Initial letter "R" of Recordare, the first word of a prologue to the apocryphal book of Baruch, in a Latin Bible written and illuminated in France, c. 1300. Princeton University Library, Med. and Ren. Mss., Garrett no. 29, vol. II fol. 79v.

RA-RZ

RAAB, ESTHER (1894–1981), Hebrew poet. Raab, born in Petaḥ Tikvah, is considered the first Hebrew poetess in Erez Israel. Her father, Judah *Raab, had immigrated from Hungary and helped found the first moshavah, where she grew up in poverty and hardship. After a short stay in Deganyah, she worked in Ben Shemen and returned home. In 1921 she married her cousin, the merchant Yitzhak Green and spent five years with him in Cairo and in Paris. Back in Tel Aviv, the couple's home became a meeting place for writers and painters. Her first poems appeared in *Hedim* in the beginning of the 1920s. In 1930, shortly before the publication of her first collection of poems, *Kimshonim* (*Thistles*, 2002), her husband died. Two years later, Raab married the painter Arieḥ Alweil. Her second collection, *Shirei Esther Raab*, appeared more than 30 years later, in 1964. Her late poems appeared in the volume *Tefillah Aḥaronah* ("Last Prayer," 1972). *Yalkut Shirim*, published in 1982, includes a lengthy introduction by Reuven Shoham. A collection of stories, *Gan she-Harav*, with stories depicting her childhood and youth in the moshavah and her vivid impressions of her stay in Egypt, appeared in 1983. Her nephew, the writer Ehud Ben Ezer, edited *Kol ha-Shirim* (1988) and *Kol ha-Prozah* (2001) and wrote her biography *Yamim shel La'anah u-Devash* ("Days of Gall and Honey" – including a bibliography, 1998). The landscape of Erez Israel and the Orient, colors, shades, and smells, and particularly the flora of the homeland make up her poetic texture. Raab expresses a genuine love for the country, the soil, the space, and writes passionate lyrical poetry, expressing yearning, pain, disappointment, and loneliness. The growing interest in Hebrew women writers and their oeuvre has also given rise to a rediscovery

and re-appreciation of Esther Raab and her poetry. In addition to the English collection *Thistles*, to which the translator Harold Schimmel added an Introduction, single poems and stories appeared in foreign anthologies. For translations see the ITHL website at www.ithl.org.il.

[Anat Feinberg (2nd ed.)]

RAAB (Ben-Ezer), JUDAH (1858–1948), pioneer and one of the first Jewish guards in Erez Israel. Born in the village of Szent István in western Hungary into a farming family which had contacts with the Jewish community in Erez Israel, Raab went to Erez Israel with his father in 1876. He joined the group of Jerusalemites who founded Petaḥ Tikvah and plowed the first furrow in its fields in 1878. He was one of the first guards and was responsible for the settlement's security during its early years. When Petaḥ Tikvah was abandoned during the sabbatical year (*shemittah*) of 1882, Raab became an instruc-

tor for new settlers in Rishon le-Zion and the Bilu settlers. In 1883, when Petaḥ Tikvah was resettled, he returned and instructed new immigrants (“the Byalistokites”) in agricultural techniques. Raab was appointed a foreman by Baron de *Rothschild’s officials and struggled to maintain the agricultural character of Petaḥ Tikvah. His memoirs, *Ha-Telem ha-Rishon* (1956) recorded by his son, B. Ben-Ezer, constitute valuable material on the early history of Jewish settlement in Erez Israel. His daughter Esther *Raab (1894–1981) was born in Petaḥ Tikvah and joined kibbutz Deganyah in her youth. After her marriage she lived in Egypt for five years and then in Tel Aviv, returning afterward to Petaḥ Tikvah. Her early lyric poetry, characterized by its descriptions of the landscape of Erez Israel, is collected in *Kimshonim* (1930). Her collected poems were published in *Kol ha-Shirim* (1988).

[Yehuda Slutsky]

RA'ANANNAH (Heb. ראַנאַנאַה), urban community with municipal council status in central Israel, N.E. of Herzliyyah. Ra'anannah was established in 1922 as a village (moshavah) by a group of American Jews who founded Ahuzzat New York A Inc. (1912). The land was bought through the Palestine Land Development Company. Initially there were many economic difficulties. An attempt was made to raise cattle as the mainstay of the economy. Ra'anannah progressed in the later 1920s and in the 1930s when a rich groundwater table was tapped, the citrus branch introduced, and middle-class immigrants of the Fourth Aliyah and later newcomers were absorbed. With the crisis in the citrus branch during World War II, the settlers changed over to mixed farming and made beginnings in industry. In the 1940s, two housing quarters for Yemenite and other immigrants were built with contributions from Zionists in the United States and South Africa. In 1947, Ra'anannah had 3,800 inhabitants and grew quickly after the War of Independence (1948) when *ma'barot* (immigrant transit camp) inhabitants were given permanent housing (1953 – 9,000 inhabitants; 1968 – 11,900). Ra'anannah belonged to the outer ring of the Tel Aviv conurbation and developed various industries as well as agriculture. Over the years, most of Ra'anannah's farmland became built-up areas. In 1981 Ra'anannah received city status, with an area of about 6 sq. mi. (15 sq. km.). In the mid-1990s the population was approximately 56,900, rising to 68,900 in 2002. The city had a large community of immigrants from English-speaking countries. Its expansion reached the outskirts of *Herzliyyah in the south. In 1996 a high-tech industrial area was established, housing such big companies as Amdocs. Ra'anannah was one of the few Israeli cities to receive ISO 9002 certification for the quality of its public services. Income among residents was much higher than the national average.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

RABAN, AVNER (1937–2004), Israeli underwater archaeologist. Born in kibbutz Ramat David in the Jezreel Valley, Raban's interest in underwater activities began after completing his military service while fishing with nets along the coast of Israel and accidentally discovering archaeological artifacts. Raban studied fine arts at the Oranim Teachers College from 1958 to 1960. In 1961 he became one of the founders of the Underwater Exploration Society of Israel, together with Dr. Elisha Linder. The society eventually joined the International Confederation of Underwater Activity (CMAS), headed by Jacques Cousteau, and Raban in time took part in a number of underwater expeditions working in the Mediterranean area, notably on the excavation of the Yassi Ada shipwreck off the coast of Turkey. Raban was co-director and staff member of various underwater expeditions in Israel: Akhziv (1961); surveys along the northern coast of Israel (1964); Acre (1965); and Athlit (1966). In 1966 Raban began his academic studies at the Hebrew University of Jerusalem, studying archaeology and geography. To qualify for his B.A. Raban participated in a number of excavations on land, at Megiddo and Hazor. During the Six-Day War (1967), he discovered several shipwrecks in the Red Sea while combing the Straits of Tiran and Snapir for mines. In 1968 he directed his first underwater excavation at Sharm el-Sheikh, which led to an interdisciplinary survey of the Gulf of Eilat and a survey of the east coast of Sinai in 1969–70, the excavation of the “Mercury Wreck” in the Red Sea in 1972, and the excavation of a wreck in the Na'ama Gulf of the Red Sea in 1973. In 1981 Raban received his Ph.D. degree from the Hebrew University of Jerusalem, subsequently teaching in the Department of Maritime Civilizations and the Center of Maritime Studies at Haifa University, where eventually he became a full professor. From the mid-1970s Raban concentrated on the archaeological study of the harbors along the coast at Israel, namely at Acre, Dor, Athlit, and Caesarea, as well as further afield in Crete and Sicily. Between 1972 and 1992 Raban also conducted work on land, with a survey of the Jezreel Valley, and digging at Tell Abu-Hawam. From the 1980s on Raban dedicated many years to the study of Caesarea Maritima, but, unfortunately, was unable to complete the two-volume report *The Harbors of Caesarea*, when he unexpectedly died while visiting London during a sabbatical at Oxford.

[Shimon Gibson (2nd ed.)]

RABB, MAXWELL MILTON (1910–2002), U.S. attorney, government official, and Jewish community leader. Rabb, who was born in Boston, graduated from Harvard Law School and was admitted to the Massachusetts bar in 1935. He subsequently became an administrative assistant to Senators Henry Cabot Lodge (1937–43) and Sinclair Weeks (1944). After naval service, Rabb became a legal and legislative consultant to Secretary of the Navy James Forrestal in 1946. He later served as associate counsel to President Dwight Eisenhower (1953–54),

and was secretary to Eisenhower's cabinet from 1954 to 1958. Rabb was sent as chairman of the U.S. delegation to the tenth session of UNESCO in Paris in 1958, later serving on the executive committee of the United States Committee for UNESCO (1959–60). President Johnson appointed Rabb to the Commission on Income Maintenance Programs (the Heineman Commission on welfare and related programs, 1968–70). He was a trustee of the American Health Foundation (1969–74) and served on the Council of Foreign Relations (1978). Between 1981 and 1989 he was American ambassador to Italy.

Among other posts, Rabb was a director of several corporations and a member of the board of directors of the NAACP Legal Defense and Educational Fund. He also served as president of the United States Committee for Refugees, a private group organized in 1958 that dealt with refugee resettlement and immigration. Active in Jewish community affairs, Rabb was chairman of the government division of the UJA (1953–57), a member of the board of governors of the Hebrew Union College-Jewish Institute of Religion, and vice chairman of the New York executive committee of the Anti-Defamation League, among many other posts. Rabb was a member of the New York law firm of Stroock, Stroock and Lavan from 1958.

John Cabot University established the Maxwell Rabb Scholarship in honor of Rabb, who was the longest-serving American ambassador to Italy. The partial-tuition scholarship is granted to a degree-seeking student from the U.S. or Italy who demonstrates a commitment to community service and/or civic involvement.

[Rohan Saxena and Ruth Beloff (2nd ed.)]

RABBA, MENAHEM (16th century), preacher in Padua. Rabba wrote *Beit Mo'ed* (Venice, 1605), a homiletic work containing sermons for every religious occasion during the year. A large number of his sermons deal with the concept of repentance (*teshuvah*) to which he ascribes a metaphysical dimension. Although the work exhibits certain philosophic influences, no specific philosophic thought is dominant. The book was published posthumously by Rabba's son, Elijah, who in the introduction lists other works of his father similar in style to *Beit Mo'ed*: *Ot ha-Berit*, *Ḥavvat Rabba*, *Netivot Olam*, *Kelil Tekhelet*, *Ma'aneh Rakh*, and *Kiryat Arba*, none of which was published.

RABBA BEN MATNAH (late fourth–early fifth century), Babylonian *amora*. The Talmud relates that he was a pupil of *Rabbah and *Sheshet and a colleague of *Abbaye b. Avin and Ḥanina (Pes. 34a). On the death of R. Joseph he was a candidate, together with Abbaye, Rava, and Zera II, for the post of head of the Pumbedita academy. They decided on a contest to see which of them could make a statement that the others could not refute. Abbaye succeeded and was appointed. The rabbis, in discussing the relative merits of the intellectual characteristics of Zera and Rabba ben Matnah, described the former as “keen witted, and sharp intellectually,” whereas Rabba ben Matnah was “slow in deliberation, and so able to arrive

at firm conclusions” in deciding a law (Hor. ad fin). Strangely enough, though he was apparently a very great scholar, none of his teaching has survived. However if he is to be identified with R. Abba II much of his wisdom has been recorded under the latter name.

BIBLIOGRAPHY: Halevy, Dorot, 2 (1923), 460–1; Hyman, Toledot, s.v.

RABBAH (**Ha-Rabbah**; Heb. רַבָּה, הַרַבָּה).

(1) An abbreviation for *Rabbath-Ammon.

(2) A town in Judah mentioned with Kiriath-Jearim as part of the inheritance of the tribe of Judah in the hill country (Joshua 15:60). It is probably identical with a city called *Rbt* near Gezer in Thutmosis III's list of Canaanite cities (no. 105). It may also be mentioned in a cuneiform letter found at Taanach. According to two el-Amarna letters (289, 290) sent by the king of Jerusalem to the pharaoh, Milkilu, the king of Gezer, together with Shuwardata captured Rbutu with the aid of mercenaries. The name appears for the last time in Shishak's list of conquered towns, after Gezer and before Aijalon. Some scholars, following the Septuagint, identify Rabbah with Soba (Ar. Sūbā) near Jerusalem, but the recently discovered site of Khirbat Bir (Bi'r) al-Ḥilū fits the descriptions in the ancient sources remarkably well.

(3) An abbreviation for the city of Rabbath-Moab, now Khirbat al-Rabba, 14 mi. (c. 22 km.) south of the River Arnon. Alexander Yannai conquered it with other cities in Moab; after his death it was restored to the Nabateans by Hyrcanus II (Jos., Ant., 14:18). It is called Rabbathmoba by Ptolemy (5:16, 4) and appears thus on the coins of his time. Rabbah appears as a district capital in one of the Babatha letters found in the Naḥal Hever in 1961. Eusebius refers to it as Areopolis, the town of the war god Ares (Onom. 124:15 ff.). In the fourth century it was identified with the Ar of Moab of Numbers 21:28; recently, the remains of a Canaanite-Moabite city (Early and Late Bronze ages) were found at al-Mishna in the vicinity of Khirbat al-Rabba. In late Roman times, Rabbah was a post of the Equites Mauri Illyriciani (*Notitia Dignitatum* 80:5); remains of a temple, walls, and a citadel have been noticed here. A sumptuous Jewish synagogue was destroyed there in the fifth century by the fanatical monk Bar-Sauma. After the Arab conquest, Rabbah, sometimes called Moab by Arab geographers, continued in existence. It is mentioned in 1321 as a village in the district of Karak and as a station on the Damascus-al-Karak road.

BIBLIOGRAPHY: Glueck, in: AASOR, 14 (1934), 62; Press, Erez, s.v.; Abel, Geog, 2 (1938), 23–5; Aharoni, Land, index; idem, in: VT (1969).

[Michael Avi-Yonah]

RABBAH (**Mar-Rava**), *gaon* of Pumbedita from 651, contemporary of *Huna, *gaon* of Sura. Rabbah and Huna were jointly responsible for one of the earliest and most important of post-talmudic *takkanot*, the *takkanah* of the *Moredet* (“the obstreperous wife”). According to the Talmud, a Jewish wife

could demand a divorce only in certain exceptional cases specified in talmudic law (as for instance when her husband was stricken with a repulsive disease). The new *takkanah* extended the reasons and made it possible for some women to obtain dissolution of their marriages by the local courts obliging the husband to issue a divorce, without her forfeiting the amount of her *ketubbah* or suffering any loss of property which she had brought into the marriage. Moreover, the period of waiting was reduced from the usual 12 months to as short as one to four weeks.

[Meir Havazelet]

RABBAH BAR BAR ḤANA (second half of the third century), *amora*. As his father's name was also Rabbah, it is thought his patronymic referred to his grandfather (see *Rabbah bar Ḥana). Born in Babylonia, he went to Erez Israel to study in the academy of R. Johanan, and many years after returned to his native land, where he disseminated the teachings of Johanan, transmitting in his name close to 200 *halakhot* in all spheres. The heads of the Babylonian academies, such as R. Judah of Pumbedita and his distinguished disciples, Rabbah, and R. Joseph, transmitted in his name *halakhot* they had learned from him. He suffered from the persecutions of the Sassanids who even broke into his house, and he complained: "Merciful One! Either in Thy shadow or in the shadow of Esau [= Rome]" (Git. 17a). It is possible that in consequence of these sufferings he decided to return to Erez Israel (Pes. 51a), but there is no evidence that he did so.

Rabbah achieved great renown for his remarkable legends (known as the "*aggadot* of Rabbah bar Bar Ḥana" and chiefly found in the tractate *Bava Batra* (73a–74a). These tales purport to relate what he saw and heard during his many journeys by sea and land. They are marked by hyperbole, and excited the wonder of contemporary scholars. Some of them spoke out sharply against him: "Every Abba is an ass and every bar Bar Ḥana is a fool" (BB 74a). Rabbah ascribes some of his stories to sailors and Arabs, but begins most of them with the words, "I myself saw." The following is a typical one: "We were once traveling in a desert and an Arab joined us... He said to me: 'Come and I will show you where the men of Korah were swallowed up' (cf. Num. 16:23ff). I saw two cracks that emitted smoke. I took a piece of clipped wool, dipped it in water, attached it to the point of a spear, and inserted it there, and when I took it out it was singed. He said to me: 'Listen carefully! What do you hear?' I heard them crying out: 'Moses and his Torah are true and we are liars!' The Arab said to me 'Every 30 days Gehenna returns them here as meat turns on a spit,' and they cry out: 'Moses and his Torah are true and we are liars'" (BB 74a).

The expositors of the Talmud, aware of the strangeness of these stories, sought to rationalize them. Yom Tov b. Abraham *Ishbili stated: "The stories in this chapter deal with subjects that are strange to people because they are unfamiliar

with them, but they are very plausible to those with a knowledge of nature, such as the size of sea monsters and the size of waves in a storm. They also contain allusions to matters which were not seen with the eye but in a vision. For when the sages went on ocean voyages they saw there God's wonders ... and during their sleep they experienced remarkable visions in the context of their meditations. The *geonim* wrote that wherever the words 'I myself saw' occur, it was in a dream while on a voyage." Some regard these tales and *aggadot* as ethical and national allegories, while others see them as intimations and cryptic sayings (see Maharsha (Samuel Eliezer b. Judah *Edels), ad loc.).

BIBLIOGRAPHY: Hyman, *Toledot*, 1076–78; Bacher, *Bab Amor*, 87–93; idem, *Ergaenzungen und Berichtigungen...* (1913), 10; Bacher, *Trad*, 699, s.v.

[Abraham Arzi]

RABBAH BAR ḤANA (TJ, **Abba bar Hana**, e.g., in BM 5:5; early third century), Babylonian *amora*. In Babylon Rabbah studied under his uncle, Ḥiyya (MK 16b), whom he subsequently accompanied to Erez Israel (MK 21a). Before they left to return to Babylon, Ḥiyya asked the *nasi* to give Rabbah permission to decide matters of ritual law, monetary cases, and defects in a firstborn animal which could render its slaughter permissible. Although such permission was rarely granted, the *nasi* acceded to the request (Sanh. 5a). Rabbah's closest colleague was Ray (TJ, BM 5:7, 10c), in whose company he is found both in Erez Israel and in Babylon (MK 21a; Ḥul. 44b), with whom he held halakhic discussions (Ḥul. 8b), and in whose name he transmitted teachings (Shab. 50a; Nid. 47a). It is related that when Rabbah was once in mourning and thought that he ought not to give his regular lecture, Rav said, "We have learned, 'if the public have need of him, he does not refrain'" (MK 21a). Little is known of Rabbah's personal life, other than that he traded in wine (BM 83a, see Dik. Sof. *ibid.*) and that his wife died before him (BB 52a). His only known pupil was Hananel (MK 19a). Rabbah b. Ḥana is frequently confused with *Rabbah b. Bar Ḥana who, some believe, was his son. They can be distinguished only by context and chronology.

BIBLIOGRAPHY: Hyman, *Toledot*.

RABBAH BAR HUNA (in TJ, **Abba bar Huna** or **Bar bar Huna**; d. 322 C.E.), Babylonian *amora*. Rabba was a disciple of both Samuel (Er. 49a), and Rav (BB 136b), in whose names he transmitted sayings and decisions (Ber. 25a; Shab. 97a). His main teacher, however, was his father, Huna (Me'il. 15b), the head of the academy at Sura (cf. Git. 35a). His father urged him to attend Ḥisda's lectures diligently. Initially, however, Rabbah found some of the matters discussed (such as personal hygiene) alien to his earnest nature (Shab. 82a). Only in later life did he develop a close association with Ḥisda, and served with him as a judge (Shab. 10a). Indeed, his eventual respect for Ḥisda was such that he accepted his advice not to introduce the Decalogue in the statutory daily prayers (Ber. 12a; see Dik. Sof. thereto). He publicly acknowledged Ḥisda's

correction of another of his decisions, instructing his *amora* to deliver a discourse on the theme that “no one can fully understand the words of the Torah until he has been mistaken in their interpretation” (Git. 43a). The two are also known to have studied *aggadah* together (Pes. 110a; 117a; Sot. 39a).

After Ḥisda’s death Rabbah was appointed head of the academy of Sura (*Iggeret Sherira Gaon*, p. 82). Rabbah was particularly friendly with the exilarch, frequenting his home (Shab. 157b, Suk. 10b, etc.), and the exilarch used to address halakhic queries to him (Shab. 115b). Nevertheless, Rabbah insisted on his complete independence of him, and in a dispute with the members of the exilarch’s household, he emphasized that he had received authority to act as judge from his father and not from the exilarch, and was therefore not bound by their views (Sanh. 5a). Rabbah was distinguished by his piety (Shab. 31a–b), and by his modesty which his colleague Rava once prayed that he might emulate (MK 28a). Among his maxims and sayings are many which stress this virtue: “An insolent person is considered a transgressor” (Ta’an. 7b). He also taught that he who possesses knowledge of the Torah but is without the fear of God is like a steward who, although in possession of the inner keys of the treasure house, is unable to gain access to it, because he does not possess the outer keys (Shab. 31a–b). He also said: “When a man loses his temper, even the Divine Presence is unimportant in his eyes” (Ned. 22b). Rabbah died in Babylon, but his remains were taken to Erez Israel, where funeral orations were delivered for him (MK 25b).

RABBAH BAR NAḤAMANI (c. 270–330; d. 321/22 according to *Iggeret R. Sherira Gaon*, ed. by B.M. Lewin (1921), 87; according to Hyman c. 260–340), Babylonian *amora*. Rabbah was the scion of a priestly family, which traced its lineage to the high priest Eli (RH 18a). He studied under *Huna at Sura, and under *Judah b. Ezekiel at Pumbedita (Er. 17a). To such an extent did Huna respect him that he seldom decided a question of importance without consulting him (Git. 27a; BM 18b; BB 172b, et al.). On one occasion his contemporaries in Erez Israel suggested that he join them and study under *Johanān, maintaining that he would learn more with a guide than by studying by himself (Ket. 111a). From *Nedarim* 59a, it would appear that he took their advice, although Bacher maintains that he never left Babylonia. He certainly spent most of his life in Babylonia, where his most constant colleague was Joseph (BB 114a). Rabbah’s main interest was in the *halakhah*, and he was renowned for his interpretation of the Mishnah and for his elucidation and clarification of the apparent contradictions contained in various texts. He was particularly versed in the regulations concerning ritual purity, in which he was regarded as an authority (BM 86a). Whereas Joseph’s encyclopedic knowledge of traditions earned him the title “Sinai,” Rabbah was known as *oker harim* (“uprooter of mountains”), for his exceptionally skillful dialectic ability (Ber. 64a.). Only ten aggadic sayings are quoted in his name (e.g., Shab. 64a;

Pes. 68b; Meg. 15b; et al.), and there is no foundation for the statement of Abraham ibn Daud in the *Sefer ha-Kabbalah* that he was the author of such aggadic compilations as *Genesis Rabbah*.

Judah’s death left the post of the head of the academy of Pumbedita vacant. Joseph declined the office, whereupon Rabbah was elected. He held the post for 22 years, until his death (Ber. 64a; *Iggeret R. Sherira Gaon*, 85–86), and under his leadership the academy achieved its greatest renown. The number of regular students rose to 400 (Ket. 106a), and during the **kallah* months of Adar and Elul, the audiences numbered 12,000 (BM 86a). Rabbah’s own contribution as a teacher was significant. He used to put his audience in a receptive mood by beginning his lectures with witty aphorisms and interesting anecdotes (Shab. 30b), and he would frequently invite comment on paradoxical *halakhot* and deliberately captious decisions (Ber. 33b). However, although highly esteemed by scholars, he was intensely disliked by the members of the Pumbedita community, whose behavior he frequently and severely denounced (Shab. 153a and Rashi *ibid.*).

Little is known of his private life other than that he was poor. The Talmud explicitly contrasts his poverty with Ḥisda’s comfortable economic position (MK 28a). Rabbah died in tragic circumstances. Charged with aiding his large audiences to avoid paying poll tax during the *kallah* months, Rabbah was forced to flee the bailiffs who had been sent to seize him. He wandered about in the vicinity of Pumbedita, and it was there, in a thicket, that his body was ultimately found (BM 86a; *Iggeret R. Sherira Gaon* 78–87). According to the *aggadah*, it was on that day that the Heavenly Academy was debating whether, if the bright spot appeared after the white hair (cf. Lev. 13:1–3), the leper was clean or unclean. The Almighty maintained that he was clean, the Heavenly Academy that he was unclean. Rabbah was asked for his opinion, and, as he called out “Clean, clean,” he expired. At that moment, a heavenly voice was heard to declare, “Happy art thou, O Rabbah b. Naḥamani, whose body is pure, and whose soul has departed in purity” (BM 86a). According to *Rosh Ha-Shanah* 18a (MK 28a) he was only 40 years old at his death. However, this figure is unacceptable on chronological grounds and has generally been emended to 60. He was survived by a son also called Rabbah (Shab. 123a). *Abbaye, who grew up in his house (Ber. 48a), was his nephew and pupil.

BIBLIOGRAPHY: Halevy, *Dorot*, 2 (1923), 435–40; Hyman, *Toledot*.

RABBAH BEN AVUHA, Babylonian *amora* of the second half of the third century C.E. Rabbah’s first teacher was Rav, in whose name he transmitted many sayings (Shab. 129b; Er. 85a). After the latter’s death, he continued his studies at Samuel’s academy at Nehardea. When Nehardea was destroyed in 259 by the Palmyrenes, he moved to Maḥoza, where he was appointed a judge (Yev. 115b) and head of the academy (Shab. 59b). According to *Sherira Gaon* he was of the family of the exilarch, and *Sherira* himself claimed to be a descendant of

his (*Iggeret R. Sherira Ga'on*, ed. by B.M. Lewin (1921), 82). The Talmud (Ber. 21a; BM 91b) records halakhic decisions in his name. He, however, stated that his knowledge extended only to four orders of the Mishnah (according to Rashi, *Mo'ed, Nashim, Nezikin*, and *Kodashim*; not *Zera'im* and *Tohorot*; but according to *tosafot*, the reference is to those four orders in the Tosefta; BM 114a–b). A legendary account is given of the manner in which Rabbah was miraculously relieved of his poverty. He was privileged to meet the prophet Elijah, and to discuss *halakhah* with him. Elijah gave him some leaves from paradise which, although discarded by Rabbah (in order not to consume his portion in the world to come), left such a pleasant fragrance on his robe, that he sold it for 12,000 denarii (BM 114a–b).

He had a son named R. Kamma (Er. 3a); however his main pupil and (probably) his son-in-law was R. Nahman (b. Jacob), who transmits many of his sayings (Yev. 80b). Among his teachings were that the commandment to love one's neighbor as oneself (Lev. 19:18) applies even in the execution of a criminal, and is fulfilled by granting him as easy a death as possible (Ket. 37b).

BIBLIOGRAPHY: Hyman, Toledot, 1070–71.

RABBAH BEN SHILAH (fl. late third early fourth century C.E.), Babylonian *amora*. His teacher was Ḥisda (Shab. 81a). Because of his aversion to bribery, Rabbah declared a judge unfit to try a case involving neighbors from whom he had borrowed anything (Ket. 105b). He was quick to defend others. According to an *aggadah*, Elijah appeared to Rabbah on one occasion, and told him that God mentions *halakhot* in the name of the sages but not in that of R. Meir, because he had been taught by *Elisha b. Avuyah who had denied the existence of God. Rabbah said to Elijah: "Meir found a pomegranate, ate the fruit, and threw away the peel," i.e., he had extracted only what was good from Elisha's teachings, whereupon Elijah replied that henceforward God would mention Meir's name (Ḥag. 15b).

[Moshe Beer]

RABBAH TOSFA'AH (middle of the fifth century), Babylonian *amora*. He was a pupil of *Ravina (I) (Suk. 32a; BK 119a), and a colleague of the latter's nephew, *Ravina (II) (Yev. 75b; MK 4a). He succeeded Mar Bar Rav Ashi as head of the Sura Academy, a position he held for six years until his death in 474 (Ibn Daud, *Book of Tradition*, 36). Although among the last of the *amoraim*, he still gave original rulings. He declared a child legitimate although born to a woman whose husband had gone overseas 12 months before the birth, assuming that a pregnancy may extend as long as that period (Yev. 80b; for another example see Ber. 50a). Some claim that his name, Tosfa'ah ("the amplifier"), reflects the activity of making additions of brief, explanatory remarks, through which he clarified talmudic themes and decided between the conflicting opin-

ions of earlier *amoraim* (Halevy, Dorot, 3 (1923), 19; but see Ḥ. Albeck, in: *Sinai, Sefer Yovel* (1958), 72). He is in fact mentioned by name in the Talmud only in nine places.

[Aaron Rothkoff]

RABBANITES, name and definition current from approximately the tenth century applied to Jews accepting the Oral Law (*Torah she-be-al peh*) as binding and normative in the same degree as Scripture (*Torah she-bi-khetav*). As with many party definitions the term is used with pride by the Rabbanites themselves and with derision and contempt by their opponents the *Karaites.

RABBATH-AMMON (**Rabbah**; Heb. רַבָּת בְּנֵי עַמּוֹן, רַבָּה), the capital of the Ammonites, present-day Amman, capital of the Hashemite Kingdom of *Jordan. The earliest settlement, dating from the Chalcolithic period until the end of the early Bronze Age (c. 2200 B.C.E.), was centered on a sacred rock on the acropolis. After a gap, occupation was resumed with the establishment of the Ammonite kingdom. Its strong fortifications prevented its capture by the Israelites (Josh. 13:25). The bedstead of the giant *Og, king of Bashan, in Rabbath-Ammon is mentioned in the Bible (Deut. 3:11). In the time of David, Joab captured the "royal city" and the "city of waters" (probably the acropolis and the water installations in the valley below), but he postponed conquest of the entire city until David's arrival (11 Sam. 11–12; cf. 1 Chron. 20:1). Shobi, the son of Nahash (an Ammonite king) of Rabbath-Ammon, succored David when he fled before Absalom (11 Sam. 17:27–29). Soon after David's death, however, the city again became the capital of an independent kingdom, and it is denounced as such by the prophets Amos (1:14), Jeremiah (49:2–3), and Ezekiel (21:25; 25:5). Remains of tombs and temples containing figurines and seals inscribed in Ammonite have been found there. The main temple was erected over the "sacred" rock on the acropolis.

In the Hellenistic period, Rabbath-Ammon was again a flourishing city and was known as Philadelphia in honor of Ptolemy II and his wife Arsinoe. It was besieged and taken by Antiochus III in 218 B.C.E. by a stratagem similar to that used earlier by *Joab (see 1 Chron. 19:10ff.). The city successfully resisted Alexander Yannai under its ruler Zeno Cotylas. It became a city of the *Decapolis in Roman times and later developed into a great and prosperous center of the caravan trade in Provincia Arabia. It was mentioned by Eusebius (*Onom.* 146). It was captured by the Arabs in 635 and became the capital of the Belqa' district. A Jewish community existed there in the 11th–12th centuries, as is known from the Scroll of *Abiathar. In the time of the Crusaders, Rabbath-Ammon, then known as Ahamant, was temporarily in the possession of the prince of Transjordan. It was subsequently abandoned until resettled by Circassians in 1878, who were relocated there by the Ottoman Turks. In 1921 it became the capital of the emirate

of Transjordan and later of the Hashemite Kingdom of Jordan. Its population, greatly increased by Palestinian refugees, numbered approximately 200,000 in 1970. By 2006 its population was over 1.7 million.

The site was surveyed and photographed by a British team led by C. Warren in 1867 for the Palestine Exploration Fund. Since then Amman was frequently visited by scholars and explorers, notably by H.C. Butler in 1921. In 1927 an Italian expedition directed by G. Guidi worked at the site; the excavations continued in 1929–33 under the direction of R. Bartoccini. From 1945 G.L. Harding investigated Amman on behalf of the Department of Antiquities, and in 1966 J.B. Hennessy excavated the Late Bronze Age temple on behalf of the British School of Archaeology in Jerusalem. Numerous excavations have taken place in recent years in Amman, particularly in the area of the acropolis/citadel (Jebel Qal'a).

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

RABBI, RABBINATE. The title *rabbi* is derived from the noun *rav*, which in biblical Hebrew means “great” and does not occur in the Bible; in its later sense in mishnaic Hebrew, however, the word *rav* means a master as opposed to a slave (e.g., “does a slave rebel against his *rav*” – Ber. 10a; “It is like a slave who filled a cup for his *rav* and he poured the water over his face” – Suk. 2:9). It was only during the tannaic period, in the generation after Hillel, that it was employed as a title for the sages. The passage in the New Testament (Matt. 23:7) in which the Scribes and Pharisees are criticized because they “love... to be called of men, Rabbi, Rabbi” probably reflects the fact of its recent introduction. The word “rabbi” therefore means literally “my master,” although the Sephardim point it and pronounce it *ribbi*, the suffix therefore not being a pronominal one. In any case it lost its significance, and *rabbi* became simply the title accorded to a sage. Since the title was accorded only to those who had been properly ordained, and such ordination was not granted in talmudic times outside Erez Israel (see *Semikhah*), it was not borne by the Babylonian sages (the *amoraim*) who adopted, or were granted, the alternative title of *rav*. In the Talmud, therefore, the title *rabbi* refers either to a *tanna* or to a Palestinian *amora*, while *rav* refers to a Babylonian *amora*. The *rabbi* of the Talmud was therefore completely different from the present-day holder of

the title. The talmudic *rabbi* was an interpreter and expounder of the Bible and the Oral Law, and almost invariably had an occupation whence he derived his livelihood. It was only in the Middle Ages that the *rabbi* became – in addition to, or instead of, the interpreter and decisor of the law – the teacher, preacher, and spiritual head of the Jewish congregation or community, and it is with this meaning of the word that this article deals. For the talmudic *rabbi* see Sages. In modern usage the word “rabbi” in Hebrew has sometimes become the equivalent of “mister.” Thus every Jew called up to the reading of the Torah is invited to do so as “Rabbi So-and-So the son of Rabbi So-and-So,” and for the *rabbi* as spiritual head the title *ha-rav* is employed.

[Louis Isaac Rabinowitz]

Middle Ages

In medieval times, the title *ha-rav* denoted great scholarly standing and social reputation unconnected with the hierarchical structure of the *yeshivot* and *geonim*. In this sense it appears, for example, in various letters of the 10th–12th centuries, and in the Chronicle of Ahimaaz is used to describe the mysterious Aaron, while the chronicler Abraham ibn Daud employs these terms and their derivatives to define the generations of scholars – *rabbanim* – after the death of Hai Gaon. Relatively early in these centuries, the term *rabbanim* (now translated into English as Rabbanites) came to designate the mainstream of Orthodoxy in Judaism, which based itself on the authority of the Talmud and the *geonim*, as against the minority of the Karaites. Centralistic tendencies in the leadership of the gaonate and exilarchs are revealed in the tendency for one of these institutions to appoint from above the scholar who led the local community and in the main carried out the functions of judge (*dayyan*), bringing with him as his letter of appointment a “writ of judgeship” (*pitka de-dayyanuta*). What is known of their actual functioning, however, shows both that such appointees were in reality much more than judges only and that in fact local opinion had a say in their appointment. By the end of the 10th and beginning of the 11th century there were more and more cases of open local election by the community of a spiritual and moral leader.

Through their social functions *rabbi* and *rabbinate* carried over into the Middle Ages a medley of concepts and attitudes, the active elements being scholarship, judgeship, social-spiritual leadership, and example. A certain measure of religious authority attached to the concept of *rabbi* and to his person, deriving from the authority invested in the *geonic* academies and the outlook of their scholars, and also from the distant memories of the supreme authority of the mishnaic *rabbi* ordained by *semikhah* – the ordination of ancient times. These titles and designations never carried with them priestly or semi-priestly authority or functions. Prayer and leading in prayer, blessing of the people, and officiating in marriage and burial ceremonies never became an integral part of the conception of rabbinical office until the beginning of the 19th century, with the Reform movement. Some rabbis led in prayer and blessed the people, but until modern times

this was no more than a matter of personal inclination. The supervision of marriage, and even more so of divorce proceedings, became an integral part of the rabbinic office, both because the payment for performing such functions became part of the stipend of the local rabbi, and because legal acumen was required, especially in the case of divorce. It would seem that from its earliest days preaching to the people was an integral part of the rabbinic function, the rabbi being both the authoritative scholarly expositor of law and morals, and the moral and spiritual leader of the people. At certain times and in certain regions scholarly exposition was regarded as the main part of preaching, while in others moral exhortation was seen as its main burden; both elements were always present in rabbinical preaching, though in varying proportions.

The weakening of centralistic institutions, as well as the continuing growth of Jewish communities in countries which had never known such leadership, increasingly augmented the importance of the local rabbi. Although the activities of many rabbis are known, in most cases neither income nor status are clearly apparent. Over the years the ideal has developed of the scholarly charisma of the rabbi asserting itself without recourse to official definitions. Ideally all rabbis are equal as officeholders; the only hierarchy ideally obtaining between them is that of personal intellectual and moral preeminence.

The office of rabbi was originally an honorary one on the principle that the Torah had to be taught free of charge. It was not until the 14th century that there is the first clear evidence of a rabbi receiving emoluments. When Simeon b. Zemah Duran fled from the anti-Jewish riots in Spain in 1391 and arrived in Algiers the local community wished to appoint him as rabbi. He pleaded inability to accept as he was penniless and had to earn a livelihood. In order to enable him to accept the position, a formula was worked out whereby instead of a salary for his services he was to receive *sekhar battalah*, i.e., compensation for loss of time due to his preoccupation with his rabbinic office. This remained the legal basis in Jewish law for a rabbi receiving a salary, even though in the modern period the rabbi's salary is generally regarded as in the category of a professional wage with contracts written between rabbis and their congregations.

In outward recognition of such preeminence, the various communities applied to a particular local rabbi for his personal responsa on different legal and theoretical matters. He would thus be given, de facto and personally, the authority vested in the *geonim* ex officio.

In both Ashkenazi and Sephardi centers rulers became aware relatively early of this new development in Jewish society. In the story of the Four Captives, Abraham ibn Daud describes the satisfaction of a local ruler in late tenth-century Muslim Spain, at having a scholarly Jewish authority in his country, independent of the *geonim* in Baghdad. The office of the *rab de la corte* in Castille and *Arraby moor* in Portugal, as well as appointments known from the 13th century of a Jewish *Hochmeister* for some regions of the German Empire (see, e.g., Meir Baruch of Rothenburg), and also similar ap-

pointments in France – all are related phenomena. They are manifestations both of the gradual institutionalization of the office of rabbi, and of the attempts by rulers and community leaders to structure a formal and fixed hierarchy out of fluid relationships based on scholarly and personal charisma. The responsa of the Sephardi Isaac b. Sheshet Perfet disclose a conflict surrounding the appointment to the office of rabbi of France in the 14th century, while other contemporary writings reveal the views of the Ashkenazi scholar Meir ha-Levi of Vienna on the nature of the rabbinate. All demand proven and attested knowledge, as well as integrity and excellence in character and conduct; and on these grounds candidates are approved and disqualified. The Ashkenazi scholar reveals a conception of a well-defined written diploma attesting to the knowledge and qualifications for a rabbi – the so-called *semikhah* diploma. For about a century – mainly in the 15th – Ashkenazi rabbis were titled *manhig* (“leader”), which shows their centrality in community life at that time. Sephardi society had its own ways of attesting these qualifications, without instituting such a diploma (see below). When Sephardim and Ashkenazim came in close contact after the expulsion from the Iberian Peninsula (1492–97), the institution of this diploma became a bone of contention, as is evidenced in the writings of Isaac Abrabanel. Ironically enough, the abortive attempt to resurrect the *semikhah*, made in 1538 by Jacob Berab and enthusiastically accepted by Joseph Caro, served to strengthen the Ashkenazi type of *semikhah* diploma and the medieval line of development of the office of rabbi, and also gave impetus to the development of the Shulhan Arukh, the combined work of Joseph Caro and the Ashkenazi-Polish Moses Isserles (who was himself a royal appointee to the central rabbinate in Poland).

From the 14th century onward there emerged the concept of one rabbi for one locality – the *mara de-atra* (“the master of the locality”). Other scholars in his community were to submit to his authority, ex officio, a concept that took a long time to establish. In Poland-Lithuania of the 16th–17th centuries rabbinical office was linked to being a *rosh yeshivah*, thereby deriving much of its authority and prestige. In its main outline, though with various changes in details, this conception of the rabbi and his office remains to the present day that which in fact dominates the society and communities of *Mitnaggedim* wherever they are found, the religious establishment in the State of Israel, and communities of Hungarian and German Orthodoxy and Neo-Orthodoxy. In these circles the office and conception of the rabbi are those which have emerged from the Middle Ages: he is seen as scholar and teacher, judge and spiritual leader. His livelihood comes either from a fixed salary or from payments for functions performed, or from a combination of both. His rights and duties are often defined in a *ketav rabbanut* (letter of appointment to and acceptance of the rabbinic office, sometimes written as two separate documents), a custom deriving from the late Middle Ages. In the frame of this traditional rabbinate there have appeared in modern times centralistic trends, manifested, e.g., in the

British office of chief rabbi for the U.K. and the dominions and the Chief Rabbinate in Erez Israel. On the other hand, in the huge concentrations of Jewish population in modern cities, in the U.S. in particular, the concept of the *mara de-atra* is on the point of vanishing and the rabbi there is mainly the rabbi of a synagogue congregation. In regions and communities where Ḥasidism prevails, the status and function of the rabbi as such have in many ways become subordinate to those of the *zaddik*.

The Reform movement, with its progressive rejection of traditionally received *halakhah*, has changed the very concept of rabbi. The Reform rabbi is judge no longer: he has become to a large degree, for the first time in the history of the rabbinate, a priest ordering the prayer service and leading it. In the U.S. in particular he is also becoming the social and even the socialite director of his synagogue congregation. The Conservative wing of Judaism, in particular in the U.S., is trying to combine both concepts of the rabbinate.

The Jewish Religious Leadership in the Muslim East

There is a scarcity of information concerning the religious leadership of the early Middle Ages in eastern lands. Extant fragments of records pertaining to such leadership date back only to the 12th century. Sources become more extensive beginning in the 16th century, after the expulsion of the Jews from Spain, and are found in the responsa of the eastern lands, especially from the Ottoman Empire. In this section the religious leadership will be discussed starting with the geonic era, although the title of “rabbi,” in its usual sense of a scholar appointed over a community to decide and teach its religious regulations, was not used until the 12th century.

The *geonim* served as spiritual heads of the Babylonian or Palestinian communities, and in Babylonia they ruled alongside the exilarchs, who served as secular heads. The authority of the *geonim* extended over the borders of the Arabian caliphate due to their religious authority. Previously the exilarch had reserved the right to appoint judges, either alone or in consultation with the *gaon*. But during the decline of the exilarchate, the *geonim* appointed judges for most of Babylonia, granting them a “certificate of justiceship” (*pitka de-dayyanuta*).

In Erez Israel the religious head of a community was known as a *haver* (associated member of the Academy) and was ordained in the Palestinian academy. The *haver* served as head of the community’s rabbinical court once he had been empowered by the head of the academy. The Palestinian academies granted to ordained scholars the title of *haver be-Sanhedrin ha-Gedolah* (member of the Great Sanhedrin); in Babylonia it was customary to call similar appointees *al-luf*. At the same time the title of *rav* (rabbi) was common in Egypt, North Africa, and Spain.

The decline of the gaonate and the Palestinian Academy in the 11th century created some confusion regarding the rabbinate as a communal institution. There was no sufficient religious authority capable of continuing the traditional ordination (*semikhah*) or appointment of judges. Consequently,

ordination was discontinued. In Spain, however, some religious heads of communities would grant their students a “writ of ordination” (*ketav masmikh*). Judah ben Barzillai al-Bargeloni declared in his *Sefer ha-Shetarot* that this writ was only reminiscent of the ancient ordination and that no actual *semikhah* could be given outside Erez Israel. This type of document, he maintained, was awarded only for the purpose of encouraging students.

In the 1130s R. Joseph ibn Migash ordained Joseph *ben Mamal* by means of a *ketav minnui* (writ of appointment). Maimonides opposed the institution of the professional rabbi in the sense of a paid official; he preferred the ideal of the scholar who earns his living independently but serves as a communal teacher. Even in the geonic period in North Africa, there were scholars who received “appointments” to the rabbinate. R. Hushi’el b. Elhanan of Kairouan ordained his son Hananel and Nissim b. Jacob b. Nissim (Ibn Shahin). Abraham ibn Daud mentioned in his *Sefer ha-Kabbalah* that after the deaths of Hananel and Nissim b. Jacob the tradition was discontinued, although judges officiated in Mahdia and Qalat Hammad without ordination. In the geonic period the title of *ha-rav ha-rosh* (chief rabbi) was widespread in North Africa. It was awarded by the academy in Pumbedita to designate the head of a famous rabbinical court.

In Spain the rank of *dayyan* (judge) was higher than that of rabbi. Certain individuals were empowered to punish offenders and bore the right to judge alone. Important authorities, such as Maimonides and his father Maimon, were called *dayyan*. The position of *dayyan* was more highly regarded in Spain than in the eastern lands after the expulsion. In those countries the *hakham* (“scholar”) gained prominence, although the *dayyan* reserved the right to appoint a *hakham* or to empower even ordinary individuals with the right to judge. Two examples are known of appointment of rabbis by the government in the 14th and 15th centuries: Joseph Sasportas who was invested with judicial powers in the kingdom of Tlemcen and Isaac b. Sheshet Perfet, who was appointed by the government of Algiers. Isaac b. Sheshet Perfet (second half of the 14th century) wrote that in Germany, as well, it was customary to award a “writ of ordination,” although in Spain it was considered sufficient if a teacher gave permission to his student to act as congregational religious leader.

The arrival of Spanish and Portuguese refugees in eastern lands aroused a serious conflict concerning “ordination” as practiced by the native Ashkenazim and Romaniots. An example of this was the controversy about Messer David ben Judah Leon, an “ordained” scholar and leader in Jewish education in Avilona (Valona), Albania, in the early 16th century. Rabbi David Cohen of Corfu supported Leon and stated that the method of ordination in use at least served to deter those not fit to decide the *halakhah*. David Cohen himself had received “ordination.” Elijah Mizraḥi opposed the Sephardi refugees who claimed that no one could ordain once the Sanhedrin no longer existed. Nonetheless, the Ashkenazim did influence some Eastern Sephardi communities to practice “ordination.”

However the significance of the ordination was completely different from the Ashkenazi ordination. The responsa cite several examples of writs of appointment containing the phrase “*yoreh, yoreh, yadin, yadin*” (“he will teach, he will judge”), sometimes adding “*yattir, yattir*” (“he will permit”); this was the text of ordination customary in the talmudic period. One factor which soothed the conflict was the public’s reluctance to accept Ashkenazi ordination as an automatic qualification for communal leadership. The idea of reinstating the traditional ordination as known in ancient times continued to excite scholars until the 16th century, when Jacob Berab relied on the words of Maimonides in his attempt to ordain certain scholars. This act aroused negative reactions and a fresh conflict continued for two generations.

When the Spanish and Portuguese refugees reached the Ottoman Empire, they organized communities according to their origins, each preserving its own traditions. Due to the absence of ordination, the spiritual leader in these communities was mainly called *hakham* or *marbiz Torah* (“teacher of the Torah”). Other titles in use were *dayyan*, *haver beit hadin*, *kahin ve-rosh*, *moreh zedek*, and *moreh hora’ah*; these titles were not limited to congregational leaders in the strict sense. In *Erez Israel*, Egypt, and Syria, however, the title *marbiz Torah* was replaced by *hakham* and in North Africa by *moreh zedek*. A rabbi in charge of all or most congregations in a city was called *ha-rav ha-kolel* (“the ‘supreme’ rabbi”).

The *marbiz Torah* or *hakham* was the highest religious authority in his district. To qualify for his office he had to be expert in all fields of *halakhah*. He preached publicly on Sabbaths and holidays. Frequently he acted as chief controller over foundations and bequests and organized the redemption of hostages. In small communities he often served as a scribe or notary. The *marbiz Torah* judged in matters of marriage, divorce, *halizah*, and monetary disputes generally alone but sometimes joined by two laymen to strengthen the verdict as having been passed in a court of three. Claims between people of different communities were judged by the *marbiz Torah* of the defendant’s community. He was also responsible for judging in matters of ritual fitness and maintaining standards of morality in the city. Generally, his office was not inherited.

The *marbiz Torah* was usually treated with respect and admiration. He was paid an ample wage and honored with set marks of etiquette; the congregation stood when he entered and allowed him to pass first through the synagogue or street. He occupied a fixed seat in the synagogue and when he died he was buried with special marks of honor. Certain congregations purposely left the late leader’s office vacant for a considerable period to show deference to their loss.

On the other hand there is record of conflicts between the *marbiz Torah* and members of his congregation. Sometimes his knowledge of *halakhah* was questioned or sometimes competition between two scholars for the same office would cause conflicts or a split in the community; many *marbizei Torah* are known to have been dismissed from their positions. An *hakham* who was disregarded or dishonored could

excommunicate his opponents, and sometimes members of his congregation took measures to curb his powers of excommunication if used too freely.

From the late 15th century the Eastern communities felt the need for a central rabbinate that would assume the overall religious and administrative leadership that lay beyond the province of the local *marbizei Torah*. In the late 15th and early 16th centuries this office had already been filled by the two chief rabbis of the Romaniots, Moses Capsali and Elijah Mizrahi, both in Constantinople, who were called *rav kolel*, *ha-rav ha-manhig* (“leading rabbi”), or *ha-rav ha-gadol* (“grand rabbi”). They were appointed by the government and given a permit known as the *hurman* to collect Jewish taxes. For the privilege of maintaining this office, the community had to pay a special tax, known as *rav aqchesi* (“white (i.e., silver) coin for the permit to have a rabbi”). This tax had to be paid even in the 17th century long after the office of chief rabbi had been discontinued. After the death of Elijah Mizrahi, there was no longer any one figure who filled this position; rabbinical councils, however, frequently met in various cities on important matters. At this time there was a growing feeling among the *Sephardim* to grant high office to great rabbis of the generation. Samuel de Medina was recognized as chief rabbi in Salonika, and Jacob Berab filled the same office in Safed. In almost every large community there was a *rav kolel* who was not appointed by the government but by the Jews themselves. The *rav kolel* performed all tasks of the *marbiz Torah* and was also head of the rabbinical court or of a yeshivah. Often he was called *reish mata* (Aramaic: “head of the city”). In Izmir (Smyrna) it was customary for two chief rabbis to serve simultaneously, one in charge of civil law, the other in charge of ritual; both were called *ha-rav ha-gadol*. Their subordinate rabbis were called *morei zedek*. In this city there was a time when four chief rabbis ruled simultaneously. The *hakhamim* devoted all their time to the study of Torah and as such were exempt from taxes; an ordinance which fixed this exemption was drafted in Jerusalem in the early 16th century. The exemption applied to any *hakham rashum* (“recorded rabbi”) who served as *marbiz Torah* or filled a spiritual position.

In other eastern countries, additional titles were awarded attesting the outstanding scholarship or eminence of the leader. The names *navon* (“understanding”) or *maskil* (“wise, erudite”) were used generally for young scholars who had acquired a fair knowledge of *halakhah*. The term *hakham vatik* (“senior” or “conscientious scholar”), despite its literal meaning, was also used for younger leaders. The name *he-hakham ha-shalem* was used to distinguish well-known important rabbis, *marbizei Torah*, heads of academies, and rabbinical courts.

Beginning in 1836 the Ottoman regime established the office of *hakham bashi* (head of the rabbis) in Constantinople. The incumbent had to be a citizen of the empire. Eventually similar offices were established in the capitals of big provinces. The exact duties and privileges of the *hakham bashi* were fixed in 1864. The *hakham bashi* of Constantinople exercised au-

thority over all other rabbis in the empire (including the *rishon le-Zion* in Erez Israel). In Egypt the *hakham bashi* was the only authority to decide ritual matters and was accompanied by a judge who had the right to sit alone. The Jewish community in Erez Israel appointed a chief rabbi known as the *rishon le-Zion* (“first of Zion”). Although this title existed from the 17th century, it was not officially recognized until 1842, when the incumbent *rishon le-Zion* was named *hakham bashi* of Erez Israel. In 1874 a *hakham bashi* was appointed in Tripoli (North Africa) and soon the title became so popular that almost every North African community had its *hakham bashi*.

There were also chief rabbis who were heads of rabbinical courts in Tunis, Djerba, in Algeria and Morocco.

In smaller cities in Morocco, which did not possess rabbinical courts, a *rabbin délégué* was appointed who acted as a one-man court and a community representative before the government. In Morocco there were some families who reserved the dynastic right (*serarah*) to serve as rabbis and judges. No parallel custom is found in any other land. Soleiman Kareh was appointed in 1872 *hakham bashi* of Yemen by the Turkish regime. In that country the *hakham bashi* was the highest legal and religious authority. After Kareh the position of *hakham bashi* was held intermittently and for short durations. In each village and town in Yemen, the *mori* served as rabbi, judge, and teacher. The Yemenite rabbis earned their livings mainly as slaughterers, goldsmiths, and teachers.

[Leah Bornstein-Makovetsky]

Modern Period

Since the emancipation era, the functions of the rabbi, particularly in Western countries, have undergone a radical change to which various factors contributed. In the first place, the governments of the various countries abolished the right of jurisdiction previously granted to the Jews in civil law, in consequence of which the function of the rabbi as judge in civil litigation and the need to study *Hoshen Mishpat* (the Jewish civil code) for practical purposes no longer existed. Moreover, even matters of ritual and matrimonial law which remained within the sphere of Jewish jurisdiction were dealt with, in these countries, not by the individual rabbi, but by a central *bet din*, these functions being fulfilled by the *dayyan*. In the second place, with the entry of the Jews into general life the need became increasingly felt for the rabbis to be equipped with a wider knowledge than was regarded as necessary for the medieval rabbi in the Jewish community, in both Jewish spheres – Jewish history, literature, homiletics, and *Juedische Wissenschaft* generally – and in purely secular branches. This need, felt internally, was powerfully reinforced when the governments of various countries, commencing with Emperor Franz Joseph in Austria in 1848 and extending to other countries, demanded a certain standard of general education as a condition of recognizing rabbis. When the existing yeshivot refused to countenance any change in their traditional syllabus, which was almost wholly confined to Talmud and the codes, the need was met by the establishment of rabbinical

seminaries which provided a comprehensive curriculum of Jewish studies (with a lessened stress on Talmud and codes), which was generally supplemented by a university education. The modern rabbi, whether Orthodox, Conservative, or Reform, was largely the product of these institutions. A major transformation in the makeup of the rabbinate in liberal denominations (Reform, Conservative, and Reconstructionist) from the 1970s into the 21st century has been the ordination of women.

FUNCTIONS OF THE RABBI. The function of the modern rabbi varied somewhat in the various countries according to local conditions. Thus in England he approximated until recently more to the cantor than in any other country. His official title in the United Synagogue was “minister-preacher,” while his colleague was the “minister-reader,” both sharing the conduct of the weekly and Sabbath services and the reading of the Torah. In England, France, and Germany the wearing of canonicals was obligatory, while in France the organizational aspects of the rabbinate was largely determined by the Consistory. Nevertheless there are general lines of similarity which applied equally to all. Preaching, of course in the vernacular, occupied a place of prime importance, out of all proportion to the old-fashioned rabbi who generally limited his public discourses to two halakhic-aggadic addresses per year (see Preaching). The modern rabbi was expected to devote much of his time to pastoral work, establishing a personal bond between himself and his congregants, visiting the sick, officiating at benei mitzvahs, marriages, funerals, and houses of mourning as a matter of course. He was expected to take part in all social, educational, and philanthropic activities of the congregation. Above all he was looked to as the spokesman of the Jewish community to the larger community, though the extent of this participation varied in different countries, being most extensive in the United States. The influence of the larger denominations, particularly the Protestant Church, was marked. Until recent times in England it was de rigueur for the rabbi to wear a clerical collar, while the garb of the French rabbi in synagogue was identical with that of the Protestant pastor. In England Chief Rabbis Adler and Hertz donned the gaiters and the silk hat with cockade of the Anglican bishop at official functions. Recent years have witnessed a departure from those models to a considerable extent, and a closer proximation to those of the old school, partly under the influence of the yeshivot and the revival of Orthodoxy.

In England particularly, as in the countries which constituted the British Empire for which it served as a model, it was not even regarded as essential that the rabbi should acquire the rabbinical diploma (it was actually forbidden by Chief Rabbi Herman Adler, who essayed to establish the principle that he was the only rabbi for the British Empire) and the title “reverend” was coined for them. This situation changed considerably, but a student of Jews College still graduates and is qualified to accept a position on obtaining the minister’s diploma,

which is less than the rabbinical diploma and carries with it the title “reverend.” In all other countries, without exception, and among Reform and Conservative, as well as Orthodox, the only title borne by the spiritual leader is rabbi, apart from the *Sephardi* congregations where he is called Haham (*hakham*). In England, France, and South Africa, in which the various congregations are united in one roof organization, the rabbi tended more and more to become a local congregational functionary, the chief rabbi alone representing the community as a whole both in religious matters and vis-à-vis the non-Jewish world. In the United States (see below) and Canada, where the tendency is for each congregation to be an independent unit, his sphere of activities was much wider. In the United States, Canada, and England, and in other countries where yeshivah education developed, a return to the old conception of the classic Eastern European rabbi in appearance, outlook, and function is apparent within limited pockets of strict Orthodox Judaism.

Jacqueline Tabick, the first female rabbi in the United Kingdom, was ordained in 1975 by Leo Baeck College, an institution under the joint sponsorship of the Reform Synagogues of Great Britain and the Union of Liberal and Progressive Synagogues.

Germany

Some special features characterized the German rabbinate until the *Holocaust*. In the debates on emancipation the question of the training and functions of the rabbis played an important part. In Prussia, which had the largest number of Jews, successive legislation beginning with the “Religionsedikt” of 1788 to the community law of 1847, had more or less ignored the position of the rabbi, leaving it to the communities whether to appoint rabbis at all, and if they did, they were shorn of their traditional authority, becoming mere functionaries, whose opinion in religious matters could be ignored by the lay leaders. Opinions given by prominent Jews such as Gumpert, Muhr, Rubo, and even Zunz had declared the rabbinical office to be altogether dispensable; rabbis were considered mere “Kauscherwaechters” (Kashrut Supervisors) and protests to the contrary remained ineffective. Their rabbinical jurisdiction had been abolished in 1811 (in Altona-Schleswig-Holstein as late as 1863) and when the last chief rabbi of Berlin, Hirschel Lewin, appointed under the “General Juden Reglement” of 1750, died in 1800, his position was not filled again. Yet rabbis of the old school were in positions of religious authority to the middle of the century, such as Akiva Eger (d. 1837) and his son Solomon (d. 1852) in Posen. The Law of 1847 required government confirmation of rabbinical appointments, though they were not considered public functionaries. The constitution of the Bismarckian Reich gave rabbis equal status with Christian clergy in some respects. States like Hanover, Electoral Hesse, and Schleswig-Holstein, which were later incorporated in Prussia, retained their previously adopted Jewish community organization in which rabbis had the official status of Landrabbiner, Provinzialrabbiner, etc. Even where rabbis

possessed no legal status, they were in fact recognized as the representatives and spokesmen of the Jewish faith and community, sat on the advisory educational boards, were given chaplaincy commissions, etc. In most other German states the new laws regulating the life of Jewish communities (Bavaria, 1813; Wurtemberg, 1828; Baden, 1809; grand-duchy of Hesse, 1841) recognized the official position of rabbis providing for offices of Landrabbiner, Konferenzrabbiner, Bezirksrabbiner or just local rabbis, regulating their qualifications, duties, emoluments, garb, etc. In several of these states they had to face examinations before specially appointed government boards. The new type of rabbi who emerged spoke High German and possessed besides rabbinical training a higher and often university education. This was not limited to Liberal and Reform rabbis; it applied to the Orthodox rabbinate as well as exemplified by such men as J. Ettlinger, I. Bernays, M. Sachs, S.R. Hirsch, and A. Hildesheimer. The transition from the new to the old was not without struggle as shown by the controversy about A. Geiger’s appointment in Breslau. The emerging *Wissenschaft des Judentums* was both creative of and created by this modern type of rabbi. At first, at least, their individual and collective authority within the community was paramount, while rabbinical conferences and synods were shaping a new non-Orthodox Judaism. Rabbinical seminaries of the three main religious trends (Breslau, Hildesheimer, and Hochschule) trained these modern rabbis. Their students could not always be clearly classified. Orthodox ones could be found at Breslau and the Hochschule, while some non-Orthodox rabbis qualified at the Hildesheimer Seminary. A large part of the future rabbis hailed from Germany’s eastern provinces or from East European countries where they had received the traditional yeshivah training. Toward the end of the 19th century and after World War I new yeshivot (the last of the old yeshivot was closed in 1865) were established in Germany itself, while some rabbinical students enrolled in eastern yeshivot. This raised both the qualifications and standing of the Orthodox rabbinate.

With this went a general lowering of their status and authority, with the lay leadership, qualified by mere professional or financial success, in the ascendancy. Most rabbis were no longer given a “call,” but had to apply for advertised positions. They were now officials rather than leaders, without a vote and even a voice on their communities’ administration. Even by 1922 there was only one congregation in Germany on whose board the rabbi had a seat and later became its chairman. Vigorous protests from within the rabbinate were of no avail. Only the Nazi persecutions brought about some belated change.

The rabbi usually taught at the community’s religious school as well as to Jewish pupils in the state high schools. Adult education emerged gradually after World War I and became an important function in the Nazi period. Public relations with the non-Jewish community, such as lecturing, participation in public functions and social and educational work in general, occupied a considerable part of the rabbi’s time. His relations to his congregation were regulated by pri-

vate contract; his salary was usually adequate for maintaining a middle-class standard of living, incidental fees being paid into the community's funds.

In the larger communities with several synagogues a division developed between the community rabbi and the synagogue rabbi. In many parts of Germany, where rural, rabbi-less communities survived in great number, district rabbis, with their seat in state or provincial capitals, were in charge of their religious needs. Even after 1918, when the separation of church and state had led to the abolition of the 19th-century laws, the titles of Oberrabbiner, Landesrabbiner, or Provinzialrabbiner survived as a historical relic, without much significance, unless it meant the care of rural communities. There was at no time a German chief rabbi. When, under the Nazis, Leo Baeck became president of the Reichsvertretung der deutschen Juden, his being a (liberal) rabbi was incidental.

Regina *Jonas, the first woman to receive rabbinic ordination, was a 1930 graduate of the Hochschule fuer die Wissenschaft des Judentums (College of Jewish Studies) in Berlin. She received private ordination in 1935 from Max Dienemann, one of the rabbinic leaders of German Liberal Judaism.

From the Franco-Prussian War of 1870 until World War I, many German rabbis served as army chaplains. The needs of German Jewry under the Nazi regime produced the office of Youth Rabbi; the social – and educational – responsibilities of the rabbi in this tragic period increased manifold.

In 1884 German rabbis united in the "Verband der Rabbiner Deutschlands," which in 1896 became the "Allgemeiner Rabbinerverband in Deutschland," though some Orthodox rabbis refused to join. The Orthodox, on their side, established in 1897 their own "Vereinigung traditionell-gesetzestreuener Rabbiner" while an "Orthodoxer Rabbinerverband" excluded those rabbis who served in "mixed" Reform-Orthodox communities. Another source of controversy was emerging Zionism; the great majority of German Jews were anti-Zionist and their assimilated leaders even more so; a great number of rabbis had signed the famous protest against the holding of the First Zionist Congress (see *Protestrabbiner*). This led to a head-on conflict with some of the younger rabbis who had embraced Zionism, as in the case of Emil Bernard Cohn, who was dismissed from his post by the Berlin Jewish community board for propagating Zionism.

[Alexander Carlebach]

In the U.S.

The status and role of the contemporary rabbi in North America exhibit some unique features which can best be understood in the light of the historical development of the synagogue as the central institution in the Jewish community.

The North American cultural and social development accepted the concept of differences based on faith, but has resisted differences based on other criteria. A full treatment of this sociological phenomenon can be found in W. Herberg's *Protestant-Catholic-Jew* (1955). The Eastern European community, from which most North American Jews and their

ancestors emigrated, was based on ethnic and other national minority differences. In the "melting pot" process, allowances were made for such concepts as Jewish nationality on the one hand, while on the other various ethnic minorities that make up the North American community (with the possible growing exception of the French-Canadian and the black-American separatists) assimilated to a cultural climate in which only differences of faith are recognized and where each community is given equal status and dignity unrelated to the number of its adherents.

Insofar as earlier immigrant generations attended churches and synagogues, they probably preferred those where the language and customs of their countries of origin were used in worship and pulpit. Norwegian Lutherans attended churches where Norwegian was used, Italian Catholics where Italian was used. Their children and grandchildren however chose to affiliate with a place of worship which was American in loyalty and composition. The place of worship became a center around which gravitated social and cultural activities which previously had been the functions of societies and clubs of a strong ethnic flavor. In the Jewish community particularly, many of the functions previously performed by Hebrew communal schools, Zionist youth movements, philanthropic activities, and social action committees, became increasingly centered in the synagogue which developed into the comprehensive Jewish Center. The latter often was the only functioning Jewish institution in the community with adequate building, constituency, and professional leadership. Besides being spiritual leader, interpreter of Jewish law, and preacher, the rabbi tended more and more to become the senior Jewish professional in the community. This was equally true of the rabbi of a Conservative, Orthodox, Reform, or unaffiliated congregation. He came to interpret the Jewish tradition not only to the members of his congregation, but also to their Christian neighbors. He had to assume responsibility for all aspects of Jewish education. National and international Jewish organizations looked to him for influence. During the first decades of this century, the Reform rabbi tended to represent the total Jewish community to its neighbors. This function later came to be performed by rabbis of all denominations. The field of counseling has become a part of the modern rabbi's schooling. In the U.S. both the Reform and Conservative rabbinical training schools include courses in pastoral psychiatry for their students. These institutions also maintain pastoral psychiatry centers for research, marriage counseling, etc.

In recent years, the modern rabbi has played an increasing role in the general field of human relations or civil rights, and organizations dealing with them as a general rule increasingly tend to have a rabbi either on their staff or as an elected president. For example, the American Jewish Congress has almost invariably elected a rabbi as president, after the election of Stephen Wise, its first rabbi president. One of the reasons is that when they participate in government or communal affairs, they often prefer that a rabbi represent them since their counterparts are likely to be Protestant or Catholic clergymen.

The modern rabbi tends to model himself after the paradigm (and often the founders) of his rabbinical seminary and professional associations, e.g., Sabato Morais and Isaac Meyer Wise, the first presidents of the Jewish Theological Seminary and the Hebrew Union College respectively, who took forthright, if different, positions on the merits of the American Civil War. Alumni of all the American Jewish seminaries played central roles as social activists, Zionists or anti-Zionist leaders.

The status of the modern rabbi is probably best reflected in the number of institutions established by the different Jewish denominations to educate future rabbis (see *Rabbinical Seminaries).

[Wolfe Kelman]

The ordination of women as rabbis has transformed the rabbinate in North America. In 1972, in response to changing public attitudes and social realities, the leadership of the Reform movement approved the ordination of Sally *Priesand by Hebrew Union College-Jewish Institute of Religion. By the beginning of the 21st century, several hundred women had been ordained as rabbis in North America, the United Kingdom, and Israel, and as many as half of rabbinical students in seminaries of liberal denominations of Judaism, including those of the Conservative/Masorti and Reconstructionist movements, were female. The paths of rabbis who are women have not been free of obstacles. Many female clergy hold subordinate positions in larger synagogues, or work as educators or chaplains, rather than senior leaders of congregations. These occupational patterns are a not only a reflection of persistent cultural prejudices towards women as religious authority figures, but also of many women's choices of rabbinic options that allow them time for the demands of home and family.

[Judith R. Baskin (2nd ed.)]

In Israel

The rabbinate and the functions of the rabbi in modern Israel differ fundamentally from their counterparts in any other part of the Jewish world, whether ancient or modern. A number of factors have contributed toward this unique state of affairs. In the first place there is the law of the State of Israel which establishes the *halakhah* as state law in all matters affecting personal status, which includes marriage, divorce, legitimacy, and conversion and affords the rabbinical courts the status of civil courts of law within that wide sphere. This, coupled with the fact that the Ministry of Religious Affairs was, apart from one brief interregnum, the prerogative of the (Orthodox) National Religious Party, has had the effect of making Orthodox Judaism to all intents and purposes the "established church" of the state, to the virtual exclusion of other religious trends in Judaism, Conservative and Reform, which have only a handful of congregations, mostly composed of recently arrived immigrants belonging to those trends in the countries of their origin.

A second factor determining the complexion and the functions of the rabbinate is the establishment of the twin Orthodox chief rabbinate (Ashkenazi and Sephardi) which are state appointments, and similar twin chief rabbinates in the

larger cities. These local rabbinates and chief rabbinates are administered by the local religious councils, which are nominated through a complicated system of political party representation and the Ministry of Religious Affairs, and it is to all intents controlled by the ministry. These councils consist of Orthodox Jews. All appointments of rabbis must be confirmed by the chief rabbis and the Ministry of Religious Affairs.

A third factor is the fact that almost without exception the *rashei yeshivot*, who exercise a powerful influence in Israel, as well as the other rabbis who belong to the Agudat Israel (to which the *rashei yeshivot* also mostly belong), regard the National Religious Party and the chief rabbis who owe their appointments to their support as tending toward heterodoxy, a charge which they are at great pains to disprove or dispel. As a result, they are unduly apprehensive of any move which might be regarded as progressive or "reform." To these considerations must be added two others. The Ashkenazi rabbinate continues wholly the tradition of the classical Eastern European rabbinate, and the new incumbents to the rabbinate are wholly the products of the yeshivot, while the Sephardi rabbinate equally continues in their old traditions. Lastly, the synagogue in Israel is, with only a handful of exceptions, not a congregational entity with fixed membership but a place for worship and study.

All these factors add up to the distinctive features of the rabbinate and the functions of the rabbis in Israel. Next to the chief rabbi the hierarchy consists of the *dayyanim* of the Supreme Bet Din of Appeal, followed by the *dayyanim* of the district courts. They are classified as civil judges with the emoluments and privileges of judges, and their functions are wholly judicial and not pastoral. Next in importance, and in receipt of salaries from the religious councils, are a host of rabbis who act as religious functionaries with specific and limited duties such as inspection of *kashrut*, of *mikva'ot*, of the *eruv*, of the adherence to the various agricultural laws, etc. They also, by nature of their functions, perform no pastoral duties. Next in the scale come district rabbis, also appointed by the religious councils. In theory they are charged with the welfare of the community within the district over which they have been appointed, but with few exceptions they regard their position as a sinecure. Lowest on the scale come, what in theory is the nearest approach to the Western rabbi, the rabbi of a synagogue. In the absence of a regularly constituted congregation, however, and with no official source of income, they are financially the least rewarded. Few synagogues pay anything approaching a living wage to these rabbis. They mostly depend upon one of the other rabbinic functions referred to for their livelihood, and their appointments largely commence as de facto ones which sometimes develop into uneasy de jure ones. In the absence of the congregational unit with its duly paid-up membership, and the consequent lack of personal bond between rabbi and worshiper, there is nothing in the rabbinate in Israel which approaches the pastoral aspect of the work of the modern rabbi. Marriages are performed by duly appointed officials of the local religious councils, funerals by the various *hevra*

kaddisha organizations. Visiting the sick is not regarded as the function of the rabbi of a synagogue; cultural activities apart from the *shi'urim* in rabbinics are undertaken by other agencies, as is youth work and philanthropic activity. The virtual nonexistence of regular preaching should be noted.

The cumulative effect of this situation is that the Western-trained rabbi even of Orthodox Jewry finds it hard to find a place in the rabbinate in Israel. Of all those who have immigrated few have been appointed to a rabbinical position in Israel, and most find their livelihood in other spheres.

RABBI BINYAMIN (pseudonym of **Yehoshua Radler-Feldmann**; 1880–1957), Hebrew journalist. Born in Zborov, Galicia, Rabbi Binyamin published his first essay in 1903, and in 1906 moved to London, where he joined J.H. *Brenner in the publication of *Ha-Me'orer*. Arriving in Palestine in 1907, he first worked as a laborer in Petaḥ Tikvah, then as secretary of Herzlia, the first Hebrew high school in Tel Aviv. He left

this position to join in the founding of kevuṭzat *Kinneret. In 1910 he moved to Jerusalem, taught at the Rehavyah Hebrew high school, and later at the Taḥkemoni religious school. After World War I he was active in the Mizrahi Party and edited the religious national monthly *Ha-Hed* (1926–53). In 1925 he was among the founders of the *Berit Shalom association, which advocated a binational state for Arabs and Jews.

Rabbi Binyamin published thousands of articles and essays, often expressing individualistic viewpoints. He did much to introduce Brenner and Agnon to the Hebrew reading audiences. His critical essays include surveys and analyses of the great figures of ancient and modern European civilization, Asian cultures, and modern Hebrew literature. His works include *Al ha-Gevulin* (1923) and *Parzufim* (2 vols., 1934, 1936), a volume of memoirs, *Mi-Zborov ve-ad Kinneret* (1950), and essays on writers and scholars, *Mishpehot Soferim* (1960) and *Keneset Hakhamim* (1961).

RABBINER-SEMINAR FUER DAS ORTHODOXE JUDENTUM, the Rabbinical Seminary for Orthodox Judaism, founded in 1873 in Berlin by Azriel (Israel) *Hildesheimer to promote *Torah im Derekh Erez* (the combination of loyalty to Judaism with awareness of modern culture and method). For the next seven decades rabbinic and lay leaders emerged from that institution whose influence extended over four continents. Throughout his career Hildesheimer had to fight opponents from the left and the right. He inspired his disciples by his life and learning. After having headed the seminary for 26 years, Hildesheimer was followed by David *Hoffmann, Joseph *Wohlgenuth, and Jehiel Jacob *Weinberg. The students attended classes both at the seminary and at the university, and the curriculum included Bible, Talmud, Jewish philosophy, and other subjects. Hildesheimer's faculty was made up of distinguished scholars. Among them were Jacob *Barth, Abraham *Berliner, Hirsch *Hildesheimer (son of the founder), Simon *Eppenstein, Moses Auerbach, and Samuel *Gruenberg. The seminary's annual reports (*Jahresberichte*, 1873–1915; 1935–36) contained a series of important scholarly studies by the members of its teaching staff. The seminary was the center of modern Orthodoxy, which combined loyalty to traditional Judaism with the recognition of the need for scientific method (most of the graduates obtained a doctorate in philosophy). Many graduates, among them Joseph *Carlebach and Leo *Deutschlander, attained continental fame through their educational work in Eastern Europe, while many others built *Torah im Derekh Erez* congregations in Germany, France, and beyond their frontiers. The seminary, which started as a German-Hungarian enterprise, was greatly enriched in its last two decades by two Lithuanian scholars on its faculty: Abra-

ham Elijah *Kaplan, who died at a young age, and Jehiel Jacob Weinberg, a great talmudist. In 1934 plans were prepared to transfer the seminary to Palestine, but the proposal had to be abandoned owing to the opposition of extreme Orthodox elements there to the concept of a modern rabbinical seminary. The institution closed in November 1938 shortly after the *Kristallnacht* pogrom. The greater part of its library was transferred to Tel Aviv. The principal fruits of the seminary's work was the training of German rabbis to counter the tide of religious liberalism.

RABBINICAL ALLIANCE OF AMERICA (Iggud ha-Rabbonim). Founded in 1942 as an association of Orthodox rabbis, the RAA “seeks to promulgate the cause of Torah-true Judaism through an organized rabbinate that is consistently Orthodox.” In its early years, most of its members were ordained by Yeshivah Torah Vodaath in Brooklyn. By 1965 the group had a membership of 250, of whom 100 occupied pulpits. In 2005 membership reached 834, of whom slightly more than half occupied pulpits. It has always been common for members of the RAA who occupy significant pulpits to also hold membership in the preexisting *Rabbinical Council of America (RCA). As early as 1949, there was discussion about an amalgamation with the RCA, which heightened during the RCA presidency of Theodore L. Adams and his counterpart at the RAA, Ralph Pelcovitz, yet nothing ever materialized from these discussions. At a joint press conference in New York City on December 3, 1954, the RCA and RAA teamed up to protest the Conservative movement's innovations regarding the *ketubbah* (marriage contract). This was noteworthy since the other major Orthodox rabbinic body, the Union of Orthodox Rabbis of the United States and Canada (Agudat ha-Rabbonim), refused to join the RCA in this endeavor. A defining feature of the RAA has been its refusal to recognize non-Orthodox streams of Judaism, although some of their rabbis are members of Jewish ecumenical bodies such as the New York Board of Rabbis. From its founding, the RAA has maintained its own **bet din* in Brooklyn, New York, headed (2005) by Rabbi Herschel Kurzrock, who was also the chairman of the RAA's halakhic committee. The RAA publishes an occasional periodical by the name of *Zikhron Meyer*. Since 1972 Rabbi Abraham B. Hecht has served as president of the RAA, although prior to the assassination of Yitzhak Rabin, Hecht called for the death of any Jewish leader who would concede portions of the land of Israel for peace. Later he expressed remorse for his comments.

RABBINICAL ASSEMBLY (RA), the international association of Conservative rabbis. The Rabbinical Assembly was founded in Philadelphia in June 1901, as the Alumni Association of the Jewish Theological Seminary, with Rabbi Henry M. Speaker as its first president. The name was changed to the Rabbinical Assembly in 1918, when graduates of other institutions were admitted as members. The RA, as it is known, functions on two levels – as a professional organization serving the needs of its members, and as an organization which seeks to promote the observance of Conservative Judaism, working closely with the Jewish Theological Seminary of America, the United Synagogue of Conservative Judaism, and other arms of the Conservative Movement.

In 2005, the organization had 1,564 members, 1,290 of them serving in the United States. Members served in 25 countries, with 151 in Israel, and 52 in Latin America. First admitting female rabbis in 1985, the group had 204 women members in 2005.

As a professional organization, the RA has always sought to improve the status of the Conservative rabbi; and its achievements have benefited the rabbis of other movements as well. Thanks to the efforts of its long-time executive director, Rabbi Wolfe Kelman, who served from 1951 to 1989, and his successor, Rabbi Joel Meyers, many rabbis now receive benefits such as pensions, medical insurance, and convention allowances. Working with other arms of the movement on the Joint Placement Commission, the RA has sought to create fair and standardized procedures for rabbinic placement. RA members serve not only as pulpit rabbis, but also as educators, academics, Hillel directors, and chaplains, and hold other positions in the Jewish community.

In seeking to promote the practice of Conservative Judaism and the study of the Torah, the RA has had an active publications program, headed from 1961 to 1994 by Rabbi Jules Harlow. It has published weekday, Sabbath, and holiday prayerbooks, a Passover *haggadah*, a commentary on the Torah, a Holocaust *Megillah*, rabbis' manuals, and other learned works that reflect the Conservative ideology. Through its Law Committee, the RA has sought to grapple with halakhic issues such as the plight of the **agunah* (deserted wife), the observance of the Sabbath and the dietary laws under modern conditions, and the role of women in the synagogue. At the start of the 21st century, the RA was also dealing with the issues of outreach to intermarried families and the role of homosexuals in Jewish life.

[Robert E. Fierstein (2nd ed.)]

RABBINICAL CONFERENCES. The idea of a *synod to provide authoritative guidance and meet the current needs of Jews in the era of *Emancipation led to the holding of rabbinical conferences in Germany in the mid-19th century. A conven-

tion was called by Abraham *Geiger in Wiesbaden in 1837 to discuss his proposals for *Reform, but had no practical results. Subsequently a conference initiated by Ludwig *Philippson met in Brunswick in 1844, and was attended by 25 Reform rabbis, including Geiger and Samuel *Holdheim. However, no substantial resolutions were passed, and the conference was attacked by all sectors: the Orthodox protested against the rejection of Jewish tradition, Philippson regretted the theorizing instead of practical solutions, and Zacharias *Frankel criticized the discussions and results. Following the conference 116 Orthodox rabbis declared that nobody could “abrogate the least of the religious laws.” In 1845, 31 rabbis, this time including Frankel, met at Frankfurt on the Main. As laid down in a memorandum delivered to the Frankfurt conference by three representatives of the Reform Association of Berlin, their stated purpose was to strengthen Judaism by rescuing it from legalistic stagnation and adapting it to modern needs, thus making it attractive to the new generation. When Frankel was overruled on the retention of Hebrew prayers, he withdrew. Heinrich *Graetz expressed a similar view. Other proposed reforms referred to the messianic portions of the prayers, the supplication for the restoration of sacrifices, the triennial cycle of Torah readings, and the use of the organ in the synagogue. A third conference took place in 1846 at Breslau, attended by 25 rabbis only. While Holdheim suggested that the Sabbath should be transferred to the civil day of rest, the majority was satisfied with minor reform in Sabbath observance, and the abolition of the second day of holidays and many mourning customs. Several resolutions dealt with the supervision of circumcision from the hygienic aspect. A number of radical reformers, dissatisfied with the conservative line taken by the conference, demanded that laymen should participate in future meetings.

In 1868 24 rabbis met in Kassel to prepare such a “synod” and to decide on a number of liturgical reforms. The “synod” assembling at Leipzig in 1869 consisted of 49 lay and 34 rabbinical delegates from 60 communities. Presided over by Moritz *Lazarus, it dealt with Jewish education, liturgical reforms, and other questions. The Orthodox and Frankel’s sympathizers were not represented. Two years later, the “synod” of Augsburg was attended by representatives from only 30 communities. Its resolutions dealt with marriage, *halizah*, and other subjects, but the stand taken on the Sabbath was more conservative than before. Again, 133 Orthodox rabbis published a strong protest, asserting that the participants were unfit to hold religious office. Neither “synod” came up to the expectations of its own promoters, and no further meeting of this kind was convened in Germany.

[Zéev Wilhelm Falk]

Nevertheless, agitation for synods continued especially in America, by Isaac Mayer *Wise in 1881, and at three sessions of the Central Conference of American Rabbis in 1904–06. Solomon *Schechter, leader of U.S. *Conservative Jewry, opposed synods as encouraging sacerdotalism and creating the danger of a schism within Orthodoxy. The Reform movement in

the United States, nevertheless, adopted in 1887 its Pittsburgh *Platform, laying down the principles of classic Reform. It reversed its stance in 1937 in Columbus, when it reaffirmed its adherence to Hebrew, Zionism, and other traditional values. In 1961 the Federation of *Reconstructionist Congregations and Fellowships, at a conference of lay and rabbinic delegates, adopted a guide for Jewish ritual in line with their humanist philosophy of Judaism. Among certain Orthodox circles there has been agitation for a Sanhedrin to legislate for world Jewry, but the difficulties involved appeared insuperable.

RABBINICAL COUNCIL OF AMERICA (RCA; Histadrut Harabanim). Founded in 1923 (as the Rabbinical Council of the Union of Orthodox Jewish Congregations), in 1935 the RCA merged with the Rabbinical Association of the Rabbi Isaac Elchanan Theological Seminary (Yeshiva University) and took its present name. The goal of the RCA is “to advance the cause and the voice of Torah and the rabbinic tradition” by “promoting the welfare, interests, and professionalism of Orthodox rabbis all around the world”; it is the rabbinic counterpart of the Union of Orthodox Jewish Congregations. The RCA has offices in New York and Jerusalem and sponsors various yeshivot and educational institutions in Israel. In 2005 the RCA claimed an international membership of over 1,000 members, of whom 600 occupied pulpits and one hundred were in chaplaincy, the remainder were in educational or communal positions. Most of its members are graduates of the Rabbi Isaac Elchanan Theological Seminary.

Since 1960, the RCA has sponsored the independent Beth Din of America, which, in addition to dealing with questions of personal status, also addresses issues arising from commercial disputes and keeps records of prenuptial agreements that are promulgated through the RCA. In 2005 The Beth Din of America was headed by Rabbi Gedalia Schwartz and its director was Rabbi Jonathan Reiss. Until his death in 1993, Rabbi Joseph B. *Soloveitchik was the “guiding spirit and mentor” of the RCA and chaired its *halakhah* commission, which Rabbi Asher Bush was coordinating in 2005. While eschewing inter-religious activities that include discussions of theology, the RCA has sent representatives to the International Jewish Committee for Interreligious Consultations (IJCIC), which is under the auspices of the World Jewish Congress. The RCA publishes two journals, a quarterly, *Tradition* (1958–) and a halakhic journal in Hebrew, *Hadarom*. (1957–). From 2002 the executive vice president of the RCA was Rabbi Basil Herring.

[Asher Oser (2nd ed.)]

RABBINICAL LITERATURE, a modern scientific term used to describe the literature of *halakhah* which is based upon the Oral Law, its traditions and methodology in its different periods, its changing languages, and its varied forms. This definition excludes from its purview such sacred literature as liturgy, *piyyutim*, and other liturgical compositions, pure Kabbalah works, philosophical bible exegesis, theology, and grammar. On the other hand it frequently includes what appear at first sight to be purely secular topics, such as the works on astronomy – inasmuch as their aim is to clarify topics connected with the calendar, such as laws of the determination of the New Moon and its intercalation; “chronologies of the *tannaim* and *amoraim*”, which are strictly chronographies, but whose main purpose is to determine according to which authority the *halakhah* is to be established; homiletic ethical and aggadic works, which aim at giving the practical *halakhah* and guidance for everyday living, and other similar works. Despite this, or perhaps because of this, the term also includes books on the laws of the Temple and its appurtenances, the laws of ritual cleanness and uncleanness, which will be actual only in the messianic future, since their purpose was regarded as “practical” in view of the ever-present faith in the imminent redemption. Combined with this was the concept of “interpret and receive reward,” i.e., the study of Torah for its own sake without regard to its application to practical life, as an independent discipline which was part of the concept of *talmud torah*, and therefore this literature too is included in the term “rabbinical literature.” It must be clearly emphasized that, despite the formal name, the term does not indicate books written by rabbis but works whose subject matter and aim belong to the sphere that concerns rabbis in their function as teachers of Judaism. Works on grammar may have an important halakhic bearing, for instance in connection with the laws of reading the Torah, but in most cases such was not the intention of their authors, whose purpose was primarily to teach grammar for its own sake or as an aid to biblical exegesis. These books are therefore not included in the term “rabbinical literature.” The name rabbinical literature is also used in an entirely different sense since it also describes literature written by Rabbanites against the *Karaites in all eras – even if it deals with theology or other non-halakhic topics.

Rabbinical literature can be divided, according to its contents, into several basic categories: exposition of the *Talmud; *responsa; codes and their commentaries; *minhagim; halakhic monographs; rules of conduct and ethical wills, and the like. This formal division, however, was adopted in practice long after the inception of this literature. The term is commonly accepted to indicate every category of this literature as defined above, from Saadiah *Gaon, who was the first rabbinical scholar to write “books” in the present sense of the word. According to this usage rabbinical literature constitutes a stage following the period of talmudic and midrashic literature, which, as is usually accepted, came to a close at the end of the geonic period. No books in the present sense of the word were written, however, from the close of this period until Saa-

diah, with the possible sole exception of the *She'iltot* of Aḥa of *Shabḥa. Saadiah was also a very prolific writer, and the many fragments extant of his various works bear evidence to his creativity in every branch of rabbinical literature.

The formal division begins to emerge in the 11th and 12th centuries, and, with the general development of literary expression, it became progressively more refined and defined. In its historical development rabbinical literature may be divided into three periods:

- (1) The geonic period;
- (2) The period of the *rishonim*;
- (3) The period of the *aharonim* (the subdivisions of each period are dealt with under their separate headings).

In its fate and its preservation in manuscripts in libraries or in the *genizah*, there is not much difference between rabbinical literature and other branches of Jewish literary creativity. It is likewise very difficult to indicate lines of development which are unique or specially characteristic of it. Research into rabbinical literature, as a branch of the study of Jewish literature in general, is still in its infancy, and the basic groundwork toward it has not yet been done. There are as yet no reliable and comprehensive catalogs of Hebrew manuscripts in the different libraries and erroneous identification of books belonging to it is still widespread.

[Israel Moses Ta-Shma]

RABBINICAL SEMINARIES. Until the first quarter of the 19th century the only source for the training of rabbis was the *yeshivot. These were not rabbinical training institutions in the strict sense, but institutions of higher rabbinic learning designed for the education of the people as a whole. The curriculum was thus strictly limited to Talmud and its commentaries and the codes. A student wishing to enter the rabbinate obtained *semikhah* and thus became an ordained rabbi.

With the advent of the era of emancipation and the consequent demolition of the ghetto walls in Western Europe, and under the influence of the *Haskalah and the development of the Wissenschaft des *Judentums, the demand became increasingly heard for the establishment of institutions specifically for the training of rabbis. These institutions would produce a new type of modern rabbis, equipped with a thorough mastery of the vernacular and a knowledge of both secular and extra-talmudic Jewish subjects. An added incentive to the establishment of such institutions was the regulation enacted by Franz Joseph I of Austria-Hungary in 1848 requiring secular knowledge of an academic standard for rabbis in his country.

The proposed seminaries were bitterly contested by the rabbis and heads of the yeshivot of the old school as a dangerous innovation, with the result that where they dominated the religious life of the community these seminaries never struck root and consequently they played no significant part in Russia and Poland. This opposition, which still exists, is the cause of the curious fact that in Israel there is no institution specifically set up for the training of rabbis. It was only

in Central and Western Europe and in the United States that such seminaries flourished.

The first rabbinical seminary was the Instituto Convitto Rabbिनico, established in Padua by I.S. *Reggio in 1829, in which Lelio Della *Torre and Samuel David *Luzzatto were the first teachers. It served as the model for all future seminaries. It was closed in 1871 but reopened in 1887 in Rome as the Collegio Rabbिनico Italiana. In 1899 it moved to Florence where it remained until 1932, when again it moved to Rome remaining there until it was closed down under the Fascist regime in 1939. In 1928 a branch was established for Sephardi communities on the Island of Rhodes, but it was also closed down at the outbreak of World War II.

The Ecole Centrale Rabbिनique was established in Metz in 1830 and a year later it received a state subsidy. It moved to Paris in 1859 as the Seminaire Israelite de France and later was given the name of the Ecole Rabbिनique. Probably the most famous rabbinical seminary in Europe was the Juedisch-Theologisches Seminar of Breslau founded by Zacharias *Frankel in 1854. Among its professors were H. *Graetz, Immanuel *Loew, J. *Guttman, and Yizhak *Heinemann. Jews' College was founded in London in 1855. Its most prominent principals were Michael *Friedlaender (1865–1907), Adolph *Buechler (1907–39), and Isidore *Epstein (1948–62). In Berlin the Juedische Hochschule was established in 1872. Its name was changed to the Lehranstalt fuer die Wissenschaft des Judentums in 1883, but it resumed its old name in 1920. A year after the establishment of the Hochschule the strictly Orthodox Rabbिनer Seminar fuer das Orthodoxe Judentum was established in Berlin by Azriel *Hildesheimer, and is usually referred to as Hildesheimer's Seminar.

The bitter opposition of Hungarian Orthodox circles to the establishment of a rabbinical seminary in that country caused a delay in its opening for over a quarter of a century. In 1850 the Emperor Franz Joseph I devoted a million talers, derived from the fine imposed upon the Jews of Hungary for their participation in the rebellion of 1849, to a fund for Jewish education, but the rabbinical seminary was not established until 1877 in Budapest. Among its prominent teachers were Wilhelm *Bacher, M. *Guttman, and I. *Goldziher. The Israelitisch-theologische Lehranstalt of Vienna, established by A. *Jellinek in 1862, did not make much progress until 1893 when it moved to the Jewish quarter of Leopoldstadt and Adolph Schwarz was appointed its rector.

An outstanding example of the complete failure of a rabbinical seminary was provided by Poland. Established in 1826 and strongly supported by the government, in the 36 years of its existence, it did not produce a single rabbi. The fact is not surprising since both its principal, A. *Eisenbaum, and its main teacher, A. *Buchner, were pronounced assimilationists. Buchner actually published a book, *Der Talmud in seiner Nichtigkeit* ("The Worthlessness of the Talmud", 1848). Not much more successful was the Russian seminary which was opened in 1847 in Vilna and in Zhitomir. It was regarded with suspicion by the Jews as an instrument of the govern-

ment's anti-Jewish educational policy and was closed down in 1873.

On the other hand the *Makhon le-Ḥokhmat Yisrael*, whose name was later changed to the *Makhon le-Madda'ei ha-Yahadut*, established by M. *Schorr, the chief rabbi of Warsaw and its first principal, served as the rabbinical seminary for Poland until the outbreak of World War II.

The United States has rabbinical seminaries for all three trends in religious Jewry. The first to be established, the Reform Hebrew Union College, was founded by Isaac Mayer *Wise in Cincinnati in 1875. In 1922 Stephen *Wise established the Jewish Institute of Religion in New York which merged with the Hebrew Union College in 1950.

The rabbinical seminary of the Conservative movement, the Jewish Theological Seminary, was established in 1886. Orthodox seminaries are represented by the Rabbi Isaac Elchanan Theological Seminary, later a unit of the Yeshiva *University, established in 1897; and the Talmudical College of Chicago, in 1922. As a result of the Holocaust, all the seminaries in Central and Eastern Europe, with the exception of the Budapest seminary have ceased to exist. The only seminaries still functioning in Europe are the Ecole Rabbिनique, Jews' College, and the Reform Leo Baeck College in London.

See also the articles on the individual seminaries.

[Louis Isaac Rabinowitz]

RABBINICAL TRAINING, AMERICAN.

Background

When the *Hebrew Union College and the *Jewish Theological Seminary were established in the late 19th Century as the first institutions for the education of rabbis on American soil, the founders did not establish these schools of higher learning in a vacuum. Men like Isaac Mayer Wise of Hebrew Union and Sabato Morais of JTS did not confront the task of imagining a modern rabbinical seminary *de novo*. Instead, their aim was to house "places of Jewish learning" comparable to the models provided by schools such as the Positive-Historical Breslau Jewish Theological Seminary (see Breslau *Juedisch-Theologisches Seminar), the Liberal Berlin *Hochschule fuer die Wissenschaft des Judentums, and the Orthodox Berlin Rabbinerseminar (see *Rabbिनer-Seminar fuer das

Orthodoxe Judentum) that had been established in Europe just years before.

All of these schools – even the Orthodox Rabbinerseminar – were marked by a dual devotion to classical Judaica and rabbinic sources on the one hand and modern critical scholarship on the other. This twofold commitment to classical rabbinic sources and the canons of academic inquiry reflects an era and intellectual setting in which it was deemed imperative that texts be understood and interpreted in light of the historical contexts that formed them.

While this ethos did not take hold at the Orthodox Rabbi Isaac Elchanan Theological Seminary (RIETS) of Yeshiva University in New York, this approach did shape the curricula and courses of training designed for rabbis in the American Reform and Conservative movements for the next 75 years. Indeed, this heritage remains prominent at JTS and HUC-JIR as well as other liberal rabbinical schools even today. Events and currents from the mid-1970s, however, have challenged the exclusive monopoly this particular vision previously enjoyed in shaping rabbinical education in North America and these events and currents have changed and informed the nature of rabbinical education for North American rabbis across denominational lines at the onset of a new century. A few words about these currents and patterns, as well as an appreciation of the western European heritage mentioned above that shaped the initial manifestations of the American rabbinical seminary, will provide a fitting backdrop and framework for the description and analysis of rabbinical education for the North American Jewish community at the onset of the 21st Century.

In the 1960s and 1970s, many of the sociological factors that became seminal in shaping the contours of contemporary American Judaism today started to emerge. The American Jewish community was no longer an immigrant community seeking to adjust to the United States. Old ethnic patterns that formerly preserved and divided the Jewish religious community were no longer present and the rivalry that had existed between American Jews of German and Eastern European descent was no more than an historical memory – if that – for most American Jews.

Jews were now completely accepted into American life, and Jews of all stripes and ethnic backgrounds were now full participants in the cultural and economic spheres of the United States. As a result, the attitudes and beliefs that had so sharply divided Reform from Conservative Jews in the first half of the 20th century were now blurred for many of these people. A permeability was emerging, one that would allow for crossover between the disparate movements.

Larger societal developments going on in the greater American culture also promoted this crossover. With the rise in the 1960s of what came to be known as “the new ethnicity” in the larger culture, an expression of ethnic allegiances unprecedented in this nation’s history appeared, and a religious revival and a renewed search for religious and spiritual meaning accompanied this expression. These forces had a decisive

impact in promoting a renewed interest in Judaism among many, as did the exhilarating 1967 Israeli victory in the Six-Day War. Trips to Israel and programs there now became a staple of American Jewish life. All these dynamics propelled many Jews to seek out Jewish community and religion in an intensive manner that was unknown to their parents earlier in the century.

The *Havurah Movement of the late 1960s and 1970s ran parallel to and was a result of these developments, and the appearance and influence of what is today called “Jewish renewal” owes its origins to those years. This “movement” envisioned a non-hierarchical brand of Judaism and promoted an “expressive individualism that featured the activism of all participants.” The inroads of feminism in organized Jewish religious life also appeared for the first time in American Jewish religious life. Jewish day school attendance in the United States rose as well, and the explosion of Jewish studies programs in American universities also began at this time. This phenomenon has caused there to be an ever-burgeoning number of serious academics devoted to the many fields of Jewish Studies. A number of these scholars are the products of previous rabbinical training. The opportunity for employment academia now provides these rabbis contrasts sharply to the reality that obtained in earlier generations, for rabbis who were scholars and gravitated to an academic environment prior to the 1960s were generally compelled either to choose Hillel or the pulpit as there were few academic positions available. Today the opportunities abound for rabbis and non-rabbis alike. Many Jewish Studies scholars today are not rabbis, and many among this non-rabbinic group now populate the teaching ranks of Jewish religious institutions as well as the secular academy.

At the same time, the reality of acculturation among American Jews fostered Jewish assimilation. As Jews became fully accepted by gentiles as social equals and as traditional Jewish attitudes that opposed exogamy weakened, intermarriage rates soared. While significant numbers of Israeli, Russian, Iranian, and South African Jewish immigrants came to the United States during the latter years of the 20th Century, they entered a well-established and fully organized American Jewish community that was largely composed of fourth-, fifth-, and sixth-generation American Jews who are an integral part of every sector of American society.

It is small wonder that Charles Liebman, in his influential landmark study, “The Training of American Rabbis,” written in 1968, would give voice to the need for change in rabbinical education brought on by all these transformations. The events and trends that were then unfolding led him to critique the contemporary state of rabbinical education in the United States for its inability to inculcate practical rabbinical skills in its graduates. While Liebman acknowledged that many of the graduates of these schools were well educated Jewishly, all too few were able to explain the relevance of Jewish knowledge to their congregants nor were they able to inspire and guide their laity spiritually and religiously in this transformed setting. The point of his critique was not to assert that classical

Jewish knowledge was not vital for the modern rabbi. Indeed, no Jewish educational institution or seminary would dissent from this posture. All are agreed that such knowledge must serve as the foundation for the authority and authenticity of the rabbi. However, American rabbinical training centers at the current moment do resonate to his call that this knowledge be taught in such a way that modern rabbis can apply this knowledge to the spiritual life and interests of modern persons. As Ismar Schorsch, the retiring chancellor of Jewish Theological Seminary has stated, the changed world of contemporary America brought on by all the factors enumerated above, has signaled a move in the present day from an accent upon historical context to an emphasis upon the immediacy and spiritual intensity associated with text devoid of content in the education and formation of American rabbis. The cultural, religious, and intellectual climate of the day has caused the institutions charged with educating rabbis for the Jewish community of 21st-century America to restructure their programs as they rethink their priorities and reshape their educational offerings in light of these concerns and this reality. This survey and analysis of rabbinical education in America at the turn of the 21st century will indicate how this is so; elements of discontinuity as well as continuity in the training of American rabbis and the curricula of the institutions and schools that educate American rabbis will be highlighted in this essay.

Conservative Institutions

JEWISH THEOLOGICAL SEMINARY OF AMERICA. In turning at the outset of this survey to the Jewish Theological Seminary of America of the Conservative Movement, it must be said that devotion to Talmud and classical rabbinical texts taught in accord with a modern critical-academic spirit still resides at the heart of the curriculum – just as it has since the institution was established in 1886. Indeed, JTS affirms a long seminary tradition of academic rigor and devotion to Jewish scholarship as a religious value. The seminary remains committed to the belief that knowledge of rabbinic literature *and* mastery of academic scholarship remain the *sine qua non* that establishes the grounds for exercising legitimate rabbinic leadership. Talmud constitutes the central core of the curriculum, and courses in other areas of rabbinic literature as well as in academic disciplines such as history, literature, and philosophy occupy the bulk of the course of instruction throughout the years spent in study at JTS.

There was a period in American Jewish history when most of the students at JTS came from Orthodox Jewish homes and their backgrounds in Talmud were strong and their commitment to Jewish observance could be taken for granted. This is not the case today, and JTS increasingly accepts students who lack the knowledge and preparation in Judaica that was true of earlier generations. While Solomon Schechter Day Schools, Camp Ramah, and United Synagogue Youth provide fertile training grounds for many Conservative movement rabbis and professionals, their level of commitment to *hala-*

khah cannot always be assumed. Consequently, JTS stipulates that candidates for admission to the rabbinical school are “expected to be living according to Jewish tradition.” This means that “*mitzvot* must guide the lives of the students,” and while JTS – like other non-Orthodox rabbinical programs – admits women to rabbinical study, the women are obligated – no less than the men – to observe “even those *mitzvot* from which women have traditionally been exempt – *tallit*, *tefillin*, and *tefillah*.” However, there is an acknowledgement “that persons may be in the process of deepening their religious commitment” as they apply, and JTS encourages such students to explore JTS as an option for their rabbinic careers.

On an academic level, students are required to have completed at least the equivalent of four semesters of college-level Hebrew prior to their admission, and they must be prepared to enroll in a six-year course of study. For students with minimal background in Jewish sources, the first year is labeled as *Mechinah* (Preparation). The student is then introduced to the richness and depth of the Jewish textual tradition and required to master ten folios of Talmud prior to admission to the second year of study. Students with advanced backgrounds in Talmud at the time of admission can proceed – depending upon their talmudic skills and erudition – immediately to the second or third year.

What is noteworthy at JTS is that the curriculum now pays significant attention – particularly in the final years – to the task of “spiritual formation” and the rabbi is consciously trained for the role he/she will play as a mediator of the tradition for those whom he/she will serve. There is a recognition that scholarly goals alone are no longer the most appropriate way to educate rabbis for their future vocation, one in which the rabbi will be asked to mediate the knowledge of Torah to their congregants so that these Jews can make the legacy of the tradition relevant to their lives as contemporary American Jews. This requires the modern Conservative rabbi to “develop a more collaborative style of leadership,” one that will demand them to be “leaders of inquiry,” not “suppliers of answers.” Bible, history, electives, and professional skills are thus given much more emphasis in the prescribed course of study at JTS than was true in earlier generations, and the administration recognizes that the modern Conservative rabbi “is a member of a profession dedicated to addressing the needs of the individual.”

This means that JTS aspires to devote serious attention to the inner religious growth of the student, and seminars and internships during the last two years of study seek to allow the student to develop the ability to teach, inspire, and transform the lives of others by articulating a compelling vision of Jewish life. Students should serve as mediators of tradition, and the curriculum is now designed to foster the analytical-synthetic skills of the students. While the vast majority of courses remain devoted to Jewish texts, the description of rabbinic training at JTS today as reflected in catalogues and articles by JTS professors and staff indicate that in accord with the changing spirit of the time there is an effort to have students “grow in

wisdom and piety” as well as knowledge as they prepare for the rabbinate.

THE ZIEGLER SCHOOL OF RABBINIC STUDIES AT THE UNIVERSITY OF JUDAISM. Of course, JTS no longer has a monopoly on Conservative rabbinical ordination. The Ziegler School of Rabbinic Studies at the University of Judaism (UJ) in Los Angeles now serves as a second center for Conservative ordination. While the *University of Judaism housed the *Mechinah* program of JTS for many years, the UJ expanded to a full rabbinic program in 1995. The parallels between the course of study at the Ziegler School and JTS are many. Both programs emphasize the study of Talmud and classical rabbinic texts. However, the UJ is distinct in that the attempt to sensitize the rabbinical student “to the affective and spiritual dimensions of Jewish identity and faith” is even more pronounced than at JTS. There is also a decided emphasis on preparing the students to provide such an approach to the laypersons they will one day serve. Consequently, all UJ students are required to take a ten-hour per week Senior Internship that is integrated into a Senior Seminar co-taught by a Rabbi/M.B.A. and a congregational rabbi so that the graduates are prepared to do the actual work of a congregational rabbi. The congregational rabbinate is thus privileged as the normative option for UJ students in a way that it is not for students at JTS. Finally, classes in Kabbalah and *hasidut* are required for all UJ students. This literature involves study of texts and genres that focus on the mystical and personal elements in Jewish tradition, and their assignment as a required part of rabbinical training surely reflects the intense personalism and turn towards spirituality that marks American religion today.

THE INSTITUTE OF TRADITIONAL JUDAISM. The Union for Traditional Judaism established The *Institute of Traditional Judaism (ITJ), also known as the *Metivta*, in 1990 in Monroe, New York. The founders of ITJ were drawn principally, though not exclusively, from graduates and faculty of JTS who were disturbed by the decision of JTS to ordain women as rabbis. They believed that the ordination of homosexuals would soon follow. Former JTS professor of Talmud David Weiss *Halivni, who moved to a position at Columbia University in the wake of his not being appointed as rector of JTS after the death of his mentor Professor Saul Lieberman, was the principal academic-religious spirit behind the establishment of ITJ, and he continues to serve as rector. Rabbi David Novak of the University of Toronto as well as Sephardi Hakham Isaac Sassoon from the Syrian Community are members of the *Metivta* Faculty, whose members range from graduates of the *Mir Yeshiva* and the Rabbi Isaac Elchanan Theological Seminary of Yeshiva University to ordinands of JTS. The ITJ motto is, “*Emunah zerufah ve-yosher da’at* – Genuine Faith and Intellectual Honesty.” ITJ strives to create rabbis who are halakhic traditionalists. At the same time, the *Metivta* opposes an Orthodox Judaism that is seen as becoming increasingly “triumphalist and separatist.” ITJ therefore seeks to create rabbis who

will “be fully committed to halakhic observance while facing the non-halakhic community with warmth and willingness to work with all Jews regardless of affiliation.”

The ITJ, in keeping with its Conservative Movement roots, is comfortable with the critical method of Talmudic study employed by Rabbi Halivni, who said that “our library will have Wellhausen in it, but not on the top shelf.” The leadership sees the school as a transdenominational halakhic rabbinical school. In 1995 the school moved to Teaneck, New Jersey, and in 2005 opened a satellite site on the Upper West Side of Manhattan. In addition to rabbinical ordination, the school offers an MPA in Jewish communal service in conjunction with Fairleigh Dickinson University as well as a *mekhinah* or preparatory program in textual study for men and women.

Reform Institutions

HEBREW UNION COLLEGE-JEWISH INSTITUTE OF RELIGION. The oldest rabbinical college in North America, the Reform seminary Hebrew Union College-Jewish Institute of Religion (HUC-JIR) was formed from a merger of Hebrew Union College (1875) in Cincinnati with the Jewish Institute of Religion (1922) in New York in 1950; it has been informed by the same contemporary cultural-religious forces and sentiments that have influenced the parameters of the JTS and UJ curricula described above. The College-Institute has engaged in a Core Curriculum Project that has caused the curriculum to focus on three key areas – academic, professional, and spiritual – in the education of a new generation of Reform rabbis. While this curriculum has been designed to “foster greater appreciation of practical skills,” every effort has been made to strengthen the “academic integrity” of the course of study. For the first time in the history of HUC-JIR, students cannot be admitted unless they have completed at least two years of college-level Hebrew. It is hoped that this minimal level of Hebrew competency for entering students will allow them to advance to “a scholarly mastery of sources.”

The HUC-JIR course of study for the rabbinate is five years, and the first-year student is required to study at the HUC campus in Jerusalem. The College-Institute is absolutely committed on an ideological level to the notion of Jewish peoplehood, the first year program in Israel is designed to instill – in addition to Hebrew and textual skills – a sense of solidarity with the Jewish people and the reborn Jewish state. Commitment to **kelal Yisrael* (the Jewish community as a whole) is viewed as a prerequisite for the rabbinic office. While students with little Judaica background are often accepted, HUC-JIR is in the process of raising its requirements in this area (beyond the Hebrew requirement mentioned above) and the establishment of a *mekhinah* year was being contemplated. All students who will be ordained must possess suitable qualities of “character, leadership, personality, and academic capacity” to serve in the rabbinical office, though unlike JTS and in keeping with the non-halakhic character of the Reform Movement, there are no minimal requirements for observance that are demanded.

