; and he reports on newly established villages, where, he notes, they were converting wasteland into fertile areas.

Much is reported about Safed as a flourishing Jewish center. A Franciscan from Spain (1553–55), whose name is not known, found a Jewish population of 8,000–10,000 there. William Biddulph (1600), an English priest, mentions the Hebrew that was taught there (as well as in Salonika).

John Sanderson (1601), an English merchant, traveled with a Jewish merchant who hid his money in his clothes, some 12,000 ducats, of which 3,000 was for charity and for books in the Holy Land. The Franciscan Eugenius Roger (1629–34), who estimates 15,000 Jews in the country, including 4,000 in Jerusalem, divides them into two groups: the old-established Oriental Jews and the newcomers from Europe, particularly Spain, Germany, and Italy. There was little intermarriage between the two groups, the first being particularly doubtful of the authenticity of the Jewishness of those from Spain, "for they had been baptized, had for long lived as Christians and ate foods and drank drinks forbidden by the Law of Moses." Other communal troubles are reported by the Jesuit Michael Nau, who visited the land in 1665 and again in 1674. He found the Jews divided into the Rabbanites, who accepted the Talmud, and the Karaites and the Samaritans, who accepted only the Bible. Each complained to him about the other: "They hate one another with an unparalleled hatred. But there is one thing about which they must agree in Jerusalem, that is, that they must pay heavily to the Turks for the right to remain there."

A vivid description of the unhappy condition of the Jews in Jerusalem is given by Chateaubriand (1806–07): "isolated from the other inhabitants, abandoned to every kind

of shame...., he suffers every humiliation without crying out against it, without a sound turns his cheek to him who strikes him,” and Chateaubriand adds sympathetically that there is nothing more remarkable in the history of the nations than the survival of the Jews – a miracle “even in the eyes of a *philosophe*.”

Another sympathetic observer is Alfonse de Lamartine (1832–33) who writes: “This land, if settled by a new Jewish people... is destined once again to become the Promised Land... if He who watches from above will return the people to it and give them the political privileges of peace and security.” Robert Curzon (1834) states: “It is noteworthy that the Jews who are born in Jerusalem are completely different from those we see in Europe. Here they are of a blond race, light in movement, and, especially, refined in their conduct.” At the same time John Lloyd Stephens (1835) tells of the fear under which the Jews lived in Hebron and Safed.

Edward Robinson remarks about Christian missionary activity among the Jews: “So far the efforts of the English mission have had only the most meager success.” He also describes the devastation wrought by the great earthquake of 1837. Another visitor was William Bartlett (1842 and 1853) who gave exact descriptions of Jerusalem.

William Holt Yates (1843), London physician and Orientalist, exemplifies an attitude toward the country radically different from the pilgrims of the earlier centuries. He thinks that Palestine (and Asia Minor and Syria) would benefit by the mingling of the “natives” with Britishers, especially Scotsmen, and with Jews: “Although the Jews as a people have never particularly distinguished themselves in literature and science, they nevertheless have excellent qualities, if only these were properly recognized...” William Francis Lynch (1848), the U.S. naval officer celebrated for his account of his voyage of discovery to the River Jordan and Dead Sea, saw the only hope for Palestine in the dissolution of the degenerate Ottoman Empire and the settlement of the Jews.

Active in assisting Jews to settle was James *Finn (1853–56), who as British consul in Jerusalem made himself their protector. His own book and his consular reports are prime sources for knowledge of conditions. Among other events he describes the blood libel raised against the Jews.

Henry Baker Tristram (1863–64), English theologian, fellow of the Royal Society, and among the founders of the Palestine Exploration Fund, finds place in his important works on the flora and fauna of Palestine for descriptions of the Jews. But the most interesting of all for that period is the diplomat and statesman Laurence *Oliphant (1883–87), who gives a first hand account of the earliest pioneers of the modern resettlement, whom he greatly assisted.

Subsequently there are accounts of historians, theologians, journalists, surveyors, and archaeologists, from all over Europe and the United States, reference to which may be found among the records of the various scientific institutions. Visitors of literary fame who wrote of their impressions

include W.M. Thackeray, Mark Twain, George Moore, G.K. Chesterton, Pierre Loti, and Herman Melville.

The flood of books by pilgrims of all kinds and all intentions and pretensions in recent times is overwhelming. As with the earlier pilgrims, the accounts of many of them are colored by their preconceived opinions. Other contemporary writers convey their experiences in the form of novels, detective stories, and thrillers, experiences which are often observed more authentically than in more solemn works.

PILGRIM FESTIVALS (Heb. שְׁלוֹשׁ רִגְלִים, “three pilgrim festivals”), collective term for the three festivals of *Passover, *Shavuot, and *Sukkot. The duty of pilgrimage on these three occasions stems from the biblical injunction, “Three times a year shall all thy males appear before the Lord thy God in the place which He shall choose, in the feast of unleavened bread, and in the feast of weeks, and in the feast of tabernacles” (Deut. 16:16; and Ex. 23:17 where the festivals are not specified). According to the Mishnah, “All are under obligation to appear, excepting a deaf-mute, an imbecile, a child, one of doubtful sex, one of double sex, women, slaves that have not been freed, a man that is lame or blind or sick or aged, and one that cannot go up [to Jerusalem] on his feet” (Ḥag 1:1). The importance of the duty is stressed by Joshua b. Levi who stated, “all who perform the duty of pilgrimage are considered as if they had received the *Shekhinah” (TJ, Ḥag, 1:1, 76a). Besides the festive offerings made on these occasions (Lev. 23), it was also enjoined that “they shall not appear before the Lord empty. Every man shall give as he is able” (Deut. 16:16–17). The Mishnah ruled that the minimum value of each individual offering was to be three pieces of silver (Ḥag. 1:2).

In the times of the judges, the pilgrimages were made to Shiloh (1 Sam. 1:3) and, after the construction of the Temple, to Jerusalem (1 Kings 8:65; 11 Chron. 7:8–9). *Jeroboam, king of the northern kingdom of Israel, considered them such a threat to his authority that he established rival shrines at Dan

and Beth-El (1 Kings 12:26–33). After the return from Babylonia, Nehemiah reinstated the practice of pilgrimage to Jerusalem on the festival of Sukkot (Neh. 8:15). Both Josephus (Wars 6:422–7) and the Tosefta (Pes. 4:3; also Pes. 64b) comment upon the large number of pilgrims to the Second Temple during Passover. According to the Mishnah, the fact that there was room for them all was a miracle (Avot 5:5). It seems that even Diaspora Jewry made the pilgrimage (Ta'an. 28a), and it was ruled that the prayer for rain should not be recited until 15 days after the conclusion of Sukkot in order to allow the last of the pilgrims to return to the Euphrates (Ta'an. 1:3).

In modern times, the tradition has been continued by individuals and groups from all over the country going up to Jerusalem, especially during the intermediate days of Sukkot. The center of pilgrimage is the *Western ("Wailing") Wall, but when access to it was barred pilgrims went to Mount Zion.

PILICHOWSKI, LEOPOLD (1869–1933), Polish painter. Pilichowski left his native village of Zadzin for nearby Lodz, where he was helped by David *Frischmann, the Hebrew writer, who made it possible for Pilichowski to study in Munich. Later, he lived in Paris for a number of years, and in 1914 he moved to London. Pilichowski became a successful portraitist. He was filled with socialist and Zionist sentiments, and struggled to give pictorial expression to both. He painted the exploited wool dyers of Lodz, and the weary shopkeepers and artisans he met in London's Whitechapel. Many of his large pictures were crowded with pious Jews in a variety of moods and postures. His huge painting of *The Opening of the Hebrew University in Jerusalem* in 1925 has been frequently reproduced. Among the Jewish personalities he portrayed were *Bialik, *Einstein, Aḥad *Ha-Am, *Nordau, and *Weizmann.

[Alfred Werner]

PILLAR (Heb. עַמּוּד; from the root *ʿmd*, "to stand"), a column that stands perpendicular to the ground and generally serves to support the beams of a roof. In this article no distinction will be made between "pillar," "column," and "post." The pillar is used in construction in three ways (see *Architecture): (1) as a functional element in construction to support a large ceiling; (2) to emphasize an ornate door at the front of a building, or to emphasize the outline of a building; and sometimes (3) to take the place of a doorpost and support a massive lintel. Another type of support performing the same functions is the pilaster which does not stand free but is attached to and stands out from the wall. There is another type of pillar that stands alone and is not connected with any other structure; this type of pillar was designed to attract attention and to serve as a place around which a crowd could gather (11 Kings 11: 14).

Pillars (posts) occupied an important place in the structure of the Tabernacle (Ex. 26–27). The pillars (posts) used in the Tabernacle were constructed of wood. During the period of the monarchy, pillars were used in palaces and the Temple.

Halls are mentioned which contained rows of pillars (1 Kings 7:6); pillars which served to support the roof; the symbolic pillars of Jachin and Boaz (1 Kings 7:21; 11 Chron. 3:17); and copper pillars which stood at the entrance to the Temple (11 Kings 7:15, 20, 22). Pillars that were functional elements in construction are mentioned in the story of Samson, who brought down the middle pillars of the palace of Dagon and in this way destroyed the entire building (Judg. 16:29).

Pillars were introduced into the Near East with the first experiments in enlarging covered structures. In Egypt they were first used as supports for roofing in the middle of the third millennium B.C.E. As early as this, pillars served not only as supports but also as ornaments of buildings, or as ornaments in themselves. In Mesopotamia pillars began to be used in the middle of the second millennium B.C.E.

Remains of pillars uncovered in various archaeological excavations in Erez Israel and the discovery of plans of various buildings have revealed much about the function of pillars in ancient architecture. In a large structure at Ai dating to the early Canaanite period a row of pillar bases was discovered in one hall, which passed through the center of a long building. The function of these pillars was to help support the beams of the roof. In general, builders saw to it that the pillars inside buildings, whether of wood or stone, should be separated from one another in order to permit free passage among them. The pillars were set up in a place where they would not hide the inside of the structure from the entrance. In most cases, only the bases of the pillars, which could have served as foundations for both stone and wooden pillars, have been found in archaeological excavations. The pillars were sometimes made from one block, but generally from several stones placed one on top of the other. The use of pillars as supports for beamed ceilings is common also in the late Canaanite period. In one of the buildings discovered at Taanach a pillar was set up in the middle of a large area that could not be beamed from wall to wall, thereby shortening the distance between walls and making it possible to place short, strong beams between the pillar and the wall in order to build a roof over this area.

The use of pillars in the construction of houses and other types of buildings was widespread in the Israelite period. Buildings from this period have been found that are divided internally into four sections: three long sections that lie side by side forming an almost perfect square, and a fourth section, of approximately the same size, running across their ends. The long rooms were sometimes divided from one another by solid walls, but generally by rows of pillars. It appears that of the long rooms, the middle one was uncovered, being a type of court lined on either side by rows of wooden or stone pillars. The roofs of the two outer rooms were supported by the outside walls and the two rows of pillars that surrounded the court. These structures are common in Tell en-Naṣbeh, Tell Qasila, and other places. Larger structures of this type were found in Hazor. Another use of pillars inside a building was discovered in the structures of the stables of Megiddo in one of the Israelite strata. In the large network of stables, stone

pillars arranged in rows at equal distances from one another were discovered. In each space between the pillars a water trough was discovered, and on the pillar itself a hole for tying a horse. These pillars had a threefold function; to support the roof, to serve as a place for harnessing a horse, and to divide the building into compartments for individual horses.

Square stone columns and pillars bearing “proto-Ionian” capitals are characteristic of the elaborate structures of the Israelite period. These capitals are decorated with a bas-relief of a double coil emanating from a central triangle. Discovered in strata from the beginning of the Israelite period in Jerusalem, Megiddo, Samaria, Ramat Raḥel, and Hazor, these pillars served as posts of gates. In addition to actual physical pillars, the Bible speaks of the *pillar of cloud and the pillar of fire that accompanied the Israelites during their journey through the desert (Ex. 13:22). The pillar of cloud is also described as standing at the door of the Tabernacle (Deut. 31:15). Metaphorically, in the poetic sections of the Bible, the heavens are described as standing on pillars (Job 26:11). In a poetic manner, the pillar is used metaphorically in the descriptions of the parts of the human body: “His legs are as pillars of marble set upon sockets of fine gold” (Song 5:15).

In the fifth and fourth centuries B.C.E., under the Persian rule, with the penetration of Greek influences into the Middle East generally and Erez Israel in particular, many elements of classical architecture found their way into the local styles. Among these elements, the pillar holds an important place as a functional element in the structure of building or as ornamentation. Pillars appear both in private and public buildings, and also in tombs. In Erez Israel pillars and capitals of different styles were in use simultaneously; for example an ancient specimen of a Doric pillar remained on a mural inside a Hellenistic tomb in Marissa. In Erez Israel remains of pillars from the beginning of the Hellenistic era are rare. From the Roman period on, Hellenistic architecture spread greatly. During this period, particularly in the reign of Herod (37–4 B.C.E.), much building on the part of the king took place in Erez Israel, almost all of which included elements of Roman architecture. In order to raise the level of the Temple Mount, Herod erected rows of large square pillars, remains of which exist underground southeast of the Temple Mount at the site known today as “Solomon’s Stables.” Examples of smooth monolithic pillars stand in the “colonnaded street” in Samaria. These pillars stand on square bases and their capitals seem to have been Corinthian. Corinthian pillars and capitals were set up by Herod in Herodium and in Masada in the northern palace. In this palace the pillars are not monolithic but are built in sections (drums) and covered with stucco intended to give the effect of marble. With the exception of the Temple and other stately buildings in Jerusalem, large pillars were not widespread in the country, as they were in other lands of the Roman Empire, large monumental structures being uncommon in Erez Israel.

The use of pillars was more common in tombs of the Second Temple period. They are found in the tombs of the

Sanhedrin and the tombs of the sons of Hezir in the Valley of Kidron in Jerusalem. In these places the pillars, like the whole tomb, are hewn out of rock. This style was also widespread in many other places both in the Judean Hills and Galilee, for example, in the cemetery in Bet She’arim. A different use was made of columns and pillars in “Absalom’s Tomb” and in the “Tomb of Zechariah” in the Valley of Kidron, both monumental tombs from the time of the Second Temple. These monuments are partly or wholly hewn from the living rock and are cube-shaped, and their facades are beautified by half pillars and columns cut out of the rock. The capitals of the pillars in these two monuments are Ionic.

With the erection of synagogues in Galilee and Judea in the third and fourth centuries C.E., a mixture of styles in architecture came into use. The pillars, like the carvings and other decorations of the synagogue, were ornamented in a mixture of styles – an Oriental style that was the result of Persian influence, and a late Hellenistic style. This is the case with the capitals and other decorations of the synagogues of Capernaum, Kefar Baram, Chorazin, and others. In these places there are capitals in a number of styles, chiefly Ionic and Corinthian, used together in various parts of the structure. Worthy of mention are the widespread corner pillars in these early synagogues. In cross-section the pillars are heart-shaped and their function is to emphasize the corners of the rows of pillars. The synagogue pillars had two functions – to beautify the appearance of the portico and to support the slanted roof inside. In the synagogues in Galilee there were usually two rows of pillars: those of the halls are large and stand on square bases, while those of the upper (women’s) galleries on the second floors are small and narrower. These are found in Kefar Baram, Chorazin, Capernaum, and other sites. While the interiors of the synagogues were decorated with columns, the facades of the early synagogues were decorated with pillars protruding from the walls, such as those found in Capernaum, Chorazin, Kefar Baram, and other places.

This mode of decoration was a continuation of the system of building of the Herodian era and is found on the monument erected over the cave of Machpelah in Hebron. It appears that the decorations with which the cave of Machpelah was adorned are a return to the motif that decorated the Temple Mount, though that was on a much larger scale. Circular pillars, mostly with Corinthian capitals, also decorated the insides of later synagogues from the fifth and sixth centuries C.E., such as those found at Bet Alfa, Beth-Shean, on the wall of Tiberias, etc. The pillar, being a conspicuous element in the architecture of magnificent buildings, also served as decoration. Thus in many places pillars are portrayed in mosaics or paintings flanking the ark of the Law in the synagogues. They were found on the murals in Dura Europos, in the mosaics of Bet Alfa, Nirim, Beth-Shean, and elsewhere. Small marble pillars with delicate ornaments usually served to support the chancel screen before the ark. Such pillars were found out of their original places in a number of synagogues in Galilee and Judea. A series of pillars symbolizing the Temple appears on

the coins of Bar Kokhba. These are usually portrayed as four pillars apparently carrying the exedra in front of the facade of the Temple.

In the Jewish world it was not customary to erect a pillar as a monument in memory of a person or enterprise. Pillars were used primarily for decorating splendid houses and as functional elements in construction, chiefly in synagogue buildings. Technically, the pillars used for this purpose were either monoliths, as in Samaria or Capernaum, or were built of sections, as in the synagogues in Chorazin and Kefar Baram and in the late synagogues. Apparently the pillars built of sections were to some extent an expression of the economic situation of the Jewish population in the first centuries C.E., when materials were poorer than in previous eras. When Herod built his monuments in Caesarea, Tiberias, Jerusalem, and other places, he erected huge monolithic columns whose production and also transportation were much more costly than the production and transportation of column drums.

[Zé'ev Yeivin]

PILLAR OF CLOUD AND PILLAR OF FIRE. The earliest traditions of the Exodus from Egypt refer to the pillar of cloud by day and of fire by night, which accompanied the Children of Israel on their way through the desert (Ex. 13:21–22). The visible symbol of the presence of God caused a panic among the Egyptians as it cut them off from the Israelites (Ex. 14:19b, 24a), and continued to guide and protect the latter uninterruptedly throughout their wanderings. Later generations remembered it as a special sign of divine favor (cf. Ps. 78:14), no less important than the parting of the Sea of Reeds itself. Another early tradition connected the cloud with the *Tent of Meeting. According to the view attributed by critics to the author of the Elohist account (E), the pillar of cloud served not as a regular escort marching at the head of the people, but as an intermittent presence, descending from time to time to the entrance of the Tent of Meeting when God conversed with Moses (Ex. 33:9–10; Num. 11:25; 12:5). The priestly authors, on the other hand, taught that “a cloud of the Lord” (not a pillar) with a fiery appearance by night, permanently covered the Tabernacle from the day of its completion, lifting only to signal the breaking of camp for a new journey (Ex. 40:34–38; Num. 9:15–23; 10:11–12, 34; 14:14). The Divine Presence in Solomon's Temple was similarly accompanied by the descent of the cloud (1 Kings 8:10–11; cf. Ex. 16:10; Lev. 16:2) though the pillar of cloud and of fire did not accompany the Israelites into the Promised Land.

Various explanations have been sought for the origin of these traditions. Among them is the attested use of braziers filled with burning wood at the head of caravans or armies, sometimes placed before the tent of the chief or carried be-

fore him. Others derive the imagery from the *pillars before Solomon's Temple, which, they contend, were fiery cressets emitting clouds of smoke and flame by day and by night at the time of a festival. Still others point to the smoke that rose from the altar of the burnt offering as the origin of the representation. The most commonly accepted theory connects the pillar of cloud and fire with the theophany at Sinai, when the descent of the Lord was marked by a thick cloud (Ex. 19:9), by thunder, lightening, smoke, and fire. Attempts to provide a natural basis for this narrative have pointed to the possible existence of volcanic action in the vicinity of Sinai – which is highly unlikely – or to the sudden outbreak of a raging desert storm. In any event, there can be little doubt that the imagery is as old as the time of Moses, and that the cloud, and, in a lesser degree, the fire symbolism proved effective in communicating the presence of God to the people.

Post-biblical legend embellished the biblical account. Thus, not one but seven clouds descended at Sukkot to envelop and protect the Israelites, one on each of the four sides of the camp, one above and one below, and one which went before them to raise the valleys and lower the mountains. The Israelites were protected against the elements and wild beasts; even their garments did not wear out or become dirty. Eliezer maintained that the Festival of Sukkot commemorated the “clouds of glory” (Suk. 11b) which were considered among God's special creations in the “twilight” of the first six days (ARN² 37, 95).

[David L. Lieber]

PILPUL (Heb. פִּלְפּוּל), a collective term denoting various methods of talmudic study and exposition, especially by the use of subtle legal, conceptual, and casuistic differentiation. The word is derived from *pilpel* (“pepper”), indicating that these methods were employed in talmudic disputations by the more sharp-witted among the scholars (cf. *palpelan* – טַל, Hor. 3:7, 48c; *ba'al-pilpul* – BB 145b). In the talmudic period the term *pilpul* was applied to the logical distinctions through which apparent contradictions and textual difficulties were straightened out by means of reasoning (*sevarah*), leading to a more penetrating understanding and conceptual analysis. This method was distinguished from a mere cursory knowledge of the texts (*girsah*) and the oral traditions and teachings of the scholars of the past. The masters of *pilpul* would advance arguments and opinions of their own, though always based on the authority of tradition, while those strictly adhering to the

texts and their traditional exegesis would reject the ways of the pilpulists, whose daring originality would sometimes lead them astray from plain reason and truth (cf. Er. 90a). Scholars hotly debated the question as to whose merits for the dissemination and advancement of Torah study were greater: *sinai*, i.e., he who faithfully preserved the established texts and traditions, or *oker harim*, i.e., he who “uproots mountains” in his intellectual struggle for clarity and logical harmony (cf. Ber. 64a). Nevertheless, it was generally agreed that *pilpul* was of vital necessity for establishing hermeneutical links between the Oral and the Written Torah, thus keeping tradition from error and oblivion (cf. Kid. 66b; BM 85b; Zev. 13a; Tem. 16a). It was also valued as a didactic method to sharpen the intellect of students (Avot 6:6; Ber. 33b; Er. 13a). Members of the high court (Sanhedrin) were required to be masters of *pilpul* (cf. Sanh. 17a). Babylonian scholars were especially noted for their subtle ways of *pilpul* and their acrimonious disputations, contrasting with the moderation of the Palestinian schools (cf. Pes. 34b; BM 85a).

The talmudic *pilpul* was thus suited to meet three principal needs. The first was to safeguard the unity of the Oral and Written Torah and to harmonize between the apparently differing opinions of the sages. This was based on the religious principle that both parts of the Torah tradition flowed from one single divine revelation and that consequently what appeared to be contradictory, repetitive, or redundant appeared so only because of the intellectual limitations of the students. The second was to keep up the vitality and relevance of the Oral and Written Torah in its traditionally fixed form in the face of changing times and circumstances. Finally, it made Torah study a permanent challenge to the intellectual powers of masters and students and kept it safe from routine and perfunctoriness. *Pilpul* enabled the gifted student to bring new elements into Torah study, and these were themselves considered part of the divine revelation (cf. Ned. 38a; Meg. 19b; T), Pe'ah 2:6; 17a; for examples of talmudic *pilpul* see JE, vol. 10, p.40).

The Babylonian scholars of the geonic period continued to employ the methods of *pilpul*, though they were chiefly occupied with arranging, editing, and explaining the text of the Talmud, as did the early school of Ashkenazi commentators up to Rashi's generation. A new wave of *pilpul* rose in the tosafist schools of France and Germany, as well as in the Spanish schools of the 13th and 14th centuries. The same methods as had previously been applied in the Talmud, now served to harmonize apparently differing talmudic passages and opinions. This new vogue gave rise to adverse criticism among the Ashkenazi Ḥasidim who deplored the over-cleverness of sharp-witted scholars who substituted originality for truth and preferred the study of *tosafot* to that of the Talmud itself (cf. *Sefer Ḥasidim* ed. by J. Wistinetzki (1924²), nos. 648, 1049, 1375, 1707, 1816, 1838).

The close of the tosafist era in the 14th century was followed by a short period during which scholars occupied themselves chiefly with the study and recording of the tradi-

tional laws and customs (*minhagim*) that had accumulated until then. However, the intrinsic dynamics of Torah study called for new intellectual challenges to be put to the restlessly searching minds of scholars and students. The traditional modes of study and disputation had become exhausted, and scholars strove to devise new modes in which they could distinguish themselves. In addition, yeshivah teachers became increasingly conscious of didactics and method in the education of rabbinical scholars. The prevailing spirit of humanism influenced scholars to seek intellectual independence while remaining faithful to the traditional sources. Thus the 15th and 16th centuries witnessed an unprecedented intensification of casuistic disputation. A clear distinction began to be made between lessons devoted to cursory study of the talmudic text and those given to intensive disputation. This was led by the head of the yeshivah and was of an essentially oral character, which accounts for the fact that very little of its content was recorded and preserved in manuscripts.

Some idea of the new modes of *pilpul*, which consisted mainly in the application of logical models and of increasingly sharper divisions and differentiations (*hillukim*), may be gained from treatises on talmudic methodology such as the *Darkhei ha-Talmud* by Isaac *Canpanton. Several new modes became known by the names of communities whose yeshivot specialized in them, e.g., Nuremberg and Regensburg. These methods are characterized by a penetrating inquiry into the minutest details of halakhic discussion as recorded in the Talmud. Each and every sentence is shown to convey some novel meaning of its own and no redundancy whatsoever is allowed. A problem set by one of the sages is not an indication of any doubt or ignorance but an attempt to test the knowledge and intelligence of his colleagues and students. Since all the sages are supposed to possess knowledge and intelligence of identical width and depth, the talmudic dialogue is shown to be an interplay of diverging attitudes and opinions rather than a series of questions and answers. Furthermore, the divergences are attributed to casuistic differentiations rather than to fundamental contradictions, and thus the basic unity and conformity of the spiritual world of the Talmud is preserved and safeguarded.

In the sphere of didactics diverse pilpulistic methods were innovated by which to heighten the students' powers of perception and imagination. Masters devised imaginary halakhic cases and problems and required their students to pass reasoned judgments. They also composed halakhic riddles, sometimes involving the most abstruse casuistry, which the students were required to solve. In the 16th and 17th centuries the ability to excel in pilpulistic disputation was the chief aim and mark of distinction of the yeshivah student. At a time when rabbinical learning had become widespread and rabbis as well as lay leaders were rivals for communal leadership, accomplished masters in the art of *pilpul* outshone less brilliant, if more conscientious, scholars and secured for themselves a paramount social status. In the spiritual sphere *pilpul* was reinforced by certain kabbalistic trends that glorified the

contemplative, as against the pragmatic, attitude to study. The intuition of the scholars was seen as a form of divine inspiration. At the same time *pilpul* served a vital purpose in enabling rabbis to pass decisions on many new halakhic problems arising from the changing economic and political situation. Nevertheless, outstanding rabbis, such as *Judah Loew b. Bezalel (the Maharal), Isaiah *Horowitz, Ephraim *Luntschitz, and Jair Hayyim *Bacharach, severely criticized the universal “craze” for *pilpul* and *hillukim*. They had been preceded as early as the 15th century by the anonymous treatise on ethics known as *Orhot Zaddikim*, which contained the first vigorous attack on the new ways of *pilpul* launched from within the circles of the Ashkenazi yeshivah. Though not opposed to *pilpul* as such, these rabbis resented the twisting of plain truth resulting out of the hairsplitting efforts of the most sharp-witted and argued that *pilpul* should serve the comprehension of the texts and not itself become an art. They also criticized the students’ passion for personal honor and aggrandizement and questioned their authority to decide on halakhic matters, since their preoccupation with *pilpul* made them wholly dependent, in matters of religious practice, on the new codes such as R. Joseph Caro’s *Shulḥan Arukh*. Thus it is not surprising that the critics of *pilpul* often expressed concern about the publication of these codes. Criticism was much more lenient regarding the application of *pilpul* to the exposition of the Bible and homiletic literature, since this was considered irrelevant to a true understanding of *halakhah*. Consequently, popular preachers used to strain their imagination by adducing the most complicated talmudic passages and controversies in order to throw new light on a story from the Bible or the Midrash. When toward the end of the 18th century the methods of *pilpul* seemed to have been exhausted, new ways of Torah study were opened by the school of the *Gaon* of Vilna, Elijah b. Solomon Zalman.

PILSEN (Czech **Plzeň**), city in W. Bohemia, Czech Republic; its Jewish community was one of the earliest in Bohemia. The first documentary record is a decree of 1338, signed by *Charles IV, in which the city’s administrators were ordered, under penalty, to protect the Jews from molestation. In 1432 the community bought a plot from the city to be used as a cemetery. It also had a synagogue. Many transactions between Jews and Christians appear on the city records of the 15th cen-

tury. In 1504 Jews were expelled from Pilsen as a result of a *Host desecration charge, and the city was granted the privilege *de non tolerandis Judaeis*. From then until 1848 Jews lived in surrounding villages and did their business in the town. Jews from all of western Bohemia and Prague attended the Pilsen markets, which became very important in Jewish life. In 1821–32 Jews were living without authorization in Pilsen, and in 1854 there were 249 Jews in the town. A Jewish cemetery was consecrated in 1856 and a synagogue in 1859. Anti-Jewish riots broke out in 1866. In 1870 the community numbered 1,207. Jews were instrumental in the development of the city into an industrial center of worldwide repute.

At the beginning of the 20th century the community was among the five largest and most affluent in Bohemia; a Moorish-style synagogue was erected in 1893. The community suffered from the conflicts between German liberal assimilationists, Czech Jews (see *Čechů-Židů, Svaz) and Zionists. In 1892 the first *B’nai B’rith Lodge of Bohemia was founded there. From 1918 the community supported two rabbis, one preaching in Czech and the other in German. **Sheḥitah* was forbidden in 1920 for “humanitarian” reasons. When the supreme court declared this prohibition illegal in 1934, the attempt to reintroduce *sheḥitah* failed because of the higher price for *kasher* meat. In 1921 there were 3,117 Jews in Pilsen and in 1930 the community numbered 2,773 (2.4% of the total population). In the fall of 1938 Pilsen became a refuge for many Jews from communities in the Sudeten area, occupied then by Germany, who were supported by funds previously designated for the building of an old-age home.

After the German occupation (March 1939) there were persecutions and arrests of Jews, and the Jewish cemetery was desecrated. A plan to destroy the synagogue was given up only because it would have caused the destruction of an entire city block. In 1940 the rabbi Max Hoch and one of the community functionaries were murdered. In 1942 more than 2,000 persons from all western Bohemia were concentrated in Pilsen and deported to the Nazi extermination camps. The synagogue’s ritual objects were transferred to the Central Jewish Museum in Prague.

After World War II a community was reorganized in Pilsen, numbering 293 in 1948. A memorial for the 3,200 victims of the Holocaust from Pilsen and western Bohemia was dedicated at the new cemetery in 1951. The newly established community, considerably reduced in numbers, was still active in 1970 using the old synagogue and maintaining both cemeteries, and survived into the 21st century. It also administered the *Ceske Budejovice congregation.

°**PILSUDSKI, JÓZEF** (1867–1935), Polish statesman, first marshal of Poland. In the early years of his political life, Pil-

sudski came into contact with Jews, especially Jewish workers, and the PPS (Polish Socialist Party) founded by him even published a periodical in Yiddish, *Der Arbeter*, between 1898 and 1905. However, he was sharply critical of the *Bund, accusing it of “commercial and religious Jewish separation,” of favoring Russification, and of opposing the Polish independence movement. Since he was fiercely anti-Russian, he dissociated himself from the pro-Russian antisemite Roman *Dmowski. When Pilsudski, supported by the left, seized power in 1926, the Jews hoped for improved conditions, and indeed the prime minister, K. Bartel, proposed the abolition of several cultural, religious, and economic restrictions on the life of the Jews. However, these proposals came to nothing; on the contrary, by a law of Oct. 4, 1927 the government interfered in internal Jewish affairs and curtailed the autonomy of the Jewish communities. As a result of the pressure of the ND (*Endecja), in 1931 further restrictions were placed on Jewish economic and social life. Now opposed to the left, Pilsudski formed a front with the land owners and did nothing to curb the antisemitic right wing. In 1934 the Pilsudski government signed a pact with Hitler’s Germany, with tragic results for the Jewish community in subsequent years.

PINA, JACOB (Manuel) DE (1616–c. 1675), Marrano poet. Born in Lisbon, Pina arrived around 1660 in Amsterdam, where he openly proclaimed himself a Jew and took the name Jacob.

The poems of his early Lisbon years were humorous in the main, for example the collection *La mayor hazaña de Carlos VI* and *Jugetes de la ninez y traversuras del ingenio* (1656). His later verse included several elegies, one dedicated to the scholar Saul (Levi) *Morteira (d. 1660), another to the martyr Isaac de Almeida *Bernal (d. 1655), and a third to the martyred Spanish nobleman Lope de Vera y *Alarcon (d. 1644). Pina wrote in both Spanish and Portuguese.

PINANSKI, ABRAHAM (1887–1949), U.S. lawyer and jurist. Pinanski, who was born in Boston, Mass., worked in the legal department of the Boston Elevated Street Railway Company (1910–12), and then practiced law privately from 1912 to 1930, becoming active in the Democratic Party. Appointed to the Massachusetts Superior Court in 1930, he instituted pretrial hearings to reduce case backlog and hasten court proceedings.

Pinanski, who was active in both Jewish and public affairs, was a member of the Sinking Fund Commission of Boston for five years; a trustee of the Boston Public Library; president of both the Hebrew Free Loan Society of Boston and the Jewish Child Welfare Association; and executive committee member of both the Association of Jewish Philanthropies and Beth Israel Hospital.

PINCAS, ISRAEL (Anton; 1935–), Hebrew poet. Born in Sofia, Bulgaria, Pincas moved to his grandparents following the death of his father. After his arrival in Palestine in 1944, he joined the Ben Shemen youth village and later served as an army reporter. He worked for a while as an editor for United Press and translator from various languages into Hebrew, and for many years ran two art galleries in Tel Aviv, acting also as adviser on contemporary art. His first collection of poems, *Arba’-asar Shirim*, was published in 1961, followed by further collections, including *El kav ha-Masheveh* (1975), *Betokh ha-Bayit* (1978), *Geneologiyyah* (1997), and *Ba-Yam ha-Atik Shelanu* (1999). A member of the so-called “*Dor ha-Medinah*” (“The Generation of the State”), Pincas followed an individualistic path, keeping away from the literary mainstream. While his early poetry focuses on Mediterranean culture, his later works pursue a dialogue with his European heritage. Indeed, at times it seems that Pincas, whose poetry is suffused with longings for other cultures, quoting from European literature and often deploying the patterns of classical music, is more of a European poet writing in Hebrew than an Israeli one. And yet, in his seminal article “*Harza’ah al ha-Zeman*” (“A Lecture on Time,” 1991), he recalls early experiences, underscoring his local, Israeli identity. Pincas was awarded the Prime Minister’s Prize and, in 2005, the Israel Prize. Some of his poems have been translated into various languages, for instance *Discours sur le temps: Choix de poèmes* (1997).

[Anat Feinberg (2nd ed.)]

PINCHERLE, MARC (1888–1974), musicologist. Born in Constantine, Algeria, Pincherle edited the periodicals *Le Monde Musical* (1924–27) and *Musique* (1927–30) and was secretary of the Société Française de Musicologie (1932–35) and its president (1948–56). He made outstanding contributions to the study of baroque violin music on which he also lectured at the Ecole Normale de Musique. His writings include *Les Violinistes Compositeurs et Virtuoses* (1922); *Corelli* (1933); *Antonio Vivaldi et la musique instrumentale* (2 vols., 1948); *Corelli et son temps* (1954); *Corelli, His Life, His Work*, 1956); *Vivaldi* (1955; Eng. transl. 1957), with an important thematic index; and *Histoire illustrée de la musique* (1959). He also published editions of baroque music.

PINCHIK, PIERRE (**Pinchas Segal**; c. 1900–1971), **hazzan*. Born in Zhivitov, Ukraine, the young Pinchik was sent to live with his grandfather in Podolia. His singing in the local yeshivah attracted the attention of one of his teachers who arranged for Pinchik to be taught music and piano and to study voice at Rostov. He became *hazzan* in Leningrad and subsequently made his way to the U.S., where his *hazzanic* talent was quickly recognized. His style was best expressed in his widely acclaimed performances and recordings of *Raza de-Shabbat*, which represent his successful attempt to evoke the mystical dimension of prayer.

PINCUS, GREGORY GOODWIN (1903–1967), U.S. biologist. Born in Woodbine, New Jersey, he pursued his interest in the genetics of physiological characteristics. In post-doctoral studies at Cambridge and the Kaiser Wilhelm Institute he began investigations of steroid control of reproductive cycles. After teaching appointments at Harvard, Cambridge, and Clark University, he rounded the Worcester Foundation for Experimental Biology in 1944 with H. Hoagland. As research director he pioneered development of the widely used oral contraceptive. Having discovered earlier that the hormone progesterone, present in increased amounts during pregnancy, prevented ovulation, Pincus tested some 200 progesterone-like compounds for their effectiveness as ovulation suppressors. In 1954 he and Dr. John Rock began clinical testing of the most promising of these. Their method proved to be virtually 100% effective in preventing conception. Its widespread adoption in the ensuing decade had great medical and sociological consequences.

Pincus was a member of the American Academy of Arts and Sciences (1939) and the National Academy of Sciences (1965). He wrote *The Control of Fertility* (1965), co-authored *Steroid Dynamics* (1966), and was editor of *Recent Progress in Hormone Research*, proceedings of the 1966 Laurentian Hormone Conference (vol. 23, 1967).

[George H. Fried]

PINCUS, LOUIS ARIEH (**Louis Abraham**; 1912–1973), Zionist leader. Born in South Africa, Pincus practiced law from 1934 to 1948. He was chairman of the South African Zionist Socialist Party and co-founder of Habonim in the country. He was also vice chairman of the Zionist Federation (1940–48). Pincus settled in Israel in 1948 and served as legal adviser and general secretary of the Ministry of Transportation until 1949. From then until 1956 he was the first managing director of *El Al. He practiced law in Israel from 1957 and was a member of the central bodies of *Mapai, the *Histadrut, and Ihud Olami from 1956. In 1961 he was elected a member of the *Jewish Agency Executive, and its treasurer. On the death of Moshe *Sharett in 1965, Pincus became acting chairman and at the 27th Zionist Congress (1966) was elected chairman of the executive. He was chairman of the Board of Governors of Tel Aviv University.

[Benjamin Jaffe]

PINCZOW (Pol. **Pínczów**; Rus. **Pinchov**; Yid. **Pinchev**), town in Kielce province, S.E. Poland. During the 16th–18th centuries Pinczow was a busy market town in Sandomierz province. The date of the foundation of the Jewish community is unknown, but the fact that it sent representatives to the *Councils of the Lands testifies to its significance in the 17th century. During the attacks led by the Polish hetman S. *Czarniecki (1656), the Jews of Pinczow suffered comparatively little since they took refuge with the local margrave, and were defended by his troops. The Pinczow district (*galil*) was included in the province of *Lesser Poland. One of the most interesting relics possessed by the community is the hand-written prayer book which was completed (according to an inscription) by a scribe named Elijah b. Samuel Gronenn in January 1614 (published by S. Dubnow in *Voskhod*, 14, no. 4 (1894), 149–50). Other records of later years mention martyrs who died as a result of blood libel accusations and during the massacres in the 1640s and 1650s. In 1765 there were 2,862 Jews registered in the district, most of whom lived in the town itself; there were 2,877 Jews (70% of the total population) in the town in 1856 and 5,194 in 1897; in the latter years there were 13,716 Jews in the whole district.

Holocaust Period

At the outbreak of World War II there were about 3,500 Jews in Pinczow. In October 1942, 3,000 Jews were deported to *Treblinka death camp. During the deportation, hundreds of Jews fled into the surrounding forests. About 100 joined the two Jewish partisan units headed by Michal Majtek and Zalman Fajnsztat. These units merged and operated in the vicinity until February 1944, when they incurred heavy losses near Pawlowice. After the war the Jewish community of Pinczow was not reconstituted.

PINE. One species of pine, the Aleppo pine *Pinus halepensis*, is indigenous to Israel. Other species of the same genus have been planted in the afforestation of modern Israel and as ornamental trees, among them the stone pine, *Pinus pinea*. The modern Hebrew name for the pine is *oren*, but this biblical name relates to a different species, the *bay tree. The Aleppo pine is one of the most beautiful forest trees of Israel. Only a few groves of it remain at the present day because it was felled for use as building material. Among the natural groves of this species is the Masrek (“comb”) at Bet Meir in the Judean hills, so called because its high trunks, conspicuous on the horizon, look like a comb. The Aleppo pine was adopted as the most important forest tree of Israel, tens of thousands of acres being planted with it, because of its rapid growth, beauty, and abundant shade, as well as for its ability to grow on rocky ground. It is the *ez shemen* (“oil tree”) of the Bible, as it is still called (in Aramaic) by the Jews of Kurdistan, and is so called because

of its high turpentine content. Isaiah (41:19) mentions this tree among those that will fructify the wilderness on the path of the redeemed. In the time of Nehemiah its branches were used for covering the *sukkah (Neh. 8:15). Ben Sira (50:10) compares the high priest to its tall evergreen flourishing top. In the Temple the cherubim and the doors were made from its wood (1 Kings 6:23, 32). The pseudo-Jonathan Targum here renders *ez shemen* as olive tree, but it is impossible to make doors from the hollow trunk of the latter (see *Olive). Furthermore, the olive is mentioned in Nehemiah (8:15) together with the *ez shemen*; they cannot therefore be identical. Nor can the *ez shemen* be identified with the *Eleagnus angustifolia* (which in modern Hebrew is called *ez shemen*) since it does not fit the descriptions of *ez shemen* in the Bible and Mishnah. *Ez shemen* is enumerated among the four species of “cedar” (*erez*), i.e., conifers (RH 23a). In mishnaic times its boughs were used for kindling the beacons that announced the appearance of the new moon (RH 2:3). They were also used as firewood for the altar (Tam. 2:3). The needle-like leaves of the pine contain fibers from which is produced “forest wool.” In the Mishnah this is called *lekhesh*, and it is mentioned among the fibers whose wick may not be used for the Sabbath lamp (Shab. 2:1, 20b; TJ, *ibid.* 4d).

The stone pine, though not indigenous to Israel, is grown as an ornamental tree and for its edible and tasty nuts. These nuts are called *iztrubalin* in the Mishnah, which states that they may not be sold to idolators on their festivals (Av. Zar. 1:5). They are liable to tithes (TJ, Ma'as. 1:2, 48d). In the view of *Saadia Gaon the stone pine is the *tirzah* (JPS ilex; A.V. cypress) of Isaiah 44:14, mentioned as being used both for making idols and for firewood.

PINEDA, JUAN DE (d. 1486), Converso martyr, commander in the Order of Santiago, and the emissary of the head of the order, Juan Pacheco, to the papal court. Born into a poor Converso family in Córdoba, in his youth, Pineda worked as a tailor and was known as Juan de Baena. Nothing is known of how he rose in Spanish society. In 1486 he was tried by the Inquisition on charges of having practiced Judaism. Among the accusations brought against him was that he had declared in 1464, when the Turks and Pope Pius II were at war, that the redemption of Israel would come through the Turks. He was burned at the stake on Aug. 16, 1486 in Toledo.

PINELES, HIRSCH MENDEL BEN SOLOMON (known as “Shalosh” from the last (Hebrew) letters of his name, Hirsch Mendel Pineles; 1806–1870), Galician scholar and writer. Pineles settled in Brody and joined the circle of young *maskilim* who gathered round Nachman *Krochmal. He per-

fectured his German, and began to educate himself in philosophy, Greek, Latin, Arabic, and astronomy, specializing in mathematics and the calculation of the Jewish calendar. In 1853 he moved to Odessa, and in 1855 to Galati in Romania, where he lived until his death. He was an active member of the *Alliance Israélite Universelle and involved in its program in Romania.

Pineles began his literary career with a letter to Krochmal in 1836 published in *Kerem Hemed* (2 (1936), 108–113). He wrote the first critical article on Krochmal's *Moreh Nevukhei ha-Zeman* (in: *He-Halutz*, 1 (1852), 123–4); and he published critical book reviews as well as numerous articles on a variety of subjects in *Kerem Hemed* (2 (1936), 125–9, 168–71), in *Ha-Maggid* (8–11 (1864–67)), *Yeshurun*, and elsewhere. For about 30 years he engaged in a fierce controversy with H.S. *Slonimsky on the method of calculating the Jewish calendar (see *Kerem Hemed*, 8 (1854), 27–37, 85–109).

Pineles is best known for his *Darkah shel Torah* (Vienna, 1861), a critical examination in 178 sections of the Mishnah and its interpretation, followed by a treatise on the Hebrew calendar including tables. The stated aim of the work was to justify the Oral Law and substantiate the words of the scribes where they deviate from the literal text. Pineles defended the Mishnah both against the authors of the Talmud, who honored it but distorted its plain meaning, and against the detractors of the Talmud, who attempted to find defects in it and to devalue it. He also sought to explain a number of difficult passages in the Babylonian and Jerusalem Talmuds. His work is characterized by critical acumen and boldness. Believing that some explanations given by the later *amoraim* distorted the original Mishnah, he attempted to interpret a number of *mishnayot* in a new way. His deviations from the traditional explanations of the *amoraim* were attacked by traditionalists, one of them being his brother-in-law, Moses b. Joel Waldberg, a leading banker in Bucharest (*Kakh hi Darkah shel Torah*, pt. 1, Lemberg, 1864; pt. 2, Jassy, 1868). Pineles, however, maintained that he had no heretical intent and himself attacked certain scholars for their extreme views – chiefly Abraham *Geiger for his *Urschrift und Uebersetzung der Bibel in ihrer Abhaengigkeit von der innern Entwicklung des Judenthums* (1857; a review of which is published at the end of *Darkah shel Torah*) and J.H. *Schorr – stressing his own attachment to tradition (*Darkah shel Torah*, no. 14, p. 19).

[Yehoshua Horowitz]

PINELES, SAMUEL (1843–1928), early member of Hovevei Zion and the Zionist Movement in Romania. Born in Brody, Galicia, the son of Hirsch Mendel *Pineles, he moved with his family to Galati, Romania, in 1863. Early in his youth he began his activity in the Hibbat Zion movement, and submitted to the central board of the Alliance Israélite Universelle in Paris

periodical information and documents concerning Romanian Jewry. In 1881 he was elected to the board of the Romanian Association for the settlement of Erez Israel. He took part in the conference of the settlement societies held in Focsani in January 1882 and was elected chairman of the central board, situated in Galati. Pineles did much for the Romanian immigrants and their two settlements in Palestine, Rosh Pinnah and Zamarin (later known as Zikhron Ya'akov). As chairman of the central board, he mobilized resources from Baron Edmond de *Rothschild for the purpose of purchasing lands in the Golan to be settled by Romanian Jews. He participated in all of the first ten congresses and was a member of the Zionist General Council. He was one of the founders of the *Jewish Colonial Trust. In 1909 he gave the *Jewish National Fund 30,000 francs, which he had received from Rothschild for the lands in the Golan acquired by Romanian members of Ḥibbat Zion. In 1920 he took part in the Committee for Jewish refugees who went to Galati after the pogroms in Ukraine. In 1965 his remains were reinterred in Jerusalem.

PINES, MEYER ISSER (1881 or 1882–1942?), leader of the Territorialist movement in his youth, Yiddish writer, and journalist. Born in Mogilev, Russia, Pines grew up in Rozinay, Grodno district. He received his doctorate for his dissertation, *Histoire de la littérature judéo-allemande* (Paris, 1911), which was translated into Yiddish (Warsaw, 1911), Russian, and German. Israel *Zinberg and Ber *Borochov stamped the work as dilettantish, a judgment held also by later scholars. Pines is presumed to have died in a Russian deportation camp sometime after 1942.

[Leonard Prager]

PINES, NOAH (1871–1939), Hebrew educator and writer. Born in Shklov, Russia, he studied at the yeshivah of Volozhin. At an early age, he became a teacher and established a modern *heder* in Lublin at the beginning of the century. After completing his pedagogic studies in German and Swiss universities, he immigrated to Palestine (1919), taught in the Levinsky Teachers' Seminary of Tel Aviv, and served as its principal from 1923 until his death.

He published study manuals, articles, and essays on educational problems. His book *Ha-Zamir* (1903), children's poems for reading and singing, was an important innovation. A volume of his poems *Zilzelei Erev* (1940) and a pedagogic work, *Ketavim Pedagogiyyim* (1941), were published posthumously.

[Getzel Kressel]

PINES, SHLOMO (Solomon); 1908–1990), historian of philosophy and science. Born in Paris, Pines taught at the Insti-

tut d'Histoire des Sciences et des Techniques de l'Université de Paris from 1937 to 1939. He settled in Erez Israel in 1940. From 1948 to 1952 he served in the Middle East division of the Israel Ministry for Foreign Affairs. In 1952 he began teaching at the Hebrew University and in 1961 Pines became professor of general and Jewish philosophy. He was a fellow of the Israel Academy of Sciences and Humanities, and in 1968 received the Israel Prize. He served as coeditor of the *Corpus Commentariorum Averrois in Aristotelem* of the Medieval Academy of America. The 20th volume of the philosophic journal *Iyyun* (1969) was dedicated to him on the occasion of his 60th birthday.

Pines wrote in the fields of Islamic philosophy and science, the Greek antecedents of Islamic philosophy and science, and Jewish philosophy. In his first book, *Beitraege zur islamischen Atomenlehre* (1936), he analyzed the atomic theories of the Muslim theologians. He wrote several detailed analyses of the thought of Abu al Barakāt ben Ali al-Baghādāī *Hibat Allah, a hitherto barely known critic of Islamic Aristotelianism. In the field of Jewish philosophy he published a new English translation of Maimonides' *Guide of the Perplexed* (1963) with an introduction tracing Maimonides' philosophic sources. In his *Scholasticism after Thomas Aquinas and the Teachings of Hasdai Crescas and his Predecessors* (1967) he proposed the thesis that late medieval Jewish philosophers, such as *Levi b. Gershon, *Jedaiah b. Abraham Bedersi (ha-Penini), and Ḥasdai *Crescas, were familiar with the philosophic and scientific doctrines of the late medieval Christian scholastics. In "Spinoza's Tractatus Theologico-Politicus, Maimonides, and Kant" (in: *Scripta Hierosolymitana*, 20 (1968), 3–54) he discusses the interrelation of Maimonides and Spinoza. He also published *A New Fragment of Xenocrates* (1961).

[Yehuda Landau / Arthur Hyman]

PINES, YEHIEL MICHAEL ("Michal"; 1843–1913), writer, early exponent of religious Zionism, and *yishuv* leader. Born in Ruzhany, Belorussia, into a family of prosperous merchants and Torah scholars, Pines was influenced in his youth by Mordecai Gimpel *Jaffe, an early leader of *Ḥovevei Zion, who headed a yeshivah maintained by Pines' family. He studied both traditional subjects and foreign languages and science, and the fusion of the two spheres of knowledge led to a romantic-religious outlook. Pines believed that Jewish life should be reformed, but he was opposed to deliberate, religious reforms that would undermine the foundations of tradition and increase assimilation. He thought that a reformed way of life would inevitably bring about certain changes of *halakhah* without affecting the sanctity of the Jewish religion. During the 1860s Pines developed these ideas in his controversy with M.L. *Lilienblum, *J.L. Gordon, and others, mainly through his articles in **Ha-Karmel*, **Ha-Meliz*, and **Ha-Levanon*. The articles were collected in his book, *Yaldei Ruḥi* ("Children of

My Spirit," 2 vols., 1872), and his ideas were later expanded by *Aḥad Ha-Am, who restyled them in his own clear, polished language.

In 1877, while he was living at his father-in-law's home in Mogilev, Pines was asked by the Moses Montefiore Testimonial Fund in London to serve as its representative in Erez Israel. He accepted eagerly, reached Jaffa a year later, and settled in Jerusalem (1878) at the home of his relative, Yosef *Rivlin, the secretary of the Va'ad Kelali (General Committee of the **halukkah*), thus arousing the enmity of Rivlin's many opponents in Jerusalem (Ḥasidim and *maskilim*, Sephardim, and religious extremists; the latter, supporters of Rabbi Y.L. *Diskin persecuted Pines and proclaimed him "excommunicated").

On behalf of his London sponsors, Pines conducted investigations into the spiritual, cultural, and particularly the economic problems of the *yishuv*, proposing the founding of an agricultural settlement, the building of houses and new quarters, and the establishment of artisan and industrial projects. The Montefiore Fund concentrated on granting aid for the construction of houses and Jerusalem was thus expanded through the building of several new quarters. Pines' letters to the Fund trustees appear in volumes 2 and 3 of *Mivḥar Kitvei Y.M. Pines* ("Selected Writings of Y.M. Pines") and in his *Binyan ha-Areẓ* ("Building of the Land"), volumes 1 and 2 (1934).

Pines tried to set up artisan and industrial projects with the help of Montefiore Fund loans, and with his own money as well, but they proved a failure and brought about his dismissal in 1885. (His son-in-law, David Yellin, was appointed to the same post in 1901.) In 1882 Pines became friendly with Eliezer *Ben-Yehuda who had just arrived in Erez Israel, and together they established the Teḥiyyat Israel ("Israel Renaissance") Society, whose aim was, inter alia, to introduce Hebrew as a spoken language. When the first members of *Bilu arrived at the end of the same year, Pines became their patron and established the Shivat he-Ḥarash ve-ha-Masger ("Return of the Craftsmen and the Smiths") Society for them in Jerusalem. With Ḥovevei Zion funds he bought for them the lands for the settlement of *Gederah in 1884 and was the settlement's patron for several years. In 1885 K.Z. *Wissotzky appointed him a member of the executive committee of Ḥovevei Zion in Palestine. For several months in 1886 he edited *Ha-Zevi*, Ben-Yehuda's newspaper, while the latter was abroad, but the friendship between the two was affected by the outbreak of the violent controversy regarding the Sabbatical Year (*shemittah*), which fell in 1888/89. Although Pines' conservative attitude to this question aroused opposition in Ḥovevei Zion circles, he was elected in 1890 to the organization's executive committee in Jaffa, headed by Vladimir *Tiomkin. At about the same time Pines joined the *Benei Moshe Society, but its leader Aḥad Ha-Am, who wanted to prevent discussions of religious problems in the Society, advocated his departure from that group. In 1892, after a crisis in the activities of the executive committee of Ḥovevei Zion, Pines was dismissed and thereafter affiliated himself with the old *yishuv*, even

becoming one of its main spokesmen. His views on nation and religion, which he then developed in his articles in **Ha-Havazzelet* and in special pamphlets, were shortly afterward adopted by the *Mizrachi Party. In 1893 he became a trustee of the Ashkenazi community's charitable institutions in Jerusalem, and the librarian and a teacher of Talmud in the Hebrew Teachers' college.

Pines was foremost a thinker, writer, and craftsman of Hebrew language and style. He displayed outstanding knowledge of biblical style and language (into which he translated various scientific books) and greatly influenced his brother-in-law and pupil, Ze'ev *Jawitz, who in turn influenced Ḥ.N. *Bialik. Pines was conversant with mishnaic style (see his *Mishnat Erez Yisrael*), the medieval style rhyming prose, and the conglomerate style that he employed in his articles and his many letters to employers and to people who approached him with queries regarding settlement in Erez Israel. *Yaldei Ruḥi* and some of his letters and articles appeared in the three volumes of *Kitvei Y.M. Pines* ("Writings of Y.M. Pines," 1934–39), edited by his sons-in-law, David Yellin and Yosef *Meyuḥas. His selected writings, *Mivḥar Kitvei Pines*, appeared in 1946, edited and with a preface by G. Kressel. Kefar Pines, a moshav in the Sharon Plain, is named for him.

PINHEIRO, MOSES (17th century), Shabbatean, born in *Izmir. A contemporary of *Shabbetai Zevi, Pinheiro studied talmudic and kabbalistic literature with him in their youth (1640–50). There is no indication that he supported Shabbetai Zevi's messianic claims in 1648. About 1650 he left Izmir and settled in *Leghorn, where he became a highly respected scholar. When the news of the Shabbatean awakening reached Italy, he became at once one of its most ardent spokesmen, continuing to believe that Shabbetai Zevi was Messiah long after his *apostasy. As delegate of the Leghorn community, he went to see Shabbetai Zevi in the summer of 1666, at the height of the excitement, but arrived in Izmir after the apostasy. There he received communications from both Shabbetai Zevi and *Nathan of Gaza which strengthened his faith. In March 1667 he returned to Italy with a delegation from three other communities. Nathan stayed at his house on his visit to Italy in 1668. Pinheiro, who was the center of the Shabbatean group in Leghorn, maintained a correspondence with Shabbetai Zevi over the years and also took an interest in Abraham *Cardozo. As shown by Abraham *Rovigo's notebook on Shabbatean matters (Ben-Zvi Institute, Ms. 2265), he was still considered a "believer" about 1690. When and whether he finally gave up his belief is unknown.

His daughter was the mother of the well-known kabbalist and Rabbi Joseph *Ergas, who kept silent about his grandfather's Shabbatean connections. Rabbi *Malachi ha-Kohen of Leghorn, Ergas' pupil, though an outspoken foe of the Shabbatean movement, praised Pinheiro highly for his piety and ascetic life in his foreword to Ergas' responsa, *Divrei Yosef* (1742). Several of Pinheiro's recollections on Shabbetai Zevi have been preserved.

PINKAS (פנקס), record book of Jewish autonomous units, used mainly in the Middle Ages. The *pinkas* contained minutes of meetings, bylaws, lists of officers elected at the annual meetings, records of disciplinary actions against recalcitrant members, of tax assessments and fines, of trials, of unusual historical events, and an endless variety of other entries reflecting the life of the local community. Each community and each *hevrah, including artisan guilds, had its own *pinkas*, as did the *Councils of the Lands in Poland, Lithuania, and Moravia. *Pinkasim* of local communities and those of the Councils have been published.

[Isaac Levitats]

PINKAS, DAVID ZVI (1895–1952), Mizrachi leader and Israel politician. Pinkas was born in Sopron, Hungary, into a religious Zionist family, which settled in Vienna when he was a child. He became active in the Mizrachi movement and represented it as a delegate at the 13th Zionist Congress. In 1925 Pinkas settled in Palestine, became the manager of the Mizrachi bank, and, in 1932, was elected to the Tel Aviv municipal council, heading its Education Department from 1935. He was also a Mizrachi representative to the Asefat ha-Nivharim and the Va'ad Le'ummi, becoming treasurer and director of its department of Religious Communities and the Rabbinate. After the establishment of the State of Israel, he was elected to the First Knesset on behalf of the United Religious Front, and after the elections to the Second Knesset, in October 1951, he was appointed minister of transportation. In this capacity he regulated the austerity measures for fuel consumption and stipulated that all vehicles should not be driven two days a week, and that one of these days should be Saturday (the Sabbath). This regulation aroused sharp protest from extreme circles opposing "religious coercion."

BIBLIOGRAPHY: Tidhar, 2 (1947), 855–6.

PINKEL, BENJAMIN (1909–1992), U.S. aeronautical engineer. Pinkel was born in Gloversville, N.Y., and graduated in electrical engineering from the University of Pennsylvania

(1930). He joined the National Advisory Council for Aeronautics where he was head of the engine analysis section (1938–42), the fuel and thermodynamic division (1945–50), and the materials and thermodynamic research division (1950–56). He was associate head of the aero-astronautics department of Rand Corporation from 1956. Pinkel was an early supporter of the superiority of jet propulsion and the gas turbine engine in aircraft design and a pioneer in rocket propulsion technology. Later in life he was interested in the philosophy of the mind in the light of scientific advances.

[Michael Denman (2nd ed.)]

PINNER, ADOLF (1842–1909), German organic chemist. Born in Wronke, then Germany, he studied for the rabbinate, but changed to chemistry. He was a professor at Berlin University from 1878 and also taught at Tieraerztliche Hochschule. He was director of the Patent Office of Ministry of Commerce (1885–1907). Pinner published extensively on organic chemistry topics, particularly alkaloids. His *Repetitorium der organischen, beziehungsweise anorganischen Chemie* (2 vols., 1872–73) was a standard textbook for many years. He also wrote *Die Imidoaether* (1892).

PINNER, EPHRAIM MOSES BEN ALEXANDER SUSSKIND (c. 1800–1880), talmudist. Born in Pinne (district of Poznan), Pinner studied Talmud under Rabbi *Jacob of Lissa. In 1831 he compiled an abbreviated form of the Talmud, *Kizzur Talmud Yerushalmi ve-Talmud Bavli*. Pinner is best known for his ambitious scheme to translate into German the whole of the Talmud; he enlisted the moral support of some prominent rabbis, including Rabbi Moses *Sofer (Schreiber) of Pressburg, who eventually withdrew his name. It appears that Pinner maintained that Rabbi Nathan Marcus *Adler of Hanover (later of London) had undertaken to translate the difficult tractates *Eruvin* and *Yevamot* under this scheme, but Adler denied the existence of such an arrangement. In 1842 *Berakhot* was published in Hebrew with German translation. Czar Nicholas I lent his name to the project, together with other notables. The volume was dedicated to the czar, who had shown an unusual interest in the translation of the Talmud before Pinner's venture – and not with the best of intentions. No further volume appeared. Samuel David Luzzatto criticized the work somewhat adversely in *Kerem Hemed* (2 (1836), 174–82).

[Alexander Tobias]

PINNER, FELIX (1880–1942), German economist and journalist. Born in Birnbaum (Posen), he engaged initially in economic and journalistic activities which also included a strong interest in the colonization of Palestine by German Zionists. In 1924 he became editor of the financial section of the *Berliner Tageblatt*, one of Germany's leading liberal dailies. He left Germany for the U.S. soon after Hitler's rise to power, but

failed to integrate in his new surroundings. He took his own life, and that of his wife, in New York during a period of mental depression due to financial difficulties.

His principal publications are *Emil Rathenau und das elektrische Zeitalter* (1918); *Deutsche Wirtschaftsfuehrer* (1925, published under the pseudonym Frank Fassland); *Das Neue Palaestina* (1926); *Tannerhuetten; der Roman einer Sozialisierung* (1928); and *Die grossen Weltkrisen...* (1937).

[Joachim O. Ronall]

PINNER, MORITZ (1828–c. 1909), U.S. antislavery activist in the Civil War period. Pinner was born in Prussia. He was one of a handful of immigrant Jews who played a significant local role in the founding of the Republican Party and in the propaganda efforts against slavery which helped to bring on the Civil War. He participated in abolitionist activities in Missouri as early as 1856, served as editor of Republican antislavery papers in St. Louis and Kansas City, and was a member of state and national Republican conventions in 1860. Said to have been offered a diplomatic post by Lincoln, Pinner preferred military service, although the reports of his commissioned service are confused.

[Bertram Wallace Korn]

PINS, JACOB (1917–2005), Israeli printmaker, born at Hoxter, Germany. Pins immigrated to Palestine in 1936 and spent five years working on the land before he took up art and studied under the great woodcut artist Jakob Steinhardt. His stark, dramatic woodcuts often convey an atmosphere of war. In style they show the influence of the Japanese color print. Bold and simple in black and white with few or no halftones, they nevertheless express a sense of volume and a third dimension. One of his favorite subjects was the city of Jerusalem. He was also a major collector of Japanese artwork.

PINSK, capital of Pinsk district, Belarus. The Jewish community there was established before 1506 by some 12 to 15 families (about 60–75 persons) from *Brest-Litovsk who settled in Pinsk instead of returning to Lithuania after the Jews were granted permission to return. Pinsk was then a Russian-Orthodox town and capital of a semi-independent principality. In 1506 Prince Feodor Yaroslavski granted the settlers the same rights enjoyed by the Jews of Lithuania, and the status of a community. The separate existence of the principality came to an end in 1521 and Pinsk was incorporated into Lithuania.

By 1566 the community consisted of about 55 families (approximately 275 persons; c. 7% of the total population). It numbered over 1,000 (c. 20% of the total) in 1648, and about 2,000 at the beginning of the 18th century, when they constituted the large majority of the town and controlled most of its life, there having been a severe decline in the Christian population during the second half of the 17th century. Subsequently the Jewish population numbered 13,681 in 1871 (77.7%); 21,819

in 1896 (77.3%); 28,063 in 1914 (72.5%); 17,513 in 1921 (74.6%); and 20,200 in 1939. Pinsk thus remained a “Jewish town” until the Holocaust.

Until 1648 the Jews of Pinsk were guaranteed the legal status of citizens, complete protection of their persons and property, freedom to engage in commerce, moneylending, and crafts, and the right to organize their internal life according to the precepts of their religion. The favorable geographical position of the region of Pinsk on the junctions of roads and waterways, and colonizing activity there during the 16th century, encouraged its development. Jews engaged in varied activities including the ownership (later lease) of estates, the lease of taxes and customs duties, commerce, moneylending, and crafts. The community leaders, descendants of the founding nucleus, mainly dealt in business connected with estates and engaged in moneylending. Later they entered the wholesale trade also, as well as the leasing of tax collection and customs duties. In the middle of the 16th century, Pinsk Jews took up the then thriving export of grain and forest products. In the 1560s Nahum Pesahovich was outstanding for the scope and variety of his business activities. As in the rest of the region, the Pinsk Jews benefited from the support of the Catholic nobles against the Russian-Orthodox Belorussian townsmen. In these circumstances the status granted to the Pinsk municipality under the *Magdeburg Law in 1581 did not greatly hamper the Jews though it contained several restrictions on their trade.

The leasing and subleasing of estates by Jews resulted in an increasing periphery of Jewish inhabitants who settled in villages and new townlets established around Pinsk which came under its jurisdiction within the structure of the *Councils of the Lands. The community consolidated and developed. As one of the three original leading communities of the Lithuanian Council, Pinsk played a prominent role in the shaping of the council's policy and activity.

The period between 1648 and 1667 was one of wars and misfortunes. At the time of the *Chmielnicki massacres, Pinsk was taken on Oct. 26, 1648. Scores of Jews there were murdered in the town and on the roads, though most of them managed to escape in good time and were thus saved. A number of those who had remained in the town became converted to Christianity, but later returned to Judaism. Before the capture of Pinsk by the Russians during the Polish-Russian War (1654–67), all the Jews fled, in general managing to save much of their property. In 1660 the community suffered again from the depredations of the Muscovite armies and the Cossacks: some Jews were murdered, and property was lost. In this period of troubles, the Pinsk community showed the resilience and vital forces inherent in Jewish society and community leadership. When the numbers of the Christian townsmen were reduced they retreated to the suburbs and villages, where many of them turned to agriculture, whereas the Jews of Pinsk timed and organized their escape (in 1648 and 1655) with relative success and took measures to preserve at least part of their property. With peace they rapidly resumed their

activities in the town, taking up new livelihoods if their former ones were no longer viable. The community leadership energetically restored community life, helped the refugees, aided in the ransoming of prisoners, and renewed the educational network and Torah study.

From 1667 until the beginning of the 18th century, the economic situation took a turn for the worse. Large-scale leasing disappeared, numerous Jews became impoverished and were compelled to seek new occupations, and many Jews of Pinsk turned to dealing in alcoholic beverages, most of them as retailers in the town and villages. Jewish trade diminished in scale and in part converted to retail trade; credit became difficult and many had to borrow from noblemen. Even the community administration itself had to borrow from them and from church officials, and gradually sank under a load of debt. However, the number of Jews in Pinsk increased, and the proliferation of small Jewish settlements around Pinsk proceeded. The same social circles which had led the community before 1648 continued to do so until the close of the century. In these difficult times there were many scholars in Pinsk, and renowned rabbis held office. These include Naphtali Gunzburg (officiated from 1664), Israel b. Samuel of Tarnopol (from 1667), Joel b. Isaac Eisik Heilperin (1691), and Isaac b. Jonah Teomim Fraenkel (1693–1703). The rabbi and *Maggid* Judah Leib *Pukhovitser, who lived in Pinsk during the last third of the 17th century, exerted considerable influence.

The tense situation in Poland-Lithuania during the first quarter of the 18th century, the continuing economic crisis, and the burden of taxation and debts, gave rise to internal tensions within the community and to a conflict of interests between the community of Pinsk and its subordinate communities, whose numbers continued to increase during the 18th century. In 1719, controversies broke out between the council of the communities of the province of *Volhynia and the community of Pinsk over the jurisdiction of several village communities of northern Volhynia. With the official abolition of the Council of the Lands in 1764, almost all the subordinate communities rejected Pinsk's authority, and after a prolonged struggle the weakened central community lost control.

*Hasidism spread to Pinsk and *Karlin during the 1760s. Aaron b. Jacob of Karlin made Karlin a center of Ḥasidism equal in importance to *Mezshirech. Until the early 1780s, Hasidism was the predominating influence in Pinsk and Karlin. The community leadership adopted a neutral position toward Ḥasidism. However, under severe pressure by the community leadership of Vilna and *Elijah b. Solomon Zalman, the Gaon of Vilna, the leadership of Pinsk associated itself with the ban against the Ḥasidim at the fair of *Zelva in 1781. *Levi Isaac b. Meir of Berdichev was dismissed from his position as rabbi of Pinsk in 1785, but he had apparently already completed his official ten-year term of office. At the same time Solomon of Karlin also left Karlin for *Vladimir-Volynski (Ludmir). In 1785 *Avigdor b. Joseph Ḥayyim, an avowed opponent of Ḥasidism, was elected rabbi of Pinsk and district. However, he did not succeed in imposing his authority on the

community, and the ḥasidic villages in the vicinity, so that the Ḥasidim regained their strength.

Under Russian Rule

In 1793 Pinsk was incorporated into Russia and became a district capital in the province of Minsk. The Ḥasidim then gained control of the community administration and dismissed R. Avigdor from his position. Under Russian rule the Jews of Pinsk and Karlin were granted equal rights with the townsmen, and a small number of Jews belonged to the merchant sector. At the beginning of Russian rule the economic activity of the Jews was reduced and their situation apparently became precarious. A change for the better began in the 1820s. From then on Pinsk played an important role as a center for the *salt trade of Lithuania and in the exploitation of forest resources for timber export. Prominent in the economic life and community leadership of Pinsk-Karlin at that time was Saul b. Moses Levin of Karlin (1775–1834), an avowed opponent of the Ḥasidim. During the 19th century the wealthiest merchants settled in Karlin, which gradually became a stronghold of the *Mitnagedim*.

The economic improvement in Pinsk continued during the 1830s, helped along by the government's economic policy which, among other measures, paved the way for the development of industry and the agricultural output of the Ukraine, and created opportunities for export of its agricultural surpluses. Pinsk became a transit center for trade between southwestern Russia and the Baltic ports. Members of the Levin and *Luria families held a prominent place in this commerce. The Jewish merchant class was broadened, its capital increased, and a stratum of white-collar workers and agents from Pinsk in the service of its wealthy merchants became active throughout the Ukraine. This prosperity in Pinsk lasted until the 1870s. Much of the capital accumulated by the merchants of Pinsk was invested in the markets of the Ukraine. During the 1850s a number of Pinsk merchants put into service steamships for the transportation of goods and passengers. In the 1860s Moses Luria established a steam-powered oil press and mill. However, after the construction in the 1860s of the Kiev-Brest-Litovsk railroad, a severe crisis struck the city.

During the 1860s there were between 750 and 950 Jewish craftsmen in Pinsk. The philanthropist Gad Asher provided training for orphans and children of the poor in crafts, and the large number of Jewish artisans at this time was a feature of the city. In 1855 a Jewish agricultural settlement was established in the village of Ivanichi near Pinsk.

At the close of the 19th century members of the Luria family established nail and plywood factories. A match factory was established in 1892. Jewish workers were employed in the factories and a Jewish proletariat formed. Of the 54 industrial enterprises in Pinsk in 1914, 49 were owned by Jews. Industrialization was accompanied by an economic recovery in both commerce and crafts, in which Jews also predominated. Stirrings of the *Haskalah movement appeared in Pinsk with the beginning of the economic prosperity of the 1830s, and its

influence gradually increased. A Russian government school for the children of Jews in the first category of merchants was founded in Pinsk in 1853, and during the 1850s to 1860s, 26 to 38 pupils studied there. During the same year a Jewish school for girls was established. In 1878 a private school, in which emphasis was placed on Hebrew studies, was founded by the *Kazyonny Ravvin* Abraham Ḥayyim *Rosenberg. During the early 1860s *talmud torah* schools were founded in Pinsk and Karlin whose curricula included the study of the Hebrew and Russian languages and arithmetic in addition to religious studies. Many were still educated in the *ḥadarim*. In 1888 a vocational school was founded in Pinsk. During the 1890s modern *ḥadarim* were founded under the tutelage of the Ḥovevei Zion, whose members included the young Chaim *Weizmann. Zionist and *Bund organizations were also formed in Pinsk in this period.

In Independent Poland

During the initial period of Polish rule after World War I, on April 5, 1919, the Poles executed 35 prominent Jews following a trumped up charge against them. Between the two world wars the majority of the Jewish population in Pinsk was Zionist in orientation while a minority adhered to the Bund and other parties. Many Jews emigrated to Erez Israel, among them members of *Bilu including Aharon Eliyahu *Eisenberg, the founder of Rehovot, and Ya'akov Shertok. The kibbutz *Gevat was founded in 1926 by pioneers from Pinsk. The Jewish educational network was widely extended. New schools were founded: the Tel Ḥai School of the *Po'alei Zion (with Hebrew and Yiddish as the languages of instruction); two *Tarbut schools, one in Pinsk and one in Karlin; and the Chechick gymnasium (Polish). The Hebrew high school Tarbut, founded in 1923, existed until the beginning of Soviet rule.

[Mordekhai Nadav]

Holocaust and Postwar Periods

When Pinsk was under Soviet rule from September 1939 to June 1941, the Jewish institutions, including political parties and schools, were closed down. Some of the Zionist and Bund leaders were arrested and many Jewish businessmen and members of the free professions were expelled from the city. A large number of Jewish refugees from western Poland found shelter in Pinsk, but were deported to the Soviet interior in 1940. Pinsk served as a stopover for many refugees trying illegally to reach Vilna. Pinsk fell to the Germans on July 4, 1941. A month later 8,000 Jewish men were rounded up and marched a few miles beyond the outskirts where they were murdered and buried in mass graves. A few individuals escaped from the mass graves. A similar *Aktion* was carried out a few days later against 3,000 Jewish men, including the elderly and children. They were executed in the nearby village of Kozlakowicze. After these executions a series of repressive economic measures were enforced. On one occasion the Jews of Pinsk were asked to hand over 20 kilograms of gold.

The first head of the *Judenrat was David Alper; he resigned after a short time and was executed in August 1941. He

was succeeded by Benjamin Bokczański. A crowded ghetto was established toward the end of April 1942, where 13 square feet were allotted per person. Some 30 to 40 Jews a day died there from starvation and epidemics, and some risked their lives to bring in food to the ghetto. The Judenrat established a hospital, a public kitchen, and some places of work. In July 1942 all the patients in the Jewish hospital were murdered. Soon afterward, groups of Jews secretly organized resistance. On Oct. 28, 1942, the final *Aktion* took place and all the Pinsk Jews, with the exception of 150 artisans, were killed. During this *Aktion* a desperate attempt was made by the resistance group to break through the cordon of German soldiers. Some managed to reach the forests but were caught by the local population, and a very few succeeded in joining the partisans. On Dec. 23, 1942, the remaining 150 artisans were executed at the local cemetery and the ghetto was liquidated. The swamps and forests around Pinsk sheltered many Jews. Polesie served as a base for partisan activities in which many Jews who escaped from the ghettos and from execution participated either as individuals or as Jewish units. After the war, under the Soviet regime, community life was not renewed in Pinsk, although Jewish families settled there. In 1970 the Jewish population was estimated at 1,500. There was no synagogue. The last prayerhouse had been closed down by the police in 1966. The old Karlin cemetery, desecrated by the Nazis, was converted by the Soviet authorities into a park in 1959. The Jews did not comply with the request of the authorities to remove the bones for reinternment in the Pinsk cemetery.

PINSKER, LEON (**Judah Leib**; 1821–1891), leader of the *Ḥibbat Zion movement. Born in Tomaszow, Poland, Pinsker studied at the school of his father Simḥah *Pinsker, a Hebrew writer and scholar, in Odessa. He was one of the first Jews to attend Odessa University, where he studied law. However, he discovered that being a Jew, he had no chance of becoming a lawyer and studied medicine at the University of Moscow, returning to practice in Odessa in 1849. Pinsker was one of the founders of the first Russian Jewish weekly, *Razsvet* (“Dawn”), to which he was a regular contributor. The editors attempted to acquaint the Jewish population with Russian culture and encourage them to speak Russian. These aims were more strongly expressed in the weekly Russian-language publication *Sion*, which replaced *Razsvet* and of which Pinsker was one of the editors for about half a year. He was also one of the founders of the Odessa branch of the Society for the Dissemination of Enlightenment among Jews, whose aim was similar to that of the periodical. Pinsker contributed to the Russian-language weekly *Den* (“Day”), founded by the society, which called on Jews to assimilate into Russian society. The pogroms that began in 1871 in Odessa severely shook the enlightened Jews; the weekly stopped publication, and the Odessa branch of the society closed down. Thereafter, Pinsker concentrated on medicine and published a book in German on the medicinal value of the sea and the Liman spa at Odessa (Vienna, 1881). He also became prominent in local public life. When, after an interval of six years, the Odessa Branch of the Society for the Dissemination of Enlightenment was reopened, Pinsker was elected to its committee and helped to collect documentation on the history of the Jews in Russia.

The pogroms that broke out in southern Russia in 1881 and the undisguised antisemitism of the government had a profound effect on Pinsker and caused him to undergo a complete change of heart. He ceased to regard the spreading of Enlightenment and the Haskalah movement as the solution to the future of Russian Jewry, doubted the value of the emancipation of European Jewry, and did not believe that hatred of the Jews would be overcome by humanist ideals. He followed the debates in Jewish newspapers as to which countries were suitable for Jewish emigration. They discussed the need for an emigration organization, some demanding that Jewish emigration be channeled into one country in which a national center be created, in essence a Jewish state. Moses *Lilienblum was an advocate of the Ḥibbat Zion movement’s demands that Jews immigrate to the Land of Israel. He saw antisemitism rooted in the fact that Jews were foreigners, a minority of strangers; Pinsker studied the problem of the fate of the Jewish people and reached similar conclusions. In his trip to Italy, to seek a cure for his heart disease (1882), he included visits to the capitals of Western Europe – Vienna, Berlin, Paris, and London – to discuss with leading personalities the need to channel Russian Jewish emigration into one country and to establish a national Jewish center. The chief rabbi of Vienna, Adolph *Jellinek, was unimpressed with the idea. In Paris, the leaders of the *Alliance Israélite Univer-

selle rejected his suggestions; they supported immigration to the U.S., without territorial aims. The person most impressed with Pinsker’s ideas was Arthur Cohen, a member of parliament and chairman of the Board of Deputies of British Jews in London. Together they emphasized the need to regard the Jewish question as an international problem and to win governments over to the idea.

It was at Cohen’s suggestion that Pinsker published his famous work “Autoemancipation.” *Mahnruf an seine Stammesgenossen von einem russischen Juden* (1882), in which he analyzed the psychological and social roots of antisemitism and called for the establishment of a Jewish national center. The book was intended to serve as a warning to his fellow Jews (*Stammesgenossen*) and was published anonymously, the author defining himself as “a Russian Jew.” The book was written in a passionate style which forcefully expressed the author’s deep anxiety for the fate of his people.

Pinsker first states that the reason for the old-new Jewish problem is the existence of the Jews as a separate ethnic entity among the nations, an entity which cannot be assimilated. The radical solution is the acquisition of a Jewish homeland, a country where they can live and which will be theirs, just like other nations. At best, Jews reach technical equality, but this legal change of status is not a real, social, emancipation. There are also economic reasons for antisemitism, because in competition, preference is given to one’s own ethnic group and the foreigner is discriminated against. There is a saturation point to the number of Jews in each country, and when they exceed this point, persecution begins.

Pinsker directs his attacks against Western Jewry, the “diploma chasers” who view the dispersion of Jews throughout the world as a “mission.” Moreover, the religious approach that the exile must be suffered in silence until the coming of the Messiah also weakened the desire for a Jewish homeland. He indicates that national consciousness has awakened in Russian and Romanian Jewry, in the form of a movement to settle in Erez Israel. Pinsker did not wish to decide whether Erez Israel or a territory in America should be chosen as a Jewish homeland, since he felt that a national Jewish congress should decide the matter. He hoped that the worldwide process of national awakening would be of benefit to the Jewish people and that other nations would help them achieve national independence. He called on Western Jewry and on its “existing alliances” (meaning the Alliance Israélite Universelle, the *Anglo-Jewish Association, etc.) to lighten the suffering of their brethren by founding a homeland and advocated the convocation of a National Jewish Congress to organize the new exodus. In order to settle destitute emigrants, a national fund should also be established.

The book had strong repercussions, both in Russia and abroad. The Ḥovevei Zion received it enthusiastically, though it had many opponents. Lilienblum attempted to convince Pinsker not to wait for a decision by Western Jewry, but to work immediately toward the realization of the plan in Erez Israel. Pinsker, however, refused to make a decision as to the

location of the homeland. Nevertheless, Hermann *Schapira, who accompanied Lilienblum, managed to win him over in the summer of 1883. Discussions, also attended by Max *Mandelstamm from Kiev and several others, led to the decision to work for the establishment of a center for Jewish settlement, in Erez Israel if possible, and to convene a congress, with the participation of the Ḥibbat Zion movement, to choose a central executive committee. Afterward Pinsker held a meeting of community leaders at his house, and they chose a committee to organize the movement; he was elected chairman, with Lilienblum as secretary. The committee made contact with existing groups of the Ḥibbat Zion movement, and encouraged the establishment of new groups. The Warsaw branch of the movement was also active in organizing a convention, which met at *Kattowitz on Nov. 6, 1884, and was attended by members of the Ḥibbat Zion from Russia and abroad. Pinsker was chosen chairman of the convention, and in his opening speech he indicated the need for Jews to return to working the land. He did not mention national revival or independence, since this new movement wished to attract Western Jews. At his suggestion, the convention decided to found the Montefiore Association for the dissemination of the idea of agriculture among Jews and to engage their support for Jewish settlers in Erez Israel. Pinsker was elected chairman of the temporary executive committee, whose seat was in Odessa.

Attempts to establish a central bureau of the Ḥovevei Zion outside Russia failed, and Odessa thus remained the center of the movement. Pinsker invited Lilienblum to become secretary of the Odessa office. The limited activities of the committee and its small income, which did not permit any large-scale settlement activity but served to support only a very small number of settlers; the lack of legalization of the committee's activities and internal feuds; and Pinsker's ailing health caused him to resign. He called a convention in Druskieniki (summer, 1887), at which he intended to hand in his resignation and then travel abroad to seek a cure. At the convention, relations worsened between the Orthodox and the *maskilim*. Pinsker handed in his resignation, but a majority of delegates asked him to continue at his post, and he agreed to do so. Six advisory wardens, including three rabbis, were elected to the leadership.

While abroad, Pinsker attempted to work for the movement. In Paris he met Baron Edmond de *Rothschild, who promised to help the *Petaḥ Tikvah settlement and to acquire land. Rothschild's associates told Pinsker that they would collaborate with the Ḥovevei Zion only if he headed it. As a result, Pinsker ceased to consider resigning immediately. The rabbis who were advisory wardens caused Pinsker considerable difficulty in their demands in religious matters. The declining situation in the movement and his failing health again caused Pinsker to consider resigning. He did not attend the convention held in Vilna in the summer of 1889 for he feared he would be persuaded to continue at his post. At this convention, Samuel *Mohilewer attempted to become head of the movement, but at Pinsker's suggestion in a letter to the convention, Abraham

Gruenberg, a resident of Odessa, was chosen as active warden, together with Mohilewer and Samuel Joseph Fuenn. The center of the movement thus remained in Odessa.

In 1890, the Ḥovevei Zion was legalized in Odessa under the name Society for the Support of Jewish Farmers and Artisans in Syria and Palestine (see *Odessa Committee) and Pinsker was again asked to be its head. He agreed, despite his grave doubts about whether the new committee would succeed any better than the old one. While the committee was carrying on its first activities, the Ḥovevei Zion movement revived in Russia, and Jews began to settle in Erez Israel as a result of worsening conditions of Russian Jewry and the expulsion of Jews from Moscow (1891). Pinsker began to hope that his dream would come true in Erez Israel. However, the Turkish authorities issued a prohibition on immigration, and the movement underwent a crisis. The Jaffa committee, which represented the Odessa center, ran into debt, many acquisitions of land in Erez Israel were cancelled, and the contributions of associations for settling the land were lost. Pinsker, who was pessimistic by nature, began to doubt whether Erez Israel would serve as the solution for saving masses of Jews from persecution. He began to believe that the activities of Baron Maurice de *Hirsch, who founded the Jewish Colonization *Association (ICA) for the settlement of Jews in Argentina, might solve the problem.

Toward his death, he reached the conclusion that Erez Israel would remain only the spiritual center of the Jewish people. He expressed these opinions in an article that he read to Lilienblum 20 days before his death and which was intended to serve as a supplement to the English edition of *Autoemancipation*, shortly to be published. Despite Pinsker's wish to publicize his new attitude, the article was never published. His funeral was the occasion for a large Jewish demonstration. In his will he left the sum of 16,000 rubles to various institutions, but only 2,000 rubles to the Odessa committee. In 1934 his remains were transferred and buried in the Cave of Nicanor on Mount Scopus in Jerusalem.

[Israel Klausner]

PINSKER, SIMḤAH (1801–1864), scholar. Pinsker was born in Tarnow, Galicia. Educated at home by his father, an eminent preacher (*Maggid*), he at first engaged in commerce, but lack of success induced him to move to Odessa, where he became secretary to the local rabbi. He also founded in 1826 the first successful modern Jewish school in Russia, in which he taught Hebrew language and literature. At the same time he published a series of learned papers in the periodical *Orient*,

and when the famous Karaite savant Abraham *Firkovich visited Odessa, Pinsker examined and described several of the ancient Hebrew manuscripts collected by him. His work eventually earned him gold medals from the Russian government and a pension from the Jewish community of Odessa. Relieved from the daily need to earn a living, Pinsker moved to Vienna in order to devote all of his time to research, and there in 1860 he published his major work, *Likkutei Kadmoniyot*, a history of Karaism and Karaite literature, with copious extracts from hitherto unpublished Karaite works in Hebrew and Arabic. It is these original extracts which lend his work its permanent value. His own contribution is now largely antiquated, particularly his exaggerated idea of the role of the early Karaite scholars, whom he erroneously regarded not only as the sole founders of the study of Hebrew grammar and lexicography, but also as the pioneers in medieval Hebrew poetry and the precursors of the great Rabbanite poets in Spain, such as Ibn Gabirol and Judah Halevi. Some of Pinsker's misconceptions were the result of Firkovich's tendentious advice or were based on data forged by Firkovich in his zeal to magnify the otherwise very substantial contribution of Karaism to medieval Jewish learning. Pinsker subsequently returned to Odessa.

Pinsker's philological works are *Mavo el ha-Nikkud ha-Ashuri o ha-Bavli*, on the Babylonian Hebrew punctuation, with an appendix containing an annotated edition of Abraham *Ibn Ezra's *Yesod Mispar* (Vienna, 1863); and *Mishlei ha-Gizrah ve-ha-Beniyyah*, on mood and inflection of the Hebrew verb, edited posthumously by S. Rubin (Vienna, 1887). The edition of Abraham Ibn Ezra's *Sefer ha-Ehad*, begun by Pinsker, was completed by M. Goldhardt and published in Odessa, 1867. His emendations to David *Kimḥi's *Mikhlol* are included in I. Rittenberg's edition of this work (Lyck, 1862). A catalog of Hebrew and Arabic manuscripts in Pinsker's library was published by J. Bardach as *Mazkir li-Venei Re-SHe-F* (Vienna, 1869). Pinsker was the father of Leo *Pinsker, author of *Autoemancipation*.

[Leon Nemoy]

PINSKI, DAVID (1872–1959). Yiddish author. Born in Mogilev, Russia, Pinski moved to Moscow with his family at 14. He received not only a traditional but also an excellent secular education. He early became interested in literature and in socialism. After living briefly in Vitebsk, he pursued university studies in Vienna and later Berlin, also living in Warsaw, where writer I.L. *Peretz became his mentor. Pinski published his first stories in Mordecai *Spector's *Der Hoyzfraynd* and Peretz's *Yontif Bletlekh* in 1894. Pinski's early writing introduced the Jewish proletariat as a subject in Yiddish literature. He wrote his first full-length play, *Ayzik Sheftl* (1907), which Martin Buber later translated into German, shortly before moving to New York to edit the Socialist Labor Party's Yiddish newspaper *Abend Blat* with labor leader Joseph *Schlossberg. He also pursued a Ph.D. in German at Columbia University.

Pinski married Hudl (Adele) Koymman in 1897, with whom he had three children, including a son who died at age seven. Hudl helped support the family as a masseuse while Pinski pursued his careers as a Yiddish author, editor, and activist. As activist, Pinski initially sympathized with the Jewish Labor *Bund. In 1912, he joined the Labor Zionist movement, helping to found that movement's North American branch, the Farband, in 1913 and served as its president (1918–21 and 1933–49). He played a role in organizing the Czernowitz Language Conference of 1908 and long proclaimed the slogan "Yiddish but also Hebrew for the Diaspora; Hebrew but also Yiddish in Erez Israel." Pinski served as an editor of *Der Arbeter* (1904–1911), *Yidishe Vokhnshrift* (1912), and later the Farband newspaper *Der Yidisher Arbeter Shtime*, Po'alei Zion's *Der Yidisher Kemfer*, *Di Tsayt*; and the literary journal *Di Tsukunft*. One of his most famous protégés was the humorist Jacob Adler. Pinski also edited the 13-volume collected works of Peretz. He cofounded CYSHO (the Central Yiddish Cultural Organization) in 1941 and the All-World Jewish Culture Congress in 1948. In 1948, he served as president of International PEN's Yiddish section.

Pinski wrote over 25 full-length plays, three novels, scores of short stories and one-act plays, two volumes of travel essays, a screenplay, and one of the first histories of the Yiddish theater. Until the 1940s, he was perhaps the world's most frequently and widely translated Yiddish author. Key plays include *Di Familye Tsvi* ("The Tsvi Family" or "The Last Jew," 1904), written following the Kishinev pogrom, published and smuggled into Russia by the Bund; *Yankl der Shmid* ("Yankl the Blacksmith," 1907), his most frequently performed work, which he adapted into a film for director Edgar G. Ulmer in 1938; and *Der Oytser* ("The Treasure," 1908; Eng. 1915), perhaps his greatest work, a dark comedy about greed in a Jewish town that critic George Pearce Baker compared in achievement to Ben Jonson's *Volpone*. *Yankl der Shmid*, depicting a married blacksmith's relationship with his neighbor's wife, is considered the Yiddish theater's first exploration of illicit sexual passion. Pinski's plays were produced by some of the world's leading theatrical companies. *Der Oytser* was first produced by Max Reinhardt at Berlin's Deutsches Theater in 1911. The Theater Guild produced it in English translation by Ludwig Lewisohn in 1920, as well as *Dos Letste Sakhakl* ("The Last Reckoning," 1926). Konstantin Stanislavski selected Pinski's one-act *Der Eybiker Yid* ("The Eternal Jew") for the Habimah Theatre's inaugural performance in 1918. Other companies to produce Pinski's plays included the Provincetown Players, the Yiddish Art Theater, the Folksbine, and the Vilna Troupe.

Pinski revisited three major themes throughout his dramatic career, often in combination: Jewish history (including dramas about such figures as Noah, King David, Mary Magdalene, and the Baal Shem Tov), the lives of humble or working-class folk (e.g., *Der Oytser*), and the psychology of sexual desire (e.g. *Yankl der Shmid*; *Profesor Brenner*, 1918). Pinski's early drama employed naturalism: the play *Ayzik Sheftl*, about a frustrated inventor trapped in a factory job drew stylistic

comparison with *Die Weber* by Gerhart Hauptmann, whom Pinski knew in Berlin. Later Pinski employed techniques of symbolism as well. Though he never abandoned an ethical viewpoint in his work, his characterization and action relied on psychological exploration rather than mere moral or political preaching. His first two novels, *Arnold Levenberg* (serialized in *Der Tog* in 1926; book 1938; Eng. 1928) and *Dos Hoyz fun Noyakh Edon* (1938; *The Generations of Noah Edon*, 1931), were well received in English translation and deal with assimilation in American Jewish life prior to the Depression. The second novel depicts the erosion of Jewish knowledge and practice in three generations of immigrant Noyakh Edon's family, the tragic emptiness in his children's lives, though they become well-educated and affluent Americans, and his grandson's belated suspicion that Judaism could have filled a void in his own life.

In 1949, Pinski settled in Haifa, Israel, where a street is named for him. His 80th birthday was a major state event. He continued to write until paralyzed by a stroke in 1956 and died a few months after his wife in 1959. While some critics find the quality of much of Pinski's prolific body of work to be uneven, he remains a major figure in the history of Yiddish literature, and Chaim Zhitlovski, among others, has classified Pinski as the fourth classic writer of Yiddish literature after Sh.Y. *Abramovitsh, *Sholem Aleichem, and I.L. *Peretz.

[Moshe Starkman / Ben Furnish (2nd ed.)]

PINSKY, ROBERT (1940–), U.S. poet and critic. Author of six collections of his own poetry and five important books of literary criticism, as well as translations of Milosz and Dante, Pinsky is the only American poet to have held the post of Poet Laureate Consultant to the Library of Congress for three consecutive years (1997–2000). The appointments to the position allowed him to bring to fruition what he called the Favorite Poem Project. Contrary to conventional notions of the philistinism of American culture, Pinsky believed that lyric poetry continued to be a vital presence in the lives of ordinary American citizens. Thus the Favorite Poem Project invited readers to send in short prose statements explaining why their favorite poem was important to them. From an abundant initial response various readers were selected for a series of video recordings that presented them reading the poems that they treasured. There followed two anthologies of those poems and a digital archive, the sum total of which bore witness to what Pinsky claimed was the hidden but vital presence of poetry far beyond the walls of the universities and research libraries.

Revealing an underground life of the spirit in the post-modern era is the central act of Pinsky's own poetry as well. His work assays and charts the life of the soul amid the swirling and always perplexing currents of the contemporary. Pinsky sometimes seems to wonder whether there is such a thing as a soul to worry about, but more often he measures the labors, passions, and effortful creations of human beings – however flawed – as visible and invaluable signs of the soul's existence. His restless intelligence, his abiding curiosity about how the soul fares – be it for good or ill – has been with him from his first book of poetry, *Sadness and Happiness* (1973), where he notes in the first poem the “terrible gaze of a unique/Soul, its need unlovable.” The concern is still there in his most recent book, *Jersey Rain* (2000), in “The Haunted Ruin,” where Pinsky writes that everything we touch leaves something of ourselves in it. Even in our machines, our computers and handsaws, there thus remains a residue of ourselves, a “machine soul.”

Pinsky's skeptical, troubled but surprisingly firm faith that there is a soul has its analogue in his attitude toward God. All sorts of gods thickly populate his collections of poetry. They range from Yahweh to Shiva to Jesus to Hermes and beyond to various lesser spirits, prophets, heroes, and all those who traffic with the gods. Pinsky's religious themes are heterodox, ironic, and inclusive, but they are also nonetheless grounded in the intellectual inheritance of Judaism. Raised in what he has called “a nominally Orthodox” Jewish family, in a working-class neighborhood of Long Branch, N.J., Pinsky attended Rutgers for his B.A. and Stanford for his Ph.D. He taught at Wellesley College, the University of California, Berkeley, and then in the graduate creative writing program at Boston University. Thus there is also a streak of the scholarly in his work, for he seems to study Judaism (as well as any other religion or manifestation of culture) as part of the abiding human impulse toward meaning. The stance he takes in some of his poems reminds one of Job facing the whirlwind, a whirlwind that one might call God, or History, or Fate, or Civilization. The best example of this is in “The Figured Wheel,” a poem that gives its name to the title of his *New and Collected Poems* (1996), where Pinsky stands stunned by an impersonal power, rolling through our lives and throughout history. It is also perhaps his sense that there are impersonal spirits moving in the world that led Pinsky also to his translation of Dante's *Inferno* (1994).

At other times, however, Pinsky seems a contemporary psalmist, praising the surprising ways in which the gods reveal themselves. In “To Television,” from *Jersey Rain*, Pinsky likens the “boob-tube” to Hermes, and sings its praises for the strange comfort it sometimes brings, however bad the rest of its news may be. In this context, it is significant that Pinsky's book of prose *The Life of David* (2005) speaks of an “obdurate calculus of pain.” That too is an essential part of his psalmlike poems. One hears the stern facts of human suffering woven through the very fabric of a poem like “Shirt,” from *The Want Bone* (1990). Here the speaker fingers a shirt, admiring each

part of its construction, and as he does he thinks of the fire at the Triangle Shirtwaist Factory in 1911, and recalls the photos of workers leaping from the windows, which then links him to thoughts of heaven and the afterlife, and the poetry of George Herbert, the English metaphysical, author of a poem called "The Collar." That thought brings him back to the shirt and a woman named Irma who has left a tag in it saying it was she who inspected this shirt. Up, down, and across the spans of human history, culture, and suffering, the poem not only praises the shirt, but all that is human and woven into that which we wear on our backs.

Yet for all the centrality of matters of soul and faith to Pinsky's work, there remains an equally firm and open-ended commitment to experience, to this world, to history, and to the turbulent vitality of lives lived. In meditations such as his book-length *An Explanation of America* (1980) or in the more recent "An Alphabet of My Dead" in *Jersey Rain*, one senses above all in this poetry an earned freedom of thought and feeling. As with William Carlos Williams, another great poet of New Jersey and urban America, one has the feeling that there is nothing in this world or the next that Pinsky conceives of as alien to poetry. Though fonder of traditional and more formal poetry than Williams was, Pinsky is nonetheless in the direct line of descent from Williams in regard to his sense of the vitality of the art. In his most important collection of essays, *The Poet and the World* (1988), Pinsky argues that "only the challenge of what may seem unpoetic, that which has not already been made poetic by the tradition, can keep the art truly pure and alive." The ongoing transformation of the apparently "anti-poetic" into poetry of the first order is one of the great revelations that the work of Robert Pinsky continues to offer.

PINSON, KOPPEL S. (1904–1961), U.S. historian. Born in Lithuania, Pinson was taken to the U.S. in 1907. He lectured at the New School for Social Research from 1934 to 1937, when he went to Queens College, N.Y., becoming professor of history in 1950. He was also history editor of the *Encyclopedia of the Social Sciences* (1929–35), and an editor of *Jewish Social Studies* (1938–61). In 1945–46, he was director of education and culture, Jewish Displaced Persons in Germany and Austria, United Nations Relief and Rehabilitation Association.