While the current curriculum of HUC-JIR does display a greater emphasis on classical textual competency than previous curricula did, it would be incorrect to assert that the HUC-JIR curriculum – even as it is refashioned – privileges Talmud. Students can often leave with as little as three classes in Talmud, as required rabbinic literature is construed much more broadly to include commentaries, liturgy, Midrash, and responsa than it would be in more traditional settings. Bible remains a central subject in the curriculum of the College-Institute and the academic orientation of the program is reflected in the scholarly thesis that is required for ordination.

Interestingly, the professors at HUC-JIR today are drawn from every part of the Jewish world, and a number of faculty have received their rabbinic and academic training at both Yeshiva University and the Jewish Theological Seminary as well as secular universities throughout North America, Europe, and Israel. These professors are asked to help equip their students with “the ability to elicit religious values and meanings from the texts they study.” Furthermore, there has been a concerted effort to foster the individual spiritual growth of the student as well as the student body as a whole. After all, the student will be striving to create such community after graduation. This necessitates spiritual growth in the seminary years, and the creation of a spiritual community during this period can serve as a model of what the student can aspire to create in the years ahead. In articulating these concerns and themes, HUC-JIR reflects the educational ethos and cultural-spiritual concerns of the day.

Reconstructionist Institution

Such concerns are present at the *Reconstructionist Rabbinical College (RRC) as well. The RRC asserts that its curriculum “embodies a new approach to rabbinic education. The approach understands rabbinical studies as necessarily combining aspects of academic study with a personal encounter with Judaism.” Citing the work of Rabbi Mordecai *Kaplan, the RRC contends that a rabbinical school should furnish its students with extensive knowledge of the Jewish heritage, of human nature and social conditions, and with the ability to synthesize situations with which they will have to deal as rabbis. In so doing, the RRC consciously rejects the ideal of rabbis as authority figures. Instead, the rabbi is envisioned as a guide who will help people explore Jewish life for themselves. The rabbi, as part of the community, will work in an egalitarian spirit of cooperation with others to shape the future of Jewish life. Indeed, the RRC teaches its rabbis “to work closely with lay people to build democratic communities.” While there is undoubtedly a unique Reconstructionist emphasis at play at the RRC, the themes that are articulated in these descriptions echo comparable accounts found at JTS, UJ, and HUC. The influence of larger cultural trends on all these major institutions of non-Orthodox rabbinical education is readily apparent.

Academically, the program is based on the Reconstructionist notion of Judaism as an evolving, dynamic religious civilization. Each year focuses on biblical, rabbinic, medieval,

modern, and contemporary eras of Jewish civilization in succession. By studying the texts, history, thought, and culture of the Jewish heritage in this way, the student gains an appreciation of the constantly evolving nature of Jewish belief and practice. There is also a practical rabbinics program with three main components – course work, fieldwork, and group supervision. The RRC offers five programs of study in this program, and encourages the student to specialize in one – congregational life; campus and Hillel; chaplaincy in hospital, hospice, and geriatric centers; community organization; and education. For people who specialize in education, there is a joint master’s degree in education from *Gratz College. The curriculum is designed to have the students appreciate and understand the nature of a rapidly changing world. The RRC is a self-described “warm, caring” community, and its rabbis are educated for the entire Jewish community – in both the synagogue and beyond. In its early years, the RRC insisted that its students pursue a Ph.D. at either Temple University or the University of Pennsylvania alongside their course of study for ordination. However, the demands this imposed on the students were soon seen as too strenuous and such academic training and aspirations were seen as unnecessary for the rabbinic careers they were choosing. The notion of the scholar-rabbi that the American rabbinical seminary had inherited from their German seminary models was no longer culturally compelling.

Transdenominationalism and Spirituality

The dual themes of transdenominationalism and spirituality find strong expression in both the Rabbinical School at Hebrew College in Greater Boston (Newton Centre) (BHC) and the Academy for Jewish Religion (AJR) in California and New York.

RABBINICAL SCHOOL AT HEBREW COLLEGE IN GREATER BOSTON. Led by Rabbi Arthur *Green, a scholar of Ḥasidism, the founder of Havurat Shalom in 1968 during the era of Jewish renewal, and the former dean and president of the RRC, the Boston Hebrew College Rabbinical School has built upon the Hebrew College’s “84-year legacy of transdenominational Jewish studies.” Boston Hebrew sees itself as devoted to *kelal Yisrael* and notions of inclusion and spirituality. Indeed, BHC emphasizes that it accepts men and women, gays and heterosexuals, and it requires that candidates display “a love of Jews as well as Judaism.” Applicants must have a B.A. and three years of college Hebrew to qualify for admission. The standard program is five years, though BHC specifies that there is a possible *mekhinah* year for students who are in need of remedial work in Judaica and texts. All students are required to study for at least one semester and one summer in Israel.

The emphasis at BHC is upon the study of primary texts. However, these texts focus upon “themes of Jewish living and daily rabbinic practice,” and the curriculum is structured around cycles of Torah study and Jewish religious life. The school states that it is a blend of “academy and *yeshivah” –

formal academic study is combined with traditional *hevruta*-style learning. Emphasis is placed upon the historic contexts, but a personal religious point of view is cultivated in every class, and there is a strong emphasis on ḥasidic and kabbalistic sources. BHC hopes that the transdenominational setting will prepare rabbis for service in a wide variety of congregational and non-congregational settings, and the college intends to support its graduates should they apply for membership in particular denominations (including possible Orthodox *semikhah*).

ACADEMY FOR JEWISH RELIGION. The Academy for Jewish Religion in California is also designed to be transdenominational and successful completion of its program leads to the title “Rabbi and Teacher in Israel” as well as a Master’s Degree in Rabbinic Studies, for its graduates. The program is designed for five years of full-time study, with part-time options available. A supervised internship is required as well as an M.A. thesis prior to ordination. The school, in a manner reminiscent of HUC-JIR, intends to offer “in-depth studies in Bible, Hebrew, History, Liturgy, Philosophy and Theology,” as well as rabbinic literature. According to Rabbi Mel Gottlieb, dean of the Rabbinical School, the AJR attempts to revitalize Judaism and seeks to train rabbis who “reflect a deep respect for all denominations” and who engage in “outreach to the unaffiliated.” Its motto, “To serve as a bridge between the pillars of Judaism,” reflects the aspirations of its founders. The AJR in California also emphasizes spirituality by focusing on mysticism and spirituality and the classics of those traditions – Musar, Ḥasidic thought, and kabbalistic teachings.

Its sister institution, the Academy for Jewish Religion in New York, also seeks to train rabbis who have a deep understanding of all the streams of modern Judaism. There is a focus on “texts and tradition,” and there is an effort to cultivate “an appreciation for the historical forces that have shaped our people.” At the same time, there is a recognition that Jews in the contemporary period “are in search of meaning and authentic guidance in spirituality.” Therefore, considerable time and attention is devoted in the curriculum to “meditation and prayer,” in addition to courses in Bible, Hebrew, history, liturgy, and philosophy.

Orthodox Institutions

The Orthodox schools for rabbinic education are all centered on the intensive study of Talmud, and critical academic study is completely eschewed in virtually every one of them. Nevertheless, the institutions and programs that educate rabbis for the North American Orthodox rabbinate display a great deal of variety in their approaches and emphases, and their offerings are surely influenced by the larger environment of North America in ways that parallel the impacts this environment have upon non-Orthodox rabbinical settings.

RABBI ISAAC ELHANAN THEOLOGICAL SEMINARY. Rabbi Isaac Elchanan Theological Seminary of Yeshiva University (RIETS) remains the premiere rabbinical educational institu-

tion of Orthodox Judaism in North America. The curriculum is “firmly set in Talmud, Codes, and Halakhah,” and there is no attempt to introduce a critical approach to talmudic scholarship into its course of study. While the motto of Yeshiva University may be “*Torah u’madda* – Torah and Academic Study,” the latter does not intrude upon the former within the walls of RIETS. As Rabbi Samuel Belkin, the late president of Yeshiva University and head of RIETS, phrased it, “Modern Jewish scholarship has tried to explain Judaism in terms which are alien and do not apply to it, and has attempted to force even those practices and rituals which define the relationship of man to God into the molds of current sociological and economic theories.” Though Belkin made this statement decades earlier, critical academic scholarship still has no place at RIETS, which views itself as “heir to, and modeled after, the traditional yeshivot of Europe.” This vision is the mirror opposite of the models that the liberal programs have embraced.

The prescribed course of study at RIETS is four years. All students accepted at RIETS must possess an undergraduate academic degree, and they must also have studied Talmud in a post-high school *yeshivah environment for a significant period of time. Virtually all of the students come from intense Orthodox educational backgrounds, and no more than a quarter of the students aspire to the pulpit rabbinate. Study of Talmud for its own sake constitutes the *raison d’être* for this yeshivah and the trend towards ever-greater levels of piety and traditional observance that mark contemporary Orthodoxy have only intensified this ethos within the walls of RIETS. While enrolled in RIETS, students study Talmud a minimum of six hours daily. During the last two years, more emphasis is placed on the codes of the Shulḥan Arukh that deal with dietary laws, family purity, and Sabbath and holiday observance, topics that have constituted the core of classical rabbinic training for centuries.

Students may also then elect an additional four hours of Talmud study daily, work towards a Master’s Degree in Judaic Studies, education, or social work, or attend classes sponsored by RIETS in traditional Jewish thought. All students must pass an examination demonstrating mastery of Hebrew as well.

To be sure, a host of classes that hone practical skills have been added to the curriculum in recent years and students may do a year’s internship in a synagogue under the guidance of an experienced pulpit rabbi. The rabbis educated by RIETS are essentially prepared to deal almost exclusively with an Orthodox audience of Jews. RIETS has therefore “developed programs to meet the communal and personal needs of our time and place – business ethics, bioethics, and technology.” The description indicates that RIETS remains modeled upon the traditional yeshivah, and these other topics are in effect supplements to the study of Talmud that occupies the central place in the curriculum of the yeshivah. This allows the ordainee of RIETS who elects congregational work “to present a more sophisticated, culturally contoured side of Judaism” to congregants who are increasingly Jewishly knowledgeable and halakhically observant.

Interestingly, RIETS was legally separated decades earlier from Yeshiva University itself, because then President Belkin wanted RIETS to be unencumbered by the legal requirements the federal government might impose upon the university itself when the university applied for federal grants. He feared that federal requirements in areas such as housing for men and women and treatment of homosexuals might compromise the religious integrity of RIETS. However, both Rabbi Belkin and his successor rabbi Norman Lamm served both as president of Yeshiva University and *rosh ha-yeshivah* at RIETS. When layman Richard Joel was appointed as president of Yeshiva University, Rabbi Lamm remained formal head of RIETS, inasmuch as Joel faced stiff opposition from many faculty members at RIETS because he was not a rabbi and a suitable religious authority.

HEBREW THEOLOGICAL COLLEGE. A parallel trajectory to that of RIETS is displayed by the Hebrew Theological College (HTC) in Skokie, Illinois. HTC was created in 1922 to provide Orthodox rabbis for an expanding Midwestern Jewish population. Its popular name, “The Skokie Yeshiva,” seems to best capture its sectarian nature. Its three-year course of study focuses almost exclusively on traditional Jewish texts and topics and a wide range of classical commentaries on those texts. The student is expected to master the same halakhic texts that the RIETS student is, and the parts of the Shulḥan Arukh that deal with the Sabbath, dietary law, family purity, and mourning are emphasized. The students possess the same type of backgrounds that RIETS students do, though the flavor of the school is even more traditional.

In addition to the intensive three-year cycle of Talmud and *halakhah* study program, “students are also involved in academic areas addressing the particular needs of the chosen specialized area of rabbinic activity, such as education, public speaking, homiletics, and psychology.” These students are also assigned to internships with rabbinical mentors in these practical areas.

There is also a *Rav u-Manhig* Program, begun in 1995, which includes 30 semester hours of Talmud study and completion of exams in *Orah Hayyim* that “form the cornerstone of the life of a religious Jew.” This program is designed to assist students who wish to pursue advanced programs of talmudic studies and is a further sign of the rightward drift that marks the Orthodox world today.

Ironically, the late Rabbi Eliezer *Berkovits, who taught for many years at the Skokie Yeshiva, wrote in a 1975 article in *Tradition: A Journal of Orthodox Jewish Thought*, that the traditional Orthodox rabbinical curriculum had to reshape itself so that the modern Orthodox rabbi would be more capable of connecting traditional Jewish learning to the demands of the modern world in which most North American Jews live.

YESHIVA CHOVEVEI TORAH. While HTC did not heed Rabbi Berkovits’s word, Yeshiva Chovevei Torah Rabbinical School (YCT), founded by activist Orthodox Rabbi Avi *Weiss of Riverdale, New York, has donned this mantle. YCT consciously

seeks “to promote an inclusive modern Orthodoxy that requires respectful interaction with all Jewish movements” and that expands “the role of women in religious life and leadership.” YCT has a four-year program, and intensive study of Talmud and *halakhah* form the focus of the curriculum, as is the case at both HTC and RIETS. However, *Tanakh* (Bible) is a separate discipline as is Jewish Thought (labeled *Mahshevet Yisrael*). There is an attempt to nurture students “both intellectually and spiritually,” and to encounter the texts as an act of “*avodat Hashem*” – service to God. Here YCT adopts the language of religious personalism and spirituality that is the hallmark of all the more liberal non-Orthodox programs.

YCT is distinct among Orthodox yeshivot in other ways as well. In studying Talmud, the curriculum is designed to “address historical and source critical concerns.” In *Tanakh*, academic issues of authorship are addressed, while the literary-theological message, as well as classical commentaries, are consulted and considered. This openness to integrating critical, scientific approaches with traditional ones in the study of Jewish texts makes YCT unique in the Orthodox world.

YCT is also a yeshivah that emphasizes the value and religious significance of the State of Israel, and requires a year of study there prior to ordination. In Jewish Thought, ḥasidic and kabbalistic literatures are studied, and two required courses are “The Rise and Development of Jewish Denominations” and “The Challenges of Modern Orthodoxy,” which addresses issues of faith and doubt, dogma, authority of the modern rabbi, and gender issues. As its literature proclaims, YCT is “a yeshiva not afraid of ideas,” and promotes “academic excellence, *ahavat HaTorah* (love of Torah), and *ahavat Yisrael* (love of the Jewish people)” in its graduates who go out to serve in a wide variety of Orthodox synagogues and communal and educational settings.

OHR TORAH STONE (JOSEPH STRAUSS RABBINICAL SEMINARY). In completing this review of institutions and programs that produce Orthodox rabbis to serve the North American Jewish community, it is important to take note of Ohr Torah Stone (Joseph Strauss Rabbinical Seminary) in Efrat, Israel. Headed by Rabbi Shlomo *Riskin and Rabbi Chaim Brovender, this Israeli-based Orthodox rabbinical program aims at training “a new generation of rabbinic leaders who combine their halakhic knowledge with an understanding of the particular needs of contemporary Jewish life.” After completing a four-year course of study, students are expected to return to the Diaspora. Ohr Torah Stone views Torah as a “unifying force rather than a divider,” and is “attentive to the importance of tolerance and openness, without compromising religious commitment.” There is “sensitivity towards the situation of Jews in the Diaspora.” Thus, when laws of conversion, for example, are taught, considerable attention is paid to issues of assimilation and intermarriage in the Diaspora. Similarly, in studying laws relating to Sabbath observance, the focus is placed upon how a community of Sabbath-observant Jews might be established.

There is also a program called Amiel – Rabbi Emanuel Rackman Program for Practical Rabbinics, attached to the yeshivah. Directed by R. Eliyahu Birnbaum, it is open to both JSRS students and qualified candidates from other Israeli yeshivot. This program is designed to train rabbis to work with the non-observant in Jewish communities throughout the Diaspora and desires to meet the challenges posed by assimilation. A number of these students come to America for at least two years, and they focus on “Communal Leadership.”

ULTRA-ORTHODOX YESHIVOT. *Haredi* (Ultra-Orthodox) yeshivot that focused almost exclusively on the study of Torah for its own sake during the first 80 years of the 20th century began to change direction as a result of a speech Rabbi Moshe Sherer, the president of Agudath Israel in America, delivered in 1978. In an appeal to yeshivah students, Rabbi Sherer stated that if *haredi* rabbis did not enter “into the rabbinate to save,” assimilated American Jews, then “millions of *nesh-amos* (souls)... will enter churches.” While ultra-Orthodox seminaries remain firm in their commitment to “Torah for Torah’s sake,” there has been movement towards the pulpit in many of them during the last two decades.

In The Rabbinical Seminary of America, Chofetz Chaim Yeshiva, Kew Gardens Hills, New York, which follows the Lithuanian model of the Musar (Ethical-Pietistic) yeshivah, a great deal of emphasis is placed upon *middos*, the formation of spiritual and ethical character. In addition to classical rabbinic texts, time is devoted each day to the study of *musar* literature. Its students can earn a master’s degrees in education or business while they study at the yeshiva a novel turn for such institutions. Baltimore’s Ner Israel Rabbinical College has such cooperative programs as well.

Chofetz Chaim also sends its students into the public schools each week for an outreach activity labeled JEP – Jewish Educational Programs. Here, the yeshivah students offer programs in Jewish cultural literacy to non-observant Jews. In this yeshivah, students study from the age of 18 to 30 or 35 before they complete their studies and receive ordination. Hence, they are in school 8 to 12 years more than their counterparts at other Orthodox rabbinical schools. As of 2006, there were over 300 students in Chofetz Chaim yeshivot, and branches have been established in Milwaukee, Cherry Hills, Los Angeles, and San Diego. The *rosh yeshivah* (head of the yeshivah) assigns ordainees to communities where he feels there is the greatest need, and these rabbis are instructed to establish day schools. These rabbis also go in a group, not as individuals, and an infrastructure is thereby established to sustain religious life for these men and their families. The influence of these rabbis in a number of communities is quite pronounced, and they are marked by a significant missionary zeal.

At the Maor Program, in Silver Spring, Maryland, a course consisting of two three-week sessions is offered in two consecutive summers to train graduates of *haredi* yeshivot for the pulpit rabbinate. Established by Rabbi Shaya

Milikowsky, a Ner Israel ordaine, the program is similar in its aim to the Amiel Program of Ohr Torah, and it reflects a shift in the right-wing Orthodox world and the determination of the leadership of that world to speak to non-observant as well as observant Jewish populations. The students come from places such as Ner Israel and Beth Midrash Ha-Gavohah in Lakewood and Philadelphia. The classes meet five days a week, eight hours a day, and the courses aim to prepare their graduates for service in communities with heavy Jewish populations where no Orthodox synagogues exist. Maor does not seek students who have undergraduate degrees, and even looks askance upon them.

Rabbinical Ordination/Leadership Program (ROLP) (Aish Hatorah) was established in 1975 by Rabbi Noah Weinberg. This yeshivah also aims to educate rabbis who will bring non-observant and weakly affiliated Jews to embrace traditional Judaism, and the program attempts to foster an “Aish Culture.” In contrast to other Orthodox yeshivot, the course of study is relatively short and less textually demanding. Furthermore, it is focused on outreach. Thus, even courses in Talmud and Codes center on what one needs to know in order to be an effective outreach rabbi. The course of study is one and a half to two years. Three components mark the curriculum – traditional rabbinic learning, practical rabbinics, and vocational training. In addition to study of Talmud and Codes, there is a great deal of emphasis placed upon Bible, as this is seen as vital for outreach to non-observant American Jews. Students also engage in practical programs where they work with such people during their time in the yeshivah, and they then take courses “dedicated to the daily responsibilities of the rabbi.” This constitutes 40% of the curriculum, and the graduates are expected to work one day in Aish centers, principally in North America.

Finally, *Chabad constitutes the other formal program designed for the education of rabbis who will serve the North American Jewish community. Chabad rabbis have to complete three years of post-high school study in Chabad yeshivot. They are then permitted to study the traditional Codes required to receive ordination, and they center their efforts in these years on those sections that deal with dietary laws, the Sabbath, and prayer. However, most of these rabbis began their formation for the Chabad rabbinate long before they entered advanced Chabad yeshivot. Indeed, the average Chabad rabbi began serving as a *shali’ah* (emissary) at the age of 14. Hence, by the time they are ordained, most have spent eight years as *sheliḥim*, teaching Jewish men how to don *tefillin* and women to light Shabbat candles. They have a great deal of exposure to non-observant Jews and unlike other Orthodox yeshivot, their graduates intend to stay in whatever community they have been assigned permanently. They often serve as Orthodox rabbis to non-observant Jews and will sometimes begin their work as the only observant Jews in their new homes. The difference here between the ideology and program that animates Chofetz Chayim – where graduates go to a community in a group – and Chabad is pronounced.

Conclusion

The venues where rabbis are educated to serve the North American Jewish community are thus many and highly variegated. Furthermore, there are a number of rabbis who are ordained privately as well and these men and women serve the North American Jewish community in a wide variety of settings. While the student of North American Judaism must be keenly mindful of this variety, there is no question that the religious and cultural environment of 21st-century America has had a profound impact upon the course of study that these many programs and institutions of higher Jewish education provide and the coming years will undoubtedly witness an ongoing vitality and diversity in the education of rabbis who will serve the contemporary American Jewish community.

[David Ellenson (2nd ed.)]

RABBINOVICZ (Rabinovitz), RAPHAEL NATHAN NATA (1835–1888), talmudic scholar. Born in Novo-Zhagory, district of Kovno, at the age of 16 he wrote a bibliographical treatise, *Siftei Yeshenim Gimmel*. Several years later he gave it to the bibliographer Isaac *Benjamin, who used it in compiling his *Ozar ha-Sefarim*. Rabinovicz lived for a time in Lemberg, Galicia, where he published a volume of responsa by R. Meir of Rothenburg (1860) and *Ge'on Ya'akov* (1863), novellae on the tractate of *Eruvin* by R. Jacob Kahana of Vilna. Moving on to Pressburg, he published *Kunteres Ikkarei ha-Avodah* (1863) by his teacher R. Joseph b. Israel Issar of Vilkomir. About that time he learned from Adolph *Jellinek in Vienna of the 14th-century manuscript of the Babylonian Talmud preserved in the Royal Library of Munich. He proceeded to that city, and with the encouragement of R. Joseph Saul *Nathanson, the rabbi of Lemberg, devoted himself to copying the variant readings in order to publish them. In 1864 he published a small booklet, *Alim le-Mivhan* (lithographed from his handwriting), containing samples of the variant readings found in the Talmud manuscript. The following year he published a similar, but more detailed, treatise, *Kunteres Dikdukei Soferim*, in the Hebrew weekly *Ha-Maggid*.

Between 1867 and 1886 he published 15 volumes of *Dikdukei Soferim*, containing the variant readings on all the tractates of the orders of *Zera'im*, *Mo'ed*, and *Nezikin*, and on the tractates of *Zeva'im*, and *Menahot*. The variant readings are accompanied by explanatory notes in which readings found in other manuscripts – in the writings of early authorities and in old printed editions – are recorded. In his introduction to

Dikdukei Soferim Rabinovicz gave a history of the printing of the Babylonian Talmud. A revised and much enlarged version of this essay *Ma'amar al Hadpasat ha-Talmud* appeared later in volume 8 (1877). In the course of his work he traveled widely to consult manuscripts and early printed editions in various libraries. He was aided greatly in his efforts by the Munich Jewish banker Abraham *Merzbacher, who supported him materially and permitted him to buy at his expense all the books and manuscripts he needed. After the death of Merzbacher, Rabinovicz compiled, at the request of the banker's son, a catalog (*Ohel Avraham*, 1888) of the rich library he had amassed for his father. Its treasures included 156 manuscripts and 43 incunabula.

Despite the material support he received, Rabinovicz was forced to engage in the selling of books and manuscripts. He died in Kiev, while on one of his business journeys to Russia. Shortly before his death he began printing *Dikdukei Soferim* on the tractate of *Hullin*. The work on the volume was completed by Heinrich Ehrentreu and appeared in 1897.

Rabinovicz also wrote *Moreh ha-Moreh* (1871), a critique of D.B. *Zomber's *Moreh Derekh*, about Rabbenu Gershom's and Rashi's commentaries on the tractate *Mo'ed Katan*, and published a small part of the medieval *Yihusei Tanna'im va-Amora'im* (1874). He also contributed to *Ha-Maggid*, where his notes on Jehiel M. Zunz's *Irha-Zedek* appeared (vols. 19–20, 1875–76).

[Tovia Preschel]

RABBINOWICZ, ISRAEL MICHEL (1818–1893), writer and scholar. Born in Gorodets, Lithuania, Rabinowicz, whose father was rabbi in Gorodets and from 1828 in Antopol, received a traditional education. His brother, Joshua Jacob, also rabbi in Gorodets, was the author of several talmudic works. At the yeshivah in Brest-Litovsk Rabinowicz began his study of the philosophers, especially Maimonides. Deciding to widen his field of study, he learned German in Brody and Greek and Latin (with D. Chwolson) in Breslau, where he subsequently entered the university as a student of philology. In 1851 he published a Hebrew grammar, *Hebraeische Grammatik nach neuen, sehr vereinfachten Regeln und Grundsätzen*, followed by *Hebraeische Schulgrammatik...* in 1853 (French translation by J.J. Clement-Mullet), selling the books himself in order to earn a living. Later he took up medicine and in 1854 went to Paris, where he continued his studies in hospitals until 1865. In that year he obtained his M.D. with his *Etudes historiques de l'empoisonnement*, which consisted in the main of a translation of Maimonides' "Treatise on Poisons." However, he rarely practiced medicine, preferring to devote himself, in solitude and poverty, to scholarship. Too poor to heat his room, he wrote his books in a café. As well as extending his grammatical methods to other languages (*Nouveaux principes comparés de la prononciation Anglaise...*, 1874; *Vergleichende Gramma-*

tik der polnischen Sprache, 1877; *Grammaire de la langue française d'après de nouveaux principes...* 1886, 1889²), he defended Jewish tradition against its detractors, publishing *Le rôle de Jésus et des apôtres* (1866), a critique of Renan; *La religion nationale des anciens Hébreux* (1873), a criticism of Jules Soury; and *Histoire Sainte: Ancien Testament* (1877). However his main work was his condensed translation, with commentary, of talmudic legislation, *La législation criminelle du Thalmud* (1876) and *La législation civile du Thalmud* (1–5, 1877–80). A Zionist from the early days of the movement, he took part in the Kattowitz Conference of 1884 and presided over the Benei Zion of Paris. He went to Russia in 1889 with the intention of trying to have his books republished, and subsequently lived in London, where he was assisted until his death by Chief Rabbi N.M. Adler and other benefactors.

[Moshé Catane]

RABBINOWITZ, SAUL PHINEHAS (acronym, **SHePHeR**; 1845–1910), East European Hebrew writer and historian. Rabbinowitz, who was born in Tavrogi, Lithuania, to a family of rabbis, received *semikhah* from Israel Salanter (Lipkin), while also becoming interested in Haskalah and teaching himself German and Russian. Rabbinowitz first worked as a private tutor in Vilna and other Lithuanian towns before settling in Warsaw in 1875 where he wrote for the Hebrew press. During this period he inclined toward socialist cosmopolitanism, which brought him into contact with A.S. *Liebermann's circle of Jewish Socialists. In 1881 Rabbinowitz was among those who reported on the Russian pogroms to Western Jewry. He accompanied S. *Mohilever to Brody, where they organized help for the refugees; he also took part in the St. Petersburg Conference of Notables (1882), calling for mass emigration from Russia. At first, Rabbinowitz advocated emigration to the U.S. but he soon joined Hovevei Zion, became secretary of the important Warsaw branch, and attended the Kattowitz Conference (1884). During 1886–88 he published the annual *Keneset Yisrael*, an organ for national revival and Hībbat Zion, and published documents on the history of Russian-Polish Jewry in a supplement (*Orot me-Ofel*). In 1890 he was among the founders of the Warsaw office of Aḥad Ha-Am's order *Benei Moshe and tried to defend the interests of religious tradition within its ranks. In 1891 he joined an abortive Hovevei Zion mission to the West. A member of the Zionist movement, Rabbinowitz attended the first Zionist Congresses, although he criticized aspects of the movement in *Al Ziyyon ve-al Mikra'eha* (1898).

Rabbinowitz's great scholarly achievement was his Hebrew translation of H. Graetz's *History of the Jews* (1890–99), in which the author had given him a free hand. Rabbinowitz introduced many changes in the text, also omitting passages that might offend the Orthodox and the Russian censors. The translation includes his own notes and those of

A. Harkavy and other scholars. Rabbinowitz's work, which was in fact a new "Graetz," had a tremendous impact on Eastern Jewry, despite its *melizah* style, and was reprinted in many editions. Other writings by Rabbinowitz include biographies of L. *Zunz (1896), Z. *Frankel (1898), and *Joseph (Joselman) of Rosheim (1902), and a study on the Jews expelled from Spain, published on the 400th anniversary of the Expulsion (*Moze'ei Golah*, 1894). He contributed articles to the newly founded (1896) Hebrew periodical *Ha-Shiloh*, participated in the early *Eshkol* Hebrew encyclopedia (1888), and completed S.J. *Fuenn's Hebrew dictionary *Ha-Ozar* (1900–03).

Beset by poverty and family misfortunes, and having suffered great hardship during and after the 1905 revolution, Rabbinowitz left Russia for Frankfurt where, however, he found little recognition and had to live on charity. His proposed three-volume modern Jewish history did not advance beyond the publication of a few chapters. His biography was written by his son-in-law, the historian J. *Meisl.

[Yehuda Slutsky]

RAB DE LA CORTE ("court rabbi"), an office common in Navarre and Castile until the expulsion of the Jews from Spain in 1492. He was appointed by the crown to supervise the Jewish communal leadership and the apportionment of taxes among the communities. Because of this task he is referred to as *repartidor de todas las aljamas* and was considered "Judge in Chief" of the Jewish communities. The office was established in these kingdoms during the middle of the 13th century. Attempts to introduce it into Aragon, Catalonia, and Valencia, mainly at the end of the 13th century, failed. The beginnings of this office are unknown. As judge in chief, *juez mayor* ("chief justice"), he served as a kind of a court of appeals for the Jews. Generally those appointed to this position were Jews close to the kings or crown princes, serving as physicians, interpreters, or fiscal agents. The majority were not distinguished for their learning, and Solomon b. Abraham ibn *Adret complained that "in our country there are rabbis appointed by the king who do not know how to read properly." Some, however, were scholars, for instance Abraham *Benveniste. The Rab de la Corte presided over meetings of representatives of the communities who were convened when necessary and supervised the drafting of the *askamot* ("communal regulations") and the tax apportionment. Sometimes, he acted as arbitrator in intercommunal disputes. The last Rab de la Corte in Castile was Abraham *Seneor, who became converted to Christianity shortly before the expulsion. The office of Araby *Mor in Portugal largely corresponds to that of Rab de la Corte.

RABI, ISIDOR ISAAC (1898–1988), U.S. physicist and Nobel Prize winner. Rabi was born at Rymanow, Austro-Hungary, and taken to the United States when he was a year old. He became a tutor in physics at City College, New York, and won fellowships to various European universities. In 1937 he returned to lecture at Columbia, where he was appointed a full professor in 1950. Meanwhile, he continued his own researches in nuclear physics, quantum mechanics and magnetism. He realized that the essential step was to determine the nature of the force that holds together the protons within the nucleus of the atom, overcoming the mutual repulsion that must exist between them, as all are positively charged. When Otto Stern discovered how to measure this force by means of a “molecular beam,” Rabi followed up the discovery, which he found more effective than fission for elucidating the structure of the atom. His most distinguished work was the development of a method of receiving and interpreting such beams, and it was this that won him the Nobel Prize for physics in 1944, four years after he had become associate director of the radiation laboratory at the Massachusetts Institute of Technology. During the remainder of World War II Rabi served as a civilian investigator for the Office of Scientific Research and Development. From 1953 he was chairman of the general advisory committee of the Atomic Energy Commission, but he was active among those opposing the strict military control of atomic energy proposed by Congress, and he deplored what he saw as a tendency for pure science to be subordinated to industrial needs. He was involved with building the cyclotron as well as with other work at the Brookhaven National Laboratory for Atomic Research. Rabi was a member of the UN Science Committee and on the Atomic Energy agency, among other international agencies. He was a member of the board of governors of the Weizmann Institute in Israel. Two autobiographical lectures, published under the title *My Life and Times as a Physicist*, appeared in 1960.

[J. Edwin Holmstrom]

RABĪ' IBN ABI AL-ḤUQAYQ (end of the 6th century). Jewish poet from the Jewish tribe of Banī *Naḍīr in Yathrib, Arabia. A short poem of his is included in the anthology of Arabic poetry by al-Jumaḥī, in the chapter on the Jews of *Medina (pp. 70–74). Except for al-*Samaw'al ibn 'Ādiyāh, he is the only poet in pre-Islamic Arabia mentioned by Moses Ibn Ezra in his book on Hebrew medieval poetry, probably based on Arab sources. Ibn Ezra raises the possibility that both Samaw'al and Rabī' were Arabs converted to Judaism. Rabī' took part in intertribal wars and in poetic contests with other famous Arab poets, such as al-Nābighah.

[Yosef Tobi (2nd ed.)]

RABIN, family of scholars. ISRAEL ABRAHAM RABIN (1882–1951) was born in Proskurov, Ukraine. After the *Kishinev pogrom of 1903, he was entrusted to accompany the orphans to Austria (in the post-World War I Ukrainian pogroms his own parents were murdered). From 1909 he taught at the Ezra teachers' seminary in Jerusalem, and in 1911 was called to head the Odessa Rabbinical Seminary. Detained in Germany by the outbreak of World War I, he subsequently took up a teaching position in post-biblical Jewish literature and history at Giesen University, taught at Frankfurt University (1918–21), and at the Jewish Theological Seminary, Breslau. From 1929 Rabin also taught Semitics and post-biblical literature at Breslau University. In 1935 he left Nazi Germany for Palestine where he headed a Mizrahi elementary school at Haifa and was chairman of the Haifa Religious Council. Rabin was an early supporter of religious Zionism (Mizrahi) and as its delegate attended all Zionist Congresses from the sixth – at which he voted against acceptance of the Uganda offer – to the twenty-first. While teaching at Jerusalem (1909–11), he was among the members of the *Academy of the Hebrew Language.

Rabin's published work ranges over a wide field of Jewish scholarship. His historical studies are devoted to the Jews of Silesia (*Beitraege zur Rechts- und Wirtschaftsgeschichte...* 1, 1932; *Rechtskampf der Juden in Schlesien*, 1927; *Juden in Dyhernfurth*, 1929; in *Zuelz*, 1926) and also deal with general problems of historiography (*Stoff und Idee...*, in *Festschrift...* *Dubnow*, 1930, 41–56). His *Studien zur Vormosaischen Gottesvorstellung* (*Festschrift zum 75 = jaehrigen Bestehen des Juedisch-Theologischen Seminars*, 2, 1929) deal critically with the hypotheses of higher biblical criticism and anticipate some of the ideas on Israel's monotheism later developed by Y. *Kaufmann. Of special importance to rabbinics is the critical edition of *Mekhilta*, prepared by S. Horovitz but completed and published by Rabin (1931, repr. 1960).

One son was the Hebraist and linguist Chaim Menachem *Rabin. Israel's younger son was Michael Oser *Rabin.

RABIN, MICHAEL OSER (1931–), Israeli mathematician. Rabin was born in Breslau, Germany, and was brought to Erez Israel in 1935. After graduating from the Hebrew University he taught mathematics from 1956 to 1958 at Princeton, where he obtained his doctorate and was a member of the Institute for Advanced Study. Returning to Israel in 1958 he became associate professor at the Hebrew University in 1961 and full professor in 1965. Rabin's field of study was mathematical logic, autotheory, and the mathematical theory of computations, and he is credited with a number of inventions in the field of computers. From 1972 to 1975 Rabin was the rector of the Hebrew University of Jerusalem and in 1980 was awarded the Harvey Prize of the Haifa Technion (jointly with S. D. *Goitein and E. *Racker). He was rewarded the Israel Prize in 1995.

RABIN, OSCAR (1928–), Russian painter. Rabin, both of whose parents were doctors, was born in Moscow and studied music before turning to art. He is an extraordinary case of an

artist refused recognition in the Soviet Union, who nevertheless became known as an outstanding painter outside his native country. Since he was not a member of the Artists' Union he was not officially recognized as an artist or allowed to exhibit and had to work as an exhibition designer from his home in a suburb of Moscow. He first gained a reputation outside the U.S.S.R. when his work was seen in London at the Grosvenor Gallery in 1964 in a mixed show of Soviet painters, and later the same gallery mounted his first ever one-man exhibition. Rabin's work was Expressionistic in character, having much in common with Soutine and Rouault, using dark somber colors and heavy outlines – almost in the manner of stained glass. He painted his native Moscow in street scenes and often depicted Western cities he has never visited. On the day of President Kennedy's assassination, Nov. 22, 1963, he painted a canvas to commemorate the event. Rabin was a prolific painter and despite official lack of recognition his work was popular both in the Soviet Union and among foreign visitors.

Both Rabin's status as a leader of young, dissident Soviet painters and his connections with foreign journalists and diplomats came to the fore in the remarkable effort to hold a "free" exhibition in September 1974. The exhibition was organized by Rabin and his son, together with a group of unorthodox artists. Their first effort was literally destroyed by the police, but as a result of international publicity the authorities relented and allowed some 60 painters to exhibit their work in an informal display at Moscow's Izmailovo Park.

In July 1978 the Soviet authorities canceled his Soviet citizenship "in view of his systematic activity incompatible with the status of Soviet citizen." He continued to work in Paris

[Charles Samuel Spencer]

RABIN, SAM (1903–1991), British painter. Rabin was born in Manchester as Samuel Rabinovitch, the son of an impoverished cap cutter who had migrated from Vitebsk. His children were artistically gifted and Rabin was taught draughtsmanship by an elder brother. At the age of eleven he was the youngest pupil ever to win a scholarship to the Manchester School of Art, and later won a scholarship to the Slade School in London, where, at the age of 15, he was the youngest student and where he was befriended and influenced by the artist Barnett *Freedman. On the completion of his studies Rabin spent some time in Paris and took up modeling under the influence of the famous French sculptor Charles Despiau. His portrait head of Barnett Freedman is in the Tate Gallery, London. Rabin, however, devoted most of his career to working in pastels and to the subject of sport. A physically powerful man, Rabin won a bronze medal in wrestling at the 1928 Olympics and later, to make ends meet, became a professional wrestler. Wrestling and boxing became the principal subjects of his work, which depicted the atmosphere of the ring and the figures of the combatants with a mixture of brilliant realism and graceful movement. Rabin was also an actor, and played boxers and wrestlers in several films, including *The Scarlet Pimpernel* (1934), where he had the role of Daniel *Mendoza,

the famous Jewish boxer. He taught at the Goldsmith School of Art from 1949 to 1965, where Mary Quant was one of his students, and then at the Bournemouth College of Art. His work is represented in leading public collections; the British Museum obtained a group of his drawings.

[Charles Samuel Spencer / William D. Rubinstein (2nd ed.)]

RABIN, YITZHAK (1922–1995), military commander and politician, seventh chief of staff of the Israel Defense Forces, and prime minister in the years 1974–77 and 1992–95, member of the Eighth to Thirteenth Knessets. Rabin was born in Jerusalem. His mother was known as "Red Rosa." He graduated from the Kadoorie Agricultural School. He joined the *Palmaḥ in 1941, and participated in the Allied invasion of Syria that year. In 1944, as second in command of a Palmaḥ battalion, he participated in underground activities against the British Mandatory Government. On Black Saturday, June 29, 1946, he was arrested and imprisoned in the Rafa detention camp for six months. After his release he was appointed deputy to Yigal *Allon, who was commander of the Palmaḥ from 1945. In the early days of the *War of Independence, Rabin was appointed commander of the Harel Brigade on the Jerusalem front. Later in 1948 he was responsible, as Allon's second in command, for the occupation of Lydda and Ramleh, and the expulsion of their Arab inhabitants. He was next appointed chief of operations of the Southern Command until the armistice agreement with Egypt, and was a member of the Israeli delegation to the Rhodes armistice talks. However, he objected to the agreement reached, and left before it was signed. After the War of Independence Rabin was given various assignments, and graduated from the British Staff College in 1953. In the years 1956–59 he served as commander of the Northern Command, and in the years 1959–63 served as head of the Operations Branch in the General Staff, and deputy chief of staff. Rabin was appointed chief of staff in January 1964, and served for four years. As a heavy smoker on the eve of the outbreak of the *Six Day War he suffered from nicotine poisoning but recovered to lead the IDF in its major victory over the Egyptian, Syrian, and Jordanian forces. Immediately after the war he was awarded an honorary degree by the Hebrew University at a ceremony on Mount Scopus, and delivered an impressive acceptance speech, noted for its humane spirit. He retired from active military service in January 1968, and was appointed ambassador to the U.S. Upon his return to Israel in March 1973 he decided to enter politics, and was elected to the Eighth Knesset on the Alignment list, right after the *Yom Kippur War. He was appointed minister of labor in the short-lived government formed by Golda *Meir, and when Meir decided to resign following the publication of the Interim Report of the *Agranat Commission in April 1974, he won the first of numerous contests for the leadership of the *Israel Labor Party against Shimon *Peres. The fact that he had not been involved in any way in the Yom Kippur War was the

main reason for his victory. Rabin formed a new government in June 1974. Even though his first premiership was generally viewed as mediocre, during his term as prime minister, with U.S. assistance, the IDF was rehabilitated, and the economy picked up, even though the rate of inflation rose. After disengagement agreements were signed with Egypt and Syria in January and May 1974 with the help of the “shuttle diplomacy” of Secretary of State Henry *Kissinger, an interim agreement was signed with Egypt in September 1975, together with a memorandum of understanding with the U.S. The Entebbe operation also took place in the course of his premiership. Towards the end of 1976 Rabin fired the ministers from the *National Religious Party, after they had abstained in a vote on a motion of no-confidence in the government, over the arrival of F-15 planes from the U.S. to Israel on a Friday afternoon, and the holding of a ceremony that allegedly resulted in the desecration of the Sabbath by those who participated in it. However, the historic coalition with the NRP was in trouble even before this event, due to a shift to the right by the young guard in the national religious camp. As a result of pressure by Attorney General Aharon *Barak, Rabin was forced to resign from the premiership in March 1977, following the revelation by journalist Dan *Margalit that his wife, Leah, continued to hold a bank account in Washington, D.C. from the time of his service as ambassador, contrary to the Israeli foreign exchange regulations. In the elections for the Ninth Knesset held in May 1977, Shimon *Peres led the Alignment and suffered a bitter defeat, in what came to be known as “the political upheaval.” In 1979 Rabin published his memoirs, in which his bitterness against Peres emerged. Following the death of Yigal *Allon, Rabin decided to contend again for the leadership of the Labor Party against Peres, but at the Party Conference held in December 1980 he gained only 29% of the votes. In the National Unity Government that was in office from 1984 to 1990 Rabin served as minister of defense. In this capacity he got the IDF out of Lebanon, canceled the Lavi fighter project, and led Israel’s fight against the first Intifada. Even though his policy in the territories was viewed as a “hard fist” policy, he realized soon after the outbreak of the Intifada that there could be no military solution to the conflict with the Palestinians. Prior to the elections to the Twelfth Knesset in 1988, he formulated a plan for holding elections in the West Bank and Gaza Strip. This plan was adopted by the National Unity Government in May 1989 as part of the Shamir-Rabin peace initiative. Even though he favored the continued existence of the government led by Yitzhak *Shamir, he supported Peres’ initiative to bring down the government in March 1990, following problems within the Likud in advancing the peace initiative. However, after Peres failed to form an alternative government, he called the ploy “the stinking ploy.” In February 1992 he contested the leadership of the Labor Party with Peres for the third time, gaining over 40 percent of the votes to Peres’ 34 percent (there were two additional contestants). In the Knesset he supported the adoption of the law for the direct election of the prime minister, but he won the elections to the Thirteenth Knesset under

the old system. After forming a government with *Meretz and *Shas, he concentrated on changing Israel’s economic priorities from massive support of the settlements in the territories to Israel’s periphery, and on efforts to further the peace process. Though the Oslo process was initiated by Yossi *Beilin (who in the past Rabin had called “Peres’ poodle”) he gave the negotiations his backing in its latter stages, and on September 13, 1993, signed the Declaration of Principles (DOP) with PLO chairman Yasser *Arafat, which led to Israel’s handing over to a “Palestinian entity” the city of Gaza and the Jericho area. This agreement was followed by two additional agreements, under which Israel handed over the Arab towns and cities in the territories to the Palestinians, and agreed to the establishment of a *Palestinian Authority. However, the talks with the Palestinians at this stage did not deal with the future of the Jewish settlements, Jerusalem, or the Palestinian refugees. Very close relations also developed at this time between Rabin and King *Hussein of Jordan, and a peace treaty was signed between Israel and Jordan in October 1994. Formal relations were also established with Morocco, Tunisia, and several Gulf states, and Israel participated in a succession of economic conferences held in various Arab capitals. Talks were also held with Syria, but despite Rabin’s willingness to make substantial concessions, these talks led to naught. For his efforts toward regional peace, Rabin was the recipient, along with Peres and Arafat, of the Nobel Prize for Peace in December 1994.

However, right-wing circles in Israel objected to Rabin’s peace initiatives, and willingness to give up control over parts of Erez Israel. Demonstrations against him became increasingly vicious and threatening, but despite warnings by the General Security Services, Rabin refused to wear a bulletproof vest. On November 4, 1995, at the end of a mass demonstration in Kikar Malkhei Yisrael in Tel Aviv, which he addressed, Rabin was shot in the back by Yigal Amir, a Jewish right-wing fanatic, who acted on his own, with only his brother being privy to his plans. Rabin’s coffin was placed at the entrance of the Knesset, and his funeral was attended by numerous heads of state and prime ministers, including King Hussein of Jordan and President Hosni *Mubarak of Egypt, who had never previously set foot in Israel. It was President Bill Clinton who coined the term “*Shalom Haver*” (“farewell, friend”) that continues to appear on stickers on many cars in Israel to the present day. The assassination was a major failure for the GSS, which changed its entire strategy of protecting VIPs in Israel. Ten years after his assassination the people of Israel were still divided over Rabin’s heritage.

Rabin’s daughter DALIA RABIN-PELOSSOF entered the Fifteenth Knesset on the Center Party list, and joined the One Israel (Labor) parliamentary group in May 2001. She did not run in the elections to the Sixteenth Knesset.

Among his books are *The Rabin Memoirs* (1979) and a collection of his peace speeches *Ne’umei ha-Shalom shel Rosh ha-Memshalah Yizhak Rabin* (1995).

RABINOFF, GEORGE W. (1893–1970), pioneer of U.S. professional Jewish communal service. Rabinoff, born in New York City, graduated from the New York School of Social Work (1914), one of the first trained Jewish social workers. After serving various Jewish communities and the Jewish Welfare Board, he became associate executive director of the Bureau of Jewish Social Research (1928–32), where he was instrumental in founding the Council of Jewish Federations and Welfare Funds, serving as its first executive (1932–35) and, after the merger of the Council and the Bureau, as its associate director. He was associate director of Chicago's Jewish Charities and Jewish Welfare Fund during World War II and served UNRRA as deputy director of the Division of Welfare and Displaced Persons in Europe. From 1947 to 1951 he directed the training bureau for Jewish Communal Service, reflecting his concern for Jewish communal professionalism. He then became associate director of the National Social Welfare Assembly (1951–61), afterward spending a year aiding the development of social work in Australia. Throughout his career Rabinoff was a leader of the National Conference on Jewish Communal Service, serving as secretary (1929–33) and president (1949). His influence on Jewish communal service and its professional practitioners was extensive.

RABINOVICH, ISAAK JACOB (“**Itzele Ponovezher**”; 1854–1919), Lithuanian rabbi. Rabinovich was born in Shershov, Grodno district. Contrary to the prevailing custom, his father, a wealthy and learned merchant, did not send him to a yeshivah but engaged private tutors for him. Supported by his father-in-law, both before and after his marriage, he was able to devote himself entirely to study, including two years with R. Ḥayyim Soloveichik in Brest-Litovsk.

In 1889, after teaching Talmud for a year in Bialystok, he was appointed a teacher at the famous Slobodka Yeshivah, a center of the *musar* movement. Rabinovich, whose system of study was similar to that of Soloveichik, maintained that priority should be given to the study of Talmud and not to *musar*, and the popularity of his courses—at the expense of the *musar* aspect—brought about some tension between him and the head of the yeshivah, R. Nathan Zevi Finkel. As a result, in 1899 Rabinovich left the yeshivah and, after serving for a year as rabbi of the small town Gorzd, moved to Panevezys. There

he established in 1911 the *Kolel “Kibbutz le-Mezuyyanei ha-Yeshivot,” which was financed by Miriam Gavronsky, daughter of the tea magnate and philanthropist Kalonymus *Wissotzky. The venture was an outstanding success and made Panevezys a major center of Talmud study in Lithuania. Forced to leave Panevezys during World War I Rabinovich moved the Kolel first to Luzin in the Vitebsk district and then to Mariopol. After the Bolshevik Revolution he returned to Panevezys, where he died.

Rabinovich was one of the few rabbis of his time who knew Russian and modern Hebrew literature, which he mastered during an illness. Originally a supporter of the *Ḥibbat Zion movement, he later became one of the founders of the *Agudat Israel. He was almost unique among contemporary rabbis in his support of the workers' and socialist movements; in 1917 he made a passionate but unavailing appeal at a meeting of the Orthodox association *Masoret ve-Ḥerut*, to persuade its member to come out in support of expropriation of the lands of the nobility and their redistribution to the peasants. As a result he was popular among the *Bundists, and even among the *Yevseksiya, who did not attack him as they had other rabbis. Despite this they refused to allow him to reopen his yeshivah, and he died brokenhearted.

Famed as an outstanding *posek*, especially after the death of R. Isaac Elḥanan *Spektor, and in his decisions tending to leniency, he committed little to writing and what there was, was lost in World War I. In 1948, however, a small collection of his commentaries and responsa was published under the title *Zekher Yitzhak*. About the same time a former student, D. Zachs, published a volume consisting of notes he had taken of his master's lectures on tractates *Kiddushin* and *Baba Meḥzia*.

[Shaul Stampfer]

RABINOVICH, ISAAK MOSEYEVICH (1886–1977), Russian construction engineer. Rabinovich, who attained the rank of major-general in the Red Army, taught at several Soviet institutes of higher education. He was appointed professor at the Military Engineering Academy in 1932 and at the Moscow Construction Engineers' Institute in 1933. From 1946 he was a corresponding member of the Academy of Sciences. He wrote several books on construction mechanics.

RABINOVICH, ITAMAR (1942–), president of Tel Aviv University. Born in Jerusalem, Rabinovich received his B.A. degree from the Hebrew University in 1960; in 1966 he completed his M.A. degree at Tel Aviv University; and in 1971 he received his Ph.D. from the University of California. In 1971 he joined Tel Aviv University. He was the director of the Shiloh Center, dean of the Faculty of Humanities, and rector of the university. He also served as senior research fellow at the Moshe Dayan Center for Middle Eastern and African Studies and as incumbent of the Yona and Dina Ettinger Chair in Con-

temporary History of the Middle East at Tel Aviv University as well as Andrew White Professor at Large at Cornell University. Between 1993 and 1996 Rabinovich was the chief negotiator with Syria and ambassador in Washington. He served as a board member of the International Crisis Group and was a member of the Trilateral Commission and a lecturer at the World Economic Forum. He was elected president of Tel Aviv University in 2003.

Rabinovich published a number of articles and books, including *Syria Under the Bath* (1972); *The War for Lebanon* (1984); *The Road Not Taken: Early Arab-Israeli Negotiations* (1991); *The Brink of Peace: Israel and Syria* (1998); *Waging Peace: Israel and the Arabs at the End of the Century* (1999); and *Waging Peace: Israel and Arabs, 1948–2003* (2004).

RABINOVICH, JOSÉ (1903–1978), Yiddish and Spanish author, playwright, and poet. Born in Bialystok, in 1924 Rabinovich arrived in Argentina, where he made his living in the printing business. Before his emigration he had written a number of texts in Yiddish and continued to do so in Argentina; part of these works were translated into Spanish, the language he adopted at a later stage. Influenced by the hardships of his life in Russia, by the difficulties faced by Jewish immigrants in Argentina and, later, by the Holocaust, all his writing is haunted by an atmosphere of hostility, material and moral misery, poverty, and fear. His Jewish characters often face the religious aporia of God's indifference and injustice. Many of his themes deal with proletarian issues and come under the rubric of leftist social-realist literature. His works include the following: novels and short stories: *Cabizbajos* ("Lowered Heads," 1943); *Tercera clase* ("Third Class," 1944); *Pan duro* ("Hard Bread," 1953); *El perro de Maidanek* ("The Dog of Majdanek," 1968); *Cuentos de pico y pala* ("Stories of Pick and Shovel," 1971); and the autobiographical *Sobras de una juventud* ("Youth Leftovers," 1977); dramas: *Con pecado concebida* ("Conceived in Sin," 1975); *El gran castigo* ("The Great Punishment," 1976); poetry: *Hombre escatimado* ("Skimped-on Man," 1969); *Rapsodia judía* ("Jewish Rhapsody," 1969); *El violinista bajo el tejado* ("The Fiddler under the Roof," 1970); *Rapsodia rusa* ("Russian Rhapsody," 1971); *Misa de un play boy* ("A Playboy Mass," 1972); *Dios mediante* ("With God's Help," 1976).

[Florinda F. Goldberg (2nd ed.)]

RABINOVICH, JOSEPH (1837–1899), missionary in *Kishinev, Bessarabia, and founder of a Jewish-Christian sect. Born into a ḥasidic family, Rabinovich was attracted by the *Haska-

lah movement. During the early 1880s he joined the *Ḥibbat Zion movement and visited Palestine. He returned disappointed in the new movement and at the end of 1883, under the influence of a missionary named Faltin, he founded a new sect called The Children of Israel of the New Testament (this sect should not be confused with the sect called Novy Izrail (*New Israel) founded by Jacob Priluker of Odessa). Adherents of the sect were to accept the basic precepts of Christianity, while at the same time retaining their Jewish nationalism and observing Jewish traditions such as circumcision, the Sabbath, Jewish festivals, etc. On Christmas Day, 1884, a prayer house Bethlehem, in which prayers were recited in Hebrew and sermons delivered in Yiddish, was opened in Kishinev. In 1885 Rabinovich converted to Protestantism and continued his work in Kishinev with the support of Protestant missionaries whose funds allowed him to open a small printing press where he published prayer books and sermons. Among his publications were *Tefillah ve-Ikkerei Emunah li-Venei Yisrael Benei Berit Ḥaḏaṣah* ("Prayers and Principles of Faith of the Children of Israel of the New Testament," 1892), and *Divrei Niḥumim* ("Words of Comfort," 1897). His activities had no influence on Russian Jewry and he remained an inefficient instrument in the hands of the German Protestant mission.

[Yehuda Slutsky]

RABINOVICH, OSIP ARONOVICH (1817–1869), Russian author and publicist, founder and editor of *Razsvet, the first Jewish journal in Russian. Born in Kobelyaki, Ukraine, the son of a well-to-do businessman, he studied both Jewish and secular subjects under private tutors. He settled in Odessa in 1845 and developed a successful practice as an adviser and pleader at the commercial court, and later, as a notary. Rabinovich's literary career also began in Odessa. In 1847 he translated Jacob *Eichenbaum's Hebrew poem on chess, *Ha-Kerav*, into Russian and contributed articles and feuilleton-type fiction to local publications. Later his works were published by leading Russian journals. Although published after the abolition of certain laws regarding recruitment of Jews into the Russian army, his story, "*Shtrafnoy*" (in *Russkiy Vestnik*, 1859), was considered a bitter reflection of the abuse perpetuated on Jews under the rule of *Nicholas I. It was a tale of the anguish suffered by a fine, public-spirited, middle-aged Jew recruited for a lifetime into the Russian army in partial payment for communal indebtedness. In 1860–61 Rabinovich published *Razsvet*. He was the mainstay of the journal, writing articles and stories for it and setting its tone by his weekly editorials. Maintaining a high standard, Rabinovich concentrated in the journal on the relationship of Jewish life to outside forces, i.e., to Russian society, and in particular to the Russian authorities. He relegated to others the concern for the inner aspects of Jewish life. He pleaded for the recognition of Jews as Russian citizens and for their integration step by step into Russian society as useful,

contributing human beings. If inner reforms were needed to prepare Jews for their role in society, it was no less important to rid them of the outward vestiges of medieval segregation and discrimination they were suffering in Russia. Rabinovich felt that a first step must be the removal of such vestiges from the law and from state and public institutions. As Rabinovich saw it, the major obstacle toward citizenship for Jews was the *Pale of Settlement. He contended that not only Jews but the country as a whole suffered from this system which closed off most of the state from Jewish settlement. He believed that the humanist and reformist tendencies during the early years of the reign of *Alexander II, which culminated in the abolition of serfdom (1861), should also lead to reforms for Russian Jews, enabling them to emulate the progress of Western Europe. Rabinovich insisted that the coercive administrative measures sometimes urged by westernizers would not help to better the conditions of the Jewish masses and should not be applied. He believed that a progressive modernization among the Jews would be evoked primarily by improving social and legal conditions. Full equality was due to Jews as human beings, irrespective of the degree to which they might be considered modern, i.e., westernized. Under oppressive Russian censorship, Rabinovich decided to discontinue the publication of *Razsvet*. He died in Merano, Italy. His complete works were published in three volumes in 1880–88.

[Mark Perlman]

RABINOVICH, YEHUDAH LEIB (**Leon**; 1862–1937), Hebrew writer, editor, and physicist; known by his pen name, Ish Yehudi. Born in Brestovitz, Russia, Rabinovich studied medicine and physics. In 1887 he began to write popular articles on science etc. in *Ha-Meliz and *Keneset Yisrael*. In 1890 he won a gold medal at the Paris Exhibition for his inventions.

A collection of his articles appeared in *Ha-Yerushah ve-ha-Hinnukh* (1903), and *Yesod Leshon ha-Mikra* (1939). In 1903 he published a Yiddish newspaper *Bleter fun a Togbukh*. Later he served as editor of *Ha-Meliz* but was unable to adapt it to the spirit of the times, and had to discontinue it in 1904. In his later years he lived in poverty in Leningrad and contributed articles to the Jewish press in the United States. His memoirs appeared in *Hadoar*, 3 (1924), no. 1, pp. 7–8; no. 3, pp. 5–6.

[Yehuda Slutsky]

RABINOVICZ, HAIM BEN ZION (1888–1976), *hazzan*. Rabinovicz was born in Kiev to a family of Tomashover *hasidim*. As a child he sang at the synagogue of the Tomashover rebbe. In 1917 he moved to Odessa and studied in the conservatory. When Pinhas Minkovsky moved to the United States, Rabinovicz took his place in the Brody Synagogue in Odessa. In 1927 he moved to Antwerp and was appointed chief

cantor at the “Shomre Hadass” Synagogue there. In 1951 he immigrated to Israel. He refused to perform in concerts and only in his old age did he agree to make recordings of some portions of the prayer service that attest to his talents.

[Akiva Zimmerman]

RABINOVICZ, PINCHAS (1947–), *hazzan*. Rabinovicz was born in Lodz, and at the age of three immigrated to Israel with his family and was educated in *yeshivot*. In 1968 he began to serve as a cantor in the Gevurat Yisrael Synagogue in Tel Aviv. He has appeared in concerts and on radio and television programs. In 1973 he moved to Montreal and continued his studies in music and voice development in McGill University. His voice is a lyric tenor, and he soon became famous throughout Canada and appeared in broadcasts of the Canadian Broadcasting Authority. He served as a cantor in the Beth Ora Synagogue in Montreal and was president of the Cantors' Association. In 1983 he moved to Los Angeles and was appointed chief cantor of the largest Orthodox congregation in the Western United States, Beth Jacob Synagogue of Beverly Hills. He has composed music to portions of the prayer service and *hassidic* songs. Rabinovicz's website made available many new and original compositions for downloading.

[Akiva Zimmerman]

RABINOVITZ, ALEXANDER SISKIND (known by acronym **Azar**; 1854–1945), Hebrew author. Born in Lyady, Belorussia, Rabinovitz became affiliated with the **Hibbat Zion* movement during a stay in Moscow. In 1888 he became a teacher in Poltava, where his pupils included D.B. *Borochov and Izhak *Ben-Zvi. It was in Poltava that he was elected a delegate to the First Zionist Congress (1897). Settling in Erez Israel in 1906, he alternately taught and worked as a librarian.

From 1888 the Hebrew language was his medium of expression, although he also wrote occasionally in Yiddish. He contributed articles to *Ha-Meliz* (1899) and to *Sefer ha-Sharon* (1891), a children's book. From that time on, he concentrated on storywriting, and was among the first to write stories of social content in Hebrew. These were published successively in the books *Be-Zel ha-Kesef* (1894), *Hattat ha-Zibbur* (1896), *Bat he-Ashir* (1898), and in various Hebrew literary journals, such as *Ha-Shilo'ah* and *Lu'ah Ahiasaf*. His writings were a synthesis of his affinity with the common people, his interest in socialism and Russian literature, and of his strong attachment to the Jewish tradition and its cultural values – an attachment which, upon his arrival in Erez Israel, expressed itself both in his personal ties with Rabbi A.I. *Kook and in his own inclination to religious observance.

In its entirety, Rabinovitz's prolific and varied output numbers over 100 books and pamphlets, including original works, translations, and adaptations. He popularized scientific subjects in Hebrew, and for many years also wrote “*Hirhurim*,” a regular column in *Kunteres* and *Davar*, which dealt with matters of concern to the labor movement. The first collection of his stories and articles was published in 1904; the second and

third volumes were published, in Erez Israel, in 1914–22. Some of his stories were also published separately at various times. Among his monographs are *Jean Jacques Rousseau* (1899); *Keter Torah* (1911), on Rabbi Kook; *Yosef Hayyim Brenner* (1922); and *Hayyei L.N. Tolstoi* (1924). He also wrote *Toledot ha-Sifrut ha-Ivrit li-Venei ha-Ne'urim* (1906–10), a literary history for youth; *Toledot ha-Pedagogikah* (1913) a history of pedagogy from early times to the present; textbooks for Jewish history; original and translated books for children and youth; and *Ha-Islam* (1927) and *Ha-Inkvizitsyah* (1930), popular histories. Encouraged by Bialik, he worked for many years on the translation of the works of W. Bacher, among them *Aggadot ha-Tanna'im* (3 vols., 1920–23) and *Aggadot Amora'i Erez Yisrael* (1916–17, 2 pts.; 1925–30², 5 vols.). In addition he edited several literary collections, notably *Yizkor* (1912), commemorating Jewish laborers who fell in the course of their work in Erez Israel. On his 80th birthday his collected works were published in five volumes (1934–36).

BIBLIOGRAPHY: Z. Fishman, in: *Sefer Zikkaron le-Yovel ha-Shivim shel A.S. Rabinovitz* (1924), 3–23 (incl. bibl.). **ADD. BIBLIOGRAPHY:** D. Hoshen, “*Ma'aseh Tefillat ha-Em: Keriah Mashvah bein 'Tefillat ha-Em' shel Azar le-'Ma'aseh' shel 'Agnon,*” in: *Mabu'a* 35 (2001), 65–75; 36 (2001), 69–85.

[Getzel Kressel]

RABINOWICH (Rabinowitsch), ELIYAHU AKIVA (1861–1917), Russian rabbi. Born in Silale, Lithuania, Rabinowich studied in various Lithuanian yeshivot, including Eisiskes, where he obtained *semikhah*, at the same time becoming proficient in secular studies and foreign languages. After marriage he engaged in business, but was unsuccessful, and on his father's death in 1888 he succeeded him as rabbi of Pyantiza. In 1892 he was appointed as rabbi of Kinishin but following a communal dispute he was expelled by the authorities, who were informed that he had no right of residence there. In 1893 he was appointed rabbi of Poltava, where he remained until his death.

Rabinowich became famous as a result of his attitude toward Zionism and the resulting controversy. Influenced by R. Samuel *Mohilewer, he attended the first Russian Zionist Conference in Warsaw in 1898 and was a delegate to the Second Zionist Congress in Basle in the same year. Like many other rabbis, Rabinowich was uneasy about associating himself with Zionism, and the parting of the ways came over the question of “Culture.” Rabinowich, like R.J.L. *Zirelson, objected to the Zionist movement engaging in culture and education, urging that it confine itself to political and economic activity, and that if it did deal with such matters it should at least be under rabbinic supervision. When his proposal was rejected, the disappointed Rabinowich, on his return to Poltava from the Congress, launched a vehement attack against the Zionist Movement. In 1899 he published a pamphlet, *Ziyyon be-Mishpat*, which raised a storm in both the Zionist and the Orthodox world. He was attacked by both the secular elements in the Zionist Movement (*Ha-Meliz*, 1899, 218–9) and its Orthodox members, such as Rabbis S.J. *Rabinowitz (*ibid.*, 153–73) and David Solomon Slouschz (*Mikhtav le-David*, 1899). A bitter

personal note was injected into the controversy. Rabinowich replied in his pamphlet *Ve-Anta Bi Zidkati* (1899). Thereafter he became one of the leading opponents of Zionism, and was associated with the Lishkah Shehorah (see *Zionism: In Russia) which had its headquarters in Kovno (Kaunas). From 1901 to 1905 he edited *Ha-Peles* and from 1910 to 1914 *Ha-Modi'a* which were the main vehicles for his polemics. In 1912 Rabinowich participated in the founding conference of the Agudat Israel in Kattowice. He also participated in various rabbinical conferences, including the one in Cracow in 1903, whose proceedings he edited.

Among his literary works were *Hesed li-Meshiho*, a commentary on the Book of Ruth. The first edition (1898), unlike later ones, also included halakhic responsa. His son, J.Z. Rabinowich, published a selection of his sermons (1943).

BIBLIOGRAPHY: J. Barnai, in: *Sinai*, 70 (5–6), 1972, 282–8; *Ozar Yisrael*, 9:242–3 (the article was written by Rabinowich himself).

[Jacob Barnai]

RABINOWICH, SARAH (Sonia; married name – Margolin; 1880–1918), publicist, daughter of S.P. *Rabinowitz. Born in Berezin, province of Minsk, Sarah graduated in Germany in 1902 as a doctor of social sciences, her thesis dealing with the organization of the Jewish working class in Russia. In 1903 she was sent to Galicia on behalf of women's organizations against white slavery, and together with Bertha *Pappenheim she wrote a study on the situation of Galician Jewry and possible steps towards an improvement of its social conditions. During 1904–05 she organized illegal political activities by workers against the military in Odessa and was arrested. Released after a short time, she left for Germany where she continued her political and publicistic work, writing in Russian, German, and Yiddish. In her writings Rabinowich showed a special interest in the Jewish working class in Russia, the women's question within Jewry, Jewish education, and statistics. Her published works include “Zur Lage des juedischen Proletariats in Mohilew am Dnjepr,” in: *Die Welt* (15.8.1902), no. 33:6–7 (Aug. 22, 1902), no. 34, 4–6 (an extract of her Ph.D. thesis); “The Life of the Trade and Handcraft Classes in the Representation of Peretz,” in: *Yevreyski Mir* (1909, 69–79); “On the Jewish Question within Jewry,” in: *Yevreyski Mir* (1909); “On the Question of the Training of Jewish Female Teachers,” in: *Vestnik obshchestva rasprostraneniya prosveshcheniya mezhdru evreyami v Rossii* (1911), no. 5, 28–46; “Die Heiraten von Juden im Europaischen Russland vom Jahre 1867 bis 1902,” in: *Zeitschrift fuer Demographie und Statistik der Juden* (5 (1909), nos. 10, 11, 12); “Die Heiraten von Juden in Russisch-Polen,” *ibid.* (6 (1910), no. 4, 61–64); “Zur Statistik der juedischen Schulen in Russland,” *ibid.* (7 (1911), nos. 9, 121–30); “Zur Bildungsstatistik der juedischen Arbeiter in Rußland,” *ibid.* (9 (1913), no. 11, 153–60). During World War I Sarah was active in the German Independent Labor Party and was again arrested. In a seizure of depression she committed suicide in prison.

RABINOWICZ (Kwasnik), OSKAR K. (1902–1969), financier, author, and Zionist. Born in Aspern, Austria, Rabinowicz studied at Brno, Prague, and Berlin, later engaging in the gold business. He was active in the Zionist Revisionist movement and after 1933 became chairman of the Czechoslovak committee to boycott Nazi Germany. When the Germans occupied Prague in 1939, he barely managed to escape, though he had helped 3,000 Jews leave Czechoslovakia for Palestine. He went to England, living mainly in London, and became active in communal life, being on the councils of Jews' College and the Jewish Historical Society. He was director of the Anglo-Federal Banking Corporation from 1946 to 1956. In 1956 he settled in the U.S., where he was active in communal affairs, particularly in the Jewish Theological Seminary and the Jewish Publication Society of America.

In his Prague period Rabinowicz wrote, among other works, *Einleitung in die Probleme des rituellen Schlachtens* (1937), in defense of *shehitah* and edited his father's *Makor Niftah* (1938), a lexicographical Bible index. In England he wrote *Vladimir Jabotinsky's Conception of a Nation* (1946), submitted Chaim Weizmann's autobiography *Trial and Error* to a searching factual criticism in his *Fifty Years of Zionism* (1950), and championed Herzl as the great figure in Zionism in his *Herzl, Architect of the Balfour Declaration* (1958). Among his other works is *Winston Churchill on Jewish Problems* (1956, 1960²) and the posthumously published *Arnold Toynbee on Judaism and Zionism: A Critique* (1974). He was one of the initiators of the Society for the History of Czechoslovak Jews and co-editor of *The Jews of Czechoslovakia* (vol. 1, 1968). His literary work was based on his extensive library, which was particularly rich in periodicals and works on Zionist and contemporary history. This was bequeathed to the National and University Library, Jerusalem. Rabinowicz was a departmental editor of the *Encyclopaedia Judaica* for Czech Jewish history.

His son, **THEODORE K. RABB** (1937–), was a professor of history at Princeton, specializing in 16th- and 17th-century European history. His works include *Enterprise and Empire* (1967), a study of merchant and gentry investment in early English maritime ventures; *The Struggle for Stability in Early Modern Europe* (1975); *Industrialization and Urbanization* (1981); *Renaissance Lives* (1993); *Origins of the Modern West* (1993); and the audiobook *What If?* (with J. Ober, 2001). He co-edited *Action and Conviction in Early Modern Europe* (1969); *The New History, the 1980s and Beyond* (1982); and *The Making and Unmaking of Democracy* (2002).

RABINOWITZ, EUGENE (1901–1973), U.S. biochemist and biophysicist. Born in St. Petersburg, Russia, Rabinowitz worked in the Kaiser Wilhelm Institute of Physical Chemistry at Dahlem, Berlin (1926–29), and at the University of Goettingen until the Nazis came to power. In 1933 he was Rask-Orsted Fellow of the Royal Academy of Sciences in Copenhagen and from 1934 worked in London. In 1939 he went to the United

States, where he was attached to the Massachusetts Institute of Technology and associated with the Manhattan Atomic Bomb Project. In 1947 he became professor of botany at the University of Illinois, and in 1960 professor of biophysics. In 1968 he was appointed professor of chemistry and biology, and adviser to the Center for Science and Human Affairs, at the State University of New York (Albany). His major scientific papers were on photochemistry, photobiology and reaction kinetics.

He wrote *Periodisches System* (1930) and *Photosynthesis and Related Processes* (3 vols., 1945–56), edited *The Bulletin of Atomic Scientists* (1945–); *Minutes to Midnight* (1950); *The Chemistry of Uranium* (1951); and *Dawn of a New Age* (1963), and co-edited *The Atomic Age* (1963).

[Samuel Aaron Miller]

RABINOWITZ, ELIAHU WOLF (1853–1932), Hebrew writer. Born in Stawiski, Poland, he went to Germany in his youth. Rabinowitz joined the Socialist movement, was also involved in the Hebrew Socialist Circle and became friendly with Morris Vinchevski. In 1876, after contributing to the journal *Ha-Shahar*, he became the assistant of M.L. Rodkinson, owner of *Ha-Kol*. As a result of the persecution of German Socialists he moved to Paris and then to London (1880). A member of Hibbat Zion from its early days, he conducted a correspondence with Judah L. Levin regarding the social prospects of Palestinian settlement in Erez Israel (*Ha-Maggid* (1883), no. 20). In his later years he published chapters from his memoirs, in *Haolam* (1927), nos. 52, 53, and in *Iyyim*, 1 (1927). His autobiographical notes appeared in *Davar* (July 7, 1933).

[Yehuda Slutsky]

RABINOWITZ, JOEL (1828–1902), one of the first Jewish ministers in South Africa. Born in Lublin, Poland, Rabinowitz was second minister to the synagogue in Birmingham, England. He came to Cape Town in 1859, when the congregation was struggling to keep alive. Largely as a result of Rabinowitz' efforts, the congregation was able to erect its first synagogue in 1863, which still stands. Taking the small Jewish communities scattered over the whole Cape Province and beyond as his parish, Rabinowitz corresponded with outlying families and traveled long distances by post-cart to officiate at marriages or circumcisions, thus contributing greatly to the preservation of Judaism. He was also a tireless collector for charitable causes, Jewish or non-Jewish, at home and abroad.

After serving the Cape Town community for 23 years he returned to England, but was back in Cape Town in 1886. His modest investments having failed because of a depression at the Cape, he took a course in metallurgy at the South African College in Cape Town and opened an assay laboratory on the Witwatersrand. He remained involved in communal life, raised funds for building the first synagogue in Johannesburg and officiated at High Holy Day services. Two years later ill health forced him to retire to Cape Town, where he continued

to devote himself to communal affairs. Rabinowitz wrote a series of articles about the early Jewish settlers in South Africa for the London *Jewish Chronicle* (1895).

Abrahams, *The Birth of a Community* (1955), index. **ADD. BIBLIOGRAPHY:** J. Simon, *The Reverend Joel Rabinowitz, and Other Adventures of a Library Chairman* (1996).

[Lewis Sowden]

RABINOWITZ, LOUIS ISAAC (1906–1984), rabbi. Born in Edinburgh, he served as rabbi in the London communities of Shepherd's Bush, South Hackney, and Cricklewood, successively. During World War II he was a senior Jewish chaplain with the British army in the Middle East and Normandy. In 1945 he became chief rabbi of the United Hebrew Congregation of Johannesburg and the Federation of Synagogues of Transvaal and the Orange Free State. He was appointed professor of Hebrew at the University of Witwatersrand and head of the Johannesburg *bet din*. In 1947, in protest against British policy in Palestine, he discarded his war decorations in public. An eloquent preacher, he was also outspoken in his criticism of the South African government's apartheid policy. Retiring in 1961, he settled in Israel and became deputy editor in chief of the *Encyclopaedia Judaica* (first edition). He was also a *Gahal* representative in the Jerusalem municipality from 1969 and in 1976 was appointed a deputy mayor of Jerusalem. He did not stand for re-election in the elections held in October 1978. In 1980 he was made a *Yakir Yerushalayim* ("Worthy Citizen of Jerusalem"), and in November of that year he was given the title of Chief Rabbi Emeritus of the Federation of Synagogues of South Africa.

Rabinowitz is the author of *The Social Life of the Jews of Northern France* (1938), *Herem Hayyishub* (1945), and *Jewish Merchant Adventurers* (1948). His other books include *Soldiers from Judea* (1942), *Far East Mission* (1952), *Torah and Flora* (1977), and volumes of sermons.

[Lewis Sowden]

RABINOWITZ, LOUIS MAYER (1887–1957), U.S. manufacturer and philanthropist. Rabinowitz, who was born in Rosanne, Lithuania, immigrated to the U.S. in 1901. In 1916 he established a corset manufacture company in New York. Rabinowitz subsequently became chairman of the corset industry (1934) and director of the Business Men's Council (1935).

Active in Jewish community affairs, he was vice president of the Hebrew National Orphan Home (1921), the Jewish Hospital of Brooklyn, the American Jewish Historical Society, the New York chapter of the America-Israel Society, and director of the Federation for the Support of Jewish Philanthropic Societies of New York City (1935). A collector of books, manuscripts, and paintings, he gave much of his collection to the New York Public Library, Library of Congress, Jewish Theological Seminary, and Yale University. Donating the Rabinowitz Fund for Judaica Research at Yale, he established a chair

there in Semitic languages and literature (1955). Rabinowitz served as director of the Yale University Association of Fine Arts and as honorary trustee of the Yale Library Associates. A director of the Jewish Theological Seminary, he established the Louis M. Rabinowitz Institute for Research in Rabbinics at the seminary in 1951 and donated many rare books to its library. The Louis M. Rabinowitz Foundation (1953) sponsored a five-year archaeological exploration in Israel in conjunction with the Hebrew Union College of Cincinnati.

RABINOWITZ, SAMUEL JACOB (1857–1921), Lithuanian rabbi and Zionist leader. Born in Kelme, Rabinowitz held rabbinical posts at Ivye, Aleksot, and Sopotskin and was esteemed as a writer of responsa and novellae, some of which were collected in his *Sefer Oraḥ Yashar* (1903). An early member of the Hovevei Zion, Rabinowitz attended the Second Zionist Congress, where he made a deep impression on both Theodor Herzl and the delegates; he was elected to the Zionist General Council, later serving as one of the first directors of the *Jewish Colonial Trust. In 1899 Rabinowitz led the Lithuanian Zionists in their battle against the Lishkah Sheḥorah, a group of violently anti-Zionist rabbis. As a result of his vigorous efforts, over 100 East European rabbis wrote letters in support of the Zionist movement. His own essays on the religious aspects of Zionism appeared in *Ha-Dat ve-ha-Le'ummiyyut* (1900). After the Fourth Zionist Congress Rabinowitz accompanied Isaac J. *Reines on a mission to the Warsaw area, where their efforts to gain the support of leading ḥasidic rabbis for the Zionist cause met with some success.

In 1906 Rabinowitz was appointed rabbi of Liverpool, where he did much to promote traditional observance and communal harmony, despite the early hostility of more Anglicized members of the local community. Together with Reines, he founded the *Mizrachi world movement of religious Zionists in 1902, and he maintained his Zionist activity in England, being elected president of the British Mizrachi organization at its first conference in 1918.

A volume of his essays and addresses, *Li-Tekufot ha-Yamim* ("The Cycle of Seasons," 1918), was sponsored by *Aḥad Ha-Am, and a supplementary work, *Sefer Yashresh Ya'akov* (1925), appeared as Liverpool Jewry's memorial tribute, with a preface written by Rabinowitz's successor, Isser Yehudah *Unterman. He inspired the character of "Reb Shemu'el" in Herzl's novel *Altneuland*.

[Godfrey Edmond Silverman]

RABINOWITZ, STANLEY (1917–), U.S. rabbi and president of the Rabbinical Assembly. Born in Duluth, Ia., Rabinowitz received his B.A. from the State University of Iowa in 1939 and was ordained by the Jewish Theological Seminary

(1943). He began his career as an itinerant rabbi of congregations whose rabbis were away serving in the Armed Forces; as director of the Midwest office of the Jewish Theological Seminary; and then as director of field services for the United Synagogue of America. For a time, he served as acting director of the United Synagogue.

In 1947 Rabinowitz assumed the pulpit of B'nai Jacob Congregation in New Haven, Connecticut, where he served for five years, and then moved to Congregation Adath Jeshurun in Minneapolis (1953–60) before coming to Adas Israel Congregation in Washington, D.C., where he served for 26 years. As the rabbi of the largest Conservative congregation in Washington, Rabinowitz often had Israeli ambassadors and prominent national leaders in the pews. A champion of women's rights in Conservative Judaism, he initiated the bat mitzvah ceremony at his three congregations and counted women in the *minyan* at Adas Israel well before it was sanctioned by the Rabbinical Assembly.

He was instrumental in pushing for the desegregation of Washington, D.C., encouraging building owners in his congregation to desegregate their facilities. He allowed and encouraged Adas Israel to hold multiple services on Shabbat morning including a Havurah service and an Orthodox *minyan*. Adas Israel also did not follow the lead of many other inner city synagogues that moved to the suburbs following the 1968 riots.

Rabinowitz was also a national leader. Handsome and charismatic, he was a well-respected orator; he chaired the Committee on Synagogue Standards for the Rabbinical Assembly; and was later vice president of the Rabbinical Assembly in 1974–76 and then president in 1976–78. He represented the Conservative movement in its confrontations with Prime Minister Menahem Begin over an amendment to the *Law of Return regarding non-Orthodox conversions. He also traveled to Egypt soon after Anwar Sadat's path-breaking trip to Jerusalem.

His national career was thwarted by a technicality of the Rabbinical Assembly bylaws that limited the presidency to two one-year terms. A leading candidate to be chairman of the Conference of Presidents of Major American Jewish Organization and thus *the* major spokesman of American Jews, his nomination hinged on his remaining a third year as president of the RA, at least until he secured the chairmanship of the Conference. The timing was not propitious and Rabinowitz became ineligible to serve as chairman since he was no longer president of a major American Jewish organization. Rabbi Alexander *Schindler had used the bully pulpit of the chair to advance his movement's prominence. Since then no Conservative movement figure has had comparable influence.

Rabinowitz' experience with the Israeli prime minister convinced him that Conservative Judaism needed a strong presence in Israel. He thus became founding president of the Zionist Organization of the Conservative Movement (MERC-AZ) (1977–1985) and chaired the Rabbinic Cabinet of United

Jewish Appeal (1986). He retired in 1986 and was named rabbi emeritus of Adas Israel.

BIBLIOGRAPHY: M. Berenbaum, "Stanley Rabinowitz Reflects on Five Decades of Leadership," *Washington Jewish Week* (June 26, 1986).

RABINOWITZ, YA'AKOV (1875–1948), Hebrew journalist and author. Born in Volkovysk, Poland, Rabinowitz, after teaching for several years in Vitebsk, left in 1900 for Switzerland, where he started to write. Upon his return to Russia in 1904, he became active in Zionist affairs and began his long career as journalist and author. From 1907 until his departure for Erez Israel in 1910, he was active in the *Odessa Committee, becoming M.M. *Ussishkin's principal aide. In Erez Israel he first settled in Petaḥ Tikvah, but moved to Tel Aviv in 1923.

Rabinowitz became a regular contributor to *Ha-Po'el ha-Za'ir*. Together with A. *Barash he founded the literary journal *Hedim* (1922), which became a forum for both the old and young generations of writers and an outstanding expression of the literary milieu in Erez Israel from the time of the Third Aliyah. His own contributions consisted of monographs on various authors. In addition, he wrote a regular column for *Davar*, contributed to many literary periodicals, and published translations. Among Rabinowitz' books are *Be-Ein Shores* (1914), a historical novel; *Or va-Ed* (1922), stories; *Setav* (1926), poems; *Nedudei Amasai ha-Shomer* (2 vols., 1929), a story of the Second Aliyah period; *Neveh Kayiz* (1934), a novel; and *Hassagot* (1935), articles and essays. Y. Har-Even edited Rabinowitz's essays and published them with a biographical essay under the title *Maslulei Sifrut* (1971).

[Getzel Kressel]

RABINOWITZ, YEHOShUA (1911–1979), Israeli politician. Rabinowitz was born in Vishnevets, Poland, where his father was a well-to-do merchant. He studied at the Tarbut school and graduated from the Teachers' Seminary in Vilna. He was appointed director of a Hebrew school in Poland, where he was active in the He-Ḥalutz movement.

Immigrating to Erez Israel in 1934 Rabinowitz was employed in the Department of Industry of Hamashbir Hamerkazi, eventually becoming head of the Consumers' Cooperative of Israel.

Elected to the municipal council of Tel Aviv in 1956, he succeeded Mordekhai Namir as mayor in 1969. The Israel Labor Party, which he represented, was defeated in the elections held in 1973, and he was not reelected. A member of the Central Bureau of the Labor Party, he was regarded as a key

figure in the movement and wielded enormous influence in its councils.

In March 1974 Rabinowitz was appointed minister of housing in the short-lived government of Golda Meir, but when Pinhas Sapir decided not to serve in the government formed on June 3, by Yizhak Rabin, Rabinowitz was appointed to succeed him as minister of finance, remaining in office until the elections held in May 1977.

RABINOWITZ, ZEVI HA-COHEN (1832–1889), science popularizer. Born in Linkavo, in the Kaunas district of Lithuania (then Russia), Rabinowitz early showed an inclination for mathematics and physics, and from 1852 began to prepare a comprehensive Hebrew work which was to encompass all the fields of physics, with his own notes.

Because of financial difficulties, he only published one volume, *Sefer ha-Menuḥah ve-ha-Tenu'ah* (1867). He later wrote other books on mathematics, magnetism, chemistry, and steam engines, thus enriching Hebrew terminology in these fields and bringing them to the attention of Hebrew readers. He also published many articles on these subjects in *Ha-Meliz*, and in Russian in several newspapers and periodicals which he edited and published between the late 1870s and 1885. Even after the pogroms of the 1880s he remained convinced that education was the solution to the Jewish problem in Russia. He died in St. Petersburg.

[Getzel Kressel]

RABINOWITZ, ZINA (1895–1965), Hebrew writer. Born in Bendery, Bessarabia, she went to Erez Israel in 1913. With the outbreak of World War I she returned to Bessarabia and later continued her studies at Moscow University. After living in the U.S., Canada and Palestine, she permanently settled in Israel in 1961.

Her poems and stories first appeared in *Ha-Shilo'ah* during World War I, after which she continued to publish stories and travel articles in Hebrew and Yiddish. Her books include *Ma'aseh be-Makkal* (1960), *Ba-Derekh la-Ḥerut* (1962), and *Be-Ahavatam Nitgallu* (1963).

[Getzel Kressel]

RABINOWITZ-TEOMIM, ELIJAH DAVID BEN BENJAMIN (ADeReT; 1842/43–1905), Ashkenazi chief rabbi of Jerusalem. Elijah David was born in Pikeln, Lithuania. His father Benjamin Rabinowitz, who was rabbi of Zamosc and later of Wilkomierz, was called “Benjamin the righteous” because of his great piety; it was said that he never slept the night through and never ate a meal before completing the study of a tractate. As Elijah David was a twin, his brother being Zevi Judah, the name Teomim (“twins”) was added to the family surname. Elijah David was known from his youth as an unusual genius and in 1874 was chosen rabbi of the community

of Ponevezh. In 1893 he was appointed rabbi of Mir which, though smaller than Ponevezh, was renowned for its large yeshivah. His decision to move to Mir started a controversy, and the leaders of Ponevezh sent “an open letter” to Mir asking that their rabbi be “freed,” but the appeal was ignored. His period at Mir was regarded as the creative period of his life. There he published the most notable of his works, as well as articles which appeared in many periodicals – *Ha Tevunah*, *Ha-Me'assef*, *Kevod ha-Levanon*, *Ha-Zofeh*, *Ha-Maggid*, *Keneset Ḥakhmei Yisrael*, *Ittur Soferim*, *Keneset ha-Gedolah*, etc. In Mir he wrote no less than a hundred works, especially notes and glosses to the Talmud, Maimonides' *Mishneh Torah*, the *Tur* of Jacob b. Asher, the *Shulḥan Arukh*, and responsa. His novellae and glosses on the Jerusalem Talmud entitled *Tuv Yerushalayim* appeared in the Romm-Vilna edition (1922) and those on the *Tur Ḥoshen Mishpat* entitled *Et Devar ha-Mishpat* in the *El ha-Mekorot* (1959) edition of the *Turim*. His extraordinary erudition is discernible in his novellae and notes, and his great knowledge of historical matters from his correspondence on these subjects with Jacob Reifmann, Isaac Hirsch Weiss and others.

The following of his works may be mentioned: *Oholei David*, *Matta'ei Hadar*, and *Heshiv Davar*, responsa; *Gefen Adderet*, on the Babylonian and Jerusalem Talmud; *Seder ha-Mo'adot*, on the festivals and special seasons; *Ma'as la-Melekh*, on Maimonides' *Mishneh Torah*; *Ziyyunim la-Torah*, source references; and *Kelei ha-Ro'im*, on the *aggadot* of the rabbis. Among his published works are *Zekher le-Mikdash* (1889), on *Hakhel*; *Aḥarit ha-Shanim* (1893); *Over Oraḥ*, appended to N. Cahana, *Orḥot Ḥayyim* (pt. 2, 1898); notes and glosses on the *Mishneh Torah* of Maimonides (1900); *Teshuvah mi-Yirah* (1906), on all topics in which Maimonides employs the phrase *Yireh Li* (“it seems to me”); *Zahav Sheva* (appended to *Tosefot ha-Rashba*, 1956), notes on the *tosafot* to *Pesahim* by Samson b. Abraham of Sens.

In 1899 a new period of his life commenced. When Samuel *Salant reached an advanced age and asked for a successor to be appointed chief rabbi of Jerusalem, extended negotiations with rabbis of the Diaspora began. At the recommendation of Ḥayyim Ozer *Grodzinski of Vilna, Elijah David was officially appointed in 1901. He succeeded in uniting the Jerusalem community, which was split into various **kolelim* and suffered from inner dissension between the *perushim* (the non-ḥasidic Ashkenazi community) and the **Hasidim*, and in forming a single organization for *sheḥitah*. He was also active in many communal spheres. He was the first treasurer of the Bikkur Ḥolim hospital, made regulations for institutions of learning and charity – particularly in the yeshivah *Ez Ḥayyim* – and arranged strict supervision of shops and merchants. His local regulations and customs are still in force, included in the annual calendar which is published by the *Ez Ḥayyim* yeshivah. The most famous of his sons-in-law, Abraham Isaac ha-Kohen *Kook, published a special brochure entitled *Eder ha-Yakar* (1906, 1967²) describing his father-in-law's personality and quoting his testament, which shows the

extraordinary humility and modesty of its author, and 20 of his letters.

BIBLIOGRAPHY: A.I. Kook, *Eder ha-Yakar* (1906, 1967²); J. Gelis, *Mi-Gedolei Yerushalayim* (1967), 116–35.

[Itzhak Alfassi]

RABON (Rubin), ISRAEL (1900–1941), Yiddish poet and novelist. Born in Govertshev, Poland, Rabon lived most of his life in Lodz. He was murdered by the Nazis at Ponary, near Vilna. He wrote his works of raw power and imaginative force under several pseudonyms including Yisrolik der Kleyner, Rut Vintsigster, Shabtai Tsiter, and Y. Rozental. His books include poetry, *Hintern Ployt fun der Velt* (“Behind the World’s Fence,” 1928) and *Groer Friling* (“Grey Spring,” 1933), and two novels, *Di Gas* (“The Street,” 1928), and *Balut, Roman fun a Forshtot* (“Balut, Novel of a Suburb,” 1934).

RABOY, ISAAC (Yitskhok; 1882–1944), Yiddish novelist, poet, and playwright. Born into a ḥasidic family in rural Podolia and raised in northern Bessarabia where he came in contact with maskilic circles and read Russian literature, in 1904, following the Kishinev pogroms and seeking to avoid conscription into the czarist army, he immigrated to New York where he worked in a hat factory. Dovid *Ignatov, a fellow worker, and *Mani Leyb, a neighbor, introduced him to the literary group *Di *Yunge*, in whose anthologies Raboy published his first stories. He studied agriculture with the financial support of the Baron de Hirsch Fund (1908–10) and subsequently worked on a horse-breeding ranch in North Dakota. On his return to the East in 1913, he failed both at farming in Connecticut and in a business venture in New York and was compelled to work in factories for the rest of his life. Many of his short stories and his two best-known novels, *Her Goldnberg* (“Mr. Goldenberg,” 1923) and *Der Yidisher Kauboy* (1942; *Jewish Cowboy*, 1989) reflect his farming experiences. The lightly veiled autobiographical protagonists exult in the freedom of the prairies – a world hitherto unknown to Yiddish literature. They empathize with Native Americans, are compassionate to animals, but experience antisemitic prejudice and long to till the soil of Palestine. In his lyrical and often humorous prose, Raboy celebrates the Jewish discovery of the New World, not only the vast spaces of the Midwest but also, in a manner comparable to those works of Sholem *Asch set in New York, as in *Iz Gekumen a Yid keyn Amerike* (“A Jew Came to America,” 1929), the sweatshops and tenements of Delancey Street at the turn of the century.

RAB-SARIS AND RAB-MAG (Heb. רַב־מַג; רַב־סָרִיס), titles of high ranking Assyrian and Babylonian officials. An economic bilingual document in Akkadian and Aramaic attests the title Rab-Saris as held by an Assyrian eponym. In that document, however, the corresponding Akkadian term is absent and it is as yet unattested elsewhere. Further a מַרְסָס of Sargon is found in Aramaic. The meaning of all these is “chief of the king’s attendants.” Though the *saris* – in Akkadian *ša rēši* – was often a *eunuch (in contradistinction to the *ša ziqni*, “the bearded one”), there is no indication that the Rab-Saris was always castrated. In the story of Daniel, the Rab-Saris Ashpenaz trained certain aristocratic Jewish youths for service in the court of Nebuchadnezzar (Dan. 1:3 ff.). The Rab-Saris is among the Assyrian officials leading the siege of Jerusalem in the days of Hezekiah (11 Kings 18:17). In Jeremiah 39:3–13, the Rab-Saris Nebushazban is mentioned together with other Babylonian officials. Among these was Nergalsharezer the Rab-Mag. In late Assyrian and late Babylonian texts the *rab-mugi* (or *rab-mungi*) is described as a high official who performed military, administrative, and diplomatic duties, although the precise significance of the title is unclear.

[S. David Sperling]

RAB-SHAKEH (Heb. רַב־שָׁקֵה; Akk. *rab šāqī*), title of a high Assyrian and Babylonian official. Akkadian texts indicate that he was in charge of territories. In the Assyrian eponym succession, this official was fourth in line from the king. In Middle Assyrian texts the *šāqū* (“butler”) is mentioned as a member of the domestic staff of the palace. The *rab-šāqī* was thus originally “chief butler.” The development calls to mind the English “chamberlain.” At the siege of Jerusalem by Sennacherib the Rab-Shakeh addresses the leaders and the people in an effort to secure their surrender (11 Kings 18:19; Isa. 36–37).

[S. David Sperling]

RACAH, GIULIO (Yoel; 1909–1965), Israeli physicist, born in Florence, Italy. On his mother’s side, Racah’s family claimed to trace its ancestry in Italy back to the destruction of the Second Temple. Racah studied in Rome under Enrico Fermi and in Pisa under Wolfgang Pauli. At the age of 28 he was appointed professor at the University of Pisa. An ardent Zionist, he placed his farm outside Pisa for use by the Zionist Organization as an agricultural training center. He first visited Pales-

tine in 1934, and on settling in Jerusalem in 1939 headed the department of theoretical physics of the Hebrew University. Here, Racah began his studies of atomic spectroscopy which gained the department an international reputation. During the Israel War of Independence he served as deputy commander of the Haganah on Mount Scopus and led research on munitions that could be produced from the raw materials available in the besieged city. The “Racah method” of spectroscopy has been recognized as one of the most effective methods of studying all types of nuclear structure. His “Racah coefficient *W*” has wide application in research on nuclear radiations, and it is the basis of books of tables published by many of the world’s leading scientific institutions. In 1958 Racah was awarded the Israel Prize for natural sciences. His reputation attracted notable scientists to Israel, and the department of nuclear physics at the Weizmann Institute of Science was built up mainly by graduates trained by Racah. In 1961 Racah was elected rector of the Hebrew University. He died while visiting Florence.

RACCAH, MAS’UD BEN AARON (1690–1768), rabbi in *Tripoli. Raccach appears to have been descended from the Venetian Raccach family. Isaac Raccach, whose daughter he married, and Solomon Raccach, wealthy uncles of his, and his brother-in-law Mas’ud lived in Venice. These relatives encouraged him and lent him their support. He studied principally in Smyrna under R. Ḥayyim Abulafia the Elder and R. Isaac ha-Kohen Rapoport, the author of *Battei Kehunnah*. Raccach immigrated to Erez Israel, settled in *Jerusalem, and was sent from there as an emissary to Tripoli. The leaders of the Tripoli community invited him to become their spiritual leader. Accepting their proposal, he was appointed *av bet din*. During his stay in Tripoli he founded a yeshivah and trained many disciples who later became rabbis and community leaders. They included R. Shalom Flus, R. Moses Lahmias, R. Nathan Adadi, who married his daughter, R. Benjamin Vaturi, and others. During the years 1731–36 he appears to have been in Leghorn, where he corresponded on halakhic matters with the rabbi of Leghorn, R. Abraham Rodriguez. While there, he gave his *haskamah* (“approval”) in 1736 to the responsa of R. David b. Zimra, which were then published there.

Raccach wrote the following works:

(1) *Ma’aseh Roke’ah* (“Works of the Apothecary,” a pun on his own name), a commentary in four parts on Maimonides’ *Mishneh Torah* (parts 1–2, Venice, 1742; part 3, Leghorn, 1863; part 4, Tel Aviv, 1964). In this work he compares the texts of the various editions of *Mishneh Torah* in order to determine the correct version;

(2) *Divrei ha-Baraita* (“Words of the *Baraita*”), commentaries on the *beraitot*, which is extant in manuscript;

(3) various sermons which are extant in manuscript;

(4) a commentary on the Five Scrolls; and

(5) a collection of commentaries on several of the tractates of the Talmud.

[Haiim Bentov]

RACE, THEORY OF. In the 18th century the “founding fathers” of anthropology almost all believed that the human races differed in innate intelligence, or even in virtue. Obviously the idea of such racial differences is far older than the first attempts at their scientific classification.

Early Beliefs

Primitive tribes who laid claim to particular genealogies, going back to legendary ancestors, developed these ideas in their own way. In classical Greece, philosophers like Plato and Aristotle were “racists” in the modern sense of the word: according to Aristotle, the Greeks were born to be free while the barbarians were slaves by nature. However, in the melting pot of Alexander’s empire and later in the Roman empire, belief in ethnocentrism faded; this was especially true of Stoic philosophy. The Jewish tradition, with its majestic story of Adam which furnished all men with a common ancestor, can be considered the first historical example of a fundamentally “antiracist” conception. On this subject the Talmud states: “for the sake of peace among creatures, the descent of all men is traced back to one individual, so that one may not say to his neighbor, my father is greater than yours” (Sanh. 4:5). Belief in a common descent from Adam was taken over by Christianity and became one of the fundamentals of the Christian principle of the equality of all men before God. However, at the same time, medieval society was divided into three estates – commoners, clergy, and nobility – superiority being ascribed to the “blue blood” of the latter. As most of Europe’s reigning monarchs were of Germanic origin, there was a tendency apparent from the earliest days to accord a measure of preeminence to “Germanic blood.” Conflicts between such conceptions of degree and the Christian universalist principle were particularly acute in the 16th-century Spanish empire. It was only after lengthy struggles and theological discussions that the Spaniards recognized the native races they found in America as men endowed with souls. At the same time, through statutes dealing with racial purity (*limpieza de sangre*), a system of racial discrimination was instituted in Spain, applying to the descendants of Jews and Moors who had been converted to Christianity. In spite of their baptism, the blood of these “new Christians” was considered impure and their race inferior.

Eighteenth-Century Anthropological Theories

So, during the whole of European history, it is possible to speak of latent, or even open, racial prejudice. The establishment of the anthropological sciences in the 18th century enabled these prejudices to be expressed systematically, and the systems of classification worked out by the scientists Buffon

and Linnaeus were typical in this respect. Both men coupled features (color of skin, type of hair, etc.) with mental and moral characteristics, which were interpreted in favor of the white man of Europe. Buffon, whose system was more overtly racial than Linnaeus', even considered the white man as the norm, the "king of the creation," and colored men as members of degenerate races. The tendency to regard the white race as superior characterized the majority of anthropological systems elaborated during the 18th and 19th centuries. The rejection of biblical anthropology favored this trend, because then it became possible to attribute different origins to different races. Thus, according to *Goethe, Adam was the ancestor of the Jews only, while *Voltaire believed that black men were an intermediate species between white men and apes. In the 18th century the major systems of classification (of which the best known and least marred by racial value judgments was that of Blumenbach) distinguished between only four or five principal races. The Jews were usually included in the white race, in whose midst they were supposed to form a nation *sui generis*. But at the beginning of the 19th century, with the emergence of nationalist struggles, writers began to multiply the number of races, to distinguish between different European races and even to set one against the other. There was continuous interaction in this field between the mental climate of the time, itself closely related to political upheavals, and the current intellectual theories.

Nineteenth-Century Nationalism

From then on racist or quasiracist notions took root, especially in Germany where nationalist agitators like E.M. Arndt and F.L. Jahn extolled the merits and qualities of the Teutonic race. The philosopher *Fichte elaborated a patriotic theory postulating that German was the original language (*Ursprache*) of Europe and the Germans its original people (*Urvolk*). After 1815, many German students and academics propounded these opinions as part of the Pan-Germanic movement. Ideas of the same type also spread in other countries. After the restoration of the monarchy in France some bourgeois intellectuals, reacting against the pretensions of the "Frankish" nobility, claimed to belong to the native "Gallic" race. In Britain "Germanism" or "Teutonism" found influential supporters in Carlyle and Thomas Arnold. In more enlightened English circles the "Hebrew race," which had given the West its spiritual values, was championed by Benjamin *Disraeli: "All is race, there is no other truth" was his maxim. In that age the concept of "race" was espoused by numerous authors as a substitute for divine providence as the determining factor in history. Germany continued to be the principal nursery of race theories reinforced by scientific pretensions, partly because its political divisions before 1871 stimulated nationalist fervor, and partly because according to the most prevalent notions the Germans were the only European nation which could claim to be a wholly "pure" race, that is, purely Teutonic. Heinrich *Heine commented ironically: "We Germans are the strongest and wisest race; descendants of our princely house sit on all European

thrones; our Rothschilds control all the world's stock markets; our scholars lead in all sciences; we know it all."

"Aryan" and "Semite"

It is obvious that from then on the Jews were considered as a race apart, an Oriental one, and the spectacle of their success in all walks of life after emancipation strengthened the tendency to attribute to them certain specific – and detrimental – racial characteristics. In intellectual spheres the race theories of the 19th century received a powerful impetus and gained a new orientation from the linguistic discovery of the Indo-European group of languages. A confusion arose between languages and races, a mistake which had grave consequences. It was believed that the nations that spoke European languages, which were thought to have derived from Sanskrit, belonged to the Indo-European or "Aryan" race. In opposition to them was a "Semitic" race, represented by the Jews and the Arabs. Typically enough, German scholars used the term "Indo-Germanic" instead of Indo-European. Of course it was also taken for granted that the "Aryan" race was morally superior to the "Semitic" one. Thus, according to the famous Orientalist scholar Lassen, "the Semites do not possess that harmonious equilibrium between all the powers of the intellect which characterized the Indo-Germans." His well-known French colleague Ernest *Renan spoke of the "appalling simplicity of the Semitic mind." All original creations of the human spirit – with the possible exception of religion – were attributed to the "Aryans." Moreover, many authors considered that, to preserve their special qualities, the Aryan nations must avoid intermingling with the people of an "inferior race." They accorded the Germans the distinction of being the purest Aryans.

Such were the opinions, which, pushed to their limits, were developed and popularized by Comte de *Gobineau in his infamous *Essai sur l'Inégalité des Races Humaines* (1853–55). The racial theories of the 19th century tended to establish a double hierarchy: the superiority of the "Aryans" over "Semites" and other "inferior races"; and the superiority of the "Germans" over other "Aryans." The political and economic success (especially after 1871) of the nations that spoke Germanic languages and that therefore considered themselves as belonging to the Teutonic race helped to sanction these opinions. In Latin countries efforts were made to set up a rival hierarchy (which gave rise to the myths of "Latinity" and "Celticity") or, especially in France, to proclaim the superiority of a "racial mixture" over "racial homogeneity." Similarly, in the United States, the adherents of the "melting-pot" conception of the country (limited to the white race) were in conflict with the acolytes of the "Anglo-Saxon race." All these notions continued to be based on the tenacious confusion, typical of the materialist orientation of anthropological science in the 19th century, between "races" and languages or cultures.

However, during the same century, progress in anthropology, ethnography, and prehistory made most specialists gradually abandon these simplified conceptions. Thus the distinguished philologist Max Mueller, although he had previ-

ously supported such theories, announced in 1871 that it was absurd to speak of an “Aryan race” or of a “grammar based on the size of the head.” However, the “Aryan theory” continued to gain adherents among the general public. It was propagated in every country in school textbooks, which usually summarily repeated ancient opinions and classified Europeans as “Aryans,” all except the “Semitic” Jews. The anti-Jewish campaigns, from then on styled “antisemitic,” made their contribution to the spread of the theory. As a result of all this, by 1900 the existence of an “Aryan race” was firmly established in the public mind as a scientific truth. Usually, this only implied a vague belief in the intellectual or moral superiority of the “Aryans” over the “Semites,” and a more marked superiority of the “whites” over the “yellows” and especially the “blacks.” But in the arena of the violent antisemitic campaigns of the time, some fanatics worked out elaborate eschatological systems in which the struggle between the Aryan and Semitic races was the counterpart of the final struggle between Good and Evil. The most influential of these writers was the Anglo-German Houston Stewart Chamberlain, who stated that the original sin of the Jews was that from ancient times they had been a mixed race opposed to Aryan purity. Ingenuously, in the time of King Cyrus, the Aryans had committed the fatal blunder of protecting the Jews: “...under the protection of Aryan tolerance was planted the seed from which Semitic intolerance spread its poison over the earth for thousands of years, a curse on all that was noble and a shame to Christianity.”

From the second quarter of the 20th century scientific anthropology rid itself almost entirely of the dangerous error of dividing the human races into “superior” and “inferior,” or even “good” and “bad.” At that same time, however, in a defeated and disoriented Germany, gripped by unemployment, this same error helped to weld a political party and then grew into a state dogma. Thus, from 1933 the theory of race was nothing but a kind of totemistic mythology, serving to justify an imperialistic and murderous expansionism.

In the later part of the 20th century, all such theories of race, whether applied to Jews or other groups, had been largely discredited by the scientific community.

[Léon Poliakov]

RACHEL (Heb. רַחֵל), matriarch of Israel, wife of *Jacob and the mother of *Joseph and Benjamin. Her name means “ewe,” while that of her sister *Leah means “cow.” She was the younger daughter of *Laban, brother of Rebekkah.

Rachel first appears as a shepherdess who happened to come in sight just when Jacob had arrived at a well near Haran in his flight from his brother Esau. The two seem to have fallen in love at once, and Jacob made an agreement with his uncle to work for him for seven years in return for receiving Rachel in marriage. However, when the time of the nuptials arrived, Laban cheated Jacob and gave him Leah, his older daughter, instead. Laban, however, agreed to deliver Rachel in advance if Jacob undertook to serve him for another seven years as the bride-price for Rachel (Gen. 29:4–30).

Rachel is described as “shapely and beautiful” (29:17) and was more beloved of Jacob than Leah (29:30). She was, however, barren and became very jealous of her sister’s fecundity. In her desperation, she resorted to the device of concubinage, used earlier by Sarah under similar circumstances (16:2–4; see *Patriarchs). She gave her maid Bilhah to Jacob and looked upon the offspring of the union, Dan and Naphtali, as her own children (30:1–8). On one occasion, she yielded her conjugal rights to Leah in return for some mandrakes that Reuben had collected (30:14–16), apparently sharing the widespread belief that this “love apple” could cure barrenness in women. It was only after Leah had borne seven children that Rachel finally gave birth, naming her son Joseph, noting with satisfaction that God had taken away (*ʿasaf*) her disgrace and expressing the wish that the Lord might give her an additional (*yosef*) son (30:22–24).

Jacob consulted with Rachel and her sister about his plan to return to his homeland and he received their consent. Before the family’s precipitate flight, Rachel stole her father’s household idols, unbeknown to her husband. The exact significance of this act is uncertain (see *Teraphim). Three days later, Laban caught up with Jacob and searched his effects. Rachel, however, managed to outwit her father and to conceal the idols (31:4–35).

When Jacob prepared for the encounter with Esau on his return home, he took care to place Rachel and Joseph last in the receiving line (33:1–7), apparently to ensure that they would have a chance to escape should the meeting prove to be hostile.

Rachel died in childbirth on the way from Beth-El to Ephrath. As she lay dying she named her son Ben-Oni, “son of my suffering,” although her husband called him Benjamin. Jacob did not bury her in the ancestral, patriarchal vault at Machpelah, but interred her at the place of her death and set up a monument over the grave (35:16–21; cf. 48:7). These traditions of burial in Bethlehem are in conflict with 1 Samuel 10:2 and Jeremiah 31:14 (15), which locate the tomb in Benjamin (see below).

Rachel appears again only twice in biblical literature. She is mentioned, together with Leah, as a matriarch of Israel, in the marriage blessing of Ruth (Ruth 4:11), and Jeremiah poetically visualizes her weeping in Ramah for her children (the tribes of Ephraim and Manasseh descended from Joseph), who are in exile (Jer. 31:15).