Pinson's principal scholarly interests embraced modern European history, with special emphasis on nationalism and modern Germany, and recent Jewish history. His contributions to general history were *Pietism as a Factor in the Rise of German Nationalism* (1934); *A Bibliographical Introduction to Nationalism* (1935); and *Modern Germany, Its History and Civilization* (1954). In Jewish studies, he edited a number of important books: *Essays on Anti-Semitism* (1946²); *Yivo Annual of Jewish Social Science*, vols. 59 (1950–54); and notably *Nationalism and History* (1958), which made available in Eng-

lish Simon Dubnow's classic, *Essays on Old and New Judaism*. Pinson analyzed Dubnow's national theories and appraised his role as historian. Pinson was actively involved in the work of the Yivo Institute for Jewish Research. He was also chairman of the modern Jewish history committee of the Jewish Publication Society of America.

[Oscar Isaiah Janowsky]

PINTER, HAROLD (1930–2005), English playwright, Nobel laureate. Born in Hackney, London, the son of a tailor, Pinter was on the stage from 1949 to 1957 under the name of David Baron, acting chiefly in repertory and with touring companies in Ireland. His first plays to become known were written for radio, a medium admirably suited to the rather sinister ambiguity of his early work. To this period belong *The Room*, *The Dumb Waiter*, and *The Birthday Party* (1958). The last play is symbolic of the universal guilt of man, with the central figure as a scapegoat. Pinter's subsequent plays include *The Caretaker*, produced in 1960, which is generally classed as a tragicomedy belonging to the genre of the "theater of the absurd." It shows a homeless tramp billeting himself upon two brothers, under the pretense of taking care of their home. He emerges, however, as a type of suffering humanity, making what may be felt to be excessive claims upon men's charity. *The Caretaker* was an outstanding success on stage, screen, and television. The plays Pinter wrote in the 1960s were dominated by the husband-wife relationship and several were acted by his wife, Vivien Merchant. *The Lover* (1963) depicts a marriage which can only function if both partners pretend that it is an illicit love affair. *The Homecoming* (1964), which won the New York Drama Critics Circle Award for best new play in 1967, is about an English intellectual who brings a new wife back from the U.S. to meet his crude, working-class family. In this phase of his writing, Pinter was concerned with the frailty of marital relationships, with the potential violence of family life, and with the impossibility of ever knowing or possessing a woman. His other plays include *A Night Out* (1960), *The Collection* (1961), *Tea Party* (1964), and *Old Times* (1971).

Pinter first became involved in writing screenplays when he adapted *The Caretaker* for the screen as *The Guest* in 1963. After that he earned two Academy Award nominations for best screenplay, for his adaptation of John Fowles' novel *The French Lieutenant's Woman* in 1981 and for his adaptation of his own play, *Betrayal*, in 1983. His adaptation of L.P. Hartley's novel *The Go-Between* won him a BAFTA award in 1971. Other screenplays include his 1968 version of *The Birthday Party* for the screen, *Reunion* (1989), *The Handmaid's Tale* (1990, based on a novel by Margaret Atwood), and *The Trial* (1993, based on Kafka's novel).

Pinter's later plays saw him shifting his focus away from the sinister underbelly of urban society and onto an upper-middle-class setting that more closely reflected his own milieu. In addition to *Betrayal* (1978), they include *No Man's Land* (1975). Pinter is also an occasional contributor of poetry to certain London journals, where he uses the pen name Harold Pinta.

In 2002 Pinter was made a Companion of Honour (CH). In later years he became well-known as a left-wing political activist over a range of international issues including Chile, Yugoslavia, and the 2003 Iraq War. After his divorce from Vivien Merchant in 1980, Pinter married the best-selling historian Lady Antonia Fraser. One of the most famous of all modern British playwrights, Pinter has attracted many biographical and critical studies, among them biographies by R. Hayman (1975), Michael Billington (1997), Martin S. Rega (1995), and Volker Strunk (1998). In 2005 he was awarded the Nobel Prize for literature.

[Philip D. Hobsbaum / Rohan Saxena]

PINTO, name of several families who originated in the small town of Pinto, whose Jewish community was subordinate to that of Madrid. Some Pintos arrived in *Morocco from the Iberian Peninsula, particularly from Seville, in 1492 and 1496 and from the Canary Islands during the 16th century. The latter were former Marranos who settled in Agadir and Marrakesh, where they ranked among the spiritual and lay leaders of the Jewish communities of those towns. R. JACOB (d. c. 1750), a disciple of R. Abraham Azulai and a well-known kabbalist, wrote a lengthy commentary on the Zohar. His son, R. ABRAHAM (d. after 1800), was a *dayyan* in Marrakesh. The latter's commentary on the tractate *Ketubbot* is often mentioned in the work *Sefer Hesev ve-Emet* (Salonika, 1803). There are many manuscripts of his responsa and *haskamot*. R. ḤAYYIM (d. before 1840) was chief rabbi of Mogador, where he was revered as a saint. Pilgrimages are still made to his grave. ABRAHAM BEN REUBEN (c. 1750) was one of the leaders of the Jewish community of Agadir. A financier, he wielded considerable influence; the sultan of Morocco entrusted him with economic missions to Europe. During the 19th century the Pintos were prominent in the communities of northern Morocco, especially in Tangier and later in Casablanca, where their commercial importance was considerable down to the present day.

[David Corcos]

PINTO, DE, family of Dutch jurists of Sephardi origin. ABRAHAM DE PINTO (1811–1878), Dutch jurist and public worker, was the elder brother of Aaron Adolf de Pinto. He graduated in law from the University of Leiden. He became editor of the law journal *Weekblad voor het recht* in 1835 and in 1840 founded the juridical review *Themis* which he edited for 36 years. De Pinto also published digests of several Dutch legal codes which served to make known the principles of Dutch law after the Codification of 1838. He was dean of the Order of Advocates in The Hague and a Hague municipal councilor from 1851 until 1878. As chairman of The Hague Sephardi congregation, De Pinto unsuccessfully favored cooperation between the Se-

phardi and Ashkenazi communities in contrast to many of his contemporaries. In 1850 he established the *Maatschappij tot nut der Israëlieten in Nederland* (Association for the Benefit of the Jews in Holland) for the promotion of educational and vocational training for poor Jews. AARON ADOLF DE PINTO (1828–1908) was a Dutch criminal lawyer. Born in The Hague, De Pinto graduated in law from the University of Leiden. As a high official at the Netherlands Ministry of Justice from 1862 to 1876, he was largely responsible for the adoption of a New Netherlands penal code which came into force in 1886, and for the Dutch East Indies Penal Code. In 1865 De Pinto initiated and drafted the law on the abolition of the death penalty. This was adopted in 1871, against the opposition of successive ministers of justice. Subsequently he drafted the law for the complete revision of the Netherlands code of civil procedure. Rejecting the offer of a professorship and the cabinet portfolio of justice, De Pinto became a member of the Supreme Court. In 1903 he was appointed vice president. From 1878 to 1901 he was an editor of the *Weekblad voor het recht*, and a founder of the Netherlands Association of Jurists. Among De Pinto's numerous publications are several on the Dreyfus trial, showing that it was being conducted in violation of French legal procedure. In 1885, at a lawyers' conference in Rotterdam, he championed the rights of the Romanian Jews. For many years he was chairman of the *Maatschappij tot nut der Israëlieten in Nederland* (founded by his brother), and in 1908 officially opened the Eighth Zionist Congress in The Hague.

[Henriette Boas]

PINTO, ISAAC (1720–1791), U.S. merchant and translator of prayer books. Emigrating to the U.S. from the West Indies, where one branch of the Pinto family was established, Pinto settled in Connecticut; an Isaac Pinto is listed in *Colonial Records of Connecticut* as living in Stratford during 1748. By 1751 Pinto was a resident of New York City and a member of Congregation Shearith Israel. Ezra Stiles, president of Yale College, identified him as a "learned Jew at New York." Pinto, who signed the Non-Importation Act, was a devoted patriot. The anonymous English translation in *Evening Services for Rosh-Hashanah and Yom Kippur* (New York, 1761) is attributed to Pinto; this rendering and his acknowledged translation in *Prayers for Sabbath, Rosh-Hashanah and Yom Kippur, with the Amidah and Musaph of the Moadim of the Sephardi rite* (New York, 1766) are the earliest English translations of Hebrew prayer books published in the New World. That a translation was needed indicates, in the view of Grinstein, a low level of Hebrew learning in the colonies at that time.

[Leo Hershkovitz]

PINTO, ISAAC DE (1717–1787), philosopher and economist of Portuguese-Jewish origin. Born perhaps in Bordeaux, Pinto lived mostly in Holland. A widely cultured man with a combative pen, he defended the Jewish people against *Voltaire's *Dictionnaire Philosophique* article "Juifs" in his well-known *Apologie pour la Nation Juive* (Amsterdam, 1762). He sent a copy of this work to Voltaire, who thanked him but held to his opinions. Pinto's major work on economics is the *Traité de la circulation et du crédit* (Amsterdam, 1771), one of the great documents in the history of political economy, written in refutation of the physiocrats, who advocated an economy based mainly on agriculture. Other works by Pinto are his *Essai sur le luxe* (Amsterdam, 1762), *Précis des arguments contre les matérialistes* (The Hague, 1774), and *Du jeu de cartes* (1768), a short essay on card playing which he addressed to *Diderot. For his services in arranging favorable terms for English trade in India at the Treaty of Paris, which ended the Seven Years' War (1756–63), Pinto was lavishly rewarded by the East India Company a few years later (1767).

De Pinto was, as Voltaire said, a *philosophe* and a Jew. He had a broad general 18th-century education, as evidenced by two unpublished philosophical discourses from 1742. His attack on Voltaire, whom he admired, was more a defense of the Sephardim than of Judaism. He suggested that Voltaire's antisemitic criticisms were justified against the Ashkenazim, but that the Sephardim were cultured and enlightened. In economics, De Pinto opposed the physiocrats, and advocated (against Hume) the economically productive role of the national debt, and modern credit and commerce. Opposed by Adam Smith, he was seen by Dugald Stewart and Sir Francis D'Ivernois as an important new economist. Marx called him "the Pindar of the Amsterdam stock exchange" for his advocacy of speculation. Werner *Sombart regarded him as the beginner of the modern age of economics, and the first to understand the growth of credit. Sée claimed he was the first to say that speculation was useful. Hertzberg saw De Pinto's economics as a covert defense of the role of Jews in 18th-century economic affairs. De Pinto was a conservative in philosophy and politics. A Deist, he opposed D'Holbach's materialistic atheism as a menace to the social order. He offered proofs of the existence of God and the immortality of the soul (borrowing from Mendelssohn among others), but not appealing to any biblical evidence. His criticisms of the American Revolution opposed popular democracy and defended the economic rights of the colonial powers, and the need for them to join together to maintain peace and social harmony.

De Pinto was a Jew of the Enlightenment (he knew Voltaire, Hume, Diderot, Marat, among others). He was a genuine innovator in economic theory, and a moderate, tolerant, pacifistic conservative in its politics and philosophy. Manuscript 48A19 of Ets Haim library (Amsterdam) contains many unpublished works of De Pinto, including two philosophical discourses.

[Richard H. Popkin]

PINTO, JOSIAH BEN JOSEPH (1565–1648), talmudist and kabbalist. Born in *Damascus, Pinto was for the major part of his life rabbi in Damascus, but went to Jerusalem about 1617. In 1625 he decided to settle in Safed, but when his son died in the following year, he returned to Damascus. His teacher in subjects other than Kabbalah was Jacob *Abulafia, who ordained him. In Kabbalah he adhered closely to the system of Ḥayyim *Vital whose son, Samuel, was his pupil and subsequently married his daughter.

Pinto is best known for his *Me'or Einayim* (part 1, Amsterdam, 1643; part 2, Mantua, 1743), a commentary on *Ein Ya'akov* of Jacob *ibn Ḥabib. He also wrote *Kesef Nivḥar* (Damascus, 1605), sermons on the weekly scriptural readings; part 2, entitled *Kesef Mezukkak* (Venice, 1628), sermons and explanations of unusual rabbinic comments on scriptural passages; *Kesef Zaruf* (*ibid.*, 1629) on the Book of Proverbs; *Nivḥar mi-Kesef* (Aleppo, 1869), responsa. Some of his responsa were in a manuscript of the responsa of his son-in-law, Samuel *Vital, which was in the possession of H.J. Michael, while others were published in the responsa of Yom Tov *Zahalon (Venice, 1694). Some, which he wrote in 1646, were published in the *Yad Aharon*, part 1 (Smyrna, 1735), of Aaron *Alfandari. His *Kesef Nimas*, on Lamentations, and *Kevuzot Kesef*, on the laws of marriage and the civil laws in the Shulḥan Arukh, are in manuscript. Joseph *Delmedigo mentions a biblical commentary by Pinto entitled *Kesef To'afot*.

[Samuel Abba Horodezky]

PINTO, VIVIAN DE SOLA (1895–1969), English literary scholar and poet. The son of a tobacconist on fashionable St. James's Street, London, Pinto became professor of English at the University of Nottingham (1938–1961) and specialized first in 17th-century studies and later in modern literature. His works include two volumes of poetry, *The Invisible Sun* (1934) and *This Is My England* (1941); *Crisis in English Poetry, 1880–1940* (1951, 1967⁵); and an edition of the poems of D.H. Lawrence (1964). He appeared for the defense in the famous 1960 obscenity trial in London of *Lady Chatterley's Lover*, and was a friend of many famous writers including Siegfried *Sassoon, to whom he was second-in-command on the Western Front in World War I.

PINTO DELGADO, JOÃO (**Mosseh**; d. 1653), Portuguese *Marrano poet, born at Vila Nova de Portimão. His grandfather, of the same name, was in government administration in

the Algarve, as was João's father, Gonçalo Delgado. On two separate occasions, João lived in Lisbon. His parents, after going to Antwerp, settled in Rouen, c. 1609, where he later joined them. In 1633 some of the Portuguese New Christians in Rouen denounced others as Judaizers, and João and his father took refuge in Antwerp (a brother, Gonçalo, remained in Rouen). João moved to Amsterdam in 1634, followed soon after by his father. In the Dutch city he openly joined the Jewish community and was known as Mosseh Pinto (Delgado). Around 1636, 1637, and 1640, he was one of the seven *parnasim* of the *talmud torah*. João Pinto Delgado began his literary career in Lisbon, where he contributed poetry to works of a purely Catholic nature by João Baptista de Este and Luis de Tovar. In Rouen, in 1627, he published a collection of verse paraphrases of Old Testament books, *Poema de la Reyna Ester, Lamentaciones del Propheta Jeremias y Historia de Rut y varias poesias*, which he dedicated to Cardinal Richelieu. I.S. Révah has published parts of a manuscript autobiography, in prose and verse and written in Holland, in which Pinto Delgado attacked the Inquisition and Christian beliefs, and satirized those New Christians of Rouen who denounced others in 1633.

[Kenneth R. Scholberg]

PIONEER WOMEN, international labor Zionist women's organization, known since 1981 as **Na'amat**. Founded in New York City in 1925, Pioneer Women appealed to idealistic and politically committed women who were part of the eastern European immigrant generation. The organization provided social welfare services for women, young people, and children in Palestine, helped new immigrants become productive citizens there, and encouraged U.S. Jewish women to take a more active part in Jewish community life and U.S. civic affairs. Although its business was originally largely conducted in Yiddish, the organization gradually shifted to English as it became increasingly acculturated to the U.S. scene. By 1936 it had chapters in 60 U.S. cities, with 10,000 members.

After World War II Pioneer Women broadened its field of endeavors, while at the same time moderating its original socialist and feminist ideology; nevertheless, it continued to cooperate with progressive and labor groups on behalf of liberal causes. In cooperation with its sister Israel organization, *Mo'ezet ha-Po'alot*, Pioneer Women maintained a large network of welfare and cultural projects in Israel. Pioneer Women also stimulated the formation of sister organizations in other countries. The World Union of Pioneer Women's Organizations, which was formed in Tel Aviv in 1964, had member sisterhoods in the United States, Canada, Mexico, Argentina, Brazil, Chile, Peru, Uruguay, Great Britain, Belgium, and Australia. The total world membership of Pioneer Women in 1970 was 150,000.

In later decades, Na'amat/Pioneer Women gradually lost many of its distinctive features, as most of its functions and goals were adopted by mainstream American Jewish groups and institutions. By 2005, U.S. membership in Na'amat had declined to approximately 25,000 from a peak of 50,000 in 1970. In the United States, Na'amat continues to conduct Jewish educational and cultural activities, publishes a quarterly journal, *Na'amat Woman*, and supports youth work through the *Habonim labor Zionist youth movement, founded in 1935. Habonim sustains a network of coeducational year-round activities and summer camps and serves as a training ground for many future leaders of American labor Zionism.

[Gertrude Hirschler and Shoshana Hareli / Judith R. Baskin (2nd ed.)]

PIOTRKOW (Pol. **Piotrków Trybunalski**; Rus. **Petrokov**; Ger. **Petrikau**), town in Lodz province, central Poland; known from 1578 as Piotrkow-Trybunalski. Several anti-Jewish resolutions were passed at state conventions held in Piotrkow during the 14th to 16th centuries, including a series of limitations by the Sejm (Diet) of 1562. Jews settled in Piotrkow from the first half of the 16th century. In 1569 Jews were permitted by the king to settle in the suburbs of Piotrkow and trade at the fairs there on payment of 30 ducats to the Christian guild. The Jews were expelled following a *blood libel in 1590. During the greater part of the 17th century the municipality prevented Jews from entering Piotrkow, until 1679 when King John II Sobieski permitted Jews to return, to trade there, and to build a synagogue (completed in 1689). During the 1720s, under the first rabbi of Piotrkow, Eliakim Getz, a *hevra kaddisha* and *Bikkur Ḥolim* were organized. In 1744 Jewish self-defense against an attack by the mob was successfully led by Ephraim Fishel. The Jews of the community (about 800) were then compelled to leave the city and settle in the suburbs (Nowa Wiés). A *bet midrash* was founded there in 1765, and a large synagogue was built by the merchant Moses Kazin in 1781.

After the second partition of Poland in 1793, Piotrkow passed to Prussia. In 1808 there were in Piotrkow 1,817 Jews (46% of the total population), and in 1827, 2,133 Jews (45% of the total). After the opening of the Warsaw-Vienna railway line and the development of industries in the region, Jews founded weaving mills in Piotrkow. A growing Jewish proletariat was employed in the timber and textile industries, and in services. In 1857 there were 4,166 Jews (42% of the total population). In 1861 Jews obtained electoral and elective rights on the municipal council. In 1864 a Hebrew printing press was set up in Piotrkow, which in 1900 published the *Jerusalem Talmud*. Moses David *Szereszewski, the Lithuanian *maskil*, introduced the *Ḥibbat Zion* movement into Piotrkow in 1880. There were 30 *ḥadarim*, a *talmud torah*, two *battei midrash*, and a private secular school in this period. The Jewish hospital, founded in 1836, was also extended. In 1912 a Zionist workers' party was founded in Piotrkow. The community numbered ap-

proximately 5,400 in 1865, 9,370 (33.14%) in 1897, and by 1917 had increased to 14,890.

Some of the Jews who found shelter in Piotrkow during World War I left the town during the establishment of independent Poland (1918). In 1921 there were in Piotrkow 11,630 Jews (28% of the total population). Of the 33 members of the municipal council elected in 1919, seven were Jews. In the 1928 elections their number rose to eight. Between the two world wars new educational institutions were established in Piotrkow by the *Tarbut, CYSHO, and *ORT; and sports organizations (Maccabi, Shtern, etc.) and a musical society, Zamir, were formed. From 1924 the Zionist periodical *Unzer Tsaytung* was published in Piotrkow and Zionist and other youth movements gained in strength. In the elections to the community council in 1935 six representatives of the *Bund were elected. From 1924 to 1931, Meir Shapiro, leader of the Agudat Israel, served as rabbi of Piotrkow.

Holocaust Period

After the outbreak of World War II about 2,000 Jews, the majority of them young people, escaped from Piotrkow and attempted to find refuge in the larger towns and the Soviet-occupied zone. On Oct. 28, 1939, the Germans set up at Piotrkow the first ghetto to be established in Poland. Despite famine, disease, and terrorization, the population in the ghetto continued to increase as thousands of Jewish refugees arrived there, mostly from the regions annexed by the Germans. In April 1942 there were 16,469 Jews in the Piotrkow ghetto, of whom 8,141 had come from other localities, and by Oct. 15, 1942, there were about 25,000 Jews, including a large number of refugees from the surrounding townlets of Kamiensk, Wolborz, Serock, and others. Subsequently, in the course of one week, until Oct. 22, 1942, some 22,000 Jews of the Piotrkow ghetto were deported to the death camp of *Treblinka. About 4,000 Jews remained, half being workers in labor camps assigned to factories which worked for the German army. Some 2,000 others hid in the ghetto to escape the death transports. At the beginning of 1943 the Nazis carried out searches for those in hiding and found about 2,000 Jews, whom they murdered in the surrounding forests. In May 1943 about 500 Jews were taken from Piotrkow to the camps of Starachowice, *Radom, and others. Among those some 40 women and children were murdered on the spot. The remainder, numbering about 1,100, were concentrated into camps near the Karo and Hortensia glassworks and the Fischer & Co. timber enterprises. In November 1944 the last few hundred Jews in the ghetto were deported to the camps of *Buchenwald, *Bergen-Belsen, and *Mauthausen.

Several attempts had been made in the ghetto to organize resistance. Between 1942 and 1944, about 500 Jews escaped from the ghetto. They found refuge in the forests and within the organizations which fought the Germans. From the middle of 1943 a group of Jewish partisans was active in the vicinity of Piotrkow. The group succeeded in escaping from the labor camp attached to the Karo glassworks and held out until the

retreat of the Germans from the region in January 1945. Jewish settlement in Piotrkow was not renewed after the war.

PIOVE DI SACCO, small town in Padua province, N. Italy. Piove di Sacco was the first town to admit Jews in this region. Before 1373 a moneylending bank was founded there by a Jewish consortium. In 1455, when the Jews of Padua were forbidden to lend money, they transferred their business to nearby centers, among them Piove di Sacco – where there had never been a ghetto. Piove di Sacco is of particular interest for its Hebrew press. In 1475 Meshullam Cusi Rafa ben Moses Jacob of nearby Padua and his sons set up a Hebrew printing press and were the first to issue a *Seliḥot* prayer book in nonvocalized square type (1475). In July 1475 they printed in folio form, the first volume of the first printed edition of *Jacob b. Asher's *Arba'ah Turim* – the second dated Hebrew book in Italy (now found at Padua's Biblioteca Civica Bp 6747). Meshullam died soon after, and his widow and sons Solomon and Moses continued printing the remaining volumes. After the second and third volumes were issued, the sons were imprisoned, apparently in connection with the *Trent blood libel, and their mother completed publication of the fourth volume alone (see *Incunabula). In 1905 Leone Romanin Jacur sat in the Italian parliament as the town's deputy.

[Alfredo Mordechai Rabello]

PIPERNO BEER, SERGIO (1906–1976), Italian judge and communal leader. Born in Rome, Piperno Beer took up a juridical career, reaching the rank of a councilor at the Court of Cassation, the highest court of Italy. During the period of racial persecutions (1938 ff.), though dismissed from public service, he was active in DELASEM (Delegation for Assistance to Emigrants) and in the Italian liberal-secular movement Giustizia e Libertà (1943–44). After the liberation he was elected councilor of the Rome Jewish community and chaired the Communal Commission charged to investigate the case of the chief rabbi of Rome, Israel Zoller, who had converted to Christianity.

In June 1956 he was elected president of the Board of Italian Jewish Communities and in this office he worked for the Italian state's recognition of the rights of families who had

lost members during Nazi persecutions, for the strengthening of institutions of Italian Jewry and their standing vis-à-vis the State, and for the revival of Jewish culture in Italy. He was active in the contacts with the Vatican before Ecumenical Council Vatican II and the declaration *Nostra aetate*. In the aftermath of the Six-Day War (1967) he helped with the emigration of the entire Jewish community of Libya, with the consent of the Italian government. Piperno Beer was reelected as president of the Board of Italian Jewish Communities in 1961, 1966, and 1974.

PIPES, RICHARD EDGAR (1923–), U.S. historian. Born in Cieszyn, Poland, Pipes migrated in his youth to the United States. He taught Russian history at Harvard, and was appointed professor. He also served as director of Harvard's Russian Research Center (1968–73). From 1974 until 1996 he held the position of Frank B. Baird Jr. Professor of History at Harvard. From 1997 he was the Frank B. Baird, Jr. Professor of History Emeritus at Harvard. Politically conservative, Pipes was included in President Ronald Reagan's U.S. Department of State transition team in 1980. He was the director of the National Security Council's East European and Soviet Affairs team (1981–82) and served as an expert witness in the Russian Constitutional Court's trial against the Communist Party in 1992.

Pipes' principal historical studies concern both Imperial Russia and the Bolshevik period, with special attention to intellectual and national questions. He was a member of the editorial boards of *Strategic Review*, *Orbis*, the *International Journal of Intelligence and CounterIntelligence*, *Continuity*, *Journal of Strategic Studies*, *East European Jewish Affairs*, and *Nuova Storia Contemporanea*.

His published works include *Formation of the Soviet Union* (1954), an important contribution to the study of the national question of Soviet Russia. He edited and translated *Karamzin's Memoir on Ancient and Modern Russia* (1959) and *Social-Democracy and the St. Petersburg Labor Movement 1885–97* (1963). He edited *Russian Intelligentsia* (1961) and *Revolutionary Russia* (1968). Among his other publications are *Europe Since 1815* (1970), *Soviet Strategy in Europe* (1976), *U.S.-Soviet Relations in the Era of Detente* (1981), *Russia Observed* (1989), *The Russian Revolution* (1990), *Communism: The Vanished Specter* (1993), *Russia under the Bolshevik Regime* (1994), *Three "Whys" of the Russian Revolution* (1996), *Prosperity and Freedom* (1999), and *Communism: A Brief History* (2001).

His son Daniel Pipes is a writer and commentator on Middle Eastern affairs.

[William Korey / Rohan Saxena and Ruth Beloff (2nd ed.)]

PIRKEI DE-RABBI ELIEZER, eighth-century aggadic work (see *Midrash), also called *Baraita de-Rabbi Eliezer* or *Haggadah de-Rabbi Eliezer* in medieval rabbinic literature because of its opening words: "It is related of *Eliezer b. Hyrcanus."

Character and Composition

The book is not a Midrash constructed on the verses of Scripture, but an aggadic narrative; the extant version is divided into 54 chapters, but this is probably not the whole book. It commences with an *aggadah* about the early days of Eliezer b. Hyrcanus, and then chronologically narrates events from the Creation until the middle of the journeys of the Children of Israel in the wilderness, concluding with *Miriam's leprosy and the *copper serpent. In the second half of the book, from Abraham onward, the narrative is related to the blessings of the **Amidah* prayer, but the last chapter terminates at the eighth blessing (for health). The book also refers to the 10 occasions when God descended to earth, but in their enumeration only reaches the eighth descent. It is therefore clear that the book as it survived is incomplete; but even in manuscript the only additional portion preserved is the second half of the last chapter.

Language and Date

The book is written in Hebrew – partially artificial – reminiscent of the geonic era, and contains a few Greek words. The author made use of the tannaitic literature, the Jerusalem Talmud, the *Midreshei Aggadah of the **amoraim*, and even of the Babylonian Talmud, as well as those Aramaic *Targums to the Scripture that originated in Erez Israel. The author does not quote his sources, but tends to revise them completely – shortening, lengthening, and combining them freely. It is therefore not a collection or compilation of different sources, but a book with a unified and continuous narrative in which the personality of the author is clearly recognizable. The author was greatly influenced in both content and form by the *Apocrypha and Pseudepigrapha of the Second Temple period, particularly the books of the *Enoch cycle. His entire manner of narration and unique method of connecting *halakhah* and *aggadah* were influenced by the Book of Jubilees. *Pirkei de-Rabbi Eliezer* has thus preserved many ancient sources. It contains almost no names of *amoraim*, but falsely attributes sayings to many *tannaim*. *Pirkei de-Rabbi Eliezer* is therefore a pseudepigraphic work par excellence; the influence of apocalyptic works of the Second Temple period is well marked in that respect, as well as in its mystical air and in the descriptions of angels. The *halakhot* of the *calendar laid down in the Byzantine period and at the beginning of the Muslim era were already known to the author. The book is filled with the halakhic customs current in Erez Israel at the beginning of the geonic period. It contains Arabic legends, and remarkable descriptions of the Muslim Omayyad dynasty, and looks forward to the downfall of this (Omayyad) caliphate as an omen of the end of the exile. All these indications prove that it was composed in Erez Israel during the first half of the eighth century, just prior to the fall of the Omayyad dynasty, but before the rise of the Abbasid dynasty. Quotations from it are already found in the tractate **Soferim*, and in the work of *Pirkoi ben Baboi. The work also follows the model of the Arabic collections of biblical legends, in which narrative re-

ceives more emphasis than exegesis. *Pirkei de-Rabbi Eliezer* was first published in Constantinople (1514), and reprinted many times on the basis of the first edition. In the Warsaw edition of 1852, a valuable commentary by David *Luria was added. Many manuscripts have been preserved, and extracts from three of them were published by Higger in *Horeb*, 8–10 (1944–48), and one of them was translated into English by G. Friedlander (1916, 1965²).

BIBLIOGRAPHY: Zunz-Albeck, *Derashot*, 134–40.

[Moshe David Herr]

PIRKOI BEN BABOI (eighth–ninth century), talmudic scholar of the geonic era and author of a polemical halakhic work. A pupil of Abba, who was a pupil of *Yehudai, a *Gaon* of Sura, Pirkoi notes that it was only because of their teaching and tradition that he presumed to write to the scholars of Kairouan. His teacher Abba wrote the *Halakhot de-Rav Abba*, small fragments of which were published from the Cairo *Genizah by S. Schechter and J.N. Epstein. Some conjecture that Abba was one of the scholars of the Pumbedita Academy and that Pirkoi also apparently studied there. It was earlier assumed that Pirkoi b. Baboi meant “the chapters of [*Pirkei*] Ben Baboi,” but Epstein showed that Pirkoi was a Persian personal name. According to Epstein, Pirkoi was born in Babylon, where he studied and wrote his *Iggeret*. According to Ginzberg, however, he was a native of Erez Israel who studied in Babylon, where he settled and wrote his work. Fragments of the work were scattered in various libraries – St. Petersburg, Oxford, Cambridge – and were published from the *Genizah*, beginning in 1903, by various scholars such as Harkavy (*Ha-Goren*, 4 (1903), 71–74) and L. Ginzberg (*Geonica*, 2 (1909), 50–53), neither of whom identified the author. J. Mann, who added a third fragment, succeeded in indicating Pirkoi as the author; additional fragments were published by various scholars of the period including Solomon Schechter, J.N. Epstein, B.M. Lewin, Shraga Abramson, and S. Spiegel.

Pirkoi became renowned through his work *Iggeret*, which reflects his aspiration to make the Babylonian Talmud the authoritative code for world Jewry. Echoes of the long drawn-out struggle between the two Torah centers – Erez Israel and Babylon – are heard in the polemical chapters of Pirkoi which constitute, in Ginzberg’s view, the earliest halakhic work extant from the geonic era. Some were of the opinion that the *Iggeret* was sent to Erez Israel, but more accepted the view of Lewin and Spiegel that it was sent to the countries of North Africa (around 812), where the customs of Erez Israel were followed. Pirkoi’s intention was to encourage them to accept the *halakhah* of Babylon and the customs of the two academies in Babylon. It is probable that Pirkoi’s words in his *Iggeret*, “God established places of learning in all localities of Africa and of Spain and granted you the privilege of engaging in Torah study by day and by night,” were directed especially to the people of Kairouan, which in the time of Pirkoi enjoyed tranquility and economic stability. The communal leaders and scholars

of Kairouan endeavored to maintain places of learning in the town as well as in various localities in Spain. Emigrants who left Kairouan for Spain founded Torah centers there. Pirkoi complains about the pupils of the Babylonian academies who “learnt the customs of Erez Israel,” arrived in North Africa, and were then drawn after the ignorant customs and habits of Erez Israel. In his view any custom or ruling which is not in accordance with the law and *halakhah* of the Babylonian Talmud is a consequence of the apostasy decreed by the wicked kingdom of Edom upon Erez Israel. As a result Torah was forgotten by the inhabitants of Erez Israel, and the Erez Israel customs came to be “customs of apostasy.” Pirkoi, as a “pro-Babylonian,” stresses the superiority of the Babylonian academies as the only source in the world for the details of the Oral Law, and says that it is fitting that from them the Torah should go forth to Jews in all countries. In the opinion of many scholars (Lewin, Mann, Aptowitzer), this polemic of Pirkoi also had an anti-Karaite purpose: to ensure that the denial of the Oral Law by Karaites should not detach the Jews from the tradition customary in the Babylonian academies.

[Josef Horovitz]

°PIROGOV, NIKOLAI (1810–1881), Russian physician-surgeon and civic leader. From 1856 to 1858 he was a trustee for the Odessa education district and from 1858 to 1861 he served in the same capacity for Kiev. In south and southwest Russia he came into contact with the Jewish population and became their defender. In a letter to the Ministry of Education, dated Feb. 4, 1857, he argued for compulsory general education which would, at the same time, respect the religious sensitivities of the Jews. He proposed a cadre of Jewish teachers who would have the same rights as their non-Jewish colleagues, and opposed the idea that Christian trustees should be assigned to Jewish educational institutions. In his writings Pirogov pointed out the traditional respect of Jews for education and culture, and supported O. *Rabinovich and J. *Tarnopol in their efforts to publish a Jewish periodical in Russian. He also supported A. *Zederbaum for his publication of a Hebrew periodical.

PIRYATIN, city in Poltava district, Ukraine. A Jewish settlement in Piryatin was first mentioned in 1630. The commu-

nity was destroyed in the massacres of 1648 and not revived until the close of the 18th century, when it became a center for *Chabad Ḥasidism. The community numbered 464 in 1847 and grew to 3,166 (39% of the total population) in 1897. Apart from *ḥadarim* there was a Jewish school with separate classes for boys and girls. By 1926 the Jews numbered 3,885 (31.8%), dropping by 1939 to 1,747 (12.7% of the total population). About 100 families worked in a Jewish kolkhoz founded in 1929. The Germans entered Piryatin on September 18, 1941. On April 6, 1942 they murdered 1,600 Jews, and later another 1,400 from the environs, and refugees.

[Yehuda Slutsky]

PISA, city in Tuscany, central Italy. Benjamin of *Tudela found 20 Jewish families living there around 1165. It may be presumed that Jews had settled in the city even earlier, attracted by the possibilities offered by the close commercial ties between Pisa and countries of the Levant. Some of the Jewish tombstones embedded in the town wall, near the cathedral, date back to the middle of the 13th century. At the end of the 13th century an "Alley of the Jews" (Chiasso di Giudei) is recorded. In 1322 the Jews in Pisa were instructed to wear the distinguishing *badge but the regulation was apparently not strictly enforced. By the second half of the 14th century Pisa was in a state of political and economic decline, which culminated in its subjection to Florence in 1406. Around the same time, Vitale (Jehiel) b. Matassia of Pisa, a banker of Roman origin, began his activities in Pisa. The family he founded owned banks in Pisa and Florence, as well as branches in other towns, and for about 150 years dominated Jewish moneylending in Italy, as well as distinguishing itself in the cultural sphere (see Da *Pisa family). Some of its members had close connections with the Medici of Florence. In 1492 Jewish exiles from Spain who arrived in Pisa were assisted generously by the Da Pisa family. When a Christian loan bank (*Monte di Pietà) was opened in Pisa in 1496, Isaac b. Jehiel subscribed over half the founding capital, so that Jews were permitted to continue their moneylending activities, although only for a short period. As a result of the struggle between the Florentine Republic, which was hostile to the Jews, and the Medici, who were favorably disposed toward them, and the war of 1494–1509 between Pisa and Florence, the Jewish community of Pisa was considerably reduced in size. It began to recover in 1547 when Cosimo I de' Medici, duke of Tuscany, urged Jews and *New Christian fugitives from Portugal to settle in Pisa and *Leghorn, and some accepted the invitation. Larger numbers were attracted by the generous terms of the proclamation issued in June 1593 by the grand duke Ferdinand I de' Medici, addressed particularly to Sephardim and Marranos wherever they happened to live. Another proclamation, issued in October 1595 to the German and Italian Jews, who had then been driven from the territories of Milan, aroused little response. The Medici wished to promote Pisa as the market capital of Tuscany, with the port of Leghorn dependent on Pisa. However, Leghorn developed more successfully and also attained

greater importance as a Jewish center, and in 1614 became independent of Pisa.

Samuel *Foa (or Fua), a member of the famous printing family of Sabbioneta, established a Hebrew press at Pisa toward the end of the 18th century, and was succeeded by Samuel and Joseph Moliho (1816ff.).

There were 600 Jews living in Pisa at the beginning of the 17th century, and half that number a century later. The number remained thereafter approximately the same, totaling 365 in 1840. Most of the Jews in Pisa were governed by the liberal patents of 1593 which granted, among other privileges, Tuscan citizenship *ipso jure* to any person admitted as a member of the community, and semiautonomous internal jurisdiction. The Jews in Pisa lived in relative tranquility, mainly engaging in commerce. In the 18th and especially the 19th century, they played an active part in developing industries, particularly the cotton industries which attracted a certain number of Jews there. The Jewish population numbered 700 in 1881.

[Attilio Milano]

Holocaust and Modern Periods

In 1931 the Jewish community of Pisa numbered 535. During the Holocaust, a dozen Jews, among them Rabbi Augusto Hasdà, were sent to extermination camps. Eight more Jews were deported elsewhere. On Aug. 1, 1944, the Nazis broke into the house of the president of the community, the well-known philanthropist Pardo-Roques, and massacred him together with six Jews who had taken refuge there. After the war, the community, including the towns of Viareggio and Lucca, had a membership of 312 Jews, which declined to 210 by 1969 and 100–200 at the beginning of the 21st century.

PISA, DA, family of bankers, financiers, and international merchants ranked among the best-known Italian Jewish families.

In 1393 **MATASSIA DI SABATO**, a member of the well-known Bet-El or Min-ha-Keneset Roman family, settled in San Miniato, a small town in Tuscany, under the Florentine government, where he opened a local bank. In 1406 his son **VITALE JEHIEL** of Matassia established his activities in Pisa, the city from which he derived his new family name. He opened other lending banks in San Gimignano, Prato, Colle di Val d'Elsa, and Arezzo. A scholar and lover of letters, he became known even outside Italy: Profiat *Duran recommended him to his disciple Judah Zark, who found hospitality at the da Pisa home.

After Vitale's death the banking activities were continued by his daughter **GIUSTA** (d. 1478) who married **ISAAC DI**

MANUELE DA RIMINI, who later assumed his wife's surname. Giusta managed the family company together with her husband and later with her son JEHIEL VITALE (d. 1490), who brought their activities to their greatest heights by obtaining, with other associates, an exclusive banking license for Florence. He opened loan banks in several other towns.

Jehiel Vitale was also known as one of the most noteworthy Hebrew personalities of his time and gained the favor of Lorenzo de' Medici. When the Franciscan friar *Bernardino da Feltre preached in Florence against the Jewish loan bankers, Vitale led a deputation of the Jews of the city before Lorenzo de' Medici and succeeded in averting an edict of expulsion (1488). Vitale had family connections with other important families (such as da S. Miniato, da Tivoli, da Fano and da Volterra) and was friendly with notables abroad, including Abraham Hayyun of Lisbon, Don Isaac *Abrabanel, and Joseph Yahia (d. 1497), whom the da Pisa house helped transfer goods from Lisbon to Ferrara. Vitale's house became known as a meeting place of scholars: among those who stayed there was Johanan *Alemanno, who tutored Vitale's sons.

The distinctive characteristics of the family were maintained also by Jehiel Vitale's sons ISAAC (d. 1511) and SIMONE SAMUEL (d. 1510). The da Pisa fortunes suffered only limited damage when the family was compelled to leave Tuscany after the downfall of the Medici (1494). When they returned to Florence, with Pope Leo X, the da Pisa were able to recover their properties and resume their banking activities in Tuscany.

Another outstanding member of the family was DANIEL (d. 1532), son of Isaac. He was active in Pisa, Florence, and Rome, where he was appointed gentleman and *familiare* of Pope Clement VII, who entrusted him with the task of drawing up the new *takkanot* of the composite Roman Jewish Community. This code was approved in 1524.

Daniel welcomed David *Reuveni on his visit to Rome. Daniel had two brothers, SALOMON and ABRAM. The first developed wide-ranging banking activities from Tuscany to the Republic of Venice. Abram established his activities in Bologna.

VITALE JEHIEL NISSIM (d. 1574), son of Simone Samuel, was an eminent scholar, with profound knowledge of Scriptures, philosophy, Kabbalah, and astronomy. He wrote *Minhat Kena'ot* (publ. by D. Kaufmann, 1898) aimed at demonstrating the superiority of religion over philosophy, and *Ma'amar Hayyei Olam*, a halakhic treatise on matters of finance (publ. in 1962 by G. Rosenthal under the title *Banking and Finance among Jews in Renaissance Italy*, with notes and biographical sketch). He lived in Pisa and on the vast farming estate that had belonged to the family for more than a century, in the hills surrounding the city. His house was open to the needy.

In 1554 SIMONE SAMUEL, son of Vitale Jehiel Nissim, graduated in medicine from the University of Pisa. Seven years later EMANUELE, son of Salomon di Isaac, obtained a university degree in Ferrara, by special privilege. Furthermore he was a member of the rabbinical academy in that city.

In the 17th century a branch of the family became established in Ferrara, under the rule of the Church. In the course of several generations their surname was simplified to Pisa.

In 1831 ZACCARIA OF ELIA PISA (1788–1833) founded a banking house in Ferrara under his name. In 1852 his sons LUIGI ISRAEL (1813–1895), LEONE LEOPOLDO (1812–1872), and GIUSEPPE (1827–1904) moved the family enterprise to Milan and developed it into one of the most important private banks in Italy. Between 1863 and 1914 the Bank Pisa was engaged in raising public-capital subscriptions and placed bonds issued by the state as well as by the railway companies. It was on the board of directors of such companies as the Strade Ferrate Meridionali (Southern Railways), the Navigazione Generale, and Edison.

UGO PISA, son of Luigi Israel (1845–1910), volunteered in the 1866 war. He entered a diplomatic career, led an economic mission to China and Japan, and was eventually appointed ambassador. He later became president of the Chamber of Commerce of Milan and senator of the Kingdom of Italy. The banking house of the family continued its operations well into the 1930s under the guidance of LUIGI DELLA TORRE (a grandson of Luigi Pisa), who was senator of the Kingdom (1913) and president of the ABI (Italian Banking Association).

From MOSES-ARON PISA, a brother of Zaccaria, descended the Roman line of the family, headed in the early 21st century by FRANCO PISA, an economist and international merchant. He engaged in the study of Jewish economic history and published several studies on the structure of local banks and their influence on regional economies. He also sponsored several cultural activities.

PISCO, SERAPHINE EPPSTEIN (1861–1942), secretary and chief administrator of the National Jewish Hospital for Consumptives in Denver from 1911 through 1938. She should also be understood as a product of the late 19th century Jewish club women's movement, which transmuted traditional ideas about women's nurturing role into professional social work. Pisco was born in St Joseph, Missouri, to Max and Bertha Eppstein, who moved her and five siblings to Denver in 1875. In 1878, like so many women of her generation, she married a businessman many years older than herself, Edward Pisko, who was prominent in local politics, and had been president of the local B'nai B'rith lodge. Also like so many women of her generation she became active in Jewish women's charitable work, serving as president of the Jewish Relief Society and in 1896 helping Carrie Shevelson Benjamin found a section of the National Council of Jewish Women. She served on many Council committees, and when president she helped found a settle-

ment house in the Colfax district, where she developed close relations with East European Jews and Italian immigrants. An excellent public speaker, in 1899 she represented the Women's Club of Denver at the National Conference of Charities and Corrections in Cincinnati, and also accepted a paid position as fundraiser for the newly opened National Jewish Hospital. Since most hospital officers did not live in Denver, when the secretary died suddenly in 1911, she was appointed his successor. She could assume this position with no medical training because sanitariums, treating a disease with no known surgical cure, lagged behind general hospitals as research-oriented teaching facilities whose medical staffs demanded control of budgets. When an audit revealed that her predecessor had embezzled funds, Mrs. Pisco used her reputation as leader of Jewish women's clubs to restore public confidence in the institution. She brought professional efficiency to the business office by removing it from her predecessor's law office to the hospital grounds, hiring women to replace men on her small staff, and using her network of female social work professionals at other Denver institutions to sustain her autonomy against the male medical staff. When nationally sponsored investigations of the hospital in 1912 and 1916 recommended that its administrative autonomy be subordinated to a city-wide Jewish federation of charities, she persuaded Judge Julian Mack of Chicago that the hospital could best treat its patients by retaining its fundraising network and administration. Her correspondence with the president and treasurer of the hospital reveal extraordinary command of fiscal details, rhetorical irony when rebuffing the criticisms of male officers, and charm when persuading city officials to meet the hospital's needs. The hospital remained her life's work, and in 1925 the Women's Pavilion was renamed in her honor. When infirmities slowed her down she retired in 1938.

PISGAH (Heb. פִּיִּגְיָה), mountain in Transjordan in the territory of the tribe of Reuben (Josh. 13:20). It lay on the border between the land of Sihon the Amorite and the territory of Reuben, northeast of the Dead Sea (Deut. 3:17; 4:49; Josh. 12:3). In the above passages, the reference is apparently to the slopes of Mt. Pisgah near the Dead Sea (Num. 21:20; 23:14; Deut. 3:27; 34:1). More precisely, they probably refer to the western slope of the mountain. The slopes of Mt. Pisgah served as an important junction for the roads in the area of the mountain ridge of Nebo. It is probably due to the area's geographic location that biblical sources emphasized its location within the borders of Israelite settlement. The "top of Pisgah" (Deut. 34:1) is identified with Ra's al-Siyāgha, west of Mt. Nebo (supposedly the

Siyaran mentioned in one version of Targum Onkelos, Num. 32: 3; cf. "Netinah la-Ger," *ibid.*). This is the place from which Moses viewed the Promised Land before his death.

PISK, PAUL AMADEUS (1893–1990), musicologist, composer, and pedagogue. Born in Vienna, Pisk studied under Arnold *Schoenberg, Schreker, and Guido *Adler and received a doctorate in musicology from the University of Vienna (1916). He attained prominence as a musical journalist and as a spokesman for progressive German and Austrian composers. Pisk served as secretary of Schoenberg's Society (1918–21) and worked as editor for the *Musikblätter des Anbruch* (1920–28) and the *Wiener Arbeiter-Zeitung* (1921–34). He was a co-founder of the International Society for Contemporary Music (ISCM), and served as director of the music department of the Volkshochschule, Vienna (1922–34). In 1936 he had to immigrate to the United States, becoming a citizen in 1941. He held senior academic posts at various universities, and renewed contact with Schoenberg, *Milhaud, and Hindemith. Pisk composed about 100 works for orchestra, chamber groups and keyboard, dramatic pieces, and choral works. Pisk's compositions tend toward atonality, but do not employ 12-note techniques. Many of them employ folk melodies. Among his publications are a study of the masses of the 16th-century composer Jacobus Gallus (1918) and articles on Schoenberg, Berg, Webern, and modern music. He wrote (with H. Ulrich) *History of Music and Musical Style* (1963). Through a bequest of his the American Musicological Society established the Paul A. Pisk Prize.

PISSARRO, CAMILLE (1830–1903), French painter. Born into a Sephardi family which had migrated from Bordeaux to the Virgin Islands, he was sent to a boarding school in Paris at the age of 12. At 17 he returned to St. Thomas to become a clerk in his father's general store, but he wanted to be an artist, and ran away to Caracas, Venezuela. After a while he obtained his father's permission to study in France, and from 1855 until his death, he remained in, or near, Paris.

With his socialist-anarchist convictions, he regarded himself a citizen of the world, with no particular religious, racial, or national ties. His wife was of Catholic peasant stock. He was shocked and hurt by the *Dreyfus case, but more as a man of progressive political ideals than as a Jew. Pissarro became a staunch member of a loosely organized group that came into being in 1874 under the name of "Société anonyme des artistes, peintres, sculpteurs, et graveurs" which soon became better known as the "Impressionists." He participated in

all of the Impressionists' eight group shows, received his share of abuse from public and press, and held the group together until 1886, after Cézanne, Renoir, and even the prime mover, Monet, had lost interest.

He took his guidance from Corot and Courbet, blending Corot's subtlety of atmospheric effect with the strength and solidity of Courbet. In 1865 he came under the spell of Manet. By that time he had already eliminated black and the siennas and ochers from his palette. In his mid-fifties, he was greatly influenced by Georges Seurat's pointillist technique, and for several years he experimented with the "divisionist" method of painting with little dots of primary color. Yet, he is chiefly known for his Impressionist landscapes and cityscapes. Pissarro thought he saw nature objectively but actually he rendered it just as much from feeling and knowledge as from dispassionate sight – rendered it in solidly constructed, architectural forms. Most of his canvases show a definite desire for order and organization, and a feeling for design. His work is uneven – perhaps more uneven than that of other artists, since he was forced to overproduce in his efforts to keep his family of eight from starvation.

All of Pissarro's sons – Lucien (1863–1944), Georges (1871–1961), Félix (1874–1897), Ludovic-Rudolpe (1878–1952), and Paul-Emile (1884–1972) – were gifted artists, but only one, LUCIEN PISSARRO, achieved a modicum of fame for his Impressionist landscapes and his woodcuts. Lucien played a major part in the introduction of Impressionist painting to England. Educated in France, he was trained by his father and in 1890 went to England, where he met William Morris, Charles Ricketts, and Charles Shannon who interested him in the art of book design. He later set up his own publishing firm, the Eragny Press, and collaborated with his wife in the production of beautifully illustrated books. Among his book productions was *The Book of Ruth and Esther*. Lucien's daughter Orovida (1893–1968) inherited his talent. She signed her work with her first name, and became known for her studies of animals.

[Alfred Werner]

PISTACHIO (Heb. בִּטְנָה; *botnah*), the tree and fruit of the *Pistacia vera*, a dioecious tree. The female tree produces reddish clusters of nuts with a white shell and a greenish kernel of delicate flavor. The word occurs only once in the Bible, in the plural, (Heb. בִּטְנִים (*botnim*)), among the "choice fruits of the land" sent by Jacob to the ruler of Egypt (Gen. 43:11). The Samaritan translation of the word is *biztekin*, i.e., pistachio. The Mishnah calls the tree *botnah* (Shev. 7:5) and its fruit *pistakin*. They were grown in Israel, and subject to tithes (TJ, Ma'as, 1:2, 48d). Two members of its genus, *Pistacia palaestina* and *Pistacia atlantica*, are indigenous to Erez Israel but the fruit is hardly edible. It was customary, however, to graft the pistachio onto the branches of these species whose trees and fruit are

called *botmin* (Ar. *but'm*) in the Talmud. The pistachio tree is similar to the latter, but its nuts taste like the almond, and in consequence the ancients thought it to be a hybrid of these two species (TJ, Kil. 1:4, 27a). In modern Hebrew *botnim* is used to designate peanuts. The identification is erroneous, for not only was the peanut brought from the Americas, but it is not a tree, as *botnim* definitely are, according to the Mishnah.

°PISTORIUS (DE NIDA), JOHANNES (1546–1608), German scholar. Pistorius was physician and adviser to the margrave of Baden-Durlach, whom he induced to support the Protestants; he himself later reverted to Catholicism, however, and entered the priesthood in 1591. He is mainly remembered for his *Artis Cabbalisticae, hoc est reconditae theologiae et philosophiae Scriptorum Tomus I* (Basle, 1587), a compendium of Christian mystical literature (including Johannes *Reuchlin's *De Arte Cabalistica* and Archangelus de Burgonuovo's commentaries on the "Conclusions" of Giovanni *Pico della Mirandola) which also contained a translation of Judah *Abrabanel's *Dialoghi di Amore*. A second volume, planned to contain major Jewish kabbalistic works, never appeared, probably as a result of Catholic objections to some of the material in the published compendium. The *Artis Cabbalisticae* was consulted by many later authors and is the most likely source of *Milton's knowledge of the Kabbalah.

[Godfrey Edmond Silverman]

PITHOM (Egyptian **Per Atum**, "House of the god Atum"), a city mentioned once in the Bible (Ex. 1:11) as one of the two treasury cities (see also *Ramses) which the Israelites were forced to build for Pharaoh. The identification of Pithom with the site of Tell el-Maskhutah near the eastern end of the Wadi Tumilat has been accepted for many years by a large number of scholars despite the lack of any definite evidence that the town located there, Tjeku (= biblical Succoth?), was called Pithom (Per Atum) earlier than the Egyptian 22nd Dynasty (c. 945–730 B.C.E.) or that Ramses II, the supposed pharaoh of the bondage, had built a completely new city there (as implied in Ex. 1:11). The 19th-Dynasty Egyptian text mentioning the "pools of Per-Atum of Merneptah which are in Tjeku" (Papyrus Anastasi IV, 4:56) may or may not refer to this city. An alternative identification of the site as Tell er-Ratabeh, about 22 miles west of Ismailia, has also been proposed and has been accepted by some. The most recent and most convincing identification depends on the Egyptians' use of *Per* (literally "house") in a wider, administrative context as the large

region, under the control of the temple of a particular god. *Per* could then refer to a city sacred to that god, as did Per Amun to Thebes and Per Bastet to Bubastis. Since Atum was a manifestation of the sun god, Per Atum could very well have meant *Heliopolis (called On in the Bible). It is quite probable that the Beth-Shemesh of Jeremiah 43:13 is a Hebrew translation of Per Atum. Such an identification is well supported by the size, importance, and fame of Heliopolis.

[Alan Richard Schulman]

PITIGRILLI (pen name of **Dino Segre**; 1893–1954), Italian author and journalist. After working on the staff of *L'Epoca* in Rome, Segre was a foreign correspondent in Istanbul and later founded two popular reviews, *Le Grandi Firme* and *Il Dramma*, in his native Turin. As Pitigrilli, he wrote novels and short stories which gained considerable notoriety in France as well as Italy for their erotic, often pornographic, themes and qualities, and their analysis, superficial though it was, of moral behavior. They include *La cintura di castità* (1921), *La vergine a 18 carati* (1924), *I vegetariani dell'amore* (1932), and *Dolicocefala bionda* (1936). During the Fascist era Pitigrilli became a police informer and, between 1934 and 1938, collaborated with the OVRA, Mussolini's secret police. As a result of these activities, he later had to seek refuge in Argentina. On his return to Italy after World War II, he ostentatiously embraced Catholicism and wrote anti-Jewish books such as *Mosé e il cavalier Levi* (1948).

BIBLIOGRAPHY: D. Zucáro (ed.), *Lettere all' OVRA di Pitigrilli* (1961).

PITTSBURGH, a leading industrial city in western Pennsylvania; in a metropolitan region of 2,500,000, the estimated Jewish population of Greater Pittsburgh (in 2002) was 54,000.

Early History

When the Quaker William Penn received the colonial charter for the area from Charles II in 1680 he incorporated a guarantee of religious freedom. Accordingly, many varied sects settled in Pennsylvania, including Jews. Among the early settlers were Joseph *Simon and Levy Andrew Levy.

After the Revolutionary War, the prosperous Philadelphia merchant David *Franks sent agents, among them Michael Gratz, with pack trains to Pittsburgh so often that their route was labeled Frankstown Road. They and several other Jews bought plots of land, apparently for speculation, and the map indicates a cluster of lots to the east marked "Jewstown," with another area near Sewickley marked "Gratztown." Most of the Jews, like other traders, came and went as itinerant peddlers, but a few remained, striking roots. The first known permanent resident of Pittsburgh to have Jewish ancestry was Samuel Pettigrew, son of Judith Hart, who settled in the town in 1814 and later served as mayor.

On the whole, however, economic difficulties caused by the diversion of river traffic by the Erie Canal kept Jewish immigration down. It was not until 1842 that Jews first met in a *minyán* for worship in a home near the Point. There is a dearth of records of this period, most having been destroyed in the great fire that swept the wooden town in 1845. In that year the Beth Almon Society was formed; land for a cemetery on Troy Hill was bought in 1846. With the building of a railroad in 1849, Jewish settlement began to increase. In 1852 there were 30 Jewish families in Pittsburgh, and six years later the number doubled. By 1854 a group meeting in a room over Vigilant Fire Department organized itself as Rodef Shalom, and in 1861 a building was dedicated on Hancock Street (later Eighth Street), where a Mr. Armhold served as reader, *mohel*, and *shohet*. German was the language of sermons and records, but the congregants showed willingness to modify practice regarding covered heads and mixed seating, among others. This caused dissension, and a new group was created in 1864, calling itself Etz Hayim, more conservative in practice. In 1861 Rodef Shalom brought a young English Jew, Josiah Cohen, to head its religious school and preach in English. He later became a distinguished judge.

With the outbreak of the Civil War, Pittsburgh grew in importance and population. From a handful, the number of Jews in 1864 became 750, nearly all of German origin. Ten of their men were in uniform. Women served on the Sanitary Commission, forerunner of the Red Cross. The United Hebrew Relief Society assisted returning soldiers and their families. Expanding heavy industry that was to make Pittsburgh the "Workshop of the World" drew great streams of immigration from Europe. The population had outgrown the Triangle and pushed upward, with stores on Fifth Avenue and small red-brick houses on adjacent streets on the "Hill." Some moved across the river to the town of Allegheny. More affluent Jews followed them there. By 1877 there were 2,000 Jews in Pittsburgh, many of them recent immigrants from Lithuania, sharing in the ferment of the industrial growth of the city and its environs. Many peddlers moved out to the surrounding towns, but all returned to the city for the Sabbath and holidays and for *kasher* food.

In 1885 a national group of leading Reform rabbis, led by Rabbi Isaac Mayer *Wise, met in Pittsburgh and articulated a series of points that were to be known as the *Pittsburgh Platform.

Eastern European Immigration

The Russian pogroms of 1881 set in motion the mass exodus which brought Russian Jews to America. Many thousands came to Pittsburgh, raising its Jewish population to 15,000 by 1905. The earlier residents received the penniless immigrants as their own, despite barriers of language and provincial manners. They doled out silver dollars for Sabbath meals, and helped to find lodgings and jobs. The Council of Jewish Women provided English teachers, gave guidance to homeless girls, and conducted classes in religion for children. The Gusky Orphan-

age was established, and various family and health services were founded. The Hebrew Free Loan Association assisted the newcomers with small sums to start them in business.

The rush of immigration brought an influx of well-educated Hebraic scholars from the yeshivot of Lithuania and Poland. In 1877 Rabbi Markowitz led the first of many Orthodox congregations. Rabbi Simon Sivitz founded the Shaare Torah Congregation and *talmud torah* in 1888. In 1901 Rabbi Aaron *Ashinsky led Beth Jacob and Beth Hamedrash Hagodol, and was a driving force in creating new agencies conducted in the Orthodox tradition, including the House of Shelter, Home for Aged, and Hebrew Institute. A variety of synagogues served Russian, Polish, Galician, and Hungarian groups. The demand for *kasher* food in a hospital and the need for professional openings for Jewish doctors inspired a group of women, led by Mrs. Barnett David, to inaugurate fund raising that led to the creation of Montefiore Hospital. The Irene Kaufmann Settlement was the recreation center for large numbers of immigrants. By 1912 a full complement of social agencies united in the Federation of Jewish Philanthropies, with headquarters on Fernando Street, easily accessible to the Yiddish-speaking community from the Hill. In that year there were 35,000 Jews in Pittsburgh. By the close of free immigration in 1925, there were 60,000 Jews in the area, many of whom had begun spilling over the margins of the Hill to Oakland, East End, and Squirrel Hill.

A complex community was growing. The Workmen's Circle fostered socialist ideas in an agnostic framework. Largely inspired by Rabbi Ashinsky, a vibrant Zionist movement flourished. A branch of the American Jewish Committee came into being; the B'nai B'rith lodges multiplied, and the American Jewish Congress added a note of militancy. Jewish War Veterans organized a Post.

Post-World War I

A new generation of young people, native American Jews, moved with enthusiasm and talent through the public schools, heading on to colleges and eastern universities. English was spoken everywhere, and prevailing American social amenities were the norm. Attendance at worship services dropped off and religious education reached a low ebb. But the Jews were playing an appreciable role in the growth of Pittsburgh. Parallel with the vast development of the steel industry, Jewish storekeeping had blossomed into great department stores – Kaufmann's, Kaufmann and Baer's, Rosenbaum's, Frank and Seder's. These and other Jewish names appeared among those who sponsored symphony concerts, art exhibitions, and other cultural events. Although the leading social clubs still practiced exclusion, Jews had created pleasant facilities for themselves and began to emerge on the political and social scene, a number serving with distinction in the judiciary, city-council, board of education, and state legislature.

With the Depression of the 1930s, the Jews were able to "take care of their own" through numerous agencies which were united in the Federation of Jewish Philanthropies. As the

decade advanced and the urgency to provide help for German Jewry became evident, new service and fund-raising agencies were called into being. In 1936 the United Jewish Fund was established. Reacting to the Nazi tragedy, Pittsburgh received its share of refugees from Germany, responded with fervor to the effort to create a Jewish homeland, and raised unprecedented sums for overseas relief.

A total transfer of Jewish population had taken place from the Hill to Squirrel Hill and the suburbs. New structures housed the synagogues, old and new. Awakened by the Holocaust, a renewed zeal for Jewish education resulted in highly developed programs of the Hebrew Institute, Hillel, and the Advanced Jewish Study Program of the United Jewish Federation. Synagogues responded with emphasis on education and youth, as well as keen interest in the State of Israel.

In 1970 Pittsburgh Jewry numbered 45,000, a decrease attributable to a growing tendency to relocate in the suburbs. Leadership passed into the hands of a new generation, largely of eastern European origin. Rodef Shalom remained the largest and most prestigious congregation, although no longer dominated solely by the "German" families. Montefiore Hospital, with 500 beds, was a teaching arm of the University of Pittsburgh. The Symphony Orchestra included many Jews, players as well as the conductor, and many generous patrons. There were several hundred Jewish teachers and principals in the public schools, and many distinguished members of university faculties. Jewish names were outstanding in the city's history – Otto *Stern, Nobel prize winner; Alexander Silverman, glass chemist; Joseph Slepian, electrical engineer; George S. *Kaufman, dramatist; Jonas *Salk, discoverer of polio vaccine; Solomon B. *Freehof, rabbi; Samuel Rosenberg, artist; William Steinberg, conductor; and Immanuel Estermann, physicist.

[Lillian A. Friedberg]

A study by the United Jewish Federation of Pittsburgh in 2002 revealed the following information:

In 2002, there were 54,000 people living in 20,900 Greater Pittsburgh Jewish households. In 1984, there were 47,700 people living in 19,000 Jewish households. This represents an increase of 14% in the number of people living in Jewish households and 10% in the number of households. The number of Jewish people in Greater Pittsburgh has declined by approximately 6% since 1984, but, in context, the Allegheny County population decreased by 11.6% during a similar time period (1980–2000).

Contrary to the graying of American Jews, 48% of the Jewish community of Pittsburgh is under the age of 40, and of those age 22 to 39, 40% have moved to the city in the past 10 years. Thus Pittsburgh is attracting young Jews.

The study reveals that Squirrel Hill remains a very vibrant, stable, and desirable neighborhood for the community. The Squirrel Hill section of Pittsburgh accounts for 47% of the entire Jewish population in greater Pittsburgh. Unique in North America, this is a tightly knit and closely connected

third generation community. Often grandchildren live in their grandparents' homes as the generational transition keeps homes in the family. The infrastructure built up before World War II – and enhanced since then – continues to serve the community. Notable is the stability of Squirrel Hill, a geographic hub of the Jewish community located within the city limits. Other Jews are dispersed throughout the community and less linked to it. The Jewish population of the South Hills comprises 14% of the total; the Eastern Suburbs, 13%; the Fox Chapel/O'Hara Township and sections of the North Hills, 9%; East End, defined as East Liberty, Highland Park, and Stanton Heights, 5%; and the Western Suburbs, 5%.

The Pittsburgh Jewish community still has a significant elderly population, with 18% over the age of 65; unlike most North American Jewish communities, this percentage is comparable to the population in the country as a whole and not disproportionate to it. Perhaps this can be accounted for by the large percentage of elderly Jews who have moved to warmer climates. One in four Jews over 65 lives alone and almost one half have no adult children in the area.

The study showed significant needs in the Greater Pittsburgh Jewish community among the Jewish poor and near poor; 59% of households with incomes under \$25,000 report "fair" or "poor" health.

Regarding Jewish denomination, 41% of all Jewish respondents self-identified as Reform, 32% as Conservative, 7% as Orthodox, 2% as Reconstructionist, and 14% as "no denomination, just Jewish."

The quantitative study was based on telephone interviews with 1,313 Jewish households conducted between November 8, 2001, and February 1, 2002. A Jewish household was defined as a residence where at least one adult considered himself/herself to be Jewish.

Pittsburgh has 28 congregations, among them Orthodox, Conservative, Reform, and Reconstructionist, as well as Gay. There is a Jewish women's center as well. There are Hillel Foundations at the University of Pittsburgh, Duquesne, and Carnegie Mellon as well as smaller schools in the area. The community has two Jewish Community Centers, one in Squirrel Hill and one in South Hill. Its local newspaper is the *Jewish Chronicle*, which serves western Pennsylvania and West Virginia as well. There is a community day school as well as the Hillel Academy. Yeshiva Schools and Mesivta of Allegheny County serve the Orthodox community. The United Jewish Federation of Pittsburgh was one of the first to sponsor a Holocaust Resource Center, and Jewish Studies programs are found at Pittsburgh and Carnegie Mellon University.

PITTSBURGH PLATFORM. The Pittsburgh Platform was a formulation of principles agreed upon by the Reform move-

ment in 1885 at the Pittsburgh Conference. The conference was called together by Kaufmann Kohler of New York and was chaired by Isaac M. Wise of Cincinnati, the foremost figure in Reform Judaism. The Pittsburgh Platform symbolized the merger of the Eastern U.S. and Germanic-oriented wings of Reform Judaism. The Eastern wing had previously been led by David Einhorn, Kohler's father-in-law; Wise led the Germanic-oriented wing, which was stronger in the western U.S.

The following points were agreed upon and became known as the Pittsburgh Platform:

First – We recognize in every religion an attempt to grasp the Infinite, and in every mode, source, or book or revelation held sacred in any religious system, the consciousness of the indwelling of God in man. We hold that Judaism presents the highest conception of the God idea as taught in our holy Scriptures and developed and spiritualized by the Jewish teachers, in accordance with the moral and philosophical progress of their respective ages. We maintain that Judaism preserved and defended, amidst continual struggles and trials and under enforced isolation, this God idea as the central religious truth for the human race.

Second – We recognize in the Bible the record of the consecration of the Jewish people to its mission as priest of the one God, and value it as the most potent instrument of religious and moral instruction. We hold that the modern discoveries of scientific researches in the domains of nature and history are not antagonistic to the doctrines of Judaism, the Bible reflecting the primitive ideas of its own age, and at times clothing its conception of Divine Providence and justice, dealing with man in miraculous narratives.

Third – We recognize in the Mosaic legislation a system of training the Jewish people for its mission during its national life in Palestine, and today we accept as binding only the moral laws, and maintain only such ceremonies as elevate and sanctify our lives, but reject all such as are not adapted to the views and habits of modern civilization.

Fourth – We hold that all such Mosaic and rabbinical laws as regulate diet, priestly purity, and dress, originated in ages and under the influence of ideas altogether foreign to our present mental and spiritual state. They fail to impress the modern Jew with a spirit of priestly holiness; their observance in our days is apt rather to obstruct than to further modern spiritual elevation.

Fifth – We recognize, in the modern era of universal culture of heart and intellect, the approaching of the realization of Israel's great messianic hope for the establishment of the kingdom of truth, justice, and peace among all men. We consider ourselves no longer a nation, but a religious community, and therefore expect neither a return to Palestine, nor a sacrificial worship under the sons of Aaron, nor the restoration of any of the laws concerning the Jewish state.

Sixth – We recognize in Judaism a progressive religion, ever striving to be in accord with the postulates of reason. We are convinced of the utmost necessity of preserving the historical identity with our great past. Christianity and Islam being daughter religions of Judaism, we appreciate their providential mission to aid in the spreading of monotheistic and moral truth. We acknowledge that the spirit of broad humanity of

our age is our ally in the fulfillment of our mission, and therefore, we extend the hand of fellowship to all who operate with us in the establishment of the reign of truth and righteousness among men.

Seventh – We reassert the doctrine of Judaism, that the soul of man is immortal, grounding this belief on the divine nature of the human spirit, which forever finds bliss in righteousness and misery in wickedness. We reject as ideas not rooted in Judaism the beliefs both in bodily resurrection and in Gehenna and Eden (Hell and Paradise) as abodes for everlasting punishment or reward.

Eighth – In full accordance with the spirit of Mosaic legislation, which strives to regulate the relation between rich and poor, we deem it our duty to participate in the great task of modern times, to solve on the basis of justice and righteousness, the problems presented by the contrasts and evils of the present organization of society.

At its founding in 1889, the *Central Conference of American Rabbis (CCAR), the Reform rabbinical organization, adopted the platform in toto, and it remained the major statement of the basic tenets of Reform Judaism until its extensive revision by the CCAR in Columbus, Ohio, in 1937.

An examination of the platform indicates its religious optimism. It is prepared to accept the legitimacy of other religious perspectives; all religions have some truth, but Judaism has the highest truth. It places its emphasis on the Bible – in contrast to the Talmud – but the Bible is described not as divine revelation but as the consecration of the Jewish people to its mission. The third element of the platform affirms the moral codes of Jewish tradition but discards the obligations of non-moral, ritual dimensions of the tradition. It treats laws as utilitarian; modernity becomes the key to the acceptance of laws. The fourth principle rejects halakhic restrictions on diet, priestly purity, and dress. Again, modern sensibility becomes the standard. The fifth principle embraces modernity as the realization of Israel's dream of a messianic age, rejecting the return to Zion and the restoration of sacrifice. "We consider ourselves no longer a nation, but a religious community." These words reject Jewish peoplehood, the essence of the Zionist vision. Principle six regards Judaism as being in accord with reason and rejects the non-rational in religious life. The seventh principle rejects bodily resurrection and a belief in heaven and hell as alien imports into Judaism. And the final element of the platform asserts the agenda of religious liberalism, working for justice and righteousness.

These principles defined Reform Judaism for almost half a century and distinguished it from Orthodox Judaism and Conservative Judaism as well as from Zionism. The Pittsburgh Platform is often referred to as Classical Reform Judaism. Reform rabbis, even leaders of the movement, did not necessarily adhere to these principles. Many were more Zionist in their orientation. Some were more observant, but it gave an ethos to the movement, one that was significantly rejected in 1937 with the Columbus Platform and by generations thereafter.

[Michael Berenbaum (2nd ed.)]

PITTUM HA-KETORET (Heb. פְּטוּם הַקֶּטֶרֶת; "ingredients of the incense"), the initial words of a *baraita* (Ker. 6a and TJ, Yoma 4:5, 41d) which enumerates the various species of incense offerings in the Temple service every evening and morning (see: Ex. 30: 34–38). In the Ashkenazi liturgy, this talmudic passage is recited on Sabbaths and festivals at the end of the Musaf prayer immediately after the *Ein ke-Elo-henu hymn; in the Sephardi ritual it is recited every morning and afternoon. The custom of reciting *Pittum ha-Ketoret* is based on a quotation in the Zohar (to Num. 224a), where it is stated that a person who recites the section of incenses will be spared death (see also: Num. 17:12 and Yoma 44a). In Provence (southern France), it was customary to recite *Pittum ha-Ketoret* at the departure of the Sabbath, after the *Havdalah* service, as a good omen for wealth and prosperity (Abraham ha-Yarhi, *Sefer ha-Manhig*, ed. Berlin (1855), Hilkhot Shabbat, 75, 35a).

°**PIUS X** (1835–1914), pope from 1903. Friendly to individual Jews and ready to acknowledge their philanthropic activities, he was, however, disdainful of Judaism and the Jewish people. On one occasion, while serving as bishop of Mantua, he prohibited the celebration of a solemn mass in honor of the king's birthday because the mayor had attended a prayer service in the synagogue on that day. The pope reacted bitterly to a festive address by Ernesto *Nathan, mayor of Rome, on Sept. 20, 1910, delivered on the occasion of the 40th anniversary of the occupation of Rome by Italian troops, and asked Catholics to pray for the Church "which was being attacked with impunity by its enemies." On Jan. 25, 1904, he received Theodor *Herzl in private audience, only to inform him that he could not support the aspirations of Zionism despite Herzl's expressed statement that Jerusalem, because of its holy places, would be extraterritorial. The pope declared: "The Jews have not recognized our Lord, therefore we cannot recognize the Jewish people," and settlement of Erez Israel by the Jews, he felt, would only make it incumbent upon him to intensify missionary activities among them: "If you come to Palestine and settle your people there, we shall have churches and priests ready to baptize all of you."

°**PIUS XI** (1857–1939), pope from 1922. Concerned about the safety of the holy places, Pius XI had misgivings regarding the Palestine mandate. A decree of the Holy Office (March 21, 1928) proscribed the Amici Israel Association (founded two years earlier) which, though missionary in its ideology, tried to promote better understanding of Judaism. The Holy Office declared the organization contrary to the spirit of the Church, finding fault specifically with its publication *Pax*

super Israel, which called upon its members to promote rapprochement with the Jews, while avoiding all offensive references and stressing the fact that the Jews continue to be the Chosen People. At the same time, however, the decree also proscribed antisemitism on the basis that it is contradictory to Christian doctrine.

Although Pius XI did not respond to a plea submitted to him in 1933 by a Catholic convert from Judaism, Edith Stein, to issue an encyclical on the so-called Jewish problem, he condemned racism repeatedly. To a group of Belgian pilgrims, whom he received on Sept. 8, 1938, Pius XI declared: "It is not possible for Christians to take part in antisemitism. Spiritually we are Semites." His efforts to protect the Jews in Fascist Italy against antisemitic actions met with some success. He also helped immigrants and on Jan. 14, 1939, called upon the envoys accredited to the Holy See to provide as many immigration visas as possible "for the victims of racial persecution in Germany and Italy." It was during his pontificate that *La Civiltà Cattolica*, a Jesuit organ which had previously been anti-Jewish, protested that the periodical had been misused by the Fascists.

PIUS XII (1876–1958), pope from 1939. Born Eugenio Maria Giuseppe Giovanni Pacelli, in Rome, he entered the Secretariat of State in 1901, was professor of ecclesiastical diplomacy at the Pontifical Ecclesiastical Academy from 1909 to 1914, undersecretary of state in 1911, archbishop of Sardes and apostolic nuncio to the Bavarian court in Munich in 1917, and nuncio to Germany in 1920 but moving to Berlin only in 1925. In 1929 Pacelli concluded a concordat with the State of Prussia. He became cardinal in 1929 and secretary of state in 1930. Cardinal Pacelli was instrumental in negotiating the concordat between the Holy See and the Third Reich, which was signed on July 20, 1933, by him and Vice Chancellor von Papen. His ambivalent stance during the Nazi period subsequently gave rise to considerable controversy (much of it engendered by Rolf Hochhuth's play *The Deputy*; for a full analysis see *Holocaust and the Christian Churches). On April 10, 1945, he received Moshe Sharett, director of the Political Department of the Jewish Agency, to discuss with him the "situation of the Jews in Europe and the future of the Jews in Palestine." His views on the situation in Erez Israel found expression in the encyclicals *Auspicia quaedam* (May 1, 1948), *In multiplicibus curis* (Oct. 24, 1948), and *In redemptoris nostri* (April 15, 1949), in which he recommended that Jerusalem should be internationalized. His attitude toward the State of Israel was reserved. On June 10, 1948, the Congregation of Rites ruled that the term *perfidii Judaei* in the Good Friday liturgy be translated into the vernacular as "unbelieving" and not as "faithless" as it had been hitherto.

[Willehad Paul Eckert]

PIYYUT (Heb. פיוט; plural: *piyyutim*; from the Greek ποιητής), a lyrical composition intended to embellish an obligatory prayer or any other religious ceremony, communal or private. In a wider sense, *piyyut* is the totality of compositions composed in various genres of Hebrew liturgical poetry from the first centuries of the Common Era until the beginning of the Haskalah. In ancient times, the *piyyutim* were intended to replace most of the set versions of prayer and to serve as substitutes. They ensured variety of the obligatory prayers, mainly on Sabbaths and festivals. In a later period, when the prayers became fixed, sections of *piyyut* were interspersed in certain places within the set pattern of the prayers. Naturally, most of the very extensive *piyyut* literature is devoted to the adornment of the major holy days. However, during the early Oriental (eastern) period of the history of the *piyyut*, liturgical compositions were also produced in great abundance for regular Sabbaths, for simple fast days, and even for weekdays. Obligatory prayers were also embellished with special sets of *piyyutim* for private occasions, such as weddings, circumcisions, and mourning. (See Table: *Piyyut*.)

The History of the Piyyut

Piyyut literature began in Erez Israel while the various versions of the obligatory prayers were crystallizing. Though the evidence from this period is limited, texts of ancient *piyyutim* are to be found scattered in talmudic sources, and *piyyutim* which apparently were composed during this period were absorbed into the established versions of the various rites of prayer. These ancient segments are recognizable by their lofty style and characteristic rhythm; they do not as yet use rhyme. The ancient compositions, known in part from the Cairo *Genizah* and in part from other sources, and similarly characterized by their style and rhythm, were also apparently composed during this period, which may be called "the period of the anonymous *piyyut*."

The earliest *paytan* known to us by name is *Yose b. Yose, who lived and worked in Erez Israel in approximately the sixth century or even earlier. His works still retain the above-mentioned characteristics of the form; they do not employ rhyme, even though something similar to rhyme can be seen in his *teki'ot*, where similar words are employed as line endings. With Yose b. Yose begins the period of the *paytanim* whose names are known; the period is represented by a group of important poets from Erez Israel, who all seem to have been functioning before Erez Israel was conquered by the Arabs (636 C.E.). The most important of these *paytanim* are *Yannai, *Simeon b. Megas, Eleazar b. *Kallir, *Haduta b. Abraham, Joshua ha-

Kohen, and Joseph b. Nisan from Shaveh Kiryatayim. During their period, the structural framework of most of the classical *piyyut* types was finally crystallized. Even after Erez Israel was conquered by the Arabs, all the great *paytanim* worked in the East; from then until the beginning of the 11th century this literature flourished; a great quantity of *piyyutim* was produced. For the first time *paytanim* from abroad, such as Solomon Suleiman b. ʿAmr al-Sanjari, Nissi al-Nahrawani, *Saadiah Gaon, Joseph al-Bardani, and others, begin to appear. Outstanding among the *paytanim* of Erez Israel are *Phinehas b. Jacob ha-Kohen from Kafra at the beginning of the period, and *Samuel ha-Shelishi b. Hoshana at its close. Toward the end of the period, creative activity spread to North Africa, which in the tenth and eleventh centuries became a fruitful extension of Oriental *piyyut*.

On European soil, the first blossoms of *piyyut* literature appeared in Byzantine southern Italy in the second half of the ninth century. Only a few *piyyutim* from among the creations of the early Italian *paytanim*, *Silano, *Shephatiah, and his son *Amittai, are now extant, but even these testify to an extensive and consolidated literary activity, which, despite a number of interesting points of originality, reveals blatant signs of the influence of Erez Israel. The creative work of the *paytanim* of southern Italy became, in the tenth century, a basis for the development of *piyyut* in central and northern Italy. The *paytanim* working there, headed by *Solomon b. Judah ha-Bavli, created a precedent for Central European *piyyut*, whose major representatives henceforth worked in Italy, Ashkenaz (Germany), France, and Byzantine Greece. The most important region of Central European sacred poetry was Germany, where the *piyyut* developed impressively because of the activity of a number of great *paytanim* in the 10th–11th centuries, such as *Moses b. Kalonymus, *Meshullam b. Kalonymus (both of Italian extraction), *Simeon b. Isaac, and Meir b. Isaac. In the succeeding centuries, Ashkenazi *piyyut* continued to develop, and a number of important composers made major contributions to the literature.

The direct continuation of Oriental *piyyut* was in Spain, where, beginning in the middle of the tenth century, several generations of great composers functioned. Outstanding among these are Joseph *Ibn Abitur, Solomon ibn *Gabirol, Isaac *Ibn Ghayyat, Moses *Ibn Ezra, *Judah Halevi, and Abraham *Ibn Ezra. These Spanish *paytanim* attained impressive peaks of perfection. Even though creativity in the realm of *piyyut* did not cease in Central Europe, Northern Africa, or the East until the beginning of the Haskalah, the 13th century marks the beginning of the decline; later *paytanim*, despite their often impressive productivity, failed to create major works. Although some of their poetry was included in local prayer rites, most of it has been excluded from accepted prayer books.

Types of Piyyut

Piyyutim can be divided according to their liturgical pur-

pose into a number of categories, differing in their histories and development, their structures, and their distribution. In different periods, certain types of *piyyutim* were more prevalent than others. The earliest and most important types of *piyyut* are the *kerovah* and the *yozer*. The *kerovah* is designed for inclusion in the *Amidah* prayer, while the *yozer* belongs to the benedictions before and after the **Shema* in the **Shaharit* service. The *kerovot* divide into a number of secondary categories, according to the types of *Amidah* to which they are attached: the *kerovah* of the daily *Amidah* is called *kerovat Shemoneh Esreh* because of the 18 blessings in that *Amidah*; that of *Musaf* or *Maariv Amidah* for Sabbaths and the holy days is called *shivata* because of the seven blessings in these *Amidot*; while that of the *Shaharit Amidah* of the Sabbath and holy days, which include a *kedushah*, is called *kedushata* (in ancient Erez Israel, *kedushah* was said on Sabbaths and festivals only in the *Shaharit* service). Each of the types of *kerovah* has its own structural characteristics. The *kerovah*, mainly the *kedushata*, is thought of as the dominant type of ancient *piyyut*. The *yozer* is combined from several types of *piyyut*, according to the structure of the permanent prayers replaced or embellished by *piyyut*. The *yozer* enjoyed great circulation mainly in the second period of Oriental *piyyut*, between the seventh and eleventh centuries. Parallel to the *yozerot*, which were intended for *Shaharit*, there are also, during this period, *piyyutim* of *Maariv*, intended to adorn the blessings before and after the *Shema* in the evening service. This type of *piyyut*, however, was never widely employed.

Among the *kerovot* of the major holidays, a number of special types of *piyyut* for different occasions are found. These include *tekiata*, which adorns the **malkhuyyot*, **zikhronot*, and **shofarot* blessings in the *Musaf Amidot* for New Year; *Seder ha-ʿAvodah* (which describes the sacrificial service on the Day of Atonement during the time the Temple was in existence), in the *Musaf kerovah* of the Day of Atonement; or the **azharot*, which discuss the list of 613 *mitzvot* in the Torah, in the *shivatot* of *Musaf* for Shavuot. The *kerovot* for fast days include **selihot* (penitential), while the *kerovot* for the Ninth of Av include *kinot* (dirges). In some communities these *selihot* and *kinot* were removed in later periods from the *kerovot* and placed after them. *Selihot* were also composed for the Days of Penitence during the month of Elul and between New Year and the Day of Atonement. The special processions for the days of Tabernacles (Sukkot) were embellished with *hoshana piyyutim* (see **Hoshanot*). In the early period of *piyyut*, works were not composed to adorn religious ceremonies outside of the obligatory prayers, except for the Grace after Meals, and even in that case, they were probably intended, from the start, for use at communal festive meals or at meals for religious ceremonies. Similarly, *ashkavah piyyutim* were composed in this period (*aftarot*, or *zidduk hadin*, “funeral services”).

All the classical types of *piyyut* were cultivated to some

extent by the later European *paytanim*. However, the scope of the *piyyut* literature was greatly enlarged, mainly in Spain, by the creation of a number of new types of *piyyut*. The Spanish *paytanim* preceded the accepted patterns of the *yozer* with a number of *piyyut* passages which they interlaced in the prayer said on Sabbaths and festivals before the *yozer* prayers. These types are known as the *nishmat*, the *muḥarakh*, the *illu-finu*, and the *kol azmotai*. The Spanish *paytanim* also cultivated the type known as *reshut* (pl. *reshuyyot*, “introductory *piyyutim*”), and they joined these works to the *Barukh she-Amar* prayer, to *nishmat*, to **Kaddish* after *nishmat*, to **Barekhu*, and so on. In addition to their extensive work with these types, the Spanish *paytanim* developed new types of special *piyyutim* for private religious ceremonies, such as Sabbath songs and **Havdalot*, as well as types of religious poetry intended to satisfy the spiritual needs of the individual. To a certain extent, the Ashkenazi *paytanim* followed them in these areas.

A considerable part of the creative efforts of the European *paytanim* was dedicated to the type known as *seliḥot* for fast days and days of penitence. Because of the great creative activity in this area, a number of secondary types within the category have been distinguished, some partly because of thematic distinctions and some because of formal distinctions. The early Oriental *seliḥah* recognized only the category *ḥatanu* (*seliḥot* of confession), and the *tokhahah* (“rebuke”) as a secondary type. In a later period, the **Akedah* type was added to them, in which God’s mercy is requested for Israel because of the merit of the binding of Isaac. According to structural distinctions, a number of secondary types of *seliḥot* are distinguishable, of which the important ones are the *pizmon* (a *seliḥah* with an opening refrain and a strophe), and the *mustagib* (a *seliḥah* in which a biblical passage appears as a refrain at the end of every verse). In specific sources, especially Ashkenazi, the *seliḥot* are distinguished by special names according to their place in the calendar, their composers, the way they are said, or the number of lines in their poetic phrases.

Language and Style

The style and the vocabulary of the *paytanim* vary in the different periods and different poetic schools. In the anonymous period of *piyyut*, the style followed the stylistic and lexical paths of the permanent prayers; the vocabulary is mostly biblical, even though some later linguistic bases – midrashic and talmudic – may be found in it. The style of the *piyyutim* is lucid and clear and contains little wordplay or rhetorical embellishment. With the work of Yannai, Hebrew sacral poetry becomes more and more expansive in its vocabulary and increasingly vague and flowery in its style. During the whole Oriental period of the *piyyut*, the composers used not only the whole Hebrew lexicon, with all its various layers and strata (to a certain extent, in the early *piyyut* creations, ancient Hebrew words with no mention in the sources are preserved) but they also adorned the *piyyut*

with idioms and words of their own creation. The poetic novelties of language and form, which do not always fit the classical rules of Hebrew grammar, gave a singular stylistic character to the poetic creations, and frequently aroused harsh criticism. These *paytanim* (who are included among those of the Kallir school, so called after its major representative, the *paytan* Eleazar b. Kallir), often used a complicated set of terms, flavoring their works with an abundance of talmudic and midrashic material, or with (sometimes vague) allusions to this material. Thus, some of their works became enigmatic, constituting difficult exegetical problems. From a linguistic point of view, *piyyut* reached its peak in the works of Saadia Gaon and his pupils, during the tenth and eleventh centuries. The *paytanim* of the “Saadia school” were the most radical in establishing novel uses of language in their *piyyutim*.

As a reaction to the Saadianic style of exaggerated innovations, and probably under the influence of the new ways and principles of Andalusian arabized secular poetry and of philological studies, Hebrew sacred poetry in Spain crystallized within clearly biblical frameworks of language and style. The first of the Spanish *paytanim* composed their works according to the example of the later Oriental *paytanim*. In addition to the works written in this style, there exists a parallel group of works, written in the Spanish model in a language which strives to recognize only a biblical vocabulary and in a style which strives to free itself of talmudic and midrashic material and allusions to the teachings of the rabbis. The style of the Spanish *piyyutim* is impressively lucid and flexible, approaching the style of secular poetry; in this period, sacred poetry was notably influenced by secular poetry both in form and in lyrical means of expression. Solomon ibn Gabirol was instrumental in the process by which the *piyyut* was increasingly purified of the linguistic-stylistic exaggerations of eastern *piyyut*; the earliest of the Spanish *paytanim* whose work appears to be entirely within the new stylistic framework is Isaac Ibn Ghayyat. During this period, the style of writing of the Spanish *paytanim* greatly influenced the *paytanim* of other lands, such as North Africa, Yemen, Erez Israel, Babylonia, and Provence. Certain traces of Spanish influence are found also in later Ashkenazi *piyyut*. In general, Central European *piyyut* remained faithful to the Kallir model in language and style. Even so, Italian and Ashkenazi poets were more restrained and moderate in their use of language and style. In the creations of the greatest of them, the poetic language reaches impressive heights of beauty and flexibility.

Rhyme and Meter

The ancient anonymous *piyyut* did not employ rhyme. The *piyyutim* composed during this period with the characteristic method of dividing each poetic line into four feet, each one having two or three stresses, are limited. With the beginning of the use of rhyme, or more specifically, with the period of the literary activity of Yannai, the *paytanim* concentrate much

more on rhyme than on rhythm. Those of the Kallir school attained great virtuosity in their methods of rhyming and playing with rhyme, and this lowered the level and content of the creations, especially in the works of mediocre *paytanim*. A number of eastern *paytanim* wrote their works in a peculiar rhythmic system (known as *mishkal ha-tevot*), by establishing an identical number of words or stresses in every poetic line, but this method is found in only a few works, and was used more widely in the works of the first Central European *paytanim*, who also continued and developed the traditions of rhyme of the early Kallir school. It was the Spanish *paytanim* who introduced a precise method of rhythm in their *piyyutim*. Many of their works, mainly in the specific types of *piyyut* which originated in Spain, are subject to the quantitative method of meter – Arabic in its source – of secular poetry, but the major part of their work is in a unique meter created in Spain for sacred poetry. This is mainly syllabic, meting out to each line of poetry a specific fixed number of grammatical syllables. In Spain, however, the *paytanim* also continued to compose *piyyutim* without meter, particularly in the classical types of *piyyut*. Rhyme also developed impressively in Spain, particularly in the short types of *piyyut*, under the influence of the *ezor* (Muwassaha) type of secular poems. Many *piyyutim*, some metered precisely according to the example of the *ezor* type, some metered according to the special method of Spanish *piyyut*, have a variegated and rich rhyme, which competes successfully with the best achievements of Hebrew secular poetry in Spain.

Signatures

The first *paytanim* signed their *piyyutim* only with their own names. Later, they added patronymics and the places where they wrote; and, after a while, they added blessings and the like. At times, the *paytanim* also added the names of relatives.

Collections of Piyyutim

The extent to which *piyyutim* were incorporated into the prayer service differs in time and locality. In ancient times, there was fierce opposition to the *piyyut* literature, mainly from the great academy in Babylonia. Nevertheless, it appears that there was a wide use of *piyyutim* in most of the early eastern communities. During this period there were still no fixed collections of *piyyutim* for the use of various communities. Rather, each cantor recited *piyyutim* according to his taste and choice. Only in later periods, when the congregations took greater part in prayer services, was the set recitation of certain *piyyutim* for various liturgical occasions practiced. These fixed prayers, which multiplied, led to the collections of *piyyutim* (*mahzorim*, books of *seliḥot*, and *kinot*) which established for every occasion passages of *piyyut*, whose recitation was repeated year after year. At first, each community established its own collection, usually by choosing *piyyut* passages and adding the works of local composers. In a later period, the distinctions between the col-

lections of *piyyutim* of the various communities became increasingly blurred and, with the invention of printing, unified collections of *piyyutim* crystallized for different rites of prayer. (See table on following page.)

[Ezra Fleischer]

The following list contains:

1. Those *paytanim* and pre-modern poets who have individual entries in the Encyclopedia – included are those who are either primarily *paytanim* or famous as such;

2. Paytanim and pre-modern poets who do not have individual entries and who are not included in (1) Davidson's *Ozar ha-Shirah ve-ha-Piyyut* (vol. 4, pp. 347) which was completed in 1933 (Davidson's additions were published in HUCA 12–13, 1937–38);

3. Paytanim and pre-modern poets who are in Davidson but on whom new material has been made available in the intervening years.

The list is alphabetical according to the first names.

The abbreviations used (other than standard) are the following:

Bernstein, Italyah – S. Bernstein, *Mi-Shirei Yisrael be-Italyah* (1939).

Bernstein, Piyyutim – S. Bernstein, *Piyyutim u-Faytanim me-ha-Tekufah ha-Bizantinit* (1941).

Habermann, Ateret – A.M. Habermann, *Ateret Renanim* (1967).

Schirmann, Italyah – J. Schirmann, *Mivhar ha-Shirah ha-Ivrit be-Italyah* (1934).

Schirmann, Sefarad – J. Schirmann, *Ha-Shirah ha-Ivrit bi-Sefarad u-vi-Provence*, 2 vols. (1959–60²).

Schirmann, Shirim Hadashim – J. Schirmann, *Shirim Hadashim min ha-Genizah* (1965).

Simonsohn, Mantovah – S. Simonsohn, *Toledot ha-Yehudim be-Dukkasut Mantovah*, 2 vols. (1962–64).

YMHSI – *Yedi'ot ha-Makhon le-Hecker ha-Shirah ha-Ivrit*, 7 vols. (1933–58).

[Abraham David]

PIZARNIK, ALEJANDRA (1936–1972), Argentinean poet. Born in Buenos Aires to a family of Jewish Russian immigrants, she published her first book of poetry in 1955. In 1960–64 she lived in Paris. Her fourth volume of poetry, *Arbol de Diana* (“Diane’s Tree,” 1962), established a distinctive style of short texts (verse and poetic prose) built in an intense language and surrounded by an expressive blank page. Among her books are *Los trabajos y las noches* (“Works and Nights,” 1965); *Extracción de la piedra de locura* (“Extraction of the Stone of Folly,” 1968); *El infierno musical* (“The Musical Hell,” 1971); and the posthumous *Textos de Sombra y últimos poemas* (“Texts of Shadow and Last Poems,” 1982), which includes unpublished texts. Also renowned is her prose book *La condesa sangrienta* (1971; *The Bloody Countess*, 1986), on the

fascination/rejection of evil. Loneliness, existential anguish, intense but hopeless love, and the seduction and dangers of silence are her main themes, together with poetic creation as a longed-for means of salvation. Though she experienced her Jewish background as an important part of her complex identity, Jewish themes are not central in her texts and appear mostly in connection with the figure of her father. Pizarnik was a gifted translator of French poetry and wrote insightful articles on poetry and fiction. She suffered periods of mental instability; it is possible that her untimely death was voluntary. Pizarnik is one of the major Argentinean and Latin American poets of the century, and her wide influence has continued to grow. Her works have been translated into English, French, and Hebrew.

[Florinda F. Goldberg (2nd ed.)]

PIZMON (Heb. פִּזְמוֹן, pl. פִּזְמוֹנִים, pl. *pizmonim*), a term transferred to Hebrew from Greek by way of Aramaic, meaning "adoration and praise," i.e., a poem praising God. It was first applied to the refrain in *piyyutim* in which either the first or the last line of the first stanza was repeated at the end of each stanza. Subsequently, the *piyyutim* themselves in which these refrains occur were called *pizmonim*. *Pizmonim* can be inserted almost anywhere in the liturgy; the Sephardi *paytanim* inserted them in the *kerovot* (the groups of *piyyutim* in the *Amidah*). In Spain the one who sang or read the *pizmon* before the congregation was called *pizmanana*. In a later period editors used the word *pizmonim* for poems and songs in general. The name often appears on the title page of collections of poems, particularly those printed in Oriental countries. In modern Israel the word is used to mean a popular song.

PLACHY, SYLVIA (1943–), U.S. photographer. Born in Budapest, Hungary, Plachy immigrated to the United States with her parents in 1958 after waiting more than a year in Vienna for visas. Her father was a Catholic, the offspring of her aristocratic but impoverished grandmother's affair with a guard in the Hapsburg court. Her mother was Jewish and many relatives were murdered during the Holocaust. In the United States, the Plachy family settled in Queens, N.Y. Plachy started photographing in 1964 and over the next 40 years recorded the visual character of New York City along with its diverse occupants. She was a photographer for the New York weekly *The Village Voice* for 30 years, and for eight years she had a black and white photograph published there, near the contents page, usually without a caption. The longest-running series was called *Sylvia Plachy's Unguided Tour*, which later became a book (Aperture, 1990). Her words and images, along with pictures from her family album, combine for poignant effect in *Self Portrait with Cows Going Home* (Aperture, 2004), an autobiography of sorts, and an ode to both the exile's life and the land of her birth. Another book, *Red Light*, was a collaboration with the writer James Ridgeway about the sex industry. Her monthly column of writing and photographs in *Metropolis Magazine* was published as a book, *Signs & Relics* (1999). On successive trips back to Hungary and while traveling through other countries in the Eastern Bloc, sometimes on assignment, Plachy's camera captured traces of her real and imagined

childhood with tenderness and yearning. She was also there in later decades to record the monuments as they fell; the empty frames in bureaucrats' offices that formerly held pictures of dictators and two Berlin teenagers pretending to be executed against a remnant of the Berlin wall. Plachy's mother had kept her own Jewishness a secret during the postwar years in Hungary. But Sylvia Plachy's Jewishness comes back to haunt her in images of her son, the actor Adrien Brody, who won an Oscar for his starring role in Roman Polanski's Holocaust drama *The Pianist* (2002), based on the life of Wladyslaw Szpilman, a Polish Jewish musician who survived the war by hiding in Warsaw. Plachy's work is in most major museum collections and she has had one-woman shows around the world.

[Stewart Kampel (2nd ed.)]

PLACZEK, ABRAHAM (1799–1884), **Landesrabbiner* of Moravia. In 1827 he became rabbi in his birthplace, Přerov (Prerau, Moravia), and in 1832 in *Hranice (Maehrisch Weisskirchen). From 1840 until his death he was rabbi in *Boskovice. When Samson Raphael Hirsch left the *Landesrabbinat* of Moravia in 1851, the provincial authorities appointed Placzek acting *Landesrabbiner*, declaring the election regulations of 1754 obsolete. He held the post until his death. By this act the *Landesrabbinat* was removed from *Mikulov after more than 200 years. Placzek was considered an outstanding talmudic scholar and was strictly Orthodox, supporting Solomon Spitzer in his struggle against liturgical reform in Vienna (1872). Nevertheless he attempted to avoid open conflicts between the factions, both in Boskovice and in Moravia.