The traditions about Rachel in Genesis are generally regarded as reflections of Israelite tribal history – though

there is no unanimity as to the period involved. It is assumed that at some stage in the development of the 12-tribe league, the tribes associated with Rachel (Benjamin, Ephraim, and Manasseh) and Bilhah (Dan and Naphtali) constituted a distinct confederation. The territory of Benjamin is, as a matter of fact, contiguous with that of Ephraim. The attribution of two tribes to the concubine Bilhah probably reflects their inferior status within the smaller confederation, while the birth of Benjamin in Canaan would imply a late association of that tribe with the others in the group. The very name can be interpreted as “son of the south,” which correctly describes the location of Benjamin’s territory in Israel in relation to that of the other members of the groups.

[Nahum M. Sarna]

In the Aggadah

Rachel warned Jacob that her cunning father would try dishonestly to wed her elder sister, Leah, to him. Jacob and Rachel therefore agreed upon a sign by which he would recognize her on the nuptial night. Nevertheless, when Laban actually sent Leah into the bridal chamber, Rachel revealed the sign to her sister lest she be put to shame. As a reward for this act, Rachel was vouchsafed to be the ancestress of King *Saul (Meg. 13b).

Rachel began to envy her sister after Leah had borne Jacob four sons because she attributed this good fortune to her sister’s piety (Gen. R. 71:6). After she implored Jacob to pray for the termination of her barrenness, he hinted that Sarah was only blessed with Isaac because “she brought her rival [Hagar] into her home.” Rachel thereupon gave her maidservant, Bilhah, to Jacob (Gen. R. 71:7). When she finally bore a son, she was doubly thankful because she had feared that Laban would permit only Leah to accompany Jacob to Erez Israel, and would detain the childless wife (Gen. R. 73:3). She was a prophetess and thus knew that Jacob was destined to have only 12 sons. Since Joseph was the 11th, she prayed for only one more son (Tanḥ. Va-Yeḡe, 20). One opinion is that she stole her father’s teraphim in order to conceal the knowledge of Jacob’s flight (PdRE 36); another is that the purpose was to turn her father away from idolatry (Gen. R. 74:5). Jacob’s unintentional curse against her on that occasion caused Rachel’s premature death. The curse would have taken effect at once were it not that she was destined to bear Jacob his youngest son (Gen. R. 74:9; PdRE 36).

She was not vouchsafed burial next to her husband in the cave of Machpelah because of her indelicate request to Leah in the mandrake incident (Gen. R. 72:3). Jacob buried her at Ephrath because he foresaw that the exiles would pass this place when they were exiled to Babylon. As they passed, Rachel would entreat God’s mercy for them (Gen. R. 82:10). Indeed, it was only Rachel who was able to obtain God’s promise that Israel would ultimately be restored after she pleaded with Him to recall her kindness to Leah on the night that should have been her own nuptial celebration (Lam. R., Proem 24).

[Aaron Rothkoff]

Tomb of Rachel

According to Genesis (35:19–20), Rachel was buried “on the road to Ephrath, which is Beth-Lehem”; according to 1 Samuel (10:–2) the tomb of Rachel was situated “within the border of Benjamin, in Zelzah.” The words of the prophet Jeremiah (31:15) allude to the tomb of Rachel as being in the portion of Benjamin. The rabbis who sought to correct this contradiction saw an error in the order of the words in the construction of the verse in the Book of Samuel. Among others, they suggested the following correction: “When thou goest from me today to the border of Benjamin, to Zelzah, thou shalt find two men by the tomb of Rachel” (Gen. R. 82:10; Tosef., Sot. 11:11; Sif. Deut. 352). Some modern scholars read: “When thou goest from me today, thou shalt find two men within the border of Benjamin, in Zelzah, and they shall say to thee: the she-asses which thou went to seek by the tomb of Rachel have been found.”

The tombstone near Beth-Lehem is mentioned by the first Christians, e.g., Eusebius; the most ancient Jewish source on the tomb of Rachel is the *Guide to Jerusalem* of the tenth century, which was found in the Cairo *Genizah. According to the descriptions of Jewish travelers, from R. Benjamin of Tudela (c. 1170) until the 18th century, the tombstone consisted of 11 stones which were laid by the 11 sons of Jacob on the grave; a large stone was placed over them, that of Jacob. The tomb was roofed over with a dome which was supported by four pillars. At the end of the 18th century the tomb was surrounded by a closed structure. In 1841 this structure was renovated with funds which were supplied by Sir Moses Montefiore. This is attested by an inscription engraved on a marble tablet inside the structure.

The tomb is especially visited on the new moons, during the whole of the month of Elul, and on the 14th of Marheshvan, the traditional anniversary of the death of “Our Mother Rachel.” Jews donated oil, sacred curtains, and charity for the tomb structure. They were also accustomed to inscribing their names on the tombstone and measuring it with red woolen threads, which were tied onto children and the sick as a remedy for good health and healing. During the Jordanian occupation, the area around the tomb was converted into a Muslim cemetery. After the Six-Day War, the structure was renovated by the Israel Ministry of Religions and adapted to mass pilgrimage. A picture of the Tomb of Rachel was commonly used as a decoration in Jewish homes throughout the world.

[Joseph Braslavi (Braslavski)]

In the Arts

Of the four matriarchs Rachel has inspired the most original work in literature and art. In many instances she figures largely as the wife of Jacob, but in others she appears as the central character, often in connection with the theme of Jeremiah 31:15 – “A voice is heard in Ramah, Lamentation, and bitter weeping, Rachel weeping for her children; She refuseth to be comforted for her children, Because they are not.” The account of Rachel’s marriage to Jacob forms the basis of three early literary works, the German dramatist Christian Weise’s

Jacobs doppelte Heyrath (1683), the Swiss German Johann Jacob Bodmer's epic *Jacob und Rachel* (1752), and an anonymous Spanish allegorical play, *La mas hermosa Rachel pastora de las almas* (c. 1780). Probably the outstanding 19th-century treatment of the subordinate theme was *Rachel* ("Rachel's Lament," 1851), a verse allegory of the fate of his homeland by the Hungarian nationalist poet János Arany. Among works on the subject written in the 20th century are *Plach Rakhili* ("Rachel's Lament," c. 1923), by the Russian writer Nikolai Alexandrovich Krashennnikov; "Rahel," a lyrical ballad by the German poet Max Barthel, who later became sympathetic to the Nazis; and *Jacob's Ladder*, one of Laurence Housman's *Old Testament Plays* (1950), in which Rachel and Leah unendingly squabble over their claims to Jacob's affection. A Jewish treatment was that by the Hebrew poet *Rahel, whose *Shirat Rahel* ("Song of Rachel," 1935) includes the phrase "Her voice sings in mine..." In medieval Christian iconography, the two wives of Jacob, Leah and Rachel, were associated with the New Testament figures of Martha and Mary (representing the active and the contemplative life), since Rachel was preferred by Jacob as Mary was preferred by Jesus. However, Rachel was not a popular subject among artists of the Middle Ages. Interest revived in the 15th century, when the meeting of Jacob and Rachel (Gen. 29:10ff.) was the subject of a pen-and-wash drawing by the Flemish painter Hugo van der Goes (Christ Church, Oxford). During the Renaissance, Palma Vecchio painted Jacob kissing Rachel (Gen. 29:11), and there is a study of Jacob and Rachel by Raphael in the Loggia of the Vatican. A painting by Hendrik Terbrugghen (National Gallery, London) shows Jacob asking Laban for Rachel's hand (Gen. 29:18). Claude Lorrain painted an idyllic landscape with Jacob and Rachel (Hermitage, Leningrad). The robust nude by *Rembrandt, known as *Danaë* (Hermitage, Leningrad), may have been intended to represent Jacob's unintended marriage to Rachel's sister, Leah. Jacob's appropriation of Laban's household idols, which were taken and hidden by Rachel (Gen. 31:30–35), is depicted in the seventh-century *Ashburnham Pentateuch* (Bibliothèque Nationale, Paris). This subject later appeared in the Vatican Loggia frescoes by Raphael and in a tapestry by Barend van Orley, one of a series recounting the story of Jacob. It was also a popular subject in the 17th century. There are examples by the French painter Sébastien Bourdon (Louvre), by the Spanish master Murillo (Duke of Westminster Collection, London), by the Dutch genre painter Jan Steen, and by Rembrandt's teacher Pieter Lastman. Among works of the 18th century is a painting by Gabriel de Saint-Aubin in the Louvre; and the subject was included by Tiepolo in his wall paintings for the archbishop's palace at Udine, Italy.

In Music

Rachel has attracted rather less attention in music, although she and Jacob have together inspired some compositions, notably a 16th-century motet by Joachim à Burck (1599), some 17th-century Spanish songs, and a comic opera by Johann Philipp Krieger (1649–1725). The oratorio *Rachel* was com-

posed by Jean François Lesueur (1760–1837), and in the 20th century Lazare *Saminsky wrote a ballet on the theme. *Rahel Mevakkah al Baneha* (Jer. 31:15–17) has been a favorite subject for composers of cantorial music, and settings have been recorded by several leading *hazzanim*, including Josef (Yossele) *Rosenblatt; there are also modern interpretations by singers such as Jan Peerce and Richard Tucker. David Roitman's extended version of *Rahel Mevakkah al Baneha* (Jer. 31:15; Jer. 25:30; Isa. 20:12; Lam. 1:16; and Isa. 33:7) was arranged for voice and piano by A.W. Binder (1930).

RACHEL (first century C.E.), wife of R. *Akiva. The daughter of *Kalba Savua, one of the three richest men of Jerusalem, Rachel secretly married Akiva, who was ignorant and her father's shepherd, because she saw in him a man of modest and noble character. When her father found out about the secret betrothal, he took a vow against her deriving any benefit from his estate. Akiva and Rachel lived in straitened circumstances, but Akiva promised her a gift of a golden ornament with an engraving of Jerusalem on it. According to legend, the prophet *Elijah once came to them disguised as a poor man and begged them for some straw for a bed for his wife who had just given birth, in order to make them realize that there were people worse off than they (Ned. 50a). Akiva later decided to study Torah. Encouraged by Rachel he stayed away for 24 years (Finkelstein assumes that this absence did not last more than three years). He returned home with 24,000 disciples to whom he said, "mine and yours are hers," i.e., the credit for all our achievements is hers. When Akiva was able to fulfill his promise and give Rachel the "Jerusalem of Gold," Rabban *Gamaliel's wife envied her and told her husband of Akiva's generosity. He replied, "Did you do what she did, selling her hair in order that he might study?" (TJ, Sot. 9:16,24c). Akiva's love for Rachel is reflected in his saying, "who is wealthy?... He who has a wife comely in deeds" (Shab. 25b).

When Akiva's daughter became secretly betrothed to *Simeon ben Azzai, the Talmud concluded that this was indeed an illustration of the proverb "Ewe (Heb. *rahel*) follows ewe; a daughter acts like her mother" (Ket. 63a). Two major traditions are preserved in the Talmud about Rachel. One is that it was she who encouraged Akiva to study (Ket. 62b, 63a; see also Ned. 50a, which is a more legendary source), while the other presents the stimulus as coming from himself and

his gift to his wife as a compensation for her suffering during his absence (ARN¹ 6, 29).

RACHEL, the stage name of **Eliza Rachel Felix** (1821–1858), French actress and one of the world's greatest tragediennes. Born in Switzerland, Rachel was the daughter of a peddler, Jacob Felix, who took his large family to Paris. She was singing with her sisters in the streets when she was heard by the singing master, Etienne Choron, who undertook to give her free instruction. Under his sponsorship, she attended drama classes and the conservatoire, and at the age of 17 played at the Théâtre Gymnase. The leading Paris critic, Jules Janin of the *Journal de Débats*, was the only one to perceive her quality, and saw his enthusiasm vindicated when, in 1838, she entered the Comédie-Française and achieved success in Corneille's *Horace*. Thereafter her career was one of fame and notoriety. Rachel was slight of build and by some considered plain; but on the stage she had beauty, charm, and power. Though she had little formal education, her supreme dramatic achievement was in the French classics, especially Corneille and Racine, in which she replaced the declamatory style of the period with vitality and passion. She appeared in some contemporary plays, including *Adrienne Lecouvreur*, written for her by Legouvé and Scribe. Her greatest performance was in Racine's *Phèdre*; it was described as "an apocalypse of human agony."

The notoriety attending Rachel's name arose from her private life. She never married, but she had two children, one by Count Colonna-Walewski, an illegitimate son of Napoleon. She was also the mistress at different times of the poet Alfred de Musset, the Prince de Joinville, and a nephew of Napoleon, Prince Jerome. She first appeared in London in 1841 and subsequently toured the Continental capitals, including St. Petersburg. Her tour of the United States in 1855 proved to be the end of her career, for the tubercular condition from which she suffered became worse, and she never acted again. At her funeral, the chief rabbi of the Consistory of Paris delivered an oration in Hebrew.

Rachel's brother **RAPHAEL** (1825–1872), and her sisters **SARAH** (1819–1877), **LIA** (1828–1908), **REBECCA** (1829–1854), and **DINAH** (1836–1909) all had theatrical careers of varying success.

RACHMAN, PETER (c. 1920–1962), British property tycoon and racketeer. He was born Perec Rachman in Lvov, Poland, the son of a dentist. His parents perished in the Holocaust and he survived the war as a slave laborer, migrating to Britain around 1946. After working as a dishwasher, in the 1950s Rachman built up a property empire in London by methods which later made him nationally notorious. Due to the war, there had been an extreme housing shortage in London. Resident ten-

ants were protected by rent control, but the owner of a property was free to raise rents to their market level once the previous occupant had vacated a building. Rachman hired thugs, mainly recent West Indian migrants, to intimidate tenants, often elderly, into leaving, using threats and other unacceptable tactics. It is believed that Rachman was one of the main progenitors of the race riots in Notting Hill and elsewhere in west London in the late 1950s. Rachman dealt almost exclusively in cash, operating from no fixed premises, which made him immune from prosecution. He also became notorious for his lifestyle of ostentatious luxury, philandering, and gambling. In 1960 he was denied British citizenship on police advice, which resulted in his moving into more upmarket property pursuits just before his death of a heart attack at the age of about 42. After his death, when his methods became public knowledge, Harold Wilson coined the term "Rachmanism" to describe his racketeering, a term which has passed into common British usage. Rachman was among the most notorious businessmen in modern British history.

RACHMILEWITZ, MOSHE (1899–1985), Israeli hematologist. Born in Mstislavl (Russia) and educated in Berlin, he reached Palestine in 1926. He joined the Hadassah Department of Internal Medicine in Jerusalem in 1931 and became its head in 1939. One of the architects of the Hebrew University-Hadassah Medical School, he became professor in 1950 and served as dean from 1957 to 1961. From 1960 he headed the Israel Association for Hematology and Blood Transfusions and in 1964 was president of the first Congress of the Asian and Pacific Society of Hematology to be held in Israel. His research work has centered on the metabolism of vitamin B-12 and folic acid, Mediterranean fever, liver diseases, the mechanisms regulating blood creation, and nutritional anemia. He made a significant contribution to the formulation of Israel's health policies as vice chairman of the National Health Council, and internationally as a member of the World Health Organization's Expert Committee on Nutritional Anemia. In 1964, he was awarded the Israel Prize in Medicine.

[Lucien Harris]

°RACINE, JEAN (1639–1699), French tragic dramatist. Racine's reputation rests on nine tragedies in Alexandrine verse written between 1667 and 1691. There is no record of his having any personal knowledge of Jews, but the heroine's speech in *Esther* (1689) makes his sympathy for them clear enough. A reference in the preface to *Esther* to the modern celebration of Purim also shows an awareness of Jewish customs. Racine's profound knowledge of the Scriptures and its application to his work can be traced to his Jansenist education at Port-Royal (1655–58), where he first met Blaise *Pascal and enjoyed semi-private tutoring by such scholars as Louis-Isaac Le Maître de Saci (1615–84), the translator and Bible commentator, and Jean

Hamon (1618–87), author of a four-volume commentary on the *Song of Songs* (1708). Racine obtained the most thorough grounding in the Scriptures then available in France, but did not learn Hebrew. His knowledge of *Midrash* and *Targum* and Jewish traditions were derived from the works of the contemporary Christian Hebraists Matthew Poole, John *Lightfoot, and Richard *Simon. Racine's *Phèdre* (1677), though based on classical myth, involves Judeo-Greek syncretism. Phaedra's pangs of conscience can only be understood within the framework of biblical law and a biblical conception of man's relationship to the Deity. The biblical tragedies (*Esther*, 1689; *Athalie*, 1691) are less religious in implication than *Phèdre*, and partake of the rationalist spirit that pervaded French intellectual society at the end of the 17th century. Like most of Racine's plays, *Esther* depicts only the last part of the story, stressing midrashic, apocryphal, and original elements – Ahasuerus' dream, Esther's prayer, and an intimate conversation between Haman and his wife. Haman's pathetic supplication to the queen, Esther's refusal of pardon, and her silence when the king falsely accuses Haman of attempting to rape her are given far more emphasis in Racine's play than in the biblical narrative. David *Franco-Mendes, who pointed out that Racine's last great tragedy supports Queen Athaliah in her struggle against God, intended his Hebrew melodrama *Gemul Atalyah* (Amsterdam, 1770) as a reply to the French author. Racine makes the high priest Joad (the biblical Jehoiadah) a prophet of heroic faith, who foresees on stage the criminal career of his Davidic protégé, yet unflinchingly sacrifices his own son to his messianic hopes.

A Hebrew verse translation of *Esther* by Solomon Judah *Rapoport, entitled *She'erit Yehudah*, was published in Vienna in 1827 in *Bikkurei ha-Ittim*, 7, 171–254. *Athalie* was twice translated into Hebrew, first by Meir ha-Levi *Letteris (1835), and a century later by Elijah Meitus (1950). A two-volume English translation by Samuel Solomon of Racine's complete plays appeared in New York in 1968.

[Herman Prins Salomon]

RACKER, EFRAIM (1913–1991), U.S. biochemist Racker was born in Neu Sandez, Poland, and, after a brief period in the Vienna Academy of Art studied at the University of Vienna, where he received his M.D. in 1938. However, art remained a lifelong passion and later in life he sold his own brilliant acrylics to benefit the fund he had established to help needy students. He left Austria after Nazi occupation for Great Britain, where his interest in psychiatry led him to work on the metabolism of the brain at the Cardiff City Mental Hospital. The general ignorance of normal cell metabolism motivated

his change from physician to biochemist after he moved to New York University Medical School in 1944 and Yale Medical School in 1952. In 1954–66 he was head of the Nutrition and Physiology Department at the Public Health Research Institute, New York City, before moving to Cornell University, where he became the Albert Einstein Professor of Biochemistry and remained a working scientist until his death. His research interests concerned photosynthesis and energy production with the major discovery that oxidative phosphorylation is mediated by a transmembrane proton gradient. His world leadership in this field was recognized by many honors, including the National Medal of Science (1976), the Gairdner Award (1980), and the Harvey Prize of the Israel Technion (1980).

[Michael Denman (2nd ed.)]

RACKMAN, EMANUEL (1910–), U.S. Orthodox rabbi, educator, and author. Rackman was born in Albany, New York. His father, Rabbi David Rackman, was an early *rosh yeshivah* at the Rabbi Isaac Elchanan Theological Seminary (RIETS). Rackman studied at Columbia University where he received his B.A. Phi Beta Kappa, his law degree, and a Ph.D. in political science, and at the Rabbi Isaac Elchanan Theological Seminary (see *Yeshiva University) where he was ordained in 1934. He served congregations in Glen Cove (1930–36) and Lynbrook (1936–43), New York, and was a chaplain in the U.S. Air Force (1943–46), later attaining the rank of colonel in the reserves. He was in Europe at the time of the liberation of the concentration camps, an experience that shaped his desire to make use of his rabbinical ordination to rebuild the Jewish people. In 1946 he became the rabbi of Congregation Shaarey Tefila of Far Rockaway, New York, and in 1967 succeeded to the rabbinate of Manhattan's Fifth Avenue Synagogue, replacing Rabbi Immanuel Jacobowitz, who had been named chief rabbi of the United Kingdom. Rackman was prominently identified with the modern Orthodox group within American Orthodoxy, and was particularly concerned with understanding the meaning of the *halakhah* in order to find contemporary applications. He took issue with those who he claimed have frozen Jewish law and refused to solve current problems within its framework. Rackman also held that Orthodox rabbis and institutions should cooperate with the non-Orthodox and could participate in organizations which contained all the divisions of American Jewry. Rackman was also a leading figure in the Far Rockaway Jewish community and was instrumental in making it an important center for Orthodoxy. He also taught political science and served as assistant to the president of Yeshiva University (1962–70), a professor of political science and jurisprudence, and later a University Professor at Yeshiva where he served as provost, and professor of Jewish studies at the City University of New York (1971–77). Rackman was president of the New York Board of Rabbis (1955–57) and the Rabbinical Council of America (1958–60), and a member of the executive of the Jewish Agency. In 1977 Rackman was appointed president of Bar-Ilan University and became chancellor.

lor of the institution in 1986. Under his leadership Bar-Ilan expanded dramatically and became the focal point of contact between Orthodox Jews and secular education. It took shape as a critical institution in what remained of Modern Orthodoxy. Well into his 90s, he was not afraid to tackle difficult issues and, despite great controversy, he worked with Agunot International to free women trapped in dead marriages by recalcitrant husbands who refuse to grant a *get*, serving on a *bet din* that invokes the halakhic concepts of *kiddushei ta'ut* and *umdenah* to annul the marriage. He was the author of *Israel's Emerging Constitution* (1955) and *One Man's Judaism* (1970), which included some of his previously published essays. Among his many acts of service, he was a member of the Board of Higher Education of the City of New York. Rackman received the Jerusalem Prize for Community Spiritual Leadership. The prestigious honor was awarded to him by Israel President Moshe Katzav, on Rackman's 90th birthday. The Jerusalem Prize is awarded annually to leading international figures dedicated to the education and preservation of the Jewish people. The prize is awarded by the Center of Jewish Relations in the Diaspora of the World Zionist Organization.

[Aaron Rothkoff / Stanley Wagner (2nd ed.)]

°RAD, GERHARD VON (1901–1971), German Bible scholar. Born in Nuremberg, Von Rad was a disciple of A. Alt. He was professor in Jena (1934), Goettingen (1945), and Heidelberg (from 1949).

His earliest research was concerned with the theological aspects of certain books of the Bible (*Das Gottesvolk im Deuteronomium*, 1929; *Das Geschichtsbild des chronistischen Werkes*, 1930; *Die Priesterschrift im Hexateuch*, 1934). Later he applied the form-critical method to the entire Hexateuch, whose nucleus he saw in confessional summaries of the Exodus and the entrance into Canaan, like Deuteronomy 26:5–9 (“short historical credo”), which had their “*Sitz im Leben*” in the cult (*Das formgeschichtliche Problem des Hexateuchs*, 1938). His *Theologie des Alten Testaments* (2 vols., 1957–60) tries to let the biblical texts speak for themselves (“*Nacherzaehlung*”), and traces a history of the tradition, in continuity and discontinuity, through to the New Testament. Von Rad was particularly concerned with Wisdom Literature, in which he found a possible relevance to contemporary thought (*Weisheit in Israel*, 1970).

BIBLIOGRAPHY: *Probleme biblischer Theologie* (1971), jubilee volume in honor of G. Von Rad's 70th birthday.

[Rudolf Smend]

RADANIYA (Radhanites), Jewish merchants of the ninth century C.E., who, according to the contemporary report of the Arab geographer Ibn Khurradādhbih, spoke Arabic, Persian, Greek, Frankish, Spanish, and Slavonic, and traveled from the farthest west to the farthest east and back again.

Their starting point is stated to have been in Spain or France. They crossed the Mediterranean to Egypt, and transferred their merchandise on camelback across the isthmus of Suez to the Red Sea, whence by ship they eventually reached India and China. They returned by the same route with musk, aloeswood, camphor, cinnamon, and other products of the Oriental countries. From the west they brought eunuchs, slave girls and boys, brocade, beaver and marten skins, and swords. Some of them sailed to Constantinople to sell their goods. Others visited the residence of the Frankish king for the same purpose. Sometimes, instead of using the Red Sea route to the East, they disembarked at Antākiya (Antioch) and crossed Syria to the Euphrates, whence they passed to Baghdad. Then they descended the Tigris to the Persian gulf, and so reached India and China. These journeys could also be made by land. Thus the Jewish merchants might proceed to the east via Tangier, Kairouan, and the other North African towns, reaching Cairo, Damascus, Kufa, Basra, Ahwaz, Persia, and India, and finally, as before, attaining by this land route their destination in China.

Another of their routes lay across Europe, “behind Rome,” through the country of the Ṣaqāliba (Slavonians) to Khamlij, the capital of the *Khazars, another name for *Atil. Thence they passed to the sea of Jurjan (i.e., down the Volga to the Caspian), then to Balkh and Transoxiana, and so to the Far East. Since Ibn Khurradādhbih relates that the Russian merchants, when passing through the Khazar capital, were tithed by the Khazar ruler, the Radaniya in similar circumstances were no doubt also liable.

The name occurs in two forms: Rādhāniya (as recorded by Ibn Khurradādhbih) and Rāhdāniya (by Ibn al-Faqīh). Since the research of J.-T. Reinaud it has been customary to explain the latter form as Persian, from *rāhdān*, “knowing the way,” but it is not certainly the more original. Other suggestions have been that the name is connected with Latin Rhodanus, i.e., the river Rhone, and that in the Letter of Ḥas dai (see *Khazars) the people called *sheluḥei Ḥorasan ha-soḥarim*, apparently “merchant-envoys of Khurasan” (not very probably), are the Radaniya.

[Douglas Morton Dunlop]

RADAUTI (Rom. **Rădăuți**, Ger. **Radautz**), city in Bukovina, N. Romania, near the Ukrainian border. The first Jews to settle there came from Bohemia in the late 18th century and were later joined by others from Galicia and Russia. Three Jewish families were listed in the tax register of 1807. The Jews of Radauti were at first affiliated to the community of the district capital *Suceava. They opened their own synagogue in 1830, when a *talmud torah* was also founded. Subsequently land for a cemetery was acquired (until then the cemetery at *Siret had

been used). After Radauti became an independent community it established its own institutions. The Jewish population numbered 3,452 in 1880 (30.9% of the population), and 6,000 in 1914. In 1888 there were in Radauti eight prayer-houses (*shtiblekh*) in addition to the central synagogue. In that year 523 heads of families were registered in the community.

Hasidism had a strong influence on Jewish life in Radauti, especially the *Vizhnitz, *Bojan, and *Sadagora dynasties. The Ḥasidim held services in their own *kloyzen* and were frequently the cause of local disputes in their opposition to Zionism. There had been adherents of Zionism in Radauti from the beginning of the *Bilu movement, and in 1892 a local group Ahavat Zion was founded. The movement gained headway in the early 20th century. When the city was incorporated in Romania (1918) the Zionist parties began to exert an active influence on municipal and communal affairs. Members of the *Bund were also active on the municipal and community councils. A Hebrew school, which maintained a kindergarten and adult courses, was supported by the community. From 1919 to 1926 a private Jewish high school also functioned in Radauti. In 1930 the community numbered 5,647 (about 31% of the total population). Among rabbis of Radauti were Eliezer Lipmann Kunstadt (officiated 1894–1907); Jacob Hoffmann (1912–23); and the Hebrew author and scholar Jacob Nacht (1925–28).

Holocaust and Contemporary Periods

Romanian antisemites increased their agitation in 1939, and in October 1941 the Jews of Radauti, numbering 4,763 (32% of the total population), were deported to death camps. In 1942 there were only 42 Jews remaining in the city.

Some survivors made their way back in 1944, and by 1947 there were as many as 6,000 Jews living in the city. The Zionist movement regained strength after World War II (until the government decided to dissolve it in 1949). New communal and welfare institutions were established with the aid of overseas organizations, such as *OSE, the American Jewish Joint Distribution *Committee, and the World Jewish *Congress, but their activities gradually decreased. From 1948 the community dwindled through emigration to Israel and other countries. In 1971 only 700 Jews remained in the city (3.5% of the total population). Some communal activity continued, however, including the holding of Sabbath and holiday services in the central synagogue.

[Yehouda Marton]

RADEK (Sobelsohn), KARL (1885–1939?), Russian revolutionary and publicist. Born in Lemberg, Radek was a member of the Polish Social Democratic Party, for which he wrote many articles. Before World War I he was also active as a publicist for the left wing of the German Social Democratic Party. During the war he played a prominent part in the Zimmerwald and Kintal pacifist conferences. After the Russian Revolu-

tion broke out in February 1917, Radek was one of those who accompanied Lenin on his famous journey from Switzerland through Germany to Sweden in a sealed railroad car. He remained in Sweden as a representative of the Bolshevik Party, but after the October Revolution he returned to Russia and became head of the Central European section of the Foreign Affairs Commissariat. In 1918, when revolution broke out in Germany, Radek entered the country secretly and helped to organize the first congress of the German Communist Party. In 1920 he proposed and supported the idea of a “united front” of the German Communists and Social Democrats. He was arrested in February 1919 but was released at the end of the year. He was one of the leaders of the group which opposed the Brest-Litovsk agreement with Germany. He returned to the U.S.S.R. and in 1922 became a leading official of the Communist International. In this capacity he maintained contact with communist-oriented Zionists of the “left *Po’alei Zion faction” who applied for admission into and recognition by the Communist International. In 1924, however, he joined the Trotskyite opposition and in 1927 was expelled from the party and banished to the Ural mountains. He was readmitted in 1930 on renouncing his adherence to the Trotskyists. Just before his banishment he had served for a year as rector of the Sun Yat-Sen University for Chinese students in Moscow.

In the 1930s Radek was an influential writer and speaker on international affairs and was a regular contributor to *Pravda* and *Izvestia*. He was the coauthor of the draft of the so-called “Stalin constitution” of the U.S.S.R. (1936). Radek’s writings include *In den Reihen der deutschen Revolution 1909–1919* (1921) and many articles on literature and the theater. In 1937 Radek was arrested and charged with complicity in plots against the Soviet government. At a show trial which received worldwide publicity, with the prisoners compelled to make dramatic and abject confessions, he was convicted of being “an enemy of the people” and was sentenced to ten years’ imprisonment. On May 19, 1939, he was killed by criminal prisoners in the prison, probably by the order of the leadership. In 1988 he was rehabilitated by the Supreme Court of the U.S.S.R. A selection of his works, *Portraits and Pamphlets*, appeared in 1935.

°RADEMACHER, FRANZ (1906–1973), German diplomat; from 1940–43 head of Section Deutschland III of the German Foreign Office, which dealt with “Jewish Affairs” and cooperated closely with *Eichmann. The son of a railroad engineer, he was a lawyer and joined the Nazi party only in 1933. He joined the Foreign Office in 1937 and served abroad. Like many ambitious civil servants, Rademacher carved out an area of expertise, choosing to view the Jewish situation within the context of Germany’s war aims and its expected triumph. It is in this context that Rademacher wrote a memorandum on the

“*Madagascar Plan” – one of a number of territorial solutions to the Jewish problem that were overtaken by the Final Solution. When Germany did not defeat Great Britain, the plan became impossible to implement and therefore non-operative. He exerted personal influence on the German representatives in the satellite states to facilitate the “Final Solution” (see *Holocaust, General Survey). In the autumn of 1941 he was sent to speed up the killing of 8,000 Serbian Jews (see *Yugoslavia). His task was in part to minimize the foreign policy complications of the Final Solution. After the war he was sentenced to only five months’ imprisonment by a German court in 1952, but skipped bail and escaped to Syria. In 1966 he returned to Germany and was sentenced in May of that year to five years’ imprisonment for aiding in the murder of Romanian, Bulgarian, and Yugoslav Jews, but was released from prison for medical reasons.

[Yehuda Reshef /Michael Berenbaum (2nd ed.)]

RADIN, ADOLPH MOSES (1848–1909), U.S. rabbi and communal worker. Radin, born in Neustadt-Schirwindt, Lithuania, served as rabbi in Prussia and Poland, and then immigrated to the United States in 1886, becoming rabbi in Elmira, New York. There he was appointed visiting Jewish chaplain of the State Reformatory, but soon accepted a position as rabbi of Congregation Gates of Hope in New York City. A pioneer among American rabbis in working with Jewish inmates, Radin was named chaplain of all penal institutions in New York and Brooklyn (1890), serving until his death. In 1905 he assumed the pulpit of the People’s Synagogue of the Educational Alliance, from which he assisted immigrants on the Lower East Side, and founded the Russian American Hebrew Association, which he considered his greatest achievement. Radin was an active philanthropic fund raiser and a champion of Zionism.

He wrote *Offener Brief eines polnischen Juden an Heinrich von Treitschke* (1885³); *Asirei Oni u-Varzel* (1893), a report on the Jews in New York prisons; and other works, and contributed to Hebrew, German, Polish, and American Jewish periodicals.

BIBLIOGRAPHY: S.A. Neuhausen, *Telishat Asavim al Kever A.M. Radin* (1910); AJYB, 5 (1903/04), 87; CCARY, 19 (1909), 424–31.

RADIN, MAX (1880–1950), U.S. jurist, teacher, and legal historian. Son of Adolph *Radin, he was born in Kempen, Russian Poland. He taught in public schools and then at Columbia University (1918–19). He was professor of law at the University of California at Berkeley from 1919 to 1948. Among his many offices and positions, he was Commissioner on Uniform

State Laws for California 1941–48. Upon his death his library went to the Hebrew University of Jerusalem. Radin’s work as a scholar and teacher ranged through law, philosophy, history, linguistics, anthropology, and literature. He was known as one of the chief proponents of “legal realism.”

The principal works in which he propagated his views are *The Law and You* (1947); *Stability in Law* (1944); *Law as Logic and Experience* (1940); and *The Law and Mr. Smith* (1938). His first interest was in the relationship of morals and ethics to commercial occupations. One of his first publications was *The Legislation of the Greeks and Romans on Corporations* (1909). Related works are *Lawful Pursuit of Gain* (1931) and *Manners and Morals of Business* (1939). Radin was deeply concerned with the political events of his time. In *The Day of Reckoning* (1943), he expounded his thoughts on the war crimes trials, then in the planning stage, and he also wrote on the treatment of the Nisei (American-born citizens of Japanese descent) of California during World War II. His pervasive interest in legal history found expression in his *Handbook of Anglo-American Legal History* (1936) and *Handbook of Roman Law* (1927), and numerous works on Jewish law and history, including: *The Life of the People in Biblical Times* (1929), *The Trial of Jesus of Nazareth* (1931), and his unpublished *Bibliography of Jewish Law*.

BIBLIOGRAPHY: *American Historical Review*, 56 (1950), 58.

RADIN, PAUL (1883–1959), U.S. anthropologist. Born in Lodz, Russian Poland, Paul Radin was the youngest son of Adolph *Radin, a rabbi, and brother of Herman, a physician, and of Max *Radin, an eminent legal scholar. He studied first in Europe, then in New York, coming to anthropology via zoology and history. A student of Franz Boas and James Harvey Robinson, he did his first field work with the Winnebago Indians, and during the next five decades explored this group intensively. He advocated the outlook of a natural scientist for the study of human cultures. Like his mentor Boas, he represented the humanistic approach to the understanding of pre-literate societies.

A member of the Boas School, he differed from it principally in holding that Boas’ quantitative and distributional treatment of culture data leads to inadequate and faulty histories of the societies concerned. With his historicist perspective, Radin interpreted Boas’ work in terms of the latter’s intellectual antecedents, showed how changes in Boas’ intellectual perspective influenced his interpretation of the primitive, and how his positions became the framework and presupposition for subsequent American anthropology. Radin taught at various universities including Cambridge, Chicago, Brandeis, and California.

His contributions to linguistics are impressive, comprising texts of Winnebago and various other American Indian languages, and work in historical linguistics (*The Genetic Relationship of the North American Indian Languages*, 1919). He also endeavored to produce a systematic ethnological theory

in such works as *The Method and the Theory of Ethnology* (1933, 1966²).

Radin's life style was that of a liberated cosmopolitan intellectual, and evinced humanistic skepticism toward our culture-bound arrogance vis-à-vis the primitives. His Enlightenment perspective stimulated his immersion in the intellectual world of the primitive and his defense of the primitive mentality as against denigration of it by *Levy-Bruhl as "prelogical." While admitting, in *Primitive Man as Philosopher* (1927), that primitive mentality differs in degree, he noted that its reaction patterns evince regularity, uniqueness, individuality, and depth, and betray neither linguistic nor conceptual inadequacy. He devoted much study to the phenomena of religion, especially the God concept among primitives, as in *Primitive Religion* (1937) and *The Trickster: A Study in American Indian Mythology* (1956).

His synthesis of the objective and subjective worlds of the primitive culminated in an apologia for pristine civilizations, and he stressed the virtues found therein – viz., their respect and concern for the individual and their impressive social and political organization.

His deeply felt insight that the universal human drama is enacted in primitive societies was set forth in *The Road of Life and Death: A Ritual Drama of the American Indians* (1945) and in his other studies of the Winnebago Indians.

[Ephraim Fischhoff]

RADISH, a vegetable, the *Raphanus raphanistrum*; not mentioned in the Bible, despite the fact that it is one of the ancient plants of the Mediterranean region. Herodotus reports that the large sum spent on radishes for the pyramid workers was inscribed on the pyramid of Cheops. In Israel it is found as a weed. In the Mishnah it is called *zenon* and in the *Gemara* it is called *pugla* (Akk., *puglu*). The radish tuber was regarded as a healthy vegetable but its leaves as harmful (Er. 56a). It is a winter plant difficult to grow in Israel in the summer, and it is therefore related of the emperor Antoninus and Judah ha-Nasi that radish was not absent from their tables even in summer (Ber. 57b). From the radish seeds an oil was extracted which the Mishnah (Shab. 2:2) declares invalid as fuel for the Sabbath lamp. In the Tosefta (*ibid.*) however, a *tanna* contends against those forbidding its use: "What shall the people of Alexandria do who possess only radish oil?" The radish is very like the rape, called *nafos* or *nafoz* in the Mishnah. According to the Jerusalem Talmud (Kil. 1:5, 27a) they are regarded as belonging to different species in spite of their similarity.

RADNER, GILDA (1946–1989), U.S. comedian and actress. Radner was born to Herman Radner and Henrietta Dwor-

kin in Detroit, Michigan. Her father was a Canadian brewery owner and during the Prohibition earned enough from smuggling to the United States to invest in the Detroit hotel The Seville, where performers stayed while entertaining in local theaters. Known for his humor and magic tricks, he died of a brain tumor when she was 14. Radner joined the drama club at the Liggett School, an all-girls high school in Detroit, and later studied in the theater department at the University of Michigan, which she attended over a six-year period without graduating. In 1972, she joined a Toronto production of *Godspell*, which included Paul Shaffer and Eugene Levy. After the show ended, she joined the comedy troupe Second City in Toronto, where she was discovered by producer Lorne Michaels, who asked her to join the cast of the *National Lampoon Radio Hour*. In 1975 she was the first cast member Michaels hired for *Saturday Night Live*. Radner would go on to create such memorable characters as Lisa Loopner, Emily Litella, and Babwa Wawa, a parody of Barbara *Walters. In 1979, she appeared on Broadway in a solo show, *Gilda Radner Live from New York*, which featured many of her well-established characters. She left *Saturday Night Live* in 1980, the same year she married its bandleader, G.E. Smith. Radner had small parts in a variety of feature films, including *The Rutles* (1978) and *First Family* (1980), but her first major role was in *Hanky Panky* (1982), a film directed by and co-starring Gene *Wilder. After she divorced Smith in 1982, Wilder and Radner married in 1984. The couple went on to star in two other films together, *Woman in Red* (1984) and *Haunted Honeymoon* (1986). Radner was diagnosed with ovarian cancer in 1986. She used her celebrity status to call attention to the Wellness Community, a cancer support group, and to start her own, Gilda's Club. In 1988, she earned an Emmy nomination for her appearance on *It's Garry Shandling's Show*. In 1989, she detailed her fight with cancer in her autobiography *It's Always Something*. She died in Los Angeles shortly after the book's publication.

[Adam Wills (2nd ed.)]

RADNÓTI, MIKLOS (1909–1944), Hungarian poet. Radnóti, born in Budapest and an orphan from childhood, was converted to Christianity. He trained to become a teacher, but because of his Jewish origin was prevented from taking up a post. He spent his last years in Hungarian army labor camps. Radnóti's writings are overshadowed by World War II and the social crises of the Horthy regime. His early poetry is filled with surrealistic influences, but over the years, as the atrocities of the Holocaust increased, it became pure enough to be defined as neoclassicist.

His verse collections include *Pogány köszöntő* ("Pagan Salute," 1930), *Újhold* ("New Moon," 1935), *Meredek út* ("Steep Way," 1938), and the autobiographical *Ikrek hava* ("Under the Sign of Gemini," 1940). Two verse collections that appeared after World War II were *Radnóti. Miklós versei* ("The Poems of Miklós Radnóti," 1948), and *Radnóti, Miklós összes versei és műfordításai* ("Translations and Poems of Miklós Radnóti," 1963).

His last book, *Tajtékos ég* (“Stormy Skies”), published in 1946, contains poems found in his pocket as he lay in a mass grave at Abda. They accurately prophesy the circumstances of his death. Radnóti, who has come to be considered one of the most important Hungarian lyric poets, was also a skilled translator.

[Itamar Yaos-Kest]

RADÓ, ANTAL (1862–1944), Hungarian journalist and translator. Born in Mór, Radó wrote for newspapers during his student days and in 1885 became a parliamentary stenographer. He eventually became director of the stenographic bureau. Known mainly as a translator of classics of Western literature, he wrote many books: *A magyar műfordítás története, 1772–1831* (“History of Hungarian Literary Translation,” 1883), *Az olasz irodalom története* (“History of Italian Literature,” 1896), and a biography of Dante (1907). When Germany occupied Hungary, Radó committed suicide.

RADO, SANDOR (1890–1972), psychoanalyst. Born in Hungary, Rado became secretary of the Hungarian Psychoanalytic Society in 1913 during the presidency of Sandor *Ferenczi. In 1922 he was analyzed by Karl *Abraham in Berlin and from 1926 to 1930 was secretary of the German Psychoanalytic Society, playing an active part in organizing the training curriculum there. Sigmund *Freud appointed him managing editor of the *Internationale Zeitschrift fuer Psychoanalyse* in 1924 and three years later managing editor of *Imago*. In 1931, at the invitation of A.A. *Brill, Rado moved to the U.S., where he organized the New York Psychoanalytical Institute on the Berlin model. In 1944 Rado was appointed professor of psychiatry and head of Columbia University’s pioneering psychoanalytic institute. He was subsequently professor of psychiatry at New York State University (1956–58) and from 1958 he organized a progressive teaching program in the New York School of Psychiatry.

Rado’s contributions to psychiatry were threefold: in the sphere of classical psychodynamics; the quest for a basic conceptual system of mind; and the development of adaptational psychodynamics. In his early writings, which included two works on the problem of melancholia, Rado revealed his search for psychological realities rather than abstractions. His research into drug addiction developed the concept of “alimentary orgasm” (later, “narcotic elation”) replacing genital satisfaction. During the years 1933–45, in his search for generally valid conceptual schemata, Rado wrote papers on the fear of castration in women (*Die Kastrationsangst des Weibes*, 1934) and the concept of bisexuality. His work culminated in his writings on adaptational psychodynamics. Rado questioned the therapist’s exclusive preoccupation with the patient’s past. He felt that the exploration of the past should be the beginning of an “emotional reeducation” of the patient in relation to his past and his adaptation to present reality.

His *Collected Papers (Psychoanalysis of Behavior)* appeared in 1956 and 1962 and *Adaptational Psychodynamics: Motivation and Control* in 1969. Rado also co-edited *Changing Concepts of Psychoanalytic Medicine* (1956).

(eds.), *Psychoanalytic Pioneers* (1966), 240–8 (incl. bibl.); *New Perspectives in Psychoanalysis: Sandor Rado Lectures 1957–1963* (1965), vi–viii. **ADD. BIBLIOGRAPHY:** P. Roazen and B. Swerdloff, *Heresy: Sandor Rado and the Psychoanalytic Movement* (1995).

[Louis Miller / Ruth Beloff (2nd ed.)]

RADOM, city in Kielce province, Poland. The first Jews to visit Radom mainly traveled there as representatives of the Jewish communities at the sessions of the Polish Sejm (Diet) or to negotiate with the tribunal of the treasury, which met at Radom between 1613 and 1764. Jewish residence in the city was banned in 1633, 1724, and 1746; a few Jews settled in the suburbs and numbered 67 by 1765. They were later permitted to reside in a special quarter. The settlement began to develop after 1814, and an organized community was formed; a cemetery was established in 1831 and the first synagogue built in 1884. The community increased from 413 in 1815 (about 16% of the total population) to 1,495 in 1856 (23%); 11,277 in 1897 (37.6%); 24,465 in 1921 (39.7%); and 25,159 in 1931 (23.3%). Before World War I and during the period between the two world wars Jews played a considerable role in the development of commerce and industry in Radom, both as entrepreneurs and employed workers. Jewish organizations in 1925 included a merchants’ and artisans’ bank and trade unions; there were numerous welfare institutions, including the hospital, founded in 1847, and an old age home, founded in 1913. Religious and secular educational and cultural needs were met by yeshivot, the first founded in 1908, the *talmud torah*, and prayer houses (*shtiblekh*) for the ḥasidic community, as well as schools of various types, including a high school, and five libraries. Periodicals published in Radom during the inter-war period were the Yiddish daily *Radomer Tsaytung* until 1925; the weekly *Radomer Lebn*, later *Radomer-Keltser Lebn*; *Radomer Shtime*; and *Trybuna* (in Polish). The first rabbi of the community officiated at the beginning of the 19th century. Rabbis of note were Samuel *Mohilewer and Simḥah Treistman (1904–13), later rabbi of Lodz.

[William Glicksman]

Holocaust Period

In 1939 over 30,000 Jews, comprising 30% of the total population, lived in Radom. During the German occupation it was the capital of the Radom District in the General Government. The German army entered the city on Sept. 8, 1939, and immediately subjected the Jewish population to persecution. During the first months of German occupation, about 2,000 Jews from the Poznan and Lodz provinces were expelled to Radom. In turn, 1,840 Jews from Radom were expelled to the smaller towns in the Kielce Province (December 1939). In August about 2,000 young men and women were deported to slave labor camps, where almost all of them perished. In March

1941 a decree for the establishment of the ghetto was issued and by April 7, 1941, the entire Jewish population was concentrated in two separate ghettos. At the beginning of 1942 the Nazis conducted a number of terror actions within the ghettos, among them an action of February 19 (“bloody Thursday”) when 40 men were shot, and on April 28, when 70 men were killed and hundreds deported to the concentration camp in *Auschwitz. On Aug. 5, 1942, the smaller ghetto was liquidated and its inhabitants (almost 10,000 people) were deported to *Treblinka death camp. On Aug. 6–17, 1942, the larger ghetto was liquidated and its 20,000 Jews dispatched for extermination. Within the part of the ghetto that was transformed into a slave labor camp (the “small ghetto”), only about 4,000 Jews remained. On Dec. 4, 1942, about 800 inmates of this camp were deported to Szydłowiec and afterward exterminated. On Jan. 13, 1943, another 1,500 prisoners were deported to Treblinka. On Nov. 8, 1943, the prisoners of the “small ghetto” were transferred to the newly established forced labor camp in the town. On July 26, 1944, all but 300 prisoners were deported to Auschwitz, where only a handful survived. The last 300 prisoners were liberated on Jan. 16, 1945.

At the time of the mass deportations in August 1942, hundreds of Jews fled to the forests to organize guerrilla units. Such units were composed mostly of persons who escaped from Radom. All the partisans fell in battles with the Germans. Many who escaped from Radom reached Warsaw and took part in the Polish Warsaw uprising (August 1944). In the whole Radom District 380,000 Jews lost their lives during the German occupation, according to figures of the Radom Regional Commission to investigate Nazi Crimes. A few hundred Jews settled in Radom for a short time after World War II, but soon left due to the hostility of the Polish population. Organizations of former Radom residents exist in Israel, the United States, Canada, France, and Australia. There were seven Jews living in Radom in 1965.

BIBLIOGRAPHY: Halpern, Pinkas, index; A. Rutkowski, in: *Bẓiḥ*, 15–16 (1955), 75–182; 17–18 (1956), 106–8; *Sefer Milḥamot ha-Getta’ot* (1954²), index; *Sefer Radom* (1961), a memorial book published in Heb. and Yid.

RADOMSKO (Radomsk), town in Łódź province, S. central Poland. In 1643 King Ladislaus IV granted the city the privilege *de non tolerandis Judaeis* excluding Jews from its bounds, which remained in force until 1862. Although the city council complained about the presence of Jews on the nobles’ estates and in neighboring villages during the 17th and 18th centuries Jewish settlement there continued. The establishment of a Jewish cemetery in the city was permitted in 1816, and by 1822 a synagogue committee existed which levied taxes for the engagement of religious functionaries. The census of 1827 recorded 369 Jews of the total 1,792 inhabitants. In 1834 the community engaged Solomon ha-Kohen Rabinowich of Włoszczowa as rabbi and *av bet din*, who in 1843 established a hasidic court and founded the *Radomsko hasidic dynasty.

After the opening of the Vienna-Warsaw railroad in 1846, the community developed rapidly. By 1857 there were 1,162 Jews living in Radomsko (about 39% of the total population). The 1897 census showed 5,054 Jews (43%). They were mainly occupied in carpentry, weaving, and dealing in timber and grain. Well-to-do Jews established factories, hotels, and restaurants which employed some 500 Jews. In this period the community expanded its activities in all spheres. *Hovevei Zion* (see **Hibbat Zion*) groups formed Zionist parties. In 1899 the Great Synagogue was completed. Jewish workers organized in the **Po’alei Zion*, **Bund*, etc., from 1905 to 1907. In 1906 the Jews in Radomsko organized *self-defense against pogroms.

During World War I the Jews in Radomsko suffered from the depredations of Russian soldiers and economic depression. The historian M. *Balaban visited the city in 1916 and established a Jewish youth group, *Kultura*.

In 1919, after Poland became independent, there were attempts at pogroms, but they were prevented by the Jewish self-defense organization. The Jewish population rose from 7,774 in 1921 (41.5%) to 12,371 in 1935 (55%). During this period the number of Jewish workers doubled in the large industrial plants for furniture, metal goods, and printing. Of the 24 members of the city council elected in 1926, eight were Jews. Jewish educational institutions included a high school (from 1916), two *talmud torah* schools, the Keter Torah yeshivah, a *bet midrash*, and two government elementary schools. There were also guilds of craftsmen and small businessmen, and a cooperative commercial bank. In 1926 a library named for *Shalom Aleichem was opened, and there were Ha-Po’el and Ha-Ko’ah sports clubs. In 1930 a commune preparing for immigration to Erez Israel was established named *Vitkinyah*.

[Arthur Cygielman]

Holocaust Period

Under the German occupation, Radomsko was incorporated into the *Radom district of the General Government. When the German army entered the city on Sept. 3, 1939, they immediately began a campaign of terror against the Jewish population. On Dec. 20, 1939, a decree was issued establishing a closed ghetto in Radomsko into which all the Jews from the surrounding districts were also concentrated. In consequence, the Jewish population of the Radomsko ghetto increased despite the high mortality due to starvation and epidemics. Two especially severe epidemics of typhus broke out during the early winter of 1940 and in January 1941. In June 1941 the authorities reduced the area of the ghetto, thus aggravating the living conditions there. On Oct. 9, 1942, an *Aktion* was carried out, and in the course of the following three days almost the entire Jewish population was deported to *Treblinka death camp where they perished. About 500 Jews and seven houses remained in the Radomsko ghetto (including some 200 Jews living there “illegally”). During the deportations hundreds of Jews from Radomsko and thousands from the surrounding districts escaped to the forests, many joining Jewish guerrilla groups which rapidly organized. They encountered severe ob-

stacles: lack of arms, an inimical local peasant population, and no possibility of a food supply for the great number of Jews who had escaped. In November 1942 the Germans established a “second ghetto” in Radomsko, and promised security for all who voluntarily left the forests. About 4,500 Jews unable to survive the winter there returned to resettle in the ghetto. On Jan. 5, 1943, the Germans liquidated the ghetto in a surprise *Aktion*; hundreds of Jews who resisted were murdered on the spot while the rest were deported to Treblinka. A number of Jews who escaped from Radomsko were active in partisan units and resistance organizations. Some of them won recognition for bravery, including Tuvia Borzykowski, who became a member of the staff of the Jewish Fighting Organization in the *Warsaw ghetto; the three brothers Sabatowski (Ḥayyim, Mordekhai, and Herzke) who fought together in a guerrilla unit in the Konskie forest (all three were murdered in a treacherous attack by antisemitic Polish nationalists); and Rosa Szapiro, who managed to make her way out of Radomsko to the Yugoslav partisans under Tito.

After the war the community was not renewed in Radomsko. Organizations of former Radomsko residents were formed in Israel, Argentina, the United States, Canada, and France. A memorial book, *Sefer Yizkor li-Kehillat Radomsk ve-ha-Sevivah*, was published in 1967 (Heb. and Yid.).

RADOMSKO (Radomsk), SOLOMON HA-KOHEN RABINOWICH OF (1803–1866), ḥasidic *zaddik*. Solomon studied in the yeshivah of Piotrkow under Abraham Żevi, author of the responsa *Berit Avraham* (1819). His father educated him in Ḥasidism. In his youth he joined Meir of *Apta, leader of the popular trend in Polish Ḥasidism after the death of *Jacob Isaac ha-Ḥozeh (“the Seer”) of Lublin. In 1834 Solomon was appointed rabbi of Radomsk, and from 1843 he was accepted as an ḥasidic rabbi. Solomon’s teachings were in the spirit of the popular trend of Polish Ḥasidism. He engaged in public affairs and worked on behalf of the poor of his town. His striking personality, his enthusiastic way of praying, and his witty sayings attracted to him many disciples, among them the Ḥasid and philosopher Aaron *Marcus (Verus) and the physician Ḥayyim David Bernard of Piotrkow. Solomon’s book, *Tiferet Shelomo* (1867–69), is considered one of the classic works of Polish Ḥasidism. His successor was ABRAHAM ISSACHAR HA-KOHEN (d. 1892), author of *Ḥesed le-Avraham* (1893–95), who in turn was succeeded by his son EZEKIEL HA-KOHEN (d. 1911), author of *Keneset Yehezkel* (1913). The last of the ḥasidic rabbis of Radomsk in Poland before the Holocaust was SOLOMON ENOCH HA-KOHEN (d. 1942), famous for his establishment of a network of yeshivot called Keter Torah. He was murdered in the Warsaw ghetto. His novellae and those of his son-in-law David Moses,

who was killed at the same time, were collected in the book *Shivḥei Kohen* (1953).

[Zvi Meir Rabinowitz]

RADOMYSHL, city in Zhitomir district, Ukraine. The Jewish community of Radomyshl was established in the 18th century. In 1792 it numbered 1,424 (80 percent of the total population), in 1847 2,734, and it increased to 7,502 (67 percent) in 1897. There were 161 Jewish artisans out of a total of 198. The community maintained a *talmud torah* and three secular schools. The district of Radomyshl included the communities of *Chernobyl near *Korosten (4,160), Brusilov (3,575), Malin (2,547), and others. The entire region was influenced by the teaching of the ḥasidic rabbis of Chernobyl. In May 1919 bands of peasants of the *hetman* Sokolovski organized pogroms in the Jewish communities of Radomyshl and neighboring towns. Hundreds (more than 400) of Jews were massacred and many others fled to the big cities. Under the Soviet regime, Jewish community life stopped and the town declined. In 1926 there were 4,637 Jews (36 percent of the total population) in Radomyshl, their number declining by 1939 to 2,348 (20 percent of the total population). The Germans entered the town on July 9, 1941, and established an open ghetto, where 15 persons were crowded per room. In August they killed 389, and on September 6 a unit of Sonderkommando 4A murdered 1,107 adults, and the Ukrainian auxiliary police murdered 561 children. Six mass graves mark the murder of Jews in the vicinity. Later, Jews were prohibited from gathering at the graves, since the militia claimed that for them to do so was to cause a “demonstration.” Jews were also forbidden to erect a monument to the dead. In 1970 the Jewish population was estimated at about 250.

RADOSHITSER (of Radoszyce), ISSACHAR BAER (1765–1843), ḥasidic *zaddik* whose popularity is attested by his nickname, “the holy old man”; famous as a miracle healer. At first he lived in great poverty as a village schoolmaster (*melammed*) in Checiny (Chantchin) and Chmielnik. He frequented the courts of numerous *zaddikim* and was among the disciples of *Jacob Isaac ha-Ḥozeh (The Seer) of Lublin, Jacob Isaac “the holy Jew of *Przysucha”, Joshua Heshel of *Apta, and Israel the *Maggid* of *Kozienice. From 1815 he became a *zaddik* in his own right in Radoszyce. He was a *tárnik*, i.e., one of those who believed that 1840 (ת”ת) would be the year of the redemption.

[Esther (Zweig) Liebes]

RADOSHKOVICHI (Pol. **Radoszkowice**), town in Molo-dechno district, Belarus; within Poland until the partitions and between the two world wars. The Jewish community was established in the 16th century. The Jews numbered 455 in 1765; 1,701 in 1847; 1,519 (58.9 percent of the total population) in 1897; and 1,215 (49.4 percent) in 1925. The Jews earned their livelihood from trading at the annual fair, dealing in wood and cereals (exported to Germany and even Hungary), local retail trade, and crafts. In the town there was also a brewery, a brick factory, flour mills, and small tanneries. Many families earned their living from cultivating orchards on behalf of non-Jewish farmers and landowners. In the 1920s and 1930s the Jewish economy suffered and there was considerable poverty as a result of the poor returns, the heavy taxes, and the competition of non-Jews who were supported by the Polish government. The local Jewish people's bank made considerable efforts to assist the community in its economic struggle. The members of the community were largely **Mitnaggedim*, but local Hasidim had two prayer rooms. Pioneers from Radoshkovichi were among the first members of the Third *Aliyah. After World War I, Zionist youth movements were very active and a *He-Halutz training farm was established. In 1921–22 Radoshkovichi (then on the Polish-Russian border) was a transit station for the Jewish refugees returning from Soviet Russia to their homes in Poland. Communal institutions included a *Tarbut school, and a Hebrew library named after the poet Mordecai Zevi *Manne, a native of Radoshkovichi. Among the community's rabbis were Abraham b. Judah Leib *Maskileison, Meir b. Joshua Zevi Rabinsohn, who settled in Palestine in his old age, and his son, Joseph Zundel, the last rabbi of Radoshkovichi. Notable natives of the town included Israel Rivka'i-Rubin, educator and author; Mordecai Rabinsohn, Hebrew critic; and Naphtali Maskileison, poet and Talmud scholar.

[Dov Rabin]

Holocaust Period

At the outbreak of World War II there were about 1,200 Jews in Radoshkovichi. On Sept. 18, 1939, the Red Army entered the town and a Soviet administration was established there. The Germans occupied the town on June 25, 1941. A Judenrat was appointed and the Jews were compelled to pay heavy contributions. An *Aktion* took place on March 11, 1942, when 800 Jews were killed, 200 escaped, and 50 were shot while trying to flee; 110 were left as skilled artisans. After this *Aktion*, a ghetto was established for the remaining Jews. The Jewish community was liquidated on March 7, 1943, when the remaining 260 Jews were burned alive in a barn. During the liquidation, about 50 Jews succeeded in escaping to the nearby forests, where they joined the "Revenge" partisan unit. After the war the Jewish community of Radoshkovichi was not reconstituted.

RADUN (Pol. **Raduń**; Yid. **Radin**), a town in Grodno district, Belarus. Originally a Polish royal estate, Radun became important in the 16th century because it was situated on the main road between Cracow and Vilna. Jews were still forbidden to live there in 1538 and Jewish farmers who cultivated lands in the vicinity exerted their influence to have Radun granted municipal status so that they would not be expelled. In 1623 the Council of the Province of Lithuania (see Councils of the *Lands) made the Radun community subordinate to that of Grodno. In 1765 there were 581 poll tax-paying Jews in Radun and district; in the town itself there were 283 Jews in 1847; 896 (53.3 percent of the total population) in 1897; and 671 (53.5 percent) in 1925. The center of Radun spiritual life was the yeshivah founded in 1869 by *Israel Meir ha-Kohen (the Hafez H'ayyim). Its fame was widespread and the 300 students came from far and near. In 1940 most of the yeshivah students were transferred to United States via Japan. The Jews of Radun earned their livelihood from commerce, crafts, and agriculture; in the 1920s, 12 percent of the 200 members of the Jewish cooperative bank were farmers. In 1922 the *Yekopo relief society in Vilna gave loans to 19 farms, covering an area of 420 dessiatines (1,134 acres).

[Dov Rabin]

Holocaust Period

Before the outbreak of World War II, there were about 800 Jews in Radun. In September 1939 the Red Army entered the town and a Soviet administration was established there until the outbreak of the German-Soviet war. The Germans occupied the town on June, 30, 1941. In October a ghetto was established containing 1,700 persons, from neighboring towns: Dowgielishki, Zablocie, Zirmun and Nacha. A large-scale *Aktion* took place on May 10, 1942, when 1,000 Jews were killed, 300 escaped to the forests, some joining partisan units; the remaining skilled artisans were sent to Szczuczyn and from there, after a while, to their deaths in an unknown place. After the war the Jewish community of Radun was not reconstituted.

[Shmuel Spector (2nd ed.)]

RADYMNO (Yid. **Redem**), town in Rzeszow province, S.E. Poland; between the two world wars in the province of Lvov. The town was founded in the 14th century by the Polish king Casimir the Great. In 1640 King Ladislaus IV granted it the privilege *de non tolerandis Judaeis*, excluding Jews from the town. Subsequently Jewish settlement was discontinued until the first partition of Poland and the incorporation of Radymno into Austria in 1772, although during this period a few Jews were granted the right of residence. In 1644 the Jew Benko was granted the right by the owners of the town to settle in Radymno with his family and trade there. When a survey of the

population carried out in 1711 showed some Jews living there, they were expelled on the demand of the townsmen. Jews who settled in the town from the close of the 18th century engaged in commerce. The Jewish population gradually increased, and around 1880 numbered 898 (46.8% of the total population). During World War I the number declined, and in 1921 there were 808 (42.3%). After World War I and the incorporation of Radymno into independent Poland, it lost its importance. The Jewish population became impoverished, Jewish communal activities, particularly in the sphere of social relief, began to wane. Elections to the community council were held in 1927, and Jews also took part in the municipal elections of 1934. The community came to an end during the Holocaust.

[Shimshon Leib Kirshenboim]

RADZINOWICZ, SIR LEON (1906–1999), British criminologist. Born in Poland to affluent parents, Radzinowicz lectured at the University of Geneva from 1928 to 1931. In 1932 he began teaching at the Free University of Warsaw and in 1936 was appointed an assistant professor. Two years later he made a study of the English penal system on behalf of the Polish Ministry of Justice. He and his wife remained in England at the outbreak of World War II, living in Cambridge. In 1946 he was named assistant director of research at the University of Cambridge and in 1949 director of the department of criminal science, a post he held for ten years. From 1959 to 1973, he was Wolfson professor of criminology at Cambridge, and from 1960 was director of the Institute of Criminology which he had founded.

Radzinowicz held many important offices in the field of law and criminology, among them, head of the Social Defense Section of the United Nations and a member of the Royal Commission on Capital Punishment in the Advisory Council on the Penal System of the Home Office and president of the British Academy of Forensic Sciences (1960–61). He served on many British inquiries and committees into crime and prison policy and was knighted in 1970. Radzinowicz made a major contribution by his research in the trends of legal thought which led to modern concepts in the administration of justice which were adopted in many of the democratic countries. Among his most significant works are *History of English Criminal Law* (4 vols. 1948–68), *In Search of Criminology* (1961), *The Need for Criminology* (1965), and *Ideology and Crime* (1966). From 1940 he was the editor of 33 volumes of *English Studies in Criminal Science*, called later *Cambridge Studies in Criminology*. Radzinowicz converted to Christianity prior to World War II. He was generally regarded as the most influential British academic criminologist and historian of crime of his time. Radzinowicz wrote an autobiography, *Adventures in Criminology* (1999).

RADZIWILLOW (since 1940, **Chervonoarmeisk**), town in Volhynia, today in Rovno district, Ukraine. A Jewish community existed in Radziwillow from the end of the 16th cen-

tury. In 1787 the owner of the town, K. Miączyński, obtained permission from King Stanislaus II Augustus (Poniatowski) to establish a printing press for Hebrew books. At that time Jewish merchants and contractors founded an explosives factory in the town. From 298 Jews who paid poll tax in 1765, the community increased to 3,064 in 1857 and 4,322 (59 percent of the total population) in 1897. The majority were shopkeepers, tailors, and furriers, but some Jews also engaged in tanning, joinery, manufacture of building materials, and transportation; the wealthy traded in timber and grain. Branches of the Jewish labor movement and of the Zionist movement were first organized in 1905–06. The Jewish population of Radziwillow suffered heavily during World War I and the civil war between Ukrainian nationalists and Bolsheviks. In 1920 the town was incorporated into independent Poland. By 1921 the number of Jews had declined to 2,036 (48 percent). Jews dominated the grain trade between the world wars. Jewish cultural and educational institutions functioned until 1939, among them a Hebrew Tarbut school with 300 pupils.

[Arthur Cygielman]

Holocaust Period

In 1939 the Jewish population numbered more than 3,000. As a result of the Soviet-German partition of Poland, the Red Army entered the city on Sept. 19, 1939. The Soviet authorities conducted a survey to determine how many of the refugees wished to return to the German-occupied zone. All those who declared that they wished to do so were deported in the summer of 1940 to the Soviet interior. After June 22, 1941, when war broke out between Germany and the U.S.S.R., groups of Jews retreated with the Red Army, but were turned back by the Soviet border patrol at the old Soviet-Polish border. Most of these Jews returned to Radziwillow.

On June 27, 1941, the city was captured by the Germans. In the first few weeks the Jewish population suffered damage to life and property at the hands of the Ukrainian police and population. On July 15, 1941, 28 Jews were killed for being “dangerous Communists.” The following day the Germans set the synagogue aflame and burned the Torah scrolls. On April 9, 1942, a ghetto was established for 2,600 Jews, and divided into two categories: “fit” and “unfit” for labor. Only about 400 persons were found to be “fit.” On May 29, 1942, an *Aktion* took place and some 1,500 persons were killed near the city. After this *Aktion* the youth attempted to organize; at the head of one of these underground organizations was Asher Czerkaski. A second *Aktion* took place on Oct. 5, 1942, and hundreds of persons were killed in Suchodoly. Under the assumption that this was a final *Aktion* mass suicides were committed and some 500 Jews broke out of the ghetto and succeeded in reaching the forests, but only 50 of them survived; some reached Brody, where a ghetto still existed, but later they also perished.

RADZYMIN (Rus. **Radimin**), town in Warszawa province, E. central Poland. Founded during the middle of the 17th century as a private town by a privilege granted by King Ladislaus IV of Poland, it grew rapidly during the 19th century as a result of Jewish enterprise. The synagogue was erected in 1840. There were 432 Jews (about 33% of the total population) in Radzymin in 1827, 1,278 (c. 70%) in 1856, 2,133 (c. 53%) in 1897, 2,209 (55% of the population) in 1921, and 3,559 (52.6%) in 1931. Radzymin was a center of Ḥasidism, and during the 19th century it was the home of Jacob Aryeh Guterman, founder of the *Radzymin dynasty of *zaddikim*. A yeshivah which gained renown was also established by the dynasty in Radzymin. Zionists played an important role in the public life of the town and in the municipal elections of 1927 they won seven of the ten seats reserved for Jews. The community council, elected in 1931, included six Zionists and two members of Agudat Israel. Among religious, educational, and charitable institutions in Radzymin was the *Linat ha-Zedek* ("Hospice for the Poor") established in 1910.

[Shimshon Leib Kirshenboim]

Holocaust Period

Before the outbreak of World War II there were 3,900 Jews living in Radzymin. The Jewish community was liquidated on Oct. 3, 1942, when all the Jews were deported to *Treblinka death camp. After the war the Jewish community was not reconstituted.

RADZYMIN, dynasty of ḥasidic *zaddikim* in central Poland. The founder of the dynasty, JACOB ARYEH BEN SOLOMON GUTERMAN OF RADZYMIN (1792–1874), was a pupil of the *zaddikim* *Simḥah Bunem of Przysucha and Isaac Kalish of Worky (see *Warka). Jacob Aryeh was rabbi in Rychwał and Radzymin. He became famous as a miracle worker and attracted a large ḥasidic followership. His teachings were published in *Divrei Aviv* (1924) and *Bikkurei Aviv* (1936). Jacob Aryeh's son, SOLOMON (d. 1903), followed his father in the rabbinate of Radzymin and in the ḥasidic leadership. The third *zaddik* of the Radzymin dynasty was AARON MENAHEM MENDEL (d. 1934). During World War I he moved to Warsaw, where he also remained after the war. He was active in Jewish communal affairs in Poland. He visited Erez Israel in 1929 and on his initiative a separate section for women was established at the Western Wall. This served as a pretext for the Arabs in the bloody anti-Jewish riots which occurred in 1929. Aaron Menahem Mendel was the author of *Hinnukh ha-Banim* (1913) and *Alim li-Terufah* (1936).

[Avraham Rubinstein]

RADZYN (Pol. **Radzyń-Podlaski**; Rus. **Radin**), district capital in the province of Lublin, E. Poland. Founded in 1468, the town was first named Kożirynek. Although no reliable evidence is available, it has been assumed that Jews lived in Radzyn from its foundation. In 1765 there were 537 Jews living there. The town developed during the 19th century. There were 1,301 Jews (about 53% of the total population) by 1856 and 2,853

(53.5% of the total population) in 1897. During World War I the general population decreased, but in 1921 there were still 2,895 Jews (59.7%) in Radzyn, and an estimated 3,000 on the eve of World War II.

The synagogue, a single-story stone building, was erected at the beginning of the 19th century. Among the outstanding personalities of the community was Gershon Ḥanokh Leiner, founder of the Radzyn dynasty of Ḥasidim, who re-introduced the interweaving of the blue thread among the *zizit* and established a laboratory for producing the proper color. His grandson, Samuel Solomon Leiner, also a leader of the Radzyn Ḥasidim, perished in the Holocaust. Prominent rabbis of Radzyn were Simeon Deutsch, who held office during the first half of the 19th century, and Ḥayyim Fein (d. during World War II). Jewish economic life was affected by a fire which destroyed many homes in 1929, and many Jewish families became dependent on support from their coreligionists in other communities. During the 1930s an economic crisis and the anti-Jewish economic *boycott proclaimed by Polish antisemites also undermined Jewish economic life. In the democratic elections to the community's council (1931) two Zionists, two Ḥasidim, two representatives of the craftsmen, one of the socialist craftsmen, and two representatives of the *battei midrash* were elected.

[Shimshon Leib Kirshenboim]

Holocaust Period

On Sept. 9, 1939, the Jewish quarter of Radzyn was heavily bombarded by the German air force. At the end of the month, just before the German army entered the town, several hundred Jews, mostly young men and women, left for Soviet-occupied territory. In December 1939 the Germans sent most of the Jews to Ślawatycze and Miedzyrzec, but after a few months most returned to Radzyn. In the summer of 1940 an open ghetto was established in Radzyn. Considerable underground activities were conducted, mainly by *Ha-Shomer ha-Za'ir, which organized several smaller partisan groups. On Aug. 20, 1942, the first deportation of Jews to the *Treblinka death camp took place, and on Dec. 20, 1942, the second, when the Jewish community was "liquidated."

RADZYNSKI, JAN (1950–), composer, born in Warsaw, Poland. Radzynski immigrated to Israel in 1969 and studied at the Tel Aviv Rubin Academy of Music with Leon *Schidlowsky. From 1977 he continued his studies at Yale University in the U.S. with Krzysztof Penderecki and Jacob Druckman and received his doctorate in 1984. He settled in the U.S.

Radzynski's music is characterized by the utilization of contemporary techniques in contexts rich of stylistic elements from the past. It is carried by expressive melodies of long chromatic lines and features rich textures and carefully composed structures, paying special attention to the links and interrelations between movements of a single work. Radzynski's vir-

tuoso writing offers technical challenges to the performing musicians and is often witty and full of verve. By embedding East European-Jewish (cantorial) and Middle-Eastern (heterophonic) musical elements in compositions committed to the past masters, Radzynski aims at a musical language timeless and contemporary alike, culturally unique and universal.

His works have been performed by such orchestras as the Cleveland, Columbus, New Haven Symphony, the Mexico National, the West German and the Saarländische Radio Symphony Orchestras, the Cracow Philharmonic, the Russian Federal, the Moscow Bolshoi Theater Chamber Orchestra; the Israel Philharmonic, Jerusalem and Haifa Symphony and Israel Chamber Orchestras and Israel Sinfonietta. He was composition professor at Yale between 1981 and 1994 and was professor at the Ohio State University in Columbus.

Radzynski's list of compositions include *String Quartet* (1977); *Kaddish for the Victims of the Holocaust* for four amplified flutes, six percussion players, piano and strings (1979); *Homage to Itzik Manger* for mixed ensemble of nine players (1979); *Canto* for piano (1981); *Psalms* for viola and eight celli (1983); *Take Five*, brass quintet (1984); *Hebrew Melodies*, piano quintet; Violin/Viola Sonata (1985); *David – Symphony in One Movement* (1987); *Encounters* for chamber ensemble (1988); *Viola Concerto* (1990); *Time's Other Beat* for symphony orchestra (1990); *Cello Concerto* (1990–92); *Serenade*, Wind Quintet; String Trio (1995); *Fanfare*; *Shirat Ma'ayan* for mezzo-soprano, tenor and orchestra (1997); *Summer Charms Rag* for violin and piano (1998); *Personal Verses* for violin and piano (1999); *Serenade for Strings* (2000); *Concert Duos* for clarinet and cello (2004).

Among the many awards Radzynski received are the ASCAP Standard Awards (1989 and 1997), the Mellon Fellowship (1985), the Research and Creative Work Grant of the Rothschild Foundation (1995), and the Distinguished Scholar Award given by the Ohio State University (1996). In 1983 he was in residence at the Foundation Artists' House in Boswil, Switzerland.

[Yuval Shaked (2nd ed.)]

RAFA (Ar. **Rafah**; Heb. **Rafi'ah**), town, near the Mediterranean coast, 22 mi. (35 km.) S. of Gaza. Rafa is first mentioned in an inscription of the pharaoh Seti I (c. 1300 B.C.E.) as Rph; it also appears in other Egyptian sources, in Papyrus Anastasi I and in the inscription of Shishak. As a border town on the way to Egypt and a point of sharp transition from desert to cultivated land, it is frequently referred to as the site of conflicts between the armies of Egypt and its neighbors. In 721 B.C.E. Sargon of Assyria defeated at Rapihu (Rafa) Sib'e of Egypt and Hanno of Gaza; the Assyrians burned the city and deported 9,033 inhabitants. Rafa does not appear in the Bible; the Targums (on Deut. 2:23) identify it with Hazerim. It was the center of important operations in the Hellenistic period during the wars of the Diadochi. Antigonos attacked it in 306 B.C.E. and in 217 B.C.E. Antiochus III of Syria was defeated there by the army of Ptolemy V of Egypt (Polybius 5:82–86). The town

was conquered by Alexander Yannai and held by the Hasmoneans until it was rebuilt in the time of Pompey and Gabinius; the latter seems to have done the actual work of restoration for the era of the town dates from 57 B.C.E. Rafa is mentioned in Strabo (16:2, 31), the *Itinerarium Antonini*, and is depicted on the Madaba Map. It was the seat of worship of Dionysius and Isis (*Papyrus Oxryrhynchus*, 1380). It was the seat of an Episcopal see in the fifth-sixth centuries. A Jewish community settled there in the geonic period; it flourished in the ninth to tenth centuries and again in the 12th, although in the 11th century it suffered a decline and in 1080 the Jews of Rafa had to flee to Ashkelon. A Samaritan community also lived there at this period. Like most cities of southern Erez Israel, ancient Rafa had a landing place on the coast (now Tell Rafah), while the main city was inland.

[Michael Avi-Yonah]

Modern Period

Between 1905 and 1913 Erez Israel Jews and Zionist groups in Central and Eastern Europe made repeated but futile attempts to buy land and establish settlements in the area. The town was reestablished in the 1920s under the British Mandate, and built for the most part on the Palestinian side but also on the Egyptian side of the border. Rafa's population grew around the time of World War II, when the British army established large military camps there, providing the Arab inhabitants with employment. In the late 1940s, before the *War of Independence, members and leaders of Jewish settlements, *Haganah, *Irgun Zeva'i Le'ummi, and the *yishuv* were detained in British detention camps at Rafa. After the battles of 1948 Arab refugees settled in the former British camps at Rafa, which was under Egyptian administration in the *Gaza Strip. Taken by Israel forces in the Sinai Campaign (1956), Rafa was evacuated by them in March 1957. During the *Six-Day War, on June 5, 1967, Israel again took the town. In 1931 the town had 1,400 inhabitants, in 1945 2,500, and according to the Israel census of the fall of 1967, 49,812, almost all Muslim Arabs, 39,000 of whom lived in refugee camps. In 1971 many inhabitants worked as farm laborers and in small trades, but the percentage of those subsisting on relief was particularly high. After the signing of the Declaration of Principles in 1993, the town was handed over to the Palestinian Authority.

RAFALIN, DAVID SHLOMÓ (1899–1979), rabbi of the Ashkenazi community of Mexico. He was born in Suwalki, Poland, and studied in the yeshivot of Slobodka and Mir. Rabbi Rafalin immigrated to New York and in 1929 to Havana, Cuba, where he was appointed rabbi of the Orthodox Ashkenazi congregation Adath Israel and was active in the Zionist Union of Cuba. In 1933 Rafalin immigrated to Mex-

ico where he became the rabbi of the Ashkenazi community Nidchei Israel, serving until his death. Besides his rabbinic functions, Rafalin developed many public activities in the community. As an active Zionist he presided over the Jewish National Fund (1938–39); he founded and was the leader of the Mexican branch of the religious Zionist party, the Mizrachi; he headed many fundraising efforts in support of the government in its campaign for the nationalization of oil resources (1938) and for the aid to Holocaust survivors. Rafalin also collaborated in the foundation of the Jewish religious school Yavneh (1942).

[Efraim Zadoff (2nd ed.)]

RAFELSON, ROBERT (1933–), U.S. director, producer, writer. Born in Manhattan, Rafelson worked at a rodeo at 15, followed by a stint as a deckhand on an ocean liner, and later tried his hand as a jazz drummer. At Dartmouth College, Rafelson was an Armed Forces radio deejay. He was a producer on the TV series *The Wackiest Ship in the Navy* (1965–66) before becoming writer, director, and producer for the television series *The Monkees* (1966–67) for which he won an Emmy. Rafelson's film debut was *Head* (1968), a Monkees movie which he directed and produced. He cowrote the screenplay with Jack Nicholson, and coproduced *Easy Rider* (1969). Rafelson directed, produced, and cowrote *Five Easy Pieces*, in which Nicholson starred, earning four Academy Award nominations, including Best Film and Best Original Screenplay. Rafelson and Nicholson also worked together on *The King of Marvin Gardens* (1972). *Stay Hungry* (1976), which Rafelson directed and produced, featured Arnold Schwarzenegger in one of his first roles. Nicholson also starred in Rafelson's 1981 hit *The Postman Always Rings Twice*, a remake of the 1946 film based on the James M. Cain novel, with a screenplay by David Mamet. *Mountains of the Moon* (1990) was a biographical account of Sir Richard Burton and John Speke's search for the origin of the Nile. In 1994, Rafelson returned to television and directed the "Armed Response" episode of the miniseries *Picture Window*. Rafelson also directed the television films *Poodle Springs* (1998) and *Afterthoughts* (2002), a documentary about independent Hollywood filmmakers. Other Rafelson films include *Brubaker* (1980), *Black Widow* (1987), *Man Trouble* (1992), *Wet* (1995), *Blood and Wine* (1996), and *The House on Turk Street* (2002). Rafelson is playwright Samson Raphaelson's nephew.

[Susannah Howland (2nd ed.)]

RAFES, MOSES (1883–1942), leading member of the Russian Bund. Rafe, born into a family of merchants, was associated in his youth with revolutionary circles and in 1902–03 joined the Bund in Vilna, where he had some connection with the terrorist act of Hirsch Lekert. He was also active in Gomel (1906) and St. Petersburg and was a Bund delegate to the London convention of the Social Democratic Workers' Party of Russia (1907). In 1912 he was coopted to the central committee of the Bund. During World War I he supported the "defensist"

wing of the Social Democrats, which preferred the victory of Russia. Together with H. Erlich he represented the Bund on the "industrial war committees." After the revolution of February 1917 he was a member of the Executive Council of the Petrograd Soviet and was later active within the Ukrainian Bund. He was at first an extremist of the right and anti-Bolshevik wing, then turned toward the center, and after the revolution in Germany made a sharp turn toward communism. He played a central role in the divisions in the Bund, creation of the Kombund and Komfarband, and the amalgamation of its majority with the Communist Party in Soviet Russia, and he was then also sent to work for the liquidation of the Bund in Poland. In a 1919 memorandum he appealed to the Kommissariat of Interior Affairs to immediately liquidate all Jewish institutions, organizations, and parties, claiming that they were a danger to the Soviet state. He acted with particular energy as the head of the Liquidation Committee for Jewish Affairs of the Yevsektsiya, subsequently adhering to the assimilationist trend and abandoning Jewish activities. After having served as a commissar in the Red Army, he worked in the government in Moscow, and also for the Comintern and the Soviet Foreign Service (Chinese affairs). He was finally transferred to the sphere of cinema work. He was arrested in May 1938, and sentenced to 10 years imprisonment, and died in the camps of Komi ASSR.

Before World War I, he contributed to the Bundist press and continued to write from time to time in the Soviet Yiddish press. He published some works on the history of the Bund which, in spite of their bias, are of some historiographic value. These include (in Russian): "Two Years of Revolution in the Ukraine" (1920) and "Chapters on the History of the Bund" (1923). He edited the anthology *Der Yidisher Arbeter* (4 vols., 1925–28) of A. Kirzhnitz.

[Moshe Mishkinsky]

RAFFALOVICH, ARTHUR GERMANOVICH (1853–1921), Russian economist. Born in Odessa, Raffalovich lived in Paris where his lucid and pertinent explanations of, and comments on, contemporary economic issues such as cartels and other commercial agreements, brought him in close contact with leading French publications and journalists. He became a regular contributor to *Le Temps* and *Le Journal des Débats*. Having acquired the confidence of the Russian authorities, particularly of Prime Minister Witte and Finance Minister Kokovtsev, whom he successfully advised on commercial and financial affairs, he became the major Russian publicity agent in France, and was particularly concerned with press relations and their effect on the placement of Russian government bonds in France. His assignment included guidance to the Russian authorities on the allocation of advertising in the French press. This exposed him to the charge of bribery. After

having attacked Bolshevism, Raffalovich became the object of relentless charges by *L'Humanité*, the Communist daily, which published his confidential reports to St. Petersburg after their release by the Soviet government. Most of these publications, however, did not prove conclusively the bribery charge.

[Joachim O. Ronall]

RAFFALOVICH, ISAIAH (1870–1956), rabbi and author who promoted the development of Brazil's Jewish community. Born in Bogopol, Podolia, Raffalovich was taken in 1882 by his parents to Erez Israel. He became interested in Jewish settlement schemes on both sides of the Jordan and worked for nine months at Es-Salt in Transjordan, trying to encourage young Jews in Jerusalem to follow his example. Together with M.E. Sachs, he published an album of his own photographs, *Views from Palestine and its Jewish Colonies* (1898). Raffalovich left for Europe, where he studied in Berlin and London, obtaining his rabbinical diploma at the Hildesheimer Seminary in Berlin. He served congregations in Manchester and Wales and the Hope Place Synagogue in Liverpool (1904–24).

While on a mission to South America in 1923, he was invited by the *Jewish Colonization Association (ICA) to go to Brazil as its representative, promote immigration to that country, and serve as a spiritual guide to the Jewish community. In this capacity he toured the country, established welfare institutions and improved already existing ones, and helped the newly established communities and synagogues. Raffalovich appealed to the common heritage of the Ashkenazi and Sephardi immigrants in working for the coordination of Jewish life in Brazil, and it was through his personal efforts that more than 30 Jewish schools and teachers' training courses were firmly established. His publications include: *Rudiments of Judaism* (1906); *Anglo-Hebrew Modern Dictionary* (1926); and *Our Inheritance* (1932), a volume of sermons and addresses. He also published in 1927 a Portuguese version of Paul *Goodman's popular short *History of the Jews* (1911) and the first Jewish sermons in Portuguese printed in modern times, *Rudimentos de judaismo* (1926²). In 1935 he retired to Erez Israel and five years later was appointed senior Jewish chaplain to the British forces in the Middle East. A Hebrew edition of his collected sermons (*Ma'gelei Yosher*) appeared in 1950 and his autobiography, *Ziyyunim ve-Tamrurim*, in 1952. His brother SAMUEL REFAELI (1867–1927), a numismatist, was director of the numismatic department of the Department of Antiquities in Palestine (under the British) and left his coin collection to the Bezalel Museum.

[Godfrey Edmond Silverman]

RAFI (abbreviation of Heb. *Reshimat Po'alei Yisrael*, "Israel Labor List"), founded in 1965 as the result of a split in *Mapai. The original split was the outcome of *Ben-Gurion's political fight against Levi *Eshkol over the *Lavon Affair and of the

struggle for succession to the leadership between a group of younger men, headed by Moshe *Dayan and Shimon *Peres, supported by Ben-Gurion, and the party veterans, headed by Levi Eshkol and Golda *Meir. At the Mapai convention in February 1965, the rebels supported Ben-Gurion's demand for an inquiry into the Lavon Affair and opposed the proposed political alignment with Ahdut ha-Avodah. After their defeat at the convention, they proposed Ben-Gurion's return to the premiership in place of Eshkol. In July, seven Mapai Knesset members (later joined by Dayan) formed a new list, called Rafi, which obtained 12% of the votes at the Histadrut elections in September and ten Knesset seats in November.

At its founding convention in May 1966, representing 23,000 members, Rafi called for electoral reform, self-reliance in the field of defense, national health insurance, free secondary education, and modernization of the economy, with particular emphasis on the full utilization of science. It became part of the parliamentary opposition, especially in defense and foreign affairs, sometimes cooperating with *Ga'hal. In May 1967, during the prewar tension and the discussions on the appointment of Dayan as minister of defense, Rafi offered to return to Mapai bodies, and when the government was reformed after the 1969 elections Peres joined it. The elections were also contested by the State (or National) List (*Reshimah Mamlakhtit*), headed by Ben-Gurion, which consisted mainly of Rafi supporters and won four seats. In February 1971 (after Ben-Gurion's resignation from the Knesset) it decided to call itself Rafi-State List. Negotiations after the *Six-Day War led to agreement between Mapai, Rafi, and Ahdut ha-Avodah. When the united Israel Labor Party was formed on Jan. 21, 1968, Rafi received 21.5 percent of the places on its governing bodies. In 1973 the State List ran for the Knesset as part of the Likud.

[Misha Louvish]

RAGEN, NAOMI (1949–), author. Born in New York, Ragen earned a bachelor's degree in English from Brooklyn College and a master's in English from the Hebrew University of Jerusalem. In January 1971 she moved with her husband to Israel. The translation of her books into Hebrew made her one of Israel's best-loved writers. Blending history, Jewish religious themes and their relation to the modern-day world, she had six international bestsellers: *Jephte's Daughter* (1989); *Sotah* (1992), her first book translated into Hebrew; *The Sacrifice of Tamar* (1995); *Chains Around the Grass* (2001); *The Ghost of Hannah Mendes* (2002); and *The Covenant*. (2004) Her play, *Women's Minyan*, commissioned by Israel's National Theater, Habimah, premiered in Israel in 2000 and became one of Habimah's longest-running hits. Its American premiere in English took place in 2005 at Duke University's Reynolds Theatre. She is an outspoken advocate of gender equality and human rights. One of the most influential and widely read columnists on the Internet, with thousands of subscribers, Ragen served as Israel's delegate to the Council of Europe's International Conference on Women's Rights in September 2000. Caught along with her family in the Netanyahu Pass-

over massacre, she used the experience to write passionately about the dangers of terror organizations and their supporters, as well as the experience of innocent civilians who find themselves on the front lines. A frequent contributor to op-ed pages, she was also a columnist for *The Jerusalem Post*. The Israeli government honored her in 2002 for outstanding achievement in literature.

[Stewart Kampel (2nd ed.)]

RAGER, BRACHA (1938–), Israeli microbiologist. Born in Tel Aviv, Rager obtained her M.Sc. in microbiology from Tel Aviv University in 1963 and received her Ph.D. from the School of Hygiene and Tropical Medicine, London University, London, England in 1973. Between 1973 and 1976, she was a postdoctoral research fellow in the Department of Microbiology and Immunology, Albert Einstein College of Medicine, New York, where later she was appointed visiting professor, a position she held until 1987. In 1977 she joined the newly established Faculty of Health Sciences, Ben-Gurion University of the Negev, and was one of the founders of the department of microbiology and immunology, where she was appointed full professor in 1997. From 1997 to 2001 she was chief scientist of the Ministry of Health and from 2005 the president of the Israel Society of Microbiology. Rager was a member of the Higher Council of Education (MALAG) and served on the board of directors of Teva Pharmaceuticals. As an expert in virology and immunology, Rager conducted extensive research on mechanisms of defense against virus infections and cancer. She was a recipient of many prestigious awards and wrote numerous papers, which were published in professional journals. She also published articles on medical research policy and of scientific interest in national newspapers and was much involved in promoting medical research, women's health, and biotechnology. Throughout her professional life, Rager was extremely active in community and education projects related to the scientific education of the young. She was the academic consultant to gifted children and science for youth programs at Ben-Gurion University and a board member of the Blumfield Science Museum in Jerusalem. She was also a member of the board of directors of ORT, Israel. Rager was co-editor of the science section of the 2nd edition of the *Encyclopedia Judaica* and the widow of Itzhack *Rager, the late mayor of Beersheba.

RAGER, (IJO) ITZHACK, (1932–1997), Israeli journalist, diplomat, businessman, and mayor. Rager was born in Egypt and came to Israel in his infancy in 1932. He was a graduate of the David Yellin Teacher's College, the Hebrew University (in international affairs), Hunter College (in Soviet studies), and the City University of New York Graduate Center (in cross-system analysis). After his army service, in 1955, he was a bureau chief for the minister of interior, Israel Rokach, and in 1958 he joined the Israel Broadcasting Authority (IBA) as a parliamentary correspondent, later becoming chief news editor. In 1962, he was appointed chief European correspon-

dent of IBA in Paris, and upon his return from Paris (1966) was appointed secretary general of the Broadcasting Authority. In 1969 he was chief editor of the *Ha-Yom* national daily newspaper. From 1971 to 1976 he was consul in London and New York and in 1980–83 was president of the worldwide State of Israel Bonds agency. In 1976 he settled in Beersheba, and in 1983 was appointed chairman of the Eilat Development Company. After building the first shopping mall in Beersheba (1984–89), he was elected mayor of Beersheba. Rager is remembered for numerous achievements during his lifetime. As an IDF officer (colonel, reserve), during the Six-Day War he commanded the battalion that liberated *Gush Etzyon and was the first to enter the city of Bethlehem. As a counselor in London and consul in New York he was an active leader for the freedom of Soviet Jews and participated in the creation of the "35s" Women's Campaign for Soviet Jewry. During his time as mayor of Beersheba, the city's population grew by 50 percent; he attracted industrial investments and revolutionized the educational system. Rager died of cancer in 1997 during his second term as mayor.

[Bracha Rager (2nd ed.)]

RAGOLER, ABRAHAM BEN SOLOMON (18th century), Lithuanian rabbi and preacher, brother of *Elijah b. Solomon Zalman Gaon of Vilna. Abraham was born in Vilna, but because of the controversy between *Hasidim and *Mitnaggedim* he moved to Ragola and was thereafter called Abraham of Ragola or "the Hasid ("righteous one") of Ragola." He was appointed preacher in Shklov.

He was the author of the *Ma'lot ha-Torah* (1828), a collection of rabbinic dicta dealing with the virtue of those who occupy themselves with the study of Torah. While explaining in detail the precepts of Torah study, he stressed that it is not sufficient "merely to study the text superficially, but it is also essential to carry it out in practice." He left in manuscript a kabbalistic commentary to the tractate *Megillah* and a commentary to the Book of Esther.

[Yehoshua Horowitz]

RAGOLER, ELIJAH BEN JACOB (1794–1850), Lithuanian talmudist. Ragoler was born in Sogindat in the Zamut region. His only teacher was his father Jacob, a distinguished scholar and wealthy merchant. In his youth Elijah acquired a comprehensive knowledge of the Talmud, the *rishonim*, and the *posekim* – which he regarded as the essential elements of study in contrast to the prevalent methods of *pilpul* and hairsplitting unconnected with the definitive *halakhah*. He was renowned throughout Lithuania for his encyclopedic talmudic knowledge, and his contemporaries said of him that he had gone over the whole of the Talmud more than 400 times. He devoted himself to considerable study of the Kabbalah, in which he also became renowned. Nevertheless, he refused through-

out his life to have any dealings with mystic exercises, despite the many appeals for prayers, amulets, etc. made to him by scholars and the common people. In his youth he spent some months with *Isaac of Volozhiner for the purpose of learning Kabbalah from him in accordance with the traditions which Isaac had received from *Elijah of Vilna. When, however, he lost hope of this he returned home. At that time, his father and father-in-law failed in business and Elijah was compelled to accept a rabbinical post. He first served as rabbi of the small town of Schatt near Keidany. From 1821 to 1824 he was rabbi of Ragola (Eiragola) where he gained his main reputation and from which he derived his name. From 1824 to 1840 he was rabbi of Slobodka and from 1840 until his death rabbi of Kalisz in Poland.

In addition to his great reputation as a *posek* and scholar in *halakhah* and Kabbalah, Elijah was distinguished for his diligence and application, and for his shrewdness and sincerity. During his last years he suffered from ill health as well as from the opposition of a group of members of the Kalisz community to whom the Lithuanian ways of their rabbi were strange. Despite this he did not hesitate to take a decisive attitude in his leadership of the community, and sided with Akiva *Lehren of Amsterdam in his violent opposition to the Reform conference of Brunswick (1844), organized by A. *Geiger. Ragoler's letter to Lehren differs from the many other letters of contemporary Orthodox rabbis in its exceptionally moderate tone. In contrast to them, Elijah held that the weapon of excommunication, prohibition of marriage, etc., should not be followed because of the grave danger it held for the whole of the Jewish community. In his view a sharp and unequivocal dissociation from the path of reform, and a warning to the public against it were necessary, but not a "war of destruction."

Ragoler left many manuscripts in all spheres of Torah study. According to the members of his family their number exceeded 35. Of these only one has been published: *Yad Eliyyahu* (1900), pt. 1, 120 responsa and a methodology of the Talmud in alphabetical order, pt. II, talmudic novellae. Among his pupils were many great Lithuanian talmudists, including Mordecai Eliasberg and Joshua Heshel *Lewin. Many of his novellae are to be found in the works of other scholars, particularly in those of his pupils, including the *Ilana de-Hayyei* (1860–65) of Gershon Tanhum. The *Keneset ha-Gedolah*, pt. 4 (1892), of Isaak *Suwalski cites many of his sayings on prayer.

Ragoler's brother, SAMUEL KELMER, was also a renowned scholar who went to Erez Israel in the closing years of his life. Samuel was the father of Aryeh Leib *Frumkin.

BIBLIOGRAPHY: A.L. Frumkin, *Toledot Eliyyahu* (1900); Urbach (ed.), in *Kovez al Yad*, 6 (16) pt. 2 (1966), 535–53.

[Israel Moses Ta-Shma]

RAHAB (Heb. רַחַב), the prostitute (Heb. *zonah* – see below), mentioned in the Book of Joshua as a central figure in Joshua's conquest of Jericho (Josh. 2–6). When Joshua sent two of his men to Jericho on a reconnaissance mission, they came to the house of Rahab and spent the night there (2:1–2). When

the king of Jericho learned about the two spies, he sent word to Rahab ordering her to surrender them (2:3). However, she hid them on the roof under stalks of flax, and declared that they had already left (2:4–6). In return for the kindness that she had shown them and her promise to keep the entire affair confidential, the spies took an oath that she and her family would be spared when Joshua conquered the land (2:12–14). They further stipulated that when the conquest began, she was to gather her entire family into her home and bind a cord of crimson thread in the window, which would serve to identify her house (2:17–21). This cord of crimson thread was the same one which had been used to let the spies down through the window when they left Rahab's house (2:18). Rahab did as she was bidden, and so when Joshua did conquer the land, she and her entire family were saved (6:22–23, 25). After the total destruction of Jericho, it is stated that Rahab and her family elected to reside with the Israelites, who accepted her into their camp (6:25).

There are two somewhat conflicting Jewish traditions concerning Rahab's profession and later life among the Israelites. The first (e.g., Meg. 14b; Ginzberg, *Legends*, 4 (1954), 5–8) maintains that she married Joshua after becoming a proselyte, and became the ancestress of eight prophets and priests among whom were the prophet Jeremiah and the prophetess Huldah. According to this tradition, the fact that a proselyte and former prostitute could achieve such a name for herself in the annals of Jewish history proved that repentance can work salvation for anyone no matter how great his past sins. The second tradition contends that Rahab was not a prostitute at all but an innkeeper. This tradition (e.g., Rashi on Josh. 2:1) is based on the Targum's rendering of *zonah* as *pundeqita* (*pundeqita*), the assumption being that this word means, like *pundakit* (*pundaqit*) in Hebrew, "hostess, innkeeper," and the derivation of the word *zonah* (normally "prostitute") from the same stem as *mazon* (מִזְנוֹן, "food"). If Rahab had been merely an innkeeper, then the shame of considering a former prostitute to be the ancestress of some of Israel's most important figures would cease to be a problem. However, as first noted by Kimḥi (on Josh. 2:1), the adherents of this theory simply misunderstood the Targum, for the Targum to the Prophets in various passages also renders *zonah* by *pundeqētā*, plural *pundeqāyān* or *pundeqāān* (e.g., 1 Kings 3:16; Ezek. 23:44), in which it cannot possibly have been understood to mean anything but "prostitute." Therefore, the Targum's rendering of Hebrew "prostitute" with Aramaic "innkeeper" is to be understood either as a euphemism or as an intended double entendre, implying that there is a connection between bars or inns and prostitutes.

[Chayim Cohen]

In the Aggadah

Rahab was one of the four most beautiful women in history. The mere mention of her name sufficed to excite desire (Meg. 15a). At the age of ten Rahab became a prostitute. There was not a prince or ruler who did not have relations with her. Because of this, she was well informed about events outside

of Jericho (Zeb. 116b). Rahab became a righteous proselyte and married Joshua. She was the ancestress of eight prophets, among them Jeremiah, who were also priests, and of the prophetess Huldah (Meg. 14b). Her conversion is regarded as more complete than that of Jethro and Naaman for, unlike them, she acknowledged that the God of Israel is the only God both in heaven and on earth (Deut. R. 2:26–27).

BIBLIOGRAPHY: Y. Kaufmann, *Sefer Yehoshua* (1959). IN THE AGGADAH: Ginzberg, Legends, index.

RAHABI, EZEKIEL (1694–1771), merchant and community leader in Cochin (*Kochi), India. In 1726, after the death of his father, Rahabi was appointed by the Dutch East India Company as “chief merchant and agent,” and invested with a monopoly of the trade in pepper and other commodities in Malabar. He rose to a position of remarkable influence and prestige; for almost 50 years he was connected with all the company’s major financial transactions in Malabar, and undertook for it diplomatic assignments to the king of Travancore (1734–42), to the zamorin of Calicut (1751), and to other native rulers.

Rahabi was also an outstanding leader of the Jewish community. He purchased land for the Black Jews near Cranganore and in 1756 built a synagogue there for ten Jewish families, supporting it until it was closed in 1761; improved and embellished the Parthesi synagogue of the White Jews in Cochin; and imported Hebrew books from Holland. Through his efforts to decipher the ancient copperplate inscriptions in Cochin, Ezekiel Rahabi also became the historian of his community. His letter of 1768 to the Dutch banker Tobias Boas remains a major source of information about Cochin Jewry. Rahabi’s tombstone is preserved in the courtyard of the Parthesi synagogue. The changed economic and political conditions in Malabar after the English occupation of Cochin (1795) caused the decline of the Rahabi family.

[Walter Joseph Fischel]

RAHAMIMOFF, RAMI (1937–), Israeli physiologist. He was born in Sofia and immigrated to Israel in 1949. He received his M.D. from the Hebrew University-Hadassah Medical School (1963) and, after deciding on a research career, worked with Sir Bernard *Katz as a British Council Research Fellow (1965–66) and lecturer in biophysics (1966–68) in the department of biophysics of University College, London. He returned to the Hadassah Medical School as a senior lecturer in physiology (1969), where he was appointed professor of physiology from 1975, chairman of the division of basic medical sciences (1974–81), Jacob Gitlin Professor of Physiology from 1985, chairman of the department of physiology (1986–89), and director of the Bernard Katz Minerva Center for Cell Biophysics (1994–2005). Rahamimoff’s research interests developed with the undergraduate teaching he received from Jonathan Magnes and Joseph Dobkin. It concerns the regulation of the chemical transmitters in the nervous system which pass information from one nerve cell to another. He and his collaborator Fred Dodge developed a theory of cooperation between factors governing neuro-transmission that has been highly influential in progress in this field. Subsequently his laboratory has helped to clarify the significance of calcium and the functional significance of the fine anatomical details involved in neuro-transmission. His findings also have important implications for understanding the mechanisms that account for many diseases of the nervous system and their therapeutic control. Rahamimoff’s teaching distinction was recognized by his regular nomination as distinguished university lecturer, the many physiologists he trained, and his contributions to many prestigious international courses. He also made important contributions to scientific education and research as chairman and council member of national and international committees concerned with the neuro-sciences and physiology in general. He served as dean (1981–85) and director of the Center for Medical Education (1985–88) of the Hebrew University-Hadassah Medical School (1981–85). From 2001 he was chief scientist of the Israel Ministry of Health and chairman of the committee responsible for the establishment of an Israeli Medical Research Council in 2002. His achievements were recognized by the award of the 1998 Israel Prize in life sciences.

[Michael Denman (2nd ed.)]

RAḤBAH, AL-, town situated on the W. bank of the Euphrates, S. of Kirkisiya. Founded in the first third of the ninth century by Mālik ibn Ṭauq, al-Raḥbah was named Raḥbat Mālik ibn Ṭauq to differentiate it from other towns bearing the name Al-Raḥbah. Onkelos, and after him R. *Saadia Gaon, identify the town with the biblical Rehoboth by the River (Gen. 36:37), while the Arab geographer Yāqūt reports an ancient tradition, according to which Al-Raḥbah was founded by Namrūd (Nimrod) b. Kūsh. It was, at any rate, one of the large cities on the Euphrates – as confirmed by another Arab geographer, al-Mukaddasī, writing at the end of the tenth century – and it had a large Jewish community. Obadiah the proselyte was

in this town at the beginning of the 12th century. *Benjamin of Tudela, the 12th-century traveler, found a Jewish community of 2,000 there. In a letter (*iggeret*) written by R. *Samuel b. Ali, head of the *Baghdad academy, in 1191, Al-Rahbah heads the list of the communities of northern *Babylonia and *Syria. There were also *Karaites living in the town, as is known from a list appearing at the end of a manuscript of Japheth b. Ali's commentary on Numbers, dedicated by Moses b. Japheth al-Rahbi to the Karaite community in *Jerusalem. By the 14th century the ancient town had been destroyed and its site had been moved further to the west. At the time that the town was included within the *Mamluk kingdom, Jews still lived there, as may be inferred from an inscription found in the synagogue of Tādef (a village near *Aleppo), dating apparently from about 1400, which mentions the name "Obadiah b. Moses ... b. Abraham al-Rahbi." During Ottoman rule Jews from al-Rahbah moved to *India, and some of them (e.g., a prominent family that lived in Cochin in the 18th century), bore the name of their ancient home.

[Eliyahu Ashtor]

RAHBAR, SAMUEL (1929–), Iranian immunologist. Rahbar was born in Hamadan, Iran, and studied medicine at the University of Teheran, obtaining his doctorate in 1953. After doing hemoglobin research at the Albert Einstein College of Medicine, New York, he was appointed professor of immunology at the University of Teheran. In 1963, he established the university's Abnormal Hemoglobin Research Laboratory of which he became the director; a number of new abnormal hemoglobins were discovered there. In addition to numerous contributions on the subject in international scientific journals, Rahbar published *Principles of Molecular Biology* (Persian, 1972). His most important achievement is the discovery of HbA_{1c} in diabetic patients, which was published in 1968. HbA_{1c} became one of the most important biochemical values to be measured in diabetic patients, its measurement being a major contribution to the quality of care of diabetic patients. At the beginning of the Islamic Revolution, he was fired from the University of Tehran and immigrated to U.S. As a professor of diabetes at the City of Hope National Medical Center in Duarte, California, he worked on the development of "inhibitors of glycation," compounds that may prevent diabetic complications in the kidneys, eyes, and nervous system.

RAHEL (pseudonym of **Rahel Bluwstein**, 1890–1931), Hebrew poet in Erez Israel. Raḥel was born in Saratov, on the Volga in northern Russia, and raised in Poltava. She began writing poetry in Russian at the age of 15 and also studied painting. In 1909 she emigrated to Erez Israel, settling in Rehovot. She abandoned her native Russian idiom and learned Hebrew. Under the influence of the pioneer Zionist Hannah Maisel

(Shoḥat) she became a pioneer and was one of the first trainees at the young women's training farm at Kinneret. At Kinneret she met Aaron David *Gordon, the philosopher of Zionist agrarianism, and to him she dedicated her first Hebrew poem, "*Halokh Nefesh*" ("Mood"), in *Ha-Shilo'ah*, 37 (1920). Having decided on an agricultural life, she studied agronomy at the University of Toulouse (1913). Unable to return to Erez Israel because of World War I, she went to Russia, where she taught Jewish refugee children. After the war she settled in Deganyah. However, having contracted tuberculosis during the war, she soon became too ill for farm life and had to spend the rest of her life in hospitals and sanatoria.

Raḥel is among the first modern Hebrew poets who wrote in a conversational style. Her knowledge of Hebrew was drawn from both the developing spoken idiom and the Bible. She was also influenced by the conversational school which then prevailed in Russian poetry (Blok, Akhmatova, and Yesenin). Her poems are characterized by a clear, uncomplicated lyrical line and a musicality, then rare in Hebrew poetry. Invariably short, her poems are elegiac and nostalgic in tone, many of them reflecting the pessimism of a young writer on the brink of death. These qualities made her writings very popular with younger Hebrew readers and with the general public. Many of the poems, including the widely sung "*Kinneret*," have been put to music. Raḥel also translated Russian, Yiddish, and French poetry and wrote occasional pieces of criticism. Two volumes of her verse appeared in her lifetime: *Safiah* ("Aftergrowth," 1927), *Mi-Neged* ("From Opposite," 1930), and one posthumously, *Nevo* (1932). These were collected in *Shirat Raḥel* ("The Poetry of Raḥel," 1935), the eighth edition (1961) of which also contains her other works as well as a biography by Bracha *Ḥabas and a bibliography of her poems and their translations. Uri Milstein edited a collection of Raḥel's poems, letters, and articles with a biographical essay (1985) and Z. Yafit published all of her poems accompanied by a biographical note (2000). An unknown short play written in Deganyah 1919/1920, in which Raḥel depicts with a grain of irony the life of the pioneers and the gap between ideals and daily life, was discovered by Dana Olmert and published in the literary supplement of *Haaretz* (November 19, 2004). Raḥel's poems have been translated into many languages and information is available at the ITHL website at www.ithl.org.il.

[Ezra Spicehandler]

RAHV, PHILIP (1908–1973), U.S. editor and critic. Born in Russia and named Ivan Greenberg, Rahv (literally, teacher) came to the United States after living in Palestine. One of the founders of the *Partisan Review*, Rahv helped to turn the magazine into an anti-Stalinist organ. He was also known for his helping other writers find their audience. His later magazine was called *Modern Occasions*. His critical works include *Image and Idea* (1949), *Literature in America* (1957), and *Myth and the Powerhouse* (1965). His *Literature and the Sixth Sense* was published in 1969. Of note is his *Essays on Literature and Politics, 1932–1972*, edited by Arabel Porter and Andrew Dvosin (1978). He also edited anthologies of U.S., British, and Russian fiction. During the 1940s Rahv did much to revive interest in the works of Henry James.

RAILROADS. Jewish financiers played a considerable role in the construction of railroads in France and in Central and Eastern Europe from the 1830s until the beginning of the 20th century. These Jewish financiers were the only investors – besides the British – among the private bankers dominant in Europe until the second half of the 19th century (see also *Banking) who were prepared to risk their capital in the pioneer stage of railroad construction. In the second half of the 19th century, when large banking joint-stock firms sprang up and expanded, private banks were increasingly pressed into the background, and the share of private Jewish capital in railroad investment diminished accordingly. In the majority of European countries this tendency became linked to nationalization of the railroads when financial crises occurred in private railroad companies. The nationalization of Prussian railroads was organized on the financial side by Bismarck's adviser Gerson von *Bleichroeder. In the 19th-century era of "railroad fever" former *court Jews who had become private bankers with considerable funds took part in furthering the industrial revolution through their investments in railroad construction.

The *Rothschilds were urged by Nathan Mayer Rothschild soon after the opening of the first successful railroad in England (1825) to invest money on the continent in railroad construction. Salomon Rothschild of Vienna sent Professor F.X. Riepel from the Vienna Institute of Technology to England to study the new means of transportation with Rothschild's secretary, Leopold von Wertheimstein. Subsequently they proposed the construction (1829) of a first line to run straight through the Hapsburg Empire, connecting Vienna with Galicia and Trieste. The July Revolution postponed the execution of Rothschild's plans. It was only in 1836, after overcoming many obstacles (especially the rivalry of the Viennese banking houses of *Arnstein and *Eskeles) that he began construction of the northern line from Vienna to Bochnia, in Galicia. The railroad was only completed in 1858. The house of Rothschild sold the shares on the stock market mainly to small investors.

James Rothschild of Paris was encouraged to construct the local line between Paris and St. Germain (opened in 1837)

by Emile *Pereire. Emile Pereire and his brother Isaac viewed the railroad as the salvation of the future, producing work for the masses, connecting nations, and conducive to world welfare and peace. The two brothers could later boast that through their efforts more than 6,000 miles (10,000 km.) of railroads had come into existence. In the 1840s they were the rivals of the Rothschilds in this field.

After the success of the Paris-St. Germain line, James Rothschild and the *Fould brothers (apostate Jews), were eager to receive the concession for the Paris-Versailles line. The government eventually approved two plans, so that Rothschild constructed his line on the left bank of the River Seine and the Foulds on the right bank. In 1839 the railroad was opened, and in 1840 the two companies merged. This did not diminish the rivalry between them and the Pereire brothers. James Rothschild also succeeded in obtaining the concession for the construction of a northern line connecting Paris with England and the industries of northern France. The financial means of the Rothschilds were thereby severely strained, but the line was at last opened in 1846.

Nathan Mayer Rothschild and his sons helped finance the state-constructed railroad network in Belgium in the years 1834 to 1843. The Antwerp-Ghent line was built by the first private railway company in Belgium formed by Leopold *Koenigswarter. The Rothschilds were the chief financiers of the world-spanning railroad politics of Leopold I. They also raised funds for building railroads in Italy, Spain, and Brazil.

The Pereire brothers were second only to the Rothschilds in the first stage of railroad network development on the continent until 1869. The first half of their organizational activity was spent on a substantial part of the French railroad network. While the Rothschilds constructed the "northern" line in the 1840s, the Pereires were responsible for the "southern" one. The 1848 revolution plunged the railroads into a severe crisis (the "southern" line, managed by Isaac Pereire, was also financially ruined). The Pereire brothers wished to overcome this crisis by diverting to plans for a "railroad bank," a bank that would solve all the current financial difficulties of the French economy. The *Crédit Mobilier* (1852) also was intended not only to finance railroad construction but also heavy industry. Pereire introduced a new type of railroad security, the 500-franc capital bond (*obligation*), paying 15 francs annual interest and issued at whatever the market would bring, generally between 300 and 400 francs. With interest guaranteed by the state these bonds were ideally suited to the investor of moderate means. They quickly replaced other types of railroad borrowing and greatly facilitated railroad finance.

In the first years of its establishment the *Crédit Mobilier* financed (through advance payments and increased circulation of bonds) the "southern" line, the "grand central," the French "eastern" line, and many others in their first years. Through its contribution the railroad network expanded from 2,000 miles (3,600 km.) in 1852 to 11,000 miles (18,000 km.) in 1870. The Pereire brothers did not neglect to finance railroad construction and industrial ventures abroad. They contrib-

uted to the predominance of French finance in the development of foreign railroads in the post-1850 decade: in Austria, where there was fierce competition between the Pereires and the Rothschilds, the Pereires founded the important Austrian State-Railroad Company, in conjunction with Sina, Arnstein, and Eskeles, while the Rothschilds were successful in buying the Lombard-Venetian and the Central Italian Railway (1856). In Spain there was lively rivalry between the Rothschilds, Pereires, and Jules Isaac *Mirès; and in Hungary they built the “Franz-Joseph” line (1857). The *Crédit Mobilier* also financed Swiss railroads.

The importance of railroads was grasped in Russia only after its defeat in the Crimean War. The *Grande Société des Chemins de fer Russes* (1857) had, besides the Pereires, other Jewish bankers as founders: Alexander *Stieglitz of St. Petersburg, S.A. Fraenkel of Warsaw, and the *Mendelssohns of Berlin. An important figure in Russian railroad construction in the 1860s and 1870s was Samuel *Polyakov. He built railroads of supreme importance for the Russian grain export trade, and also wrote on the political aspect of railroad construction. He and other Jewish entrepreneurs succeeded in attracting foreign capital (Leopold *Kronenberg, J.J. Sack, Gerson von Bleichroeder, Sulzbach Brothers, etc.) without which their plans would have been unattainable. Railroad construction by Jewish bankers in Russia created employment for numbers of Jews, who filled technical and administrative posts. The advent of the railroad brought many changes in Jewish economic and social life, described, for instance, in the poem *Shenei Yosef ben Shim'on* of J.L. *Gordon.

Bethel Henry *Strousberg started by working for English firms, and when he had accumulated enough capital, founded railway companies in Prussia and later in Hungary. He also acquired locomotive factories and rolling mills for rails, and subsequently coal mines. A careless venture into Romanian railroad construction ruined his enterprise. His bankruptcy influenced public opinion in favor of nationalization of railroad lines in Germany. It also revealed malpractices and bribery, which were given a prominent place in antisemitic propaganda.

Jewish bankers were large-scale investors in railroad construction outside Europe. Baron Maurice de *Hirsch bought, in 1869, the concession for railroad building in Turkey from the bankrupt International Land Credit Company. His connection by marriage with the Jewish banking enterprise Bischoffsheim and Goldschmidt aided him initially. In 1869 he began the first stage of extending the Austro-Hungarian lines southward. However, before beginning construction on the Oriental Railroad, he took steps to secure financial backing, and chose a new type of 3% government loan. “Turkish lottery bonds,” which attracted small investors in France and Germany, were offered on the general market. Hirsch concluded his project in 1888.

At first Jewish financiers, mainly of German origin, acted as intermediaries between foreign finance and the United States. When the Civil War broke out in 1861, railway bonds,

mainly distributed by Jewish bankers in Europe, served as a means of payment for munitions bought in Europe. The Speyer, Stern, and *Seligman New York banking houses all dealt in railway shares. A leading personality in late 19th and early 20th century American financing was Jacob H. *Schiff. In 1875 he became a member of the banking firm of Kuhn, Loeb & Company (a firm long engaged in railroad financing) which he eventually dominated. In 1897 he reorganized the Union Pacific Railroad, which was described in the period as being “battered, bankrupt and decrepit.” According to financial authorities the Harriman-Schiff railway combination became the most powerful and most successful that America had ever known. Schiff was one of the first supporters and associates of James Hill, who, by building the Great Northern Railway, virtually became the founder of a vast empire in the northwest. His firm aided other railroads by financial operations until the end of World War I. Schlesinger-Trier in Berlin, together with other Jewish banks, imported the shares of the Canadian Pacific railroad and offered them on the Berlin stock market.

A position similar to that of Schiff in financing railway companies in the United States was held by Sir Ernest *Cassel in England. He had a share in developing Swedish, American, and Mexican railway companies. The Vickers and Central London Railway Company was connected with his name.

[Michael Graetz]

RAIN (Heb. מָטָר, גֶּשֶׁם). The large number of quotations referring to rain in the biblical and talmudic sources may be attributed to the fact that rain is the most important climatic element for the agriculture of Israel, particularly in non-irrigated areas. In comparing these quotations with modern knowledge of rainfall in Israel it is evident that although part of the quotations are in the realm of folklore, many of them are valid and correspond to contemporarily measured data, although the descriptions of rain in the Bible and talmudic literature are mainly qualitative. This correspondence not only shows the keen observations of weather phenomena made in ancient times, but also indicates that during the last 3,000 years there were fluctuations but not fundamental changes in the climate of Israel. The importance of a normal rainfall regime, i.e., an appropriate seasonal distribution of rainfall, for the success of agricultural crops is clearly stated in the Bible on several occasions (Lev. 26:4; Deut. 28:12; Ezek. 34:26), sometimes with special emphasis on the first and last rains of the season (the *yoreh* and the *malkosh*) whose importance for agriculture is particularly great (Deut. 11:14; Jer. 5:24). The local nature of

Map 1. Average annual rainfall, amounts in mm. (1921-1950).

Map 2. Interannual variability of rainfall amount, as a percentage of the average for the period 1921/22-1950/51.

rainfall, expressed in Erez Israel particularly at the beginning and end of the rainfall season, is also mentioned (Amos 4:7; cf. Ta'an. 6b). An impressive description of the results of droughts is available in Jeremiah 14:1-6. Late and strong rains at the beginning of June are as rare and notable nowadays as they were at the time of Samuel (1 Sam. 12:16-18). Similarly, three consecutive drought years in the region of Samaria are as rare and notable in the last 50 years of rainfall measurements (1931/32, 1932/33, and 1933/34) as they were at the time of Elijah and Ahab (1 Kings 18:1).

In the Talmud and Midrashim

Rain is referred to on many occasions in the Talmud and midrashic literature, particularly in tractate *Taanit* (Mishnah, Tosefta, and the Babylonian and Jerusalem Talmuds). In the Mishnah there is a quantitative definition of drought (Ta'an. 3:1). The following references are examples of keen observa-

tions of weather phenomena: R. Eleazar b. Perata paid attention to the variations from year to year in both amounts and times of rain occurrence (Ta'an. 19b). R. Johanan and R. Papa determined that thin clouds under thick clouds are a sign of rainfall (*ibid.* 9b); the ragged fragments of low clouds, known as scud (nautical term) or stratus fractus (meteorological term), often moving rapidly below rain clouds, indicate rainy weather (which is also the case today). On the same page in the Babylonian Talmud a weather forecast is given by R. Ulla, using the above-mentioned sign. Even a forecast for the rainfall of a whole year is given in the Jerusalem Talmud (Ta'an. 2:1, 65b). The dates of the beginning and end of the rainfall season in Israel also fit modern conditions (Ta'an. 1:1; Ned. 8:5; see also Yal., Num. 29). As for rain intensities, there are various expressions for slight, moderate, and heavy rains in the Bible (e.g., 1 Kings 18:45; Ezek. 13:11; 34:26; Ps. 68:10; Prov. 28:3; for the Mishnah see Ta'an. 3).

In Contemporary Israel

Israel is situated on the boundary of two different climatic regions: its northern half belongs to the southern part of a region having the so-called "Mediterranean" type of climate, whose main feature is that the greatest part of the annual rainfall occurs during the moderately cold winter months, while in the warm summer practically no rain falls; the southern half of Israel, the Negev, is situated on the northern boundary of a hot desert. Like every country with a Mediterranean climate Israel also lies near the limit of the cyclonic rains. Most of the rain-bearing cold lows (barometric depressions) arriving or forming in the eastern Mediterranean during the rainfall season are situated in the northeastern part of this sea (the "Cyprus Low"). Such a depression in the lower layers of the atmosphere is generally associated with a cold barometric trough in the higher layers (upper trough). The great majority of rainfall in Israel is due to this combination, even in the southern Negev – which is far away from the center of the Cyprus Low. Rains usually fall in Israel when cold air masses arrive mainly from Russia, the Balkans, or Turkey. These air masses are cold and dry, but in passing over the relatively much warmer waters of the Mediterranean they are heated in their lower layers, absorb much moisture, and reach Israel in a state of marked instability. Then, the land areas of Israel serve as a "trigger" to induce rainfall.

REGIONAL DISTRIBUTION OF RAINFALL. For the areal distribution of rainfall over Israel four rules can be stated:

- (1) rainfall decreases with increasing distance from the sea, i.e., from west to east (continental effect);
- (2) rainfall increases with increasing elevation (orographic effect);
- (3) rainfall depends on exposure: of two localities at the same elevation, other conditions being equal, the windward slope facing ascending air (anabatic effect) receives more rainfall than the leeward slope with descending air (katabatic effect);
- (4) rainfall decreases from north to south, i.e., with increasing distance from the Cyprus Low and decreasing distance from the planetary desert.

A good example for the first rule is the Valley of Jezreel where the average annual rainfall decreases gradually from west to east (650 mm.–400 mm.), and for the fourth rule – the Coastal Plain (650 mm.–200 mm., north to south). In each of these regions there are no significant differences in elevation. The second and third rules are clearly demonstrated on the Carmel range (600 mm.–850 mm.), where the isolines of rainfall (isohyets) are somewhat similar to those of elevation (isohypses), demonstrating the importance of the height factor. The same applies to two other compact and continuous ranges, namely, Upper Galilee, which is the highest and most northerly region in Israel and therefore the rainiest one (600 mm.–1000 mm.), and the Judean Hills (450 mm.–700 mm.); whereas the Samarian Hills and those of Lower Galilee are broken up and scattered, so that their

isohyets do not take a markedly topographic course. The Samarian Hills, which generally become higher from north to south, demonstrate the prevalence of height over latitude when the latter factor is opposed to the former: this is the only region in Israel where rainfall increases from north to south (500 mm.–700 mm.). In the Jordan Rift Valley, on the other hand, the combined influence of southward progress and falling elevation is seen in the rapid decrease of the average annual rainfall from 570 mm. in the northern part of the Huleh Area to 90 mm. at the northern edge of the Dead Sea. Further south, the Arabah between the Dead Sea and the Gulf of Eilat, forming the eastern border of the Negev, is the driest region in the country (25 mm.–50 mm.). Even the highest hills of the Negev do not enjoy 100 mm. while the northwestern Negev receives 200 mm. as an annual average.

SEASONAL DISTRIBUTION OR REGIMEN OF RAINFALL. In effect rains fall in Israel only during the period October through May, which is called "the rainfall season." The three central rainy months – the "winter" of the temperate climates, December, January, and February – contribute two-thirds to three-quarters of the annual rainfall in most regions of the country. The remaining 30% is distributed among the first and last months of the rainfall season: the "autumn" months October and November and the "spring" months March, April, and May, although in the Coastal Plain the percentage of rainfall in autumn is greater than in the hill region, while in the hills and other regions of the interior the percentage of spring rains is larger than near the coast. In addition to this west-east variation of the rainfall regime there is a north-south variation: while the northern half of the country has a Mediterranean rainfall regime with the characteristic steep increase from the beginning of the season toward the peak month and a rapid decrease from then to the end of the season, no specific month can be singled out in the central and southern Negev as having a marked maximum, and the curve typical for the Mediterranean regime becomes ill-defined. All the preceding facts are true with respect to a normal rainfall regime, i.e., a seasonal distribution of rainfall in which each month receives its average value. But in fact there are large variations from year to year in the seasonal rainfall, and particularly in its monthly distribution, so that it is difficult to find a season in which each of its months has even approximately received its average amount.

VARIABILITY OF RAINFALL. There are several statistical methods for measuring quantitatively the variations of annual rainfall from year to year. One measure, called Relative Variability, is defined as the percentage ratio between the mean deviation of individual annual totals from their average and the average; another measure, Relative Interannual Variability, relates, in percent, the mean value of absolute differences between successive annual totals to the average. The values of each of these measures of variability are relatively low (20%–26% RV; 25%–37% RIV) in regions with much rainfall

(the hill region and Coastal Plain) and higher ($\geq 27\%$ RV; $\geq 38\%$ RIV) in regions with less rainfall (the Jordan Valley and Negev). This property is of important consequence to non-irrigated areas in the eastern and southern parts of Israel in drought years. For charts, tables, and further details see bibliography.

[Jacob Katsnelson]

RAIN, PRAYER FOR (Heb. תְּפִלַּת גֶּשֶׁם, *Tefillat Geshem* (Ashkenazi); תִּקּוּן הַגֶּשֶׁם, *Tikkun ha-Geshem* (Sephardi)), prayers offered on various occasions, in which God is acknowledged as the power causing rain and the change of seasons, and which contain petitions for the fertility of the fields and for preservation from famine.

The principal prayer for rain is recited during the *Musaf* service on the eighth day of Sukkot (*Shemini Azeret) as part of the second benediction in the reader's repetition of the **Amidah* (Ashkenazi tradition). The Sephardim recite it before the Additional Service. The *piyyutim* of which this prayer is composed vary according to the different rites. Those in the Ashkenazi rite are by Eliezer *Kallir; the last of the six *piyyutim* invokes the remembrance of Abraham, Isaac, Jacob, Moses, Aaron, and the Twelve Tribes, and culminates in the invocation: "In their merit favor us with abundant water (rain)... For a blessing and not for a curse, for life and not for death, for plenty and not for famine. Amen." From this service on Shemini Azeret until that of the first day of Passover when the prayer for *dew is said, the sentence *mashiv ha-ru'ah u-morid ha-geshem* ("cause the wind to blow and the rain to fall") is included in every *Amidah* prayer at the beginning of the second benediction (Sh. Ar., OH 114). This insertion is called by the Mishnah (Ta'an. 1:1) *gevurot* (meaning "the Powers of God"). In traditional synagogues following the customs of Eastern Europe the *hazzan* officiates in the *kitel at the *Musaf* service when the prayer for rain is read as on the Day of Atonement, and recites the *Kaddish* before the *Musaf* service to a solemn melody. In Israel, the *Tefillat Geshem* is recited after the Torah scrolls have been returned to the ark and before the *Musaf* service so as to avoid an "interruption" in the statutory *Amidah*; however, the *hasidic* rite in Israel recites it in the reader's repetition of the *Amidah*. The *Tefillat Geshem* (like the prayer for dew) is part of the service in all Jewish rituals including the *Conservative and *Reform where it appears in a shortened version.

Another prayer for rain is the petition (*she'elah*) "and give dew and rain for a blessing" (*ve-ten tal u-matar li-verakhah*; in the Sephardi rite this is a different and longer petition) in-

serted in the ninth benediction of the **Amidah* for weekdays. This petition is recited only from a date two weeks or more after the *Tefillat Geshem* on Shemini Azeret because the pilgrims in Temple times had to return from Jerusalem to their homes and traveling during a rainy season would have caused them hardship. Thus, in Erez Israel the insertion is made from the evening prayer of the seventh of Heshvan (Ta'an. 1:3; Ta'an. 4b); elsewhere, from the 60th day after the autumnal equinox, that is, from the fifth or sixth of December. This petition for rain appears in the ninth benediction (the "Blessing of the Years"), rather than in the second benediction of the *Amidah*, because the first three benedictions of the *Amidah* should contain the praise of God only and no petitions.

Prayers for rain are among the earliest liturgical texts and withholding of rain is regarded in the Bible as a punishment from God (cf. Deut. 11:11–17; 1 Kings 17:1). In the time of the Second Temple, the high priest recited a special prayer for rain on the *Day of Atonement (Yoma 53b) based upon Solomon's prayer (1 Kings 8:35–36; 11 Chron. 7–13). During periods of drought, special prayers and supplications combined with fasting (see Fast *Days) were ordained (Ta'an. 1:4–3:9). These prayers entered the liturgy as it evolved in the time of the Mishnah and thereafter.

The dates for the special fasts and prayers for rain were fixed by the rabbis with a view to the climate and agricultural needs of Palestine; later rabbinic authorities decreed that wherever rain is beneficial during the summer, appropriate prayers for rain may be inserted, even during this season, in the 16th benediction of the *Amidah*, *Shome'a Tefillah* (Ta'an. 14b; Maim. Yad, Tefillah, 2:17; Sh. Ar., OH 117:2).

RAINBOW, "bow" (Heb. קֶשֶׁף, "in the cloud" (Gen. 9:13–14, 16; Ezek. 1:28). In the sequel to the Flood Story (Gen. 9:8–17) God sets His bow in the clouds as a sign to the people and as a reminder to Himself that no deluge shall again destroy the earth. According to the rabbis this rainbow was created during the eve of the Sabbath of Creation at twilight (Pes. 54a). Nahmanides similarly explained that the rainbow had existed previously but was now designated to serve as this symbol (to Gen. 9:12). However, Ibn Ezra held that the bow was first created by God after the Flood (to Gen. 9:13). The bow symbolized that God's wrath had ceased since the end of the bow pointed downward just as the warrior lowers his bow on declaring peace (Nahmanides to Gen. 9:12).

The rabbis held that the rainbow need not appear in the lifetime of a saint whose merit alone is sufficient to save the world from destruction (Ket. 77b and Rashi ad. loc.). Since the rainbow was the reflection of "the glory of the Lord" (Ezek. 1:28), it was considered injurious to gaze directly at it (Hag.

16a). It was reported that R. Joshua b. Levi declared that upon seeing the rainbow one should fall on his face as did Ezekiel (Ezek. 1:28). Nevertheless, in Erez Israel, the rabbis disapproved of such action since it appeared as if the person was bowing down to the rainbow. They, however, approved of reciting a blessing upon the rainbow's appearance. The text of this blessing as it is today recited is "Blessed are Thou O Lord our God, King of the Universe, Who remembers the Covenant, is faithful to His Covenant, and keeps His promise" (Ber. 59a; Sh. Ar. OH 229:1). The blessing is to be recited even if a rainbow is seen twice within 30 days *Mishnah Berurah* to Sh. Ar., loc. cit.).

RAINER, LUISE (1910 –), German actress. Born in Dusseldorf, Germany, into a prosperous Jewish family, Rainer began her career in 1928. She later joined Max Reinhardt's company in Vienna, Austria. As part of his company, Rainer became a popular stage actress in Berlin and Vienna in the early 1930s, appearing in such plays as *Saint Joan* and *Six Characters in Search of an Author*. In 1935 she went to Hollywood and became famous for her performance in the films *Escapade* (1935); *The Great Ziegfeld* (Oscar for Best Actress, 1936); and *The Good Earth* (Oscar for Best Actress, 1937). These were followed by less notable roles in *The Emperor's Candlesticks* (1937); *The Big City* (1937); *The Toy Wife* (1938); *The Great Waltz* (1938); *Dramatic School* (1938); and *Hostages* (1943). Ultimately disillusioned with the superficial quality of Hollywood and frustrated at not being able to attain the more substantial roles, Rainer retired from the screen in 1943. She made a brief comeback decades later when she starred in the Swiss TV movie *A Dancer* (1988) and appeared in the Hungarian film *The Gambler* (1997), based on the story by Dostoevsky; and the German film *Poem: I Set My Foot upon the Air and It Carried Me* (2003).

Amassing a string of "firsts" to her credit, Rainer was the first actor/actress to achieve the perfect Oscar track record of two nominations, two wins; she was the first to receive double Oscars consecutively; she was the first to obtain two Oscars before turning 30; she was the first (and as of 2005 the only) German actress to win an Academy Award; and she was the first actress to win an Academy Award for portraying a real-life person – Anna Held in the biopic *The Great Ziegfeld*.

Her first role on the English stage was in *Behold the Bride* (London, 1939) and, on the New York stage, *A Kiss for Cinderella* (1942), followed by *The Lady from the Sea* (1950).

Clifford *Odets, the playwright, was her first husband; they were married from 1937 to 1940. Rainer wed publisher Robert Knittel in 1944, to whom she remained married until his death in 1989.

[Ruth Beloff (2nd ed.)]

RAISA, ROSA (née **Raisa Burchstein**; 1893–1963), dramatic soprano. Born in Bialystok, Poland, Raisa fled from there fol-

lowing the 1907 pogroms and settled on Capri. She studied at the Conservatorium of Naples with Barbara Marchisio, the famous 19th-century "bel canto" contralto. Conductor Cleofonte Campanim, the director of the Chicago Opera, contracted the 20-year-old Raisa for a debut in Parma's Teatro Regio in Verdi's first opera, *Oberto, Conte di San Bonifacio*, inaugurating a special festival of operas commemorating the hundredth anniversary of Verdi's birth. Her immediate success prompted him to take Raisa to the United States for her North America debut. Her first professional seasons witnessed debuts at London's Covent Garden singing Aida opposite Enrico Caruso as well as appearances in Paris, at the Rome Opera, and La Scala, Milan.

Raisa spent the major part of her career with the Chicago Opera as principal dramatic soprano from 1913 to 1937. Her best known roles were as Aida, Gioconda, Norma, Santuzza, Maliella in *Jewels of the Madonna* and Rachel in *La Juive*. She also appeared on the stages of South America (Buenos Aires, Montevideo, Rio do Janeiro, and Sao Paulo) and Mexico. Arturo Toscanini, whose admiration for her voice and art, led him to name her in 1916 the "Tamagno of dramatic sopranos," brought her back to La Scala (1924–1926) and cast her in the world premieres of Boito's posthumous *Nerone* and Puccini's posthumous *Turandot*. Raisa sang numerous concerts throughout the United States with her husband, the Italian baritone, Giacomo Rimini. Her programs often included Russian and Yiddish art and folk songs. She made numerous appearances for Jewish charities and causes. Upon her retirement in 1938 she and Rimini opened a voice school in Chicago.

Raisa was noted for her large and richly colored voice with its brilliant upper register, the technical control and ease of her delivery, as well as the emotionalism, sincerity, and beauty of her stage portrayals.

RAISIN, JACOB ZALMAN (1877–1946), rabbi and writer. After emigrating from Poland to the United States, he served as a Reform rabbi in Charleston, South Carolina, for many years (1915–44).

An author of Hebrew poems and articles on English literature in Hebrew, his books – in English – include *Sect, Creed and Custom in Judaism* (1907), *Centennial Booklet Commemorating the Introduction of Reform Judaism in America* (1925), and the posthumously published *Gentile Reactions to Jewish Ideals* (1953). His volume *The Haskalah Movement in Russia* (1913) is still an important contribution to the literature of Haskalah.

[Eisig Silberschlag]

RAISIN, MAX (1881–1957), rabbi and author, the younger brother of Jacob *Raisin. Born in Poland, he arrived in the United States as a boy of 12. He was ordained as rabbi at the Hebrew Union College in Cincinnati in 1903. He served as

rabbi of Congregation B'nai Jeshurun of Paterson, New Jersey (1921–53).

A prolific writer in Hebrew, English, and Yiddish, Raisin dealt with contemporary problems, with the history of the Reform movement, and with Hebrew literature, on both a popular and a scholarly level. His books included: *Mordecai Manuel Noah: Zionist, Author and Statesman* (1905); *John Milton* (1924); *Israel in America* (1947); and *A History of the Jews in Modern Times* (1919) which was published as a supplement to *Graetz's History of the Jews. An ardent Zionist when Zionism was unpopular in the Reform movement, his views were influenced by *Aḥad Ha-Am. A number of his works were autobiographical: *Dappim mi-Pinkaso shel Rabbi* (1941); *Out of My Life* (1956); and *Great Jews I have Known* (1959).

RAISMAN, SIR (Abraham) JEREMY (1892–1978), British economist and banker. Born in Leeds, in 1916 he entered the Indian Civil Service, first in Bihar and Orissa, then with the customs department in Bombay and Calcutta, and as commissioner for income tax in the Punjab and the Northwest Frontier Province. In 1931 he joined India's central government as joint secretary in the Commerce Department. In 1938 he was appointed secretary to the Finance Department, and from 1939 to 1945 served as finance member of the government of India. In 1944 he led India's delegation to the International Monetary Conference at Bretton Woods (New Hampshire) which resulted in the formation of the International Monetary Fund and the International Bank for Reconstruction and Development. In 1939 he was knighted, and in 1945 resigned from service in India, where he had been helpful to many Jewish refugees from Europe. After his retirement he served as an adviser to several newly independent countries including Pakistan, Rhodesia, Nigeria, and East African countries.

[Joachim O. Ronall]

RAISZ, ERWIN J. (1893–1968), U.S. geographer and authority on cartography. Raisz was born in Hungary, where he studied architecture and engineering. He settled in New York City in 1923 and studied geology at Columbia University. From 1925 to 1931 he was an instructor in this field, but during this period turned his attention to geography and cartography. He instituted Columbia's first course in cartography. From 1931 to 1950 he was a lecturer at the Institute of Geographical Exploration at Harvard. In 1945 he founded the cartography group of the Association of American Geographers and was its chairman until 1952.

Raisz was the author of *General Cartography* (1938); the *Atlas of Global Geography* (1944); *Mapping the World* (1956); *Principles of Cartography* (1962); and *Atlas of Florida* (1964).

RAJAK, TESSA (1946–), British historian of Hellenistic and Roman-era Judaism. Born in London and educated at Oxford, Rajak became professor of ancient history at the University of Reading, a leading historian of the cultural history of the Jews in the Hellenistic and Roman periods. She is particularly known for her work on *Josephus, and is the author of *Josephus: The Historian and His Society* (1982) as well as *The Jewish Dialogue With Greece and Rome: Studies in Cultural and Social Interaction* (2000) and other works. She was the editor of *The Journal of Jewish Studies*.

[William D. Rubinstein (2nd ed.)]

RAJPURKAR, JOSEPH EZEKIEL (1834–1905), scholar of the *Bene Israel community in Bombay. After studying at the Free Assembly School, he became a teacher in the David Sassoon Benevolent Institution, Bombay, in 1856 and after five years its headmaster, a post which he occupied for 40 years. In 1871 he was appointed Hebrew examiner at the University of Bombay, which elected him a fellow in 1879. A master of Hebrew as well as of Marathi, the vernacular of Bombay, he translated over 20 works of the Hebrew liturgy and many English works of Jewish interest into Marathi.

His translations of Hebrew liturgical works include the Daily Prayer Book (1889, 1924), the *mahzor*, *piyyutim*, and *seliḥot*. In 1887 he published *Kuttonet Yosef* – a handbook of Hebrew abbreviations, a Hebrew grammar in Marathi, a Hebrew primer for children, and prayers for various occasions.

RÁKOSI, MÁTYÁS (1892–1971), Hungarian Communist dictator. Born in Ada (then Hungary), Rákosi was the son of a small shopkeeper. He completed his studies at the Budapest Oriental Academy and after working as a bank clerk in Budapest and Hamburg, went to England where he became active in the socialist movement. During World War I he fought in the Austro-Hungarian army until 1915 when he was taken prisoner by the Russians. Following the October Revolution of 1917, Rákosi joined the Red Army and the Communist Party and returned to Hungary with Béla *Kun. He was made deputy commissioner of trade in Kun's Hungarian soviet republic (1919) and with the suppression of the regime in the same year, fled to the Soviet Union. He returned to Hungary secretly in 1924 to organize the illegal Communist Party, and was arrested and sentenced to death. Following the intervention of leading intellectuals abroad such as Romain Rolland his sentence was commuted to life imprisonment. In 1940 he was released and settled in the Soviet Union where he became the leading figure and propagandist among the Hungarian exiles in Moscow.

Rákosi returned to Hungary in 1944, and reorganized the Hungarian Communist Party. Between 1945 and 1948 he served as deputy leader of a coalition government, but step by step he removed the other parties from political life and assumed dictatorial powers. From 1949 he removed all traces of the former regime, among them leaders of the Catholic Church, Social Democrats, and even Communists and secret police chiefs. Rákosi conducted his policy in strict conformity with the Stalinist line. After Stalin's death (1953) he was summoned to Moscow and severely criticized for the failure of his economic policy. He resigned but was recalled to the premiership in the following year and remained in power until the summer of 1956, shortly before the outbreak of the Hungarian revolution. Once again, he was obliged to flee to the Soviet Union but after the rebellion's suppression did not return to Hungary until shortly before his death. Rákosi did not take any interest in Jewish affairs and tried to hide his Jewish origins. His policy of trials against Zionists, the confiscation of private enterprises, and the transfer of populations from the large cities caused great suffering to many Jews.

RAKOUS, VOJTĚCH (pseudonym of **Vojtěch Oesterreicher**; 1862–1935), Czech writer. Born in Velký Brázdím, Bohemia, Rakous was a prominent representative of the Czech-Jewish assimilation movement in literature. He published some short stories in a serious vein, such as *Doma* (“At Home,” 1897) and *Na rozcestí* (“At the Crossroads,” 1914). Nevertheless, he is best remembered as a writer with a sense of comedy or the tragicomic, as in the sketch *Stryc Václav* (“Uncle Wenceslas”). In the four volumes of humorous tales entitled *Vojkovičtí a přespólní* (“Those from Vojkovice and Those from Elsewhere,” 1910), Rakous vividly portrayed Jewish life in the Czech villages. The volume featuring the *schlemiel*, Modche, and his domineering wife, Rézi, became a popular classic and was later dramatized and filmed. The stories also shed important light on Jewish-Christian relations in Czech villages at the turn of the 19th century. *Výbor ze spisů* 1–3 (“Selected Works”) appeared in 1925, other editions continuously.

[Avigdor Dagan /Milos Pojar (2nd ed.)]

RAKOVSKY, PUAH (1865–1955), feminist activist, Zionist, educator, and translator. Born in Bialystok into a middle-class religiously observant family, Rakovsky was educated by private tutors in Bible, Hebrew, and rabbinics, in addition

to receiving a general education in Polish schools. Fluent in Russian, Polish, German, French, Hebrew, and Yiddish, Rakovsky made her debut as a translator at 15, when her translation of a Russian poem by Shimon Frug was published in the Hebrew journal *Ha-Zefirah*. Rakovsky had a son and a daughter in her unhappy first marriage to Shimon Machlin, arranged when she was 16. She ultimately left her husband to be trained as a teacher, and they were divorced while she was teaching Hebrew in a Jewish girls' school in Lomza, Poland. Two years later, under the auspices of Bnei Moshe, the cultural arm of the Zionist movement *Hibbat Zion, Rakovsky founded “Yehudiah,” a Jewish school for girls in Warsaw, which was pathbreaking in the prominence given to Hebrew in its curriculum. Rakovsky married twice more; her second husband, Abraham Krislavin, died of pleurisy after six years of marriage. Rakovsky and her third husband, Mordechai Birnbaum (1875–1934), whom she married in 1901, had a daughter.

World War I drove Rakovsky to close her school and flee Warsaw. Now drawn to Socialist Zionism, Rakovsky joined the Ze'irei Zion faction, and she became well-known as a Zionist and feminist advocate. Her first pamphlet, *Di Yiddishe Froy* (“The Jewish Woman”), published by Bnos Tsyion (“Daughters of Zion”), called for Jewish women's greater activism in Zionist affairs. In 1920, at the age of 55, Rakovsky emigrated to Palestine, but remained there for only one year. Rakovsky attended the 1920 founding meeting of *WIZO and became the first secretary of its Palestinian branch. She also established a vocational school for girls in Jerusalem before returning to Warsaw.

Known for her mastery as a Hebrew writer, highly unusual for a Polish Jewish woman of her generation and social class, Rakovsky also strongly supported the Yiddish language; during the 1920s, she increasingly turned to Yiddish in her writing, publishing, and translations. As a leader of the Jewish Women's Association in Poland, she coedited the *Froyenshtim* (“Women's Voice”), a journal which gave women a forum for public commentary that the general Yiddish press denied them. In this publication, as well as in her second Yiddish pamphlet, *Di moderne froyen-bavegung* (“The Modern Women's Movement”), Rakovsky encouraged women to organize separately and independently for equal participation in Zionist and Jewish communal affairs.

In 1935, Rakovsky moved permanently to Palestine. Between 1940 and 1942, she wrote her memoirs, published in both Hebrew and Yiddish. In her autobiography, Rakovsky labeled herself a “Radical Jewish Woman,” an appellation which accurately reflected the revolutionary nature of her break from the traditional heritage of her family, her devotion to Zionism, and her advocacy for women's equality in modern Jewish life.

[Tracy Sivitz (2nd ed.)]

RALL, YISRAEL (1830–1893), Hebrew writer and translator. Born in Brody, Galicia, he became interested in the Has-kalah and studied classical and European languages. He lived for many years in Odessa where he published a collection of translations from classical Latin poetry, *Shirei Romi* (1876), which established his reputation. After years of wandering in Western Europe he settled in Lemberg, where he founded the periodical *Shem ve-Yafet* (1887). He also published booklets in German and French in which he rebutted antisemitic libels. Rall contributed to **Ha-Meliz*, **Ha-Maggid*, and also to the German press.

RAM, MOSHE (1895–1975), Israel hydrological engineer. Born in Tatarsk, Russia, Ram was educated at California and in Moscow. He went to Palestine in 1925, and worked on the Naharayim hydroelectric station. Ram was chief engineer of the Jewish Agency water resources bureau from 1936, and with the establishment of the State in 1948 he became director of the water utilization division of the Israel Ministry of Agriculture until 1960. He wrote several books, including *Surface Irrigation* (1964). He was one of the leading thinkers of Israel water planning.

[Bracha Rager (2nd ed.)]

RĀMA, AL-, Christian-Arab and Druze village in Upper Galilee, Israel, at the foot of Mt. Ha-Ari. Reported uninhabited and in ruins in 1729, the village thrived in the 20th century, and as in antiquity, is one of the principal olive-growing centers in the country. In the Israel War of *Independence, al-Rāma fell to Israel forces in October 1948. The number of inhabitants increased from about 1,100 in 1947 to 3,570 in 1968, with a majority of Christians (mostly Greek-Orthodox and Greek-Catholic), and about one-third Druze. In 1954 al-Rāma received municipal council status. In 2002 the population of al-Rāma was 7,280 in an area of 2.5 sq. mi. (6 sq. km.). Among the inhabitants, 51.5% were Christian, 29% Druze, and 18% Muslims. Income in the village was much lower than the national average.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

RAMAH or HA-RAMAH or HA-RAMATHAIM-ZOPHIM (Heb. רָמָה, הַרְרָמָה, הַרְרָמָה; צוֹפִים, הַרְרָמָה; “height”), the designation of several places located on high ground (see also Ramoth).

(1) A town in the territory of Benjamin, mentioned together with Gibeon and Beeroth in Joshua 18:25 and with Gibeon on the main road north of Jerusalem in Judges 19:13, Isaiah 10:29, and Hosea 5:8. Baasha, king of Israel, tried to fortify the place against Judah, but Asa of Judah dismantled the fort and used the materials to strengthen Gebah and Mizpeh (1 Kings 15:17ff.; 11 Chron. 16:1, 5–6). Jeremiah, following the tradition of the north, located the tomb of Rachel in Ramah (31:15). There the Babylonians concentrated the captives taken from Jerusalem before exiling them (Jer. 40:1). After

the return from exile, the place was resettled by Judeans (Ezra 2:26; Neh. 7:30; 11:33). Later authors place it 6 mi. (c. 9 km.) north of Jerusalem (Eusebius, Onom. 144:14; Jerome, Hosea 5:8, and Zephaniah 1:15), a location corresponding to the village of al-Rām, which was a fief of the Holy Sepulcher in the Middle Ages.

(2) A town in the territory of Naphtali, mentioned together with Adamah and Hazor in Joshua 19:36. It is identified with Khirbet al-Jūl, near al-Rāma in the valley of Beth-Cherem in Galilee. In 1933 I. Ben-Zvi discovered a synagogue lintel with an Aramaic inscription there.

(3) A town in the territory of Asher (Josh. 19:29). Its identification with Rāmiya, southeast of Tyre, is controversial.

(4) The hometown of Samuel (1 Sam. 1:1; as Ramathaim-Zophim) and possibly the residence of Deborah (Judg. 4:5). There Samuel judged Israel (1 Sam. 7:17; 8:4) and was later buried (1 Sam. 25:1; 28:3); his school of prophets was located in Naioth in Ramah (1 Sam. 19:22–24). In the Septuagint, it is identified with ha-Ramatha or Arimathea, which is described in 1 Maccabees 11:34 as the headquarters of a Samaritan toparchy transferred to Judea in 145 B.C.E.; this place was the home town of Joseph, a Jerusalem councilor, in whose tomb Jesus was buried (Matt. 27:57, et al.). It was called Rempthhis by Eusebius (Onom. 144:28) and is the present-day Rantis, northeast of Lydda. However, the identification of this site with Samuel's birthplace is controversial. Various scholars view that both names of Zuph on the border of the territories of Benjamin and Ephraim (1 Sam. 1:1; 9:4).

[Michael Avi-Yonah]

RAMALLAH (Rām Allāh; al-Bīra), twin towns in the northern Judean Hills, 9 mi. (15 km.) N. of Jerusalem. While al-Bīra is supposed to stand on the site of biblical *Beeroth, Ramallah is generally identified with *Ramah. The twin towns occupy a strategic position at 2,854 ft. (870 m.) above sea level, where the Judean upfold broadens, and at a crossroads. During the British Mandate, Ramallah was preponderantly Christian-Arab with 4,710 Christian and 650 Muslim inhabitants in 1946. The proportion was reversed in al-Bīra, then a village with 2,100 Muslims and 150 Christians. Because of Ramallah's elevation, the authorities chose it as the site for the country broadcasting transmitters. The clear, brisk climate encouraged the development of the town as a summer resort, which gained impetus under Jordanian rule when wealthy citizens built summer houses there and tourists came from other Arab countries to spend the summer. In the *Six-Day War, Ramallah was taken by Israeli forces. The census taken by the Israeli authorities in the fall of 1967 revealed that the population of both towns had greatly increased since 1948, mainly through the opening of refugee camps, while the relative strength of the Christian communities had diminished. Ramallah in 1967 had 12,134 inhabitants, of whom 6,966 (57.4%) were Christians,

while al-Bira, with a population of 13,037, was larger than Ramallah and was almost exclusively Muslim. Following the Oslo Agreements and the transfer of the city to the Palestinians, the Palestinian Authority located its government institutions there. Against a background of undiminished terrorism, Yasser *Arafat was confined to his headquarter compound in the city (the Muqata) by Israeli forces from 2003 until his death in 2004, and was also buried there. According to the Palestinian Bureau of Statistics, in 1997 the population of Ramallah was 18,017 and that of Al-Bira was 27,972.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

RAMAT DAVID (Heb. רַמַּת דָּוִד), kibbutz in northern Israel, near Nahalal, affiliated with Ihud ha-Kevuzot veva-Kibbutzim, founded in 1926 by two groups of Third Aliyah pioneers, "Ayanot" and "Ha-Sharon," from Eastern Europe. The kibbutz economy was based on field and fodder crops and dairy cattle. The kibbutz also housed one of the biggest disco clubs in the north of the country, called Vertigo. The village is named after David *Lloyd George who was prime minister of the British War Cabinet which issued the *Balfour Declaration. In 2002 its population was 238.

[Efram Orni / Shaked Gilboa (2nd ed.)]

RAMAT GAN (Heb. רַמַּת גַּן, "Garden Height"), city in central Israel adjoining Tel Aviv. In 1914, 20 settlers from Eastern Europe formed a group called Ir-Gannim ("garden city"); they envisaged a garden suburb where they could enjoy a country-like life without having to relinquish the amenities of a city. The group resolved to carry out the building without the use of any hired labor and forbade the establishment of factories within the settlement's boundaries. The project became feasible only in December 1921. The proximity of Jaffa and expanding Tel Aviv engendered Ramat Gan's quick growth. In 1922 it had 140 inhabitants, but in 1926 already rated municipal council status with A. *Krnitzki as its first mayor. In the 1930s relatively large industrial enterprises, instead of choosing Tel Aviv, preferred to establish themselves in Ramat Gan where land prices were cheaper. In 1939, the community had 5,000 inhabitants and grew vigorously. In 1948 its population was 19,000. Care was taken to preserve the design of the town. Avenues of trees were planted and many public gardens were laid out, utilizing mainly the slopes of the low sandstone hills. In 1948 the municipal area covered about 3 sq. mi. (7.92 sq. km.). After 1948 Ramat Gan's growth accelerated and city status was obtained in 1950. Population growth was most rapid in the early 1950s. In 1953 there were 42,000 inhabitants, in 1958, 71,500, and by 1963, 95,800. In 1961 *Bar-Ilan University and the Tel ha-Shomer hospital were affiliated to Ramat Gan. By 1968 the city's population totaled 106,800. In 2002 it was 126,000, making it the 11th largest city in Israel.

Bordering on Tel Aviv in the west and north, on Givatayim in the southwest, on Bene-Berak in the east and on Ramat ha-Sharon in the northeast, Ramat Gan, whose municipal area expanded to 4.7 sq. mi (12.2 sq. km.) in 2004, occupies a

central position in the country's largest conurbation. The city has been one of Israel's foremost manufacturing centers (food preserves, chocolate, cigarettes, textile spinning, weaving, dyeing and finishing, metals, building materials, and wood). In 1968 the Israel Diamond Bourse was opened in Ramat Gan. Hotels and recreation sites constituted another branch of the city's economy. The largest of the city's network of gardens was the 494 acre (200 ha.) national park to the south with tropical tree species, a rose garden, and a large artificial lake with boating facilities. A quarter of the city's area is green. Ramat Gan has the country's largest sport stadium with a capacity of 60,000 and Israel's most important sports center. The Safari, a large zoo without bars, is also located in Ramat Gan, as is the *Maccabiah Village and many other installations and children's playgrounds belong to its municipal area. It has many cultural institutions (municipal library, museum, and lecture halls), and a chamber orchestra as well as the Beit-Zvi acting school and the Shenkar School of Engineering and Design.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

RAMAT HA-GOLAN (Heb. רַמַּת הַגּוֹלָן; the "Golan Heights" or "Plateau"), comprises practically the whole Golan region of N. Transjordan which forms the western section of the *Bashan. Ramat ha-Golan borders on the upper Jordan Rift Valley and Lake Kinneret in the west, on the Yarmuk Valley in the south, on the Ruqqād stream in the east, and on the Hermon Massif in the north. In the last stage of the Six-Day War (1967), nearly the entire region was occupied by the Israeli army and came under Israeli administration. Together with the southeast portion of Mount Hermon – also occupied by Israeli forces – it measures about 480 sq. mi. (1,250 sq. km.). The origin of the name Golan is not clear; A.J. Brawer proposes that it is derived from *golah* ("exile") as the biblical "Golan in Bashan" (Deut. 4:43; 1 Chron. 6:56) was a city of refuge for expatriates (see below History and Archaeology).

Three subregions are distinguished: the southern Golan, a plain area with land suitable for farming, characterized by a hot, dry climate and an average annual rainfall of 10 in. (250 mm.); the central Golan, moderate slope with altitudes of up to 3,000 ft. (700 m.), with rocky lands and deep gulleys; and the northern Golan, rising to altitudes of 2,000–3,000 ft. (600–900 m.), with a number of hilltops attaining 3,600–4,040 ft. (1,100–1,226 m.). This last area is characterized by low temperatures and large amounts of rain (about 40 in. or 1,000 mm. a year). The dominant characteristics of the Golan's topography were created through volcanism, which continued into the Middle Pleistocene period, i.e., until approximately 500,000 years ago, with lava pouring out from fissures and craters and covering the plateau with a continuous layer of basalt and strings of volcanic cones, the largest being Tel Avital (Tell Abu al-Nadā', 1,204 m.). The plateau rises gently from south to north and dominates the rift valley to the west and south with abrupt escarpments. Stream courses, mainly

in the southern section, have cut deep ravines, laid bare light-colored chalks, marls, and limestones underneath the black basalt, and separated small portions of the plateau from each other. Soils are mostly dark, fertile, and deep grumusols and are covered with basalt boulders in the north.

The Lower Golan has been farming country throughout most of its historic past, with grain crops as the principal branch; the ample rainfall and resulting stronger erosion make the Upper Golan a region of brush, forest, and pastures, rather than tilled fields, and biblical expressions such as the “cows” or “cattle of Bashan” (Amos 4:1; Ezek. 39:18) and “oaks of Bashan” (Isa. 2:13; Ezek. 27:6) seem to refer to this section. Deforestation by man has left only stunted remnants of ancient forests in the northern Golan; flocks of sheep and herds of cattle, however, continued to be the region’s economic mainstay until the recent past.

[Efraim Orni]

History and Archaeology

The name “Golan” is first mentioned in the Bible as a settlement in the region of the Bashan (Deut. 4:43; Josh. 20:8), within the territory allocated to the tribe of Manasseh (Deut. 4:43). It is referred to as a free city (Josh. 20:8) and later as a Levitical city (1 Chron. 6:7), thought to be Sahem ed-Djolan (Eusebius, *Onom.* 64:7), beyond the eastern border formed by the river Rukkad. The name of the entire region appears to have derived from this site. In the Persian period the region was included in the satrapy of *Karnaim, which encompassed the Golan and the *Bashan.

In the early Hellenistic period, the Golan formed a separate district under the name of Gaulanitis. The writings of *Josephus help to trace the history of the entire area (Antiq. 4:5, 3; 8: 2, 3; 13:15, 4; Wars 2:20, 6; 3:3, 1–5; 3:10, 10; 4:1,1). Early in the reign of the Hasmonean Alexander Jannaeus, the cities of Golan, Gamala and Seleucia were conquered (83–81 B.C.E.), and the Golan was annexed to the Hasmonean kingdom (Antiq. 16:9, 2). After the conquest of Palestine by Pompey (63 B.C.E.) the Golan was populated by the *Itureans, but when Herod the Great came to the throne it came into his possession (23 B.C.E.). It remained part of his descendants’ kingdom until the death of Agrippa II. It was then annexed to the Roman Provincia Judaea and later in the Roman period it formed part of Palaestina Secunda. The more important large villages were Seleucia, Sogane, Bethsaida, and Gamla, and these were fortified by Josephus who had been proclaimed Jewish rebel commander of the Galilee (Wars 2:20, 6). The revolt was crushed by the Romans in 67 C.E. During the Roman and Byzantine periods the Gaulanitis was a prosperous rural area but devoid of large towns. At the end of the 5th century C.E., the emperor Anastasius made use of the Ghassanids, a Monophysite Christian Arab tribe from the Yemen that had moved into Syria, as frontier guards, particularly against the Lakhimids who were nomads in the Upper Euphrates. The Golan in the sixth century was populated by two groups: a well-established community of Jews and the Christian Ghassanids. Following the Arab invasion of 636 C.E., the region

was slowly depopulated. The Mamluk and Ottoman authorities initiated enforced resettlement.

L. Oliphant was one of the first to record the archaeological sites in the Golan during his visits to the region between 1879 and 1886. At Khirbat Kānif Oliphant found the remains of a synagogue with a lintel bearing an incomplete Aramaic inscription: “... remembered be for good Yose son of Ḥalfu son of Ḥana[n].”

A large number of sites were recorded and described by G. Schumacher following his work in the area between 1883 and 1885, and until 1914. Schumacher also prepared the first proper map of the region. He investigated at least a dozen sites with stones bearing Jewish symbols, such as the seven-branched *menorah* and other motifs, and attributed these to the remains of ancient synagogues. These sites include Fiḡ, Umm al-Qanāṭir, Khan-Bandaq, Lawiyya, al-Dikkī (Dikke), al-Rafid, al-Aḥmadiyya, al-Burayka – most of them in southwestern Golan near the shores of the Sea of Galilee. In the village of Fiḡ a basalt column was found incised with a seven-branched *menorah* and under it an Aramaic inscription: “I, Judah, the cantor.”

Since 1967 numerous surveys and excavations have been carried out in the region, notably a general survey of the region by S. Gutman and C. Epstein in 1967–1968, a more methodical general survey by D. Urman in 1968–1972, surveys of Chalcolithic sites and of dolmen fields by C. Epstein in 1973–2000, various investigations by Z. Maoz since 1977, a study of settlements and their landscapes by C. Dauphin in 1978–1988, and a study of “Iturean” settlements by M. Hartal since 1983. Since the late 1970s surveys and excavations have been undertaken on Mount Hermon by S. Dar.

Prehistoric evidence (Upper Paleolithic) comes mostly from Berkehat Ram with flints and basalt implements, and from Biq’at Kuneitra. A site from the southern Golan, Mjhiyyeh, has been dated to the Pre-Pottery Neolithic period. At least 30 Chalcolithic unwalled settlements from the first half of the 4th millennium B.C.E. have been investigated. Houses were broad rooms built in chain formation. The settlers engaged in agriculture and stock breeding and placed basalt pillar-shaped house gods in their houses and courtyards. Their material culture was quite distinctive. The Early Bronze I is barely represented in the Golan, but more than 40 sites from the Early Bronze Age II have been identified, including settlements (e.g., Gamla) and enclosures (e.g., Mitham Leviah). The enigmatic megalithic structure at Rujm el-Hiri with concentric circles and a tumulus at its center is also dated to this period.

Early Bronze Age IV settlements have only been identified in the southern Golan. Elsewhere there are very extensive fields of dolmens and tumuli/cairns. The earliest material found in the dolmens is dated to the Early Bronze IV. However, it is likely that these finds represent the final use of these structures, which may date back to the Early Bronze II. In the Middle Bronze Age IIB, settlement was concentrated mainly in the southern and northern parts of the region. Many of the sites controlled roads and were probably built for strate-

gic purposes. Fewer settlements of the Late Bronze Age were found. Settlement was renewed in the Iron Age I, especially above earlier Middle Bronze II sites. A lion's head carved on an orthostat, discovered not *in situ*, was dated on stylistic grounds to the 9th century B.C.E. It was probably originally placed at the entrance of a citadel of a local ruler. Numerous Iron Age II sites are known from the Golan and particularly at sites along the shores of the Sea of Galilee (see *En-Gev; Tel Hadar).

From the Hellenistic period there are agricultural villages and fortified towers. Two sites (Ḥorvat Zemel and Ḥorvat Namra) are identified as "Iturean" on the basis of the discovery of a distinctive pottery ("Golan Ware") within these settlements. Early Roman sites were scattered throughout the Golan. One major site was Gamla which fell to the Romans in 67 C.E. Numerous sites from the Late Roman period are known (2nd–early 4th centuries C.E.), with exceptional remains at the site identified as Hippos (Sussita) and Baniyas. Villages were built in the Golan, many of which were of pagan character, judging by the discovery of statue fragments and altars. Roads were built criss-crossing the region, linking the land of Israel with Damascus.

The Byzantine period saw an enormous increase of sites in the Golan to close to one hundred. Numerous large villages are known but the region did not have towns or cities. A project led by C. Dauphin has traced the growth of four settlements (Kafr Naffakh, Na'aran, Farj, and Er-Ramthaniyyeh) between the Hellenistic and Ottoman periods, focusing particularly on the Byzantine period. Olive oil production (but not exclusively) was undertaken in the western parts of the Golan. Viticulture was also practiced. The agricultural landscapes surrounding the four above settlements were also investigated. Remains of numerous churches and synagogues have been found. An ongoing debate exists among scholars as to whether the ethnic divide between the Jewish and Christian populations in the Golan in this period was sharply defined or whether some or many of the settlements had mixed populations as well as to the extent of the Jewish-Christian element in the population between the 1st and 5th centuries C.E. Some agricultural villages were abandoned prior to the Umayyad period (7th century), but others survived, notably Kaẓrin, until the earthquake of 749 C.E.

[Shimon Gibson (2nd ed.)]

Modern Period

One of Syria's backward provinces, Golan entered modern history in the 1880s, when the Turkish authorities settled Circassians there to ward off Bedouin robbers. The regional center, *al-Qunaytira, came into being at that time. Shortly afterward, Jews made attempts to found settlements in the Golan, initially at Rumsaniyya, south of al-Qunaytira; then at Benei Yehudah east of Lake Kinneret; and finally, in 1908, in the Bet Zayyada (al-Buṭayḥa) Valley (a much larger enterprise, at Benei Binyamin and Jilīn, was undertaken with Baron E. de Rothschild's aid in the Bashan, further east). Prior to 1967, the Golan's population included Sunnite Muslims, as well as Circassians, Druze, Alawids (Nusayris), a small Christian mi-

nority, and others. In the 1950s and 1960s, the Syrians covered the Golan with a network of artillery positions and fortifications to harass Israeli settlements in Upper Galilee and the Lake Kinneret area, and geared the region's entire economy to military needs. In the last two days of the Six-Day War (June 9–10), almost the entire population took to flight together with the Syrian army, with the exception of the Druze who stayed on in six villages in the north (in the September 1967 census they numbered over 6,000). The remaining Druze villagers in the area quickly made contact with their kinsmen in Israel and developed friendly relations with the Israeli administration and their new Jewish neighbors.

The first initiative for new Jewish settlement in the region was taken in July 1967 by a group of Ha-Kibbutz ha-Me'uḥad, which founded Kibbutz Merom Golan. By 1970 the number of Golan settlements had increased to 12, including Ramat Baniyas (Senir; of Ha-Shomer ha-Za'ir), Merom Golan and Ein Zivan (Ha-Kibbutz ha-Me'uḥad) in the north; Naḥal Geshur (Ha-Shomer ha-Za'ir) in the center; Ramot Magshimim (moshav shittufi of Ha-Po'el ha-Mizrachi), Givat Yo'av (Tenu'at ha-Moshavim), Ne'ot Golan (moshav shittufi of Ha-Oved ha-Ziyyoni), El Al (Tenu'at ha-Moshavim), Mevo Ḥammah (Iḥud ha-Kibbutzim), Naḥal Golan, and Ramot (Tenu'at ha-Moshavim) in the south Hermon. In 1977 *Kaẓrin, an urban community, was established. Subsequently, other settlements were founded, bringing the total up to 33 at the beginning of the new millennium, with a total population of 37,000, including 18,300 Druze (see *Israel, State of, under Religious Life). After 1967, land reclamation was carried out on a large scale and the first storage ponds were installed to retain runoff and ease the problem of water shortage, which is serious despite the relatively ample rainfall. The main economic branches in the area are agriculture, tourism, and industry. Farming is based on citrus groves, orchards, vineyards, and vegetables crops. Tourism includes 1,000 guest rooms and other tourist attractions. Ramat ha-Golan industry is located in three industrial zones, in Kaẓrin, Benei Yehudah, and the Technological Center. It includes the Golan Heights Wineries and the Eden natural mineral water bottling plants.

Since the 1990s there have been sporadic negotiations between Israel and Syria about the future of the area in a political settlement, and various Israeli prime ministers have reportedly expressed a willingness to return most of it to Syria. In 1999 the Knesset passed the Golan Law, requiring an absolute majority of 61 Knesset votes to confirm the return of any Golan land.

RAMAT HA-KOVESH (Heb. רַמַּת הַכּוֹבֵשׁ), kibbutz in central Israel, N.E. of *Kefar Sava, affiliated with Ha-Kibbutz ha-Me’uhad. It was founded in 1932 by pioneers from Eastern Europe who, before setting up their own kibbutz, had worked in Kefar Sava’s citrus groves. In the 1936–39 Arab riots, the kibbutz was the easternmost outpost of Jewish settlement in the southern Sharon and suffered attacks, losing 15 of its members. Similarly, the kibbutz found itself in the front line during the Israel *War of Independence (1948), and again suffered losses. In 1970 Ramat ha-Kovesh had 520, rising to 586 in 2002. Its economy was based on citrus groves and irrigated crops, etc., as well as on a large bakery. The kibbutz also operated a factory for rubber products and an events garden. The name, “Height of the Conqueror,” symbolizes the settlers’ early history as “conquerors of labor” in Kefar Sava

[Efram Orni / Shaked Gilboa (2nd ed.)]

RAMAT HA-SHARON (Heb. רַמַּת הַשָּׂרׁוֹן; “Sharon Height”), urban community with municipal council status, in central Israel, N. of Tel Aviv. Ramat ha-Sharon was founded in 1923 as a middle-class village (moshavah) primarily based on citriculture. Following the crisis in citrus exports during World War II, the settlers turned to other branches, including vegetable growing. In the late 1940s, industrial enterprises were opened. By 1947 the population reached 1,150. After the War of Independence (1948), a large *ma’barah* was included in Ramat ha-Sharon’s area which covers 4,250 acres (1,700 ha.). The population increased quickly as the *ma’barah* inhabitants were gradually transferred to permanent housing and numerous

veteran Israelis settled in Ramat ha-Sharon. It became a town within the Tel Aviv conurbation. Over the years, the moshavah changed its character from rural to urban. The number of inhabitants grew to 8,200 in 1958 and 17,600 in 1970. By 2002 it had reached 35,600, occupying a municipal area of 8.5 sq. mi. (22 sq. km.). Its population was well-educated, with high income and a high mean age level. Most residents earned their livings in the Tel Aviv conurbation. Some of Israel’s biggest industries, such as Israel Military Industries and Elco, were located in Ramat ha-Sharon.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

RAMAT HA-SHOFET (Heb. רַמַּת הַשׁוֹפֵט), kibbutz in central Israel, on the Manasseh Hills near Ein ha-Shofet, affiliated with Kibbutz Arzi ha-Shomer ha-Za’ir. It was founded by pioneers from Lithuania, Poland, Hungary, and Bulgaria in 1941, with the aim of reinforcing the “bridge” of Jewish settlements between the Sharon and the Jezreel Valley. In 1970 the kibbutz had 530 inhabitants, increasing to 710 in the mid-1990s but then dropping to 557 in 2002. Farming included field crops (with Kibbutz *Ramot Menasheh), avocado plantations, poultry, and dairy cattle. The kibbutz also manufactured plastic and wood products and operated guest rooms. The local Beit Rishonim museum focuses on the history of the kibbutz. The name Ramat ha-Shofet, meaning “Height of the Judge,” commemorates Judge Julian W. *Mack, U.S. Zionist leader.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

RAMAT RAHEL (Heb. רַמַּת רָהֵל), ancient tell (Khirbat Šāliḥ) located on a hilltop (2,683 ft. (818 m.) above sea level) within Israel’s international 1947–48 border, in the western part of Kibbutz Ramat Raḥel, about midway between the Old City of Jerusalem and Bethlehem. The site is strategically situated, overlooking the junction of two important roads – the one that in ancient times was the major route from Jerusalem southwards, and the road connecting Jerusalem to the west, via Beth-Shemesh in the Shephelah, through the Rephaim valley, where the old Turkish railway, as well as the modern one, runs to Jerusalem.

The name and the site’s biblical identity are still enigmatic. Y. Aharoni identified the site as *Bet-Cherem, and hypothesized that it had been built on a former vineyard of the king, hence its name. He based the assumption on the reference in the LXX supplement to Joshua 15:59a, as a site near Bethlehem. It was also mentioned in Nehemiah 3:14 as a center of one of the districts in the province of Yehud. B. Mazar, however, identified the Ramat Raḥel site with Netofah, a place mentioned in the OT near Bethlehem (11 Sam. 23:28; 1 Chr. 2:54ff. and cf. Ezra 2:22; Neh. 7:26; 12:28). G. Barkay identified the site with *MMŠT* – one of the places mentioned on the *lmlk* stamp impressions. He regarded it as one of the four local centers in Judah (together with Hebron, Sochoh, and Ziph). Lipschits has suggested identifying the site with

Geruth Chimham, mentioned in Jeremiah 41:17 as a place “near Bethlehem.”

Already in 1930–31, B. Mazar and M. Stekelis, working on behalf of the Israel Exploration Society, excavated a Jewish burial cave some 200 m. south of the hilltop of the site. Y. Aharoni began excavating the site in 1954 and later conducted four successive seasons there, between 1959 and 1962, on behalf of the Israel Department of Antiquities and Museums, the Israel Exploration Society, the Hebrew University of Jerusalem, and the University of Rome. G. Barkay made a few soundings at the site in 1984 on behalf of the Institute of Archaeology of Tel Aviv University, the Israel Exploration Society, the Israel Department of Antiquities and Museums, and the American Institute of Holy Land Studies on Mount Zion. In the course of the site’s restoration and reconstruction as an Archaeological Park, trial excavations were made by Gideon Suleimanny on behalf of the Israel Antiquities Authority. Excavations on behalf of the Institute of Archaeology of Tel Aviv University and the University of Heidelberg were resumed at the site in 2004 under the direction of O. Lipschits, M. Oeming, and Y. Gadot, as part of a major excavation project.

As at other hilly archaeological sites, differentiating between the strata at Ramat Raḥel has been difficult. The generally accepted view, however, is that there were seven periods of occupation:

1. The site was first settled in the time of the kings of Judah at the end of the eighth and early seventh centuries B.C.E. (Stratum VB). Scanty architectural remains have been found, and a large number of storage jar handles, stamped with royal seal impressions of the *mlk* type. Aharoni assumed that during this period there was a royal fortress at the site (though only scanty architectural remains were assigned to this stratum, and most of them were found in the fillings of stratum VA, out of any clear archaeological context). Some agricultural terraces and private dwellings are the main structural finds from this stratum; in one of the houses Aharoni found seal impressions of “Shebnah [son of] Shaḥar.” The same seal impressions have also been discovered at Lachish and Mizpah. Lipschits, Oeming, and Gadot assigned to this same stratum another private seal impression – “Ahaziah [son of] Tanhum.” The same seal impressions are known at Mizpah, Lachish, and Beth-Shemesh.

2. In the next stratum (VA), dated to the seventh century B.C.E., an imposing palace stood on top of the mound. This is the first palace from the period of the kingdom of Judah that has so far been found in archaeological excavations. The palace walls were built of ashlar blocks, uniquely in Judean architecture, and it was decorated with proto-Aeolic capitals. Ten of these were found in Ramat Raḥel, and other than one found in Kenyon’s excavations in the city of David (dated by her to the 10th–9th centuries), this is the only example found in Judah. Lipschits, Oeming, and Gadot have suggested that the capitals may have been first used in the palace of stratum VB. Among the other main finds were window balustrades of the palace (cf. Jer. 22:14), a painted potsherd depicting a king

(?) seated on a throne, and a seal impression of “Eliakim, steward of Yokhan,” also known from Beth-Shemesh and Tell Beit Mirsim. Aharoni assumed that the palace was built at the end of the seventh century and assigned it to king *Jehoiakim son of Josiah (608–598 B.C.E.), whose palace is described by Jeremiah (22:13–19). This date is, however, not justified, at least from the archaeological point of view. Aharoni assumed that the palace was surrounded by a wide fortified courtyard extending over an area of about 20 dunams (five acres). However, the 2005 excavation season at the site revealed that this courtyard, if it existed, was much smaller and confined to the western side of the mound. As a result of the recent work it is possible to reconstruct a small citadel that stood west of the palace, next to its western wall, and a system of wide, open pools adjacent to the southwestern corner of the palace. However, the architectural and chronological connections between the palace and the citadel with the pools and water system are still unclear.

3. The next settlement (Stratum IVB), was dated to the long time-span extending between the Persian and Hasmonean periods. Numerous small finds from these periods have been found, with unclear and segmented architectural finds. Hundreds of seal impressions on jar handles were attributed to the Persian and Hellenistic occupation. The site was the main center of the Yehud seal impressions (of all types), as nearly 200 impressions were found. Many jar-handle impressions with the name *yršlm* (Jerusalem) were found at the site, dated to the Hasmonean occupation. Other seal impressions were stamped with the names of royal officials or governors of the province, two of whom – Jehoezer and Ahiyab (new reading by Lipschits and Vanderhooft) – could have been previously unknown Jewish governors. We may accept Aharoni’s assumption that a new citadel was built at the site during the post-Exilic period, and served as one of the main administrative centers in Judah. So far, however, no significant architectural finds from the Persian and Hellenistic periods have been found.

4. A small unfortified village from the Early Roman period (Stratum IVA), dated to the first century B.C.E.–first century C.E. After its destruction ca. 70 C.E., the site remained abandoned until the third century. The main find from this period are tomb caves containing ossuaries with Jewish names written in Aramaic and Greek.

5. After a gap of more than a century, a Roman-style house with a well-built bathhouse was erected on the hill, probably for the Tenth Roman Legion, as confirmed by bricks stamped L^XFR (*Legio X Fretensis*). The many small remains from this stratum (Stratum III) are dated to the third and fourth centuries C.E.

6. Between the middle of the fifth century and the sixth century, a Christian church was built on the tell with an attached monastery complex and a large settlement around it (Stratum II). There are clear two phases in this period. This church should be connected to the other, larger, church of the “Kathisma” (“the Seat”), that was excavated close by, about

300 m. from the tell and just beside the main road leading from Jerusalem to Bethlehem. This last church was often mentioned in Byzantine sources as the place where Mary, mother of Jesus, rested during her journey to Bethlehem, where she gave birth.

7. Scanty remains were found upon the ruined Byzantine stratum dating from the Umayyad and the early Abbasid periods (7th-8th centuries C.E.). The finds from this period (Stratum 1) consisted of poorly built structures. This was the last occupation of the tell.

[Oded Lipschits (2nd ed.)]

Modern Period

The founders of Kibbutz Ramat Raḥel originated from Eastern Europe. They came with the Third Aliyah to the country and belonged to *Gedud ha-Avodah ("Labor Legion"). In 1921 they were sent to Jerusalem as an "urban work group" and set up a temporary camp on the site of Jerusalem's Rehavyah quarter. The first houses in this quarter were built by the work group, who became construction workers and stone dressers. In 1926 the kibbutz was transferred to its present site on a dominating hill overlooking a wide expanse of the Judean Desert to the east, *Herodium, and the town of *Bethlehem with Rachel's Tomb to the south (from which the settlement took its name). Ramat Raḥel joined Ha-Kibbutz ha-Me'uḥad at the end of the 1920s. In the 1929 Arab riots a large armed mob stormed Ramat Raḥel and completely destroyed it. The kibbutz was rebuilt in 1930. Ramat Raḥel again came under repeated attacks in the 1936-39 Arab riots. As the settlement's cultivable area was then severely limited, its economy was partly based on outside work in which the members performed important pioneering tasks, e.g., in the potash works near the Dead Sea, the railway service, and in enterprises established in the kibbutz, notably a laundry and bakery for Jerusalem customers. In 1946 additional land was allocated and the deciduous fruit orchards and vegetable gardens were enlarged. In the Israel *War of Independence (1948), Ramat Raḥel constituted one of Jewish Jerusalem's forward defense positions and the battles around it were decisive for the city's fate. In May 1948 the kibbutz was attacked by the Arab Legion and irregulars advancing from the east and by an Egyptian tank force simultaneously attacking from the Bethlehem road in the west. In the following battles, the place changed hands several times and was completely destroyed, but finally remained in Israel hands. The armistice border was drawn around it to the east, south, and southwest. The village was rebuilt and received farmland in the nearby demilitarized zone around the former high commissioner's palace and in the Coastal Plain. A seminary was opened at the kibbutz. In the 1951-52 split in Ha-Kibbutz ha-Me'uḥad, Ramat Raḥel joined Iḥud ha-Kevuzot ve-ha-Kibbutzim, while a part of its members went to Ein Karmel. In the autumn of 1956 nearby Jordanian positions opened fire on a party of the Israel Exploration Society congress visiting the local excavations and killed four persons. In the *Six-Day War (1967), the kibbutz again found itself in the front line, when the way to Bethlehem and the Hebron Hills was opened by Israel forces

on June 6-7, by the capture in a hard battle of fortifications around the nearby monastery of Mar Elias.

In 2002 the population of the kibbutz was 308. Its economy was based mainly on tourism, including a hotel, archaeological garden, and conferences and sports centers. Its farming branches were field crops, fruit orchards, citrus groves, and poultry.

RAMAT RAZIEL (Heb. רַמַּת רִזְיָאֵל), moshav in Israel's Judean Hills, on the Zobah-Eshtaol road, affiliated with the Ḥerut movement. Ramat Raziel was founded in 1948 as one of the first settlements designed to secure the Jerusalem Corridor that had been opened in the fighting in the Israel *War of Independence in the preceding months. The terrain conditions were particularly difficult and all the farming land had to undergo heavy reclamation. Ramat Raziel was therefore included in the work village scheme. The population, in spite of this scheme, changed several times. In 1970 the moshav had 135 inhabitants. In 2002 the population was 382. Farming was based on deciduous fruit orchards, vineyards, and poultry. A well-known boutique winery by the name of Kastel was owned by one of the settlers. The village bears the name of David *Raziel, the *Irgun Zeva'i Le'ummi commander.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

RAMAT YISHAI (Heb. רַמַּת יִשָּׂי), semirural settlement in N. Israel, in the Tivon Hills. It was founded in 1925 by industrialists from Poland as a textile center. Abandoned with the outbreak of the Arab riots in 1936, Ramat Yishai was resettled in 1943. In 1958 the settlement received municipal council status. In 1970, it had 800 inhabitants and medium-size factories for textiles and leather. In the mid-1990s the population was approximately 2,990, increasing to 5,280 in 2002 on an area of nearly a square mile (2.3 sq. km.). The majority of residents found work in the Haifa conurbation. Income was much higher than the national average. The town is named after the writer and teacher Yishai Adler, whose contribution was instrumental in rebuilding the settlement in 1943.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

RAMAT YOĦANAN (Heb. רַמַּת יוֹחָנָן), kibbutz in N. Israel, in the Haifa Bay area, E. of Kiryat Ata, affiliated with Iḥud ha-

Kevuzot ve-ha-Kibbutzim, founded in 1932 by pioneers from Eastern Europe. In 1939 an ideological split brought about an exchange of members with *Bet Alfa, with those in favor of *Ha-Shomer ha-Za'ir concentrating in the latter kibbutz, while the members who supported the *Mapai Party stayed in Ramat Yoḥanan. In the Israel *War of Independence, the kibbutz was attacked by a strong unit of Druze irregulars, but held out and counterattacked successfully (April 13–16, 1948). After this battle, the Druze in Israel ceased to side with the Arabs. In 1970 Ramat Yoḥanan had 500 inhabitants, increasing to 700 in 2002. The kibbutz's economy was based on highly intensive farming (field crops, orchards, citrus groves, and dairy cattle) and on a plastics factory. Ramat Yoḥanan had among its members several painters and writers. The ancient tradition of gathering the *Omer* ("sheaf") during the Passover week was first renewed in Ramat Yoḥanan. The name, "Height of Yoḥanan," commemorates Gen. Jan (Yoḥanan) *Smuts.

RAMAT ZEVI (Heb. רַמַּת זְעֵבִי), moshav in N. Israel, on the Kokhav Plateau of Lower Galilee, affiliated with Tenu'at ha-Moshavim. It was founded in 1942 by a group of veteran farm laborers, who had previously set up a temporary settlement, based on auxiliary holdings at Shimron, near Nahalal. They were later joined by demobilized soldiers from World War II. After 1948 the population changed when most of the veteran settlers left and were replaced by new immigrants. Farming at Ramat Zevi consisted mainly of field crops and dairy cattle. The village is named after Zevi (Henry) Monsky, B'nai B'rith president. Its population in 1970 was 180. In 2002 its population was 388.

RAMBERT, DAME MARIE (1888–1982), British ballet teacher and founder director of the Ballet Rambert. Born in Warsaw as Miriam Rambach, she studied eurythmics and was invited by Serge Diaghilev to teach in his company. While she influenced Diaghilev's most famous dancer, Nijinsky, in his choreographic work, she was herself won over to classical ballet, became a pupil of Enrico Cecchetti, the Italian ballet dancer and teacher, and followed his principles when she opened a school in London in 1920. By 1930 the school had developed into the Ballet Club which, as the Ballet Rambert, became famous for its performances at the Mercury Theater, a former parish hall at Notting Hill rebuilt by Rambert's husband, the author, Ashley Dukes. Rambert had a great flair for discovering new talent and inspired choreographers, designers, and dancers. She was the first to present a whole group of young dancers under British names, and she drew the public with ballets like *A Tragedy of Fashion*, *Lilac Garden*, *Lady into Fox*, and *Death and the Maiden*. In 1966 she became co-director with Nathan Morrice of the New Ballet Rambert Company. She was made a Dame of the British Empire in 1962.

[Lewis Sowden]

RAMERUPT, village in the Aube department, N.E. central France. No single extant non-Jewish source confirms the existence of a Jewish community in Ramerupt during the Middle Ages, but Jewish sources mention a community which existed from at least around 1100 until the latter half of the 12th century. It was renowned for its yeshivah, headed by *Meir b. Samuel, Rashi's son-in-law, who was succeeded by his sons, Jacob *Tam and *Samuel b. Meir. The chronicle of *Ephraim b. Jacob of Bonn records an attack made by crusaders on the community of Ramerupt on the second day of Shavuot, 1147, but only describes in detail the ill-treatment of R. Jacob Tam. His house was looted, a Torah Scroll was desecrated, and he would have been murdered in the fields had not a passing nobleman tricked the crusaders into releasing him.

RAMLEH (Heb. רַמְלָה, **Ramlah**), city in Israel, situated on the Jerusalem–Tel Aviv highway, approximately 28 mi. (45 km.) from Jerusalem.

The Old City

Ramleh was founded in 716 by the Umayyad caliph Suleiman ibn 'Abd al-Malik and is the only city in the country established by Arabs. The name means "sand" in Arabic and refers to the sandy ground on which the city arose. Ramleh was the administrative capital of the country under the *Umayyads and the *Abbasids. Although originally founded as a town for Muslims, it had from the beginning a large population of Christians, Jews, and Samaritans. Hārūn al-Rashid, the Abbasid ruler in the late eighth century, increased the Samaritan farming population. Due to its advantageous location on the crossroads of the Egypt–Damascus and Jerusalem–Jaffa highways, the city prospered until the time of the Crusades.

Among the Jewish community, Ramleh was called Gath or Gath-Rimmon or Ramathaim-Zophim, after the biblical towns with which it was identified. The temporary transfer of the Jerusalem academy to Ramleh in the tenth century greatly strengthened the Jewish population. At that time, a Karaite and a Rabbanite community, the latter divided into Palestinians and Babylonians, existed in the town; there were also synagogues for the Jerusalemites and the Damascenes. In the 11th century the flourishing communities of Ramleh suffered from a series of blows: a disastrous Bedouin raid in 1025 and two devastating earthquakes in 1033 and 1067 (in the latter, 25,000 people reportedly perished). During the Crusader occupation, beginning in 1099, the Jewish and Samaritan communities were dispersed. When Benjamin of Tudela visited there in 1170–71, he recorded a Jewish population of only three dyers, living in the midst of extensive cemeteries.

During the 12th and 13th centuries, the city was often attacked by Muslims. It was finally captured by the *Mamluk sultan Baybars and as the capital of a province, it regained some of its former importance. By the 14th century, it was again the largest town in Palestine and a Jewish community was reestablished there. With the Ottoman conquest, it once more declined, although most pilgrims passed through the town, at the time called Rames, on their way to Jerusalem. The tax records for 1690–91 show no Jews living there. The main buildings of the early city which still stand are the Cathedral of St. John (now the Great Mosque), the White Mosque and its minaret (completed in 1318) and the ʿUnayziyya cistern (dating from the eighth century).

[Michael Avi-Yonah]

The New Town

In 1890 Ramleh had 9,611 inhabitants, the majority of whom were Muslim Arabs, with a sizable minority of Arab and non-Arab Christians, and a small Jewish community of 66 people. Under the British Mandate (1917–48), the town's economy benefited only slightly from its location near a principal highway. Christian institutions helped raise the local educational level. In the 1930s Ramleh still had five Jewish families; they left, however, in 1936, with the outbreak of the Arab riots.

During the Israel *War of Independence, when Ramleh was occupied by Israel forces in July 1948, most of the town's Arabs abandoned it, causing the population to shrink to 1,547 persons by the November 1948 census. At the beginning of the 1950s the town absorbed a large number of Jewish immigrants from various countries, raising the population to 20,548 in 1961. Initially the newcomers were housed in three *ma'barot* ("immigrant transit camps"); but, with housing construction proceeding rapidly, Ramleh's built-up area expanded, principally to the west and southwest, until it covered an area of about 4 sq. mi. (10 sq. km.). In 1969 about 4,200 families lived in the new sections, compared to 3,000 in the town's older areas, where numerous structures were earmarked for leveling and reconstruction. Of its 30,800 inhabitants in 1970, 27,000 were Jews and 3,800 Arabs. In the mid-1990s the population was approximately 55,000, including 9,020 non-Jews. By 2002 the population of Ramleh increased to 62,800, consisting of 80.5% Jews, 15.4% Muslims, and 4% Christians. A third of the population consisted of immigrants from the former Soviet Unions. In earlier years the Arabs were for the most part well integrated in the city's economy and cultural life and satisfactory social relations existed between the Jewish and Arab communities, with a Jewish-Arab Friendship League in operation. However, in the course of time, relations became tense. Most Arabs remained in the old city, nicknamed the Ghetto, while the Jews lived in the new areas of the city. When the "al-Aqsa" Intifada erupted in 2000 a few synagogues were set on fire and Jews tried to burn a mosque.

The city's economy was based mainly on industry, which benefited from its location at one of the country's major highway and railroad junctions and its relative proximity to the port of Ashdod. In 1969, 23 of the larger industrial enterprises

employed about 2,000 workers. Products included cement (in the country's largest cement factory), wood products, metal pipes, motors, refrigerators and miscellaneous metal products, prefabricated houses, and canned foods. There were two industrial zones. Until June 1971, the Tel Aviv–Jerusalem traffic artery intersected the town from northwest to southeast, with the number of vehicles passing through Ramleh averaging 17,000 a day. The local market mainly serviced rural settlements around Ramleh, and provided an outlet for its farm produce. The city also provided health services to the villages in the vicinity. During the 1980s the city became known for its various disco clubs. According to Israel's Central Bureau of Statistics, income in Ramleh was much lower than the national average in 2002 and a third of the population was on welfare

°RAMON, LULL (**Raimundus Lullus**; c. 1234–1315), Catalan Christian preacher, mystic, and philosopher. As a youth Lull grew up in *Majorca, where a substantial Muslim majority had remained even after this island's conquest (1229–32) by King James I. This enabled him, besides the traditional education imparted to the sons of Spanish nobility, to familiarize himself with Muslim culture and the Arabic language. When he was 30, Lull turned to ascetic life. Besides his immersion in mystical contemplation, he considered it his vocation to preach and propagate Christianity among nonbelievers, Muslims, and Jews in Aragon and, chiefly, in Majorca. To this end, Lull devoted many years to the study of Arabic language, philosophy, and theology, and some of his initial works were written in that language. In comparison, his knowledge of Judaism was scant and superficial, some works by Jewish thinkers being known to him through Arabic philosophy, or from Maimonides *Guide of the Perplexed*. In about 1272 Lull wrote in Arabic and translated into Catalan the widely circulated *Libre del gentil e los tres savis*, which was subsequently translated into Latin, French, and probably Hebrew. It is a work of apologetic character, drawn up in a form frequent in those times. A man, either a nonbeliever or a pagan, consults three sages – a Jew, a Christian, and a Muslim – and asks them the basic principles of their respective creeds. This furnishes the starting point of a peaceful debate between the three, which finally remains inconclusive, although the author does not conceal his sympathy for the Christian. There has been speculation as to the possible influence of *Judah Halevi's *Kuzari* over this work, but there is nothing to warrant it. In 1305 Lull wrote a second apologetic work chiefly directed against the Jews, *Liber de Trinitate et In-*

carnatione adversus Judaeos et sarracenos, better known under its shorter appellation *Liber Predicationis Contra Judaeos* (scholarly edition published in Madrid-Barcelona, 1957). The book comprises 52 sermons, one for each week of the year, preceded by a verse from the Bible. In these Lull strives to demonstrate, against Jewish and Muslim arguments as to the irrationality of Christianity, that the Christian truth is not only rational but also borne out by common sense.

Lull was also active as a preacher. In 1299 James II (1291–1327) allowed him to give sermons on Saturdays and Sundays in the synagogues and on Fridays and Sundays in mosques. In his important *Ars Magna* (c. 1274) Lull reduces all knowledge to a few basic metaphysical principles. The theory of the attributes of God occupies the central part of this work and it is interesting to compare the *dignitates* of Lull with the *Sefirot* of the kabbalists. The similarity between the two categories possibly stems from Neoplatonic influence common to the kabbalists and to Lull; the latter maintained friendly relations with a circle of Jewish religious thinkers in Catalonia, such as Solomon b. Abraham *Adret and R. Aaron ha-Levi of Barcelona, author of *Sefer ha-Hinnukh*; Lull presumably learned about the foundations of *Kabbalah from them.

[José Maria Millas-Vallicrosa]

RAMON, HAIM (1950–), Israeli politician, member of the Knesset from the Tenth Knesset. Ramon was born in Jaffa. He served in the air force in the years 1967–73 and received a law degree from Tel Aviv University. He started his political life as national secretary of the *Israel Labor Party Young Guard in 1978, serving in this capacity until 1984. He first entered the Knesset in 1983, replacing MK Danny Rosolio, who resigned. In the course of the Eleventh Knesset he was the Labor Alignment's coordinator in the Knesset Finance Committee, and in the course of the Twelfth Knesset served as chairman of the Labor parliamentary group. In 1985 he established together with Nissim Zvili the Kefar ha-Yarok circle – a dovish political group made up of younger members of the Labor Party that succeeded in getting several members into the Twelfth Knesset. It was generally believed at the time that some of Labor's future leaders would emerge from this circle, but in 2005 Ramon and Amir *Peretz were the only two members of this group still in the Knesset.

In March 1990 Ramon was actively involved, in full coordination with Labor Party chairman Shimon *Peres, and in consultation with his friend Aryeh *Deri from Shas, in the plan to bring down the National Unity Government headed by Yitzhak *Shamir, of which the Labor Party was a member, in a vote on a motion of no confidence. However, Peres failed to form an alternative government. Prior to the fifth Labor Party Conference, at the end of 1991, Ramon considered leaving the Labor Party and forming a joint dovish party with the CRM,

Mapam and Shinui. However, in light of his success, together with some of his colleagues, in getting the Conference to adopt many of their positions in connection with the peace process and religion and state, he decided to remain. In the primaries for the elections of Labor's leader in February 1992 Ramon supported Yitzhak *Rabin rather than Peres, and in the government formed by Rabin in July he was appointed minister of health. In this position he started, much to the chagrin of many of his Labor colleagues, to prepare a National Health Insurance bill that would, *inter alia*, break the link between the *Histadrut and Israel's largest health fund, Kuppas Ḥolim Kelalit. Ramon supported the candidature of Amir Peretz as Labor's candidate in the election for secretary general of the Histadrut against that of Haim Haberfeld, and when Peretz failed, stood himself for election against Haberfeld at the head of his own list, called Ḥayyim Ḥadashim la-Histadrut. Before deciding to run, Ramon gave a well-publicized speech at a special session of the Labor Party Conference in which he compared the party to a whale swimming towards the beach to its death, arguing that with his meager power he was trying to push the party back into the living water. Several days later he resigned from the government. As a result of his decision to run against the Labor candidate for the Histadrut, he was removed from the party, but nevertheless remained part of the Labor parliamentary group.

In May 1994 Ramon was elected secretary general of the Histadrut, and changed his title to chairman. He set off immediately to make drastic organizational and functional changes in the bankrupt Histadrut, and managed to enact the National Health Insurance Law. Before Rabin's assassination in November 1995 Ramon was reinstated in the party, and was invited by Rabin to return to the government. However, it was only in December that he entered the government formed by Peres, as minister of the interior, and Peretz took over the leadership of the Histadrut. Ramon was in charge of Labor's propaganda strategy in the elections to the Fourteenth Knesset, and was largely responsible for the decision to minimize mention of the Likud's role in creating the atmosphere that led up to Rabin's assassination. He was thus blamed by many Laborites for Labor's defeat in the elections, in which Binyamin *Netanyahu beat Peres by only 30,000 votes. Ramon considered running against Ehud *Barak in the primaries for the Labor Party leadership in June 1997, but when his proposal that open primaries be held, rather than primaries among Labor Party members only, was rejected, he decided not to run. In the government formed by Barak after the elections to the Fifteenth Knesset Ramon was appointed minister in the Prime Minister's office. He was not a member of the National Unity Government formed by Ariel *Sharon after he defeated Barak in the election for prime minister in 2001.

In 2004–5 Ramon played an active role in the negotiations for the formation of a new National Unity Government, after the government formed by Sharon following the 2003 elections disintegrated against the background of his disengagement plan. However, after doing poorly in the vote that

took place in the Labor Party Central Committee for ministerial posts in the new government formed in January 2005, he was appointed minister without portfolio. At the end of 2005, when Sharon left the Likud and formed the new Kadimah Party, Ramon left the Labor Party to join him, along with Shimon Peres and others. After the 2006 elections he was appointed minister of justice.

BIBLIOGRAPHY: A. Barzilai, *Ramon: Biographia Politit* (1996).

RAMON, ILAN (1954–2003), colonel in the Israel air force, the first Israeli astronaut. Ramon was killed on board the U.S. space shuttle *Columbia* in its ill-fated 2003 mission. Ramon served in the IDF as a combat pilot and was among those who participated in the bombardment of the Iraqi nuclear reactor in 1981. From 1983 to 1987 he studied computer science and electronic engineering at Tel Aviv University. From 1990 to 1992 he served as an F-16 squadron commander. Later, with rank of colonel, he served as head of the Department of Operational Requirements for Weapons Development and Acquisition. In 1995 Israel and the United States agree to send an Israeli astronaut into space, and Ramon was chosen in 1997 after a lengthy selection process. He and his alternate, Yizhak Mayo, were sent with their families to the U.S. to start training at the NASA Space Agency. Four years later, in 2003, as the only payload specialist on board, he was part of the crew that lifted off on the *Columbia* shuttle mission. During the 16-day journey in space, he carried out a number of scientific experiments. During re-entry, a technical problem caused the *Columbia* to disintegrate, and all its crew members, including Ramon, lost their lives. After his death, asteroid 51828 was named after him.

[Shaked Gilboa (2nd ed.)]

RAMONE, JOEY (Jeffrey Hyman; 1951–2001), co-founder, vocalist, and songwriter for the influential U.S. punk rock group The Ramones (1974–96); member of the Rock & Roll Hall of Fame. Ramone was born in Forest Hills, Queens, to Charlotte and Noel, who divorced when he was young. His mother encouraged an interest in music in both Joey and his younger brother Mitchell (who later adopted the name Mickey Leigh). Ramone took up drums at 13, playing throughout his teen years at Forest Hills High School, where he met his future band mates. The 6 ft. 6 in., gangly Ramone was originally the drummer for the Ramones, but eventually moved to vocalist and frontman for the band. Described as a “cartoon family,” The Ramones played fast, furious, and funny primal pop songs, with titles like “Teenage Lobotomy” and “I Wanna Be Sedated,” and chants like “Hey ho let’s go” and “Gabba gabba hey!” that became rallying cries for disaffected youth. The other original Ramones were Tommy, Johnny, and Dee Dee, who like Ramone, all adopted the stage surname of Ramone and wore matching “non-uniforms” of black leather jackets, black t-shirts, and ripped jeans – what became standard attire for a generation of musicians. They led a movement of no-

frills bands that were based in the seedy Bowery club CBGB in New York. Rules that The Ramones eponymous 1976 debut album instated into a bloated mid-1970s rock world were no song needed to be more than two minutes long, include more than three chords, or needed a guitar solo – guidelines the band stuck to closely for their entire career. During their career, The Ramones played over 2,000 shows. Diagnosed with lymphoma in 1995, and given three to six months to live, Joey maintained his health and spirits for five years until a broken hip led to a decline. His death was treated as the end of an era, and given almost the same amount of coverage as the deaths of rock icons John Lennon and Jerry Garcia. Ramone’s first solo album – *Don’t Worry About Me* – was posthumously released in 2002, the same year he entered the Rock & Roll Hall of Fame as a member of The Ramones. In November 2003, the city of New York named the corner of 2nd St. and the Bowery near CBGB as Joey Ramone Place. In September 2005, Ramone was awarded the Heeb Magazine Lifetime Achievement Award at the inaugural Jewish Music Awards.

[David Brinn (2nd ed.)]

RAMOT, BRACHA (1927–2006), physician and medical researcher. Ramot was born in Raseinei, Lithuania. In 1941, after the occupation of Lithuania by the Soviets, she was transferred to Komi in North Russia, where she studied to become a practical nurse (*felsher*) and substituted for a family physician. Simultaneously, she also graduated from an evening high school. She arrived in Israel illegally via Poland and Cyprus in 1947, to be joined by her family 27 years later. During the Israel War of Independence she served in the *Palmah as a nurse. She then studied at the Hebrew University-Hadassah Medical School, from which she graduated in 1952. She did her internship and residency in medicine at the Tel Hashomer (now Sheba) Hospital.

In 1954–56 Ramot trained with Karl Singer in hematology at the Michael Reese Hospital, Chicago, and in 1956–57 at the Albert Einstein College of Medicine with Irving London. Upon her return to Israel, she established the Institute of Hematology at Tel Hashomer Hospital and took an active part in the founding of the Sackler Faculty of Medicine of Tel Aviv University. From 1971 until her retirement in 1994 she was professor and head of the Hematology Section at the Postgraduate School of Medicine, Tel Aviv University. In 1975–79 she was head of the Blood Service of *Magen David Adom and in 1991–96 she was medical director of the Maccabi Health Services. She educated an entire generation of hematologists who became leaders in the field in Israel. In 2001 she was awarded the Israel Prize in medical sciences.

Ramot was involved in a number of fields of basic and clinical research. They included red cell enzymes and cell aging, circadian rhythms of enzymes, variants of glucose-6-phosphate dehydrogenase (G6PD), genetic variants of serum proteins in Jewish ethnic groups and Arabs, and effects of genetic and environmental factors on the hematologic malignancies. She described the clinical and pathologic entity of small in-

testinal lymphoma with malabsorption in Arab and non-Ashkenazi Jewish young adults.

[Bracha Rager (2nd ed.)]

RAMOTH (Heb. רַמּוֹת), Levitical city in the territory of Issachar (1 Chron. 6:58), called Jarmuth in one of the lists apportioning territory to the Levites (Josh. 21:29). In the city list of Issachar, the town is called Remeth (Josh. 19:21). It seems to have been the center of the mountainous district of Yarmutu, which was inhabited by Ḥabiru even before the Israelite conquest; Seti I, in one of his stelae found at Beth-Shean, describes his victory over them in approximately 1300 B.C.E. The suggested identification is with Kokhav ha-Yarden (Ar. Kawkab al-Hawā, the Crusader “Belvoir”), a dominating height (895 ft., 275 m.) overlooking the Jordan Valley; it is possibly identical with the fortress of *Agrippina. The topographical position of the site justifies the name Ramoth (“the Heights”).

[Michael Avi-Yonah]

RAMOT HA-SHAVIM (Heb. רַמּוֹת הַשְּׁבִימִים; “Heights of the Returning”), moshav with municipal council status, in central Israel, near Hod ha-Sharon, affiliated with Ha-Mo‘ezah ha-Ḥakla’it. It was founded in 1933 by middle-class immigrants from Germany, who chose to become farmers although they had been merchants and members of the free professions abroad. As the area initially available for farming was extremely limited, poultry breeding became the principal farming branch. In 1970, Ramot ha-Shavim had 450 inhabitants, growing to around 890 in the mid-1990s and 1,100 in 2002.

[Efraim Orni]

RAMOTH-GILEAD (Heb. רַמּוֹת גִּלְעָד), levitical city of refuge in the territory of the tribe of Gad in N. Transjordan, which was held by the family of Merari (Deut. 4:43; Josh. 20:8; 21:38). Ramoth-Gilead was chosen by Solomon as the capital of his sixth district, which included the villages of Jair and the region of Argob in Bashan (1 Kings 4:13), thus strengthening the assumption that the levitical cities served as administrative centers from the time of David. Its fall to the Arameans in the days of the divided monarchy was regarded as a grievous blow. Ahab, king of Israel, tried to retake it with the help of Jehoshaphat, king of Judah, but fell in the battle (1 Kings 22; 11 Chron. 18); his son Joram was wounded in another attempt (11 Kings 8:28ff.; 11 Chron. 22:5ff.). Jehu was anointed and proclaimed king by a messenger of the prophet Elisha in the camp before Ramoth-Gilead (11 Kings 9). Josephus calls the city Arimanon or Aramatha(h) (Ant., 4:173; 8:399; 9:105). Eusebius identified it with the village al-Ramm in the Jabbok (Onom. 144:4). Modern scholars locate it at Ḥuṣn ‘Ajlūn or at Tell Ramith south of Edrei, near the village of al-Ramta. A fortress of the Israelite period was discovered at the latter site in recent excavations.

[Michael Avi-Yonah]

RAMOT MENASHEH (Heb. רַמּוֹת מְנַשֶּׁה; *ramot*, “heights”), kibbutz in the Manasseh Hills, Israel, affiliated with Kibbutz Arzi ha-Shomer ha-Za’ir. It was founded in 1948 by young immigrants from Poland, including ghetto fighters of World War II, and Bulgaria. Later, immigrants from Chile and Uruguay joined the kibbutz and became the majority among the settlers. In 1970 the kibbutz had 500 inhabitants; in 2002, 447. Its economy was based on partly intensive farming, including field crops in partnership with Kibbutz Ramat ha-Shofet, and dairy cattle. It also manufactured water gauges and was a partner in a metal factory at nearby *Daliyyah.

[Efram Orni / Shaked Gilboa (2nd ed.)]

RAMOT NAFTALI (Heb. רַמּוֹת נַפְתָּלִי; *ramot*, “heights”), moshav E. of the Israel-Lebanese border, Israel, affiliated with Tenu’at ha-Moshavim. It was founded by a group of veteran soldiers called “Irgun Wingate.” Originally a moshav shitufi, Ramot Naftali was the first settlement of demobilized soldiers from World War II. In the *War of Independence (1948), the settlers were in a highly dangerous position and in one instance drove off Lebanese attacking forces after they had already broken into the settlement’s perimeter. Although after the war moshav-born youth, and later new immigrants joined the village, it made little progress, due to a number of difficulties: access to the site, the pumping of water, and reclamation of the mountainous terrain for farming. Deciduous fruit trees and vineyards constituted its prominent agricultural branches. Later, guest rooms became another source of income in the face its declining farm economy. Large areas in the vicinity have been afforested. In 2002 the population of Ramot Naftali was 414.

[Efraim Orni]

RAMSES (Raameses, Rameses; Heb. רַעַמְסֵס, רַעַמְסֵס), ancient city in Lower Egypt. The second but the more important of the two treasury cities which the Hebrews built in Egypt (Ex. 1:11), Ramses is mentioned four further times in the Bible (see also *Pithom). In Genesis 47:11 *Joseph established his family in the land (i.e., region) of Ramses, and in Exodus 12:37 and Numbers 33:3, 5 Ramses was the Israelites’ point of departure from Egypt. Ramses can be hardly any city other than the Delta residence of the Ramessid kings of the Egyptian 19th dynasty, Per-Rameses-Mi’amunpa-ka-a’o-en-pre’-Ḥorakhty (“The House of Rameses-Beloved-of-Amun, the-Great-Ka-Soul-of-Re-Ḥorakhty”), the identification of which was long a subject of controversy among modern scholars. Since it was certainly situated within the eastern Delta, its exact location would shed light on the possible route of the Exodus. It was first thought to have been Pelusium, but the identification was then narrowed down to either Tanis (biblical *Zoan) or Qantir, with the weight of scholarly opinion favoring the latter.

[Alan Richard Schulman]

RAMSES (Egyptian **R^c-ms-sw**; “Re is he that has borne him”; name of several Egyptian rulers of the 19th and the 20th dynasties. Connected with the sun god of Heliopolis, the name is significant for the orientation toward Lower Egypt that accompanied the attempt to regain power over Asia, which had been lost in the Amarna period. Ramses I (c. 1306–1305 B.C.E.) rose to become founder of the 19th dynasty from a non-royal position as vizier. It was left to his grandson Ramses II (c. 1290–1223 B.C.E.) to restore Egypt to her former greatness. His long reign, splendid building activities (additions to the Karnak and Luxor temples, the Ramesseum, the monumental rock-cut temple at Abu Simbel), and numerous offspring (over 100 children) made him a legendary figure for later times. The enlargement of his residence at Tanis, renamed Per-Ramses in his honor, agrees with the biblical record (Ex. 1:11) of the building of *Ramses and *Pithom (Tell el-Maskhuta in the eastern Delta) by the Israelites, and makes him the probable *pharaoh of the Exodus. A battle with the Hittites at Kadesh in his fifth year ended in a stalemate. Campaigns in Palestine, southern Phoenicia, and Edom are attested for the following years. In year 21 of his reign a treaty with Hatti was drawn up in the face of the new common menace embodied in the advancing Sea Peoples. The full impact of these peoples fell on Ramses III (c. 1188–1157 B.C.E.), the son of the founder of the 20th dynasty. He warded off their attack in his eighth year, after they had overrun the Hittites. He also managed to check the Libyans and maintained authority over Palestine. However, after his death by a harem intrigue, Palestine, now settled by Philistines and the Israelites, was forever lost to Egypt. A list of his temple donations shows that increasing wealth accumulated in the hands of the priests of Amun at Thebes. Under his successors (Ramses IV–XI, c. 1157–1085 B.C.E.), political influence was also taken over by the priests, while the might of the rulers steadily declined in a country lacking foreign influence and troubled by poverty and inflation.

[Irene Grumach]

RAN, SHULAMIT (1949–), composer. Born in Tel Aviv, already by age nine she studied composition with Alexander U. *Boskovich and Paul *Ben-Haim and piano with Emma Gorochof. At the age of 14 she moved with her mother to New York on a piano scholarship to the Mannes College of Music where she studied composition with Norman Dello-Joio and piano with Nadia Reisenberg. She continued her studies with Dorothy Taubman (1970–76) and Ralph Shapey (1977). In 1971 she premiered her *Concert Piece* for piano and orchestra as soloist with the Israel Philharmonic Orchestra conducted by Zubin *Mehta. In 1973, she joined the faculty of the University

of Chicago, where she became the William H. Colvin Professor in the department of music. She was visiting professor at Princeton University in 1987.

Ran’s music shows a diversity of styles and flexibility maintained in the process of composing. Her early works are more indebted to modernism than her later ones. Though the emphasis is on the comprehensibility of the music, the result is often an overt expression of a large gamut of sentiments, at times extravagantly so. Being mostly fantasy-like, the works feature great contrasts and have a sharply dramatic profile. Ran explores the dramatic potential of a certain compositional idea or of specific musical instruments and sets musical elements in action similar to theatrical personae in a play.

Her list of works includes *O the Chimneys* for mezzo-soprano, chamber ensemble and magnetic tape (1968); *For an Actor*, monologue for clarinet (1978); *Private Games* for clarinet and cello (1979); *Verticals* for piano (1982); *Amichai Songs* for mezzo-soprano, oboe/English horn, viola da gamba and harpsichord (1985); *Concerto da Camera I & II* (1985 and 1987); *String Quartet No. 2 “Vistas”* (1988/89); *Concerto for Orchestra* (1986); *Inscriptions* for violin (1991); *Legends* for orchestra (1992/93); *Invocation* for horn, timpani and chimes (1994); *Soliloquy* for violin, cello and piano (1997); *Between Two Worlds (The Dybbuk)*, opera (1997); *Vessels of Courage and Hope* for orchestra (1998); and *Voices* for flute and orchestra (2000).

Ran’s numerous honors include an award from the Rockefeller Fund (1968), Ford Foundation (1972), and the Guggenheim Foundation (1977 & 1990). From 1990–97 she served as composer-in-residence with the Chicago Symphony Orchestra and from 1994–97 with the Lyric Opera of Chicago. Her *Symphony* (1989/90) earned her the 1991 Pulitzer Prize in Music and the 1992 Kennedy Center Friedheim Award. In 1998 she received the Koussevitsky Foundation Grant. In 2003 she was elected to the American Academy of Arts and Letters.

[Yuval Shaked (2nd ed.)]

RAND, AYN (Alissa Zinovievna Rosenbaum; 1905–1982), writer and philosopher. Born in St. Petersburg, Russia, she displayed a strong interest in literature and films from an early age. Her mother taught her French and subscribed to a magazine featuring stories for boys, where Rand found her first childhood hero, an Indian army officer in a Kipling-style story. She expressed a passionate enthusiasm for the Romantic Movement and fell deeply in love with the novels of Victor Hugo at the age of 13. She studied philosophy and history at the University of Petrograd. In her diary she expressed intensely anti-Soviet ideas. She loved the philosophical ideas of Nietzsche, and embraced his exaltation of the heroic and independent individual who embraced egoism and rejected altruism in *Thus Spake Zarathustra*. She eventually became critical of Nietzsche, believing his philosophy emphasized emotion over reason. She considered Aristotle her greatest influence by far.

She entered the State Institute for Cinema Arts in 1924 to study screenwriting. The following year, she was granted a

visa to visit American relatives and in 1926, after a brief stay in Chicago, she resolved never to return to the Soviet Union. She set out for Hollywood to become a screenwriter, changing her name to Ayn (rhymes with pine) Rand, a variant spelling of the name of a Finnish writer. While working as an extra in Cecil B. DeMille's *King of Kings*, she met an aspiring actor, Frank O'Conner. They married in 1929. Rand became a naturalized citizen of the United States in 1931. The following year she achieved literary success with the sale of her first screenplay, *Red Pawn*, to Universal Studios. In 1934 she wrote the play *The Night of January 16th*; it was highly successful. She then published two novels, *We the Living* (1936) and *Anthem* (1938).

Her first major professional success came with the best-selling novel *The Fountainhead* (1943), which she wrote over a period of seven years. The theme of *The Fountainhead* is "individualism and collectivism in man's soul." The hero is Rand's ideal, a noble soul, an architect who is firmly and serenely devoted to his own ideals and believes that no man should copy the style of another. The other characters demand that he renounce his values, but the hero maintains his integrity.

Rand's *Atlas Shrugged* (1957), her most extensive statement of her Objectivist philosophy in any of her fiction, became an international bestseller. In the appendix, she asserted: "My philosophy, in essence, is the concept of man as a heroic being, with his own happiness as the moral purpose of his life, with productive achievement as his noblest activity, and reason as his only absolute." Along with Nathaniel Branden, a young philosophy student, his wife, Barbara, Alan *Greenspan, the future head of the Federal Reserve System, and others, members of The Collective, she launched the Objectivist movement to promote her philosophy of individual ability and laissez-faire capitalism. After several years, Rand and Branden's relationship blossomed into an intense romance, despite the fact that both were married. Eventually, the affair led to the Brandens' divorce.

Rand's political views were radically pro-capitalist, anti-statist, and anti-Communist. She had a strong dislike for mysticism, religion, and compulsory charity, all of which she believed helped foster a crippling culture of resentment towards individual human happiness and success. Although she became a cult figure in libertarian circles, her view of selfishness as a virtue and altruism as a vice was a reversal of the traditional Judeo-Christian ethic. In 1985, Leonard Peikoff, a surviving member of The Collective and Rand's designated heir, established the Ayn Rand Institute: The Center for the Advancement of Objectivism.

[Stewart Kampel (2nd ed.)]

RAND, YA'AKOV (1926–), professor of education, specializing in special education. His research contributed to the development of cognitive teaching techniques. Rand was born in Romania, and left for Israel in 1947. Seized by the British, he was sent to Cyprus and finally arrived to Israel in 1948. In 1964 he graduated in psychology and special education from the Hebrew University of Jerusalem and in 1971 he received

his Ph.D. from the Sorbonne. From 1971 he served as a lecturer in the School of Education of Bar-Ilan University, serving as head of the school in 1972. In 1978 he was named dean of the Faculty of Social Sciences, a position he held until 1982. From 1980 until 1983 he was the chairman of the public committee for retarded children. In 1983 he served as the chairman of the committee for advanced studies in Bar-Ilan. In 1989 he became a professor. From 1990 until 1996 he was a member of the Council for Higher Education and from 1991 chairman of its regional college committee. From 1997 he served as academic consultant for Touro College and rector of the Academic Education College Talpiyyot. During these years he was also a visiting professor in universities in the United States and Canada. Rand is a member of many professional and academic associations and societies. He published numerous articles and 10 books. In 2001 he was awarded the Israel Prize for education.

[Shaked Gilboa (2nd ed.)]

RANDALL, TONY (Leonard Rosenberg; 1920–2004). Born in Tulsa, Okla., Randall enrolled as a speech and drama major at Northwestern University in Evanston, Ill., but dropped out after a year and moved to New York, where he studied acting at the Neighborhood Playhouse. In the early 1940s he got a start in radio, appearing in mysteries; his distinctive voice was heard on soap operas like *Portia Faces Life*. He made his New York stage debut in an adaptation of the 13th-century Chinese fantasy *A Circle of Chalk* and later that year appeared in Shaw's *Candida*. After his discharge from the army in 1946, he returned to New York. By 1950 he was appearing in *Caesar and Cleopatra* and two years later he won a role as a teacher in *Mr. Peepers*, playing opposite Wally Cox as his posturing, swaggering sidekick. His portrayal earned him an Emmy nomination and his career took off. He appeared in three Doris Day-Rock Hudson movies: *Lover Come Back*, *Pillow Talk*, and *Send Me No Flowers*, often as the foil to Hudson's romantic leads. He had similar roles in *Let's Make Love* (with Marilyn Monroe) and *Boys Night Out* (with Kim Novak).