His son, BARUCH JACOB (1835–1922), succeeded him and became the last *Landesrabbiner* of Moravia. He taught at Jewish secondary schools in Germany for some years and was called as rabbi to *Brno (Bruenn) in 1860. He established a teachers' seminary offering a course in *hazzanut*, a project favored by his father, and was an adherent of moderate religious reform. Baruch published, partly under the pseudonym Benno Planek, various works on Jewish themes: *Im Eruw* (1867), poems, and *Der Takkif* (1895), a short novel documenting a Moravian Jewish quarter before 1848. He also published articles on natural science, mainly zoology.

BIBLIOGRAPHY: H. Gold (ed.), *Die Juden und Judengemeinden Maehrens...* (1929), 52 (a list of Baruch's works), and index; D. Feuchtwang, in: *Gedenkbuch... D. Kaufmann* (1900), 384; A. Frankl-Gruen, *Geschichte der Juden in Kremsier*, 2 (1898), 138–43, 174–6; *Dr. Blochs Oesterreichische Wochenschrift*, 28 (1911), 11–12.

[Meir Lamed]

PLAGUES OF EGYPT. The Bible has three accounts of the plagues (*maggéfot*, Ex. 9:14; *neg'aim*, cf. Ex. 11:1; *makkot*, cf. 1 Sam. 4:8; cf. LXX, Targ.) that struck Egypt prior to the Exodus: a full, prose account is given in Exodus 7:14–11:10; 12:29–33, and brief, poetic ones in Psalms 78:43–51 and 105:27–36. The variations are set out in the Table: Plagues of Egypt listing the plagues and their effects. While the ten items of the Exodus narrative are distinctly separate, some of the items in Psalms

The Plagues Of Egypt

Exodus	Psalm 78:44–51	Psalm 105:28–36
1. Blood Nile; all water; fish died	1. Blood Nile; liquids	1. Darkness
2. Frogs nuisance to ³ men	2. Swarms ¹ “consumed them”	2. Blood water; fish died
3. Lice nuisance to men and beasts	Frogs “ruined them”	3. Frogs nuisance
4. Swarms ¹ nuisance to men; ruined land	3. <i>Hasil</i> ² ate produce	4. Swarms ¹ } Nuisance Lice }
5. Pestilence killed livestock	Locusts ate “toil”	5. Hail } Fire } destroyed vines, figs, trees
6. Boils pained men and beasts	4. Hail destroyed vines	6. Locusts } <i>Yeleg</i> ² } destroyed all vegetation
7. Hail and fire destroyed plants, men, and beasts	<i>Haname</i> ³ destroyed sycamores	7. Firstborn death
8. Locusts destroyed plants	5. Hail ⁴ destroyed beasts	
9. Darkness immobilized men	<i>Reshafim</i> ⁵ destroyed livestock	
10. Firstborn death	6. Death } Pestilence } Killed men ⁶	
	7. Firstborn death ⁷	

1 Heb. *’arov*; LXX: “dogflies”; R. Nehemiah (Ex. R.) “gnats and mosquitoes”; NJPS “swarms of insects.” But Josephus (Ant., 2:303), R. Judah (Ex. R.), and Targ. “mixture of birds and beasts.”
 2 A kind (or stage of development) of locusts.
 3 Meaning obscure; LXX: “frost”; medieval conjectures: “locust,” “stones.”
 4 Symmachus: “pestilence” (*dever* for MT *barad*).
 5 Traditionally “fiery bolts,” but *Reshef* is a Canaanite plague-god, and *reshef* in Deuteronomy 32:24 (ll *qetev*) and Habakkuk 3:5 (ll *dever*) means “pestilence” (cf. note 4).
 6 *Hayyatam* = *nafsham*, “their life” (Ibn Ezra; cf. Rashi); LXX, Targ. misconstrue as “their beasts”.
 7 Ibn Ezra joins to the preceding.

are but synonyms or components of plagues. Thus Psalm 105 lists ten items, but refers to seven plagues only. Psalm 78 lists 11 items, but only seven (or six) plagues. The climactic order in Psalm 78 is most satisfactory: nuisances, destruction of plant life, of animals, and of human beings. The order of Psalm 105 is similar, while in the Exodus account the ascending line is not consistently realized. The Psalms’ divergence from Exodus has been ascribed to poetic license; the likelihood is, however, that it attests to independent, variant traditions (see further below).

Their Function

The leading motif of the plague series in the Exodus account is introduced in 7:5: “The Egyptians shall know that I am YHWH when I stretch my hand over Egypt...” Repeated variously (7:17; 8:6, 18; 9:14, 16, 29), it shows the plagues to be the answer to Pharaoh’s challenge in 5:2: “Who is YHWH...? I do not know YHWH, nor will I release Israel.” Intended, thus, as revelations of the nature and power of Israel’s God, the plagues are distinguished from both magic and natural calamities. The magicians’ failure to produce lice elicits from them the con-

fession that “it is the finger of God” (8:15). The plagues’ onset after an announcement or at a signal, and their removal by order, links them to YHWH, whose agents, Moses and Aaron, announced, signaled, and removed them in His name. The accumulation of disasters, their discriminating between Israel and the Egyptians (starting from 8:18), and the unprecedentedness of the last four plagues succeed in eliciting from Pharaoh’s court increasingly frequent acknowledgments of God’s authority (8:4, 21, 24; 9:20, 27–28; 10:7–8, 16–17, 24), ending with the release of Israel to worship Him (12:31–32). As 9:14–16 and 10:1–2 make clear, the reason for prolonging the series is not to secure Israel’s release (which might have been achieved by one crushing blow), but to establish for all time the fame of YHWH and the folly of defying Him.

The Structure of the Narrative

The narrative evidences a deliberate, if imperfectly realized design:

(1) The plagues gradually intensify, beginning with nuisances, passing through destruction of livestock and crops, and ending with the death of human beings. The intensifica-

tion sometimes falters (e.g., boils after pestilence), and sometimes the effects of a plague transgress its proper limits (e.g., the death of men and beasts in the hail). These appear to result, on the one hand, from the combination of variant traditions, and, on the other, from a desire to aggrandize God (see further below). A comparison with the strategy of reducing a rebellious population is found in the Midrash: God used the tactics of kings against the Egyptians. First He cut off their water supply (blood), then He raised a clamor around them (frogs), then shot arrows at them (lice), then arrayed legions against them (swarms), then caused a pestilence, then threw burning naphtha at them (fever boils), then sent hosts against them (locusts), then incarcerated them in dungeons (darkness), then put to death their chiefs (firstborn; Tanḥ. *Bo* 4). Levi b. Gershom perceives cycles of increasing severity: God began with a harmless wonder (Ex. 7:8–13); when that failed, He spoiled their water – but not totally; next He sent the frogs, which caused discomfort; but that was less than the distress caused by the lice. A second round began with the swarms that attacked livestock and food; then pestilence that killed off the livestock; then boils that afflicted the body. A third round followed, starting with hail and locusts, wiping out the food supply, followed by darkness – a bodily affliction just short of death. The death of the firstborn climaxed the series.

(2) These rounds correspond to the formal division of the story into three sets of three plagues, capped by a tenth, in a pattern determined by an invariably recurring order of introductory clauses. Plagues one, four, and seven begin with God commanding Moses to stand before Pharaoh in the morning (at the Nile) to warn him; two, five, and eight begin with a command to enter Pharaoh's residence to warn him there; three, six, and nine begin with a command to bring on the plague without warning. Early perception of this pattern is reflected in R. Judah's mnemonic, cited in the *Haggadah*, **ב"ב ע"ד ש באה"ב** (cf. also Rashbam to 7:26; Bahya to 10:1).

(3) A certain design can also be discerned in the various agents who induce the plagues. In the first triplet Moses warns, but Aaron signals the coming of the plague; in each case the Egyptian magicians respond. The triplet continues, on an intensified level, the contest begun with the accreditation episode (7:10–12) between the very same characters. It is decided only in the third plague, when the magicians, unable to produce lice, confess it is the work of a higher power. In this contest, the principles – Moses and Pharaoh – are each represented by their seconds; when the magicians retire from the fray, Aaron does too (and when Aaron reappears in a subsidiary role in the sixth plague, the magicians momentarily reappear with him). In the last triplet Moses both announces and induces the plagues, thus enhancing his prestige as God's plenipotentiary in the negotiations that mark this climactic triplet (cf. 11:3). God directly brings on two plagues of the middle triplet – the third (boils), induced by Moses and Aaron, is asymmetrical – and the final firstborn plague. The reason emerges from an examination of the distinctive motif of each triplet.

(4) A purpose clause in the first member of each triplet adumbrates its distinctive motif. As the aim of the first triplet is to dispel the courtiers' notion that the power of the Hebrew envoys is magical, God fittingly admonishes Pharaoh before the blood plague: "By this you shall know that I am **יְהוָה**" (7:17). Two plagues of the second triplet explicitly (and the third implicitly) discriminate the Israelites from the Egyptians (8:18–19; 9:4, 6, 11). Such discrimination realizes the purpose stated in 8:18, "That you may know that I, **יְהוָה**, am in the midst of the land," for the presence of God – His overseeing providence (cf. Ex. 17:7; 33:5; Num. 14:42; Deut. 6:15; 31:17) – is typically manifest in the separation between the fates of the innocent and the guilty. The opening speech of the third triplet asserts that its aim is to let Pharaoh know "that there is none like Me in all the earth" (Ex. 9:14). The words are echoed four times in phrases expressing the unparalleled intensity of the first two plagues of the triplet (the last member (darkness) again is asymmetrical). There is a notable accumulation of motifs in the last plagues. Thus the last triplet twice refers to discrimination (in different words; 9:26; 10:23) besides its own motif, while the warning of the last plague mentions the last two motifs (11:6–7) and alludes to an intensified form of the first (11:8; the court will bow to Moses). That God directly brings on plagues of the second triplet suits its stated purpose of demonstrating God's presence in the land. The presence-discrimination motif is linked again to God's direct action in the last plague (11:4, 7; 12:12, 29). Where God's presence is to be felt, mediators are out of place.

(5) Design (without strict systematization) is also evident in the characterization of Pharaoh and Moses. Pharaoh's reactions oscillate erratically during the first two triplets between impassivity (7:23; 8:15; 9:7, 12) and insincere concessions (8:4, 21, 24). In the first plague of the third triplet he confesses guilt (9:27), and in the last two he negotiates seriously over Israel's release, as is indicated by his measured concessions at each stage (10:8, 11, 24). Moses' manner changes from a certain sportiveness (8:5) to pained rebuke (8:25), to disbelief (9:30), and finally, in negotiation, to provocative baiting that enrages Pharaoh (10:25–26).

Hardening Pharaoh's Heart

This drama is embedded in (and manages to overcome the stultifying potential of) a deterministic framework. God's policy of hardening Pharaoh's heart is announced in advance (7:3), and notice of its operation is repeatedly given (9:12; 10:1, 20, 27; 11:10). Some mitigation of it is probably to be seen in the fact that during the first five plagues Pharaoh's stubbornness is consistently represented as self-motivated (7:22; 8:11, 15, 28; 9:7; cf. Ex. R. 13:3: God hardened Pharaoh's heart from the sixth plague in order to punish him for his voluntary defiance during the first five; cf. further Maimonides, introduction to Avot, ch. 8; Yad, Teshuvah 6). But this still makes the last, worst plagues – an infliction of suffering on an involuntary sinner – paradoxical, since precisely in the last plagues Pharaoh's reactions are adequately motivated, perhaps even

justifiable in view of Moses' provocations. There is here the parade example of the "two-level" view of history characteristic of biblical narrative. Human events are shaped by the will of God, yet they unfold in accord with the motives of actors who do God's will without realizing it (Gen. 45:5, 8; Judg. 14:4; 1 Kings 12:15). Thus God determined for His own purposes that Pharaoh should resist the plagues; indeed He saw to it. But Pharaoh conducted himself throughout conformably with his own motives and his own godless arrogance. God made it so, but Pharaoh had only to be himself to do God's will.

Interpretations of the Plagues

Attempts have been made to interpret the plagues in terms of ancient Egyptian beliefs or the natural conditions of Egypt. A Middle Kingdom description of anarchy speaks of the Nile's turning into blood (The Admonitions of Ipuwer; Pritchard, Texts, 441); a New Kingdom prophecy of the darkening of the sun (Nefer-rohu; Pritchard, Texts, 445). Philo and the Midrash understand the blood plague as an attack on the deified Nile (I Mos. 98; Ex. R. 9:9), and this clue has been followed by some moderns who look for the humiliation of Egyptian deities in the course of the plagues (e.g., Hapi, the Nile god; Hekt, a frog-headed goddess; Re, the sun god), though no hint of this is to be found in the biblical plague narrative. On the other hand, most of the plagues can be linked with local or seasonal phenomena. During its annual rise, in the summer, the Nile is reddened by organisms carried in it; swarms of frogs and insects follow the inundation (insects normally abound in Egypt); Egyptian boils were proverbial (Deut. 28:27); hail, though uncommon, has been known to fall in January – the time indicated by the agricultural data of Exodus 9:31–32; locusts may be blown across the country in winter or spring; three-day, palpable darkness conforms with the heavy sandstorms raised by the *hamsin* winds that blow in the early spring. Thus the plagues have been viewed as a miraculous intensification and concentration of local phenomena, crowded into a single year (Moses was 80 years old when they began (7:7), lived 40 years more, and died at the age of 120 (Deut. 34:7); cf. also Eduy. 2:10).

The Variant Versions

The narrative appears to combine two major versions of the plague series. Hence arose such inconsistencies as are found in the depiction of the agent, the signal, and the extent of the blood plague in Exodus 7:17–21 (cf. the dispute between R. Judah and R. Nehemiah in Ex. R. 9:11); such inconsequence as the skipping of the boils in the backward glance of 9:15, or the unmotivated reappearance of Aaron and the boils-afflicted magicians after the lapse of two plagues; and such asymmetry and stylistic differences as set lice, boils, and darkness apart from the rest of the plagues.

(1) One version began with the accreditation sign given by God to Aaron and Moses: Moses orders Aaron to turn his staff into a serpent; the magicians imitate the sign (7:8–13). The plagues proper follow;

(2) Moses orders Aaron to turn all the waters of Egypt to blood; this is imitated by the magicians (7:19–20aa, 21b–22);

(3) Moses orders Aaron to induce frogs; this is again imitated by the magicians (8:1–3, 11b (fragmentary));

(4) Moses orders Aaron to produce lice; the magicians fail and confess God's power (8:12–15);

(5) Moses, aided by Aaron, induces boils; the magicians are themselves afflicted and retire routed (9:8–12);

(6) Moses alone induces darkness, immobilizing everyone for three days (10:21–23, 27a (fragmentary));

(7) God strikes the firstborn (cf. 12:12, belonging to this version). In this conjecturally restored version (which, with the exception of item 6, agrees with conventional criticism's P) the agents of the plagues ascend climactically, the effects intensify steadily, and all before the last are designed to outdo and overwhelm rather than destroy. They are tokens of God's might rather than punishments.

The second version ran thus:

(1) After a morning warning, Moses turned the Nile into blood, which killed its fish; Pharaoh was unmoved (7:14–17, 20ab–21a, 23–25);

(2) After a warning in the palace... (there follows the other version of frogs); negotiation with Pharaoh (7:26–29 (gap), 8:4–11a (fragmentary));

(3) After a morning warning by Moses, God sends swarms of insects, separating the Israelites; negotiations (8:16–28);

(4) After a warning in the palace by Moses, God strikes Egypt's livestock with a pestilence, separating the Israelites (9:1–7);

(5) After a morning warning, heeded by some courtiers, Moses signals the onslaught of an unprecedented hail mixed with fire; negotiations (9:13–35);

(6) After a warning in the palace, followed by fruitless negotiation, Moses signals the coming of an unprecedentedly severe locust plague; Pharaoh asks relief just this once; further negotiations end in Moses' expulsion (10:1–19, 24–29);

(7) Moses announces the death of the firstborn (11:4–8), which comes that night (12:29–33).

This conjectured version (roughly consisting of the conventional JE) represents the plagues as increasingly severe injuries to Egyptian property and life, as blows designed to afflict the land. The story seems to have been expanded at times by reflective comment (9:15–16; 10:1b–2), or to broaden the scope of a plague (e.g., 9:19–21 includes men and beasts among the victims of the hail). The redactorial interweaving of the two accounts was relatively smooth once the first triplet was constituted on the basis of the overlapping of the two versions and the lice plague's deciding the issue posed in the accreditation sign. The formal pattern of that triplet determined the rest of the interweaving, the genial device of three triplets plus one (an expansion of the 3.3.1 pattern of Gen. 1:1–2:3) nicely accommodating the total of ten separate plagues. Since both versions were climactic, their fusion was on the whole reasonable, although it impaired thematic symmetry, stylistic unity, and strict progress of the narrative. The variant Psalms pas-

sages may attest to independent traditions of the plagues. The affinity of the listing in Psalm 78 to the reconstructed second version is particularly striking: both lack the three distinctive plagues of the first – lice, boils, darkness. The present Exodus narrative presumably represents an effort to create a standard account of the plagues, embodying maximally the data of the various traditions known to the author-redactor.

Midrashic Embellishment

The local color of a number of the plagues makes it plausible to assume that the traditions concerning them rose out of events that happened in Egypt. In time, the events were added to, embellished, and reflected upon, most likely in connection with the religious celebrations of the Exodus. The Passover laws of Exodus 12:26–27; 13:8 and the firstborn redemption rite in 13:11–16 suggest occasions for use of a liturgical formulation of the pre-Exodus events. Various statements of the plague series may have originated in and for such occasions, just as, in post-biblical times, the standard Exodus listing was taken up into the *Haggadah*. The tendency to enlarge the scope of the plagues – formally legitimized in the Midrash cited in the *Haggadah* (“How can you prove from Scripture that each plague was really four [or five] plagues...?”) – shows itself already in the components of the Exodus narrative, e.g., while in one version the blood plague affects the Nile only, in the other it spreads to all the waters of Egypt. Similarly, just as the Exodus version of hail has already made it deadly to man and beast, so does Philo raise blood (1 Mos. 98) and Josephus raise lice, swarms (of beasts), ulcers, and darkness to the level of death-dealing scourges (Ant., 2:293ff.). The Midrash gives free rein to the imagination in this direction: the Egyptians’ spittle and fruit juice turned to blood; their wood and stone household objects oozed blood (Ex. R. 9:11; Mid. Hag. to 7:19); the frogs castrated them (Ex. R. 10:4); deadly pestilence accompanied all the plagues (Ex. R. 10:2); the darkness lasted six days, and at its worst was so thick that no one could move a muscle (Ex. R. 14:3). The Midrash also enlarges upon the brief biblical reflections on the rationale of the plagues. The “measure for measure” interpretation is typical: blood – because they kept Israel’s women from their post-menstrual immersion, to stop their childbearing (another view – because they cast the male infants into the Nile); frogs – because they made Israel clean and repair streets; lice – because they made them sweep homes and markets; mixture of beasts – because they made them catch wild beasts; pestilence – because they made them tend flocks; fever boils – because they made them tend baths; hail – because they made them tend fields; locusts – because they made them plant trees; darkness – so that they could not witness the burial of wicked Israelites; firstborn – because they enslaved Israel, whom God called “my firstborn son” (Ex. 4:22; Mid. Hag. to 10:2). Thus the plagues grew ever more marvelous “to spread the fame of God’s great power... that Israel might realize that He is the Lord, and teach it to their descendants, so that this true belief might live on in Israel forever” (Rabag, Comment., end of *Va-Era* and *Bo*).

PLAIN, BELVA (1919–), U.S. novelist. Born in New York and a graduate of Barnard College, Plain published her first book, *Evergreen*, in 1978 when she was almost 60. The book topped the *New York Times* bestseller list for 41 weeks and was adapted into a six-part television series. *Evergreen* spans three generations of an immigrant family. It was born, she said, when her children began asking questions about their forebears. Every one of Plain’s books became national bestsellers. More than 25 million copies of her books were in print in the early part of the 21st century, and they appeared in 22 foreign translations. Before she became a novelist, Plain wrote short stories for major magazines. A history major in college, Plain used her background in her work. The Werner family saga, first unveiled in *Evergreen*, continued in *The Golden Cup* (1986), *Tapestry* (1988), and *Harvest* (1990). *The Sight of the Stars* was published in 2003.

[Stewart Kampel (2nd ed.)]

PLAMENAC, DRAGAN (1895–1983), U.S. musicologist of Yugoslav origin. He was born in Zagreb where he first studied law and took a degree. Thereafter, he turned to his early interest in music and studied composition in Vienna (1912) and Prague (1919), musicology with Pirro at the Sorbonne and with Hugo *Adler, one of the founders of modern musicology, in Vienna. He took his doctorate in 1925 with his dissertation on Ockegem’s motets and chanson; in 1928 he began teaching musicology at the University of Zagreb. He went in 1939 to the U.S. as the Yugoslav representative to the International Musicological Society Congress in New York and decided to remain there during World War II. He became an American citizen in 1946. Plamenac was thereafter professor of music at different universities, mainly the University of Illinois (1954–63), where he received an honorary doctorate in 1976. Plamenac held several offices at the American Musicological Society and received a number of awards.

In his numerous writings Plamenac distinguished himself as a prominent researcher and editor of early music, namely that of the 14th and 16th centuries as well as the music of Adriatic coastal areas in the Renaissance and early Baroque period. His studies and editions of manuscripts provide important insights into the practice of those periods.

PLANE TREE (Heb. אַרְמוֹן; *armon*). The Oriental plane, *Platanus orientalis*, is indigenous to Israel and grows on the banks of rivers, especially in the north. It is one of the most beautiful of Israel's trees and is recognizable by its lofty trunk, spreading crest, and large leaves. Its Hebrew name is connected with the fact that its bark peels so that the trunk is left bare (*arom*). It grows also in Syria and Babylon; while sojourning with Laban in Mesopotamia, Jacob peeled "white streaks" off rods from the tree (Gen. 30:37). Ezekiel, who prophesied in Babylon, mentions it among the beautiful trees in "the garden of God" (Ezek. 31:8). The Targum (Gen. 31:37) rightly renders the word *doleva* ("the plane") and the Septuagint similarly has *platanos*. Rashi, however, identifies the *armon* with the chestnut, an identification which was accepted by European rabbis and by the biblical commentators, and it has been adopted in modern Hebrew. However, this identification is erroneous since the chestnut does not grow in Israel or in Mesopotamia. Beautiful plane trees are found especially on the banks of the River Dan and the River Senir, the sources of the Jordan. Particularly well known is the great plane tree at the Banias Falls which divides the falls in two.

PLANNING AND CONSTRUCTION. The laws of planning and construction occupy an important place in contemporary public law. This group of laws regulates the status of the various planning authorities, determines norms for the planning of communities, allocates areas for residence, industry and agriculture, establishes various norms regarding the construction of buildings and other facilities within the bounds of a community (such as for residential areas, agricultural regions, nature reserves, and waterside areas), and enumerates various conditions for the maintenance and preservation of buildings and other entities (such as trees, railways, roads, etc.) – especially in cases in which they are liable to cause harm to individuals or to the public.

Although the modern city is notably different from the city of ancient times, the sources of Jewish law over the generations set forth basic principles regarding the regulation of various aspects of planning and construction which are also appropriate – with certain appropriate changes – in contemporary times. In many cases, these principles of Jewish law have been incorporated within other laws, such as *Torts, *Acquisition, public and administrative law (see *Public Authority) and constitutional law (see *Rights, Human: Right to Title), *Unjust Enrichment, etc. Some of the laws of planning and construction were intended to prevent safety hazards, but many were intended to ensure the external appearance of the community, which should be attractive and pleasant for residential purposes. Initially, many of these obligations were specified in the framework of torts regarding private law and

created rights and obligations of individuals, but they eventually became public obligations, binding all members of the community.

Thus, for example, it was ruled that commercial installations liable to cause damage to the public should be removed, or built at a safe distance from residential areas (see *Hazard). In many cases, such laws enable individuals to submit claims against others for damage caused to them, or to compel their removal (see *Nuisance).

In other cases, the *public* aspect of planning law is emphasized. Thus, for example, already in the Mishnah we find the requirement that a cemetery be located at a distance from urban centers (M. BB 2:8), the commentators differed however regarding the reason for that requirement: Some think that in this case, similar to other laws of nuisance, the reason is because of the offensive smell that is prevalent there, but others explain that it was meant to prevent distress to the city residents who might see the place (Rabbi Mordechai Yaffe, *Sefer ha-Levush*, YD 365). A similar directive was made in Israeli law, which specifies certain areas in which burials may be performed and prohibiting burial elsewhere (Public Health Ordinance; Planning and Construction Law, 5725 – 1965).

Owing to the wish to preserve "the city's beauty" – its external esthetics – a requirement was made to keep certain types of trees far from its borders (M. BB 2:7), for which the Talmud gives the following rationale: because these trees have many branches, and "it is the beauty of the city when there is open space around it" (BB 24b and Rashi, ad loc.). In the Jerusalem Talmud, there were those who explained that the reason for distancing such trees far from the city is that they have many branches, which create excessive shade for the city's residents (TJ, BK 2:7). Among the early Sages there were those who limit this rule to inhabited regions in the Land of Israel, where it is obligatory to preserve its beauty, while others extend it to include cities abroad as well (Ramban, Rashba and Ritba, on Bava Batra, ad loc.). Rashba, in his novellae (to BB 24b), set an important rule, according to which "Anything that has to do with aesthetics cannot be waived by the residents"; in other words, this is a mandatory rule having the character of *jus cogens*, being intended to maintain "the city's beauty," and therefore cannot be made a matter of their discretion.

The rules concerning the "city's beauty" were especially enforced in those cities given to the Levites, and this dictated their explanation of the biblical rule (Num 35:5), compelling one to leave an empty "plot" around the Levite cities. Rashi (Sotah 27b) interprets the rationale for this by saying that they wished to leave open space on the edges of the city, to leave "an expanse empty of sowing and houses and trees for the sake of the city's beauty, and to provide air for it." From other sources, it emerges that this empty space surrounded the town from all sides, and measured 1000 cubits (approximately 500 meters) in each direction. See Targum Onkelos to Num. 35:4–5; and Rashi to Eruvin 56b, s.v. *ze'i mehen*.

Another law stated with respect to the levitical cities prohibits changing the land's designation. Already in the Tosefta

(Arakhin 5:18) we read that “A plot should not be made into a field, and a field should not be turned into a plot.” Rashi explains this (Arakhin 32b) with the rationale: “A plot should not be made into a field – because of [the imperative] of settling the Land of Israel, and this would be devastating, for it reduces sowing [the areas available for sowing]; and a field should not be turned into a plot – *because it ruins the town’s aesthetic appearance.*” In other words, the desire to maintain certain agricultural areas, as well as concern for the town’s aesthetic appearance, requires the avoidance of changing the land’s designation. Similar norms were set in Israel’s Planning and Construction Laws.

Special rules were fixed for the *City of Refuge, which served as the place of residence for persons who had accidentally committed manslaughter. Although Jewish law does not generally establish criteria regarding urban density and the location of cities, this indeed was *inter alia* the rationale of the rule that the various cities of refuge should not be too close to one other but rather scattered at equal distances (Tosefta Makkot 3:3). The Tosefta (*ibid.*, 8) further states that: “These three towns [= Cities of Refuge] should not be built either as large cities or as small villages, but rather as medium-sized towns. They should not be built in places where there is no water. If there is no water there – water should be brought there. And they should not be built in places that are uninhabited. If the population has dwindled – other inhabitants should be brought and settled there instead of those who left. If their residents have dwindled – then priests (Kohanim), Levites and [ordinary] Israelites should be added to them.” The Jerusalem Talmud (Mak. 2:6) adds that “If there is no market there, then one should be set up” – all in order that the person who accidentally committed manslaughter and finds refuge there should be able to live a normal life. Nevertheless, in order to prevent blood avengers from getting into the habit of coming to these towns, the practice of certain crafts – such as operating an oil press and producing oil, manufacturing glassware, rolling cords, and similar crafts – was forbidden in those towns (Tosef. and TJ, ad loc., and see *Human Rights: Freedom of Occupation).

Laws of this nature were also applied to the building of the Temple, such as the prohibition on building it during the night hours and the obligation to build it only from materials that were originally designated for this purpose (Yad., Beit ha-Beḥirah). Various limitations on construction works were imposed on special occasions. In addition to Shabbat and holidays, in the ancient sources construction was also prohibited on fast days, such as public fasts, and from the beginning of the month of Av until the 9th of the month, which is a period of mourning (Ta’anit 14b). In the later sources this prohibition was qualified and limited only to “building for the sake of joy.” Rambam explained (*Commentary on the Mishnah*, Ta’anit 1:7: “planting for joy” (such as drawings and ornaments) refers to special buildings the wealthy make, or aromatic trees and so on planted by kings, but building for residence, and planting for the sake of fruits and for making a living, is not

forbidden and is not prevented at all. The Jerusalem Talmud explains that if a building was about to collapse, it is permitted to rebuild it even in such times (TJ, Ta’anit 1:8). During the Intermediate Days of Festivals construction work was prohibited as well. The Tosefta cites an exception to this rule (Tosef. Mo’ed Katan 1:7) regarding a house that is liable to endanger its residents: “Should its wall be tottering on the brink of collapse into the public domain, then it should be toppled and rebuilt because of the risk to life.” The same rule applies in those places where there are other dangers: “If the city walls have been breached – then it should be fenced off. If it has been fenced off and breached – then it should not be fenced off further. If it was close to the frontier [= border] – then it should be demolished and rebuilt in the usual way.”

The sources of Jewish law indicate that certain institutions were originally built in certain locations. Thus, for instance, from many biblical sources we learn that the Court used to sit at the city gates, to enable convenient access. In the Midrash (*Pesikta Zutrata, Lekah Tov, Ki Teze*) it was even taught that it is mandatory, and not merely a directive to be exercised voluntarily, that the Court sit at an the highest spot in the city.

A special norm was fixed regarding the construction of synagogues as well. As early as the Tosefta (Megillah 3:22–23) it was already stated that “The doorways of Synagogues are to be opened only towards the East, because in the Sanctuary the doors opened towards the East,” and that “Synagogues are only to be built in the highest place in the city.” However, as early a source as Rabbenu Tam (12th century) already qualified this law, stating that it had been applicable specifically in ancient times, “when people were accustomed to residing on and using the roofs, but in our times this prohibition should be qualified.” At any rate, he too prohibited the construction of an apartment on a floor that was higher than the synagogue (Shabbat 11a, and Nov. Ritba *ibid.*). Testimony from medieval Jewish communities shows that, in certain cases, it was decreed that synagogues should be elevated or houses that were built at higher levels should be lowered (*Hagahot Maimoniyot*, to *Hilkhot Tefillah* 11:2; Sh. Ar., Oḥ, 150, and Rema *ad loc.*, 3, and *Arukh ha-Shulḥan*, Oḥ 150). During the period of the *aḥaronim* and certainly in modern times, when synagogues are frequently built in multi-storey buildings, various dispensations were made for this issue as well. For example Rabbi Joseph Caro cites Rabbi Jacob Ibn Habib – “In our times, when we are under Turkish rule, that we are not permitted to establish a permanent house for a synagogue; all the more we are not permitted to build one, and we are obliged to hide ourselves in low buildings, where the sounds [of prayer] are not to be heard because of the danger involved. Accordingly, even if there is a residential house above the house in which we customarily pray, this is not to be protested, on condition that they maintain cleanliness in the houses that are above the house of prayer.” (*Beit Yosef*, Oḥ 154; and see the Rambam’s responsum in Resp. Pe’er ha-Dor 74; *Magen Avraham*, Oḥ 150:2; and compare Rabbi Ben-Zion Ouziel, Resp. Mish-

patei Ouziel, vol. 3, OH 19, and R. Ovadiah Yosef, Resp. Yabi'a Omer, vol. 6, OH, 26).

As a remembrance of the destruction of the Temple, it was enacted that when a person plasters his home, he should leave a certain area unpainted in remembrance of the destruction of the Temple (Tosef. Sotah 15:12; Tur, OH 560).

Other *halakhot* determine the need to distance one residential building from another for the sake of maintaining privacy (see *Rights, Human: the Right to Privacy). This *halakhah* is rooted in ancient sources. Commenting on the biblical verse (Num 24:2), "And Balaam lifted up his eyes, and he saw Israel dwelling tribe by tribe; and the spirit of God came upon him," the Sages remarked: "He saw that the openings [of their tents] were not facing each other, to prevent one person from looking into his neighbor's tent (Rashi, *ibid.*; BB 60a). Accordingly, the sages stated in the Mishnah (BB 3:7) that "In a courtyard which he shares with others, a man should not open a door facing another person's door, nor a window facing another person's window. If it is small, he should not enlarge it, and he should not turn one into two. On the side of the street, however, he may do so," because there, there is no risk that someone's privacy may be infringed

In all these rules, important status was granted to "the prevailing practice in that place" (see *Minhag), on condition that it isn't a "foolish practice" or a "mistaken practice." And thus, the Rashba (Rabbi Solomon Adret, Spain, 13th century), in his important responsum on the status of custom in Jewish law (Resp. Rashba, vol. 2, no. 268) wrote: "And we also learn from the custom of the land, even though it has not been [formally] agreed. As we have learned (M. BB 1:1): "In those districts where it is usual to build using unhewn stone, hewn stones, beams, or bricks, they must use such materials, all according to the custom of the district." And they explained: "Everything – including a light partition, made of thatch and straw," but he adds: "At any rate, if the custom was not to be particular at all with respect to the injury of visual trespass [into] homes and yards [= which damages the neighbor's privacy, see entry: *Damages], then this is a mistaken practice, and is not a [correct] custom. Because a person cannot waive his rights, except with respect to finances, of which a person is entitled to give of his own, or to sustain damage to his property. But he is not entitled to breach the fences [= prohibitions] of the Jewish people, and behave immodestly."

Special provisions of the Israeli planning and construction laws prevent a person from making changes in his house (such as closing a balcony or building an annex) without receiving a permit from the local committee for planning and construction. Similar principles exist in various provisions of Jewish law, as well as in local regulations for public welfare (see **Takkanot ha-Kahal*). The main principle was based upon the words of the prophet Jeremiah: "Woe unto him that builds his house by unrighteousness, and his chambers by injustice" (Jer 22:13). In other words: even a person building his own house must do so in accordance with principles of justice and law. In later generations, the Sages used this verse as a basis for various

rulings with respect to planning and construction. Thus, for instance, the Italian sages stated that a person is not entitled to make changes to a house in his possession if his neighbors' rights to light and air would thereby be compromised (see, for instance, Resp. Haramaz of Rabbi Moses Zacuto, no. 37).

Other provisions of modern planning and construction laws require a person to demolish unstable buildings, which endanger their surroundings. A similar provision may be found in Jewish civil torts law. Already in the Mishnah it states that in such cases, "the Court determines a period of 30 days during which the owner of the property must demolish the unstable building, and if he does not do so, he will be charged with any damage that may be incurred as a result" (M. BM 10:4; Yad., *Nizkei Mamon* 13:19; and see Resp. Rashba, vol. 4., no. 114).

Various laws were legislated in the Mishnah and the Talmud, with respect to construction below the surface of the ground, intended to prevent hazards from the public. Thus, it is stated in the Mishnah (BB 3:8) that "It is not acceptable to make a hollow space under the public domain, such as pits, a trench or a cave," while Rabbi Eliezer allows making a cavity under the public domain, provided that it is provided with a sufficiently strong covering to bear the weight of a wagon laden with stones passing over it." And it is further stated in the Mishnah (*ibid.*) that "one must not make beams and balconies that protrude into the public domain unless one chooses to do so by withdrawing into his own area, and then the protrusions can be contained within his own area." The Talmud cites an opinion that qualifies this law, adding that if the protruding beams are higher than "a camel and its rider" – that is, in a sufficiently high place so as not to cause a disturbance to passers-by, then it is allowed. Indeed, Ritba, who was asked about this matter, rules that in places where "it was not customary" to have protruding beams, even if they are much higher than "a camel and its rider," they should not be extended (Resp. Ritba 125). However, in places where a custom existed to allow this, one cannot protest against a person who does so, and in certain cases he even acquires possessory rights (**Hazakah*) and cannot be compelled to demolish what he has built (Resp. Rosh, 99:6).

Due to its unique character and status, special laws were made for *Jerusalem. Thus, for example, it was determined that in this city, even within private property, a person is barred from building with beams that protrude from the walls, or balconies or pipes that project into the public domain, because they are liable to contaminate or cause other harm to the pilgrims who come to the city (BK 82b; Tosef., *Nega'im; Avot de-Rabbi Nathan*, 35; Yad., *Beit ha-Behirah* 7:14; Resp. Rashba, 125). It was similarly prohibited to plant "gardens and orchards" within the city of Jerusalem, and trees should not be planted there, apart from "a rose garden that had been there since the days of the former prophets" (BK and *Rambam*, *ibid.*). This was decreed in order to prevent the fertilizing of the fields with manure, which creates an offensive odor, which would be liable to lead to the city's becoming "repulsive

to the pilgrims and to all those who come to it from all over the land” (Responsa Radbaz, vol. 2, 633). Likewise, “kilns are not to be made in Jerusalem” – i.e., lime kilns for pottery – because the smoke blackens the city walls, which would be a disgrace, as it has been said of Jerusalem that it was the “paragon of beauty.” Others interpret the reason for this rule so as to prevent the smoke from blackening the walls of the Temple (בכ 82b; *Rashi* and *Shitah Mekubbezet*, ad loc.; Ḥaggigah 26a; Zevaḥim 96a; Yad., *Beit ha-Behirah* 7:14). It was further stated that “cemeteries should not be built within the boundaries of Jerusalem, apart from the tombs of the House of David and that of the prophetess Huldah, which have been there since the time of the earliest prophets” (Tosefta, *Avot de-Rabbi Nathan*, *ibid.* and Rambam, *ibid.*). Indeed, Radbaz (Rabbi David Ben Zimra – a rabbi in Egypt and the Land of Israel during the 16th century) wrote that during these times, when the Temple was not standing, and the laws of uncleanness and purity no longer prevailed there, this prohibition was no longer in effect (Resp. Radbaz, vol. 2, 635).

A special chapter on the laws of planning and construction relates to compensation of a landowner who has suffered damage due to the change of designation or expropriation of his property (see, for example, Sections 188–197 of the Planning and Construction Law, 5725 – 1965, and the Lands Ordinance (Acquisition for Public Purposes), 1943). This principle complies with the values of a Jewish State, which require that landowners be given compensation even when the damage to his rights in the land is justified due to an opposing public interest, such as in cases of expropriation of the land for public purposes. The compensation can be monetary, in the manner ruled by Rambam (Melakhim 4:6) with respect to the king’s right to expropriate land: “and he takes the fields and the olive trees and the vineyards for his slaves when they go to war ... and gives their value [in money]” (see Hacoheh; and *Rights, Human: Right of Acquisition), or by way of providing alternative land, in the manner that Ahab proposed to Naboth the Jezreelite (1 Kings 21:2).

In the State of Israel

In Israeli law, the laws of planning and construction were regulated by a system of laws, the most important of which is the Planning and Construction Law, 5725 – 1965. Other laws establish various qualifications regarding the location of commercial and industrial facilities in residential areas, such as the Business Licensing Law, the Abatement of Nuisances (Noise and Pollution) Law, and municipal by-laws.

In several cases, the Israeli courts have found support and remedies from the sources of Jewish law for matters concerning planning and construction laws that they adjudicated. For example, one case dealt with the municipality’s obligation to demolish an unstable structure (CA 2904/92 *Tel Aviv Municipality v. the Estate of the Deceased Leterhaus*, PD 50(1)754). Justice Tal cited the position of Jewish law, according to which one must distinguish between an unstable building that does not present an immediate danger, in which case the court is

obliged to caution the owners and give them time to demolish it, and one that poses immediate danger. Thus, it is stated in the Shulḥan Arukh: “The wall and the tree ... if they are unsound, the court gives him time to chop the tree and to demolish the wall. And how much time? Thirty days” (Sh. Ar., ḤM 416: 1). The Rema, in his gloss on this passage, adds that “A time is set for him – only when the court has forewarned him. But without there having been a court [warning], even though his friends have cautioned him, it is considered as nothing ... and if it is necessary and there are grounds to assume that it might harm others, then he should not be given time, and he is forced to remove the impending menace immediately.”

In another case, the Supreme Court deliberated over the rights of demonstrators to demonstrate in a public area, while causing a nuisance to neighbors [CA 3829/04 *Israel Tuito, Chairman of Mikol Halev, Kikar Halehem, The Association for Reducing Social Disparities in Israel, et al. v. Municipality of Jerusalem*; (unpublished)]. Justice E. Rubinstein ruled that even the right to freedom of demonstration (see *Rights, Human: Freedom of Expression) is not unlimited, and should be prevented when its damage to the public is greater than its benefit. He found support for this ruling, inter alia, in the above-cited talmudic ruling, according to which the prohibition against beams and balconies that protrude into the public domain does not apply when they are “higher than [the height of] a camel and its rider.”

The Supreme Court likewise referred to the sources of Jewish law when it determined the obligation of the Local Planning and Construction Committee to avoid expropriating land areas from their owners unnecessarily and to compensate the owner in cases in which he incurs harm as a result of its actions (HC 2390/96 *Karasik et al. v. the State of Israel*, 55 (2) PD 625). In order to establish the landowner’s proprietary rights, Justice Heshin referred, inter alia, to the biblical story of Ahab and Naboth the Jezreelite, which is discussed extensively in the sources of Jewish law. In another case (CA 8989/04, *Petach Tikva Local Planning and Construction Committee and others v. M. Zitman and Sons Ltd.*; unpublished), Justice Rubinstein refers to the words of Chief Rabbi Ben Zion Meir Hai Ouziel, who wrote in connection with a similar matter on the eve of the establishment of the State of Israel:

“Proposals for the Constitution of the State of Israel,” in which it was stated, among other things, that “The State of Israel recognizes its obligation to protect all private and public property owners by their own acquisition or by inheritance, and denies the right to expropriate private or public lands in favor of the government if it is not located in a place where it is necessitated by public needs. And even in such cases, no land shall be expropriated save at its full price or in exchange for other similar land” (quoted in Rabbi Isaac Halevi Herzog, *Constitution and Law in the Jewish State*, vol. 1: *Administration of Rule and Justice in a Jewish State* [Hebrew], ed. I. Warhaftig, 251).

A special section of the Planning and Construction Law determines limits to injury and prohibits the destruction of buildings that have been designated for preservation due to their

historic value (Section 76 and the Fourth Supplement to the Planning and Construction Law, 5725 – 1965). Similar provisions also exist in Jewish law with respect to the prohibition on damaging holy sites. Thus, for example, a prohibition was imposed on breaking one stone of the Temple, and it was prohibited to unnecessarily demolish a synagogue. This issue was deliberated in the Supreme Court, in the context of demolishing synagogues in *Gush Katif in wake of the disengagement plan of 2005, and Justice E. Rubinstein referred extensively to the sources of Jewish law when deliberating the matter.

The rabbinical courts, too, are occasionally required to address the laws of planning and construction, such as the question of whether a neighbor can force his neighbors to consent to additional construction in his apartment.

°PLANTAVIT DE LA PAUSE, JEAN (*Plantavitius*; 1576–1651), French Hebraist. Born into an aristocratic Protestant family, Plantavit was brought up in Nîmes and became pastor of Béziers. In 1604 he converted to Catholicism and later became bishop of Lodève. He left a detailed account of his Hebrew teachers, who included the erudite and prolific convert Philippe d’Aquin (born Mordecai Cresque de Carpentras, c. 1575–1650), Leone *Modena, Abraham Jedidiah Shalit of Ferrara, Elisha Mazzal-Tov of Modena, Jacob b. Moses Senior of Pisa, and Solomon b. Judah Ezobi of Carpentras. One of the outstanding Christian Hebraists of the age, Plantavit spent 30 years preparing his monumental *Thesaurus synonymicus Hebraico-Chaldaico-Rabbinicus* (Lodève, 1644–45), which gave the Latin equivalent of Hebrew and Aramaic terms, appropriate biblical references, and a wealth of synonyms. He also published *Florilegium Biblicum* and *Florilegium Rabbinicum* (both Lodève, 1645), in the latter of which he records his gift of a copy of the Zohar to his master, Philippe d’Aquin.

°PLANTIN, CHRISTOPHE (c. 1520–1589), French humanist printer and publisher. Plantin, who was born near Tours, learned the book trade in Normandy and Paris. His Protestant sympathies led him in 1549 to the more congenial atmosphere of Antwerp in the Spanish Netherlands, where he devoted himself to fine printing from about 1555 onward. Plantin was, after Daniel *Bomberg, the outstanding 16th-cen-

tury Christian printer of Hebrew books. By 1576 he operated 22 presses and was the leading printer-publisher of northern Europe. Following the “Spanish Fury” of 1576, he spent some years in France and Holland, eventually returning to Antwerp, where he died.

Plantin’s greatest publishing achievement was the eight volume “Antwerp Polyglot,” *Biblia Sacra hebraice, chaldaice, graece et latine...* (1568–72), an improved and expanded version of the first Complutensian Bible (Alcalá de Henares, 1514–17). The undertaking received the Vatican’s approval in 1568 owing to fears of a rival project by Immanuel *Tremellius, a Jewish convert to Protestantism. The four volumes devoted to the Old Testament included revised texts of the Targums, and a Latin translation; the fifth covered the New Testament; and the last three volumes constituted the *Apparatus Sacer*, which included pioneering lexicons of Syriac and Aramaic. The introduction to the first volume, inspired by the prefaces to Daniel Bomberg’s second Rabbinic Bible (1525), contains interesting Hebrew panegyrics by Benito *Arias Montano, Guy *Le Fèvre de la Boderie, and Gilbert Générard (one of the Polyglot’s obliging censors). From every aspect, the work was a masterpiece of Bible scholarship, typography, and illustration. Hebrew punches were either especially cut by Guillaume *Le Bé or provided by the Bombergs. Of the 1,200 copies printed, 12 sets on vellum were prepared for Philip II of Spain, who made Plantin his Architypographer Royal, but never furnished the sum promised for naming the Bible in his honor. The “Antwerp Polyglot” was speedily denounced by Spanish obscurantists, who objected to its philological, rabbinic, and kabbalistic preoccupations, but it was cleared of suspicion in 1580. Plantin also printed Hebrew Bibles for export to Jewish communities in North Africa (1567) and may have issued the anonymous Hebrew prayer book which appeared in Antwerp c. 1577. His descendants maintained the press until 1875, when the Antwerp municipality transformed it into the present-day Plantin-Moretus Museum – a unique monument to Renaissance printing and publishing.

PLANTS. Research into the flora mentioned in the ancient Hebrew literature is grounded on the basic assumption that within historical times no fundamental changes have taken place in the country’s climate (see *Agriculture). This assumption, which allows conclusions to be drawn from present-day plants about the floral landscape of bygone days, is particularly important for identifying the flora of the Bible and of talmudic literature. The overwhelming majority of them can be identified with those of today, but, as with all the terms of biblical

and talmudic realia, many and varied identifications and interpretations have been suggested for them. Modern botanical and philological studies have, however, helped greatly in arriving at a correct identification.

In the Bible

The Bible mentions about 100 names of plants, the bulk of them of Erez Israel, the others being trees of Lebanon and tropical plants that yield an aromatic substance or were used in incense. (See Table: Plants in the Bible and Mishnah.) These names refer to specific plants, but some are generic names, such as *koz ve-dardar* (“thorns and thistles”) and *shamir va-shayit* (“briars and thorns”). Although the biblical plants are chiefly those which were economically important, they are to a large extent mentioned fortuitously. The carob, for example, although undoubtedly grown at that time, is not mentioned in the Bible, while specific vegetables are mentioned in one verse only of the Bible; and these are the vegetables of Egypt for which the children of Israel longed during their wandering in the wilderness (Num. 11:5).

In Talmudic Literature

The Mishnah, the Talmuds, and the Midrashim add hundreds of names of plants to those mentioned in the Bible. They are particularly numerous in the Mishnah of *Zera'im* which treats of laws connected with agriculture. In the aggadic Midrashim, too, many plants are mentioned in simile and parable. In all, the ancient literature on Erez Israel mentions close to 500 names of flora. The Babylonian Talmud refers to scores of plants of Babylonia and its neighborhood. In the Table: Plants in Bible and Mishnah, only one identification is given. Alternative suggestions of identification will be found in the individual articles.

Plants and Products of Plants Mentioned in the Bible and Mishnah

English Name	Scientific Name	Hebrew name	Description of Plant	Reference
Acacia	<i>Acacia albida</i>	שטה, שטים	thorn tree	Ex. 26:15; Isa. 41:19, et al.
Alga	Chlorophyta	ירוקה	seaweed	Shab. 2:1
Almond	<i>Prunus amygdalus</i> (<i>Amygdalus communis</i>)	לוז שקד	fruit tree	Gen. 30:37 Num. 17:23; Jer. 1:11, et al.
Aloe	<i>Aquilaria agallocha</i>	אֶהְלִים אֶהְלִוֹת אֶלְמָגִים אֶלְגָּמִים	fragrant tropical tree	Num. 24:6; Prov. 7:17 Ps. 45:9; Song 4:14; I Kings 10:11–12 II Chron. 2:7; 9:10–11
Amaranth	<i>Amaranthus retroflexus</i>	ירבוז	vegetable (herb)	Shev. 9:1
Amomum	<i>Amomum cardamomum</i>	חקם	tropical spice plant	Uk. 3:5
Apple	<i>Pyrus malus</i>	תפוח	fruit tree	Joel 1:12; Song 2:3, et al.
Artichoke	<i>Cynara scolymus</i>	קנרס	garden vegetable	Kil. 5:8; Uk. 1:6
Asafetida, Fennel	<i>Ferula assafoetida</i>	חקתיית	herb whose gum fennel is used in spices and medicine	Shab. 20:3; Av. Zar. 2:7, et al.
Balm, Balsam	<i>Commiphora opobalsamum</i>	בשם נטף צרי, צרי קטף	the balsam shrub whose resin yields an aromatic substance	Song 5:1 Ex. 30:34 Gen. 37:25; 43:11, et al. Shev. 7:6
Barley	<i>Hordeum sativum</i>	שעורה	cereal grass	Ex. 9:31; Deut. 8:8, et al.
Barley, two-rowed	<i>Hordeum distichum</i>	שבולת שועל שורה	cereal grass	Isa. 28:25 Kil. 1:1; Pes. 2:5, et al.
Bdellium	<i>Commiphora africana</i>	בדולח	tropical tree whose resin yields an aromatic substance	Gen. 2:12; Num. 11:7
Bean, broad	<i>Vicia faba</i>	פול	legume	II Sam. 17:28; Ezek. 4:9, et al.
Bean, hyacinth	<i>Dolichos lablab</i>	פול הקבן	legume	Kil. 1:1; Ma'as. 4:7, et al.
Bean, yard-long (asparagus bean)	<i>Vigna sesquipedalis</i>	פול הקרוב	legume	Kil. 1:2
Beet spinach	<i>Beta vulgaris</i> var. <i>cicla</i>	תרד	garden vegetable	Kil. 1:3; Ter. 10:11, et al.
Bermuda grass	<i>Cynodon dactylon</i>	יבלית	weed	Kelim 3:6
Box	<i>Buxus sempervirens</i>	אשכרוע	hardwood shrub	Yoma 3:9; Kelim 12:8; Neg. 2:1

Cabbage, garden	Brassica oleracea var. capitata	תְּרוּבָתוֹר	garden vegetable	Kil. 1:3
Cabbage, kale	Brassica oleracea var. acephala	כְּרוֹב	hardy cabbage	Kil. 1:3; Ter. 10:11, et al.
Calamus, Indian sweet	Cymbopogon martini	קִנְהַ הַטּוֹב קִנְהַ-בִּשְׁם קִנְהַ	tropical aromatic plant	Jer. 6:20 Ex. 30:23 Isa. 43:24; Song. 4:14, et al.
Cane, biflorate	Saccharum biflorum	אֶגְמוֹן	reed that grows near water	Isa. 9:13, 58:5, et al.
Caper	Capparis spinosa	צֶלֶף, קַפְרִס אֲבִינָה	thorny plant whose buds and fruit are used as spices Caperberry	Ma'as. 4:6 Eccles. 12:5, Ma'as 4:6
Caraway	Carum carvi	קֶרְבוֹס (קֶנְבוֹס)	vegetable used as a spice	Kil. 2:5
Carob	Ceratonia siliqua	חֵרוֹב	fruit tree	Pe'ah 1:5; Dem. 2:1, et al.
Castor-oil plant	Ricinus communis	קִיקְיוֹן	shrub whose seed yields oil	Jonah 4:6, 7, 9, 10
Cattail	Typha angustata	סוּף	marsh and water plant	Ex. 2:3; Isa. 19:6, et al.
Cedar	Cedrus libani	אֶרֶז	forest tree of Lebanon	Isa. 2:13; Amos 2:9, et al.
Celery	Apium graveolens	כֶּרֶס	garden vegetable	Shev. 9:1
Chick-pea	Cicer arietinum	חֶמְיִץ אֲפִוּיִם	legume	Isa. 30:24 Pe'ah 3:3; Kil. 3:2
Chicory	Cichorium intybus	עוֹלֶשֶׁן	garden vegetable	Shev. 7:1; Pes. 2:6
Chicory, wild	Cichorium pumilum	עוֹלֶשֶׁן-שָׂדֶה	wild vegetable	Kil. 1:2
Cinnamon, Ceylonese	Cinnamomum zeylanicum	קִנְמוֹן	aromatic tropical spice tree	Ex. 30:23; Prov. 7:17, et al.
Cinnamon, Chinese	Cinnamomum cassia	קִדְהַ	aromatic tropical spice tree	Ex. 30:24; Ezek. 27:19
Cinnamon, Indo-Chinese	Cinnamomum laurei	קִצְיֵה	aromatic tropical spice tree	Ps. 45:9
Citron	Citrus medica	עֵץ הַדָּר אֶתְרוֹג	fruit tree	Lev. 23:40 Ma'as. 1:4; Bik. 2:6, et al.
Colocasia	Colocasia antiquorum	קֶרֶס	vegetable with edible bulb	Ma'as. 5:8
Coriander	Coriandrum sativum	גֵּד רֶסֶבֶר	herb whose seed is used as a spice	Ex. 16:31; Num. 11:7 Kil. 1:2; Ma'as. 3:9, et al.
Cotton	Gossypium herbraceum Gossypium arboreum	כֶּרֶס צֶמֶר-גִּפֶּן	plant with fibrous fruit	Esth. 1:6 Kil. 7:2
Cowpea	Vigna sinensis	פּוֹל הַמִּצְרַיִם	legume	Kil. 1:2; Shev. 2:9, et al.
Cowpea, Nile	Vigna nilotica	שְׂעוּעִית	legume	Kil. 1:1
Cress	Lepidium latifolium	עֶדֶל	garden vegetable	Uk. 3:4
Cress, garden	Lepidium sativum	שְׁחָלִים	garden vegetable	Ma'as. 4:5
Crocus, saffron	Crocus sativus	כֶּרְכוּם	plant used as a spice and for coloring	Song 4:14; Nid. 2:6
Cucumber, bitter	Citrullus colocynthis	פִּקּוּעוֹת	wild desert plant	II Kings 4:39; Shab. 2:2
Cucumber, squirting	Ecballium elaterium	יְרוּקַת הַחֲמוֹר	wild herb	Oho. 8:1
Cumin	Cuminum cyminum	כֶּמוֹן	herb whose seeds are used as a spice	Isa. 2:25, 27; Dem. 2:1
Cypress	Cupressus sempervirens	גִּפְר תְּאֲשׁוּר	forest evergreen tree	Gen. 6:14 Isa. 41:19; 60:13, et al.
Daffodil, sea	Pancratium maritimum	חֶבְצֵלֶת	fragrant wild flower	Isa. 35:1; Song 2:1
Darnel	Lolium temulentum	זוֹן	weed grass	Kil. 1:1; Ter. 2:6
Dill	Anethum graveolens	שֶׁבֶת	plant used as a spice	Pe'ah 3:2; Ma'as. 4:5; Uk. 3:4
Durra	Sorghum cernuum	דָּחָן	summer cereal	Ezek. 4:9; Shev. 2:7

PLASENCIA, city in the Extremadura region of Spain, near the Portuguese border. The Jewish quarter was in the suburb of Jaraíz, and in the 13th century the Jewish community ranked with the flourishing communities in Castile. The Jews settled in Plasencia quite soon after its foundation at the end of the 12th century. From the beginning of the 14th century, restrictions issued against the Jews in Castile by the various *cortes*, or legislative assemblies, were also applied in Plasencia; for instance, those of the *cortes* of Medina del *Campo (1305), stipulating that no Jew was to farm taxes or acquire real estate from Christians. In 1313 Queen Dona María and the infante Pedro ratified the decisions of the *cortes* of Plasencia which prohibited the Jews from holding public office; furthermore, suits in which one of the parties was not Jewish were to be tried according to local and not Jewish law, and Hebrew documents would not be accepted as proof. Toward the end of the 14th century, there were 50 Jewish heads of families in Plasencia who paid the annual tax. The decline which overtook the Castile communities after the persecutions of 1391 was also felt in Plasencia.

In the mid-15th century several Jewish names appear among the tax farmers of Plasencia and the kingdom. Various documents give further details on the life of the community during the final period of Jewish residence in Spain. In 1490 a sum of 501,183 maravedis was levied on the community for the redemption of the Jewish captives of *Málaga. The monarchs were dissatisfied with the incomplete residential segregation of the Jews in Plasencia, and in 1491 they ordered that the decisions of the *cortes* of 1480 be stringently fulfilled. Even after the edict of expulsion of March 1492, the crown continued to collect money in payment of the debts which the Jews had left in the hands of various Christians. One of the collectors was Gernando Perez Coronel (formerly Meir *Melamed).

The exiles from Plasencia, about 50 heads of families, left for Portugal; the synagogue was converted into the Santa Isabel church in honor of the queen; and the cemetery was sold to the local church. There was also a *Converso community in Plasencia, but little is known of it. An *auto-da-fé was held in the town in 1489 and Conversos from nearby *Trujillo were then burnt at the stake.

There were two synagogues in Plasencia. One was in the Mota, next to the alcázar, where San Vicente church stands now. This synagogue was confiscated in 1477 so that a Dominican monastery could be erected on the site in honor of Vicente Ferrer. After the confiscation of their synagogue the Jews built a new synagogue which was on Vargas Street.

[Haim Beinart / Yom Tov Assis (2nd ed.)]

PLASZOW, forced labor camp (*Zwangsarbeitslager Plasow des SS – und Polizeifuehrers im Distrikt Krakau*) and, later, a *Konzentrationslager* (concentration camp). It was opened in late 1942 and built partially on the site of Cracow's two main Jewish cemeteries. Plasow had only about 2,000 prisoners when it initially opened, though at its peak in the summer of 1944, it had about 25,000–30,000 prisoners, most of them Jews. But Plasow was also an important transfer camp for Jews being sent to other camps, particularly nearby Auschwitz. Estimates are that 150,000 Jews passed through Plasow, par-

ticularly during the summer of 1944 when Adolf *Eichmann was sending hundreds of thousands of Hungarian Jews to their death in Auschwitz. Estimates are that between 8,000 and 12,000 Jews died in Plaszow during the Holocaust.

Like most forced labor and concentration camps, Plaszow was laid out as a small city by the SS, meaning that it was a self-sustaining entity fully able to support its inmates and SS staff with the products it produced in its slave labor factories. During most of its history, Plaszow was commanded by Amon Goeth, a figure made famous by Steven Spielberg's film, *Schindler's List*. Goeth was a true monster who brutalized his Jewish work force. Goeth was also extremely corrupt and was removed as commandant in the fall of 1944 in the midst of an SS investigation into corruption in Plaszow and other concentration camps. Goeth was arrested at the end of the war and tried in Poland for war crimes. He was found guilty and hanged in Cracow in 1946.

Oskar *Schindler, a Sudeten-German businessman, operated a factory for Goeth, but not in the Plaszow camp. Schindler, who arrived in Cracow in the fall of 1939, ran, among other things, an enamelware factory, Emalia (*Deutsche Emailwarenfabrik Oskar Schindler*), about two miles from Plaszow. After Goeth brutally closed the Cracow ghetto in the spring of 1943, Schindler convinced Goeth to allow him to transform Emalia into a Plaszow subcamp, the *Schindler Nebenlager*. Schindler, who had begun using Jewish workers at Emalia in the fall of 1939, and relied heavily on a Jewish manager, Abraham Bankier, to run his enamelware factory, increased the number of Jewish workers substantially over the next four years. When Goeth ordered Schindler to shut down that portion of Emalia that employed Jewish workers in the summer of 1944, Schindler got permission to transfer a thousand Jews to a new factory in Bruennlitz in what is now the Czech Republic.

Unfortunately, most of the Jews who had worked for Schindler in Emalia never made it to Bruennlitz. After Schindler closed the Jewish portion of his Emalia factory, his Jewish workers were sent back to Plaszow and on to other camps. It was in Plaszow that the famed "Schindler's List" was written in the fall of 1944, though not by Schindler. Its architect was a Jewish orderly, Marcel Goldberg, who compiled two lists with the names of 700 men and 300 women. Those chosen from the remaining Jewish inmate population in Plaszow were then sent on separate transports to Bruennlitz via Auschwitz or Gross Rosen in October and early November 1944. Plaszow was finally shut down two months later after Soviet forces occupied Cracow.

Today, little remains of the former camp. Its grounds have been turned into a nature preserve, though a Soviet-style monument, the Polish Martyrs' Monument, rests at one corner of the former camp site. Nearby is a smaller monument to Plaszow's Jewish victims. The Jewish cemeteries are still part of the nature preserve, with open, desecrated graves. Poles live in the only buildings remaining from the camp, Amon Goeth's villa, and the "Grey House," the former camp prison.

A McDonald's stands at the site of the camp's storehouse for property stolen from the camp's Jewish inmates.

°PLATO AND PLATONISM. The influence exercised by the Greek philosopher Plato on posterity both directly and through his interpreters was enormous and has been detailed in a vast literature. The direct influence of Plato on Jewish circles is much less pervasive. It seems quite clear that Greek philosophical writings in general had little or no influence on biblical and rabbinic literature, though current popular philosophic notions evidently became known also in the Jewish world. In Alexandria, one of the great centers of *Hellenistic civilization, Philo in the first century C.E. was faced with the necessity of effecting a reconciliation between Greek philosophy and scripture. This he did by reading the principles of the Platonism of his day into the Pentateuch by interpreting the latter in an allegorical manner. Philo did not leave any direct impression on later Jewish literature until reintroduced by Azariah de' *Rossi in the 16th century. After the Hellenistic period Plato did not have a great influence on Jewish thought until the period of the Arabic translations from the Greek, at which time Jews shared in general humanistic culture.

Among the dialogues reported to have been translated into Arabic were the *Republic*, the *Timaeus*, and the *Crito*. Quotations in Arabic from the *Republic*, *Timaeus*, *Laws*, and *Symposium*, among others, have been identified. Another source was the synopses of certain of the Platonic dialogues by *Galen. *Maimonides quotes from Galen's "commentary" on the *Laws* (*Galen's Compendium Timaei Platonis*, ed. by P. Kraus and R. Walzer (1951), 101), and his contemporary and friend Joseph ibn *Aknin quotes from Galen's *Summary of the Republic* (*ibid.*, 100; and A. Halkin "Classical and Arabic Material in Aknin's 'Hygiene of the Soul'" in: *PAAJR*, 14 (1944), 135). However, it was mainly through the works of his later interpreters and followers that the doctrines of Plato had an effect on Jewish intellectuals in the Islamic cultural sphere, first of all through quotations and interpretation of Platonic doctrine occurring in the body of Aristotle's writings, and secondly through neoplatonic interpreters of Plato, mainly Plotinus and Proclus. The doctrines of Plotinus became known through the medium of the pseudepigraphical *Theology of Aristotle*, which consists of excerpts from the fourth, fifth, and sixth *Enneads* of Plotinus, as well as other works. The longer version of the *Theology of Aristotle* includes extracts from an as yet unknown neoplatonic work cited in the works of Isaac

*Israeli and translated partially into Hebrew by Abraham *Ibn Ḥasḏai in *Ben ha-Melekh ve-ha-Nazir ("The Prince and the Ascetic"), which itself is a translation of an Arabic work which goes back to the legend of Buddha. Also interpolated in the longer version are texts relating to the doctrine of the Divine Will, which are not Plotinian and had an influence, along with the whole *Theology*, on Ibn *Gabirol in his *Fons Vitae*. The longer version is extant in Leningrad in three fragmentary manuscripts, all Arabic in Hebrew script, which testify to its influence on Jewish circles. In the early 16th century, Moses Arovav made a Hebrew as well as an Italian translation of the longer version. The Italian version was then translated into Latin and published in Rome in 1519.

*Avicenna utilized neoplatonic sources in the construction of his philosophic system and had a vast influence on philosophic circles, Jewish as well as non-Jewish. The influence of neoplatonism on Jewish mystical (kabbalistic) thought is also very great. A third major source of Platonic doctrine was through the works of al-*Fārābī, who seems to have been dependent on a tradition of Platonic interpretation which emphasized the political aspect of his thought. The influence of the *Republic* and the *Laws* as well as the *Statesman* are apparent in his political works. In his *Philosophy of Plato and Aristotle*, he summarizes briefly all of the dialogues and considers them from a political point of view. Extensive excerpts from this work were translated into Hebrew by the polymath 13th-century historian of philosophy, Shem Tov ibn *Falaquera. Maimonides in his *Guide* leans heavily on al-Fārābī in his attempt to explain the relationship which should obtain between philosophy and religion. Plato indirectly thus influenced the whole course of later Jewish medieval philosophy, which was mainly a reaction to the position taken by Maimonides in his *Guide*. Maimonides' esotericism in the *Guide* may also have been influenced by the tradition of Platonic esotericism common in Arabic philosophic literature.

The *Politics* of Aristotle was not known in the Arabic west, where Plato was the major classic of political philosophy. *Averroes composed an *Epitome of the Republic* in which he expresses interesting personal views more openly than he would in works addressed to a more religious audience, on the relationship between philosophy and politics. This work, along with Averroes' *Middle Commentary on the Nichomachean Ethics*, was translated by Samuel b. Judah of Marseilles into Hebrew in the 14th century, and marks the first time that a classical work of political philosophy was translated into Hebrew. The work was soon summarized by Joseph ibn *Kaspi, Samuel's contemporary, and exercised some influence on the course of later Jewish philosophy. In the 16th century the Jewish physician Jacob *Mantino translated it from Hebrew into Latin and it appears in the standard Latin editions of Averroes' works.

Another source of Platonic sentiments were the collections of the sayings of the philosophers, notably that of Ḥunayn ibn Ishāq, which was translated into Hebrew by Judah *Al-Ḥarizi in the 13th century. Joseph ibn Akinin includes a

number of Platonic dicta in his "Hygiene of the Soul" (see Halkin, as above in: PAAJR, 14 (1944), 69 ff.).

Finally, Judah *Abrabanel or Leone Ebreo, the son of Isaac Abrabanel, utilizes the basic ideas of Platonic philosophy in his *Dialoghi di amore*. Moses *Mendelssohn wrote on the immortality of the soul in his *Phaedon* (1767) and follows the Platonic dialogue of the same name.

[Lawrence V. Berman]

PLAUT (Flaut), HEZEKIAH FEIVEL (1818–1895), Hungarian rabbi. Born in Kolin, Plaut studied under Moses *Sofer of Pressburg, whom he venerated exceedingly, paying particular attention to every detail of his way of life so that he could emulate him. A profound talmudic scholar, Plaut was renowned for his piety. He engaged in halakhic correspondence with Hillel Lichtenstein, rabbi of Kolomyia, Galicia, with whom he had studied. In 1849 he was appointed rabbi of Nagysurany and remained there until his death. Students from every part of Hungary came to study at the large yeshivah he established there. As rabbi of Nagysurany he was also rabbi for the whole region, which included the community of Nove Zamky (Ersekujvar). He spent a number of Sabbaths there every year and preached there despite the fact that the leaders of the synagogue had, against accepted custom, moved the reading desk from the center of the synagogue to the front of the ark. When a ban was eventually issued by the Orthodox Hungarian rabbis against even entering such a synagogue, he established a separate synagogue in the old style. Plaut had no children but brought up orphans as his own children.

He was the author of *Likkutei Haver Ben Hayyim*, in 11 parts (1878–93), containing talmudic novellae, glosses on the four parts of the Shulḥan Arukh, a number of his responsa, eulogies, the glosses of the Ḥatam Sofer (Moses Sofer) on the Shulḥan Arukh, *Yoreh De'ah*, and the customs of Ḥatam Sofer and the latter's biography, as well as Plaut's correspondence with Hillel Lichtenstein.

[Samuel Weingarten-Hakohen]

PLAUT, HUGO CARL (1858–1928), German bacteriologist. Born in Leipzig, Plaut settled in Hamburg in 1913 and became director of the Institute for Fungus Research. In 1918 he was appointed titular professor. He made his greatest contribution to medicine in 1896, when he described the etiology of trench

mouth. Two years later H. Vincent of the Pasteur Institute described the same condition and it became known as the Plaut-Vincent disease or angina ulcero membranosa caused by fusiform spirochaeta. Of significance also were Plaut's works on streptococcus mocosus, streptothrix, and actinomyces. His publications include *Die Hyphenpilze oder Eumyceten* (1903, 1913²), *Dermatomykosen* (1909), and *Mykosen* (1919). He also carried out fundamental work in veterinary medicine.

[Suessmann Muntner]

PLAUT, W. GUNTHER (1912–), U.S. Reform rabbi and author. Plaut was born in Munster, Germany, and earned his law degree at the University of Berlin in 1934. When Nazi decrees made a law career impossible, he switched to Jewish studies. He was tutored by Abraham Joshua *Heschel and attended the Hochschule (later, Lehranstalt) für die Wissenschaft des Judentums. In 1935, Plaut and four other students accepted a lifeline – an invitation to study at *Hebrew Union College in Cincinnati, where he was ordained in 1939. HUC-JIR awarded him an honorary D.D. in 1964, followed by an honorary L.L.D. from the University of Toronto in 1977.

Plaut became rabbi of Congregation B'nai Abraham Zion (Washington Boulevard Temple) in Chicago (1937–48), taking a leave of absence in 1943 to enlist in the U.S. Army and serve as a chaplain in the infantry at the European front. He was present at the opening of the Dora-Nordhausen concentration camp in April 1945 and was awarded a Bronze Star.

Plaut's next pulpit (1948–61) was at Mt. Zion Temple in St. Paul, Minnesota, where he served as president of the Minnesota Rabbinical Association, was appointed to the Minnesota Human Relations Committee, and headed the Governor's Commission on Ethics in Government. In 1961, he was named senior rabbi of Holy Blossom Temple in Toronto, Canada, becoming senior scholar in 1977. He was also a founder and co-chairman of the Canada-Israel Committee (1975–76) and president of the Canadian Jewish Congress (1977–80). In the wider community, he served as president of the World Federalists of Canada (1966–68); as vice chairman of the Ontario Human Rights Commission (1979–85); and as a judicial officer in cases of human rights violations (1987). In the Reform movement, he chaired the Reform Jewish Practice Committee of the Central Conference of American Rabbis (1973–79), served as its vice president (1981–82), and as president (1983–85). He also served as vice president of the *World Union for Progressive Judaism and chaired the CCAR's Response Committee (1989–94).

Plaut was a prolific writer. A 1982 bibliography of his writings, compiled as a *Festschrift* titled *Through the Sound of Many Voices*, contained approximately 1,000 entries. In addition to chronicling the evolution of the Reform movement in *The Rise of Reform Judaism* (1963) and *The Growth of Reform Judaism* (1965), Plaut grappled with theological issues in *Judaism and the Scientific Spirit* (1962) and *The Case for the Chosen People* (1965). Other major books include *The Man Who Would Be Messiah* (1990); *The Magen David: How the Six-*

Pointed Star Became an Emblem for the Jewish People (1991); *The Price and Privilege of Growing Old* (1999); and *The Reform Judaism Reader* (with Michael A. Meyer, 2001).

His masterpiece remains *The Torah – A Modern Commentary* (1981), which was praised by Robert *Alter as “the finest commentary [on the Torah] in English or, for that matter, in any language.” He complemented it with *The Haftarah Commentary* (1996), which is used in Reform synagogues throughout the English-speaking world.

[Bezalel Gordon (2nd ed.)]

PLEAS.

Nature of Pleas

Talmudic law developed certain well-defined forms of pleading in civil cases (not unlike the *actio*, *formula*, and *exceptio* in Roman law). These forms of pleading constitute a catalog of causes of actions and defenses which could be applied in, and adapted to, all kinds of civil litigations. Unlike Roman law, pleas were not reduced to abstract terms, but expressed in direct language: for instance, the action of debt is rendered as the plea of “I have money in your hands”; the defense of payment is rendered as the plea of “I have paid.” The law of pleas thus comprises the catalog of the various pleas and the provisions governing the applicability and effect of each particular one. However, in the sources there is no systematic differentiation between the two, and they will be considered together below. It often happens that not only the burden of proof (see *Evidence) or of taking the *oath will depend on the pleas chosen by the party but also the immediate outcome of the action, where in the circumstances a given plea is considered conclusive.

Pleas of the Plaintiff

Plaintiff's pleas, or causes of action, can be roughly divided into three classes: debt – “I have money in your hands”; or “I have a loan in your hands”; or “I have wages with you”; chattels – “I have a deposit in your hands”; or “I have deposited this or that chattel with you”; or “you have stolen this chattel from me”; and oath – where the cause of action depends on accounts to be rendered and the defendant (e.g., an agent, executor, or guardian) is sued to verify his accounts on oath.

In order to be valid and to require a plea (or an oath) in reply, the plaintiff's plea must be such as to disclose a legally valid cause of action. Where a plaintiff would not be entitled to judgment, even though his plea be proved or admitted, no defense is called for. Thus, the plea “you promised to lend me money” – which is a promise unenforceable in law – or the plea “you insulted me” – which, if proved or admitted, could not bear weight in a case of damages – would be rejected as irrelevant from the outset.

Pleas of the Defendant

Whenever a cause of action has been pleaded by the plaintiff, “it is not a proper reply for the defendant to say, I owe you nothing, or you have nothing in my hands, or you are lying; but the court will tell the defendant to reply specifically to the

plaintiff's plea and be as explicit in his defense as the plaintiff was in his claim: have you or have you not taken a loan from him?; has he or has he not made this deposit with you?; have you or have you not stolen his chattel?; have you or have you not hired him?; and in the same way with all other pleas. The reason is that a defendant may err [in law]... and believe that he is not liable to the plaintiff; therefore he is told: how can you say 'I owe him nothing'? maybe the law renders you liable to him and you do not know; you must submit to the judges explicit statements of fact, and they will advise you whether you are or are not liable. Even a great scholar is told: you do not lose anything by replying to his plea and explaining to us how it is that you are not liable to him; is it because 'the thing has never happened' or although 'it happened, it is because you already made restitution to him'" (Yad, To'en 6:1).

Defendant's pleas may roughly be divided into admissions and denials.

*Admissions are of three kinds:

(1) full and express admission of the whole claim – such an admission establishes the claim "like a hundred witnesses";

(2) partial admission and partial denial, with the result that the oath will be administered to the defendant;

(3) implied admission – plea of "I have not borrowed" is, on proof of the loan, taken as an admission that the defendant has not repaid the loan; or, a plea of "I have repaid" is, on proof of non-repayment, taken as an admission that a loan had been made (BB 6a; Shevu. 41b; Yad, To'en 6:3). For pleas of "feigning" or "satiating" to revoke out-of-court admissions, and for the effect of admissions in general, see *Admission.

Denials are also of three kinds: "no such thing has ever happened" – i.e., a total denial of the fact (the loan, the contract, the tort) underlying the cause of action; "I have paid" – i.e., an assertion that any liability which may have existed has already been fully satisfied; and "you have renounced the debt," or "the money you gave me was in repayment of a debt which you owed me, or was a gift" (Yad, To'en 6:2) – i.e., in the nature of a plea of confession and avoidance.

The general rules that the burden of proving his case rests upon the plaintiff (see *Evidence) and that, in the absence of such proof, the defendant has to take the oath to verify his denial, apply to all these pleas of denial. The presumption that a debtor will not lie in the face of his creditor was in the course of time superseded by the presumption that the plaintiff will not lodge a claim unless he has a cause of action. While by virtue of the former presumption the defendant would be believed on his oath, by virtue of the latter he was required to take the oath to disprove the plaintiff's claim (Shevu. 40b).

Plea of Repayment

In the case of the plea of repayment, the following special provisions should be noted:

Where the defendant pleaded repayment, it was not sufficient for the plaintiff to prove that he had given the defendant a loan, because a loan given before witnesses need not

necessarily be repaid before witnesses (Shevu. 41b), and the claim would be dismissed on the defendant's oath verifying his plea. The same rule applied to claims on bills: where the signature of the defendant on the bill was proved or admitted, his defense of repayment would be accepted on his taking the oath (BB 176a; Yad, Malveh 11:3; Sh. Ar., ḤM 69:2); but some later jurists held that the plea of repayment was not available against a bill which was in the hands of the plaintiff, as it would normally have been returned or destroyed on payment (*Rema*, ḤM 69:2 and the references given there). The matter appears to be left to the discretion of the court in each particular case (Resp. Ribash, no. 454; *Sifte'i Kohen*, ḤM 69, n.14). Where the plea of repayment is inadmissible in law, e.g., where the loan or bill was made with formal *kinyan* (see *Acquisition, Modes of; ḤM 39, 3), the plaintiff will recover on the bill on taking the oath that it is still unpaid (Shevu. 41a; Yad, Malveh 14:2). Where a debt is repayable at a certain date, the defendant will not be heard to plead that he repaid it before that date because of the presumption that no debtor pays a debt before it matures (see *Evidence). The plaintiff will be entitled to recover without oath, on proof of the debt and of the time stipulated for repayment (BB 5a–b; ḤM 78:1).

In order to forestall pleas of repayment and their all too easy verification by oath, it became customary to stipulate beforehand either that repayment must be made in the presence of witnesses – in which case the plaintiff could recover without oath unless the defendant produced witnesses of repayment (Shevu. 6:2; Yad, Malveh 15:1; ḤM 70:3) – or that the plea of repayment should not be available to the defendant, and that the plaintiff should be entitled to recover on his assertion that he had not been paid (Yad, Malveh 15:3; ḤM 71:1).

Plea of Insolvency

Originally the law was that a debtor who pleaded that he was unable to pay was not required to take the oath, but the burden was on the creditor to discover property of the debtor on which execution could be levied (Yad, Malveh 2:1). However, when "defrauders increased and borrowers found lenders' doors closed," it was laid down that the debtor should take the oath that he possessed nothing and concealed nothing and that he would disclose any property coming into his hands (Yad, Malveh 2:2; ḤM 99:1). There are two noteworthy exceptions to this rule: a man reputed to be poor and honest will not be required to take the oath if the court suspects the creditor of desiring to annoy or embarrass him; and a man reputed to be a cheat and swindler will not be allowed to verify his plea on oath even though he volunteers to do so (Yad, Malveh 2:4; ḤM 99:4–5; see also *Execution, Civil).

Plea of Counterclaim

Where a plaintiff sues on a bill, it is no defense for the defendant to plead that the plaintiff is indebted to him on another bill: each sues and recovers on his own bill separately (Ket. 13:9; Yad, Malveh 24:10; Sh. Ar., ḤM 85:3). But where the defendant denies the bill sued upon by the plaintiff, his plea prevails that the plaintiff would not have made a later bill in

favor of the defendant had he really been indebted to him (Sh. Ar. loc. cit.; but see Yad, loc. cit. and *Sifteï Kohen* to Sh. Ar., הַמ 85, n. 7). Where the defendant pleads that the plaintiff already “has mine in his hands,” the plaintiff is entitled to have his claim judged first, and the defendant’s claim for restitution or to have one claim offset by the other will be adjudicated separately (בַּק 46b; Rashi and Tosef. thereto; Tur, הַמ 24:1; *Rema*, הַמ 24:1).

Identical Pleas

Where, in respect of a certain sum of money or of a chattel, both parties plead “this is mine,” and both are in possession of it (i.e., each holds it with his hand), and none can prove previous or present title, both will have to take the oath that they are entitled to at least one-half of it, and then one-half will be judged to belong to each (בַּמ 1:1; Yad, *To’ën* 9:7; הַמ 138:1). Where the mutual “this is mine” is pleaded in respect of land, or in respect of a chattel not in the possession of either, the party who first succeeds in taking possession, even by force, cannot be ousted unless the other can prove that he has a better title to it (בַּב 34b–35a; Yad, *To’ën* 15:4; הַמ 139:4). For this rule, which in effect legitimizes seizing by force, the Solomonic reason was given that it would only be the true owner who would go to the length of using force and facing the ensuing lawsuit (Resp. *Rosh* 77:1; *Beit Yosef*, הַמ 139, n.1; see also *Extraordinary Remedies).

Pleas of Law

As a general rule, pleas are assertions or denials of fact only; but there are some exceptions to the rule, two of which are noteworthy:

(1) the plea of “I do not want this legal privilege.” Wherever the law confers a benefit on the class of persons to which the pleader belongs, he will be heard if he waives that benefit (Ket. 83a). Thus, the rule that a husband must maintain his wife in consideration of her handiwork for him was established in favor of his wife, and she may plead, “I will not claim *maintenance and I will not work” (Ket. 58b). Or, where a plaintiff is allowed by law to recover on taking the oath, he may plead, “I do not want the privilege of taking the oath,” and have the oath shifted to the defendant (Yad, *To’ën* 1:4; הַמ 87:12); and

(2) the plea of “I rely on the other view.” Where the authorities are divided on a given question of law, the defendant is entitled to plead that the opinion most favorable to him should be adopted (*Keneset ha-Gedolah*, הַמ 25, *Beit Yosef*). This post-talmudic rule is based on the premise that the benefit of any possible doubt on what the law is must accrue to the defendant, the burden of establishing his case always being on the plaintiff (see also *Codification of the Law).

Weight of Pleas

Even where no evidence is available or forthcoming to substantiate a plea and even before such evidence is called for, the court will accept a plea as valid and conclusive in the following cases:

(1) Where the plea is fortified by a legal presumption (see *Evidence) or by generally recognized standards or patterns of conduct. For instance, the plea, “I have not been paid” is accepted as conclusive if fortified by the presumption that no debtor pays a debt before maturity (בַּב 5b).

(2) Where the plea is eminently reasonable (*sevarah*). The reasonableness cannot generally be determined from the particular circumstances of the case at issue, but rather from legal rules evolved for this purpose. Thus, a man’s plea is not believed if by that plea he accuses himself of wrongdoing (Ket. 22a, 23b), unless he can adduce a good reason (*amtala*) for so doing. Where, by his own mouth, a man has taken upon himself a certain status or obligation which could not otherwise be proved against him, he is believed on his plea that that status has come to an end or that obligation has been performed, for “the mouth that obligated is the mouth that discharged” (Ket. 2:5). For instance, a woman who cannot otherwise be proved to have been married is believed on her plea that her marriage has been dissolved (Ket. 2:5; Yad, *Gerushin* 12:1; Sh. Ar., עַה 152:6).

Witnesses whose attestation to a deed cannot be proved other than by their own testimony are believed on their plea that they were incompetent or coerced to attest (Ket. 2:3; Ket. 18b; Yad, *Edut* 3:6; הַמ 46:37), provided they did not plead that their incompetence was due to criminal conduct (Yad, *Edut* 3:7; הַמ 46:37). Opinions are divided on whether a defendant who admitted that a bill, which could not otherwise be proved, had been authorized by him, would be believed on his plea that he had paid the bill (בַּמ 7a; Ket. 19a; בַּב 154b); the better opinion seems to be that, as long as the bill is in the hands of the plaintiff, it is presumed to be unpaid (Tur, הַמ 82:3), and the defendant’s unsworn plea of repayment is not sufficient to discharge him (see above; and Rashi, Ket. 19a, s.v. *Ein ha-Malveh*). Similarly, a plea is believed if it was “in the hands” of the pleader to execute it by his own act (Sanh. 30a; הַמ 255:8).

(3) A particular brand of reasonableness is known as *miggo*, meaning something like “inasmuch”: inasmuch as you could have succeeded by some other more far-reaching plea, the lesser plea, by which you likewise succeed, can be accepted as credible. “If A makes a certain statement which does not appear probable on the face of it, this fact will not tend to weaken his case, if he could have made another statement which would have appeared probable. If that other statement would have been acceptable to the court, the one that he actually makes must also be accepted, for had he wished to tell an untruth he would have rather made that other statement” (Herzog, *Instit*, 1 (1936), 250ff.). In the much shorter and clearer words of *Shabbetai b. Meir ha-Kohen (Shakh) in his “Rules of *Miggo*” (appended to his commentary *Sifteï Kohen* to הַמ 82, hereinafter referred to as Rules), “he is known to speak the truth, for if he had wanted to lie, a better plea would have been open to him” (Rule 26). *Miggo* is the amoraic version and elaboration of the mishnaic “the mouth that obligated is the mouth that discharged” (cf. Ket. 2:2, 16a; the dif-

ferent problems of *miggo* are dealt with in the Shakh at the end of *ḤM* 82).

Miggo is, generally speaking, available in respect of pleas of defendants only (Rules 1, 14, 15); *miggo* is of no use against witnesses (Rules 5, 12); *miggo* is of use against a written deed (Rule 11); where the taking of an oath is prescribed (other than the post-mishnaic oath), *miggo* is not available in lieu of it, nor will it be allowed where the more far-reaching plea could have resulted in a Pentateuchal or mishnaic oath being imposed, for the actual plea may have been put forward only for the purpose of evading the oath (Rules 25, 28); *miggo* does not apply where it would contradict local custom in matters of commerce (Rule 2); both the more far-reaching and the actual plea must relate to the same subject matter (Rule 13); *miggo* does not operate retroactively (Rule 8); where the more far-reaching plea would obviously have been a lie, it cannot operate as *miggo* on the actual plea; nor will *miggo* be of any avail to strengthen a plea which is manifestly false (Rule 9); whether the *miggo* is of avail against presumptions of fact is discussed (Rules 10, 16); *miggo* is of no avail against any possessory title (*ibid.*); *miggo* is not allowed where the more far-reaching plea would have been “I do not know” (Rule 3); *miggo* is allowed only in respect of pleas which are outspoken and unambiguous (Rule 7); there are differences of opinion on whether *miggo* would be allowed where the pleader could have remained silent instead of pleading, and by remaining silent would have attained the same or a better result (Rules 19, 21); whether *miggo* is available where the more far-reaching plea would have been unreasonable or unusual, or would have been an affront or an impertinence to the creditor, is discussed (Rules 6, 22); *miggo* is not available where the more far-reaching plea would have incriminated the pleader (Rule 24); *miggo* is applied only to the plea of a single pleader: where the same plea is put forward by more than one, none can avail himself of *miggo* (Rule 4); *miggo* is allowed in respect of pleas of fact only, and not in respect of pleas of law (Rule 31); and where there recommends itself to the court a reasoning (*sevarah*) which appears (however slightly) better than *miggo* in the particular case before it, *miggo* may be discarded at the discretion of the court (Rule 32).

Rejection of Pleas

UNTRUSTWORTHINESS. Once a defendant has denied having taken a loan and the fact that he has is proved by witnesses, he will not be allowed to plead that he has repaid the loan (BM 17a; Yad, To'en 6:1; *ḤM* 79:5), provided the denial has been made in court (Yad, To'en 6:2; *ḤM* 79:9). The denial which proved untrue renders the pleader, insofar as the same subject matter is concerned, a “potential denier,” *huhzak*, whose pleas will no longer be accepted as trustworthy. The same rule applies where a debtor had admitted the debt and, when sued in court, denied it (*ḤM* 79, 10), provided the previous admission could not be explained away as unintentional (Sanh. 29b; Yad, To'en 6:6).

INCONSISTENCY. No alternative or inconsistent pleas are allowed (BB 31a; *ḤM* 80:1). While pleading in court, however, the pleader may rectify his plea and explain it or even substitute another plea for it, as long as his original plea has not been proved or disproved by evidence (Yad, To'en 7:7–8; Tur, *ḤM* 80:4). Statements made out of court are not regarded as “pleas” and may freely be contradicted by pleas in court (*ḤM* 79:9, 80:1).

PUBLIC POLICY. Pleas which may otherwise be perfectly legitimate may sometimes be rejected because their acceptance might lead to undesirable results from a moral, humanitarian, or economic point of view. Examples of purposes for which pleas might be rejected are: that a wrongdoer should not reap a reward (Ket. 11a, 39b; et al.); that the lenders' doors not be closed in the face of borrowers (Ket. 88a; Git. 49b–50a; BK 7b–8a; et al.); for the protection of open markets (BK 115a); that it be not too easy for a husband to divorce his wife (Ket. 39b); and that equity and generosity may prevail over strict law (BM 51b–52a; 83a; 108a; Ket. 97a; et al.).

Suggestion of Pleas

Where the defendant (or, in exceptional cases such as widows and orphans, the plaintiff) appears unable or unfit to formulate the plea which is open to him in the circumstances, the court will “open the mouth of the dumb for him” (Prov. 31:8) and enter the plea for the defendant of its own accord (Ket. 36a; Git. 37b; BB 41a; *Piskei ha-Rosh*; BK 1:3). The court will not, however, of its own accord enter for the defendant a plea to the effect that any admission made by him out of court was false or unintended (Yad, To'en 6:8; *ḤM* 81:21; but see *Rema*, *ḤM* 81:14).

[Haim Hermann Cohn]

PLEDGE.

The Concept

In Jewish law, in addition to the personal right of action against the debtor, the creditor also has a right of *lien on

the latter's property. This lien automatically comes into being when the debt is created and is termed *aḥarayut* or *shi'bud nekhasim*. Sometimes the operation of the lien may be limited by the parties to a specified asset or part of the debtor's property, in one of two possible ways: either this distinct asset remains in the debtor's possession, in which case the lien is termed *apoteke*, or possession of the asset is surrendered to the creditor, which is termed *mashkon* ("pledge"). In both cases limitation of the lien to a distinct asset may be effected either so that it operates over and above the general lien on all the debtor's property, or so as to free all but the distinct asset from its operation; in the case of pledge, these two forms are referred to respectively as *mashkon stam* ("unconditional") and *mashkon meforash* ("express pledge"; Tur, ḤM 117:1).

Jewish law distinguishes between three types of pledge: a pledge taken when the debt is due for repayment, not in payment of it but as a security for its repayment; a pledge taken when the debt is established with the consent of both debtor and creditor, as security for repayment of the debt on the due date; and a pledge given by the debtor to the creditor for the latter's use and enjoyment of its fruits.

Taking a Pledge After Establishment of the Debt

There are various biblical enjoinders concerning taking a pledge from the debtor: "If thou lend money to any of My people, even to the poor with thee, thou shalt not be to him as a creditor; neither shall ye lay upon him interest. If thou at all take thy neighbor's garment to pledge, thou shalt restore it unto him by that the sun goeth down; for that is his only covering, it is his garment for his skin; wherein shall he sleep?" (Ex. 22:24–26); similarly, "When thou dost lend thy neighbor any manner of loan, thou shalt not go into his house to fetch his pledge. Thou shalt stand without, and the man to whom thou dost lend shall bring forth the pledge without unto thee. And if he be a poor man, thou shalt not sleep with his pledge; thou shalt surely restore to him the pledge when the sun goeth down, that he may sleep in his garment, and bless thee; and it shall be righteousness unto thee before the Lord thy God" (Deut. 24:10–13); and, "No man shall take the mill or the upper millstone to pledge, for he taketh a man's life to pledge" (Deut. 24:6). In their plain meaning, these passages refer to a debtor from whom a pledge is taken as such. These passages (which also lay down general principles concerning the creditor-debtor relationship; see *Execution, Civil) are the source of a threefold direction in matters of pledge and relate to articles which may never be taken in pledge; which may be taken in pledge but must be returned to a poor debtor when he needs them; and the prohibition against taking a pledge from a widow.

From the biblical prohibition on taking "the mill or upper millstone to pledge," the scholars deduced that it is forbidden to take in pledge "aught wherewith is prepared necessary food" (BM 9:13). They generally agree that the prohibition applies to utensils which are used in the actual preparation of "necessary food," such as a grain mill, certain cooking pots,

an oven, and a sieve (Tur, ḤM 97:17), as well as water, wine, or oil jugs, "since this involves taking from a man a utensil which was fashioned for the actual preparation of necessary food for himself and his family, and this the Torah has forbidden, to save him hurt" (ḤM 97:11). In the case of things which do not meet this exact requirement but are used by a man to earn his livelihood, such as oxen for plowing and the like, some scholars hold that these may be taken in pledge, except for the essentials of his sustenance which must be left with the debtor, in terms of the rule of making an "arrangement" or assessment for the debtor (*Rema*, ḤM 98:8); other scholars hold that these things too fall into the category of "necessary food" and, therefore, may not be taken in pledge (Tur, ḤM 97:17; BM 113b; this opinion also conforms with the ordinary meaning of the statements in Tosef., BM 10:11 and those surrounding the discussion about a yoke of oxen and a pair of barber's shears, in BM 116a). With regard to articles which may be taken in pledge but must be returned to a needy debtor, Maimonides states "when a person takes a pledge from his neighbor [when the debt is due for payment] – whether through a court, or forcibly of his own accord, or with the debtor's consent – then if the debtor is poor it is a *mitzvah* to return the pledge to him if and when he be in need thereof; he must return to him the pillow at night to sleep thereon, and the plow by day to work therewith" (Yad, Malveh 3:15). Anyone who does not return a poor man's pledge when he needs it transgresses two prohibitions of the Torah and one positive precept.

It is in the interest of the creditor to take a pledge – notwithstanding his obligation to return it to the debtor when the latter is in need of it – in order that the debt shall not be wiped out in the Jubilee Year, just as a debt established against a pledge is not wiped out in order to recover payment of it on the death of the debtor, so that it should not be like movable property in the hands of orphans, which is not charged in the creditor's favor (Tosef., BM 10:9; BM 115a; Yad and Sh. Ar., loc. cit.). "Why then does he continue each day to take the pledge after he has returned it to the debtor whenever necessary? So that the debtor shall hurry to repay the debt because he is ashamed of having his pledge returned by the creditor day after day" (Tos. to BM 115a). In a dispute with R. Simeon b. Gamaliel, the scholars held that the creditor must return the debtor's pledge in this way as long as the debtor is alive; Gamaliel's opinion was that the creditor need only return the pledge during a period not exceeding 30 days; thereafter it must be sold through the court. All the scholars agree that if the creditor takes in pledge articles which are not essential to the debtor and therefore need not be returned to him from time to time, the creditor will be entitled to have the pledge sold through court, in similar manner to a pledge taken at the time of the establishment of the debt.

In the case of a widow, R. Judah held that the prohibition applies to all widows, rich or poor, giving to the word "widow" its ordinary meaning, since "he did not seek the reason for the scriptural law." R. Simeon, because "he sought the reason for the scriptural law," was of the opinion that the

prohibition only applied to a poor widow, since the creditor would have to return her pledge if she needed it, and by entering and leaving her house from time to time would bring her into disrepute. The *halakhah* was decided according to R. Judah's opinion. Maimonides' opinion that the prohibition extends also to a pledge taken from a widow at the time the debt is established (Yad Malveh 3:1) is disputed in most of the codes on the grounds that the Torah deals solely with the question of a pledge taken when the debt is due for payment and that this is also to be deduced from the statements in the Talmud, even when the debtor is a widow (*Hassagot Rabad* and *Maggid Mishneh*, ad loc.).

The laws concerning a pledge of the debtor's property which the creditor takes after the debt is due as security for but not in payment of a debt are set out in detail in Scripture; although these laws were also dealt with in the Talmud and in the codes, by then they had become of less practical importance in daily life. The result was that the relevant laws came to be interpreted as applying also to the matter of actually satisfying a debt out of the debtor's property. (Maimonides, for instance, incorporates a number of matters pertaining to the *siddur le-va'al-hov* in his treatment of the above laws (Yad, Malveh 3:6) and this is done by other commentators also.) This process is particularly noticeable in the treatment of the prohibition against entering the debtor's home; the prohibition was interpreted in talmudic discussions and until the 12th century as applying also to the case of the creditor seeking to recover his debt, and only R. Tam interpreted the prohibition as applying solely to the case of entry for the purpose of taking a pledge.

In talmudic times, when the creditor came to take any of the debtor's assets after the debt was due, he generally did not do so in order to take a pledge, but rather as a means of recovering his debt. For this purpose too the scholars specified a number of articles which a debtor needed for the sustenance of himself and his family which might not be taken from him. From talmudic times onward it became most common for the pledge to be delivered by the debtor to the creditor at the time the debt was established.

Pledge Taken When the Debt is Established

The distinction drawn in Hebrew legal parlance in the State of Israel between the terms *mashkon* and *mashkanta*, pertaining to movables and to immovable property respectively, does not appear in the sources, where the term *mashkanta* is simply the Aramaic form of *mashkon* (although the distinction is already hinted at in earlier periods – see, e.g., Elon, *Mafte'ah*, note on p. 152).

Modes of Establishing a Pledge

The ancient form of pledge was apparently executed in the following manner: the debtor would sell one of his assets – land or movable property – to the creditor on the condition: “whenever I so desire I shall return the money and take it back.” On receipt of the property the creditor would hand over the money; if, in the course of time, the money was re-

turned by the debtor, the transaction constituted a loan and the property a pledge, otherwise the property would be forfeited to the creditor, presumably upon determination and expiry of a maximum period allowed the debtor for redemption of the property. This form of pledge also existed in other legal systems (Tosef., BM 4:4; Gulak, *Toledot ha-Mishpat be-Yisrael bi-Tekufot ha-Talmud*, 1 (*Ha-Hiyyuv ve-Shi'budav*), 62–65). A variation of this form of pledge was one in which the sale only came into effect upon the debtor's failure to make repayment on the date due (BM 63a). In the first case the creditor was entitled to sell the property after it had been delivered to him, although the debtor retained the right to redeem the property from a third party – i.e., within the period determined for this purpose; since the property had already been sold to the creditor, his usufruct thereof was not in conflict with the prohibition against *interest (see below). In the second case, however, it was forbidden for the creditor to sell the property before the agreed date of repayment and, therefore, according to some scholars, the fruits of the property were forbidden to the creditor, as amounting to interest, since the property had not yet been effectively sold to the latter. Common to both the above forms of sale was forfeiture of the property to the creditor upon the debtor's failure to return the money within the determined period (Gulak, 65–66). Forfeiture of this kind, although likely to have resulted in the creditor gaining property whose value exceeded the amount of the debt, was not regarded by the scholars as prejudicial to the debtor since the latter retained the option of selling the pledged property to a third party before the due date for repayment of the debt and then paying the creditor the exact amount only (Tos. to BM 65b).