Randall was best known for comedy, particularly his signature role as the fussy budget Felix Unger in the classic television series *The Odd Couple* (1970–75), based on Neil *Simon's play and movie. Randall's roommate and temperamental opposite on the show was the slovenly, unkempt, cigar-smoking sportswriter, played by Jack *Klugman. Randall had a great love for repertory theater, and in 1991, with a million dollars of his own money and much more from friends and moneyed associates, he founded the National Actors Theater in New York. Its purpose was to keep the works of playwrights like Ibsen, Chekhov and Arthur *Miller before the public, at a reasonable price. As he gained fame as an actor, Randall became active in a number of causes, including a futile effort to save the old Metropolitan Opera House in New York. He was national chairman of the Myasthenia Gravis Foundation for

30 years, and supported medical and artistic organizations. A member of Congregation Rodeph Shalom in New York, he was also prominent in many Jewish scientific and educational philanthropies.

[Stewart Kampel (2nd ed.)]

RANK, OTTO (original surname – **Rosenfeld**; 1884–1939), psychoanalyst. Born in Vienna, Rank met *Freud in 1906 and became a member of his inner circle. Rank edited with H. *Sachs the psychoanalytic journal *Imago* and with S. Ferenczi and E. Jones *International Zeitschrift fuer Psychoanalyse* (1912–24). He founded and directed the Internationale Psychoanalytische Verlag (1919–24). He had a special flair for interpreting myths, legends, and dreams. His vast erudition was evident in his great work on incest myths, *Das Inzest Motiv in Dichtung und Sage* (1912). He spent the war years in Cracow. E. Jones notes the change that had occurred in him as a reaction to the melancholia he suffered there. He eventually broke with Freud after his book *Das Trauma der Geburt* (1923; *The Trauma of Birth*, 1929) appeared. Freud opposed what he finally considered to be Rank's error in attributing to birth trauma the determination of anxiety and his underemphasis of the role of incest drives and the Oedipus complex. After the split with Freud he left Vienna, finally settling in the U.S. in 1935. Rank applied psychoanalytic theory to the arts and to mythology in his works *Der Kuenstler* (1907; *Art and Artist*, 1932) and *Der Mythos von der Geburt des Helden* (1909; *The Myth of the Birth of the Hero*, 1914).

[Louis Miller]

RANKIN, HARRY (1920–2002), Canadian lawyer and politician. Rankin was born and raised in Vancouver, British Columbia, and became one of the city's most beloved and controversial public figures. During World War II, Rankin served in the Canadian Army Seaforth Highlanders and was twice wounded. Returning to civilian life, he completed a B.A. and law degree in just five years at the University of British Columbia. Staunchly left-wing, Rankin was nearly prevented from taking the bar because he had belonged to the Communist University Club. He went on to become treasurer and a life member of the BC Law Society and was appointed Queen's Counsel. In addition to helping establish the province's first system of legal aid, much of Rankin's work as a lawyer was performed without charge. He was a tireless advocate for tenant rights, the working class, Aborigines, Vancouver's downtown east side, and many disadvantaged groups and individuals. He and his first wife, Jonnie (Ottwell) Rankin, were early members of the city's People's Cooperative Bookstore, and their Vancouver home was a well-known meeting place for leftist political and labor activists. In 1966 Rankin was elected as a City Council alderman, a position that he held for 24 years.

In 1968 he co-founded the Coalition of Progressive Electors (COPE), a socialist municipal political party that eventually broke the conservative domination of city government. Rankin retired from the City Council in 1993, but he continued to pursue high-profile progressive causes and cases until his death. His second wife and widow, Connie Fogal-Rankin, is also a prominent Vancouver lawyer and politician. Following Rankin's death, the BC chapter of the Canadian Bar Association established an annual award in his memory as recognition of Rankin's outstanding contributions in pro bono work.

[Barbara Schober (2nd ed.)]

RANSCHBURG, BEZALEL BEN JOEL (1760–1820), rabbinical author. In accordance with the imperial decree of 1787 (see *Names) he adopted the name “Daniel Rosenbaum” but was later called Ranschburg, the Yiddish pronunciation of the town Ronsperg, the German name for *Pobezovice where he was born. He attended yeshivot at Schwabach, Fuerth, and Prague, where he was a pupil of Leib Fischels and also studied under Ezekiel *Landau. He never held an official appointment and was supported by his wife and her father, but acted as *rosh yeshivah* in Prague. Ranschburg fought Reform (Resp. Hatam Sofer). Among his pupils was Zacharias *Frankel (MGWJ, 45 (1901), 220).

He devoted himself to commenting on those tractates of the Talmud on which there are few commentaries, such as his *Horah Gever* on *Horayot (Prague, 1802) and *Pithei Niddah* (1957; published in Jerusalem 1928 under the title *Hokhmat Bezalel*). His *Sedeh Zofim* on *Asher b. Jehiel's *halakhot* was appended to the Prague Talmud edition (1839–46). His *Ma'aseh Rav* (Prague, 1823) deals partly with tractate *Nazir*. *Haggahot based on it are included in all subsequent editions of the Talmud. Many letters on halakhic subjects which he wrote to the censor Carolus Fischer (partly signed “Ilan Shoshan”) are preserved in the Prague University Library (MGWJ, 62 (1918), 49–56).

BIBLIOGRAPHY: B. Ranschburg, *Horah Gever* (1802), introd.; idem, *Ma'aseh Rav* (1823), introd.; S. Kauder, *Ahavat Emet* (1828), 47b–50b; O. Muneles, *Bibliographical Survey of Jewish Prague* (1952), index.

[Meir Lamed]

RANSOM (Heb. כֹּפֶר, *kofer*), the compensation required to avoid bodily punishment or to free one's self from an undesirable state or condition (Isa. 43:3). The term *kofer* is related to the Akkadian *kapāru* (“to wipe off”) or *kuppuru* (“to expiate”). The substitution of a penal sum for corporal punishment was widespread in the ancient world. Thus, the Hittite Code provides for fixed damages for bodily harm; and the Bedouin, too, allowed for ransom as an alternative to blood vengeance. Except in the case of murder (Num. 35:31–34), the Israelites followed this practice too, though fixed sums do not seem to have existed in early times. Instead the principle of “measure for measure” was employed (Ex. 21:36; Lev. 24:18), together with specific standards for determining the compensation

(Ex. 21:19; 22:16). Later, set amounts were established (Deut. 22:29), such as the “redemption” fees for those consecrated to YHWH (Lev. 27). To be distinguished from *kofer* in the sense of “ransom,” which is paid to an aggrieved party, is *kofer* in the sense of “bribe,” which is paid to a judge in the hope of influencing his decision (1 Sam. 12:3; Amos 5:12).

[David L. Lieber]

***RAOUL (Rodulphus) GLABER** (before 1000–1049?), Benedictine chronicler. In his very comprehensive account of the anti-Jewish persecutions perpetrated in France (and in Germany) at the beginning of the 11th century, Glaber confirms or completes many details of the Hebrew report concerning the same events, in which Jacob b. Jekuthiel of Rouen had become involved. His narrative gives a clearer insight than the Hebrew report as to what extent this persecution gave rise to the idea of the *Crusades. He is also the source of information on a Judaizing movement promoted by Raynaud, Duke of Sens, from 1009, and a similar Judaizing heresy in Lombardy in 1024.

[Bernhard Blumenkranz]

RAPAPORT, DAVID (1911–1960), U.S. clinical psychologist. Born in Hungary, he interrupted his studies in 1933 and for two years lived in a kibbutz in Palestine. He moved to the U.S. and from 1940 to 1948 was a leading figure at the Menninger Foundation, Topeka, Kansas, first as chief clinical psychologist and then as director of research. From 1948 he worked at the Austen Riggs Center, Stockbridge, Massachusetts.

He wrote *Emotions and Memory* (1950) which reflects his continuous attempts at demonstrating the close interaction between the affective and cognitive spheres in mental functioning; *Diagnostic Psychological Testing* (with M.M. Gill and R. Schafer, 2 vols. 1948–49; rev. ed. 1968) presenting his pioneering work in clinical psychology and reflecting the revolutionary transition of psychologists from psychometricians to clinicians; and *Organization and Pathology of Thought* (1951), a monumental annotated source book, in which his copious critical footnotes to excellent translations into English of important contributions to psychology and psychiatry from Europe attempted to create a conceptual framework linking ideas and findings of different thinkers. A visit to Israel in 1953 resulted in his paper “Study of Kibbutz Education and Its Bearing on the Theory of Development” (1957). His works extend from clinical research on the etiology of the psychosis of dementia paralytica to the analysis of different psychodiagnostic instruments. His attempt at systematization of psychoanalytic theory appeared as *The Structure of Psychoanalytic Theory: A Systematizing Attempt* (1960). He was also concerned with the professional status of the clinical psychologist and his training. With David Shakow he wrote *The Influence of Freud on*

American Psychology (1964). His collected papers, edited by M.M. Gill, were published in 1967.

BIBLIOGRAPHY: R.P. Knight, in: *Psychoanalytic Quarterly*, 30 (1961), 262–4; M.M. Gill, in: *Rapaport, Collected Papers* (1967), 3–7; M.M. Gill and G.S. Klein, *ibid.*, 8–31, incl. bibl.

[Avraham A. Weiss]

RAPAPORT, DAVID HA-KOHEN (second half of 17th century), rabbi and Jerusalem emissary. Rapaport’s family originated in Lublin. He emigrated to Erez Israel and settled in Jerusalem, where he served as a *dayyan* in the *bet din* of Moses *Galante. A responsum to a halakhic query from Mordecai ha-Levi, chief rabbi of Egypt, signed by Rapaport, Abraham *Amigo, and Moses ibn Ḥabib, is mentioned in Ha-Levi’s *Darkhei No’am* (*Even ha-Ezer*, no. 18), where he refers to Rapaport as “one of the three great men of Erez Israel” (*ibid.*, 17, 31). In 1679, apparently, Rapaport went as an emissary to Germany, and his mission seems to have terminated in 1682. When he passed through Belgrade he appended his signature in approval to two rulings of Joseph b. Isaac *Almosnino (see *Edut bi-Yhosef*, pt. 1 (Constantinople, 1716), nos. 1 and 3), who refers to him in the most laudatory words, stating that “his decision is final since the *halakhah* is according to him” (*ibid.*, no. 23).

His responsum on the subject of a will in the town of Ḥarta in 1675 is no longer extant, but it was seen by Moses b. Jacob Shilton of Constantinople, who agreed with his decision (*Resp. Benei Moshe* (Constantinople, 1712), no. 4). Rapaport’s responsum is also mentioned in *Shenei ha-Me’orot ha-Gedolim* of Elijah Covo (Constantinople, 1739), pt. 1, nos. 21–22). In 1700 Rapaport signed in Jerusalem the authentication of a Safed bill of debt (*Mishkenot ha-Ro’im* of Uzziel Al-Haik, 1860, 153c). He was the author of *Da’at Kedoshim* (Lehghorn, 1809), source references to the *posekim* – both *rishonim* and *aḥaronim* – on the four sections of the Shulḥan Arukh, arranged alphabetically and published by his grandson Jacob David Jekuthiel, who added his own commentary, entitled *Shelal David*. Rapaport’s novellae together with the sermons and memorial addresses he delivered on various occasions were published under the title *Ben He He* (Lehghorn, 1821).

His son JACOB was rabbi of Safed. His daughter married her relative Judah ha-Kohen Rapaport of Lublin, who emigrated to Jerusalem. Their son ISAAC HA-KOHEN, author of the *Battei Kehunnah*, was rabbi of Smyrna.

[Yehoshua Horowitz]

RAPAPORT, NATHAN (1911–1987), Israel sculptor, born in Warsaw. Rapaport studied in Warsaw, Italy, and France, went to Russia, and settled in Israel in 1948. Among his best-known works are his majestic monument in Warsaw to the *Heroes of the Warsaw Ghetto* and his statue of their commander, Mordecai *Aniliewicz, at Kibbutz Yad Mordekhai, Israel. His monu-

ment to the *Defenders of Kibbutz Negbah* is also famous. Rapaport is a conservative sculptor whose rhetorical, patriotic monuments are characterized by idealization and pathos. In later works he experimented with abstract form.

RAPE (Heb. **זִנְיָה**, *ones*), sexual intercourse with a woman against her will. Unless the contrary be proved by the testimony of witnesses, intercourse with a woman in a place where no one could have come to her aid even if she had cried out (“in the open country,” Deut. 22:25, 27) will be presumed to have occurred against her will. If, however, it happened in a place where she could have summoned help (“in the town,” Deut. 23), but there are no witnesses to testify that she did so, she will be presumed to have been seduced, i.e., to have consented to intercourse (*ibid.* and Sif. Deut. 242:5 and commentaries; Yad, Na’arah Betulah 1:2 and *Hassagot Rabad* thereto). If intercourse took place while she was asleep and thus unaware, she is considered to have been raped because of the absence of her free will. Intercourse with a female minor is always regarded as rape since she has no will of her own (Yev. 33b, 61b; Sh. Ar., EH 178:3 and Beit Shemu’el n.3, thereto). If intercourse began as a forcible violation but terminated with the woman’s consent, she will nevertheless be regarded as having been raped since in such circumstances her passions and nature have compelled her to acquiesce (Ket. 51b; Yad, Issurei Bi’ah 1:9).

Legal Consequences

IN CIVIL MATTERS. A person who violates a virgin *na’arah* (between the ages of 12 years and one day and 12 years and six months) must pay a fine at the fixed amount of 50 shekels of silver (Deut. 22:28–29), as well as compensation for pain and suffering, shame, and blemish, which is to be assessed according to the circumstances in each case (Yad, Na’arah Betulah 2:1–6; see *Damages). If the *na’arah* is seduced, the seducer is liable to pay the same fine and compensation, but in view of her consent is not liable for compensation for pain and suffering (*za’ar*; *ibid.*). Since when laying down the liability for the fine the pentateuchal law speaks of a *na’arah* only, there is no liability for a fine upon the rape or seduction of a *bogeret* i.e., a girl above the age of 12 years and six months (Yad, *ibid.* 1:8), but compensation for pain and suffering, shame, and blemish is due if she was raped (Tur, EH 177, contrary to Yad, *ibid.* 2:10, 11). The seducer of a *bogeret* is exempt from all financial liability toward her since, having consented to the intercourse, she is presumed to have waived all such claims (Ket. 42a; Yad, *ibid.*; Beit Yosef, EH 177).

IN PERSONAL LAW MATTERS. In addition to the financial liabilities mentioned above, the violator of a *na’arah* is compelled to marry her, “She shall be his wife... he cannot put her away all his days” (Deut. 22:29), unless marriage between them is prohibited by the pentateuchal or rabbinic law (see *Marriage, Prohibited). However, for the reasons set out above concerning the fine, this obligation does not apply if the victim is a *bogeret* (Ket. 39a; Yad, *ibid.* 1:3; 5:7; Resp. Radbaz, no. 63; Glosses

(*haggahot*) of Akiva Eger to Sh. Ar., EH 177:2). The *na’arah* or her father may refuse her marriage to the violator, in which event the transgressor will be exempt from the obligation to marry her and be liable only for the fine and the other payments (Yad, *ibid.* 1:3; Sh. Ar., EH 177:3). A person who seduces a *na’arah* has no obligation to marry her (Yad, *ibid.*). A married woman who has been raped does not become prohibited to her husband unless he is a priest, in which case he must divorce her (Yev. 56b; Yad, Ishut 24:19, 21; Sh. Ar., EH 6:10, 11; see also *Marriage, Prohibited). The outraged wife’s pecuniary rights toward her husband, in particular her **ketubbah*, remain unaffected in both cases since there is no blameworthiness on her part (Yad, *ibid.* 24:22; Sh. Ar., EH 115:6).

In suits concerning matters of rape and seduction the court must be composed of three competent ordained judges (*mumḥim semukhim*), and, therefore, in strict law the fine (see above) is no longer recoverable since today there are no *semukhim* (see **Bet Din*); in various *takkanot*, however, the scholars have nevertheless regulated for recovery of the fine, “lest the sinner be rewarded” (Tur, EH 177; Sh. Ar., EH 117:2; Resp. Radbaz, no. 63; see also **Fine*).

In the State of Israel

Of practical significance is the *halakhah* concerning the effect of rape on the marital relationship between the victim and her husband, since this is a matter of personal law which for Jews is governed by Jewish law. The purely civil-law aspects, such as the question of compensation, are governed before the civil courts by the general law of the state, i.e., the Civil Wrongs Ordinance, 1946 (NV 1968). The provision that a person must marry the *na’arah* he has violated is rendered unenforceable by the provisions of the Marriage Age Law, 1950, as amended in 1960.

[Ben-Zion (Benno) Schereschewsky]

RAPHAEL, one of the chief angels. The name occurs in the Bible (1 Chron. 26:7) but not yet as an angelic name, first appearing as such in the Apocrypha (Tob. 12:15 and 1 En. 20:3), where he is one of the seven archangels. In angelological systems built upon four archangels, he is one of the four; the others are Michael, *Gabriel, and *Uriel or Suriel (1 En. 9:1–3). He defeats the demon Asmodeus (Tob. 3:17) and binds *Azazel, chief of the demons, throwing him into the abyss (1 En. 10:4). As his name implies (“God is healing”), he is the angel set over all kinds of healing and this is his main function. The Talmud (Yoma 37a; BM 86) knows of him as one of the three angels who came to visit Abraham after he had circumcised himself. From the second century on, Jewish traditions refer-

ring to Raphael were taken over by both Christian angelology and syncretistic magic. His name occurs frequently in magical papyri in Greek and Coptic, on amulets, and in many Jewish and Mandaean incantations. As a planetary angel he governs the sun, and in the division of the four corners of the world he commands the west. He is one of the four angels of the Presence who stand on the four sides of God, a notion taken over into the prayer at bedtime: "to my right Michael and to my left Gabriel, in front of me Uriel and behind me Raphael, and over my head God's *Shekhinah* ["the presence of God"]." According to esoteric Midrashim, his original name was Laviel or Buel but the name was changed to Raphael when he defended against the other angels God's decision to create man. In kabbalistic literature he keeps his high rank and is credited with many missions and functions. Among the four elements he governs earth; in the colors of the rainbow he represents green. M. Recanati even sees him as the angel who governs primordial matter before it divides up into the four elements. According to others, he commands the host of angels known as the *ofannim*. He is also ordained over one of the four rivers coming out of paradise. In the Zohar he is the angel who dominates the morning hours which bring relief to the sick and suffering.

[Gershom Scholem]

RAPHAEL, ALEXANDER (1775–1850), English merchant. Born in Madras (India) of Persian Jewish parentage, Raphael settled in England and built up a considerable fortune as a stockbroker in the City of London. Having become converted to Roman Catholicism, he was sheriff of London in 1834 and was elected to the House of Commons as a Liberal in 1835 and again in 1847–50. He was one of the two Roman Catholic M.P.s who opposed Jewish emancipation, notwithstanding the fact that their own religious disabilities had been removed so recently. Although he was not the first person born a Jew to be elected to the English parliament, his career is of interest as typifying the assimilatory potentialities of even an Oriental Jew in early 19th century England. There is some doubt about his ancestry: it is possible that his mother was not Jewish.

BIBLIOGRAPHY: A.M. Hyamson, in: *JHSET*, 16 (1952), 225–6.

[Cecil Roth]

RAPHAEL, CHAIM (1908–1994), author and scholar. Born in Middlesborough, he lectured in post-biblical Hebrew at Oxford (1932–39), became a civil servant, and was head of the information division of the British Treasury (1959–68) before returning to academic life as a Jewish social historian. Raphael wrote thrillers such as *The Naked Villany* (1958) under the pen-name of Jocelyn Davey; the autobiographical *Memoirs of a Special Case* (1962); and several books on Jewish history

and practice, including *The Walls of Jerusalem* (1968), on the destruction of the Temple in history and legend, *The Springs of Jewish Life* (1983), and *The Sephardi Story* (1991).

RAPHAEL, FREDERIC (1931–), English novelist and scriptwriter. Born in Chicago of an American mother and a British father, Raphael was taken to England by his parents in 1938. His first novel, *Obbligato*, was published in 1956 and *The Earlsdon Way*, a study of suburban life, in 1958. Other books included *Orchestra and Beginners* (1967) and *Like Men Betrayed* (1970).

Jewish themes dominate two of Raphael's novels, *The Limits of Love* (1960) and *Lindmann* (1963). The former traces the development of three children of a lower-middle-class London Jewish shopkeeper from the years immediately after World War II up to the Suez Campaign and the Hungarian Revolt in 1956. A family chronicle in form, this novel touches vividly upon a number of social themes. *Lindmann* is different in form and conception. It is a brilliant tour de force, based on the tragic fate of the SS Struma which sank in Turkish waters with its cargo of "illegal" immigrants during 1941.

Raphael won an Academy Award for best screenplay for the 1975 film *Darling*, one of many film scripts he wrote. Later books included *Richard's Things* (1973), *California Time* (1975), *The Glittering Prizes* (1976) – which became a popular television serial – and *Heaven and Earth* (1985). These too evince Raphael's perpetual preoccupation with Jewish themes such as antisemitism, the specter of the Holocaust, and the pull toward assimilation. He also wrote a biography, *Somerset Maugham and His World* (1977), and several books of short stories. Raphael wrote most of the screenplay for Stanley Kubrick's controversial last film, *Eyes Wide Shut* (1999), and a book about his dealings with the filmmaker, *Eyes Wide Open: A Memoir of Stanley Kubrick* (1999).

[Shulamit Nardi / Rohan Saxena (2nd ed.).]

RAPHAEL, GIDEON (1913–), Israeli civil servant. Raphael was born in Berlin and immigrated to Erez Israel in 1934. Prior to the establishment of the State of Israel he served in the Political Department of the Jewish Agency, and after its establishment he joined the Ministry for Foreign Affairs and was a member of its Israeli delegation to the United Nations until 1953. In September of that year he returned to Jerusalem on his appointment as head of the Department of the Middle East and of United Nations Affairs in the Foreign Ministry. In 1957 he was appointed ambassador to Belgium and Luxembourg, and from 1960 to 1965 was a deputy director-general of the Foreign Office. From September 1965 to April 1966, Raphael served as Israel's representative to the European Office of the United Nations in Geneva, and in February 1967 was appointed permanent representative of Israel to the United Nations. In 1968 he was appointed director-general of the Ministry for Foreign Affairs. From 1972 until January 1974

he served as senior adviser to the foreign minister, when he was appointed ambassador to England and Israel's first non-resident ambassador to Ireland. Upon his return to Israel in 1977 he was appointed political adviser to the foreign minister, retiring in 1978. In 1981 he published his memoirs *Destination Peace*.

RAPHAEL, JOHN (Nathaniel, known as "Percival"; 1868–1917), author, critic, and journalist. He reported the *Dreyfus case for *The Daily Mail* and was Paris correspondent for various British periodicals. Raphael's plays include *The Uninvited Guest* (1911), based on a drama by Tristan *Bernard, and a French adaptation of *Potash and Perlmutter* by Montague *Glass (1916). He also wrote books about Paris and made translations from the French.

RAPHAEL, MARK (Marco; c. 1460–after 1534), Italian rabbi converted to Christianity by Francesco *Giorgio, who acted as his godfather. Raphael played an important role in the theological controversy engendered by the divorce suit brought by Henry VIII against his wife Catherine of Aragon and instituted at Venice by the secret envoy of the king, Richard Croke. Associated with the kabbalistic circles which were influential at the time, as well as with the most erudite of the hebraizing humanists in Venice, Raphael entered the service of the Venetian republic in 1525, which made him a grant for having invented an improved invisible ink. He ranged himself on the side of the king in 1529. Although many eminent rabbis of Venice had been consulted, including Kalonymus b. David, Elijah Menahem *Halfan, and Baruch (Bendit) Axelrod ben Eleazar, as well as Solomon *Molcho, Henry VIII attached the greatest weight to Raphael's opinion. Raphael wrote a number of theological treatises in Hebrew, still not discovered, at the instigation of Giorgio, who translated them for the king. The quality of his arguments, which varied according to need, and his vast erudition were feared by the king's opponents. Warmly recommended by Giorgio to Henry VIII, Raphael was invited to England in 1530, and he remained in the king's service for several years, accompanying him on his visit to France in 1532, serving him in the most diverse capacities and receiving substantial rewards. Henry VIII even sent him on a mission of investigation to the Welsh silver and iron mines. He was still alive in 1534, when he complained about his lack of means to his protector Thomas Cromwell.

[J.-F. Maillard]

RAPHAEL, RALPH ALEXANDER (1921–1998) British organic chemist. Raphael was born in Croydon, Greater London, and educated at Wesley College, Dublin and Tottenham

County School, where he was inspired to study science by Edgar Ware. He graduated B.Sc. (1941), Ph.D. (1943, under the supervision of I. Heilbron and E.R.H. Jones), and D.Sc. (1952) from Imperial College of Science and Technology, University of London. Raphael was head of the chemotherapy research unit of the pharmaceutical company May and Baker (1943–46) and then ICI research fellow at Imperial College (1946–49). He was lecturer in chemistry at Glasgow University (1949–54) before his appointment as the first professor of organic chemistry at Queen's University, Belfast (1954–57), where he established a new department. He returned to Glasgow University as Regius Professor of Chemistry (1957–1972). Later, he was appointed professor of organic chemistry at Cambridge University and Fellow of Christ's College (1972–88). Raphael's research started with his Ph.D. thesis and mainly concerned the chemistry of acetylenic compounds and their application to the synthesis of a wide range of novel products derived from natural substances. He was the first to synthesize penicillanic acid and linoleic acid. He synthesized novel compounds related to carbohydrate synthesis and many other compounds of great theoretical and practical importance. He also developed new pathways for synthesizing histamine and many alkaloids. He was an outstanding teacher and he established thriving research and teaching departments in the universities where he held chairs. He served on the governing committees of his own and other universities and of the societies with which he was associated. His many honors included election to the Royal Society of London (1962) and the award of its Davy Medal (1981), the Ciba-Geigy Award for Synthetic Chemistry (1975), and appointment as C.B.E. (1982). He was visiting professor at the Haifa Technion and the Hebrew University of Jerusalem (1981). He married the violinist and violist Prudence Gaffikin (1944). He was passionately interested in music and the improvement of violin tone by utilizing his chemical expertise. He was a noted raconteur of Jewish humor.

[Michael Denman (2nd ed.)]

RAPHAEL, WILLIAM (1833–1914), artist and teacher. Raphael is Canada's first known professional Jewish artist. He was born into a religious home in East Prussia and studied at the Royal Academy of Berlin and emigrated first to New York and then to Montreal in 1857. Here he produced mainly genre scenes, landscapes, and portraits in the Biedermeier realist tradition. His earliest livelihood derived from portrait commissions in Montreal, Quebec City, and Trois Rivières and from photography-based art for William Notman. In Jewish public spaces, portraits remain of Dr. Aaron David Hart, ophthalmologist, and Dr. Abraham David *de Sola, rabbi of the Spanish and Portuguese Synagogue. Raphael loved the Canadian landscape and its indigenous peoples and habitants, both of which became part of his lively genre scenes and site-specific landscapes. He created artistically rendered drawings in *Behind Bonsecours Market, Montreal*, 1866, (where he includes himself as the immigrant artist clutching his portfolio and family menorah), *Habitants Attacked by Wolves*, 1870 (made

into the first Canadian chromolithograph for distribution by the Art Association), and his Murray Bay Indian Encampment scenes. Raphael painted religious subjects for Catholic institutions and taught in those institutions as well. Canadian artist Wyatt Eaton received his first art lessons with him before 1867. Raphael also taught at Montreal High School; the Art Association of Montreal (the first teacher of "Figure Painting and Drawing" there, 1881); the Sisters of St. Anne Convent (where he trained nuns to teach art); and the Villa Maria Convent and society pupils at Raphael's private art school from 1885. One of his nine children, Samuel, became an artist in New York. Raphael was a charter member of the Royal Canadian Academy and the Society of Canadian Artists. He was a member of the Art Association of Montreal; the Ontario Society of Artists; the Pen and Pencil Club of Montreal; and the Council of Arts and Manufacturers of Quebec. Raphael was also a founder of the National Gallery of Canada and of Montreal's first Reform temple, Temple Emanuel.

[Sharon Goelman (2nd ed.)]

RAPHAEL (Werfel), YITZHAK (1914–1999), Israeli religious politician, member of the Second to Eighth Knessets. Born in Sasov, East Galicia, Raphael went to a *heder*, and then studied at a yeshivah in Lublin. Raphael moved to Lvov in 1929, where he studied in a gymnasium. He was one of the founders of the *Bnei Akiva movement and a member of the Torah va-Avodah leadership in Galicia. Raphael settled in Palestine in 1935. He received a second degree from the Hebrew University in the arts, and a doctorate from the Jewish Theological Seminary in New York. In the years 1940–46 he edited the weekly *Bamishor*. In the Jewish Agency he was director of the department for small businesses. In 1944 he became a member of the Va'ad Le'ummi. In the years 1947–48 he was a member of the Jerusalem Committee, and in 1948 was the director of the office that provided for those wounded in the course of the War of Independence. In the years 1948–53 he was a member of the *Jewish Agency Executive, and head of its Aliyah Department during the period of mass immigration. He was a member of Ha-Po'el ha-Mizrachi, and later of the *National Religious Party. Raphael was first elected to the Second Knesset. In the Knesset he was a member of the Foreign Affairs and Defense Committee. In the years 1961–65 he served as deputy minister of health. During this period he started to edit *Sinai*, a monthly on Judaica. In 1965 he was implicated in an affair involving one of his employees, who was imprisoned on charges of extortion, and resigned from his ministerial post in 1965. He was finally acquitted of complicity in this affair by the Tel Aviv District Court. In the years 1974–76 he was minister of religious affairs. After abstaining in a vote on a motion of no confidence in the government, against the background of the alleged desecration of the Sabbath as a result of an official ceremony held when new fighter aircraft arrived from the U.S. on Friday afternoon, the Na-

tional Religious Party ministers, including Raphael, were dismissed from the government.

Raphael was chairman of Mossad ha-Rav Kook and Yad ha-Rav Maimon, and a member of the Party Executive and of the World Center of ha-Mizrachi-ha-Po'el ha-Mizrachi. In 1979 he received the Bialik prize for Jewish knowledge.

Among his writings are an autobiography *Lo Zakhiti ba-Or min ha-Hefker* (1981) and a book on Ḥasidism. He was also an encyclopedia editor on religious Zionism in the *Enziklopedyah shel ha-Ziyyonut ha-Datit*, 3 vols. (1958–65), and on Ḥasidism, in the *Enziklopedyah le-Ḥasidut* (2000).

[Susan Hattis Rolef (2nd ed.)]

RAPHAEL OF BERSHAD (d. between 1816 and 1826), ḥasidic *zaddik*. Raphael was a close disciple and successor of Phinehas of *Korets, who thought highly of him. After Phinehas' death many of his followers became Raphael's disciples. He introduced several customs and liturgical elements ("the Bershada liturgy") that differed from the accepted ḥasidic style and came closer to the Ashkenazi rite. His followers remained a distinct group after his death, although he had no successor. There are many legends about him and some of his sayings were published in *Midrash Pinhas* (1872), most of which is still in manuscript.

RAPHAELSON, SAMSON (1894–1983), U.S. playwright and screenwriter. After graduating from the University of Illinois, the Manhattan-born Raphaelson worked at various jobs, including English literature professor at his alma mater, advertising account executive, and crime reporter at the *New York Times*. *The Jazz Singer* (1926) was Raphaelson's first and best-known play. A story of assimilation, it told how a young Jew breaks with his family's tradition of being cantors to become a jazz singer. In 1927, Raphaelson adopted *The Jazz Singer* for the screen and it became the first "talkie." Raphaelson's 1934 play, *Accent on Youth*, was turned into a film in 1935. It was redone in 1950 as *Mr. Music* and in 1959 as *But Not for Me*. Other Raphaelson plays that later became movies include *Sky-lark* (1941), *Bannerline* (1951), from his play *A Rose Is Not a Rose*, and *Hilda Crane* (1956). In 1941, Raphaelson wrote the Alfred Hitchcock classic *Suspicion*. Raphaelson characterized his work as "sophisticated comedy," which went well with director Ernst *Lubitsch's style. The two often worked together, and Raphaelson was the screenwriter for *The Smiling Lieutenant* (1931), *Broken Lullaby* (1932), *One Hour with You* (1932), *Trouble in Paradise* (1932), *The Merry Widow* (1934), *Angel* (1937), *The Shop Around the Corner* (1940), and *Heaven Can Wait* (1943). Other Raphaelson films include *Caravan* (1934), *Ladies Love Danger* (1935), *Green Dolphin Street* (1947), and *That Lady in Ermine* (1948). From 1978 to 1982, Raphaelson taught screenwriting at Columbia University. Raphaelson was Robert *Rafelson's uncle.

[Susannah Howland (2nd ed.)]

RAPHALL, MORRIS JACOB (1798–1868), rabbi. Raphall, who was born in Stockholm, Sweden, settled in England in 1825. He quickly became prominent in British Jewry and one of its chief exponents to the Christian world, fighting for the political rights of Jews and against defamations of Judaism. He published *Hebrew Review and Magazine of Rabbinical Literature* (3 vols., October 1834–July 1836), the first Jewish periodical in England, and, with David Aaron de *Sola, he produced the first translation of parts of the Mishnah into English, *Eighteen Treatises from the Mishna* (1843; 1845²). In 1849 Raphall went to the U.S. to serve as rabbi of B'nai Jeshurun Synagogue in New York. There he associated himself with Isaac *Leeser and S.M. *Isaacs and preached against Reform. His lectures on Jewish history attracted large crowds, including many Christians. In 1860 he gave the first invocation by a rabbi before the House of Representatives.

At the peak of the secession crisis, on Jan. 4, 1861, a day President Buchanan had proclaimed a National Fast Day, Raphall delivered what became the most highly publicized rabbinical statement on the “Bible and Slavery.” Placing Judaism squarely in opposition to abolitionism, he denied that any statement in the Bible could be interpreted to prohibit slavery, and insisted that, on the contrary, biblical law granted the right to own slaves. He did distinguish between biblical slavery and the southern system; the Bible, he said, regarded the slave as a person, whereas Southerners treated the slave as a thing. But he directed his major attack against the abolitionists for their misrepresentation of the Bible and their agitation against the legitimate right of slaveholding. The sermon was widely reprinted, drawing praise throughout the South and criticism from Jewish and non-Jewish abolitionists in the North. A notable reply came from the Reform leader and abolitionist Rabbi David *Einhorn.

An active fund-raiser on behalf of the needy, Raphall was particularly concerned for the poor of Palestine. His books include *Ruhamah: Devotional Exercises for the Use of the Daughters of Israel* (1852), *Post-Biblical History of the Jews* (2 vols., 1855), and *Path to Immortality* (1859).

[Jack Reimer]

RAPKINE, LOUIS (1904–1948), biochemist. Rapkine was born in Russia, taken to Canada in 1911, and settled in France in 1924. As early as 1932 he became involved with the plight of European victims of racial and political discrimination and in 1934 set up in France the “Comité d'accueil des savants étrangers” to find work for academic refugees. During the war he went to the United States, where he worked tirelessly and managed to rescue a group of men of science and their families. When American legislation made it difficult for this group of foreign scientists to work for the allied war effort, Rapkine arranged for them to be transferred to the United Kingdom,

where he became head of a French Scientific Mission. In 1946 he followed his group back to France to continue his research in a department of cellular chemistry created for him at the Pasteur Institute. He also devoted much of his energy to getting French science back on its feet.

RAPOPORT (Rappoport; also Rapaport or Rappaport), common surname among Jews in Italy, Germany, Poland, and Russia. The family was descended from Abraham Menahem b. Jacob ha-Kohen Rapa who lived in Porto, Italy, at the beginning of the 16th century. The name Rapa originated in the German *Rabe* (*Rappe* in Middle High German), i.e., a raven. In order to distinguish themselves from other members of the Rapa family, the members of this family added the name of the town of Porto, and thus the name Rapoport was formed. (According to another version, this came about by a marriage between the Rapa and Porto families.) The family escutcheon of Abraham Rapa of Porto shows a raven surmounted by two hands raised in blessing (indicating the family's priestly descent). In the course of time other families, including some who were not *kohanim*, took the name of Rapoport.

Known from the 17th century were David ha-Kohen *Rappaport of Lublin and SOLOMON BEN NAḤMAN HA-KOHEN, who officiated as a rabbi in Dubno, Grodno, and Lublin. In the 18th century there were ḤAYYIM BEN SIMḤAH HA-KOHEN RAPOPORT (c. 1700–1771), rabbi in Slutsk and Lvov, who took part in the disputation with the Frankists in Lvov in 1759 and was the author of *Zekher Ḥayyim* (Lemberg, 1865), responsa and funeral orations. His brother, BENJAMIN BEN SIMḤAH HA-KOHEN RAPOPORT, a *Maggid* in the community of Brzezany (Berezhany), Galicia, wrote *Gevulot Binyamin* (Lemberg, 1789), containing novellae on the Torah, and a commentary on the Passover *Haggadah*. Isaac ben Judah ha-Kohen *Rappaport officiated as rabbi at Smyrna. He died in Jerusalem, having published responsa and homilies *Battei Kehunnah* (Smyrna, 1736; Salonika, 1754²). In the 19th century Benjamin Ze'ev Wolf ha-Kohen ben Isaac *Rappoport (1754–1837) officiated as rabbi in Papa, Hungary. He was known for the lenient decisions in his responsa, which caused the extreme Orthodox Mordecai *Banet and Moses *Sofer to demand his dismissal. He opposed Kabbalah and Ḥasidism. He wrote *Simlat Binyamin* (Dyhernfurth, 1788), *Simlah Sheniyyah* (Vienna, 1800), and responsa *Edut le-Yisrael* (Pressburg, 1839).

The most important member of the Rapoport family in the 19th century was Solomon Judah Leib *Rappoport (“Shir”). His grandson, ARNOLD RAPOPORT (b. 1840), a leader of the assimilationists in Galicia, was a deputy of the Austrian Reichsrat from 1879 to 1907 representing the Polish party. He was popular among the Jewish masses in Galicia for founding relief organizations. In 1890 he was ennobled, receiving the title von Porada.

Members of the family well known in Russia in modern times were the Russian-Yiddish journalist SIMON RAPA-

PORT; the author and folklorist Solomon Zainwil Rapoport (S. *An-ski); and the socialist leader and writer Charles *Rapoport. ALEXANDER RAPOPORT (1862–1928), a publisher in Russia, was the last owner of the Hebrew newspaper *Ha-Meliz* as well as the publisher of *Der Fraynd*, the first Yiddish daily in Russia.

[Yehuda Slutsky]

RAPOPORT, ABRAHAM BEN ISRAEL JEHIEL HAKOHEN (1584–1651), Polish talmudist and halakhic authority. Abraham was born in Cracow, and studied in the yeshivah there under Meshullam Feivush of Zbarazh. He married the daughter of Mordecai Schrenzilsh, a wealthy man of distinguished ancestry from Lvov, and adopted his surname, becoming known as Abraham Schrenzel of Schrenzilsh. In Lvov he studied under Joshua ben Alexander *Falk. Although one of the outstanding scholars of his time, Abraham did not take up a rabbinical position, and taught in a voluntary capacity for more than 40 years in the yeshivah of Lvov. He was prominent in the *Council of the Four Lands, and was placed in charge of the collection of funds for the needy in Erez Israel.

Rapoport's most important work is his *Eitan ha-Ezrahi*, published by his grandson Abraham, the rabbi of Baslov (Ostrow, 1796). It is divided into two parts, the first containing more than 50 responsa, and the second including sermons arranged according to the weekly sections of the Pentateuch, together with a commentary on the Five Scrolls and parts of Psalms and Proverbs. Rapoport's genealogy appears at the end of the work. In addition to its halakhic value, *Eitan ha-Ezrahi* contains much important historical material, biographies of rabbis and heads of yeshivot, and details of the economic and moral state of the Polish communities of the time. Some responsa shed light on the Chmielnicki massacre (1648–49) which occurred during his lifetime. From the introduction to *Eitan ha-Ezrahi* it appears that Rapoport left many writings in manuscript, which were destroyed during various upheavals which occurred after his death.

[Shlomo Eidelberg]

RAPOPORT, BENJAMIN ZE'EV WOLF HA-KOHEN BEN ISAAC (1754–1837), Hungarian rabbi. His father Isaac and his grandfather came from Fuerth in Germany to Nikolsburg, where Benjamin was born. In 1771 Rapoport went, as was the custom with many Moravians, to nearby Hungary in order to evade the ban on Jewish marriages of other than the eldest son in force at the time in Moravia (see *Familiants Laws). He settled in Obuda (now part of Budapest) and married the daughter of David Boskovitz, one of the leaders of

the community. He lived with his father-in-law for ten years, engaging in studying and teaching. In 1781 he was appointed rabbi of the community of Pápa in Hungary, where he served until his death. This community, founded in 1749, made considerable progress during the period of his office. Because of his comparatively liberal attitude, differences between him and the influential rabbis of the time, particularly Moses *Sofer and Mordecai *Banet, increased. These two rabbis were opposed to his methods of study and teaching as well as to his halakhic rulings, even attempting to oust him from his rabbinic office. Rapoport was opposed to *Hasidism and to the study of *Kabbalah. A dispute, which exercised Jewish communities in Central Europe for many years, also developed between him and Moses Sofer with regard to Jonathan Alexandersohn, rabbi of Hejőcsaba in Hungary. Like R. *Schwerin-Goetz, Rapoport supported the attacked Alexandersohn, while Moses Sofer was opposed to him, even invoking the secular government, but his community supported him.

Rapoport published during his lifetime, *Simlat Binyamin u-Vigdei Kehunnah* (Dyhrenfurth, 1788) on the Shulhan Arukh *Yoreh De'ah*, but he left a number of works in manuscript, some of which were published after his death, among them *Edut le-Yisrael* on tractate *Makkot* with additions by his son (Pressburg, 1839). It constitutes the third part of his *Masat Binyamin*.

[Yehouda Marton]

RAPOPORT (Rappaport), SAMUEL (1871–1943), rabbi, folklorist, and religious Zionist. Born in Lemberg, Rapoport studied in Germany and then returned to Galicia where he managed the family estate at Kalinka near Zloczow. An ardent (pre-Herzlian) Zionist from his youth, he was active and prominent in the Zionist movement from its beginning, participating in Zionist Congresses from 1898. Rapoport was co-founder of the *Mizrachi and the leader of its East Galician branch. During World War I, the Austrian government appointed him honorary rabbi of Zloczow, in which post he remained to the end. He was a victim of the Holocaust. His scholarly interests were in Jewish folklore, Hasidism, and Kabbalah.

In 1906 he published in Polish a work on the psychology of Hasidism, and also wrote a historical study in German on the Hanukkah festival (1912). His main work, *Werdegang und Charakteristik des religioesen Lebens der Ostjuden*, was not completed, but a number of chapters appeared in M. Buber's *Der Jude* from 1917–23. These gave western Jews an insight into the rich religious and cultural life of Eastern Jewry. Rapoport also wrote the articles on Jewish folklore for the *Juedisches Lexikon*.

RAPOPORT (Rappaport), SOLOMON JUDAH LEIB (known by his acronym **Shir**; 1790–1867), rabbi and scholar, pioneer of Haskalah and *Wissenschaft des Judentums. Rapoport, born in Lemberg, Galicia, received a traditional education and became known for his brilliance as a talmudist. Under the influence of Nachman *Krochmal he took an early interest in Haskalah and secular learning, studying classical, Semitic, and modern languages, as well as science. Supported at first by his father-in-law Aryeh Leib *Heller, who was one of the leading talmudists of his time, Rapoport later had to take the position of a manager of the government kosher-meat tax. Without income again in 1832, Rapoport tried unsuccessfully to obtain a rabbinical position in Berlin and in Italy through recommendations by L. Zunz and S.D. Luzzatto, but his German was poor and he had no university education. After a period in business in Brody, he became rabbi of Tarnopol (1837), where he had to contend with the violent opposition of the Hasidim, whom he had attacked in a pamphlet (*Ner Mitzvah*, in: *Naḥalat Yehudah*, 1868) in defense of Haskalah in 1815 (see also his introduction to *She'ërit Yehudah*, in: *Bikkurei ha-Ittim*, 8, 1827). Rapoport was appointed chief rabbi of Prague in 1840, successfully opposing the candidacy of Zevi Hirsch *Chajes for the same position.

After some youthful efforts at poetry and drama, including a paraphrase of Racine's *Esther* entitled *She'ërit Yehudah* ("The Remnant of Judah," first published in *Bikkurei ha-Ittim*, 8, 1827), Rapoport turned to Jewish scholarship, publishing articles in *Bikkurei ha-Ittim* and *Kerem Hemed*. Dealing with biblical subjects, he considered the Book of Judges a composite work, certain Psalms to be post-Davidic, and some chapters in Isaiah as belonging to a later prophet. His real mark on Jewish scholarship was made in a series of bibliographical studies of the geonic leaders Saadiah, Hai, Hananel b. Ḥushi'el, Nissim b. Jacob, and Hefez b. Yazli'ah, and of Eleazar ha-Kallir and Nathan b. Jehiel of Rome, author of the *Arukh* (published in *Bikkurei ha-Ittim*, 1828–31; and also separately and posthumously under the title *Yeri'ot Shelomo*, 1904, repr. 1913 and 1960). These studies illuminated a relatively obscure period of Jewish history and paved the way for later research; moreover, they set a new standard of critical methodology to be applied to the history of rabbis. In them Rapoport traced the migration of rabbinic scholarship and tradition from Erez Israel through Italy to Central and Western Europe, and from Babylonia through North Africa to Spain.

Of importance, too, was his *Erekh Millin*, a talmudic encyclopedia dealing mainly with historical and archaeological aspects of the Talmud (vol. 1 (1852); the rest, 1914). Rapoport also wrote an introduction to Abraham b. Ḥiyya's ethical treatise *Hegyon ha-Nefesh* (ed. by Freimann, 1860, reprint 1967). Rapoport wrote articles for Abraham Geiger's *Wissenschaftliche Zeitschrift*, Julius Fuerst's *Orient*, and Zacharias Frankel's *Zeitschrift fuer die religioesen Interessen des Judentums* and became editor of **Kerem Hemed*. He was in close contact with these and other leading figures of the *Wissenschaft des Judentums* (see his correspondence in A. Harkavy, *Zikkaron*

la-Rishonim (vol. 2, pt. 1, 1881); *Iggerot Shir*, ed. by S.E. Graeber (1885); M.S. Ghironi, *Peletat Soferim* (1890); and B.Z. Dinaburg-Dinur (in *KS*, 3 (1927), 222–35; 306–19). Rapoport took a moderate line against radical writers such as Geiger (see his *Or Torah*, a detailed criticism of the latter's *Urschrift*, in: *Naḥalat Yehudah*, published posthumously in 1868 by Rapoport's son David). He strongly opposed the decisions of the Rabbinical Conferences held by the German Reform rabbis (1844–46), both for the divisive character of the proposed reforms and for the assimilationist tendencies which inspired them, but even so did not exclude the reformers from the Jewish people as long as they considered themselves Jewish (*Tokhaḥat Megullah*, with German translation by R. Kirchheim, 1845). Like Krochmal and Luzzatto, he wanted to see the national character of Judaism preserved. When Frankel's *Darkhei ha-Mishnah* was attacked by Samson Raphael *Hirsch and others on dogmatic grounds, Rapoport came to his defense (*Divrei Shalom ve-Emet*, 1861, repr. 1969; see Hirsch's reply in his *Gesammelte Schriften*, 6, 419–34).

[Victor A. Mirelman]

RAPPAPORT, ARMIN H. (1916–1983), U.S. historian. Rapoport was born in New York City. He taught briefly at Stanford University and then for nearly two decades at the University of California, Berkeley, where he gained recognition as one of the foremost scholars of American diplomatic history. He also served as assistant dean of students from 1957 to 1967.

He was then appointed professor of history and, from 1967, provost of the Third College, University of California, San Diego. He was one of the founding members of the UCSD history department and served as its chairman. He was editor of the journal of *Diplomatic History* and president of the Society of Historians of American Foreign Relations. Rapoport was also involved in La Jolla, California, Jewish community affairs.

UCSD established the Rappaport Prize, which is awarded annually for the best history essay.

Rappoport's major works include *The British Press and Wilsonian Neutrality* (1951), *The Navy League of the United States* (1962), *Henry L. Stimson and Japan* (1963), *Patterns in American History* (with A. De Conde and W. Steckel, 1965), *Present in the Past* (with R. Traina, 1972), and *A Short History of American Diplomacy* (1975). He also edited several books of sources and issues in American diplomacy.

[Ruth Beloff (2nd ed.)]

RAPPAPORT, HENRY (1913–2003), U.S. pathologist. Born in Austria, where he obtained his doctorate in medicine, Rapoport trained in both Europe and the U.S. In the late 1940s he was assistant professor of pathology at George Washington University School of Medicine and pathologist and chief of

laboratories at Mount Alto Veterans Administration Hospital, Washington, D.C. He headed the reticulo-endothelial pathology and hematology section of the Armed Forces Institute of Pathology, Washington, D.C., from 1949 to 1954. Rappaport moved to the University of Chicago, where he became professor of pathology and director of surgical pathology. He was a member of the WHO committee for nomenclature and histopathologic classification of leukemias and lymphomas. He wrote *Tumors of the Hematopoietic System* (1966).

RAPPAPORT, ISAAC BEN JUDAH HA-KOHEN (d. 1755), rabbi in *Jerusalem and Smyrna, and rabbinic emissary of Safed. His father emigrated from Lublin to Jerusalem, where Isaac studied at the yeshivah Beit Ya'akov Pereira, headed by *Hezekiah da Silva. Because of the difficult circumstances then prevailing in Jerusalem, Isaac accepted the assignment of rabbinic emissary of Safed to Turkey and the Balkans (1702–12). Arriving in Constantinople in 1709, he joined Abraham *Yizhaki, who was there as the emissary of Jerusalem, in issuing a proclamation against the Shabbatean, Nehemiah Hiyya *Hayon, and engaged there in halakhic discussions with Aaron *Alfandari. He arrived in Salonika in 1712. At the conclusion of his mission, because of the straitened circumstances in Jerusalem, he accepted the position of rabbi at Smyrna, a position he held for 36 years, though he originally intended to stay only a short time. In this capacity, he greatly assisted Erez Israel emissaries who visited Smyrna, and in 1732–33 saw through the press in Constantinople and Smyrna *Zera Abraham*, responsa by Abraham Yizhaki, then the chief rabbi in Jerusalem. In 1749 he returned to Jerusalem, where he became the chief rabbi. Unable to trace the old record book of the local *takkanot*, he published many of them from memory, but was unwilling to issue new ones of his own accord. A collection of his responsa, novellae, and homilies, entitled *Battei Kehunnah*, was published in two volumes, the first in Constantinople, 1736, and the second at Salonika, 1754.

BIBLIOGRAPHY: Rivkind, in: *Reshumot*, 4 (1925), 341–2; Frumkin-Rivlin, 3 (1929), 61–4; Yaari, Sheluhei, 423–5.

[Avraham Yaari]

RAPPAPORT, JACOB (1890–1943), *hazzan*. Rappaport was born in Telenesht, Bessarabia. As the son of a rabbi and a seventh generation descendant of the Ba'al Shem Tov, he enjoyed a strong hasidic upbringing. As a child he was apprenticed to the great Zeidel Rovner. In Hungary, at the age of 18, he made his debut as a cantor. Two years later he emigrated to America, where he held various positions and devoted himself to composing, becoming a master of the *hazzanic* recitative. Among those who turned to him for their materials were *Hershman, Shlisky, and *Ganchoff, as well as operatic singers Richard *Tucker and Jan *Peerce. Amongst his famous recitatives are *Ellu Devarim*, *Modim anahnu lakh* and *Atta noten yad*. He also served as president of the Jewish Ministers Cantors Association.

[Raymond Goldstein (2nd ed.)]

RAPPAPORT, ROY (1926–1997), U.S. anthropologist. A native of New York City, Rappaport enlisted in the U.S. Army at the age of 17, seeing combat duty with the Infantry in World War II, for which he received the Purple Heart. He earned his bachelor's degree in hotel administration from Cornell University in 1949; in 1951 he opened Avaloch Inn, near Tanglewood in Lenox, Massachusetts. He then studied anthropology at Columbia University, receiving his doctorate in 1966.

Rappaport joined the faculty of the University of Michigan at Ann Arbor as an assistant professor in 1965, becoming associate professor in 1968 and professor of anthropology in 1972, eventually serving as chair of the department of anthropology. An internationally respected scholar, his work explored the relationship between religion, society, and ecology, and his many professional activities reflected these interests. His early work, *Pigs for the Ancestors: Ritual in the Ecology of a New Guinea People* (1968), based on his fieldwork among the Maring people, established his reputation. Another notable work, *Ecology, Meaning and Religion*, was published in 1979. His last book, *Holiness and Humanity: Ritual in the Making of a Religious Life*, completed shortly before his death in 1997, was published in 1999; it is considered to represent the scope of his academic work, and it was described as a milestone in the anthropology of religion.

Rappaport served as a consultant for educational, anthropological, and environmental projects, including the National Academy of Sciences Task Force. He was a consultant to the state of Nevada and to Nye County concerning the storage of nuclear waste at Yucca Mountain, and he advised the federal government regarding oil leasing on the outer continental shelf. He contributed numerous articles to academic journals, including *American Anthropologist*, *Ethnology*, *Scientific American*, and the *Journal of the Polynesian Society*. He was a member of the American Association for the Advancement of Science, the American Academy of Arts and Sciences, and the American Ethnological Society. Rappaport was president of the American Anthropological Association, and he served on several national committees on environmental issues.

[Dorothy Bauhoff (2nd ed.)]

RAPPAPORT, CHARLES (1865–1941), socialist politician and writer. Born in Doukshty (Dukštos), Lithuania, Rappaport joined the social revolutionary movement in Vilna as a youth. In 1887 he took part in a conspiracy together with Lenin's brother Alexander Ulyanov, to assassinate Czar Alexander II. Ulyanov was apprehended and hanged. Rappaport fled to France where he joined the Socialist Party and became a prominent Marxist, in opposition to the moderate doctrines of the Socialist leader, Jean Jaurès (1858–1914). Rappaport opposed France's participation in World War I and was present at the left-wing anti-war conferences at Kienthal and Zimmerwald and was arrested in 1917 on charges of making defeatist speeches. Sentenced to three months' imprisonment, his pamphlet *Devant les juges militaires*, describing how he

conducted his own defense, created a sensation. In 1921 Rappoport joined the French Communist Party and edited the *Revue Communiste* and the official party organ *Humanité*. Already disillusioned by the evolution of communism in Russia, and shocked by the Moscow trials, Rappoport resigned from the Communist Party in 1938. He condemned the Munich pact and expressed his great sympathy for the Jewish victims of Nazism, regretting that he had not fought more often for Jewish rights.

Rappoport published several works on politics and history including *La Philosophie de l'histoire comme science de l'évolution* (1925²), *Jean Jaurès, L'homme, le penseur, le socialiste* (1916, 1925), and *La révolution mondiale* (1921). His autobiography was published in the Paris Yiddish newspaper, *Arbeter Shtime*.

RAQQA (al-), city on the Euphrates in N.E. Syria, founded in 722 by the *Abbasid caliph al-Manṣūr. The Jews identified al-Raqqa with the Calneh of Genesis 10:10. According to the Arab geographer al-Muqaddasī (late 10th century) the city was an important commercial center during his lifetime. Throughout the period of caliphal rule there was a large Jewish community in al-Raqqa and its environs. The philosopher David *al-Mukammis was from this city. An 11th-century letter from a *ḥaver* (rabbi) to a *rosh yeshivah* in *Jerusalem is extant which states that he will go to Calneh the following day to pacify the community, where a dispute had arisen over the appointment of a successor to the deceased *dayyan*. The Jewish community of al-Raqqa also prospered during the period of the Crusades. In the latter half of the 12th century, the traveler *Benjamin of Tudela found about 700 Jews there. In 1191 the head of the Baghdad academy, Samuel b. 'Ali, addressed an *iggeret* ("letter") to al-Raqqa and other important communities in northern Babylonia and Syria. A letter from the last decade of that century, from a Jewish scholar in al-Raqqa to *Cairo, is extant; he sends greetings to *Maimonides and tells about his contacts with the Jews of *Aleppo. At the beginning of the 13th century Judah *Al-Ḥarizi visited the city and complained about the miserliness of the Jews living there, deriding them bitterly.

[Eliyahu Ashtor]

RASEINIAI (Rus. Rossieni), city in W. central Lithuania. The community there, which included *Karaites, numbered 4,247 in 1797, 2,649 in 1847, and 3,484 in 1897 (46.7% of the total population). Raseiniai was one of the centers of the *Haskalah movement in Lithuania. Abraham *Mapu and Senior *Sachs lived there. According to the 1923 census, there were 2,305 Jews living in Raseiniai (43.7% of the total), most of whom were occupied in small trade and crafts, with a number in

business on a larger scale. The Jewish People's Bank had 600 members. Communal institutions included a Yavneh primary school, a Hebrew secondary school, and a yeshivah. Raseiniai was occupied by the Germans a few days after the outbreak of the German-Soviet war in 1941. The more prominent Jews were murdered first, followed by the men, and ultimately the women and children. A few families who managed to escape survived until the liberation.

[Joseph Gar]

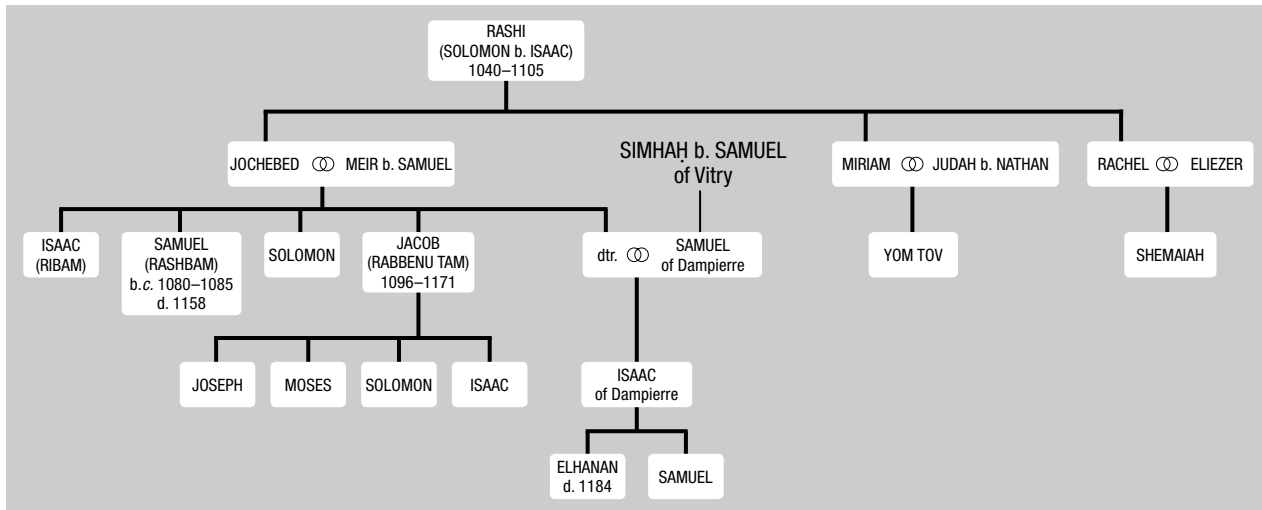

RASHI (Solomon ben Isaac; 1040–1105), leading commentator on the Bible and Talmud.

His Life

Rashi was born at Troyes, France. (See Chart: Rashi Family). His mother was the sister of the liturgical writer, *Simeon b. Isaac. His father was a scholar whom Rashi quoted in his writings (Av. Zar. 75a). Few facts are known about his early life, although many legends are told about this period. A legend tells that his father cast a precious gem into the sea rather than surrender it to Christians who desired it for idolatrous purposes. A heavenly voice then foretold the birth of a son who would enlighten the world with his wisdom. It is also related that his mother was imperiled in a narrow street during her pregnancy. She pressed against a wall which formed a niche to rescue her.

Troyes was then the capital city of Champagne which attracted merchants from many countries. Rashi learned about different currency standards, banking, and trade. He knew of soldering, engraving, weaving figures into material, and the embroidering of silk with gold. He also learned much about agriculture and husbandry. After his initial education in Troyes, Rashi was attracted to the great academies of Mainz and Worms where he studied after his marriage. His main teachers were *Jacob b. Yakar and *Isaac b. Judah at Mainz, and *Isaac b. Eleazar ha-Levi at Worms. At about the age of 25, Rashi returned to Troyes. He maintained close relations with his teachers, occasionally returning to the academies to discuss unclear talmudic texts with them.

Rashi's return to Troyes was notable, since, due to his influence, henceforth the schools of Champagne and northern France were destined to rival and finally supplant those of the Rhenish provinces. Around 1070, he founded a school which attracted many pupils and became even more important after the death of his own teachers. His most gifted pupils were his relatives, *Simḥah b. Samuel of Vitry, Shemaiah, *Judah b. Abraham, Joseph b. Judah, and *Jacob b. Samson. Nothing is known about Rashi's wife. Although the couple had no sons, they are generally believed to have had three daughters, all of whom married prominent scholars. One of them, Jochebed, married R. *Meir b. Samuel who attended the Mainz academy with Rashi. Four sons were born to Jochebed and Meir and they all became famous scholars: *Samuel (Rashbam), *Isaac

(Ribam), *Jacob, popularly known as Rabbeinu Tam, and *Solomon (the actual birth order is unclear, although Jacob was certainly younger than Samuel). They all belonged to the outstanding group of French scholars of the following generation who founded the school of **tosafot*. Another daughter, Miriam, was married to *Judah b. Nathan, whose commentary to the end of *Makkot* is included in all editions of the Talmud (19b–24b). This couple also had a learned son, Yom Tov, and a daughter, from whom *Dulcea, the wife of R. Eleazar of Worms, was descended. A third daughter, Rachel, was known as Belle Assez. Her marriage to a certain Eliezer (Jocelyn or Vasselin in the vernacular) ended in divorce.

Rashi's last years were aggrieved by the massacres committed at the outset of the First Crusade (1095–96), in which he lost relatives and friends. Tradition relates that he foretold the defeat of the expedition of Godfrey of Bouillon, correctly predicting that Godfrey would return to his native city with only three horses remaining from his entire massive army. It is only a legendary tradition that during this period Rashi transferred his school to Worms; there the house called his *bet ha-midrash*, which was located next to the city's synagogue, is a construction of the 16th century. He is reported to have died while writing the word "pure" in his commentary to *Makkot*, (19b) on 29 Tammuz. His burial place is not known.

[Aaron Rothkoff]

Biblical Exegesis

Rashi commented on most, if not all, the books of the Bible. The comments ascribed to him on Job, from 40:25, on Ezra, Nehemiah, and Chronicles are not his, being different in style and method of exegesis. According to Poznański, Rashi did not manage to comment on these, since in writing his commentary he followed the order of the books in the Bible. Lipschuetz, however, contends that the exegesis on these books is substantially Rashi's but was recast and augmented by his pupils. Comments of pupils of Rashi, who studied with him, are embodied in his biblical commentary, which contains

(1) explanations that Rashi himself accepted and included in his commentary, and (2) annotations written alongside Rashi's commentary by others, and later interpolated into the text by copyists.

Rashi incorporated in his comments that of *Samuel b. Meir (Rashbam) on Exodus 15:6 ("Thy right hand, O Lord, glorious in power"), even referring to this and other verses expounded by the latter as "the verses of Samuel" (Tosafists' Commentary on the Pentateuch, in Ms.). Writing to the rabbi of Auxerre in connection with his commentary on Ezekiel, Rashi declared: "At all events I made a mistake in that comment... I have now gone through it with our brother Shemaiah and have corrected it" (A. Geiger, *Melo Chofnajim* (1840), Heb. pt. 36). A third pupil whose explanations are embodied in Rashi's commentary is Joseph *Kara (the passages are enumerated by A. Berliner in *Peletat Soferim* (1872)). There is evidence that the latter two, Shemaiah and Joseph Kara, studied the Book of Ezekiel under Rashi, while he was writing his commentary to it. The copyists' interpolations, now part of Rashi's commentary, can be identified by the aid of manuscripts, in which these are written between the lines, accompanied by the word "addition."

Main Characteristics of His Commentary

The main distinguishing characteristic of Rashi's commentary is a compromise between the literal and the midrashic interpretations; to the latter, which was the principal method of exposition in French biblical exegesis, he added the former. At least three-quarters of Rashi's comments are based on rabbinic sources. The few that are original are mainly philological explanations. When basing his comment on the Midrashim, Rashi chose from the available material those that were closest to the literal interpretation of the biblical text, or solved the difficulties presented by it. Thus, for example, in commenting on Leviticus 19:3 ("Ye shall fear every man his mother, and his father"), Rashi, instead of using the *Sifra*, the halakhic Midrash on Leviticus, as he had done in interpreting the preceding

verses, now resorted to the *Mekhilta*, the halakhic Midrash on Exodus. The latter explains the twofold difficulty in the verse, namely, the prior mention of the mother and the use of the verb “fear” rather than “honor” as in the Ten Commandments, whereas the *Sifra* explains only the first difficulty.

Another characteristic aspect of Rashi’s exegesis is the manner in which he formulated his comment. In many instances he did not quote a Midrash literally but either augmented or abridged it, or even altered its wording (cf. Gen. 1:5, 6, 7 with Gen. R.), his aim being to make for easier understanding and lucidity, and to adapt the language of the Midrash to that of the text. In this way Rashi obviated a patchwork impression and instead achieved a uniform style. The criterion on which he based his choice of comment is clearly stated by him: “As for me, I am only concerned with the literal meaning of the Scriptures and with such *aggadot* as explain the biblical passages in a fitting manner” (Gen. 3:8). In many instances where he departs from this latter principle he adds the comment that these *aggadot* do not give the literal interpretation. But it is not to be assumed that where he failed to add this comment he regarded such Midrashim as providing a literal exposition of the text (thus, for example, the Midrash quoted without this comment in his explanation on Gen. 1:6 (“Let there be a firmament”) does not accord with his exegesis of Gen. 1:1). While Rashi based his comment on the halakhic part of the Pentateuch on talmudic literature, his purpose was not to lay down the *halakhah*, and he therefore quoted only some of the many *halakhot* dealing with the subject in question. Sometimes he states that the halakhic Midrash does not give the literal interpretation of a passage (Ex. 16:29, 22:8); at others he interprets a verse contrary to the decided *halakhah* (Lev. 13:6). His partiality for the literal explanation is further attested by the fact that, having revised his commentary several times, he wished at the end of his days to improve it “on the basis of the plain meanings which appear daily” (Rashbam, to Gen. 37:2).

Generally, Rashi did not state his sources but these have been given in detail by Zunz in his book on Rashi, the most important of his sources being the Targums. In his Pentateuch commentary, Rashi derived much help from Targum Onkelos. Not only did he expound many verses according to it, but on occasion dwelt at length on its rendering (Gen. 49:24; Ex. 24:14); interpreted the words of Targum Onkelos; quoted from the Talmud in support of them, and dealt with the etymology of some Aramaic word in the Targum (Deut. 14:5). He laid down general rules explaining Onkelos’ choice of words (Gen. 43:15), but in many instances rejected his translation where he found this unacceptable (Gen. 15:11). On several passages Rashi had a different version of Targum Onkelos (Gen. 27:36; Ex. 23:27), which was subsequently emended by publishers in accordance with his version. In his commentary on the Prophets and the Hagiographa he made much use of Targum Jonathan and even quotes Targum Sheni on Esther but apparently did not know the Palestinian Targum on the Pentateuch nor the Targum on the Hagiographa. Some of his sources he

heard from others (Deut. 29:3). On one occasion he even declared: “I have had no one to help me, nor a teacher, in all this edifice, but it is as revealed to me from Heaven.”

[Avraham Grossman]

Rashi as Grammarian

Rashi centers his commentaries on meticulous analysis of the language of the text. He was both philologist and linguist and derived his grammatical principles from rabbinic literature and the Hebrew works of the Spanish grammarians, *Menahem b. Jacob ibn Saruq and *Dunash b. Labrat (Ps. 39:7, 55:22). Since he knew no Arabic, Rashi never learned of Judah b. David Ḥayyuj’s and Jonah *Ibn Janaḥ’s work on tri-consonantalism. Like Menahem, Rashi sometimes assumes the existence of roots of one consonant (like *hoga*), although, following Dunash, he generally regards the verbs primae *waw* as being tri-consonantal. Verbs tertiae *he* are in his view bi-consonantal. To support this view Rashi calls attention to the nominal derivation from the root (such as *zadah-zedi’ah* in Ex. 21:13). Verbs primae *nun* are bi-consonantal (e.g., *niḥatu*, Ps. 38:3), as are those mediae *waw* as the middle letter, and the geminates like *yegudennu* (Gen. 49:19). By turns, he utilizes the terms *yesod*, *ikkar*, and *shoresh* to indicate the root; *yesod nofel* (omitted root) to represent a consonantal root which falls away in conjugation; and *pa’ol* and *asoh* to indicate the conjugation of the verb. For the names of vowels he utilizes *pathaḥ* (a), *pathaḥ qatan* or *segol* (e (or: ae)), *hireq* (i), *qameṣ* or *qameṣ gadol* (a), *sereh* (e), *melopum* (o), *šuruq* (u). Scattered throughout his commentaries are many remarks on syntax, tenses, moods, conjugations (such as the privative use of the *pi’el* – Ex. 27:3), collective nouns (Gen. 32:6), deletion of parts of the sentence, prepositions required by certain verbs (Judg. 6:32), and changes in word order (Gen. 2:19). Occasionally he formulates rules on linguistic usage (Jer. 51:12), and discusses the shades of meaning of various synonyms (Gen. 1:11; Micah 5:7). He discriminates clearly between biblical Hebrew and mishnaic Hebrew (e.g., Ps. 76:11), even though he sometimes interprets the verse in accordance with the rabbinic literature (Ex. 12:7), for which he was criticized by his grandson, Samuel b. Meir. Rashi often resorts to the vernacular French in order to explicate difficult words and phrases, for example, about 1,000 such words and phrases are so explained in his commentary on the Bible. This practice has proven invaluable for the study of Old French glosses (see *La’az). He wrote a small number of glosses in German. However, some of the existing German glosses, and all of the Slavonic glosses, were added by other scholars in subsequent generations (1 Kings 6:7).

[Menahem Zevi Kaddari]

His language is concise and straightforward. At times his terseness is due to his assuming that the reader is fully acquainted with the relevant details (Deut. 1:3, 18), and it is therefore a mistake to hold, as some do, that his commentary was intended for the masses. He explained many difficult problems with a word or a mere hint. Thus, for example, he did not deal explicitly with the difficulty raised (in view of

the belief in the giving of the Torah at Mt. Sinai) by the passage “And the Canaanite was then in the land” (Gen. 12:6), but contented himself with the brief comment: “He [i.e., the Canaanite] was increasingly conquering Erez Israel from the descendants of Shem.” In many instances he even refrained from entering into the detailed proof of his comments hinted at in the verses he cites. A thorough study of his statements is thus necessary to reveal the problems that faced him, his manner of solving them, and the support for his comments that he derived from scriptural verses and rabbinic sources. His honesty led him in many instances to declare: “I do not know what it is” (Ex. 22:28; Is. 13:21).

Other Characteristic Aspects of Rashi's Commentary

(1) He placed great reliance on the cantillation signs: “Had I not seen the accent *zakef gadol* on the word *u-feneihem*, I would not have been able to explain it” (Ezek. 1:11), but also on occasion he disagreed with them (Gen. 20:16).

(2) Sometimes he combined verses (Deut. 4:44), or explained apparently superfluous details in order to throw light on events mentioned elsewhere (Ex. 13:18), two methods that were later developed and elaborated by his French pupils in their exegesis.

(3) On occasion, as at the beginning of his commentary on Zechariah and Song of Songs, he prefaced his comments with the principles underlying his exegesis, or added illustrations for greater clarity (1 Kings 6:31), some of which were omitted by copyists and publishers (*Rashbam* Num. 34:2: “Our teacher, my grandfather, explained and made a drawing of the borders”).

(4) He refrained from dealing with problems associated with philosophy which had not penetrated into German Jewish culture, and thus the question of reconciling philosophy with the biblical concept of the universe did not arise. In many instances he did not even deal with moralistic appreciations of the Patriarchs' actions, e.g., the driving out of Hagar, nor was he concerned with mysticism.

(5) On various occasions he referred to contemporary events (Ex. 28:41; Job 19:24). Here and there one can detect in his comments an echo of the persecution of the Jews in his day (Isa. 53:9; Ps. 38:18). He also disputed the christological interpretation of biblical passages (e.g., Isa. 9:6), a course also adopted by his pupils in Germany in their exegesis.

Rashi's commentary on the Bible, and particularly that on the Pentateuch, enjoyed an enormous circulation. More than 200 supercommentaries were written on his Pentateuch commentary, some even by distinguished halakhists, such as, for example, Joseph *Caro, the author of the *Shulḥan Arukh*. Of particular importance is Elijah Mizraḥi's supercommentary. The study of Rashi's commentary spread to such an extent that he was accorded the title of “Parshandata” (“the expounder of the law,” “the commentator par excellence,” a pun on Esther 9:7). It was even laid down in the *halakhah* that the reading of the weekly portion with his commentary could take the place of the obligatory reading “twice in the original and once in

the Targum.” Christian scholars were also influenced by his commentary. As early as the 12th century Nicholas of Manjaccoria mentions him. Nicholas de Lyra (1279–1340) in particular was so greatly influenced by him that his critics called him “the ape of Rashi.” This interest of Christian scholars in Rashi grew in the 15th century, and from the 17th century onward his commentary began to be translated into other languages. Rashi's commentary on the Pentateuch is the first known Hebrew work to have been printed (1475), and since then hardly an edition of the Hebrew Bible for Jewish use has appeared without his commentary. An excellent edition was issued by A. Berliner (1905²) who examined more than a hundred manuscripts and printed books, indicated Rashi's sources, and added annotations of his own. Part of Rashi's commentary to the Prophets and Hagiographa was edited by I. Maarsen, Isaiah (Jerusalem, 1933), the Minor Prophets (Amsterdam, 1932), and Psalms (Jerusalem, 1936). I. Elbogen published fragments from his commentary to Ezekiel from manuscripts in the S. Poznański jubilee volume (Warsaw, 1927) and by A. Levy in Rashi's commentary on Ezekiel (Philadelphia, 1931). J. Rosenthal edited his commentary to Song of Songs, on the basis of manuscripts and various printed versions (S. Mirsky jubilee volume (New York, 1958), 130–88). An English translation of Rashi's commentary on the Pentateuch was made by M. Rosenbaum and A.M. Silbermann (5 vols., London, 1929–34).

Commentary to the Babylonian Talmud

The summit of Rashi's creative work was his commentary to the Babylonian Talmud. His commentary on most of the tractates of the Talmud has been preserved, but those to tractates *Ta'anit*, *Nedarim*, *Nazir*, and *Horayot* ascribed to him are not his. The commentary to *Mo'ed Katan* which bears his name is not by him, but his commentary to this tractate has been published by A. Kupfer (1961). His commentary to *Bava Batra* was completed by his grandson and pupil, Samuel b. Meir (*Rashbam*), and to *Makkot* by his pupil, *Judah b. Nathan. Rashi's commentary to the Talmud was published with the first printed edition of the Talmud, and except for modern editions of a few tractates no edition of the Talmud has appeared without it. There are extant whole or fragmentary manuscripts of his commentary on most tractates but no critical and scientific edition of his commentary to even one tractate had appeared by the end of the 1960s. Rashi's commentary on the Talmud had been preceded by others, both of the Franco-German school, including his own teachers, and of other centers. His commentary, however, superseded them all and caused them to be virtually forgotten. The language of his commentary is variegated but nevertheless accurate. In his explanations of words he does not confine himself to dry lexicographical data; his explanation is often colorful and the commentary is replete with realistic concrete descriptions. He adduces reasons for *halakhot* and talmudic argumentations, and often provides psychological and realistic backgrounds to talmudic times. In manifold ways he aids the student in the understanding of the

text. He provides introductions to themes, intersperses the commentary with the words of the text, and combines recurring statements. With an excellent feeling for the methodology of the Talmud, he points out difficulties in the construction of the passages and unusual terminology. In all this his commentary is unique. In Rashi's view, the only acceptable explanation of the Mishnah is that given to it by the *Gemara* (see BM 33a and b et al.), with the result that he does not give an independent explanation of the Mishnah. Rashi did not write commentaries to those tractates that have no Babylonian Talmud (the commentary to *Avot* ascribed to him is not his).

Although carefully planned, the linguistic variety led many scholars to point to inconsistencies and contradictions, but most of these have no real substance and can be explained against the background of his methods. From the statements of medieval scholars it is known that Rashi emended his commentary here and there after it had already been issued. However, there are only a few emendations which are definitely from Rashi's pen and an examination of the manuscripts proves that Rashi did not write his commentary more than once, i.e., there were no revised editions of it. The commentary circulated rapidly, and from the beginning of the 13th century almost every talmudic scholar made use of it and pointed out difficulties which he answered or explained. Some even worked over his commentary to various tractates, e.g., to *Sukkah*, *Ketubbot*, *Bava Kamma*, and *Sanhedrin*. Rashi's corrections of the Talmud text were for the most part introduced into the standard editions and became the accepted text.

[Jona Fraenkel]

As a Halakhist

Despite the fact that Rashi's main aim in his commentary to the Talmud was not to determine the *halakhah*, practical halakhic rulings are scattered here and there, and at times even at length, and he was regarded as a halakhic authority of the first rank in Germany during a very long period. In the same way as his commentary on the Talmud became the basis for all later literary activity in this field in France and Germany, even though his pupils and their pupils did not hesitate to query his comments, disagree with them, and suggest alternatives, so with regard to his halakhic rulings. They based themselves upon his oral teachings and his practices as testified to by those who witnessed them, though they did not hesitate to differ from him in practice from time to time. His grandson Jacob already disagreed with him on *halakhah*, and did not even refrain from criticizing him sharply (cf. *Sefer ha-Yashar*, novellae no. 449). To such an extent was he regarded as a halakhic authority that shortly after his death his responsa, teachings, communications, and practices were assembled in different collections. This literature, the greater part of which has survived, both published and in manuscript, is very ramified, and has acquired the general title of "the school of Rashi." The published collections are: *Sefer ha-Pardes* (Constantinople, 1807, ed. by H.L. Ehrenreich, 1924), *Sefer ha-Orah* (ed. by S. Buber, 1905), *Siddur Rashi* (ed. by S. Buber, 1911), *Mahzor*

Vitry (ed. by S. Hurwitz, 1923²), *Likkutei ha-Pardes* (Venice, 1519), *Sefer Issur ve-Hetter* (printed in part c. 1925), and the one published by Urbach (see bibl.). The connection of the *Sefer ha-Sedarim* (ed. by S. Elfenbein, in: *Horeb*, 11 (1951), 123–56) with Rashi is very much closer. Apart from all these there are extant about 350 of Rashi's responsa, collected from various sources by S. Elfenbein (1943). On the other hand, the works of "the school of Rashi" include additions of a very varied and diversified nature, from the teaching of the *geonim*, from the great Spanish scholars (chiefly in accordance with the *Sefer ha-Ittim* of *Judah b. Barzillai al-Bargeloni), as well as from the early teaching of Erez Israel. It is still somewhat of a riddle how the teaching of Erez Israel was preserved and in what manner it found its way into various works of "the school of Rashi."

The special character of the books of "the school of Rashi" as halakhic collections caused them to pass through many hands, involving additions and omissions, so that the traditions and the practices have become confused. The many parallels existing among these books themselves show considerable differences. Rashi's influence as a ruling authority is also discernible upon the Italian authorities, both among the pupils of *Isaiah di Trani I and also upon Zedekiah *Anav, whose *Shibbolei ha-Leket* depends upon the work of Rashi and his school.

[Israel Moses Ta-Shma]

Rashi's Daughters

Legends about the exceptional piety and learning of Rashi's daughters include the claim that they wore *tefillin*. There is no direct evidence for this assertion but it may have arisen from the likelihood that Rashi's daughters, like other daughters of learned men who had no sons, were better educated than most women in the Jewish communities of their time. Moreover, Jewish women of medieval Ashkenaz, who played a significant role in the economic success of their households and community, had an unusually elevated social position. As A. Grossman has demonstrated, this high status was reflected, in part, by women's increased involvement in Jewish religious life, including their voluntary assumption of religious practices from which they were exempt in talmudic Judaism. Certainly, Rashi's grandson, Rabbenu Tam, knew of women who chose to recite blessings over the performance of time-bound commandments, including donning *tefillin*. Like many contemporaneous sages in Ashkenaz, he accepted these practices (Tosafot to Er. 96a, s.v. *dilma*).

A legend also survives that one of Rashi's daughters had significant rabbinic scholarship. This may be based on a report in *Shem ha-Gedolim* that when Rashi fell ill he called upon his daughter to write an involved responsum. While this reading was accepted by the 19th-century historian Heinrich *Graetz, most contemporary scholars believe it stems from a scribal error which made its way into *Sefer ha-Pardes*. They suggest that instead of "*ve-lakhen bitti karati*" ("and thus I called my daughter"), the text should be read "*u-le-ven bitti karati*" ("and

I called the son of my daughter”) (Berger, 167, n. 46). The claim that one of Rashi’s daughters wrote a commentary on *Nedarim* probably stems from confusion over the commentary on that tractate written by Judah b. Nathan, Miriam’s husband.

However, Rashi’s daughter Miriam is cited as an authoritative source on ritual practice in the *Teshuvot Maimoniot* of R. Isaac b. Samuel (the Ri) to *Hilkhot Kedushah, Ma’akhalot Asurot*, par. 5, which states, “This is how it was done at the home of Miriam, the daughter of our teacher Solomon.” The citation adds, “We rely upon our logic and upon the testimony of the daughters of the leading lights of the generation.” (See E. Urbach, *Ba’alei ha-Tosafot* (1955), 1:38, who cites manuscript evidence that “daughter,” not “granddaughter,” is the correct reading.) In medieval and early modern Ashkenaz, women were often invoked as authoritative witnesses of the domestic practices of their learned fathers and husbands.

RASHID AL-DIN (Fazlallah Tabib al-Hamdani, “the physician from Hamadan”; 1247–1318). He was born to Jewish parents in *Hamadan. He was the son of Imād al-Dawla b. Abu al-Khayr, a pharmacist by profession. We do not have any knowledge of the early periods of his life until we hear of him entering the service of the Ilkhan Abaqa (r. 1265–1282), the second *Mongol Emperor, as a physician. We are informed from some early sources that he had embraced Islam around the year 1278, when he was 30 years old. Twenty years later, namely around 1298, Rashid al-Din became a deputy to Sadr

al-Din Zanjāni, the vizier of Arghun’s son, Ghazan Khan (r. 1295–1304). A few months later, Sadr al-Din was put to death and his place was taken by Sa’d al-Din Sāvaji who made Rashid al-Din his associate. In this capacity Rashid al-Din introduced substantial administrative reforms during Ghazan’s reign. He amassed tremendous power and wealth and owned property in almost every corner of the Mongol Empire. Eight of his 14 sons were appointed governors of provinces. As the associate of the Sāhib Divān, mostly using his fortune he built *madrasas*, hospitals, and other public and educational institutions in many places in the empire, especially in the capital city of *Tabriz and in the nearby city, Sultāniyya. In the suburb of Tabriz he constructed a little town, called by his name Rab’-i Rashidi, to which he brought intellectuals and artists from different Islamic lands.

In *Tārikh-i Uljeitu*, composed by ‘Abdallah Kāshāni (d. 1337), we read about a bitter debate which took place between Rashid al-Din and Sa’d al-Din Sāvaji in the presence of the Uljeitu. Sa’d al-Din vilified Rashid al-Din with abusive words and called him a Jew (1969:121ff.). For this impudent behavior, Sa’d al-Din was dismissed from the office of the Sāhib Divān and was put to death on February 19, 1312. Rashid al-Din almost experienced the same fate.

Soon afterwards, Tāj al-Din ‘Ali-Shāh was appointed by the Emperor Uljeitu to replace Sa’d al-Din. From that time, because of the deep hatred and rivalry between ‘Ali-Shāh and Rashid al-Din, the vast Mongol Empire was divided and administered by the two Sāhib Divāns. Thus ‘Ali Shāh became responsible for northwestern *Persia, Mesopotamia, and Asia Minor, and Rashid al-Din took charge of central and southern Persia. Eventually, the enmity between the two viziers brought disaster to Rashid al-Din when he was accused of having poisoned the Uljeitu. In an interesting account, related mostly by Kāshāni, Rashid al-Din was charged with murdering the emperor by prescribing the wrong medicine. During his trial, his Jewish background was mentioned very often. Rashid al-Din, when defending himself against the accusation that he had poisoned Uljeitu, said: “How could I do such a thing? I was a Jewish pharmacologist, a physician, a weak person who rose to a high rank” (Suqā’i 1974:183). Rashid al-Din and his 16-year-old son, Ibrahim, were put to death in 1318 by the new emperor, Abu Sa’id, the son of Uljeitu. Consequently, Rashid al-Din’s property was confiscated and Rab’-i Rashidi was looted. Later on, one of Rashid al-Din’s sons, Ghiyāth al-Din, was appointed vizier to Abu Sa’id (r. 1316–1335).

Rashid al-Din is considered one of the greatest scholars in Persia. Besides Persian, he knew Arabic, Hebrew, Turkish, and Mongolian languages. He produced several monumental books, the most important of which was *Jāmi’ al-Tavārikh*. The latter includes the history of the Mongols and accounts relating to the history of many nations including the European peoples. His production of the history of the Mongol and Turkish tribes remains a single, uniquely valuable source until now. Regarding his writings, including a commentary on *Koran, see S.H. Nasr et al. in the bibliography below. About

80 years later, Rashid al-Din's body was transferred from the Muslim graveyard and buried in the Jewish cemetery.

RASHKIN, LEYB (Leib Raskin, born Shoyl Fridman; 1905–1942), Yiddish writer. Born in Kazimierz Dolny (Kuzmir), Poland, where he managed a cooperative bank and was a hardwareman, Rashkin started writing stories in his early youth. His major work is a searingly satirical anatomy of the *shtetl* Godlbozhits (patently the author's Kuzmir) between the two world wars. Completed in 1934 and published in Warsaw in 1935, *Di Mentshn fun Godlbozhits* ("The People of Godlbozhits") is an epic portrait of the disintegrating Polish Jewish *shtetl*. The author draws his townsfolk with acerbic pungency, animating a large crosscut of the town's inhabitants in a broad-canvas *comédie humaine*. The Polish Jewish Pen Club divided the 1938 Peretz Prize among Aaron *Zeitlin, Joshua *Perle, and Rashkin. Y.-Y. *Trunk wrote of the novelist: "*Er iz geven ... di letste atraktsye fun a nayem yidishn shriftshteler in Poyln*" ("He was the last new Jewish writer to attract attention in Poland"). The novel still attracts readers, one recent study hailing it as "a lasting work of European literature" (Clifford). His *ershtling* ("firstling"), as he calls his novel in a dedication to Abraham *Reisen (University of Haifa Library copy), had no fellows since he was killed by the Nazis in the Brest ghetto extermination while still in the prime of life. A daughter survived and raised a family in Israel.

[Leonard Prager (2nd ed.)]

RASKIN, JUDITH (1928–1984), U.S. lyric soprano. Born in New York City, she grew up as the only child of teachers Harry A. Raskin and Lillian Mendelson Raskin. She studied both violin and piano as a child, but discovered singing and sang in the glee club of Roosevelt High School in Yonkers. She studied voice with Anna Hamlin and acting with Ludwig Donath at Smith College, graduating in 1949 with a B.A. Smith College also awarded her an honorary M.A. in 1963. She won the Marian Anderson Scholarship in 1952 and 1953, and in 1956 won an award from the Musician's Club of New York. That same year, she sang the title role in *The Ballad of Baby Doe*, which premiered in Central City, Colorado. Raskin married the psychiatrist Dr. Raymond A. Raskin, a distant relative, in 1948. They had two children.

Raskin sang with the New York Oratorio Society and was soloist with the Symphony of the Air. She joined the New York City Opera Company in 1959, making her debut at City Center as Despina in *Così fan tutte*. From her debut at the Metropolitan Opera in 1962 as Susanna in *The Marriage of Figaro*, Raskin's repertoire ranged over about 20 operatic roles, especially baroque opera. She stayed at the Met 10 years until 1972. She also sang at the Chicago Lyric and other opera houses.

In 1964, Raskin received a Ford Foundation grant for a solo recital where she premiered pieces by Hugo Weisgall and Miriam Gideon. While she enjoyed an active recital life, especially in baroque music, unfortunately the amount of recital work that she would have preferred did not materialize during her mature career years. She took advantage of other opportunities and recorded for numerous record labels. She also turned to teaching, becoming an instructor at Manhattan School of Music, the 92nd Street Y, and at Mannes College. Raskin served on the music panel of the National Endowment of the Arts and as a judge for the Metropolitan Opera auditions. Raskin continued singing until just before her death from ovarian cancer at the age of 56. Her voice was often described as ravishing.

[Judith S. Pinnolis (2nd ed.)]

RASKIN, SAUL (1878–1966), illustrator, painter, printmaker, critic. Born in Nogaisk, Russia, Raskin studied lithography in Odessa, and attended art academies in Germany, Switzerland, France, and Italy. In 1904, he emigrated to the U.S. He worked in many media and garnered a reputation for his draftsmanlike attention to detail and his realistic approach. His imagery depicted scenes of Jewish life, especially that of New York's Lower East Side. His trips to Palestine yielded many representations of that country's Jewish population, among them twenty lithographs of Jerusalem. Raskin also illustrated many Hebrew texts, including *Pirke Aboth* (1940), the *Haggadah* (1941), *Psalms* (1942), the *Siddur* (1945), *Kabbalah in Word and Image* (1952), and other works with Jewish content, such as *Hebrew Rhapsody* (1959). *Pirke Aboth* demonstrates Raskin's wonderful sense of design; he makes dramatic use of blank space as a component of his compositions as well as underscores the meaning of each of the book's sections with a powerful combination of human and fantastic forms, each revealing carefully rendered details of expression. Raskin was the art and theater critic for the Yiddish weekly magazine *Does Neie Land*. In 1911, Raskin's "The Future of Jewish Art," appeared in the magazine. In the article, Raskin bemoans the inability to find common Jewish attributes in the works of such artists as Antokolsky, Israels, Liebermann, and Pissarro. Raskin postulated that a Jewish Art (sic) might emerge through the identification of common themes and subjects in the work of his contemporaries, specifically in genre and history paintings, rather than through an examination of the widely varied techniques, forms, and styles used by artists of Jewish heritage. Raskin's work has been exhibited at the Art Institute of Chicago, the National Academy of Design, and the Pennsylvania Academy.

His work has been collected by many major museums and galleries, including the Brooklyn Museum.

RASKY, HARRY (1928–), Canadian film maker, producer, director, author. Rasky was born in Toronto, one of eight children in a Yiddish-speaking Russian immigrant home. Harry, whose father was a cantor and *shohet*, spoke only Yiddish until he began public school. In 1949 he graduated from the University of Toronto with a B.A. in arts and began looking for a job in the media, a field not always welcoming to Jews. He found a first job as a reporter in Kirkland Lake in northern Ontario but soon moved back to Toronto to work as editor for a local radio station and also wrote copy for popular newscaster Lorne *Greene. In 1952 Rasky began to write and direct news programs for the new CBC television network and in 1955 he moved to New York to work for Edward R. Murrow. In 1970, already an accomplished documentary film maker and winner of an Emmy award for his film *Hall of Kings*, a documentary on Westminster Abbey, Rasky returned to Toronto, where he continued his career as freelance filmmaker.

Rasky regards his more than 40 films as infused with Jewishness – about half of his documentaries deal directly with Jewish themes and many of the rest are informed by his Jewish roots. His unique, innovative documentary films, often dubbed “Raskymentaries” for their combination of documentary and fiction-film elements, include: *Homage to Chagall: The Colours of Love* (1975), *Arthur Miller on Home Ground* (1979), *Karsh: The Searching Eye* (1986), and the autobiographical *Nobody Swings on Sunday* (2003). His work has chronicled the lives of people as diverse as Shaw and Tennessee Williams, Northrop Frye and Robertson Davies, Leonard Cohen and Henry Moore. In 2005 he was preparing a film on Italian-Jewish artist Amedeo Modigliani.

Rasky’s art has been honored with more than 200 international prizes and citations, including the Venice Film Award, the Golden Eagle, several Peabody Awards, an Emmy, and two Oscar Nominations. In 1992, he was given the lifetime award of the Association of Canadian Television and Radio Artists. The Denver International Film Festival called Harry Rasky “the world’s most acclaimed nonfiction filmmaker.” Rasky has also published a number of books on his life, his art, and some of those he has documented on film, including *Nobody Swings on Sunday*, *The Many Lives and Films of Harry Rasky* (1980), and *The Three Harrys* (1999).

[Joel Greenberg (2nd ed.)]

RASMINSKY, LOUIS (1908–1998), economist, governor of the Bank of Canada. Rasminsky was born in Montreal and grew up in Toronto. He was active in Jewish life at the University of Toronto, where, despite his outstanding record in the Economics Department, he was unable to attract postgraduate funding. Jewish community leaders established a scholarship

allowing him to attend the London School of Economics in 1928. He was soon drawn to Geneva, where he worked at the League of Nations specializing in monetary and banking matters. By the late 1930s he was devoting a large portion of his salary to aiding refugees from Nazism to escape to England.

A man of formidable intellect, Rasminsky joined the Bank of Canada in 1940, becoming executive assistant to the governor in 1943. He organized the research and statistical section of Canada’s Foreign Exchange Control Board and played a key role at the 1944 Bretton Woods Conference. John Maynard Keynes credited him with helping shape the consensus that gave birth to the postwar system of international finance and trade. In 1954, Rasminsky was deeply disappointed to be passed over for the position of governor of the Bank of Canada, a snub which reflected antisemitism in the civil service and banking sector of the day. Nevertheless, he continued to hold important positions at the Bank and in 1955 was appointed deputy governor and finally in 1961 governor of the Bank of Canada. In 1973 Rasminsky resigned to spend more time with his ailing wife. However, he remained active, chairing the Board of Governors of the International Development Research Institute in 1973–78 and re-immersing himself in Jewish communal activities.

Although a member of the small circle that comprised Ottawa’s postwar bureaucratic elite, Rasminsky was initially denied membership in the Rideau Club, the bastion of Ottawa’s establishment. Due to his influence, the club’s membership policies were altered, but Rasminsky chose not to join until he completed his term as governor. Among his many honors, Rasminsky received eight honorary doctorates and the Outstanding Achievement Award of the Public Service, Canada’s highest recognition of a public servant. He was named a Companion of the Order of Canada in 1968.

[Paula Draper (2nd ed.)]

RASSEGNA MENSILE DI ISRAEL, LA, Italian Jewish review founded by Alfonso *Pacifci in 1925 as a monthly supplement to the weekly newspaper *Israel*. It dealt with Jewish history and contemporary Jewish life from the traditional point of view. Its editor until 1938 was Guido *Bedarida, but it became most effective under the direction, until 1965, of Dante *Lattes. From 1965 the review was directed by Yoseph *Colombo. The *Rassegna* was closed by the Fascist government in 1938, but reappeared in 1948 and in time regained its importance. For the centenary of Samuel David *Luzzatto in 1966, a special number of 300 pages was issued.

[Yoseph Colombo]

It was followed by another special number of 400 pages for the centenary of Dante Lattes’ birth in 1976. In the course of the years the *Rassegna* tried to express in the best possible way the cultural recrudescences of an Italian Hebraism during a process of radical transformation under the influence of new

Jewish migratory waves coming mostly from Libya, on the one hand, and the influence of circumstances that are extrinsic to the local Jewish situation. These phenomena were specifically connected to Italian political and social life, mostly involving, in broad terms, the vicissitudes of Italian public opinion in the context of the Arab-Israeli conflict. After the editorship of Augusto Segre (1975–1979) the *Rassegna* was distinguished chiefly as a publication with a high-quality scholarly content, published by the Italian Jewish Communities Union.

RAT (Heb. הָרָד, *holed*, mod. Heb. הַרְדָּה, *huldah*, JPS and AV “weasel”), rodent. Two species of rat are found in Israel, *Rattus rattus* and *Rattus norvegicus*. The second only reached the country in approximately the 18th century. *Huldah* occurs as the name of a prophetess (II Kings 22:14, the same verse including two other names taken from the world of fauna: *shafan* (“coney”) and *akhbar* (“mouse”). In the Torah *holed* is mentioned with the *akhbar* among the unclean creeping things, from which it seems that *holed* is the same as *huldah* (so rendered by Onkelos) where the Palestinian Targum (cf. Meg. 14b) has *kirkushta*, “rat.” The name *huldah* is derived from *halod* (“to undermine”); “*huldah* that undermines the foundations of the houses” (Pes. 118b in Ms. Munich). The *huldah* is frequently mentioned in rabbinic literature. It is said to drag food into its nest for storage (Pes. 1:2; TJ, Shab. 14:1, 14c; Lev. R. 6:2). There is a well-known legend of “the rat [*huldah*] and the pit,” in which the *huldah* bit the child of a man who did not keep faith with a maiden and married another (see Rashi, Ta’an. 8a). These characteristics do not apply to the cat or the polecat (*Mustela nivalis*), with which some have identified the *huldah*. The polecat is not found in Israel, neither does it store up its food.

RATH, MESHULLAM (1875–1963), talmudist and rabbinic authority. Rath’s father and earlier forebears had occupied the rabbinate of Kolomyia for 150 years consecutively. Rath, who had a remarkable memory and a rapid grasp of essentials, was ordained at the age of 12 by Isaac *Schmelkes and Jacob Teomim. In 1895 he was appointed rabbi of Molniza and in 1899 rabbi to his native town Horoskov and then to Ushbuza. Rath was an active community leader. He founded a yeshivah for outstanding students, was elected to the Romanian senate, and was one of the first rabbis to join the Mizrahi movement openly. He spent part of World War I in Vienna, where his renown spread. On returning to Galicia after the war, he

was considered for the Lvov rabbinate but withdrew his candidacy when asked to give up his Zionist work. He was then appointed rabbi of Chernovtsy. In 1944 he settled in Erez Israel and became a member of the chief rabbinate. There he was consulted by the Supreme Rabbinic Court, and examined candidates for the post of *dayyan*.

Some of his responsa were published under the title *Kol Mevasser* (2 vols., 1955–62). These deal with such topical matters as the permissibility of a bat mitzvah ceremony for girls and of the wording of the *ketubbah* in Hebrew instead of Aramaic. He ruled that *Hallel* with blessings and the *She-Heḥeyanu* should be recited on Israel Independence Day.

BIBLIOGRAPHY: O. Feuchtwanger, *Righteous Lives* (1965), 98–101; S.N. Gottlieb, *Oholei Shem* (1912), 407; Kaniel, in: *Shanah be-Shanah* (1963), 493–7.

[Mordechai Hacohen]

RATHAUS, KAROL (1895–1954), composer. Born in Poland, Rathaus studied composition in Vienna and in Berlin, where he taught at the Hochschule fuer Musik. In 1934 he moved to London, and in 1938 to New York. He taught at Queen’s College, New York, from 1940 until his death.

His music was very individual in style. It was atonal and intellectual, showing skill in contrapuntal development and at the same time brooding and romantic. Among his works are three symphonies; an opera *Fremde Erde* describing the modern American city; a ballet; chamber and piano music; incidental music to films; a setting of Psalm 23; and stage music, including, for the Habimah Theater, the music for *Uriel Acosta*, *Jacob’s Dream*, and *Herod and Mariamne*.

°RATHBONE, ELEANOR (1872–1946), British philo-semitic and champion of Jewish refugees. Born to a family of wealthy and influential Unitarian shipowners in Liverpool, Rathbone was educated at Somerville College, Oxford, and became a champion of feminism and other social causes. She was an early and important advocate of family allowances – benefits paid to the wife rather than the husband – and of state pensions for widows, and was very active in the anti-colonial movement. From 1929 until her death she was an Independent Member of Parliament. Beginning in 1934, when she visited Palestine, Rathbone became probably the foremost gentile champion of Jewish refugees from Nazism in Britain, constantly raising their plight in the House of Commons, and was a determined opponent of the appeasement of Hitler. In 1942, with Victor *Gollancz and others, she was the founder and head of the National Committee for Rescue from Nazi Terror, the main British body working on behalf of rescuing Jews from the Nazis. It constantly lobbied government ministers to do more to save the lives of Jews in Nazi-occupied Europe and produced a number of widely distributed pamphlets advocating plans of action. The committee met with little success, in large part because of the near impossibility of rescue from the

Nazi death machine, but was very influential in arousing British public opinion on behalf of Hitler's victims.

[William D. Rubinstein (2nd ed.)

RATHENAU, EMIL MORITZ (1838–1915), German industrialist and engineer. Emil Rathenau was born in Berlin into a family of businessmen and entrepreneurs. Through his mother he was related to the painter Max *Liebermann. After leaving school before the final examination he started his education as an engineer and technician, which lasted until 1862. Afterwards he worked in different companies in Germany and Great Britain. In 1865 he bought an engineering plant in Berlin. One year later he married Sabine Mathilde Nachmann, with whom he had three children Walther (1867), Erich (1871), and Edith (1883). Shortly after the foundation of the German Reich, Rathenau's company was closed. After some years living independently on his own resources, he established the Deutsche Edison Gesellschaft in 1883. In 1887 it was enlarged and named Allgemeine Elektrizitäts-Gesellschaft (AEG). By the turn of the century the AEG became Germany's second-largest electrical company, topped only by Siemens. The AEG was active worldwide. Rathenau was an obsessive and brilliant entrepreneur. He was creative in finding new ways of marketing and creating new needs for products of the AEG. Thanks to his close contacts with banks, with which the AEG cooperated (especially the Deutsche Bank, later the Berliner Handelsgesellschaft under Carl *Fuerstenberg), he invented new systems of financing his business projects by founding his own company banks (i.e., the Elektrobank in Zurich). Buying licenses for innovative technical products he carefully applied scientific advances to the purposes of the AEG. As a Jew, Rathenau followed the path of acculturation. He avoided any kind of close religious or cultural contacts with the Jewish community. He assumed that a Jewish state could never be self-supporting and thus rejected Zionism. In spite of all this Rathenau was an opponent of the conversion of Jews. Early in his life, he was confronted with antisemitism, including antisemitic comments by his competitors. Being a National Liberal Rathenau always remained faithful to the constitutional monarchy. He was one of the few unbaptized Jews who could come into close contact with German Emperor Wilhelm II. When World War I broke out Rathenau initially expected that it would last only a short time. As an entrepreneur he followed traditional and patriarchal social patterns even though he was able to think in modern abstract terms of building up a modern world-wide company. In the years before his death Emil Rathenau succeeded in placing his son Walther *Rathenau at the helm of the AEG.

[Christian Schoelzel (2nd ed.)]

RATHENAU, WALTHER (1867–1922), German statesman, writer, and industrialist; son of Emil *Rathenau and his wife, Mathilde. Walther Rathenau's father became the founder of the Allgemeine Elektrizitäts-Gesellschaft (AEG) in the 1880s. After his studies in physics, chemistry, and philosophy in Berlin and Strasbourg, Walther Rathenau wrote his Ph.D. thesis on the "Absorption of Light in Metals." Afterwards he completed a postdoctorate course in electro-chemistry in Munich and then started practical work in the field of industry. Step by step Rathenau developed into an industrialist on the world stage. In 1899 he became a member of the governing body of the AEG. From 1902 to 1907 Rathenau was co-proprietor of the Berliner Handels-Gesellschaft. At the same time he went back to the AEG as a member of its board of directors. In 1912 he became chairman of the board. Rathenau was one of Europe's leading entrepreneurs and an expert on global finance. As an innovative "system-builder" he not only created new organizational structures in the AEG, but also thought of new ways to develop processes for both heavy and light industry. During the last pre-war years Rathenau made some attempts at attaining a political role. A few days after the outbreak of World War I he started to organize the German war economy as the leader of the newly created Kriegs-Rohstoff-Abteilung (Raw Material Department) in the Prussian War-Ministry. When Emil Rathenau died in 1915, Walther became president of the AEG, a newly created directorial function. During the war Walther Rathenau became increasingly an informal advisor to politicians and high-ranking military personnel. After the war he was one of the official German experts at the financial conference in Spa in 1920. Here he created, with other members of the German delegation such as Moritz Julius *Bonn and Carl *Melchior, the idea of a cooperative "fulfillment policy." In 1921, Rathenau was appointed minister for reconstruction (*Wiederaufbauminister*). In this capacity he signed the Treaty of Wiesbaden with his French colleague Louis Loucheur. This treaty foresaw partial payment by Germany of its reparations not in money but in goods. The agreement helped German industry regain the French foreign market. In 1922 Rathenau was appointed foreign minister. Increasingly despairing of French diplomacy Rathenau was tempted to abandon his concept of a "cooperative revisionism" of the Versailles Treaty. He still planned to cooperate in the reconstruction of the Soviet economy with the Western powers. Rathenau signed the Treaty of Rapallo, which set the frame for further closer political and economic German-Soviet-Russian cooperation.

During his career as an industrialist, banker, and poli-

tician Rathenau also revealed a strong desire to be a man of letters. In this he opposed his father's wishes to see his son exclusively in the world of money and technology. His publications number more than 150 titles, monographs, essays, poems, and plays. Rathenau wrote about politics, economics, financial affairs, aesthetics, social matters, the arts, literature, and philosophy. He developed a philosophy of world history which was based on the antagonism of two types of human beings, the "Furchtmensch" (as a symbol for a mechanistic and rational capitalism) and the "Mutmensch" (as a symbol for the world of art, social progress, and morality). Both were fighting for dominance in the world. The ideal, which only the "Mutmensch" could reach was Rathenau's "Reich der Seele" – a way of living characterized by love, freedom, and transcendent spirituality. Out of his experiences as an industrialist and also with the ideal aim of reaching the "Reich der Seele," after the war Rathenau also developed his theory of a cooperative economy ("Gemeinwirtschaft"). However, Rathenau was a staunch opponent of socialism. For him the question of a constitutional monarchy or a democracy (which he demanded in opposing the feudal structures in Prussia until 1918) was not as important as having all institutions run by capable and moral people. In foreign affairs Rathenau had an international perspective strongly influenced by his business interests. During the war he became increasingly nationalistic, which also reflects the development of his ideas for creating a "Mitteleuropa" under German hegemony. From the end of the World War I until 1920 Rathenau turned towards a "cooperative revisionism" of the Versailles Treaty.

Rathenau revealed a complex relationship towards his own Jewishness. He internalized antisemitic stereotypes with the idea of escaping discrimination by identifying with the perpetrators. Rathenau regarded Jews as a "race" and demanded their physical and spiritual transformation ("Höre Israel!" (1897) published in *Die Zukunft*). He opposed Zionism and all kinds of Jewish organizations (e.g., the Centralverein). Beneath these tendencies Rathenau also displayed more hidden, positive attitudes towards Jewishness: He refused to leave the Jewish community. The baptism of Jews seemed to him only possible for religious reasons, not for reasons of social opportunism. He was interested in Hasidism and started to re-learn Hebrew. In his belief Rathenau tried to find parallels between Jewishness and Christianity. After World War I he tried to create his own religion integrating the ideal of the "Reich der Seele" in it.

Rathenau suffered severely from constant attacks by antisemites from his early years on. From 1918 there were warnings about assassination plots against him and, indeed, in 1922 he was assassinated by members of the "Organization Consul," an antisemitic, antidemocratic, "volkish" secret organization. The murderers killed Rathenau as a symbol of the Republic of Weimar and as a Jew. Rathenau became a symbol of the Weimar democracy, and remains one of its most-read authors.

[Christian Schoelzel (2nd ed.)]

RATISBONNE BROTHERS, two French Jews who converted to Christianity and who became prominent in the Catholic Church in the 19th century. The Ratisbonne brothers were sons of a Strasbourg Jewish banker who was president of the Consistoire of Alsace. His second eldest son, THEODORE RATISBONNE (1802–1884) was born in Strasbourg and practiced law in his native city. He devoted much of his time to the improvement of the social and economic plight of the Jews in the Strasbourg ghetto. However, his study of the Bible and church history led him to be baptized secretly. He adopted the name Marie and was hereafter known as Marie Théodore Ratisbonne. After being ordained a priest in 1830 he taught at a church school in Strasbourg and in 1840 went to Paris to work for the archconfraternity of the parish Notre-Dame des Victoires. In 1843, together with his brother Alphonse, he founded the Congregation of Notre Dame de Sion for women and in 1852 the Fathers of Zion. Marie Théodore Ratisbonne's avowed aims in founding these religious societies were to bring about a better understanding between Jews and Christians and to convert Jews. He wrote profusely, and among his principal works are *Histoire de Saint Bernard et de son siècle* (2 vols., 1840; 1903¹¹) *Manuel de la mère chrétienne* (1859; 1926²²).

ALPHONSE RATISBONNE (1812–1884), the ninth child of the family, was also born in Strasbourg and began his career as a lawyer and banker. Like his brother Théodore he was filled with fervor to help his fellow Jews. At first he found it difficult to forgive his brother's conversion and felt hatred toward Christendom for its persecution of Jews. However, an experience during a visit to a church in Rome in which he reportedly saw a vision of Mary (January 20, 1842) moved him so powerfully that he had himself baptized eleven days later. He took the name of Marie, became a Jesuit, as Marie Alphonse

Ratisbonne, and in 1848 was ordained a priest. He left the Society of Jesus in 1852 to collaborate with Théodore in Paris, but in 1855 went to Palestine, where he spent the rest of his life working for the conversion of Jews and Muslims. In 1856 he established the Ecce Homo convent for the Sisters of Zion in the Old City of Jerusalem and, subsequently, two orphanages. He wrote *Monument à la gloire de Marie* (1847).

The Ratisbonne Congregations

The Sisters of Zion benefited from the fact that in the middle of the 19th century there was a prodigious development in the education of girls, particularly in France, and that the French teaching congregations were spreading throughout the world. A congregation whose aim was the conversion of the Jews would have attracted a very limited number of candidates, whereas the movement toward teaching and the establishment of boarding schools made it possible to reach young ladies attracted to religious life. The development deflected the primitive orientation of the congregation: if in their life of prayer their objects remained unchanged the sisters made no efforts at proselytizing. The Fathers of Zion who did not constitute a canonically erected religious congregation during the lifetime of the Ratisbonne brothers were at the beginning primarily chaplains and spiritual directors to the Sisters and their pupils. Until the end of World War I both congregations had little contact with Jews and Judaism. With the rise of Hitlerism Fathers and Sisters were among its most prominent opponents on the Catholic side and insisted in their publications on the necessity of common action by Jews and Christians against neo-paganism. In the countries occupied by Nazi Germany Sisters and Fathers made efforts to provide Jews with shelter and a passage to safety, although they themselves were closely observed by the Gestapo. After World War II they were active in the development of the mentality which led to the Declaration "Nostra Aetate" by the second Vatican Council. Both Congregations now hold that proselytizing must be entirely abandoned and they considered themselves pioneers of a new era of Jewish-Christian understanding. The Sisters and Fathers of Zion have taken a positive attitude toward the State of Israel.

[Marie Joseph Stiassny]

RATNER, BRUCE C. (1945–), U.S. developer. Ratner was born in Cleveland, Ohio, part of the second generation of a prominent real estate family that left Poland in 1920. The original family name, Ratowczer, was changed to Ratner. A family lumberyard business built by Ratner's three uncles and an aunt grew into a national real estate enterprise, Forest City Enterprises, now publicly owned, with Albert Ratner, Bruce's cousin, as its chairman. Bruce Ratner graduated from Harvard University in 1967 and earned a law degree from the Columbia University School of Law in 1970. His interest at first was

public service, and his first job out of school was as a lawyer for the Model Cities program in Queens. In 1978, he became head of the city's consumer-protection division. He taught law for four years at New York University Law School before being named commissioner of consumer affairs for New York City. He quit government at the end of 1981 to fortify his net worth in real estate development. He formed the Forest City Ratner Companies, an affiliate of Forest City Enterprises, in 1982. He picked unlikely places to develop, like little-known poor areas of Brooklyn. He built an office building in Brooklyn and then the Metrotech office complex in downtown Brooklyn, which proved to be major factors in raising the vitality of the area. From there he built hotels in Manhattan and spread his projects across Harlem, Queens, the Bronx, and Staten Island. In 2004 he bought the New Jersey Nets, a professional basketball team, and was engaged in extensive negotiations with New York City and others to build an arena at Brooklyn Atlantic Yards for the team and to create a cultural-business center there, with Frank Gehry as the architect. He was also a partner with the New York Times Company in building the newspaper's new headquarters, with Renzo Piano as architect. He was a member of the board of the Museum of Jewish Heritage.

[Stewart Kampel (2nd ed.)]

RATNER, DOV BAER (1852–1917), Lithuanian talmudic scholar. Born in Kalvarija, Lithuania, Ratner studied at the yeshivot of Mir and Volozhin, and acquired a wide secular knowledge by independent study. In St. Petersburg and Vilna he engaged in commerce, but later devoted himself entirely to scholarly research.

Having made his literary debut at the age of 16, he contributed studies, learned notes, and book reviews to a variety of publications, particularly to *Ha-Melitz*. In 1894 his *Mavo le-Seder Olam Rabbah* appeared in Vilna and was followed three years later by a critical edition of the text of the *Seder Olam Rabbah*. From 1901 until his death, he published 12 parts of *Ahavat Ziyon vi-Yrushalayim*, on the entire orders of *Zera'im* and *Mo'ed* of the Jerusalem Talmud, except for the tractate *Eruvin*, containing variant readings and explanations culled from the writings of early authorities. Selections from this work were subsequently included in the Vilna (Romm) edition of the Jerusalem Talmud. An early adherent of the Zionism movement, Ratner was among the Vilna community notables who welcomed Theodor Herzl on his visit to the city in 1903. He left his books to the Straschun Library of Vilna, of which he had been a director.

[Tovia Preschel]

RATNER, LEONARD (1896–1975), U.S. business executive and Jewish community leader. Ratner, who was born in Bialystok, Poland, went to the U.S. and settled in Shaker Heights, Ohio. He was founder and chairman of the board of direc-

tors of Forest City Enterprises, Inc., a national real estate development firm with interests in retail stores and building materials.

Ratner served a wide variety of community organizations and educational institutions in the United States and Israel. He was a member of the board of overseers of the Jewish Theological Seminary from 1953, a member of the board of the American Committee for the Weizmann Institute of Science in Israel, and former vice president and board member from 1965 of the American Friends of the Hebrew University. He worked for many charitable organizations, including the Jewish Community Federation of Cleveland, the UJA, and the American Jewish Joint Distribution Committee.

RATNER, MARC BORISOVICH (1871–1917), Russian lawyer and socialist. Born in Kiev, Ratner was brought up in an assimilated environment. He was expelled from high school because of clandestine Socialist activities. As a law student he was arrested and exiled for two years, but later graduated as a lawyer. In his student days he attracted attention with his articles in *Russkoye Bogatstvo* on the agrarian problem, Marxism, political economy, and labor legislation. He appeared as counsel for the defense in political trials and as civil prosecutor in the pogrom trials. The Kishinev pogrom brought him closer to Jewish affairs. He was among the leaders of the *Vozrozhdeniye and later the *Jewish Socialist Workers' Party, in which, with Chaim *Zhitlowsky, he represented the populist socialist-revolutionary trend. He fought for the inclusion of Yiddish in the curriculum of the *Society for the Promotion of Culture among the Jews of Russia, and was a candidate to the second *Duma. As a result of his activities during the 1905 revolution, he was compelled to leave Russia. Ratner was the initiator of the convention of the socialist parties of oppressed nations in Russia (1907). He represented the Jewish Socialist Workers' Party at the Congress of the Socialist International in Copenhagen (1910) and initiated the campaign for the recognition of a Jewish section of the International. The hardships of emigration (Switzerland, Vienna) ruined his health. A short while before his death he settled in Jassy, Romania.

In his works on the national question he rejected assimilationism and supported the idea of a national-personal, extraterritorial, autonomy. Noteworthy are his "*Evolutsiya natsionalno-politicheskoy mysli v russkom yevreytve*" ("The Evolution of National-Political Thought among Russian Jewry," in *Serp*, vol. 2, 1907); "*Natsionalny vopros v svete sotsialisticheskago mirovozzreniya*" ("The National Question in Light of the Socialist Weltanschauung," in *Russkoye Bogatstvo*, nos. 2–5, 1908); and articles on autonomism in *Yevreyskiy Mir*, nos. 6, 9, and 10 (1909).

[Moshe Mishkinsky]

RATNER, SIDNEY (1908–1996), U.S. economic historian. Born in New York City, Ratner was appointed professor of economic history at Rutgers University, New Brunswick, New Jersey, in 1958. He was active in U.S. civil liberties and civil rights movements. Ratner's major scholarly work concerned the interaction between government and the economy, with particular focus upon American taxation problems.

Among other books, he was the author of *Taxation, Its History as a Social Force in Democracy* (1942), *Taxation and Democracy in America* (1967), and *The Evolution of the American Economy* (with J. Soltow and R. Sylla, 1979).

RATNER, YOHANAN (1891–1965), Israel architect and a commander in the *Haganah and the *Israel Defense Forces. Born in Odessa into an assimilated family, Ratner completed university studies in Germany and served in the Czar's army during World War I and, despite being a Jew, was employed in planning campaigns on various fronts. Ratner went to Palestine in 1923 and was appointed a professor at the *Technion in Haifa. He played an important role in establishing the faculty of architecture, which he headed from 1930 until his retirement in 1963. Parallel to his career as a teacher, Ratner worked as an architect and drew up the plans for many public buildings, including the *Jewish Agency building in Jerusalem, the Eden Hotel, Jerusalem, the aeronautics building for the Technion in Haifa, the Kefar ha-Yarok Agricultural School, and Bet Berl at *Zofit.

Ratner joined the Haganah upon arrival in Palestine, became a member of the Haganah Committee in Haifa, and participated in the defense of Jerusalem during the riots of August 1929. He supported a more efficient and compact organization of the Haganah, and when the decision was made to appoint a head of the territorial command of the Haganah, Ratner was the first to occupy the position, which he held in 1938–39. During the German advance on Egypt (1941–42), he was among the creators of the "Carmel Plan," the main aim of which was to concentrate the Jewish armed forces in the Haifa region to fight the invaders. In 1947 Ratner became a member of the Haganah's high command, and, when the Israel Defense Forces were formed, became head of a department of general headquarters with the rank of *alluf* ("brigadier general"). In 1948 he was appointed military attaché to the Israel embassy in Moscow and filled the post until 1951.

[Yehuda Slutsky]

RATOSH, YONATHAN (originally **Uriel Halperin**; 1908–1981; pseudonym: **Uriel Shelah**), Hebrew poet and journalist. Born in Russia, the son of Yehiel *Halperin, he was brought up in an exclusively Hebrew-speaking environment. Ratosh went to Palestine in 1921. In the mid-1930s, he worked on the staff of two daily newspapers, first *Haaretz* and then the right-wing *Ha-Yarden*. In 1938 he left the country to avoid imprisonment by the Mandatory authorities for his political activities, but returned with the outbreak of World War II.

Ratosh published several volumes of poetry; the first, *Huppah Shehorah* ("Black Canopy," 1941), caused a scandal because of its sensuality, its innovations of language, and the *Canaanite motifs intrinsic to the writer's political-cultural thought. He translated many books into Hebrew, including such classics as *Cyrano de Bergerac* (1965) and the *Fables* of La Fontaine. Ratosh founded a political movement, originally called the Young Hebrews, but dubbed the "Canaanites" by its opponents, and he published articles on politics. He coined many new Hebrew words, worked in Hebrew literature and linguistics, and advocated the use of the Latin alphabet for Hebrew.

Ratosh was distinguished by his political-cultural philosophy. His insistence on being defined as a "Hebrew" rather than as a "Jew" reflects his conviction that the population developing an identity in Palestine/Israel is a new nation – as the descendants of immigrants in a country of immigration invariably become. Through its choice of the Hebrew language and culture, the new nation is defining itself as the cultural descendant of the ancient Hebrew-Canaanite nation, indigenous to what is generally known as the Fertile Crescent, which produced such cultural documents as the Ugaritic tablets and the body of literature that, extensively and tendentiously edited, has come down as the Hebrew Bible. The terms "Jew" and "Jewish" are, in Ratosh's opinion, to be reserved for the adherents of the religion of that name, developed by a group of Judean emigrés during the Babylonian Exile and imposed on the people of the land when part of them returned there in the time of Ezra and Nehemiah. To apply the term now as a national determinant is in his view a distortion, and the resulting identification between the old-new Hebrew nation and the Jewish communities of different persuasions in the rest of the world runs counter to history. In addition, Ratosh believed that the identification is injurious to the Hebrew nation and to the role that it must play in the national revival of the lands of the Euphrates. Ratosh had considerable influence on contemporary Hebrew poetry. The vicissitude of his early work, which provoked violent opposition when it first appeared, and was accepted ten years later and held up as a standard 20 years later, is perhaps characteristic. Devices and principles which he was the first to use were later taken for granted as part of the Hebrew poet's tools. This is true at all levels, from such purely technical matters as the use of an indention and dash pattern instead of punctuation, to structural techniques such as the near-repetition of phrases and refrains to obtain a counterpoint effect, to the recourse to local mythology as a vivifying poetic element. It seems likely that later works, particularly his verse in *Ha-Holkhi ba-Hoshekh* ("Who Walketh in Darkness," 1965) will, in time, be found to have had a similar influence. His collected poetry was published 1975–77, followed by a number of collections, among them *Shirei Ahavah* (1983), *Huppah Shehorah* (1988), and *Shirei Heshbon* (1988), as well as the letters (1937–80), which were edited by Y. Amrami (1986). D. Laor supervised the publication of Ratosh's essays (1983). Aharon *Amir edited (with a bibliography) a

collection of Ratosh's poems (*Yalkut Shirim*), to which he and Dan Miron added essays (1991). For English translations of Ratosh's works see Goell, Bibliography and the ITHL website at www.ithl.org.il.

[David Saraph]

RATSHESKY, ABRAHAM CAPTAIN (1864–1943), U.S. banker and civic leader. Ratshesky was born in Boston. He became a state Republican leader and was state senator in 1892–94. In 1895 he left career politics and founded the U.S. Trust Company, of which he served as president and board chairman. Subsequently, Ratshesky held numerous civic posts, including Massachusetts food administrator during World War I and U.S. minister to Czechoslovakia (1930–33). He was chairman of the Massachusetts Department of Public Welfare for ten years. Ratshesky served as first president of the Federated Jewish Charities of Boston (1909–19) and was prominent in many civic and Jewish endeavors. He formed the A.C. Ratshesky Charity Foundation in 1916.

[Edward L. Greenstein]

RATTNER, ABRAHAM (1893–1978), U.S. painter and sculptor. An expressionist artist who painted many biblical subjects imbued with subjective elements, Rattner was born in Poughkeepsie, New York, to Russian immigrant parents. He studied at George Washington University and the Corcoran School of Art in Washington, D.C., and attended the Pennsylvania Academy of Fine Arts in Philadelphia. His studies were interrupted by service in the army during World War I as a camouflage artist. Upon his return from war Rattner re-enrolled at the Pennsylvania Academy and soon won a fellowship to travel in Europe. After his travels, Rattner lived in Paris (1920–39), only returning to the United States because of Germany's invasion of France. While in Paris, Rattner received additional art instruction at École des Beaux-Arts, Grand Chaumière, and Académie Ranson. He had his first one-man show at the Galerie Bonjean in Paris (1935), from which the French government bought *Card Party* for the Louvre. At this time Rattner exhibited paintings influenced by Cubism and Futurism. Later that year Rattner had a one-man exhibition in New York at the Julien Levy Gallery, establishing the artist as a progeni-

tor of the avant-garde in contrast to the Social Realist imagery popular in New York at the time. Much of Rattner's early work was abandoned when he hurriedly left France and was destroyed before the artist could return after the war.

Soon after settling in New York, Rattner toured the eastern and southern United States with Henry Miller in 1940. Their travels resulted in the book *The Air-Conditioned Nightmare*, with text by Miller and drawings by Rattner. Distraught by the war, Rattner responded with a series of Crucifixion paintings conceived in what would become known as his signature style. *Descent from the Cross* (1940, Art Institute of Chicago) shows a cubistically rendered Jesus helped down from a bright red cross by two geometrically delineated figures. The segmented figures, painted with exaggerated limbs and oversized features, are colorful in conception with thick black lines separating the juxtaposition of warm and cool hues. Many of Rattner's later paintings, which are often pictured in multiple versions of biblical themes – such as Moses, Ezekiel, and Job – employ a heavy paint application and stronger abstraction.

He designed mosaics and a tapestry column for Fairmount Temple in Cleveland, Ohio (1957), and a stained-glass window, *And God Said Let There Be Light*, for the Chicago Loop Synagogue (1958). In 1968, Rattner exhibited his canvas *Victory – Jerusalem the Golden* (1967–68, collection unknown) to honor the celebration of Israel's 20th anniversary of independence. In 1969, he painted *The Gallows of Baghdad* series to protest the hanging of nine Jews in Iraq. Opened in 2002, the Leepa-Rattner Museum on the Tarpon Springs campus of St. Petersburg College contains the largest holdings of Rattner's work in the world.

[Samantha Baskind (2nd ed.)]

RAU, HEINZ (1896–1965), Israel architect. Rau was born in Berlin, where he specialized in interiors, among which were several for Berlin University. When Hitler came to power in 1933 he immigrated to Erez Israel, where he entered the office of Richard *Kaufmann. From 1949 to 1953 he worked for the Israel Government Planning Department. In 1962 he went to England to become assistant professor in the Department of Town and Country Planning, Manchester. Among Rau's designs in Jerusalem were the Hebrew Union College, the Mathematics Institute, and the domed synagogue at the Hebrew University of Jerusalem (in collaboration with Reznik). A feature of his buildings in Israel is the small intake of light, which he regarded as most suited to the climatic conditions.

RAUCH, EDUARDO (1940–2002), Jewish educator. Rauch was born in Chile to a family that fled Romania before the Holocaust. He was raised and educated in Santiago, receiving a master's degree in biochemistry from the Universidad de Chile. In his student years he was deeply affected by Zionism, partially through meeting the charismatic Argentin-

ean Jewish educator Jaime *Barylko, and in the wake of the Six-day War, led a delegation of Latin American volunteers to Israel. He spent three years in Israel working in the No'ar ve-he-Ḥalutz department of the Jewish Agency under Shelomo Dinur and Mordechai (Morele) Bar-On. In Israel he met and married his wife.

Rauch was elected secretary general of the World Union of Jewish Students (WUJS) and relocated to the WUJS headquarters in London, where he stayed from 1970 to 1973. After his term at WUJS ended, Rauch moved to America so that he could work on a doctorate in education at Harvard. He completed his degree in 1978 and accepted a position at the Melton Research Center for Jewish education at the Jewish Theological Seminary of America.

Two years later he and Barry W. Holtz became co-directors of Melton, serving in that position for 12 years. Rauch taught on the Seminary's education faculty, was the co-creator and editor of *The Melton Journal* (in its time one of the liveliest publications in the field), invented innovative educational projects such as the Melton Teacher Retreat Program, and helped build the Melton Center as a national force in American Jewish education. He published numerous reviews, poems, and essays on a wide range of topics. In a language that was not his native tongue, he was a powerful writer and a remarkable editor. His history of American Jewish education, *The Education of Jews and the American Community*, was published by Tel Aviv University Press posthumously in 2004.

[Barry W. Holtz (2nd ed.)]

RAUH, FRÉDÉRIC (1861–1909), French philosopher. He was born at St. Martin-le-Vinoux, was professor at Toulouse and later (1901) at the Sorbonne (where he replaced *Bergson) and at the Ecole Normale Supérieure.

His main philosophical interest was in morality, which he treated apart from metaphysics and empirical facts. He held that moral thought is like invention, and finds its verification in action. Moral certitude is possible, and man's true guide is reflection upon instinct, rather than either just reflection or just instinct. Individual conscience in which active moral belief manifests itself is all important. His main works were *Essai sur le fondement métaphysique de la morale* (1890); *L'expérience morale* (1903); *Psychologie appliquée à la morale et à l'éducation*, with R. d'Allones (1900–17); and *Etudes de Morale* (posthumous, 1911). He was a brilliant teacher. He was actively involved in the Dreyfus case.

BIBLIOGRAPHY: L. Brunschwig, in: *Revue Philosophique* (1928), 5–32; H. Daudin, in: *Revue de Métaphysique et de Morale* (1910), 185–218, 318–44 (contains complete bibliography); R. Junod, *Frédéric Rauh, Essai de biographie intellectuelle* (1932).

[Richard H. Popkin]

RAUH, JOSEPH L., JR. (1911–1992), U.S. lawyer. Rauh, who was born in Cincinnati, Ohio, graduated from Harvard Law School. He was law secretary to U.S. Supreme Court Justice Benjamin *Cardozo and counsel to various government

agencies, including the Wage and Hour Administration and the Federal Communications Commission (1935–42). Rauh served in the U.S. Army as a commissioned officer in the Pacific during World War II and was discharged with the rank of lieutenant colonel. He was a founder of the Americans for Democratic Action in 1947, which presented a liberal, non-Communist alternative to the then-conservative domination of both the Republican and Democratic parties. He was chairman of the ADA executive committee (1947–52), vice chairman (1952–55 and 1957), and national chairman (1955–57). Rauh was a delegate to all Democratic National Conventions from 1948, when he fought for the inclusion of the first strong civil rights plank in that party's platform, through 1964, when he strongly advocated seating the blacks representing the Mississippi Freedom party as the official Democratic delegation from that state. He served for many years on the board of the NAACP and as general counsel to the Leadership Conference on Civil Rights. Rauh was the Washington counsel (1951–63 and again from 1966) and general counsel (1963–66) for the United Automobile Workers. He also served as attorney for the insurgent United Mineworkers Union group led by Joseph Yablonski, who opposed incumbent Tony Boyle for the union's presidency in 1969.

Rauh was instrumental in the founding of the District of Columbia's public law school. In 1999, the Joseph L. Rauh, Jr. Chair of Public Interest Law was established at the University of the District of Columbia's David A. Clarke School of Law.

Regarded as one of the foremost civil rights and civil liberties lawyers of his time, Rauh was awarded the Presidential Medal of Freedom, posthumously, by President Bill Clinton in 1993.

***RAUTER, HANNS ALBIN** (1895–1949), Austrian *SS officer and *Himmler's principal representative in the occupied *Netherlands. One of the founders of the fascist Steirischer Heimatschutz ("Styrian Homeguard"), he became its chief. In 1933 he adhered with his organization to the Austrian branch of the Nazi Party. Himmler appointed him in 1940 Higher SS and Police leader in the Netherlands. In this capacity he won Himmler's praise for precisely and zealously carrying out the persecution of Dutch Jewry and their deportation to the camps in Poland. Rauter was considered the chief executor of the "Final Solution" (see *Holocaust, General Survey) of the Jews of the Netherlands. He was sentenced to death by a Dutch court and executed in 1949.

[Yehuda Reshef]

RAV (third century C.E.), leading Babylonian *amora* and founder of the academy at *Sura. His name was Abba b. Aivu, but he was also called Abba Arikha ("Abba the Tall") because of his tall stature (Nid. 24b). He is generally known as Rav by reason of being "the teacher [*rav*] of the entire Diaspora" (Beḥaz 9a, and Rashi thereto). Born at Kafri in southern Baby-

lonia in the latter half of the second century C.E., he belonged to a very distinguished family; he was related to Ḥiyya through both his parents (Sanh. 5a; Pes. 4a and Rashi) and traditionally was descended either from Shimei, brother of David (Ket. 62b), or from Shephatiah, the son of Abital and David (TJ, Ta'an. 4:2, 68a). It is not known who were Rav's teachers in Babylonia, but he immigrated to Erez Israel and studied under his uncle Ḥiyya (MK 16b), was a member of his household (Shab. 66b), and assisted him in his business affairs (TJ, BM 6:1, 10d). Ḥiyya introduced him into the home of Judah ha-Nasi (Ber. 46b), where he discussed *halakhah* under Ḥiyya's guidance (Ḥul. 16a). Extremely diligent in his studies (cf. Suk. 26b), Rav joined the academy of Judah ha-Nasi, with whom he debated halakhic topics (Ḥul. 137b) and whose *bet din* he joined (Git. 59a). He knew and entered into halakhic discussions with the greatest of the last generation of *tannaim*, being in contact with Ishmael b. Yose (Pes. 112b, according to R. Hananel's version; see Dik. Sof. *ibid.*), Symmachus (Ket. 81a), Bar Kappara (Yoma 87b), Eleazar b. Simeon (Zev. 102b), as well as with Levi (Beḥaz 24b) and Ḥanina b. Ḥama (Yoma 87b).

He learnt the Torah of Erez Israel, and prior to leaving the country was ordained by Judah ha-Nasi and was authorized to give decisions in ritual law and in civil cases (Sanh. 5a–b; TJ, Ḥag. 1:8, 76c). Some hold that after going back to Babylonia, he returned several times to Erez Israel (see TJ, Pe'ah 6:3, 19c) before finally deciding to settle in Babylonia, apparently in 219 C.E. (*Iggeret R. Sherira Ga'on*, ed. by B.M. Lewin (1921), 78). He encountered some difficulties in Nehardea (Shab. 108a), which was an important center of sages and Torah, and where Shila, Samuel, and Karna flourished at the time. Rav first served as an interpreter in Shila's *bet midrash* (Yoma 20b), and subsequently the exilarch appointed him *agoranomos* ("market commissioner," TJ, BB 5:11, 15a), whose duties in Babylonia comprised superintending market measures and prices; in keeping with the prevailing *halakhah* in Erez Israel, however, he refused to regulate prices. Compelled to resign his position, he left Nehardea and went to Sura, whose inhabitants were not distinguished for their knowledge of the Torah (Ḥul. 110a); there he established a *bet din* and academy which in time attained such eminence that it was regarded as "a little sanctuary" (Meg. 29a) and attracted hundreds of pupils from Sura and its neighborhood. Its permanent pupils numbered 1,200 (Ket. 106a).

The Jews of Sura and its neighboring towns accepted his religious leadership and jurisdiction (*ibid.* 54a). Not only the Babylonian sages, foremost among them Samuel, acknowledged his considerable religious authority (Git. 36b), but Johanan, the head of the academy at Tiberias and one of the outstanding sages of Erez Israel at the time, counted Rav as his teacher in *halakhah* (Ḥul. 95b). Perhaps the most conspicuous recognition of his signal religious authority is the statement: "Rav is a *tanna* and differs" (Ket. 8a), that is, Rav has the right to differ from a *tanna* without sustaining or basing his view on that of another *tanna*, a privilege accorded only to him among all the Babylonian sages of that generation. Re-

turning to Babylonia equipped with the teachings of Judah ha-Nasi and with a profound, comprehensive knowledge of the Torah of Erez Israel, Rav introduced into Babylonia several *halakhot* previously not practiced there. Thus Huna, one of Rav's distinguished pupils, declared: "From the time Rav arrived in Babylonia, we in Babylonia have put ourselves on the same footing as Erez Israel with regard to the breeding of small cattle" (which was prohibited there; BK 80a), as well as "with regard to bills of divorce" (the bearers of which in Erez Israel were exempted from stating, "In my presence it was written and in my presence it was signed"; Git. 6a). Rav enacted regulations relating to matrimony (Yev. 52a; Kid. 12b) and the education of children (Ket. 50a), and frequently visited different communities in Babylonia to institute various ordinances there and to raise their religious and social standard (the sources have been collected by J. Umanski, notes 140/1).

That he relied on his independent judgment, unrestrained by other authorities, when issuing regulations and arriving at decisions, shows the extensive authority enjoyed by him in Babylonia and recognized, according to all indications, also by the exilarch and his officials. Rav was a member of the exilarch's *bet din* (Kid. 44b) and his daughter married into the exilarch's family (Hul. 92a). The fact that Rav was economically independent (Ber. 57b), owning landed property (Kid. 59a) and enjoying an income from the manufacture and sale of beer (Pes. 107a), helped to sustain his eminent status. Although there is evidence that he was in some contact with Artabanus v, the last of the royal Arsacid dynasty (Ar. Zar. 10b), unlike Samuel, he did not maintain close relations with the authorities or with non-Jews, his chief activity being directed to internal affairs, to the religious welfare of the members of the Babylonian Jewish community. In addition to his labors in his *bet din* and the academy, Rav was one of the most eminent and prolific Babylonian aggadists and frequently delivered public discourses. In his addresses, greatly influenced by the Erez Israel *aggadah*, he urged his audiences to observe the *mitzvot* and to study the Torah.

In explaining the reason for the *mitzvot* and for their observance he declared: "The *mitzvot* were given only as a means of refining men. For what difference does it make to God whether one slaughters an animal from the front or from the back of the neck?" (Gen. R. 44:1). Of the study of the Torah he said that it "is more important than the offering of the daily sacrifices" (Er. 63b), that it "is superior to the building of the Temple" (Meg. 16b), that "whoever departs from the words of the Torah is consumed by fire" (BB 79a), and that "he who says, 'I shall rise early to study this chapter or this tractate,' has vowed a great vow to the God of Israel" (Ned. 8a). In his solicitude for the status and dignity of scholars he asserted that anyone who insults a scholar is a heretic (*eppikoros*; Sanh. 99b) and "has no remedy for his wounds" (Shab. 119b). Urging scholars to be diligent in teaching the Torah, he declared that "whoever withholds a *halakhah* from a disciple is as though he has robbed him of his ancestral heritage" (Sanh. 91b), and "that whoever teaches Torah to his neighbor's son will be

privileged to sit in the Heavenly Academy... if he teaches it to an ignorant man's son, even if the Holy One blessed be He decrees adversely, He annuls it for his sake" (BM 85a). From the examples quoted and their emphasis, it is evident that Rav regarded the teaching of the Torah and the spreading of the knowledge of the Torah as one of the most important spheres of his communal activities.

Of the Jews of Babylon who had refused to grant a certain Shabbetai b. Marinus facilities for earning a livelihood and had not given him any food either, Rav said: "These are the descendants of the 'mixed multitude' (Ex. 12:38), for it is written (Deut. 13:18). 'And [He will] show thee mercy, and have compassion upon thee.' Whoever is merciful to his fellowmen is decidedly of the children of our father Abraham, and whoever is not merciful to his fellowmen is decidedly not of the children of our father Abraham" (Bezah 32b). Rav warned his audiences against quarreling (Sanh. 110a), against slander and its grave consequences (BB 164b), against paying heed to slander (Shab. 56b), and against boastfulness (Pes. 66b), and was solicitous for the position and welfare of workers (BM 83a).

In some of Rav's homilies a tendency to a certain mystical thinking is discernible. Describing, for example, the difference between this and the next world, he said: "In the future world there is no eating nor drinking, no propagation nor business, no jealousy nor hatred nor competition, but the righteous sit with their crowns on their heads feasting on the Divine Glory" (Ber. 17a). Rav expounded God's names and their pronunciation (Kid. 71a), the purpose of creation (Shab. 77b) and the process of creation (Ḥag. 12a), the divine providence of the world and its creatures (Sot. 2a; Ḥag. 5b), and warned against criticizing God's attributes (Men. 29b). Rav composed several prayers, the best known being *Tekiata de-Rav* which is recited during the *Amidah* on Rosh Ha-Shanah (TJ, RH 1:3, 57a) and whose contents express his outlook on God's providence over the nations and of Israel.

Opposed to a life of abstinence and mortification, Rav asserted: "Man is destined to render an account for all that his eye has seen and he has not eaten" (TJ, Kid. 4:12, 66d). To *Hamnuna he declared: "My son, if you have anything, derive what benefit you can from it, for there is no enjoyment in the grave nor does death delay. And should you say, 'I would leave a portion for my children,' who will tell you in the grave? The children of men are like the grasses of the field, some blossom and some fade" (Er. 54a, based on Ecclus. 14:12-14). The Jews of Babylonia had great esteem for Rav and grieved deeply at his death. Samuel rent his garments (MK 24a), as did Rav's pupils (Ber. 42b-43a) who mourned him for a long time (Shab. 110a). People took earth from his grave for medicinal purposes (Sanh. 47b). Rav and Samuel are the founders of the Babylonian Talmud, and their discussions and debates both in *halakhah* and *aggadah* are one of its prominent features. Where Samuel, who probably never visited Erez Israel, and his academy in Nehardea reflect the Babylonian tradition, Rav and the academy of Sura which he founded reflect that of Erez Israel.

[Moshe Beer]

RAVA (d. 352 C.E.), Babylonian *amora*. Rava is an abbreviation of R. Abba, and his full name was R. Abba b. Joseph b. Ḥama (Er. 54a). He lived at *Maḥoza. His teachers were *Ḥisda, the head of the academy at Sura, whose daughter he married (BB 12b), but principally *Naḥman b. Jacob (Shab. 4a) and R. Joseph, head of the academy at Pumbedita (Hul. 133a). His main halakhic discussions were with his companion *Abbaye, and their statements and controversies are found throughout the Babylonian Talmud. In their many debates the *halakhah* follows Rava's view except in six instances (for which the mnemonic ם"ק"ג"ע"ל"ק"ג"ע" was given) in which the *halakhah* is according to Abbaye (BM 22b). After R. Joseph's death in 323 (*Iggeret Sherira Ga'on*, ed. by B.M. Lewin (1921), 85–86), Abbaye was chosen in preference to the other candidates (Rava, Zera, and Rabbah b. Matna) as the head of the Pumbedita academy. Rava thereupon left that city and returned to Maḥoza, where he established a *bet midrash* which attracted many pupils (BB 22a). Rava ascribed overriding weight to logical reasoning and inference in the study and comprehension of the Torah; this approach is reflected in his statement that “one grain of pungent pepper is better than a basketful of pumpkins” (Ḥag. 10a) and in his assertion that he was “like Ben Azzai,” who was noted for his mental keenness (Er. 29a). His educational approach was popular with Rava's pupils, one of whom, addressing the pupils of Abbaye, who in his teaching preferred a thorough knowledge and comprehension of halakhic discussions, said: “Instead of gnawing bones in the school of Abbaye, why do you not eat fat meat in the school of Rava?” (BB 22a). Those who had studied under Rava found no great satisfaction in other sages' discourses (Ta'an. 9a). Rava's academy became the principal one after Abbaye's death in 338, the sages and pupils of Abbaye's academy moving to Maḥoza (*Iggeret Sherira Ga'on* pp. 88–89).

For 14 years, until his death, Rava was the head of the academy, during which time his intellectual powers and economic position so expanded as to enable him to assert that he had been granted the wisdom of *Huna and the wealth of Ḥisda, though not the modesty of *Rabbah b. Huna (MK 28a). He owned fields and vineyards (BM 73a) and traded in wine (Ber. 56a), cooperated in public and administrative matters with the exilarch's officials (BB 22a; Git. 31b), and negotiated with the Persian authorities. He was on friendly terms with the exilarch (Bezah 21b; Ber. 50a; Pes. 74b), and there is illuminating information on his contacts with *Shapur II. When the sages of the academy complained that Rava had established too close relations with the royal court, he replied by

telling them what he had to endure there and the large sums with which he bribed the court (Ḥag. 5b). Apparently much money was demanded from the Jews, as from the rest of the population, to finance Shapur's wars against the Romans. Rava also maintained close ties with Ifra Hormuz, the king's mother, who sent him money for distribution among the poor (BB 10b) and a calf to be sacrificed on her behalf (Zev. 116b). She told her son of Rava's greatness when the king wished to punish him for having sentenced a man to flogging which proved fatal (Ta'an. 24b). Maḥoza's geographic proximity to Be-Ardashir, one of the country's capitals, may have facilitated Rava's contacts with the authorities there.

Rava's main activity, however, lay in teaching and in spreading knowledge of the Torah. He instituted various regulations for the people of Maḥoza (Bezah 30a; Er. 40a; MK 22a; Nid. 66b). He denounced for their pursuit of pleasure (RH 17a), many among the well-to-do (BK 119a) who ate and drank to excess (Shab. 109a) and whose wives did no work (Shab. 32b–33a). On the other hand, he praised the industry of the workers of Maḥoza (BM 77a). Large audiences gathered on Sabbaths to hear Rava's discourses (Er. 44b), and in numerous statements he stressed the signal religious value of studying the Torah. Once, when he noticed a disciple of the sages praying at great length, he said: “They forsake eternal life and occupy themselves with temporal life” (Shab. 10a). He declared that whoever occupies himself with the study of the Torah has no need of sacrifices (Men. 110a) and is superior to a high priest who enters into the innermost part of the sanctuary (Sot. 4b), that the Torah is an antidote to the evil inclination (BB 16a), that suffering comes upon a man for neglecting the study of the Torah (Ber. 5a), and that King Asa was punished for having imposed forced labor on the disciples of the sages who were thus compelled to neglect the study of the Torah (Sot. 10a). He claimed exemption from government taxes for disciples of the sages (Ned. 62b), to whom he gave the right to sell their goods in the market (BB 22a). To uphold their honor and prevent them from wasting their time, which should be devoted to the study of the Torah, he allowed them to disclose that they were disciples of the sages so that they might be judged or give evidence without having to wait for the cases of others to be finished (Ned. 62a). But he also demanded of them that they be worthy of the name, declaring that “any disciple of the sages whose inside is not like his outside is not a disciple of the sages” (Yoma 72b).

Yet despite its great importance Rava did not regard the study of the Torah as an end in itself. Thus a favorite saying of his was, “The goal of wisdom is repentance and good deeds, so that a man should not study the Torah and Mishnah and then despise his father and mother, his teacher, and his superior in wisdom and rank” (Ber. 17a). In like manner, when describing what is demanded of man in this world, he said: “When man is brought in for judgment [in the next world] he is asked, ‘Did you deal faithfully, fix times for studying the Torah, did you engage in procreation, hope for salvation, did you search after wisdom, infer one thing from another?’ Yet,

even so, if 'the fear of the Lord is his treasure' (Isa. 33:6) it is well; if not, it is not well" (Shab. 31a). Rava's special outlook can be better comprehended when compared with Hammuna's statement that "the first matter for which a man is called to render account in the hereafter is with regard to the study of the Torah" (Sanh. 7a). Rava likewise said: "Jerusalem was destroyed only because men of integrity ceased therein" (Shab. 119b). An illuminating view of his is that "length of life, children, and sustenance depend not on merit but on luck" (MK 28a). He had many affinities with mysticism and performed miracles (see Sanh. 65b). On one occasion he even wished to discourse in the *bet midrash* on the mystery of the Tetragrammaton but was stopped by a certain old man (Pes. 50a). On Rava's death the academy at Maḥoza was divided in two, *Naḥman b. Isaac, the head of the **kallah* at Maḥoza, succeeding Rava as head of the academy there, while R. *Papa, a pupil of Rava, established one at Naresh.

[Moshe Beer]

RAVA, MAURIZIO (1878–after 1935), Italian colonial administrator and traveler. Born in Milan, Rava studied painting. Due to poor health he moved to warmer climates, traveling in Africa and Asia. He published his impressions in Italian magazines and geographical periodicals. In 1909 he founded *Il Carroccio*, a political literary periodical, staunchly supporting the new Italian Nationalist Party. Rava strongly advocated Italian colonial expansion. He served in the Libyan campaign and was decorated for valor. In 1927 Rava was appointed secretary-general of the *Tripoli government and from 1932 to 1935 was governor of Italian Somaliland. Rava published many studies on Italian administration in *Libya, East Africa, and Ethiopia.

RAVAYA (Ravalia, Ravaylla), family of courtiers in 13th-century Spain, originating from Gerona in Aragon. Its prominent members included ASTRUG RAVAYA, bailiff of Gerona from 1276 to 1281. In the 1260s Astrug and his son JOSEPH (d. 1282) loaned large sums to King James I, and also farmed the royal revenues. Joseph was the treasurer of King Pedro the Great (1276–85). In the reign of Pedro's father, James I, Joseph had served as the infante's banker and for a time managed all the latter's property. From 1268 Joseph was bailiff of Besalú and from 1271 also of Gerona and district. Apart from the king and the infante, Joseph was the only person in the kingdom of Aragon whose functions enabled him to act in the three states of the crown (Aragon, Catalonia, and Valencia). The general local bailiffs as well as various other officials were all subordinated to his authority. Muca de *Portella, Aaron Abinafia, and Joseph's brother, Moses (see below), served under him as district commissioners, their functions being similar to those of the general bailiffs in later periods. As king's treasurer, Joseph had to supervise the royal accounts and manage the crown revenues. In 1279 he is mentioned by the title

thesaurarius ("treasurer"). Joseph had a part in the appointment or dismissal of royal officials and often served Pedro in an advisory capacity. He accompanied the king at the siege of Balaguer against the rebel Catalonian nobles (1280) and during the campaign against Sicily (1282). Various state documents contain Joseph's signature in Hebrew and other administrative notes in this language.

Joseph's brother, MOSES, headed the crown administration of Catalonia until his dismissal (before February 1283). In that year, when he was about to inherit his brother's office in charge of the three states of the kingdom, the king ordered that Moses' functions should be restricted to Catalonia only, while for the first time Christian officials were appointed to these posts in Aragon and Valencia. Moses also continued his activities under Alfonso III (1285–91), despite the laws of 1283 which barred Jews from holding public office in the kingdom.

RAVEN (Heb. עֹרֵב), bird. Mentioned in the Pentateuch among the unclean birds is "every raven after its kind" (Lev. 11:15). The reference is to the genus *Corvus* of which four species are found in Israel, three black (cf. Song 5:11) and one, very prevalent near inhabited areas, the hooded crow, *Corvus corone*, which has a gray back and belly and a black head and wings. It is commonly found in Jerusalem where it nests in high trees. Metal spikes were placed on the roof of the Temple to prevent ravens, undoubtedly attracted by the remains of sacrifices, from sitting on these (Mid. 4:6) and disturbing the Temple service with their raucous cries. These sounds are particularly strident during hot spells at the beginning of summer, when the "young ravens" leave the nest. Although already grown, the young are incapable of finding food, and since they have a voracious appetite, their parents fly to and fro in search of food for them, the air being filled with their cries, and hence the description: "He giveth to the beast his food, and to the young ravens which cry" (Ps. 147:9). These young ravens cry, as it were, to God to satisfy their hunger, as it says in Job (38:41): "Who provideth for the raven his prey, when his young ones cry unto God...?" The hooded crow is found in flocks which with great devotion defend their companions and especially the young, and hence the saying: "Three love one another, proselytes, slaves, and ravens" (Pes. 113b). The black raven, *Corvus corax*, preys on small animals and feeds on carcasses and corpses (cf. Prov. 30:17). Although folklore represents the raven as presaging evil (cf. Isa. 34:11), it is once mentioned in a favorable context, ravens having fed *Elijah when he hid in the brook *Cherith (1 Kings 17:2–6). The raven is endowed with a highly developed sense of orientation, and in eastern countries mariners took with them ravens to direct them to dry land; the story of the raven in the ark (Gen. 8:7) is reminiscent of this.

RAVENNA, city in Emilia Romagna, N. central Italy. There is evidence that a Jewish settlement existed in Ravenna in the third and fourth centuries, probably the earliest Jewish community in the region. A piece of an amphora with the word "Shalom" written on it attests physically the Jewish presence, when Ravenna was the capital of Byzantine Italy. Around the beginning of the sixth century Ravenna became the capital of the kingdom of the Ostrogoths under Theodoric, who was well disposed toward the Jews. Thus in 519, after the Christian populace incited by the clergy burnt down the synagogue in Ravenna, Theodoric ordered that those responsible should pay compensation: persons who refused were to be publicly flogged. The early medieval Jewish community of Byzantine Ravenna probably consisted of merchants engaged in overseas commerce.

In 1352 there is mention of the first loan bank owned by Jews. When the Republic of Venice took control of Ravenna, a number of Jews immigrated. Ravenna Jews were goldsmiths, wine merchants, and hemp merchants. When Ravenna passed under the rule of the pope the situation of the Jews worsened. The vigilance committee of the Italian Jewish communities met at Ravenna in 1443 to consider measures to counteract the restrictive papal bull recently issued. The original nucleus had by now been joined by loan-bankers, whose lucrative activities continued until 1492 when a public loan-bank (*Monti di Pietà) was opened. In the same year the first expulsion occurred. The previous year the synagogue had been destroyed by the populace incited by the preaching of the *Franciscans, and the Jews had been attacked. Since Ravenna was now under the sovereignty of the Church, the anti-Jewish regulations issued by the popes in the second half of the 16th century were all enforced, and the Talmud was burned in 1553. Jews came back to Ravenna; thus in 1515 the General Council decreed the erection of a ghetto in the area where Via Luca Lunghi stands today. The Jews also erected a small synagogue. The Jews were expelled once more in 1555. In 1569, when Pope *Pius v ordered the Jews to leave the minor centers of the Papal States, the Jews were expelled from Ravenna. Thirty loan-bankers returned following the concessions made by *Sixtus v in 1587. In 1593, the Jews were again expelled by Clement VIII.

The Biblioteca Classense includes various manuscripts in Hebrew and a printed book, *Sefer Kol Bo*, dated to 1525. The book was printed in the workshop of Gershon Soncino at Rimini.

Not far from Ravenna at Piangipane, there is the Allied War Cemetery. Part of the burial ground includes the graves of the 34 soldiers of the Jewish Brigade Group who fought in the Senio area at Alfonsine di Romagna and Brisighella between March and April 1945.

[Ariel Toaff / Samuele Rocca (2nd ed.)]

RAVENSBRUECK, Nazi concentration camp for women. This camp, the only one of its kind, was located near Fuerstenberg in Mecklenburg (in the former East Germany). Its construction by prisoners from *Sachsenhausen, begun in the fall of 1938, was completed in the spring of 1939. The first camp commandant, Max Koegel, was replaced in 1942 by Fritz Suhren, who remained in charge until the evacuation of the camp (April 30, 1945). The key posts were held by men, but the *ss staff was mostly female and excelled in its cruel treatment of the inmates. Originally intended as a prison camp for political prisoners, Ravensbrueck's role changed with the start of World War II, eventually becoming a concentration camp and finally, in 1944, with the addition of a gas chamber, an extermination camp.

On May 15, 1939 the first prisoner transport arrived from Lichtenburg, a concentration camp for women in Saxony that closed in May 1939. The women were "Bibelforscher" (Jehovah's Witnesses) or criminals. On May 18, 1939, 867 women who were political prisoners (some were coincidentally Jewish, arrested for their political activities, not because they were Jewish), arrived from Germany and Austria. By late May 1939 there were 974 women imprisoned in Ravensbrueck including 137 Jews. In the summer of 1939 a transport of gypsies arrived from Austria. The camp's original purpose was the imprisonment and punishment of political prisoners. After the war began its prisoners served as a pool for slave labor. The outbreak of World War II also brought thousands of Polish women (many with their children) and Czech women to Ravensbrueck. Later on other prisoners came, especially resistance fighters from all over Europe. Women wore color-coded triangles that designated them as political prisoners, criminals, asocials, Jehovah's Witnesses, or Jews. With the war and the increasing numbers of incarcerated women came a swift deterioration in living conditions due to overcrowding, malnutrition, and hard labor. The escalation of the war brought continually harsher and demanding work conditions in jobs that ranged from hard physical labor such as road building to factory work in the network of satellite camps. A clothing industry, especially for furs, operated in the camp. Work was required of everyone. Older women who were too weak to do hard labor were used to make clothes for the army or clean the barracks and latrines. The "Bunker" – as the camp prison was known – was completed in 1939 and became the site where women were regularly subjected to solitary confinement and torture. In 1941 the sick prisoners were included in the *Euthanasiaaktion* involving the killing of the mentally ill. The steadily growing death rate was caused by overwork and deteriorating living conditions. In the fall of 1944 a gas chamber was constructed (until then prisoners had been sent for gassing to other camps), and it is likely

that the first female prisoners were murdered there in January 1945.

Ravensbrueck prisoners served as guinea pigs for pseudomedical experiments carried out by the *Auschwitz physicians, August Horst and Karl Clauberg. The surviving victims were often crippled for life. Ravensbrueck also became a training site for women SS auxiliary guards who went on to work in Auschwitz or *Majdanek. The rising number of Jewish inmates was concentrated in a special Jewish block, where the worst living conditions prevailed. With the implementation of the "Final Solution," all Jewish prisoners were sent to Auschwitz or Majdanek in October 1942. In the summer of 1944 Hungarian Jewish women arrived, followed later by others from other camps. Due to the intervention of *Himmler's favorite, the Finnish Dr. Kersten, and of the representatives of the World Jewish Congress in Sweden, together with the activities of *Bernadotte, on April 21 Himmler gave his consent to release thousands of women from Ravensbrueck and two other camps nearby. They were transferred by the Red Cross to Sweden and Denmark. Among them were at least 1,000 Jewish women. This rescue action had been decisively influenced by the personal intervention of Norbert Masur (d. 1971), a member of the Swedish section of the World Jewish Congress, who flew with Kersten to Berlin on April 19 and conferred with Himmler in a meeting arranged by Kersten, during the night of April 20 to 21. With the approach of the Soviet army, evacuation of Ravensbrueck was ordered by Himmler and 15,000 women were sent on a forced death march. Up to this time, 132,000 women and children had passed through the camp, of whom 92,000 died or were murdered in the camp. When the Red Army reached the camp on April 30, 1945, they found 3,000 gravely ill and dying prisoners there.

No armed resistance was possible in Ravensbrueck, but other examples of "illegal" and punishable activities are noteworthy. Those of a political nature include attempts by women working in the nearby Siemens factory to sabotage its manufacture of rocket components, to steal newspapers, or to keep lists of prisoners. Women also taught clandestinely and attempted small theatrical productions. Acts that offered reminders of home and emotional reassurance to the imprisoned women are also important. Women secretly created cookbooks, artwork, and other small items. These artistic and hand-crafted gifts that prisoners fashioned from scraps and threads of clothing and exchanged among themselves were unique ways in which women were able to resist the dehumanizing and deadly conditions.

[Yehuda Reshef / Beth Cohen (2nd ed.)]

RAVENSBURG, city in Wuerttemberg, Germany. A Jewish community existed there in the first half of the 14th century and had a synagogue. From 1330 to 1343 ten Jews are listed in the burgher rolls, including a rabbi or teacher (referred to as Ysak *scholasticus*) and a miller. The Jewish *oath (a brief dignified formula) was administered in the synagogue. The Jews' street was near the northern wall. During the *Black Death persecutions, the Jews fled to the imperial bailiff's castle where most of them were burned to death by the populace early in 1349. A survivor was admitted as a burgher in *Esslingen in 1385. Jews again appear in Ravensburg in 1380; in 1385 two Jewish masons are mentioned. In 1427 a Jew was imprisoned on charges of forgery but released upon proving his innocence. In 1429, when a young lay brother's body was found hanging from a tree in a nearby wood, two Jewish couples, one of them with their son, were accused of murder and imprisoned; they made a public declaration of innocence, which was signed by the Swabian imperial bailiff, his deputy, and others. However, the social unrest in the area caused the *blood libel to spread, and Jews in the communities on Lake *Constance were also arrested. In 1430 the imprisoned Jews in Ravensburg were burned to death and the rest banished from the city. The decision was reaffirmed by King Ferdinand I in 1588. Both King Sigismund II at the end of 1430 and Bishop Henry of Constance in 1441 vigorously opposed attempts to venerate the dead boy. Nevertheless, in local tradition the blood libel fable prevailed, as crystalized in a chronicle written c. 1770.

In the 18th century some Jews attended fairs held in Ravensburg, and by 1835 a few Jews had moved to the city. They numbered 40 in 1900 and 27 between 1925 and 1933. Of these 12 emigrated, five moved elsewhere, and 13 were deported to death camps in Eastern Europe in 1941–42. There were 32 liberated Jewish survivors of the Holocaust living in Ravensburg by 1947–48; 17 Jews remained by 1965. In 1968 eight Jews were affiliated with the *Stuttgart community. In 2005 there were three Jews living in Ravensburg who were members of the Jewish community in Stuttgart.

[Toni Oelsner]

RAVIKOVITCH, DALIA (1936–2005), Hebrew poet. Born in Ramat Gan, Ravikovitch was sent after her father's death

to live on a kibbutz. She studied at the Hebrew University, worked as journalist and teacher, and began publishing poetry in 1955. Her first collection, *Ahavat Tappuah ha-Zahav*, with the title alluding to Prokofiev's burlesque opera, appeared in 1959. Nearly a dozen volumes of poetry followed, including *Ha-Sefer ha-Shelishi* ("The Third Book," 1969), *Ahavah Amitit* ("True Love," 1987), *Kol ha-Shirim ad Ko* ("All the Poems Till Now," 1995), *Merov Ahavah* ("Because of Love," 1998) and *Ḥazi Sha'ah lifnei ha-Monsun* ("Half an Hour before the Monsoon," 1998). The often very intimate poetry addresses the theme of loss and loneliness. Typical is the way in which Ravikovitch sets the personal experience in a wider context, the emotion in a collective historical or mythological frame of reference (as, for example, in the poem "*Ha-Historyah shel ha-Perat*"). Dreams and hallucinations evoke the vulnerability of the feminine speaker in the poems, the sense of yearning and anticipation, frequently alluding to a thwarted eroticism (as in "Clockwork Doll"). Motherhood and commitment, bodily decrepitude, and the mysterious life-driving force are some of the recurring themes. Another keynote is the political one: poems in which the speaker protests in the tradition of the biblical prophet against injustice and oppression. Ravikovitch depicts the fate of an infant who was killed in his mother's womb ("Mother Walks Around"), delineates with sarcasm the picture of terror and death in the Palestinian refugee camps of Sabra and Shatilla ("One Doesn't Kill a Baby Twice"), tells of an Arab who was burned to death, reflects on Palestinian youth throwing stones, robbed of the innocence of childhood ("Stones"), or portrays the Israeli mother whose son died in the army ("But She Had a Son"). A sense of futility and resignation marks many of the confessional poems speaking of existence – both private and collective – on the verge of an abyss. "We are a plan that has gone awry," she writes.

In addition to her own collections of poetry, Ravikovitch translated the poetry of W.B. Yeats and T.S. Eliot into Hebrew. She is the author of children's books in verse and prose, including *Mekhonit ha-Pela'im* ("The Magic Car," 1959), *Kalman shel Rami* ("Rami's Kalman," 1961), *Imma Mevulbelet* ("Absent-Minded Mommy," 1978). She also published two collections of short stories: *Mavet ba-Mishpahah* ("Death in the Family," 1976) and *Kevuzat ha-Kaduregel shel Winnie Mandela* ("Winnie Mandela's Soccer Team," 1997). The typical protagonist is generally a woman or a girl who does not fit into normative social frameworks, a sensitive individual who remains an outsider, whether in the family, in the group, or in the kibbutz. In 2005 Ravikovitch published a collection of fifty mini-stories, oscillating between the melancholy and the humorous, under the title *Ba'ah ve-Halkhah* ("She Came and Went"). Ravikovitch was awarded the Bialik Prize (1987) and the Israel Prize (1998). Her poems have been translated into many languages. The English collection *Dress of Fire* appeared in 1978, followed by *The Window* in 1989. For information concerning translations into other languages see the ITHL website at www.ithl.org.il.

Ravikovitch was found dead in her apartment on August 21, 2005, apparently by her own hand.

[Anat Feinberg (2nd ed.)]

RAVINA (abbreviation of Rav Avina), the name of several Babylonian *amoraim*, some of whom are mentioned with their patronymics and some without. At times it is difficult to identify the particular Ravina. The two best known are: RAVINA I (d. 422), who studied under Rava (Ber. 20b; 38a, et al.), and also maintained contact with Rava's other pupils, Naḥman b. Isaac, Papa, and Huna b. Joshua (Pes. 105a; BM 74b; Sanh. 69a). He had frequent discussions with R. Ashi, who was his junior. He attended his academy in Mata Meḥasya and referred to himself as a pupil-colleague of Ashi (Er. 63a; et al.). He gave rulings on various occasions (Er. 40a, 63a). The statement, "Ravina and R. Ashi conclude the [authoritative] teaching [of the Talmud]" (BM 86a), may refer to him (Ravina's name occurs before that of Ashi in many manuscripts and early sources; see bibl., *Sinai Sefer Yovel*, 60, n. 6). He was renowned for his devotion to study and it was said of him that "he made nights as days in study of the Torah" (MK 25b; see Dik. Sof., *ibid.*). He had a son and daughter (BM 104b; Nid. 66a), and lived to an advanced age ("*Seder Tanna'im ve-Amora'im*" in *Maḥzor Vitry*, p. 483). Lavish eulogies were delivered at his death (MK 25a).

Ravina II (d. 499), Ravina b. Huna, apparently a nephew of Ravina I (Ket. 100b). His father, who was a scholar since he transmitted sayings of R. Papi (Ned. 90a) and of R. Joseph (Ned. 60b), died while Ravina was still young and his mother reported some of his father's customs in a number of *halakhot* that were in dispute (Ber. 39b; Men. 68b). Maremar was his main teacher and Ravina frequently discussed halakhic problems with him (Shab. 81b; et al.). Ravina served as *dayyan* in Mata Meḥasya and helped Ashi's daughter collect the portion of her father's property that was her due from the property of

her brother Mar (Ket. 69a). On the death of Rabbah Tosfa'ah in 474, Ravina succeeded him as head of the academy of Sura (*Iggeret R. Sherira Ga'on*, ed. by B.W. Lewin (1921), 95; and see Abraham ibn Daud, *Sefer ha-Kabbalah – Book of Tradition*, ed. by G.D. Cohen, 1942). During that period the Babylonian government issued harsh decrees against the Jewish community; synagogues were closed and Jewish children compelled to apostasize (*Iggeret R. Sherira Ga'on*, p. 97). According to Sherira Gaon it is this Ravina who together with Ashi “concluded the teaching” (see above). The death of Ravina marks the end of the era of *amoraim* in Babylonia and the beginning of the age of the *savoraim*.

[Moshe Beer / Yitzhak Dov Gilat]

RAVINA (Rabinowitz), MENASHE (1899–1968), composer and writer. Menashe Ravina was born in Pereyaslav, Ukraine, went to Palestine in 1924, and became active as a music educator, choral organizer, music critic (for *Davar*, from 1925 until his death), and composer. He pioneered in music popularization as well as in the arranging of music and singing courses for workers. Ravina's writings include *Yo'el Engel ve-ha-Musikah ha-Yehudit* (1947); and an exercise book for solfège, *Organum and the Samaritans* (1963). His songs include *Ha-Shekediyyah Porahat* (text by Israel Dushman), *Alei Giv'ah* (A. Broides), and many others.

RAVITCH, MELECH (pseudonym of **Zekharye Khone Bergner**; 1893–1976), Yiddish poet and essayist. Born in Radymno, East Galicia, Ravitch left home at 14 and lived in various cities, including, for long periods, Vienna (1912–21) and Warsaw (1921–34), later emigrating to Australia (1936–38), Argentina, the U.S., and Mexico (1939–40), before settling in Montreal in 1941 for the rest of his life (excepting 1954–56 in Israel). His earliest lyrics appeared in *Der Yudisher Arbeter* (1910); his first volume of verse was *Oyf der Shvel* (1912). He worked in a bank before serving in the Austrian army during World War I. His *Spinoza* (1918) is a tribute to the philosopher whom he ranked with Moses and Jesus. From the early 1920s he was an active contributor of poems and essays to major Yiddish periodicals in Eastern Europe and beyond. He co-founded *Literarische Bleter* (1924) and the Yiddish Pen Club. In Vienna he felt the impact of expressionistic poets such as F. *Werfel and E. *Lasker-Schüler and began to experiment with expressionistic technique. In his *Nakete Lider* (“Naked Songs,” 1921), he gave up rhyme, regular meter, and stanzas. Impressed by the Yiddish revival in postwar Poland, he settled in Warsaw in 1921. There he joined Uri Zevi *Greenberg and Peretz *Markish, a triumvirate branded the *Khalyastre (“Gang”), in the struggle against realism in art. Ravitch reached the climax of his expressionistic striving in the poems “Dos Gezang tsum Menschlekhner Kerper” (“Song to the Human Body”), “Gezang tsum

der Zun” (“Song to the Sun”), “Dos Gezang fun Has un Libetsum Yidishn Folk” (“Song of Hate and Love for the Jewish People”), and “Eftlekher Mishpet Ibern Toyt” (“Public Judgment of Death”), all four of which, having initially appeared in periodicals, were published in book form in *Di Fir Zaytn fun Mayn Velt* (“The Four Sides of My World,” 1929). Ravitch's retreat from expressionism was reflected in the song and ballads of *Kontinentn un Okeanen* (“Continents and Oceans,” 1937), a volume which embodied his moods and experiences of the restless decade that preceded his two years in Melbourne (1936–37). Instead of trying to shock and mystify his readers, he aimed at maximum clarity, proclaiming himself a citizen of the world, a poet beyond nationalism. In 1946 he and his brother H. *Bergner published the memoirs of their family as recorded by their mother Hinde Bergner (1870–1942) on the eve of World War II. In Montreal he served as a catalyst of Yiddish literary, educational, and cultural activities. During his active association there with the *Yidische-folksbyblotek* (Jewish Public Library), he revived the *Yidische-folksuniversitet* (Jewish People's Popular University) to offer adult education programming in Jewish and non-Jewish topics from 1941 to 1954. Soon after he settled in Montreal, Ravitch embarked on a project to immortalize the Jewish cultural figures he had known in Poland, Israel, and America, and other countries and produced five encyclopedic volumes, *Mayn Leksikon* (1945–82). He also wrote three autobiographical volumes (*Dos Mayse-bukh fun Mayn Lebn* (1962–75), which appeared in Hebrew as *Sefer ha-Ma'asiyot shel Hayai* (1976).

Ravitch was one of the world's leading Yiddish literary figures after the Holocaust. His poetry and essays appeared in the international Yiddish press and in anthologies, as well as in translation. Ravitch published numerous collections of poetry, including *67 Lirishe, Satirishe, Natsyonale, Sotsyale un Filozofishe Lider fun di Letste Finf-zeks Yor* (1946), *Di Kroynung fun a Yungn Yidishn Dikhter in Amerike: Poeme* (1953), *Di Lider fun Mayne Lider* (1954), and *Iker Shokhakhti: Lider un Poemes fun di Yorn 1954–1969* (1969), as well as in Hebrew translation (*Hamishim Shirim*, 1969). His essays appeared in *Eynems Yidische Makhshoves in Tsvantsikstn Yorhundert* (1949), and posthumously in *Eseyen* (1992). Ravitch edited and co-edited numerous collective projects, including the weekly literary supplement of the *Keneder Odler* (1943–49), *Almanakh Yidish* (1961), and *Dos Amolike Yidische Varshe biz der Shvel fun Dritn Khurbn* (1966). During his long career, he was awarded numerous literary prizes including the prestigious L. Lamed, Yud Yud Segal, and Itzik Manger Prizes.

[Sol Liptzin / Jerold C. Frakes and Rebecca Margolis (2nd ed.)]

RAVITZ, SHELOMO (c. 1886–1980), *hazzan* and composer. Born in Novogradok, Russia, Ravitz studied music from the age of 15 and received his diploma in Vienna. He officiated in various European communities, including Riga, and in Johannesburg before moving to Erez Israel in 1932. He became *hazzan* of the Ohel Shem Synagogue in Tel Aviv and his reputation spread through his singing together with his own choir, at the weekly *oneg shabbat* organized there by H.N. *Bialik. He subsequently became *hazzan* of the Tel Aviv Great Synagogue, where his expressive, yet unexaggerated, style of singing brought him admiration and popularity. As director of the Selah Seminary for *hazzanim*, Ravitz was the teacher of many present-day *hazzanim*.

His compositions and arrangements of traditional melodies were published in *Yalkut Zemirot* (1954) and *Kol Yisrael*, 2 vols. (1964), edited by M.S. Geshuri. Ravitz also edited the music section in each volume of Y.L. Baruch and Y.T. Levinsky (eds.), *Sefer ha-Mo'adim*, 8 vols. (1946–67), which serves as a popular source of Jewish musical tradition in Israeli homes and schools.

[David M.L. Olivestone]

RAVITZKY, AVIEZER (1945–), Israeli philosopher and professor. Born in Jerusalem, Ravitzky was raised in a religious-Zionist family and in his youth led the Bnei Akiva youth movement in Tel Aviv. As a graduate student in Jewish philosophy at the Hebrew University he headed the university's student union. His Ph.D. dissertation dealt with the early commentators on Maimonides' *Guide of the Perplexed*, a subject of his continued scholarly interest. In 1980 he joined the faculty of the department of Jewish Thought at the Hebrew University of Jerusalem, eventually becoming department chairman and head of the Institute of Jewish Studies. Ravitzky was an active member of the Israel Council for Higher Education, and from 1995 served as a senior fellow at the Israel Democracy Institute, where he headed research projects dealing with religion and state, the subject of some of his own publications. Ravitzky also served on the National Committee for Bio-Ethics. In 2001 he was awarded the Israel Prize for Jewish Thought.

His research has led to new ways of understanding Jewish philosophy in the Middle Ages and 20th-century Jewish thought. Ravitzky's medieval studies cast new light on *Maimonides and Ḥasdai *Crescas, and showed how a continuous Maimonidean–Ibn *Tibbon school of thought shaped Jewish philosophy in subsequent generations, thereby influencing research into the esoteric doctrines found in the manuscripts of Maimonides' early followers and commentators. Ravitzky's work also provided a new conceptual framework for understanding Jewish political philosophy, clarifying the ideological tensions relating to messianism and the Land of Israel. His research investigating the roots of contemporary Orthodox

theological responses to nationalist movements, presented these diverse perspectives in an overall conceptual model, and thereby led to new ways of understanding religious thought and its relation to modernity, Zionism, and the State of Israel. Many of Ravitzky's publications focus on the connection between classical Jewish thought and existential issues, including war and peace, exile and redemption, religion and state.

Ravitzky rejected the increasingly right-wing orientation of the national-religious movement and its emphasis on settlement activity, in favor of an ideology balancing these values with the sanctity of life and the search for peace. From the early 1970s he was a founder and leader of the religious peace movements in Israel.

Among Ravitzky's books are *Messianism, Zionism and Jewish Religious Radicalism* (1996); *History and Faith: Studies in Jewish Philosophy* (1996); *The Land of Israel in Jewish Thought* (Heb., 3 vols., 1990, 1998, 2005), *Religion and State in Jewish Thought* (Heb., 2 vols., 1998, 2005; Eng., 2000); and *Argument on Faith and Philosophy with Yeshayahu Leibowitz* (Heb., 2006).

[Raphael Jospe (2nd ed.)]

RAWET, SAMUEL (1929–1984), Brazilian author. Rawet was born in Klimontow, Poland; in 1936 his family immigrated to Brazil, where his parents settled in the suburbs of Rio de Janeiro. Rawet earned a degree in engineering, and he made significant contributions to the design and building of Brasília. He early on decided to establish a career as an author and in 1956 published his first volume of short stories, *Contos do imigrante*, which contains stories he had previously published between 1949 and 1953 in a variety of magazines and literary supplements. Subsequent works of fiction include: *Diálogo* (1963), *Abama* (1964), *Os sete sonhos* (1967), *O terreno de uma polegada quadrada* (1970), *Viagens de Ahasverus* (1970), and *Que os mortos enterrem os seus mortos* (1981). An anthology of his stories has also been published in English under the title *The Prophet and Other Stories* (1998). In addition to his fiction, Rawet also wrote two plays (never published) and a number of nonfiction works such as *Alienação e realidade* (1970), *Homossexualismo, sexualidade e valor* (1970), and *Angústia e conhecimento* (1978).

Rawet's works began to receive critical attention in the 1990s. Most critics point to his adherence to a nostalgic portrayal of *Yiddishkeit* in his early fiction to a rather violent rejection of Jewishness in his later works. To be sure, his work reflects the author's changing attitudes over the course of his life. He was at times controversial. His characters are in a constant struggle to define and find their place in the world. Displacement, exile, tragedy, solitude, suffering, incomprehension, anguish, insecurity, and memory persist in his literature as inherent to the human condition. The trope of the wandering Jew, most overt in *Viagens de Ahasverus*, is a persistent leitmotif in his works. Problematic and inconsistent, his works represent a major contribution to Brazilian literature.

[Darrell B. Lockhart (2nd ed.)]

RAWICZ (Ger. **Rawitsch**), town in Poznan province, W. Poland. The first settlement of Jews in Rawicz took place soon after the founding of the town in 1639. In 1648 complaints were lodged against Jewish merchants who were then expelled. They returned soon thereafter, only to be expelled again in 1674. By 1698 an organized community was in existence and in 1719 it received a *Freibrief* ("letter of privileges") regulating the rights and taxes of its members. By then the community totaled 12 families. A *hevra kaddisha* was founded in 1728 and the first rabbi, Menahem Mendel Gradenwitz, was appointed in 1755. Its *bet din* was headed by learned talmudic authorities, including R. Solomon b. Dov Baer (1786–93), later to be the community's rabbi. In 1774 a *bet midrash* was founded. Services were held in a private house until a synagogue was built in 1783. The community (35 families in 1739) flourished, and after a fire in *Leszno (1790) absorbed many refugees, including R. Akiva *Eger, who lived there for one year. The local Jews were mainly shopkeepers, tailors, livestock merchants, and artisans. In 1797 the community had 198 families, and by 1835 there were 401 families (a total of 1,574 persons, or about 50% of the total population). A new synagogue was built in 1889 when the community was at its economic peak and served by a long line of scholarly rabbis, including its last one, the scholar John Cohn (1893–1920). The Jewish population subsequently declined to 363 in 1905. The town suffered during World War I, and under Polish rule the community was subjected to discrimination which induced many to leave for Germany; only 15 remained in 1933. The cemetery and synagogue were both destroyed by the Nazis during World War II. Markus *Brann, the historian, and Arthur *Ruppin, the Zionist leader, were both born in Rawicz.

RAWIDOWICZ, SIMON (1896–1957), Jewish scholar, philosopher, Hebraist, and ideologue. Born in Grajewo, then in Russia, Rawidowicz received a traditional Jewish education, during the course of which he became attracted to the Haskalah and Modern Hebrew literature. After the outbreak of World War I in 1914, he moved with his family to Bialystok, where he became active in the Hebrew cultural life of the city. In 1919, he left for Berlin, where he obtained a Ph.D. in philosophy in 1926 for his dissertation on Ludwig Feuerbach, which he expanded into *Ludwig Feuerbachs Philosophie: Ursprung and Schicksal* ("Ludwig Feuerbach's Philosophy: Sources and Influence," 1931; 1964²). Concomitantly, he made his mark as a scholar of Judaica with the publication of *Kitvei Ranak* ("The Writings of Nahman Krochmal," 1924; 1961²), and volume seven of the Jubilee Edition of the writings of Moses Mendelssohn (1930; 1971²). Additionally, he established the Hebrew Ayanot Publishing Company (1922–25) and the *Brit Ivrit Olamit (World Hebrew Union, 1931), and edited the Hebrew miscellany *Ha-Tekufah* (1928–30) with Saul Tchernikowsky and Ben-Zion Katz. In 1933, he left Berlin and after looking un-

successfully for a position in Erez Israel, went to London, where he continued his research in Jewish philosophy, primarily on Saadiah, Maimonides, Krochmal, and Mendelssohn.

From his youth, Rawidowicz had been a staunch supporter of the development of the Jewish community in the Land of Israel and of the political aims of the Zionist movement, but in the early 1930s he also became concerned with the future of Hebrew creativity in the Diaspora. This led him to criticize the accepted Zionist position that the Land of Israel was to serve as the spiritual center for world Jewry and to reject the concept of the "Negation of the Diaspora." He believed that realistically the Jewish Diaspora would continue to exist for the foreseeable future, and that as long as it did, it should be accepted as a fact and encouraged to maintain its own creativity. Consequently, Rawidowicz formulated his concept of "partnership" which posited that rather than being relegated to the inferior role of imitating the spiritual center, the Diaspora should be considered an equal partner. Rejecting the dominant ideology expressed symbolically by a circle with a center and circumference representing the Land of Israel and the Diaspora, respectively, instead he adopted the figure of an ellipse with two foci, the Land of Israel and the Diaspora, with the ellipse itself representing the entirety of the united Jewish people. As historical precedent for the coexistence of two such creative centers, Rawidowicz invoked the experience of the Land of Israel and Babylonia during the talmudic period.

In 1941, Rawidowicz accepted a newly created position in Medieval and Modern Hebrew at Leeds University, eventually becoming head of the department of Hebrew language and literature in 1946. During World War II, he established the Ararat Publishing Company as an affirmation of Hebrew creativity in the only country in Europe in which it was still possible to publish Hebrew books. Ararat's publications edited by Rawidowicz included the Hebrew miscellany *Mezudah* (7 vols. in 5; 1943–54) and *Sefer Dubnow* (1954). He additionally edited *Sefer Sokolow* (1942).

In 1948, Rawidowicz left Leeds for the College of Jewish Studies in Chicago, and in 1951 accepted a new position in Jewish Philosophy and Hebrew literature at Brandeis University. There, he served as the first chair of the department of Near Eastern and Judaic Studies until his death in 1957. At the time, he was in the final stage of proofreading *Bavel vi-Yrushalayim* ("Babylon and Jerusalem," 1957), the final and most elaborate formulation of his ideology which also contained a chapter from his projected introduction to the philosophy of Jewish history.

Rawidowicz's overall approach was to stress the importance of the Hebrew language for continued Jewish creativity and to emphasize the ongoing internal process of interpretation within the realm of Jewish thought rather than the influence of external factors. While his philosophical research remains important for the field of Jewish thought, he is increasingly remembered for his ideological approach and insights, which despite the acknowledgment of his great erudition were widely and sharply criticized during his life-

time but in recent years have attracted growing favorable attention.

Many of Rawidowicz' essays and articles have been reissued in four books: *Shriftn* ("The Yiddish Writings of Simon Rawidowicz"), ed. A. Golomb (Buenos Aires, 1962); *Iyyunim Be-Maḥashevet Yisrael: Hebrew Studies in Jewish Thought by Simon Rawidowicz*, ed. B. Ravid, 2 vols. (Jerusalem, 1969–71), with biography and bibliography; and with translations from Hebrew and Yiddish, *Studies in Jewish Thought*, ed. N.N. Glatzer (Philadelphia, 1974), 3–42, and *Israel: The Ever-Dying People and Other Essays by Simon Rawidowicz*, ed. B. Ravid (Rutherford, NJ, 1986), with biography, reissued in expanded version in paperback under title of *State of Israel, Diaspora and Jewish Continuity* (Hanover, NH, 1998).

[Benjamin Ravid (2nd ed.)]

RAWNITZKI, YEHOŠUA ḤANA (1859–1944), Hebrew journalist and publisher. Born in Odessa, Rawnitzki began his journalistic career – in which he continued for most of his life – in 1879, by contributing first to *Ha-Kol*, and then to other periodicals. His articles, first in Hebrew and later in Yiddish, were largely the result of his activities in the *Ḥibbat Zion movement. He was the editor and publisher of the literary collection *Pardes* (3 vols., 1892–96), a forum for the outstanding Hebrew writers of the time and a forerunner of *Ha-Shilo'ah. With his publication of Ḥ.N. *Bialik's first poem, "*El ha-Zippor*," in *Pardes*, Rawnitzki became Bialik's first patron, thus initiating a lifelong association with the poet. Some of his own works appeared in *Pardes* and subsequently in *Ha-Shilo'ah*, as well as other periodicals. Special recognition was aroused by a series of feuilletons, "*Kevurat Soferim*" ("The Burial of Writers"), which were written with Shalom Aleichem under the pseudonyms of Eldad (Shalom Aleichem) and Medad (Rawnitzki). As a result of his teaching experience and interest in pedagogical problems, he established the Moriah publishing house in Odessa in 1901, together with S. *Ben-Zion and Bialik, having influenced the latter to move to Odessa. The publishing house, the first of his joint endeavors with Bialik, began with the publication of textbooks (e.g., *Sippurei ha-Mikra*, 1903–05), followed by the influential aggadic anthology *Sefer ha-Aggadah* (1908–11), and many other books. This partnership between the two continued until the poet's death. Bialik frequently complained that Rawnitzki's role was not sufficiently appreciated. Settling in Erez Israel in 1921, Rawnitzki, together with Bialik and S. *Levin, founded the Devir pub-

lishing house, where he published the works on which he and Bialik had cooperated (e.g., the commentary on the poems of Moses *Ibn Ezra and Solomon ibn *Gabirol).

Later, he published *Dor ve-Soferav* (2 vols., 1926–37), a collection of his articles and memoirs on Bialik, Mendele Mokher Seforim, and other writers of his time, and *Mikhtavim le-Vat Yisrael* (2nd ed., 1923), on educational problems. A collection of his articles, *Be-Sha'arei Sefer* (1961), was published by S. Kremer, together with a comprehensive introduction by the editor. Rawnitzki also published Yiddish books and edited various Yiddish periodicals.

RAY, MAN (1890–1976), U.S. photographer and painter. Born in Philadelphia and moving to Paris in 1921, Ray is known as a founder of the dadaist-surrealist movement in painting, and in photography circles he is famous for his abstract prints made in the darkroom without a camera, to which he gave the name of "Rayograph." Ray added beams and moving pencils of light to the original technique of spreading objects on photographic sensitized papers which were exposed and then developed. He also contributed other facets to creative photography, making effective use of solarization by giving a momentary second exposure to his negative before developing it. The prints he produced from film treated this way showed strong secondary black lines along the major contours of the subject. Ray's portfolio of portraits records the celebrities of the 1920s. Ray fled from France in 1940 on the Nazi invasion and went to Hollywood, where he remained for the duration of World War II, after which he returned to Paris. His autobiography, *Self Portrait* (1963), explains a great deal of his artistry and his personality.

[Peter Pollack]

RAYKIN, ARKADI ISAAKOVICH (1911–1987), Soviet Russian vaudeville actor and director. After theatrical training in Leningrad, Raykin became widely known in the U.S.S.R. for his mime and impersonations. In 1939 he established the Variety and Miniature Theater in Leningrad, becoming its director. One of his most popular impersonations was that of Charlie Chaplin. He also appeared as Don Quixote and caricatured many types in his act *Intourist Hotel*. In later years his satire of bureaucrats and pseudointellectuals became more caustic. In 1962 Raykin appeared at the International Festival of Pantomime in West Berlin, and in 1964 in England. His wife, Ruth Joffe-Raykin, was a writer and an actor, as were his daughter Yekaterina and his son Konstantin.

°**RAYMOND DE PENAFORTE** (d. 1275), Dominican monk, one of the initiators of anti-Jewish activities in Catalonia during the reign of James I (1213–76). Raymond was born in Penaforte, Catalonia, and studied law at the University of Bologna, completing his studies in 1216. In 1222 he founded the

Dominican monastery of Barcelona. He was a favorite of Pope Gregory IX and, among other duties, he served as the Pope's confessor beginning in 1230. When the heresy of the Albigenses spread to northern Catalonia from Provence, Raymond influenced the king of Aragon to establish the Papal Inquisition in the district of Tarragona. As initiator of missionary activities in his order, he made great efforts to convert Jews to Christianity, founding Hebrew and Arabic schools for this purpose. He was the moving spirit of the anti-Jewish legislation of James I in 1228. He was also among the initiators and most prominent participants of the Barcelona disputation of 1263. The accusation before the royal tribunal of Barcelona against Nahmanides, in 1265, that he had "blasphemed Christianity," was also instigated by Raymond and the Christian anti-Jewish literature written after the disputation of Barcelona was a product of his school. He was canonized in 1601.

RAYNAL, DAVID (1841–1903), French politician. Born in Paris, Raynal founded the firm of Astruc and Raynal in Bordeaux in 1862 and there made the acquaintance of the French leader, Léon Gambetta. He was elected deputy for Bordeaux in 1879 and two years later became minister of works in the government of Gambetta. From 1883 to 1885 Raynal was again minister of public works, from 1893 to 1894 he was minister of the interior. While in office he was accused of underhand dealings in his handling of the railways, but his successful libel action against the journal *La Cocarde* in 1893 cleared him of all suspicion. He was made a senator in 1897 and was president of a commission to reform the merchant navy.

[Shulamith Catane]

RAYNE, SIR MAX, BARON (1918–2003), British businessman and financier. The son of a tailor in London's East End, Rayne was educated at University College London and served in the Royal Air Force during World War II. Rayne was one of the most successful of post-World War II property developers and was chairman from 1961 of the property company London Merchant Securities. He was also chairman or director of other property and industrial companies. Rayne was active in support for the arts as a governor of the Royal Ballet School, chairman of its London Trust (1967–75) and of the National Theatre Board from 1971 to 1988. His support for medical work included the post of special trustee of St. Thomas's Hospital. He was an honorary vice president of the (London) Jewish Welfare Board and served on other bodies concerned with social service, including the King Edward VII Hospital Fund for London and St. Thomas's Medical School. Rayne was knighted in 1969 and created a life peer in 1976. In 1962 he established the Rayne Foundation, a charity devoted to helping the disadvantaged, the arts, and education.

[Vivian David Lipman]

RAYNER, ISIDOR (1850–1912), U.S. lawyer and politician. Rayner was born in Baltimore, where his Bavarian immigrant father William Solomon Rayner had been one of the founders of the Har Sinai Congregation. He studied law at the University of Virginia and was admitted to the Baltimore bar in 1870. After several years of legal practice he entered Democratic Party politics and was elected to the Maryland state legislature in 1878 and to the state senate in 1885. In 1886 he was elected to the first of three terms in the U.S. House of Representatives, and after serving a term as Maryland attorney general (1899–1903), he was elected to the U.S. Senate in 1904 and again in 1910. Politically, Rayner was a moderate liberal. While still in the state legislature, he was a vigorous opponent of black disenfranchisement laws and Jim Crow, and his 1904 senatorial campaign was undertaken in defiance of the corrupt Democratic machine. In the Senate Rayner was particularly active on the Foreign Relations Committee, which he used as a forum to eloquently criticize President Theodore Roosevelt's imperialist policies toward Latin America. He also helped lead successful Senate efforts to abrogate the treaty with Russia in 1911 in protest against czarist antisemitism and discrimination against U.S. Jewish travelers. A nominal member of his father's congregation, Rayner married a Christian and was buried in a Unitarian ceremony.

[Hillel Halkin]

RAYNOR, BRUCE (1950–), U.S. labor leader. Raynor was born and raised on Long Island, New York, the son of a truck driver and a department store worker. He joined the labor movement shortly after graduating from Cornell University in Ithaca, N.Y., in 1973, rose to become president of UNITE, the apparel and textile workers union, then became the first president of the organization formed in 2004 by the merger of UNITE and HERE, the hotel and restaurant employees union. Raynor entered Cornell on a scholarship, majoring in biochemistry, but found himself stirred by the Vietnam antiwar and civil rights movements. He gave up his chemistry scholarship and enrolled in Cornell's School of Industrial and Labor Relations. After graduation, Raynor joined the education department of the Textile Workers Union, which in a few years would merge with the Amalgamated Clothing Workers Union and became the ACTWU. His first assignment was to help lead a six-month strike at Oneida Knitting Mills. It resulted in the union's first contract with that company. Raynor became an associate organizing director and soon found himself taking part in a bigger fight, one that had begun in 1963. This was an effort to organize J.P. Stevens, the giant textile company, a struggle dramatized in the 1979 movie *Norma Rae*. Raynor was said to have been the inspiration for the union organizer portrayed by actor Ron Leibman. In 1980, the ACTWU finally won a contract at Stevens. A year later, Raynor was named Southern Regional Director of the union and in 1993 was appointed executive vice president. He held the same post when the ACTWU and the International Ladies Garment Workers Union merged in 1995 to create UNITE. Three years later, he

was named secretary-treasurer of UNITE and in 2001 he became president, succeeding Jay *Mazur. Although many Jewish garment workers had been replaced by other ethnic groups by then, Raynor said, “This is still a Jewish union – in terms of its beliefs and ideals. It views itself as much more than wages and benefits. It’s deeply rooted in the traditions of social justice and concern for the least of us. When I say ‘Jewish union,’ that’s what I mean.” Raynor had already led an organizing drive that expanded UNITE’s membership to include industrial laundry workers. From 5,000 such members in 1998, the number grew to more than 40,000 in 2000. As UNITE’s president, Raynor continued to focus on building its membership. At the same time, he helped reform abusive labor practices by overseas contractors of major U.S. brands. Raynor, who was also a vice president of the AFL-CIO, then played a key role in the merger with HERE. At the time of the merger, the combined organization had 440,000 members and an annual operating budget in excess of \$60 million.

[Mort Sheinman (2nd ed.)]

RAYSS, TSCHARNA (1890–1965), Israel botanist. Born in Vinnitsa, Russia, Rayss was in charge of research at the department of botany at the universities of Odessa and Bucharest, 1918–29, and deputy director of the phytopathology department of the Institute for Agricultural Research, Romania. An enthusiastic Zionist she joined the newly formed botany department of the Hebrew University in Jerusalem in 1934 and was appointed professor in 1951.

Her research on the lower plants dealt with the taxonomy and ecology of algae of the Mediterranean and the Red Sea; mycoflora of Israel; taxonomy and biology of fungi in Romania, France, and Israel, with special emphasis on their pathogenicity to crops and wild plants. She built up the herbarium and library of cryptogamic plants in the Hebrew University.

[Shira Borut]

RAZA RABBA, SEFER (Aram. ܪܙܐ ܪܒܐ; “The Book of the Great Secret”), a work of *Merkabah mysticism which is no longer extant as a separate entity. That it existed, however, cannot be doubted. Several Near Eastern, Palestinian, and Babylonian authors of the ninth, tenth, and 11th centuries who attest to its existence were discovered by Jacob Mann (Mann, *Texts*, 2 (1935), 74–83). In the polemical works of the leading Karaite sage of Jerusalem, *Daniel b. Moses al-Qumisi (late ninth century), the work is described as having magical content. Another Karaite author writes about the magical acts described in the book: “for love and hate, miraculous shortcuts, and questions in dreams.” *Raza Rabba* is also mentioned in a responsum of *Hai Gaon (B.M. Lewin (ed.), *Ozar ha-Geonim*, on *Hagigah* (1931), 21). In *Sefer Raza Rabba* magical content is intertwined with an exposition on the Merkabah, including

speculations on the names of angels and demons known from magical literature on oaths, formulations of amulets by Babylonian Arabs from the fifth to eighth centuries, and *gematriot* which afterward passed on to the *Ḥasidei Ashkenaz.

Raza Rabba differs in character from Midrashim written in France and in Narbonne and apparently derived from an Eastern or Babylonian source which reached Germany and groups of Ḥasidim. However, it is not clear whether either *Judah he-Ḥasid or *Eleazar of Worms knew the work.

Portions of *Raza Rabba* were found in a manuscript of a commentary on *Sefer *Shi’ur Komah* written in the late 13th century by Moses (Azriel) b. Eleazar ha-Darshan (“the preacher”), son of Moses ha-Darshan (the husband of Judah b. Samuel he-Ḥasid’s granddaughter in Wuerzburg), and have been published by G. *Scholem. Moses cites a work which he calls *Ha-Sod ha-Gadol* (“The Great Secret”) and quotes other works which leave no doubt that he saw several versions of *Raza Rabba* or parts of it; he cites *Sefer ha-*Bahir* as a separate source.

In contrast to extant visionary Merkabah texts, *Raza Rabba* was a Merkabah Midrash and some elements in it are clearly and unquestionably linked to *Sefer ha-Bahir*, although they appear in different versions. While *Raza Rabba* contains no definitely Gnostic homilies, the *Sefer ha-Bahir* develops the same motifs in a new direction, a kabbalistic-Gnostic one. *Sefer ha-Bahir* contains the oldest enumeration of the ten *Sefirot* interpreted kabbalistically; an older, though incomplete, list is found in *Raza Rabba*, which was one of the literary sources for the editing of the *Bahir*. The homiletic symbolism of the *Sefirot* developed in the *Bahir* does not occur in *Raza Rabba*. Other matters treated in the *Bahir*, such as **gilgul*, are not present in the extant portions of *Raza Rabba*.

[Esther (Zweig) Liebes]

RAZIEL, an important angel who, according to his name, is connected with “the mysteries of God.” In midrashic and magical literature he is mentioned only in sources going back to the esoteric teachings of the talmudic period, where he appears in three sources. When Moses is ascending to heaven in order to receive the Torah, he encounters on his way the angel Gallizur (“he who reveals the hidden reasons of the Rock”; i.e., God), who is also called Raziel because he hears from behind the divine curtain all that is going to happen in the world, and this he reveals to Elijah, who “spreads the voice” over all the world. The angel Raziel also appeared to Adam three days after he had been expelled from paradise and had fallen into despair. Then Raziel revealed to him a magical textbook containing the mysteries of the workings of creation. This version of an old esoteric *aggadah* was incorporated into a collection of cosmological and angelological material culled mainly from the writings of *Eliezer b. Isaac of Worms and some other 13th-century kabbalists, and published in Amsterdam in 1701 under the title, “This is the book of the first Adam

which the angel Raziel delivered to him,” commonly called “*Sefer Razi’el*” (see below). It had a wide circulation, being reprinted nearly 40 times. The third source is the apocryphal *Sefer *ha-Razim*, known in manuscript form in post-talmudic times. This purported to be the book of mysteries which the angel Raziel taught to Noah in the year he entered the ark and which Noah later wrote down on tablets of sapphire. It is a handbook of magic, both Jewish and syncretistic, giving a detailed account of the angels in the seven heavens and the magical practices connected with them and their conjuration. Whereas the first part is of a strictly Jewish character, the magical practices contain strong pagan elements. In the opinion of the editor, Mordecai Margalioth (1966), the text goes back to the talmudic period, perhaps even to the earlier part, especially because of its close connection with some texts in the Greek magical papyri. The age of the book is still a matter of controversy. According to the Zohar, Adam received his book while he was still in paradise, and the angel Raziel was none other than the archangel *Uriel who revealed the deep mysteries of the Torah. The numerical value of the Hebrew name is 248, corresponding to the number of the positive commandments of the Torah and the name Abraham. The kabbalist Abraham b. Samuel *Abulafia used this name as a pseudonym in several of his books.

Margalioth, *Malakhei Elyon* (1945), 280–2; J. Dan, in: *Tarbiz*, 37 (1967/68), 208–14; F. Secret, in: *REJ*, 128 (1969), 223–45.

[Gershom Scholem]

RAZIEL, BOOK OF, collection of mystical, cosmological, and magical Hebrew works and portions of works. First printed in Amsterdam in 1701, it was reprinted many times, because of the popular belief that the book protected its owner's home from fire and other dangers. There are some manuscripts of, at least, parts of this work which date back to the 16th century. However, in its printed form, it was not compiled much earlier than the 17th century. Many manuscript collections of material of the same sort are extant, and *Raziel* is not unique among them in any way. The material included in the collection can be divided into three distinct categories or strata:

(1) Works, or parts of works, which belong to *Heikhalot* and *Merkabah mysticism, the mystical and cosmological literature of the talmudic and geonic periods. Of these, *Raziel* contains a version of the *Sefer ha-Malbush*, a magical work; *baraita* of *Ma'aseh Bereshit*, a cosmological and astrological description of the Creation, which has some mystical overtones; and a major part of the *Sefer ha-Razim* (“Book of Magical Secrets”), which is a collection of magical formulas and angelological material from talmudic times. The introduction to *Sefer ha-*Razim* probably gave the whole collection its name. In this introduction, the angel Raziel is claimed to have revealed the secrets described to Adam. In this category, there is some importance to a long version of the early anthropo-

morphic work, the **Shi'ur Komah*, describing the members and secret names of the Creator.

(2) Material which belongs to literature of the 13th-century *Hasidei Ashkenaz. To this category belong the introduction and the first half of *Eleazar of Worms' work, *Sod Ma'aseh Bereshit* (“The Secret of the Creation”), which formed the first part of his *Sodei Rezaya*. Some exegetical works on the Holy Names of God, and some magical formulas which conclude the collection, also belong to the literary heritage of the Hasidei Ashkenaz.

(3) A few portions of kabbalistic literature, descriptions of the *Sefirot* and exegeses of Holy Names, mostly reflecting kabbalistic theology of pre-Lurianic periods. A critical analysis of the work by Elyakim Melsack (Milzahagi) is preserved in a manuscript in Jews' College, London.

[Joseph Dan]

RAZIEL, DAVID (1910–1941), commander of the *Irgun *Zeva'i Le'ummi* (IZL). Born in Smorgon, near Vilna, Raziel was taken to Erez Israel at the age of three by his parents. From an early age he displayed literary ability, writing essays and plays on biblical themes. During the 1929 Arab riots he joined the *Haganah, becoming one of the first members of the IZL, which seceded from the Haganah in 1931. He soon became known as a gifted instructor and leader and produced manuals of military instruction. About a year after the first split in IZL (1937), he became commander of the organization, and during that tense year led it in its reprisal activities against the Arabs. On May 19, 1939, he was captured by the British authorities, and sent to a prison camp, from which he was released at the end of October as a result of the outbreak of World War II and the IZL's readiness to cooperate in the war effort against the Axis. He continued to serve as commander of the IZL and leader of *Betar in Palestine even after the June 1940 split in IZL. On May 17, 1941, in cooperation with British Army intelligence, he led a group of IZL members to Habbaniyya, Iraq, to sabotage the oil depots on the outskirts of Baghdad, which were serving the German Luftwaffe; but on May 20, in a German bombing attack, the car in which he was traveling was hit and he and a British officer were killed. Buried in the British military cemetery at Habbaniyya, his remains were transferred to Nicosia, Cyprus, in 1955 and finally interred on Mount Herzl in Jerusalem in 1961. Ramat Raziel, a moshav in the Judean Mountains, is named after him.

[David Niv]

RAZIM, SEFER HA- (Heb. סֵפֶר הַרְזִיִּים; “Book of Secrets”), early work of Jewish mystical literature. *Sefer ha-Razim* is remarkable for its systematic treatment of magic, witchcraft, in-

cantations, and supernatural remedies, on which no special works have otherwise been preserved in Hebrew literature. In the midst of deliberations on the angels, their names, and their functions in the six heavens which precede the supreme heaven, the book interweaves about 30 magical counsels for suppliants – who might include those seeking to know the future, to sway the hearts of the great, to have their enemies overtaken by misfortune, to be healed, to have their dreams interpreted, to overcome an enemy or a wild animal, to see the sun during the day or the night, or to speak with the moon and the stars. The general contents of this work have long been known, especially from the extracts scattered in the *Book of *Raziel*, but most of its magical terms became known only through Mordecai Margalioth's discovery, as he probably succeeded in restoring *Sefer ha-Razim* to its original form. On the basis of fragments from the *genizah* and Hebrew, Latin, and Arabic manuscripts, he organized the work into a preface and seven short chapters describing the Seven Heavens. The work is relatively short (about 800 lines), but it is of considerable literary and historic interest. Written in a beautiful midrashic Hebrew containing hardly any Aramaic, it is however inlaid with transliterated Greek words – some of which are *termini technici* of Greek magic – as well as a short Greek prayer. The names of about 700 angels are listed (some having a Greek etymology); several have specified “characters” (symbolic figures, which form a quasi-magical alphabet). The chapter on the Seventh Heaven, dealing with the Divine Throne, the Throne of the Great Light, praises God in an exalted liturgical style. The chapters dealing with the heavens are skillfully constructed to form one unit (but it cannot be ascertained if the preface in the Margalioth edition belongs to the work because it differs widely in content from the seven chapters). Nor is it at all certain that the original name of the work in its original context was *Sefer mi-Sifrei ha-Razim*. It may perhaps have been entitled *Raziel ha-Malakh* or possibly *Razei Hokhmah*, or some other name.

In this work, Raziel is mentioned as the angel who stands on the seventh step of the Second Heaven. Scholars differ on the extent of the role and influence which mystical doctrines wielded over the rabbis and their schools, but it may definitely be assumed that these doctrines, which were accepted in the Orient as well as by the Greeks and Romans, were not basically foreign to the Jews of Palestine during the Second Temple period and the generations which followed the destruction of the Temple. According to *Origen (third century), such Hebrew names as *Zevaot*, *Eloha*, etc. were mentioned along with the names of the archons, and Gabriel, Raphael, Michael, and Soriel with the demons of the Gnostic sect of the Ophites (*Contra Celsum* I, 22, 26; II, 6; IV, 33–34; V, 9, 42, 45, etc.). Those engaged in magic recited the prayer to the God of Abraham, Isaac, and Jacob while invoking demons (*Contra Celsum*, IV, 33). Greek amulets which have been preserved show a marked relation to Jewish concepts. The pagans even attributed the worship of the sun and the moon to the Jews, but Origen pointed out their error. Some of the themes of the

Sefer ha-Razim are also discussed in the apocryphal books of the Bible, especially in 11 *Enoch (the Slavonic version), and in the Apocalypse of *Baruch: others are mentioned in talmudic literature (Seven Heavens, dreams, amulets in Shab. 8:2; remedies in Ber. 40a; and “Hezekiah burned the Book of Remedies” in Pes. 4:8), while parallels to them can be found in various Midrashim, *Heikhalot*, *Merkabah, and *Ma'aseh Bereshit* literature.

On the grounds of contents and style, his work should be dated to no later than the talmudic period, a dating corroborated by the chronology of Greek kings mentioned in it, which A.S. Rosenthal explained as referring to the *Indictio* of the middle or possibly the beginning of the fourth century. However, further study may perhaps reveal the later inclusion of Greco-Egyptian magical texts to eighth-century Arabic literature.

[Chen Merchavya]

RAZIN, AHARON (1935–), Israeli biochemist. Born in Tel Aviv, Israel, he received his Ph.D. in biochemistry from the Hebrew University of Jerusalem in 1967, continuing his post-doctoral studies at the California Institute of Technology from 1968 to 1970. From 1971 he taught cell biochemistry and human genetics at the Hebrew University and held the Dr. Jacob Grunbaum Chair in Medical Science from 1988. His career included research and teaching posts at Cambridge University, the Beckman Cancer Research Center, and the NIH. Between 1994 and 2000, he was a member of the advisory committee on human genome research of the Israeli Academy of Sciences. Razin was awarded the Israel Prize in 2004 for his research in biochemistry and was among the outstanding figures in this field in Israel and internationally. His studies made significant contributions to the furtherance of the understanding of gene-expression control mechanisms, and he was a pioneer in the understanding of the biological role of DNA methylation.

[Ruth Rossing (2nd ed.)]

RAZON, JACKO (1921–), Greek boxer. Born in Salonika, Razon had to terminate his studies when the Germans occupied Salonika in 1941 and was left without a profession. He learned boxing in Maccabi and in 1939 was the middleweight boxing champion of Greece. He was also goalkeeper for the Salonikan soccer team Olympiakos in the Greek National Football League. In 1943, he was deported by the Germans to Auschwitz. After two months, he was transferred to the Buna labor camp where he organized the boxing at the camp. He had 12 pairs of boxers – Jews and non-Jews, professionals and amateurs, among them Jung Perez, the former Tunisian world lightweight boxing champion. During the day he

worked in the kitchen and after working hours he trained the boxers. Razon had to box weekly, often against heavyweights, winning most of his matches. Due to his kitchen connections, he was able to help many prisoners and hundreds owed their lives to him. This ended when Buna was evacuated and the “death march” began.

After a short stay in Gleiwitz, where Jung Perez died, Jacko was moved to Dora. He boxed also there but received little extra food for his talent and managed to feed only a few individuals at most. Transferred to Bergen-Belsen, he found the way to return to kitchen duty and helped Greek Jews in their most dire hour, when the camp was full of living skeletons and food was scarce. He was liberated by the British in May 1945.

After returning to Greece, Razon was a leader of Holocaust survivors who planned to immigrate to Palestine “illegally.” They sailed on the *Henrietta Szold*, with 356 passengers, which was met by British warships in Haifa port. Razon led a revolt against the British navy, which was eventually overcome, and he and the other passengers were deported to Cyprus where they were interned for several months.

Eventually he arrived in Palestine and participated in Israel’s War of Independence; he was one of the founders of the Organization of Greek Concentration Camp Survivors in Israel.

[Yitzhak Kerem]

RAZOVSKY (Davidson), CECILIA (1891–1968), U.S. social worker and expert on immigration. Born in St. Louis, she worked there as a volunteer at the Jewish Educational Alliance, teaching English to foreigners. In 1917 she moved to Washington, D.C. and served as an inspector in the U.S. Children’s Bureau. She was secretary in the immigration department of the National Council of Jewish Women and in 1932 became associate director of the council. Razovsky traveled widely to study the conditions of Jewish refugees, and in Cuba she set up a social service program for the refugees.

Razovsky was head of a group of experts assigned by Secretary of Labor Perkins to study conditions on Ellis Island and was on several U.S. immigration committees. She also served as assistant to the executive director of the National Refugee Service.

From 1922 to 1930 she was editor of *The Immigrant* and she wrote articles, plays, and pamphlets on immigration. Her pamphlet *Handicaps in Naturalization* (1932) investigated the effects of the 1929 amendment to the Naturalization Law, raising the fee from five to twenty-five dollars. Her *Making Americans* (1938), a manual prepared for the National Council of Jewish Women, contains information on the naturalization process and suggests ways of organizing communal naturalization aid programs.

RAZRAN, GREGORY (1901–1973), U.S. psychologist. Razran was born in a village near Slutsk, Russia. He immigrated

to the United States in 1920 and graduated from Columbia University in 1927, receiving his doctorate in 1933. He was a lecturer in psychology at Columbia from 1930 to 1938 and a research associate from 1938 to 1946. In 1946, he was appointed chairman of the Psychology Department of Queens College, and on his retirement in 1966 was appointed emeritus professor. He served as statistical consultant to the Office of Strategic Services in World War II. In 1952, he took a year’s leave to serve as visiting professor at the Hebrew University of Jerusalem, where he helped to establish the Department of Psychology. In 1961 he was co-chairman of the International Pavlovian Conference on Higher Nervous Activity, which was held in Israel.

Razran’s main contribution to psychology was twofold. His interest in conditioning led him early in his career (1933) to pioneering work in the study of conditioning of young infants. His later work on adults focused on the study of the meaning of words by a conditioning technique (1939). Other areas of conditioning theory to which he contributed were the transposition problem (1938) and conditioning to compound stimuli, particularly as an aid in analyzing perception (1965). Much of his activity consisted in bringing to the attention of his colleagues the work of the Russian school of conditioning, especially the use of conditioned stimuli of the internal organs in interoceptive conditioning. Razran served as president of the division on general psychology of the American Psychological Association and chairman of the psychology section of the New York Academy of Sciences. His only book *Mind Evolution: An East-West Synthesis* (1971) represents the culmination of his activities. He met his death by drowning.

[Helmut E. Adler (2nd ed.)]

RAZSVET (Rus. “Dawn”), name of four Russian-Jewish weeklies that appeared in Russia and abroad.

(1) The first *Razsvet* was published in Odessa (May 1860–May 1861). The first Jewish periodical in Russian, it was founded in an era when knowledge of the Russian language was rare even among “enlightened” Jews. Although a few *maskilim* in Vilna and Minsk regarded the promotion of Russian among the Jews as a step toward social integration in Russia (see *Haskalah), Odessa was the only Russian-speaking Jewish community of any considerable size. Among the founders of *Razsvet* were Osip *Rabinovich and Joachim (Ḥayyim) *Tarnopol, who in 1856 appealed to the ministry of education through N.I. Pirogov, inspector of education for the Odessa region, to allow them to publish a weekly. The purpose of this weekly was to spread Russian among the masses, thus helping to eliminate prejudices and enlighten the Jews. Rabinovich and Tarnopol also claimed that the periodical would serve to clarify Jewish problems to the Russian public and combat defamation of the Jews and attacks against them. After considerable effort permission was received to publish the weekly. Soon after the first issues a disagreement arose among the founders as to whether *Razsvet* should include Jewish self-criticism and a public airing of internal Jewish problems. It was feared that

a lack of discretion might provoke antisemitic reaction. Those who opposed self-criticism, led by Tarnopol, left the staff, and Rabinovich remained as sole editor. Among those who contributed to *Razsvet* were the writer L. *Levanda, the physician and communal leader E. Soloveychik, and the jurist and historian Hermann *Baratz, as well as the Russian professor A.I. Georgiyevski and the German-Jewish historian I.M. *Jost. From the outset *Razsvet* encountered difficulties from the censors, who forbade all reference to emancipation for the Jews, and from the apathy of the Jewish public toward the Russian language. The number of subscribers never exceeded 640. After a year's publication, Rabinovich was forced to relinquish editorship to L. *Pinsker and Soloveychik, who for technical reasons changed the periodical's name to *Sion*. *Razsvet* was a first step in an effort to encourage an active Russian-speaking Jewish intelligentsia and a Jewish literature in Russian.

(2) The second *Razsvet*, published in St. Petersburg (September 1879–January 1883), was founded by a group of young intellectuals seeking ways to attract more enlightened Jews back to their national values. Publication rights were acquired from the journalist Alexander *Zederbaum, who had been granted them by the authorities. The editors were Jacob Rosenfeld and G.I. *Bogrov, and the staff was filled by such writers as S. *Wengeroff, L. *Slonimski, A. Tenenbaum, S.Z. Luria, A. *Volynski (A.L. Flexer), and M.B.H. Ha-Kohen, and the poets N. *Minski (Vilenkin) and S. *Frug. *Razsvet* called for Jewish patriotism and the development of Jewish literature in Russian, closer association with the Jewish masses, and a positive approach to Jewish national values, the Jewish religion, the Hebrew language, and the settlement of Erez Israel. The solution of the Jewish problem would be for large numbers of Jews to take up agriculture. The publication soon attained a circulation of 3,400. However, the wave of pogroms and antisemitism in 1881 caused severe disillusionment among the staff, and after several weeks of indecision they reached the conclusion that the sole solution to the Jewish problem was emigration. Hence *Razsvet* became the outstanding spokesman for organized emigration and the proponent of the *Hibbat Zion movement. The January 16, 1882, edition of *Razsvet* contained an interview between a staff member, I. Orshanski, and the minister of the interior, N. Ignatiev, in which the latter announced that “the western borders were open to the Jews.” The Zionist writings of Levanda and M.L. *Lilienblum appeared in *Razsvet*, as well as a translation of Pinsker's *Autoemanzipation*. Bogrov left the staff, and Rosenfeld departed for Constantinople to examine the possibilities of Jewish immigration into, and settlement in, Erez Israel. Opponents of mass emigration sought all possible ways to fight *Razsvet's* policies. The two other Russian-Jewish periodicals, *Russky Yevrey* and *Voskhod, attacked *Razsvet*, and letters were sent to the provinces to discourage further subscriptions; by 1883 circulation fell to 900. Financial support was not forthcoming and *Razsvet* closed down. Its staff dispersed, some withdrawing from public life and some joining Hibbat Zion; others turned their attention from Jewish affairs to find their places in Rus-

sian literature and public activity. Despite its brief existence *Razsvet* opened up a new direction in Jewish life and thought in Russia, especially among the intellectuals.

[Yehuda Slutsky]

(3) The third *Razsvet* was a weekly journal of topical political and literary content, published in St. Petersburg by the Zionist Organization of Russia from 1907, when it replaced the weeklies *Khronika Yevreyskoy Zhizni* (“Chronicle of Jewish Life”) and *Yevreyskiy Narod* (“The Jewish People”), which had been suppressed by the czarist administration. The editor of *Razsvet* was A.D. *Idelson, assisted by an editorial staff consisting of S. Gepstein, A. *Goldstein, V. *Jabotinsky, A. Sidenman, and M. Soloveichik (*Solieli). Questions of major policy were decided upon by the Zionist Central Committee. *Razsvet* played an outstanding part in molding and disseminating the ideology and program of the Zionist movement in Russia. Strictly adhering to Herzl's political Zionism, the journal also advocated immediate practical colonizing work in Erez Israel and active Zionist participation in the defense of the rights and interests of the Russian-Jewish community. It laid the foundation of what later became known as “synthetic Zionism,” a concept which harmoniously combined the traditional Zionist negation of *Galut with the struggle for Jewish survival and national organization in the countries of dispersion. *Razsvet's* militant nationalist crusade against all forms of assimilation contributed essentially to the defeat of assimilationist tendencies and groups in Russian Jewry and made it the most widely read Jewish publication in the Russian language. Early in its career its circulation reached 10,000. In July 1915 the weekly was closed down, and in its stead appeared in Moscow the *Yevreyskaya Zhizn*. In July 1917 *Razsvet* again appeared in Petrograd, and its circulation rose to 25,000. After the Bolshevik Revolution of November 1917, the Zionist press was allowed to exist for a time. But in September 1918 *Razsvet* was closed by the Cheka. In its place appeared the *Khronika Yevreyskoy Zhizni*, edited by Y. Klebanov, which was also closed down on July 18, 1919.

(4) The fourth *Razsvet* reappeared in 1922 in Berlin as the organ of the Federation of Russian-Ukrainian Zionists in exile. It was headed by an editorial board nominated by the Federation and consisting of S. Gepstein (editor), J. *Schechtman (secretary), M. Aleinikov, Hayyim Greenberg, M. Hinds, and V. *Jacobson. Soon after V. Jabotinsky's resignation from the Zionist executive (February 1923), *Razsvet* endorsed his criticism of the official Zionist political line and his concept of an activist Zionist policy; it strongly disapproved, however, of Jabotinsky's later decision to leave the World Zionist Organization. Soon Jabotinsky, J. *Brutzkus, Y. Klinov, M. Schwartzman, and I. Trivus joined the reconstructed editorial board and *Razsvet* became the spokesman of the Zionist Revisionists. Financial difficulties led to the periodical's brief discontinuance in May 1924, but by the end of the year publication was resumed in Paris, with Jabotinsky as editor-in-chief and M. Berchin and J. Schechtman as acting editors.