In the later form of the pledge that was customary in talmudic times, the creditor was only entitled to recover out of the pledge – when the debt matured – the exact amount owing to him, and the remainder belonged to the debtor; conversely, if the value of the pledge was less than the amount of the debt, the creditor was entitled to recover the shortfall from the debtor. (Nevertheless, from a number of *halakhot* it is discernible that later, as early as amoraic times, forfeiture of the whole of the pledge continued to be practiced; see Gulak, 69–71.) It was customary for the parties to stipulate that the whole of the pledge be forfeited to the creditor upon the debtor's failure to repay the debt within a prescribed period, even if the value of the pledge exceeded the amount of the debt. Some scholars upheld the validity of such express conditions, but R. Judah held a contrary opinion: “In what manner shall this party become entitled to that which is not his!” (Tosef., BM 1:17). For part of the amoraic period some scholars maintained that the above condition was valid, but later the *halakhah* was decided to the effect that this condition was invalid because of the defect of **asmakhta* (BM 66a–b). A similar decision was made in the codes; namely, that this condition was invalid unless imposed in a special manner so as to obviate the defect of *asmakhta* (Yad, Malveh 6:4; Sh. Ar., ḤM 73:17).

Ownership and Responsibility for the Pledge

Property pledged by the debtor remains in his ownership, but cannot be alienated by him to another since it is not in his possession (Rashi, Pes. 30b). The debtor may, however, alienate the pledge to another in such manner that the *kinyan*, i.e., transfer of ownership, shall take effect after he has redeemed the pledge from the creditor, and then retroactively to the time of alienation; in addition, the debtor may immediately alienate that portion of the pledge which is in excess of the amount of the debt (Ket. 59a–b; Tos. to BM 73b, s.v. *hashata*; s.v. *hakhi ka-amar*; *Rema*, YD 258:7).

The creditor acquires a limited proprietary interest in the pledge (Pes. 31b; et al.), hence a marriage contracted by him through the means of a pledge he holds is valid (according to Maimonides, the creditor has *mikzat kinyan*, “a measure of *kinyan*,” in the pledge: Yad, Ishut 5:23). The creditor may assign to another the charge which he has on pledged property. According to the *posekim*, the creditor only has *mikzat kinyan* in a pledge that is taken after the debt is established, and no *kinyan* whatever in a pledge taken at the time of establishment of the debt, so that a marriage contracted by the debtor through the means of pledged property of the latter kind will be invalid (Tos. to BM 82b, s.v. *emor*; *Rema*; *Siftei Kohen*, ḤM 72, n. 9; R. Isaac’s above statement is also based on a passage dealing with a pledge taken after establishment of the debt).

Opinions were divided on the question of the creditor’s responsibility for the pledge in his possession, some holding him liable as a bailee for reward and others regarding him as an unpaid bailee (BM 6:7). The majority of the *posekim* decided according to the first view: “hence if the pledge was lost or stolen, he will be liable for its value; if the value of the pledge equaled the amount of the debt, the one party will have no claim against the other; if the debt exceeded the value of the pledge, the debtor must pay the difference; but if the value of the pledge exceeded the debt, the creditor must refund the difference to the debtor; if the loss of the pledge was due to **ones*, the creditor must swear that this was the case, whereupon the pledger must repay the debt to the last penny” (Yad, Sekhirut 10:1; *Hassagot Rabad*, ad loc.; *Rema*, ḤM 72:2).

Use of the Pledge

The use of the pledge is forbidden to the creditor, since this is tantamount to taking interest on the loan. In the case of a poor debtor, if the nature of the pledge is such that it suffers only slight deterioration upon use and the return for its hire is great – for instance a plowshare or spade – the creditor will be entitled to hire the pledge to others and to apply the proceeds in reduction of the debt, since this is assumed to be convenient for the debtor. It is precisely to others and not to himself that the creditor may hire the pledge in this manner, lest he be suspected of using the pledge without reducing the debt accordingly. If originally, however, the parties stipulate with each other that the creditor might use the pledge and apply the hire in reduction of the debt, then he will be entitled to use the pledge himself, since anyone who knows

that he holds a pledge will also know what he stipulated with the debtor. When the pledge consists of books, the use of the pledge is permitted by some scholars because it is a *mitzvah* to lend books for study, but other scholars include books in the general prohibition against the use of the pledged property (*Rema*, ḤM 72:1; and YD 172:1).

Recovering Payment out of the Pledge

When the debt matures the creditor must notify the debtor, before two witnesses, that the debt must be repaid and the pledge redeemed or else he will seek leave from the court to sell the pledge in satisfaction of the amount owing to him. The debtor, according to some of the *posekim*, has 30 days in which to make payment, failing which the value of the pledge is assessed by three knowledgeable assessors and “he [the creditor] shall sell it at the assessment price allowed by the above three and he is given the advice to sell it before witnesses, lest the debtor say that it was sold for more than the assessment price” (Yad, Malveh 13:3; Sh. Ar., ḤM 73:12–15). The creditor himself may not purchase the pledge, but some scholars aver that he may do so if the pledge is sold through a court of experts.

Pledge (Mortgage) with a Right of Usufruct in the Creditor’s Favor

USUFRUCT AND THE PROHIBITION AGAINST INTEREST. In the case of a long-term debt in a large amount, land was generally given in pledge, to remain in possession of the creditor until the debt matured; this practice is illustrated in Nehemiah 5:3–5. According to the Jewish laws of interest, any benefit derived by the lender over and above repayment of the original amount of the loan is regarded as interest and prohibited (BM 5:9). Strict observance of the minutiae of the prohibition posed no particular economic hardship in the case of small short-term loans, but when large credits were involved it was difficult to deny the creditor the right to derive any benefit from the mortgaged land in his possession. In other legal systems it was customary for the creditor to enjoy the fruits of the mortgaged property by way of interest and the existence of this phenomenon in Greco-Roman laws was mentioned in the Talmud (TJ, BM 6:5). In order to ensure the availability of credit, the halakhic scholars sought to evolve special ways for the creation of a mortgage in a manner enabling the creditor to derive some usufructuary benefit from it without transgressing the prohibition against interest.

As already noted, the use and enjoyment of the pledge was permitted the creditor in case of a sale for return and – in the opinion of R. Judah – even in the case where the sale only came into effect upon the debtor’s failure to make payment on the due date. This was because the property was regarded as sold to the creditor whereas the question of interest could only arise in the case of loan. The Babylonian *amoraim* regarded even the above cases as involving prohibited interest, since upon repayment of the debt the land would return to the debtor and the sale become voided retroactively (see BM 67a and Rif, *Halakhot*; Sh. Ar., ḤM 182:12; and *Ha-Gra*). A way

of permitting the creditor a usufruct of the pledged property was found by the latter scholars on the principle of a reduction of the debt, at times until full liquidation thereof, by virtue of and in return for the usufruct. Even if such reduction bore no proportion to the actual value of the usufruct enjoyed by the creditor, yet this method – unlike the case of a sale of the body of the land – involved some real and not fictitious consideration for the usufruct. An important consideration for the Babylonian *amoraim* in treating the permissibility of such usufruct was the distinction between a mortgage “in a place where it is customary to make the creditor give up possession” and a mortgage “in a place where it is not the custom...” In the former case the debtor could repay the debt at any time and recover possession of his land from the creditor and therewith regain the usufruct of his land; in the latter case the creditor could not be made to give up possession within a fixed period and thus the mortgage was akin to a sale for a specified period, whereby the suspicion of prohibited interest was reduced. In certain places it was laid down that, unless expressly stipulated between the parties, the debtor might not recover possession of the land from the creditor during the first year at least (BM 67a–b).

Three forms of usufruct of the mortgaged land were customarily recognized by the Babylonian *amoraim*.

Mortgage with a Fixed Deduction

With a mortgage of this kind the practice was to make a deduction from the amount of the debt against the creditor's enjoyment of the usufruct, as if the fruits were sold for the amount deducted. The rate of the deduction was fixed and amounted to far less than the value of the usufruct enjoyed, hence a *talmid ḥakham* was forbidden from enjoying the usufruct of the mortgaged property, even with the deduction (BM 67b).

Mortgage with a Stipulated Time Limit

The practice in this case was for the creditor to enjoy the usufruct of the mortgaged land against a deduction for the first five years – i.e., with a minimal reduction of the debt (and none at all according to another opinion) – and thereafter enjoyment of the usufruct would be assessed at its full value for purposes of repayment of the debt. Some of the scholars held this form of mortgage to be permissible also to a *talmid ḥakham* (BM 67b). During the first five years the creditor apparently could not be made to surrender possession of the land, the mortgage being akin to a sale and the suspicion of prohibited interest therefore reduced.

Mortgage “as Arranged in Sura”

In this form of mortgage the parties would insert into the bond the condition: “on the expiry of so-and-so-many years, this estate reverts [to the debtor] without any payment.” Here the creditor would enjoy the usufruct for a period stipulated in advance, at the end of which the land reverted to the debtor and the debt was considered as fully repaid. In this case too the value of the usufruct may have exceeded the amount of

the debt, but this method was preferable to the “time limit” mortgage as regards the interest prohibition. In the “Sura” mortgage the creditor, as against his profits, also had to face a possible loss, since the land would revert to the debtor at the end of the stipulated period even though the creditor may not have enjoyed any profits during one or more years; on the other hand, in the “time limit” mortgage, repayment of the debt, after the first five years, would take place according to the measure of the profits enjoyed, and during the first five years the profits could be enjoyed without any risk of loss. With the “Sura” mortgage the suspicion of prohibited interest was entirely eliminated, since it in no way resembled a loan transaction, but rather one of “purchasing the fruits of these particular years against this particular payment” (Rashi, BM 67b). Hence all the scholars agreed that a “Sura” mortgage was permissible even to a *talmid ḥakham* (BM, loc. cit.).

In permitting a usufruct of the mortgaged property, both with reference to the ancient forms of mortgage and those sanctioned by the Babylonian *amoraim*, the scholars relied on the law of the redemption of dwellings in walled cities and fields of possession (Lev. 25:16, 27, 29; Tosef., BM 4:2; TJ, BM 5:3, 108; BM 67b).

Disputing Opinions in the Codes

The problem of the creditor's enjoyment of a usufruct of the mortgaged property continued to engage halakhic scholars in post-talmudic times and became a subject of much controversial discussion in the codes (*Ha-Gra*, YD 172, n.1, enumerates six different methods entertained by the *posekim*). The main points of dispute may be briefly summarized as follows:

It was generally agreed that a “Sura” mortgage was permissible. As regards a mortgage “with deduction,” Alfasi's opinion (to BM 67b) was that although enjoyment of the fruits is initially prohibited to the creditor, nevertheless the *post facto* value of this cannot be reclaimed from him, since no fixed or direct interest is involved, but only *avak ribbit* or indirect interest. The distinction between the two forms of interest, even as regards mortgage, was already discussed in the Talmud (BM 67b). In this case Maimonides permitted enjoyment of the usufruct from the start, but only with reference to a field, “since in the case of a field, the profits are not yet in existence at the time of the loan, and it is possible that the creditor may either derive fruits and profits therefrom or suffer loss in the sowing and cultivation of the field.” In the case of a courtyard or a dwelling, Maimonides held the profits to be available at the time of loan and enjoyment of them, although prohibited initially, became permissible, *ex post facto* – because this entailed no more than *avak ribbit* (“dust of interest”; see *Usury) by virtue of the reduction (Yad, Malveh 6:7). Rabad held that a mortgage “with deduction” is only permissible from the start where the local custom is not to make the creditor give up possession of the mortgaged property (against repayment of the debt) and that for this purpose no distinction should be made between a dwelling and a field (*Hassagot Rabad* to Malveh 6:7). Rashba, on the other hand, held all mortgages

“with deduction” to be permissible from the start, whether relating to a field or dwelling and regardless of local custom on the question of the debtor regaining possession of the mortgaged property.

A great deal of difference of opinion is also expressed in the codes concerning a mortgage with no deduction at all in return for the usufruct. Alfasi (to BM 67b) regarded this as amounting to fixed interest which could be reclaimed by action. Maimonides (Yad, Malveh 6:7) regarded this form of mortgage as entailing direct interest when relating to a courtyard or dwelling, and “dust of interest” when relating to a field or vineyard, and Rabad’s view (*ibid.*) was that such a mortgage entailed direct interest or “dust of interest” depending respectively on whether it was local custom to make the creditor give up possession of the mortgaged property (against repayment of the debt) or not. Rashi (on BM 62a, 67a) was of the opinion that in the case of a field a mortgage, even without deduction, was permissible from the start wherever it was the custom not to make the creditor give up possession of the property, since by virtue of the latter fact, “all agree that all these years he holds the field as if purchased by him” (see also Tur, YD 172). However, in the case of a dwelling, such a mortgage (i.e., a usufruct without further deduction of the debt) entailed direct interest (see *Lehem Mishneh* to Malveh 6:7). Although extremely liberal as regards the permissibility of a mortgage with deduction, Ibn Adret nevertheless held that where it was customary to make the creditor give up possession of the property, a mortgage without deduction entailed direct interest, and where it was customary not to make the creditor give up possession, it was “dust of interest” (*Nimmukei Yosef*, BM 67b; *Lehem Mishneh*, loc. cit.).

The diversity of opinions made it difficult to decide the law in practice: “how shall we enter into the scholarly discussions... we have no power to decide the issue, but the court must act in accordance with its own understanding” (Resp. Abraham b. Isaac of Narbonne, no. 173). In one of his responsa Nahmanides similarly expressed regret at the diversity of opinion, which left the *halakhah* on the subject uncertain and lacking in binding force. Therefore it had to be left for every community to act in this matter according to local custom. The opinions of the *posekim* were summarized by Isserles in a similar fashion: “Local custom is to be followed in this matter and in these countries the custom is to permit [enjoyment of usufruct] in the case of a mortgage with deduction, even when the debtor may reclaim possession [of the property from the creditor] and in this regard no distinction is drawn between a field and a dwelling or the different kinds of movables, since in all cases a mortgage with deduction is permissible” (*Rema*, YD 172:1).

In the State of Israel

The laws of pledge are ordered in two laws of the Knesset: the Pledge Law, 1967, and the Land Law, 1969. Sections 85–91 of the second law deal with a pledge of land, termed *mashkanta*, i.e., mortgage (sec. 4), to which all the provisions of the

Pledge Law are applicable save as otherwise provided in the Land Law itself (sec. 91). The provisions of the Pledge Law are partially in accord with the attitude of Jewish law on the subject. The bill originally submitted to the Knesset (in 1964) included a provision entitling the creditor to enjoy the income of the pledge, with the debtor’s consent and in return for an appropriate consideration to the latter, his waiver thereof to be of no validity (sec. 23). In the final version passed by the Knesset, the law provides that the creditor shall pay the debtor appropriate remuneration “unless otherwise agreed.” This in effect means that upon the debtor’s waiver of consideration the creditor becomes entitled to use and enjoy the income of the pledged property without making any reduction of the debt, which is contrary to Jewish law, where this amounts to prohibited interest.

°PLEHVE, VYACHESLAV KONSTANTINOVICH VON (1846–1904), Russian statesman, a leader of Russian reactionary circles during the reigns of Alexander III and Nicholas II. In 1881 he was appointed director of the police department of the Ministry of the Interior and from 1884 to 1894 he was deputy minister. He adopted a systematic anti-Jewish policy in interpreting the restrictive laws against Jews. In 1902 Plehve was appointed minister of the interior, in which capacity he took strong measures to subdue the revolutionary movement. When riots broke out in *Kishinev on Passover 1903, liberal and Jewish circles declared that Plehve was responsible for them and the London *Times* published an order which he had sent to the provincial governor of Bessarabia not to open fire on the rioters, although the authenticity of this order was not definitely proved. In June 1903 Plehve called for strict measures to be taken against the Zionist movement which, according to information available to the secret police, had become a powerful political movement encouraging youth to organize self-defense and take up a struggle against the anti-Jewish regime. These measures impelled Herzl to request a meeting with the rulers of Russia. In Au-

gust 1903 Herzl met with Plehve, Finance Minister *Witte, and other high officials, asking for the support of the Russian government in establishing a Jewish state to absorb the persecuted Jews of Russia. The reply was that as long as the Zionists encouraged emigration of Jews from Russia the authorities would not disturb them; any political activity in Russia, however, would be crushed. On July 15, 1904, Plehve was assassinated by a member of the Socialist Revolutionaries, E.S. Sazonov. His successor, Svyatopolk-Mirski, adopted a more liberal policy.

[Yehuda Slutsky]

PLESSNER, MARTIN (Meir; 1900–1973), Orientalist. Plessner, born in Breslau, was the great-grandson of Solomon Plessner (1797–1883), a prominent German Orthodox preacher and scholar. The classical heritage in *Islam and its influence on medieval Judaism was Martin Plessner's main scholarly interest. An assistant to H. Ritter in Hamburg, he edited a comprehensive work on magic which was wrongly attributed to Maslama al-Majrīti (Spain, d. 1004) but written about 50 years later (1933; Ger. tr. 1962). Plessner worked as assistant to J. Ruska at the Berlin Forschungsinstitut fuer Geschichte der Naturwissenschaften (1927–29), and in 1933 became lecturer in Semitics at Frankfurt University, leaving Germany for Palestine in 1933 to teach at the Reali secondary school in Haifa. There he wrote an Arabic grammar, the first in modern Hebrew. From 1945 he taught at the Ma'aleh school in Jerusalem, also working (from 1949) at the Jewish National and University Library, and later as librarian of the School of Oriental Studies of the Hebrew University, where he became an external teacher in 1952 and professor in 1955.

Among Plessner's other published work was his Hebrew edition (with J.J. Rivlin) of I. *Goldziher's lectures on Islam (*Harṣa'ot al ha-Islam*, 1951). One of his main achievements was the discovery that the alchemical "parliament," *Turba Philosophorum*, is based on the doxographical tradition about the pre-Socratic philosophers, thus establishing a new chronology and evaluation of early Arabic alchemy.

PLETTEN (Yid. פֿלעטען; "meal tickets"), an arrangement begun at the end of the 15th century which ensured meals for the itinerant needy. In many communities in Germany, Poland, and other countries, the itinerant poor person – usually either a yeshivah student or a beggar – received a slip of paper bearing the name of the house owner who would provide food, drink, and lodging for him for at least three days. It was obligatory to provide for someone who had one of these *pletten* and householders who refused were fined; in many communal registers the rates of such fines were recorded. Eventually those who refused were publicly denounced in the synagogue, and in some synagogues the names of such offenders were recorded on a special board.

[Natan Efrati]

PLEVEN (Plevna), city in N. Bulgaria. During Byzantine rule, there was a Jewish community in Pleven. This community later included Hungarian Jewish refugees, who had been expelled in 1376, Walachian refugees who fled during the revolt of Vlad v in 1461 against Sultan Mehmed II, Jews of Bavaria who were expelled in 1470, Spanish refugees, and again Hungarian refugees, who came after the conquest of Hungary by *Suleiman the Magnificent in 1526. During the 16th century, there were Ashkenazi, Hungarian, and Sephardi communities in Pleven which united into one general community. After the great fire of 1582, a single synagogue was built, but apart from the Sephardi ritual the different communities partly kept their customs. In 1593 Michael of Wallachia rebelled against Sultan Murad III and burned the town, taking many Jews prisoner. The Jews of Pleven traded in hides and copper and also wove cloths. During the invasion of the city by the adventurer Ottoman Pazvanoğlu in 1799, the Jews took up arms in self-defense. In 1877, they fled to Sofia before the Russian invasion, but after a time, the community was reorganized. In 1910 there were 623 Jews in Pleven and in 1928, 550. After the establishment of the State of Israel, most of the Jews of Pleven, like almost all Bulgarian Jewry, immigrated there. In 2004 there was a community of around 90 Jews affiliated to the local branch of the nationwide Shalom organization.

[Simon Marcus / Emil Kalo (2nd ed.)]

°PLINY THE ELDER (23–79 C.E.), Roman historian, naturalist, and administrator. Pliny's voluminous *Naturalis Historia*, the only work of his extant, contains a number of references to Jews and Judaism. Some of these references relate to the physical characteristics of Judea and its natural resources, in particular the Dead Sea and the bitumen found there. Pliny notes the excellence of balsam (a monopoly of Judea), describes the tree, and praises the date palms of Jericho. The sections on Judea (*Naturalis Historia*, 5:66–73) in the geographical volumes include a survey of the administrative division of Judea into toparchies, which differs slightly from that given by *Josephus. Pliny describes the *Essenes, discussing their settlement by the Dead Sea, their separation from women, and their renunciation of money. Jerusalem, he observes, is the most illustrious city in the East ("longe clarissima urbium Orientis non Iudaeae modo"). The sources which Pliny used in his description of Judea cannot be ascertained, but he evidently relied on material dating from the period of Herod, which he adjusted to the situation of his time. Thus, he mentions the destruction of Jerusalem and the establishment of new Roman colonies in Palestine by *Vespasian. However, in addition, he must have used earlier sources. The theory that

Pliny was present at the siege of Jerusalem as an officer in the army of Titus is hardly tenable.

PLISETSKAYA, MAYA (1925–), Russian ballerina born in Moscow to a Jewish family. Her father, an engineer, was declared an enemy of the people during Stalin's era of political purges and was executed in 1937. Her mother, Rachel, belonged to the famous ballet family of *Messerer. Her mother, a film actress, was also arrested and sent to a work camp for several years. Maya, who at that time was a student in the choreographic college, went to live with the Rachel's family. In 1941 her mother returned to Moscow and in the same year Maya Plisetskaya had her first stage appearance in "Impromptu" to the music of Tchaikovsky. In 1943, after graduation, she joined the Bolshoi theater.

Her career can be divided into three phases. The first was dedicated to dancing. Her relative, Asaf *Messerer, put her into the corps de ballet, but Plisetskaya soon became a principal dancer in *Cinderella*, where she showed herself as a wonderful dancer and dramatic actress. This two-fold talent made her the unique dancer she is. Her style is very graphic and delicate, perfect in its movement and flawless in technique. Plisetskaya was noted for her fast spins and soaring leaps, staying suspended in the air for a long time, and her wondrous, breathtaking, expressive and fluid hand movements. Odette-Odile in *Swan Lake* is certainly one of her most prominent roles; she performed it around the world for over 30 years. The only major ballet role she did not perform is that of Gisele. She explained that something in her opposed this role. A role with which she fully identified is Carmen. The Cuban choreographer, Alberto Alonso, created a Carmen Suite for her in 1967, based essentially on Bizet's opera. Here came into effect her full dramatic power and her striving for novel experimentation.

In the 1960s, after a successful tour with the Bolshoi and thanks to the encouragement of Ingmar Bergman, Plisetskaya started her second career phase as a choreographer. Her first work in that capacity was a ballet based on Tolstoy's *Anna Karenina* to the music composed by her husband, the conductor Rodion Shedrin, and then came the *Seagull* (1980) and *Lady with a Lapdog* (1985) by Chekhov, also using the music by Shedrin. She performed as a prima ballerina in all her creations. Her thirst for creativity and her endless energy and temperament made Maya Plisetskaya a world famous ballet artist. Even in her sixties she was still assigned top female roles such as the *Mad Woman of Chaillot*, performed in 1992.

In the third phase of her career, she appeared in films as a dramatic actress. Most of her choreographic works were filmed and televised.

In addition to her long career with the Bolshoi Theater, Plisetskaya also danced with other companies, such as Roland

Petit's company and Maurice Bejart's ballet of the 20th century. In 1983–84 she was an artistic director of the ballet in the opera of Rome and in 1989–90 she headed the ballet dance group of Teatro Lirico National Madrid.

Maya Plisetskaya held the title of National Artist and was the winner of two national prizes. She organized three dance competitions.

[Yossi Tavor (2nd ed.)]

PLOCK (Pol. **Płock**; Rus. **Plotsk**), city in Warszawa province, central Poland. As Jews settled there before 1237, when the city was the capital of Masovia, the Plock Jewish community is one of the oldest in Poland. In the first 200 years of their residence there, the Jews usually engaged in moneylending, sometimes accepting landed estates and other immovable property as security. Before the 16th century, however, they began to earn their living from trade and crafts. At the beginning of that century legal and municipal documents record the names of 28 Plock Jews who traded in wool, leather, spices, horses, and grain. About the middle of the century the burghers made a stubborn attempt to limit Jewish trade, but in 1555 King Sigismund II Augustus granted the Jews economic rights equal to those of the other citizens, and in 1576 King Stephen Báthory forbade the city authorities to hinder the Jews in their business pursuits. However, at the beginning of the 17th century the burghers succeeded in limiting the activities of the Jewish traders and artisans for some time. From the middle of the 17th century many Plock Jews engaged in weaving, glasswork, arms manufacture, and tailoring and some were accepted in the local Christian guilds, but the struggle of the Christian bakers, butchers, and harness makers against Jewish artisans continued. In the 16th century there were six Jewish physicians in Plock.

The Jewish quarter was first mentioned in 1532; in 1616 there were 25 houses in the town owned by Jews in which probably around 400 members of the Jewish community lived. The synagogue was opened in 1534, and a cemetery was consecrated in a suburb in 1570. In 1577 the *parnasim* of Plock – the physician Lewek and "Black Jacob" – appeared as prosecutors in the trial of the men who had hastily passed sentence in the *Sochaczew blood libel. In riots against the Jews in 1534, 1570, 1579, 1590, and 1656, the men of the Plock Jewish community took up arms in self-defense. After the depredations of the Great Northern War in 1705, the community suffered further economic loss through the hostile attitude of the nobility and the Church. In 1754 their situation deteriorated even further when a *blood libel caused an uproar in the city. About the middle of the 18th century the Jewish tailors organized their own guild in order to protect their livelihood (see E. Ringelblum, in: *Miesięcznik żydowski*, 2 no. 2 (1932), 46–47). The spiritual leaders of Plock Jewry in the 17th century included R. Zevi Hirsch Munk (in the 1680s), R. Menahem Nahum b. Israel (d. 1691), and Zelig Isaac Margoloth, author of *Kesef Nivhar* (Amsterdam, 1712). Rabbis in the 18th

century included Samuel b. Israel, Ḥayyim Ginzburg, and Judah Loeb *Margolioth (1747–1811) one of the supporters of moderate *Haskalah.

In the first years of the 19th century, under Prussian rule, the Jewish population of Plock grew from 731 in 1800 to 1,932 in 1808 (49% of the total population). As a result of the great fire in 1810, the synagogue and a considerable part of the Jewish quarter were destroyed. A year later the government of the grand duchy of Warsaw confined the Jews to a separate quarter which contained only eight streets, a restriction which remained in force until 1862.

In the middle of the 19th century the Jews of Plock earned their living from trade and transportation and Jewish entrepreneurs established textile factories in the city. In 1827 there were 3,412 Jews in Plock (35% of the population). In 1841–44, on the initiative of the industrialist Solomon Zalman *Posner, farming villages (Kuchary, Ickowiec) were founded near Plock in which 170 Jewish families had settled by 1850. In 1897 the Jewish population of the city numbered 1,480 (33% of the total). At the beginning of the 20th century about 5% of the Jews of Plock were engaged in commerce, 31% in crafts and industry (clothing, food, metals, printing), and about 12% earned their living as hired laborers. From 1865 to 1871 the town contained a government school where Jewish children were taught in Hebrew and Russian, and in 1888, on the initiative of the writer Abraham Jacob *Paperna, a Jewish school sponsored by the government was founded. In the *talmud torah*, founded in 1868, secular studies were introduced at the end of the 1880s on the initiative of the noted educator Aharon *Kahnstam. In 1872 the first Jewish hospital was built.

At the beginning of the 20th century, branches of the *Bund, the Zionist Socialists, and *Po'alei Zion began to operate in Plock. A yeshivah was opened in 1912 under the direction of Michael Rubinstein and Mendel Mendelson; in 1916 a Jewish high school was founded. In 1921, 7,352 Jews (29% of the total population) lived in Plock. In the period between the two world wars there were three Jewish cooperative banks and Jewish trade unions for the garment industry, transport workers, clerks, and salesmen. In the 1930s a *Tarbut school was founded and in 1938 an *ORT school. During this period the monthly *Dos Plotsker Vort* was published. The authors Jakir *Warszawski and Sholem *Asch, the painters Nathan Korzeń, Fishl Zilberberg (1909–1942), and Jehiel Meir (Max) Eljowicz, and the miniaturist David Tysziński lived in the city, as did the Zionist leaders Nahum Sokolow and Yizḥak Gruenbaum.

[Arthur Cygielman]

Holocaust Period

At the outbreak of World War II, Plock had nearly 10,000 Jews, around one-third of the total population. When the Germans entered on Sept. 9, 1939, the majority of Jews had fled to nearby Gabin, but they gradually returned. Immediately, men were hunted down for forced labor. In December 1939 a *Judenrat was established. It created an *Arbeitsamt* ("labor bureau") to supply the Germans with manpower. It also maintained a

clinic, an old-age home, and a soup kitchen subsidized by the *American Jewish Joint Distribution Committee and by 10% of the wages Jews received from the Germans. In November 1939 a ghetto was created. Jews could not leave the ghetto without permission, but Poles entered without difficulty and supplied food at high prices. Although private workshops and stores were liquidated, some of the cooperatives, such as those of cobblers and tailors, continued.

The German police carried out night raids involving searches and plundering, accompanied by beating and sometimes killing. Before the establishment of the ghetto the authorities requested that the Judenrat supply a list of the elderly invalids and chronically ill. Some days later all the inmates of the old-age home and all the others on this list were rounded up and deported. After one of the night raids some Jews lodged a complaint before the German authorities. In retaliation, the Germans arrested and executed 180 Jews. The Plock community was liquidated in two deportations on Feb. 20 and 28, 1941. During the first deportation, the main street was surrounded; all the Jews were driven outdoors. More than half were sent to the concentration camp in Dzialdowo. During the next deportation the remaining Jews were sent to the same camp, where they were tortured and sent on to Radom District. During February and March 1941 six transports of Jews from Plock arrived in Radom District (5,000–7,000 Jews). They were dispersed in small localities – barefoot, in rags, and exhausted. Most of the deportees died in camps.

About 100 survivors (most of whom returned from the U.S.S.R. and a few of whom were saved on the "Aryan" side of the city) reconstituted the community and reestablished public and mutual welfare institutions. In October 1949 the community erected a monument in memory of the victims of the Holocaust. Organizations of the former residents of Plock exist in many countries.

PLOESTI (Rom. **Ploești**), city in Walachia, S. central Romania. The first Jews settled in Ploesti in the second half of the 17th century. There were so few, however, that they continued to bury their dead at the cemetery at *Buzau. At the end of the same century they purchased ground for a cemetery, far from the city, where tombstones have been found dating back

to 1719–40. A second cemetery was confiscated by a landowner to enlarge his estate. A third, established on ground acquired in 1818 by the “Jews’ Guild” (see *Romania), was also closed, being too near the city. Consequently, a fourth cemetery was established outside the city. In the early 18th century the synagogue was demolished by order of the ruler, and the Jews had to move two kilometers out of the city. However, their commercial importance was so valued that the cattle market and general market of the city were established in their neighborhood. The road linking the Jewish quarter with the city became known as the “Jews’ street” till 1882. At the beginning of the 19th century, Sephardi Jews migrated to Ploesti from the Balkan states; their neighborhood was called “the Spanish street.” In 1830 the Sephardim requested the **hakham bashi* to approve the establishment of their own community, but the request was refused. Thus Ploesti became the only Romanian locality whose *kahal* combined Ashkenazim and Sephardim in communal activities (although distinctions persisted in regard to separate synagogues and *hevra kaddisha*).

From 280 Jews listed as taxpayers in 1831, the number reached 2,478 in 1899 (5.5% of the total population) and 3,843 (3.3%) in 1930. Five synagogues were eventually established, including one for artisans and another for Sephardim. The boys’ school, built in 1875, was named after Luca Moise who granted funds for its building and maintenance. A girls’ school was built in 1896. Among noted rabbis who served Ploesti were those of the Brezis family, Judah Aryeh Brezis (1869–1908) and Dr. Joseph H̄ayyim Brezis (1911–22). Menahem Safran officiated as rabbi from 1939 to 1956. Rabbi David Friedman, a ḥasidic *zaddik* of the *Ruzhin dynasty, lived in Ploesti until his murder by the *Iron Guard in 1940.

The Jews did much to develop the city by organizing the export of agricultural produce, leather, and other goods to Hungary and on to Vienna. From the middle of the 19th century many dealt in oil, developing Ploesti into a center for that commodity. After the emancipation of the Jews in Romania, Jews officiated as representatives on the city council and for a time a Jew served as vice mayor.

Holocaust Period

Immediately after the outbreak of World War II, Ploesti became a center of German interest because of its oil resources. Units of the German army appeared in the city as early as the autumn of 1940. After Antonescu assumed power (September 1940), Cojocaru, a member of the Iron Guard, was appointed commander of the local police. Immediately upon taking over the post he introduced serious measures against the Jews, i.e., confiscation of their businesses and wide-scale arrests of merchants and community leaders. On the night of Nov. 27/28, 1940, 11 of the Jewish prisoners were executed in a nearby forest. Among those killed was Rabbi David Friedman. During the same period members of the Iron Guard destroyed three synagogues and the Luca Moise school; they burned the Scrolls of the Law taken from the synagogues and transferred

the furniture to churches, while the school equipment was taken to Romanian educational institutions.

A number of Jews were sent to the Tirgu-jiu concentration camp. After the outbreak of war with the U.S.S.R. (June 1941), all the Jewish men from ages 18 to 60 were arrested and sent to the Teiș concentration camp. Youth from the ages of 13 to 18 remained in Ploesti and were mobilized into different forms of forced labor. In January 1942 men over the age of 50 were released from Teiș and returned to the city. The rest were scattered throughout various cities in Romania but were forbidden to leave their new locations. Later on they were sent to do forced labor in various places in Bessarabia and Moldavia. After the war, practically all of Ploesti’s Jews returned to the city.

In 1947 the Jewish population numbered about 3,000, decreasing to 2,000 in 1950. By 1969 about 120 Jewish families remained. They had one synagogue.

[Theodor Lavi]

PLONSK, town in Warszawa province, E. central Poland. A Jewish settlement existed in Plonsk from 1446. The princes of Masovia encouraged the settlement of Jews to help develop the economy of the town, although this aroused the jealousy of the Polish merchants, and consequently, Jewish activity was later restricted by various decrees. In 1677 King John III Sobieski prohibited all Jewish commerce on market days, with the exception of the sale of kosher meat. In spite of the restrictions, the number of Jews increased, as did their importance in the town. In 1887 Jews owned most of the houses and the shops; they dealt in the wholesale trade of cereals and owned brandy distilleries, beer breweries, underwear factories, etc. They were also engaged in tailoring and the fur trade, exporting goods to the interior of Russia. Jews numbered 2,801 in 1808; in 1910 they numbered 7,665 (64% of the population), and in 1939 there were 8,200 Jews in the town of Plonsk. World War I and the advent of an independent Poland restricted Jews to business transactions in the local Polish market where they engaged primarily in the trade of inexpensive ready-made clothing. The economic crisis of the late 1920s and the economic boycott brought on by Polish antisemitism in the 1930s struck a severe blow at Jewish economic life.

During the 15th century the Jewish community was under the guardianship of Plock, the leading community of Masovia. With the organization of the Council of the Four Lands it was subordinated to the community of Ciechanow, but due to its expansion it eventually became an independent community. During the 19th century the community administration was under the influence of the *mitnaggedim*, even though the courts of the *zaddikim* (especially that of Gur) exerted considerable influence on the Jews of the town. In the 20th cen-

tury the influence of the *maskilim* and the Zionists rose. The community supervised the activities of the relief and educational institutions. The rabbinical positions of the community were held by R. Abraham Jekuthiel *Lichtenstein during the second half of the 18th century and by R. Zevi Ezekiel *Michaelsohn at the close of the century. On the eve of the Holocaust, the rabbinical post of the town was held by R. Abraham Hayyim Horowitz. A synagogue was erected at the beginning of the 17th century and its Ark was a work of art. The Jews of Plonsk participated in the Polish Revolt of 1863. Solomon Posner, one of the commanders of the Plonsk company, was killed in battle.

Jews were elected to both the provincial and the municipal councils. At the municipal council elections of 1927, out of the 23 delegates 13 were Jews. In addition to the religious, educational, and cultural institutions of the town, there were also societies for the propagation of Jewish and general education. In 1865 a society named *Doreshei ha-Torah ve-ha-Hokhmah* was founded by the *maskilim*, offering lectures on Jewish subjects. In 1910 the Ha-Or society was established, having been authorized by the Russian authorities to propagate Jewish and general education. Zionist societies were also active in promoting Hebrew language and culture. The Zionist Organization wielded considerable influence. It was quite evident in daily life, and especially apparent at the time of the elections to the Zionist Congresses. The author Shelomo *Zemaḥ and David *Ben-Gurion originally came from Plonsk.

[Shimshon Leib Kirshenboim]

Holocaust Period

At the outbreak of World War II there were about 6,000 Jews in Plonsk. The German army occupied the town on Sept. 5, 1939. Some Jewish men were sent to the forced-labor camp in Nosarzewo and Jewish women to the forced-labor camp in *Sierpc. Few of them survived. A closed ghetto was established in May 1941. The Jewish community was liquidated when 12,000 Jews from Plonsk and the vicinity were sent to *Auschwitz in four transports between Nov. 1 and Dec. 5, 1942. After the war, the Jewish community of Plonsk was not reconstituted. Organizations of former residents of Plonsk are active in Israel, the United States, and Argentina.

BIBLIOGRAPHY: *Sefer Plonsk ve-ha-Sevivah* (1963; Heb. and partly Yid.).

PLOTNICKA, FRUMKA (1914–1943), underground leader in Poland. Born in Plotnicka, she belonged to the Zionist Youth movement, Dror, and became a member of its leadership in 1938. Along with most of the others in Dror's main office, she left at the outbreak of World War II, fleeing to Kovel. It was hoped that from Kovel, which was under Soviet rule, a path to Palestine could be found. In 1940 the Dror leadership decided that some of its members should return to German-occupied Poland and Plotnicka was among them. From Warsaw she visited many Jewish communities, trying to fortify local Zionist youth cells.

In September 1942, Plotnicka was sent to Bedzin by the *Zydowska Organizacja Bojowa* (Jewish Fighting Organization; ZOB) with the task of bolstering the underground there, and helping it to prepare for armed resistance. Its agricultural training center ("farma") became the center of Zionist youth activity in Bedzin. Plotnicka herself was one of the leaders of the underground. From Bedzin she and others helped the escape of a handful of young Jews to Hungary, by way of Slovakia, while rejecting offers for her own escape. The clandestine youth organization members, and Frumka among them, maintained contact with representatives of the Zionist youth movement in Geneva and Istanbul. Attempts to establish contact with the Polish underground were unsuccessful.

On August 1, 1943, the final liquidation of the Bedzin Jewish community was launched. From several bunkers the youth offered armed resistance. Plotnicka was killed along with the last group of fighters in a battle on August 3.

PLOTZKI, MEIR DAN OF OSTROVA (1867–1928), Polish rabbi. Plotzki studied under R. Israel Joshua of Kutno, R. Hayyim Eleazar Wax of Piotrkow, and R. Abraham of Sochaczew. In 1891, he was elected rabbi of Warta. The publication of the first part of his *Ḥemdat Yisrael* in 1903 made him famous throughout Poland, and in 1908 he was appointed rabbi of the large town of Ostrow. In 1926 he resigned from the rabinate and was appointed *rosh yeshivah* of the "Metivta" in Warsaw. This institution, founded by the Ḥasidim of *Gur, of whom he was a fervent adherent, was the most important yeshivah in Poland. In 1912 Plotzki visited Erez Israel and instituted many improvements in the administration of the Polish *kolel*. One of the leaders of *Agudat Israel, he spent a year as its emissary in Belgium, England, and the United States. He was chairman of the executive committee of the Agudat ha-Rabbanim in Poland.

In addition to his *Ḥemdat Yisrael* (1903–24), partly on Maimonides' *Sefer ha-Mitzvot*, he wrote *Keli Ḥemdah*, a commentary on the Pentateuch, in six parts (1906–38); *Sha'alu Shelom Yerushalayim* (1910), to expose the forgery of the purported Jerusalem Talmud on the order of *Kodashim* published by Solomon *Friedlander (1907–09); and *Niḥozei Or*, novellae on the *Or ha-Ḥayyim* by R. Hayyim b. *Attar, printed together with the *Toledot Rabbenu Hayyim ibn Atar* (1925) by Reuben Margolioth. Many of his other works have remained in manuscript.

[Itzhak Alfassi]

PLOVDIV (ancient **Philippopolis**), city in the S. central part of Bulgaria. During the Byzantine rule, the Jews lived in

a special quarter. Under the Turks, their quarter was known as *Orta Mezar*. During the 16th century, there were some Sephardi Jews in the town; they engaged in commerce. During the 18th century, the rabbi was Judah Sid (d. 1815), the author of *Ot Emet* (Salonika, 1799) and *Ner Mitzvah* (*ibid.*, 1810–11). He was succeeded by R. Abraham ibn Aroio (1750–1819), the author of the responsa *Mayim ha-Hayyim* (*ibid.*, 1846–64). Plovdiv was the seat of the regional assembly of Eastern Rumeia, an entity established in 1878 by the Congress of Berlin; some Jews played a role in the assembly's proceedings. In 1912, there were 3,000 Jews in Plovdiv and in 1938, 6,000. In 1895 a Yishuv Erez Yisrael society was founded. At that time Joseph Marco (Marcou) *Baruch published there, in French, *Carmel*, which was the foremost Jewish-national newspaper of Bulgaria. From 1901 *Ha-Shofar*, the bulletin of the Zionist Organization, was published in Plovdiv, and from 1924 the Zionist headquarters was situated there. The Jews of Plovdiv were engaged in commerce and crafts. Later they opened some factories. During World War II, in 1943, an expulsion decree ordering all the Plovdiv Jews to leave Bulgaria was issued, but it was not carried out. In 1967 there were 1,000 Jews, dropping to 500 in 2004, affiliated to the local branch of the nationwide Shalom organization.

[Simon Marcus / Emil Kalo (2nd ed.)]

PLUM, the *Prunus domestica*, of which there are many different varieties. In modern Hebrew, the name *shezif* is applied to the plum, but erroneously, since the ancient name *shezaf* is the *jujube. A species of plum, *Prunus ursina*, grows wild in the groves of Upper Galilee and in Lebanon. It is a shrub or tree, somewhat prickly, producing small yellow tasty fruits. In Syriac it is called *huha* and in Arabic *hoḥ*. Some identify it with the “*hoḥ* in Lebanon,” which in the parable of Jehoash is contrasted with the cedar of Lebanon, but the parable concludes that the wild beasts of Lebanon trod it down (II Kings 14:9). It would therefore seem that a prickly weed is intended and not a tree, which is, in fact, the meaning of *hoḥ* in other passages in the Bible (see *Thistles and Thorns). In Greek and Roman literature a choice plum is referred to as *damascena* (δαμασκηνά which is also its name in modern Greek and in modern Arabic) because it originated from Damascus. In rabbinic literature it is found under the names *dormaskin*, *dormaskenin*, *dormaskeniyot*, and is mentioned as a fruit which was mainly imported (Tosef., Dem. 1:9). It was regarded as good for sick people (BK 116b) and was served to important visitors (Ber. 39a). The parallel passage in the Jerusalem Talmud (Ber. 6:2, 10b end) has *ahvanita* which is the Arabic for the plum.

[Jehuda Feliks]

PLUNGE (Lith. **Plungė**; Rus. **Plungyany**), city in W. Lithuania. The 15th-century tombstones in the Jewish cemetery indi-

cate that there was a Jewish settlement in Plunge at that time. In 1847 there were 2,197 Jews living there; 2,502 (55% of the population) are recorded in 1897. Most Jews engaged in commerce with eastern Prussia and the surrounding villages as well as in crafts and agriculture. During the period of Lithuanian independence, Jewish commercial enterprises were repressed and a period of intensified emigration followed. The number of Jewish residents in Plunge decreased to 1,815 (44% of the population) in 1933 and 1,700 in 1939. There were six synagogues and a yeshiva with 50 pupils in the town, as well as a *Tarbut and Yiddish school, a Hebrew secondary school, two libraries, and a Jewish bank. Political and communal organizations of every kind and relief institutions were also active. For a time, the office of mayor was held by a member of the Jewish community. When the Germans entered Plunge on June 25, 1941, they murdered a number of Jewish youths who had participated in its defense. A few weeks later they massacred all the remaining Jews.

[Dov Levin]

PLUNGIAN (Plungiansky), MORDECAI (1814–1883), Hebrew writer. Born in Plunge, Lithuania, he became learned in talmudic and rabbinical literature; later, he was attracted to the Haskalah and studied foreign languages. In his biography of R. *Manasseh b. Joseph of Ilya, *Ben Porat* (1858), Plungian dissociated himself from extremist Haskalah ideology as well as from unenlightened Orthodoxy. This work angered the religious elements, and Plungian backed down and destroyed the manuscript of the second part.

He wrote for the journals *Kerem *Hemed*, **Ha-Maggid*, *Ha-Karmel*, and **Ha-Shaḥar* and also wrote poetry. His writings include *Kerem Shelomo*, a commentary in two parts on Ecclesiastes (1857) and the Song of Songs (1877); *Tel-Piyyot* (on the Mishnah, 1849); *Shevet Eloha* (on blood libels, 1862); and *Or Boker* (part of a large work on the reading of the Torah, 1868).

***PLUTARCH** (c. 46–120 C.E.), Greek biographer and antiquarian. He discusses whether the Jews abstain from the use of swine's flesh out of reverence for the animal or because of aversion to it (*Quaestiones Convivales*, 4). In a symposium (*ibid.*) “Who is the God of the Jews,” Bacchus is identified with the God of the Jews and the Bacchanalian celebrations with the Festival of Tabernacles. “They set up tables laden with all kinds of fruit and live in tents and in huts made of vine branches and ivy intertwined. The first day of this Festival is called the Festival of Tabernacles” (Gr. *skēnē*, “tent”). This identification is refuted by his contemporary *Tacitus (*Historiae*, 5:5). Plutarch also mentions the widespread anti-Jewish slander (cf. *Apion and Tacitus) that the Jews worshiped the head of an ass because that animal helped them discover wells of water in the wilderness. In his essay on superstition, Plutarch states that

the Jews did not defend their city on Sabbath, but remained “clothed in their superstition, as if in a great net.” Plutarch’s treatment of Judaism is prompted by neither hatred nor respect. The Jewish religion was considered by cultured pagans a pious superstition, in common with other Oriental cults.

PLYMOUTH, port and naval base in Devon, S.W. England. One of the earliest provincial Jewish communities after the Resettlement was established there and the beautiful synagogue, dating from 1761, is the oldest in England outside London. In the 18th century, Plymouth’s Jewish inhabitants, mainly Ashkenazim from Poland and Germany, included silversmiths, merchants, petty traders, old-clothes men, opticians, and pen cutters. Jews were also active as suppliers of stores and clothing for the navy and a subsidiary congregation was formed at Plymouth Dock (Devonport). By the end of the Napoleonic Wars there were about 30 Jewish licensed navy agents. The community was one of the four most prominent in Britain until 1815, when its importance declined. In the early 20th century the Jewish population numbered 300 and in 1969 it was 225 (out of a total population of 212,000). The 2002 British census found the declared Jewish population to be 181. There was an Orthodox synagogue.

PNUELI, AMIR (1941–), Israeli computer scientist. Born in Nahalal, Israel, he gained his B.Sc. in mathematics from the Haifa Technion and Ph.D. in applied mathematics from the Weizmann Institute for his thesis on calculating ocean tides. His interest in computer science developed during postdoctoral fellowships at Stanford University, Palo Alto, California and IBM’s Watson Research Center, Yorktown Heights, New York. He returned to Israel as a senior research associate in the department of applied mathematics at the Weizmann Institute before moving to Tel Aviv University as professor and founder and chairman of the department of computer science (1973–81). From 1981 he was professor of computer science at the Weizmann Institute. Pnueli’s main research achievements concern the application to computing of temporal logic, defined as the inclusion of temporal information within a logical framework. He developed what are termed “reactive systems” which extend this logic into real-time methods of formal analysis. With David Harel, he devised “Statecharts,” a visual language for modeling reactive systems. His research has influenced the theory, design and validation of computing systems and especially methods for verifying the reliability of complex software such as that used in civil aviation. Pnueli has a long-term and continuing interest in the commercial applications of his research to program design, teaching, message switching, operating systems, data compilation, and

military purposes. In 1971 he cofounded the software company Mini-Systems which was, until 1982, Israel’s sole provider of computer-aided graphic printing systems. In 1989 he cofounded AdCad, which evolved into I-Logic and produces Statemate, a program dealing with complex computing such as control and communication systems. He is coauthor (with Zohar Manna) of the standard text on temporal logic. Pnueli’s achievements have been universally recognized with the Association of Computing Machinery’s Turing Award (1996) and many distinguished lectureships.

PO'ALEI AGUDAT ISRAEL (PAI), *haredi* workers party, affiliated to the World Union of Po’alei Agudat Israel. PAI was founded in Lodz, Poland, in 1922, as an outgrowth of *Agudat Israel. Its central ideal was the application of the social principles contained in the Torah in daily Jewish life. In its struggle for social progress, PAI clashed with the Jewish industrialists in Poland, from whom it demanded better treatment of the workers, and eventually with Agudat Israel over the same issue.

PAI started to operate in Erez Israel in 1925, after the arrival of young Orthodox settlers, but broke up after a short period. It was reestablished in Tel Aviv in 1933, under the leadership of Benjamin *Minz, who had arrived from Poland, and who after the establishment of the state became a member of the Knesset, and Jacob *Landau, who arrived from Germany. Histadrut ha-Po’alim ha-Ḥaredit (Federation of Ḥaredi Workers), which had been formed in Petaḥ Tikvah, joined the new party. PAI continued to operate in Erez Israel in close cooperation with Agudat Israel, and was close to it in its religious approach and the aspiration to establish in the country a society run on the basis of the *halakhah*. However, unlike Agudat Israel it also advocated cooperation with the secular Jewish population in Erez Israel on national issues. At the third Kenesiyah ha-Gedolah (Great Synod), held by Agudat Israel at Marienbad in Czechoslovakia in 1937, PAI advocated support for the establishment of a Jewish state on the basis of the Peel Commission Report, and the setting up of kibbutzim with the assistance of Zionist funds. The Great Synod rejected PAI’s proposals. A breach with Agudat Israel occurred when PAI established a youth movement called Ezra, to which Agudat Israel strongly objected. Members of PAI settled on Jewish National Fund land in May 1944 and established kibbutz Hafez Ḥayyim. It later established kibbutz *Sha’albim and several moshavim. In 1945 Minz was elected political leader of PAI, and the following year the World Union of Po’alei Agudat Israel was founded in Antwerp. This step was regarded as PAI’s final secession from World Agudat Israel, following which members of PAI joined the *Haganah, while Minz became a member of the *yishuv*’s security committee.

Shortly after the establishment of the state, PAI joined the trade union section of the *Histadrut. Despite all of this, it continued to accept the authority of Agudat Israel’s Mōezet Gedolei ha-Torah (Council of Torah Sages).

PAI ran in the elections to the First Knesset on a joint list with Agudat Israel, Ha-Mizrachi and Ha-Po'el ha-Mizrachi, receiving three of the list's 16 seats. In the elections to the Second, Fifth, Sixth, Seventh and Ninth Knessets it ran independently, in the elections to the Third, Fourth, and Eighth Knessets, it ran in a joint list with Agudat Israel, in the elections to the Eleventh Knesset within the framework of Morashah, and in the elections to the Twelfth and Thirteenth Knessets it ran as part of Agudat Israel, even though to all effects and purposes it ceased to exist as a separate party. The largest number of Knesset seats it ever received was three. PAI joined the coalition after the elections to the Second Knesset in 1951 without assuming any ministerial post, but then left in September 1952 over the issue of the drafting of girls to national service. In July 1960, in contravention of a decision by Mo'ezet Gedolei ha-Torah it joined the government, and Minz served as minister of postal services until May 1961.

After the death of Benjamin Minz in 1961, Rabbi Kalman Kahana became the party's leader. After the Ninth Knesset PAI's last remaining representative in the Knesset was Rabbi Avraham Verdiger.

In the United States

Po'alei Agudat Israel of America was a *haredi* organization founded in the U.S. in 1948 for the purpose of educating and preparing young people for *aliyah* to Israel, and supporting the institutions of the parent movement in Israel. PAI remained a relatively small organization, with only five branches located in Brooklyn, New York. Its lack of popularity was due to lack of approval by the heads of yeshivot in the U.S., which rendered PAI incapable of providing an effective alternative to the anti-Zionist Agudat Israel in the U.S. PAI's women's division, Neshei Po'alei Agudat Israel, supported six children's homes and villages in Israel, with a population of more than 2,000 children. PAI published the periodicals *Ahдут*, *PAI-Views*, and *Yedi'ot PAI*. On issues affecting Israel, it generally followed the Israel parent party line. Domestically, PAI was one of the few Jewish organizations to support the Elementary and Secondary Education Act of 1965, which authorized the provision of federal funds to aid students in private schools. The organization, though small, was headed by Rabbi Fabian Schonfeld, past president of the Rabbinical Council of America. The organization is a member of the Conference of Presidents of Major American Jewish Organizations.

PO'ALEI ZION, movement that tried to base itself upon the Jewish proletariat whose ideology consisted of a combination of Zionism and socialism. Attempts to combine Jewish nationalism and Zionism with socialism were made by *Zhitlovsky and *Syrkin in the 1890s, but a movement came into existence

in Russia toward the end of the 19th century and at first consisted of local groups and regional associations. Later, countrywide Po'alei Zion parties were established in Russia, the Austrian Empire, the United States, England, Argentina, Romania, and Erez Israel. In 1907 a World Union of Po'alei Zion was founded. In 1920 the movement split over the attitude toward the Socialist and Communist Internationals, the Zionist Organization, and the place to be accorded to the movement's activities in Erez Israel. One faction (the Left Po'alei Zion) sought unconditional affiliation with the Third International (the Comintern); by 1924 it had abandoned this attempt and reorganized itself on an independent basis. The other faction, the Right Po'alei Zion, merged in 1925 with the Zionist Socialists (ZS) and in 1932 joined with Hitahadut in founding the Ihud Olami (see *World Labor Zionist Movement).

In Russia

At the turn of the century, societies bearing the name Po'alei Zion were founded in various places in the *Pale of Settlement, largely independent of one another. Some of these societies were made up of Jewish workers affiliated with the general Zionist movement, while others were composed of Zionists who seceded from the Russian Social Democratic Party or from the *Bund, particularly when the latter adopted (1901) a resolution declaring membership in the Zionist Organization incompatible with membership in the Bund. The Zionist workers and wage earners who were thus compelled to leave the Bund also had to renounce membership in the trade unions sponsored by it and, as a result, had to establish their own trade unions.

In the years 1901–03, many Po'alei Zion societies were founded in the northwestern part of the Pale of Settlement (e.g., in Vilna, Dvinsk, and Vitebsk) and in southern Russia (Yekaterinoslav, Odessa, Poltava) and one was founded in Warsaw. All these societies shared the view that the economic problem of the Jews in general and the Jewish workers in particular was of a special nature and could be solved only by means of their territorial concentration in Erez Israel. Only there could a Jewish socialist society be established. They differed, however, on the immediate program for action on the local scene. Thus, the leading Po'alei Zion group of that time, the Minsk group, advocated the restriction of local activities to the economic interests of the workers and confined its political and ideological struggle to the World Zionist Organization, where it posed special demands on behalf of the Jewish workers. Other societies called for active participation in the revolutionary struggle in Russia and cooperation with the non-Jewish revolutionary parties. The latter trend was strengthened by the 1903 Kishinev pogrom, in the wake of which Po'alei Zion societies also organized for Jewish self-defense. Another difference among the various societies emerged in the period 1903–05 over the question of *Territorialism. By the end of 1904 the Territorialists had achieved a measure of consolidation (they were later joined by the Minsk group), and at the Seventh Zionist Congress in 1905 they appeared as an

independent faction, separate from the "Palestine-oriented" Po'alei Zion. Assuming the name of Zionist-Socialist Workers' Party (for short ss, according to their Russian name, "Sionisty-Sotsialisty"), they wielded considerable influence on the Jewish population during the 1905 Russian revolution.

Another split occurred in the remaining Palestine-oriented faction of Po'alei Zion at the Seventh Congress, when a new party arose in its midst, advocating emphasis on the development of Jewish life in the Diaspora within an autonomous framework. The faction had its origin in an ideological group founded in 1903 called *Vozrozdheniye* (Renaissance); as a party, it took on the name Jewish Socialist Workers' Party. In 1906, under the leadership of Ber *Borochov, the Jewish Social Democratic Workers' Party Po'alei Zion came into being; it continued to adhere to the idea of the territorial concentration of the Jewish people in Erez Israel. Borochov's approach was based upon an analysis of objective processes in the economic condition of Jewish life that pressed for mass emigration and territorial concentration; it was also founded upon the principle of the class struggle, for which a sound basis could be established only in Erez Israel. Two trends existed within this group of Po'alei Zion: one regarding settlement in Erez Israel only as the outcome of an objective historical process (the "Prognosticists"), the other supporting concentrated mass settlement in Erez Israel and nowhere else as a matter of principle (the "Principlers"). Within the latter group a small movement of *halutzim* for Erez Israel developed.

Po'alei Zion in Russia advocated boycotting the elections to the First Duma. Later it changed its attitude and actively participated in the elections to the Second Duma. The laws regulating the election to the Second Duma were less favorable, however, than those for the first, and Po'alei Zion nominees reached only the stage of electors. The political reaction in Russia after 1906 resulted in the almost complete dissolution of Po'alei Zion. Like other movements, it was outlawed, and its leaders were either arrested and exiled or emigrated from the country. Out of a membership of about 25,000 in 1905, only 300 were left, who were organized in clandestine groups. The movement took a turn to the left and in 1909 decided to secede from the Zionist Organization and the Zionist Congress. In the last prewar years, its activities were confined to modest efforts in trade unionism and propaganda.

In the Austro-Hungarian Empire

At the end of the 19th century, various groups made up of Jewish workers and employees who were members of the Zionist movement came into being. They resulted from the efforts of the Zionist Organization to recruit Jewish workers to its cause, as well as the feeling among Jewish workers that the Austrian Social Democratic Party showed no understanding for their special needs. The spokesman for this group was S.R. *Landau. At the Second Zionist Congress he demanded that Jewish workers be allowed the right to organize into groups of their own and of separate representation in the Zionist bodies; he also became the editor of *Der juedische Arbeiter*. This scheme

of independent organization met with fierce opposition on the part of the Austrian and German Social Democratic parties. In June 1903 the Galician groups established a Federation of Zionist Employees' and Workers' Groups in Galicia. The federation was influenced by the Zionist Socialist groups led by Nachman *Syrkin and by the Zionist Workers' Groups of Vienna and their publication, *Der juedische Arbeiter*.

Led by Shlomo *Kaplansky and Nathan *Gross, the Vienna groups initiated the establishment of a Po'alei Zion Federation in Austria. As its name indicated, the federation was to be composed of workers who were Zionists, without, however, committing itself to any detailed ideology. The first conference took place in May 1904 and was attended by 37 delegates, representing 2,000 members. It decided to form an organization that was to function as both a political party and a trade union. At its second conference (June 1905) the new party decided to accept the discipline of the Zionist Organization in all Zionist matters, while retaining its independence in labor matters. Zionism and the class struggle were to be regarded as being of equal importance; membership in the party was to be incompatible with membership in any other party or trade union. The conference also adopted the party's own program for activities within the Zionist Organization; it called for cooperative settlement in Erez Israel (along the lines proposed by Franz *Oppenheimer) as a means of expressing the special interests of the workers in the Zionist movement.

It was not until the third conference (October 1906) that the Austrian Po'alei Zion adopted a clearly defined socialist program and assumed the name of Jewish Socialist Workers' Party Po'alei Zion. The conference also decided to secede from the Austrian Zionist Organization and demand that Po'alei Zion be accorded the status of an autonomous federation in the World Zionist Organization. This move resulted in several groups of Zionist intellectuals leaving the party. The Austrian Po'alei Zion did not, however, emulate the Russian party of that name when the latter decided to secede from the World Zionist Organization in 1909. In 1910 the party ran into difficulties in maintaining its function as a trade union, when the Congress of the International in Copenhagen decided that there was to be a single trade union for each country. When the Jewish National Party was founded in Austria in 1907 as a pro-Zionist list for the elections to parliament, Po'alei Zion did not join; in the parliamentary elections, however, it recommended that its members give preference to candidates of the Jewish National Party over Social Democratic candidates. In the 1910 census, Po'alei Zion urged Jews to list Yiddish as their national language (although it was not included in the census questionnaire). It also developed a program for the Jewish community councils from 1908 onward and presented its own lists for the council elections.

In the United States

Po'alei Zion came into being in the United States in 1903 as an offshoot of the Russian groups. It differed from the existing Jewish socialist organizations by emphasizing the need for

Jewish national activities and by supporting the Zionist *Basle Program. There were two influences at work among the U.S. Po'alei Zion: the ideas imported by the continued immigration from Russia and the ideologically more relaxed atmosphere prevailing in the United States, much less doctrinaire in its approach than that in Europe. The first conference of Po'alei Zion groups in the U.S. took place in 1905. It brought about no concrete results, in view of a split between the Territorialists (who were in the majority) and the supporters of Erez Israel. At the end of 1905, however, a Jewish Socialist Party Po'alei Zion came into being in the U.S. and Canada, and the following year the party founded its own newspaper, *Der Yidisher Kemfer*. The failure of the efforts to find a territory other than Erez Israel, as well as the revolution of the Young Turks in Constantinople, persuaded the Territorialists to join the party, led by Syrkin and Baruch *Zuckerman (1909). This move was preceded by a slight change in the party's platform to include "neighboring countries," in addition to Erez Israel itself, as possible areas of settlement.

The U.S. Po'alei Zion, like its Austrian counterpart, stood for cooperation with non-labor Zionists. They founded Aḥavah, a society for the creation of cooperative settlements and garden towns in Erez Israel; contributed to the Zionist funds; and supported labor enterprises in Erez Israel, including the periodicals. On the local scene, Po'alei Zion engaged in a variety of activities, founding the Yidisher Natsionaler Arbeter Farband (a mutual aid society) and a network of "national-radical" schools. During World War I, the U.S. Po'alei Zion became the center of activities for the entire movement. Upon the initiative of Syrkin and Borochof, it sponsored the movement for the establishment of a Jewish Congress and the creation of the *He-Ḥalutz movement and supported the drive for volunteers to the *Jewish Legion battalions, led by Yiḏḥak *Ben-Zvi and David *Ben-Gurion.

In Erez Israel

The Po'alei Zion Party in Erez Israel came into being from various Po'alei Zion groups composed of immigrants who had come from Russia starting with the Second *Aliyah. There were differences among them in the wording of their ideological approach to Erez Israel and the Hebrew language. The party was founded in 1906 and consolidated in 1907 under the leadership of Ben-Zvi. It advocated the class struggle and organized trade unions and strikes (one at the Rishon le-Zion wine cellars in 1907 and another in the Jerusalem printing trade in 1909). Its first newspaper, *Onfang*, was published in Yiddish. After the Young Turks came to power in 1908, the party became interested in political activities in the Ottoman Empire and among its Jewish communities and supported the nonpartisan organization of Jewish agricultural workers and the cooperative enterprises sponsored by the Zionist Organization. In 1910 it founded a Hebrew newspaper, *Aḥdut*, and at its sixth conference made a significant change in its platform by renouncing the postulate that the class struggle is the sole means of creating the national center of the Jewish people

in Erez Israel. Po'alei Zion in Erez Israel grew away from the mother party in Russia and from the Bolshevik ideology. It no longer relied on the spontaneous uprising of the proletariat and the spontaneous creation of a cooperative economy which would provide the proletariat with work. It began to support the constructive activities of the Zionist Organization and to demand practical activity on the part of the World Union. A sharp debate was caused by the decision of the World Union of Po'alei Zion to establish an Erez Israel Workers' Fund and an Erez Israel Labor Office, centering on the question of who should have the authority over the two institutions. Po'alei Zion in Erez Israel also encouraged the arming of the Jewish settlers and took the *Ha-Shomer organization under its wing. The party in Erez Israel did not want the institutions to be directed by the World Union, and the Association of Agricultural Workers and Ha-Po'el ha-Za'ir Party rejected the idea of intervention by a party factor. Po'alei Zion was forced to take into consideration the position of a large portion of the workers and to reduce the scope of the fund and the labor bureau's activities.

The World Union

The World Socialist Union of Jewish Workers-Po'alei Zion was founded in 1907 in The Hague, where its first conference was held, following the Eighth Zionist Congress. It was recognized by the Zionist Organization as a "special federation," a step which ensured the status of the Po'alei Zion parties in various countries that were not affiliated with the local Zionist bodies. The World Union wished to conduct its own work in Erez Israel, and at its second conference, held in Cracow in 1909, it decided to establish an Erez Israel Workers' Fund (Kuppat Po'alei Erez Israel – for short Kappai) "to further the emigration of Jewish workers and their settlement in Erez Israel." At its third conference (Vienna, July 1911), the World Union decided to establish its own information office in Erez Israel to be financed by the Workers' Fund. The World Union also defined the party's political attitude toward the Ottoman Empire and the direction of its activities among the Ottoman proletariat. It dealt with problems of Jewish workers in the Diaspora, especially in connection with emigration and finding employment (productivization) and supported the public protest against the methods employed by the *Jewish Colonization Association (ICA) in the Jewish agricultural settlements in Argentina.

The World Union also took up the struggle of the Russian, Austrian, and American Po'alei Zion parties, begun in 1907, toward achieving independent representation in the Socialist International. It called for national Jewish representation on a worldwide basis, independent of the national socialist parties. In 1910 it was joined in this demand by the Russian Zionist Socialists (ss) and the Sejmists (see *Jewish Socialist Workers' Party) and together they addressed a memorandum on this subject to the International (1911), which did not elicit a favorable reply. The Po'alei Zion World Union abstained from participating in the work of the Zionist Executive, and at the

Zionist congresses stressed the need for practical work in Erez Israel, with special emphasis on cooperative enterprises. It supported the idea of creating national farming estates, opposed the use of the means of the* Jewish National Fund (JNF) for private noncooperative settlement, and criticized the proposals for the establishment of a university in Erez Israel.

The fourth conference (1913) was marked by ideological differences between a leftist group, led by Borochoy, and the Austrian and U.S. parties (with which the Erez Israel party also associated itself). The former called for organization on a class basis and a determined class struggle, as well as dissociation from the Zionist Organization, while the latter supported active partnership with the Zionist Organization in the creation of cooperative enterprises in Erez Israel.

During World War I

The World Union of Po'alei Zion maintained its headquarters in The Hague (1915–16) and Stockholm (1917–19) during World War I. By that time it was accorded representation on the Socialist International, although technically it represented the Erez Israel party. Its main activity was explaining the special situation of the Jews in the war and formulating Jewish demands for the postwar peace conference. Thus, as a result of the World Union's efforts, the Netherlands-Scandinavian socialist peace committee included in 1917 in its proposals a demand for international responsibility for the Jewish problem, the personal autonomy of Jews in the areas where they were settled in large numbers (Russia, Austria, Romania, and Poland), and protection of Jewish settlement in Erez Israel. After the war the World Union became a full-fledged member of the Socialist Conferences (Berne, 1919). The steering committee of the Socialist International at Amsterdam adopted in April 1919 a Po'alei Zion-sponsored resolution affirming the right of the Jewish people to a national life of its own in Erez Israel under League of Nations auspices and with the safeguarding of the interests of the non-Jewish population. It also demanded the protection of civil rights and national minority rights for the Jews in the Diaspora, the freedom to emigrate, and Jewish representation at the League of Nations.

Po'alei Zion also stood in the forefront of the Jewish Congress movement in the U.S. during World War I to formulate Jewish demands for autonomous rights in the Diaspora, and organized assemblies of Jewish workers to draft the demands concerning Erez Israel. Following the war, the membership of the parties in the World Union began to grow. Before the war there were approximately 600 members in Russia, 1,000 in Austria, 1,200 in the United States, 100 in England, and 200 in Erez Israel. After the war it was estimated that there were 15,000 members in Poland, 1,000 in Lithuania, 800 in German Austria, 2,000 in Czechoslovakia, 4,000 in east Galicia, 4,500 in the United States, 1,200 in Argentina, 500 in Germany, 1,000 in England, and 2,200 in Aḥdut ha-Avodah in Erez Israel. In addition there were a number of small parties in Estonia, Belgium, South Africa, Egypt, and Siberia. In total, there were 30,000 members outside Russia, and the number

inside Russia was estimated between 10,000 and 20,000. The splits around 1920, however, weakened the movement and reduced the number of its members. The momentous events that took place during the war sharpened the differences in outlook that had existed before it inside the movement. The Po'alei Zion party in each country was confronted by questions of principle and had to find its own answers. Thus the Erez Israel party had to deal with the question of political orientation – between loyalty to the Ottoman regime and support for the Allies – and enlistment in the Jewish Legion; its vast majority abandoned internationalism and advocated enlistment in the Legion. For the Russian party, at first, it was the attitude toward the war that was at stake, and, later on, the attitude toward the two revolutions of 1917. The October Revolution caused a split in the Russian Po'alei Zion; on local questions it was close to Bolshevik ideology, whereas on the issue of Erez Israel it supported the idea of “class Zionism.” At the end of 1917, a faction calling itself Radical Po'alei Zion, centered in Odessa, split from the party and advocated cooperation with the Zionist Organization and the fostering of Hebrew. Another faction emerged in 1919, demanding total identification with the Bolsheviks and advocating postponement of the Zionist program until after the socialist revolution had been accomplished; it called itself the Jewish Communist Party-Po'alei Zion (JCP). The majority of the party in Russia (Po'alei Zion-Social Democrats) regarded the revolution as a long drawn-out process and rejected the postponement of Zionism.

Postwar Developments

In Erez Israel, the Po'alei Zion party merged after the war with the nonparty Independents, which included most of the membership of the Federation of Agricultural Workers, and formed the Zionist-Socialist Union of Erez Israel Workers – *Aḥdut ha-Avodah. This was both a political and economic organization. It regarded the creation of a national economy in Erez Israel, based on labor economy, as its main task and did not put the emphasis on the class struggle. A small faction, which opposed the merger and did not agree to the abandonment of the class struggle and of Yiddish, established its own party, the Socialist Workers' Party (Mifleget Po'alim Sozjalistim – MPS), which became the first nucleus of the Palestine Communist Party. In the course of time, the radicalization of this party along Communist lines and its abandonment of the ideals of Zionism proved to be intolerable for a group of its members. This group was headed by Abraham *Revusky, who proceeded to establish a preparatory committee for the reestablishment of a Po'alei Zion Party in Erez Israel.

The World Union of Po'alei Zion resumed its activities in the Zionist Organization in 1919. A council meeting held in Stockholm in August 1919 elected a commission to visit Erez Israel and draw up a plan to develop the country along socialist lines. The commission, which spent some time in Erez Israel at the beginning of 1920, was unable to arrive at an agreed report; its differences reflected the range of opin-

ions among the various parties in the World Union. The fifth conference of the World Union, which met in Vienna in July 1920, was to consider the differences among the various member parties. It split over the issue of joining the Third (Communist) International, 178 delegates voting in favor and 179 abstaining. All efforts of the abstaining delegates to heal the breach were unsuccessful. They claimed that the Third International was liable to prevent the independent development of Erez Israel and ties with the Zionist organization and the Jewish people. Some of them objected to the exclusive nature of the Russian approach to Communism and demanded the unification of all the revolutionary parties (an attitude near to that of the "Two-and-a-Half International"); they held that only the speedy initiation of the Jewish people in Erez Israel would ensure the survival of Zionism after the expected world revolution was achieved. The left World Union was composed of leftist parties only, which opposed any connection with the Zionist Organization and held that only by cooperation with the world revolution would Zionism stand a chance of realization. The parties which supported this stand were those of Russia, Czechoslovakia, Austria, and Poland (the last being the largest). The right wing held the majority in the U.S., Argentine, British, and Erez Israel parties. It decided to engage in practical work in the upbuilding of Erez Israel on a cooperative basis, which would ensure the growth and development of the Jewish working class. It became the mainstream of the Zionist labor movement, whereas the World Union gradually dwindled due to Communist secession. The right-wing leaders abroad were Shelomo *Kaplansky, Marc Yarblum, Zalman *Rubashov, and Berl *Locker; in Erez Israel they were Ben-Gurion, Ben-Zvi, and Yizhak *Tabenkin. The left-wing leaders in Erez Israel were Nahum *Nir (Rafalkes) and Jacob *Zerubavel.

The right wing, which opposed joining the Third International, also left the Second International. It joined the Viennese "Two-and-a-half" International and in 1923 returned to the Socialist International, together with the latter. It also participated actively in the Zionist Organization, despite the reservations of a number of its member parties. It engaged in political activities in the International and within the British Labour Party, to which Po'alei Zion in Britain belonged from 1920. In its activities on behalf of Erez Israel, the right wing succeeded in obtaining the cooperation of other Zionist labor parties, and in August 1923 it convened a conference for Erez Israel labor and established a league for practical activities. The common sphere of Zionist activities led to a convergence between the World Union of Po'alei Zion and the Zionist-Socialist Union, and after difficult negotiations, especially over the question of the status of the Yiddish language, the two unions merged in August 1925, adopting the name the Socialist World Jewish Workers' Party Po'alei Zion (united with the Zionist Socialist Union). Following the merger between Ha-Po'el ha-Za'ir and Ahdut ha-Avodah in Erez Israel in 1930, a united world movement, called Ha-Ihud ha-Olami, was founded in Danzig in 1932; it was composed of the Union of Socialist Jewish

Workers-Po'alei Zion (united with z's) and the World Zionist Labor Party-Hitahdut.

The second congress of the Third International, which was attended by a representative of the Erez Israel leftist Po'alei Zion (appearing on behalf of MPs), adopted not only the famous 21 rules which had to be accepted by any party seeking admission to the Comintern but also an anti-Zionist resolution. The bureau of the left-wing World Union of Po'alei Zion decided to accept the 21 rules, adopted the name of Jewish Communist Union Po'alei Zion, and applied for admission to the Third International. The Comintern, however, rejected the application out of opposition to the principle of a world union and of territorial concentration in Erez Israel, and demanded that members of the Jewish Communist Union join individually the respective Communist parties in various countries. Nevertheless, it sought to make use of the union in order to gain influence among Jewish workers and prolonged the negotiations with it.

The sixth conference of the World Union, held in Danzig in June 1922, rejected the Comintern demands and insisted upon its right to independent organization and to maintain its Erez Israel program, but declared itself an integral part of the World Communist Movement. As a result, the Social Democratic Po'alei Zion in Russia and the Revusky group in Erez Israel left the World Union and in 1923 formed the Organizing Committee of the Left Po'alei Zion in Berlin. In the following two years most of the remaining parties in the World Union disintegrated, joining local Communist parties. The Russian "Jewish Communist Party Po'alei Zion" was liquidated, whereas the Social Democratic faction of Po'alei Zion there changed its name to the Jewish Communist Workers' Party Po'alei Zion and had a technically legal existence until 1928. In Austria and Czechoslovakia the left Po'alei Zion joined the local Communist parties. Thus only the Polish party was left as a major party in the World Union. A renewal of the left World Union took place in Paris in 1926 (the seventh conference), and it included the Revusky group. It adopted the name World Communist Union of Jewish Workers Po'alei Zion, continued to oppose association with the Zionist Organization and the He-Halutz movement, and maintained the belief that in the course of time it would be able to join the Comintern.

The left Po'alei Zion Party in Erez Israel had been renewed in 1923 and was based on the Revusky group and former members of the Social Democratic Po'alei Zion in Russia. Within the *Histadrut they opposed the exclusion of Arab workers from the general framework and demanded separation of trade-union from cooperative activities. In 1923 the Polish party also began to establish a Po'alei Zion Party in Erez Israel. Israel Washer was sent to organize it. The two groups merged in 1924. Four years later another split occurred in the Erez Israel left Po'alei Zion when a group led by Yizhak and Z'ev Abramovitz seceded from the majority group led by Nir (Rafalkes) and Moshe Erem over the issue of Hebrew versus Yiddish (opposing the Yiddishist attitude prevailing in the

World Union). They were reunited in 1931, only to split again in 1934 over the question of *aliyah*, pioneering youth movements, and He-Ḥalutz. In the same year, however, the ninth world conference adopted a more positive stand on He-Ḥalutz; but only the tenth conference, held in 1937, decided to rejoin the Zionist Congress. Further differences in the party arose over the attitude toward World War II, and they were settled only when the Soviet Union entered the war in 1941. In 1944 the left Po'alei Zion in Erez Israel joined with *Ha-Shomer ha-Za'ir in the Left Front in the elections to the *yishuv* institutions (Asefat ha-Nivḥarim and Va'ad Le'ummi). Then, in 1946, it united with the opposition group of *Mapai, Si'ah Bet, which seceded from Mapai in 1944 and formed an independent party, Ha-Tenu'ah le-Aḥadut ha-Avodah. The united party was called Ha-Tenu'ah le-Aḥadut ha-Avodah-Po'alei Zion. This party joined *Mapam in 1948 and remerged in 1954 with the split in Mapam. In 1968 it joined Mapai and Rafi to form the Israel Labor Party. Its Diaspora groups joined the World Zionist Labor movement, which was largely based on the Iḥud Olami previously centered on Mapai.

°POBEDONOSTSEV, KONSTANTIN PETROVICH (1827–1907), Russian statesman and jurist. From 1860 until 1865 he was professor of civil law at the University of Moscow. During the years 1880 to 1905, Pobedonostsev acted as Supreme Prosecutor of the Holy Synod, a function which resembled that of minister of religious affairs, except that his behind-the-scenes influence on the czar and the government greatly surpassed his official responsibilities. Pobedonostsev fostered the idea of maintaining a regime of absolute power, with the support of the police and the Church, and strove for the Russification of all the peoples of Russia. Under his influence the Synod intensified its persecutions of the sects that had broken away from the official Church as well as other religions. In 1905, with the partial victories of the revolutionary movement and the limitations on the czar's absolute power, Pobedonostsev resigned from his duties. His hatred of the Jews stemmed from the belief that, because the Jews were a more talented people than the Russians, it was likely that in

time they would dominate the latter both materially and intellectually.

Pobedonostsev supported the anti-Jewish legislation (“*May Laws”) of 1882, and the law of 1887 limiting the percentage of Jews in schools, and he rejected decisions of the Pahlen Commission of 1887 which might be considered favorable to Jews. In 1891 he supported the program of Baron *Hirsch for the emigration of 3 million Jews from Russia within 25 years. He objected to the idea that the *Jewish Colonization Association (ICA) be granted authorization to settle Jews on land within the Russian Empire. The famous remark concerning the fate of the Jews of Russia – “One-third will die, one third will leave the country, and the last third will be completely assimilated within the Russian people” – has been attributed to Pobedonostsev. Collections of his letters and other writings which reveal much of his thought have been published (e.g., *K.P. Pobedonostsev i yego korrespondenty*, 1923), along with a memoir, *Reflections of a Russian Statesman* (1898).

POBEZOVICE NA SUMAVE (Czech *Pobežovice na Šumavě*; Ger. *Ronsperg*), village in W. Bohemia. The Jewish community there apparently existed in the 16th century, although the first documentary mention is not until 1664. Until the beginning of the 19th century it was the seat of the district rabbi for *Pilsen and *Klatovy, an office held by Falk Kohner, Samuel Kohn-Kostelhore, and Eleasar *Loew (1810–12). In 1724 there were 17 Jewish families in Pobezovice. The synagogue – the third in Pobezovice – was built in 1816 on the initiative of R. Joel, father of R. Bezalel *Ranshburg. Great interest was aroused in 1927 by the discovery, in the *mikveh*, of a stone bearing a Hebrew inscription reporting that *Israel b. Eliezer Ba'al Shem Tov had bathed there and pronounced the waters salutary. Consequently, Ḥasidim went there to seek cures. An extract from the confiscated *pinkas* (1773) records a tradition about the community's destruction in 1096, describes *Shabbatean and *Frankist activities, and mentions the visit of the Ba'al Shem Tov in 1744. Pobezovice was the birthplace of R. Moses Loeb Bloch and the pharmacologist Emil *Starkenstein, and the residence of Heinrich *Coudenhove-Kalergi, whose library of Judaica was deposited in the synagogue. The Jewish population declined from 212 persons in 1848 to 193 in 1893, 63 in 1921, and 41 (2% of the total population) in 1930. With the annexation of the Sudeten area by Germany in 1938, almost the entire community fled, the remaining few being expelled to no-man's-land. The synagogue was burnt down on *Kristallnacht*, Nov. 10, 1938, and the cemetery was destroyed. Most of the Jews managed to emigrate, mainly to England and Palestine.

POCHEP, city in Oriol district, Russian Federation. Jews are mentioned in the 17th century, and were massacred in the *Chmielnicki uprising. In 1882 in a big fire destroyed 100 houses and 120 shops. There were 3,172 Jews (about 33% of the total population) living in Pochep in 1897. The *Chabad yeshivah in the town was headed by the local rabbi Joshua Nathan Gnessin. Among the yeshivah students were his son Uri Nissan *Gnessin and J.H. *Brenner. Jews numbered 3,616 (27.1% of the population) in 1926, with the number dropping by 1939 to 2,314 (15% of the total population). The Germans arrived in Pochep on August 22, 1941. Some of the Jews managed to escape. There were hundreds of Jews among the 2,200 people killed there. After the liberation a monument with an inscription in Hebrew was erected on the mass grave of the murdered Jews.

POCOCKE, EDWARD (1604–1691), English Orientalist and Hebraist. In 1630–36, as Anglican chaplain to the English merchants in Aleppo, Syria, Pococke was able to perfect his knowledge of Arabic, Syriac, and Ethiopic, to translate Arab historical works, and to collect the Greek and Oriental manuscripts (bought with funds provided by Archbishop William Laud) which now constitute the Pococke collection in the Bodleian Library at Oxford. On his return to England in 1636 Pococke was appointed to a chair of Arabic at Oxford especially created for him by Laud. In 1640 Pococke found himself almost dispossessed because of his royalist sympathies and friendship with the unpopular archbishop. However, the eminent Puritan Hebraist John *Selden befriended Pococke, who was reappointed to the chair of Arabic at Oxford in 1647; in the following year he was also made regius professor of Hebrew and canon of Christ Church.

Pococke was an outstanding English Hebraist and one of the leading Orientalists of the age. His share in the preparation of Bryan *Walton's London Polyglot Bible (1657) was unmatched by any other editor: He prepared the Arabic text of the Pentateuch; provided manuscript texts of the Syriac Old Testament, the Ethiopic version of Psalms, and two Syriac manuscripts of Psalms; and also prepared parts of the Syriac New Testament with annotations and a Latin translation. Pococke's biblical scholarship may also be gauged from other works, such as his English commentaries on some of the Minor Prophets (Micah and Malachi, 1677; Hosea, 1685; Joel, 1691), which display familiarity with rabbinic exegesis and wide knowledge of Christian commentators (*Calvin, *Muenster, *Pellicanus). Among his other notable works are two translations of *Maimonides: *Porta Mosis* (Oxford, 1655), an annotated edition of six sections of the Mishnah commentary with the Arabic text in Hebrew characters and a Latin translation (this was the first Hebrew book printed in Oxford and at the university's expense); and a Latin version of Maimonides' preface to the Mishnah (Oxford, 1690). Pococke also cultivated friendly relations with Jews in the East (he studied with Judah Romano in Constantinople).

Of his two sons, the elder, EDWARD POCOCKE (1648–1726), was also an Orientalist; the younger, THOMAS POCOCKE, issued an English translation of *Manasseh Ben Israel's treatise *De termino vitae* on free will and predestination, entitled *Of the Term of Life... with the Sense of the Jewish Doctors* (London, 1699).

[Godfrey Edmond Silverman]

POCOCKE, RICHARD (1704–1765), British ecclesiastic and traveler. From 1735 to 1742 he traveled extensively in the Near East, visiting Erez Israel in 1738. He spent some time in Jerusalem, visited the Dead Sea in order to check Pliny's account of it, and journeyed along the Mediterranean coast to Galilee, from there going to the Lebanon, Baalbek, and Cyprus. These travels resulted in the *Description of the East and some other Countries* (2 vols., London, 1743–45), with numerous copperplate engravings. He was a good observer and the plans he made of the various sites are numerous, although not very reliable. He had a preference for less-traveled routes, which enhances the value of his journeys. He was appointed archdeacon of Dublin in 1745 and bishop of Ossory in 1756.

[Michael Avi-Yonah]

PODGAITSY (Pol. **Podhajce**; in Jewish tradition, **Pedaayets**), city, W. Tarnopol district, Ukraine. A Jewish community existed in Podgaitz during the 16th century. At the beginning of the 17th century the rabbinical seat was held by Benjamin Aaron b. Abraham Solnik, who died in 1610. He published a collection of 112 responsa and legal novellae in his work *Masat Binyamin*. After the invasion of the town by the Tatars in 1667 and the massacre which they perpetrated among the Jews, R. Zëev b. Judah Leib wrote an elegy in memory of the victims. According to the census of 1764 there were 1,079 Jews. There were some adherents of Jacob *Frank, but the greatest influence came from the ḥasidic dynasties of Belz and Ruzhany. During the 19th century, under Austrian rule, the Jewish population increased, and by 1910 numbered about 6,000. However, Podgaitz's importance subsequently declined and according to the census of 1931 only 2,872 Jews were left.

[Shimshon Leib Kirshenboim]

Holocaust Period

When war broke out between Germany and the U.S.S.R. (June 22, 1941), Podgaitz was occupied by the Germans, and the Jews immediately became victims of attacks by the Ukrainian population. They were forced to pay fines, their movement was restricted outside the city, and they were subjected to forced labor. L. Lilienfeld headed the *Judenrat. In the winter of 1941–42 many died from hunger and disease. On Sept. 21, 1942, over 1,000 Jews were sent to the *Belzec death camp,

and on October 30, 1,500 people were sent there. Survivors of the community tried to find shelter in neighboring forests; due to informers, however, many fell into German hands and were executed. On June 6, 1943, the community was completely liquidated and the ghetto and the city were declared *judenrein*. After the war the community was not reconstituted.

[Aharon Weiss]

PODHORETZ, NORMAN (1930–), U.S. editor and author. In 1960, following a brief interim after the death of Eliot E. *Cohen, *Commentary's* first editor, Norman Podhoretz, a young literary critic, was named editor of the magazine. A protégé of the critic Lionel *Trilling during his undergraduate years at Columbia, Podhoretz was the son of a milkman in Brooklyn. He studied also at the Jewish Theological Seminary. His brilliance in his studies won him a scholarship to Cambridge, England, where he found a second mentor in the famous literary critic F.R. Leavis.

Returning home, Podhoretz gained wide attention with a series of essays including “The Adventures of Saul Bellow,” “The Know-Nothing Bohemians,” and, later, “My Negro Problem – and Ours” which prefigured both the controversial positions he would later take and his literary style. In taking over at *Commentary*, where he had worked briefly earlier, however, he initially moved the magazine to the Left, publishing such radical writers as Paul *Goodman, Edgar Z. Friedenberg, and Staughton Lynd. His position on the Left was short-lived, however.

Under Cohen, *Commentary* had been one of the few influential magazines on the Left that had fought Communism and the imperial designs of the Soviet Union following World War II. As the Cold War with the Soviet Union heated up, Podhoretz moved the magazine into an even more aggressive posture in countering the threat of the Soviet Union. His book *The Present Danger* (1980) provided much of the rationale for the incoming Reagan Administration, helping to move it away from the policy of détente which characterized previous administrations, both Republican and Democratic, to one of seeking to bring down the Communist state. Following the appearance of pieces in *Commentary*, Daniel Patrick Moynihan and Jeane Kirkpatrick, who reflected these views, were appointed, respectively, by Presidents Ford and Reagan U.S. ambassadors to the United Nations.

Podhoretz's most critical role, however, took shape during the Vietnam War and its aftermath. He was an early critic of the war as peripheral to bringing down the Soviet Union, but felt it was an honest error, not a sign of the country's moral decay, as some of its critics argued. Moreover, he felt it took away from the real battle that needed to be fought: loosening the Soviet grip on eastern Europe and challenging the extension of its power in undeveloped parts of the world, especially in the Middle East. “During the bleakest days of anti-Communism,” historian Richard Gid Powers has written, “...One man summoned the will, the strength, and the imagination to commence the giant task of rebuilding the anti-Communist coalition. This was Norman Podhoretz.”

During the Six-Day (1967) and Yom Kippur (1973) wars, Podhoretz came to feel that Jews in Israel and the United States, particularly with the rise of black nationalism, had come to be threatened. The pages of *Commentary* reflected increasingly his sense that one measure of public policy for Jews was whether positions taken were good for Jews. In this respect, he argued that, however useful New Deal and Fair Deal reforms had been earlier, they had grown stale and even dysfunctional. He was troubled, also, by the use of racial quotas or preferences as appropriate remedies for racial inequality, the growth of an adversarial youth culture, and what he described as the capitulation of elite campuses to its excesses. At the heart of the positions Podhoretz took was a deep sense of gratitude to the country that made it possible for a boy from humble origins to rise in American life, expressed in a fervent, almost old-fashioned patriotism. Operating from this position, Podhoretz, along with social critic Irving *Kristol, emerged in the last third of the 20th century primarily as architects of what came to be called neo-conservatism, a socio-political posture which sought (and seeks) a halfway house between an older liberalism and traditional conservatism both at home and abroad.

Podhoretz's ideas are most fully expressed in a series of memoirs he wrote beginning with, *Making It* (1967), an account of how he gained success in intellectual circles; *Breaking Ranks* (1979), the way he freed himself from his Left-wing roots; *Ex-Friends* (1999), the price he paid for this shift; *My Love Affair with America; The Cautionary Tale of a Cheerful Conservative* (2001); and *The Prophets: Who They Were, What They Are* (2002). In 1995, Podhoretz stepped down as editor of *Commentary*. His long-time associate and collaborator, Neal Kozodoy, assumed the post. Podhoretz continued, however, to remain as editor-at-large, writing lengthy articles in support of the Bush Doctrine calling for the use of preemptory strikes when the country or its friends are faced with terrorist attacks and the war in Iraq.

Podhoretz is married to Midge Decter, a writer who focuses, also, on neo-conservative themes. His son, John, and son-in-law, Elliott *Abrams, also share his political views and are influential members of the second generation of neo-conservative thinkers.

[Murray Friedman (2nd ed.)]

PODKAMEN, town in Tarnopol district, Ukraine. A Jewish community existed in Podkamen in the 17th century at the time of the Council of the Four Lands, when the town was within the “province of Russia.” During the 18th century its rabbinical seat was held by Ḥayyim Segal Landa, who also played a role in the Council of the Four Lands. The town economy was greatly helped by the yearly trade fairs. In 1765 there were 922 Jews living in the town. During the 19th century its Jewish population increased. By 1910 it numbered 2,000 persons. As a result of World War I, it decreased to 822 (or about 27.4 percent of the population) in 1921. In spite of this decline, the Jewish community maintained an active public life. In the

elections to the communal organization in 1932, the delegate of the Zionists was elected to the presidency. There was a Hebrew school in the town and a home for Jewish orphans.

[Shimshon Leib Kirshenboim]

Holocaust Period

At the outbreak of World War II there were about 1,000 Jews in Podkamen. The Germans occupied the town on July 2, 1942. The first *Aktion* took place in August 1942, and the second at the end of September, when most of the Jews were deported to the death camp Belzec. The remaining Jews were deported on December 3, 1942 to *Brody, and shared the fate of that community. After the war the Jewish community of Podkamen was not reconstituted.

PODOLIA, region in S.W. Ukraine; formerly a region of S.E. Poland, passing to Russia in 1793. The history of the Jews in the region was largely dominated by its position as a border territory between Poland-Lithuania and the Ottoman Empire. *Medzibozh, the most ancient community in Podolia, is first mentioned in 1518. On the eve of the Union of Lublin between Lithuania and Poland (1569), there were at least 750 Jews living in nine communities of Podolia, about half of them in Medzibozh. Under Polish rule Jews took part in the settlement of Podolia, though not at the same pace and extent as in neighboring regions. In many places the settlement of Jews met with opposition on the ground that their presence as a foreign element was undesirable in the vicinity of the Ottoman Empire (see *Kamenets-Podolski). In 1639 Jews of Podolia were granted the right to have lawsuits with Christians tried before the provincial governor (*wojewoda*). There were then 18 communities in the region, of which the most important were *Nemirov, *Tulchin, *Bar, and Medzibozh. Yom Tov Lippmann *Heller was rabbi in Nemirov.

On the eve of the *Chmielnicki uprising of 1648 there were 4,000 Jews in Podolia. During this period numbers of Jews were massacred in Nemirov, Tulchin, Bar, and other communities. Thousands of Jews from Podolia and other regions of Ukraine took refuge in the fortified city of Kamenets-Podolski, where in ordinary times Jewish residence was forbidden.

Under Ottoman rule in Podolia (1672–99) the Jews enjoyed the same rights and protection as the rest of the Jews in the empire. With the return of Polish rule in Podolia, their situation again deteriorated, and it was only in 1713 that they regained the right to bring lawsuits before the provincial governor. In 1765 the Jews of Podolia numbered 38,365. Some communities of northern and eastern Podolia suffered severely at the hands of the *Haidamacks.

With the first partition of Poland in 1772, the region of “Red Russia,” where about one-third of Podolian Jewry lived, was annexed by Austria and became an integral part of *Galicia. In 1787 there were 25,438 Jews in the rest of Podolia living in about 60 towns and 853 villages. The Jews there at the time earned their livelihood by trading as innkeepers, and espe-

cially by **arenda*, which was almost entirely in Jewish hands. The proximity of Podolia to the territories dominated by Turkey, and the commercial relations between the Jews and their coreligionists in the Balkans and Turkey, resulted in the spread of kabbalistic teachings in Podolia during the 16th century, and subsequently in the success of the movement of *Shabbetai Zevi and its aftermath. The *Frankist movement originated in Podolia. The disputation with the Frankists forced on the rabbis of Podolia by the Frankist leaders in 1757 resulted in the burning of the books of the Talmud (see *Talmud, Burning of), seized from the communities throughout Podolia, in Kamenets-Podolski. Podolia was also the cradle of Hasidism. *Israel Ba'al Shem Tov lived and died in Medzibozh. Many hasidic leaders, including *Nahman of Bratslav, set up their “courts” in its towns.

When Podolia passed to Russia in 1793 the administrative province of Podolia was established, which at first had a Jewish population of 16,687. The Jews formed the majority of merchants and townsmen in the province throughout the 19th century. There were 165,000 Jews in Podolia in 1847 and an estimated 418,458 in 1881. During Passover of 1882, *pogroms broke out in *Balta and the surrounding villages, accompanied by murder and rape. Subsequently the number of Jews in Podolia declined, mainly due to the *May Laws 1882 which restricted Jewish economic activity in the villages, and to the retardation of industry and commerce in Podolia. Thousands of Jews emigrated to the provinces of New Russia and Bessarabia, as well as overseas. In 1897 Podolia was the only province whose Jewish population had decreased in comparison with the figures for 1881. The Jews then numbered 370,612 (12.3% of the total population), with a proportion of 100 men to 106 women (compared with 101 women in the neighboring province of *Kherson and 102.8 in Bessarabia). There were 88 communities with over 1,000 Jews in Podolia, including Kamenets-Podolski, Balta, *Mogilev, *Vinnitsa, *Proskurov, Tulchin, *Bershad, Medzibozh, *Chmielnik, Bar, Bogopol, *Krivoye Ozero, and Nemirov. About 55,000 Jews lived in villages. Approximately 47% of Podolia Jewry was engaged in commerce (compared with 38.6% of the Jews in the whole of Russia) and 30% in crafts and industry (35.4% in the whole of Russia). About 7,000 Jews (2%) were engaged in agriculture in Podolia, almost half of them in 16 Jewish settlements.

During the civil war in Russia (1918–21) Podolia was among the regions which suffered most severely. Pogroms began with the retreat of the Ukrainian army through Podolia before the advancing Red Army, fomented by Ukrainian army units, bands of peasants who rebelled against the Soviet regime, and units of the White Army commanded by A.I. *Denikin. Massacres took place in Proskurov and Felshin (Gvardeyskoye) in February 1919. Up to the end of 1921, 162 pogroms occurred in 52 localities of Podolia, 125 by the Ukrainians, 28 by the White Army, and nine by the Poles. The total number of victims has been estimated at about 3,700. The most sinister pogroms (after Proskurov and Felshin) took place in Trostyans (with 342 dead), *Bratslav (where pogroms occurred 11 times), and *Litin. The small Jewish settlements in the villages

were destroyed and completely abandoned. Refugees from the villages and the townlets streamed into the larger towns of the region and *Odessa. Many crossed the borders into Bessarabia and Poland. Typhus and famine also devastated the Jewish population. In many settlements (Orinin, Chmielnik, Kamenets-Podolski, etc.), Jewish *self-defense units were organized against the pogroms. They withstood the rioters but could not resist the regular army units. Many Jewish youths joined the ranks of the Red Army, within whose framework Jewish units were occasionally formed. These were specially sent on punitive expeditions against rebellious villages.

Under Communist rule Jewish communal life ceased and the position of the Jews of Podolia was the same as that of the rest of Russian Jewry. In the 1920s Jews in Podolia organized cells of *He-Ḥalutz and other secret Zionist youth movements. In 1925 a petition for the right to study Hebrew, signed by thousands of Jewish children in Podolian towns and townlets, was presented to the authorities. The Jewish population in 1926 numbered 347,481 in the seven regions which comprised the former province of Podolia (and some smaller areas outside it).

Holocaust and Contemporary Periods

During World War II, after the Germans invaded the Soviet Union, they ceded the greater part of Podolia to the Romanians. The whole of the area between the Dniester and Bug rivers extending to the Black Sea (including Odessa) became known as *Transnistria. The northwestern part of Podolia (including Kamenets-Podolski) was included in the General-Kommissariat Volhynien-Podolien. The Germans systematically murdered the Jews who did not succeed in escaping eastward, in a series of massacres which continued until the end of 1942. The region of Transnistria became a center for the concentration of the 120,000 Jews expelled from *Bessarabia, *Bukovina, and other parts of Romania, who were segregated in the ghettos set up in Mogilev, *Shargorod, Bershad, Tulchin, Balta, and other towns.

At the time of the liberation of Transnistria by the Red Army in the spring of 1944, there were some 60,000 Jews in the region, of whom 15,000 had lived there before the German occupation, while the remainder were from Romania. In 1970 there were still many thousands of Jews living in Podolia but their exact number is unknown. There was apparently no Jewish communal life except for small groups of worshipers connected with local synagogues. In the 1990s many Jews immigrated to Israel and the West.

PODOLOFF, MAURICE (1890–1985), U.S. basketball executive; engineered the merger of the Basketball Association of America and the National Basketball League into the National Basketball Association in 1949; NBA commissioner from 1949 to 1963; member of the Basketball Hall of Fame. Born in Elizabethgrad, Russia, Podoloff came to the United States at the age of six. He graduated Hillhouse High School in New Haven, Connecticut, in 1909, and then graduated Yale University in 1913 and Yale Law School in 1915. Podoloff built the New Haven Arena in 1926 together with his father and two brothers Nathan and Jacob, and created the New Haven Eagles for the newly formed Canadian-American Hockey League (CAHL). Podoloff was a charter member of the board of governors, while Nathan was team president of the Eagles. Podoloff was named secretary-treasurer of the league in 1935, and the next year the CAHL merged with the International Hockey League to form the International-American Hockey League, which became the American Hockey League in 1940. Podoloff was named president of the IAHL, a post he held until 1952. Podoloff was appointed president of the newly formed Basketball Association of America on June 6, 1946, becoming the first person to simultaneously lead two professional leagues. As he had done 13 years before, Podoloff again negotiated the merger of two leagues: the Basketball Association of America (BAA) and the National Basketball League (NBL), forming the National Basketball Association in the summer of 1948. During his 17-year tenure, Podoloff brought stability to professional basketball and helped financially unstable franchises to stay on their feet; introduced the collegiate draft in 1947; instituted the 24-second clock in 1954, perhaps the most important rules change in pro basketball history; and significantly increased national recognition of the game by securing its first television contract in 1954. Podoloff helped create an NBA that eventually grew from a small, regional association to a worldwide presence, and the standard by which all other professional sports leagues are measured. Podoloff was enshrined in the Basketball Hall of Fame as a contributor on April 25, 1974. The Podoloff Cup is given annually to the NBA's MVP.

PODVOLOCHISK (Pol. *Podwoloczyńska*), town in Tarnopol district, Ukraine. Jews were among the founders of Podvolochisk in 1860s. Before World War II Podvolochisk was within the Tarnopol district in Poland, and was a grain and milling center. Between the two world wars the town included a customs station between Poland and the Soviet Union. In 1865 there were 2,200 Jewish inhabitants in the town, who constituted 70% of the total population. In 1921 the Jews numbered 2,275 (62% of the total population). After World War I, in independent Poland, the economic situation of the Jews became precarious because the town was isolated from its previous markets; trade was reduced and the Jews could not earn their livelihood. The organization of Jewish merchants attempted to alleviate the situation but could not find a solution because of the hostile attitude of the Polish authorities who sought to

strengthen the Polish element of this border town. The situation became so bad that, by 1925, the tradesmen required communal assistance. Jewish life was vibrant in Podvolochisk and community elections were held in 1924 and 1928. Jews also participated in the municipal elections in 1933. Among the rabbis of the community were members of the *Babad family, including Joshua Heshel and his son Judah Leibush who was rabbi on the eve of the Holocaust.

[Shimshon Leib Kirshenboim]

Holocaust Period

The city was captured by the Germans on July 7, 1941, and about 70 Jews were immediately killed. Economic restrictions were decreed, and seizure of Jews for forced-labor camps began. The Ukrainian population also attacked the Jews. An extension of the Kamionki labor camp was established in the city, a number of streets were marked off by barbed wire, and young Jews were put there. Many died of overwork, disease, and torture. In September 1942 a part of the camp population was transferred to Zbaraz and Kamionki. The labor camp in the city was liquidated on June 29, 1943. Those who worked in the Kamionki camp perished later. After the war, the Jewish community was not reconstituted in the city.

BIBLICAL POETRY

Introduction

The Bible preserves several versions of the first plague upon the Egyptians. The account in the book of Exodus is commonly classified as prose, while the retellings in the Psalms are categorized as poetry:

Moses and Aaron did just as YHWH commanded: he raised the rod and struck the water that was in the Nile in the eyes of Pharaoh and in the eyes of his servants, and all the water that was in the Nile turned to blood, and the fish that were in the Nile died, and the Nile stank, and the Egyptians could not drink water from the Nile, and the blood was all over the land of Egypt (Ex. 7:20–21).

He turned their rivers into blood;

and their streams they could not drink (Ps. 78:44).

He turned their waters into blood

and killed their fish (Ps. 105:29).

What qualifies the Exodus passages as “prose” and the Psalms passages as “poetry”? What are the distinguishing features of biblical poetry?

These questions are not easily answered, in part because of a lack of scholarly consensus about many aspects of biblical poetry and in part because there are not always sharp distinctions between poetry and prose. Nevertheless, in spite of uncertainties in our understanding of this ancient, sacred literature, it is possible to delineate those sections of the Bible widely considered poetry and to outline the key stylistic features of biblical poetry.

The Search for Identifiable Indicators of Biblical Poetry

In theory, there are a number of potential ways to identify poetry in a given body of literature. We might expect to identify the poetic sections of the Bible by turning to discussions of biblical poetics, by terminology used to label a passage as poetry, or by the distinctive layout of a page. In practice, however, none of these avenues leads to a clear, consistent determination of what constitutes biblical poetry.

In the classical period, thinkers like Aristotle and Horace penned theories about the nature, mechanics, and effects of poetry. In contrast, in the Bible we do not find definitions of poetry or discussions of how biblical poetry operates. In fact, biblical Hebrew does not have a general term for “poetry,” though various terms do seem to signal the presence of a poetic passage. For instance, the passage known as the “Song of Moses” is introduced with the statement: “Then Moses and the children of Israel sang this song (שִׁירָה)” (Ex. 15:1). David’s eulogy for Saul and Jonathan is labeled as a “dirge” (קִינָה) (II Sam. 1:17). Many compositions in the book of Psalms begin with the word מְזֻמָּר which is translated as a “psalm” and likely indicates a song accompanied by a stringed instrument. Such terms suggest that a number of labels were used to classify certain types of compositions; yet these titles are not used consistently throughout the Bible, nor are they affixed to every text that a contemporary scholar would consider a poetic passage.

Since these internal indicators do not point conclusively or consistently to the presence of biblical poetry, we might look to visual means in order to identify biblical poetry. When opening selected Hebrew editions or translations of the Bible, one can determine the poetic sections by the distinctive layout of the verses. For example, in *Biblia Hebraica Stuttgartensia* and the Jewish Publication Society *Tanakh*, in Genesis 4:23–24 the prose format gives way to poetic verse, signaling a shift in discourse. However, in *Biblia Hebraica Leningradensia* or the Koren *Holy Scriptures*, no graphic distinction is made between poetry and prose. A comparison of Bibles that use stichography shows that the delineation into cola is not universally agreed upon, but instead is an interpretative act determined by the scholars preparing a given edition or translation (compare, for instance, the different colon boundaries in the presentation of Jeremiah 6:14 *BHS* and *JPS*).

The convention of visually distinguishing poetic passages through stichography evolved over time. In Qumran texts versification is found sporadically (e.g., 4QPs^b and 4QPs^a). In talmudic times, spacing was used widely in certain books, but it was not required. The Talmud established special writing for only four sections: Ex. 15:1–18; Josh. 12:9–24; Judg. 5; Est. 9:7–9 (TB, Meg. 16b; TJ Meg. 3:7); the late tractate *Soferim* added Deuteronomy 32 to the list (Sof. 12:8–12). Three of these are poetic passages (Ex. 15; Judg. 5; Deut. 32); others are prose. The Talmud describes two stichographic patterns. In the first pattern, “small brick over small brick, large over large,” each line contains two columns of writing separated by a blank space in between; in the second, “small brick over large brick, large over small,” the lines alternate between one line consisting of two columns with a space in the middle, and then the next line with one column with blank spaces on both sides.

Throughout the Middle Ages, Jewish scribes commonly incorporated some type of special spacing, not only for the sections mentioned in talmudic sources, but also for other parts of the Bible, such as Psalms, Proverbs, Job, Lamentations, the Song of Asaph (I Chr. 16:8–35), and selected lists.

After the advent of the printing press, most printed masoretic Bibles abandoned stichographic arrangement of all but those passages mandated by the Talmud. Most modern scholarly editions reversed this trend, employing stichography for everything considered poetry, including many of the prophetic books.

The Presence of Poetry in the Tanakh: An Overview

Lacking conclusive indicators of the presence of biblical poetry, one must rely on stylistic features to identify biblical poetry. Though some scholars caution against drawing sharp distinctions between poetry and prose (e.g., Kugel 1981, 83), a general consensus exists about which parts of the Bible contain poetry. Although prose dominates, poetry permeates every part of the Bible, totaling approximately one-third of the corpus.

Ketuvim or Writings contains the most poetic material, including Psalms, Proverbs, Job 3:3–42:6, Song of Songs, and Lamentations, along with scattered poetic selections in Ecclesiastes (e.g., 1:2–9; 3:1–8) and other books (e.g., I Chron. 16:8–35). Poetry overshadows prose in the Latter Prophets, for most of the prophetic books contain poetic verse exclusively or predominately; Jonah and Ezekiel stand out as exceptions. In the Former Prophets, poems punctuate the narrative account of Israel’s history in Judges 5 (Song of Deborah), I Sam. 2:1–10 (Hannah’s Prayer), II Sam. 1:19–27 (David’s eulogy for Saul and Jonathan), II Sam. 22 (David’s Song), and II Sam. 23:1–7 (David’s last words). Some of the smaller poetic passages include Jotham’s fable (Josh. 10:12–13) and Solomon’s declaration to God (I Kings 8:12–13).

The Torah preserves several lengthy poems, including the Testament of Jacob (Gen. 49:2–27), the Song of the Sea (Ex. 15:1–18), the Song of Moses (Deut. 32), and Moses’ Blessing (Deut. 33). We also find a number of shorter poetic compositions or fragments, such as the Song of Lamech (Gen. 4:23–24), Miriam’s Song at the Sea (Ex. 15:21), the Song of the Ark (Num. 10:35–36); the Song at the Well (Num. 21:17–18), the Victory Song over Moab (Num. 21:27–30), and the Oracles of Balaam (Num. 23:7–10, 18–24; 24:3–9, 15–24). In some instances, often in the course of a dialogue, a few poetic verses interrupt the surrounding prose narrative, as when the man names the woman (Gen. 2:23), God speaks to Cain (Gen. 4:6–7), or Rebekah’s family bids her farewell (Gen. 24:60).

In each part of the Bible, the poetic material displays a notable degree of diversity in content. Note the range of poetic expression in *Ketuvim*, with aphorisms in Proverbs, passionate diatribes on human suffering in Job, sensual love songs in the Song of Songs, and mournful laments for the destruction of Jerusalem in Lamentations. Within the book of Psalms itself, in certain texts the speaker joyfully sings God’s praises, while in others, the psalmist cries out in pain and calls upon God’s help. Likewise, the poetry of the prophets contains many passages in which the prophets rail against the people for their moral and religious failings, and others in which they exhort their listeners to repent or entice them with visions of

a glorious future. The Torah contains a similar poetic panoply, with songs of victory, deathbed blessings, oracles, and other assorted passages. Nevertheless, for all this variety in genre and subject matter, the poetic sections of the Bible exhibit considerable stylistic similarities. Understanding biblical poetry requires a familiarity with the literary devices adeptly wielded by the writers of biblical poetry, namely parallelism, rhythm, terseness, imagery, metaphor, repetition, patterning, and other tropes.

Parallelism

The identification of parallelism as a central defining feature of biblical poetry traces back to the *Lectures on the Sacred Poetry of The Hebrews* delivered by Bishop Robert Lowth in 1753. In the context of a lecture entitled “The Prophetic Poetry is Sententious,” he endeavors to illustrate that the literature of the Prophets deserves to be classified as poetry, just like Psalms and other poetic parts of the Bible. In order to prove that “the Prophetic Muse is no less elegant and correct” (Lowth, 210), Lowth marshals a host of citations intended to demonstrate that parallelism operates the same in the Prophets as in the Psalms. Explaining what he means by the term “parallelism,” Lowth states: “The poetical conformation of the sentences, which has been so often alluded to as characteristic of the Hebrew poetry, consists chiefly in a certain equality, resemblance, or parallelism, between the members of each period” (Lowth, 210). While he acknowledges that parallelism exhibits significant variety, nonetheless he groups his examples into three “species”: synonymous, antithetic, and synthetic parallelism.

Lowth explains that in the most frequent variety, synonymous parallelism, “the same sentiment is repeated in different, but equivalent terms” (Lowth, 210). He cites a number of examples:

When Israel went forth from Egypt,
The house of Jacob from a people of strange speech (Ps. 114:1).
And nations shall walk by your light,
and kings by your shining radiance (Isa. 60:3).

In antithetic parallelism, which is most prevalent in Proverbs, “a thing is illustrated by its contrary being opposed to it” (Lowth, 215), as seen in Proverbs 27:6 (Lowth’s translation):

The blows of a friend are faithful;
But the kisses of an enemy are treacherous.

Lowth’s third category, called ‘synthetic’ or ‘constructive’ parallelism, consists of “all such as do not come within the two former classes” (Lowth, 216–17). Lowth provides a number of examples to illustrate this rather amorphous category, including the following:

I will be like the dew to Israel;
He shall blossom like the lily,
and he shall strike root like a Lebanon tree (Hos. 14:6).
Nations rage, kingdoms totter,
He raises his voice, the earth melts (Ps. 46:7).

Lowth recognizes that the degrees of resemblance in this third category are nearly infinite and that the workings of the par-

allelism can sometimes be subtle and obscure. He concludes his lecture with the caveat that lest the topic “appear light and trifling to some persons, and utterly undeserving any labour or attention,” he promises that the study of parallelism will yield copious rewards (Lowth, 220).

For over 200 years, Lowth’s tripartite understanding of parallelism dominated the discussion of biblical poetry. As subsequent scholars sought to refine Lowth’s work, they added additional categories like “incomplete parallelism,” “staircase parallelism,” and “janus parallelism.” Then, starting in the late 1970s and 1980s, a number of studies were published that challenged Lowth’s perception of parallelism and expanded our understanding of the nuances and complexities of biblical verse.

In the 1981 book, *The Idea of Biblical Poetry: Parallelism and Its History*, James Kugel contends that the ways of parallelism are numerous and varied, far exceeding Lowth’s limited three categories. He observes that the degree of connection between two parallel clauses may range anywhere from no perceivable correspondence to just short of a word-for-word repetition. He insists that the second, “B” clause does not simply restate the first, “A” clause. Instead, the B-line expands upon the A-line in a multitude of ways: reasserting, supporting, particularizing, defining, completing, or going beyond the first line. He illustrates his approach as he interprets Psalm 145:10 (Kugel’s translation):

All your works praise you, Lord
and your faithful ones bless you.

Instead of focusing on the similarities between these two clauses, Kugel draws attention to the differences. He points out that “faithful ones” is more specific than “all your works,” just as “bless” differs from the more general term “praise.” Kugel captures the various ways in which the second line differs from and develops the first with the phrase, “A is so, and *what’s more*, B is so” (Kugel 1981, 8).

In the 1985 work, *The Art of Biblical Poetry*, Robert Alter highlights what he terms the “impulse to intensification” in biblical poetry. He argues that even in lines that appear at first glance to be nearly synonymous, a closer reading often reveals a “dynamic progression” from one half of the line to the next. He points out that many parallel lines move from a common word in the first line to a more poetic term in the second, a pattern that can be seen in Psalms 114:1 above, where the unique phrase “a people of strange speech” follows the common term “Egypt.” According to Alter, the treatment of numbers in poetic parallelism exemplifies this pattern of intensification, for a number in the first clause usually is increased in the second clause by one, a decimal, or a decimal added to the number. For example, in Genesis 4:24, “sevenfold” is paired with “seventy and seven,” and in Amos 1–2, “three” parallels “four.” He asserts that in biblical poetry “the characteristic movement of meaning is one of heightening or intensification...of focusing, specification, concretization, even what can be called dramatization” (Alter 1985, 19).

During this same time period, a number of scholars turned away from Lowth's three-fold model of poetic parallelism by shifting the focus of the discussion from semantics to grammar (see Collins 1979; Geller 1979; O'Connor 1980; Greenstein 1982). In the 1985 study, *The Dynamics of Biblical Parallelism*, Adele Berlin applies the study of linguistics to the topic of parallelism, but she does so in a more expansive manner, one that helps the reader to uncover and appreciate the intricacies of biblical parallelism. She sees parallelism as a multifaceted phenomenon, one that involves grammatical, lexical-semantic, and phonological aspects on the level of individual words, as well as clauses and larger expanses of a text. Instead of drawing a stark contrast between synonymous and antithetical elements, she asserts that parallelism achieves its effectiveness from the interplay of equivalence and contrast along these various aspects and levels.

Isaiah 1:10 provides a good example of the dynamic nature of poetic parallelism:

Hear the word of YHWH, leaders of Sodom,
Give ear to the instruction of our God, people of Gomorrah.

The two cola in this verse certainly meet Lowth's definition of synonymous parallelism, for the same sentiment appears to be repeated in "different, but equivalent terms." However, further investigation reveals varying degrees of equivalence and contrast. Looking first at the lexical aspect of this bi-colon, the correspondence between the words in the two cola may range from exact equivalence to complete contrast. In this case, we find a number of word pairs that exhibit a high degree of semantic similarity. The divine names "YHWH" and "God" belong at the far end of the scale, for the two names point to the same referent. The verbs "hear" and "give ear" are frequently paired terms that both call upon the audience to listen, though the first verb is more standard and the second more poetic. Similarly, the nouns "word" and "instruction" are both used to designate God's teaching, though the first term is more general and the second more specific. With the last two words in each colon, we move more toward the contrast side of the scale. The nouns "leaders" and "people" cannot be considered synonymous, for the first word refers specifically to the ruling class, whereas the second denotes the population as a whole. The place names "Sodom" and "Gomorrah" identify two different cities, though often the nouns appear as a consecutive, fixed phrase ("Sodom and Gomorrah"); the two cities symbolize a place of debauchery and sin.

Expanding the scope of the examination from the relationships between the individual words to the connections between the two cola as a whole, on a semantic level, the two lines appear fairly synonymous: the second colon echoes the basic sentiment of the first. In both sentences, the prophet calls the intended audience to listen to God's message. By invoking the place names Sodom and Gomorrah, Isaiah metaphorically maligns his listeners, a fitting prelude to the divine diatribe that follows.

Applying the same approach to the grammatical aspects of the verse reveals a similar amalgam of relationships of equivalence and contrast. Syntactically, the two sentences are identical:

Verb + Direct Object (noun + divine name) + Subject (noun + place name)

However, when we unpack each colon grammatically, we discover a number of contrasting elements. While the verbs are both second person plural imperatives, they differ in conjugation: *qal* and *hif'il*. The masculine noun דבר ("word") contrasts with the feminine תורה ("instruction"). This difference in gender is supplemented by the place names, for while names of cities are usually regarded as feminine, the masculine looking סדום ("Sodom") contrasts with the feminine looking עמרה ("Gomorrah"). Likewise, the plural noun קצינים ("leaders") and the singular עם ("people") introduce a contrast in number. The two divine names also differ in several respects: unlike the unmarked, singular YHWH, the word אלהינו ("our God") is grammatically plural and marked with the addition of the first person plural suffix.

These various types of grammatical variation stand in opposition to the more pervasive sense of semantic and syntax similarity. What sort of exegetical insights can this sort of analysis yield? In this case, the interplay of equivalence and contrast on these different levels animates the verse. In addition, the grammar reinforces the prophet's message. By addressing both the leaders and the people as a whole, Isaiah implies that all strata of society are guilty and thus fitting recipients of his words. In a more subtle manner, the grammatical contrast supplements this inclusive message: masculine and feminine, singular and plural, all need to heed God's charge to "cease to do evil and learn to do good" (Isa. 1:16–17).

Berlin also contributes to the study of biblical parallelism by introducing the linguistic concepts of paradigmatic and syntagmatic relations to describe the connections between isolated words and entire cola. Compare the relationship between the two cola in Isaiah 1:10 to the two cola in Hosea 14:2:

Return, O Israel, to YHWH your God,
for you have stumbled because of your sins.

In this case, the two halves of the verse do not mirror each other syntactically or echo each other semantically. Instead, the second colon continues the topic introduced in the first colon, providing a justification for the prophet's call to return. The relationship between the two cola in Hosea 14:2 can be termed "syntagmatic," whereas the connection between the two parts of Isaiah 1:10 can be labeled "paradigmatic," concepts introduced by the influential linguist, Ferdinand de Saussure. "Syntagmatic" refers to the linear relationships between the signs in a sentence, the way the words and sentences connect to one another and form a sequence. "Paradigmatic" refers to the way words and phrases can substitute for one another. Applying these concepts to the level of words helps us to differentiate the paradigmatic connection between a word pair like "hear" and "give ear" in Isaiah

1:10, where one word substitutes grammatically and semantically for the other, and the syntagmatic link between Sodom and Gomorrah, where the parallel terms constitute the break up of a continuous or fixed phrase. A good example of a syntagmatic word pair is found in Judges 5:12, where “Barak” parallels “son of Abinoam.”

Often, the nature of the relationship is not as clear as in Isaiah 1:10 and Hosea 14:2, or a passage may combine paradigmatic and syntagmatic elements. In some cases, how one views the relationships between isolated words and the cola as a whole can influence how one interprets a given passage. For example, Hosea 14:3 reads:

Take with you words
And return to YHWH.

If we consider “taking words” and returning to God as paradigmatic phrases, meaning that the two cola can be substituted for or equated with one another, that implies that repentance involves a verbal confession or declaration of the sort provided by Hosea in the subsequent verses. In contrast, if we understand the two phrases as syntagmatic, or as two parts of a consecutive sequence, that suggests that one must speak words of contrition *before* one can reconcile with God.

Scholars like Berlin, Alter, Kugel, and others have helped to refine our reading of biblical poetry. Their work encourages us to look at poetic parallelism not simply as a mirror, whereby one poetic line tends to reflect the other in a fairly synonymous manner. Instead, like a kaleidoscope, parallelism creates multifaceted, shifting patterns of equivalence and contrast, substitution, and continuity. By analyzing the various aspects and levels of a poetic passage, we gain a keener appreciation of the artistry and interpretative possibilities of this aspect of biblical poetry.

Meter and Rhythm

Interestingly, although Lowth’s discussion of parallelism stands out as the most influential aspect of his writings on biblical poetry, he did not dedicate a lecture specifically to this topic; instead, he introduced the subject in lecture 19, as part of a series of talks on the Prophets. In contrast, Lowth devoted his third lecture entirely to the topic of meter. The title of this speech summarizes his stance on the subject: “The Hebrew Poetry is Metrical.”

The question of whether or not biblical poetry displays some sort metrical system has vexed scholars from antiquity to the present day. The word ‘meter’ derives from the Greek term ‘measure’ and refers to the counting and organization of various aspects of spoken discourse. Some metrical systems measure syllables, accents, or both, as seen in the following poem by Jonathan Swift, which contains four accents and eight syllables per line (the following two selections are taken from Fussel, 11):

Creatures of ev’ry Kind but ours
Well comprehend their nat’ral Powers;
While We, whom *Reason* ought to sway,
Mistake our Talents ev’ry Day.

The system called quantitative meter counts durational units, meaning that each unit consists of ‘long’ and ‘short’ rather than ‘accented’ and ‘unaccented’ syllables. In the poem ‘Iambicum Trimetrum,’ Edmund Spenser imitates this type of meter, which was used in most Greek and Roman poetry:

Unhappy verse, the witness of my unhappy state,
Make thyself flutt’ring wings of thy fast flying
Thought, and fly forth unto my love, wheresoever she be.

Over the centuries, scholars have scoured the poetic sections of the Bible, looking for signs of these various forms of meter. One factor that complicates the matter is that, unlike the case regarding other ancient languages like Akkadian or Greek, we are not certain as to precisely how biblical Hebrew was pronounced. Largely influenced by contemporary poetic aesthetics – be that Greek, Arabic, Renaissance, or other types of poetry – some ancient, medieval, and modern scholars have insisted on the existence, biblical meter while others have rejected such a conclusion. Among the more recent studies of biblical poetry, the consensus has shifted toward the latter perspective. Kugel insists: “There is indeed an answer to this age-old riddle: no meter has been found because none exists” (Kugel, 301). Given the deficits in all metrical theories of biblical poetry, Berlin concludes: “It seems best, therefore, to abandon the quest for meter in the poetry of the Bible” (Berlin, 1996, 308).

While biblical poetry may not contain conclusive evidence of meter, it does display a certain degree of symmetry and sound patterning. As a result, a number of scholars suggest that we shift the focus of the discussion from meter to the broader notion of rhythm, which refers to various forms of sound repetition and regularity (Berlin 1996, 308; Kuntz, 326; Miller, 102–3; Peterson and Richards, 37–47). The observation has been made that segments of biblical verse tend to be of similar length, often with the same number of stresses in the parallel lines. For instance, when David eulogizes Saul and Jonathan, he ends his dirge with the statement:

איך נפלו גבורים
ויאבדו כלי מלחמה
How have the mighty fallen;
and the weapons of war are lost (11 Sam. 1:27).

Here, the cola each contain three stresses, though the number of syllables differs. As occurs frequently in biblical poetry, an element in the first line is absent, but assumed, in the second. The second colon compensates for the “gapped” interjection “how” by introducing a two word subject, the construct phrase “weapons of war.” This type of compensation produces a sense of balance between the two lines, adding to the appearance of rhythmic balance in biblical poetry.

Terseness

According to Berlin, the rhythm of biblical poetry results in part from the terseness of parallel lines, the fact that the lines of biblical poetry tend to be short and comprised of about the same number of words and stresses. She identifies terse-

ness as one of the defining features of biblical poetry, explaining that since “poetry has a tendency to be more terse, more concise, than non-poetic discourse,” this creates “the impression that in poetry each word or phrase is more loaded with meaning, since fewer words must bear the burden of the message” (Berlin 1996, 303). Paul Fussel refers to this quality of poetry as ‘density’: “Density of texture is attained by an interweaving of poetic elements...so firmly and tightly that, once interwoven, the separate strands resist unraveling” (Fussel, 90).

Several trends contribute to the terseness of biblical poetry. First, poetic verses frequently omit the definite article (ה), the accusative marker (את), and the relative pronoun (אשר). Compare, for instance, prose and poetic accounts of the first plague quoted earlier:

He raised the rod and struck the water (וַיִּךְ אֶת הַמַּיִם) that was in the Nile (אֲשֶׁר בַּיָּאֵר) and all the water that was in the Nile (כָּל הַמַּיִם אֲשֶׁר בַּיָּאֵר) turned to blood, and the fish that were in the Nile (וְהַדְּגָה אֲשֶׁר בַּיָּאֵר) died, and the Nile stank, and the Egyptians could not drink water from the Nile, and the blood was all over the land of Egypt (Ex. 7:20–21).

וַיִּהְיוּ יְאִרֵיהֶם לְדָם
וְנֹזְלֵיהֶם בַּל יִשְׁתִּיּוּן
He turned their rivers into blood;
and their streams they could not drink (Ps 78:44).

The juxtaposition of the two passages highlights the terseness of the psalm in contrast to the wordier prose version. The Exodus quotation repeats “the Nile” five times, whereas the psalmist varies the language, invoking the more general terms “rivers” and “streams” as a synonymous, paradigmatic word pair. In the six-word, syntagmatic bi-colon, the Psalm summarizes the narrative told with 24 words in the Exodus account.

Secondly, biblical poetry abounds with parataxis, meaning that cola often are joined together without conjunctions. In prose, hypotaxis dominates, for dependent clauses are usually linked with conjunctions that specify how one clause relates to the other. Frequently, as in the preceding examples from Psalm 78, two cola appear one after another, merely connected by the conjunction *vav* (ו), which carries a range of meanings. As seen in the discussion of Hosea 14:3, the vague nature of the conjunction *vav* can produce ambiguity, thus requiring the interpreter to determine the nature of the connection. Does the *vav* indicate that the second line repeats the basic idea of the first: Take with you words and *thus* return to YHWH? Or does it imply a sequence of actions: Take with you words and *then* return to YHWH? In many other cases, two poetic lines are juxtaposed with no grammatical marker specifying the relationship between the statements, as seen in the following citations:

You turned my mourning into dancing for me,
You undid my sackcloth and girded me with joy (Ps. 30:12).
A garden locked is my sister, bride,
a fountain locked, a spring sealed-up (Song 4:12).

Imagery, Metaphor, and Simile

The quotes from Psalm 30 and Song of Songs highlight another defining feature of biblical poetry: the abundant use of imagery. The term ‘imagery’ is a complicated term that often is used to speak about figurative language in general or the more specific trope of metaphor. In fact, the terms ‘imagery’ and ‘metaphor’ designate two distinct, though frequently overlapping literary devices. In Psalms 30:12, the speaker paints a visual picture of a person in mourning who breaks out in dancing. In Song of Songs 4:12, the speaker also evokes a mental image, but in this case, the images of the garden, fountain, and spring function as part of a comparison, the key component of a metaphor.

Imagery involves the creation of a mental image, which can be visual (sight), auditory (hearing), olfactory (smell), gustatory (taste), tactile (touch), as well as organic or kinesthetic (awareness of bodily organs and muscles) (Friedman, 560). For instance, the prophet Joel depicts of a future time of judgment, the day of YHWH, when “the beasts groan” and “the waterways are dried up” (Joel 1:18, 20). The first comment involves an auditory element, while the second is primarily visual. Amos also speaks about the day of YHWH, warning that “it shall be darkness, and not light” (Amos 5:18). When Isaiah speaks about a very different type of time, he likewise relies upon imagery, creating a vision of a wolf dwelling with a lamb and a leopard stretching out alongside a young goat (Isa. 11:6).

In these examples, the speaker uses language to take a snapshot: a picture of predators reclining alongside their former prey, a vision of total darkness, a scene of parched streams and groaning bears. In each case, as the saying goes, one picture is worth a thousand words. Amos does not specify what will happen on the day of YHWH; instead, the image of darkness communicates the general impression that this will be a dreadful time. Similarly, Isaiah paints a series of mental pictures from which his audience can extrapolate the larger point that a glorious future will bring peace and harmony among all creatures. In doing so, he taps into a larger motif that signals a return to Eden. With imagery, the poet goes beyond the straightforward language on the page, delivering a more vivid, but less explicit message. Utilizing the listener’s various senses, the writer employs a concrete image to convey a more abstract idea.

While a metaphor also evokes an image, what makes it distinct is the presence of an analogy, a comparison between a hypothetical situation and an actual situation. For example, in the extended metaphor in Isaiah 5:1–7 (the “Song of the Vineyard”), the prophet likens the actual situation, God’s displeasure about Israel’s immoral behavior, to a hypothetical situation, a gardener’s disappointment about the way the vineyard he lovingly tended yielded wild grapes. At the end of the passage, Isaiah explicates the metaphor: “For the vineyard of YHWH of Hosts is the House of Israel” (Isa 5:7). Applying the frequently used terminology coined by I.A. Richards, the subject under discussion (here, the Israelites) would be considered

the ‘tenor’ and that to which the subject is being compared (here, the vineyard) would be called the ‘vehicle.’

In a metaphor, the analogy is implicit, whereas it is explicit in a simile, a closely related trope. Examples of similes abound in biblical poetry, as seen in the following passages from the book of Hosea. At several points, Hosea favorably compares God to dew or rain in order to send the message that God nourishes Israel and will bring about her revival and success:

And He will come like rain for us,
like latter rain that waters the earth (Hos. 6:3).
I will be like dew for Israel;
he will blossom like the lily (Hos. 14:6).

In both cases, the preposition כ (“like” or “as”) signals the presence of an analogy. Other grammatical markers such as כמו, כאשר, or כן are also used in biblical similes, though with less frequency.

Elsewhere, Hosea applies a similar simile to speak about Israel instead of God. In the process, he transforms this comparison from a compliment to a criticism, from a promise of Israel’s prosperity to a depiction of her demise. In Hosea 6:4, directly after the positive comparison between God and rain quoted above, the hypothetical situation (the source of precipitation) is cast in a negative light when used to describe the actual situation (the fleeting nature of Israel’s covenantal faithfulness):

What shall I do for you, Ephraim,
and what shall I do for you, Judah,
and your loyalty is like a morning cloud,
and like dew that early goes away?

Further on, Hosea incorporates nearly identical language as part of a string of similes compiled to convey a somewhat different message: a warning that Israel is destined for ruin as a result of her sins:

Therefore, they will be like a morning cloud,
and like dew that early goes away,
like chaff driven away from the threshing floor,
and like smoke from a window (Hos. 13:3).

This litany of similes, each of which is introduced with the marker כ, provides the prophet with a vivid, effective means of chastising his audience.

With a metaphor, the speaker crafts the comparison in a variety of ways. The most obvious type of metaphor takes the form of a predicative statement, as in “YHWH is my shepherd” (Ps. 23:1), “All flesh is grass” (Isa. 40:6), or “Israel is a ravaged vine” (Hos. 10:1). Each of these nominal sentences equates one object with another object, thus creating an anomaly. In other instances, the metaphor is introduced by weaving together words connected with the actual situation and vocabulary associated with the hypothetical situation. For example, in the previous citation from Isaiah 1:10, the prophet compares his audience to the archetypal sinners of Sodom and Gomorrah by linking the second person plural imperative verbs and the

nouns “leaders” and “people” with the place names “Sodom” and “Gomorrah.” The Israelites addressed are not, in fact, residents of Sodom and Gomorrah, but only metaphorically equated with them. In Amos 1:2, the metaphor is more subtle, created by pairing a divine subject with a verb primarily associated with the sound produced by lions:

YHWH roared from Zion,
and from Jerusalem he raised his voice.

The combination of “YHWH” and “roared” creates an incongruity that, in part, marks this statement as a metaphor.

In the following example, it is the larger context that exposes the anomalous nature of the analogy. In the beginning of the book of Isaiah, God states:

Children I reared and raised,
and they rebelled against Me (Isa. 1:2).

If a parent had spoken these words about his or her children, there would be nothing incongruous about the sentence; thus, it would not constitute a metaphor. Here, however, the larger context establishes that the speaker is God, the subject is Israel, and the comparison provides a means of expressing God’s sense of anger and disappointment about the Israelites’ actions. The pairing of a divine, first person subject with verbs typically associated with the actions of human parents generates a semantic incongruity that identifies this statement as a metaphor. As these examples demonstrate, a metaphor contains both an analogy and an anomaly. In contrast, a simile lacks any sort of anomalous element, for it explicitly compares two entities, without equating them.

Interpreting metaphors and similes involves unpacking the common features that motivate the analogy, what Max Black labels the ‘associated commonplaces’ (Black, 74). Imagine a Venn diagram, with “God” in one circle and “dew” in another. What qualities do the two have in common? What characteristics would fit in the overlapping section of the two circles? In the abstract, we might compile a list of various attributes shared by God and dew. However, when interpreting the simile as it appears in Hosea 14:6, the relevant question is: What specific qualities are focused upon in this particular verse? In Hosea 14, the larger context allows the interpreter to decipher the associated commonplaces, for the subsequent verses describe how Israel will flourish like a verdant plant. One can infer from the larger passage that just as dew nourishes trees and flowers, so God will sustain and support Israel so the nation can thrive. In a separate context, when the prophet applies the same analogy to Israel, different associated commonplaces drive the comparison. In Hosea 6:4, the clause “that early goes away” modifies the simile “like dew,” thereby specifying what Israel has in common with dew: just as dew evaporates rather quickly, so Israel’s loyalty to God is fleeting. When the same simile appears in Hos 13:3, the surrounding context confirms the accuracy of this reading. Morning clouds, dew, chaff, and smoke are all ephemeral, a characteristic that the prophet warns will be true for Israel as well. As these ex-

amples demonstrate, in many cases, the associated commonplaces are made clear by modifying phrases or the broader context; sometimes, however, analyzing the analogy requires a greater degree of conjecture and interpretative effort.

Note that many of these examples involve metaphors or similes for God. Speaking about the divine naturally demands the use of metaphor or simile, for human beings can only attempt to articulate ideas about God by applying the known and the familiar. For instance, in order to impress upon Israel God's commitment to comfort the exiles, God is pictured as a loving mother:

a person whose mother comforts him,
so I will comfort you (Isa. 66:13).

The wording of the simile makes it clear that comfort is the associated commonplace generating the comparison. The prophetic books in particular contain an array of analogies for God. In addition to those cited so far (dew, shepherd, lion, parent), we find an abundance of metaphors, some drawn from the sphere of human relationships and others from the natural world and from other semantic domains relevant to the ancient Israelites, such as husband (e.g., Hos. 2), warrior and woman in labor (Isa. 42:13–14), spring of living water (Jer. 2:13), light (Isa. 60:19), and traveler (Jer. 14:8), to name only a few.

Repetition and Patterning

David's tribute to Saul and Jonathan concludes with two phrases invoked to describe the deceased men:

How have the mighty fallen,
and the weapons of war are lost (11 Sam. 1:27).

In the first colon, literal language is used to characterize Saul and Jonathan. In the second, David communicates through figurative language, employing the image of abandoned armor to speak of the loss of Israel's military leaders. The phrase "how have the mighty fallen" is repeated two other times in this passage: once at the end of the first verse (v. 19) and again toward the end of the unit (v. 25). When a word or phrase recurs at the beginning and end of a composition, it is called an *inclusio* or envelope structure. When a word or phrase repeats a number of times, particularly at marked intervals, it is called a refrain.

Repetition stands out as an important way to convey meaning in the Bible. In poetry as well as prose, repetition of key words allows the author to highlight and emphasize central themes. For instance, in Hosea 14:2–9, the root **נ.ו.שׁ** ("to turn") appears five times. First, the prophet charges his listeners to return to God (vv. 2, 3); then he promises that God will "heal their turning back," for God's anger "has turned away" from them (v. 5; also see v. 8). Likewise, in Isaiah 60:1–3 the roots **א.ל.ה** ("light") and **ה.א.ר** ("shine") each repeat three times in this short unit, amplifying the message that the light of Zion will illuminate the darkness:

Arise, give *light*, for your *light* has come
and the glory of **יהוה** has *shone* upon you.

For behold, darkness shall cover the earth
and thick clouds the peoples;
but upon you **יהוה** will *shine*
and His glory will be seen over you.
And nations shall walk by your *light*,
and kings by the brightness of your *shining*.

Additional types of repetition can be found in poetic compositions throughout the Bible. In Isaiah 40–66, reduplication, or the side-by-side repetition of the same word, punctuates numerous passages, including: "Comfort, comfort my people" (Isa. 40:1); "I, I am **יהוה**" (Isa. 43:11); "Pass through, pass through the gates" (Isa. 62:10). In certain psalms, the same phrase repeats at the beginning of several consecutive lines, such as "how long" in Psalm 13:2–3 or "bless" in Psalm 115:12–13. Even more prominently, in Psalms 148 and 150, "Hallelujah" (**הללו יה**) ("Praise Yah") frames each psalm, functioning as an *inclusio*; in between, the verb **הללו** ("praise") starts each of the subsequent lines, seven times in Psalm 148 and ten times in Psalm 150. In other cases, the repetition appears at the end of the line, as seen in Psalm 136, where the phrase "for His steadfast love is eternal" (**כי לעולם חסדו**) concludes each of the 26 verses. As these examples demonstrate, repetition not only conveys meaning, but also serves as a structuring device and enhances the aesthetic quality of the composition.

In biblical poetry, patterns are created though repetition as well as through other means. In various psalms and in the book of Lamentations, the verses are arranged alphabetically, in what is called an acrostic (Lam. 1–4; Ps. 111; 112; 119; 145). A prominent pattern in the Bible is a chiasm, where elements in a verse or over the larger expanse of a text are arranged in reverse order. Genesis 9:6 provides a good example: "The one who sheds [A] the blood [B] of a human [C], by a human [C'] shall his blood [B'] be shed [A']." Isaiah 1:18 contain a number of overlapping patterns. Note the chiasmic arrangement of the similes in relation to the verbs in each bi-colon:

If your sins are [A] like scarlet [B],
like snow [B'], they will turn white [A'].
If they have turned red [C] like crimson [D],
like wool [D'] they will be [C'].

Looking at the two bi-cola together, a chiasmic pattern emerges in the order of the verbs, with the verb "to be" alternating with causative, color-related verbs: "are [A]...will turn white [B]...have turned red [B']...will be [A']." Focusing just on the similes, the references to red and white appear in *ABAB* order: "like scarlet [A], like snow [B]...like crimson [A], like wool [B]. With its rich use of imagery and its precisely arranged elements, Isaiah 1:18 demonstrates the potential complexity and artistry of biblical verse.

Another form of repetition and patterning involves the use of sound. Alliteration entails the repetition of the same or similar sound; in the Bible, we find ample examples of consonance, the more specific category of the repetition of consonants. For instance, listen to the way Amos 5:5 incorporates

several recurring sound patterns, which Shalom Paul attempts to capture in his English translation:

ואל תדרשו בית אל
והגלגל לא תבאו
ובאר שבע לא תעברו
כי הגלגל גלה יגלה
ובית אל יהיה לאון

But do not seek Beth-el!
Nor go to Gilgal!
Nor cross over to Beer-sheba!
For Gilgal shall go into galling exile,
And Beth-el shall become a nullity.

Isaiah 5:7 provides a good example of paranomasia, a play on words using similar sounding words with different meanings (*JPS* translation):

ויקו למושפט
והנה משפח
לצדיקה
והנה צעיקה

And He hoped for justice,
But behold, injustice;
For equity,
But behold, iniquity!

Other Poetic Devices

Paranomasia is one of a host of literary devices found in biblical poetry. Classical Greek rhetoricians coined much of the terminology that is still used today to label the manifold ways language can be manipulated to produce various rhetorical effects. The few mentioned below reflect some of the more prominent tropes in biblical poetry.

In 11 Samuel 1:27, David speaks of Jonathan and Saul as “weapons of war.” He does not compare them to armor, which would constitute a metaphor. Instead, he metonymically speaks of them using the name of an object with which they are associated. Metonymy involves a connection between two entities related in some sort of a part/whole manner; synecdoche is considered either a subset of metonymy or a distinct trope. Amos creates a metonym when he refers to ruler of Ashkelon as “the one who grasps the scepter” (Amos 1:8), thus linking the king with an action and object associated with him.

The book of Amos contains examples of a number of other tropes. Amos employs hyperbole, or emphatic exaggeration, when he expresses the message that God rejects religious rituals if people do not act with justice and morality. The juxtaposition of two verbs in the first colon amplifies the tone of the passage:

I hate, I despise your festivals;
and I take no delight in your solemn assemblies (Amos 5:21).

Earlier in the book, Amos effectively uses rhetorical questions, constructing a prophecy comprised of nine rhetorical questions. He begins by asking: “Can two walk together without having met?” (Amos 3:3). Then, question after question, he

draws his audience in so that they eventually recognize his main point: “My Lord God has spoken, who can but prophesy?” (Amos 3:8). Deutero-Isaiah cleverly crafts a rhetorical question in order to respond to the Israelites’ feeling of having been abandoned by God:

Can a woman forget her nursing baby,
have no compassion on the child of her womb?
Though these might forget, I will not forget you (Isa. 49:15).

This rhetorical question forms a metaphor that compares God to a mother in order to reassure the Israelites of God’s enduring love and commitment. The expected answer to the rhetorical question is ‘no’; but the prophet surprisingly suggests that, in certain cases, a mother might forget her child. This verse shows the limitations of a metaphor: God may be similar to a mother, but God’s powers far exceed that of any human being. As Deutero-Isaiah repeatedly reminds his listeners: “To whom can you liken God?” (Isa. 40:18); ultimately, God is beyond compare.

This example demonstrates the way poetic devices often operate in conjunction with one another. In many cases, we can identify the specific type of trope found in a poetic passage. In other cases, a writer’s creativity defies easy categorization. None of the stylistic features discussed in this article are restricted to biblical poetry. They all appear in biblical prose, though not with such frequency and intensity. As Berlin points out, it is not the mere presence of elements such as parallelism or terseness, but their predominance “which marks the poetic expression of the Bible” (Berlin 1985, 5). Appreciating the artistry of biblical poetry and the depth of its meaning requires being a skillful reader, one who can unpack the language, structure, and imagery of a poetic passage and then piece everything back together in a way that gives voice to the ideas conveyed in the elevated discourse of poetry.

[Andrea L. Weiss (2nd ed.)]

MEDIEVAL HEBREW SECULAR POETRY

Al-Andalus and Provence

Hebrew secular poetry flourished in Muslim Spain (Al-Andalus) from the middle of the 10th century to the middle of the 12th and in the Christian kingdoms of the North of the Iberian Peninsula and Provence from the middle of the 12th century to the end of the 15th (shortly before the expulsion). During these two eras, particularly the former, Spanish Jewry developed a versatile poetry of far-ranging scope which was rooted in the revival of the biblical tradition. At the same time it also evolved in the light of Muslim, and later of Christian, culture and poetry and in the spirit of contemporary rationalistic trends.

SECULAR POETRY IN AL-ANDALUS (c. 950–1150). A “golden era” was reached by the Hebrew poetry of Al-Andalus whose principal exponents were *Samuel ha-Nagid, Solomon ibn *Gabirol, Moses *Ibn Ezra, and *Judah Halevi; these three last poets attained artistic excellence both in secular and in devo-

tional poetry, i.e., liturgical poetry incorporated in the prayer service (see **Piyyut*). The most remarkable innovation of this period, however, was the creation of secular poetry which became a vehicle through which the poet could express his personal thoughts and feelings and his relation to man and society. The style and motifs of secular poetry came to influence devotional poetry, which, however, developed separately and was considered a distinct genre.

Prior to the rise of secular poetry in Spain, Hebrew poetry in the various centers (Erez Israel, Babylon, Byzantine Italy, etc.) had been liturgical only, except for a few early texts. The earliest non-liturgical poems (works by **Saadia Gaon* (tenth century) and his contemporaries), dealing with public matters, stem from Babylonia; however, the firm religious tradition of the Babylonian Jewish community precluded any far-reaching innovations. Congenial conditions for secular poetry evolved in the new Jewish community in Muslim Spain, a community not bound by tradition and prospering in an environment of religious tolerance and great cultural and ethnic diversity. It absorbed the culture of its environment and developed rapidly under the Cordoba caliphate and the petty kingdoms that were formed after the caliphate disintegrated in the 11th century.

The patronage of the Jewish courtier, who was either a government official, a financier, or a landowner, created favorable conditions for the development of secular Hebrew poetry. The most eminent Jewish courtiers attracted scholars, artists, and poets to their courts, as did their Muslim counterparts. **Menahem b. Jacob ibn Saruq* and **Dunash b. *Labrat*, the earliest Hebrew poets in Spain, were the court poets of **Hisdai ibn Shaprut*, who was himself a courtier of *Abd-al-Rahman III*, caliph of Cordoba. Most of the later poets of the Andalusian period were also court poets; a few poets, however, made their living as physicians and *dayyanim*, etc. The institution of patronage in Muslim Spain began to decline in the middle of the 12th century but continued in the Christian North of the Iberian Peninsula for a long time, though not as prominently.

The court poet depended on his patron's favor and was closely connected with the latter's fate at the royal court. (Some patrons, such as *Ibn Gabirol's Jekuthiel*, were executed as a result of court intrigues.) From the literary point of view the main drawback of court poetry was the conventionality in creativity that necessarily prevailed in the most commonly used poetic genres. One of the poet's main social functions was to compose panegyrics for his patron and dirges on the death of the latter's relatives. Thus the same motifs, images, and conventional formulations constantly recurred.

On the other hand the status of the court poet had many advantages. Poetry was part of the cultural life at the court and added to the prestige of the patron since it was the far-reaching dissemination of the poetry written at his court and the popularity it gained which spread his fame. Poetry was also a weapon in the hand of the poet, mainly in the guise of satiric poems. The poet enjoyed economic security, respectability, and sometimes even friendship, since many patrons

were erudite, and true lovers of poetry. Cultural life at the court also afforded the means for the extensive development of different poetic genres: wine and love songs for feasts, as well as other genres which did not have an immediate social function, e.g., universal wisdom poems and personal poetic complaints. The involvement of a cultured and refined reading public at the numerous courts developed a keen critical sense both in the public and in the poet and stimulated the development of poetry into a highly refined art. The dependence of the court poet on his patron was considered natural, and the decline of the institution of patronage at the end of the Andalusian period was seen by poets as a direct cause of the decline of poetry.

Poetry was a very popular art. The works of *Samuel ha-Nagid*, for example, were already known during his lifetime, as testified to by *Moses ibn Ezra* in his poetics, "In all the regions of East and West... Babylon... Erez Israel... Egypt... Ifriqiya (Tunis, etc.)... and Spain." Evidence from the Cairo *Genizah* shows that manuscripts of Spanish poems were brought from Spain to Egypt and thence to Yemen. The fact that after the decline of the Spanish center its poetry was preserved and copied in remote countries testifies to its wide distribution. In Spain itself there were many centers of poetry: *Lucena*, *Seville*, and other towns were called "cities of poetry," such as *Cordoba*, *Granada*, etc.

Language. The language of the Bible had a glorious renaissance in secular poetry and superseded other linguistic layers which had developed since the end of the biblical period, i.e., talmudic and especially paytanic Hebrew, which in Spain were considered arbitrary and chaotic. The opposition to these latter developments was at times extreme, as *Abraham ibn Ezra's* criticism (in his commentary on *Eccles. 5:1*) of the style and language of *Eleazar *Kallir*, the greatest of the early poets, who lived in Erez Israel.

This return to the ancient source of the language was a great innovation. Biblical Hebrew, considered the only accurate form of Hebrew, was seen as a clear, precise, beautiful, and divine tongue, which was superior to all other languages. The view reflected the spiritual contest with the Arabs who set up the style of the Koran as a theological and aesthetic model and developed linguistic and poetic tools for its interpretation. An answer to this challenge could only be in the adoption of a biblical style which, because of its antiquity, diversity, poetry, and accuracy preserved by the masorah, was a formidable opponent. In his work on poetics, *Kitab al-Muhadara wa al-Mudhakar* (c. 1135), *Moses Ibn Ezra* illustrates each rhetorical figure by using both contemporary Arabic and Hebrew poetry, but he primarily refers to the Bible 'so that the Arabs will not discredit it and think... that the Hebrew tongue (i.e., biblical Hebrew) lacks aesthetic rules.' He also mentions the work *Kitab la-Bad'i* (around 900) which discusses rhetorical figures in the Koran, but insists that, though contemporary poetry applies the Arabic poetic form and style, it is mainly rooted in the language of the Bible.

Philology and Poetry. The new approach not only developed out of internal apologetics and external rivalry, but was fostered by the spirit of rationalism expressed in the flourishing of sciences, including philology and philological exegesis – a prerequisite to a biblical renaissance and to the development of a new poetic style. Already the earliest poets, Menahem ibn Saruq, Dunash b. Labrat, and Samuel ha-Nagid were also philologists, while all poets had a distinct inclination for philology.

An important innovation in form was the introduction into Hebrew of an exact quantitative poetic meter, as found in Arabic poetry. The metric system (establishing a new symmetry of sound which aroused admiration) was based on a grammatical (morphological) principle: the distinction between short and long metrical units according to the exact biblical vocalization of the words.

Since quantitative meter had from its inception in Hebrew poetry been accepted as an immutable law, a preoccupation with biblical grammar and a mastery of biblical style in general was a natural outcome. Hebrew poetry used not only biblical vocabulary but also biblical idioms or verses which were interwoven into the fabric of the poem among other ornaments of style. This style, called *muṣṣiv*, was not a mechanical mosaic of quotations, but a peculiar and original combination in a new context, which often led to a surprising change in meaning whose effect sometimes was humorous. Readers brought up on the Bible studied these new effects, examined the poems in the light of the new linguistic and poetic norms, criticized them, and even corrected them.

In time, though poetry tended toward extreme biblical purism, both in vocabulary and in form (for later changes see below), semantic and syntactical changes were nevertheless introduced into biblical Hebrew. Syntax was at times determined by meter and biblical words consequently acquired a new meaning, either through the influence of similar Arabic words or through motifs drawn from Arabic poetry. The fusion of the biblical background with the new elements of stylized poetry followed clear aesthetic principles.

The poetics of the time, though formulated for Hebrew poetry by Moses ibn Ezra at the end of the Andalusian period (c. 1135), is found already in the early poetry of the period and reflects Arabic critical works and poetry. Normative and neo-classic in character, it considers secular poetry (it does not deal with devotional poetry) as an art which demands education and training even for the naturally talented. It calls for clear, formal, rhetorical, and thematic requirements.

Forms. Spanish Hebrew poetics thus demands that each poem be carefully rhymed and its meter be meticulous. Most of secular Hebrew poetry was written in the Arabic *qaṣīda* form (or in its abbreviated form, *qitā'*), i.e., it had to have one unchangeable rhyme throughout the poem and one quantitative meter dividing each verse (*bayit*) into two hemistichs. Poems in which homonyms replace the rhymes are a variation of this type of poem. The other type of secular poem was

the 'girdle poem' (the *muwashshah*) whose strophic pattern was a creation of Andalusian Arabs. While the monotony of the classical form was relieved in the "girdle poem," allowing for virtuosity in metrical schemes and rhyme patterns, it was based on a unique principle of form. The "girdle poem" combines fixed and variable rhyme elements. Each stanza has a different rhyme and is followed by a section of a varying number of verses which have the same rhyme. This rhyme recurs only in each of these sections.

In their imitation of complex and intricate forms of Arabic "girdle poems" (or of Hebrew ones by their predecessors), the Hebrew poets showed great skill in techniques of poetry. Some concluded their poems with an Arabic or Hispano-Roman *jarya*, which was frequently taken from a popular folk song. The *muwashshah* form was mainly a vehicle for entertaining and encomiastic poetry; but in Hebrew it was also assimilated into devotional poetry.

Rhetorics and General Poetics. Poetry was mainly regarded as "ornamented speech" and the creative process as a conscious art. The poet chooses the subject and themes which he then "embellishes" with figures and tropes. This view which separates form and content is foreign to the modern conception of poetry. The approach, basic to the rationalistic exegesis of metaphorical language in the Koran and the Bible (in order to refute an anthropomorphic interpretation of descriptions of God), was adopted by the theory of poetry and was also used by poets.

The poet's art is revealed in the rhetorical weave of the poem and in the details of poetic diction. It, too, is bound by tradition: conventional phrases and images recur in new combinations, as in a colorful kaleidoscope of style which changes the patterns of its permanent elements. Originality is praised but its scope is limited and is usually expressed by subtle, though sometimes surprising, variations on conventional elements rather than by daring individualistic vent and outburst, or by a new sensibility.

The choice of themes is circumscribed and conventionally fixed. Many subjects were considered unsuitable for poetry, others were only conventionally treated. Some poetic genres employ the neo-classical style which is beyond the individual and the specific. In wine songs, for example, the scenery is conventional, reinforced by traditional images: the feast par excellence or the ideal qualities of wine. Similarly, love poetry usually centers on a beautiful but harsh mistress of the type of *la belle dame sans merci*. The unhappy rejected lover humiliates himself before the beloved (in front of others who watch him, or in front of a moralizer); but he draws supreme pleasure from his torment.

In general, this poetry posits an ideal world of opposites (absolute beauty or absolute ugliness, heights of joy and delight or abysses of grief, etc.). The imagery is also often based on real or fictitious antitheses (pearls of wisdom as against the mire of folly; flames of anguish as against rivers of weeping, etc.).

As many compositions are polythematic, it is also possible to overcome the limits of convention and to express more personal or realistic views, according to the wish of the poet. Even in the most classical period Hebrew poetry is not purely formal and conventional, but allows a distinctive and personal means of expression of high literary value.

Genres. Secular poetry includes panegyrics, dirges, poems of self-praise, satire, wine songs, love poems, wisdom poems, complaints, songs of friendship and separation, etc. Genres were considered to be defined mostly by theme and to some extent by tone. This type of division, however, is not exhaustive, since each genre also has in addition to theme a specific pattern reflected in many ways, e.g., in the attitude of the speaker (personal or universal), the specific use of motifs, imagery, and even recurring formula.

The autonomy of the genres is most striking in the long poems similar to the Arabic *qasida*, which are not one unit. Traditionally, these have an “introduction” (on any subject, e.g., a feast), the “body” of the poem (treating the actual theme, e.g., panegyrics), and between these a “transition verse.” Many times, the author plays with contrasting descriptions of feelings in both parts of the poem, creating a very dynamic ambience. In these poems the division is also not exhaustive. There is often a further subdivision into many diverse secondary sections, each belonging to a different genre. Many of the long poems therefore resemble a series of short poems of different genres. Though the elements of stylization in secular poetry were highly conventionalized, poetry was not stifled; it is richer in themes than is usually thought; variations in rhetorical and descriptive usages or in combination of genres, etc., are exceedingly numerous; some important poems do not even belong to any of the set genres. The basic principles of theoretical and practical poetics, however, differed from the modern and appealed to a different type of sensibility.

Trends in Secular Poetry in Al-Andalus. The development of secular poetry testifies to a conscious and directed aim toward a continuous improvement of vehicles of expression and the increase of genres and themes within a normative framework. The character of secular poetry became defined in a relatively short period of time. Its inception was around 950 in Cordoba, under the patronage of Isaac ibn Shaprut, and particularly at the court of his son *Ḥisdai ibn Shaprut. The earliest secular poet was apparently Menahem ibn Saruq; the novelty of his poems (of which only fragments are extant or merely the names) lay in their purpose and theme, but not as yet in the synthetic Hebrew-Arabic style which was to mark the school. That style was introduced as a deliberate novelty by Dunash b. Labrat, Menahem’s rival at Ḥisdai’s court. Dunash adapted the principle of the Arabic quantitative meter to Hebrew poetry and changed its whole outlook through the integration of images, figures of speech, motifs, and genres taken from Arabic poetry. His innovation in meter aroused a sharp controversy between his and Menahem’s disciples, who claimed that he

corrupted the Hebrew language (see Isaac *Ibn Kapron, Isaac ibn *Gikatilla). While Dunash’s views prevailed and greatly influenced Spanish Hebrew poetry, he did not develop all these possibilities in his own poetry – encomiastic and polemical poems and a quasi wine song which remain poor in style. His innovations were developed and extended in the following generation by Isaac b. Levi *ibn Mar Saul, and particularly by Isaac *ibn Khalfun, who was the first professional poet to write secular poetry.

Secular poetry expanded with the appearance of Samuel ha-Nagid, who introduced (or fully developed for the first time) universal wisdom poems, encomiastic and derogatory poems, official and personal dirges, wine and love poems, ornamental epigrams, and most of the other genres of secular poetry, including a genre which was not taken up by his followers, i.e., war poems. Samuel ha-Nagid’s achievement is spectacular not only in the diversity of genres and themes he used, but in the flexibility of his style, his glittering descriptiveness, and in some aspects of his poetic diction. His high status as Jewish leader, minister serving as one of the commanders of the army, halakhist, and philologist undoubtedly also contributed toward establishing secular poetry (which greatly developed in his generation) as a branch of literature. As stated by Abraham *Ibn Daud, “In the days of Ḥisdai they started chirping and in the days of Samuel ha-Nagid they gave voice” (see Moses b. Samuel ha-Kohen *Gikatilla, and Judah b. Samuel *Ibn Balam).

His younger contemporary, Solomon ibn Gabirol, famous as a philosopher and poet, added to secular poetry a dimension of introspective depth and complexity, particularly in his personal poems which express the poet’s struggle against fate and his yearning for love. The paradox, which had served his predecessors as a rhetorical device, became in Gabirol’s poems a means through which the poet expresses his divided soul. The change of mood from despair to joy, to boasting, in his secular poetry contrasts sharply with the tone of his excellent devotional poetry, which was written in a different style (see **Piyyut*). Gabirol not only wrote personal secular poems which depart from conventions but modified existing genres by refining the diverse aspects of their conventions.

At the end of the 11th century the Spanish style had already become defined, and even minor poets, whose range was limited, produced commendable works and enriched the extensive background from which the great talents emerged. Literary activity in secular and devotional poetry increased greatly; “these groups of poets are as water, at first it flows slowly and then it gushes forth” (Moses ibn Ezra; see **Piyyut* in Spain, Isaac ibn Ghayyat, Levi b. Jacob *Ibn Altabban, *Bahya b. Joseph ibn Paquda, *Joseph b. Sheshet ibn Latimi, and Joseph b. Jacob *Ibn Sahl). The characteristics were defined and expressed in theory and in practice in the works of Moses ibn Ezra (c. 1055 to 1135) who, to some extent, represents the school. In *Kitāb al-Muḥāḍara wa al-Mudhākara*, his work on poetics, he states the school’s views on poetry: its essence, function, sources, and its practical theory of ornamentation.

In another essay *Maqāla bi al-Hadiqa fi ma'āni al-majāz wa al-haqīqa*, he introduces a theory of metaphor as related to biblical exegesis and to contemporary poetry. Among his diverse secular poems some are written in a very ornamental style, showing a preference for the metaphor over the simile and combining it with various figures of speech. He was the first to develop homonymic poems in Hebrew which he collected in his *Sefer ha-Anak*.

Secular poetry attained its classical peak with the works of the greatest Hebrew poet of the period, Judah Halevi. He gained fame not just through his personality and nationalistic sentiments, expressed in his poems and in his book *Sefer ha-Kuzari*, but for the quality of his poetry which aroused the admiration of his contemporaries. His talent found scope both in his extensive and excellent devotional poetry and in his secular poetry, expressed in its range, versatility, and perhaps most of all in its pleasing style, which the poet achieved by a very flexible use of rhetorical devices, surprising twists, and a personal tone accompanying well-known themes. Judah Halevi infused new life into the literary tradition of his time, even to the extent of deviating from convention, which he did with the freedom of the master. Through new combinations he modified and changed most of the poetic genres of his time. In dirges, for example, he not only used the classic form but innovated the genre with the strophic form, to which he gave a ballad-like quality by introducing a dialogue with the deceased. His poems are also marked by a change of tone, and his love poems range from lightness and humoristic brilliance to sensuality. Judah Halevi also created new genres: poems about Zion and sea poems. He developed the new possibilities that secular poetry afforded, yet none of the later poets reached his poetic excellence or versatility.

The Andalusian period of Hebrew poetry came to an end in Judah Halevi's generation (see Solomon ibn al-Mu'alem, *Joseph b. Zaddik, and Judah b. Isaac *Ibn Ghayyat) – a very short time after his death in Egypt or Palestine (1141) and that of Moses Ibn Ezra in northern Spain (1138?). The Almohads invaded Andalusia (1145) and wrought havoc among the Jewish communities, which were completely destroyed.

SECULAR POETRY IN CHRISTIAN SPAIN. From the mid-12th century (during the Reconquista), as Jews emigrated to the north and the Christians advanced southward, secular Hebrew poetry (and Hebrew poetry in general) passed into the Christian North of the Peninsula. Although the cultural environment was no longer Muslim and the Arabic language and poetry were superseded by the Romance languages and literatures, and to some extent by troubadour poetry, secular poetry deliberately and consciously carried on the tradition of the Andalusian period. The Hebrew poets of Christian Spain at times declared themselves to be the guardians of the Andalusian tradition or merely its epigones (e.g., Judah *al-Ḥarizi in *Taḥkemoni*). Sometimes they might evince an affinity for a particular Andalusian poet and his fate (e.g., Solomon b. Reuben *Bonafed for Solomon ibn Gabirol, who had

lived about 400 years earlier). In reality, however, important changes occurred in secular Hebrew poetry in Christian Spain due both to external influence and to internal development, one of which was in the sphere of language. In theory the ideal of biblical Hebrew still prevailed. Many poets who wrote and translated *maqāmāt* stressed their intention to glorify biblical Hebrew and to prove its vigor. Al-Ḥarizi (in his introduction to *Taḥkemoni*) even presented an allegorical personification of biblical Hebrew as his muse. In practice, however, some poets by the middle of the 13th century no longer adhered to biblical purism and used more and more rabbinic (talmudic and midrashic) language, and even the contemporary scientific and philosophical language which had evolved in the late 12th century. At the same time translated literature developed to bring scientific and philosophic writings to the Jews of the Northern Christian kingdoms who could not understand the original Arabic. Speculative literature written in Hebrew also began to flourish during this period.

Though the vocabulary was expanded, poetic diction tended to a prose-like sparseness or, conversely, to a baroque-like elaborateness and to manneristic forms, i.e., the use of certain letters only, poems composed in a geometrical form, poems which could be read backward, vertically, mirror-poems, poems with echo, etc. Such devices appeared in some poetry only, but rarely allowed for genuine poetic expression. Humor and satire as poetic vehicles were already comparatively prominent in the 12th century. Parody was a popular device (e.g., parody of the marriage contract, the Mishnah, the prayer for the dead, etc.), especially in *maqāmāt* (*Judah b. Isaac ibn Shabbetai, Vidal Benveniste; see **Maqāma* and *Parody), for entertainment and, even more, for pungent social satire.

In the sphere of genres, the most prominent innovation in the Christian period was the development of the *maqāma*, which was primarily an amusing story, written in rhymed prose with special emphasis on stylistic brilliance (sometimes at the expense of the plot), interlaced with poems that had both rhyme and meter. The plot at times was only a pretext for their introduction. The *maqāma* therefore may be classified as poetry, but it also contains prose narrative elements. Al-Ḥarizi's *maqāmāt* were patterned on the Arabic works of Al-Hamdani and Al-Ḥariri, in which the hero, a likable scoundrel, appears in many independent stories, and the narrator relates his adventures. Most of the other rhymed stories – some by authors earlier than Al-Ḥarizi, e.g., *Judah ibn Shabbetai and Joseph b. Meir *Ibn Zabara, while others were later, e.g., *Jacob b. Eleazar and Isaac b. Solomon ibn *Sahula – adopted a different technique to unravel the plot and to present the characters and their function. They thus deviated from the classic *maqāma* genre. Some also show Christian influence, both in subject and in motif. In the 13th century, and perhaps somewhat earlier, the *maqāma* acquired a didactic-moralistic and satiric character and was strongly influenced by philosophy (e.g., Shem Tov *Falaquera) and by the *Kabbalah (e.g., Isaac ibn Sahula).

Beside the *maqāma*, literary correspondence also developed in a very particular way. Many Jewish intellectuals of the time maintained correspondences with co-religionists as a way of showing their ability in writing and their knowledge of Jewish culture. This correspondence included long sections of rhymed, highly rhetorical prose, and some verses. It acquired its own structure, with a prose introduction, a few initial verses indicating the number of verses of the main body of the composition, and the body itself; usually a section in prose followed, and, on the back of the paper, a few lines about the addressee.

Non-narrative metrical secular poetry also had a much wider range of subjects than in the Andalusian period. It broached topical matters, the most important of which was the major 13th-century controversy on the character and teaching of Maimonides (see Meshullam b. Solomon *de Piera, Meir *Abulafia, and the *Maimonidean Controversy). In the 14th and 15th centuries forced conversion and resistance to it was a foremost topic, beside other more classic genres (panegyrics, dirges, satiric poems, love songs, etc.). While the polemical poems were not always of great artistic value, they were typical of the adherence to reality found in secular poetry and the avoidance of ideal classicist generalizations of the Andalusian period. This trend also found expression in other poetic genres, seen in the explicit mention of places, dates, etc., in the ready acceptance of new specific concrete themes, and in the realistic description of objects (e.g., a prison cell, a chess game, or a poor man's torn coat). Other themes testify to Christian influence, particularly troubadour poetry (through Provençal and related dialects, such as Catalan) and, to a much lesser extent, Spanish poetry which was then in its beginning (though some Hebrew poets also wrote in Spanish, e.g., *Santob de Carrion Shem Tov Arduziel). Such themes were spiritual love (for a woman; e.g., Todros *Abulafia), a debate between abstract ideas (Abraham *Ibn Ezra and others), the wanderings of a Hebrew troubadour (*Isaac b. Abraham ha-Gorni), mutual invectives between poets written in the form of a troubadour tenson (Todros Abulafia and *Phinehas b. Joseph ha-Levi), nature described pastorally (Meshullam de Piera), and other subjects (as well as some manneristic effects).

Secular poetry in the Christian period through its expansion of themes and forms was more variegated than the secular poetry of the Andalusian period. At the same time, however, it usually was inferior in literary merit. There were some talented poets and some groups of poets, but there was no pleiad centering around great poets as in the Andalusian period.

Trends in Secular Poetry in Christian Northern Iberia. The beginning of the period of secular poetry in the Christian Northern kingdoms of the Peninsula (during and shortly after the destruction of the Jewish communities of al-Andalus) is represented by the versatile Abraham ibn Ezra, poet, commentator, philologist, and scientist, who disseminated the Hebrew-Spanish style and culture in Christian Spain. His extensive poetry already reveals the particular blend of An-

dalusian tradition and the beginning of the new trends in its humor, satire, realistic approach and description – mentioning places, etc., the use of new genres (e.g., poems of debate in which the proponents are abstract ideas), and in some manneristic effects. From the 12th to the 15th centuries, the fusion of Andalusian tradition with the various new elements (humor in parody, satire, concreteness, etc.) was differently effected in *maqāmāt*, rhymed stories (similar to the *maqāma* in form), and the poems interlaced in these stories which sometimes appear in a special section, e.g., at the end of *Tahkemoni* by Al-Ḥarizi (see Joseph ibn Zabara; Isaac, author of *Mishlei Arav*; Judah ibn Shabbetai; Isaac, author of *Ezrat Nashim*; Judah al-Ḥarizi; Jacob b. Eleazar; Abraham b. Samuel ha-Levi *Ibn Ḥasdai; Shem Tov Falaquera; Isaac ibn Sahula; *Kalonymus b. Kalonymus; Isaac b. Joseph ibn *Pollegar; Shem Tov Arduziel; Maimon *Galipapa; *Mattathias; and Vidal Benveniste for the development of this literature; see also **Maqāma*).

The principal innovations are first fully developed in the highly original poetry of Meshullam de Piera (early 13th century). He extensively resorts to rabbinic language and even to the language of the translators using unusual syntactic links between verses, but also sudden conceptual transitions and at times an obscure style which bears affinity to the troubadour *trobar clus*. He reduces the laudations in the panegyrics to a closing dedication (a type of troubadour *envoi*), etc.

The poet Todros Abulafia (late 13th century), whose patron was Don Isaac de la Maleha (courtier of Alfonso x, “the Wise”), also introduced novel themes into secular poetry, such as spiritual love and love poems about Arab and Christian women, description of the court and of the prison in which the poet was incarcerated, and comments in his poems on hackneyed poetic conventions. He created new genres – a panegyric for the king patterned on a troubadour poem, panegyrics in which he used bold erotic imagery, and poems of controversy with other poets. To some extent he was also an innovator in clever manneristic forms (letter combination, echo rhymes, etc.). His poetry, however, shows him to be also an epigone of the Andalusian school (particularly of Moses ibn Ezra). Todros Abulafia was still bound to the Arabic language and poetry 150 years after his city Toledo had been conquered by the Christians.

During the 13th century secular poetry also developed in countries which had not been under Muslim rule, particularly Provence, which was for more than one century a part of the Kingdom of Aragon, and as such received a strong Andalusian tradition, although through Hebrew only. Abraham b. Isaac *Bedersi (Habadrashi; of Beziers, Perpignan) tends to verbosity and flowery playfulness, employing strange images and even conspicuous mannerism in form. He seems to have been particularly fond of literary controversy with the poets of his time. His view on tradition and innovation is found in a fragment of a long and tedious poem in which he reviews early Hebrew poets, contemporary poets, and even Christian troubadours. His contemporary, *Isaac ha-Gorni, with whom he disputed, was a kind of Jewish troubadour who made the

round of the communities with his musical instruments, as he himself states in some of his poems.

The poems by *Jedaiah (ha-Penini), son of Abraham Bedersi, are manneristic like his father's, but show more talent and poetic restraint. Jedaiah is perhaps the best-known Provençal Hebrew poet by virtue of his philosophical satiric work, *Behinat Olam*, which imitates the biblical style (division into verses, etc.). *Even Boḥan* (1322), by Kalonymus b. Kalonymus (the greatest translator of Provence), a similar work but of greater literary merit, is rich in talmudic expressions. It is characterized by despair about the Jewish condition, by biting satire, and by humor.

During the last 200 years (the 14th and 15th centuries) in which secular poetry flourished, Spanish Jewry lay under the shadow of persecutions and had to contend with forced conversion. The theme, however, is expressed in Spanish Hebrew literature as early as the 13th century. Among these is the controversy on religion between Isaac Pulgar and the apostate *Abner of Burgos, carried on in polemical poetry and in *maqāmāt*.

The tendency in secular poetry toward formal mannerism and the use of linguistic and stylistic trick devices for their own sake is partly found in the poems of Ibn Soli, Joseph b. Sheshet ibn Latimi, and Samuel b. Joseph *Ibn Sasson, Isaac *Pulgar's friend. While there was also a number of good single poems, there was an increase of uninspired versification of the books of the Bible and of philosophy. Some secular poems attained a high degree of excellence, e.g., the amusing *maqāmāt* of Shem Tov Arduziel, of Maimon Galipapa, and to some extent the works of the last group of poets, Adat Nogenim, "the circle of Saragossa," which toward the end of the 14th and the beginning of the 15th century centered around the Lavi family – Solomon de Piera (a relative of the poet Meshullam de Piera), Vidal (Joseph) b. Lavi, Vidal Benvenist, Astruc *Rimoch, Solomon *Bonafed, and others. While some of them converted to Christianity after the *Tortosa Disputation in 1414, others continued to write in Hebrew.

The last prominent Hebrew poet in Christian Spain, Solomon *Bonafed, one of the younger members of the Adat Nogenim group (which had disintegrated), did not convert to Christianity. He attended to problems of immediate import; at the same time he also wrote personal poetry, e.g., love poems to various women. He launched a biting satirical attack against his enemies. (For other poets of the time, see Solomon ha-Levi, Profiat *Duran (ha-Efodi), Moses b. Isaac *Remos, Simeon b. Zemaḥ *Duran (the Rashbaz), and *Mattathias). Saadia b. Maimun *Ibn Danan, one of the last Hebrew poets of Spain, lived in Granada, the last Muslim stronghold, which had been a center of Hebrew poetry hundreds of years earlier. After the conquest of Granada and the expulsion of all Jews from Spain in 1492, Ibn Danan moved to North Africa. Among the Jews expelled from Spain were a number of poets who continued writing in other countries, e.g., Judah b. Isaac *Abrabanel, who gained some fame for his book on love written in Italian.

The Jews expelled from Spain and their descendants continued to foster the Spanish style in their countries of refuge. The influence of the Hebrew-Spanish style had, however, extended beyond the Spanish borders long before – at the time secular poetry flourished in Spain. From the 12th century onward it was taken up by Jewish communities throughout the Muslim world (Egypt, Babylonia, Yemen, etc.), but it also influenced Jews in the Christian world (Italy, to some extent Germany, northern France, and especially Provence). The expulsion from Spain led to a new flourishing of the Hebrew-Spanish style in such widely dispersed Jewish communities as Turkey, Greece, North Africa, Erez Israel, and Holland. The period extended from the 16th to the 18th centuries.

Echoes of secular and devotional poetry, particularly of the great Andalusian poets, are found in modern Hebrew poetry at the end of the 19th century and in the 20th century. This harking back, however, is only sporadic.

[Dan Pagis]

Italy

Italy was the first European country, other than Spain, in which Hebrew poetry, both sacred and secular, was developed. Although the Jewish population there was never large, the Hebrew poets in Italy made a notable contribution to Hebrew poetry. In prayer the Jews in Italy originally used the *piyyutim* of Erez Israel, but, beginning in the ninth century, Italian *paytanim* arose who, for all their dependence upon the Erez Israel *piyyut*, made their poems express something of their own time and place. Secular Hebrew poems written in Italy during the earliest period have not survived, and only one *paytan*, *Silano, who lived in the ninth century in Venosa, is known to have composed humorous verse. The best-known early *paytanim* in Italy were members of the Ahimaaz family: *Shephatiah b. Amittai and *Amittai b. Shephatiah, and later, members of the *Kalonymus family, and *Elijah b. She-maiah. Ahimaaz b. Paltiel's family chronicle, *Megillat Yuḥasin* (*Megillat Aḥima az*), written in rhymed prose, dates from the middle of the 11th century. Undoubtedly there was communication between the Jews of Spain and Provence and those of Italy, and Hebrew poetry written in Spain was known in Italy. From the beginning of the 12th century metrical poems were already being composed by Italian poets, e.g., *Jerahmeel b. Solomon (in southern Italy) and *Isaiah b. Mali di Trani. In the 13th century Benjamin delli Mansi composed a satire on his contemporaries in rhymed prose entitled *Massa Gei-Hizzayon*. The greatest secular Hebrew poet of Italy, *Immanuel b. Solomon of Rome (Manoello Giudeo), lived during the 13th and 14th centuries. His *Mahberot Immanu'el* (Brescia, 1492; critical ed., Jerusalem, 1957), containing all his prose and poems, was influenced by the poetry of Italy and Provence and the writings of Judah al-Ḥarizi, an influence Immanuel himself admitted. Immanuel was one of the first to compose sonnets in Italian and the first to compose Hebrew sonnets. His works comprise 28 compositions (*mahberot*), the last being *Mahberot ha-Tofet ve-ha-Eden* ("Hell and Paradise") in which the influence of Dante's *Divine Comedy* is recognizable. It has been sug-

gested that, since Dante's work is called *The Divine Comedy*, Immanuel's be called "The Human Comedy."

Immanuel's work inspired a diversification in secular poetry. Similarly, sacred poetry also began to acquire a new character; the poets of Italy, after the manner of the poets of Spain, composed metrical *piyyutim*. In the 15th century Italian Hebrew poets began to emancipate themselves from their servitude to Spanish meter, utilizing instead a new (syllabic) meter which did not differentiate between the long and the short syllable.

Translating works from Arabic into Hebrew became a major literary activity in 13th- and 14th-century Italy, as it had been earlier in Provence. One of the great Hebrew translators, Kalonymus b. Kalonymus b. Meir (Maestro Calo), who lived several years in Italy, became the friend of Immanuel of Rome and others of the 'group of the poets' in Rome.

The first Hebrew play, *Zahut Bedihuta de-Kiddushin*, by Judah Leone b. Isaac *Sommo of Mantua (c. 1527–1592), was written in Italy and may have been performed during the author's lifetime. Sommo stated that he wrote the comedy to demonstrate that the Hebrew language was not dead and that it was capable of expressing contemporary concerns. Apart from this play, and apparently others, Sommo also wrote poetry and was known for his 'Dialogues on Stagecraft,' a discussion in Italian of the history and nature of the theater. However, Sommo's original work was preceded by the Hebrew translation made by Joseph b. Samuel Zarfati (b. in Rome, Giuseppe Gallo; d. 1527) of the Marrano Fernando de *Rojas' important Spanish play, *Tragicomedia de Calisto y Malibea (La Celestina)*. The play, which first appeared in Burgos in 1499, had considerable influence on the development of drama. Although the translation itself has been lost, the translator's prologue is extant (see *Drama).

Leone *Modena, a man of great learning, composed poetry and prose in Hebrew and Italian and also a play in Italian. Moses b. Mordecai *Zacuto, the 17th-century kabbalist and poet, composed two Hebrew plays: *Yesod Olam* (Berlin, 1875), on the patriarch Abraham, and *Tofteh Arukh* (Venice, 1715), on punishment after death. *Tofteh Arukh* ('Prepared Hell'), a play which reflects the influence of Immanuel of Rome, was at one time read as a *musar* book. Scholars who had read the play at communal gatherings requested the poet Jacob Daniel b. Abraham *Olmo (Ferrara, 1690–1757) to compose a play about the Garden of Eden. Complying with this request, Olmo wrote *Eden Arukh* ('Eden Prepared'), which was published together with *Tofteh Arukh* in Venice in 1744. In the 17th century the brothers Jacob and Immanuel *Frances wrote poetry, satire, and polemic. Although subsequently a great deal of Hebrew poetry was composed in Italy, few innovations were introduced until the appearance in the 18th century of Moses Hayyim *Luzzatto, who began a new chapter in Hebrew poetry.

France and Germany

In the Middle Ages the Jewish inhabitants of France and Germany constituted a single cultural entity. Although it is prob-

able that secular poetry in the vernacular was composed by Jews living in this area, none of it is extant. The Hebrew poetry of the Jews of France and Germany was initially liturgical (for a further treatment see **Piyyut*). In their synagogues the Jews of these countries initially used the *piyyutim* of Italian Jewry, and those Erez Israel *piyyutim* which had been adopted in Italy. The first *paytanim* in France and Germany, who appeared at the beginning of the tenth century, were members of the Kalonymus family (Moses and Meshullam) originating from Italy. In the mid-tenth century *Simeon b. Isaac and *Gershom b. Judah ("the light of the exile") lived there. With the increase in the number of French and German *paytanim*, two of the greatest medieval *paytanim*, *Ephraim b. Isaac of Regensburg and *Ephraim b. Jacob of Bonn, made their appearance in the 12th century. Ephraim b. Isaac was the first to use Spanish meter in his *piyyutim*, and Ephraim b. Jacob integrated short *piyyutim* into his *Sefer Zekhirah*, a chronicle of the persecutions suffered by Jews of his time. Although in his *Tefillah Tikkaḥ Tehinna Tivḥar* (Ozar, 473) the 11th-century *paytan*, *Meir b. Isaac, anticipated Ephraim b. Isaac in the use of the Spanish meter in *piyyut*, this innovation was not followed up until much later. In the 12th and 13th centuries, *Judah b. Kalonymus and his son, *Eleazar b. Judah of Worms, author of the *Sefer Roke'ah*, reflected in their *piyyutim* the sufferings endured by the Jews of their era. In medieval times every rabbi composed *piyyutim*, since the people wished to hear not only the traditional *piyyutim* but also new ones expressive of their time and place, and composed by a *paytan* whom they knew. Although these *piyyutim* are important from an historical point of view, poetically they contain little originality.

A parody, *Leil Shikkorim Hu Zeh ha-Laylah* (Ozar, 721), attributed to *Menahem b. Aaron ibn Zerah, was inserted into the *Mahzor Vitry* apparently as a joke. Also extant are the satirical poems *Golim Holekhei Derekh* (Ozar 119) of Gomplin, the song, *Yom mi-Zarefat Yazati* ("The Day I Left France"), by Isaac, and the jocose poems in Hebrew and Yiddish of Menahem Oldendorf (15th–16th centuries). From the 16th to 18th centuries *paytanim* and rhymesters, whose poetry is of little value, appeared in France and Germany and in countries to which French and German Jews immigrated, e.g., Bohemia, Russia, and Poland.

England

Before the expulsion in 1290, *paytanim* in England, such as *Joseph b. Asher of Chartres, who lamented the pogrom in York (1191), and *Meir b. Elijah of Norwich (13th century) were influenced by the French *paytanim*. Meir of Norwich, in addition to *piyyutim*, composed metrical rhymes of four lines in which the first two and last two letters of the line are identical. Secular poetry, some of which was inspired by Spanish poetry, was also written. Indebted to the French fabulist, Marie de France, is the secular poetry found in *Mishlei Shualim* ("Fox Fables," latest edition, Jerusalem, 1946) by *Berechiah b. Natronai ha-Nakdan, who lived in the 13th century in Normandy and also in England. The work

is written in rhymed prose and the fables end with metrical poems.

For the modern period see *Hebrew Literature, Modern. See also **Piyyut* (includes a list of *paytanim* and poets); For a general review, see *Literature, Jewish, Hebrew poetry.

[Abraham Meir Habermann]

Research on Hebrew Poetry in the 1970s

SPAIN AND PROVENCE. The scholarly research devoted to Medieval Hebrew poetry in the mid-1970s was most notable for the publication of critical editions of the poems of the great poets of Spain. H. Brody and H. *Schirmann published an edition of the secular poems of Solomon Ibn Gabirol (1974), which included 276 original poems and 26 most probably attributable to him, garnered from 97 manuscripts and 93 printed texts. Following their work, Dov Yarden also published an edition of Ibn Gabirol's secular poems, adding in a second volume those edited by Brody and Schirmann, but adding his own interpretation. He cites the manuscripts without giving actual textual variants.

In 1976 Israel Levin published the first book in a series sponsored by the Israel Academy of Sciences, which is to include all the religious poems of Abraham *Ibn Ezra. This volume contains 262 poems out of a total of 478 by him. A commentary distinguished by great clarity accompanies all the poems and complements the description of the poet's work already published by Levin in the monograph, *Abraham Ibn Ezra, Ḥayyav ve-Shirav* (1970).

Yonah David published in 1974 a critical edition of the poems of the renowned Spanish poet and translator, Nahum ha-Ma'aravi, whose date has been established as circa 1300. Although only 13 religious and two secular poems by him are known, the publication revealed him in all his glory and splendor. He translated the *Sefer Yezirah* of Yizhar Ha-Yisraeli and the *Iggeret Teman* of Maimonides. Each translation is preceded by a poem in Hebrew by Nahum and his poetry, written in one of the most tempestuous periods of Medieval Jewish history, gives faithful and artistic expression to the period.

A.S. Halkin has published (Mekize Nirdamim, 1975) the translation of the philosophical work of Moses *Ibn Ezra *Sefer ha-Iyyunim ve-ha-Diyyunim*. The translation, an outstanding scholarly and precise work, replaces the outdated translation by Ben-Zion Halper (1924; 1966). The volume gives the Arabic original and the translation on opposite pages and includes a detailed introduction, in addition to the commentary. Keter has put out two valuable books in the field of the history of Hebrew poetry. The first, *Shirat ha-Kodesh ha-Ivrit Bimei ha-Beinayim* (1976) by Ezra Fleischer, describes the development of Hebrew religious poetry from its original center, Erez Israel, to its emergence in Spain, Italy, and Germany. He succeeds admirably in defining the special characteristics of the religious works in relation to their connection with rabbinic literature. Many of the poems are published here for the first time, and it includes an extensive, up-to-date bibliography of research in Hebrew religious poetry. The second book, *Ḥiddush u-*

Masoret be-Shirat ha-Kodesh ha-Ivrit by Dan Pagis, complements Fleischer's volume. Mention should be made also of the monumental work by N. Golb, *History and Culture of the Jews of Rouen in the Middle Ages* (1976), in which he describes the community with its leaders, supporters, and rabbis, but also deals with the history and language of its poets.

ITALY. The most significant contribution in the study of the Hebrew poetry of Italy has been the publication of critical editions of the early Italian poets, undertaken by Yonah David. He has thus far published *The Poems of Zebadiah* (1974), who lived and wrote in southern Italy in the 9th century; *The Poems of Amittai* (*Amittai ben Shefatiah, 1975), who also wrote in southern Italy (Oriah) at the end of the 9th century; one single *kerovah* for the fast of the 17th of Tammuz by Yudah ha-Kohen bi-Ribbi Mastiya, one of the first *paytanim* of Rome, who lived not later than the 10th century (1973); Abraham, known as Ezra bar Mattityah, a *paytan* of Rome, who lived in the middle of the 12th century and wrote only one work, *Yozer Le-Pesah* (1977); and the *piyyutim* of Elya bar Shemaiah, who lived in Bari during the second half of the 11th century (American Academy for Jewish Research, 1977). It gives 38 poems collected for the first time.

Dramatic works have not been overlooked. *Noam*, an oratorio on the Revelation, by Mattitiah Nissim Tireni (Ancona, 1745; died after 1810), has been published in a limited edition of 100 copies.

After the publication of critical editions of two of the plays of Moses Ḥayyim Luzzato (*Ma'aseh Shimshon*, 1967; *Migdal Oz*, 1972), David published a comparative study of Luzzato, *Ha-Mahazot shel Moshe Ḥayyim Luzzato* (1973) and also analyzed the contribution made by him to Hebrew rhetoric and poetics in *Moses Ḥayyim Luzzato's Rhetoric and Poetics (A Comparative Study)*, Jerusalem 1978.

Ezra Fleischer made an important contribution to the study of Hebrew Poetry in Italy with his publication of the *piyyutim* of Solomon ha-Bavli, who lived and worked in the 11th century and by whom 24 *piyyutim* are extant (Israel Academy for Sciences, 1973).

Hitherto unknown poetic works of Moses Ḥayyim Luzzato have been discovered and published. They supplement those published by Klar and Ginzburg and provide additional evidence of Luzzato's poetic ability.

Mention should also be made of the new corrected edition of the Ahima'az Scroll, first published in 1944 by B. Klar, to which has been added a *seliḥah* by the author *Ahima'az ben Paltiel, *Ish Yemini mi-Yoshevei ha-Lishkah* (pp. 107–108).

Two additional volumes have been published in the field of *piyyut*. Fleischer's *Pizmonei Ha'anonimus* (Israel Academy of Science, 1974) is a critical edition of 580 poems found in a *Genizah* manuscript in the Cambridge University Library (Ms. add 3363). According to Fleischer, they were by an anonymous *paytan* who lived in Erez Israel about the end of the 9th century. In his introduction he shows that the *pizmonim* of the 'Anonymous' have preserved a distant echo of some important

developments in the history of Hebrew liturgical poetry in Oriental Jewish communities in the 9th century, which helped bring to a close the period of classical liturgical poetry and led to the emergence of the post-classical period.

In 1977 A. Mirsky published *Piyyutei Yose ben Yose*, containing 11 *piyyutim*, which are certainly by him, and four which are also attributed to him. The volume includes a comprehensive introduction dealing with the period and works of Yose.

Developments in the 1980s

During the 1980s, a number of noted scholars in the field of Medieval Hebrew Poetry died, namely: A. *Scheiber, J. *Schirrmann, N. Allony, A.M. *Habermann, G. *Vajda, H. Schwarzbaum, D. Jarden, D. Goldschmidt, D. Pagis, Y. *Heinemann, and A.L. Wilsker. Anthologies of articles from their estates, as well as memorial volumes, have begun to appear.

During the 1980s, the decade under review, editions of poetic texts from all the countries of the Diaspora as well as from Erez Israel were published.

EDITIONS – POETRY. *Erez Israel*. All the *piyyutim* of Yannai (Z.M. Rabinowitz); *piyyutim* of Eleazar Berabbi Kiler (S. Elizur). *Babylonia*. Rabbi Hai Gaon (Y. Hasida); Eleazar ben Jacob ha-Bavli (D. Jarden); Rabbi Judah Berabbi Benjamin (S. Elizur). *Byzantium*. Simeon bar Megas (Y. Yahalom). *Spain*. Joseph Bensuli (Y. David); A. Ibn Ezra (I. Levin); Y. Ibn Ezra (M. Schmelzer); Joseph Ibn Zaddik (Y. David); Samuel ha-Nagid (Ben Mishlei; D. Jarden); Isaac ibn Ghiyyat (Y. David); Judah Halevi (religious poems; D. Jarden); Jehiel ben-Harosh (Y. David); Isaac b. Solomon al-Ahdab (O. Raanan). *Provence*. Rabbi Zerachiah ha-Levi Gerondi (I. Meiseles). *North Africa*. Fradji Shawat (E. Hazan).

EDITIONS – TEXTS. *Prose and Rhymed Prose*. “*Isaac Polgarzer ha-Dat*” (J.S. Levinger); Shem Tov ben Isaac Arduziel, “*Ma’aseh ha-Rav*” (“The debate between the pen and the scissors”; Y. Nini and M. Fruchtmann); Berechiah ha-Nakdan, *Mishle Shu’alim* (“Fox Fables”; H. Schwarzbaum); *Sippurei ben Sira* (E. Yassif).

Monographs and Studies. Topics chosen focused on trends and aims in poetry and prose. (1) Poetry. The following poets and topics were studied and annotated: Judah Halevi (A. Doron; E. Hazan); Samuel ha-Nagid (T. Rosen-Moked; A. Zemach); M. Ibn Ezra (J. Dana); Erez Israel piyyut (Y. Yahalom); Saadiah Gaon (N. Allony); Eliezer Berabbi Kiler (S. Elizur). (2) Types of Hebrew secular poetry (I. Levin; T. Rosen-Moked; R. Tsur; R. Scheindlin; M. Itzhaki, Y. Feldman). (3) Types of Hebrew religious poetry and the *piyyut* of Erez Israel (E. Fleischer; D. Goldschmidt; J.J. Petuchowski). (4) Hebrew emblem-riddles in Italy (D. Pagis). (5) The history of Hebrew poetry in Spain, Provence, Italy (J. Schirrmann) and Morocco (H. Zafrani).

Edited Texts. (1) V.E. Reichert, *The Tahkemoni of Judah al-Harizi*, an English translation, vol. I, Introduction and Gates 1–15 (Jer., 1965), 234 pp.; vol. II, Gates 16–50 (Jer., 1973), 443 pp.

(2) E. Hazan, *Shirei Fradji Shawat* (Jer., 1976), a critical edition of 91 poems by the most famous Hebrew poet in Tunisia, who apparently lived in the 17th century. He came to Tunisia from Fez, Morocco, and composed a total of 900 poems which were largely religious in nature. The real name of the poet was Raphael Malah, who adopted the equivalent Arabic name Fradji Shawat.

(3) Y. Hasida, *Rav Hai Gaon, Reshuyyot le-farshiyot ha-Torah* (Jer., 1977), 63 pp.; the book contains 29 poems for sections of the Torah.

(4) R. Bonfils and A.M. Habermann (eds.), *Kalonymus ben Kalonymus, Megillat Setarim al Massekhet Purim* (Jer., 1977), a facsimile of the first edition published in Pesaro in 1513. Along with 24 pages of text there are 34 facsimile pages. The book contains an article by the translator M.D. Cassuto about Kalonymus in Rome and an introduction by Habermann on *Massekhet Purim*, its editions and printings.

(5) E. Romero (tr. and ed.), *Selomo ibn Gabirol, Poesia secular* (Madrid, 1978), 532 pp., with an introduction by Dan Pagis. This is a bilingual edition with selected texts, translations, and notes.

(6) S. Hopkins, *A Miscellany of literary pieces from the Cambridge Genizah Collection... Old Series, Box A 45* (Cambridge, 1978), 110 pp.; this work has facsimiles and copies, along with short introductions, and includes *piyyutim* by Kallir and a fragment from *Esa Meshali* by Saadiah Gaon.

(7) Y. David, *Piyyutei Yosef Bensuli* (“The Poems of Joseph Bensuli”), critical edition with introduction and commentary (Jer., 1979), 55 pp. Joseph Bensuli was an important Hebrew poet in Toledo, Spain, at the beginning of the 14th century. Fifteen liturgical collections found in Spain and elsewhere.

(8) H. Schwarzbaum, *The Mishle Shualim*, 658 p., bibliography, table of narrative types and table of narrative motifs plus a general index. In this comprehensive work the author presents not only competent translations of all the fables, but examines the various sources which influenced them and offers a comparative folkloristic analysis.

(9) Rabbi Shem Tov ben Isaac Arduziel (or Don Santo de-Carrion), *Ma’ase -Harav (The Debate between the Pen and the Scissors)*; Tel Aviv, 1980), 86 pp., edited with introduction, commentary, and notes by Y. Nini and M. Fruchtmann.

(10) I. Levin, *Shirei ha-Kodesh shel Avraham Ibn Ezra* (“Religious Poems of Abraham Ibn Ezra,” 1 (Jer., 1975), 522 pp.; 2 (Jer., 1980), 708 pp. Volume one contains 262 poems and volume two has 247 poems.

(11) M.H. Schmelzer, *Yizhak ben Avraham Ibn Ezra, Shirim* (“Isaac ben Abraham Ibn Ezra, Poems”; New York, 1980), 171 pp., edited on the basis of manuscripts, with an introduction and notes; the book contains a letter and 44 annotated poems.

(12) L.J. Weinberger, *Sefer ha-Selihat ke-Minhag Kehillot ha-Romaniyyotim* (“Romaniote Penitential Poetry”; New York, 1980), 248 pp.

(13) A. Saenz-Badillos, *Tešubot de Dunaš ben Labrat*, critical edition and Spanish translation (Granada, 1980), 124 + 164 pp.