The first issue of the Paris edition sold 1,000 copies; the tenth issue, 2,500. The ideology, program, and tactical line of the Zionist-Revisionist World Union, founded in April 1925, was largely molded by the *Razsvet* group. Although the readership of the journal largely consisted of Jewish émigrés from Russia in West European countries and groups in Erez Israel, and of the Jewish communities in east and southeast Europe which had a Russian cultural background, *Razsvet's* influence reached far beyond its immediate audience. Its articles were frequently translated and reprinted in other periodicals and widely commented upon by Zionists and non-Zionists alike. Stressing that *Razsvet* was the only Russian-language journal serving the Russian-Jewish diaspora, a group of noted non-Revisionist and non-Zionist émigré leaders in Paris, headed by Henry *Sliozberg, and including I. *Naiditsch, M. Goldstein, G. Vishnyak, and the sculptor N. *Aronson, formed in the spring of 1933 the "Society of Friends of Razsvet." The editorial policy in Zionist affairs remained unaffected by the agreement between the editorial board and the "Friends," but the coverage of matters of general topical Jewish interest – cultural, economic, and political – was expanded. The financial position of the paper steadily deteriorated, however, as the circle of the Jewish Russian-reading public shrank. *Razsvet* had to be converted from a weekly to a biweekly, and even in this form it appeared irregularly; the periodical was discontinued in 1935.

RAZUMNI, EPHRAIM ZALMAN (Solomon; 1866–1904), *hazzan* and composer. Born in Nikolayev, Russia, Razumni became *hazzan* there at the age of nineteen. After serving in Kishinev, he moved to Odessa where he spent the rest of his life. An unpredictable character, Razumni was a lyric tenor with an unusually fine faculty for improvisation. He officiated as guest cantor in many communities and gave concerts throughout Eastern Europe, gaining a huge popular following and becoming a legend in his own lifetime. His rendition of *El Male Raḥamim after the *Kishinev pogrom became the standard musical version of the prayer in the East European Ashkenazi area and its sphere of influence. A collection of his recitatives, *Shirei Razumni*, was published by S. *Alman in 1930.

RAZUMNY, MARK (1896–1988), Yiddish writer. Born in the *shtetl* of Zhager, he grew up in Riga, where he received a tra-

ditional Jewish and general secular education and became a Labor Zionist. In 1919, after brief service in the Red Army, he emigrated to Germany, living in Hamburg, where he worked at a bank and studied at the university. His first publication, a story in German, appeared in the Hamburg *Israelitisches Familienblatt*. In 1921 he returned to Riga and began to work for various Yiddish periodicals, some edited by his cousin, journalist Moshe-Mikhl Kitay (1886–194?). From 1924 he was a correspondent for the New York *Forverts*, and in January–March 1925, he edited the shortlived *Riger Moment*. In 1926–34 he worked for the democratic newspaper *Frimorgn*, cofounded by Kitay. Newspapers published his numerous travelogues, some of which later appeared in book form, e.g. *Dos Land fun Toyznt Geshtaltn: a Rayze in Norvegye* ("The Country of a Thousand Images: A Trip to Norway," 1929) and *Eyner Tsvishn Milyonen: fun an Amerikaner Nesie* ("Alone among Millions: From an American Trip," 1931). He was a prolific translator from German and Russian. From 1937 until World War II, he edited the popular magazine *Yidishe Bilder* ("Jewish Pictures"). When Riga became the capital of Soviet Latvia, Razumny became secretary of the Jewish Cultural Society and wrote for the newspaper *Kampf* and the journal *Ufboy*. After World War II he continued to write short stories and fables, which appeared in the Warsaw-based *Yidishe Shriftn* and *Folks-shtime*, and after 1961 the Moscow journal *Sovetish Heymland* and its affiliated book publications. Among his other books are *Hintergeslekh* ("Backalleys," 1929), *Breyter di Trit* ("Longer Steps," 1975), and *A Velt mit Vunder* ("A World of Wonders," 1986; German tr. 1985).

[Gennady Estraiikh (2nd ed.)]

READING, family of British statesmen and lawyers. RUFUS DANIEL ISAACS (1860–1935), first marquess of Reading, British statesman, advocate and lord chief justice. Born in London into a family of fruit merchants, and a relative of the famous boxer Daniel *Mendoza, Isaacs went to sea as a ship's boy at the age of 16. He returned to England two years later and in 1879 went into the London Stock Exchange in an attempt to make his fortune. In 1884, however, he was unable to meet his obligations and was "hammered" (suspended from the exchange). Isaacs planned to sail to Panama to recoup his losses but was persuaded by his mother to study for the bar instead and was admitted in 1887. His knowledge of the commercial world enabled him to establish himself as a leading commercial counsel and in 1898 he was made a queen's counsel. Subsequently he was involved in a series of cases which brought him before the public eye. His ability to master complicated facts and his magnificent cross-examination of the financier Whittaker Wright on charges of fraud and of Frederick Seddon on charges of murdering his lodger won him the reputation as one of the greatest advocates of all time. Isaacs' success at the bar was phenomenal. He amassed a considerable fortune and honors were heaped upon him. He was elected to parliament as a Liberal Imperialist in 1904 and was made solicitor-general in 1910. In the same year Isaacs was given a knighthood

and appointed attorney-general. Nevertheless, he was passed over for the appointment of lord chancellor because of his involvement in the Marconi scandal in which he was one of four ministers accused of attempting to make financial gain out of a government contract with the English Marconi Company. In 1913 Isaacs was made lord chief justice of England, the first Jew ever to hold this post, and took the title of Lord Reading. He presided over several famous criminal cases, among them the trial of the Irish nationalist, Roger Casement, on charges of treason. Yet although he was well known for his humanity and impartiality he was not considered a great judge.

Following the outbreak of World War I, Isaacs became increasingly involved in problems of government finance and introduced the scheme by which the state guaranteed all bills of exchange, thereby preventing a panic in the London bill market. In 1915 he went to the United States as president of the Anglo-French mission and secured a loan of 500 million dollars. Isaacs returned to the U.S. two years later as special envoy with the object of persuading America to join the Allies. In the following spring he went to the U.S. for a third time as high commissioner and special ambassador to convince the American government to send half a million American troops to France immediately. Isaacs remained lord chief justice until 1920 when he was made viceroy of India, ruler of India on behalf of the British crown, the only Jew ever to hold this post. His appointment was hailed as a move to reconcile warring factions in India and also to assuage the growing hostility toward British rule. Isaacs succeeded in initiating the widespread reforms embodied in the Montagu-Chelmsford report (1918), establishing a form of self-government in most of the Indian provinces and introducing improvements in agriculture and housing. He was much admired for the genuine sympathy he and his wife showed for the people of India but he failed, nevertheless, to obtain the cooperation of Mahatma Gandhi and the Hindu nationalists and was eventually obliged to arrest Gandhi for incitement to civil disobedience and to call in the army to keep order. Isaacs returned to England in 1926 and was given the title of marquess, the only Jew to be so honored. He held numerous company directorships and remained a prominent figure in the Liberal Party, representing the party at the Indian Round Table Conference of 1930. For a short period in 1931 he was foreign secretary in the national government headed by J. Ramsay Mac-Donald and he retired in 1934 from public life with the honorary post of lord warden of the Cinque ports.

Rufus Isaacs was one of the outstanding figures of his age and in Anglo-Jewish history. He showed considerable interest in Jewish and Zionist affairs toward the end of his life and in 1926 became chairman of the Palestine Electric Corporation. He visited Palestine in 1932 and associated himself with various Zionist projects. After the advent of Hitler, Isaacs resigned the presidency of the Anglo-German Fellowship and spoke in the House of Lords against the persecution of the Jews in Germany.

GERALD RUFUS ISAACS (1889–1960), second marquess of Reading, British statesman and lawyer. Born in London, he was the only son of Rufus Isaacs and succeeded to his father's titles in 1935. He was admitted to the bar and was a bencher of the Middle Temple from 1936, becoming treasurer in 1958. Isaacs was chairman of several government committees and was undersecretary of state for foreign affairs from 1951 to 1953. He served as minister of state for foreign affairs from 1953 until his retirement in 1957. Isaacs was active in Jewish affairs as chairman of the Council for German Jewry and president of the London Jewish Hospital.

EVA VIOLET, MARCHIONESS OF READING (1895–1973), English social worker. The daughter of Alfred *Mond, first Lord Melchett, she married Gerald Rufus Isaacs in 1914. Eva Reading devoted her life to problems of nursing and child care and was adviser to the ministry of health on child care during World War II. From 1957 to 1959 she was president of the National Council of Women. Though brought up as a Christian, Eva Reading reverted to Judaism in the 1930s and became a staunch Zionist; she toured the United States on behalf of the *United Jewish Appeal in 1939, and later served as chairman of the British section of the *World Jewish Congress. She should not be confused with Stella Isaacs, marchioness of Reading (1894–1971), the second wife of Rufus Isaacs, first marquess of Reading, who was not Jewish. She was the founder of the Women's Royal Voluntary Service, and, in 1958, was the first woman to be given a life peerage and to sit in the House of Lords, where she took the title of Baroness Swanborough.

READING, FANNY (1884–1974), Australian communal leader. Born Fanny Rabinowich near Minsk, she migrated with her family to Victoria, Australia, in 1889. Active from her youth in Melbourne Jewish communal affairs, she was originally a music teacher but in 1916–22 studied medicine and became a physician, moving to Sydney and changing her name to Reading in 1918. She was one of the first Jewish women physicians in Australia. In 1923 she was instrumental in founding the Council of Jewish Women of New South Wales, serving as its president from 1923 to 1931. Unlike many mainstream Australian Jewish organizations of the time, it was keenly Zionist, despite communal pressures to moderate its stance. In 1929 it changed its name to the National Council of Jewish Women of Australia. Reading remained its life president until her death. In 1947 she sued *Smith's Weekly*, a populist Australian tabloid, for libel when it alleged that her fundraising was being used to fight the British in Palestine. Although she lost the case on a technicality, the verdict, delivered “with regret”

by the judge, was regarded as a moral victory for the Jewish community. In 1957 a settlement in Israel, Neve Zipporah, was named in her honor. The National Council of Jewish Women of Australia continues as one of the most important Jewish women's organizations in the country.

°**REAGAN, RONALD WILSON** (1911–2005), 40th president of the United States. Born in Tampico, Illinois, Reagan became an actor, serving as president of the Screen Actor's Guild (1947–52, 1959–60) and the Motion Picture Industry Council. From 1967 to 1975 he was governor of California, home to America's second largest Jewish community.

In 1948 he resigned from the Lakeside Country Club in Los Angeles because of its refusal to permit a Jew to take out membership. In 1967 he strongly supported Israel during the *Six-Day War and was the featured speaker at a pro-Israel rally in the Hollywood Bowl in Los Angeles.

During his governorship he was instrumental in having a law passed in the California legislature in which banks and savings institutions were authorized to purchase and invest in State of Israel Bonds. During the mid-1970s Reagan had a weekly column in the *Jewish Press* newspaper, whose readers were mainly Orthodox Jews in New York and other parts of the U.S.A.

His closest Jewish advisor was Theodore E. Cummings of Los Angeles. Cummings served in the Reagan inner circle for a number of years. During the presidential campaign in 1980 Los Angeles businessman Albert Spiegel headed the Jewish Coalition for Reagan. Additional figures with access to Reagan were Max *Fisher, *Maxwell Rabb, George Klein, Gordon Zacks, and Jacob Stein. Neo-conservative Jewish intellectuals, such as Eugene V. Rostow, Max Kampelman, Irving Kristol, and Norman Podhoretz were active in the Reagan election campaign and many became influential in the Reagan Administration.

In the 1980 election 40 percent of the Jews who voted chose Reagan, another 40 percent voted for the incumbent President Jimmy Carter, the lowest percentage for a Democrat in the past 80 years, and 20 percent for John Anderson, indicating that the Democratic party could no longer take the Jewish vote for granted. Orthodox Jews in Brooklyn voted overwhelmingly for Reagan, the first time that the Jewish vote split along religious divides within the United States.

Reagan saw the early raw footage of the liberation of the concentration camps and referred to this during his Yom Hashoah address in the White House in 1981. None of this, however, was any guarantee that at the helm of the nation he would be particularly sensitive to the cause of Israel.

Upon assuming office Reagan's Middle East position could be summarized as follows: First, a militarily strong Israel, which is both democratic and anti-Soviet, is "the only

remaining strategic asset in the region on which we can rely" (*Washington Post*, August 1979); second, opposition to the terrorist PLO and rejection of the notion of a PLO state because it would be a surrogate to the Soviet Union; third, strong support for Israel as America's most reliable ally in the Middle East and unequivocal support for Egyptian and Israeli peacemakers as the best way to attract other Arab states to the peace process.

Interestingly, one of the first crises affecting Israel, which was to have tremendous ramifications for the region, revolved around the June 7, 1981, bombing of the Iraqi nuclear reactor at Osirak by Israeli jet fighters. Only the newly appointed U.S. Ambassador to the United Nations Jeane J. Kirkpatrick stood in the way of an anti-Israel vote. Realizing that the word "aggression" had terrible consequences for Israel as it would make it appear that the attack was unprovoked and that the attacked party, Iraq, might now legitimately undertake unspecified self-defense measures, she strenuously argued that the U.S. should abstain from voting for that resolution, unless the word "aggression" was deleted. In the end, after taking the matter directly to President Reagan, her efforts prevailed and "aggression" was deleted from the resolution allowing the U.S. to half-heartedly join in the condemnation. This set the tone for much that was to follow at the UN during the years of the Reagan presidency.

In this context, and especially as concerned UN activities relative to Israeli-Arab relations, Reagan understood that charges of illegality aimed at Israel's conduct in the West Bank and Gaza had nothing to do with allegiance to rule of law in the sense of objective jurisprudence. Rather, it had everything to do with using law as a weapon in order to isolate Israel on the diplomatic front as a prelude to legitimating terrorism and other hostilities against Israel as a pariah state. The formula that Reagan repeatedly espoused was that "the settlements are not unlawful."

Similarly, when it came to Arab efforts to characterize East Jerusalem as "occupied territory," President Reagan instructed his delegates to the UN to veto such resolutions on the grounds that the final status on Jerusalem was to be negotiated, and not subject to resolution by legal fiat. He authorized a U.S. veto – the only veto cast – on April 19, 1982, of a Security Council resolution which sought to condemn the 1982 shooting of Palestinian worshippers at the Dome of the Rock by a deranged Israeli gunman – even though the U.S. was revolted by the shooting – because of the insertion of a paragraph equating Jerusalem with occupied Arab territory.

The Israeli invasion of Lebanon on June 6, 1982, created unique challenges for the Reagan Administration, with many White House advisors wanting Israel out of Lebanon as quickly as possible. Their views prevailed, but only up to a point. Although the United States joined in a UN Security Council resolution on June 6 that called for "unconditional withdrawal of Israeli forces (paragraph 1) while calling (paragraph 2) for cessation of all cross border attacks," the U.S. made clear in its explanation of its vote that "paragraphs 1 and

2 are inextricably linked... there can be no Israeli withdrawal before there is a cessation of all cross border hostilities. One cannot be without the other.” This set the tone for the U.S. position throughout the war.

U.S. Ambassador Phillip Habib conducted a mission for peaceful evacuation of the PLO from Beirut. Its success led in turn to termination of the Lebanon war, and made it propitious for President Reagan to launch a major peace initiative in his speech of September 1, 1982. That initiative, also known as the Reagan Plan, called for direct negotiations between the Israel and the Arab states; Palestinian autonomy, but not an independent Palestinian state; and, for maintaining Jerusalem as an undivided city, with its final status to be negotiated.

A byproduct of Ronald Reagan’s meetings with U.S.S.R.’s President Mikhail Gorbachev in 1985 aimed at creating a thaw in the Cold War led to conditions for the liberation of Ethiopian Jews who were rescued and brought to Israel in Operation Moses between November 19, 1984, and January 5, 1985, with some covert U.S. assistance.

In July through September of 1985, Israel had undertaken the sale of arms to Iran through the “Arms for Hostages Deal.” Although the Iran Contra Affair, which resulted from exposure of the illicit sale of U.S. arms to Iran resulted in a major embarrassment to the Reagan Administration, it did not impair U.S.-Israeli relations.

Reagan’s consistent record in identifying with the cause of Israel was somewhat marred by his decision to go to Germany’s Bitburg Cemetery in 1985 (see *Bitburg Controversy), despite the knowledge that this was the burial ground for SS officers who committed the most heinous crimes. In hindsight, the President’s visit – controversial as it was – caused no lasting damage to the cause of remembrance.

[David Geffen / Allan Gerson (2nd ed.)]

REBBETZIN, Yiddish honorific for the wife of a rabbi. Although no such title existed in ancient Judaism, its emergence in medieval and early modern Central and Eastern Europe indicates that rabbis’ wives frequently assumed an elevated status in Jewish society deriving from their husbands’ religious roles and from their own activities. Rabbis tended to marry daughters of elite families who had often received Jewish educations superior to those of most women. Many learned *rebbetzins*, such as the 12th-century *Dulcea of Worms, took on a variety of spiritual and communal functions. These could include leading worship in the women’s section of the synagogue and teaching prayers and responses to other women as well as coordinating bridal arrangements, preparing corpses for burial, and dispensing charity. *Rebbetzins* were regarded as reliable witnesses of their husbands’ rulings on ritual matters, particularly related to Jewish dietary laws, and they might be consulted for legal testimony as to their husbands’ customary practices.

In a social setting which honored scholarship above economic success, the *rebbetzin* frequently supported her family financially while her husband devoted himself to study. In

some European communities the *rebbetzin* had a monopoly on the sale of yeast; she might also be compensated for providing refreshments following religious events at which her husband officiated. Literary portrayals of the *rebbetzin* in East European Jewish culture can be found in the writings of such authors as Chaim *Grade (*Rabbis and Wives*, 1982) and Isaac Bashevis *Singer (*In My Father’s Court*, 1966).

In more recent times, the *rebbetzin* in all denominations of Judaism was expected to fulfill a number of social, communal, and educational functions within her husband’s congregation. Prior to the introduction of female ordination in non-Orthodox forms of Judaism, some women who became *rebbetzins* built on their husbands’ positions to achieve their own independent roles as teachers and representatives of Jewish life within their communities and the larger non-Jewish world. With changing social mores and increased professional opportunities for Jewish women in many fields, it had become less common by the early 21st century for rabbis’ spouses in Reform, Reconstructionist, and Conservative Judaism to follow these patterns. However, within Orthodox Jewish communities, the *rebbetzin*, more frequently known by the Hebrew designation *rabbanit*, continued to fulfill traditional expectations, serving as a domestic hostess to her husband’s congregation and as an educator and counselor to female congregants. Some *rebbetzins* continued to achieve renown on their own terms, as inspirational teachers and charismatic counselors for women in their communities.

[Judith R. Baskin (2nd ed.)]

REBECCA BAT MEIR TIKTINER (16th century), Yiddish author, probably from Prague. Two texts are attributed to her: *Meneket Rivkah* (*Meynekes Rivko*) (“The Nursemaid of Rebecca”), which was published posthumously in 1609, and *Eyn Simkhas Touro Lid* (“A Simḥat Torah Song”), to be sung by women in the synagogue.

While Rebecca bat Meir’s place and date of birth are unknown, her tombstone inscription in Prague indicates that her learned father was from Tykocin, Poland. She probably acquired her knowledge of Hebrew and rabbinic literature in her childhood home. The inscription also relates that Rebecca “taught (or preached) day and night to women in every pious neighborhood.” The titles, *darshanit ve-rabbanit* (preacher and teacher), with which she was eulogized on the title page of *Meneket Rivkah*, appear to be honorifics reflecting her instruction to women in Prague and elsewhere. Rebecca bat Meir was married; her husband is mentioned in her entry in the *Memorbukh* of the Altneushul as *ha-rav rabbi*, a title uncommon for an officiating rabbi in Prague.

Meneket Rivkah, published posthumously in Prague in 1609 (a second edition appeared in Cracow in 1618) and consisting of 36 folios, was written for a female readership, and belongs to the genre of Yiddish **musar* literature. The book is divided into seven chapters, six of which deal with a particular domestic relationship in the life of a married woman (her husband, her parents, her parents-in-law, her children, her daughter-in-law, and servants and guests). In the first chapter, the author develops a comprehensive ethical system, in which she lists important profane and religious commandments related to the body. These include healthy nutrition and the laws of **niddah*, labeled as *hokhmat ha-guf* (wisdom of the body), and the enumeration of social and practical-religious ideals and commandments, termed *hokhmat ha-neshamah* (wisdom of the soul).

Rebecca's many practical instructions paint a vivid picture of Jewish women's daily lives in the early modern period. They are accompanied by long homiletical and exegetical passages demonstrating her erudition. She provides biblical citations in Hebrew, as well as quotations from contemporary Hebrew and Yiddish *musar* literature. Rebecca also includes Yiddish adaptations of stories from the Talmud and midrash, and adopts terms and techniques of rabbinical exegesis. *Meneket Rivkah* is probably the first substantive published book in Yiddish written by a Jewish woman. The only other extant Yiddish works by Jewish women from this period are personal supplicatory prayers (**tkhines*). It is significant, too, because it contains homiletics and exegeses, genres which had hitherto been written exclusively by learned men.

Rebecca also wrote a rhymed Yiddish hymn for the holiday of Simḥat Torah, entitled *Eyn Simkhas Touro Lid*, which describes an eschatological, festive banquet for men and women alike. The poem, which survives in two separate undated 17th century printings, consists of 40 rhyming couplets (with acrostic), in which each verse is followed by the refrain *hallelujah*.

[Frauke von Rohden (2nd ed.)]

REBEKAH (Heb. רִבְקָה), wife of *Isaac, daughter of Bethuel, and granddaughter of Nahor, a brother of *Abraham (Gen. 22:23; 24:15, 24, 47). Rebekah is also described as “the sister of *Laban” (24:29, 50; 25:20). When Abraham sought a wife for his son he sent his servant to his homeland, Aram-Naharaim, for he wanted to avoid marriage with the Canaanites. The episode is described in detail in Genesis 24, which makes clear the providential nature of the union of Isaac with Rebekah (verses 7, 14, 27, 48, 50).

The text provides an insight into Rebekah's character by stressing her hospitality to strangers and her kindness to animals (verses 14, 18, 20), as well as her beauty and chastity

(24:16; 26:7). That she is willing to expend considerable energy on watering camels is a testament to her virtue. The same feature may reflect an eighth century B.C.E. date for the origin of this element of the tradition. On one occasion Isaac felt that his life was in danger because of Rebekah's great beauty and he felt constrained to claim that she was his sister (26:6–11). Isaac's age at the time of the marriage is given as 40 (25:20); Rebekah's is not recorded. She is said to have remained childless for 20 years until, in divine response to her husband's prayers, she gave birth to twins: Esau and Jacob. During a difficult pregnancy, she received an oracle about the future relationships between, and destinies of, her unborn children (25:21–26). On the biblical account she displayed favoritism toward Jacob (25:28).

When Isaac in his old age expressed his intention of bestowing his farewell blessing on Esau, Rebekah skillfully induced Jacob to supplant his brother so as to obtain it for himself. When Esau, in his bitter disappointment, threatened to kill Jacob, Rebekah arranged Jacob's flight to the house of Laban in Haran (Gen. 27), using as a pretext her bitterness and disgust over Esau's marriage to local women and her determination that Jacob marry within the family (26:34–35; 27:46; 28:1).

The death of Rebekah is not recorded in the Bible, but only the fact that she was buried in the cave of Machpelah together with the Patriarchs and *Sarah and *Leah (49:31).

[Nahum M. Sarna]

In the Aggadah

The description of Rebekah as the “daughter of Bethuel the Aramean, of Padan-Aram, the sister of Laban the Aramean” (Gen. 25:20) is taken to indicate her righteousness. Despite the fact that her father and brother were scoundrels and she came from a land where deceit was rife, she succeeded in being pious (a play on the Hebrew *arammi* which by a transposition of letters is read as *ramai*, “scoundrel” or “cheat”; Gen. R. 63:4). Eliezer immediately perceived her greatness since the water of the well rose to greet her when she came to draw water (Gen. R. 60:5). The blessings of her mother and brother when she left with Eliezer were not sincere, and they were considered the “blessings of the impious which are curses.” This caused Rebekah to remain barren for years (60:13). Rebekah was either three or fourteen years old at the time of her marriage (Tos. to Yev. 61b). When she entered Sarah's tent, the divine cloud that had overhung it during Sarah's lifetime immediately reappeared (Gen. R. 60:16). Nevertheless, their marriage was not entirely happy, as a result of Rebekah's barrenness. Together they prayed for children. Finally, God acceded to the prayers of Isaac since the prayer of a pious man who is the son of a pious man is far more efficacious than the prayer of one who descends from a godless father (Yev. 64a). While pregnant, Rebekah suffered agonizing pains because her twin sons had already begun their lifelong quarrel in her womb. If she walked near a synagogue, Jacob tried to break forth from her womb, while Esau attempted to get out when she passed an idolatrous temple (Gen. R. 63:6). Finally she went to consult in the *bet*

midrash of Shem and Eber where she was informed that two opposing nations were in her womb (63:6, 7).

The children Esau and Jacob seemed alike, yet Rebekah already perceived Jacob's greatness. The more often she heard his voice (engaged in study), the deeper grew her affection for him (63:10). Rebekah was not present when Isaac requested Esau to bring him savory food so that he would bless him; Isaac's charge was revealed to her through the holy spirit since she was a prophetess (67:9). She thereupon insisted that Jacob receive Isaac's blessing. She was not only actuated by love for Jacob, but also by the wish to keep Isaac from committing a detestable act by blessing the wicked Esau (65:6). She agreed to bear the possible imprecation of Isaac just as the curse of Adam fell upon "his mother," the earth (65:15). Rebekah died a short time after the death of her nurse Deborah. Her death was not mentioned explicitly in the Scripture, but is implied by the words *allon bakhut* (Allon-Bacuth; Gen. 35:8) which the Midrash renders "weeping for another," *allon* being connected with the Greek ἄλλον "another" (Gen. R. 81:5). There was no public mourning for Rebekah. Since Abraham was dead, Isaac blind, and Jacob away from home, only Esau remained to represent the family in public. It was feared that onlookers might say, "Cursed be the breasts that sustained thee." To avoid this, Rebekah was buried at night (PDRK 23; PR 12:48b).

BIBLIOGRAPHY: Noth, Personennamen. 10; H. Bauer, in: ZDMG, 67 (1913), 344; idem, in: ZAW, 48 (1930), 78; See Commentaries on *Genesis. IN THE AGGADAH: Ginzberg, Legends, index.

REBELLIOUS SON. "If a man have a stubborn and rebellious son, that will not hearken to the voice of his father and [not "or"] the voice of his mother and though they chasten him, will not hearken unto them, then shall his father and his mother lay hold of him and bring him out unto the elders of his city... They shall say unto the elders of his city: This our son is stubborn and rebellious, he doth not hearken to our voice, he is a glutton and a drunkard. And all the men of his city shall stone him with stones that he die; so shalt thou put away the evil from the midst of thee; and all Israel shall hear, and fear" (Deut. 21:18–21).

It appears that this law was intended to limit the powers of the *pater familias*: the head of the household could no longer punish the defiant son himself, according to his own whim, but had to bring him before the elders (i.e., judges) for punishment. In earlier laws (eg., Hammurapi Code, nos. 168, 169) only the father had to be defied; in biblical law it must be both father and mother, and the father cannot act without the mother's concurrence. If either was dead (Sif. Deut. 219) or refused to join in the prosecution, the son could not be indicted (Sanh. 8:4), but it was not necessary that father and mother should be validly married to each other (Sanh. 71a).

There is no record of a rebellious son ever having been executed, except for a dictum of R. Jonathan stating that he had once seen such a one and sat on his grave (Sanh. 71a). However, it is an old and probably valid tradition that there never had been, nor ever will be, a rebellious son, and that

the law had been pronounced for educational and deterrent purposes only, so that parents be rewarded for bringing their children up properly (*ibid.*; Tosef. Sanh. 11:6).

Interpreting every single word of the biblical text restrictively, the talmudic jurists reduced the practicability of this law to nil. The "son" must be old enough to bear criminal responsibility, that is 13 years of age (see *Penal Law), but must still be a "son" and not a man: as soon as a beard grows ("by which is meant the pubic hair, not that of the face, for the sages spoke euphemistically") he is no longer a "son" but a man (Sanh. 8:1). The period during which he may thus be indicted as a "son" is three months only (Sanh. 69a; Yad, Mamrim 7:6), or, according to another version, not more than six months (TJ, Sanh. 8:1). The term "son" excludes a daughter (Sanh. 8:1; Sif. Deut. 218), though daughters are no less apt to be rebellious (Sanh. 69b–70a).

The offense is composed of two distinct elements: repeated (Sif. loc. cit.) disloyalty and defiance, consisting in repudiating and reviling the parents (Ex. 21:17), and being a "glutton and drunkard." This second element was held to involve the gluttonous eating of meat and drinking of wine (in which sense the same words occur in Prov. 23:20–21), not on a legitimate occasion (Sanh. 8:2), but in the company of loafers and criminals (Sanh. 70b; Yad, Mamrim 7:2) and in a ravenous manner (Yad, Mamrim 7:1). There are detailed provisions about the minimum quantities that must be devoured to qualify for the use of the term (cf. Yad, Mamrim 7:2–3). As no "son" can afford such extravagance, the law requires that he must have stolen money from his father and misappropriated it to buy drinks and food (Sanh. 8:3, 71a; Yad, Mamrim 7:2). "Who does not heed his father and mother" was interpreted as excluding one who does not heed God: thus, eating pork or other prohibited food, being an offense against God, would not qualify as gluttony in defiance of parents (*ibid.*). But it was also said that one who in his use of the stolen money performed a precept and thus heeded his Father in heaven could not be indicted (TJ, Sanh. 8:2).

As father and mother have to be "defied," to "take hold of him," to "say" to the elders, and to show them "this" is our son, neither of them may be deaf, dumb, blind, lame, or crippled, or else the son cannot be indicted as rebellious (Sanh. 8:4; Sif. Deut. 219). Either of them could condone the offense and withdraw the complaint at any time before conviction (Sif. Deut. 218; Sanh. 88b; TJ, Sanh. 8:6; Yad, Mamrim 7:8).

The son had first to be brought before a court of three judges (see *Bet Din) where, when he was convicted, he would be flogged and warned that unless he desisted from his wanton conduct he would be indicted as a rebellious son and liable to be stoned; if he did not desist, he would be brought before a court of 23, including the three judges who had warned him (Sanh. 8:4; 71b; Mid. Tan. to 21:18; Yad, Mamrim 7:7). If he escaped before sentence was passed, and in the meantime his hair had grown, he had to be discharged; but if he escaped after sentence, he would be executed if caught (Sanh. 71b; Yad, Mamrim 7:9).

The sentence passed upon a rebellious son had to be published far and wide, so that “all Israel will hear and be afraid” (Sanh. 89a; Mid. Tan. to 18:21). According to one view, the sentence was to be passed and executed at Jerusalem, at the time of mass pilgrimages, when all the people would be there to see and to hear (Tosef. Sanh. 11:7). It is said that the rebellious son is executed, not because of what he has actually done, but because of what he was foreseen to be prone to do were he allowed to live. His conduct showed that eventually he would have ruined his parents and become a robber and murderer (Sanh. 72a; TJ, Sanh. 8:7), so God considered it better for him to die innocent than to die guilty (Sanh. 8:5).

“In our times, we pay no attention to gluttonous and defiant sons, and everybody covers up the sins of his children; even where they might be liable to flogging or to capital punishment under the law, they are not even reprimanded. Many such children are leading purposeless lives and learn nothing – and we know that Jerusalem was destroyed because children loafed around and did not study” (Shab. 119b; Samuel Eliezer Edels, *Hiddushei Halakhot ve-Aggadot*, Sanh. 71a).

[Haim Hermann Cohn]

REBREANU, village in Transylvania, central Romania. Jews settled in the villages Lusça and Entrádám which later became part of Rebreanu. There was a Jewish community in Lusça dating from the early 18th century, while the population of Entrádám was entirely Jewish and its Romanian name was Jidovița, from the Old Romanian word *jidov* of Slavic origin (a pejorative ethnonym meaning “Jew”). The Jews engaged mainly in commerce and agriculture and operated water mills. With the abolition of the settlement restrictions in Transylvania in 1848 many Jews from Entrádám moved to the nearby city of Nasaud, founding the community there. The population of the village was almost wholly Jewish in 1900. In 1930 the 135 Jews formed over 60% of the total population. The administration of the village remained in Jewish hands, and Rebreanu was popularly known as “Klayn Erez Israel” (“little Erez Israel”). The community was Orthodox with a strong hasidic influence.

During World War II, in 1944, the Jews were moved by the Hungarian Fascists first to Nasaud, then to Bistrita, then finally deported to *Auschwitz. In 1947 there were 17 Jews living in Rebreanu, but they left soon afterward. There was no Jewish community in Rebreanu in the early 21st century

[Yehouda Marton]

REBUKE AND REPROOF (Heb. *tokhaḥah*), admonition and chastisement for the purpose of restraint or correction. The biblical source for the duty to rebuke the wrongdoer is: “You shall not hate your kinsman in your heart. Reprove your

neighbor, but incur no guilt because of him” (Lev. 19:17). In the view of the rabbis the duty to reprove one’s neighbor has two applications: the first, to confront one’s fellow with personal grievances held against him, and the second, to chastise evildoers in the hope of bringing about their regeneration (Maim. Yad, De’ot 6:6, 7). The duty to openly confront one’s neighbor with personal grievances is entailed in the injunction against hatred of one’s brother, insofar as the silent harboring of resentments leads to hatred (Ch. B. Chavel (ed.), *Sefer ha-Hinnukh* (1961), 297). Thus the behavior of Absalom toward his brother Amnon (“Absalom spoke unto his brother Amnon neither good nor bad, for Absalom hated Amnon...,” II Sam. 13:22) is cited as an example of the wickedness of bearing unexpressed grievances (see Gersonides on this verse; and also Yad, De’ot 6:6, 7). The duty to chastise sinners and wrongdoers stems from the view that everyone is charged with the responsibility of bringing about the correction of the sins of his fellowman. Failure to discharge this responsibility is tantamount to bearing the same sins and faults (cf. Targum Onkelos and commentary of Naḥmanides on Lev. 19:12).

Because the intention behind the rebuking of the evildoer is his rehabilitation, a number of qualifications are imposed upon this commandment. One is prohibited from rebuking another to the point of embarrassment (Ar. 16b). According to Maimonides, admonition must be carried out in private (Yad, De’ot 6:7). In fact, rebuke must be effected with such delicacy that R. Eleazar b. Azariah doubted that there were any in his generation sufficiently capable in this regard (Ar. 16b). Furthermore, the Talmud, in accordance with the dictum “Reprove not a scorner lest he hate thee” (Prov. 9:8), prohibits admonition where there is a foregone conclusion that it will be rejected and merely increase enmity (Yev. 65b). Certain later rabbinic authorities maintain that in cases where it may safely be assumed that rebuke will be disregarded, it is preferable not to rebuke people for violating prohibitions that are not explicit in the Torah, for it is preferable that they transgress unknowingly rather than deliberately (Sh. Ar., oḥ 608:2).

Procedures of Rebuke

It is not sufficient to rebuke the wrongdoer once, rather one must rebuke him incessantly so long as he is recalcitrant. According to R. Johanan, a person should persist in rebuking his neighbor until the wrongdoer insults him; according to Samuel, until he curses him; and according to Rav, until he is ready to strike him (Ar. 16b). The obligation to rebuke one’s neighbor falls even upon one who is generally intellectually and morally inferior to the person at fault, so that the disciple, for instance, must rebuke his teacher where necessary (BM 31a). Every community must appoint a wise and respected person whose function it is to publicly chastise wrongdoing and call for repentance (Yad, Teshuvah 4:2).

The role of admonition is central in Jewish ethical thought. The rabbis proclaim that there exists no love or peace where there is no admonition, citing as an example the peace covenant between Abimelech and Abraham which re-

sulted from Abraham's reproving Abimelech (Gen. R. 54:3). The duty of admonition extends not only to individuals, but to the community at large, and even to the entire world, to the extent that if one does not fulfill the commandment of rebuke, the guilt of all those he might have reformed accrues to him (Shab. 54b). Some rabbis of the Talmud maintain that the Second Temple was destroyed, despite the presence of the righteous, because the righteous did not fulfill their obligation to rebuke the wrongdoers of their time, and thus shared their guilt (Shab. 119b). In the opinion of Judah ha-Nasi, the most righteous course for a man to choose is the love of admonition: "As long as there is admonition in the world there is satisfaction, goodness, and blessing in the world... as it is written [Prov. 24:25] 'To them that rebuke shall be delight, and a good blessing shall come upon them'" (Tam. 28a).

[Joshua H. Shmidman]

RECANATI, town in the Marches, central Italy. Already by the 13th century there was a Jewish community in Recanati, trading in wine, oil, and cereals. Around the end of the following century Jewish loan-bankers settled in Recanati. In the 15th and 16th centuries Recanati became the most important Jewish center in the Marches, and in 1448 delegates of the Jewish communities in the region were summoned to assemble there to consider ways of defending themselves against the prevailing anti-Jewish agitation. Other meetings took place in 1480, 1509, and 1515. In 1558 the apostate Fra Filippo (formerly Joseph Moro) burst into the synagogue during the Day of Atonement service and profaned the Ark. After he had been driven out of the synagogue by the furious congregation, he appealed to the ecclesiastical authorities and obtained a severe sentence against the Jewish community. In 1569, following a bull by Pius v, the Jews were expelled from Recanati, as they were from all other centers in the Papal States, except Rome and Ancona. They returned for a brief period under Sixtus *v (1587) and opened loan-banks once again until 1593. The famous mystical exegete, Menahem (of) *Recanati, may have lived here in the 14th century.

[Ariel Toaff]

RECANATI, Italian family, originally from *Spain, which produced scholars, physicians, merchants, and financiers. The name derives from the town of *Recanati. The family rose into special prominence in the 17th century, but earlier members of the family are Menahem *Recanati in the 13th century and AMADEO (Jedidiah) in the 16th century who translated Maimonides' *Guide of the Perplexed* into Italian, under the title

Erudizione dei Confusi, which he dedicated to Menahem Azariah da *Fano.

The main branch of the family begins with SHABBETAI ELHANAN (early 17th century), rabbi of Ferrara when the ghetto was established there (1624). He founded a dynasty of rabbis that continued for at least six generations. MENAHEM, his son, succeeded him as a rabbi in Ferrara. He wrote a number of responsa. Some of these are included in *Piskei Recanati ha-Aḥaronim* of Jacob Ḥayyim Recanati (nos. 4, 6, 33; see below). JUDAH ḤAYYIM (late 17th century), Menahem's son, was rabbi of the Sephardi community of Ferrara. He wrote a number of responsa and his name appears often with the other rabbis of the city on rabbinical decrees. One of his responsa appears in *Piskei Recanati ha-Aḥaronim* (no. 5). SHABBETAI ELHANAN (d. 1738), his son, continued as rabbi of the Sephardi community of Ferrara. He was a contemporary of Mordecai *Zahalon and his name appears often together with Zahalon's and those of the other rabbis of Ferrara on regulations (*takkanot*) and approvals (*haskamot). He wrote responsa at a very early age. One of them is found in *Devar Shemu'el* (p. 280) of Samuel Aboab. He is mentioned in the *Paḥad Yizḥak* of Lampronti, *Reshit Bikkur Kaḥzir* of Jacob Daniel Olmo, and *Shemesh Zedakah* of Samson Morpurgo. His son MOSES was also a rabbi in Ferrara as early as 1730.

JACOB ḤAYYIM BEN ISAAC SAMUEL (1758–1824), his grandson, born in Pesaro. At first an elementary school teacher in Ferrara, he later served as rabbi in Siena, Acqui, Moncalvo, Finale, Carpi, Verona, and Venice. In Verona he also acted as head of a rabbinical school. He is best known for his *Piskei Recanati ha-Aḥaronim* (Leghorn, 1813) a collection of responsa, and for *Ya'ir Nativ* (Dessau, 1818) a responsum on the Hamburg Temple and its use of an organ. He was one of the four rabbis who took the liberal view. He was a man of wide interests, being also a grammarian and mathematician, poet and preacher. He published a treatise on arithmetic at Siena. Unpublished are books of sermons entitled *Afikei Mayim*, *Oholei Ya'akov*, and *Neveh Ya'akov*. He also wrote a compendium on Judaism (Verona, 1813), a number of Hebrew poems, and *Har ha-Tov*, quotations from *Ein Ya'akov*. Emanuele (Menahem; 1796–1864), the son of Jacob Ḥayyim, was physician in Verona. He wrote *Grammatica Ebraica in Lingua Italiana* (Verona, 1842); and *Dizionario Ebraico-Caldaico ed Italiano e Italiano ed Ebraico* (2 vols., *ibid.*, 1854–56). Other branches of the family are found in various Italian cities. In the 20th century branches of the family spread to Greece, Israel, and the U.S.

[Isaac Klein]

In *Greece, Yehudah Leib Recanati (1890–1945) was a noted banker. Born in *Salonika, Recanati was a leader of Greek Jewry for many years and became the president of the Greek communities in 1934, representing them on the Jewish Agency council. In 1935 he settled in Tel Aviv and established the Discount Bank of which he became chairman of the board of directors. This bank became one of the largest in the country and contributed substantially to the economic

development of Israel. Recanati was the chairman of the Sephardi community council in Tel Aviv and was active in a large number of public institutions and bodies. His sons, Harry Rafael (1918–) and Daniel (1921–1984), were both directors of the Discount Bank and developed wide banking and commercial interests in Israel and elsewhere. They were dedicated to public and social needs in Israel (see Israel: *Banking).

RECANATI, ABRAHAM SAMUEL (1888–1980), Greek Zionist and journalist. A member of the *Recanati family, Abraham Samuel was born and educated in Salonika. He wrote in the local Jewish Judeo-Spanish press. In the Balkan wars, as a correspondent for the *Jewish Chronicle* and *Die Welt* (Berlin) he brought the suffering of the Jewish community of Salonika to the attention of the Jewish world and to the general European public.

In 1911 he became the head of Maccabi Federation in Salonika, transforming it from a sports organization to a mass youth movement.

Among his writings are *La Poriza dela Familia Judia, Ke es el Tsionismo*, and *Los Judios de Rusia Sofrin Eyos Como Judios*. He also translated *The Jewish State* by Theodor Herzl into French.

Owing to tactical and ideological differences, Abraham Recanati and a group of friends left Maccabi and in 1917 founded the French weekly newspaper *Pro Israel*, which Recanati edited during the ten years in which it appeared. The newspaper had widespread influence on the development of the Zionist movement in Salonika. The connections which developed at that time between Vladimir *Jabotinsky and Recanati brought about the molding of the core group of *Pro Israel* into a branch of the Revisionist Zionists in Salonika.

In 1919, Recanati formed the Histadrut ha-Mizrachi (Mizrachi Organization) in Greece and served as its leader. In 1923 he formed "Ha-Shomer," which was founded to use legal and "illegal" means to work for a Jewish state in Erez Israel.

He was a delegate to various Zionist Congresses and was among the founders of the World Revisionist Organization and a member of its world executive committee. The Jews always had a small representation in the municipality of Salonika and in 1929 Recanati was appointed assistant mayor of the city.

In 1934 Recanati immigrated to Palestine. He was one of the founders of "Ha-Mizrachi Ha-Mekori," which was a faction in the Tel Aviv branch of the Mizrachi. In 1935 he obtained immigration certificates for Salonikan portworkers, sailors, and fishermen.

In Tel Aviv most of the Salonikan immigrants settled in the Florentin Quarter. Recanati served as vice chairman of the neighborhood committee under Rabbi Izhak Yedidiah Frenkel and helped in the areas of health, sanitation, education, commerce, and the crafts. During the period of the Holocaust he

participated in the formation of the Va'ad ha-Hazzalah (Rescue Committee) for Greek Jewry.

As a veteran Revisionist he was elected to the First Knesset in Israel representing the Herut party. He was chairman of the public services committee of the Knesset.

In the last years of his life, he spent much time collecting material and writing for the Salonika memorial book, *Zikhron Salonika* (vol. 1, 1972; vol. 2, 1986).

He was the brother of the banker Yehudah Leib (Leon) Recanati.

[Yitzhak Kerem]

RECANATI, LEON (Yehuda) (1890–1945), banker. Born in Salonika, Recanati was one of the earliest Zionist activists in Salonika. After the outbreak of the Young Turk revolution in 1908, he was one of the first Zionist leaders who acted in the open. In the same year he began to function as a correspondent of the local Zionist movement to the Central Zionist Bureau in Cologne. After the death of his older brother Zacharia, Leon took over the family business of commercial representation for foreign firms in Salonika.

When the Young Turks began to ban official Zionist activities, Leon channeled his public endeavors through his involvement with B'nai B'rith, of which he was one of the founding members in Salonika (1911). One of the first results of his B'nai B'rith work was his initiative in founding a women's organization, B'not Israel.

Recanati's principal business was as owner of the tobacco factory Fumero. He provided work for some 600 Jewish breadwinners in times of economic stress.

In 1929 he was the Greek Jewish representative at the gathering which founded an extended Jewish Agency and subsequently was Greek Jewry's representative to the World Jewish Congress in Geneva. In 1933 the Zionist slate won the local Jewish community elections, and Leon Recanati was elected president of the Jewish community of Salonika.

In 1934 he moved to Palestine and in 1935 founded the Israel Discount Bank. He continued his concern with the welfare of his fellow Salonikan Jews. During the period of Nazi occupation in Greece, Recanati tried to take measures to help save his fellow Jews. He persuaded the Jewish agency to rent a small boat that sailed secretly at night between Zakalos, on the eastern coast of the Euboean peninsula in Greece, and Gesme, Turkey. Hundreds of Greek Jews fleeing Nazi terror were saved in this manner and later arrived in Palestine. Hundreds of Greek officers escaped from Greece in these same boats in order to join the Greek army stationed in the Middle East.

In Palestine, Recanati cared for the few refugees who succeeded in escaping and granted them loans for initial rehabilitation. He also participated in the building of a residential area for Greek Jewish immigrants in Yad Eliyahu in the Tel Aviv region.

He was also actively involved in public life in Palestine. He was chairman of the Greek-Jewish Kadima club, leader of the Organization of Greek Immigrants which ran a kitchen

for the needy as well as a welfare fund for Greek immigrant women, and was president of the settlement company Ban-imli-Gevulam, which founded and strengthened the settlements of Kefar Hittim, Bet Hanan, Zur Moshe, and Bet Halevi, all inhabited mostly by Sephardi Jews. He also set up a scholarship fund to enable Sephardi youth to obtain high school, technical, agricultural, and particularly university training.

RECANATI, MENAHEM BEN BENJAMIN (late 13th–early–14th centuries), Italian kabbalist and halakhic authority. No information whatsoever is available on Recanati's life, although according to family tradition mentioned in *Shalshet ha-Kabbalah* he was once an ignorant man who miraculously became filled with wisdom and understanding.

He wrote three kabbalistic works: *Perush al ha-Torah* (Venice, 1523); *Ta'amei ha-Mitzvot* (Constantinople, 1544); and *Perush ha-Tefillot* (*ibid.*, 1544); and one halakhic work, *Piskei Halakhot* (Bologna, 1538). Two commentaries on the *Perush al ha-Torah* were written during the 16th century: one by Mattathias Delacrut (Neubauer, *Cat.*, nos. 1615, 1623, 3); and *Be'ur Levush Even Yekarah* by Mordecai Jaffe (Lublin, 1605; Lemberg, 1840–41). An important part of the *Ta'amei ha-Mitzvot*, in which Recanati deals with the problem of the nature of the *Sefirot*, still remains in manuscript. According to Recanati, the *Sefirot* are not the essence of God but coverings in which God enfolds Himself and instruments through which He acts. This entire extract is quoted by Judah *Ḥayyat in his commentary to **Ma'arekhet ha-Elohut*, and in their discussions of this question other 16th-century kabbalists (notably Isaac Mor Ḥayyim, Elhanan Sagi Nahor, Solomon *Alkabez, and Moses *Cordovero) refer to Recanati's views. Even those who oppose his theory refer to him with admiration and respect, with the exception of David Messer *Leon, who attacks him harshly in *Magen David* (MS Montefiore 290).

With the exception of his discussion on the essence of the *Sefirot*, where his conclusion is the result of his own speculations, Recanati's doctrine is drawn mainly from written sources. He cannot be regarded as the recipient of "revelations from heaven" (despite Guedemann; see *bibl.*), and in few places indeed does he tell of his dreams and visions. Thanks to him the doctrines of many kabbalists whose writings are otherwise unknown have been preserved. He made use of many sources, which he usually does not mention by name, and was especially indebted to *Naḥmanides, whom he refers to as "the great rabbi." Another kabbalist he mentions frequently is R. Ezra (whose name is occasionally changed to R. Azriel), and he made use of the writings of Jacob b. Sheshet Gerondi, *Asher b. David, Joseph *Gikatilla, and *Moses b. Shem Tov de Leon. Recanati was acquainted with two large works on the reasons for the precepts which were written during his lifetime: one by R. Joseph from Shushan (then attributed to Isaac ibn Farḥi) and another by an unknown author. An important part of his commentaries on Naḥmanides' esoteric

mysticism derives from *Keter Shem Tov* by Shem Tov *Ibn Gaon. Other important sources were *Sefer ha-Bahir* and the *Zohar*, which he quotes often although he had access to only a limited number of sections.

[Efraim Gottlieb]

***RECCARED**, Visigothic king of Spain (586–601). He succeeded his father Leovigild and shortly thereafter converted from Arianism to orthodox Christianity. This conversion was followed in 589 by the Third Council of Toledo, where it was decreed that all Arians must become orthodox. His preoccupation with religious matters seems to have led Reccared to reaffirm and modify existing anti-Jewish legislation. He forbade Jews to own Christian slaves and decreed that if a Jew circumcised a Christian slave, the latter was to be set free and the owner was himself to be enslaved. Jews were further forbidden to have Christian wives or mistresses and any children born from such a union were to be baptized. This is the earliest example of compulsory conversion of Jews in Visigothic Spain. Aside from the enactment requiring the forced baptism of offspring from mixed marriages, Reccared's legislation did not go beyond that which had existed under his Arian predecessors. In fact the punishment for converting one's own slaves was reduced from death to slavery. Like his predecessors, moreover, Reccared was lax in enforcing the anti-Jewish laws. Not only did Jews continue to own and trade Christian slaves, but the pope felt compelled to indicate his wrath at this state of affairs. This had little effect, however, and the Jews seem to have been little bothered by Reccared's legislation against them.

[Bernard Bachrach]

RECHAB AND BAANAH (Heb. רֶכָב, "rider"; and בְּעֵנָה, cf. Ugaritic *bn'na*, "son of Ana"), sons of Rimmon from Beeroth, one of the four cities which constituted the Gibeonite (or Hivite) league, and which has been identified as the site of el-Bire, lying northwest of Jerusalem just outside the territory of the tribe of Benjamin. Rechab and Baanah, captains of the army of Saul's son Ish-Bosheth (11 Sam. 4:2), murdered their king (verse 7). Entering Ish-Bosheth's house undetected, they decapitated him while he was sleeping (verse 7) and took his head to David, claiming to have carried out the will of God (verse 8). David, anxious to clear himself of the suspicion of

complicity, had them summarily executed, reminiscent of the way he treated the man who brought the news of Saul's suicide. The assassins' bodies were mutilated and hanged beside the pool in Hebron, while the head of Ish-Bosheth was honorably buried in Abner's grave in the same town (verse 12). Several possible motives may explain the captains' regicide: the hope of being rewarded by David; the desire to realize Abner's plan for a united kingdom with David as king, by eliminating David's most dangerous opponent; and revenge for Saul's conquering the confederacy of the Hivite cities (cf. Josh. 9:17).

Saul's conquering of the confederacy explains why the Beerothites, including the sons of Rimmon, fled to Gittaim, where they lived as aliens (11 Sam. 4:3). In the course of time the sons of Rimmon became officers of Ish-Bosheth and at an opportune moment murdered him as an act of blood revenge.

BIBLIOGRAPHY: M.H. Segal, in: JQR, 8 (1917/18), 98–99.

RECHABITES (Heb. רֵכָבִיּוֹת), a small religious sect first identified as such in Jeremiah 35 in an incident dated in the reign of *Jehoiakim, but tracing their descent to Jonadab son of Rechab, who was a contemporary of *Jehu (11 Kings 10:15–17 where he is called Jehonadab; see below). Jeremiah was commanded by God to take the Rechabites to one of the chambers in the Temple and serve them wine. The Rechabites, however, refused to drink the wine, citing the charge of their ancestor Jonadab son of Rechab, which forbade them to drink wine, to cultivate or even to own fields or vineyards or to build houses. They had remained pastoral tent-dwellers until the invasion of Nebuchadnezzar, when they had taken refuge in Jerusalem. It is not known whether this was when Nebuchadnezzar merely occupied the West and Jehoiakim became his vassal (604 B.C.E.) or during Jehoiakim's rebellion (601–598), nor whether the Rechabites had been able to continue to dwell in tents while residing in Jerusalem, but at any rate they continued to abstain from wine. Jeremiah, while he did not necessarily demand this Nazirite-like asceticism, extolled their strict observance of these commandments, contrasting it with the evil ways of the people of Judah. He promised the Rechabites that they would continue to serve before God: "Jonadab son of Rechab shall never lack a man to stand before me" (35:19).

"Ben Rechab" may mean not literally "son of Rechab" but "Rechabite," in which case Jonadab may have won over his clansmen as well as his descendants to his way of life. He was not necessarily the physical ancestor of all the Rechabites of Jeremiah's day, but he was in any case their lawgiver and spiritual ancestor. Whether the Rechabites had peculiar religious observances (e.g., letting the hair grow) other than those enumerated above is not known.

Opposition to the Monarchy of Omri

Jonadab son of Rechab sided with Jehu against the House of Ahab. From a fragmentary text (11 Kings 10:15–17) it appears that Jonadab, riding in Jehu's chariot from Jezreel to Samaria, gave his blessing to the slaughter of the royal family, and that

Jehu was interested in proving to him his zealousness on behalf of God. Jonadab also participated at Jehu's side in the slaughter of the prophets of Baal in the House of Baal in Samaria (11 Kings 10:23). There is no evidence in the text that other men of the family of Rechab participated with Jonadab or that he acted as a representative of the sect. However, although Jonadab was accepted by Jehu on the strength of his personality, it may be assumed that his reputation as a zealous supporter of the God of Israel, who would tolerate no compromises, derived from his position as a head of a family that was completely opposed, because of its zealous faith and unique social character, to the rule of the House of Omri. Jonadab may have promulgated his rules as a reaction to the policies of Ahab, which notoriously provoked the opposition of the prophets and the sons of prophets headed by *Elijah and *Elisha. It appears that even at that time the Rechabites were distinguished from the prophets by their asceticism and extreme zealousness on behalf of the God of Israel (there is no sign that the prophets also participated in the slaughter of the worshipers of Baal in Samaria).

Origin of the Group

There is no definite information concerning the origins of the Rechabites. From a vague verse in 1 Chronicles 2:55 – "These are the Kenites who came from Hammath, the father of the house of Rechab" – it follows that the house of Rechab (as far as it is possible to identify it with "the house of the Rechabites" in Jer. 35 and "the son of Rechab" in 11 Kings 10) was related to the *Kenites. This verse mentions the Rechabites only in passing, in connection with the lineage of the Kenites. It goes on to say that the Kenites, or at least some of them, were among the inhabitants of Jabez, implying that they established a permanent settlement there, which cannot of course refer to the Rechabites. Even if "the house of Rechab" is also a place-name, identical with the name of the family, as is usually the case in the genealogies of Chronicles, there is no proof that it refers to a permanent settlement. If preference is given to the text of the Septuagint: "these are the men of Rechab," over that of 1 Chronicles 4:12: "these are the men of Recah," it is seen that, in accordance with the genealogical context in 1 Chronicles 4:11–15, the Rechabites were related to the Kenazites and the Calebites. Indeed, if these above verses reflect the process of settlement of the desert tribes in Judah in the period of the united monarchy in Israel, it may be estimated that the Rechabites were known, many years before Jonadab, as a special family in Judah. It is reasonable to suppose that, like the Kenites and the Kenazites, the Rechabites were absorbed in Judah at the time of the united monarchy, and in any case their territory was adjacent to the permanent settlements in the hill country of Judah. But their character as a religious sect dates only from the time of Jonadab.

Seminomadic Shepherds

Not engaging in agriculture and living in tents, the Rechabites must have subsisted by raising sheep and goats (cf. Gen. 4:20; 25:27). It follows that the Rechabites were among the nomads

and herdsmen who dwelt in proximity to the permanent settlements in Israel and Judah, and even wandered further to the Wilderness of Judah. From the verses describing the meeting between Jonadab and Jehu – which took place between Jezreel and Samaria – it may be inferred that Jonadab's settlement was in the neighborhood of the cities in Israel. But their wanderings in the different periods ranged over Israel and Judah.

Relation to Society at Large

It appears that, in contrast to the deeds of Jonadab in the days of Jehu, the Rechabites in the following generations did not participate in the practical life of the kingdom and were essentially not a rebellious sect. The impression is that they did not set out to preach a way of life to the whole people, but, as is generally the case with a separatist group unified by family ties and stringent communal restrictions, it served in its very existence as a challenge to the conventions of the agrarian society and culture; in this respect it was analogous to some of the ascetic sects in the Wilderness of Judah in Second Temple times.

Second Temple Period

There are allusions to the existence of the family of the Rechabites in the days of the Second Temple. In Nehemiah reference is made to Malchijah son of Rechab, officer of the district of Beth-Cherem who held the Dung Gate (3:14), but there is no mention of his being unique among the other officers. Diodorus Siculus (19:9), in the name of Jerome of Cardia, speaks of the asceticism of the early Nabateans at the end of the fourth century B.C.E. in terminology almost exactly like that which Jeremiah used in describing the Rechabites, and he too placed special emphasis on the prohibition against drinking wine. There is no way of knowing of any connection between the Rechabites and the Nabateans, but it is probable that there were parallels to biblical asceticism, such as that of the house of Rechab, among other ethnic groups that settled in the south and Transjordan. According to the Mishnah (Ta'an. 4:5), "the children of Jonadab son of Rechab" had (in Second Temple times) a fixed day in the year for bringing wood for the altar of the Temple. They were probably descended from the tent-dwelling Rechabites, but they hardly constituted a separate sect. There were "water-drinking" sacrificers, and the Midrash traces their descent to Jonadab (Gen. R. 98:10; Sif. Num. 78, 81, et al.; cf. Ta'an. 28a; TJ, Ta'an. 4:2, 68a), but this merely indicates that sects of teetotalers existed in the Second Temple period. The designation which connects them with the pre-Exilic Rechabites may very well be typological rather than truly genealogical.

RECHITSA, city in Gomel district, Belarus. Rechitsa had one of the oldest Jewish communities in Belorussia. In 1648 the rampaging Cossacks murdered many of its Jews. The Jewish population in 1766 numbered 133, increasing to 1,268 in 1800 (two thirds of the total population), and 2,080 in 1847. The city was a center for Chabad *Hasidism. At the end of the 19th century Rechitsa had a yeshivah led by Rabbi Hayyim Shelomo Kumm and was the residence of the hasidic leader, R. Shalom Dov Ber *Schneersohn. Rechitsa's Jews included petty merchants in lumber and agricultural produce, artisans, a few wholesalers, and the owner of a match factory. In 1897 the 5,334 Jews of Rechitsa constituted 57 percent of the population. On October 23, 1905 the peasants of the surrounding area participated in a pogrom which killed 6 Jews and wounded 12, most of them members of the Jewish self-defense force. On the eve of World War I the Jewish population numbered about 7,500. Jewish communal and religious life began to decline under Soviet rule. There existed a Yiddish section in the court of law and two Jewish elementary schools. In 1926 there were 7,386 Jews, and 7,237 in 1939 (24 percent of the total population). The Germans occupied the town on August 23, 1941. In November 1941 all 3,000 remaining Jews were gathered in a ghetto, and on November 25 they were murdered. A few Jews returned after the war. They had no synagogue, and in 1970 the Jewish population was estimated at about 1,000. In the 1990s most remaining Jews emigrated to Israel and the West.

RECHTER, Israeli architects. ZE'EV RECHTER (1899–1960) was born in Russia and went to Palestine in 1919, working in an engineering office in Jerusalem. He worked for many years as a draughtsman and surveyor, later studying architecture and engineering in Italy and France. After his studies, he returned to Tel Aviv. He had a considerable influence in formulating the types of urban dwelling houses in Israel as a whole, and in Tel Aviv in particular. He introduced the house built on piles, with the lower floor open to the street, which determined the look of residential streets in Tel Aviv and other towns. The first building of this type was Bet Engel in the Rothschild Boulevard in Tel Aviv built by Rechter in 1934–36. Among other public buildings built or designed by Rechter are Binyenei ha-Ummah in Jerusalem, the Meir Hospital at Kefar Sava, the Elisha Hospital in Haifa, the Tel Aviv law courts (in partnership with Dov *Karmi), and the School of Archaeology at the Hebrew University. Rechter was one of the leaders of the modernist movement in Israel, simple forms characterizing his architecture.

His son, YA'AKOV RECHTER (1924–2001), was born in Tel Aviv and served as an officer during the War of Independence. In 1951 he became partner in his father's firm. He worked on a number of private buildings and public projects such as the F.R. Mann Auditorium in Tel Aviv (in collabora-

tion with D. Karmi). On the death of his father, he ran the office with his brother-in-law, Zarchi. The designs emerging from the reorganized office shifted from a solid sobriety to lively sculptural forms blending with the natural surroundings. In the Zikhron Ya'akov Rest Home, Rechter repeated the cellular pattern of his Tel Aviv Hilton. In a different mood, Rechter experimented with concrete and glass at the Poly-clinic in Haifa. Rechter worked on a town-planning scheme for the development of the Tel Aviv seafront. One of his most famous buildings is the Stage Arts building in Tel Aviv, a monumental structure that includes a small piazza, two large entrance gateways, and a large hall. Rechter was awarded the Israel Prize for arts in 1972.

The Ministry of Education and Culture awards the Rechter Prize for excellence and creativity in architecture.

RECIFE, city in northeast Brazil, capital of the state of Pernambuco; population: 1,486,869 (2004); Jewish population estimated at 1,300.

Colonial Period

When Recife became a prosperous center for sugar production in the 16th and 17th centuries, Portuguese New Christians were already living in the city and its environs and in many regions of the Brazilian Nordeste (North East). They worked mainly in sugar production and commerce. The significant number of New Christians in Recife took part in a variety of activities, and some bound themselves through intermarriage to prestigious Old Christian families.

The Inquisition dispatched an official inspector (*visitator*) and an inquisitional commission was established in 1593–1595 in Olinda, the port of Recife. New Christians were tried and arrested; some were taken to Lisbon and handed over to the inquisitional tribunal. After the inspector had left, surveillance of New Christians was continued by the bishop of Brazil, with the assistance of the local clergy. Thus the New Christian Diego Fernandez, husband of Branca Dias, was accused by the Inquisition of being a “Judaizer” and of keeping an “esnorga,” a secret place to pray.

Two New Christian writers lived in Recife and stood out in the colonial period with works that reveal elements of Jewish expression: Bento Teixeira, author of *Prosopopéia* – one of the most important Portuguese-Brazilian colonial poems – published in Lisbon on 1601, and Ambrósio Fernandes Brandão, author of *Diálogos das Grandezas do Brasil*, in 1618.

Dutch Period

The first organized Jewish community in Brazil was established in Recife during the period of Dutch colonial occupation (1630–1654) that brought Jews among other Dutch colonists and permitted religious freedom. The West India Company came to Brazil attracted by the sugar plantations and more than 120 engenhos (sugar mills) in Pernambuco.

In 1636–1640 the Dutch Jews founded the first Brazilian synagogue in Recife, the first on American soil: Kahal Kadosh

Zur Israel. Later they founded the synagogue Kahal Kadosh Magen Abraham in Maurícia. Both were unified in 1648, with the signatures of 172 members both from Recife and Maurícia. The Jewish community was very well organized along the same lines as the mother community in Amsterdam. Zur Israel maintained a synagogue, the religious schools Talmud Torah and Eḏ Ḥayim, and a cemetery. In Recife there was a “Rua dos Judeus” (Jodenstraat or Jewish street) in 1636.

In 1642 Rabbi Isaac Aboab da Fonseca arrived from Holland, accompanied by the *hakham* Moses Rafael de Aguilar. Jews from Recife addressed an inquiry regarding the proper season to recite the prayers for rain to Rabbi Ḥayyim Shabbetai in Salonika, the earliest American contribution to rabbinic responsa literature. Despite official tolerance, however, the Jews were subjects of some hostility at the hands of Calvinists.

The estimates of the Jewish population at Recife vary greatly. According to Arnold Wiznitzer, it reached 1,450 members in 1645. Egon and Frieda Wolff’s research indicated around 350 Jews.

By 1639 Dutch Brazil had a flourishing sugar industry with more than 120 sugar cane mills, six of which were owned by Jews. Jews also had an important role in commerce, tax farming, and finances. Jews were also engaged in the slave trade, worked in agriculture, in the Dutch militia and as artisans and physicians. The contacts with the local population – including many New Christians – was permanent, due to the economic activities. During Dutch domination in the Nordeste, New Christians came closer to Judaism.

As early as 1642 the Portuguese began preparations for the liberation of northeastern Brazil. In 1645 they began a war that lasted nine years. Jews joined the Dutch ranks, and some were killed in action. Famine had set in and conditions were desperate when, on June 26, 1649, two ships arrived from Holland with food. On that occasion, Rabbi Isaac Aboab wrote the first Hebrew poem in the Americas, “*Zekher Asiti le-Nifleot El*” (“I Have Set a Memorial to God’s Miracles”).

It was stipulated in the capitulation protocol of Jan. 26, 1654, that all Jews, like the Dutch, were to leave Brazil within three months and had the right to liquidate their assets and to take all their movable property with them. The majority left for Amsterdam, but some sailed to the Caribbean Islands (Curaçao, Barbados, and so on). Wiznitzer maintained that a group of 23 Brazilian Jews arrived in New Amsterdam (old name of New York), then under Dutch rule, on the *Saint Catherine* at the beginning of September 1654 and that they were the founding fathers of the first Jewish community in New York. Egon and Frieda Wolff rejected this historical connection and argued that there is no documentary basis to assume that the Jews who arrived in New York were the same that had left Recife during the expulsion of the Dutch.

New Christians continued to live in Recife. Two decades after the departure of the Dutch, the Inquisition was also acquainted with and persecuted the New Christians who had converted to Judaism during the Dutch occupation and had remained in Pernambuco. Many reports reached the Lisbon

Inquisition in the second half of the 17th century and during the 18th century regarding their clandestine observance of Jewish rituals. Portuguese policy in the middle of the 18th century eventually enabled the New Christians to mingle with the rest of the population, until their traces disappeared as they became completely assimilated.

Modern Period

The contemporary immigration of Jews from Eastern Europe to Recife started in the 1910s, and in 1910 a synagogue was established in a private house. The Centro Israelita de Pernambuco and the local Ídishe Shul were founded in 1918. Synagoga Israelita da Boa Vista and the Jewish cemetery were created in 1927. In 1930 Sephardi immigrants built their synagogue. The Jewish community was very active with a network of institutions, including six schools, the assistance organization Relief, a sports club, a library, a Yiddish theater group, youth and Zionist groups, and women organizations such as WIZO and Pioneiras. The community, which reached a population of 1,600, lived mostly in the neighborhoods of Boa Viagem and Boa Vista.

In 1992 the Arquivo Histórico Judaico de Pernambuco (Historic Jewish Archive of Pernambuco) was founded. In 1994 the Associação para a Restauração da Memória Judaica das Américas (Association for the Restoration of Jewish Memory in the Americas) was established and in 2000 the building where the synagogue Kahal Kadosh Zur Israel had been founded in the Dutch period was recognized as a “national historical patrimony” by Instituto do Patrimônio Histórico e Artístico Nacional – Iphan, a federal agency, and a memorial-museum was opened. Together with the old “Rua dos Judeus” the memorial figures in the tourist tours of the city of Recife.

RECKENDORF, HERMANN SOLOMON (1863–1923), German Orientalist. Reckendorf’s father, also named HERMANN (Ḥayyim Zevi; 1825–1875), taught Semitic languages at Heidelberg University, and wrote a Hebrew translation of the Koran (1857). Inspired by E. Sue’s *Les Mystères de Paris*, he also wrote *Die Geheimnisse der Juden* (5 vols., 1856–57), a fictionalized recounting of Jewish history. Several Hebrew versions of this work were published; the one by A.S. Friedberg (*Zikhronot le-Veit David*, 1893–1900) is still popular with Israel youth. Hermann Solomon Reckendorf studied Semitics under T. Noeldeke and at the Berlin rabbinical seminary, but later abandoned Orthodoxy. Reckendorf became professor at Freiburg University, specializing in Arabic syntax.

His *Die syntaktischen Verhältnisse des Arabischen* (1895–98) outlines the problems of Arabic syntax; his *Arabische Syn-*

tax (1921) is important for its collection of material. The two works remain outstanding. In his *Ueber Paronomasie in den semitischen Sprachen* (1909) Reckendorf covers a wider field, dealing with a well-defined syntactic phenomenon in most Semitic languages. Another of his works is *Mohammed und die Seinen* (1907).

[Joseph L. Blau]

RECKLINGHAUSEN, town in Westphalia, Germany, where the presence of Jews is attested as early as 1305. The financier Gottschalk of Recklinghausen, who carried on extensive business from Lochern (in Dutch Gelderland), was killed during the disturbances caused by the Black Death in 1349–50. No organized community, however, came into being in medieval times, and there is no record of one in Recklinghausen until 1828. In the course of time, an active Jewish life developed and the community established a synagogue, communal center, elementary school, *mikveh*, and a variety of Jewish societies. Eastern European immigrants founded their own society and *minyán*. The Jewish population of Recklinghausen grew from 72 in 1880 to 298 in 1905. It dropped to 280 (5% of the total population) in 1933. From 1903 until 1922 and again from 1934 to 1938, Recklinghausen was the seat of a district rabbi. The last incumbent was Selig Auerbach, who later immigrated to the U.S. During the Nazi persecutions, many members of the community succeeded in emigrating from Recklinghausen, principally to Holland. On Nov. 9/10, 1938, the synagogue was destroyed, and subsequent deportations of the remaining Jews brought the community to an end. A new community of 52 Jews was established in Recklinghausen after World War II in conjunction with *Bochum and Herne, numbering 76 persons in 1962. In 1960 and 1961 the “Synagoga” exhibition of Jewish art and folklore was held in Recklinghausen and was subsequently shown throughout Germany. In 1974 there were 60 Jews residing in the city. In 1997 a new synagogue was consecrated. Due to the immigration of Jews from the former Soviet Union, the community grew so that it was divided in 1999. The new Jewish community of Recklinghausen numbered 624 in 2004.

[Larissa Daemmig (2nd ed.)]

RECONSTRUCTIONISM, ideology and movement in U.S. religious life. Both the idea and the movement owe their inspiration to Mordecai Menahem *Kaplan (1881–1983). Raised Orthodox in Eastern Europe, Kaplan came to America at age eight. He saw his generation responding to this radically different setting in two ways: struggling to maintain Jewish identity

while acclimating to America, or abandoning Jewish identity altogether. Kaplan believed that with the breakdown of belief in the Torah as the revealed word of God, in the authority of *halakhah* (Jewish law), in a supernatural conception of God, and in the notion of the Jews as a separated and “chosen people,” a new rationale for maintenance of Jewish identity was needed. Kaplan argued that in pre-modern times, Jews had remained loyal to their identity despite hardship and suffering because they believed that adherence to Judaism assured them of salvation in the next world. Before the French Revolution (1789) Europe’s Jews also lived in segregated communities; with the entry of Jews into citizenship in the countries where they resided, the social and sociological constraints that kept them apart from the larger culture were removed, however imperfectly. Kaplan argued that Jews had to learn to live in two civilizations: the Jewish one and the larger culture of which they were now a part.

When Kaplan began his career, there was widespread disagreement among Jews about how to define Judaism and what comprised Jewish identity. Reform Judaism defined Judaism as a religion only, and Jews as a community of faith. Zionist theoreticians defined Judaism as a nationality, and Jews as citizens (in exile, perhaps, but citizens nonetheless) of the Jewish nation. Secular Jews saw Judaism as a culture and Jews as an ethnic group. Kaplan sought definitions that could encompass this diversity. He decided that Judaism should be understood as the evolving religious civilization of the Jewish people, and that the Jews should share a common sense of peoplehood. Judaism, like any other civilization, comprised a history, a language, a religion, a social organization, standards of conduct, and spiritual and social ideals. Under the influence of modern sociology, Kaplan stated that whatever is an object of collective concern takes on all the traits of a religion, which in its turn functions in order to hold up to the individual the value of the group and the importance of his complete identification with it. For Kaplan, belonging to the Jewish people came before behaving according to Jewish practice or believing according to Jewish religion.

Kaplan believed that Judaism had to be transformed from an “other-worldly” civilization into a “this-worldly” one. He rejected supernaturalism in all of its manifestations. For Kaplan, the Torah was a human document recording the Jewish people’s earliest record of their search for God and for the behaviors that would lead to human responsibility. What tradition called *mitzvot* (divine commandments) were for Kaplan “folkways” (*minhagim*) that had been created by the Jewish people, and thus were subject to adaptation, change, and/or rejection in response to the changing needs of the Jewish people. The Jewish religion, said Kaplan, exists for the Jewish people, not the Jewish people for the Jewish religion. Where Reform Judaism saw ethical monotheism as the unbroken line of continuity throughout Jewish history, and Orthodox Judaism saw the Torah and *halakhah* as the unchanging constants, Kaplan held that it was Jewish peoplehood that was the sole constant throughout the evolving history of Judaism.

Many Jewish intellectuals were attracted to Kaplan’s program for a Jewish life. Since Judaism was a civilization, Kaplan argued that its parts could best function in interrelationship with one another. Kaplan sought to replicate the model of the European Jewish *kehillah* as what he called an “organic community,” in which the basic unit of Jewish life would be the entire aggregate of a given community’s synagogues, educational institutions, Zionist organizations, agencies, and organizations, linked into a single structure with a democratically elected leadership. In Kaplan’s vision, one would join the local Jewish community, pay dues to that community, and in return have access to all the services of that community from birth to death. While this model was never implemented in the way Kaplan envisioned, it did have an influence on the emergence and development of the Jewish Federations and Jewish Community Relations Councils, each of which sought to embrace the entire spectrum of the communities they represented.

Kaplan was also a pioneer in conceiving of the synagogue as a Jewish center, in which social, intellectual and athletic activities would be as much a part of the institutional program as the synagogue and the religious school. This vision not only influenced the development of Jewish congregational life in the period before World War II, but it also helped inspire the creation and development of the Jewish Community Center movement.

The most controversial aspect of Kaplan’s thinking was his theology. The conception of God as a supernatural personality became for Kaplan a conception of God as force or process, or, in his preferred formulation, “the Power that makes for salvation.” Salvation was understood by Kaplan as self-fulfillment on a social and individual basis. It meant the progressive improvement of the human personality and the establishment of a free, just, and cooperative social order. Kaplan maintained that there were adequate resources in the world and capacities in humans to achieve such salvation. Since we sense a power that orients us to this life and elicits from us the best of which we are capable, this notion of God conforms to our experience. Kaplan distinguished between conceptions of God and belief in God. He felt that Judaism offered many different conceptions of God, from rational to mystical, and from personal to non-personal. It was belief in God as that force or power in creation and in human life that supported salvation, what Kaplan later called “transnaturalism,” that he felt was essential; the conception of God that a Jew might choose was less important. Some early Reconstructionists, such as Milton Steinberg, rejected Kaplan’s naturalistic theology while accepting the rest of Kaplan’s program.

Until the founding of the Reconstructionist Rabbinical College (RRC) in 1968, Reconstructionist ideology was essentially defined by Kaplan and his immediate circle of disciples and followers. Once the RRC began to ordain Reconstructionist rabbis, and as the number of Reconstructionist congregations began to grow in the 1980s and 1990s, Reconstructionism itself began to evolve, adapt and change to meet new circumstances. The inclusion of hasidic, kabbalistic and

meditative practices and teachings broadened the spectrum of Reconstructionist spirituality in ways that the primarily rational approach of Kaplan might not have accommodated. As an independent movement, Reconstructionism had to grapple with creating positions and practices that, if not exactly couched as a return to *halakhah*, meant a serious engagement with *halakhah*. The rise of literary analysis and appreciation of biblical scripture in the last quarter of the 20th century provided a new opportunity to reengage the Torah and other biblical writings as myth and poetry, and not only as an historical document.

Reconstructionism in the 21st century remains firmly grounded in Kaplan's essential insight, that Judaism is the product of the historical experience of the Jewish people, and is not the revealed word of God or an inspired reaction to revelation. The traditional sources and practices of Judaism still have, in Kaplan's famous formulation, a "vote but not a veto." The organic Jewish community may never have actually been created, but the institutions of the movement and the congregations affiliated with the Jewish Reconstructionist Federation (JRF) try to operate with Kaplan's principles of democracy, egalitarianism, and openness. In particular, the concept of values-based decision-making has become integral to Reconstructionism, as has inclusivity, the bringing into the Jewish community of intermarried Jews, single Jews, gay and lesbian Jews, single Jewish parents and elderly Jews, among others. Kaplan's emphasis on belonging over behaving and believing remains central to Reconstructionism; what has changed is that it is as much the belonging to a Jewish community (congregation or havurah) as to the Jewish people that is now central.

The founding of the Reconstructionist movement may be dated from the establishment by Mordecai Menahem *Kaplan of the Society for the Advancement of Judaism (SAJ) in January 1922. The society served both as a synagogue center and as a forum for Kaplan's ideas. Several months after the publication of Kaplan's *Judaism as a Civilization* (1934), he launched the magazine *The Reconstructionist* in collaboration with his closest associates, of whom Milton Steinberg, Eugene *Kohn, and Kaplan's son-in-law, Ira *Eisenstein, formed the nucleus. In 1941 the *New Haggadah* and *A Guide to Jewish Ritual* were published. In the *Guide*, ritual was viewed not as law but a means to group survival and the spiritual growth of the individual Jew. The individual was to be the arbiter of which rituals or folkways would be followed, though when making such choices, a balance between one's own needs and those of the group was optimal. Preserving the integrity of the tradition, while being responsive to contemporary needs, was fundamental.

In 1945 the Reconstructionist Sabbath Prayer Book appeared, which resulted in a ban (*herem*) against Kaplan by the Agudat ha-Rabbonim, a small Orthodox association, although such an attempt was largely ignored. But several of Kaplan's colleagues on the faculty of the Jewish Theological Seminary published an adverse "statement of opinion" (*gillui da'at*) in

the Hebrew publication *Hadoar*. In accordance with Kaplan's ideology, the prayerbook excised references to the Jews as the "chosen people," and to such concepts as God's revelation of the Torah to Moses, the parting of the Red Sea, and belief in the coming of a personal Messiah. Some passages of the traditional prayerbook were retained despite Kaplan's rejection of the concepts which lay behind them. In such cases the editors suggested to the reader how the passages were to be understood. Thus, prayers for the restoration of Israel were retained, but readers were told this should not be construed as the return of all Jews to Palestine. Kaplan was a Zionist of the American school, ardent in his support for the colonization of Palestine, but opposed to concepts implying the "negation of the Diaspora" and to emphasis on the necessity of *aliyah*. The entire second half of the prayerbook contained a major innovation for the time: supplementary readings intended to allow for variety in the structure of weekly services.

Kaplan's greatest success was in his impact on Jewish educators, social workers, and rabbis, especially students of the Jewish Theological Seminary, where he taught from 1909 to 1963. Because he himself preferred to think of Reconstructionism as a school of thought rather than a separate movement, and because he was resistant to further dividing the Jewish community, Kaplan's followers were constrained from building on his intellectual and liturgical efforts. Only with the establishment in 1968 of the Reconstructionist Rabbinical College (RRC) in Philadelphia did Kaplan finally give his blessing to the development of Reconstructionism as an independent denomination. Ira Eisenstein, who had been Kaplan's closest collaborator, and had served as the editor of *The Reconstructionist* magazine since the 1940s, became the first president of the RRC, serving until his retirement in 1981. Without Eisenstein's dedication to the creation of the RRC, Kaplan's legacy would have been one primarily of ideas, and not of institutions.

Once Reconstructionism began to train its own rabbinic leaders, the movement began to grow, slowly at first, but then in the 1980s and 1990s, the number of affiliated Reconstructionist congregations and havurot grew rapidly. From ten affiliates in 1968, the movement counted 105 members of the Jewish Reconstructionist Federation (JRF) in 2005. As of 2005, the RRC had graduated 265 rabbis who served in congregations, agencies, schools, on campuses and in chaplaincy settings, and as writers, lecturers and teachers, so that the influence of Reconstructionism continued to be disproportionate to the size of the movement.

In the 1990s, the Reconstructionist movement issued a new series of prayerbooks and a new *Haggadah*. This second generation of Reconstructionist liturgy was unique in being the work of an editorial committee comprised of rabbis, academics, and laypeople, and in reflecting the contributions of many of the graduates of the RRC, who were also rapidly moving into positions of leadership on the faculty and administration of the RRC, the staff of the JRF, and of the Reconstructionist Rabbinical Association (RRA, established in 1974). In 1996 the RRA published the first Reconstructionist rabbi's manual.

A new magazine, *Reconstructionism Today*, was established in 1994. In 2005, *The Reconstructionist*, now a journal, published its 70th anniversary issue. The initial publication of a projected three-volume *Reconstructionist Guide to Jewish Practice* appeared in 2000. In 2003, a Reconstructionist youth movement, No'ar Hadash, was established. That same year, the first Reconstructionist summer camp opened (Camp JRF); in 2005, the camp purchased a permanent home in the Pocono mountains in Pennsylvania, which will also serve as a year-round conference and retreat center for the movement.

After Kaplan and Eisenstein, the most important and influential leader of the Reconstructionist movement has been David *Teutsch, who served as vice president of the Jewish Reconstructionist Foundation (1980–82), executive vice president of the Federation of Reconstructionist Congregations and Havurot (1982–86), president of the Reconstructionist Rabbinical College (1993–2002), editor-in-chief of the *Kol Hane-shamah* prayerbook series (1989–2002), and director of the Center for Jewish Ethics at the RRC (2002–).

The intellectual history of the Reconstructionist movement came full circle with the publication in 2002 of the first volume of excerpts from the daily journal kept by Kaplan from 1913 until the late 1970s. Edited by Kaplan's biographer, Mel Scult, the journals helped to bring to a new generation of Reconstructionists and to all interested in the history of American Judaism in the 20th-century, the insights of the founder of Reconstructionism as he worked out the ideas, principles, and positions that would become Reconstructionist Judaism.

RECONSTRUCTIONIST RABBINICAL COLLEGE. The Reconstructionist Rabbinical College (RRC) was founded in 1968 in Philadelphia to carry on the ideals of the founder of Reconstructionist Judaism, Rabbi Mordecai *Kaplan. The decision to open the school was made by the lay-led organization of the movement, the Federation of Reconstructionist Congregations and Havurot (today the Jewish Reconstructionist Federation) meeting in Montreal in June 1967. Kaplan previously had resisted establishing a seminary that would mark Reconstructionism as a denomination rather than a school of thought. He maintained a life-long allegiance to the Jewish Theological Seminary where he taught for decades. However Reconstructionist congregations, insufficiently served by Reform and Conservative rabbis, pushed Rabbi Ira Eisenstein and lay leaders to make this decision.

Eisenstein became the RRC's first president. The college included two unique features. Reflecting Kaplan's vision of living in two civilizations, students were to pursue doctoral

studies in religion simultaneously at a secular university. (However this dual-studies program would later be dropped.) Second, the curriculum would be based on Kaplan's concept of Judaism as an evolving Jewish civilization, studying each period sequentially and integrating history and literature from each time period. The five-year rabbinic curriculum devotes a year each to the biblical, rabbinic, medieval, modern, and contemporary periods. Open to both men and women, from the beginning RRC included faculty from diverse Jewish backgrounds.

The college opened in September 1968 in Philadelphia near Temple University, as the college was to collaborate with the Temple religion department and provide access to other graduate programs. Given the existence of only a handful of Reconstructionist congregations, for many students their first exposure to the movement in practice came as students. In 1974, the second graduating class included Sandy Eisenberg Sasso, the second woman rabbi in the United States.

In 1984 the college moved from its inner-city location to its current home in a former mansion in suburban Wyncote. Around that time, the college leadership wanted to enrich the curriculum and increase the Hebrew level of students. The number of RRC courses increased, including courses by visiting non-Jewish scholars. In 1983 RRC became the first rabbinical seminary to officially admit openly gay students. A *mekhinhah* (preparatory) year for some students was also added. The college continued to expand in the late 1980s as faculty and student enrollment significantly increased, and the Israel study program expanded. The college received full academic accreditation in 1990.

In the 1990s and early 2000s the college strengthened its financial base and expanded its programs, publications, and facilities. Cantorial studies and a masters program in Jewish studies were added. Three academic centers were established to support research, publications, and education in the wider community: Jewish ethics; Kolot, a center on Jewish women's and gender studies; and Hiddur, a center on aging.

By 2005, RRC had graduated 283 rabbis and two cantors. Of these, 153 were male and 132 were female. Enrollment in 2005 was 76 rabbinical students, two cantorial students, and two masters' candidates. RRC publishes the *Reconstructionist* journal (1935–).

[Robert P. Tabak (2nd ed.)]

RECORDS, PHONOGRAPH. The earliest "talking machine" was patented by Thomas A. Edison in 1878 as a vertical cylinder device. In 1887 Emile *Berliner produced a lateral flat disc mechanism, bringing the disc "gramophone" into competition with the cylinder "phonograph." By 1891 recordings were introduced to public entertainment as coin-in-slot ma-

chines, and soon included some Jewish monologues, skits, and songs.

One of the most widespread Jewish subjects on recordings was cantorial music. Gershon *Sirota was the first cantor to record liturgicals commercially. He was widely criticized because recordings were played in cabarets and on the Sabbath. Then Zavel *Kwartin recorded and other cantors followed in a "golden cantorial age." In the 1920s such favorites as Mordecai *Hershman, David *Roitman, and Berele *Chagy were presented on discs and cylinders. Cantor Josef (Yossele) *Rosenblatt put 82 different liturgical selections on 10 labels. Since World War II revival of interest in European-style cantorials has resulted in re-pressings and reissues of old liturgical performances, as well as recordings of modern cantors such as Moshe *Koussevitzsky and Leib *Glantz, and the cantorial records of such prominent concert and opera artists as Jan *Peerce and Richard Tucker. In the U.S. congregations have honored their own cantor with a recording issue of his performances. In the 1960s recordings of the devotional music of ḥasidic groups, such as the Lubavitcher, Modzhitzer, and Gerer, on their own labels or Jewish companies, added to the number of Jewish liturgical recordings.

Theatricals

Edison cylinders early captured such voices as the Yiddish artist Madame Regina Prager (1874–1949) and the Jewish entertainer Sophie *Tucker. Among the Jewish performances early in this century on single-side small discs were a folk melody *Min ha-Mezar* and a popular ditty *Kum Yisru'lik, Kum Aheym*. Shalom Aleichem read his works for cylinders, and the comic monologist, Ikey Eisenstein, was a great favorite on discs. Especially in the U.S. dance music recordings sold well, particularly of Jewish wedding *freylekhs*, *shers*, *kazatskis*, and *horas*. By the end of World War I every recording company had a roster of all types of Jewish performers. With the rise of radio in the 1920s, records dropped in sales. Jewish records especially lost their audiences with the changing tastes of the U.S. Jewish public for "Anglicized" entertainment and with the appearance of Jewish "stars" on the general stage, in radio, and "talking pictures." Some recordings include Yiddish theatrical personalities of the era between the two world wars, such as Joseph Rumshinsky (1881–1956), Aaron Lebedeff (1873–1960), Ludwig Satz (1891–1944), Moïshe Oysher (1907–1958), and Menasha Skulnick (1892–1970). The aftermath of the Holocaust in Europe and the establishment of the State of Israel stimulated wider interest for popular performances of Yiddish and Hebrew folk music. Prominent among recorders of this post-war Jewish expression have been the actor-singer Theodore Bikel, the ḥasidic performer Shlomo Carlebach, the Israel entertainer Shoshana Damari, and the Yiddish actress Molly Picon. With the rise of the "youth market" in the 1960s, such phenomena as folk-rock liturgicals and rock-ballads in Hebrew with electronic instrumentation have appeared in the U.S. and Israel.

At the turn of the century, in St. Petersburg, Russia, the

Jewish proprietor of Rappaport's "listening shop" encouraged and assisted his supplier of discs to present in 1902 a roster of higher quality selections on a special "red seal" label. The entire industry followed over the next decade with "quality labels" on larger double-side discs, upon which were available the performance of concert artists, many of them Jewish. In the worldwide growth of better quality recordings over the decades to the 1970s, Jewish participation has been outstanding. In 1969 the *Service Technique pour l'Education* (STÉ) of the Alliance Israélite Universelle in Paris published a selective listing of all types of Jewish recordings available on the Continent at the time.

Folk Music

Use of cylinder recording for collection of Jewish folk materials was made at the turn of this century by collectors in Russia. Before World War I the Jewish musicologist Abraham Zevi *Idelsohn made use of recording apparatus in assembling liturgical materials in Jerusalem for his 10-volume *Thesaurus of Hebrew-Oriental Melodies*. Such scholars in Israel and America as Edith *Gerson-Kiwi and Johanna *Spector used recording equipment in their work among groups in the field.

Jewish Recording Companies

By 1920 there were about 30 different companies each issuing several labels, all of which had some Jewish materials in addition to rosters of Jewish performers. The decade of the 1920s was an era of consolidation into "big business" concerns in the recording industry, as well as much technological expansion. The oldest continually operating record shop into 1971 has been the Metro Music Shop, which was established in 1918 on the Lower East Side of Manhattan in the Yiddish theatrical area of Second Avenue by Henry Lefkowitz (1892–1959), a composer and publisher of Jewish music. A number of specifically Jewish recording companies have been formed since World War II. In 1939 Moses Asch (d. 1986) formed Asch Record Company to supply Jewish recordings for the all-Jewish radio station WEVD in New York. Expanded to Ethnic-Folkways Records in 1947, its scope of Jewish materials was broadened to include recordings of Sephardim, Beta Israel, Yemenites, and other Oriental Jewish groups, much of it based on field collections by researchers, in addition to folk music in Yiddish and Hebrew Zionist songs. Formed after the war, Banner Records has made a specialty of Jewish variety and theatrical presentations by more recent artists. Ḥasidic music has been issued by smaller companies as well as by the larger Jewish companies. Menorah Records features recordings for children, holiday albums, and other educational releases. Since 1947, Tikva Records has manufactured and distributed a wide variety with an active market catalog of about 130 different issues. It has been especially successful in presenting Jewish folk dance records with instructions for the performances of the dances. In 1962 Greater Recording Company was formed to locate and re-issue on long-playing records rare Jewish performances done originally in the early decades of this century on cylinders and discs. Some recent performances of ḥasidic

music and cantorials are included in its roster. Benedict Stambler (1903–1967) formed Collectors Record Guild and began in 1955 to re-press for commercial sale many of the old Jewish recordings from his large personal collection. He also produced new ḥasidic recordings. In 1971 the Stambler collection of recorded Jewish music, comprising 4,000 different selections, was donated to the Rogers and Hammerstein Archives of Recorded Sound, housed in the New York Public Library at Lincoln Center. This collection, recorded on approximately 150 labels and starting with materials from 1902, is available for study on the library premises. Among the leading Israel recording companies were Hed Arzi, for light Israel entertainers and folk ensembles; Ha-Taklit, with folk music presentations; Israeli Music Foundation, for serious compositions as well as folk dances; and CBS-Israel, which produced light popular, classical, musical and drama, educational material, and “small disc specials” for children. All went over to compact disks in the 1990s.

[Irene Heskes]

REDEMPTION, salvation from the states or circumstances that destroy the value of human existence or human existence itself. The word “redeemer” and its related terms “redeem” and “redemption” appear in the Bible some 130 times and are derived from two Hebrew roots, *pdh* (פדה) and *g'l* (גאל). Though used to describe divine activity as well, they arose in ordinary human affairs and it is in this context in which they must first be understood. *Pdh* is the more general of the two, with cognates of related meaning in Akkadian, Arabic, and Ethiopic. It belongs to the domain of commercial law, and refers to the payment of an equivalent for what is to be released or secured. The verb *pdh*, unlike *g'l*, indicates nothing about the relation of the agent to the object of redemption, which in the Bible is always either a person or another living being. Its usage does not differ in cultic activity from that of a normal commercial transaction. In both cases a person or an animal is released in return for money or an acceptable replacement (cf. Ex. 13:13; 34:20; Lev. 27:27; 1 Sam. 14:45 with Ex. 21:7–8; Lev. 19:20; Job 6:23). *G'l* is more restricted in usage and does not appear to have cognates in other Semitic languages. It is connected with family law and reflects the Israelite conception of the importance of preserving the solidarity of the clan. The *gō'el* (“redeemer”) is the next of kin who acts to maintain the vitality of his extended family group by preventing any breaches from occurring in it. Thus, he acquires the alienated property of his kinsman (Lev. 25:25) or purchases it when it is in danger of being lost to a stranger (cf. Jer. 32:6ff.). Possibly, too, he is required to support the widow of his next of kin in

the event of her being dependent on this estate for her livelihood (cf. Ruth 4:4ff.). In any event, he redeems a clansman who has been reduced to slavery by poverty (Lev. 25:47ff.), and avenges his blood when it has been shed (cf., e.g., Num. 35:17–19). Whether he actually was duty bound to perform these acts was contested by early rabbinic authorities (cf. Kid. 21a), but it seems likely that he was expected to do so, unless there was a good reason to the contrary (cf. Ruth 4:6).

When applied to divine activity, a slight shift occurs in the use of both these terms. Thus, *pdh* takes on the general meaning of “deliver” and does not involve the notion of the payment of an equivalent. God is, after all, the Lord of the universe and everything belongs to Him. Indeed the only place in Scripture when the possibility of such an exchange is even suggested is obviously rhetorical and *pdh* is not used (cf. Isa. 43:3–4). God's purpose is not to retain the right of possession, but to liberate people, both individuals and groups, from their woes (cf. 11 Sam. 4:9; 1 Kings 1:29), including bondage (e.g., Deut. 7:8; 13:6), oppression (e.g., Isa. 1:27; Ps. 119:134), and death (e.g., Hos. 13:14; Ps. 49:16). In the Torah, the Deuteronomist uses *pdh* to characterize God's acts at the time of the Exodus as redemptive (e.g., Deut. 9:26; 15:15; 21:8; 24:18). This usage is extended by later writers to describe Israel's eschatological redemption as well (cf., e.g., Isa. 1:27; 35:10; Jer. 31:11) and even, on one occasion, its deliverance from its sins (Ps. 130:8). Though *g'l*, like *pdh*, loses its strictly juridical connotation when describing divine activity, and takes on the meaning of “deliver” pure and simple (cf., e.g., Gen. 48:16), it still does retain some of its original overtones even when referred to God. Thus, Proverbs (23:10–11) speaks of God as the *gō'el* of (“the next of kin,” duty bound to protect) orphans, and Job similarly believes Him to be the *gō'el* of the persecuted (19:25; cf. 19:21–22). In the same spirit the Psalmist calls Him the “father of orphans, defender of widows” (68:6). What better way, then, for the prophet to reassure his people that God has a special reason to redeem them, for He is their *gō'el* (Isa. 41:14; 43:14; 44:6, 24; 47:4; 48:17, etc.) and an intimate relationship exists between Him and them (41:89; 43:10, 20; 44:1–2; 45:4; 54:10; 55:3). It must be no accident also that the prophet uses *pdh* only twice (50:2; 51:11) and in both instances it appears in earlier expressions that concern the Exodus. For, though the two terms were used interchangeably when separated from their life context, the poet was aware of their broader connotations and exploited them to create a more receptive mood for his message. Possibly, too, he wanted to distinguish between the earlier redemption from Egypt and the later one to come, by using a term for the latter that had only infrequently been associated with the Exodus (e.g., Ex. 6:6; 15:13).

While the king is described as a deliverer of the poor in a royal Psalm (72:4, 14), and Ezekiel prophesies that David will be established as the shepherd of God's flock (34:23), the national hope for redemption was centered on God. Only He – not the messianic king or other divine being – was the Redeemer. And though some biblical passages stipulated that His deliverance is conditional upon repentance, many sim-

ply state that He Himself would take the initiative because of His boundless love (e.g., Isa. 54:8) and passionate concern for justice (cf., e.g., Isa. 59:15–20). An end would come to all pain and suffering, and Israel would be restored to its land to live in safety, protected by an everlasting covenant and the Divine Presence (Jer. 32:37–44; cf. Ezek. 11:17–21). Israel's Redeemer would then be manifest through His great acts of redemption and "the redeemed of the Lord" give thanks to him (Ps. 107:1–2).

[Donald Daniel Leslie]

Dead Sea Sect

The idea of redemption had a special character among sects in the Judean desert. Although the word *ge'ullah* itself has not yet been found in their works, nor does the root *ga'al* appear there, yet a redemptive function was at the very heart of the beliefs of the sect, which in their view was the remnant of Israel of whom the prophets had spoken. They are "the basis for that which God chose. He appointed them as a permanent estate and will possess them the portion of the holy ones" (Manual of Discipline, 11:6–7; cf. Col. 1:12). Entry into the sect is an act of divine grace that atones for all iniquities and purifies the associate "from human impurity and the sin of men" (*ibid.*, 11:14). Despite this the sect believed also in the perfect redemption of the end of time. "And then God with His truth will clarify all the deeds of a man... to purify him with a holy spirit of truth free of any abomination of falsehood" (*ibid.*, 2:20–22, cf. Mark 1:8). In keeping with the sect's regard of itself as the subject of redemption, the Messiah served merely a minor role in their religious system.

In the Talmud

While the Bible uses both *padah* and *ga'al* for redemption, the Talmud applies *padah* to ransom (see *Ransom) and *ga'al* to redemption. The sages know nothing of a miraculous redemption of the soul by external means. There is no failing in man, whether collectively or as an individual, which requires special divine intervention and which cannot be remedied, with the guidance of the Torah, by man himself. As a result, the term *ge'ullah* is applied almost exclusively to national redemption, and became a synonym for national freedom. This idea of national freedom from subjection to other states is the main element in the yearnings of the people for the redemption of Israel, and it became even more pronounced during the period of Roman domination. Redemption is dependent upon repentance and good deeds (Shab. 118b; Yoma 86b; BB 10b; Sanh. 97b), and all attempts to calculate the exact date of the redemption by means of transcendental or cosmic factors were opposed, at times even sharply, even though in all eras such calculators – for understandable psychological reasons – were never wanting (Sanh. 97b). Despite the prominence of the image of the Messiah as a redeemer, his role in the process of redemption is no different from those of Moses and the other redeemers in the past; he is merely an instrument in the hands of God. The view is also found that in contrast to past redemptions that were effected by human agency and

were therefore only temporary redemptions, the final redemption will be accomplished by God Himself and will be eternal (Mid. Ps. to 31:2).

A quasi-transcendental and mystical element was introduced into the concept of redemption with the notion that it served the "needs of the Most High," since "wherever [Israel] was exiled the Divine Presence was exiled with them" (Sif. Num. 161; Meg. 29a). God therefore, so to speak, redeems Himself with the redemption (Mekh. Bo 14). There are contradictory statements and inconsistent popular aggadic descriptions about the redemption. At one extreme is found the view that even proselytes will not be accepted in the time of the Messiah (Yev. 24b) – a saying that is probably to be explained by the unfortunate personal experience of its author. At the other are the many descriptions of the redemption of Israel bringing with it the redemption of the world (Song R. 2:2, no. 3); the gentiles will become proselytes and all will call on the name of the Lord (cf. Tosef., Ber. 7:2); God himself will bring all of them "beneath the wings of the Divine Presence" (Tanḥ. B., Gen. 108).

[David Flusser]

Medieval Philosophy

As in the biblical and talmudic systems that preceded them, the medieval philosophers generally regarded man's finite condition as the primary state from which he required redemption. The state of finiteness was not the result of human action or sin, but a cosmic circumstance ultimately due to the nature of creation. The creation of the universe is attributed ultimately by almost all medieval Jewish philosophers to the goodness and grace of God, yet despite the divine goodness, man was so formed that he is finite, a state in which he is subject to despair and death, spiritual and physical annihilation. Open thus to annihilation, man stands in need of redemption. Owing to the divine goodness, redemption is available to him, but he must participate in the redemptive process. If he adheres to true beliefs and performs right actions, he is accounted righteous and worthy of redemption, otherwise he is a sinner and condemned either to eternal torment or physical annihilation. Hence sin does not produce the unsaved state, as does original sin, for example, in the Christian view; sin rather serves to prevent the redemption of man from the spiritual or physical consequences of his finite condition.

Despite broad agreement among the medieval Jewish philosophers on the general understanding of redemption, significant differences appear among them in their various individual soteriologies. Two major approaches, which may be termed traditional supernaturalism and philosophic naturalism, can be distinguished. The former retains the basic features of talmudic soteriology, while the latter is strongly influenced by Aristotelian and Neoplatonic concepts. Saadia *Gaon (*Book of Beliefs and Opinions*), whose view is representative of traditional supernaturalism, states the position this way. God created the world out of his goodness. Man, though created finite, is the ultimate purpose of creation. God intended from the beginning that man should attain redemption from

his finite condition. To enable man to merit such redemption, God revealed to him His will through Moses at Sinai. Thus man could come to know the divine commandments and by obedience to them earn salvation. Although the Jews are the chosen of God, salvation is attained by the righteous of all peoples. There are two major stages of redemption, both of which will arise miraculously: the Messianic Age and the world to come. In the Messianic Age the Jewish people will be restored to the Land of Israel and the first of two resurrections will occur, that of the righteous Jews. When the Messianic Age ends, the world to come will emerge, then all the dead will be resurrected and final judgment rendered. All who ever lived will now be infinite in time, the righteous enjoying eternal reward and the wicked eternal punishment. Included among those who subscribe to the view of traditional supernaturalism are Judah *Halevi (*Kuzari*), Hasdai *Crescas (*Or Adonai*), and Joseph *Albo (*Sefer ha-Ikkarim*).

*Maimonides (*Guide of the Perplexed*) is the foremost exponent of a philosophic, naturalistic soteriology among the medieval Jews. In Maimonides' view, the creation of the world is also the result of God's goodness, but the universe was not created for the sake of man nor is he the direct creation of the Godhead. The universe comes from God through a successive series of emanations in the course of which the world of man (sublunar world) and man himself are created out of matter. All that is formed of matter is necessarily finite. Hence matter is the principle of human finity, and redemption is attained, therefore, by man overcoming his material nature. This is accomplished naturally, by the actualization of the hylic intellect to an acquired intellect through metaphysical and scientific studies. The acquired intellect enables man to gain ascendancy over his material desires during the life of his body, and at the time of death gives him immortality, since the acquired intellect exists separate from the body and is unaffected by its states or finity. Among those who subscribe to such a view of redemption are Solomon ibn *Gabirol (*Mekor Hayyim*), Abraham ibn *Ezra, and Levi b. *Gershom (*Milhamot Adonai*). The Christian notion that mankind requires redemption owing to the guilt of original sin, which is incurred by every person as a consequence of Adam's disobedience in Eden, is completely foreign to the medieval Jewish thinkers. Judah Halevi manifests the spirit of the Jewish position when he presents Adam as a paradigm of religious excellence whose spiritual genius was ultimately inherited by the Jews, the chosen people.

[Alvin J. Reines]

In the Kabbalah

The kabbalists make no additions to the historic aspects of the doctrine of redemption as developed in rabbinic tradition. Their original contribution to this concept is bound up with its inner "hidden" aspect. As in all things, there is an inner aspect or "mystery" in the course of redemption, which is intimated and expressed in a symbolic manner. The basic tenet of their outlook is derived from the verse "On that day the Lord shall be One and his Name One" (Zech. 14:9), which

was often interpreted in the *Zohar as indicating the lack of perfection in the unity of God during the time of exile. As long as iniquity has caused a fissure in the mystery of the Godhead, i.e., between His *Sefirot* which constitute the totality of His manifestation to created beings, His Name is not one; for the "Name" is, in the opinion of the kabbalists, the symbol of the Divine *Sefirot* when they are joined in complete unity. The exile is indicative of a state of creation in which this unity has, "so to speak," become impaired. (Many kabbalists took care always to add the qualifying phrase "so to speak" in order to intimate the symbolic character of their daring expressions.) Consequently, redemption is bound up with a certain change in the regulating mechanism at the heart of creation: If exile is expressed, in the language of symbols, as a temporary separation between the king and the queen, between God and His *Shekhinah*, so that their union is not perfect and continuous, then redemption will be expressed in restoration of this uninterrupted union. The return of the people of Israel to its land at the time of redemption symbolizes the inner process of the return of the "Congregation of Israel" or the *Shekhinah* ("the Matron") to a continuous attachment to her husband. The secret meaning of the messianic redemption was already defined in this way by the Gerona school of Kabbalah (*Nahmanides and his colleagues), and this definition was accepted by the author of the Zohar. Views more far-reaching than this were expressed in the *Ra'aya Meheimna* and the *Tikkunei Zohar*, where a new set of symbols appears. During exile, the world is conducted in accordance with the mystery of the "Tree of Knowledge of Good and Evil" from which Adam and Eve ate and brought sin and separation upon the world; redemption will reveal a conduct of the world in accordance with the mystery of the "Tree of Life." These two trees were once of one root, but were separated by the original sin of Adam, as were "the king and the matron" in the earlier symbolism. Consequently, during the exile there are separate spheres of good and evil, holiness and impurity, etc., but at the time of redemption the pure spiritual essence of all the worlds will become manifest. The Divine Life will spread to every sphere and this will cause a deep change in the state of the entire creation. In this view the kabbalists are aligned with those who regard redemption as a metaphysical concept. It is not only the oppression of Israel by the nations of the world which distinguishes exile and redemption, but also a deep and even utopian change in the structure of creation.

In Lurianic Kabbalah a new element is added to these ideas which relates redemption and exile not only to original sin, but also to the inner structure of every act of creation and to situations and events in the world of emanation. The "breaking of the vessels" (see *Kabbalah) caused, in all the worlds, a state which has in it something of a general exile of all creation, a disturbance in the harmony destined for the worlds. The disturbance, however, was inevitable, and the entire substance of the process of creation in all its manifestations, including the history and mission of the people of Israel within it, are nothing but stages through which this harmony will be

restored and achieve the perfection for which it was destined from the beginning. Redemption is here defined as the manifestation of that state in which the breaking of the vessels is completely “mended.” Every other manifestation of redemption serves only as symbol of this fundamental meaning.

An important problem in the doctrine of redemption arose regarding the role of the Jew in bringing it about. There were two contradictory opinions on this point.

(1) Essentially, redemption will come miraculously, and flesh and blood creatures shall have no part in bringing it about: this is the opinion of the majority of the Spanish kabbalists.

(2) Redemption is no more than the external manifestation of the inner state of *tikkun* (“restitution”) which depends on the deeds of Israel and a realization of the way of life which the Kabbalah preaches. The fact of *tikkun* is not something which depends on a miracle, but rather on human action.

According to the first view, the Messiah’s coming will not bear any essential relationship to men’s deeds; according to the second view, his coming is conditional upon the accomplishment of the task of Israel in the “*tikkun* of the world.” According to this latter view, there is a human and historical preparation for redemption and the Messiah will come automatically if this preparation is completed. This belief is widespread among the disciples of Isaac *Luria, and it follows logically from the basic assumptions of Lurianic Kabbalah. Only after the triumph of these ideas had brought about the deep historical crisis of Shabbateanism did the Ḥasidic doctrine appear, which distinguished between “general redemption” (of the people of Israel; redemption in its literal meaning) and “individual redemption” (the mystical redemption of the soul, which has no messianic connotation). This distinction is intended to limit human initiative to the realm of individual redemption and make general redemption once again dependent solely on the power of God. This distinction removed the dangerous and utopian sting contained in the Lurianic view of redemption.

[Gershom Scholem]

Modern Jewish Thought

In modern Jewish thought redemption has been viewed as referring to the eventual triumph of good over evil, to the striving of individuals to self-fulfillment, to the achievement of social reforms, and also in terms of the reestablishment of a sovereign Jewish state. Hermann *Cohen, for example, regarded redemption as man’s conquering his impulse to sin. The idea of God is that which ensures the eternal existence of mankind as a whole in order that His program for the future ethical world can become real. The individual who commits sin feels that he has strayed from the rest of mankind and detracted from the common goal, and that he must be redeemed back to humanity. God then becomes the indicator of individual man’s triumph over sin (cf. *Der Begriff der Religion im System der Philosophie* (1915), 64). This conception of God the Redeemer is an aid to the individual in helping him to repent. The individual who contemplates this relationship with God may be led to improve his character.