- (14) A. Scheiber, *Geniza Studies* (New York, 1981), 570 pp.
- (15) *Amadis de Gaula (Alilot ha-Abir)*, Hebrew translation by the physician Jacob di Algaba, first published Constantinople, c. 1541. Critical edition with introduction by Z. Malachi (Tel Aviv, 1981), 240 pp.
- (16) Varela Moreno Ma Encarnacion, *Tešubot de Yehudi ben Šešet*, edited and translated with commentary (Granada, 1981), 117 pp.
- (17) Y. David, *The Poems of Joseph Ibn Zaddik* (Jerusalem, 1982). Joseph Ibn Zaddik (1075–1149) was well known as a Hebrew poet in Cordoba, Spain, at the beginning of the 12th century. This critical edition of his extant poetry, in which 36 poems are collected for the first time, includes liturgical poems, eulogies, love songs, and four lamentation.
- (18) D. Jarden, *Divan Shemuel Hanagid*; vol. 2, *Ben Mishlei* (“The Son of Proverbs”; Jerusalem, 1982), 478 pp.
- (19) L.J. Weinberger (ed.), *Bulgaria’s Synagogue Poets: The Kastoreans*, critical edition with introduction and commentary (Cincinnati, 1983), 175 pp.
- (20) I. Levin, *Iggeret Hay Ben Mekitz by Abraham Ibn Ezra*, a critical edition supplemented with a Hebrew translation of the Arabic original *Hay Ibn Yaqizān* by Abu Ali Alḥusain Ibn Abdalla Ibn Sina (Tel Aviv, 1983), 99 pp.
- (21) J. Yahalom, *Piyyutei Shimon bar Megas* (Jerusalem, 1984). The poet Simeon bar Megas lived in Byzantine Palestine in the sixth or seventh century. He is the author of a cycle of over 150 *kedushot* based on the triennial cycle then current in Palestine. His writings constitute one of the few resources for information on Palestinian Jewry, its practices and customs, during the crucial period of transition from the Byzantine to the Arabic period. Simeon Bar Megas’s 218 poems manifest a special ingenuity in vocabulary and inventiveness, in the use of neologisms, poetic form, and structures. They contribute also to knowledge of Palestinian Hebrew, which, according to the editor, was still spoken in Simeon Bar Megas’s time, at least in the villages.
- (22) J.S. Levinger, *Isaac Polgar, Ezer ha-Dat* (“A defense of Judaism”), a critical and annotated edition (Tel Aviv, 1984), 197 pp.
- (23) D. Jarden, *Shirim Ḥadashim le-Rabbi Elazar ben Yaakov ha-Bavli* (“New Poems of Rabbi Eleazar ha-Bavli”), based on manuscripts and printed editions (Jerusalem, 1984), 60 pp.
- (24) I. Meiseles, *Shirat ha-Maor. The Poems of Rabbi Zerahia ha-Levy* (Jer., 1984), 186 pp. critical edition with commentary. The complete collection of the liturgical poems of Rabbi Zerahiah ha-Levi Gerondi is presented in this volume, which contains 51 poems collected from 145 manuscripts located in 32 libraries.
- (25) L.J. Weinberger, *Jewish Poets in Crete* (Cincinnati, 1985), 211 pp., a critical edition with introduction and commentary.
- (26) Y. Ratzaby, *A Dictionary of Judeo-Arabic in R. Saadya’s Tafsir* (Ramat Gan, 1985), 151 pp.
- (27) E. Yassif, *Sippurei Ben-Sira bi-Ymei ha-Beinayim* (Jer., 1985), 324 pp.
- (28) *Ma’aseh Zofar*, an ancient story first printed in Salonika, c. 1600, republished by Z. Malachi (Lod, 1985), 72 pp., a limited edition of 100 copies.
- (29) Y. David, *The Poems of Yehiel ben-Harosh* (1986), a critical edition with introduction and commentary (Jer., 1986), 65 pp. Rabbi Jehiel ben-Harosh was a theologian, a judge (*dayyan*), and also a poet of Toledo, Spain, during the 14th century. The poems of Ben-Harosh are offered here in a critical edition of extant works, 15 liturgical poems collected for the first time. The poet was, moreover, a witness of the 1391 massacre in Toledo, and his lamentations give a historical perspective of Jewry in the Middle Ages in Spain.
- (30) D. Jarden, *Shirei ha-Kodesh le-Rabbi Yehuda Halevi* (“The Liturgical Poetry of Judah Halevi,” vol. 1: The Winter Festivals (Jer., 1978); vol. 2, The Summer Festivals (Jer., 1980); vol. 3: Other Poems (Jer., 1982); vol. 4, Poems (Jer., 1986)). The four volumes of this edition include 550 poems. In addition to an introduction, a commentary, source references and parallels, and indices are provided.
- (31) T. Alsina Trias, Olmo Lete, del. G., *El Diwan de Yosef ibn Saddiq*, according to the critical edition by Yonah David. Introduction, text, and notes (Barcelona, 1987), 116 pp.
- (32) Z.M. Rabinovitz, *The Liturgical Poems of Rabbi Yannai according to the Triennial Cycle of the Pentateuch and the Holidays*, critical edition with introductions and commentary, vol. I: Introduction, Liturgical Poems to Genesis, Exodus, and Leviticus (Jer., 1985), 508 pp.; vol. II: Liturgical Poems to Numbers, Deuteronomy and Holidays and indexes (Jer., 1987); 444 pp.
- (33) Y. David, *The Poems of Rabbi Isaac Ibn Ghiyyat (Lucena 1038–Cordoba 1089)* (Jer., 1987); the first anthology of 370 poems by this poet.
- (34) Sh. Elizur, *Rabbi Jehuda Berabbi Binjaminis, Carmina Cuncta*. Ex codicibus edidit, prolegomnis et notis instruxit (Jer., 1988), 319 pp.
- (35) Sh. Elizur, *Kedushah ve-Sir Kedushta’ot le-Shabbatot ha-Nehamah le-Rabbi Eleazar Berabi Kiler*, critical edition with commentary and epilogue (Jerusalem 1988), 109 pp.
- (36) O. Raanan, *The Poems of Ishak ben Shlomo Al-Ahdab based on manuscripts and prints*. Critical edition with commentary (Lod, 1988), 152 pp. The 90 poems in this book represent a great variety of a didactic ethical nature and humorous and satiric elements. The poet was born towards the middle of the 14th century in Castile, Spain, and died after 1429, approximately at the age of 80.
- (37) *The Piyyutim of Rabbi Musa Bujnah of Tripoli* (1989), 251 pp., were edited by Ephraim Ḥazan, who also wrote the introduction and notes. The book has two parts: the first describes North African Hebrew poetry and discusses the poet and his period, the genre of his poems and their language, while the second offers 109 *piyyutim* by this poet. Appendices provide a table of poetic meters, a list of sources, and an index to the *piyyutim*.

(38) *Pirkei Shirah*, from the treasure-houses of poetry and *piyyut* of Jewish communities, were produced by Yehudit Dishon and Ephraim Ḥazan (1990), 166 pp. The book includes, in addition to the introduction of the editors, chapters by Ya'akov Adler on the explication of a poem by Yosé ben Yosé; Yizḥak Meizlish on a heretofore unknown personal *bakkashah* by Zerariah ha-Levi; Benjamin bar-Tikvah, on a *kerovah* by Rabbi Berachiah; Judah Razaby, on songs of praise by Joseph ha-Yerushalmi; Hadassah Shai, on a selection from a *maqāma* by Joseph ben Tanḥum ha-Yerushalmi; Aaron Mirsky, on poems of Israel Najara from his *She'erit Yisrael*; Ephraim Ḥazan on eight *piyyutim* by Mandil Avi-Zimra; Meir Wallenstein, on the character of Samuel Vitale according to a poetic letter by Moses Judah Abbas.

(39) Ezra Fleischer's *The Proverbs of Sa'id ben Babshad* appeared in 1990 (320 pp.). In this book the author publishes fragments of a major collection of proverbs, written by an unknown medieval Hebrew poet, Said ben Babshad, who flourished in Iraq or in Persia at the end of the 10th and beginning of the 11th century. The eleven chapters of the book, in addition to the texts themselves, summarize the progress of this research, the linguistic issues, ideology, and poetics as well as sources of influence upon which the poet drew. The proverbs were culled from 25 manuscripts located in 10 different collections, most prominently from the Cairo *Genizah*.

(40) *Hibbat ha-Piyyut* was edited by Eliyahu Gabbai. It is a selection of *piyyutim* representing different Jewish communities. The commentary was provided by Herzl and Balfour Hakkak. This is a second edition, and it appeared in 1990 (258 pp.). The book has 18 chapters.

(41) Federico Pérez Castro published *Poesia secular Hispano-Hebrea* (1989; 399 pp.), which contains translations of 92 Hebrew poems by nine of the most outstanding medieval Hebrew poets, from Menahem ibn Saruq to Judah Halevi. Included are notes and introductions to each poem, edited by H. Schirmann in his *Ha-Shirah ha-Ivrit bi-Sefarad u-ve-Provence*. There are also a general introduction and bibliography.

(42) Carlos del Valle Rodríguez wrote *El Divan Poetico de-Dunash ben Labrat. La introuducion de la metrica arabe* (1988), 543 pp. The book has, in addition to an introduction, six chapters: (1) Dunash ben Labrat the man; (2) the poetry of Dunash; (3) language of Dunash; (4) quantitative metrics; (5) a diachronic survey of Hebrew metrics; (6) the terminology of Hebrew poetry. Moreover, all of Dunash's poems (including those of doubted attribution) are printed according to N. Allony's edition. The author added two appendices which cite the most significant works treating Hebrew metrics [text opposite translation], and finally the volume ends with a bibliography, list of terms, and list of names.

Interpretive Works. (1) C.A. Colaḥan, "Santob's Debate between the Pen and the Scissors," Dissertation, University of New Mexico (1977), 360 pp.

(2) A. Doron, "Kivvunim u-Megamot be-Heker Shirato shel Yehudah ha-Levi," Dissertation, Tel Aviv University (1977), 240 pp.

(3) N. Ben-Menahem, *Inyanei Ibn-Ezra* (Jerusalem, 1978), 373 pp., an anthology of the author's articles on Abraham Ibn Ezra.

(4) E.D. Goldschmidt, *On Jewish Liturgy: Essays on Prayer and Religious Poetry* (Jerusalem, 1978), 494 pp.

(5) *Mishnato ha-Hagutit shel Rabbi Yehudah ha-Levi*, published by the Ministry of Education and Culture, the Department of Tarbut Toranit (Jerusalem, 1978), 242 pp. The book is divided into four sections: (a) the thought of Judah Halevi, a general discussion, (b) society and state, (c) historical thought, and (d) thought and experience. Eighteen contributors participated in the volume, which was dedicated to the 900th anniversary of the birth of Judah Halevi.

(6) J.J. Petuchowski, *Theology and Poetry: Studies in Medieval Piyyut* (London, 1978), 153 pp. The book contains ten *piyyutim* in the original language, as well as in English translation, accompanied by commentary.

(7) J. Schirmann, *Le-toledot ha-shirah ve-ha-dramah ha-ivrit* ("Studies in the History of Hebrew Poetry and Drama," Jerusalem, vol. 1, 1979, 438 pp., vol. 2, 1980), 376 pp. A year before his death, Schirmann was able to collect the studies and essays which he had published from 1931 through 1978, and arrange them chronologically according to subject matter. Vol. 1 is devoted to early Palestinian *piyyut* and medieval Spanish and southern French poets. Vol. 2 deals with Hebrew poetry in Italy from its beginnings until approximately 1800, as well as with Hebrew drama during the 16th–18th centuries. The material has been revised and the biography of Judah Halevi rewritten on the basis of the *Genizah* finds of Shlomo Dov Goitein. This is a monumental work distinguished for its erudition, expertise, and meticulous care in dealing with the literary creativity of more than a thousand years.

(8) I. Levin, *Me'il Tashbez, The Embroidered Coat: The Genres of Hebrew Secular Poetry in Spain* (Tel Aviv, 1980). The six chapters of the book are divided as follows: (a) the *qasida*; (b) the war poems of Samuel ha-Nagid; (c) songs of praise; (d) poems of glory; (e) poems of complaint; (f) poems of retribution, apology, and abuse.

(9) Z. Malachi, *Be-No'am Si'ah, Pleasant Words: Chapters from the History of Hebrew Literature* (Lod, 1983). This volume contains articles dealing with five types of subject matter: (a) studies in *piyyut*; (b) Hebrew poetry in Spain; (c) Medieval Hebrew fiction; (d) the Balbo family of Candia (Crete) in the 15th century; and (e) authors and books of Amsterdam.

(10) A. Zemach and T. Rosen-Moked, *Ye'zirah Meḥukhamah: Iyyun be-Shirei Shemuel ha-Nagid* ("Sophisticated Writing: a Study of Samuel ha-Nagid's Poems"; Jer., 1983), 158 pp. The authors analyze and explain 17 poems by Samuel ha-Nagid. The book includes three short introductions which treat various biographical, thematic, and methodological aspects of the poet's work.

(11) J. Dana, *Ha-Po'etika shel-ha-Shirah ha-Ivrit bi Sefarad bi-Ymei ha-Beinayim al-pi Rabbi Moshe ibn Ezra u-Mekoroteha* ("Of Medieval Hebrew Literature, According to Moshe Ibn Ezra"; Tel Aviv, 1983), 337 pp. The book contains, in addition to an introduction, chapters devoted to: (a) content and form, (b) the best poem is that which contains the greatest falsehood, (c) the ornaments in poetry, (d) the qualification and image of the poetic outline, (e) M. Ibn Ezra as poetical theorist and as poet, and (f) influence and originality in the poetics of M. Ibn Ezra. There are also a bibliography and indices.

(12) E. Fleischer, *Ha-Yozerot be-Hithavvutam u-ve-Hitpattehutam* ("The Yotzer, Its Emergence and Development"; Jerusalem, 1984), 795 pp. This is an illuminating and comprehensive scholarly treatment of a thousand years of the development of the *yozer* form, from its beginnings in Byzantine Palestine (c. the 6th century) to its decline in the European Jewish centers. Over two hundred unpublished selections from the Cairo *Genizah* are employed by the author, the first work of its kind in Hebrew.

(13) H. Zafrani, *Poesie juive au Maroc*, (ed. Yosef Tob; Jer., 1984), 210 pp.

(14) A. Doron, *Yehuda Ha-Levi: Repercussion de su obra*, with a biographical sketch of Judah Halevi by Fernando Diaz Estaban (Barcelona, 1985).

(15) J. Dishon, *Sefer Sha'ashuim le-Yosef ben Meir ibn Zabara* ("The Book of Delight Composed by Joseph ben Meir Zabara"; Jerusalem, 1985), 292 pp.

(16) *Studies in the Work of Shlomo Ibn-Gabirol* (Zvi Malachi (ed.), Hanna David (co-ed.); Tel Aviv, 1985). The book contains two collections of articles. The first is dedicated to the philosophical elements in the poetry of Ibn Gabirol, while the second deals with the types of poems by him and the characteristics of his poetry. There were 12 contributors in addition to the editor.

(17) J. Yahalom, *Sefer ha-Shir shel ha-Piyyut ha-Erez-Yisraeli ha-Kadum* ("Poetic Language in the Early Piyyut"; Jer., 1985), 218 pp. This study deals with the language of the early Erez Israel *piyyutim* which struggled to maintain its independence between the natural needs of expression, rooted in the spoken language, and the archaic literary tradition characteristic of the *piyyutim*. During this confrontation there developed a new independent literary language which bridges the ancient times and the Middle Ages; its distinctive signs are developed and expanded in this work.

(18) Y. Silman, *Bein Filosof le-Navi: Hitpattehut Haguto shel R. Yehuda ha-Levi be-Sefer ha-Kuzari* ("Thinker and Seer: The Development of the Thought of R. Yehuda Halevi in the Kuzari"; Ramat Gan, 1985), 325 pp.

(19) T. Rosen-Moked, *Le-Ezor Shir* ("The Hebrew Girdle Poem (*Muwashshah*) in the Middle Ages"; Haifa, 1985), 245 pp.

(20) N. Allony, *Mehkarei Lashon ve-Sifrut: Pirkei Sa'adiah Gaon* (Jer., 1986), 400 pp.

(21) E. Hazan, *Torat ha-Shir be-Fiyyut ha-Sefardi le-Or Shirat ha-Kodesh shel R. Yehuda ha-Levi* ("The Poetics of the

Sephardi *Piyyut* According to the Liturgical Poetry of Yehuda Halevi"; Jer., 1986), 340 pp.; this work, with introduction, appendices and indices, discusses meter, rhyme, and euphonic word-texture: language, methods of formulation and imagery, and structural methods.

(22) Dan Pagis, *Al Sod Hatum* ("A Secret Sealed," Hebrew Baroque Emblem-Riddles from Italy and Holland; Jerusalem, 1986). This work deals with Hebrew riddles which developed in Italy and Holland in a 200-year period, 1650–1850. The ten chapters of the book cover: the field and its study; the origin of the emblem-riddle and foreign languages; the literary riddle as a social genre; the social role of the emblem-riddle; the "emblem-riddle" and related subjects; tricks of language; Aramaic, Hebrew, and the random interpolation of the key word; the body of the emblem-riddle; the unit of the false "solution," three emblem-riddles by Rabbi Moses Zacuto. There are also indices, bibliography, and an English summary.

(23) R.P. Scheindlin, *Wine, Women, and Death: Medieval Hebrew Poems on the Good-Life* (Philadelphia, New York, Jerusalem, 1986), 204 pp. The author presents the original Hebrew poem along with his own English translation, followed by commentary which explains its cultural context. Included are 31 poems, grouped into three categories: (a) Wine, description of or meditations on the wine party, a conventional Arabic social gathering; (b) Women, Golden Age poems of love and desire; (c) Death, mellow reflections on the brevity of life. Among the poets whose work is represented in this collection are: Samuel ha-Nagid, Solomon Ibn Gabirol, Moses Ibn Ezra, and Judah Halevi.

(24) M. Itzhaki, "*Ani Hashar*": *Studies in Secular Poetry in Spain* (Tel Aviv, 1986), 133 pp. This work discusses a number of poems by Samuel ha-Nagid, Solomon Ibn Gabirol, Moses ibn Ezra, and Judah Halevi in the light of normative poetics of the period.

(25) I. Levin, *Ha-Sod ve-ha-Yesod* ("Mystical Trends in the Poetry of Solomon Ibn Gabirol"; Lod, 1986), 174 pp.

(26) Y. Feldman, *Bein ha-Kotavim le-Kav ha-Mashveh* ("Semantic Patterns in the Medieval Hebrew Qasida": Tel Aviv, 1987), 130 pages. The author analyzes through semantic deductions six *qasidot* by Moses Ibn Ezra and thereby demonstrates significant principles of structure which are based on two patterns of organization: opposition or polarization and comparison.

(27) M. Itzhaki, *Ha-Hai Ge en ve-ha-Mawet Bozer* ("Man-the Vine; Death-the Reaper: The *Tocheha* Hebrew Admonishment Poetry of Spain"; Tel Aviv, 1987), 82 pp.

(28) R. Tsur, *Ha-Shirah ha-Ivrit bi-Ymei ha-Beinayim be-Perspektivah Kefulah: Ha-Kore ha-Versatili ve-Shirat Sefarad* ("Medieval Hebrew Poetry in a Double Perspective: The Versatile Reader and Hebrew Poetry in Spain." Papers in Cognitive Poetics; Tel Aviv, 1987), 221 pp. The book deals with medieval literature from three perspectives: (a) the analysis and evaluation of the poems as the result of interaction between the ideational generic figurative, and prosodic dimensions as objects of perceived meaning; (b) the skills necessary for a

versatile reader to be able to respond to a wide range of literary styles; (c) the contemporary reader's confrontations with the styles of a far-distant literary period.

(29) S. Elitzur. *Piyyutei Eleazer berabbi Kiler* (Jer., 1988), 430 pp.

Additional Bibliography on Individual Subjects. (1) *Todros ha-Levi Abulafia* (1989), 234 pp., was published by Aviva Doron. Todros ha-Levi Abulafia was born in Toledo some hundred years after the transfer of the Jewish cultural centers from Muslim Andalusia to Christian Spain. This book describes the poetry of the Hebrew-Castilian poet against the background of the cultural crossroads in which he lived and worked. The book comprises, in addition to an introduction, a selected bibliography, and three indices (poems treated in the book, subject, and name) eight chapters: (a) the author and his times; (b) Todros ha-Levi, a Hebrew author at the crossroads of literary streams; (c) national and religious expressions in the language of Todros's personal poetry; (d) time in his poetry; (e) the attitude of the poet towards his poetry; (f) love poems; (g) methods of structural and rhetorical design in his poems; (h) comments on a selection of poems from *Gan ha-Meshalim ve-ha-Ḥidot*.

(2) Rina Drory's *The Emergence of Jewish Arabic Literary Contacts at the Beginning of the Tenth Century* appeared in 1988. In addition to an introduction and summary, the book has six chapters: (a) the structure of the Jewish literary system at the beginning of the 10th century; (b) the consolidation of Hebrew and Arabic as the written languages for the Jewish literary system; (c) unequivocal literary patterns: Karaite patterns; (d) ambivalent literary patterns: wisdom proverbs; (e) biblical treatment; (f) the role of Saadia Gaon in contacts with Arabic literature. Indices of names and of works conclude this important contribution to the field.

(3) *Yehuda Halevi*, a selection of critical essays on his poetry, selected with an introduction by Aviva Doron, was published in 1988, 285 pp. It has (a) studies into the biography of the poet by H. Schirmann, S.D. Goitein, and Yosef Yahalom; (b) articles on his poems – a total of 16 items by Ḥayyim Naḥman Bialik, Franz Rosenzweig, Ben-Zion Dinur, Michael Ish-Shalom, Yitzḥak Heinemann, Aryeh Ludwig Strauss, Yisrael Levin, Moshe Schwartz, Adi Zemaḥ, Aharon Mirsky, Reuven Zur, Dov Sadan, Ezra Fleischer, Zevi Malachi, Ephraim Hazan, and Aviva Doron; (c) five appendices – Samuel David Luzzatto's *Betulat Bat-Yehudah* (1840); a diwan by Judah Halevi; from Michael Sachs' *Religious Poetry of the Jews* (1845); Heinrich Ḥayyim Brody's *Rosh Davar* to a diwan by the poet; and from Fritz Yitzḥak Baer's *The History of Jews in Christian Spain* (1945).

(4) *Abraham Ibn Ezra y su tiempo*, the acts of an international symposium held in Madrid, Tudela, and Toledo on February 1–8, 1989, 396 pp., appeared in 1990. This book contains the 45 lectures given by international scholars at the symposium held in honor of the 900th anniversary of the birth of Abraham Ibn Ezra.

Jubilee and Memorial Volumes. (1) *Shai le-Heiman* (A.M. Habermann *Jubilee Volume*), edited by Z. Malachi with the assistance of Y. David (Jer., 1977), 385 pp. This volume contains 21 articles, a bibliography of Habermann's works and an index to *piyyutim* he published, prepared by Y. David.

(2) J. Blau, S. Pines, M.J. Kister, S. Shaked (eds.), *Ḥakkirei Mizraḥ* (*Studia Orientalia, Memoriae D.H. Baneth Dedicata*) (Jer., 1979), 407 pp.

(3) G. Nahon and Ch. Touati, *Hommage a G. Vajda. Etudes d'histoire et de pensée juive éditées par...* (Louvain, 1980), 604 pp. The 40 contributions dealt with Judaica studies.

(4) Z. Malachi (ed.), *Yad le-Heiman* (*The A.M. Habermann Memorial Volume*; Lod, 1983), 434 pp. The five sections of the book deal with Medieval Hebrew literature, the heritage of Eastern Jewry after the Expulsion from Spain, bibliography and study of the Hebrew book, the history of liturgy and customs, and the memory of Prof. Habermann.

(5) *Le-Zikhro shel Ḥayyim Schirmann*, published by the Israel National Academy of Science (Jer., 1984). The essays included are "The Position of Prof. Schirmann in the Study of Hebrew Poetry," by S. Abramson; "On Retribution and Redemption in the Religious Poems of Abraham Ibn Ezra," by I. Levin, and "Ups and Downs in Ancient Hebrew Poetry," by A. Mirsky.

(6) Z. Malachi (ed), *Be-Oraḥ Mada* (*Aharon Mirsky Jubilee Volume*, essays on Jewish Culture; Lod, 1986), 619 pp. In addition to a selected bibliography of the works of A. Mirsky, the book contains essays on Jewish studies, on Hebrew poetry in Spain and North Africa, on poetry and *piyyut* and culture.

(7) G.J. Blidstein, Y. Salmon, E. Yassif (eds.), *Eshel Beer-Sheva* ("Essays in Jewish Studies in Memory of Professor Nehemia Allony"; Beersheba, 1986), 371 pp. A bibliography of the works of Nehemiah Allony prepared by R. Attal is included.

Anthologies and Collections. (1) J. Rothenberg, H. Lenowitz, and Ch. Doria, *A Big Jewish Book; Poems and Other Visions of the Jews from Tribal Times to the Present* (New York, 1978), 633 pp.

(2) K. Bosley, *The Elek Book of Oriental Verse* (London, 1979).

(3) D. Pagis (ed.), *Ke-Hut ha-Shani* ("The Scarlet Thread; Hebrew love poems from Spain, Italy, Turkey and the Yemen"; Tel Aviv, 1979), 120 pp. an anthology of 99 poems by 23 poets, dating from the 10th to the 19th centuries. The poems are arranged in 12 sections by subject and motif rather than according to chronological order.

(4) *Abraham ibn Ezra Reader*, annotated texts with introduction and commentary, by I. Levin, edited by M. Arfa (Tel Aviv, 1985), 438 pp.

(5) Angel Saenz-Badillos and Judit Targarona Borrás published an anthology, *Poetas Hebreos de-al-Andalus* (*Siglos x–xii*), in 1988, 232 pp. This is the first anthology of its type to appear in Spain: it offers selections from 12 of the greatest Hebrew poets of Spain, beginning with Menahem ibn Saruq

and ending with Abraham Ibn Ezra. The text, in an excellent translation, is accompanied by a selected bibliography.

(6) Aharon Mirsky's 731-page *Ha-Piyyut, The Development of Post-Biblical Poetry in Eretz-Israel and the Diaspora*, appeared in 1990. This large, excellent anthology contains 45 articles representing 40 years of research in the field. There are three sections to the book: (1) 16 articles on the sources of the prayers and the initial steps toward *piyyut* in the Bible; post-biblical poetry; poetry in the talmudic period; delineation of the characteristics of ancient poetry; the schools within ancient Hebrew poetry; the *piyyut* tradition in the Land of Israel; and other items.

(2) 15 articles on innovations introduced by early post-biblical poetry, including language and the poetic form; the significance of rhyme in Hebrew poetry; clarification and explication of the language of poetry, and so on;

(3) 14 articles on Hebrew poetry in Spain and Germany and the nature of the poetry which began anew in the eastern countries in the 17th and 18th centuries; evaluations of four important poets – Dunash ben Labrat, Rabbenu Gershom Meor ha-Golah, Judah al-Ḥarizi, and Israel Najara. The book ends with indices on subjects, *piyyutim* and *paytanim*.

Liturgy. (1) J. Heinemann and A. Shinan, *Tefillot ha-Keva ve-ha-Ḥovah shel Shabbat ve-Yom Ḥol* (Tel Aviv, 1977), 131 pp., deals with the weekday and Sabbath liturgy and includes explication, history, and discussion of their structure.

(2) J. Heinemann, *Prayer in the Talmud* (Berlin, 1977), a revised English edition of the 1964 Hebrew-language version.

(3) H.G. Cohen (ed.), *Ha-Tefillah ha-Yehudit* ("Prayer in Judaism: Continuity and Change"; Jerusalem, 1978), 292 pp.

(4) J. Heinemann, *Iyyunei Tefillah* ("Studies in Jewish Liturgy"; Jerusalem, 1981), edited by A. Shinan, 205 pp.

(5) A. Mirsky, *Yesodei Zurot ha-Piyyut* ("The Original Forms of Early Hebrew Poetry"; Jer., 1985), 134 pp., deals with ancient Erez Israel poetry.

(6) A.M. Habermann, *Al ha-Tefillah* ("Essays on Prayers"), edited by Z. Malachi (Lod, 1987), 148 pp. This collection is made up of various essays on prayers published during the author's lifetime.

(7) The monumental (posthumous) work by D. Goldschmidt, *Mehkare Tefillah u-Fiyyut*.

FACSIMILES AND BIBLIOGRAPHY. (1) D.S. Loewinger (ed.), *Osef Piyyutei Sepharad* ("Collection of Spanish Piyyutim"; Jerusalem, 1977), 264 pp. Facsimile edition based on Ms. 197 in the David Guenzberg Collection. Lenin Public Library, Moscow.

(2) J. Yahalom (ed.), *Kitvei ha-genizah shel piyyutei Yannai* ("A Collection of Genizah Fragments of Yannai's Liturgical Poems"; Jerusalem, 1978), 214 pp.

POGREBIN, LETTY COTTIN (1939–), U.S. feminist activist, prolific writer, and cofounder with Gloria *Steinem of the National Women's Political Caucus. Born in Queens, New York City, to Cyral (Halpern) and Jacob Cottin, Pogrebin was among the first girls to celebrate a bat mitzvah in Conservative Judaism (1952). A 1959 graduate of Brandeis University, she married Bertrand Pogrebin, a New York City lawyer, in 1963. Following her marriage, Pogrebin worked for Bernard Geis Associates, a publishing company, becoming director of publicity and vice president. Her experiences inspired her first book, *How to Make It in a Man's World* (1970). In 1971, Pogrebin helped found *Ms. Magazine* with Steinem. *Getting Yours: How to Make the System Work for the Working Woman* (1975), continued her concern for women's status in the workplace.

Pogrebin's writings reconciled feminist convictions with marriage and family life. A mother of twin daughters and a son (and later grandmother of six), Pogrebin discussed sex-role socialization and principles of nonsexist child-rearing in *Growing Up Free: Raising Your Child in the 80s* (1980) and *Stories for Free Children* (1982). She worked with Marlo Thomas to create *Free to Be You and Me*, a record, book, and television special of nonsexist songs and stories, for which she received an Emmy Award. In *Family Politics: Love and Power on an Intimate Frontier* (1983), Pogrebin argued against "family fetishists," who insisted on "the old-fashioned, confining, authoritarian family, or no family at all." Pogrebin elaborated on the meaning and politics of relationships in *Among Friends: Who We Like, Why We Like Them and What We Do with Them* (1987).

For the first two decades of her career, Pogrebin was not overt about her Jewish identity. Her disenchantment with Judaism began when she was barred from reciting *kaddish following her mother's death when she was 15. In her memoir, *Deborah, Golda and Me: Being Female and Jewish in America* (1991), she chronicled her 1980s reconnection with Jewish life: "I decided it was worth the effort to incorporate the nice Jewish girl I was raised to be into the uppity woman I had become." Pogrebin's high-profile status in the secular feminist movement made the book a powerful example of a Jewish commitment that embraced feminist/liberal social activism. She also wrote a second memoir, *Getting Over Getting Older* (1997), as well as a critically acclaimed first novel, *Three Daughters* (2002).

Pogrebin's essays and articles have appeared in diverse publications, including the *New York Times*, *Tikkun*, the *Nation*, and *Good Housekeeping*. She was a leader in the National

Women's Political Caucus, the Ms. Foundation for Women, the International Center for Peace in the Middle East, Americans for Peace Now, Mazon: A Jewish Response to Hunger, and the New Israel Fund. She spoke out against antisemitism in the women's movement (*Ms. Magazine*, June 1982) and decried the United Nations declaration that equated Zionism and racism.

[Wendy Zierler (2nd ed.)]

POGREBISHCHENSKI (known as **Pogrebishche** up to 1945, referred to by the Jews as **Pohorbishch** and in Polish documents as **Bohybryszcze**), town in Vinnitsa district, Ukraine. Jews settled in Pogrebishchenski at the beginning of the 17th century, and it is listed among the communities destroyed during the *Chmielnicki massacres of 1648. The community, restored at the end of the 17th century, suffered severely from the uprisings of the *Haidamacks in 1736 and 1768. There were 664 Jews in Pogrebishchenski in 1765 and 1,726 in 1847; the census of 1897 showed 2,494 Jews (39.5 percent of the total population). The 17th-century wooden synagogue, whose construction and appurtenances were renowned for their original artistic execution, attracted the attention of researchers of Jewish art. During the years of the civil war (1918–21), a Jewish *self-defense group was maintained, which prevented bands of peasants of the region from attacking Jews. In the summer of 1919 troops of *Petlyura conquered the locality and ordered the self-defense group to be disarmed. A few days later (on Aug. 22, 1919) an armed band of peasants commanded by Zeleny entered and gained control of the town, carrying out a massacre of the Jews which lasted several hours. About 400 people were murdered, many were wounded, and property was looted. There were 2,881 Jews (30 percent of the total) in the town in 1926, dropping by 1939 to 1,445 (15% of the total population). Between the world wars there was a Yiddish school and a Jewish council. Most of the artisans in the two cooperatives were Jews and did not work on Saturdays. The Germans occupied the town on July 21, 1941. At the end of July 40 Jewish refugees were killed, and a ghetto was established. On October 18, 1941 more than 1,750 were murdered. The remaining artisans were killed later.

[Yehuda Slutsky]

POGROMS. Pogrom is a Russian word designating an attack, accompanied by destruction, looting of property, murder, and rape, perpetrated by one section of the population against another. In modern Russian history pogroms have been perpetrated against other nations (Armenians, Tatars) or groups of inhabitants (intelligentsia). However, as an international term, the word "pogrom" is employed in many languages to

describe specifically the attacks accompanied by looting and bloodshed against the Jews in Russia. The word designates more particularly the attacks carried out by the Christian population against the Jews between 1881 and 1921 while the civil and military authorities remained neutral and occasionally provided their secret or open support. The pogroms occurred during periods of severe political crisis in the country and were linked to social upheavals and nationalist incitement in Eastern Europe. (Similar events also occurred during that period, though on a more limited scale, in the context of the antisemitic movements in Germany, Austria, Romania, and the Balkan countries, and of nationalist and religious fanaticism in *Morocco, *Algeria, and *Persia.)

The Jews of Russia were the victims of three large-scale waves of pogroms, each of which surpassed the preceding in scope and savagery. These occurred between the years 1881 and 1884, 1903 and 1906, and 1917 and 1921. There were outbreaks in Poland after it regained independence in 1918, and in Romania from 1921.

In the 1880s

The pogroms of the 1880s took place during the period of confusion which prevailed in Russia after the assassination of Czar Alexander II by members of the revolutionary organization Narodnaya Volya on March 13, 1881. Anti-Jewish circles spread a rumor that the czar had been assassinated by Jews and that the government had authorized attacks on them. The pogroms at first also received the support of some revolutionary circles, who regarded this action as a preliminary awakening of the masses which would lead to the elimination of the existing regime. The first pogrom occurred in the town of Yelizavetgrad (*Kirovograd), in Ukraine, at the end of April 1881. From there, the pogrom wave spread to the surrounding villages and townlets – about 30 in number. At the beginning of May, the pogroms spread to the provinces of *Kherson, Taurida, Yekaterinoslav (*Dnepropetrovsk), *Kiev, *Poltava, and *Chernigov. The most severe attack was perpetrated in Kiev over three days before the eyes of the governor general and his staff of officials and police force while no attempt was made to restrain the rioters. The pogroms in *Odessa were of more limited scope. During the months of July and August there was again a series of pogroms in the provinces of Chernigov and Poltava. During this period, the pogroms were mainly restricted to the destruction and looting of property and beatings. The number of dead was small. The attackers came from among the rabble of the towns, the peasants, and the workers in industrial enterprises and the railroads. At the end of this period, the government forces reacted against the rioters and in several places even opened fire on them, leaving a number of dead and injured. The pogroms occurred in a restricted geographical region – southern and eastern Ukraine. Here there was a combination of aggravating circumstances: the traditional rebelliousness among the masses; a tradition of anti-Jewish hatred and persecutions from the 17th and 18th centuries (the massacres perpetrated by *Chmielnicki and the

*Haidamacks), together with the presence there of homeless seasonal workers in the factories, railways, and ports; the rise of a rural bourgeoisie and local intelligentsia, who regarded the Jews as most dangerous rivals; and an extremist revolutionary movement which was unscrupulous in the methods it adopted.

After the pogroms in the spring and summer of 1881, there was a remission, although occasional pogroms broke out in various parts of the country. Among these was a severe pogrom in *Warsaw on the Catholic Christmas Day and an Easter pogrom in *Balta, in which two Jews were killed and 120 injured, and many cases of rape occurred. In *Belorussia and *Lithuania, where the local authorities adopted a firm attitude against the rioters, large fires broke out in many towns and townlets; a considerable number of these were started by the enemies of the Jews. The murder of individual Jews and even whole families also became a common occurrence during this period. On June 21, 1882, the new minister of the interior, Count D. Tolstoy, published an order which placed the blame for the pogroms on the governors of the provinces and declared that "every attitude of negligence on the part of the administration and the police would entail the dismissal from their position of those who were guilty." Isolated pogroms nevertheless occurred during the following two years or so. In the spring of 1883, a sudden wave of pogroms broke out in the towns of *Rostov and Yekaterinoslav and their surroundings. On this occasion, the authorities reacted with vigor against the rioters and there were several casualties among them. The last great outburst occurred in June 1884 in Nizhni Novgorod (see *Gorki), where the mob attacked the Jews of the Kanavino quarter, killing nine of them and looting much property. The authorities tried over 70 of the rioters and severe penalties of imprisonment were imposed on them. This marked the end of the first wave of pogroms in Russia.

The pogroms of the 1880s greatly influenced the history of Russian Jewry. In their wake, the Russian government adopted a systematic policy of discrimination with the object of removing the Jews from their economic and public positions. This was achieved either by restrictive laws (the *May Laws of 1882, the percentage norm of admission (**numerus clausus*) to secondary schools, higher institutions of learning, etc.) or by administrative pressure, which reached its climax with the expulsion of the Jews from *Moscow in 1891–92. A mass Jewish emigration began from Russia to the United States and other countries. One reaction to the pogroms was the birth of a nationalist and Zionist movement among the Jews of Russia, while many of the Jewish youth joined the revolutionary movement. The year 1881, the first year of the pogroms, was a turning point not only for Russian Jewry but also for the whole of the Jewish people.

1903 to 1906

The second wave of pogroms was connected with the revolutionary agitation in Russia and the first Russian revolution of 1905. In its struggle against the revolutionary movement, the

Russian government gave the reactionary press a free hand to engage in unbridled anti-Jewish incitement in an attempt to divert the anger of the masses against it toward the Jews and to represent the revolutionary movement as the result of "Jewish machinations." Monarchist societies, such as the *Union of Russian People, the Double-Headed Eagle Society, and others, which were referred to by the general name of the Black Hundreds, played a prominent role in the organization of the pogroms. The first results of this incitement were pogroms which occurred in Kishinev during Passover 1903, in the wake of the wild agitation propagated by the antisemitic local newspaper *Bessarabets*, edited by P. *Krushevan. This pogrom was accompanied by savage murders (45 dead and hundreds of wounded) and mutilations of the wounded and dead. About 1,500 Jewish houses and shops were looted. The pogrom angered public opinion throughout the world. Subsequently, a *self-defense movement was organized among the Jewish youth. Its organizers were mainly drawn from the Zionist socialist parties and the *Bund. In a pogrom which broke out in *Gomel in September 1903, the self-defense group played a prominent part in saving Jewish lives and property. In the fall of 1904, a series of pogroms was perpetrated in *Smela, *Rovno, *Aleksandriya and other places by army recruits about to be sent to the war against Japan and by the local rabble. In 1905, when the revolutionary movement gained strength, reactionary circles, with the support of the government, intensified the anti-Jewish propaganda, and an atmosphere of terror reigned in many towns of the *Pale of Settlement and beyond it. Occasionally pogroms occurred in reaction to revolutionary demonstrations, which the opponents of the revolution condemned as Jewish demonstrations. In February 1905 a pogrom took place in *Feodosiya, and in April of the same year in *Melitopol. A pogrom which took place in the provincial capital of *Zhitomir surpassed all these in scope (May 1905). However, the severest pogroms of this period took place during the first week of November 1905, immediately after the publication of the manifesto of the czar (October 1905), which promised the inhabitants of Russia civic liberties and the establishment of a state *Duma (parliament). On publication of the manifesto, spontaneous manifestations of joy broke out throughout Russia. The celebrants came from the liberal and radical elements of Russian society, while the Jews, who hoped to obtain rapid *emancipation, prominently participated in this rejoicing. In response to these manifestations, the reactionary circles organized popular processions of elements loyal to the regime; these were headed by the local civil and ecclesiastical leaders. In many places these processions developed into pogroms against the Jews (on some occasions, the non-Jewish intelligentsia was also attacked).

The most serious pogrom occurred in Odessa (with over 300 dead and thousands of wounded); another severe pogrom took place in Yekaterinoslav, where 120 Jews lost their lives. Altogether, pogroms were perpetrated in 64 towns (including, in addition to Odessa and Yekaterinoslav, Kiev, Kishinev, *Simferopol, *Romny, *Kremenchug, *Nikolayev, Chernigov,

*Kamenets-Podolski, and Yelizavetgrad), and 626 townlets and villages. About 660 of the pogroms took place in the Ukraine and Bessarabia, 24 outside the Pale of Settlement, and only seven in Belorussia. There were no pogroms in Poland and Lithuania. The total number of dead in these pogroms was estimated at over 800. The pogroms lasted only a few days. The most prominent participants were railway workers, small shopkeepers and craftsmen, and industrial workers. The peasants mainly joined in to loot property.

From the outset, these pogroms were inspired by government circles. The local authorities received instructions to give the pogromists a free hand and to protect them from the Jewish self-defense. Commissions of inquiry were appointed after the pogroms which explicitly pointed out the criminal inactivity of the police and military forces. After a while, it became known that pamphlets calling for the pogroms had been printed on the press of the government secret police.

Two further pogroms occurred in 1906. The first took place in *Bialystok in June. About 80 Jews lost their lives and the mob looted and murdered under the protection of the military and police forces, who systematically opened fire on the Jews. This pogrom occurred during the session of the first Duma, which sent a commission of inquiry to Bialystok. It also held a debate, in which direct responsibility for the pogrom was placed on the authorities. The second took place in *Siedlce in August and was directly perpetrated by the police and military forces. About 30 Jews were killed and 180 wounded. With the suppression of the first Russian revolution, the pogroms were brought to a halt until the downfall of the old regime in 1917.

The pogroms of 1903–06 stimulated a great nationalist awakening among the Jews of Europe, encouraged the development of organized self-defense movements among Jews, and accelerated Jewish emigration for the Second *Aliyah and the formation of the *Hashomer society in Erez Israel.

1917 to 1921

The third wave of pogroms occurred during the years 1917–21, in scope and gravity far surpassing the two previous outbreaks. These attacks on the Jews were connected with the revolutions and the civil war which took place in Eastern Europe during this period. At the end of 1917, pogroms had already occurred in the townlets and towns within proximity of the war front. The riot was headed by groups of soldiers from the disintegrating czarist army, and consisted of unruly acts against Jews by drunkards and of looting. Many pogroms of this type occurred in the Ukraine after the declaration of its independence in 1918. The first pogroms to be accompanied by slaughter of Jews were, however, perpetrated by units of the Red Army which retreated from the Ukraine in the spring of 1918 before the German army. These pogroms took place under the slogan "Strike at the bourgeoisie and the Jews." The communities of *Novgorod-Severski and Glukhov in northern Ukraine were the most severely affected. After a short period of confusion, the Soviets adopted stringent measures

against pogromists found in the ranks of the Red Army. In addition to a fundamental and comprehensive information campaign, severe penalties were imposed not only on guilty individuals, who were executed, but also on complete army units, which were disbanded after their men had attacked Jews. Even though pogroms were still perpetrated after this, mainly by Ukrainian units of the Red Army at the time of its retreat from Poland (1920), in general, the Jews regarded the units of the Red Army as the only force which was able and willing to defend them.

In the spring of 1919, at the time of the retreat of the Ukrainian Army before the Red Army which occupied Kiev, units of the Ukrainian Army carried out organized military pogroms in *Berdychev, Zhitomir, and other towns. These pogroms reached their climax in the massacre at *Proskurov on Feb. 15, 1919, when 1,700 Jews were done to death within a few hours. On the following day, a further 600 victims fell in the neighboring townlet of Felshtin (Gvardeiskoye). Those responsible for these pogroms went unpunished, and henceforward the Ukrainian soldiers considered themselves free to spill Jewish blood. The Jews regarded Simon *Petlyura, the prime minister of the Ukraine and commander of its forces, as responsible for these pogroms (in 1926 he was assassinated while in exile in Paris by Shalom *Schwarzbard). The general chaos which reigned in the Ukraine in 1919 resulted in the formation of large and small bands of peasants who fought against the Red Army. The commanders (atamans) of these bands occasionally gained control of whole regions. The Jews in the villages, townlets, and towns there were constantly terrorized by the peasants, who extorted money ("contributions") and supplies from them or robbed and murdered them. These atamans included Angell, Kazakov, Kozyr-Zyrko, Struk, Volynets, Zeleny, Tutunik, and Shepel. The ataman Grigoryev, who in May 1919 seceded from the Red Army with his men, was responsible for pogroms in 40 communities and the deaths of about 6,000 Jews in the summer of 1919. He was killed by Ataman Makhno, who led a peasant rebellion in eastern Ukraine and endeavored to restrain his men from attacking the Jews. One of the most notorious pogroms carried out by the peasant bands was that in Trostyanets in May 1919, when over 400 people lost their lives.

In the fall of 1919, there was a wave of pogroms committed by the counterrevolutionary White Army, under the command of General A.I. *Denikin, in its advance from northern Caucasus into the heart of Russia. This army, which sought to restore the old regime, proclaimed the slogan: "Strike at the Jews and save Russia." Its officers and soldiers made savage attacks on the Jews in every place which they occupied. The most sinister of these pogroms was in Fastov at the beginning of September 1919, in which about 1,500 Jewish men, women, and children were massacred. The soldiers of the White Army also perpetrated similar pogroms in other regions of Russia: in Siberia, where they were led by Admiral Kolchak and where the Cossack battalions of Baron R. Ungern-Sternberg gained notoriety for the systematic destruction of many com-

munities in eastern Siberia and Mongolia; and in Belorussia, where Bulak-Balachowicz was in command in 1920. During 1920–21, when the Red Army gained control of Ukraine, the armed anti-Soviet bands still retained their full strength and the pogroms and brutalities against the Jews assumed a character of revenge, such as the massacre in Tetiev, in which about 4,000 Jews were put to death and the whole townlet was set on fire. The anti-Jewish movement set the total annihilation of the Jews as its objective and destroyed whole townlets. Only the military weakness of the attackers prevented a holocaust of Ukrainian Jewry.

During this period of pogroms, Jewish self-defense organizations were formed in many places throughout the Ukraine. The “Jewish Militia for War against Pogroms” of Odessa was renowned; it prevented pogroms in the largest community of Ukraine. Such groups were created in many towns and townlets but they were not always capable of withstanding military units or large armed bands. It was only after the consolidation of the Soviet regime that they received its support and played an important role in the suppression of the armed counter-revolutionary movement.

It is difficult to assess the scope of the pogroms during the civil war years and the number of victims they claimed. Partial data are available for 530 communities in which 887 major pogroms and 349 minor pogroms occurred; there were 60,000 dead and several times that number of wounded (according to S. Dubnow). The pogroms of 1917–21 shocked East European Jewry, as well as world Jewry. On the one hand, they rallied many Jews to the Red Army and the Soviet regime; on the other, they strengthened the desire for the creation of a homeland for the Jewish people and a powerful and independent Jewish force. This aspiration found its expression in the Zionist movement, the *He-Ḥalutz movement, and the *Haganah in Erez Israel.

[Yehuda Slutsky]

***POHL, OSWALD** (1896–1951), *SS officer, formerly a naval paymaster head of the Wirtschafts-Verwaltungshauptamt (Economic-Administrative Main Office, WVHA). He joined the Nazi Party in 1926 and the SS in 1934. In 1934 he became head of the administrative office of the SS which dealt with all its financial and administrative matters. In 1939 he was ap-

pointed head of the construction office of the SS, including the concentration camps. His task was to develop the economic enterprises of the SS, which were essential to their operation. On Feb. 1, 1942, the officers under his charge were brought into the WVHA. In the spring of 1942 the Inspection Authority of the concentration camps was added to his responsibilities. Pohl aimed at financing all SS activities, including the Waffen SS, from the profits of SS-owned enterprises for which he utilized the slave labor of concentration camp prisoners and expropriated Jewish property. He had more than half a million slave laborers at his disposal which he could rent to industry as workers. Another source of income was gained from the belongings of murdered Jews, including their gold teeth. Pohl always urged longer working hours, less rest, and stricter supervision over the camp inmates. He enslaved prisoners of war contrary to international conventions. Since his concern was labor and since he was pressed for manpower, he even opposed the *RSHA policy for the total destruction of the Jews and advocated sparing able-bodied Jews from immediate death, so that they could be worked to death. This bought them a little time and enabled some to survive. Pohl was sentenced to death by the U.S. Military Tribunal in 1947 and hanged in Landsberg in 1951.

[Yehuda Reshef / Michael Berenbaum (2nd ed.)]

POHORELICE (Czech **Pohorelice**; Ger. **Pohlitz**), village in S. Moravia, Czech Republic. It had one of the most ancient Jewish communities in Moravia, and according to legend, the oldest. Although the earliest known documentary evidence for the existence of a Jewish settlement in Pohorelice dates from 1490, a Jewish community apparently already existed there at the beginning of the tenth century. At the close of the 18th century about 500 Jews lived in Pohorelice. From 1849 (officially from 1862) until the dissolution of the Austrian Empire in 1918, a local Jewish political authority also existed. From 1847 to 1918 the community supported a Jewish elementary school whose language of instruction was German. In 1930 the community numbered 277. The majority perished in the Holocaust. A transit camp for Jewish prisoners from Hungary existed in the town in 1944–45 from where they were sent to Theresienstadt and Bergen-Belsen. A synagogue built in 1854–55 was demolished by the Nazis. The cemetery was likewise destroyed; however, after the war it was restored. The Jewish community was not renewed. Berthold *Feiwel was born in Pohorelice.

[Chaim Yahil / Yeshayahu Jelinek (2nd ed.)]

POISON (Heb. תַּרְעֵלָה, רַעַל, [רוֹשׁ], מְרַרָה, לַעֲבָה, לְעֵבָה, חֲמָה; Akk. *imtu*, *martu*; Ug. *hmt*). The biblical terms for poison are derived mainly from two sources: types of poisonous plants and the poisonous venom of snakes and other reptiles. Many attempts have been made to identify the specific plants involved based on the translations of these terms in the Septuagint and the other ancient versions, but any conclusions based on this evidence must be considered extremely uncertain. The Bible itself offers no evidence whatsoever, since its usage of these terms is generally metaphorical, offering no identifying characteristics. Therefore, when discussing these various terms, this article will deal with the biblical usage and its ancient Near Eastern parallels rather than attempting to arrive at specific identifications.

La'anah, Rosh

The terms *rosh* ("gall") and *la'anah* ("wormwood") are often found in synonymous parallelism (Jer. 9: 14; 23:15; Amos 6:12) or in hendiadys (Deut. 29:17; Lam. 3:19). They are most often used metaphorically to represent the concepts of poison and bitterness. As her punishment for disobeying the Lord, Israel is forced to consume bitter food and drink (Jer. 8:14; 9:14; 23:15; Lam. 3:15), while a psalmist contends that his enemies are giving him such a hard time that he feels that he is being given bitter food (Ps. 69:22). Another common theme for which these terms are employed is the turning of justice into bitterness (Hon. 10:4; Amos 5:7; 6:12). The especially general nature of the term *rosh*, "gall," in the bible may be demonstrated by its usage in contexts referring to snake venom (Deut. 32:33; Job 20:16) and grapes (Deut. 32:32).

Hemah

The biblical term most commonly employed for the venom of snakes and other reptiles is *hemah*. In the Song of Moses, the calamity which befalls Israel as a result of God's judgment takes the metaphorical form of *hamat zohalei 'afar*, "the venom of snakes" (Deut. 32:24; for the meaning of *zohalei 'afar* cf. Micah 7:17), while later in the same chapter, *rosh* and *hemah*, which are parallels, are again used metaphorically: "the venom (*hamat*) of serpents is their wine, and the poison (*rosh*) of vipers ..." (Deut. 32:33). Elsewhere *hemah* is used for snake poison in Psalm 58:5 and for the venom of an unknown reptile (*akhshuv*) in Psalm 140:4.

Both Akkadian (*imtu*) and Ugaritic (*hmt*) utilize an etymological and semantic equivalent of חֲמָה as one of their regular words for "poison." The usage of Akkadian *imtu* is very close to the usage of biblical *hemah*. The following two passages illustrate the usage of *imtu* as "snake venom":

1. azzūā izarri imta ana sursurru
izarri imta
imat šēri imassu
imat zuqaqīpi imassu

She [Lamaštu] spits venom now and then,
she spits venom suddenly,
her venom is snake venom,

her venom is scorpion venom (A. Falkenstein, *Literarische Keilschrifttexte aus Uruk* (1931), 33:21ff.).

2. patūni šapti šinnašunu našā imta

[Their] lips are open, their fangs carry venom (*Enūma eliš*, 4:53; Ps. 140:4).

Two Ugaritic texts (*Ugaritica*, 5 (1969), nos. 7, 8), which appear to be "serpent charms" contain, for the first time in Ugaritic, the substantive *hmt*, "poison, snake venom." This substantive is found more than 25 times in these two texts whose provenance has already been compared to such biblical passages as Jeremiah 8:17; Psalms 58:5; and Ecclesiastes 10:11. In the first of these two texts, an incantation formula consisting of six lines is repeated 11 times, each time invoking a different deity. While the translation of all the lines of this incantation is far from certain, the lines containing the noun *hmt*, while not without their difficulties, are relatively clear:

1. lnh mlhs/a'bd
lnh ydy hmt

From him [the serpent], the conjurer shall destroy,
from him, he shall remove the venom (*Ugaritica*, 5 (1969), 7: 5-6, 10-11, 16-17, 21-22, 27-28, 32-33, 37-38, 42-43, 47-48, 53-54, 59-60).

There are many biblical passages (e.g., Isa. 51:17, 22; Jer. 25:15; Job 21:20) where the substantive *hemah* is employed to evoke a double entendre based on its most regular meaning of "wrath" (e.g., Gen. 27:44-45; Deut. 29:22, 27; Isa. 63:3, 6; Jer. 21:5; *a'f*, "anger") and its less common denotation of "poison, venom" (see above). This usage is further demonstrated by the occurrence of such idioms as the "pouring out of God's wrath/poison" (e.g., Isa. 42:25; Jer. 10:25; Ezek. 7:8; Ps. 79:6) and "full of God's poison/wrath" (e.g., Isa. 51:20; Jer. 6:11). While there are no Akkadian passages where *imtu* could be translated "wrath," *The Assyrian Dictionary of the Oriental Institute of the University of Chicago* (7 (1960), 139) defines *imtu* in one of its meanings as "poisonous foam, slaver produced from the mouth of angry gods, demons, humans, and animals." (For a full discussion of the semantic range of words for "anger, wrath" in Semitic languages, see H. Cohen, in *ibid.*)

Mererah

The substantive *mererah* ("poison, venom, gall") is obviously connected with the root *mrr*, "to be bitter," and is generally used in the same way as *hemah* (see above). This is demonstrated by the Akkadian lexical equation *imtum* = *martum* (*malku* = *šarru*, 8:124; where *martum* is the Akkadian etymological and semantic equivalent of Hebrew *mererah*) as well as by the following biblical passages:

Their grapes are grapes of poison (*rosh*); Their clusters are venomous (*merorot*) (Deut. 32:32; cf. Deut. 32:33 quoted above); The venom serpents (*merorat petanim*) is within him (Job 20:40; cf. all examples for *hemah*, "snake venom" quoted above); He pours out my gall (*mererati*) upon the ground (Job 16:13; cf. the idiom לשפך חממת יהוה quoted above); He has filled me with poison (*merorim*), sated me with wormwood (*la'anah*) (Lam.

3:15; cf. the idiom “the pouring out of God’s wrath/poison” quoted above).

The Akkadian substantive *martu*, “gall,” is used in the same way as *imtu*, *hemah*, and *mererah*, as may be seen from the following proverb which is somewhat parallel to Deuteronomy 32:32 (see above):

ina nāri tabbaššima mūka daddaru
appūnāma ina kiri tabšima suluppaka martum

When you are in a canal, the water around you is foul-smelling;

Furthermore, when you are in a palm grove, your dates are gall (W.G. Lambert, *Babylonian Wisdom Literature* (1959), p. 244, lines 19–24).

Thus, the biblical *hemah* (in its meaning of “poison, venom”) and *mererah* must be considered poetic synonyms like the Akkadian *imtu* and *martu*.

Ra'al, Tar'elah

The exact meaning of *ra'al* and *tar'elah* is unknown. That it must refer to some kind of poison is clear from Isaiah 51:17, 22, where *tar'elah* parallels *hemah*. The occurrence with *yayin* (“wine”) in Psalm 60:5 (*yayin tar'elah*) also fits in well with the usage of *hemah* and *mererah* as stated above. The other few passages (Isa. 3:19; Nah. 2:4; Hab. 2:16 [read וְהָרַעַל, as in 1Qp-Hab]; Zech. 12:2) in which this substantive or its denominative verb occurs are far from clear, however, and offer nothing in the way of identification. What is clear from the little evidence is that the biblical *ra'al* cannot be derived from Aramaic *r'l* (“to reel, tremble”) because its usage is identical with that of two known biblical words for poison, *hemah* and *mererah*. While the etymology of the Modern Hebrew *ra'al* (“poison”) is unclear (*ra'al* “poison” is almost nonexistent in the Talmud and Midrash), because its usage in modern Hebrew appears consistent with biblical usage, it is more likely that it is derived from the biblical term than from the Aramaic *r'l*.

[Chayim Cohen]

POITIERS, capital of Vienne department, W. France. The history of the Jewish community of Poitiers is almost entirely interwoven with that of *Poitou. During the 13th century, Nathan b. Joseph *Official was involved in a religious disputation with the bishop of Poitiers. An expulsion order against the Jews of Poitiers had already been issued in 1291 but it was canceled in exchange for a large sum of money. The community ceased to exist in 1306. The Rue de la Juiverie, the modern Rue Arsène-Orillard, was closed off by ogival gates which still existed during the 19th century. The cemetery was situated in the present suburb of Montbernage. According to local tradi-

tion, treasures buried by the Jews lay hidden there. On the eve of World War II, there were a few hundred Jews in Poitiers. Their numbers increased with the arrival of Jewish refugees from Alsace and Lorraine and later with the internees detained in several camps within the vicinity of the town. In 1970 the community consisted of about 100 persons.

[Bernhard Blumenkranz]

POITOU, region and former province of W. France, now included in the departments of Vendée, Deux-Sèvres, and Vienne. In the Middle Ages Jews lived in at least 20 localities in Poitou, the most important of which were *Poitiers, Niort, Vitré, Moncontour, Loudun, Bressuire, Lusignan, Montmorillon, and Thouars. Their presence is also recalled by a large number of sites named La Juderie, La Judrie, Les Judes, etc. The earliest evidence of Jewish settlement in Poitou dates from 1134 to 1143, with arrivals from Narbonne. After 1160 Jewish scholars from Poitou took part in the synod of Troyes convened by *Samuel b. Meir and Jacob b. Meir *Tam. One *takkanah* with which the scholars of Poitou were also associated referred to the custom of Narbonne Jewry connected with the dowry. When Poitou passed to English rule, the kings of England provided both individuals and groups of Jews (Niort, 1221) with letters of protection. Under French rule (1224) the Jews of Poitou (like those of Anjou, etc.) were attacked by the *Crusaders in 1236. Soon after he received Poitou in appanage, *Alphonse of Poitiers threatened the Jews with expulsion, but this was not carried out. In 1268, in order to finance his joining a Crusade, Alphonse had all the Jews of Poitou, as well as all those in his other territories, imprisoned and their belongings seized, extorting a ransom of 8,000 livres for their release. In 1269, following the example of *Louis IX, he imposed the wearing of the distinctive Jewish *badge. Although Poitou was incorporated into the kingdom of France in 1270, the Jews there were subjected to special decrees and were finally expelled in 1291, 15 years before their coreligionists in other parts of France. A few of them who returned in 1315 were among the first to be accused (1321) of collusion with the lepers (see *France). An even smaller number of Jews returned after 1359 (or more exactly after 1372 when Poitou was liberated by the English). Some Jews from Comtat Venaissin traded in Poitou during the 18th century.

[Bernhard Blumenkranz]

POKI, JUDAH BEN ELIEZER CHELEBI (16th century), *Karaitic scholar of Constantinople, a nephew of Elijah *Bashyazi. He traveled widely in order to study Karaite writings. In 1571 he was living at the house of the Karaite *nasi* in Cairo. In

his *Sha'ar Yehudah*, on forbidden marriages (published by his son Isaac in Constantinople, 1581), he opposed the modifications introduced in this subject by Joseph ha-Ro'eh and Jeshua b. Judah. Poki is the only Karaite scholar of the period to uphold the *rikkuv* ("catenary") theory of forbidden marriages. He mentions also a second work, *Ve-Zot li-Yhudah*, on the determination of the new moon. Jedidiah Solomon of Troki refers in his *Appiryon* to a prayer book compiled by Poki, as well as works on poetry and grammar.

[Isaak Dov Ber Markon]

POLACCO, VITTORIO (1859–1926), Italian jurist. Born in Padua, Polacco was professor of civil law at the University of Padua from 1885 to 1918 and at the University of Rome from 1918 until his death. He was renowned as a jurist and was invited to teach law and the history of religions to Prince Umberto of Savoy. Polacco was a member of the Italian Senate from 1910 and played an important part in the drafting of the Senate's legislation. He kept aloof from politics and aroused great interest when, in 1925, he delivered the only political speech he ever made in parliament, his subject being freedom of conscience and the protection of religious minorities. He wrote a number of legal works, including *Le Obbligazioni nel Diritto Civile Italiano* (1898); and *Delle Successioni* (2 vols., 1902), both of which ran into many editions, and *Contro il divorzio* (2 vols., 1892) in which he set out his opposition to divorce. Rome's Jewish elementary school was named after him.

[Giorgio Romano]

POLÁČEK, KAREL (1892–1945), Czech writer and journalist, a participant in the "Friday Visitors" literary gatherings of Karel Čapek and probably the outstanding Czech humorist after Hašek. Born in Rychnov nad Kněžnou, Bohemia, he began his career as a reporter in the law courts, where he gained insight into the ordinary people about whom he wrote in his short stories and novels. In these Poláček introduced many Jewish characters, mainly traders, salesmen, and commercial travelers, recording their way of life and mode of speech with accuracy and understanding. A number of these novels and stories became screen and TV successes. Poláček's first novel was *Dům na předměstí* ("The House on the Outskirts," 1928). One of his major works was the quintet *Okresní město* ("District Town," 1936), *Hrdinové táhnou do boje* ("Heroes Go into Battle," 1936), *Podzemní město* ("Underground Town," 1937), and *Vyprodáno* ("Sold Out," 1939); the fifth volume was completed but is known only in fragments. The work presents the panorama of a small Czech township. His volumes of short stories include *Povídky pana Kočkodana* ("Mr. Kočkodan's Tales," 1922), *Mariáš a jiné živnosti* ("Cardplaying and Other Professions," 1924), *Povídky izraelského vyznání* ("Stories of the Mosaic Persuasion," 1926), and *Život ve filmu* ("Life in the Movies," 1927). Two humorous novels are *Muži v offsidu* ("Men

at Offside," 1931) and *Michelup a motocykl* ("Michelup and the Motorbike," 1935). His last novel had to be published under the name of a painter, Vlastimil Rada: *Hostinec u kameného stolu* ("The Restaurant at the Stone Table," 1941). Other books were published after 1945, like the novel *Bylo nás pět* ("We Were Five," 1964). Poláček wrote two comedies, one of which, *Pásky na vousy* ("The Beard-binders," 1926), was produced by the Prague National Theater. During the Nazi occupation, Poláček was deported, first to Theresienstadt, later to Auschwitz. He probably died on his way to the Dora concentration camp in the winter of 1945. Poláček's *Sebrané spisy* ("Collected Works") were published in 1994–2002 in Prague in 22 volumes.

[Avigdor Dagan / Milos Pojar (2nd ed.)]

POLACHEK, SENDER (also known as **Sender Minsker**; 1786–1869), Polish cantor. Born in Gombin, Polachek received instruction from Cantor Nahum Leib Weintraub, brother of Solomon *Weintraub. For over 30 years Polachek was cantor in Minsk (hence his additional name) and became famous for his melodic gifts. Having no knowledge of musical notation, he committed none of his works to writing, but he achieved an original style which deeply affected his hearers and which became known as the "Sender Steiger."

POLACHEK, SOLOMON (1877–1928), talmudic scholar and teacher. Polachek was early recognized as a precocious youngster and became widely known as the *illui* ("prodigy") of Meitshet where he studied. He entered the Volozhin yeshivah at the unusually early age of 12 and his bar-mitzvah was celebrated at the home of the head of the yeshivah, Naphtali Zevi Judah *Berlin. After the yeshivah was closed by the czarist government in 1892, Polachek studied with Ḥayyim *Soloveitchik in Brest-Litovsk and became "R. Ḥayyim's" most beloved pupil. Polachek also studied in the Slobodka yeshivah and at the "kibbutz" of Ḥayyim Ozer *Grodzenski in Vilna. Polachek mastered secular studies and modern Hebrew on his own and acquainted himself with the literature and problems of his time. In 1905, I.J. *Reines appointed him head of the Talmud department in the newly organized Lida yeshivah where the curriculum also included secular studies. After Reines' death in 1915 the entire burden of the yeshivah fell on Polachek. Shortly afterward, as a result of World War I, Polachek and the yeshivah were compelled to move to central Russia, where the

school continued for five more years. During the war Polachek lost the notes he had amassed on over 1,500 different talmudic topics. After the war and the Bolshevik revolution, Polachek succeeded in escaping to Poland, where he became head of the Talmud department of the Tahkemoni Rabbinical Seminary in Bialystok. In 1922 Polachek emigrated to America and accepted the position of senior *rosh yeshivah* in the Rabbi Isaac Elchanan Theological Seminary (the forerunner of *Yeshiva University). He was enthusiastically received by American Orthodoxy since he was the first renowned European talmudist who agreed to remain in the U.S. for the purpose of teaching Talmud in an advanced yeshivah. While in the U.S., he was a member of the *Union of Orthodox Rabbis and was active in the *Mizrachi movement. Polachek's *Hiddushei ha-Illui me-Meitshet* was published posthumously in 1947.

[Aaron Rothkoff]

POLACHEK, VICTOR HENRY (1876–1940), U.S. editor and publisher. An executive with the Hearst newspaper chain for 40 years, Polachek began as a reporter in his native Chicago in 1893. He was appointed telegraph editor of the *Chicago Inter-Ocean* in 1897 and went to the *New York World* in 1898. He joined the Hearst organization in 1899, served on various papers of the chain in Chicago and New York, and in 1928 became manager of the Hearst Sunday newspapers. In 1931 he was given charge of circulation for all Hearst papers.

POLACK, JOEL SAMUEL (1807–1882), adventurer and author. Born in London, he was the son of the artist Solomon Polack (1757–1839). Before his arrival at Hokianga, New Zealand, in 1831, he had been an artist, Californian gold miner, South African ordinance officer, and Australian ship's chandler. His dominant personality enabled him to survive among the rough whalers and semi-cannibalistic Maoris of Hokianga and Kororaraka, where he opened a store in 1833. He learned to speak Maori fluently, and won the confidence of the Maoris. In 1838 his Kororaraka store containing military and naval explosives blew up and he returned temporarily to London. There he urged the colonization of New Zealand in evidence before a select committee of the House of Lords. *The Times* attacked Polack's New Zealand dealings, describing him as "a worthy and wandering offshoot of the seed of Abraham." Suing *The Times* for libel, he was awarded £100 damages. In 1838 Polack wrote *New Zealand*, being a narrative of travels and adventures in that country between 1831 and 1937, and *Manners and Customs of New Zealanders* in 1840. Both books, especially the second which is profusely illustrated by Polack himself, are valuable documentaries of New Zealand's precolonization history. Polack returned to New Zealand after the proclamation of British sovereignty in 1840, but soon left for the Californian goldfields. He died in San Francisco.

[Maurice S. Pitt]

POLAK, GABRIEL ISAAC (1803–1869), Dutch scholar, Hebrew author, and bibliographer. Born in Amsterdam, Polak served as head of a school there. He provided Dutch Jewry with accurate liturgical texts translated into Dutch.

Among these were a Pentateuch with *haftarot* and Rashi (1828; his *le'azim* translated into German), Sabbath prayers (1828), and *piyyutim* (*Torat Emet-Tikkun Soferim*, 1827, repr. 1937); *Amarot Tehorot* (biblical books with Dutch translation, 1862/63; also Job, with M.S. Polak, 1844); a *mahzor* (1857²), with commentary in Hebrew and Judeo-German and another edition with Dutch translation (with M.L. van Ameringen, 1850²); *Areshet Sefatayim* (1960²³), a *siddur*; a Passover *Haggadah* (1930⁹); *Ezrat ha-Sofer* (1866), a *tikkun*; and *Sefer Hayyim la-Nefesh* (1867). He also edited orders of service for Purim (1857), circumcision (1878), and the seventh of Adar (death of Moses; 1851), *Kinot* (1868), and *Selihot* (1869). Polak published a small Hebrew-Dutch dictionary, *Divrei Kodesh*, with S.E. Heigman, in 1857². Among his other works were *Hukkei Ha-Elohim* (1841, 1883), on the 613 commandments; a translation with commentary of *Josippon (1868, with van Ameringen); an edition of a manuscript he discovered of Judah ibn Balam's *Sha'ar Ta'amei Sefarim Emet* on the accents of Psalms, Proverbs, and Job (1858); and an enlarged edition of Abraham Bedersi's (Bedarshi's) dictionary of Hebrew synonyms (1865). Polak completed H.A. Wagenaar's biography of Jacob Emden (1868), and annotated Menahem Mann b. Solomon's *She'orit Yisrael* (with L. Goudsmit, 1855), with notes on the history of Dutch Jewry. He also wrote Hebrew poetry and translated Dutch works into Hebrew (*Ha-Poret*, 1836; *Halikhot Kedem*, 1847; *Ben Gorni*, 1851). In addition, he wrote a biography of the Dutch Hebrew poet D. Franco-Mendes and published letters and essays by S. *Dubno, J.S. Reggio, S.L. Rapoport, and S.D. Luzzatto, maintaining contact with some of them. Among his bibliographical work is *Me'ir Einayim* (1864), a catalog of the M.L. Jacobson and M.B. Rubens collections in Amsterdam *Hok Shelomo* (1857), and catalogs of S.B. Rubens' collections in Amsterdam (1864).

[Jacob H. Copenhagen]

POLAK, HENRI (1868–1943), Dutch trade unionist and socialist politician. Born in Amsterdam, he was the eldest of Mozes Polak and Marianna Smit's ten children. His father started out as a diamond polisher and became a rather prosperous jewelry manufacturer; his mother, daughter of a much respected antiquarian bookseller, developed a keen interest in Western literature. After a stay of three years in London, where he worked as a diamond cutter, Henri Polak settled in Amsterdam in 1890 with his London-born wife, Emily Nij-

kerk. As one of the first Jewish members of the small revolutionary socialist party, and as a diamond cutter, he tried for four years, with some success, to propagate socialism and trade unionism among the then 8,000 Amsterdam diamond workers (about 60% of whom were Jewish). In 1894, he was one of the 12 founders of the Dutch Social Democratic Party (SDAP) and after a general diamond workers strike became founder and president of the General Dutch Diamond workers Union (ANDB). Under his clever and enthusiastic guidance, the ANDB grew within a few years into the best-organized and most successful modern trade union of the Netherlands. Polak's prestige as a union leader resulted in the SDAP's electing him president during 1900–05. In 1905, Polak became founder and president of the World Alliance of Diamond workers. He retained both this presidency and that of the ANDB until the German occupation of Holland in 1940.

For a man like Henri Polak, socialist trade unionism meant not only striving for better tangible living conditions for the workers, but also improving the quality of life of the working classes by teaching them to take part in all kinds of social and cultural activities. In this respect he was a student of the English socialist artist William Morris, for whom he had great admiration. In the 1920s and 1930s Polak became, partly under Morris' influence, one of Holland's staunchest defenders of historical and natural monuments. Most Jewish workers viewed Polak as a cherished member of the family, as well as a leader of great ability and moral standing.

Although he never believed in the possibility of a Jewish state, after the World War I Polak became a member of the board of the Dutch chapter of the *Keren Hayesod. He considered the founding of a Jewish National Home (not a state) only a partial solution to the problem of the persecution of the Jews. From 1933 until the war Polak launched, both in his weekly column in the socialist daily *Het Volk* ("The People") and as a member of the Dutch Senate, unabatingly fierce attacks on the Nazis in Germany and Holland. As one of the few anti-fascist leaders, he took Julius *Streicher's threat to kill all the Jews seriously.

After half a year of imprisonment in 1940, Polak was put under house arrest until July 1942 in the home of a Dutch Nazi, who made his life as miserable as possible. At the start of the deportations of the Jews from Holland, Polak was unexpectedly set free. Although mentally unbroken, his physical health had deteriorated considerably. He died of pneumonia in the hospital at Laren in February 1943, just in time not to be deported. Emily died about two months later in Westerbork. Both were buried in the Jewish cemetery of Muiderberg.

POLAK, JACOB EDUARD (1820–1891), physician and writer. Born in Bohemia, he studied medicine and science in Prague and Vienna and in 1851 was invited to Teheran by the Persian government to serve as professor of anatomy and surgery at the military college. In 1856 he was appointed court physician to Shah Nasr-el-Din. Polak returned to Vienna in 1860 and was associated with the general hospital there while acting as lecturer in Persian at the University of Vienna. When Nasr-el-Din toured Europe in 1872 he visited Polak, who is mentioned in the shah's "Diary" as his "good old friend." Polak wrote a number of important treatises in Persian on anatomy, surgery, ophthalmology, and military medicine, some of which became standard works. He also compiled a medical dictionary in Persian, Arabic, and Latin in order to provide the Persian language with a system of medical terminology, and composed a much-used dictionary, *Deutsch-persisches Konversationswoerterbuch* (1914).

A faithful and devoted Jew, Polak used his prestige and influence at the court of the shah in favor of his coreligionists. He drew the attention of European Jewry to the plight of the Jews in Persia at the time and proposed that the Alliance Israélite Universelle should send a Jewish representative to Teheran or establish a Jewish school there, as was ultimately done. Polak wrote extensively on various aspects of Jewish life in Persia; *Persien, das Land und seine Bewohner* (1865) and other publications contain important information about the Jews.

POLAK, LEONARD (1880–1941), Dutch philosopher. Born in Steenwijk, Polak graduated in law, in 1925 became assistant professor at the University of Leiden, and in 1929 was appointed to the chair in philosophy at the University of Groningen. A rationalist and agnostic, Polak played an important part in the free-thought movement in the Netherlands. He followed the Marburg neo-Kantian school of philosophy holding that mechanical causality reigns in nature while freedom reigns in the realm of the spirit.

Polak wrote on important social questions such as the philosophy of war, the philosophy of punishment, sexual ethics, and religious divisions. His principal works include *Kennisleer contra materie-realisme* (1912); *De zin der vergelding* (1921); *Hegel's leer der straf* (1925); and *Noodlot en vrije wil* (1937). After World War II, Polak's works were collected in *Verzamelde werken* (4 vols, 1947).

While Jews had visited the kingdom of Poland and been economically active there at an early stage of the country's consolidation, from the tenth century approximately, they had no contact with the grand duchy of Lithuania until King Gedimin conquered the regions of Volhynia and Galicia (as it was later called) in 1321.

Jews came to Poland mainly from the west and southwest and from the very beginning were of *Ashkenazi culture.

Those in the regions conquered by Gedimin had come there from the south and the southeast, chiefly from *Kiev, and were thus influenced to a large degree by Byzantine Jewish culture patterns; some think that they could have had traces of *Khazar ethnic descent and culture patterns. Jews in the region of *Lvov and its environs were of the same provenance to a large extent. In the end the western Ashkenazi culture became dominant.

Polish-Jewish legendary tradition tells about a Jewish merchant, Abraham Prochownik (unlikely to mean "the gunpowder man," which would be completely anachronistic, but probably, "the dust-covered," an epithet found in the early Middle Ages in relation to merchants), who was offered the Polish crown around the middle of the ninth century, before Piast, the first, legendary, Polish king, ascended to the throne. According to another legend, at the end of the ninth century a Jewish delegation in Germany appealed to Prince Leszek to admit them to Poland. The request was granted after prolonged questioning, and later on privileges were granted to the immigrants. Although almost certainly formulated in their present version in the 16th–17th centuries – at a time of fierce struggle between Jewish and Christian townsmen (see below) – the legends do transmit meaningful historic elements. Jews did first come to Poland as transient, dust-covered merchants, and they did come there to escape the suffering and pressure brought to bear on them in the lands of the German Empire. The theories of some historians, that place-names like Żydowo, Żydatycze, Żydowska Wola, and Kozarzów indicate the presence of Jewish villages and peasants and even the presence of Khazar settlements in the regions where they are found, have been thoroughly disproved. The first Jews that the Poles encountered must certainly have been traders, probably slave traders, of the type called in 12th-century Jewish sources *Holekhei Rusyah* (travelers to Russia). Some of them may have stayed for years in Poland, giving rise to the legends and fixing their dates. The chronicler Cosmas of Prague relates that the persecutions of the First Crusade caused Jews to move from *Bohemia to Poland in 1098. From this point undisputed and datable information on Jews in Poland begins to appear. According to the chronicler Vincent Kadlubek, under Boleslav III heavy penalties were laid on those who harmed Jews bodily.

The first sizable groups and fixed communities of Jews settled and established themselves in the region of Silesia, then part of Polish society and culture but later Germanized. A large part of Jewish settlement in what was later consolidated as the kingdom of Poland came from Silesia, and a great proportion of the immigration from further west and from the southwest passed through it. As late as the 15th century Silesian Jewry kept its ties with Poland. Jewish settlement grew steadily, though at first slowly, in Polish principalities to the east of Silesia. Excavations in *Great Poland and near *Wloclawek have unearthed coins with Hebrew inscriptions issued under the princes Mieczyslaw III (1173–1209), Casimir II the Just (1177–94), Boleslav the Curly (1201), and Leszek the White (1205). Some inscriptions directly concern the ruler, like the

Hebrew legend “Mieszko King of Poland” (משקא קרל פולסקי) or “Mieszko Duke” (משקא דוכוס); others include the names and titles of the Jewish *mintmasters, one of them even with its honorific title of **nagid*; “of the [coining] house of Abraham the son of Isaac Nagid” (דבי אברהם בר יצחק נגיד); another showing that the Jewish mintmaster was settled in Poland: “Joseph [of] Kalisz” (יוסף קאליש). Minting money was an important social and economic function, and as some of the inscriptions indicate, these finds are evidence of a circle of rich and enterprising Jewish merchants in the principalities of great Poland and Mazovia in the 12th century, some of them in close contact with the princely courts, some priding themselves on their descent from old Jewish families or on their own role in Jewish leadership. Rulers were quick to realize what they could gain from such immigrants; in 1262 Prince Boleslav the Shy forbade a monastery in *Lesser Poland to take Jews under its sovereignty.

By that time, however, a new era had already begun in the history of the colonization of Poland in general and of the settlement of Jews in it in particular. From 1241 onward the Mongol invasions caused heavy losses in life and destruction to property in Poland. Subsequently, the princes of Poland eagerly sought immigrants from the west, mainly from Germany, and gave them energetic assistance to settle in the villages and towns. Various organized groups settled in the cities that were granted the privilege of living according to German Magdeburg *Law; thus Polish towns became prevalently German in origin and way of life. Though the children of the immigrants became gradually Polonized, the traditions and social attitudes of the German town remained an active force and basic framework of town life in Poland of the 15th to 17th centuries. From the Jewish point of view the most important, and harmful, result of this basic attitude of the Polish towns was the tradition of the *guilds against competition and against new initiative in individual commercial enterprise and the activities of craftsmen. The townsmen also inherited a direct and bitter legacy of hatred of the Jews and the baleful and deeply rooted German image of the Jew.

Jews did not only come to Poland in the wake of the German *Drang nach Osten*, tracts of which are found in the 13th-century *Sefer Hasidim*, for instance, in the description of the creation of a new settlement in a primeval forest by Jews (*Sefer Hasidim*, ed. J. Wistinetzki (1924), 113, no. 371). For them the move was a continuation of and linking with earlier Jewish settlement in Poland. They also had compelling reasons stemming from the circumstances of their life in Western and Central Europe to leave their homes there and go to Poland-Lithuania. Their insecure position in this region was a compound of the atmosphere of fear and danger generated by the *Crusades, the insecurity of settlement caused by the *expulsions, the wave of massacres in Germany in particular between 1298 and 1348 (see *Rindfleisch; *Armleder; *Blood Libel; *Black Death; *Host, Desecration of), the insecurity and popular hatred in Germany and German-Bohemian-Moravian towns in the second half of the 14th century and the first half of the 15th,

the tensions and dangers created by the *Hussite revolution and wars in Bohemia-Moravia and southern Germany in the early 15th century, and the worsening situation of Jews in the kingdoms of Christian Spain after the massacres of 1391. All these factors, combined with the success of the settlers in Poland-Lithuania, induced large and variegated groups of Jewish immigrants from various countries – Bohemia-Moravia, Germany, Italy, Spain, from colonies in the Crimea – to go to Poland-Lithuania long after the original German drive had died out. As Moses b. Israel *Isserles put it in the 16th century, “it is preferable to live on dry bread and in peace in Poland” than to remain in better conditions in lands more dangerous for Jews” (Responso, no. 73). He even coined a pun on the Hebrew form of Poland (Polin), explaining it as deriving from two Hebrew words, *poh lin* (“here he shall rest”).

The results of this immigration were evident almost immediately. In 1237 Jews are mentioned in Plock. The Jewish community of *Kalisz bought a cemetery in 1283, so it must have been organized some time before, as the fact that the first writ of privileges for Jews was issued in 1264 by the prince of Kalisz also tends to show (see below). A *Judengasse* (*Jewish Quarter) is mentioned in *Cracow in 1304, lying between the town market and the town walls, but there must have been a community in Cracow long before then for about 1234 “Rabbi Jacob Savra of Cracow that sits in Poland, a great scholar and fluent in the entire Talmud” put forward his own opinion against that of the greatest contemporary scholars of Germany and Bohemia. In 1356 there is a record of the Jewish community at *Lvov; in 1367 at *Sandomierz; in 1379 at *Poznan; in 1387 at Pyzdry; and about 1382 at *Lyuboml. In the grand duchy of Lithuania Jewish communities are found in the 14th century at *Brest-Litovsk (1388), *Grodno (1389), and *Troki (1398). The volume of immigration grew continuously. By the end of the 15th century more than 60 Jewish communities are known of in united Poland-Lithuania. They were dispersed from Wroclaw (*Breslau) and *Gdansk in the west to *Kiev and *Kamenets Podolski in the east. The number of Jews living in Poland by that date is greatly disputed: At the end of the 15th century there were between 20,000 and 30,000.

JEWISH LEGAL STATUS

The foundations of the legal position of the Jews in Poland were laid down in the 13th to 15th centuries. The basic “general charters” of Jews in Poland have their origin in the writ issued by Prince *Boleslav v the Pious of Kalisz in 1264. This “statute of Kalisz” (Pol. *Statut kaliski*) – as it is called in literature – was also an “immigrant” from the countries which Jews left to come to Poland, being based on the statute of Duke Frederick II of Austria and on derivative statutes issued in Bohemia and Hungary. The Jews are seen, accepted, and defended as a group whose main business is *moneylending against pledges. With the unification of Poland into a kingdom, King *Casimir III the Great strongly favored the Jewish element in the cities of Poland, the German element having proved untrustworthy under his father, the unifier of Poland, Ladislaus I Lokietek.

Map 1. The Partitions of Poland.

Casimir broadened the statute of Kalisz while ratifying it for the Jews of his kingdom (in 1334, 1364, and 1367). Yet basically the same conception of the Jews as **servi camerae regis* and as protected moneylenders remains throughout. The legal status of the Jews changed considerably in Poland, but not through any central reinterpretation of their rights and standing, which

remained in theory based on and conceived of in terms of the Boleslavian-Casimirian statutes, codified and ratified by King Casimir IV Jagello in 1453. Throughout the 14th century, there was opposition to Jews accepting landed property as security for loans; while throughout the 15th century town and church tried to insist that Jews should wear the distinctive **badge*.

On several occasions these undercurrents broke out in sharp and violent decisions and action. During the Black Death “All Jews ... almost throughout Poland were massacred” (*omnes judaei ... fere in tota Polonia deleti sunt*; Stanislas of Olivia in his *Chronica Olivska*, for the year 1349). The martyrs were defined by German Jews as “the communities and kingdom of Cracow, its scholars and population” (S. Salfeld, *Das Martyrologium des Nuernberger Memorbuches* (1898), 82). By that time hatred of the Jews was also widespread among the nobility. In the statute of Lesser Poland of 1347, paragraph 26 claims that “the aim of the perfidious Jews is not so much to take their faith away from the Christians as to take away their wealth and property.” In 1407 the Cracow populace was diverted by the spectacle of a Jewish moneylender being led through the streets adorned with a crown set with forged coins – he was accused of forging currency – to be horribly tortured and burned in public. The citizens of Cracow claimed as early as 1369 that the Jews were “dominating” the town and complained of their cruelty and perfidy. In the main King Ladislaus II Jagello was hostile to Jews, though some of them were numbered among his financial and business agents, like Volchko, whom the king hoped in vain to bring over to Christianity.

Church circles were very active in their opposition to the Jews. Many priests and directors of monasteries, who had originally come from Germany, brought to Poland the hostile traditions concerning the city-dwelling accursed Jew. As early as 1267 the Polish Church Council of Wrocław (Breslau) outlined its anti-Jewish policy; its main aim was to isolate the Jews as far as possible from the Christians, not only from the communion of friendship and table but also to separate them in quarters surrounded by a wall or a ditch: “for as up to now the land of Poland is newly grafted on to the Christian body, it is to be feared that the Christian people will more easily be misled by the superstitions and evil habits of the Jews that live among them” (*quum adhuc Terra Polonica sit in corpore christianitatis nova plantatio, ne forte eo facilius populus christianus a cohabitantium Iudeorum superstitionibus et pravis moribus inficiatur*; Aronius, Regesten, 302 no. 724). With various modifications, this was restated in subsequent Church councils. In the 15th century this ecclesiastical attitude found new and influential expression. Cardinal Zbigniew *Oleśnicki and the chronicler Jan *Długosz were the main leaders of the anti-Jewish faction. When Jewish representatives came to King Casimir IV Jagello to obtain the ratification of their charters, Oleśnicki opposed it vehemently. He invited to Poland “the scourge of the Jews,” John of *Capistrano, fresh from his “success” in engineering a *Host desecration libel which resulted in the burning of many Jews and expulsion of the community of Wrocław. In vain Capistrano tried to influence the king not to ratify the Jewish charters. Oleśnicki himself wrote to the king in support of his effort: “Do not imagine that in matters touching the Christian religion you are at liberty to pass any law you please. No one is great and strong enough to put down all opposition to himself when the interests of the faith

are at stake. I therefore beseech and implore your royal majesty to revoke the aforementioned privileges and liberties. Prove that you are a Catholic sovereign, and remove all occasion for disgracing your name and for worse offenses that are likely to follow” (*Monumenta Mediaevi*, ed. Szugski, Codex Epistolaris s. XV, T. II past posterior p. 147). As a result of this pressure, the Nieszawa statute of 1454 decreed the repeal of all Jewish charters, but the repeal was short-lived. Perhaps central to the definition of the status of the Jews was the decision of King Sigismund I in 1534 that the Jews need not carry any distinguishing mark on their clothing. Despite the contrary resolution of the Sejm (Diet) of *Piotrków in 1538, the king’s decision remained.

Major changes in the status of the Jews occurred throughout the 16th and 17th centuries, but they came about either through the issuance of particular writs of rights by kings for towns and communities – both in favor of Jews as well as to their detriment (e.g., the *privilegia de non tolerandis judaeis* given to many towns in Poland) – or through the action of various magnates, whose power was continuously growing in Poland in these centuries. Some of the latter, nicknamed *Krolewięta* (“kinglets”), granted Jews many and costly rights in the new municipal settlements they were erecting on their expansive estates – the “private townships” of Poland, so-called in distinction to the old “royal townships.” To a slight degree, change resulted from the new economic activity of the Jews, mainly in the east and southeast of Poland-Lithuania, and their move toward colonization there.

The foundations of the legal status of the Jews in the grand duchy of Lithuania were laid by Grand Duke Vitold in writs of law granted to the Jews of Brest-Litovsk in 1388 and to the Jews of Grodno in 1389. Though formally based on the rights of the Jews of Lvov in Poland, in letter and spirit these charters reveal an entirely different conception of the place of Jews in society. The writ for the Grodno community states that “from the above-mentioned cemetery – in its present location as well as on ground that might be bought later – and also from the ground of their Jewish synagogue, no taxes whatsoever will have to be given to our treasury.” Not only are the Jewish place of worship and cemetery tax free – a concession that indicates interest in having Jewish settlers in the town – but also “what is more, we permit them to hold whatever views they please in their homes and to prepare at their homes any kind of drink and to serve drinks brought from elsewhere on the condition that they pay to our treasury a yearly tax. They may trade and buy at the market, in shops and on the streets in full equality with the citizens; they may engage in any kind of craft.” Thus, in granting the Jews complete freedom to trade and engage in any craft, the grand duke gave them economic equality with the Christian citizens. He also envisaged their having agricultural or partially agricultural occupations: “As to the arable lands as well as grazing lands, those that they have now, as well as those that they will buy later, they may use in full equality with the townspeople, paying like them to our treasury.” The Jews are here considered as merchants,

craftsmen, and desirable settlers in the developing city. As the grand duchy merged with Poland to an ever-increasing degree, in particular in the formal, legal, and social spheres, the basic concepts of the *servi camerae* also influenced the status of Lithuanian Jews (as was already hinted at in the formal reference to the rights and status of the Jews of Lvov). In spite of this, the general trend in Lithuanian towns and townships remained the same as that expressed in the late 16th-century charters. In 1495 the Jews were expelled from Lithuania. They were brought back in 1503; all their property

was returned and opportunities for economic activity were restored.

Thus, on the threshold of the 16th century, the gradually merging grand duchy of Lithuania and kingdom of Poland had both a fully worked out legal concept of the status of the Jews. In Poland, the whole conception was medieval to the core: Legally and formally the attitude to the Jews remained unchanged from their first arrival from the west and southwest. In Lithuania, on the other hand, from the start the formal expressions reveal a conception of a Jewish “third estate,”

Map 2. Major Jewish communities in Poland in 1931.

equal in economic opportunity to the Christian townspeople. Particular legal enactments in Poland took cognizance of the change in the economic role of the Jews in Polish society. In Lithuania the formal enactments were always suited to their economic role, and to a large extent the dynamics of 16th- and 17th-century development could be accommodated in the old legal framework.

ECONOMIC ACTIVITY

From the very first the Jews of Poland developed their economic activities through moneylending toward a greater variety of occupations and economic structures. Thus, by the very dynamics of its economic and social development, Polish Jewry constitutes a flat existential denial and factual contradiction of the antisemitic myth of “the Jewish spirit of usury.” On the extreme west of their settlement in Poland, in Silesia, although they were mainly engaged in moneylending, Jews were also employed in agriculture. When the Kalisz community in 1287 bought a cemetery it undertook to pay for it in pepper and other Oriental wares, indicating an old connection with the trade in spices. As noted above, the Jewish mintmasters of the 12th century must undoubtedly have been large-scale traders. In 1327 Jews were an important element among the participants at the *Nowy Sacz fair. Throughout the 14th and 15th centuries Jews were occupied to a growing degree in almost every branch of trade pursued at that time. Jews from both the grand duchy of Lithuania and Poland traded in cloth, dyes, horses, and cattle (and on a fairly large scale). At the end of the 15th century they engaged in trade with Venice, Italy, with Kaffa (Feodosiya), and with other Genoese colonies in the Crimea, and with Constantinople. Lvov Jews played a central role in this trade, which in the late 15th and early 16th centuries developed into a large-scale land-transit trade between the Ottoman Empire and Christian Europe. Through their participation in this trade and their contacts with their brethren in the Ottoman Empire, many Jewish communities became vital links in a trade chain that was important to both the various Christian kingdoms and the Ottoman Empire. Lithuanian Jews participated to the full and on a considerable scale in all these activities, basing themselves both on their above-mentioned recognized role in Lithuanian civic society and on their particular opportunities for trade with the grand principality of *Moscow and their evident specialization in dyes and dyeing. Obviously, in all these activities, all links with Jewish communities in Central and Western Europe were beneficial.

During all this period Jews were engaged in moneylending, some of them (e.g., Jordanis *Lewko, his son Canaan, and Volchko) on a large scale. They made loans not only to private citizens but also to magnates, kings, and cities, on several occasions beyond the borders of Poland. The scope of their monetary operations at their peak may be judged by the fact that in 1428 King Ladislaus II Jagello accused one of the Cracow city counselors of appropriating the fabulous sum of 500,000 zlotys which the Jews had supplied to the royal treasury.

To an increasing extent many of the Jewish moneylenders became involved in trade. They were considered by their lords as specialists in economic administration. In 1425 King Ladislaus II Jagello charged Volchko – who by this time already held the Lvov customs lease – with the colonization of a large tract of land: “As we have great confidence in the wisdom, carefulness, and foresight of our Lvov customs-holder, the Jew Volchko ... after the above-mentioned Jew Volchko has turned the above-mentioned wilderness into a human settlement in the village, it shall remain in his hands till his death.” King Casimir Jagello entrusted to the Jew Natko both the salt mines of Drohobycz (*Drogobych) and the customs station of Grejdek, stating in 1452 that he granted it to him on account of his “industry and wisdom so that thanks to his ability and industry we shall bring in more income to our treasury.” The same phenomenon is found in Lithuania. By the end of the 15th century, at both ends of the economic scale Jews in Poland were becoming increasingly what they had been from the beginning in Lithuania: a “third estate” in the cities. The German-Polish citizenry quickly became aware of this. By the end of the 15th century, accusations against the Jews centered on unfair competition in trade and crafts more than on harsh usury. Not only merchants but also Jewish craftsmen are mentioned in Polish cities from 1460 onward. In 1485 tension in Cracow was so high that the Jewish community was compelled to renounce formally its rights to most trades and crafts. Though this was done “voluntarily,” Jews continued to pursue their living in every decent way possible. This was one of the reasons for their expulsion from Cracow to Kazimierz in 1495. However, the end of Jewish settlement in Cracow was far from the end of Jewish trade there; it continued to flourish and aggravate the Christian townspeople, as was the case with many cities (like *Lublin and *Warsaw) which had exercised their right *de non tolerandis Judaeis* and yet had to see Jewish economic activity flourishing at their fairs and in their streets.

CULTURAL AND SOCIAL LIFE

In Poland and Lithuania from the 13th century onward Jewish culture and society were much richer and more variegated than has been commonly accepted. Even before that, the inscriptions on the bracteate coins of the 12th century indicate talmudic culture and leadership traditions by the expressions used (*rabbi*, רַבִּי, *nagid*, נָגִיד). About 1234, as mentioned, Jacob Savra of Cracow was able to contradict the greatest talmudic authorities of his day in Germany and Bohemia. In defense of his case he “sent responsa to the far ends of the west and the south” (E.E. Urbach (ed.), in *Sefer Arugat ha-Bosem*, 4 (1963), 120–1). The author of *Sefer Arugat ha-Bosem* also quotes an interpretation and emendation that “I have heard in the name of Rabbi Jacob from Poland” (*ibid.*, 3 (1962), 126). Moses Zaltman, the son of *Judah b. Samuel he-Ḥasid, states: “Thus I have been told by R. Isaac from Poland in the name of my father.... thus I have been told by R. Isaac from Russia.... R. Mordecai from Poland told me that my father said” (Ms. Cambridge 669. 2, fol. 69 and 74). This manuscript evidence

proves conclusively that men from Poland and from southern Russia (which in the 13th century was part of the grand duchy of Lithuania) were close disciples of the leader of the *Ḥasidei Ashkenaz. The names of Polish Jews in the 14th century show curious traces of cultural influence; besides ordinary Hebrew names and names taken from the German and French – brought by the immigrants from the countries of their origin – there are clearly Slavonic names like Lewko, Jeleń, and Pychacz and women’s names like Czarnula, Krasa,

and even Witoslawa. Even more remarkable are the names of Lewko’s father, Jordan, and Lewko’s son, Canaan or Chanaan, which indicate a special devotion to Erez Israel.

By the 15th century, relatively numerous traces of social and cultural life in the Polish communities can be found. In a document from April 4, 1435, that perhaps, preserves the early *Yiddish of the Polish Jews, the writer, a Jew of Breslau, addresses “the Lord King of Poland my Lord.” The closing phrases of the letter indicate his Jewish culture: “To certify

this, have I, the above mentioned Jekuthiel, appended my Jewish seal to this letter with full knowledge. Given in Breslau, on the first Monday of the month Nisan, in Jewish reckoning five thousand years and a hundred years and to that hundred the ninety-fifth year after the beginning and creation of all creatures except God Himself” (M. Brann, *Geschichte der Juden in Schlesien*, 3 (1901), Anhang 4, p. lviii).

Though Israel b. Hayyim *Bruna said of the Jews of Cracow, “they are not well versed in Torah” (Responsa, no. 55, fol. 23b), giving this as his reason for not adducing lengthy talmudic arguments in his correspondence with them, he was writing to one of his pupils who claimed sole rabbinical authority and income in the community of Poznan (*ibid.*, no. 254, fol. 103b). Israel b. Pethahiah *Isserlein of Austria writes, “my beloved, the holy community of Poznan.” Two parties in this community – the leadership, whom Isserlein calls “you, the holy community,” and an individual – were quarreling about taxation and Isserlein records that both sides submitted legal arguments in support of their cases (*Terumat ha-Deshen, Pesakim u-Khetavim*, no. 144). Great scholars like Yom Tov Lipmann *Muelhausen, who came to Cracow at the end of the 14th century, and Moses b. Isaac Segal *Mintz, who lived at Poznan in 1475, must certainly have left traces of their cultural influence there. Some of the responsa literature contains graphic descriptions of social life. “A rich man from Russia” – either the environs of Lvov in Poland or of Kiev in Lithuania – asked Israel Bruna, “If it is permissible to have a prayer shawl of silk in red or green color for Sabbath and the holidays” (Responsa, no. 73, fol. 32b), a desire fitting a personality of the type of Volchko. Something of the way of life of “the holy company of Lvov” can be seen from the fact that their problem was the murder of one Jew by another in the Ukrainian city of *Pereyaslav-Khmelnski. As the victim lay wounded on the ground, a third Jew, Nahman, called out to the murderer, Simḥah: “Hit Nisan till death” and so he was killed by being beaten on his head as he lay there wounded. The victim was a totally ignorant man, “he couldn’t recognize a single [Hebrew] letter and has never in his life put on *tefillin*.” The murderer was drunk at the time and the victim had started the quarrel; they were all in a large company of Jews (*ibid.*, no. 265, fol. 110a–b). The rough social and cultural climate of Jewish traders in the Ukraine in the middle of the 15th century is here in evidence. Moses Mintz describes from his own experience divorce customs in the region of Poznan (Responsa (Salonika, 1802), no. 113, fol. 129b). He also describes interesting wedding customs in Poland which differed in many details from those of Germany: “when they accompany the bride and bridegroom to the *huppah* they sing on the way ... they give the bridegroom the cup and he throws it down, puts

his foot on it and breaks it, but they pour out the wine from the cup before they give it to the bridegroom. They have also the custom of throwing a cock and also a hen over the head of the bride and bridegroom above the canopy after the pronouncing of the wedding blessings” (*ibid.*, no. 109, fol. 127a). Thus, in the western and central parts of Poland there is evidence of an established and well developed culture and some learning, contrasting sharply with the rough and haphazard existence of Jews living southwards from Lvov to Pereyaslav-Khmelnski.

Jewish culture in Poland and in Lithuania seems to have had a certain rationalist, “Sephardi” tinge, as evidenced both by outside reports and by certain tensions appearing in the second half of the 16th century. At the beginning of the 16th century the Polish chronicler Maciej Miechowicz relates that in Lithuania, “the Jews use Hebrew books and study sciences and arts, astronomy and medicine” (*Tractatus de duabus Sarmatiis* (1517), II: 1, 3). The cardinal legate Lemendone also notes that Lithuanian Jews of the 16th century devote time to the study of “literature and science, in particular astronomy and medicine.” At the end of the 15th century, Lithuanian Jews took part in the movement of the *Judaizers in Muscovite Russia, whose literature shows a marked influence of rationalistic Jewish works and anti-Christian arguments. The Jewish community of Kiev – in the 15th and early 16th centuries within the grand duchy of Lithuania – was praised by a Crimean Karaite in 1481 for its culture and learning. In about 1484 another Karaite, Joseph b. Mordecai of Troki, wrote a letter to Elijah b. Moses *Bashyazi (Mann, Texts, 2 (1935), 1149–59) telling about a disputation on calendar problems between him and “the Rabbanites who live here in Troki, Jacob Suchy of Kaffa (Feodosiya) and Ozer the physician of Cracow” (*ibid.*, 1150). He closes his letter with ideas showing a decided rationalist tendency, “The quality of the sermon will be through the quality of the subject, therefore as we have none such more important than the Torah, for in it there is this teaching that brings man straight to his scientific and social success and the chief of its considerations is that man should achieve his utmost perfection, which is spiritual success; and this will happen when he attains such rational concepts as the soul, the active reason, can attain, for the relation between a phenomenon and its causes is a necessary relation, i.e., the relation of the separate reason to the material reason is like the relation of light to sight” (*ibid.*, 1159).

In Poland a dispute between two great scholars of the 16th century – Solomon *Luria and Moses *Isserles – brings to the surface elements of an earlier rationalist culture. Luria accuses yeshivah students of using “the prayer of Aristotle” and accuses Isserles of “mixing him with words of the living God ... [considering] that the words of this unclean one are precious and perfume to Jewish sages” (Isserles, Responsa, no. 6). Isserles replies: “All this is still a poisonous root in existence, the legacy from their parents from those that tended to follow the philosophers and tread in their steps. But I myself have never seen nor heard up till now such a thing, and,

but for your evidence, I could not have believed that there was still a trace of these conceptions among us” (*ibid.*, no. 7). Writing around the middle of the 16th century, Isserles tells unwittingly of a philosophizing trend prevalent in Poland many years before. A remarkable case of how extreme rationalist conceptions gave way to more mystic ones can be seen in Isserles’ pupil, Abraham b. Shabbetai *Horowitz. Around 1539 he sharply rebuked the rabbi of Poznan, who believed in demons and opposed *Maimonides: “As to what this ass said, that it is permissible to study Torah only, this is truly against what the Torah says, ‘Ye shall keep and do for it is your wisdom and understanding in the eyes of the gentiles.’ For even if we shall be well versed in all the arcana of the Talmud, the gentiles will still not consider us scholars; on the contrary, all the ideas of the Talmud, its methods and sermons, are funny and derisible in the eyes of the gentiles. If we know no more than the Talmud we shall not be able to explain the ideas and exegetical methods of the Talmud in a way that the gentiles will like – this stands to reason” (see MGWJ, 47 (1903), 263). Yet this same man rewrote his rationalistic commentary on a work by Maimonides to make it more amenable to traditionalistic and mystic thought, declaring in the second version, “The first uproots, the last roots.” Later trends and struggles in Jewish culture in Poland and Lithuania are partly traceable to this early and obliterated rationalistic layer (see below).

Polish victories over the Teutonic Order in the west and against Muscovite and Ottoman armies in the east and southeast led to a great expansion of Poland-Lithuania from the second half of the 16th century. In this way Poland-Lithuania gained a vast steppeland in the southeast, in the Ukraine, fertile but unpacified and unreclaimed, and great stretches of arable land and virgin forest in the east, in Belorussia. The agricultural resources in the east were linked to the center through the river and canal systems and to the sea outlet in the west through land routes. These successes forged a stronger link between the various strata of the nobility (Pol. *szlachta*) as well as between the Polish and Lithuanian nobility. In 1569 the Union of Lublin cemented and formalized the unity of Poland-Lithuania, although the crown of Poland and the grand duchy of Lithuania kept a certain distinctness of character and law, which was also apparent in the *Councils of the Lands and in the culture of the Jews (see below). With the union, Volhynia and the Ukraine passed from the grand duchy to the crown. The combined might of Poland-Lithuania brought about a growing pacification of these southeastern districts, offering a possibility of their colonization which was eagerly seized upon by both nobility and peasants.

1569–1648: COLONIZATION OF THE UKRAINE

The Polish nobility, which became the dominant element in the state, was at that time a civilized and civilizing factor. Fermenting with religious thought and unrest which embraced even the most extreme anti-trinitarians; warlike and at the same time giving rise to small groups of extreme anarchists and pacifists; more and more attracted by luxury, yet for most

Table 1. Growth of Jewish Settlement by Places and Numbers in the Colonization Period (Poland)

Wojewódstwo (district)	Before 1569		c. 1648

Podolia	9	750	18	4,000
Kiev	–	–	33	13,500
Bratslav	2	?–	18	18,825
Total	24	c. 4,000	115	51,325

of the period developing rational – even if often harsh – methods of land and peasant exploitation; despising merchandise yet very knowledgeable about money and gain – this was the nobility that, taking over the helm of state and society, developed its own estates in the old lands of Poland-Lithuania and the vast new lands in the east and southeast. Jews soon became the active and valued partners of this nobility in many enterprises. In the old “royal cities” – even in central places like Cracow, which expelled the Jews in 1495, and *Warsaw, which had possessed a *privilegium de non tolerandis Judaeis* since 1527 – Jews were among the great merchants of clothing, dyes, and luxury products, in short, everything the nobility desired. Complaints from Christian merchants as early as the beginning of the 16th century, attacks by urban antisemites like Sebastian *Miczyński and Przeclaw *Mojecki in the 17th century, and above all internal Jewish evidence all point to the success of the Jewish merchant. The Jew prospered in trade even in places where he could not settle, thanks to his initiative, unfettered by guilds, conventions, and preconceived notions. The *keshirim*, the council of former office holders in the Poznan community, complain about the excessive activity of Jewish intermediaries, “who cannot stay quiet; they wait at every corner, in every place, at every shop where silk and cloth is sold, and they cause competition through influencing the buyers by their speech and leading them to other shops and other merchants.” The same council complains about “those unemployed” people who sit all day long from morning till evening before the shops of gentiles – of spice merchants, clothes merchants, and various other shops – “and the Christian merchants complain and threaten.” There was even a technical term for such men, *tsuvayzer*, those who point the way to a prospective seller (*Pinkas Hekhsherim shel Kehillat Pozna*, ed. D. Avron (1966), 187–8 no. 1105, 250 no. 1473, 51 no. 1476). Miczyński gives a bitter description of the same phenomenon in Cracow in 1618. Large-scale Jewish trade benefited greatly from the trader’s connections with their brethren both in the Ottoman Empire and in Germany and Western Europe. It was also linked to a considerable extent with the *arenda system and its resulting great trade in the export of agricultural products.

Through the arenda system Jewish settlements spread over the country, especially in the southeast. Between 1503 and 1648 there were 114 Jewish communities in the Ukraine,

some on the eastern side of the River Dnieper and list by S. Ettinger, in *Zion*, 21 (1956), 114–8); many of these were tiny. The table Growth of Jewish Settlement shows the main outlines of the dynamics of Jewish settlement in these regions of colonization (*ibid.*, p. 124).

The further the move east and southward, the greater the relative growth in numbers and population. The Jewish *arenda* holders, traders, and peddlers traveled and settled wherever space and opportunity offered.

Life in these districts was strenuous and often harsh. The manner of Jewish life in the Ukraine, which as we have already seen was uncouth, was both influenced and channeled through Jewish participation in the defense of newly pacified land. Meir b. Gedaliah of Lublin relates “what happened to a luckless man, ill, and tortured by pain and suffering from epilepsy... When there was an alarm in Volhynia because of the Tatars – as is usual in the towns of that district – when each one is obliged to be prepared, with weapon in hand, to go to war and battle against them at the command of the duke and the lords; and it came to pass that when the present man shot with his weapon, called in German *Buechse*, from his house through the window to a point marked for him on a rope in his courtyard to try the weapon as sharpshooters are wont to do, then a man came from the market to the above mentioned courtyard ... and he was killed [by mistake].” The rabbi goes on to tell that a Christian, the instructor and commander of this Jew, was standing in front of the courtyard to warn people not to enter. The Jew was “living among the gentiles in a village” with many children (Meir b. Gedaliah of Lublin, Responsa, no. 43). There is reference to an enterprising group of Jews who went to Moscow with the armies of the Polish king during war, selling liquor (one of them had two cartloads) and other merchandise to the soldiers (*ibid.*, no. 128). Among the Cossack units there was a Jew about whom his Cossack colleagues “complained to God ... suddenly there jumped out from amongst our ranks a Jew who was called Berakhah, the son of the martyr Aaron of Cieszewiec.” This Jew was not the only one in the ranks of the Cossacks, for – to allow his wife to marry – one of the witnesses says that “he knew well that in this unit there was not another Jewish fighter who was called Berakhah” (*ibid.*, no. 137). Life in general was apt to be much more violent than is usually supposed: Even at Brest-Litovsk, when the *rebbe* of the community saw a litigant nearing his door, he seized a heavy box and barricaded himself in for fear of harm (*ibid.*, no. 44).

Arenda did more than give a new basis to the existence of many Jewish families; it brought the Jews into contact with village life and often combined with aspects of their internal organizational structure. Thus, the Jew Nahum b. Moses, as well as renting the mills, the tavern, and the right of preparing beer and brandy, also rented for one year all milk produce of the livestock on the manors and villages. Elaborate and complicated arrangements were made for payment and collection of these milk products (S. Inglot, in: *Studja z historii społecznej i gospodarczej poświęcone prof. Franciszkowi Bu-*

jakowi (1931), 179–82; cf. 205, 208–9). In contact with village life, the Jew sometimes formed a sentimental attachment to his neighbors and his surroundings. In 1602 a council of leaders of Jewish communities in Volhynia tried to convince Jewish *arendars* to let the peasants rest on Saturday though the Polish nobleman would certainly have given them the right to compel them to work: “If the villagers are obliged to work all the week through, he should let them rest on Sabbath and the Holy Days throughout. See, while living in exile and under the Egyptian yoke, our parents chose this Saturday for a day of rest while they were not yet commanded about it, and heaven helped them to make it a day of rest for ever. Therefore, where gentiles are under their authority they are obliged to fulfill the commandment of the Torah and the order of the sages not to come, God forbid, to be ungrateful [*livot לִבְעֵט*] to the One who has given them plenty of good by means of the very plenty he has given them. Let God’s name be sanctified by them and not defiled” (H.H. Ben-Sasson, in *Zion*, 21 (1956), 205).

The interests of the Jews and Polish magnates coincided and complemented each other in one most important aspect of the economic and social activity of the Polish-Lithuanian nobility. On their huge estates the nobles began to establish and encourage the development of new townships, creating a network of “private towns.” Because of the nature of their relationship with their own peasant population they were keen to attract settlers from afar, and Jews well suited their plans. The tempo and scale of expansion were great; in the grand duchy of Lithuania alone in the first half of the 17th century between 770 and 900 such townships (*miasteczki*) existed (S. Aleksandrowicz, in: *Roczniki dziejów społecznych i gospodarczych*, 27 (1965), 35–65). For their part, the Jews, who were hard pressed by the enmity of the populace in the old royal cities, gladly moved to places where they sometimes became the majority, in some cases even the whole, of the population. Since these were situated near the hinterland of agricultural produce and potential customers, Jewish initiative and innovation found a new outlet. Through charters granted by kings and magnates to communities and settlers in these new towns, the real legal status of the Jews gradually changed very much for the better. By the second half of the 17th century everywhere in Poland Jews had become part of “the third estate” and in some places and in some respects the only one.

Jews continued to hold customs stations openly in Lithuania, in defiance of the wishes of their leaders in Poland (see Councils of the Lands). Many custom station ledgers were written in Hebrew script and contained Hebrew terms (see R. Mahler, in *YIVO Historische Shriftn*, 2 (1937), 180–205). Sometimes a Jew is found with a “sleeping partner,” a Pole or Armenian in whose name the customs lease has been taken out. That some customs stations were in Jewish hands was also of assistance to Jewish trade.

This complex structure of large-scale export and import trade, the active and sometimes adventurous participation in the colonization of the Ukraine and in the shaping of the

“private cities,” in the fulfilling of what today we would call state economic functions, created for the first time in the history of Ashkenazi Jewry a broad base of population, settlement distribution, and means of livelihood, which provided changed conditions for the cultural and religious life of Jews. Even after the destruction wrought by the *Chmielnicki massacres enough remained to form the nucleus of later Ashkenazi Jewry. The later style of life in the Jewish *shtetl was based on achievements and progress made at this time.

INTERNAL JEWISH LIFE

The Councils of the Lands, the great superstructure of Jewish *autonomy, were an outgrowth of such dynamics of economy and settlement. Beginning with attempts at centralized leaderships imposed from above, appointed by the king, they ended with a central elected Jewish leadership. The aims, methods, and institutions of this leadership were intertwined with the new economic structure. Great fairs – notably those of Lublin and Jaroslaw – since they attracted the richest and most active element of the Jewish population, also served as the meeting place of the councils. Throughout its existence the Council of the Province of Lithuania cooperated with its three (later five) leading communities through a continuous correspondence with them and between each of them and the smaller communities under its authority. Here the council was adapting the organizational methods of large-scale trade to the leadership structure. The concern of the councils with the new economic phenomena, like *arenda*, is well known. They also concerned themselves with matters of security and morals which arose from the thin spread of Jewish families in Christian townships and villages. On the whole, up to 1648 a sense of achievement and creativity pervades their enterprises and thought. A preacher of that time, Jedidiah b. Israel *Gottlieb, inveighed against a man’s gathering up riches for his children, using the argument of the self-made man: “The land is wide open, let them be mighty in it, settle and trade in it, then they will not be sluggards, lazy workers, children relying on their father’s inheritance, but they themselves will try ... to bring income to their homes, in particular because every kind of riches coming through inheritance does not stay in their hands ... easy come, easy go... through their laziness ... they have to be admonished ... to be mighty in the land through their trading: their strength and might shall bring them riches” (*Shir Yedidut* (Cracow, 1644), *Zeidah la-Derekh*, fol. 24a).

This buoyancy was based on a continuous growth of population throughout the 16th and the first half of the 17th centuries, due both to a steady natural increase thanks to improving conditions of life and to immigration from abroad resulting from persecution and expulsions (e.g., that from Bohemia-Moravia for a short period in 1542). As noted, the growth was most intensive in the eastern and southeastern areas of Poland-Lithuania, and it was distributed through the growing dispersion of Jews in the “private cities” and in the villages. At the end of the 16th century, Great Poland and Masovia (Mazowsze) contained 52 communities, Lesser

Poland 41, and the Ukraine, Volhynia, and Podolia about 80; around 1648, the latter region had 115 communities. From about 100,000 persons in 1578 the Jewish population had grown to approximately 300,000 around 1648. It is estimated that the Jews formed about 2.5–3% of the entire population of Poland, but they constituted between 10% and 15% of the urban population in Poland and 20% of the same in Lithuania.

The dynamics of Jewish economic life are evident not only in the variety and success of their activities, but also in certain specific institutions and problems that reveal the tension behind their strain for economic goals which tended to entail risks. By the end of the 16th century, Jews were borrowers rather than lenders. Seventeenth-century antisemites – Miczyński and Mojecki – accused Jews of borrowing beyond their means and deceiving Christian lenders. From their accusations it is clear that much of this credit was not in ready cash but in goods given to Jewish merchants on credit. Borrowing was a real problem with which the Jewish leadership was much concerned. Many ordinances of the Councils of the Lands, of the provincial councils, and of single communities are preoccupied with preventing and punishing bankruptcy. Great efforts were devoted to prevent non-payment of debts to Christians in particular. Young men who were building up a family were especially suspected of reaching beyond their means. These ordinances tell in their own way the story of a burgeoning economy which is strained to dangerous limits, inciting in particular the young and the daring. A good name for credit was then a matter of life and death for the Jewish merchant. The great halakhist Solomon Luria was prepared to waive an ancient talmudic law in favor of the lender because “now most of the living of the Jews is based on credit; whereas most of those called merchants have little of their own and what they have in their hands is really taken from gentiles on credit for a fixed period – for they take merchandise [on credit] till a certain date – it is not seemly for a judge to sequester the property of a merchant, for news of this may spread and he will lose the source of his living and all his gentile creditors will come on him together and he will be lost, God forbid, and merchants will never trust him again. I myself have seen and heard about many merchants – circumcised and uncircumcised – to whom, because people said about them that they are a risk, much harm was caused and they never again could stand at their posts” (*Yam shel Shelomo, Bava Kamma*, ch. 1, para. 20). Because of the importance of credit the practice of a Jew lending on interest to another Jew became widespread in Poland-Lithuania despite the fact that it was contrary to Jewish law (see *usury). This necessitated the creation there of the legal fiction of *hetter iskah*, formulated by a synod of rabbis and leaders under the chairmanship of Joshua b. Alexander ha-Kohen *Falk in 1607. Widespread credit also led to the use of letters of credit specific to the Jews of Poland, the so-called **mamram* (Pol. *membrana*, *membran*; Heb. מַמְרָם, מַמְרָם, מַמְרָמָא, in initials: מַמְרָא): the Jew would sign on one side of the paper and write on the

other side “this letter of credit obliges the signed overleaf for amount x to be paid on date y.”

Jewish cultural and social life flourished hand in hand with the economic and demographic growth. In the 16th and early 17th centuries Poland-Lithuania became the main center of Ashkenazi culture. Its *yeshivot were already famous at the beginning of the 16th century; scholars like *Hayyim b. Bezalel of Germany and David b. Solomon *Gans of Prague were the pupils of *Shalom Shakhna of Lublin and Moses Isserles of Cracow, respectively. Mordecai b. Abraham *Jaffe; Abraham, Isaiah, and Jacob b. Abraham *Horowitz; Eliezer b. Elijah *Ashkenazi; *Ephraim Solomon b. Aaron Luntshits; and Solomon Luria were only a few of the great luminaries of talmudic scholarship and moralistic preaching in Poland-Lithuania of that time. Councils of the Lands and community ordinances show in great detail if not the reality at least the ideal of widespread Torah study supported by the people in general. This culture was fraught with great social and moral tensions. Old Ashkenazi ascetic ideas did not sit too well on the affluent and economically activist Polish-Lithuanian Jewish society. Meetings with representatives of the Polish *Reformation movement, in particular with groups and representatives of the anti-trinitarian wing like Marcin Czechowicz or Szymon *Budny, led to disputations and reciprocal influence. Outstanding in these contacts on the Jewish side was the Karaite Isaac b. Abraham *Troki, whose *Hizzuk Emunah* sums up the tensions in Jewish thought in the divided Christian religious world of Poland-Lithuania. It was Moses Isserles who formulated the Ashkenazi modifications and additions to the code of the Sephardi Joseph Caro. Isaiah b. Abraham ha-Levi *Horowitz summed up in his *Shenei Luhot ha-Berit* the moral and mystic teaching of the upper circles of Ashkenazi Jewry. Yet his writings, and even more so the writings of Isserles, give expression to the tensions and compromises between rationalism and mysticism, between rich and poor, between leadership and individual rights. To all these tensions, Ephraim Solomon Luntshits gave sharp voice in his eloquent sermons, standing always on the side of the poor against the rich and warning consistently against the danger of hypocrisy and self-righteousness. Fortified and wooden synagogues expressed the needs and the aesthetic sense of Jewish society of that time. In the old “royal cities” magnificent synagogue buildings were erected as early as the 16th century (e.g., the Rema synagogue at Cracow and the Great Synagogue of Lvov). Hebrew manuscripts were brought from abroad and some of them illuminated in Poland. Jewish printing developed early and many beautiful works were published. Various sources describe carnival-like Purim celebrations, and the fun, irony, and joy of life expressed in now lost folk songs and popular games and dramas.

FROM CHMIELNICKI TO THE FIRST PARTITION

The *Chmielnicki revolt and massacres of 1648–49, the Tatar incursions from Crimea, and the subsequent war with Moscow combined with the Swedish War to bring on the Jews of

Table 2. Distribution of Jews in Poland According to Size of Communities in the 18th century

Region	Percentage of communities of less than 500	Percentage of communities of more than 500
Great Poland	91.7	8.3
Masovia	93.5	6.5
Lesser Poland	76.5	23.5

Ukraine	28.9	3.6	2.0	27.0	14.5	24.0

Poland-Lithuania approximately 30 years of bloodshed, destruction, and suffering. Thousands were killed, thousands forced to adopt Christianity. At the end of these convulsions, Poland-Lithuania had lost much territory in the east which of course was also lost for Jewish life and settlement. Thousands of refugees thronged westward, bringing heavy pressure to bear on charity and the very structure of Jewish society. The arrangements of the Councils of the Lands to prevent competition for *arenda* had to stand the severe test of diminished opportunities and increasing demand. Contemporary figures like Nathan Nata *Hannover saw in this catastrophe a fissure in Jewish life and institutions, as indicated by the tenor of his chronicle, *Yeven Metsulah*. In reality, Jewish cultural and social life in the second half of the 17th century and in the 18th continued to a considerable extent along the lines developed in the great era of the 16th and first half of the 17th centuries. Recent research has shown that *Pinsk, a community in the east of Lithuania, recovered from its troubles more completely and at greater speed than had been known before. But the dynamism had gone out of institutions and activities; inertia set in. Much that had been full of imminent promise of development and change before the disasters tended now to be petrified. Tensions that had been submerged in the buoyant pre-Chmielnicki times became more open, causing dissension and revolt. The councils and communities were burdened with the growing debts incurred mostly to meet unexpected demands for defense against multiplying libels and massacres, but at the same time the oligarchic structure within the community and the councils and the dominating attitude adopted by the larger communities toward the smaller ones – in Lithuania in particular – caused the lower strata of the population and the members of the smaller communities to suspect their in-

tentions and greatly resent the increasingly heavy tax burden. Jewish economic activity continued to develop, though Jews in the “private towns” and on *arenda* in the villages came to feel more and more the heavy and capricious hand of the Polish nobles, who by that period had lost the vigor of earlier times and become tyrannical, petty lords.

Despite the loss of territory and the worsening of conditions, the Jewish population in Poland-Lithuania continued to grow both absolutely and, from many aspects, in its relative strength in the country. With the abolition of the Councils of the Lands in 1764, a census of the Jewish population was taken. Jews tried to evade being counted by any means available for they were certain that the purpose of the census was to impose heavier taxation on them, as they had every reason to suspect the intentions of the authorities. For this reason at least 20% should be added to the official figures. Accordingly in 1764 there were 749,968 Jews over a year old in Poland-Lithuania: 548,777 of them in Poland and 201,191 in Lithuania; 16.5% of the Jewish population of Poland lived in western Poland, 23.5% in Lesser Poland, and 60% in the Ukraine and neighboring districts; in Lithuania 77% lived in the western part and only 23% in the eastern, Belorussian districts. Taking into account the overall population of Poland, it can be seen that the concentration of Jewish population had shifted eastward in the 18th century to an even greater extent than in the early and successful 17th century. The census also shows that Jews lived mostly in small communities. (See Table 2: Distribution of Jews in Poland.)

As the entire Christian urban population of Poland-Lithuania was estimated at that time to be about half a million, and as the Jews were concentrated mainly in the townships and “private towns,” there emerges a clear picture of a predominantly Jewish population in the smaller Polish-Lithuanian urban centers, at least 70% to 90% in many of these places.

The economic structure of the Jewish population at this time is shown in Table 3.

Although the predominance of unspecified professions does indicate the impoverishment of the Jews, it is largely an aspect of the evasive attitude toward the census. As this table does not include the village Jews, among whom the occupations of *arenda* and the production and sale of alcoholic beverages certainly predominated, only the following economic conclusions can be drawn with certainty: A considerable proportion of the Jews were engaged in crafts, and *arenda* and alcoholic beverages became more important as sources of livelihood as the Jews moved eastward and into villages (according to R. Mahler, *Yidn in Amolikh Poyln in Likht fun Tsifern*, 1958).

The Jewish population of Poland-Lithuania was still seething with creativity and movement in the 18th century. The messianic claims of *Shabbetai Zevi not only stirred the masses of Jews in 1665–66 but also left a deep impression on later generations. This is evident in the suspicion expressed about itinerant **maggidim* (it was also demanded that they be supervised), who were suspected of disseminating hereti-

cal and critical ideas. The personality and movement of Jacob *Frank made the greatest impact on the distressed population of Podolia, in the extreme southeast. From the same region too arose *Israel b. Eliezer Ba'al Shem Tov and the movement of *Hasidism he originated. Talmudic scholarship and traditional ways of life, which continued to flourish throughout the period, found a supreme exemplar in the vigorous personality and influence of *Elijah b. Solomon Zalman, the Gaon of Vilna, and in the way of life and culture originated by him and his circle in the Mitnaggedic Lithuanian yeshivot. At that time too the first influences of *Haskalah and *assimilation began to appear in Poland-Lithuania.

With the partitions of Poland (beginning in 1772), the history of ancient Jewish Poland-Lithuania comes to an end. During the agony of the Polish state, several of its more enlightened leaders – e.g., H. Kołłantaj and T. *Czacki – tried to “improve the Jews,” i.e., improve their legal and social status in the spirit of western and European enlightened absolutism. With the dismemberment of Poland-Lithuania, their belated efforts remained suspended. Even when broken up and dispersed, Polish-Lithuanian Jewry was not only the majority and the cultural source of Jewish society in czarist Russia, but those elements of it which came under Prussia and Austria also served later as the reservoir of Jewish spirit and manpower which resisted the ravages of assimilation and apostasy in the German and Austrian communities in the late 18th and 19th centuries.

[Haim Hillel Ben-Sasson]

AFTER PARTITION

The geographic entity “Poland” in this part of the article refers to that area of the Polish commonwealth which, by 1795, had been divided between Austria and Prussia and which subsequently constituted the basis of the grand duchy of Warsaw, created in 1807. Following the Congress of *Vienna in 1815 much of this area was annexed to the Russian Empire as the semi-autonomous Kingdom of Poland, also known as Congress Poland. The kingdom constituted the core of ethnic Poland, the center of Polish politics and culture, and an economic area of great importance. It is to be distinguished from Austrian Poland (Galicia), Prussian Poland (Poznan, Silesia, and Pomerania), and the Russian northwestern region also known as Lithuania-Belorussia.

During and after the partitions the special legal status enjoyed by the Jews in Poland-Lithuania came under attack – while disabilities remained, efforts were made to break down the Jews’ separateness and transform them into “useful” citizens. This new notion, brought to Poland from the west and championed by Polish progressives with the support of the tiny number of progressive Jews, advocates of the Haskalah, was clearly expressed during the debates on the Jewish question at the Four-Year Sejm (1788–92). The writings of H. Kołłantaj and M. *Butrymowicz demanded the reform of Jewish life, meaning an end to special institutions and customs (from the *kahal* to the Jewish beard), sentiments to be expressed later on

Table 4. Growth of Warsaw Jewry

Year	Number of Jews	Percentage
1781	3,532	4.5
1810	14,061	18.1
1856	44,149	24.3
1882	127,917	33.4
1897	219,141	33.9

Table 5. Lodz Jewry, Population

Year	Number of Jews	Percentage
1793	11	5.7
1856	2,775	12.2
1897	98,677	31.8
1910	166,628	40.7

by S. Staszic and A.J. *Czartoryski. The attack on “*l'état dans l'état*” as Czartoryski put it in 1815, was accompanied by an attack against Jewish economic practices in the village, which, it was claimed, oppressed and corrupted the peasantry. From Butrymowicz, writing in 1789, to the writings of Polish liberals and Jewish assimilationists in the inter-war period, there runs a common assumption: the Jews suffer because they persist in their separateness – let them become like Poles and both they and Poland will prosper. This assumption was also shared by many antisemites of the non-racist variety.

Some effort was made during the 19th century to implement this belief. For example, the *kahal*, symbol of Jewish self-government, was abolished in 1822, and a special tax on Jewish liquor dealers forced many to abandon their once lucrative profession. On the other hand Jews were encouraged to become agriculturalists and were granted, in 1826, a modern rabbinical seminary which was supposed to produce enlightened spiritual leaders. Moreover, in 1862 the Jews of Poland were “emancipated,” meaning that special Jewish taxes were abolished and, above all, that restrictions on residence (Jewish ghettos and *privilegium de non tolerandis Judaeis*) were removed. Nonetheless, the legal antisemitism of Russia's last czars was also introduced into Poland: in 1891 aspects of N. *Ignatiev's *May Laws were extended to Congress Poland, resulting in the expulsion of many Jews from the villages, and in 1908 school quotas (**numerus clausus*) were officially implemented. In sum, during the 19th and early 20th centuries the policy of the carrot and the stick was employed. By the end of the pre-World War I era the stick had prevailed, making the legal status of Polish Jewry nearly identical to that of Russian Jewry. The efforts to assimilate Polish Jewry by legislation aimed at making it more productive and less separatist had virtually no impact on the Jewish masses.

The “Jewish question” in Poland and the legal efforts to deal with it were to a certain extent the result of the Jews' special demographic and economic structure. From the demographic point of view two striking tendencies may be observed. First, the natural increase of Polish Jews was greater

than that of non-Jews, at least during most of the 19th century, leading to an increasing proportion of Jews within the population as a whole. In 1816 Jews constituted 8.7% of the population of the kingdom; in 1865, 13.5%. In 1897, despite the effects of large-scale Jewish emigration, 14 out of every 100 Polish citizens were Jews. This increase, attributable in part to the low Jewish death rate, was accompanied by the rapid urbanization of Polish Jewry. A few examples may suffice to illustrate this important process. Table 4 demonstrates the growth of Warsaw Jewry, where restrictions on residence were not entirely lifted until 1862.

A similar trend is found in Lodz, the kingdom's second city (see Table 5).

This remarkable urbanization – the result of government pressure, a crisis in the traditional Jewish village professions, and the economic attractions of the growing commercial and industrial centers – had the following impact on the Jewish population: In 1827, according to the research of A. Eisenbach, 80.4% of the Jews lived in cities and the rest in villages, while in 1865 fully 91.5% of Polish Jewry lived in cities. In the same year 83.6% of the non-Jewish population lived in the countryside. As early as 1855 Jews constituted approximately 43% of the entire urban population of the kingdom, and in those cities where there were no restrictions on Jewish settlement the figure reached 57.2%. The Jews, traditionally scattered, could claim with some justification that, by the end of the century, the cities were their “territory.”

This demographic tendency meant that the traditional Jewish economic structure also underwent certain changes. Jews, of course, had always predominated in trade; in 1815, for example, 1,657 Polish Jews participated at the Leipzig fair compared with 143 Polish gentiles. During the course of the century, as the Jews became more and more dominant in the cities, their role in urban commercial ventures became more pronounced. Thus, in Warsaw, at the end of the century, 18 out of 26 major private banks were owned by Jews or Jewish converts to Christianity. A wealthy Jewish merchant and financial class emerged, led by such great capitalists as Ivan *Bliokh and Leopold *Kronenberg, who played a role in the urbanization and industrialization of Poland. On the other hand, the vast majority of Jews engaged in commerce very clearly belonged to the petty bourgeoisie of shopkeepers (of whom, in Warsaw in 1862, nearly 90% were Jews) and the like. In the same year, according to the calculations of the economic historian I. *Schiper, more than two-thirds of all Jewish merchants were without substantial capital.

Two tendencies must be emphasized with regard to the Jewish economic situation in the kingdom. First, it became apparent by the end of the century that the Jews were gradually losing ground to non-Jews in trade. Thus, for every 100 Jews in Warsaw in 1862, 72 lived from commerce, while in 1897 the figure had dropped to 62. For non-Jews, on the other hand, the percentage rose from 27.9 in 1862 to 37.9 in 1897. The rise of a non-Jewish middle class, with the resulting increase in competition between Jew and gentile, marks the beginning

of a process which, as we shall see, gained impetus during the interwar years. Second, there was a marked tendency toward the “productivization” of Polish Jewry, that is, a rise of Jews engaged in crafts and industry. The following figures, which relate to the whole of Congress Poland, are most revealing: in 1857 44.7% of all Jews lived from commerce and 25.1% from crafts and industry, while in 1897 42.6% were engaged in commerce and 34.3% in crafts and industry. In this area, as in trade, the typical Jew was far from wealthy. For every wealthy Jew like Israel Poznański, the textile tycoon from Lodz, there were thousands of Jewish artisans (some 119,000, according to the survey of the *Jewish Colonization Association (ICA) in 1898) who worked in tiny shops with rarely more than one hired hand. It is noteworthy that for various reasons – the problems of Sabbath work, the antisemitism of non-Jewish factory owners, fear of the Jewish workers’ revolutionary potential – a Jewish factory proletariat failed to develop. Even in Lodz and Białystok the typical Jewish weaver worked in a small shop or at home, not in a large factory. One further development should be mentioned. By the end of the century a numerically small but highly influential Jewish professional class had made its appearance, particularly in Warsaw. This class was to provide the various political and cultural movements of the day, Jewish and non-Jewish, with many recruits, as well as to provide new leadership for the Jewish community.

The Jews, therefore, constituted an urban, middle class and proletarian element within the great mass of the Polish peasantry. There existed in Poland a long tradition of what might be called a “Polish orientation” among Jews, dating back to the Jewish legion which fought with T. *Kościuszko in 1794 and continuing up to the enthusiastic participation of a number of Jews in J. *Piłsudski’s legions. The Polish-Jewish fraternization and cooperation during the Polish uprising of 1863 is perhaps the best example of this orientation, which held that Polish independence would also lead to the disappearance of antisemitism. The idea of Jewish-Polish cultural assimilation took root among the Jews of the kingdom far earlier than in Galicia, not to mention multi-national Lithuania-Belorussia. **Izraelita*, the Polish-Jewish periodical advocating assimilation, began publication in 1866, and a number of Jewish intellectuals like Alexander Kraushar hoped for the eventual merging of the Jews into the Polish nation. Such men took comfort from the views of a few Polish intellectuals, notably the poet Adam *Mickiewicz, who hoped and worked for the same event. The slogan “for our and your freedom” had considerable influence within the Polish-Jewish intelligentsia by the century’s end.

The Jewish masses, however, had nothing to do with such views, knew nothing of Mickiewicz, knew little if any Polish, and remained (as the assimilationists put it) enclosed within their own special world. Here, too, as was the case regarding the economic stratification of Polish Jewry, a thin stratum separated itself from the mass. It was usually the offspring of the wealthy (Kraushar’s father, for example, was a banker) who championed the Polish orientation, while the typical Jewish

shopkeeper or artisan remained Yiddish-speaking and Orthodox. On the Polish side, too, Mickiewicz was a voice crying in the wilderness. It is true that the great wave of *pogroms in the Russian Empire was concentrated in the Ukraine and Bessarabia (although Russian Poland was not wholly spared); nor was there anything in Poland resembling the expulsion of the Jews from Moscow in 1891. Indeed, Russian antisemitism led to the influx of so-called Litvaks into the kingdom. But the rise of Polish national fervor, accompanied by the development of a Polish middle class, naturally exacerbated Polish-Jewish relations. The founding of the National Democratic Party (**Endecja*) in 1897 was symptomatic of the growing antisemitism of the period. The economic and political roots of this antisemitism (not to mention the traditional religious factor) were clearly expressed in 1912, when the Jews’ active support of a Socialist candidate in elections to the *Duma resulted in an announced boycott of Jewish businesses by the National Democrats. On the eve of World War I relations between Poles and Jews were strained to the utmost, a state of affairs which led to a decline in the influence of the assimilationists and a rise in that of Jewish national doctrines.

In comparison with Russia, specifically Jewish political movements had a late start in the kingdom. The Haskalah, progenitor of modern Jewish political movements, was far less influential in Poland than in Galicia or Russia. Warsaw, unlike *Vilna, Lvov, and other great Jewish cities, did not become a center of the Enlightenment; its Jewish elite, like the elite in Germany, tended toward assimilation. True, the city of *Zamosc was, for a time, a thriving Haskalah center, but Zamosc was part of Galicia from 1772 to 1815 and followed the Galician rather than the Polish pattern. Later on, the pioneers of Jewish nationalism and Jewish Socialism came from the northwest region (Belorussia-Lithuania) or the Ukraine. While in Lithuania the Jewish intelligentsia, though Russianized, remained close to the masses, in Poland the intelligentsia was thoroughly Polonized. Its members tended, therefore, to enter Polish movements, such as the Polish Socialist Party (**PPS*). Thus the *Bund, although it succeeded in spreading into Poland in the early 20th century, remained very much a Lithuanian movement. It is striking that the so-called Litvaks played a major role in spreading the ideas of Jewish nationalism to Poland; it was they, for example, who led the Warsaw *Hovevei Zion* (**Hibbat Zion*) movement, the precursor of modern Zionism. On the eve of World War I, however, Jewish political life in Poland was well developed. The Bund had developed roots in such worker centers as Warsaw and Lodz, while the Zionists felt strong enough to challenge, albeit unsuccessfully, the entrenched assimilationist leadership of the Warsaw Jewish community.

INDEPENDENT POLAND

As a result of World War I and the unexpected collapse of the three partitioning powers, Poland was reconstituted as a sovereign state. The final boundaries, not determined until 1921, represented something of a compromise between the feder-

Table 6. Decrease in the Percentage of the Jews in the Total Population in the Cities of Poland in the Interwar Period

City	Percentage of Jews in 1921	Percentage of Jews in 1931
Warsaw	33.1	30.1
Lvov	35.0	31.9
Vilna	36.1	28.2
Bialystok	51.6	43.0
Grodno	53.9	42.6
Brest-Litovsk	53.1	44.3
Pinsk	74.7	63.4

Roman Catholic	13.1
Greek Catholic	12.5
Greek Orthodox	16.7
Jewish	9.5

alist dreams of Pilsudski and the more ethnic Polish conception of R. *Dmowski. To Congress Poland, purely Polish save for its large Jewish minority, were added Galicia, Poznan, Pomerania, parts of Silesia, areas formerly part of the Russian northwestern region, and the Ukrainian province of Volhynia. The new state was approximately one-third non-Polish, the important minorities being the Ukrainians, Jews, Belorussians, and Germans.

The heritage of the war years was a particularly tragic one for Polish Jewry. The rebirth of Poland, which many Jews had hoped for, was accompanied by a campaign of terror directed by the Poles (as by the invading Russian army in the early years of the war) against them. The Jews too often found themselves caught between opposing armies – between the Poles and the Lithuanians in Vilna, between the Poles and the Ukrainians in Lvov, and between the Poles and the Bolsheviks during the war of 1920. And it is probably no accident that the two major pogroms of this period, in Lvov in 1918 and in Vilna in 1919, occurred in multi-national areas where national feelings reached their greatest heights. The triumph of Polish nationalism, far from leading to a rapprochement between Jews and Poles, created a legacy of bitterness which cast its shadow over the entire interwar period. For the Poles the war years proved that the Jews were “anti-Polish,” “pro-Ukrainian,” “pro-Bolshevik,” etc. For the Jews the independence of Poland was associated with pogroms. The legal situation of the Jews in independent Poland was, on the surface, excellent. The Treaty of Versailles, concluded between the victorious powers and the new states, included provisions protecting the national rights of minorities; in the Polish treaty Jews were specifically promised their own schools and the Polish state promised to respect the Jewish Sabbath. The Polish constitution, too, declared that non-Poles would be allowed to foster their national traditions, and formally abolished all discrimination due to religious, racial,

or national differences. The Jews were recognized by the state as a nationality, something the Zionists and other Jewish nationalists had long fought for. There were great hopes that the Jews would be allowed to develop their own national institutions on the basis of national autonomy.

These hopes were not fulfilled. The two cornerstones of Jewish autonomy – the school and the *kehillah* – were not allowed to develop freely. The state steadfastly refused to support Jewish schools, save for a relatively small number of elementary schools closed on Saturday which possessed little Jewish content. The Hebrew-language **Tarbut* schools, along with the Yiddish-language *CYSHO* (see **Education*) network, were entirely dependent on Jewish support, and the diplomas issued by the Jewish high schools were not recognized by the Ministry of Education. The Jewish schools were successful as pedagogical institutions, but the absence of state support made it impossible for them to lay the foundation for a thriving Jewish national cultural life in Poland. As for the *kehillah*, projected by Jewish nationalists as the organ of Jewish national autonomy on the local level, it was kept in tight check by the government. While elections to the *kehillah* were made democratic, enabling all Jewish parties to participate on a basis of equality, the government constantly intervened to support its own candidates, usually those of the Orthodox **Agudat Israel*. By the same token the government controlled the budgets of the *kehillot*. These institutions remained essentially what they had been in the preceding century, concerned above all with the religious life of the community.

Far from barring discrimination against non-Poles, the policy of the interwar Polish state was to promote the ethnic Polish element at the expense of the national minorities, and above all at the expense of the Jews, who were more vulnerable than the essentially peasant Slav groups. The tradition of *numerus clausus* was continued at the secondary school and university level, efforts were made to deprive the “Litvaks” of Polish citizenship, local authorities attempted to curb the use of Yiddish and Hebrew at public meetings, and the Polish electoral system clearly discriminated against all the minorities. All Jewish activities leading toward the advancement of Jewish national life in Poland were combatted; the government favored Zionism only insofar as it preached emigration to Erez Israel, and in domestic politics tended to support the traditional Orthodoxy of *Agudat Israel*. Worst of all was the economic policy of the state.

According to official statistics, most likely too low, Jews made up 10.5% of the Polish population in 1921. The density of their urban settlement was related to the general development of the area. In less developed regions, such as East Galicia, Lithuania, and Volhynia, the Jewish percentage in the cities was very high, while in more developed areas, such as Central Poland (the old Congress Poland), the existence of a strong native bourgeoisie caused the Jewish percentage to be lower. As for the Jewish village population, it too was higher in backward areas, since the number of cities was naturally less. There were, therefore, substantial Jewish village popu-

lations in Galicia and Lithuania but not in the old Congress Poland (with the exception of Lublin province, economically backward in comparison with the other provinces of the region). The most striking development in the demography of Polish Jewry between the wars is the marked loss of ground in the cities. Table 6 illustrates this point. (See Map: Poland, 1931 and Map: Jews in Poland.)

Among the factors contributing to this decline was the Polish government's "colonization" policy in non-Polish areas, its changing of city lines to diminish the Jewish proportion, and Jewish emigration (though with America's gates shut this last factor was not very significant). Another major cause would appear to be the low Jewish natural increase, caused by a low birth rate. (Table 7 presents the natural increase of four major religious groups in interwar Poland.) Thus the process of Jewish population expansion in Poland ended, itself the victim of urbanization (which led, in turn, to a low birth rate). If the cities were Judaized during the 19th century, they were Polonized in the 1920s and 1930s.

The demographic decline of Polish Jewry was paralleled by a more serious economic decline. On the whole, Polish Jews between the wars continued to work at the same trades as their 19th-century predecessors and the tendency toward "productivization" also continued. The vast majority of those engaged in industry were artisans, among whom tailors predominated; those working in commerce were, above all, shopkeepers. What distinguished the interwar years from the prewar era was the antisemitic policy of the Polish state, which Jewish leaders accused of leading to the economic "extermination" of Polish Jewry. Jews were not employed in the civil service, there were very few Jewish teachers in the public schools, practically no Jewish railroad workers, no Jews employed in state-controlled banks, and no Jewish workers in state-run monopolies (such as the tobacco industry). In a period characterized by economic *étatisme*, when the state took a commanding role in economic life, such official discrimination became disastrous. There was no branch of the economy where the state did not reach; it licensed artisans, controlled the banking system, and controlled foreign trade, all to the detriment of the Jewish element. Its tax system discriminated against the urban population, and its support of peasant cooperatives struck at the Jewish middleman. Such specific legislation as the law compelling all citizens to rest on Sunday helped to ruin Jewish commerce by forcing the shopkeeper to rest for two days and to lose the traditionally lucrative Sunday trade.

More natural forces were also at work in the decline of the Jews' economic condition, e.g., the continued development of a native middle class, sponsored by the government but not created by it. According to research carried out by the *YIVO in 113 Polish cities between 1937 and 1938, the number of Jewish-owned stores declined by one, while the number of stores owned by Christians increased by 591. In the western Bialystok province, to cite another example, the number of the Jewish-owned stores declined between 1932 and 1937 from

663 to 563, while the number of Christian-owned stores rose from 58 to 310. These figures reflect both the impact of anti-semitism (in the late 1930s the anti-Jewish boycott became effective) and the impact of the developing Polish (and Ukrainian) middle class.

The Jews' economic collapse in the interwar period bears witness to the disaster, from the Jewish point of view, inherent in the rise of exclusive nation-states on the ruins of the old multinational empires. Jews were employed in the old Austrian public schools of Galicia, but not in the Polish state-operated schools. They worked as clerks in the railroad offices of Austrian Galicia, but not in Poland. Thousands of Jewish cigarette factory workers in the old Russian Empire were dismissed when the Polish state took over the tobacco monopoly. It also demonstrates the extremely vulnerable position of the Jews vis-à-vis the other Polish minorities, largely peasant nations which did not compete with the Polish element. The urban Jewish population found itself in a situation in which the traditional small businessman was being squeezed out, while the policy of the state also ruined the wealthy Jewish merchant and industrialist. This was then the end of a process already discernible in the late 19th century, immeasurably speeded up by a state which wanted to see all key economic positions in the hands of "loyal" elements, i.e., Poles.

What was the Jews' political response to this situation? In the beginning of the interwar period the *General Zionists emerged as the strongest force within the Jewish community, thus reflecting the general trend in Eastern Europe toward nationalism and, in the Jewish context, reflecting the impact of the terrible war years. In the 1919 Sejm elections the list of the Temporary Jewish National Council, dominated by General Zionists, received more than 50% of those votes cast for Jewish parties. In 1922, when Jewish representation in the Sejm reached its peak, the percentage of General Zionists (together with the *Mizrachi) among the Jewish deputies was again over 50% (28 out of 46). The Jewish Club (Koło) in the Sejm, which claimed to speak for all Polish Jewry, was naturally dominated by General Zionists, who with considerable justice regarded themselves as the legitimate spokesmen of the community. General Zionism in Poland was divided into two schools, that of "Warsaw-St. Petersburg" and that of "Lvov-Cracow-Vienna." The former came of age in the revolutionary atmosphere of the czarist regime and consequently tended to be more extreme in its demands than the Galicians, who had learned their politics in the Austrian Reichsrat. The clash between Yizhak *Gruenbaum, leader of the Warsaw faction, and Leon *Reich of Lvov was well expressed in the negotiations carried on between the Jewish Sejm Club and the Polish government in 1925. Gruenbaum, rejecting negotiations with antisemites and offering instead the idea of a national minorities bloc, found himself outnumbered in the club by adherents of Reich's position, namely that negotiations should be carried on in order to halt the deterioration of the Jewish position. In the end neither Gruenbaum's minorities bloc nor Reich's negotiations caused any improvements; the tragedy of

Jewish politics in Poland was that the government would not make concessions to the Jews so long as it was not forced to do so, and the Jews, representing only 10% of the population, could find no allies.

All General Zionists agreed on the importance of “work in the Diaspora,” though Gruenbaum, the central figure in this work, was castigated by Palestinian pioneers as the apostle of “Sejm-Zionismus.” They did not agree, however, on various aspects of Zionist policy; the efforts to broaden the *Jewish Agency and the nature of the Fourth *Aliyah caused a split within the Warsaw Zionists, Gruenbaum leading the attack on Chaim *Weizmann and upholding the young pioneering emigration while his opponents defended the “bourgeois” *aliyah* and Weizmann’s conciliatory tactics toward non-Zionist Jewry. Gruenbaum’s faction, *Al ha-Mishmar* (“On Guard”), remained in the minority throughout the 1920s, but the so-called radical Zionists returned to power in the 1930s following the failure of the Agency reform, the crisis in the Fourth Aliyah, and the stiffening of the British line in Palestine. The General Zionists, of course, did not monopolize Jewish political life in interwar Poland. On the right, non-Zionist Orthodoxy was represented by the *Agudat Israel*, which succeeded in dominating the Jewish *kehillot*, but its generally good relations with the government did not stem the antisemitic tide. On the left the dominant Jewish party was the Bund, which had disappeared in Russia but survived to play its last historic role as the most important representative of the Jewish proletariat in Poland. The Bund, like Gruenbaum’s Zionist faction, also recognized the need for allies in the struggle for a just society in which, its leaders hoped, Jews would be able to promote their Yiddish-based culture. Such allies were sought on the Polish left rather than among the disaffected minorities, but the Polish Socialist Party (PPS), for reasons of its own, had no desire to be branded pro-Jewish. Unable to create a bloc with the Polish proletariat, the Bund devoted itself to promoting the interests of the Jewish working class and took a great interest in the development of Yiddish culture. Despite the fact that this party, too, was split into factions (the split turned chiefly on different attitudes toward the international Socialist movement), it was to grow in influence. Sharing the left with the Bund, though overshadowed by it in terms of worker allegiance, were the various Socialist Zionist parties, ranging from the non-Marxist **Hitahadut* to the leftist **Po’alei Zion* (the *Po’alei Zion* movement had split into right and left factions in 1920; in Poland the left was dominant, at least in the 1920s). The moderate Socialist Zionists were concerned mainly with the pioneering emigration to Erez Israel, while the Left *Po’alei Zion* steered a perilous course of non-affiliation either with the Zionist organization or with the Socialist International. Its ideological difficulties with the competition of the anti-Zionist Bund (which went so far as to brand Zionism as an ally of Polish antisemitism) sentenced the Left *Po’alei Zion* to a relatively minor role among the Jewish proletariat, though its influence among the intelligentsia was by no means negligible.

Two other Jewish parties deserve mention. The Polish Mizrachi, representing the Zionist Orthodox population, enjoyed a very large following (eight of its representatives sat in the Sejm in 1922). The Mizrachi usually cooperated with the General Zionists, though its particular mission was to safeguard the religious interests of its followers in Erez Israel and in the Diaspora. The **Folkspartei*, on the other hand, never managed to make an impression on political life in Poland, though its intellectual leadership was extremely influential on the cultural scene. Both anti-Zionist and anti-Socialist, it could never attain a mass following.

The economic collapse of Polish Jewry, together with the rise of virulent antisemitism, led to the radicalization of Jewish politics in Poland. Extreme solutions to the Jewish question gained more adherents as the parliamentary approach clearly failed to lead anywhere; hence the growth of the pioneering Zionist movements – **He-Ḥalutz*, *HeḤalutz ha-Za’ir*, **Ha-Shomer ha-Za’ir*, and others – resulting in the large-scale emigration to Erez Israel in the mid-1930s, and also the inroads of Communism among the Jewish youth. Another symptom of this radicalization was the great success of the Bund in the 1930s; by the late 1930s the Bund had “conquered” a number of major *kehillot* and was probably justified in considering itself the strongest of all Jewish parties. This spectacular success did not occur as a result of any apparent party success, since the efforts to improve the lot of the Jewish proletariat and to forge a bloc with the Polish left had failed. Rather, the Bund’s success may be attributed to the rising protest vote against attempts to mollify the regime and in favor of an honorable defense, no matter how unavailing, of Jewish interests. Within the Zionist movement the process of radicalization was very clearly illustrated by the decline of the General Zionists and the rise of the Socialists and the Revisionists. In the elections to the 18th **Zionist Congress*, held in 1933, the labor Zionists of Central Poland received 38 mandates and the General Zionists only 12. The same congress seated 20 Polish Revisionists, whose growing strength faithfully reflected the mood of Polish Jewry. In short, a transformation may be discerned of what might be called the politics of hope into the politics of despair. The slogans of *ḥaluziyyut* (“pioneering”), evacuation, and Communist ideology became more and more palatable as the old hopes for Jewish autonomy and the peaceful advancement of Jewish life in a democratic Poland disappeared.

By the late 1930s the handwriting was clearly on the wall for Polish Jewry, though no one could foresee the horrors to come. The rise of Hitler in Germany was paralleled by the appearance of Fascist and semi-Fascist regimes in Eastern Europe, not excepting Poland. A new wave of pogroms erupted along with a renewed anti-Jewish boycott, condoned by the authorities. The Jewish parties were helpless in the face of this onslaught, especially as the disturbances in Erez Israel resulted in a drastic decline in *aliyah*. The political dilemma of Polish Jewry remained unresolved; finding no allies, Jewish parties could do little to influence the course of events. It should be

recalled, however, that the role of these parties was greater than the narrow word “political” implies. Their work in raising the educational standards of Polish Jewry was remarkable, and the Jewish youth movements were able to supply to the new generation of Polish Jews a sense of purpose and a certain vision of a brighter future.

Polish Jewish history, from 1772 to 1939, reveals an obvious continuity. The Jews remained a basically urban element in a largely peasant country, a distinct economic group, a minority whose faith, language, and customs differed sharply from those of the majority. All attempts to break down this distinctiveness failed, and the Jews naturally suffered for their obvious strangeness. A thin layer of assimilated, or quasi-assimilated, Jews subsisted throughout the entire period, but the masses were relatively unaffected by the Polish orientation. In the end all suffered equally from Polish antisemitism. There were also several basic discontinuities. The rise of an exclusively national Polish state in 1918 was a turning point in the deterioration of the Jews’ position, though the signs of this deterioration were already visible in the late 19th century. The rise of a native middle class, encouraged by state policy, put an end to the Jews’ domination of trade and forced them into crafts and industry, resulting in the emergence of a large Jewish proletariat. Politically speaking perhaps the greatest change was the triumph within the community of Jewish nationalism, whether Zionist, Bundist, or Folkist, at the expense of the traditional assimilationist or Orthodox leadership. In this sense Polish Jewry followed the same course of development as the other peoples of Eastern Europe. It was a tragic paradox that these nationalist parties, which extolled the principle of activism and denounced the passivity of the Jewish past, also depended for their effectiveness on outside forces. Neither the Polish government nor the Polish left proved to be possible allies in the struggle for survival.

[Ezra Mendelsohn]

HOLOCAUST PERIOD

The outbreak of the war (Sept. 1, 1939) and the invasion of Poland by German troops were marked by immediate heavy loss of civilian (especially Jewish) life and material damage. Military operations caused the death of 20,000 Jews, while bombing destroyed some 50,000 Jewish-owned houses, factories, workshops, and stores in about 120 Jewish communities, in some of which 90–95% of the houses went up in flames. In Warsaw alone, in the first month of the war, 30% of the Jewish buildings were destroyed when entire Jewish neighborhoods burned down. A tremendous stream of refugees sought shelter in the large cities, particularly in Warsaw. Subsequently, tens of thousands of Jewish enterprises not destroyed in the bombing were now lost in liquidation measures, bringing the total amount of Jewish property and business concerns lost or destroyed to an estimated 100,000. Jewish losses on the battlefield totaled 32,216 dead (officers and enlisted men) and another 61,000 taken prisoner, the majority of whom died in captivity.

Military operations were still going on when the German army and SD Einsatzkommandos undertook a campaign of bloody repression (see *Holocaust, General Survey). They usually arrested a group of Jews or Poles, who were kept as hostages and eventually shot. Sometimes mock executions were staged, in which the victims stood for hours in suspense anticipating execution. Pious Jews had their beards removed by blunt instruments, which tore their skin, or had their beards burned off. Swastikas were branded on the scalps of some victims; others were subjected to “gymnastics,” such as “riding” on other victims’ backs, crawling on all fours, singing and dancing, or staging fights with one another. The Nazis took a special sadistic pleasure in violating religious feelings, deliberately choosing Jewish religious holidays on which to carry out their assaults.

They instituted a special campaign of burning down synagogues, or, after destroying their interiors, turned them into stables, warehouses, bathhouses, or even public latrines (see *Synagogues, Desecration and Destruction of). At *Bedzin the synagogue at the old market place was set on fire on Sept. 9, 1939. The flames spread to the neighboring Jewish houses, and as the area was cordoned off by soldiers and SS-men who did not permit anyone to escape or to fight the fire, 56 houses were burned down, and several hundred persons were burned to death. In some places, e.g., *Wloclawek and *Brzeziny, the president or rabbi of the community was forced to sign a “confession” that the Jews themselves started the fire and to pay heavy fines as punishment for the “arson.” The tenants of the houses burned down were brought before a military court. Any Jew who tried to enter a burning synagogue in order to save the Torah scrolls was either shot or thrown into the flames. In many places the military staged *autos-da-fé* of Torah scrolls, Hebrew books, and other religious articles, and forced the Jews to sing and dance around the flames and shout that the Jews were to blame for the war. The Jewish communities were also compelled to bear the cost of tearing down the remaining walls of the houses and clearing the rubble. It is estimated that several hundred synagogues were destroyed in the first two months of the occupation.

At the same time, mass arrests of Jews were carried out in which thousands of men, women, and children were interned in “civilian prison camps” set up in synagogues, churches, movie houses, and the like, or put behind barbed-wire fences on open lots and exposed to the soldiers’ cruelty and torture. Afterward the prisoners were sent on foot to larger centers (such as *Wegrow, *Lomza, *Sieradz, *Tomaszow Mazowiecki), where some were set free and others put on forced labor or deported to Germany. In the latter instance their transport to Germany was used for propaganda purposes, as in the case of groups of Jews from Kalisz and Wieruszow who were borne around German towns in trucks bearing the inscription: “These are the Jewish swine who shot at German soldiers.”

Precise instructions issued by the High Command of the Wehrmacht on July 24, 1939, for the internment of civilian prisoners provided for the arrest of Jews and Poles of mili-

tary age at the outset of the invasion. In practice, however, a wild hunt down of Jews was made, without regard to age. In the campaign of terror that followed, hundreds of civilians, Poles, and Jews (in *Czestochowa, *Przemysl, *Bydgoszcz, and Dynow) were slaughtered outright or imprisoned in buildings which were sealed and then set on fire or blown up, the imprisoned dying a horrible death (in Dynow, Lipsk-Kielecki, Mszczonow). No precise figures are available on the number of victims in this period of terror. In the rampage of persecution throughout Poland, people were taken off the streets or dragged from their homes and put on forced labor. They were tortured and beaten, and deprived of their human dignity when forced to perform such acts as cleaning latrines with their bare hands or, in the case of women, washing the floor with their own underwear. Normal life was paralyzed by the arbitrary arrests for forced labor even at a later stage, when forced labor was “regulated” and the still-existing communities or the Judenraete (see *Judenrat) had to provide labor contingents on the basis of an understanding reached with the various German offices or commands.

The systematic robbery of Jewish property involved the closing of all the Jewish shops in many towns, or enforced sale of the wares at nominal prices or against worthless receipts. To facilitate the identification of Jewish property, the chief of the civilian administration attached to the army, Hans *Frank, issued an order (Sept. 8, 1939) for all Jewish stores to display a Star of David or other appropriate inscriptions on their stores by the following day. Practically all Jewish communities were also forced to make large “contributions” of money, gold, silver, and jewelry. In many towns compulsory contributions were paid several times over. Large sums were extorted from wealthy individuals under threat of imprisonment. Whenever a Nazi “visit” to the offices of the communities took place, all the money in their safes was confiscated, e.g., in Warsaw on Oct. 5, 1939, when 100,000 zlotys (\$20,000) were taken in this manner. “Legal” forms of robbery were also instituted. The civilian administrators attached to the occupation forces issued orders restricting the sums Jews could hold in their bank accounts, while the accounts themselves were blocked. Restrictions were also placed on the amount of cash a Jew could keep in his home. Jewish-owned property was frozen, Jews were prohibited from engaging in the textile and leather business, and their inventories were registered with the Nazi authorities. Any infringement entailed heavy punishment, including death.

Two decrees by Hitler (Oct. 8 and 12, 1939) provided for the division of the occupied areas of Poland into the following administrative units: (a) Reichsgau Wartheland, which included the entire Poznan province, most of the Lodz province, five Pomeranian districts, and one county of the Warsaw province; (b) the remaining area of Pomerania, which was incorporated into the Reichsgau Danzig-Westpreussen; (c) Regierungsbezirk Zichenau (Ciechanow) consisting of the five northern counties of Warsaw province (*Plock, *Plonsk, *Sterpe, *Ciechanow, *Mlawa), which became a part of East

Prussia; (d) Regierungsbezirk Kattowitz – or unofficially Ost-Oberschlesien (East Upper Silesia) – which included *Sosnowiec, Bedzin, *Chryzanow, and *Zawiercie counties and parts of *Olkusz and Zywiec counties; (e) the General Government of Poland, which included the central Polish provinces and was subdivided into four districts, Warsaw, Lublin, *Radom, and Cracow.

The areas listed under (a)–(d) were incorporated into the Reich. After the outbreak of the Soviet-German War, the Polish territories previously occupied by the Russians were organized as follows: (f) Bezirk Bialystok, which included the Bialystok, *Bielsk Podlaski, *Grajewo, Lomza, *Sokolka, *Volkovysk, and Grodno counties and was “attached” (not incorporated) to East Prussia; (g) Bezirke Litauen und Weissrussland – the Polish part of White Russia (today western Belorussia), including the Vilna province, which was incorporated into the Reichskommissariat Ostland; (h) Bezirk Wolhynien-Podolien – the Polish province of Volhynia, which was incorporated into the Reichskommissariat Ukraine; and (i) East Galicia, which was incorporated into the General-Government and became its fifth district.

The Jewish population of this entire area was 3,351,000, of whom 2,042,000 came under Nazi rule and 1,309,000 under Soviet occupation in September 1939. The ultimate fate of the Jewish population under Nazi rule was the same in all the areas, though the various administrative areas differed in the degree and pace of persecution, depending on local leadership (a Nazi principle of administration).

Reichsgau Wartheland

The area was subdivided into three *Regierungsbezirke* (“administrative districts”) – Poznan, *Inowroclaw, and Lodz. On Sept. 1, 1939, it had 390,000 Jews (including 4,500 in Poznan, 54,090 in Inowroclaw, and 326,000 in the Lodz district – 233,000 in the city of Lodz). Like all Polish areas incorporated into the Reich, Wartheland was from the beginning designated to become “*judenrein*” (*Heydrich’s “*Schnellbrief*” of Sept. 21, 1939). In a secret order to the *RSHA (Reichssicherheitshauptamt – Reich Security Main Office) and the high *ss and police officials, issued on Oct. 30, 1939, *Himmler fixed the period of November 1939–February 1940 for clearing the incorporated areas of their entire Jewish population and the majority of their Polish population as well. A similar decree was issued on Nov. 4, 1939, by Wartheland’s Gauleiter Arthur Greiser.

Arrangements were made for the transfer of 100,000 Jews from its territory during this period. In fact, more than 50 Jewish communities were deported wholly or in part to the Lublin district between the fall of 1939 and May 1940; the larger communities among those deported were Poznan, Kalisz, Ciechocinek, *Gnieszno, Inowroclaw, Nieszawa, and *Konin. In some towns the deportation was carried out in stages, with a small number of Jews remaining, engaged in work for the Nazi authorities. In some instances, the regime of terror drove the Jews to desperation, so that they chose “voluntary” exile. This happened in *Lipno and in Kalisz, where many Jews, unable to

withstand the persecution, fled from the city in October and November 1939. In Lodz, over 10,000 Jews, including most of the Jewish intelligentsia, were deported in December 1939. For weeks the deportees were kept at assembly points, and had to supply their own means of subsistence, though they had been deprived of all their valuables. Large assembly points were located at Kalisz, Sieradz, and Lodz. There, the *Selektion* (“selection”) took place in which able-bodied men, aged 14 and over, were sent to labor camps which had been established in the meantime, while women, children, and old men were deported in sealed freight cars to the Lublin and *Kielce areas. This occurred in the severe winter of 1939–1940, and upon arrival at their destination, some of the deportees were dead, others nearly frozen, or otherwise seriously ill. The survivors were bereft of clothing, food, and money. A few found refuge with relatives or friends, but most of them had to find places in the crowded synagogues and poorhouses. For the Jewish communities of the Lublin and Radom districts, the influx of deportees was a very heavy burden. Most of the deportees perished before mass deportation began.

GHETTOIZATION. At this time, a second campaign was launched to concentrate the Jewish population in ghettos. The first ghetto in Wartheland was established at Lodz, on orders given by *Polizeipraesident* (Chief of Police) Johannes Schaefer (Feb. 8, 1940). By the latter half of 1940, all the Jewish communities that had survived the mass deportations were sealed off in ghettos. Lodz ghetto had a population of 162,000 on the day of its establishment (May 1, 1940). The large ghettos in Wartheland included *Pabianice (with about 8,500 persons), *Kutno (7,000), *Belchatow (5,500), *Ozorkow (4,700), *Zelow (4,500), *Zdunska Wola (10,000), Wloclawek (where 4,000 were left after the deportations), and *Wielun (4,000). Lodz became a central ghetto (*Gahetto*) for the entire province, absorbing Jews sent from ghettos that were liquidated or reduced in size, as well as from the Reich, *Vienna, and *Prague. Between Sept. 26 and Oct. 9, 1941, 3,082 Jews from Wloclawek and the vicinity arrived at Lodz Ghetto, and between Oct. 17 and Nov. 4, 1941, approximately 20,000 arrived from Vienna, Prague, Berlin, Frankfurt, Hamburg, Cologne, Emden, Duesseldorf, and Luxembourg. From May to August 1942, 14,440 “selected” Jews from liquidated ghettos arrived at Lodz.

From the end of 1942 until its liquidation in August 1944, Lodz was the only remaining ghetto in Wartheland. Its comparatively long existence was due to the fact that it became one of the largest industrial plants working for the Wehrmacht or private contractors. In August 1943, some 76,000 workers (about 85% of the entire ghetto population) were employed in 117 warehouses. According to the Nazi *Ghettoverwaltung* (“ghetto administration”), the total wages and production in 1942 reached a value of 27,862,200 RM (\$5,572,440). Large tailor shops also existed at Pabianice, Belchatow, Ozorkow, and other ghettos in the Lodz district. Lodz Ghetto bore the imprint of its *Judenaeltester* (“Jewish elder”) Mordecai *Rum-

kowski, who at an early stage imposed his rule over the ghetto. The ghetto was administered by division of the population into various socio-economic groups, each with a different status, in accordance with their status in the ghetto hierarchy or their usefulness for the war industry. In those areas of ghetto life in which the Nazis allowed the Jews autonomy, Rumkowski held absolute power.

PHYSICAL ANNIHILATION. Partial liquidation actions affecting certain categories of Jews, such as the sick and the old, began in Wartheland as early as the fall of 1940 (in Kalisz). In September or October 1941, experiments in the murder of Jews were carried out in Konin county, where Jews were forced into ditches and covered over with wet quicklime. On Dec. 8, 1941, the murder camp at *Chelmno began operation. On Jan. 2, 1942, Greiser’s *Erlass, die Entjudung des Warthelands betreffend* (“Decree on Clearing all Jews from the Wartheland”) was issued. In December 1941, the remaining Jews from *Kolo and Dabie were deported to Chelmno, followed in January 1942 by the inmates of the ghettos of Izbica Kujawska and other places. From Jan. 16 until mid-May 1942, numerous transports of Jews were dispatched from Lodz Ghetto to Chelmno. By May some 55,000 were murdered there. Between March and September 1942, all the remaining ghettos, with the exception of Lodz, were evacuated. Lodz ghetto was the scene of a bloody “action” against children under 10 years of age, the old, and the sick, resulting in the murder of 16,500 persons.

In mid-1943, Himmler and Albert Speer (Reich Minister for Armament and War Production) entered a long-drawn-out contest over the disposition of Lodz Ghetto. Himmler sought to incorporate the ghetto industries into the ss camp combine in the Lublin district, while Speer tried to retain a monopoly over this important industrial center. Their rivalry prolonged the existence of Lodz Ghetto until the summer of 1944, by which time Germany’s strategic situation had deteriorated to such an extent that the evacuation of Poland was imminent. In August 1944, Lodz, the only ghetto still left in Europe, was liquidated and all its inmates, some 68,500 Jews, were deported to *Auschwitz.

Reichsgau Danzig-Westpreussen

This area, with a total Jewish population of 23,000, had few and small Jewish communities; e.g., *Danzig, *Torun, and *Bydgoszcz. The province became “*judenrein*” at a comparatively early stage. The Jews and Poles were exposed to a campaign of terror from the very beginning, which resulted in the massacre of part of the Jewish inhabitants. Others fled from the area, and the rest were deported to the General Government. The last transport of Jews (some 2,000 persons) from Danzig and Bydgoszcz, including the surviving Jews of *Koenigsberg, arrived at the Warsaw Ghetto on March 10, 1941.

Regierungsbezirk Zichenau (Ciechanow)

According to the 1931 census, there was a Jewish population of 80,000 in the area of this newly created administrative district. In the first weeks of the occupation, a large number of

Jews from the towns near the German-Soviet demarcation line, e.g., *Ostrow Mazowiecka, Przasnysz, *Ostroleka, and *Pultusk, were forced to cross over to the Soviet zone. Their expulsion was accompanied by acts of terror, such as forcing the Jews to cross the Bug or the Narew rivers and opening fire on them, so that some people drowned or were shot to death. This group shared the fate of all the other Polish refugees in the Soviet Union. At the end of February 1941, about 10,000 Jews from Plock and Plock county were driven out, first passing through the Dzialdowo transit camp, where they were tortured and robbed, and from there to various towns in the Radom district, where within a year most of them died of starvation and disease. In Ciechanow, Mlawa, Plonsk, Strzegowo, and Sierpc, the Jews were segregated into ghettos, along with the few Jews left in towns whose Jewish populations had largely been expelled to the Soviet Union in the fall of 1939. These ghettos situated in the administrative area of East Prussia, ruled by the notorious Erich Koch, endured particularly harsh and bloodthirsty treatment, and the murder of members of the Judenrat and ghetto police was a frequent occurrence. In the fall of 1942 the ghettos were liquidated and the Jews dispatched to *Treblinka.

Regierungsbezirk Kattowitz (East Upper Silesia)

According to statistics published by the "Central Office of the Councils of Elders of the Jewish Communities in East Upper Silesia," comprising 32 communities, a Jewish population of 93,628 existed in these communities in March 1941. The largest among these were Bedzin (25,171), Sosnowiec (24,149), Chrzanow (8,229), Zawiercie (5,472), *Dabrowa Gornicza (5,564), and *Oswiecim (6,454). Jews played an important role in the life of this highly industrialized region (in mining, metallurgy, and textiles), and were heavily hit by the early-instituted "Aryanization" process.

A special office, the Dienststelle des Sonderbeauftragten der RRSS und Chefs der deutschen Polizei fuer fremdvoelkischen Einsatz in Oberschlesien, headed by Gen. Albrecht Schmelt (and commonly referred to as the Schmelt Organization), was in charge of sending the comparatively large number of skilled Jewish workers to German firms in Silesia and the Reich. No German firm was permitted to employ Jewish workers without the consent of the Schmelt Organization, and the latter maintained complete control over the Jewish "work effort." The German firms paid the Jewish workers at the normal rate (in this the Katowice (Kattowitz) area differed from the other occupied areas), but the workers received only a part of their wages and the firms had to submit the remainder to the Dienststelle. In 1942 the Schmelt Organization controlled 50,570 Jewish workers. When the evacuation of Jews from East Upper Silesia took place (starting May–June 1942), the Jewish workers were deported to Auschwitz, which was the major concentration camp as well as the largest industrial combine in Silesia.

The chairman of the Central Office of the Councils of Elders in Sosnowiec, Moshe Merin, exercised a decisive in-

fluence on the internal affairs of the Jewish communities and had considerable authority over the Judenraete (the Jewish councils). The formal ghettoization of East Upper Silesia did not take place until a comparatively late date. In Bedzin and Sosnowiec, for example, a closed ghetto was not established until May 1943, but it was liquidated by August 1943. These ghettos also absorbed the Jews left over from previous *Aussiedlungen* ("evacuation actions"). Merin was a consistent protagonist of the strategy of "rescuing" Jews by voluntarily providing the Nazi Moloch with contingents of victims to give others the chance of survival. He carried out this policy to its extreme, lending his own active cooperation, as well as that of the ghetto police, to the *Aussiedlungsaktionen*.

General Government

Originally, the General Government consisted of four districts, Warsaw, Lublin, Radom, and Cracow. When the district of Galicia was added, the Jewish population reached 2,110,000. The transfer of the administration from military to civilian authorities, which took place at the end of October 1939, did not alleviate the harsh conditions, for the uncontrolled terror of the first period was then replaced by "legally" imposed restrictions and persecution. The first proclamation, issued by General Governor Hans *Frank on Oct. 26, 1939, stated that "there will be no room in the General Government for Jewish exploiters," and from the very first day of his rule, Frank inundated the Jewish population with a flood of anti-Jewish measures. The personal rights of Jews were severely curtailed in all spheres of private and social life. Jews were deprived of freedom of movement, the right to dispose of their property, exercise their professions, and benefit from their labor. They were denied social and medical insurance benefits (which the antisemitic regime in Poland had granted them), religious observance (ritual slaughter and public worship), and a normal school education for their children. Finally, they lost the right to dispose of their own persons. Jews could no longer associate freely and Jewish societies, institutions, and organizations were disbanded and their property confiscated. The Judenrat, a quasi-representative body of the Jews, was established in their place by the Nazi authorities.

WARSAW DISTRICT. This district was divided into 10 counties, Warsaw, Garwolin, *Grojec, *Lowicz, *Skierniewice, *Sochaczew, Blonie, Ostrow Mazowiecki, *Minsk Mazowiecki, *Siedlce, and *Sokolow Podlaski. In the first half of 1940 the total Jewish population of this district was 600,000, of whom 400,000 lived in Warsaw. Its Jews were concentrated into ghettos in the western counties in 1940, and in the eastern counties in the fall of 1941. The Warsaw Ghetto was established on Nov. 15, 1940. The ghettos in the western part were of short duration. From the end of January to the beginning of April 1942, 72,000 Jews from this area were brought into the Warsaw Ghetto, where they lacked even the most rudimentary means for existence. With their arrival, the total number of refugees

in the ghetto rose to 150,000, but the population was being constantly decimated by starvation and disease.

In the fall of 1941, the Jews in each of the eastern counties were concentrated into between five and seven ghettos. This step was in fact in preparation for *Aussiedlungsaktionen* which began with the Warsaw Ghetto on July 22, 1942, and continued until Oct. 4–6, 1942. In the General Government these actions, under the code name of “Einsatz Reinhard,” were always carried out by special commando units (see Reinhard *Heydrich and *Holocaust, General Survey), headed by the ss and police chief of the Lublin district, Odilo *Globocnik. A decree issued by Frank on June 3, 1942, transferred the civilian authority’s jurisdiction over the Jewish population in the General Government to Wilhelm Krueger, its chief of ss and police.

On the eve of its destruction, the Warsaw Ghetto contained 450,000 Jews, of whom approximately 300,000 were deported to Treblinka by Sept. 21, 1942. Officially, 35,639 Jews remained in Warsaw as workers in German factories, employees of the Judenrat, or policemen. In fact, some 60,000 were left, including those in hiding. It is to be noted that Himmler’s order to Krueger of July 19, 1942, formally fixed the date of Dec. 31, 1942, as the final date for “cleansing” the General Government of the Jews. Between July 19 and 24, 1942, the Jews of *Otwock, Minsk Mazowiecki, and Siedlce were deported. Between September 22 and 27, most of the ghettos in the Sokolow Podlaski, Wegrow, and Minsk Mazowiecki counties were liquidated, followed, in the last days of October, by the remaining ghettos in the Warsaw district. Small groups of Jews tried to hide out on the “Aryan” side or in the countryside. In order to lull the intended victims into a false sense of security, Krueger issued a decree (Oct. 28, 1942) when the annihilation of the Jewish population in the district had been almost completed, providing for “residential quarters” in Warsaw and Siedlce. His aim was to influence the Jews in hiding to believe that these “newly established ghettos” which had already passed through a partial liquidation would now be a safe haven for the survivors. In this he was largely successful. The intolerable conditions in which the Jews found themselves, hiding out in the forests amid a hostile population, induced them to seek out and settle in the new “residential quarters.” Only a short while later they were deported. The “new” Siedlce Ghetto, for example, did not last a month, and by November 25, Siedlce was *judenrein*. In November, too, the liquidation of most of the Jewish labor camps was begun and after “selections” the workers were deported to the Warsaw Ghetto. In the course of the *Aktion* on Jan. 18–19, 1943, the ss men met with armed resistance from the Jewish Fighting Organization and were forced to cease action for the time being. The Warsaw Ghetto, according to Himmler’s decree (Feb. 16, 1943), was to be liquidated at the earliest possible date, and the workers and machinery were to be transferred to the Lublin ss camps.

LUBLIN DISTRICT. The 10 counties in the Lublin district – Lublin, *Biala Podlaska, *Bilgoraj, *Chelm, *Hrubieszow, *Janow

Lubelski, *Krasnystaw, *Pulawy, *Radzyn, and *Zamosc – had a Jewish population of 250,000 in March–April 1941, including 55,000 refugees and deportees. In the beginning, the eastern part of the Lublin district was regarded as a “Jewish reservation” and Jews from parts of Poland that had been incorporated into the Reich, as well as from the Reich itself, from the Czech Protectorate of Bohemia-Moravia, and from *Austria were deported there on a systematic basis. Jozefow, Izbica Lubelska, Krasnystaw, and Zamosc were some of the towns which served as concentration points for these deportees. The local population was also displaced, generally in order to make room for the new arrivals. Even after this plan for the “Jewish reservation” had been given up, tens of thousands of Jews deported from Germany, Czechoslovakia, and Austria continued to stream into the district, to be “evacuated” to the *Belzec death camp, whose murder installations began functioning in March 1942.

The Nazi ideologists also regarded Lublin as a reservoir of “World Jewry,” which presumably maintained secret links with Jewish communities everywhere (see *Hitler). As a result, the Lublin district was turned into an experimental station for various Nazi schemes for the annihilation of Polish Jewry. It was the headquarters of “Einsatz Reinhard” from where its “action groups” began their destructive march through the General Government. The first ghetto in the district was set up in the city of Lublin in April 1941. Since the area designated for the ghetto was too small to hold the approximately 45,000 Jews who were in Lublin at the time, the Nazi authorities forced over 10,000 to leave the city “voluntarily” and move to other towns in the district. The restricted area of the ghetto and its dense population caused epidemics and a high rate of mortality. In November and December 1941 there were 1,227 cases of typhus and the mortality rate that year was three times that of a year before the war (40.8 per 1,000).

In the second half of 1940, about 50 forced labor camps for Jews were established in the Lublin district for local Jews and Jews from other districts. In the winter of 1940–41, there were over 12,000 Jews in these camps. Many succumbed to the intolerable living and working conditions – starvation; wretched accommodations (usually in decrepit old barracks, stables, and barns); lack of hygiene; strenuous work (regulating rivers, draining swamps, and digging canals); and inhuman treatment by the camp commanders. In Osowa camp, 47 inmates were shot in July 1941 after two or three of them had contracted typhus. The Judenraete in ghettos from which the workers had come organized aid for them. The Warsaw Judenrat, for example, spent 520,000 zlotys (\$104,000) in aid to the camps in 1940, and the Lublin Judenrat, 150,000 zlotys (\$30,000). The “evacuation” campaign in this district preceded those in other parts of the General Government. In the period from March 17 to April 20, 1942, 30,000 Jews from Lublin Ghetto were deported to Belzec and murdered there, while 4,000 others were deported to the Majdan Tatarski Ghetto close to Lublin, which existed until Nov. 9, 1942. In the same period, 3,400 Jews from Piaski and 2,200 from

Izbica were dispatched to Belzec, preceded by about 17,000 Jews from Pulawy county (May 6–12). The ghettos which had thus been made *judenrein* became temporary collection points for Jews deported from the Reich, the Protectorate, and Vienna, and after a short stay there they were sent on to Belzec to be murdered.

Krueger's decree of Oct. 28, 1942, set up eight ghettos in the Lublin district, and like the ghettos in the Warsaw district, their existence was of short duration. By Dec. 1, 1942, five ghettos were left (Piaski, Wlodawa, Izbica, *Lukow Lubelski, and Miedzyrzec Podlaski) and the last of these was liquidated in July 1943. The Jewish workers remained in the concentration and labor camps until November 1943. On Nov. 3–7, 1943, 18,000 Jews were murdered in *Majdanek concentration camp, over 13,000 in the Poniatowa camp, and approximately 10,000 in the Trawniki camp, to which several thousands of Jews had been deported from Warsaw after the ghetto revolt in April 1943.

CRACOW DISTRICT. The Cracow district, consisting of 12 counties (Cracow, Debica, *Jaroslaw, *Jaslo, *Krosno, Miechow, *Nowy Sacz, Nowy Targ, *Przemysl, *Sanok, and *Tarnow), had a prewar Jewish population of over 250,000. By May 1941 this number dwindled to 200,000, in spite of the additional influx of 20,000 refugees and deportees from the incorporated areas, including Silesia, Lodz, and Kalisz, in the fall of 1939 and spring of 1940. The expulsion of Jews from the Cracow district, where the General Government capital was situated, was accelerated. In the first few months, Jews living in the border towns along the San River were expelled to the Soviet zone. From the spring of 1940 to November 1941, Jews living in the spas and summer resorts in Nowy Sacz and Nowy Targ counties were expelled, and from May 1940 to April 1941, 55,000 Jews left Cracow voluntarily or were driven out. The Jewish population thus became concentrated in an ever-decreasing number of places – in Cracow county, in seven townships and 10 villages, in Nowy Sacz in five places, and in the Nowy Targ county in seven.

The first ghetto was established in March 1941 in the Podgorze quarter of Cracow. A wall sealed it off from the rest of the city and the gates of the wall had the form of tombstones. The first “evacuations” took place in Cracow Ghetto, which underwent three such actions, on May 30–31, October 28, 1942, and March 13–14, 1943. In the final evacuation, 2,000 Jews were murdered on the spot, about 2,000 were deported to Auschwitz, and approximately 6,000 were sent to the nearby camp in *Plaszow, located on the site of two Jewish cemeteries. The first *Aktion* in Tarnow took place on June 11–13, 1942, involving 11,000 Jews. The Jews of Przemysl county were murdered on July 27–August 3 (after 10,000 Jews from the county had been concentrated in the city). At the beginning of August, the Jews from Jaroslaw were deported to Belzec, followed at the end of that month by deportation of the Jews from Cracow county, where at an earlier date the Jews from the ghettos in *Bochnia, *Wieliczka, and Skawina had

been concentrated. In September 1942 approximately 11,000 Jews from Sanok county (earlier concentrated at a camp at *Iziaslav (Zaslav) were deported to Belzec or shot in the surrounding forests. That month the ghettos in Tarnow county were finally liquidated.

Krueger's decree of Oct. 28, 1942, setting up six ghettos in the Cracow district (Cracow, Bochnia, Tarnow, Rzeszow, Debica, and Przemysl), was immediately followed by murder “actions” there. From June to November 1942, a total of over 100,000 Jews were murdered, and by Jan. 1, 1943, according to official figures, 37,000 destitute Jews were left in “residual ghettos” and a number of camps. There were over 20 labor camps in the Cracow district, the largest at *Mielec (with 3,000 Jewish inmates on the day of its liquidation, Aug. 24, 1944) – and others in Pustkow (1,500), Rozwadow (1,200), Szebnie (2,000–2,500), and in Plaszow with two branches in Prokocim and Biezanow. Plaszow, a collection point for the Jews who survived the liquidation of ghettos and camps in the entire district, had 20,000 imprisoned there in the fall of 1943. In March 1944, large transports were sent from Plaszow to Auschwitz, Stutthof, Flossenburg, and *Mauthausen, while the 567 Jews left were liquidated in January 1945 together with the rest of the Jewish survivors from the Cracow district.

RADOM DISTRICT. The newly created Radom district, comprising the larger part of the Kielce province and parts of the Lodz and Warsaw provinces, had a Jewish population of about 360,000 on Sept. 1, 1939. In this district too the evacuation of the Jews proceeded at a rapid pace. First of all, the district had been heavily bombarded, and there were cities and towns in which up to 80% of the Jewish population had lost their homes and sought refuge elsewhere. Secondly, the deportations from the incorporated areas, the Protectorate (an undetermined number from Prague), and Vienna brought into the district large numbers of homeless Jews – 4,000 from Wartheland, about 10,000 from the Plock county, and 4,000 from Vienna. In 1941, the total number of refugees and deportees reached 70–75,000 (over 20% of the local Jewish population). In 1940–41, a kind of internal expulsion process went on in the district, e.g., in December 1940, when 2,000 Jews were expelled from Radom, and in October 1941, when several thousand were driven out from Tomaszow Mazowiecki.

The ghettos in this district were created at an earlier stage than in other parts of the General Government – in *Piotrkow at the end of October 1939, and in *Radomsko at the end of December that year. Ghettos were set up in March–April 1941 in the three large cities of the Radom district – in Radom (which in January 1941 had 28,000 Jews), Czestochowa (36,000), and Kielce (20,000). At the end of 1940 the ghetto of Tomaszow Mazowiecki was established (this town had 16,500 Jews in June 1940), divided into three different sections (the Radom Ghetto also consisted of two sections in two different quarters of the city). Many places were in ruins, causing severe overcrowding in the ghettos, and in some of the smaller ghettos there were as many as 12–30 persons to a room. In or-

der to prepare for the *Aussiedlungen*, the Nazis concentrated the Jews in a few ghettos. In the first stage, the Jews who were still living in villages were expelled to the neighboring towns. In the second stage, the Jewish population from the smaller towns was concentrated in the large ghettos, and each of the 10 counties had several concentration points assigned to it. At the end of this stage, over 20,000 Jews were living in a few large, heavily guarded ghettos.

The first deportation, to Treblinka, took place on Aug. 5, 1942, in Radom. The Kielce Ghetto inhabitants were deported on August 20–24, and the Czestochowa Ghetto inhabitants, between Sept. 2 and Oct. 5, 1942. By Nov. 7, 1942, most of the Jews had been deported to Treblinka. On Jan. 1, 1943, according to a German source, there were only 29,400 Jews left in the four ghettos (“residential districts”) in Radomsko, Sandomierz, *Szydlowiec, and Ujazd, provided for in Krueger’s second decree (Nov. 10, 1942). These ghettos came to an end in January 1943. Only the Jewish slave laborers in the labor camps were left, mainly near the industrial concerns of Radom, Kielce, Czestochowa, Ostrowiec-Swietokrzyski, Skarzynsko-Kamienna, Blizyn, Piotrkow, Tomaszow Mazowiecki, and other towns. These were in fact concentration camps run by the district ss and police chiefs, to whom the German factory owners directly paid the fees for exploitation of Jewish manpower (as was the case in the other districts also). Some of these camps went through a series of transfers and “selections” but continued to exist until the second half of 1944. The German *Hasag* factories in Czestochowa were still functioning as late as January 1945.

GALICIA DISTRICT. The district of Galicia, established in August 1941, comprised the *Stanislaw and *Tarnopol provinces and the eastern part of the Lvov province, and consisted of 16 counties. The 1931 census report indicated a Jewish population in this area of 500,000. As a result of the great influx of refugees from Nazi-occupied Poland in the fall of 1939, the number of Jews had considerably increased, and it is estimated that at the outbreak of German-Soviet hostilities, there were 600,000–650,000 Jews in the area, taking into account the natural increase from 1931 to 1941. The German invasion was accompanied from the very beginning by the mass murder of Jews, initiated and perpetrated by local Ukrainians with the support and participation of the Einsatzkommandos and the German army. Pogroms took place in Lvov (on the “Petlyura Days,” July 25 and 27), in Tarnopol, *Zolochew, and *Borislaw. Many of the Jews living in the countryside, about 25% of the total Jewish population, were murdered in this period.

In the part of Galicia temporarily occupied by the Hungarian army (Kolomyia, Borshchev, and *Gorodenka), the situation was quite different, the Hungarian commanders taking the Jews under their protection and preventing murders from taking place. During the short period of German military occupation, until Aug. 1, 1941, when its civilian administration took over, several tens of thousands of Jews were killed. The civilian administration immediately introduced the anti-Jewish

legislation applying to the General Government. In fact, some of the provisions of this legislation were applied even before a “legal” framework was created. The first ghettos were set up in the beginning of October at Stanislaw (for about 30,000 Jews) and Tarnopol (18,000). These were followed in the spring of 1942 by ghettos in Kolomyia and Kolomyia county, and at *Chortkov. By the second half of 1942, ghettos existed in all the cities and towns, and a large part of their population had already been deported to Belzec. The last ghetto to be established was the one at Lvov, in August–September 1942, after several postponements. This came after the great *Aussiedlung* action, 36,000 surviving out of a population of about 150,000. Krueger’s decree of Nov. 10, 1942, provided for 32 ghettos in the Galicia district, in Lvov, Stanislaw, Tarnopol, Chortkov, *Stry, *Drogobych, *Sambor, Borshchev, *Zholkva, *Brody, Rava-Russkaya, *Rogatin, and *Skalat.

Large-scale physical extermination campaigns began in the second half of 1941 and were initially directed mainly against Jews in the professions and intellectuals. During the High Holiday period, on Oct. 12, 1941, about 10,000 Jews were shot to death at the Jewish cemetery of Stanislaw. In November numerous executions took place in Lvov, when the first attempt was made to organize a ghetto there, and mass shootings occurred in Kolomyia county in December of that year. This is only a partial listing and it is estimated that some 100,000 Jews were murdered in July 1941–March 1942. In the latter month, the extermination camp at Belzec went into operation and from then until the end of 1942, about 300,000 Jews – 50% of the Jewish population of the district – were deported to Belzec or shot on the spot, or taken away for execution in the forests. The others remained for a short while in the ghettos and labor camps, and by June 1943 they were all liquidated. According to *ss-Gruppenfuhrer* Fritz *Katzmann’s report on the “Final Solution” in Galicia, only 21,000 Jews were left in Galicia, distributed in over 21 camps, the largest of which was the Janowska Street camp in Lvov. Selected workers from liquidated ghettos were transferred to this camp in Lvov, while those who were no longer fit for work were executed in the vicinity. In the second half of 1943, nearly all the Jewish labor camps were liquidated and their inmates murdered. In this period, several thousand Jews who had been engaged in agricultural work were also murdered.

Bezirk Bialystok

This district, created in July 1941, was attached to but not incorporated in East Prussia. The chief of the East-Prussian provincial government was also appointed head of the civilian administration of the Bialystok district and the central provincial organs at Koenigsberg were responsible for all district affairs. The area of the district, practically identical with Bialystok province, was divided into seven counties: Bialystok, Grodno, Bielsk Podlaski, Grajewo, Lomza, Sokolka, and Volkovysk. The Bialystok district suffered two eruptions of war, on Sept. 1, 1939, and June 22, 1941. The first German occupation was restricted to the western part of the district

and lasted only a fortnight, after which the area was turned over to the Soviets. The Soviet occupying forces imposed far-reaching changes in the economic, social, and political life of the Jews. The Jewish population of the district in September 1939 was estimated at 240,000–250,000. Later on, the district was flooded by a stream of refugees from the western and central part of Poland. Among the officials and specialists brought in from the Soviet Union, there were also a considerable number of Jews, and the total increase in population is estimated at 100,000. It may therefore be assumed that in June 1941 the district had a Jewish population of about 350,000.

The second German invasion was accompanied by mass murders, carried out by the *Einsatzkommandos* comprising Tilsit police battalions. These operated in the rear of the army and caused the destruction of entire communities (Jedwabne, *Kolo, Stawiski, *Tykocin, and others). In Bialystok, over 6,000 Jews were murdered between June 27 and July 13, 1941. The great synagogue was burnt down and at least 1,000 Jews who had been forced into it perished in the flames. Special murder campaigns were instituted against Jewish intellectuals. Antisemitic elements within the local Polish and Belorussian population, as well as among the Polish police which continued to serve under the occupying power, took an active part in the mass murder of Jews. (Even before the war, the influence of the Polish antisemitic parties had been especially strong in this area.) Most of the ghettos were established in August 1941. The larger among these were Bialystok (over 50,000), Grodno (25,000), *Pruzhanj (12,000), Lomza (10,000), *Sokolka (8,000), and Bielsk Podlaski (7,000). Grodno Ghetto consisted of two parts, one inhabited by artisans and skilled workers and their families, and the other by the rest of the Jewish population. Each had its own Judenrat and ghetto police, but the chairman of the Judenrat of the artisans' ghetto had the title of *Generalobmann* ("chief chairman") and represented both parts vis-à-vis the authorities.

While the ghettos were in the process of formation, "selections" and mass slaughter of Jews often took place. In Szczuczyn, for example, the ghetto was inhabited almost entirely by women and children, most of the men having been killed. The overcrowding in the ghettos was phenomenal. In Czyzow, for example, 200 persons were squeezed into seven tiny houses. Systematic mass annihilation began on Nov. 2, 1942. In a single day, most of the ghettos were wiped out (except for Bialystok, Pruzhanj, the first part of the Grodno Ghetto, *Krynki, and Sokolka). Before reaching their final destination at the extermination camp of Treblinka, the deportees were kept in assembly camps for a period of three to 10 weeks, during which many of them succumbed to the inhuman conditions. In November, 120,000–130,000 Jews were killed in the murder campaign. The *Aktionen* were renewed in February 1943, after the liquidation of the Pruzhanj, Sokolka, and Krynki ghettos. In Bialystok Ghetto, the first "action" took place on Feb. 5–12, 1943, resulting in the deaths of 13,000 Jews, of whom 1,000 were killed on the spot. Over

40,000 persons were killed in the third phase of the extermination campaign. Bialystok Ghetto was the last in the district to be liquidated (Aug. 16, 1943). Armed resistance, organized by the Jewish Fighting Organization (see Mordechai *Tenenbaum), was suppressed by German military forces, including tanks. Over 30,000 Jews were deported to Treblinka, Majdanek, and Auschwitz.

Generalbezirk Litauen und Weissrussland (Lithuania and Belorussia)

The Polish parts of these districts, which belonged to Reichskommissariat Ostland, consisted of almost the entire Vilna and Novogrudok provinces and of the northern portion of Polesie province. In 1931 this area was inhabited by over 230,000 Jews. From September to December 1939, a large number of refugees arrived in the area, especially in Vilna. For nearly 11 months (from Oct. 10, 1939, until the end of August 1940), Vilna and its environs formed a part of Lithuania. In August, the entire country was absorbed by the Soviet Union. Under Soviet occupation, thousands of Jews were arrested and deported to distant parts of the Soviet Union, but several thousand escaped to the United States, Palestine (see *Berihah), and *Shanghai. It is therefore impossible to determine the size of the Jewish population in June 1941. The larger communities in the Lithuania district were Vilna, Vileika, *Oshmyany, Svienciany, and Trakai (*Troki); in the Belorussian district they were *Novogrudok, *Baranovichi, *Lida, *Slonim, *Molodechno, and *Stolbtsy. Like everywhere else in "Ostland," the military invasion brought in its wake large-scale murder by the *Einsatzkommandos*, in this case *Einsatzgruppe A*. In many places they had the assistance of locally recruited "Hiwis" (*Hilfswillige* – local volunteer units). On July 11–Dec. 24, 1941, 45,000 Jews were killed in Vilna (which in 1931 had a total Jewish population of 55,000). At approximately the same time, 9,000 Jews were slaughtered in Slonim; 5,000 in Vileika; 4,000 in Molodechno; 2,500 in Novogrudok; 1,800 in *Volozhin, and other places. During the murder campaign, or a short while later, ghettos were established where further mass executions took place (Vilna Ghetto was set up on Sept. 6, 1941). Many small communities were completely wiped out.

Ghettos continued to exist in Vilna, Vileika, Oshmyany, Novogrudok, Lida, *Glubokoye, Slonim, and Baranovichi, and in a few smaller communities from which Jews were dispatched to larger ghettos in the summer of 1942, in preparation for the second phase of the annihilation program. Vilna Ghetto was also used for this purpose. Jacob Gens, chief of the Vilna Ghetto and of the ghetto police, had some measure of jurisdiction over the smaller ghettos in "Wilnaland," and the Vilna ghetto police participated in the *Aktion* that took place in Oshmyany at the end of October 1942. In Belorussia the same procedure was initiated of concentrating the Jewish population of a certain area in one of the larger ghettos in preparation for murder "actions." Here there was an almost continuous murder campaign, with breathing spells only between one *Aktion* and the next. The longest such period of

respite was granted to Vilna Ghetto, lasting from early 1942 until September 1943.

The final phase extended from August 1942, when the ghetto in Slonim was destroyed, until September 1943, when the Jews of Vilna, Novogradok, and Lida were sent to their deaths. In the course of August and September 1943, about 10,000 Jews were deported from Vilna Ghetto to concentration camps in Estonia. Six thousand were murdered on September 23, and the ghetto was liquidated. Several thousand Jewish workers employed outside the ghetto were exterminated later (July 1944). Specialists and skilled workers were sometimes concentrated in certain houses in the liquidated ghetto or sent to labor camps. Such camps, containing the pitiful remnants of the liquidated ghettos of Belorussia, were located at *Koldychevo (near Baranovichi) and Kelbasin. They too ceased to exist at the end of 1943.

Generalbezirk Wolhynien-Podolien

Of the Polish territories, this district, which formed part of the "Reichskommissariat Ukraine," contained the larger part of the Polesie province and the entire Wolyn (Volhynia) province belonging to prewar Poland. The 1931 census of the population in this area indicated about 300,000 Jews. The larger communities were Pinsk, Brest, *Kobrin, *Kovel, *Dubno, *Rovno, *Lutsk, *Ostrog, *Kremenets, and *Vladimir-Volynski. Here too, a large influx of refugees came from Poland shortly after the outbreak of the war, while a certain number of Jews were moved by the Soviets to other parts of the U.S.S.R., so that it was impossible to determine the size of the population in June 1941. A mass slaughter in this district was carried out mainly by Einsatzgruppe C, commencing with the German invasion. The murder action at *Rovno was carried out on Nov. 5–6, 1941, when 15,000 Jews were shot. In general the local Ukrainian population cooperated in the annihilation campaign against the Jews.

Only a few communities escaped in the initial phase (one of these was Kovel). As was the case elsewhere, the surviving Jews were herded into temporary ghettos. Dubno Ghetto was among the first to be liquidated (May 27, 1942), and 5,000–7,000 Jews were killed. The first *Aktion* took place on May 10, 1942, and the handful of Jewish workers who survived it were shot on May 23, 1942. In Kovel the "city" ghetto was destroyed on June 2, 1942, with 8,000–9,000 victims, while the "workers'" ghetto in the city was liquidated on Sept. 18, 1942. Lutsk Ghetto came to an end on Aug. 20, 1942 (17,000 people murdered). In Kremenets, the ghetto's agony lasted for two weeks, starting on Aug. 10, 1942, in the course of which 19,000 Jews went to their deaths. In September, it was Vladimir-Volynski's turn (18,000 victims) and from October 28 to 31, the Jews of Pinsk Ghetto were murdered. As in "Ostland," the mass executions took place in the vicinity of the ghettos, in front of prepared mass graves, and were marked by extraordinary manifestations of sadism. The Ukrainian police displayed a murderous zeal in their cooperation with the Nazis. In the course of December 1942, the Jewish workers who had

survived the mass executions were also liquidated. In a report on a trip in the Ukraine in June 1943, Hans Joachim Kausch of the Propaganda Ministry stated that the Jews of that area had been "completely" liquidated and throughout his entire stay there he had found only four Jews, working as tailors in an SD camp.

Demographic Total

Up to September 1939 Poland had a Jewish population of 3,351,000. Exact figures on the number killed between September 1939 and 1944 are not available, but the following account is a relatively well-founded estimate. Shortly after the end of the war, the Central Committee of Polish Jews began registering all surviving Polish Jews and by June 15, 1945, 55,509 had registered. Since some people registered several times with different local committees a round figure of 55,000 is assumed, which included a certain number of Jews who succeeded in returning to Poland from the Soviet Union. To this must be added 13,000 Jews in the Polish army formed in the U.S.S.R. in 1941, and approximately 1,000 Jews (out of 2,000) who had saved themselves by posing as "Aryans" and had not registered with the Jewish committees, bringing the total to 69,000. The number of Polish Jews who were saved by fleeing in September 1939 to the Soviet Union, to certain European countries, to Palestine, or to North and South America, or who survived the camps in Germany, is estimated at a maximum of 300,000 (250,000 of whom had fled to the U.S.S.R.). The sum total of surviving Polish Jews is therefore about 369,000, i.e., 11% of the prewar population, while 2,982,000 Jews were killed.

Jewish Resistance

Nazi plans called for a campaign of repression utilizing legal and economic restrictions and hard labor to bring about a rapid reduction of the Jewish population by pauperization, starvation, and epidemics. The Jews developed a system of self-defense to thwart the rapid achievement of the plans for their destruction, or at least succeeded in slowing down the realization of the Nazi program. Jewish resistance applied to all spheres of life – economic and spiritual; on an individual as well as on a collective basis; and in the final stage, when the Nazis resorted to the "Final Solution" (physical annihilation) of the Jews, it took the form of armed insurrections. In the economic sphere, the Jews succeeded in circumventing the regulations designed to isolate them from the gentile society, due to the fact that large numbers of Jews were put to work outside the ghetto. They established secret industries in the ghetto itself, by which they staved off rapid starvation and carried on business with the "Aryan" market. Foodstuffs were also smuggled into the ghetto by various means, often displaying astounding inventiveness. Jewish industrialists and artisans managed to obtain substitutes for all kinds of raw materials. In Warsaw Ghetto, for example, the export of wares produced in the ghetto workshops under orders of the German "Transferstelle" was in no proportion to that of articles produced in secret and exported without the knowledge of the official German office. The considerable gap between

legal and illegal economic activities became characteristic of the economic situation in all the occupied areas. Officially the Jews were given the opportunity of working for the German economy only, military as well as civilian, for as long as this served the German war effort. In practice, many of the Jews, inured by a long tradition of existence under harsh conditions of persecution, and fortified by a powerful will to live, were able to break out of the economic straitjacket into which the Nazis had forced them and to surmount the dangers of the ghetto walls.

The Nazis were disappointed by the ability of the ghettoized Jews to adapt themselves to the abnormal conditions of their existence, and surprised that “so few” Jews were dying from “natural” causes and that there were no mass suicides. At a meeting of Nazi officials, held in Cracow on Aug. 24, 1942, General Governor Frank openly admitted: “By the way, I wish to state that we have sentenced 1,200,000 Jews to death by starvation; the fact that the Jews are not dying from hunger will only serve to speed up enactment of further anti-Jewish decrees.” Thus, the Jews’ vitality served to frustrate partially the biological war that the Nazis waged against them and was one of the causes for the Nazis’ decision to resort to the “Final Solution.”

Jewish aid organizations which existed before the war, such as the *American Jewish Joint Distribution Committee (JDC), *TOZ, and *CENTOS, the Yidishe Sotsiale Alaynhilf (YISA) founded in May 1940, and, after liquidation of the last in Oct. 1942, the Juedische Unterstuetzungsstelle (JUS), established formally in March 1943, were permitted by the General Government to carry on their activities in its area. The YISA set up a highly diversified system of social and medical assistance. Almost every ghetto provided some form of public assistance, such as soup kitchens and accommodation for deportees and refugees. As early as May 1940, according to an incomplete list, some 200 welfare committees were sponsored by the Judenraete, and their budgets were provided mainly by the JDC. These committees also collected funds, clothing, and other articles among local Jews. By the end of 1941 the YISA organization was active in over 400 localities in the General Government, maintaining 1,500 social and medical institutions and serving 300,000 adults and 30,000 children. This, of course, was not enough to cope with the demands posed by the constantly growing pauperization of the Jewish population and the continual influx of new arrivals (in some ghettos, 60% of the population was dependent on public assistance). The constant lack of nourishment and hygiene in the ghettos, which the Nazis set up in the most dilapidated parts of the towns, resulted in diseases and epidemics to which the entire Jewish population might have easily succumbed. However, health and sanitary departments were set up and maintained by the Judenraete and TOZ which in turn subsidized 117 hospitals and 123 out-patient clinics and sanitary posts. To prevent the spread of the epidemics to the “Aryan” city quarters, the Nazi authorities used police measures, the results of which were even worse than the epidemics. In fact the ghetto

population was so weakened that a large loss of life could not be avoided. In Warsaw, Lodz, Lublin, and Kutno, 15–20% of the Jewish population died in the two or three years of the ghettos’ existence.

The Jews also displayed moral resistance to the starvation and debilitating forced labor, whereby the Nazis hoped to divest the Jews of all interest in spiritual life and dehumanize them. Moral resistance took varied forms. Pious Jews convened in secret for prayers, disregarding the dangers thus incurred; yeshivah students continued their studies and held clandestine *minyanim* to which they took the orphans to recite *kaddish* for their deceased parents. They also abstained from using the public soup kitchens which under ghetto conditions were not kept *kasher*, despite the greater suffering this entailed for them. Nonobservant Jews had their own means of moral resistance. Teachers established clandestine student groups and conducted classes in private homes. Persons who had been active before the war in cultural societies established secret libraries, choirs, orchestras, and dramatic groups, and held lectures and celebrations of important historical anniversaries. The Judenraete also established schools, wherever the Nazi authorities did not put obstacles in their way. (According to a decree issued by Frank on Aug. 31, 1940, the Judenraete were to be permitted to run elementary and vocational schools, but with few exceptions were prevented from actually doing so by the local Nazi authorities.)

Intensive cultural and educational activities were carried on in the Warsaw ghetto by the Yidishe Kultur-Organizatsye and the CENTOS, and in Vilna Ghetto by the cultural department of the Judenrat. Lodz Ghetto also maintained a large network of schools until the summer of 1941 (45 schools with 500 teachers and an average monthly attendance of 10,300 children). In most ghetto schools the emphasis was placed on Jewish studies. The teaching of history and geography was prohibited. Cultural activities fulfilled the dual purpose of protecting the inhabitants of the ghetto, especially the youth, against the demoralizing atmosphere of the ghetto created by the Nazis, and of strengthening their resistance to Nazi attempts to deprive them of their human dignity.

Organized physical and armed resistance was closely linked to political activities in a number of ghettos, and took various forms. Illegal publications, including pamphlets, were issued periodically or singly, and were either handwritten or duplicated. (In Warsaw Ghetto, for example, incomplete reports indicate that from mid-1940 to April 1943, 40 illegal periodicals were issued by various illegal movements representing every shade of political opinion.) Organized secret listening-in to foreign broadcasts, to reduce the Jews’ isolation from the outer world, provided information on the political and military situation, and served as a source of hope and encouragement. In some ghettos, political parties – particularly workers’ parties, e.g., the Bund, Po’alei Zion, and the communists – actively opposed the Jewish ghetto administration, i.e., the Judenraete and the ghetto police. (In Lodz Ghetto, opposition to Rumkowski’s regime took the form of street demon-

strations and strikes in the ghetto workshops.) Opposition to the Judenraete was also voiced in the underground press. The parties' youth movements conducted a cultural education campaign among their secret membership.

At a later stage, when the mass deportations began, the movements made preparations for armed resistance to the deportation "action." It was on the basis of organizing armed resistance that the political parties began to cooperate. Thus, in Warsaw Ghetto, a Jewish Coordinating Committee was set up in October 1942, composed of representatives of all the Zionist parties (with the exception of the Revisionists) – who were united in the Jewish National Committee – and of representatives of the Bund. On Oct. 27, 1942, the Jewish Fighting Organization (ZOB) was established which united the above-mentioned Jewish parties and the communists under one command. The heroic revolt of Warsaw Ghetto (which lasted from April 19 until the end of May 1943) was the result of the collective, self-sacrificing efforts of the youth of almost all political parties. The Revisionist Jewish Military Organization took an active part in the fighting. Similarly, in Bialystok Ghetto, a united fighting organization was set up on the eve of the revolt that broke out on Aug. 16, 1943.

In Czestochowa, the planned revolt was frustrated when an unexpected deportation "action" (on Sept. 21, 1942) barred access to the bunkers where the arms were hidden. During the liquidation of Bedzin Ghetto, underground fighters of the Zionist youth movements fought against vastly superior Nazi armed forces from fortified bunkers until they all fell. In Cracow Ghetto, the fighting organization, consisting of Zionist and Communist youth, carried out acts of sabotage and direct attacks on the Germans (such as the armed attack against German officers in the Cyganeria Café on Dec. 23, 1942). In Vilna Ghetto, a United Partisans Organization was founded in January 1942, comprising in later stages members of all the political movements. Following the Gestapo demand for the surrender of the Vilna underground commander, Yizhak *Wittenberg, in July 1943, the leadership of the organization was forced to give up the struggle inside the ghetto, and smuggled its members into the forests, where they set up a partisans' group under the name of *Nekamah* ("Revenge").

Revolts broke out in the extermination camps of Treblinka (on Aug. 2, 1943) and Sobibor (Oct. 14, 1943) in which large numbers of prisoners managed to escape (most of whom were later killed). These insurrections later brought the murder installations in those camps to a halt. An armed revolt of the Jews in the "Sonderkommando" in Auschwitz took place on Oct. 7, 1944.

PARTISANS. The guerilla warfare in Poland (i.e., within the area designated by post-World War II boundaries) was confined to the territories of the so-called General-Government and the province of Bialystok. The first Jewish attempts to organize partisan units were undertaken by the resistance movement of the *Warsaw Ghetto in spring 1942, but these, as well as some other early attempts, failed due to lack of ex-

perience and the lack of support from the local population. In July 1942, the Germans began to implement the so-called Operation Reinhard. At that time, mainly in the provinces of Lublin and Kielce, there began a spontaneous movement of thousands of Jews fleeing the townlets to the forests to escape deportation. Many of them formed groups that offered active resistance to the Nazis. Although numerically strong, they had very few arms and no supply bases at all. Those who managed to hold out through the winter of 1942/43 came in contact with the Polish underground, as in the course of spring and summer 1943 a number of Polish partisan units began to operate from the forests.

The attitude of the Polish partisans toward the Jews depended upon the political framework to which they belonged and the goodwill of local commanders. The closest relations were between the Jewish partisans and the Communist-dominated People's Guard (*Gwardia Ludowa*). About a dozen Jewish partisan units were subordinated to the command of that organization and later acted as its units. Among them were: partisan detachment "Chil" (known also as the Second Company of the "Holod" battalion), under the command of Yehiel Grynszpan, which operated in the eastern part of the Lublin province; detachment "Emilia Plater," under the command of Samuel Jegier, and detachment "Kozietulski," under the command of Mietek Gruber, in the northern parts of the Lublin province; detachment "Berek Joselewicz," under the command of Forst, in the southern part of the Lublin province; detachment "Lwy" ("Lions"), under the command of Julian Ajzenman (Kaniewski), in the northern part of the Kielce province; detachment "Zygmunt," under the command of Zalman Fajnsztat, in the southwestern part of the Kielce province; detachment "Iskra" ("Spark"), under the command of Lejb Birman, in Rzeszow province; and detachment "Mordecai Anielewicz" commanded by Adam Szwarcfus, Mordecai Growas, and Ingac Podolski, in the forests near Wyszkiw (northeast of Warsaw) which was organized after the Warsaw Ghetto uprising by remnants of the Jewish Fighting Organization. Jews also constituted a significant percentage in a number of other units of the People's Guard.

Remnants of the fighters in the *Bialystok Ghetto uprising formed the partisan unit "Forwards" ("Foroys"), which was later part of a Soviet partisan brigade under the command of General Kapusta. The attitude of the *Armia Krajowa* (Home Army), sponsored by the Polish government-in-exile residing in London, and of the Peasants' Battalions ("Bataliony Chłopskie") were different. These organizations did not accept Jewish units, but some of them accepted individual Jewish fighters, while others often took part in the murder of Jews. The extreme right-wing National Armed Forces ("Narodowe Siły Zbrojne") were strongly hostile toward Jews, organized attacks against Jewish partisans, and murdered all Jews they found hiding in the forests. Some Jewish units managed to operate independently of any Polish underground organization. The greatest of them was the unit in the Doleza forests under the command of Abraham Amsterdam.

A number of Jews won great fame in various Polish partisan units, mainly in those belonging to the People's Guard. Among the best known are: Colonel Ignacy Robb-Rosenfarb (Narbutt), commander of the People's Guard in the Kielce region; Colonel Robert Satanowski, commander of a partisan brigade; Colonel Niebrzydowski, commander of the Peasants' Battalions in the Miechów region; Major Menashe Matywiecki, member of the general staff of the People's Guard; Alexander Skotnicki, commander of the "Holod" battalion; Yehiel Brewerman, commander of the detachment "Bartosław Glowacki," and Captain Lucyna Herz, the only Polish woman officer parachuted into the woods for partisan activity. Jews also played a significant role in the Special Attack Battalion, which organized parachute units for guerilla warfare in the rear of the German army. The commander of that unit was the Jewish officer Lieutenant Colonel Henryk Toruńczyk. Four of the 12 units parachuted into the forests during the summer and autumn of 1944 were commanded by Jewish officers: Robert Satanowski, Julian Komar, Joseph Krakowski, and Zygmunt Gutman (later known as one of the best partisan commanders in the Kielce province). The significant feature of the Jewish partisan movement in Poland was that almost all Jewish partisans started their guerilla activity at a very early period (second half of 1942), when the Polish partisan movement hardly existed; thus Jews constituted in the early period a high proportion of the partisans and guerilla fighters. Among the first nine partisan detachments organized at the beginning of 1943 in the Kielce province, four were Jewish units, with a number of Jews present in all other units. Later in spring 1944, when the partisan movement in Poland grew rapidly, thanks to the great flow of arms from England (for the *Armia Krajowa*) and from the Soviet Union (for the left-wing guerillas), the Jewish communities were already destroyed and there were no more Jewish youth who could fill the partisan ranks. (See also: *Partisans.)

[Stefan Krakowski]

Jewish-Polish Relations during the War

Relations between Jews and Poles in occupied Poland were complicated in nature, especially in the Polish underground movements. The entire Polish population was vehemently anti-German, but the vast majority of people were also violently antisemitic. In the first month of the war, antisemitism seemed to have completely disappeared out of hatred for the Nazis, but it reemerged soon afterwards.

The Polish political parties' attitude to the Jews before the war generally remained much the same during the entire period of occupation. The right-wing parties, led by the *Narodowa Demokracja* (Endecja) officially denounced Hitler's barbaric methods, but in fact remained antisemitic and regarded the Nazi "solution of the Jewish problem" in Poland with quiet satisfaction. The extreme right-wing radicals, the *Obóz Narodowo-Radykalny* (ONR) and the *Falanga*, rejoiced over Hitlerism and approved of the Nazi murders. They contended that the victims were no better than murderers, and deserved their fate. The Polish Socialist Party (PPS), on the

other hand, and especially its left wing (RPPS) and the reorganized Communist Party (PPR) condemned the murder of the Jews in their illegal publications, took part in campaigns to aid Jews, and appealed to the Polish people to assist. A similar stand was taken by the Democratic Party and the People's Party, although the latter, formerly an important party, did not have a uniform approach. In general it identified itself with the stand taken by the Polish government-in-exile represented inside Poland by the Delegatura. The Delegatura also maintained contact with the Jewish National Committee and the Jewish Coordinating Commission. Through the Delegatura these Jewish bodies were able to keep in touch with Jewish political movements and organizations abroad.

Relations between the Jews and the Delegatura, initially quite friendly, deteriorated in the course of time. This was due to the Delegatura's negative attitude in regard to supplying the Jewish Fighting Organization with sufficient quantities of arms. It was not until the resistance of the Jewish Fighting Organization in Warsaw in January 1943 that the fighters at last received a small quantity of arms from the Delegatura. The strained relations with the Delegatura were partly the result of the reactionary and antisemitic groups' influence within the Polish underground, which grew in strength as the German front moved back toward Poland and a general anti-Soviet attitude came to the fore. (Anti-Soviet feelings among the Poles were also heightened by the story of the Katyn massacre, and the resulting break in Soviet-Polish diplomatic relations in the summer of 1943.) Anti-Jewish agitation among the Polish population was also fed by the reports of the situation of the Jews in Eastern Poland under the Soviet occupation, when Jews were appointed to official positions. The Delegatura also adopted a negative attitude to the Jewish partisan movement, refusing to support it or even to recognize its existence.

As the Soviet army drew near the Polish frontier, a rapprochement took place between the *Sanacja* (the ruling party of Pilsudski's successors) and the *Endecja* and between the *Sanacja* and such outright Fascist organizations as the ONR, whose military arm, the National Armed Forces (NSZ), was recognized in March 1944 as a component of the Delegatura's underground army, the *Armia Krajowa*. The NSZ went so far as to murder Jewish partisans and Jews who had succeeded in escaping from the slaughter taking place in the ghettos. More and more, an anti-Jewish tendency made itself felt in the official underground publications issued by the Delegatura.

The Nazi propaganda machine cleverly exploited the antisemitism existing among the Polish population. Reviving the old Polish slogan of "Żydo-Komuna," they identified Jews with Communism and succeeded in further poisoning the prevailing anti-Jewish feelings among the Poles. As a result, Jews who had been in hiding on the "Aryan" side were denounced to the Nazis. In many places Poles not only assisted in the search for Jews, but joined the Nazis in torturing and killing them as well. The Polish police, with hardly any exception, took part in the "actions" and on several occasions were

themselves in charge of rounding up the Jews and dispatching them to the death camps.

There were, however, some social groups and individuals, from all segments of the population, who helped Jews at the risk of their own lives. The activities of the "Council for Aid to Jews," which provided "Aryan" documents and shelter in Polish houses, rescued children, and extended financial aid, helped some 50,000 Jews. There were more than a few individual Poles who had the moral strength to overcome the fear of death (the punishment for giving refuge to Jews) and the pressure exerted on them by the prevailing anti-Jewish climate of opinion, to stretch out a helping hand to the persecuted Jews. Some of these Poles, along with their families, had to pay with their lives for the courage they displayed in aiding Jews.

It may be concluded that the attitude of the Poles to the Jews was marked by both active participation in the murder of Jews and rescue efforts at great risk. The motives for these attitudes also varied from religious, humanitarian, or simply materialistic considerations, to a "biological" hatred of Jews. Of all the occupied countries, the percentage of Jews saved in Poland was the smallest, since the predominant attitude was hostile, while rescue was an exception to the rule.

[Isaiah Trunk]

AFTER WORLD WAR II

Rescue of Jewish Children

When Poland was liberated in 1945, thousands of orphaned and abandoned Jewish children were wandering through villages and in the streets of the towns. Many were found in Polish homes and in convents. Some had been baptized, and some had been exploited by the peasants as a source of cheap labor. The official Jewish committees (*komitety*) established institutions for homeless children. Jewish parents applied to the Jewish organizations for help in finding children, who had been entrusted to non-Jewish families in order to save their lives but later disappeared without trace. Some Poles refused to return Jewish children, either because they had become attached to them or because they demanded financial remuneration for maintaining the child and for the risk they had incurred in hiding Jews from the Germans. There were a few cases of Jewish children living under conditions of starvation and terror. With the mass repatriations from the Soviet Union, 31,700 children under 14 years of age returned to Poland, including many hundreds of orphans, who also needed immediate care. Three separate bodies worked to save Jewish children. The first of these, the official Jewish committees, acting under the auspices of the authorities, maintained 11 boarding schools with a total of 1,135 orphans, and day schools and nurseries which cared for about 20,000 children. The youth department of the committees cared for about 7,700 boys and girls. Material conditions were good, but education was oriented toward Polish assimilation. The second, the Jewish Religious Council (Kongregacja), sent people to redeem children from Polish homes, particularly at the request of religious relatives. These children were delivered to their relatives abroad, or sent to be

adopted by Jewish families in the United States, Great Britain, and other countries. The third organization was established by the Zionist movement, and given the abbreviated name of the "Coordination" (Koordynacja). Its emissaries wandered through Poland to rescue children, very often risking their lives in doing so. The Koordynacja established four children's homes, which housed hundreds of children aged between two and 12. The older children were sent to "children's kibbutzim" of the youth movements. Funds were supplied mainly by the *American Jewish Joint Distribution Committee (JDC). The special psychological problems of the Holocaust period, such as fear and hatred of Jews, necessitated the establishment of a special seminary for educators at Lodz. The Koordynacja systematically sent children abroad, with the intention of finally enabling them to reach Palestine. By the end of 1947, more than 500 children had been taken out of Poland. Together with their teachers and educators they entered *Youth Aliyah institutions in Germany, Austria, and France, most of them settling later in the State of Israel. Scores of Jewish children are believed to have remained in Poland, mainly in Catholic institutions and convents.

[Sara Neshamith]

Renewal of Jewish Life

The first attempts to renew Jewish life took place in Lublin, the seat of the Polish Committee of National Liberation. In a manifesto issued on July 20, 1944, this committee published a solemn declaration assuring equal rights and full rehabilitation to the survivors of Polish Jewry. The Jewish Committee was formed to extend emergency aid to Jews converging on Lublin from the liberated parts of Poland. This group included adults who returned from the forests and other hiding places or who miraculously survived the concentration camps, and children who found refuge in convents or with individual Polish families. In October 1944 the Jewish Committee was renamed the Central Committee of the Jews in Poland and moved to Warsaw when the Polish capital was liberated. The committee was composed of representatives of the various Jewish parties and was presided over by the Zionist Emil *Sommerstein. At first it was primarily concerned with providing material assistance to the Jewish survivors and facilitating their return to a productive life. Before long, however, the committee extended the range of its activities to social and cultural spheres.

By 1945 it comprised 10 districts (*województwa*), two sub-districts, and about 200 local committees. Several dozen Jewish cooperatives, in a variety of trades, and 34 Jewish farms run by several hundreds of Jewish agricultural laborers were founded. A considerable number of Jewish weeklies and bi-weeklies, representing every shade of Jewish political opinion, made their appearance. Among them was the organ of the Central Committee, *Dos Naye Leb*n. An elementary school having Yiddish as the language of instruction with Hebrew as a compulsory subject was established in Lodz. There was also a society of Jewish writers, journalists, and actors in that city, while in Lower Silesia the Jewish Society for Art and Culture

was formed. After the Zionist pioneering youth movements were reorganized, they established hundreds of training farms, children's homes, etc., and prepared their members for *aliyah*. In July 1945 the JDC entered the Jewish scene in Poland. Through the Central Committee, it subsidized a variety of social welfare agencies, emphasizing the care of children, the aged, and the sick. In addition the JDC provided food, clothing, and medicine to educational and cultural institutions, and supported a variety of plans to help able-bodied men and women become productive again. The following year, *ORT began its work in Poland, creating a network of vocational schools. In the medical field TOZ provided the assistance. At the beginning of 1946, this organization was running eight mobile clinics, seven hospitals, and medical aid stations in all major cities.

In addition to the 80,000 Jews already in Poland, over 154,000 Polish Jews were repatriated from the U.S.S.R. in the summer of 1946, bringing the total Jewish population of Poland close to 250,000. The Polish government and the Communist-dominated ruling party (the Polish Workers' Party – PPR) encouraged the Central Committee in its social and cultural activities and lent support to the Jewish efforts to establish new economic foundations and restore communal life. At the same time, the government placed no obstacles in the path of Jews who wished to emigrate. It permitted the Zionist movement to exist and displayed a friendly attitude to the aspirations of the *yishuv* in Palestine and later to the State of Israel. Polish government support (or at least tolerance), aid from world Jewry, and, especially, the growth of the community by mass repatriation from U.S.S.R., led many Polish Jews in the immediate postwar period to believe that the conditions being created in the “new” Poland would enable them to live a free and full Jewish life.

Cultural, Religious, and Economic Life

At first these hopes had some basis in fact. In 1946–47 two Yiddish theaters were founded – in Lodz and Wroclaw – and employed some 80 actors. In 1950 they joined forces as the Jewish State Theater with a government subsidy under the direction of Ida *Kaminska. The theater discontinued its activities after 1968, when most of the Jews emigrated from Poland. A publishing house and a literary monthly came into being. The Society for Art and Culture founded Jewish libraries, promoted amateur societies in various cultural fields, and arranged public lectures. The *Jewish Historical Institute embarked upon a program of collecting and publishing historical material on the Holocaust. According to figures published in the anniversary edition of *Dos Naye Lebn* (1945–47), the Central Committee's Board of Education served 34 Jewish schools staffed by 179 teachers and attended by 2,874 children. Jewish religious life was renewed in every town where Jews resettled. In prewar Poland there had been 2,000 rabbis, 8,000 ritual slaughterers and religious teachers, and 10,000 yeshivah students. Of these, only a few dozen rabbis, slaughterers, and about 100 yeshivah students survived the war, mainly in the

U.S.S.R., but only a few of them refrained from emigrating and remained in postwar Poland. Nevertheless, the Union of Religious Communities was established, comprising some 30 communities. The Union attended to Jewish religious needs by refurbishing and using two synagogues which had not been destroyed – one in Warsaw and the other in Wroclaw – establishing prayer-houses in all the communities, providing *mazzot* for Passover, arranging for the supply of *kasher* meat, and founding *kasher* public kitchens. In cooperation with the Central Committee, the Union rededicated Jewish cemeteries and reburied according to Jewish rite the victims of Nazism buried in mass graves.

In mid-1948, the Union of Religious Communities formally joined the Central Committee of Jews in Poland. The cooperation between the two bodies, however, lasted only into the early 1950s, when the Stalinization taking place in the country also affected Jewish life and made the cooperation of secular and religious bodies impossible. By the end of 1960, there were 23 member communities in the Union, and by 1966 the number was reduced to 18. The number of individual members varied greatly from one community to another; thus, in Warsaw, there were only 20 registered members, while in Katowice there were 1,200 and in Wroclaw 2,000. The Union of Religious Communities was still in existence in 1969, but the mass emigration of 1968–69 reduced its membership severely. At the end of 1947, there were 200 Jewish cooperative societies, with a membership of 6,000. About 15,000 Jews were employed in communal institutions, coal mines, heavy industry, textile factories, and a variety of government and private factories; 124 Jewish families were employed on farms. By the end of 1946, ORT was conducting 49 different vocational courses staffed by 81 instructors and attended by over 1,100 pupils. Contact with Jewish communities outside of Poland was maintained by both the Central Committee and by the various Zionist groups which were active in the early postwar years. In the beginning of 1948, the Central Committee joined the *World Jewish Congress and participated in its meetings and conferences.

The Flight from Poland

The revival of a sound Jewish community life in Poland was the declared aim of those Jews who had been Communists before the war. They believed that the conditions were now ideal for the renewal of Jewish life and argued that a revived Jewish community would both demonstrate the vitality of the Jewish people and the failure of Nazism and other forms of antisemitism. The majority of Polish Jews, however, including those who were being repatriated from the Soviet Union, did not want to reestablish their lives in Poland, where the Nazis had found thousands of collaborators among the local population eager to cooperate in the extermination of the Jews. Moreover, pogroms continued even after the Nazi occupation ended. To most Polish Jews it was unthinkable to renew their life on the Polish soil soaked with the blood of millions of Jews. Thus tens of thousands of Polish Jews who fled from the U.S.S.R.

and Poland made their way to Romania and Germany in the hope of reaching Palestine. After the *Kielce pogrom this exodus took on an organized and semi-legal character. A coordinating committee for *aliyah* was formed from representatives of all Zionist groups to make arrangements for up to a thousand persons a day to cross the Polish border at three points in Lower Silesia near Kudowa. The operation lasted about six months, until the end of 1946 (see *Berihah). Thereafter, Jews encountered difficulties in leaving Poland, but emigration did not come to a stop. In 1949, when the Zionist parties were disbanded, all former Zionists were permitted to leave for Israel, and some 30,000 people took advantage of this opportunity. Thus, mass emigration continually depleted Polish Jewry from 1944 to 1950. The Central Committee, which did all in its power to combat this movement, was forced to accept the reality of a drastic decrease in the Jewish population.

Anti-Jewish Excesses

Jewish emigration from Poland was motivated not only by the recent tragic past and by prewar Zionist education, but also by the continuation of a clear and present danger to the Jews. There were murderous attacks upon Jews on Polish roads, railroads, buses, and in the towns and cities. The murders were committed by members of Polish reactionary organizations, such as the NSZ (Narodowe Sily Zbrojne). In cruelty and inhumanity, their crimes often equaled those committed by the Nazis. Beginning in 1945 the assaults upon Jews swiftly assumed mass proportions. In two pogroms – one in Cracow on Aug. 11, 1945, and the other in Kielce on July 4, 1946 – thousands of Polish men, women, and children ran amok in the Jewish quarters, killing in Kielce 42 Jews and wounding 50 others. The attacks spread throughout the country, and in 1945 alone 353 Jews were reported murdered. The wave of anti-Jewish excesses continued well into 1946 and reached its climax in the Kielce pogrom. The government and the ruling party issued declarations designed to placate the Jews and there were public protests against antisemitism by intellectuals and large parts of the working class. Above all, the Jewish Communists and the Central Committee of Jews in Poland tried to reassure the Jews that the government would stamp out the antisemitic underground. The Jews, however, did not heed the exhortations and raced for the borders. By the end of 1947, only 100,000 Jews remained in Poland.

The Soviet Example

A second factor discouraging any hope for a viable Jewish community in Poland was the rising tide of antisemitism in the U.S.S.R. Soviet antisemitism was at first disguised as a campaign against “rootless cosmopolitans.” This was followed by the judicial murder of leading Jewish writers and artists and the total liquidation of Jewish cultural life in the Soviet Union. The campaign culminated in the so-called *Doctors’ Plot (see *Antisemitism, in the Soviet Bloc). These Soviet developments had an immediate effect on the Polish scene. In 1948 the central committee of the ruling party, the PPR, on Moscow’s initiative, accused its first secretary, Wladyslaw Go-

mulka, and his associates of rightist-nationalist deviation, and Poland became, more than ever, a Soviet satellite. The entire country was overrun by the Soviet secret police. Under these circumstances Poland’s attitude toward its Jews could not be substantially different from the Soviet model.

Nevertheless, Stalinist antisemitism was effected in Poland without bloodshed and mass arrests. It was the cultural activities of Polish Jewry that were immediately affected, reduced in their scope, and adapted in their content to the new spirit. The Stalinization of Poland was carried out by a variety of measures. The existing workers’ parties were merged into a single party, and all other parties were liquidated. The Soviet Union was glorified and its policies in internal and foreign affairs were slavishly copied. In all creative activities “socialist realism” became the rule. In the Jewish sphere, “unifications” and liquidations were carried out. The first to be liquidated were the Zionist parties and the Bund in November 1949. This was followed by a ban on the operation of the JDC and ORT, in spite of the assurance given by the Polish Committee of National Liberation in its manifesto of July 20, 1944, and the appeal in December 1945 by the Polish provisional government for foreign aid to be extended to Polish Jews. Similarly, the recognition of the JDC’s work expressed in November 1946, when JDC director, Joseph *Schwartz, was awarded a high decoration by the government, no longer had any meaning.

An act of liquidation by “unification” affected the Union of Jewish Cooperative Societies, representing 200 societies, 15,000 workers, and substantial assets (originally financed by the JDC) which was forced to merge with the general Polish Union of Cooperatives. On May 16, 1949, a “recommendation” was made to the Central Committee of the Jews in Poland to secede from the World Jewish Congress. Finally, the Central Committee itself, whose continued existence as a seemingly independent representative body was not in harmony with the new trend, was ordered to merge with the Jewish Society for Art and Culture. The new organization bore the name Cultural-Social Association of the Jews in Poland (Kultur-Gezelschaftlekker Farband fun di Yidn in Poyln). All Jewish schools were nationalized in the 1948–49 school year, resulting in the further reduction of Jewish studies. Yiddish as the language of instruction and the teaching of Hebrew had already been eliminated. Such organizations as the Jewish Agency came to be regarded as “agents of imperialism,” and any contact with them was highly suspect. The spiritual life of Polish Jews was now restricted to preoccupation with the “progressive” tradition. The mass emigration had resulted in a radical reduction in the number of district and local Jewish committees. Their total number dropped to 30. The largest concentrations of Jews were in Warsaw (about 8,000), Wroclaw (about 6,000), Lodz (about 5,000) and Szczecin, Katowice, Cracow, Legnica, and Walbrzych.

In spite of these far-reaching quantitative and qualitative changes, the leaders of the Cultural-Social Association and the other Jewish establishments (such as the Historical Institute, the theater, the publishing house, the literary journal, and the

newspaper *Folksshtime*), both in Warsaw and the provinces, did all in their power to maintain at least a modest level of Jewish activity. In fact, in the period 1950 to 1957, Jewish life in Poland was relatively stable. Even so, there were those in the association who, encouraged by the ruling party, sought to promote assimilation and achieve results.

1956–1967. Stalin's death in 1953 resulted in an easing of tension, but Gomulka's assumption of power, in 1956, completely transformed the Jewish scene in Poland. Revelation of the innumerable crimes committed in the U.S.S.R. during the period of Stalin's rule enabled the Jewish newspaper *Folksshtime* to publish a passionate protest against Soviet antisemitism and its destruction of Yiddish literature and culture. In Poland it was once more possible to foster Jewish literature and to re-establish contact with Jewish organizations abroad. The JDC and ORT returned to devote themselves primarily to the approximately 25,000 Polish Jews who were being repatriated from the U.S.S.R. under an agreement between Gomulka's government and the Soviet Union (along with hundreds of thousands of people who had been Polish citizens in 1939 but for some reason had not been repatriated after the war). Once again the JDC extended aid to the sick, the aged, and children. It also assisted various cultural institutions, including schools. ORT, for its part, reestablished its network of vocational training schools.

The great majority of Jews repatriated from the U.S.S.R. did not, however, have any intention of staying in Poland. Even before their departure from the Soviet Union, most of them resolved to move on from Poland, primarily to Israel. Similarly, thousands of long-established Jews now decided to leave Poland for good. Their decision was influenced by the antisemitic incidents that occurred soon after Gomulka's rise to power. Poland again allowed Jews to emigrate, and some 50,000 people left the country in 1958–59. In some cases, whole towns were emptied of their Jewish population, and the Jewish community in Poland was now reduced to about 30,000 people. Of those who remained some 3,000 were too old or too sick to earn their livelihood and were supported by the JDC, as were various children's homes, camps, and clubs. In addition, the JDC financed the Historical Institute, the Cracow Jewish Museum, cultural enterprises, the reestablishment of Jewish cooperatives, and the construction of a Jewish home for the aged.

The Jewish cooperative movement, revived after 1957 with help from the government and the JDC, was soon able to stand on its own feet and to transfer 20% of its yearly profits – ranging from one to two million zlotys – to the Jewish Cultural-Social Association. This situation prevailed until 1967.

Final Liquidation

In 1968–69, a fourth mass emigration of Jews from Poland took place, resulting in the virtual dissolution of the Jewish community as an identifiable and creative group. It also spelled the final disillusionment of those Jews who hoped the Gomulka regime would differ from the Soviet Union in its ap-

proach to the Jews. The Six-Day War (1967) and the March 1968 student riots in Polish university towns were seized by the Polish government as the opportunity to utilize popular antisemitism for its own political purposes. When the party faction called the Partisan Group, led by Minister of Interior Mieczyslaw Moczar, initiated antisemitic action in an attempt to oust Gomulka from power, the Polish Communist leader adopted a clearly defined anti-Jewish policy. In March 1968 Gomulka publicly declared those Jews whose loyalty wavered between Poland and Israel to be “rootless cosmopolitans” unworthy of holding public office. He reiterated, however, the principle that Israel-oriented Jews should be allowed to immigrate to the Jewish state. In the course of 1968, Jewish youth camps, schools, and clubs were disbanded. Jews were dismissed from whatever public positions they still held, and the Cultural-Social Association was reduced to a mere paper existence. Restrictions were placed even on the status of Yiddish, a language which had been used in Poland almost as long as Polish itself. Yiddish was declared a foreign language, with the result that any publication in Yiddish had first to be translated into Polish before it could be released for distribution. In practice this signified the end of the Yiddish publishing house “Yidish Bukh” and of *Yidishe Shriften*, the literary journal. The Yiddish newspaper *Folksshtime*, which formerly appeared four times a week, was now restricted to a weekly appearance. The JDC and ORT were again forbidden to operate in Poland, and the Jewish cooperatives were again handed over to the general Cooperative Union. The Jewish home for the aged, financed by the JDC, was turned into a general institution.

The liquidation of all organized forms of Jewish life was accompanied by a relentless antisemitic campaign carried through the press, radio, and television. The majority of Polish Jews, the tragic remnant of a community that had once numbered over 3,250,000 people, reacted to these events by choosing to emigrate. Since the Polish authorities allowed Jewish emigration only to Israel, and then only upon renunciation of Polish citizenship, many Jews who intended to immigrate to other countries (Canada, Australia, Scandinavia) ostensibly applied for papers and visas to Israel. Efforts to assure the continued existence of Jewish life in Poland were in vain. Young Jews, most of whom left the country, were especially shocked by the antisemitism displayed by leading Polish Communists. The few Jewish institutions still in existence in 1971 were devoid of all creative content and had been stripped of all authority. (See also *Cooperatives; *American Jewish Joint Distribution Committee; *ORT; *OZE; *Berihah.)

[David Sfarid]

Later Developments

In the following two decades the Jewish population of Poland stabilized at around 6,000. There remained only a single synagogue in Warsaw and in the whole country there was no rabbi. The Jewish cemetery in Bialystok was transformed into a public garden and the famous Jewish cemetery in War-

saw was repeatedly desecrated by gangs who stole the marble from the graves.

The Social and Cultural Society of Jews in Poland came under the full control of the Ministry of Interior and almost all of its social functions were terminated. After the Jewish cooperatives were liquidated, the Polish government began to defray the rather modest budget of the society.

In 1976–77 the Jewish issue again became a motif in the official propaganda campaign which came on the heels of the Polish workers' protest movement against rises in food prices and the activities of the "Committee for the Defense of the Workers" and dissidents.

The prolonged instability of the situation resulted in intensified exploitation of the Jewish issue, and the press directly attacked and ridiculed Jewish religion, tradition, and customs with the result that Jewish life was compressed into a lifeless framework which, nevertheless, still continued to function. The Jewish Cultural-Social Committee remained in existence, as did the Jewish Historical Institute and the Jewish Theater. The newspaper *Folksshtime* also continued to appear. The institute received permission to resume publication of the academic journal *Yidische Bletter*, whose publication had ceased several years earlier.

In the latter part of 1977 the Poles took several tactical steps to improve their image with regard to Jewish matters. In October and December 1977 the chairman of the Organization of Former Jewish Partisans and Fighters in Poland (Stefan-Shalom Greik, an Israeli), the chairman of Yad Vashem (Dr. Yitzhak Arad), and a representative of Kibbutz Loḥamei ha-Getta'ot (Zevi Schneir) were invited to Poland in connection with the implementation of a plan to establish a Jewish exhibit hall in the former extermination camp at Auschwitz. It was the first time that the authorities in Poland displayed a readiness to permit Israeli institutions to participate in the implementation of the plan, and even to be assisted by the advice of Israeli experts. The Warsaw Institute of Jewish History was also invited to assist in drawing up the plan. The pavilion was opened at a ceremony held on April 17, 1978, in the presence of Polish authorities and Jewish delegations from Israel and the Diaspora. Its official name was "The Destruction and the Struggle of the Jews in Occupied Europe." In June, however, it was closed to the public, although it was claimed that the closure was only temporary to improve the amenities there, and that it would be opened to individuals on request.

A definite anti-Zionist, anti-Jewish tone was expressed in government propaganda used in its fight against the increased strength and demands of Solidarity in 1980 and 1981, although the current demographic distribution of Jews in Poland certainly did not warrant any such attacks. Individual Jews did participate in the Solidarity movement.

Poland's transition to a democratic system of government and a market economy which began in 1989 after nearly five decades of Communist rule took place against the background of economic crisis and industrial unrest. At the same time, the new freedom experienced by Polish society had an

invigorating effect on the small, mostly elderly Jewish community that remained in the country. A significant renewal of Jewish cultural and religious life took place, and people previously estranged from Jewish tradition, especially among the young, began to acknowledge their Jewish identity. Communal and cultural activities were strengthened and encouraged by the renewal of ties with Israel and increasing contacts with world Jewry. Two important events exemplify this positive trend: The community acquired its first resident rabbi in over 20 years, and a Coordinating Commission of Jewish Organizations, which represented and acted on behalf of the whole community, was established. The new body brought together the Jewish Social and Cultural Association, the Mosaic Religious Association, the Jewish Historical Institute, the Jewish Theater, and the bi-weekly paper *Dos Yiddishe Wort* (formerly *Folkssztyme*).

A range of educational and cultural activities was provided by the Social and Cultural Association (TSKZ), which had branches in 15 cities. Courses in Jewish history and Yiddish as well as song and dance classes were held. The Jewish Historical Institute conducted research and published scholarly papers and books on the history of Jews in Poland. Welfare activities were carried out with the financial support of the JDC.

On the positive side of Polish-Jewish relations was the continuing interest in the history and culture of Polish Jews among the Polish intelligentsia. The awareness of the need to preserve the Jewish heritage and recognize the Jewish contribution to Polish culture originated in liberal Catholic, Protestant, and opposition circles in the 1980s.

Among the initiatives taken were annual weeks of Jewish culture, seminars on Jewish subjects, festivals of Jewish films, exhibitions as well as efforts to restore and maintain Jewish cemeteries and monuments. From the mid-1980s, in an attempt to improve their image abroad the Communist authorities encouraged Jewish studies. The Institute for the Study of the History and Culture of the Jews in Poland was created at Cracow's Jagellonian University in 1986. A number of conferences and symposia were held with the support of the state and the participation of Western, including Israeli, scholars. A large number of books on Jewish subjects were published to meet the growing demand. In post-Communist Poland, state authorities continued to support a range of cultural activities. A foundation called Eternal Memory was set up by the treasury for the restoration and preservation of Jewish cultural monuments.

The community, however, experienced a rising tide of antisemitism. The change to a pluralist democracy opened up opportunities for extremist nationalist groups using antisemitism as a tool in the political struggle. Their propaganda identified Jews with the Communist regime and blamed them for all the shortcomings of Polish life. The removal of restraints on freedom of expression meant that antisemitism was now openly voiced in public and everyday life with grass-roots antisemitism well attested in public polls.

Government and Solidarity personalities became targets of anti-Jewish campaigns, which drew attention to their real or alleged Jewish origins. At the time of the 1990 presidential and 1991 parliamentary elections these tactics were freely used even by the mainstream political groups. Antisemitic publications, including reprints of the notorious *Protocols of the Elders of Zion*, were distributed widely. Acts of vandalism at Jewish institutions, synagogues, and cemeteries multiplied as Polish skinheads sought to emulate their Western counterparts. The need to obtain economic assistance from the West, which acted as a brake on political antisemitism during 1980s, prompted President Walesa's initiative in 1991 to create a Council on Polish-Jewish Relations. An advisory body attached to the president, its function was to promote better understanding between Poles and Jews by drawing-up educational programs for Polish youth, organizing events and exhibitions, and providing a reaction to antisemitic incidents.

The continuing dispute over the Carmelite convent at Auschwitz had been at the center of the crisis in Catholic-Jewish relations from 1984 (see *Auschwitz Convent). The controversy was widely debated in the Polish press: a range of views from openly antisemitic to liberal was expressed revealing a disquieting level of prejudice and a lack of understanding between Poles and Jews. The crisis was finally resolved in 1993 with the relocation of the nuns at the convent.

While some elements within the Catholic Church supported right-wing Christian parties with known antisemitic tendencies, the Polish bishops, in an effort to improve relations, issued an unprecedented statement taking a clear stand against all manifestations of antisemitism. The episcopal letter, read in churches on January 21, 1991, presented Vatican II teachings on the relations between the two faiths and dealt with a number of controversial issues such as Polish responsibility for the Holocaust, alleged Jewish responsibility for Communism, and antisemitism past and present. At the same time the Catholic Seminary in Warsaw published a book on Judaism and the Jews for school teachers written in a similar spirit.

[Lena Stanley-Clamp]

By the mid-1990s most of the Jewish communities in Poland – Warsaw, Cracow (Krakow), Lodz, Stettin (Szeczin), Danzig (Gdansk), Kattowitz (Katowice), and Breslau (Wroclaw) – had synagogues. The eastern part of the country, once teeming with Jewish life and with great centers such as Lublin and Bialystok, probably had no more than 50 Jews. The Coordinating Committee of Jewish Organizations in the Polish Republic (KKOZR) coordinated activities of the various Jewish bodies. Under the auspices of the Lauder Foundation, a club was established which organized many events for young people including Jewish summer camps and athletics. The Jewish groups included persons orphaned in the Holocaust and brought up by non-Jews and a veterans' organization. An important item on the agenda was the preservation of synagogues and cemeteries throughout the country. Many of these were in a state of disrepair or being used for secular purposes.

Poland had a chief rabbi whose seat was in Warsaw and another rabbi for youth. A primary school and kindergarten were opened in Warsaw. Jewish courses were offered at the universities in Warsaw and Cracow. Warsaw's Jewish Historical Institute was an important archive and venue for cultural events while Cracow had a Center for Jewish Culture. The Warsaw Yiddish Theater was the only regularly functioning Yiddish theater in the world. Most of the actors were non-Jews. Poland was the scene of considerable Jewish tourism including pilgrimages to Holocaust sites, which bring many Jewish youth groups, such as the March of the Living.

In the early years of the 21st century, around 8,000 Jews were registered with the community, but it was estimated that as many as 30,000–40,000 had some Jewish ancestry.

RELATIONS WITH ISRAEL

Poland was among the first countries to recognize Israel (May 18, 1948). During the period preceding the establishment of Israel, Poland was unstinting in its support for the *yishuv*. At a convention of Soviet-bloc foreign ministers, the Polish foreign minister introduced a resolution congratulating Israel and condemning Arab aggression. Polish public opinion also strongly supported Israel and its struggle, as evidenced by resolutions passed by various public institutions, including the National Conference of Polish writers. Israel also received practical aid. In 1948, before the declaration of independence, a Haganah camp was set up in Poland, where 1,500 young Jews underwent preparatory military training before leaving for Israel. During the actual fighting, shipments of wheat were brought to Israel by a Polish boat. In August 1948 an Israel legation was established in Poland, one of Israel's first diplomatic missions.

The Change of 1950

The cooling of U.S.S.R.-Israel relations from 1950 affected relations between Poland and Israel. A certain ambivalence characterized Poland's attitude toward Israel, for, together with criticism of Israel on the international scene, particularly at the UN, there was also understanding and sympathy for Israel's problems and a courteous attitude in official relations, in contrast to the attitude of other member states of the Eastern bloc, even in 1950–55, which were particularly difficult years for Israel relations with East Europe. The change, which started to make itself felt at the beginning of 1950, was reflected in a decrease in the number of exit permits issued, although emigration from Poland never ceased altogether. Polish authorities began to display animosity toward the Israel legation, with a view to minimizing its contacts with Polish Jewry. During this period there were mass arrests and staged trials in a number of Eastern European countries, and, while the situation did not reach such proportions in Poland, police measures were intensified there and the Israel legation was put under police surveillance. A sharp turn of events occurred in 1953, when the Israel minister in Warsaw, A.L. Kubovy, who was stationed in Prague, was declared *persona non grata* as a

result of a similar action taken against him by the Czechoslovak government after the *Slánský trial. Thereafter two other Israel diplomats were expelled.

Improved Relations in 1956

Wladyslaw Gomulka's ascension to power as secretary of the Communist Party in the fall of 1956 ushered in a liberalization in Poland's internal regime and a more independent foreign policy. Relations toward Israel improved primarily through an open emigration policy. Israel's problems were given more objective treatment in the press. In 1956 Israel again appointed a resident minister in Warsaw after a three-year period during which a chargé d'affaires headed the Israel legation. In 1963 the mission was elevated to the level of an embassy. After 1956 there was also a broadening of cultural and scientific relations in the form of reciprocal visits by individuals and delegations. Nevertheless, the Polish government maintained a constant reserve and did not respond to all of Israel's initiatives, sometimes even failing to implement plans they themselves had suggested. Thus, for example, cultural and scientific relations were not established on a formal basis, although such a step would have been justified by the extent of these activities. Nor was a Polish-Israel Friendship League set up in Poland, although an Israel-Polish Friendship League functioned in Israel.

Nevertheless, Poland was undoubtedly foremost among the East European countries in fostering relations with Israel, especially in the areas of culture, science, and information. Israel artists participated regularly in international music festivals in Poland, and many Polish performers appeared in Israel. Radio musical programs were exchanged. Exhibitions of Hebrew books were held in Poland, and Polish books were distributed in Israel. Regular exchanges of scientific publications took place, and individuals and figures in public life paid reciprocal visits. Exhibitions of graphic art were organized in Poland and in Israel. Of special note during the period between 1956 and 1967 were the tour of a Polish medical delegation in Israel; the visit to Israel of the chairman of the Polish Academy of Sciences; and the visit of the Israel ministers of health and welfare to Poland. After 1956 Israel participated regularly in the International Fair in Poznan. An information bulletin distributed by the Israel embassy influenced public opinion, and the Polish press often drew upon it.

In the political arena (e.g., in voting at the UN), Poland continued to identify with the U.S.S.R. but nevertheless was willing to support the election of Israelis for various functions in international agencies. Its spokesmen would point out that Poland's guiding principle was to foster relations both with Israel and with the Arab states, but neither at the expense of the other. An event in May 1966 seemed to herald a marked improvement in Polish-Israel relations and a development in Israel's relations with the entire Communist bloc: A convention of Israel diplomatic representatives in Eastern Europe was held in Warsaw with the participation of Foreign Minister Abba Eban. It was the first time that such a convention was

held in a capital of the Eastern bloc, and Warsaw was willing to serve as its venue; it was also the first visit in an East European capital by an Israel foreign minister. Eban held discussions with the Polish foreign minister, Adam Rapacki, who displayed the attitude usually accorded an official foreign visitor.

The Six-Day War

Fairly normal relations were maintained between the two countries when the U.S.S.R. began escalating the Middle East crisis, which resulted in the Six-Day War. Significantly, a visit to Poland at the end of April by the Israel minister of welfare, heading a delegation for the establishment of the Auschwitz memorial, was handled in a way that reflected a change for the worse in Poland's attitude. The fact that the visit was not mentioned in the press was interpreted as one expression of the attempt to minimize the Jewish character of the Holocaust. In the first half of May, Polish newspapers and communications media were still presenting a balanced view of the Middle East crisis. A sharp change occurred, however, during the second half of the month. The press began to give unilateral coverage to the Arab-Soviet position. Grotesque accusations with antisemitic overtones were leveled against Israel and its leaders. On May 28 the president of Poland sent a message to Nasser expressing "full support for the struggle of the Arab nations." After that time, Poland's statements were characterized by an animosity toward Israel even more venomous than in other East European countries.

According to all indications, Polish public opinion generally supported Israel in its struggle for survival, but in the hands of groups competing for power in the party and in the Polish government, the Middle East crisis became a weapon for infighting, with the declared intent of displacing Jews from public positions. On June 12, 1967, following the Soviet Union's example, Poland notified Israel that diplomatic relations between the two countries were being severed, and inimical demonstrations against the Israel diplomats initiated by the authorities took place in sight of the diplomatic staff that came to take leave of the Israelis at the Warsaw airport. The Dutch embassy, which represented Israel's interests in Poland from that time, strongly protested against this behavior.

Immigration to Israel

In 1948 there were approximately 70,000–80,000 Jews in Poland. This number was swollen by thousands of Jews who returned from the U.S.S.R. in 1956–57 under the Polish-Soviet repatriation agreement. One of the major tasks of the Israel legation in Poland was the struggle on behalf of the majority of Jews who wished to migrate to Israel. Despite accusations leveled periodically by Polish authorities at the Israel legation and its staff for propagandizing and organizing the Jews for migration to Israel, there was continuous emigration. Between 1948 and 1949 the Polish authorities were issuing several hundred passports a month to Jews wishing to emigrate, especially to the aged, handicapped, and women left alone. Between 1949 and 1956 the number of passports issued decreased to a few dozen per month. The major years of Polish Jewish im-

migration to Israel were 1956–60 with their numbers reaching around 52,000. The peak year was 1957, during which some 31,000 Jews migrated to Israel. Despite the breakdown in diplomatic relations in June 1967, the Polish government continued to issue exit permits for emigration to Israel, but the motivation for this policy became more and more an antisemitic intent to “purge” Poland of its Jewish population.

Trade Relations

A trade agreement signed between Poland and Israel in 1954 was renewed annually until 1968. The numerous industrial and agricultural products traded were valued at approximately \$4 million in both directions. Major Israel exports were citrus fruit and tires, with Poland exporting frozen meat, sugar, iron and steel products, and chemicals. Two Israel exports added in the later years were potash and cotton, which then exceeded the citrus export. During 14 years the scope of the agreement had doubled, in effect, and in certain years it had tripled. A shift in the trade balance in Israel's favor occurred in the first months of 1966 and continued thereafter due to a steep increase in the export of potash. Upon the severance of diplomatic relations, Poland was in debt to Israel for over \$5 million, but despite its hostile attitude toward Israel it did not revoke the trade agreement of 1954, and it was automatically renewed in 1968. By then, however, the agreement was meaningless, with Israel having discontinued its exports to Poland to avoid increasing the Polish debt, which was, in effect, a credit extended to Poland without interest. In June 1968 the Israel government informed the Polish government of the revocation of the trade agreement. Poland's debt to Israel, then \$2.7 million was repaid thereafter.

[Moshe Avidan]

Following the severing of commercial ties between Israel and Poland in 1968, the first exchange of goods between the two countries was renewed in 1976. Israel exported citrus to Poland (\$834,000) and imported books (\$5,000). In 1977 goods in the value of \$1.5 million were exported to Poland and \$600,000 worth of merchandise was exported from Poland to Israel.

In 1986 Poland was the first of the Communist bloc countries to re-open low-level diplomatic relations with Israel which had been severed since the Six-Day War. Interest sections dealing with visa regulations and cultural and economic ties were established in Warsaw and Tel Aviv. Full diplomatic relations were restored in 1990. A framework for the promotion of good relations was provided by the establishment of the Polish-Israeli Friendship Society. There was a steady growth in cultural exchanges and trade expansion. Poland has shown a strong interest in acquiring Israeli technology in the fields of agriculture, telecommunications, health, and hotel industry. There was an unparalleled growth in tourism, facilitated by direct air links, with Israelis visiting Poland in great numbers. President Walesa visited Israel in 1991 and President Herzog visited Poland in 1992. By 2003 Israel's exports to Poland had grown to around \$95 million, with imports at \$60 million.

POLANSKI, ROMAN (Liebling; 1933–), film director, writer, and actor. Born in Paris, Polanski went to Poland with his parents at the age of three. During World War II, he managed to escape the ghetto, while his parents were sent to a concentration camp, where his mother died. As a young boy he survived in the Polish countryside, living with various Catholic families. In 1945 he was reunited with his father.

In the 1950s, still in Poland, he took up acting and also became a well-known filmmaker. He moved to Paris and made two films in England – *Repulsion* (1965) and *Cul-de-sac* (1966) – which won him international acclaim. Polanski also won several international awards for his film *Two Men and a Wardrobe* (1958). Among his other films are *Mammals* (1961); *Knife in the Water* (Oscar nomination for Best Foreign Language Film, 1962); and *Rosemary's Baby* (Oscar nomination for Best Adapted Screenplay, 1968), which showed his mastery of suspense and the macabre, as well as *The Fearless Vampire Killers* (1967), starring his wife, Sharon Tate.

In 1968 Polanski had gone to Hollywood – until 1969, when the circumstances of his life took on the nightmarish quality of his films. While Polanski was out of town his wife, who was eight months pregnant with their first child, as well as four of their friends, were brutally murdered at a party at their home by the Charles Manson gang. Polanski returned to Europe and continued to make films there, such as *Macbeth* (1971) and *What?* (1973). In 1974 he returned to the U.S. and made *Chinatown* (Oscar nomination for Best Picture and Best Director, 1974) and *The Tenant* (1976).

However, in 1977 he fled the country again, this time to avoid being incarcerated on a charge of statutory rape after having been involved in a sex scandal with a 13-year-old model. Living in Paris, Polanski continued to make films, such as *Tess* (Oscar nomination for Best Director, 1979), *Pirates* (1986), *Frantic* (1988), *Bitter Moon* (1992), *Death and the*

Maiden (1994), *The Ninth Gate* (1999), and *The Pianist* (Oscar for Best Director, 2002).

He also acted, most notably in *The Fearless Vampire Killers; What?; Chinatown; The Tenant*; the French film *A Pure Formality* (1994); and the Polish film *The Revenge* (2002).

His autobiographical *Roman by Polanski* was published in 1984.

[Jonathan Licht / Ruth Beloff (2nd ed.)]

POLÁNYI, JOHN C. (1929–), Canadian chemist and Nobel laureate. Born in Berlin, he moved to England in 1933 with his Hungarian parents, Michael and Magda. He graduated B.Sc. (1949) and obtained his Ph.D. (1952) in chemistry from Manchester University. After a post-doctoral research fellowship at the Canadian National Research Council Laboratories in Ottawa (1952–54) and Princeton University (1954–56) he joined the chemistry faculty at the University of Toronto where he was appointed professor in 1962 and continued to work there with his research group. Polanyi's research interests develop themes explored by his father, Michael *Polanyi, namely the atomic interactions that form the basis of chemical reactions. The theoretical basis for his earlier contributions was the computer integration of the classical equations of motion allied to the methodology of infrared chemiluminescence. In principle, this approach, termed "surface aligned photochemistry," analyzes the visible emission from a variety of molecules adsorbed to crystals in an ultra-high vacuum. He shared the 1986 Nobel Prize in chemistry with Dudley Herschbach and Yuan Lee. Subsequently Polanyi and his colleagues in their Toronto laboratory adapted laser techniques and reactive rather than inert adsorbing surfaces to analyze chemical reactions in even more detail occurring virtually instantaneously. Polanyi's many honors include the Centenary Medal of the British Chemical Society (1965), the Wolf Prize in Chemistry (1982), and the Royal Medal of the Royal Society of London (1989). He was appointed Officer of the Order of Canada (1974) and Companion of the Order of Canada (1979). He was elected to the Royal Society of Canada (1966), the Royal Society of London (1971), the American Academy of Arts and Sciences (1976), the U.S. National Academy of Sciences (1978), and the Pontifical Academy of Rome (1986). He received an honorary doctorate from the Weizmann Institute (1989). He has played a prominent part in many national and international organizations concerned with scientific research and education.

[Michael Denman (2nd ed.)]

POLÁNYI, KARL (1886–1964), economist and anthropologist. His scientific work was based on the place of economics in society, and the relation between production and distribution

of goods. He also made a study of kinship and religion. Born in Vienna and educated in Budapest, Polányi was the foreign editor of the *Der Oesterreichische Volkswirt*, Austria's leading economic journal. Later he moved to England and in 1940 to America where he taught at Bennington College (Vermont) and New York. He was a socialist and in his later years the maintenance of peace became his major concern.

Polányi's writings include *The Great Transformation* (1945); jointly with A. Rothstein, *Dahomey and the Slave Trade* (1966); and *The Plough and the Pen—Writings from Hungary 1930–1956* (1963, jointly edited with Ilona Duczynska).

BIBLIOGRAPHY: J. Helm (ed.), *Essays in Economic Anthropology Dedicated to the Memory of Karl Polanyi* (1965), includes biographies.

[Joachim O. Ronall]

POLANYI, MICHAEL (1891–1976) British physical chemist and philosopher. Born in Budapest, Polanyi was educated at the extraordinarily successful Minta Gymnasium. He entered the University of Budapest to study medicine (1908) but his interest in physical chemistry largely dominated his student career and he spent the summer of 1912 at the Technische Hochschule in Karlsruhe, Germany, where he wrote his first papers on physical chemistry with Einstein's approval. He received his M.D. (1913) and returned to the Karlsruhe institute for the 1913–14 academic year, but joined the Austro-Hungarian Army as a medical officer on the outbreak of war in 1914. Diphtheria and other illness curtailed his military obligations, allowing him to complete his Ph.D. (awarded in 1919). Political upheaval linked to virulent antisemitism obliged Polanyi to leave Hungary to work in Karlsruhe again (1919–20), and in Berlin at the Kaiser Wilhelm Institute for Fiber Chemistry (1920–23) and for Physical Chemistry and Electrochemistry (1923–33), eventually with a tenured position as “scientific member.” After initial reservations, with the Nazi rise to power he moved to the University of Manchester, England (1933), as professor of physical chemistry with a brief to revitalize the chemistry department. A shift in his professional interests from the sciences to the humanities prompted a change in title to professor of social studies (1948) before his retirement in 1958. He was elected a senior research fellow at Merton College, Oxford (1959–61) and he continued to write, lecture, and travel as visiting professor in Europe and North America. He lived in Oxford until shortly before his death in Northampton. Polanyi's first scientific work concerned the interaction of molecules with a liquid surface, a process termed adsorption. His subsequent interests centered on the fundamental basis of molecular structure and the factors governing molecular association and dissociation. His theoretical insight was matched by technical innovations in crystallography and methods for studying gases at low concentration. His work had an important practical application in the British development of synthetic rubber during World War II. His work also explained the remarkable fibrous strength of cellulose. He was elected to the Royal Society of London (1944). Polanyi's inter-

est in other fields dates from his student days. His philosophical studies explored the links between the physical universe and religious belief and were also largely concerned with the central role of personal morality in the face of eternal human imperfection. These beliefs were closely related to his conviction that scientists should have social concerns but intellectual freedom without constraints imposed by central planning. His early defense of what are now termed civil rights complemented his vigorous political opposition to communism and his support for Keynesian economics. Polanyi identified with Christianity mainly on moral grounds and he converted to the Roman Catholic Church (1919), although possibly for political reasons. He was not a practicing Catholic and was skeptical about biblical authority. Although he did not join any Jewish communal organizations and was opposed to Zionism, he gave talks to Jewish societies. He married Magda, a chemistry student, in a civil ceremony (1921) and they had two sons. Polanyi's extensive writings in all fields are listed in Scott and Moleski's enlightening biography *Michael Polanyi: Scientist and Philosopher* (2005).

[Michael Denman (2nd ed.)]

POLEMICS AND POLEMICAL LITERATURE. There were internal polemics with Jewish sectarians in the talmudic and post-talmudic periods, and a rich Jewish polemical literature in the Middle Ages. It does not include the continuous and sustained controversies which characterize rabbinical literature throughout the ages on the interpretation of the Oral Law. For this see *Conflict of Opinion. Polemics with non-Jews in the Bible, Talmud, and Middle Ages is discussed under *Disputation and Polemics and *Islam.

Talmudic Period

The talmudic literature is replete with details of polemics between the upholders of normative Judaism, the Pharisees and their successors, and the numerous sects which flourished at the time. Insofar as they are referred to by name, these are the *Samaritans, the *Sadducees, and those who are referred to under the generic name of **minim* (sectarians). Confusion exists as to the exact nomenclature and identification of the last two. As a result of *censorship, the original word in the Talmud had to be changed. Reference to the manuscripts as well as internal evidence provided by the context, show that the word *Zeduki*, Sadducee, which appears in the printed text refers to other sects. In addition, the word *min* applied to a wide range of sectarians, Judeo-Christians, Gnostics, Manicheans, Magi, etc. Thus whereas in the *Sifra* (Lev. 2) in the phrase “from here is provided an opening to the *minim*” the word refers to Gnostics who believed in dualism, the identical phrase in *Exodus Rabbah* 13:4 refers to those sectarians who denied the doctrine of free will. Jacob of Kefar Sakhnaya “of the disciples of Jesus of Nazareth” (these words, which are in the Mss., have been omitted from the printed text; Av. Zar. 17a) is referred to as a *min* in 27b. The Talmud states in the name of R. Nahman “there are no *minim* among the gentiles” (Hul.

13b). The *minim* were all Jewish sectarians, and the Christian *minim*, Judeo-Christians.

There are a few polemics which can be definitely ascribed to Sadducees and Samaritans. With regard to the former, the Mishnah records a number of polemics between the Sadducees and the Pharisees in one of which Rabban Johanan b. Zakkai was the spokesman of the Pharisees. "The Sadducees said 'We cry out against you, O ye Pharisees' for they say 'the Scriptures render the hands unclean' [a typical rabbinic enactment]. Yet the writings of Hamiram [Homer?] do not render the hands unclean." In typical polemic vein Rabban Johanan carried the war into the enemy camp: "They say that the bones of the ass are clean, and the bones of Johanan the High Priest are clean" and the argument continues with the victory of the Pharisees (Yad. 4:6–8).

R. Eleazar b. Yose polemicized against the Samaritans by pointing out to them that the identification of Mt. Gerizim, the holy mountain, overlooking Shechem depends entirely upon the application of the *gezerah shavah*, an inference from analogy which was one of the 13 *hermeneutical rules evolved by the rabbis which the Samaritans rejected (Sot. 33b). Whereas this, like so many of the polemics in the Talmud, was a literary and academic controversy, the Midrash gives one with a Samaritan which belongs to a less refined sphere. R. Ishmael b. Yose, on a pilgrimage from Galilee to Jerusalem, came to Mt. Gerizim. There he met a Samaritan who asked him where he was bound. When he answered "Jerusalem," the Samaritan said "Is it not better for you to pray on this blessed mountain than that accursed one?" To which Ishmael retorted, "You are like a dog which digs up a buried carcass. It is because you know that there are idols buried here, which Jacob hid away [Gen. 35:4] that you are so full of fervor for this mountain" (Gen. R. 81:3; TJ, AZ 5:4, 44c). The polemics with the *minim* are legion in the rabbinical literature. They cover every biblical and theological topic including monotheism, dualism (Sanh. 38a), that "he who created the wind did not create the mountains" (Hul. 87a), freedom of will, and predetermination (see above); the validity of the principles of rabbinic exegesis (Ber. 10a); that the destruction of the Temple was a sign that God had rejected the Jewish people (obviously a Judeo-Christian, though the printed text has a Sadducee; Yoma 57a); and other topics.

One fact seems to emerge clearly from a consideration of the many polemics in the Talmud, namely that they were rarely if ever sought out by the rabbis. Almost invariably the challenge came from the sectarians. The sectarian who "used to annoy Joshua b. Levi greatly with his biblical texts" (Ber. 7a) represents the general attitude of challenge by them and only response by the rabbis.

In the Geonic Period

As was the case in the talmudic period, the rise of the various sects was the cause of various polemics. To a special category belongs *Saadia Gaon's *Kitab al-Amanat* in which he answers the heretical opinions expressed by Hiwi al-Balkhi who lived

in Persia in the last quarter of the ninth century. The fact that Saadia found teachers in Babylonia teaching children from books based on Hiwi's biblical criticism makes it a contemporary polemic. The greatest polemic, however, in which Saadia took a leading part, but which extended over at least three centuries, was against the *Karaitic schism.

Polemical Literature of the Middle Ages

The literature of the period reflects this preoccupation with disputation, polemical works being composed in almost every literary form then used by Jews: e.g., poetry, homiletics, ethical literature, fiction, and halakhic writing. In addition, the polemic – a genre whose main purpose was to express the views of the conflicting parties – was developed.

Purely halakhic and rabbinic disputes were usually dealt with in the literature of *she'elot u-teshuvot* (rabbinic responsa) and other halakhic literary forms. Medieval halakhists followed the literary style and legal precedents found in the vast body of talmudic literature, in which almost every point of law was contested, clarified, and usually determined. Even in controversies touching basic beliefs and carried on with intense emotion, medieval Jewry accepted opposing views as at least worthy of consideration. For example in his *Hassagot*, *Abraham b. David, the leading rabbi of Provence, contested many of the legal decisions in Maimonides' *Mishneh Torah*. Yet when the celebrated code of laws was printed, the *Hassagot* were included, as if they were a commentary on Maimonides' text. Opposing views, therefore, were regarded as important and worthy of being studied by all rabbinical scholars. Sometimes halakhic controversies originated from political differences rather than legal ones; thus the contentions between the leading rabbis in Palestine and Babylonia in the time of Saadia Gaon, carried on in the traditional halakhic literary forms, were in fact struggles for recognition as the supreme religious authority in the Jewish world.

Halakhic literary forms, however, were both inadequate and inappropriate for the resolution of basic ideological problems and new literary forms were used. One of the earliest literary documents recording a fierce ideological controversy is *Milhamot ha-Shem* ("The Lord's Fight," 1830), a small tenth-century book by the Karaite writer, Solomon b. Jeroham. Part of the polemical literature of the Rabbanite-Karaite dispute, the work is a Hebrew reply to Saadia Gaon's attack against the Karaites, though Arabic was usually the language in which this controversy was sustained. *Milhamot ha-Shem*, like most medieval polemical works, is written in the literary form of a letter (see *Letters and Letter Writing). But whereas only the opening and concluding portions of such a letter were usually written in rhymed prose, this work is written entirely in that manner. The most striking characteristic of Solomon's book is its satirical nature; he quotes (and rhymes) passages from the Talmud and from the literature attributed to talmudic sages, including the **Shi'ur Komah*, to show how far these rabbinic sayings had strayed from the biblical text and from the accepted theological ideas of the times – even those accepted in

Saadia's philosophical works. The three elements – the epistolary form, the rhymed prose, and the satirical statement of the main thesis – became the common feature in medieval Hebrew polemical literature.

Polemical literature in the form of a literary epistle served as the main vehicle of expression in one of the greatest controversies in medieval Jewry – the controversy over the writings of Maimonides, which began in the last year of Maimonides' life and continued throughout the 13th and the beginning of the 14th century, and especially during the years 1232–35 and 1304–05. The subjects of the controversy – the meaning of the anthropomorphic passages in the Bible and the talmudic literature, the reasons behind the commandments (*ta'amei ha-mitzvot*), the question of the resurrection and the nature of the afterlife, the existence of angels and demons, the problem of the creation *ex nihilo*, the allegorical interpretation of the biblical stories – were discussed in letters exchanged between the leading disputants. Most of the letters are written partly in rhymed prose, with some written completely so.

The use of the literary epistle resulted from the fact that the disputants usually did not intend to clarify the ideological, theological, or even exegetical problems over which the controversy arose. Their main aim was to disqualify the opponent as a competent judge in the issue, to prove that he does not have the requisite knowledge or awareness of the problems which would entitle him to be heard in the controversy. Thus, early in the 13th century, when *Aaron b. Meshullam of Lunel answered Meir b. Todros Abulafia ha-Levi's letters concerning Maimonides' alleged disbelief in the resurrection, he dedicated the bulk of his letter to a discussion of Abulafia's character, knowledge, and understanding, and a review of his own feelings about Maimonides and his critics. The small portion of the letter that actually deals with the problem of the resurrection says nothing more than that Maimonides' views do not differ from those of the Talmud and the *geonim*, especially Saadia Gaon. The letter is entirely written in rhymed prose and makes extensive use of biblical and talmudic phrases, leaving no doubt that the writer intended to win the public over to his views mainly by the beauty with which he expressed his feelings. This form of polemic, therefore, encouraged not so much the clarification of the issues as the demonstration of the writer's personal qualities and literary ability, and the enumeration of his opponent's faults. Another example of the evasive character of the polemical epistle is *Naḥmanides' reply to the rabbis of northern France in the same controversy over Maimonides' *Guide of the Perplexed*. Naḥmanides did not address himself to the issues raised by the French rabbis, rather he concentrated on proving that the rabbis, being far removed from the culture of the Jews in Spain and the Provence, were not qualified to judge Maimonides. In addition, he said that the *Guide* was not written for them, but for the perplexed Jewish scholars in Spain who could not avoid contact with Greek and Arabic philosophy. In this letter, Naḥmanides did not reveal his own kabbalistic ideas nor make known his stand on the problems themselves. Neither his duties as a responsible

rabbi, nor the conventions of the polemical letter required Naḥmanides to express his own opinions about the issues involved. Although other letters exchanged in this controversy deal more closely with the ideological problems, they never do so fully or exhaustively. Abraham Maimon, for example, in his letters collected as *Milḥamot ha-Shem* ("The Wars of the Lord," a very common name for a polemical work), treated some problems, especially the allegorical interpretation of biblical and talmudic passages, as did Abraham b. Samuel in his defense of Maimonides against the criticism of the French rabbis. But even in these cases the personal allusions and the flow of rhymed phraseology make up a great part of the letters. These conventions persist in the letters exchanged during the controversy in 1305, when Abba Mari *Astruc again raised the issue of the dangers stemming from allegorical interpretation and the study of philosophy. Astruc tried to organize a movement, to be headed by Solomon b. Abraham *Adret, to oppose these practices.

Ashkenazi Ḥasidism, which flourished during the Middle Ages among the Jews in Germany and northern France, also gave rise to controversy. An extant fragment of Moses b. Ḥisdai *Taku's detailed polemical work, *Ketav Tamim* ("Book of Righteousness," published by R. Kirchheim, in: *Ozar Neḥmad*, 3 (1960), 54–99), indicates that the work pays almost no attention to literary form, the issues themselves being the writer's major concern, although inflamed accusatory language is sometimes used. Moses did not hesitate to declare that his opponents, who included *Judah he-Ḥasid, Saadia Gaon, Maimonides, and Abraham *Ibn Ezra, were followers of the Karaites and the Christians who were destroying Judaism from within.

*Kabbalah, probably the most innovating Jewish ideology during the Middle Ages, aroused surprisingly little controversy when it began to flourish in Provence in the 12th century and in Christian Spain during the 13th century. From this period only one letter in clear opposition to the Kabbalah is extant. It is known that there was some disagreement among the kabbalists themselves over whether the Kabbalah should be discussed openly and brought to the attention of the Jewish community, or kept a secret known only to the selected few, the mystically inspired elect. Like most medieval disputes, these discussions were carried on in the form of letters.

During the 16th and 17th centuries both Jewish philosophy and Kabbalah again became objects of controversies, but with a larger part of the discussions now carried on in the form of special polemical books. Thus Joseph *Jabez, who wrote in Italy after the expulsion of Jews from Spain, termed the teachings of the Jewish philosophers as the cause of the conversion of thousands of Jews to Christianity during the 15th century in Spain. Isaac b. Judah *Abrabanel held somewhat similar views. Accusations and polemics against the philosophers are found in the works of many scholars up to and including Jacob *Emden and *Naḥman of Bratslav. Many polemical letters were written concerning the 16th-century controversy over whether the Zohar, the major work of the Kabbalah, should be printed. The opponents of publication comprised two groups:

the devout kabbalists, who thought that a work of kabbalistic mysticism should be kept secret in order to prevent the uninitiated from reading it; and the opponents of the Kabbalah in general, who opposed its printing in order to reduce the influence of the Kabbalah which they regarded as false. A few anti-kabbalistic works were written in Italy, the most notable being *Ari Nohem* by Leone Modena who systematically sought to prove that kabbalistic beliefs were invalid and that the kabbalists' claim that their theory and literature are ancient, transmitted from the time of the *tannaim*, is historically untrue. Modena was one of the first to use methods of literary and historical criticism in polemics against the Kabbalah. Two other 16th-century controversies deserve mention. The first was initiated by Azariah de' Rossi's *Me'or Einayim*, a critical study of Jewish history and tradition which claims that the accepted system of chronology, i.e., counting from the creation, has neither a historically nor a traditionally sound basis. For this view he was criticized both by Renaissance scholars and by traditional Jewish scholars like Judah Loew b. Bezalel of Prague. Azariah answered his more learned critics in a special book, *Mazref la-Kesef*.

During the 1530s dozens of polemical letters were written by supporters and opponents of the *semikhah*, the ordination of rabbis, after the rabbis of Safed tried to reinstate the tradition that had been broken early in the Middle Ages. The rabbis of Jerusalem, however, opposed this; participation in the controversy increased, engaging the attention of many rabbis from various countries. The participants tried to treat the controversy as a purely halakhic one and the language of the polemical letters exchanged on this problem is clearly halakhic. But there is no doubt that beyond the halakhic references lay the true question: Should the rabbis take upon themselves activities concerned with messianic times (the reestablishment of the *semikhah* was regarded as one of the events connected with the redemption) or should they wait patiently until the coming of the Messiah who will reinstitute the *semikhah* himself? A similar consideration probably lay behind the dispute over the printing of the Zohar, for it was believed that wide acceptance of the Zohar and its teachings was one of the signs indicating the approach of messianic times.

The fiercest controversies in Jewish history were those arising over Shabbateanism and Ḥasidism. Although there was some 17th-century criticism of Shabbetai Zevi and his prophet, Nathan of Gaza, even before the former was converted to Islam, it was neither intense nor widespread. After the conversion, however, the critics knew no bounds in their accusations against the Shabbateans, and for 150 years thereafter the persecution of believers in Shabbetai Zevi and those influenced by his teachings was carried out relentlessly by some of the greatest rabbis. Jacob b. Aaron Sasportas, among the first to oppose Shabbateanism, published his collection of anti-Shabbatean epistles under the title *Zizat Novel Zevi* (though it was proven recently that he re-edited some of his early letters to make them more anti-Shabbatean than they originally were). Later, anti-Shabbateans concentrated their

efforts on discovering scholars with Shabbatean sympathies and bringing about their excommunication (*herem*). Thus, Moses Ḥagiz accused Moses Ḥayyim Luzzatto of Shabbateanism, the same charge Jacob Emden leveled against Jonathan Eybeschuetz. Both Luzzatto and Eybeschuetz were defended against the accusation by a number of supporters, and the controversies raged for decades.

In the second half of the 18th century, the newly founded ḥasidic movement was also suspected of heretical and Shabbatean tendencies. This suspicion, one of the causes for the unflinchingly intense opposition to the movement, led to the *herem* brought against the Ḥasidim in 1772, a ban which was renewed many times in the next 40 years. The Ḥasidim were mainly accused of disregarding the importance of traditional Talmud study and of abusing the traditional scholars. Rarely did Ḥasidism's opponents clearly express their real suspicion – that the ḥasidic movement was a new version of the Shabbatean and Frankist movements – a suspicion which was the underlying reason for the vehemence of the various *herem* declarations, in the anti-ḥasidic epistles, and in the collections of letters and special polemical works written by the *Mitnaggedim*. It is to be noted that very little material in the vast anti-ḥasidic literature is concerned with the basic ideas of Ḥasidism. The *Mitnaggedim* attacked the Ḥasidim because of the way they behaved, or the way they believed they behaved, almost totally disregarding the ideology of the new movement. In this omission the *Mitnaggedim* followed the tradition of epistolary polemical literature since the early Middle Ages.

[Joseph Dan]

POLEMON II (d. 74 C.E.), king of Cilicia. The Judean princess, Berenice, widow of Herod of Chalcis, induced Polemon to undergo circumcision and marry her in an attempt to suppress rumors detrimental to her reputation. Polemon, with an eye to her wealth, accepted the proposal, but the marriage did not last long. Berenice deserted her husband, and the king, according to Josephus, “was relieved simultaneously of his marriage and of further adherence to the Jewish way of life” (*Ant.*, 20:145–6). Polemon of Cilicia has been confused with Julius Polemon, king of Pontus from 37–63 C.E., who visited Agrippa I at Tiberias.

[Isaiah Gafni]

°**POLEMON OF ILIUM** (c. 202–181 B.C.E.), Greek author of a lost history in which the Exodus was used to date the mythological Greek king Apis, according to Eusebius, *Praeparatio Evangelica*, 10:10, 15.

POLGAR, ALFRED (1873–1955), Austrian essayist and critic. One of Austria's foremost prose stylists and drama critics, Polgar, who was born as Alfred Polak, was the son of a Viennese musician. He worked as a reporter and as drama critic for the *Wiener Allgemeinen Zeitung*. From 1918 he voiced his pacifistic views, which were influenced by his impressions of World War I, in the journal *Der Friede* and in monographs such as *Kleine Zeit* (1919) and *Schwarz auf Weiss* (1929). In 1925 he moved to Berlin, where he contributed to such eminent periodicals as *Die Weltbuehne* and the *Berliner Tageblatt*. He returned to Vienna upon the Nazis' accession to power in Germany, where he worked as a reporter for German-language foreign papers. In 1938 he fled to Paris and in 1940 he settled in the U.S. After 1949 he spent much of his time in Europe. In his years of exile and after the war Polgar was active as a translator, adapter, and cultural mediator. He died in a hotel while on a visit to Zurich.

A prolific and subtle writer, Polgar produced many brilliant *feuilletons*, impressionistic sketches, reviews, parodies, satires, and elegant short essays and vignettes in the style of Peter *Altenberg. Polgar collaborated with Egon *Friedell on the witty satirical plays *Goethe im Examen* (1908) and *Soldatenleben im Frieden* (1910). One of several collections of his short stories appeared in 1912 under the title *Hiob*. Polgar's collected critical writings appeared as *Ja und Nein* (4 vols., 1926–27, 1956), followed by *Handbuch des Kritikers* (1938, 1997). Collections of Polgar's work were compiled and published in six volumes under the title *Kleine Schriften* (1982–86), edited by M. Reich-Ranicki and U. Weinzierl, and *Das Grosse Lesebuch* (2003), edited by H. Rowohlt.

POLIAKOV, LÉON (1910–1997), historian. Born in Saint Petersburg, Russia, Poliakov went to France in 1920. He was on the staff of the *Pariser Tageblatt* until 1939. During World War II he served with the French army. Participating in the establishment of the Centre de Documentation Juive Contemporaine, he became head of its research department after the war. In 1952 he was appointed research fellow at the Centre National de la Recherche Scientifique and in 1954 joined the Ecole Pratique des Hautes Etudes. Poliakov, one of the first historians of the Holocaust, wrote extensively about it and paved the way for the scientific study of antisemitism from the 1950s. He was departmental editor of the first edition of the *Encyclopaedia*

Judaica for the subject of antisemitism. Some of his books have been translated into English – *Harvest of Hate* (1954), *The Aryan Myth: A History of Racist and Nationalist Ideas in Europe* (1974), and his major four-volume *The History of Anti-Semitism* (2003). His other works include *Auschwitz* (1964), *Les banchieri Juifs et le Saint-Siège du xiii au xvii siècle* (1965) and *De l'antisémitisme à l'Anti-semitisme* (1969). Poliakov also edited a number of works, including *La condition des Juifs en France sous l'occupation italienne* (1946) and, with Josef Wulf, *Das Dritte Reich und seine Diener; Dokumente* (1956) and *Das Dritte Reich und die Juden; Dokumente und Aufsätze* (1955). He published his memoirs in 1981 (*Lauberge des musiciens*), and amongst his other books published later are *La Causalité diabolique: essai sur l'origine des persécutions* (1980) and *L'impossible choix: histoire des crises d'identité juive* (1995).

[Sylvie-Anne Goldberg (2nd ed.)]

POLICE OFFENSES, offenses arising in connection with the prevention of public mischief and for the maintenance of public security, as laid down in the Bible, that have formed the basis for elaborate regulations in later periods of Jewish law. Thus, the biblical injunction against false weights and measures (Deut. 25:13–15) led to the appointment of special inspectors who were authorized not only to enter shops and ascertain the accuracy of weights and measures in use, but also to impose penalties, e.g., *floggings or *fines. Similarly, the biblical injunction against *fraud (Lev. 25:14, 17) and *oppression (Lev. 19:13) led to the prohibition of profiteering and to the appointment of special officers charged with the supervision of prices (cf. Yoma 9a); and profiteers too were liable to be flogged. *Gambling and betting were prohibited as if they were species of larceny, and so were such potentially injurious acts as hunting in populated areas or taking animals already captured in the trap of another (Yad, Gezelah 6:8–12). The biblical injunctions for the protection of animals (Deut. 22:4, 6–7; Ex. 23:5) gave rise to the prohibition against hurting any living creature (BM 32a, b), and led to the elaboration of rules for the prevention of collisions between loaded animals in the street, and hence also between ships and vehicles (Yad, Roze'ah 13:11–12).

The injunction that “you shall not bring bloodguilt on your house” (Deut. 22:8) was interpreted as not limited to the traditional requirement of providing a *parapet for the roof lest anyone should fall from it, but as extending to any act or omission likely to endanger human life (Yad. loc. cit.). It is no excuse for a man to say that his conduct endangers himself too; even if he chooses to disregard his own safety, he cannot disregard that of others – and he is liable to be flogged if he does. Thus the supply or consumption of unclean or noxious food or water is prohibited (*ibid.*, 11:7–16), and so is the creation of any danger to the public (BK 27a–30a). There are also express provisions for the annual inspection of streets and thoroughfares by officers of the court to make sure they are not damaged by rain and are safe for traffic (Tosef. Shek 1:1). Where particular roads or journeys were dangerous, the court would appoint officers to accompany travelers and guard their

safety; if they failed in watchfulness, the officers were regarded as if they had shed innocent blood (Yad. Evel 14:3). Where there were dangers of overcrowding or public licentiousness, court officers would mingle among the crowds to maintain law and order (Yad, Yom Tov 6:21).

The biblical prohibition against a woman putting on a man's clothing, and vice versa (Deut. 22:5), may have served as the authority and pattern for later regulations governing dress and appearance. As dressing in the clothing of the opposite sex was regarded as conduct conducive to sexual perversion, so was dressing in the gentile fashion regarded as a first step toward assimilation. Sumptuary laws against extravagance and luxury became increasingly frequent, not only to prevent the following of the practices of gentiles (cf. Lev. 20:23), but also to ensure humility in walking before God (cf. Micah 6:8). Penalties were imposed mostly as fines, but we find also public denunciations (see **Herem*). In some places, regulations were also laid down to make certain dresses or robes obligatory, e.g., for judges and notables (*Takkanot Mehryn*, 530). Generally, the biblical injunction to appoint executive officers in addition to judges (Deut. 16:18) was interpreted as imposing a duty to attach to each court "men with sticks and rods, standing at the service of the judges, to patrol markets and streets, inspect shops, rectify prices and measures, and redress all injury: they act only on the orders of the court, and when they detect a breach of law, they bring it before the court for adjudication" (Yad, Sanhedrin 1:1). It appears that until the destruction of the Temple, petty offenses were not, in Jerusalem, brought before the ordinary criminal courts, but before two or three police courts (*dayyanei gezerot*, Ket. 13:1), who were sitting full time and therefore (in contradistinction to judges) entitled to remuneration (Ket. 105a).

[Haim Hermann Cohn]

Offenses that Harm the Entire Public

Particular severity attaches to offenses that harm the entire public, or any undefined group of people. Their severity stems from the fact that when a person causes an injustice to the public at large or an unidentified person or persons, he cannot directly rectify the injustice, neither to a specific person, nor to the society at large. An example of such an offense is stealing from the public, regarding which the Sages said, "Theft from the public is more severe than theft from an individual, because one who steals from an individual can compensate him by returning what he has stolen, while a person who steals from the public cannot compensate them by returning what he has stolen" (Tos. to BK (ed. Zuckerman) 10:14). Another example of theft which cannot be compensated is an act of fraud in weights and measures (see **Weights and Measures*): Rabbi Levi said, "The punishments for offenses relating to weights and measures are more severe than for sexual offenses" (BB 88b). The reason is explained by the *posekim*: "The punishment for [offenses concerning] weights and measures is very severe, because it is impossible for one who weighs and measures to repent properly" (Sh. Ar., ḤM, 231: 19) – "Because it is impos-

sible to restore [the amount improperly taken to its owners, since he cannot know to whom and how often he gave a [false] measure" (*Sema* to Sh. Ar., ḤM, 231:34). The offender's act can be redressed to a certain extent by his working in community service for the benefit of the public, but this is not considered full redress, which necessitates returning the full return of what he has stolen to the victim (*Rashbam*, BB 88b).

Based on these principles, the Israeli Supreme Court decided on a severe sentencing policy against public officials who embezzled public funds (Cr. A 291/81, *Ploni v. The State of Israel*, 35 (4) 438; per Justice Menachem Elon).

Different Aspects of Police Activities

MAINTAINING PUBLIC ORDER. The obligation to maintain public order has implications for the saving of life (*pikku'ah nefesh*), which, as is well known, overrides almost all biblical and rabbinical prohibitions. When a large public is concerned, the fear of jeopardizing lives is even greater. Thus, to prevent public damage and risk, even when the life threatening risk is not obvious, some authorities permit certain otherwise forbidden actions on Shabbat, precisely because the public is involved (Shab. 42b; *Hidushei Haran*, ad loc.; Yad, Shabbat 10: 25 and in *Maggid Mishneh*, ad loc.). Following the establishment of the State of Israel, these principles were relied upon to justify various aspects of police activity intended to maintain public order and peace, including various police activities on the Sabbath or operations entailing risk to the life of an individual in order to maintain the peace and security of the entire public.

THE PROHIBITION ON THE HUMILIATING OR INTERFERING IN THE WORK OF THE POLICE. The humiliation of policemen, who are officers of the court, is considered as contempt of court (see **Contempt of Court*). A punishment of excommunication (see **Herem*) may be imposed on anyone found to have humiliated or interfered with the police in their work, even if based on the sole testimony of the policeman concerned. Policemen are exempt from liability if causing financial damage to a person who interfered in their work, and are even entitled to strike such individuals (Sh. Ar., ḤM 8.5., *Rema*, ad loc.).

POLIER, SHAD (1906–1976), U.S. Jewish leader and civil rights advocate. Polier was born in Aiken, South Carolina. After graduating from the University of South Carolina with dis-

tion, he continued his studies at the Harvard Law School, graduating in 1929, and got his master's degree in 1931. As a college student he was disturbed by cases of lynching which had taken place in his hometown, and devoted himself from then on to the cause of civil rights. He gained international fame in the famous Scottsboro case, in which eight black youths were sentenced to death on an allegation of rape of two white girls, preparing briefs on behalf of the defendants twice before the High Court. As a result he became active in the National Association for the Advancement of Colored People (NAACP), serving on the Executive Committee of its legal and educational defense fund. In 1948 he brought a personal suit against the Metropolitan Life Insurance Company, alleging that its Stuyvesant Town Development in New York was guilty of discriminatory practice in not admitting blacks. The case resulted in fair housing laws in New York. He led the fight that resulted in the first state Fair Education Law that was directed to ending discrimination in the admission of blacks on the basis of race or religion.

In 1945 Polier founded and became chairman of the commission on Law and Social Action of the American Jewish Congress, which conducted legal battles against antisemitism, segregation, racism and other discriminatory laws. In this capacity he fought and won a six-year battle against anti-semitic job practices by Aramco, the Arabian-American Oil Company.

Polier occupied prominent positions in the World Jewish Congress, as a member of its Executive and Governing Council and Chairman of its Budget and Finance Commission, and finally as Honorary Chairman of its National Governing Council. He was also a member of the board of the Conference on Jewish Material Claims against Germany and of the Memorial Foundation for Jewish Culture. Polier's wife Justine, daughter of the late Rabbi Stephen *Wise, was for 35 years a judge of the New York Family Court, retiring in 1973.

POLIKER, YEHUDAH (1950–), Israeli rock-ethnic guitarist-singer. Poliker is one of the best-known artists in Israel, but it took him a long time, a lot of hard work, and a musical reincarnation to get to the top. He was born in the northern town of Kiryat Ḥayyim and began playing melodica and accordion as a young child. For a while he divided his leisure time between his musical explorations and goaltending for the local youth soccer team. When he received a guitar for his bar mitzvah the former won out and he soon began spending most of his time out of school honing his guitar skills.

When he was in high school he set up a band called FBI, which included a bass player called Banjo Kimḥi. This was followed by a band called The Phantoms, which broke up in 1968, when Kimḥi joined the army. Poliker enlisted a short while after but failed to win a place in the navy band, despite his advanced instrumental skills, because he could not read music. Poliker's stint in the army was short-lived, and he soon resumed his musical career, forming the Tigers in 1970. This group was a far more professional outfit. It lasted

a full five years and, for a while, relocated to Tel Aviv before Poliker returned north to set up Bareket, with Kimḥi back on bass. Bareket mostly played covers but also began to perform some original material, and even released a couple of poorly received singles.

It was in 1980 that Poliker got his first big break when supergroup Brosh recruited him for a show with megastar pop singer Zvika Pik that ran for six months. That spot brought him to the notice of several leading figures of the Israeli music industry, including a producer by the name of Ya'akov Gilad. Gilad soon took a trip up north to see Poliker and his Bareket group for himself and was impressed. Shortly afterwards, Poliker and the band members moved to Tel Aviv, began working on a new album, and changed their name to Benzine. Benzine's debut recording, "24 Hours a Day," was a hit and the group was one of the leading rock bands on the Israeli scene until it disbanded in 1985.

With the passing of Benzine, Poliker took the biggest step in his career when he returned to the ethnic sounds his Greek-born parents had brought with them to Israel. In 1985 he released his first solo album, *Enayim Sheli* ("My Eyes"), which incorporated a mix of Greek songs and rock material. The record was an instant hit and Poliker had found his way to the hearts and ears of a much wider audience. In 1988, Poliker's career took another successful turn when he released *Efer ve-Avak* ("Ashes and Dust"). This was a very emotive album which included several songs with lyrics based on Poliker's parents' Holocaust experiences and Poliker's own feelings as the child of Holocaust survivors and on the hardships of growing up in Israel of the 1950s and 1960s.

Poliker was now a superstar and remained at the top, releasing more big sellers, like *Paḥot Aval Ko'ev* ("Less, But Painful") in 1990 and 1995's *Ha-Yeled Shebekha* ("The Child in You"), which included electronic and computer music.

[Barry Davis (2nd ed.)]

POLISH, DAVID (1910–1995), U.S. Reform rabbi, Zionist leader. Polish (pronounced like the household product, not the country) was born in Cleveland and received a B.A. from the University of Cincinnati in 1931. In 1934, he was ordained at Hebrew Union College, where he earned a D.H.L. in 1942 and was awarded an honorary D.D. in 1959. Already an outspoken Zionist at the time of his ordination, Polish was told by a Reform movement then indifferent (if not hostile) to Zionism that he would not be employed. Nevertheless, he became the rabbi of Congregation of Judah in Cedar Rapids, Iowa (1934–39), where he formed a statewide Zionist organization. After serving as director of the B'nai B'rith Hillel Foundation at Cornell University (1939–42) and rabbi of Temple Israel in Waterbury, Connecticut (1942–47), he assumed the pulpit of Temple Mizpah in Chicago, Illinois, where he introduced **seliḥot* services to the congregation, sparking interest in a traditional practice that was soon adopted by other Reform congregations. Polish became influential in the so-called neo-traditional movement, in which Reform Jews re-

covered many traditions and customs that the movement had earlier discarded; his 1957 book *Guide for Reform Jews* emphasized the importance of *mitzvot* in Reform Jewish observance.

In 1950, the still controversial Polish left Temple Mizpah to form Beth Emet – The Free Synagogue in the Chicago suburb of Evanston, named and modeled after the original Free Synagogue in New York City and conceived in the principle that the pulpit was free, i.e., the rabbi could sermonize about whatever he wanted to without fear of being dictated to by the lay leaders. Polish went on to reorganize the Chicago Rabbinical Association into the Chicago Board of Rabbis, serving as its first president (1958–60) and doing the same for the Chicago Board of Reform Rabbis. He was the first rabbi in Chicago – indeed, one of the first rabbis in the country – to invite Martin Luther King, Jr., to address his congregation: in early 1958, King, then 29, dined at the rabbi's home, spoke on the “Desirability of Being Maladjusted” and then slept at the temple, because he could not find a suitable hotel. In 1965, Polish joined King in his march for peace from Selma to Montgomery, Alabama.