Other thinkers who deal with redemption as the triumph over evil are Martin *Buber and A.J. *Heschel. Buber speaks of redemption as the eradication of man-caused evil in human history. The means of achieving this is to sanctify daily life in order to redeem evil. This sanctification comes about in the greater context of the encounter of man and God, “Who enters into a direct relation with us men in creative, revealing, and redeeming acts, and thus makes it possible for us to enter into a direct relation with him” (*I and Thou* (1958²), 135). This encounter is characterized by a turning away from evil and toward God. In addition God comes toward us “The Thou meets me through grace – it is not found by seeking” (*ibid.*, 11) – and when this grace of His becomes manifest – redemption begins. Repentance is the spur to the attitude of redemption, but is not to be confused with it. Buber saw in Ḥasidic teaching the kernel of this doctrine of redeeming evil. “If you direct the undiminished power of your fervor to God’s world-destiny... you will bring about the union between God and *Shekhinah*, eternity and time... All that is necessary is to have a soul united within itself and indivisibly directed to its divine goal. The world in which you live affords you that association with God, which will redeem you and whatever divine aspect of the world you have been entrusted with” (*Tales of the Ḥasidim; the Early Masters* (1947), 4). Heschel also speaks in these terms: “The world is in need of redemption, but the redemption must not be expected to happen as an act of sheer grace. Man’s task is to make the world worthy of redemption. His faith and his works are preparation for ultimate redemption” (*God in Search of Man* (1959), 380). In the manner of Ḥasidic thought Heschel sees man’s task in preparing the world for redemption as separating evil from good. “All of history is a sphere where good is mixed with evil. The supreme task of man, his share in redeeming the work of creation, consists in an effort to separate good from evil and evil from good. Since evil can only exist parasitically on good, it will cease to be when that separation will be accomplished. Redemption, therefore, is contingent upon the separation of good and evil” (*The Insecurity of Freedom* (1966), 135). Heschel does not emphasize the state of actual redemption but the task of separating good and evil – which leads to redemption.

For Franz *Rosenzweig, redemption is the process by which the world and man are united in one perfect harmony with God – and thereby partake of God’s eternity. Rosenzweig dealt with the relationship between God, man, and the world pointing to certain key words as standing for those relationships. The words are creation (God – world), revelation (God – man), and redemption (man – world). Traditionally, philosophy held that these three items had basically one being – that all existence was a unity. For Rosenzweig that conception, a basic premise of much of Western philosophy, was the conclusion of his philosophy. Man, God, and the world have three separate beings which unite into one only under the force of redemption. The revelation of God to man implies God’s love. Man’s feeling of God’s love “redeems” man from his state of isolation and indeed from the supreme form

of isolation – death, and its concomitant fear. This love also awakens the response of love in man, and the binding together of man and God in love is the first step toward redemption of the world for the love spreads and is applied to other men. This first redemption applies to man. Rosenzweig also held that the world had a special spiritual relationship to God and that it, too, could be redeemed. In the second stage God acts to unite man and the world. When this is achieved God, too, is redeemed. “For God is not only the redeemer but also the redeemed. In this redemption God redeems the world by the means of man and redeems man by the means of the world. He also redeems Himself” (*Kokhav ha-Ge’ullah* (1970), 267). “For then true unity is created – God-man-world. Eternity enters into being and death is pushed off and the living become immortals in eternal praise of redemption” (*ibid.*, 280).

Mordecai Kaplan uses the term salvation instead of redemption. He links redemption with the concept of the other world and asserts that until modern times the Jewish concept of salvation was other-worldly. Kaplan maintains that it is impossible in modern times to continue this belief and that we must see salvation in terms of this world. Furthermore Kaplan speaks of God as “the power that makes for salvation,” i.e., an inherent force in the universe which enables man to achieve salvation. He points out that salvation must have both a personal and social significance. “In its personal aspect it represents the faith in the possibility of achieving an integrated personality” (*The Meaning of God in Modern Jewish Religion* (1937), 53). Social salvation is the natural concomitant of personal salvation for “we cannot think of ourselves except in relation to something not ourselves” (*ibid.*)... Social salvation is “the pursuit of common ends in a manner which shall afford to each the maximum opportunity for creative self-expression” (*ibid.* 54). “Salvation must be conceived mainly as an objective of human action, not as a psychic compensation for human suffering” (*ibid.*) “Salvation means deliverance from those evils, external and internal, which prevent man from realizing his maximum potentialities. It is deliverance from frustration...” (*Questions Jews Ask* (1956), 126).

Joseph B. Soloveichik, the modern Orthodox thinker, describes redemption in terms of faith and performance of *mitzvot*, but also includes the idea that the human capability of renewal and self-transformation manifests itself especially in times of human distress. Being redeemed is a mode of existence, not an attribute. “Even a hermit can live a redeemed life” (i.e., as a mode of existence, redemption is an individual thing and not dependent upon society. “The Lonely Man of Faith” in: *Tradition*, vol. 7, no. 2, Summer 1965). Furthermore redemption is a function of man’s control over himself. “A redeemed life is ipso facto a disciplined life” (*ibid.*). As opposed to dignity which is man’s triumph over nature and the feeling of success, redemption is when man is “overpowered by the creator of nature,” and it is discovered in the “depth of crisis and failure” (*ibid.*, 23–24).

Zionist thought represents another aspect of modern Jewish thought about redemption. To the extent that Zionism

was considered a messianic movement dealing with the redemption of the Jewish people, its theorists talked in terms of redemption. A. Hertzberg characterizes Zionist thought by saying that classical Judaism saw redemption as a confrontation between the Jew and God, but Zionism “in its most revolutionary expression... is between the Jew and the nations of the earth” (*The Zionist Idea* (1959), 18). Religious Zionist thinkers saw redemption as at least beginning in temporal terms with the return of the Jews to Erez Israel and the building of the land. Rabbi Y. Alkalai writes “Redemption must come slowly. The land must, by degrees, be built up and prepared” (*ibid.*, 105). Some religious Zionists such as A.I. Kook added another dimension to this idea: “The hope for the return to the Holy Land is the continuing source of the distinctive nature of Judaism. The hope for the redemption is the force that sustains Judaism in the Diaspora; the Judaism of Erez Israel is the very redemption” (*ibid.*, 420). Redemption in Kook’s thought thus becomes not only a physical reality by the return to Erez Israel, but a metaphysical underpinning for Jewry everywhere. Even nonreligious Zionist thinkers, while not necessarily using the term redemption, spoke in messianic terms or expressed themselves by concepts traditionally connected with redemption. J. Klatzkin for example states “Zionism pins its hopes, in one sense, on the general advance of civilization and its national faith is also a faith in man in general – faith in the power of the good and the beautiful” (*ibid.*, 327). Here the element of the triumph over evil and the advance of social good, topics connected with redemption, are assumed as an integral part of the Zionist hope.

REDER, BERNARD (1897–1963), U.S. painter, printmaker. Born in Czernowitz, Bukovina, Austria, a center of Hasidic culture before WWII, Reder studied at the Academy of Fine Arts in Prague, after which he returned to his hometown to work as a carver of cemetery monuments while also pursuing stonecarving. In 1935, he returned to Prague, enjoying his first exhibition at the Manes Gallery. Reder moved to Paris in 1937, where he met the sculptor Aristide Maillol, even exhibiting at the prestigious Wildenstein Gallery in 1940. However, the Nazi occupation of France forced Reder to flee to Spain, passage to which Maillol secured for Reder and his wife. The Nazis destroyed the contents of Reder’s studio. Sometime later, Reder traveled to Cuba, where he concentrated on woodcuts and drawings, such as the both haunting and whimsical woodcut *The Complaining Ravens* (1950). A recurring subject in Red-

er's art was that of musicians, such as the one depicted in the bronze sculpture *The Trumpeter* (1955). He settled in New York in 1943, where he enjoyed great success: he won a Guggenheim fellowship and exhibited at the Whitney Museum and the Philadelphia Museum of Art (1949). In 1954, Reder studied sculpture in Rome and Florence; two years later, he had a solo exhibition at Galleria d'arte Moderna l'Indiano. Reder attained American citizenship in 1948. The artist worked in both bronze and stone. For instance, the bronze sculpture *The Conquerer*, a work depicting a military figure astride a tiny horse balanced on a circular object, suggests to the viewer both the pompousness and precarious nature of leadership. As his career progressed, Reder moved from realism to a rhythmic abstraction, as expressed in the stone sculptures *Centaur's Head* and *The Fantastic Bird*. One of Reder's better-known sculptures is the bronze *Aaron with Tabernacle* (1959), now in the Israel Museum in Jerusalem. This large-scale sculpture combines biblical history, Jewish folklore, and references to mysticism and magic in a magisterial figure which seems rooted and blossoming like a tree. Reder was a recipient of a Ford Foundation Grant in 1960, and a year later the Whitney Museum presented a solo exhibition of his work. In 1969, the State of Israel gave Denmark a sculpture entitled *Wounded Woman*. Made by Reder, it is sited behind the Museum of Jewish Resistance, as a symbol of gratitude for Denmark's efforts on behalf of persecuted Jews during WWII. Reder's prints and sculptures have a wide range of subject matter, including figures, both human and fantastic, and subjects with Jewish themes, often infused with what many critics refer to as a baroque, Rabelaisian spirit. He also worked as an illustrator, fashioning woodcuts for such publications as *Yiddish Proverbs* by Hanan J. Ayalta (1949). His work is in the collections of the Art Institute of Chicago, the Brooklyn Museum, the Hofstra Museum, the Jewish Museum, New York, the National Gallery of Art, and the Whitney Museum.

[Nancy Buchwald (2nd ed.)]

RED HEIFER (Heb. פָּרָה אֲדֻמָּה), the animal whose ashes were used in the ritual purification of persons and objects defiled by a corpse (Num. 19). While the English term heifer means a young cow that has not had a calf, the Bible (Num. 19:2) speaks simply of a cow (Heb. *parah*). The Bible prescribes that the red cow be without blemish (Heb. *temimah*), that it should have no defect (Heb. *mum*), and that it should never have been yoked (Num. 19:2). The first of these requirements applies also to burnt offerings (Lev. 1:3, 10), peace offerings (Lev. 3:1, 6), and sin offerings (Lev. 4:3). The second regulation, which applies to all sacrifices (Lev. 22:19, 21; Deut. 17:1), is explained in Leviticus 22:22. The third stipulation applies also to the calf whose neck is broken to atone for the blood-guilt of the unidentified manslayer (Deut. 21:3).

Unlike ordinary sacrifices, which could be slaughtered

only at the entrance of the Tent of Meeting (Lev. 17:5), the red heifer was to be slaughtered outside the camp (Num. 19:3). Not slaughtered in the camp are likewise the scapegoat (Lev. 16:10), the calf whose neck is broken (Deut. 21:4), and the birds used in the purification of the recovered leper (Lev. 14:7). The red heifer was more like an ordinary sacrifice than these, however, in that some of its blood was sprinkled seven times toward the front of the Tent of Meeting (Num. 19:4). In the other two rites there was no sprinkling of blood at the sanctuary. The red heifer ritual resembled the purification of the recovered leper in that cedar wood, crimson stuff, and hyssop were used in the preparation of the purificatory substances in both rites. While it was the blood of a bird that was mixed with these in the purification of the leper, these were combined with the ashes of the red heifer in the purification of persons and objects defiled by a corpse. Like the bull used in the induction of Aaron and his sons (Ex. 29:14; Lev. 8:17), the bull for the sin offering of the anointed priest (Lev. 4:11), and the goat and the bull for the sin offering of the Day of Atonement (Lev. 16:27), the red heifer was burned outside the camp along with its flesh and dung. In the red heifer ritual the greater part of the blood as well was burned outside the camp (Num. 19:5). In all of these rituals the performance of certain acts outside the camp clearly indicates a degree of ritual impurity that somehow threatens the holiness of the sanctuary itself. If the scapegoat which assumed Israel's impurities had to be removed from the camp, and if the birds which revived the leper from his temporary symbolic death (cf. Ned. 64b) had to be subjected to the appropriate ritual outside the camp, it is logical that the ritual purification of those in contact with death itself, the source of the highest degree of ritual impurity (cf. Kel. 1:4), should be performed outside the camp. In the books of Numbers and Deuteronomy the Israelite community is often pictured as an armed camp. Wherever the camp is located God's Presence is found. The area outside the camp is the sphere of uncleanness to which lepers, gonorrhoeal persons, and those defiled by contact with the dead are sent (Num. 5:2), as are men who have had nocturnal emissions (Deut. 23:11 [10]). Excrement likewise was to be buried outside the camp (Deut. 23:14 [13]). The stoning to death of the man who gathered sticks on the Sabbath also took place outside the camp (Num. 15:35). The Book of Leviticus (Lev. 14:45) speaks of the domain of the unclean as "outside the town" rather than as "outside the camp" but there is no practical difference, since the camp of the wilderness period actually represents the towns of the settled period.

The law of the red heifer addressed to Moses and Aaron (Num. 19:1) prescribes that the slaughtering and burning of the animal be carried out by Eleazar (19:4), Aaron's heir apparent (after the death of his two older brothers; Lev. 10:1–3, 12). Some modern commentators suggest that Eleazar was given the role so as not to defile Aaron the high priest. The ashes were gathered by a ritually clean man (Num. 19:9) and placed outside the camp in a ritually pure place (cf. Lev. 6:4). The gatherer of the ashes could evidently be a layman as could also the slaughterer of a freewill offering (Lev. 1:5). Both the

priest and the gatherer became unclean until evening, as did a person who carried the carcass of an animal from a species that is forbidden for food and as did a person who ate or carried the carcass of a permissible animal that was not properly slaughtered (Lev. 11:28, 39).

The ashes of the red heifer were combined with spring water (Heb. *mayim hayyim*) in a vessel (Num. 19:17) to produce a mixture called “water of lustration” (Heb. *me niddah*). The mixture was applied by dipping into it and sprinkling (19:18) on the third and seventh days after defilement (19:19). This defilement was acquired by touching a corpse, a grave, or a human bone, or by being under the same roof with any of these. That the priest, the gatherer of the ashes, the sprinkler (19:21), and the one who touched the water of lustration (19:22) became unclean until evening has been explained both as uncleanness attached to the handling of sacred objects and as contamination by association. The second explanation means that the red heifer caused uncleanness because of its association with death. The first explanation finds its analogy in the defiling of the hands by sacred scrolls (Yad. 3–4), while the latter has no analogue. In addition, the red heifer has not yet come into contact with the dead during the time of its preparation. Furthermore, the assumption that the red heifer defiles because of its association with human death ignores the distinction between the seven days of uncleanness consequent on contact with the dead (Num. 19:14) and the shorter period noted for the priest, the gatherer of the ashes, the lustrator, and the one who touched the water of lustration according to the law of the red heifer.

Baumgarten elaborates on the first explanation by showing that normality results from equilibrium. On the one hand, the dead are the most potent source of defilement. On the other hand, the ashes of the heifer with their ability to reverse that defilement are equally potent. As a result, those who come into contact with the ashes, which are especially holy, have subverted the equilibrium required for normality and are therefore impure. The apparent paradox as to how the red heifer purifies the defiled and defiles the pure is no paradox. Too much sanctity is dangerous and leads to impurity. The same conception underlies Rabban Yohanan b. Zakkai’s explanation (Yad. 4:5–6) that sacred Scripture defiles the hands because of their precious character. The ancient of sanctity though, conveys a lesser impurity than corpse contagion. The uncleanness of the red heifer is only until evening, but it affects the priest, the gatherer, the lustrator, whoever touches the water of lustration, and indeed the man who is purified by it from the more severe defilement. Thus, after his purification from the latter by the application of water of lustration, he, like the lustrator, must wash his clothes, bathe in water, and remain unclean until evening (Num. 19:19b).

The burning of the red heifer with its blood, the crimson that was combined with it, and the red color of the animal itself may allude to the power of blood to overcome the power of death which threatens both the sanctity and the existence of the Israelite camp (cf. Ex. 12:22–23). While blood is mostly

a source of purity, innocent blood that has been shed is a pollutant. In such a case, the red of the heifer might be seen as symbolic of the sin (cf. Isa. 1:18) that caused the death, which is banished from the camp.

[Mayer Irwin Gruber / S. David Sperling (2nd ed.)]

In the Talmud

The entire tractate **Parah* is devoted to the laws of the red heifer. The accepted opinion in talmudic law is that a cow which has been mounted by a bull may not be used for the ritual (Par. 2:4). The Mishnah specifies that the cow be at least three or four years old; younger than three is termed “calf” (Heb. *eglah*) rather than “cow” (Par. 1:1). Furthermore, R. Meir asserts that theoretically the animal may be aged. In practice, he explains, a younger one is more likely to fulfill the other biblical specifications (Par. 1:1). Since the red heifer is called a sin offering (*Hattat*; Num. 19:9), the rabbis applied to it the laws appertaining to this offering. The mixture of the heifer’s ashes with water is called consecrated water. Some of the rites connected with the red heifer were instituted by the Pharisees in order to refute the view of the Sadducees. The Sadducees claimed that only those who were in a state of complete ritual purity were entitled to burn the heifer. According to the Pharisees, however, even a *tevul yom* (an unclean person who has already undergone ritual immersion but still has to wait until sunset to be declared clean; see **Tevul Yom*) is qualified to burn it. As a result, the priest who was assigned to burn the heifer was deliberately rendered unclean and afterward immersed himself (Par. 3:7–8). This procedure was not carried out without opposition. One tradition tells about a Sadducean high priest who attempted to burn the red heifer according to the ritual of his faction and was prevented by **Johanan b. Zakkai*, who told him to immerse himself. The priest answered rudely, and the story continues that as a punishment the Sadducee died three days later (Tosef., Par. 3:8). In reference to another law, R. Yose recommended being less strict, saying, “Do not give the Sadducees an opportunity to cavil at us” (Par. 3:3; cf. Tosef., Par. 3:3). According to the Mishnah, only the high priests could be qualified (Par. 4:1; cf. Yoma 42b). Some talmudic authorities (Yoma 42b; Sif. Num. 123) insist that the assistant to the high priest be in charge; others suggest that it may be any priest.

According to R. Meir in all of Jewish history only seven heifers were burned, but according to the rabbis there were nine (Par. 3:5), and the tenth and last will be prepared by the Messiah (Yad, Parah Adummah 3:4). If two hairs of the animal were not red, it was invalid. As a result, the red heifer was rare and costly, and several stories are told in the Talmud about the exorbitant price demanded for it (TJ, Pe’ah 1:1, 15c; Kid. 31a). Although it was impossible to prepare the ashes of the red heifer after the destruction of the Temple, its use did not cease with the destruction, since there was still a supply of the ashes. As late as the amoraic period, those who had become ritually unclean through contact with the dead still used to cleanse themselves with it (see Nid. 6b, Y. Gilat, *Mishnato*

shel R. Eliezer b. Hyrcanus (1968), 252; Neusner (1987), 146ff.; and Sussmann, 306–16).

Even after it ceased entirely, however, the rabbis still regarded its regulations as of importance in teaching a profound lesson. With its contradictory “regulations” rendering the unclean clean and the clean unclean, it was regarded as a classic example of a *hukkah* (i.e., a statute for which no rational explanation can be adduced, but which must be observed because it is divinely commanded). It is one of the laws about which “the evil inclination and the gentile nations” deride the Jews and weaken their religious loyalties (Num. R. 19:5–6). Even Solomon, the wisest of men, was baffled by it (Eccles. R. 7:23 no. 4). Similarly, although an *aggadah* relates that Rabban Johanan b. Zakkai once replied to a gentile that the sprinkling of the holy water of the heifer’s ashes can be compared to exorcising a demon from a person (Num. R. 19:8), it goes on to tell that he nevertheless told his students that he was merely “putting him off with a straw,” and that in truth the law of the red heifer should be understood as a *hukkah* which must not be questioned (*ibid.*). It is even stated that the reason was not revealed to Moses himself (Eccles. R. 8:1 no. 5). Several homiletical interpretations of the red heifer are given, one being that it was to atone for the sin of the golden calf, so that the mother – the red heifer – should purify the defilement caused by her offspring, the golden calf (PR 14:65a and see the whole chapter). Nevertheless, the rabbis of the talmudic period never really solved these problems (Urbach, see bibl.). The portion of *Parah* constitutes the reading of the third of the four special *Sabbaths, and one of the reasons given is that an unclean person could not celebrate the paschal sacrifices without first being purified by the consecrated water of the red heifer.

REDL, FRITZ (1902–1988), child psychologist. Redl was born in Klaus, Austria, and trained at the Vienna Psychoanalytic Institute. In 1936 he emigrated to the United States, where he was a research associate at the Rockefeller Foundation. From 1941 to 1953 he was a professor of social work at Wayne State University, Detroit, and from 1953 to 1959 he was chief of the Child Research Branch of the National Institute of Mental Health. From

1948 to 1957 he was the principal investigator on a research project for clinical work with disturbed children, and from 1959 was professor of behavioral science at Wayne State.

In 1959 Redl published *Mental Hygiene in Teaching* (with William Wattenberg; 1959²) and *Children Who Hate* (with David Wineman; 1951; 1969²). In the latter book, Redl contributed to understanding the abnormal psychology of antisocial behavior. Redl made an essential contribution to understanding delinquency, especially in groups and gangs, and the use of group methods in its treatment. In his paper *The Psychology of Gang Formation and the Treatment of Juvenile Delinquents* (1945) he distinguishes four types of delinquents: those protesting against wrong handling; those basically nondelinquent who drift into delinquency because of growth confusion; delinquency as a part of neurosis; and “genuine delinquency” in which there are disturbances of impulse or personality structure. On the issue of treatment, Redl wrote *Psychoanalysis and Group Therapy: A Developmental Point of View* (1963).

He also co-wrote with David Wineman *Controls from Within* (1952), *The Aggressive Child* (1966), and *When We Deal with Children* (1966).

ADD. BIBLIOGRAPHY: W. Morse (ed.), *Crisis Intervention in Residential Treatment: The Clinical Innovations of Fritz Redl* (1991).

[Louis Miller]

REDLICH, FREDERICK C. (1910–2004), U.S. psychiatrist and psychoanalyst. Redlich was born in Vienna. Raised as a Catholic, he discovered his Jewish ancestry at age 24. After working at a psychiatric hospital in Vienna, he left for the United States in 1938. In 1940 he joined the staff of the New Haven Hospital and in 1948 was appointed its chief psychiatrist. From 1942 he taught at Yale University, where in 1950 he became professor of psychiatry. He served as head of the department of psychology from 1950 to 1967 and was dean of the Yale School of Medicine from 1967 to 1972. During that time, he helped to establish a new department of molecular biophysics and biochemistry and to create a new program of medical education. In 1972 he returned to Yale’s department of psychiatry for five more years before retiring. He subsequently taught for five years at the University of California, Los Angeles. He returned to New Haven in 1999.

Redlich was the co-founder and first director of the Yale-Connecticut Mental Health Center. He was also instrumental in inspiring the founders of the Western New England Institute of Psychoanalysis to locate in New Haven, and was president of the foundation’s Fund for Research in Psychiatry throughout its existence.

Redlich published *Psychotherapy with Schizophrenics* (1952, joint ed.), *The Inside Story* (1953, 1955², compiler, written by J. Bingham), *Social Class and Mental Illness* (1958, with August B. Hollingshead), and *Theory and Practice of Psychiatry* (with Daniel Freedman, 1966). *Social Class and Mental Illness* is a report on research conducted in 1957 by Redlich and Yale sociologist August Hollingshead into the relation of social class and the distribution of mental illness and its relation

to the ways mentally ill persons are treated by psychiatrists. Redlich also wrote *Hitler: Diagnosis of a Destructive Prophet* (1998), in which he attempts to determine whether Hitler's actions were the result of physical and mental illnesses. It is novel in that it may well be the first book in which these questions were examined by a practicing psychiatrist.

[Louis Miller / Ruth Beloff (2nd ed.)]

REDLICH, HANS FERDINAND (1903–1968), musicologist. Born in Vienna, Redlich conducted opera in Berlin and Mainz, and after 1931 devoted himself to research and writing. In 1939 he settled in Britain, where he lectured at Cambridge University from 1942 and at Edinburgh University from 1955. He was an authority on Monteverdi and edited some of his works. His writings include *Gustav Mahler* (1919), *Claudio Monteverdi* (1949; Eng., 1952), *Bruckner and Mahler* (1955), and *Alban Berg* (1957). He composed a concerto grosso (1927) and *Hoelderlin Trilogy* for tenor and orchestra (1946).

REDLICH, JOSEPH (1869–1936), Austrian constitutional lawyer and politician. Born in Goeding, Moravia, Redlich was acknowledged as an outstanding authority on Austrian and British parliamentary procedure. He was made assistant professor at the University of Vienna in 1905 and full professor in 1908. Redlich was active in politics and, from 1906 to 1918, was a Liberal member of the Moravian Landtag (provincial legislature) and the Austrian Reichsrat. His support for the Western Allies before World War I barred him from the Austrian government until 1918 when shortly before the fall of the empire he was made minister of finance in the last Hapsburg government. Redlich was an authority on American legal education on which he had written a study in 1905. He was invited to lecture in the United States at the Institute of Politics at Williamstown, Massachusetts, and at Harvard. In 1929 he was appointed professor of comparative law at the latter university but in 1931 was recalled to Austria to become minister of finance for a second time during the Austrian financial crisis. Redlich retained this post until the advent of the Dollfuss regime in 1934. He was baptized in 1903.

Redlich's many works include *The Procedure of the House of Commons* (3 vols., 1908); *The Common Law and the Case Method in American University Law Schools* (1914); and *Das Wesen der oesterreichischen Kommunalverfassung* (1910) as well as a number of important books on Austrian political history, such as *Das oesterreichische Staats- und Reichsproblem* (1920) and *Oesterreichische Regierung und Verwaltung im Weltkrieg* (1925). He also wrote a history of English local government, *Englische Lokalverwaltung* (1901; trans. by F.W. Hirst, *Local Government in England*, 1903; vol. 1, republished 1958) in which he traced the growth of democratic institutions in English local government.

[Josef J. Lador-Lederer]

REDLICH, NORMAN (1925–), U.S. jurist. Redlich received his LL.B. from Yale Law School in 1950 and served as the executive editor of the *Yale Law Journal* from 1949 to 1950. He received his LL.M. from New York University in 1955. He was in private practice and business from 1950 to 1959. He was a lecturer at the New York University School of Law (1957–60), and then associate professor (1960–62), and professor of law from 1962 to 1988. In 1974 he was appointed associate dean, and then served as dean from 1975 to 1988. He taught the subjects of constitutional law, professional responsibility, federal income taxation, state and municipal finance, and urban law.

An outspoken opponent of capital punishment, he has been counsel to the New York Committee to Abolish Capital Punishment. He served from 1963 to 1964 as assistant counsel to the President's Commission on the Assassination of President Kennedy (the Warren Commission), and as special consultant to the state of Vermont on Revision of Vermont's Income Tax Law (1965–66). In 1966 he was given a leave of absence from the New York University School of Law to become Executive Assistant Corporation Counsel to the City of New York. In 1972 Mayor John Lindsay named him corporation counsel of the City of New York, the city's highest legal office. Redlich was active in the organized bar, having served as chair of the American Bar Association's Section of Legal Education and Admissions to the Bar (1989 to 1990). He was a member of the House of Delegates of the American Bar Association. He was also a member of the board, and of its executive committee, of the NAACP Legal Defense and Education Fund, and cochair of the Commission on Law and Social Action of the American Jewish Congress.

Redlich served as counsel to the law firm of Wachtell, Lipton, Rosen, & Katz. He continued to teach at the NYU Law School as an adjunct professor, offering a course in professional responsibility. Greatly concerned with professional ethics, Redlich believes there is "deficiency in legal education concerning what a lawyer's role is to his client, his adversary, and the legal system." He has written extensively on taxation and civil liberties. From 1960 to 1966 he was editor of the *Tax Law Review*.

Redlich wrote or co-authored such books as *Professional Responsibility: A Problem Approach* (1976), *Constitutional Law* (1983), *Standards of Professional Conduct for Lawyers and Judges* (1984), *Understanding Constitutional Law* (1995), and *Understanding Contracts* (2004).

[Julius J. Marcke / Ruth Beloff (2nd ed.)]

RED SEA (Heb. יַם סוּף, *yam suf*; lit. "Sea of Reeds"). The Hebrew term *yam suf* denotes, in some biblical references and in most later sources, the sea known as the Red Sea (as in Gr. Ἐρυθρὰ θάλασσα; Lat. Sinus Arabicus, Mare Rubrum; Ar. Baḥr or al-Baḥr al-Aḥmar). The Red Sea is a long narrow strip of water separating the Arabian Peninsula from the northeastern corner of Africa (Egypt, Sudan, Ethiopia) and forming the northwestern arm of the Indian Ocean to which it is connected by the Bāb al-Mandib Straits (whose narrowest

point is 21 mi. (33 km.) wide). In the northern part of the Red Sea are the Gulf of Elath (Aqaba) and the Gulf of Suez which enclose the Sinai Peninsula. With the opening of the Suez Canal, the Red Sea was connected with the Mediterranean. Its total area is 176,061.6 sq. mi. (456,000 sq. km.) and its length about 1,240 mi. (2,000 km., excluding the gulfs in the north). For most of its length it is 124–155 mi. (200–250 km.) wide and about 223 mi. (360 km.) at its widest point, near Massawa. Its mean depth measures approximately 1,640 ft. (500 m.); about 70% of its area is more than 656 ft. (200 m.) deep and its maximum depth, 7,741 ft. (2,360 m.), is northeast of Port Sudan. The Red Sea is the warmest and most saline of all open seas. The temperature of the surface water reaches 30°–33° C (86°–91° F) in July–September (near the shores it rises to 36° C (97° F) and drops to 23°–27° C (73°–81° F) in December–February. The average salinity near the surface is 40–41% which increases to 43% on the northern side, in the gulfs of Elath and Suez. Because of the wasteland nature of the area, the shores of the Red Sea are sparsely settled. Its port sites are few and for the most part small; the principal ones are Joba, Suez, Port Sudan, and Hudida.

History

In the Bible the Red Sea, apart from its problematical appearance in the route of the Exodus (see below), is clearly identified in the description of the borders of the land promised to Israel (Ex. 23:31) and in other passages describing the maritime activities of Solomon (1 Kings 9:26) and later kings. In antiquity the two gulfs at its northern tip served as important navigation routes. The Gulf of Clysma (Suez) was used by the rulers of Egypt as the shortest route to the Mediterranean above the Isthmus of Suez. It was connected via the Bitter Lakes with the Nile and the Mediterranean by a canal which already existed in the days of Necho and which was repaired by Darius I, the Ptolemies, and the Romans. The Gulf of Elath was a vital outlet to the south for the kings of Israel and Judah and their Phoenician allies. David acquired access to the sea and this was maintained by his successors until the division of the kingdom; it was later regained by Jehoshaphat and Uzziah. Still later the Nabateans used it for their maritime trade and overland transport to Petra and Gaza. In the Hellenistic period the discovery of the monsoon wind systems revived direct trade with India via the Red Sea; this trade continued throughout the Roman period. During the Byzantine period the Red Sea was the only trade route to the East open to the empire, which explains the tenacity with which the Byzantines fought for its control against the Jewish kings of Ḥimyar. From the seventh century onward the Arabs dominated the Red Sea, except for a brief period during which Elath was held by the crusaders. The discovery of the sea route to India and Turkish domination put an end to international trade on the Red Sea; it was revived with the inauguration of the Suez Canal in 1869.

The Red Sea and the Problem of the Exodus

Tradition has identified the sea which engulfed Pharaoh's army with the Red Sea ever since the Septuagint translation of the

Bible in the third century B.C.E. This identification was adopted by Josephus and the Christian pilgrims and is still accepted by some scholars. They place the crossing of the Red Sea in the vicinity of Suez and point out the high tides in the Red Sea (up to 6½ ft.), but they fail to explain how an east wind could have driven the waters back at this point (Ex. 14:21). Most of the scholars who accept the southern route of the Exodus maintain that the Red Sea was crossed at the Great Bitter Lake, but here too an east wind could lower the water level by only a few inches at the utmost. This theory, furthermore, is unable to account for the places Pi-Hahiroth, Migdol, and Baal-Zephon which the Israelites passed. The majority opinion today identifies the Red Sea of the Exodus with one of the lagoons on the shores of the Mediterranean. Some locate it at Baḥr Manzala (Gardiner, Loewenstamm) or the Sirbonic Lake (Jarvis, Mazar, Noth) and identify Pi-Hahiroth with Tell al-Khayr, Migdol with Pelusium, and Baal-Zephon with the sanctuary of Zeus Cassius on the isthmus dividing the lake from the sea, the former being occasionally inundated by waves from the latter when an east wind is blowing (cf. also *Exodus).

[Moshe Brawer and Michael Avi-Yonah]

In the Aggadah

While the Israelites were threatened by the Egyptians' closing in on them and driving them toward the sea, the angels wanted to sing a song of praise, but God did not permit them to do so, saying: "My sons are in distress and you want to praise Me?" (Tanḥ. Ex. 60; Ex. R. 23:7; the version quoted in Meg. 10b, "The work of My hands are about to drown in the sea," also referred originally to the Israelites, not the Egyptians). Even after the sea was parted and Israel had crossed it safely, God again told the angels to wait, for He desired to hear first the song sung by Israel (Tanḥ. *ibid.*; Ex. R. *ibid.*). When Moses raised the rod over the sea and commanded it to be parted, the sea refused at first to obey the orders of a human being; it only submitted when it saw the Divine Name engraved on the rod, or – according to another version – when God Himself rebuked it (Mekh. Be-Shallah 4; Ginsburger, *Fragmententhergum*, Ex. 14:29). In spite of the miracle, the people were at first afraid to enter the receding waters, until *Naḥshon of the tribe of Judah descended first; but another version relates that all were eager to obey the Divine command, competing among themselves until eventually the tribe of Benjamin succeeded in being the first to enter the sea (Mekh. *ibid.* 5; Sot. 36b ff.). When the Egyptians had drowned, the sea tossed their bodies to the shore, but the earth, too, refused to receive them until God swore an oath not to punish it for receiving the corpses (Mekh. Shirata 9; Pseudo-Jon.; Ex. 15:12). According to another version the sea refused to give up the corpses and only agreed to do so when God promised to compensate it in the days of Sisera (Pes. 118b). God's decision that the Egyptians should not be swallowed up by the sea was either in order to give the Israelites the satisfaction of seeing their former masters lying dead at their feet (Mekh. Be-Shallah 6) or because

in spite of all they deserved burial in the ground (Mekh. Shirata 9; PdRE 39).

REDSTONE, SUMNER MURRAY (Ostrovsky; 1923–), U.S. entertainment executive. Born in Boston, Massachusetts, Redstone attended Boston Latin School, the oldest public high school in the United States, graduating at the top of his class in 1940. While attending Harvard University, Redstone studied German and Japanese. In 1943, he was selected to join a team that successfully broke a secret Japanese code. After a two-year stint in the Army, Redstone entered Harvard Law School in 1947. After law school, he worked first as special assistant to U.S. attorney general Tom Clark before joining private practice. In 1954 he joined the family business, Redstone Management, which owned movie theaters, building up the company's drive-ins. In the early 1960s, he served as president of the Theater Owners of America. In 1968, as president and CEO of the growing family business, which had been renamed National Amusements, Redstone began converting his properties into multi-screen theaters, which he called “multiplexes,” a term he trademarked. In 1977, he purchased a 5 percent stake in 20th Century Fox after viewing the film *Star Wars*; the investment netted him \$20 million when he sold the stock in 1981. In 1979, he was caught in a fire at Boston's Copely Plaza Hotel, during which he suffered third-degree burns over 45 percent of his body. He underwent five operations, which lasted 60 hours. Redstone went on to invest in Columbia Pictures and MGM/UA, earning \$40 million. In 1987, Redstone bought Viacom Pictures for \$3.2 billion and then took the company public the next day. Throughout the 1980s and 1990s, he battled for control of studios, finally acquiring Paramount. In 1996, Redstone was elected CEO of Viacom, and by 2000 National Amusements' holdings would include CBS, Blockbuster, Simon and Schuster, Showtime Networks, 18 television stations, and movie theaters in 12 countries. In 2001, he released his biography, *A Passion to Win*. In 2004, Redstone announced he was stepping down as CEO of Viacom by 2006. Redstone also served in leadership roles for various nonprofits, including the Combined Jewish Philanthropies of Greater Boston, and was a visiting professor at Brandeis University.

[Adam Wills (2nd ed.)]

RÉE, HARTVIG PHILIP (1778–1859), manufacturer, merchant, and religious reformer. He was born and brought up in Fredericia (Denmark), where in his young days, he tried to introduce religious reform but was unsuccessful. In 1810 he moved to Aarhus, establishing there a business empire and became known as “King Rée.” In Aarhus he also founded a syna-

gogue and officiated as rabbi, introducing choir hymns, psalms in German, and sermons in Danish; however his reforms were not imitated throughout Denmark, as he had hoped. He also wrote many hymns in Hebrew and German, with melodies, and made frequent contributions to Jewish and general periodicals. Rée was the author of several books, including *Forschungen ueber die Ueberschriften der Psalmen* (1846).

REED. Three species of reed grow in Israel on the banks of rivers and swamps. Two of them, *Phragmites communis* and *Arundo donax*, are the *kaneh* of the Bible and rabbinical literature; the third, *Saccharum biflorum*, seems to be the biblical *agmon*. These species also grow on the banks of the Nile. In the scriptural parable “the bruised reed” that cannot be depended on and even inflicts harm symbolizes treacherous Egypt (Isa. 36:6; Ezek. 29:6–7), and it is mentioned as withering during the drying-up of the Nile. The *Behemoth dwells “in the covert of the reed and the fens” (Job 40: 21), and is therefore called “the wild beast of the reeds” (Ps. 68:31). The reed standing in the water and shaking in the wind in the prophecy of *Ahijah symbolized the Israelite nation shaking from the many blows inflicted upon it (1 Kings 14:15). According to the Midrash: “The curse with which Ahijah of Shiloh cursed Israel is preferable to the blessing of the wicked Balaam. Balaam praised them as cedars (Num. 24:6) while Ahijah cursed them as ‘the reed which is shaken.’ The reed stands in water and, although bruised and bent, recovers. It has many roots so that even if all the winds of the world blow upon it, they do not move it from its place, but it sways with them and when the wind ceases it remains standing in its place.” Hence, concludes the moralist, “a man should always be as pliant as a reed and not as hard as the cedar.” As a result, the reed merited that the scroll of the law be written with it.

Reeds had many uses: for roofing (Gen. R. 1:8), for making partitions (Tosef., Er. 2:4), mats (Kel. 17:17), scales (Kel. 17:16), flutes (Tosef., Ar. 2:3), and pens (*kolmos*, “pen” is derived from *calamus*, “reed,” Ta’an, 20b). Some grew it in gardens (Tosef., Dem. 7, end). The pay for cutting reeds was low, hence the designation *katla kanya be’agma* (“cutter of reeds”) for a person of little worth (Sanh. 33a, et al.). Reeds were much used for making arrows, the Midrash noting that Israel lacks nothing – “even reeds for arrows” (Eccles. R. 2:8, no. 2). In this connection the words of Pliny are instructive: “The peoples of the East wage war with the aid of the reed, they strengthen their arrowheads with it and give wings to death by putting feathers into the reeds” (*Natural History*, 16:159).

Agmon is mentioned a number of times in the Bible as a slender plant, shaking in the wind and bowing its head, its head being the thick inflorescence shaped like a tail (Isa. 9–13). Its thin stalk was used for stringing fish (Job 40:26). The word is connected with *agam* (“swamp”). The scriptural descriptions of *agmon* fit *Saccharum biflorum*, the slenderest of the reeds common in Israel.

REED, LOU (Lewis Allen; 1942–), U.S. guitarist, songwriter, founder of the influential art rock band The Velvet Underground; often referred to as the “Godfather of Punk.” Born into a middle-class Jewish family in Freeport, New York, Reed played guitar in several high school bands. He attended Syracuse University, but dropped out after two years and moved to New York City, where he became a songwriter for Pickwick records. There, Reed met John Cale, with whom he formed The Primitives, a band which evolved to become The Velvet Underground in 1964. Later managed by Andy Warhol, The Velvet Underground was considered groundbreaking for their lyrical tales of urban decay, heroin addiction, and social realism, as well as for their droning sound and experiments in noise. Although the band was never a commercial success, The Velvet Underground is considered one of the most influential rock bands of all time. Reed left the band in 1970, and after spending a short musical hiatus working for his father’s Long Island accounting firm, he released an eponymous solo album that was mostly rehashed Velvet Underground tunes. It wasn’t until Reed recruited David Bowie and Mick Ronson to produce his 1972 album *Transformer* that Reed achieved widespread success: a Top-20 hit in the U.S., and a Top-Ten hit in the U.K. for “Walk on the Wild Side,” a tribute song to the transsexuals, misfits, and hustlers at Andy Warhol’s Factory. Reed followed *Transformer* with *Berlin*, which though artistically impressive, failed to make a mark commercially. Reed, who adopted a public persona of an androgynous junkie, followed *Berlin* with *Rock and Roll Animal* and *Sally Can’t Dance*, both albums aimed at commercial success, and then in 1975, *Metal Machine Music*, a double album of pure guitar feedback. As Reed wrestled with drug and alcohol problems, his releases, while prolific, remained inconsistent. On 1976’s *Rock and Roll Heart*, Reed delivered an album of pure guitar pop, only to follow up with raw punk on 1978’s *Street Hassle*. The 1980s saw a sober, drug-free, and more focused Reed releasing critically acclaimed albums such as 1983’s *The Blue Mask* and 1989’s *New York*, a love letter and sharp criticism of the state of his adored city. After a 25-year estrangement, Reed reunited with John Cale in 1990 and released *Songs for Drella*, a musical biography and tribute to Andy Warhol. The Velvet Underground temporarily reunited in 1993. Reed and his bandmates from The Velvet Underground were inducted into the Rock and Roll Hall of Fame in 1996.

[Harry Rubenstein (2nd ed.)]

REESE, JIMMIE (James Hymie Solomon; 1901–1994), U.S. baseball player and coach for 78 years. Reese first became involved with baseball in 1917 as a mascot and then batboy

for the Los Angeles Angels in the Pacific Coast League, for whom he played briefly in 1920 and 1924. Reese had changed his given name from Solomon, and no one knew that he was Jewish. Reese was invited to play in a celebrity exhibition game in Los Angeles against a team with songwriter Harry Ruby pitching and Ike Danning – brother of N.Y. Giants star Harry – as the catcher. Clowning around, the battery mates opted to forgo the traditional hand signals and instead call out their pitches in Yiddish, certain that nobody on the other team would understand. Reese got four hits in the game, and afterward Danning said, “I didn’t know you were so good,” to which Reese replied, “You also didn’t know that my name was Hymie Solomon.” Reese played fulltime with the PCL’s Oakland Oaks from 1924 to 1928, when he was sold to the New York Yankees. Reese, who made his Major League debut on April 19, 1930, played second base for the Yankees in 1930 and 1931 – when he was the roommate of Babe Ruth on the road – and then with the St. Louis Cardinals in 1932, finishing with a .278 batting average in 742 at bats. Reese returned to the Pacific Coast League, finishing a 14-year minor league career hitting .289 in 1,673 games, and setting the PCL record for most put-outs by a second baseman (4,771) as well as most assists (5,119). Reese served as a coach with four minor league teams and managed two others, and then joined the California Angels in 1972, where he remained as scout and coach until he died. Reese was known for his ability to hit fungos, and for being known as “the nicest guy in baseball” – indeed, two pitchers he worked with named their sons Reese.

[Elli Wohlgernter (2nd ed.)]

REESE, MICHAEL (1815–1878), U.S. realtor and philanthropist. Reese, whose place of birth is unknown, made his fortune as a realtor during the California gold rush, but lived alone in miserly frugality. Reese’s estate was worth ten million dollars at the time of his death and he was the second-largest real-estate owner in San Francisco. He bequeathed \$30,000 to his nephews in Chicago for use in a charitable cause. They, in turn, donated the money toward the rebuilding of a Jewish hospital destroyed in the Chicago fire, with the stipulation that it be called the Michael Reese Hospital. Reese also left portions of his estate to the University of California and to various Jewish charities.

REEVE, ADA (1874–1966), British actress. Born in London to an acting family, Ada Reeve played Willie in *East Lynne* at the age of six and toured the music halls with a light comedy group. She appeared in the West End in 1894, and played the title role in *San Yoy*, 1901. In subsequent years she visited Australia five times between 1896 and 1935, and South Africa five times between 1906 and 1913. She acted in many plays during World War II. In 1954 she appeared in the television show *Life Begins at 80* and at the age of 90 she took part in a TV film. In 1954 she published her autobiography *Take it for a Fact*. Some sources give her birthdate as 1870 or 1876.

REFORMATION. Like most revolutions the Reformation within the Christian Church in 16th-century Europe combined ultraconservative trends with a drive for change. In his attitude toward the Jews, Martin *Luther moved from a conscious attempt at a form of reconciliation, through a missionary effort, to a most extreme, abusive outlook aimed at putting an end to their very existence in Christian states. His more benevolent approach finds expression in his *Das Jesus Christus eyn geborner Jude sey* (1523), while his *Von den Jueden und jren Luegen* (1543) exemplifies his most vehement attitude. This vacillation between extremes was typical of Luther's personal approach to many problems (e.g., toward the peasant revolt and toward toleration in general); more than that, however, it was also an expression of, on the one hand, the reform movement's feeling that their revolutionary return to a "pure" biblical Christianity would make a greater appeal to the Jews – the earlier missionary attempts having failed because they were made in the name of corrupt Christianity – and, on the other, the deeply ingrained fear and hatred of the Jews which characterized most of the Reformation leaders. As their mission to the Jews failed too, they felt deeply insulted; the deep layers of their baleful image of the Jew came to the fore in Luther's scurrilous attacks. His work is described by Joseph b. Gershon of *Rosheim as "such a boorish and inhuman book, containing curses and vilification hurled at us, hapless Jews, such as by the will of God can truly never be found in our beliefs and Judaism generally" (ZGJD, 5 (1892), 331). Of the legal and social measures vis-à-vis the Jews proposed by Luther toward the end of his life, Joseph b. Gershom said that the like "never has... been contended by any scholar, that we Jews ought to be treated with violence and great tyranny, that none was bound to honor any obligation toward us" (*ibid.*, 332).

Less abuse and violence but a similar mixture of innovation and hatred marked the attitude to the Jews of John *Calvin – in his *Ad quaestiones et obiecta Judaei cuiusdam Responsio*" (*Opera quae supersunt omnia*, 9 (1900), 653–74), of Martin *Bucer – in many of his writings and public appearances, and especially in the *Ratschlag ob die Christliche Oberkait gebueren muege, dass sye die Juden undter den Christen zu wonen gedulden, und wa sye zu gedulden welche gestalt und mass* of 1539 (in his *Deutsche Schriften*, 7 (1964), 319–94), and of many of their followers and imitators. Exceptions to the rule were Wolfgang Fabricius *Capito of Strasbourg and the Bavarian Andreas *Osiander, who dared to give the lie to one of the basic elements of popular hatred of the Jews, the blood *libel, in: *Ob es war vn-glaublich sey dass die Juden der Christen kinder heymlich erwuerger, und jr blut gebrauchen, ein treffenlich schriftt, auff eines yeden urteyl gestelt. Wer menschen blut vergeusst, des blut sol auch vergossen werde* (written in 1529; published in 1893). Here is an eloquent and well-reasoned treatise against this appalling accusation.

For the Jews, the Reformation brought humiliation and suffering and an additional burden because of Catholic Counter-Reformation claims that they were responsible for its "Judaizing" tendencies. There is also the impression that, at a far

later date, Luther's teaching of the submission of the individual to his rulers, combined with his latter-day virulent antisemitism, were one of the root causes of racist Nazism, preparing the soil for the acceptance of the Holocaust in the German mind and society. Yet in spite of all these elements (some certain and some arguable), in Jewish history the Reformation was not only, nor even largely, negative and harmful. Not only were many elements of Catholic faith changed in a way that removed the grounds for anti-Jewish accusations – e.g., charges of desecration of the *Host disappeared in Protestant circles because of the change in beliefs about transubstantiation – but many of the reformers' innovations removed some differences between Jews and Christians in the Reformation environment. About 1524, Jews coming from Europe described with joy to the kabbalist Abraham b. Eliezer *ha-Levi in Jerusalem the iconoclastic and anti-clerical tendencies of the reformers. On the basis of this much exaggerated report the kabbalists regarded Luther as a kind of *Crypto-Jew who was trying gradually to educate Christians away from the bad elements of their faith (Abraham's letter of 1525; see KS, 7 (1930/31), 444–5).

Of more importance and real impact for the future relationship with Christians – and for that matter for the relationship with Christians of other denominations in the post-Reformation period – was the great weight the Reformation gave to the Bible in Hebrew and to Hebrew in general. Although it had originated with the Renaissance, this tendency was given major religious sanction in the Reformation. According to Abraham b. Eliezer ha-Levi, this was one of the mysteries of "God's mind, who decreed this beforehand... when He turned the hearts of many nations in the lands of the uncircumcised toward the study of the Hebrew language and writing. And they delve into these, each according to his powers of attainment" (*ibid.*, 445). Later, in many Protestant groups and sects, this was combined with the appreciation of the law and values of ancient Jewish society which were seen as the proper basis for the life of a model sectarian society. Away from the individualistic spiritual path of the evangelists, they looked to the Hebrew Bible for the modes of justice and moral way of life appropriate to a closely knit group. Many of them – both before and after him – would have agreed with Samuel Langdon, president of Harvard, when he declared in his election sermon delivered in 1775 that "the Jewish government, according to the original constitution which was divinely established, if considered merely in a civil view was a perfect republic" (in J. Wingate Thornton, *Pulpit of the American Revolution* (1860), 239). This sums up the attitude of many settlers in New England from the time it was first expressed by John Cotton in his *Moses, His Judicials* (1641). The great debate in Reformation countries, in Cromwellian and Restoration England in particular, about the divine right of kings and regicide was conducted to a large degree on the basis of texts and ideas from the Old Testament, which were taken as valid paradigms for actual Christian society. In many such circles, from the Netherlands to the eastern boundaries of Reforma-

tion Europe, Jews and Judaic ways came to be considered respectable and exemplary. Gradually this appreciation of the Jewish past developed into an appreciation of the Jews of the day, as abundantly shown by the paintings of *Rembrandt and a great deal of literary and social evidence.

Yet the main importance of the Reformation for Jewish history lies more in what it failed to achieve than in its direct attitudes and achievements. No less fervently than the pope, its leaders wanted to have one Christian, all-embracing, orthodox Church. In the clash between the various strands of the Reformation and between all of them and the Catholic Counter-Reformation, this concept of an all-inclusive orthodoxy had perforce gradually to be abandoned. Through the fire and blood of the wars of religion (at least up to 1648), toleration reluctantly dawned in European culture. The centuries-old reality of a fixed religious, legal, and social attitude toward the Jews vanished; many established attitudes were now reexamined. Toleration embraced only very reluctantly the notion of including a non-Christian, let alone a Jew, within its permissive outlook. An anonymous Jew began to urge this change in Luther's lifetime. To the demand for apostasy he advised that the Jew reply with a polite refusal based on historical continuity and loyalty. Jews will not listen: "now, in our [the Jewish] old age, after we have suffered the servitude to the kingdoms and the hand of our enemies... God forbid that we should relinquish what our fathers left to us, a tradition in our hands, with proof, more than the other nations of the world." This refusal is addressed to the "very few men of reason who ply their words mildly" (published from Ms. by H.H. Ben-Sasson, in *HTR*, 59 (1966), 388). Yet by implication, and through forces inherent in the very logic of its birth, toleration had to relate to the Jews. This move was first made only by small splinter groups like some Puritan sectarians in the Netherlands and England. But the attitude of the eminent lawyer and theologian Hugo *Grotius in his memorandum of 1616 (as member of a committee of two appointed by the municipality of Amsterdam to regulate the status of the newly admitted Jews) shows the considerable change in the thought of the Calvinist Netherlands. He assumes the right of the Jews to basic equality, while advocating many specific legal disabilities; thus, much of medieval practice was to remain without the medieval frame of mind. Oliver Cromwell's readmission of Jews into England was intended to be on a similar basis; in the end popular opposition resulted in factual readmission without explicit legal formulation. The pro-Jewish trend continued both in England and the Netherlands, widening to embrace more and more sectors of the population. By 1697 the city of London had demanded that Jews be admitted as members of the London Stock Exchange. The writings of men like John *Toland and Roger Williams give an explicit edge to the reform attitude of toleration toward Jews, providing a weapon for its advocates. Thus the fluid situation following on the Reformation offered the chance of a change (both for better and worse) in the status and image of the Jews in Europe.

As noted, Jewish reaction to the Reformation was re-

lated from the beginning to the actions and expressions of the movement, but from the very first moment the Jews appreciated the element of revolutionary breakthrough, as they had done much earlier in relation to other heretical and revolutionary movements in Christianity, as evident in their disputations and in their attitude toward the *Hussites. Old traditions and ideas looked to a change in Christianity that would bring back its beliefs to the right Jewish way that they had erroneously departed from. Some made an extreme evaluation of the reports of the new leader and his acts. In a "prophecy" ascribed to "the sage and astronomer R. Abraham *Zacuto," Abraham b. Eliezer includes "what a great astrologer in Spain, named R. Joseph, wrote in a forecast on the significance of the sun's eclipse in the year 1478. He states: 'Having no desire to favor any particular religion or mores I say that a man will arise who will be great, valiant, and mighty. He will pursue justice and loathe butchery. He will marshal vast armies, originate a religion, and destroy the houses of worship and clergy. In his days Jerusalem shall be rebuilt.'" Abraham b. Eliezer adds that "at first glance we believed that the man foreshadowed by the stars was Messiah b. Joseph [see *Messiah]. But now it is evident that he is none other than the man mentioned [by all; i.e., Luther, according to the general trend of Abraham b. Eliezer's thought at this time], who is exceedingly noble in all his undertakings and all these forecasts are realized in his person" (in H.H. Ben-Sasson, *Yehudim mul ha-Reformazyah* (1969/70), Eng. translation in bibl.).

Admiration for Luther vanished in many Jewish circles, in particular in Germany, in view of his later enmity and cruelty. To Joseph b. Gershon of Rosheim, Luther is the arch-enemy of the Jews, a second Haman. But some still retained their sympathy for the Reformation movement if not for Luther himself. The growing diversity within the Reformation camp encouraged the rationalist Abraham ibn Migash, physician to the sultan in the 16th century, to think that "their faith has reverted to a state of primeval flux. Where there are a thousand of them one cannot find 10 men willing to rely upon a single doctrine or consent to a given line of reasoning. Thus they are in a state of formlessness, ready to take shape, since faith has departed and no longer finds expression in their utterances. But they have been made ready to assume form when they will find favor with God, after being scourged for their sins and the sins of their fathers, for all that they and their fathers have perpetrated against Israel. And when they find favor with God they will be ready to accept the faith" (*Kevod Elohim* (Constantinople, 1586), essay no. 3, ch. 3, fols. 127v.-128r.). Even from afar, the capital of the Ottoman Empire, Ibn Migash recognized that the Protestant camp was splintered because it was ardently striving for true faith; they had lost their form in the Aristotelian sense of the term. He could not understand their remaining outside of the true Jewish form except through accepting that this is a temporary withholding of grace to enable them to expiate their sins in persecuting Jews in former generations. To Samuel *Usque the Reformation was a revolt of descendants of Jewish *anusim who had naturally

taken the opportunity to avenge their forced conversion: “For since throughout Christendom Christians have forced Jews to change their religion, it seems to be divine retribution that the Jews should strike back with the weapons that were put into their hands; to punish those who compelled them to change their faith, and as a judgment upon the new faith, the Jews break out of the circle of Christian unity, and by such actions seek to reenter the road to their faith, which they abandoned so long ago” (*Consolation for the Tribulations of Israel*, trans. by M.A. Cohen (1965), 193). Another Jewish chronicler, Joseph *ha-Kohen – born in Avignon but living and writing in Italy – wholeheartedly supported the Reformation camp and described events and personalities consistently from this point of view. To him Luther was the sage among the Christians; the Council of Trent failed because the Lutherans did not come and, left to themselves, the Catholics could only do foolish things. His sympathy goes out to the Reformation fighters of southern France in particular. He describes their plight in a way that shows that he made use of their information and sources. The death of the heads of the population of a Protestant city in the province is described as true *kiddush ha-Shem*: “the leaders of the populace they [the Catholic forces] took along with them, torturing them and burning them alive... But they [the Reformation martyrs] exclaimed: “This indeed is the day we have hoped for – our souls shall return to God while our bodily clods return to dust” (*Divrei ha-Yamim* (Sabioneta, 1554), pt. 2, fol. 289v.). Joseph ha-Kohen was happy to witness and describe the sack of Rome in 1527, but when a Protestant church in Metz was destroyed by the Catholics and some of the people killed, he commented that the Catholics had “polluted the land with blood” (in H.H. Ben-Sasson, op. cit., 284). Perceiving the hope of toleration emerging from the wars of religion, he felt that the essential factor to emerge from a peace pact between reformers and Catholics in France was “that each man could worship his God according to his wish without fear. So all the people were exceedingly pleased” (*ibid.*). This is quite in the spirit of the middle-of-the-road party in France.

With sectarian existence under Catholic rule in Bohemia and Moravia, Hungary, and Poland-Lithuania, ties between Protestants and Jews became closer, for there was a growing similarity between their modes of existence. In the 1530s there were complaints in Poland that Jews exploited the Reformation disquiet for proselytizing. Much more clear are the contacts – both through disputations and through direct influence – between anti-trinitarians and Jews, as, e.g., in Poland between Isaac b. Abraham of *Troki and Szymon *Budny, and between Marcin Czechowic and Jacob of *Belżyce. In the thought of Judah Loew b. *Bezalel of Prague and his circle, there is much evidence of contacts with sectarians. Judah Loew’s plea against censorship on books – antedating *Milton’s *Areopagitica* by about 50 years (Judah Loew’s plea was printed in 1598) – has the marks of sectarian pleading for tolerance. Yet his brother *Ḥayyim felt constrained to warn “the Jews that... when they slacken in their regard for the Torah

and its commandments, God bestows His bounty upon the unclean cattle. So that even if Israel subsequently repents, it is difficult for God to reject that nation on their account. This is all due to the fact that we, in our manifold sinfulness, are daily drawing farther away from the truth, whereas they, on the contrary, realize day by day that they are in the grip of falsehood. A different spirit is manifesting itself to some extent in their midst, bringing them nearer to truth, since they, too, for the most part are descended from the true seed” (*Sefer ha-Ḥayyim, Sefer Ge’ullah vi-Yshuah*, ch. 7, fol. 46v.). Ḥayyim feared that the new and eager spirit of the Reformation was endangering the covenant between the Jewish people and the Torah.

In modern times some Reformation patterns of worship and behavior and modes of thought influenced not only the *Reform trend in Judaism but also some of the *Orthodox communities, in particular in Anglo-Saxon countries. The ideology of religious pluralism accepted in the U.S., and welcomed by Jews, is a direct result of Reformation development. On the other hand, Nazism reawakened in Europe all the scars and problems of the Reformation’s antisemitic inclination. In modern Jewish *historiography and thought, the 19th century may be described mainly as the pro-Reformation period, while in the 20th century some pro-Catholic and anti-Reformation historiography and ideas emerged and developed.

[Haim Hillel Ben-Sasson]

REFORM JUDAISM, first of the modern interpretations of Judaism to emerge in response to the changed political and cultural conditions brought about by the *Emancipation.

The Reform movement was a bold historical response to the dramatic events of the 18th and 19th centuries in Europe. The increasing political centralization of the late 18th and early 19th centuries undermined the societal structure that perpetuated traditional Jewish life. At the same time, Enlightenment ideas began to influence not only a small group of intellectuals but also wider circles. The resulting political, economic, and social changes were profound. From a religious point of view, many Jews felt a tension between Jewish tradition and the way they were now leading their lives.

Many responded to this new situation by observing less and less of that tradition. As the insular religious society that reinforced such observance disintegrated, it was easy to fall away from vigilant observance without deliberately breaking with Judaism. Over the course of a few decades, a large percentage of the Jews of central Europe were no longer sure exactly how much of the traditional belief they subscribed to. Some tried to reconcile their religious heritage with their new social surroundings by reforming traditional Judaism to meet their new needs and to express their spiritual yearnings. Gradually these efforts became a movement with a set of religious beliefs, with practices that were considered expected as well as practices regarded as antiquated, and with an identity

as a coherent and cohesive modern Jewish religious stream or denomination.

Usually viewed in contrast with Orthodoxy, Reform Judaism was the first of the modern responses to the emancipation of the Jews, a political process that occurred over an extended period. Because of its stress on autonomy – both of the individual and of the congregation – Reform Judaism has manifested itself differently in various countries. Nevertheless, Reform communities throughout the world share certain characteristics. Reform Jews believe that religious change is legitimate and that Judaism has changed over the centuries as society has changed. While in the past this evolutionary process was subconscious and organic, in the modern world it has become deliberate. The guiding principal of the contemporary Reform movement is that it can adapt Jewish religious beliefs and practices to the needs of the Jewish people from generation to generation.

The first Reformers – long identified as “German” Jews but, in fact, Jews from many European countries – were seeking a middle course between halakhic Judaism, which they wanted to break away from, and conversion to Christianity, which they wanted to avoid. Looking for a way to remain Jewish while adapting to the prevailing social customs, they hoped that by introducing modern aesthetics and strict decorum, they could make worship services more attractive to the many central European Jews who were drifting away from traditional Judaism but had not become Christians. Most of the early reforms focused on minor cosmetic changes: They abbreviated the liturgy and added a sermon in the vernacular, a mixed male and female choir accompanied by an organ, and German along with Hebrew prayers. From the point of view of Jewish law, reading some additional prayers in German was a relatively minor divergence. But for the congregants eager to create a synagogue service that would look respectable to their neighbors and at the same time feel authentic to themselves, such a change carried great import.

By the early 1840s, a trained Reform rabbinic leadership had emerged in central Europe. Abraham Geiger, called to the Breslau Jewish community in 1839, developed into the most distinguished intellectual defender of Reform Judaism in 19th-century Europe. Reform rabbinical conferences in Brunswick in 1844, Frankfurt in 1845, and Breslau in 1846 gave rabbis an opportunity to clarify their beliefs and the practices that could follow from them. A debate over the use of Hebrew in the services led Zacharias *Frankel to walk out of the 1845 conference, a moment many see as the beginning of the historical school, which advocated positive-historical Judaism. Frankel accepted the evolutionary character of the Jewish religion but insisted that the “positive” dimensions of Jewish tradition needed to be preserved. This perspective later evolved into Conservative Judaism. Although most of the rabbis at these conferences were much less traditional than Frankel, they taught in the established Jewish community, the *Einheitsgemeinde*, and therefore had to remain sensitive to and conversant with traditional rituals and observances.

A number of radical Reform rabbis, in particular Samuel Holdheim, made strong anti-traditional statements that shocked many of the more traditionally inclined. Geiger himself has been quoted as seeming to repudiate the circumcision rite as “a barbaric act.” Yet the practice of most German Reform rabbis remained far more traditional than their rhetoric. They worked to remain a part of Kelal Israel, the totality of the Jewish people, and did not fully accept the radical Reform groups in Berlin and Frankfurt.

Reform Arrives in the United States

The history of Reform Judaism in the United States differs profoundly from that in Europe. Whereas in Europe the movement developed under the shadow of antisemitism and the threat of conversion to Christianity, in the United States a much freer and more pluralistic, more heterodox atmosphere prevailed. There was no established religious community and no support from the state. Over 200 years, the U.S. Reform movement has changed significantly and has seen substantial regional and even local variation among individual congregations. Nevertheless, it can point to a surprisingly high degree of continuity.

The first attempt at Reform occurred in Charleston, South Carolina, in 1824, when 47 members of Congregation Beth Elohim signed a petition requesting that their congregational leadership institute certain ritual reforms, including the introduction of prayers in English. The congregational board rejected the request, and a small group of intellectuals decided to form a new congregation, to be based on enlightened liberal values. On November 21, 1824, the Reformed Society of Israelites came into being, and the group published the first American Reform prayer book, *The Sabbath Service and Miscellaneous Prayers Adopted by the Reformed Society of Israelites*. Although the original group disbanded in 1833, due in part to the relocation and subsequent death of one of its more dynamic leaders, an interesting Sephardi intellectual named Isaac *Harby, Mother Congregation Beth Elohim soon began to move toward Reform under the leadership of its *hazzan*, Gustavus Poznanski.

One of the most fascinating episodes in American Jewish history, the Charleston Reform attempt was an isolated phenomenon. Far more important for the development of the Reform movement in the United States was the arrival of large numbers of central European Jews beginning in the 1830s, later mistakenly referred to as “German” Jews. For the most part, they were central Europeans. The Jewish population of the United States jumped from approximately 3,000 in 1820 to 15,000 in 1840 and 150,000 in 1860. Although many scholars have assumed that these immigrants brought Reform Judaism with them from Germany, Leon Jick has argued persuasively that American Reform was not “imported” but rather developed in the United States in response to the American socioreligious environment of the antebellum period. While Jick overstates his argument, his book was a much needed corrective to the earlier historical consensus.

Jewish immigrants settled throughout the United States. As they established businesses and built homes, local Jews began to put more effort into building a community. They consecrated cemeteries and held High Holy Day services, usually in a private home or a hotel meeting room. Eventually, they erected synagogue buildings and, if the community was large enough, engaged a religious leader with training in religious matters in the old country who could read the Hebrew prayers and perform the required rituals. For the congregations in Fort Wayne, Indiana, or Lexington, Kentucky, this was sufficient. As the immigrants gradually acculturated, they wanted their synagogue practice to reflect American norms. They wanted to use English as well as Hebrew in the services and to create an atmosphere to which they could bring Christian neighbors, who would come away impressed with the propriety and nobility of the ritual. Thus they moved their congregations toward Reform, not out of an intellectually based theological commitment, but as a practical response to daily life in the United States. Most of the functionaries went along with that trend. They were not theologically motivated but rather saw the practical benefits of adapting religious practices to the American patterns of living and enabling Jews to remain Jewish.

But ideologically motivated reformers also existed. One group of liberal religious intellectuals in Baltimore formed a *verein* in 1842, a small religious group that met to discuss theology and conduct services based on that theology, the Har Sinai Verein. In 1845 a similar group founded Emanuel in New York City, which developed into the largest and most prestigious Reform congregation in the country. These groups, dedicated to Reform Judaism in ideological terms, differed from the vast majority of congregations in the United States, whose members were more concerned with the realities of everyday life in America than with the intricacies of Judaic theological debate.

Isaac Mayer Wise and the Development of the American Reform Movement

As more congregations developed in the antebellum period, the need for strong rabbinic leadership grew. Not all congregations felt this need; many treasured their independence and many local lay leaders enjoyed dominating communal affairs. Despite the difficulties, rabbis carved out a leadership niche for themselves. Numerous immigrant teachers and ritual functionaries were interested in serving in the rabbinate and, in some cases, in assuming leadership roles on a regional or national level. One of the best known was Isaac *Leeser of Philadelphia. A traditionalist minister who published an influential newspaper, *The Occident*, Leeser also promoted many other intellectual, social, and educational projects. But it was Isaac Mayer *Wise who had the charisma and determination to develop into a national Jewish religious leader and to actively work to build American Jewish institutions and organizations.

Isaac Mayer Wise arrived from Bohemia in 1846, and although he was advised to become a peddler, Rabbi Max Lilien-

thal encouraged him to consider the pulpit rabbinate and sent Wise in his stead to dedicate a number of synagogues. This led to an opportunity for Wise to begin serving as rabbi in Albany, New York, where there was a famous confrontation between Wise and the congregation's president, the first of so many clashes between rabbis and lay leaders. When he was offered a life contract in 1854 to become the rabbi of Congregation B'ne Jeshurun in Cincinnati, Wise accepted, and the pulpit became his base for building the American Reform movement.

Wise established a newspaper, *The Israelite* – later *The *American Israelite* – and edited a *siddur* called *Minhag Amerika: Tefillot Beney Yeshurun/Daily Prayers*. Credited with establishing or being the driving force behind the founding of all three major institutions of the Reform movement, he inspired one of his lay leaders to establish the Union of American Hebrew Congregations (UAHC, later *Union for Reform Judaism (URJ)) and himself founded the *Hebrew Union College (HUC) and the *Central Conference of American Rabbis (CCAR).

Although Wise had hoped to build an American Judaism that included all American Israelites rather than just the more liberal elements, a moderate form of Judaism that combined some ritual reforms with traditional elements, this vision proved unworkable especially after the incident of the *Treife Banquet*, in which forbidden foods were served as the post ordination reception of the first ordination of Hebrew Union College. The Reform movement, however, was the first Jewish religious movement in the United States to organize itself on a denominational basis. Reform Judaism includes three types of organizations, each with its own territorial parameters: the congregational organization, today represented nationally by the UAHC; the four campuses of the *Hebrew Union College–Jewish Institute of Religion (HUC-JIR); and the rabbinate, represented by the CCAR. The movement pioneered this “tripartite polity” – a congregational body, a rabbinic organization and a seminary – as Lance Sussman refers to it, subsequently adopted by the other major denominations of American Judaism.

In the early 1870s, Wise, who had been trying for many years to create a national association of U.S. congregations, encouraged Moritz Loth, the president of Wise's Congregation B'ne Jeshurun, to issue a call to congregations to meet in Cincinnati for the purpose of establishing a Hebrew theological college. In July 1873, representatives from 34 congregations from 28 cities, mostly in the Midwest and the South, came together to found the organization. The following year, 21 additional temples joined. By the end of the decade, 118 congregations belonged to the UAHC, more than half of all identified synagogues in the United States.

The UAHC dealt with congregational issues and strategies for working together as an organized congregational movement. Its first goal was to create a rabbinical school. Wise had been trying to create such a school for many years and had actually opened one shortly after his arrival in Cincinnati in 1855, Zion College, which lasted for only one year. But Wise

did not give up on the idea. He was further encouraged when Henry Adler of Lawrenceburg, Indiana, offered a \$10,000 gift toward the establishment of an American rabbinical college. With the UAHC's establishment in 1873, Wise saw a new opportunity to build a successful school. That same year, the University of Cincinnati was founded, presenting the possibility for rabbinical students to attend the university simultaneously and graduate from rabbinical school with a university degree as well. At the UAHC annual meeting in July 1874, congregational representatives voted unanimously for such a college to be established, with Wise as president. In 1875 the Hebrew Union College was founded. Wise served as president until his death in 1900. A number of distinguished Reform rabbis followed him in this role: Kaufmann *Kohler (1903–1921), Julian *Morgenstern (1921–1947), Nelson *Glueck (1947–1971), Alfred *Gottschalk (1971–1996), Sheldon *Zimmerman (1996–2000), and David *Ellenson (2001–). Since its founding, the college has educated the professionals who would assume leadership roles in the congregations, as well as many of the women who would marry future rabbis.

A long period of tension and conflict between the theologically oriented radical Reformers in the East and the more moderate Reformers in the Midwest had created a great deal of bitterness between the two groups as they attempted to influence the direction of American Judaism. Because of this divisiveness, Wise waited until HUC had graduated a sufficient number of rabbis and only then moved forward with the establishment of a permanent rabbinical association. David Philipson, an early HUC graduate and rabbi at Congregation Bene Israel in Cincinnati, helped Wise issue a call to rabbis planning to attend the 1889 UAHC conference to meet separately to establish their own organization. The rabbis created the Central Conference of American Rabbis, then elected Wise president by unanimous vote; he continued to serve until his death 11 years later.

By 1890 90 rabbis had affiliated with the CCAR, which dealt with rabbinical issues, including controversial religious questions. Membership was open to any rabbi who was serving or had served a synagogue as spiritual leader. After the first year, membership would be open to those from several categories, not only those with ordination from HUC, but also a wide variety of religious functionaries. As time went on, more and more members were HUC graduates. Today the CCAR has a membership of more than 1,800.

Despite his successful leadership, Wise was considered an uneducated and unworthy colleague by some of the “German” Reform rabbis who arrived in the 1850s and 1860s with doctorates from prestigious central European universities. Primary among them was David *Einhorn, who immigrated to the United States in 1855. Einhorn wrote a number of scathing attacks on Wise for abrogating Reform theology and turning what he saw as a consistent and principled approach to modern Judaism into a jumble of incoherent beliefs. The issue debated by Wise and Einhorn has remained a relevant theme throughout the history of the Reform movement. Is it more

important to be theologically unswerving, or to respond effectively to changing societal trends? Most of the time, the movement has favored pragmatism over theological consistency.

Wise represented a pragmatic approach to American Judaism. He was primarily an institution builder who attempted to use ideology as a tool for compromise and consensus. Wise succeeded as an organizational leader in building an entire American religious movement from scratch, under very difficult circumstances.

The Classical Reform Period

Classical Reform was the type of Reform Judaism that developed in the late 19th century. American Jews, most of whom were of central European background, saw the tremendous influence that liberal religion had on their Protestant neighbors and wanted to develop a form of Judaism equivalent to Episcopalianism, Presbyterianism, and especially Unitarianism.

As presented in the 1885 *Declaration of Principles*, known as the 1885 *Pittsburgh Platform, Classical Reform Judaism minimized Judaic ritual and emphasized ethics in a universalist context, stressing universalism while reaffirming the Reform movement's commitment to Jewish particularism through the expression of the religious idea of the mission of Israel. The document defined Reform Judaism as a rational and modern form of religion in contrast with traditional Judaism on one hand and universalist ethics on the other.

Motivated by his concern that persuasive personalities were urging American Jews to embrace these alternatives, Kohler, the platform's principal author and a son-in-law of David Einhorn, wanted to present in a formal manner what distinguished Reform Judaism from traditional Judaism as well as what was Jewish about Reform Judaism. Earlier in 1885, he had debated in a series of public forums with Alexander *Kohut, a Hungarian rabbi recently arrived in New York who espoused the traditionalist approach. Their debates had attracted wide attention in the synagogues and the press. That the founder of the Society for Ethical Culture, Felix *Adler, was the son of Samuel *Adler, the rabbi of Congregation Emanu-El in New York, particularly galled Kohler. The rabbi's son, who had returned from rabbinic studies in Germany advocating a philosophical approach to ethics in a universalistic framework, was attracting to his philosophy and organization many Reform Jews who wanted both to express their conviction that ethics was important and to loosen or break their particularistic ties with Jewish ethnic identity. Adler placed himself on the extreme of the continuum between particularism and universalism, emphasizing the individual's connection with and commitment to humanity as a whole, rather than to any one ethnic or religious grouping.

Kohler chose a middle road, as this excerpt from the *Declaration* indicates:

We hold that all such mosaic and rabbinical laws as regulate diet, priestly purity and dress originated in ages and under the influence of ideas altogether foreign to our present mental and spiritual state. They fail to impress the modern

Jew with a spirit of priestly holiness; their observance in our days is apt rather to obstruct than to further modern spiritual elevation.

Reform Judaism has historically emphasized what it interpreted as the central message of the prophets: the need to fight for social justice. The Reformers believed deeply in working with their Christian neighbors to help make the world a place of justice and peace, and this belief was a central part of the religious worldview. The platform emphasized the prophetic mandate to work tirelessly for the rights of the downtrodden, and the term “prophetic Judaism” described the Reform vision of following the dictates of the prophets to create a just society on earth. Coupled with the emphasis on its interpretation of prophetic Judaism, the early Reformers in particular spoke frequently about the mission of Israel, which presented the idea that the prophets of the Bible served as advocates of ethical monotheism. Ethical monotheism combined the Jewish belief in one God with rational thought and modern innovations in scientific knowledge.

The mission of Israel was to stand as an example of the highest standards of ethics and morals and to help bring the world to an awareness of and commitment to ethical monotheism.

American Jews who embraced Reform were greatly influenced by the popular belief in the sovereign self. They started with their own religious feelings and tried to place their personal understanding of what we would today call “spirituality” in a Judaic context. When Emil G. Hirsch of Chicago Sinai Congregation in 1925 entitled one of his books *My Religion*, he was making a statement about the source of his religious inspiration. Still, the Reformers understood that American Judaism could not stand solely on the basis of personal inspiration but needed a connection to Jewish history through a religious concept not “nationalistic” in orientation, but pure and holy.

They believed that the prophets stressed universalism rather than particularism, and therefore the Reformers felt justified in likewise stressing the universal over the particular. At the same time, the concept of the mission of Israel justified the continued existence of the Jewish people by arguing that their ongoing survival as a religious group was essential if the Jews were to bring their universalistic message of ethical monotheism to the world. David Einhorn used a version of this argument to oppose intermarriage with non-Jews, since “the small Jewish race [a term acceptable at that time]” needed to preserve itself as a separate entity to fulfill their religious mission on earth. Taken to its extreme, the mission of Israel concept helped Reform leaders present Judaism as the ultimate expression of ethical monotheism.

As the purest form of monotheistic religion, Judaism was therefore the strongest theological argument for ethical behavior. As such, it deserved to be taken seriously as a way of thought and a way of life by all individuals committed to finding a true understanding of God and God’s place in the world. This allowed Reform leaders such as Wise to declare that Juda-

ism was destined to become the faith of all humankind, or at least of all Americans who held liberal religious beliefs.

Reform leaders believed that as time passed, humankind would be better able to understand the will of God, and thus society was certain to become a better place. This belief became most pronounced in Classical Reform.

The theology of the Classical Reform rabbis is only part of the story. Yaakov Ariel has argued that historians have portrayed the Reform movement of this period in stereotypical terms taken from eastern European Jewish perceptions of the German Jewish elite. Specifically, such historians have presented the Reform movement as having divorced itself completely from the national as well as the ethnic components of Jewish identity. Ariel argues that there was an “astonishing gap” between the ideals of the Reform movement as expressed by rabbinic leaders, and the attitudes held by the vast majority of members in the congregations:

The Reform movement held a character almost diametrically opposed to its universalistic aspirations. As an ethnically oriented, parochial, and tribal group, Reform Jews were concerned with Jewish matters on local, national, and international levels, and were strongly involved with their non-Reform Jewish brethren.

Classical Reform Judaism had developed during a period of heady optimism, beginning with the 1885 Pittsburgh Platform, but as early as 1881, Jews began fleeing to the United States to escape the pogroms of eastern Europe. By the time the Nazi Party rose to power in 1933, it was increasingly difficult to see the world as a place where Jew and gentile could continue to work side-by-side to make the world a better place and to bring justice and peace to all in the spirit of the prophets.

The 1930s brought signs that at least some of the Reform movement’s leaders felt the need for a return to tradition. Jews increasingly believed that the world was profoundly hostile to them. Rather than universal goals, they yearned for a Jewish homeland that could absorb the hundreds of thousands or even millions of Jews who faced prejudice, persecution, and murder. While no one imagined the enormity of the tragedy that would befall European Jewry, the possibilities were apparent. In response to the changing political environment, the Reform movement began to accept and eventually embrace a more particularistic understanding of Jewish identity, including political Zionism. The Reformers began to accept a definition of Judaism centered on Jewish peoplehood. Nevertheless, Reform rabbis continued to speak of ethical monotheism, which stressed that the Jewish belief in one God would lead to the highest ethical behavior.

The Changing Character of the Reform Movement

The Reform movement changed its direction as a consequence of the increasingly brutal nature of the 20th century. World War I jump-started the process of reexamining the liberal sense that had propelled Reform religious thought until that time. The movement’s optimistic view of human progress in collaboration with God underwent further change after the

rise of the Nazi movement in Germany and the subsequent murder of six million Jews. In the aftermath of that tragedy, the Reform movement veered away from its universalistic triumphalism toward a more ethnically based cultural identity. But the breakdown of this optimism did not mean the end of either Reform Judaism or the Reform movement. Congregations continued to attract new adherents as sociological patterns shifted. Many Jews found that the Reform temple met their need for a nominal religious identification, while allowing them to join the stew in the American melting pot.

From 1881 until 1920, the Reform movement grew slowly relative to the increase in the American Jewish population, with 99 congregations consisting of 9,800 members in 1900 and 200 congregations with 23,000 in 1920 while the American Jewish population increased 14-fold. The Reform movement went from being the single most important voice of the Jewish American community to being a small minority. Although the elite nature of many Reform Jews meant they retained a high profile, they were swamped by the eastern European organizations and ideologies.

The eastern European mass immigrations increased the American Jewish population from 250,000 in 1880 to 1 million by 1900 and 3.5 million by 1920. The bulk of the immigrants came from Russia, Ukraine, Lithuania, Poland, Romania, and other regions where there had not been full emancipation. Since most of the native population in their home countries had viewed these Jews as an alien presence, they came to America from an insular Jewish background. As a consequence, few joined the Reform movement. The immigrants did not like the Reform service, which they found lacking in traditional Jewish elements. Many Reform Jews maintained a haughty attitude toward the newcomers, preferring not to remember that their own parents or grandparents had arrived in the United States one or two generations earlier under similar circumstances. Indeed, a mythology developed that had the "German" Jews descended from aristocrats. Historically inaccurate, it reflected a widely held perception.

Nevertheless, over the course of time increasing numbers of eastern Europeans joined Reform congregations. Under their influence, the Reform movement inched back toward a more traditional approach to Jewish thought and practice, hastened by world events. By the 1920s and especially the 1930s, with the worldwide rise of antisemitism, this direction became clear. Even though the 1885 *Declaration of Principles* had argued that Jews should remain together solely as a religious group to fulfill their mission of bringing ethical monotheism to the world, the rise in antisemitism threatened Jewish physical survival, a concern that far outweighed theology or ideology. Policies that had seemed levelheaded just a few decades earlier now appeared naïve and foolhardy. As a result, the CCAR adopted the Columbus Platform in 1937, officially named *The Guiding Principles of Reform Judaism*. This new platform embraced Jewish peoplehood and leaned toward support of political Zionism. The culmination of a revolutionary shift in the ideology of the American Reform movement,

it encouraged a greater diversity of opinion and a multiplicity of approaches.

By 1945 the Reform movement was well on its way to accepting Zionism and the soon-to-be-created State of Israel. The interwar period saw the rise of two strongly Zionist Reform rabbis, Stephen S. Wise and Abba Hillel Silver. Wise (no relation to Isaac Mayer Wise) began his rabbinic career in Portland, Oregon, then moved to New York, where he established his own congregation after Temple Emanuel refused to promise him freedom of the pulpit. In 1922, he established the Jewish Institute of Religion (JIR) in New York City to provide a Zionist alternative to Hebrew Union College. Wise believed in both the importance of social justice and the centrality of Jewish peoplehood. Like him, Abba Hillel Silver was a prominent leader in American and world Jewish affairs as well as a congregational rabbi. After serving as a rabbi in Wheeling, West Virginia, he became rabbi of the temple in Cleveland, Ohio. From this pulpit he worked tirelessly to build up the American Zionist movement in the hope of establishing a Jewish state. With Wise, Silver formed the American Zionist Emergency Council, which lobbied the U.S. Congress on behalf of the Zionist movement. Silver was the leader who announced to the United Nations that Israel had declared itself an independent state. Both men were Classical Reformers devoted to Jewish nationalism, a synthesis that would have been incongruous just a few decades earlier.

Post-World War II Developments

The aftermath of World War II brought a massive suburban construction boom that within American Judaism benefited the Conservative branch most. Conservative Judaism appealed to the now Americanized Eastern European immigrants and their children, because it appeared substantially more traditional than Reform but allowed far greater flexibility than Orthodoxy. Nevertheless, Reform Judaism benefited from this suburbanization trend as well. The 265 congregations in 1940, with 59,000 members in the UAHC, grew by 1955 to 520 congregations and 255,000 members.

Many suburban Jews who joined Reform congregations saw the temple mainly as an extracurricular activity for their children. Congregations that moved most rapidly to meet the needs of these new suburbanites thrived. The temple became a social center that substituted to some degree for the loss of the old Jewish neighborhoods, such as those once clustered on the Lower East Side or Brownsville in New York and its equivalences in other major urban settings. The Reform leadership faced the challenge of conveying a religious message to congregants who had not joined their synagogues primarily to share a religious vision. Yet the leaders needed to captivate and motivate them to care and to feel that the congregation was helping them fulfill themselves as ethically concerned people.

The Reform movement grew in large part because it benefited from strong leadership. While much of this strength was more perception than reality, it nevertheless inspired many in

the rank-and-file. A tremendous amount of private infighting remained largely hidden from public view. Maurice N. *Eisendrath, who became UAHC executive director in 1943 and president in 1946, moved the national headquarters from Cincinnati to New York – and thus geographically separate from Hebrew Union College – where he constructed an entire building for the organization on Fifth Avenue across the street from Central Park and next to Congregation Emanu-El. He called the new headquarters the “House of Living Judaism,” and it remained the operating center of the Reform movement until it was sold under the presidency of Eric H. Yoffie in 1998. Unlike the Conservative Movement, where the titular leadership of the movement is the chancellor of the Jewish Theological Seminary, the president of the Union is the titular and actual head of the Reform Movement.

Nelson Glueck, a world-famous archeologist who had appeared on the cover of *Time*, became president of HUC in 1947. While many viewed him as more interested in his archaeological pursuits than in his administrative responsibilities, his fame brought a great deal of attention to the movement. He oversaw the 1950 merger of HUC with JIR, and under his leadership HUC-JIR established a third U.S. branch in Los Angeles in 1954 and a fourth campus in Jerusalem in 1963. Although this growth may have owed more to the burgeoning of the American Jewish community than to Glueck, the perception grew that the Reform movement had competent and visionary leadership.

The leaders could project this image of a strong, unified movement partly because of the number of pressing causes that could galvanize members of Reform congregations. In the 1960s many Reform Jews became involved in the U.S. civil rights struggle as well as in the movement opposing the war in Vietnam. The Six-Day War of 1967 dramatically increased American Jews’ emotional connection and commitment to the State of Israel. As they worried about its ability to survive in the face of Arab promises to destroy the country during the tense three weeks preceding the war, many came to realize how important the State of Israel had become to them. This fear resurfaced in 1973 when Israel’s physical survival was in doubt during the early stages of the Yom Kippur War. The cumulative effect was to increase dramatically the Zionist fervor of most American Jews, a sea change felt throughout the movement.

Interest in liturgical issues also increased. Many began to feel that *The Union Prayer Book*, used in Reform congregations since the 1890s, had become outdated; new prayers would better express how people felt in response to the volatile 1960s. Joseph Glaser, executive vice president of the CCAR, initiated a campaign in 1971 to write and publish new forms of liturgy. A thick blue prayer book, *The Gates of Prayer*, replaced *The Union Prayer Book* in 1975 to a mixed response – great excitement at the numerous options offered, along with horror at the drastic changes. This publication was joined in 1978 by a completely reworked High Holy Day prayer book, *The Gates of Repentance*. Both new prayer books contained a great deal

more Hebrew than their predecessors and reintroduced many traditionalist elements deleted from *The Union Prayer Book*. There were 10 different Friday night services offered, most of which presented a specific theological approach, as well as services that catered specifically to children or those preparing for bar mitzvah. Synagogues introduced new ceremonies and experimented with various types of innovations. While many congregants embraced these changes, others resisted – some who had ideological objections, some who missed the liturgy they had been using their entire lives. To this day, some congregations, such as Congregation Emanu-El in New York, continue to use *The Union Prayer Book*. Others, such as Temple Sinai in New Orleans, have a Friday-night service once a month that uses *The Union Prayer Book* instead of the more recent liturgical works. The Reform movement’s boldness in its liturgical publications matches its brave leadership in the realm of social justice, as well as its willingness to break with traditional belief and practice.

New Approaches to Changing Social Trends

Alexander M. *Schindler, who became president of the UAHC in 1973, gained renown for his assertive support of the social action agenda of the Reform movement of the 1970s and 1980s, including civil rights, world peace, nuclear disarmament, a “Marshall Plan” for the poor, feminism, and gay rights, as well as his opposition to the death penalty. Although this advocacy landed Schindler frequently in the pages of the *New York Times*, he got along with traditional Jews and Israeli leaders better than had any of his predecessors. His command of Yiddish and his sense of humor and of fairness helped enormously. He played a central role as chairman of the Conference of Presidents’ of Major American Jewish Organization in smoothing the way for Likud leader Menachem Begin, with whom he disagreed ideologically but with whom he established a warm and trusting personal relationship, to be accepted by American Jewish leaders who had long thought of Israel leadership as synonymous with Labor Israel. Despite a disinterest in administrative issues, Schindler and his German accent became synonymous with Reform Judaism. His leadership inspired not only individuals, but also entire temples, to join the movement. During his presidency, the UAHC grew from 400 congregations in 1973 to about 875 in 1995. Of course, the continuing move to suburbia made much of this growth possible, but Schindler’s inspirational leadership on issues meaningful to American Jews disconnected from traditional belief or practice played an important role.

Schindler is perhaps best remembered for two issues, his outreach to intermarried couples and his advocacy of patrilineal descent. Intermarriage had long been a taboo in the Jewish community, and many parents ostracized children who “married out.” Some would even sit *shiva* for children about to intermarry, as if the child had died. Schindler, who felt strongly that this taboo was counterproductive as well as inappropriate, came to believe that a bold gesture was in order. At a meeting of the UAHC’s Board of Trustees in Houston in December

1978, he issued a public call to the Reform movement to reach out to the non-Jewish spouses in interfaith marriages. Even more surprising, he urged making the Jewish religion available to unchurched gentiles. This controversial call to proselytize those with no connections of blood or marriage to the Jewish community appeared to be a dramatic departure from two thousand years of Jewish religious policy against proselytization. His critics argued that such a move would encourage certain Christian groups to launch opposing campaigns against the Jewish community, using Schindler's call as an excuse for proselytizing unaffiliated Jews. Despite the attention that this suggestion created, little proselytizing of unchurched gentiles has occurred in the succeeding years, whereas many outreach programs to interfaith couples have been developed.

During the Schindler years the Reform movement adopted the patrilineal descent resolution, which stated that the child of one Jewish partner is "under the presumption of Jewish descent." While the document's vague wording led to some difficulties, the patrilineal descent policy insured that if one's father was Jewish and one's mother was not, one would still be regarded as Jewish, *provided that one was raised as a Jew*. This requirement of raising a child as a Jew was more stringent than *halakhah*. This would supplement rather than replace the traditional matrilineal descent policy, which established that the children of a Jewish mother would be Jewish regardless of their father's faith or even how they were raised.

Also during Schindler's presidency, the Reform movement allowed women to assume a more central role in the synagogue, a direct consequence of the feminist movement that influenced every aspect of American life. As American women in the 1960s and 1970s took on a far greater role in religious life than those of previous generations, the Reform movement responded quickly and actively to the changing sex-role expectations. Increasing numbers of congregations allowed women to assume responsibility for all aspects of religious and communal life, even the rabbinate. In 1972, Sally J. Priesand became the first woman ordained a Reform rabbi at HUC-JIR, a revolutionary breakthrough. Since 1972, hundreds of women have enrolled in HUC. As the changes in the Reform movement paralleled social changes, its character as an American religious denomination made it popular with an increasingly Americanized Jewish community.

Contemporary Trends

Reform practice today, especially in the synagogue itself, is characterized by the partial restoration of a number of formerly abrogated rites and rituals. Ritual items eliminated by the Classical Reformers, such as the *yarmulke*, *tallit*, and even *tefillin*, have been brought back. But because of the concept of religious autonomy, individual congregations cannot and do not require congregants to wear any of these traditional prayer items. Rather, they are offered to those who find them religiously meaningful or who prefer to wear them as an expression of traditionalist nostalgia. This generates some incongruous and perhaps amusing situations. For example, it is not

uncommon to find congregations where many of the women wear *yarmulkes* and *tallitot*, while most of the men sit bare-headed and bare shouldered. This is the converse of the norm in traditional synagogues, where all men wear *yarmulkes*, *tallitot*, and on weekday mornings *tefillin*, and women rarely do. The Orthodox Jew who wanders into a Reform sanctuary by mistake would either break out laughing or withdraw in shock and horror.

Another dramatic trend has been the move away from a formal style of worship and music toward more jubilant and enthusiastic prayer. Certain particularly progressive congregations, such as the independent Congregation B'nai Jeshurun on the Upper West Side of New York, have served as models for most congregations that have been slowly evolving toward this more informal, exuberant style. The formalized Classical Reform service, which could uncharitably be called sterile, no longer impresses many with its dignity and majesty. Younger people have grown up with a different aesthetic. New types of music incorporate simple Israeli, ḥasidic, and folk styles, a style of worship developed at the UAHC summer camps under the rubric of the North American Federation of Temple Youth (NFTY) programs.

In a remarkably smooth transition of leadership, Eric H. *Yoffie, the president of the UAHC since 1996, inherited a movement that had grown substantially in numbers yet was perceived as having fundamental problems. Yoffie moved quickly and boldly to address these challenges, taking advantage of the new enthusiasm for spirituality and launching a systematic campaign to rebuild the entire Reform movement. He initiated a Jewish literacy campaign, which encouraged every Reform Jew to read at least four books with Jewish content every year. Recognizing that the NFTY, the movement's youth organization, had dwindled in effectiveness, Yoffie proposed a system that would include the appointment of full-time youth coordinators in each of the UAHC's thirteen regions.

Yoffie has only begun the process of reorienting the movement to meet the sociological challenges that Reform Judaism faces in contemporary America. At the same time, the rabbinic leadership has proposed a number of interesting initiatives, most notably Richard Levy's new Pittsburgh Platform. This restating of Reform religious beliefs generated a firestorm of controversy in 1998 and 1999. Although the CCR at its annual conference in Pittsburgh in May 1999 eventually passed a revised version called *A Statement of Principles for Reform Judaism*, supporters found it severely watered down, while Classical Reformers viewed it as a betrayal of the Reform legacy in America. Despite a year-and-a-half of conflict over this issue, the values that inspired people to join the Reform movement have kept them from splitting off or leaving altogether. Although many remain persuaded that Reform Jews have no strong religious beliefs, the movement has created and propagated a religious vision that remains compelling after 200 years. It owes its success to its ability and willingness to respond theologically to changing times.

REJECTION OF JEWISH LAW. Traditional Judaism had focused on the observance of the *mitzvot*, the commandments given by God and incumbent on every adult Jew. The Reformers argued that if the Sages developed specific laws as a response to historical conditions, then *halakhah* could be changed or even abrogated. The Reform movement thus viewed *halakhah*, Jewish law, as no longer obligatory.

Yet there was never complete agreement over how to relate to ritual observance. By the middle of 19th century, a wide spectrum of opinion existed on the issue. The historical school, which developed into the Conservative movement, argued that although *halakhah* might develop over time, it nevertheless remained binding. The historical school developed innovative religious approaches as well. The main difference – a significant one – is that the historical school attempted to show that *halakhah* evolved in order to justify ritual change on the basis of contemporary needs. The Conservative movement viewed itself as faithful to the halakhic process.

But Reform thinkers understood the historical changes within Judaism as far more radical. According to a Reform understanding of the history of Judaism, the religion has evolved in a revolutionary fashion at several key points in its history. These changes were not simply adaptations of a minor nature, but dramatic developments that marked huge jumps in both belief and practice. Reform theologians believed that generations in different time periods fashioned a Judaism that suited their contemporary religious sensibilities.

But if Jewish law was not obligatory, then what was the purpose of Judaism? Many 19th-century rationalists believed that human beings possessed an autonomous sense of ethics and morals.

The rationalist philosophers argued that religion imposed an externally derived legal system on individuals that prevented them from exercising their autonomous will. Such reasoning could lead one to conclude that the essence of Judaism is ethics rather than law. That explains why so much of the early Reform literature stressed abstract ethical lessons and avoided describing ritual acts. Religious law, the Reformists believed, was inferior to ethics; Judaism's challenge was to develop along Kantian lines. Revelation became a bit tricky, because one needed autonomy to choose the ethical path. If God made all the decisions and issued all the commands, then the individual would not have autonomous choice. Therefore, Reform thinkers developed the notion of man and God as partners in an unfolding process of continuing revelation.

The rejection of *halakhah* as a legal system meant that every individual practice had to be justified on its own merits, which produced widespread inconsistencies and contradictions. For example, the *halakhah* requires all Jews to fast not only on Yom Kippur, but also on Tisha be-Av, a fast day commemorating the destruction of the First and Second Temples and other catastrophic events, and four additional minor fast days. But if *halakhah* no longer bound Reform Jews, then they no longer had to abstain from eating even on the holiest fast day of the year. Most pulpit rabbis seem to have chosen to ig-

nore the glaring problem of ritual inconsistency, particularly in the private sphere. While Reform synagogues developed a standard liturgy and a formalized ritual, no corresponding code detailed how Reform Jews should live their lives outside the synagogue; each person had to decide what rituals, if any, remained meaningful. Perhaps the rabbis preferred not to interfere with the private habits of their congregants. Some theologians, however tried to provide an ethical justification for specific observance. In recent years, many Reform Jews have come to a new appreciation of the importance of ritual in religious life, which some Orthodox observers misinterpret as a return to halakhic observance. Rather, these Reformists find that specific traditional practices provide spiritual meaning for the individual. And that is, at heart, what the Reform movement stands for.

DIFFERENTIATING BETWEEN BIBLICAL AND TALMUDIC LAWS. From the beginning, lay leaders who wanted specific practical changes implemented pushed Reform forward. Innovation developed in response to local needs and took into account no overarching theological system or broad religious blueprint. Nevertheless, Reform thinkers had to develop a system for interpreting the tradition. One of their most important concepts was to differentiate between biblical and talmudic laws.

In traditional Judaism, the Sages differentiated laws that were *de-oraita*, from the Torah, from laws that were *de-rabbanan*, from the rabbis. But both types of laws were obligatory to the same degree, and one could not justify nonobservance by pointing out that a given law was “only” *de-rabbanan* rather than *de-oraita*. What was important to the Reformers was to develop a religious system that synchronized Jewish belief with contemporary trends yet retained enough particularistic elements to distinguish their religion as a form of Judaism. To this end, they wanted to eliminate laws and practices that would prevent or restrict their social and economic integration into the host society.

Writing in the 1960s and 1970s, American Jewish sociologist Marshall Sklare argued that the Jewish rituals most likely to endure were those capable of being redefined in modern, universal terms. A ritual would command widespread observance only if it did not bring with it social isolation or the adoption of a unique lifestyle. The message of the ritual had both to accord with the religious culture of the larger community and to provide a Jewish alternative to it. These usually focused on children and were performed infrequently so as not to be overly burdensome. Passover and Hanukkah, two holidays that met people's needs well, were therefore widely observed.

Reform Jews were quick to abandon practices such as *kashrut* that did not meet Sklare's criteria. Although it could be redefined in modern terms, for instance, keeping kosher would still demand a relatively high degree of social isolation as well as the adoption of a unique lifestyle. Nevertheless, some Reform Jews remained observant of the kosher laws, at least to some degree.

Reformers emphasized the prophetic ideals of justice and righteousness, arguing that these universalistic values formed the essence of Judaism. The 1885 Pittsburgh Platform, which differentiated moral and ritual laws and became the “principle of faith” for Classical Reform Judaism, stressed that most of the ancient laws were not to be observed.

Classical Reform was not only a system of beliefs, but also an aesthetic approach to religious practice. Although as immigrant Jews Americanized, they wanted their synagogues to reflect American norms, even in Europe many had seen the Orthodox way of worship as disruptive and undignified.

Many of the central European Jews not only believed that houses of worship should be places of propriety but also wanted their synagogue worship to reflect American norms and standards; they borrowed structural and stylistic features from local Protestant churches, copying their architecture, seating arrangements, musical styles, and so forth. Reform Jews also made a number of ritual changes solely on the basis of what they considered the most dignified approach. A Classical Reform aesthetic slowly developed into a compulsory system of ritual that replaced the halakhic system.

THE CHALLENGE OF UNRESTRICTED AUTONOMY. While Reform Judaism stood for the autonomy of the individual and against the belief that *halakhah* was binding in its entirety, in the post-World War II period, Reformers took a variety of positions on religious authority and how it can be reconciled with individual autonomy. While some argued against all boundaries, others tried to develop a post-halakhic justification for some form of Jewish legal authority. Reform thinkers understood that the freedom of action they advocated could result in unintended consequences. If individuals could make their own decisions over what to observe, then what would stop those individuals from observing nothing at all? Indeed, there were those who used the Reform movement to justify apathy and even apostasy. But no obvious solution presented itself.

In 1965, W. Gunther Plaut recommended to the Central Conference of American Rabbis (CCAR) that a Sabbath manual be written as a beginning toward a comprehensive guide for the Reform Jew. Plaut edited the result, *A Shabbat Manual*, published by the CCAR Press in 1972. The manual went much further than any previous CCAR publication in urging Reform Jews to perform certain *mitzvot* – to light Shabbat candles, to recite or chant the **kiddush*, and to avoid working or performing housework on the Sabbath. This watershed publication led to additional efforts to “return to tradition.”

Yet a return to tradition should not be misunderstood as an acceptance of *halakhah* as a binding system. Most Reform Jews believe that religion in general, and Judaism specifically, is very much a human institution. They believe that it is impossible to know with absolute certitude what God wants from us. Certainly, behaving ethically is necessary for people of all faiths. But we cannot know what ritual behavior God expects from us. Eugene B. Borowitz, HUC-JIR theologian, has suggested that “when it comes to ritual, they [Reform thinkers]

admit we are dealing largely with what people have wanted to do for God... ceremonial [behavior] discloses more of human need and imagination than it does of God's commands.” The traditional belief that the *mitzvot* are binding because they are God-given is reinterpreted to acknowledge God's indirect inspiration in what is essentially a process of human spiritual expression.

THE QUESTION OF THEOLOGICAL BOUNDARIES. The question of whether the movement has theological boundaries was tested in the early 1990s when Congregation Beth Adam of Cincinnati applied to join the URJ. Its founder, Robert Barr, had graduated from HUC-JIR; many if not most of its congregants came from Reform backgrounds, including three current or former members of the HUC-JIR Board of Governors. An adherent of Sherwin T. Wine's Humanistic Judaism, Barr had founded Beth Adam in 1981. Arguing that it was possible to follow Judaism without believing in God and certainly without a traditional conception of God, Wine had established the small movement in 1963, along with the first Humanistic Jewish congregation, the Birmingham Temple, in Michigan. Beth Adam had grown unhappy with the organization, in particular, as Barr explained, because the group had begun ordaining its own leaders. After about 10 years of belonging to no national organization Barr and the congregation felt the need to be in closer touch “with the issues and concerns of the wider Jewish community.” The board of Beth Adam decided to apply to join the URJ.

URJ president Alexander Schindler encouraged Beth Adam's application but took no public stand on what the Union should do, stating at the 1991 URJ biennial only that the controversy would “generate a boon to our community” by opening a debate on what a Reform congregation must accept, if anything. The debate centered on the congregation's exclusion of God from its liturgy. Neither the *Shema* nor the *kaddish* was recited, the group's literature explained, because prayers “which presume a God who intervenes or manipulates the affairs of this world” would be inconsistent with its religious message.

While some supported Beth Adam's application, the response was largely negative and even hostile, and in 1990 a majority of the CCAR Responsa Committee voted against accepting the group. Chairperson W. Gunther Plaut wrote that its “elision of God” means the congregation “does not admit of Covenant or commandments”; while the Reform movement can accept individuals who may be agnostic or even atheist, it cannot accept congregations whose declared principals contradict the religious beliefs of Reform Judaism. Three rabbis on the Responsa Committee disagreed with the majority view, arguing that to accept Beth Adam into the URJ would not necessarily imply that the Reform movement accepts its theological views. The debate continued through the early 1990s.

In June the URJ Board of Trustees spent an entire day deliberating the matter in Washington, DC. At the end of its deliberations, the board voted 115 to 13 with four abstentions to reject the application.

The Beth Adam decision meant that while congregations still had the right to adopt the prayer book of their choice or write one of their own, there were theological limits on what could legitimately be regarded as Reform liturgy. The vote also reaffirmed that the drive for inclusion did not obligate the Reform movement to accept every group from every background espousing every ideology.

THE MOVE TOWARDS RETRADITIONALIZATION. Rabbi Eric H. Yoffie, a Reform rabbi and the president of the URJ, is leading the restructuring and revitalization of the Reform movement. When Yoffie took office the Reform movement had to either make dramatic changes or watch its fortunes fade rapidly. Large numbers in the movement have been receptive to his proposals. New approaches to study, worship, and ritual practice are being implemented.

Yoffie then outlined a plan to reform Reform. "I propose, therefore, that at this biennial assembly we proclaim a new Reform revolution. Like the original Reform revolution, it will be rooted in the conviction that Judaism is a tradition of rebellion, revival, and redefinition; and like the original too, this new initiative will make synagogue worship our Movement's foremost concern." Yoffie urged that this "worship revolution" be built on a partnership among rabbis, cantors, and lay people.

The URJ leadership has prepared a series of initiatives that taken together constitute "a Reform revolution." Many insiders are very hopeful that the coming years will see radical changes that excite Reform Jews and get them involved in concrete religious activities. To bring the synagogue back as a central Jewish institution, Reformers are developing programs that appeal to a much broader range of individuals and client groups.

Much of the success of this effort relies upon how deeply it can touch people's emotions. In his Orlando address Yoffie asked, "What will be the single most important key to the success or failure of our revolution?" And then he answered his own question: "Music." "Ritual music is a deeply sensual experience that touches people in a way that words cannot. Music converts the ordinary into the miraculous, and individuals into a community of prayer. And music enables overly-intellectual Jews to rest their minds and open their hearts."

The new programming has occurred not only within the movement itself, but also in related efforts such as the Synagogue 2000 transformation project led by Rabbis Ron Wolfson and Lawrence Hoffman. As Wolfson put it, "What defines great, spiritual davening experiences is music, music, music." Some cutting-edge congregations like B'nai Jeshurun in Manhattan and Temple Sinai in Los Angeles have become nationally known for implementing vibrant music programs that draw hundreds to their Friday night and Saturday morning services. That neither congregation is affiliated with the Reform movement may not be a coincidence. A vibrant musical experience requires the congregants to actively participate, to sing the songs with passion as well as confidence, and most Reform Jews do not know the words well enough to sing along.

Their Hebrew may be poor, and not enough congregants have so far expressed the willingness to put in the time and effort necessary to acquire more advanced Hebraic skills.

The URJ has inaugurated a number of programs specifically to address this issue, among them a Hebrew literacy campaign called "Aleph Isn't Tough: An Introduction to Hebrew for Adults" launched to "open the gates of prayer" to the average Jew. The URJ's new Hebrew primers will focus not only on phonetic reading but also on the comprehension of basic prayers and text. The hope is that more and more synagogues will use these or other texts to offer a variety of adult Hebrew classes. The more Hebrew that Reform Jews know, the more accessible is the textual tradition.

Yoffie argues that in the current religious climate, concrete programming designed to get people doing *mitzvot* must precede theological formulations.

YOUTH EDUCATION PROGRAMS. Temple youth groups are the entry points for many young people into congregational life, and over the last several years, the Reform movement has set out aggressively to nurture the development of teen leaders not only for youth groups but also for congregations as a whole.

Once a dynamic and successful organization, NFTY failed to keep up as society changed in the 1980s and the 1990s. As a consequence, more and more youth found NFTY no longer as nifty as it had once been, and they voted with their feet, particularly after their bar and bat mitzvahs. Other youth organizations that had experienced similar problems had taken steps to remake their images and reformat their activity offerings, including the Girl Scouts, as Fox News reported in November 2000. "We're no longer about baking cookies and toasting marshmallows around the fire," one Girl Scout leader told a news crew. "We now offer young women the chance to get advanced computer training, learn marketing skills, and network widely."

Yoffie himself called the teen dropout rate in the Reform movement "appalling high." While many Reform teenagers appear to be uninterested in Reform Judaism and drop out for that reason, others claim that they would love to continue to be involved but are simply not the youth-group type. In response, Yoffie suggested revamping NFTY. To build a structure that could more effectively keep youth involved throughout their high school years, he announced that each URJ region would hire a full-time professional to organize and develop youth programming in that region. The hope was that this decentralization would allow the URJ regional directors to have more impact on youth programming, a far more effective approach than trying to run everything out of New York. Yoffie has further committed the entire movement to developing a range of new programs for teenagers who want alternatives to the standard youth group activities. His ideas include a summer travel program focusing on social action projects and a summer study program that combines SAT preparation and college visits with Judaica.

NFTY's own summer programs in Israel have proved remarkably popular, although registration dropped off precipitously as a consequence of the renewed tensions between Palestinians and Israelis. Eric Yoffie set off a controversy when he cancelled Reform youth trips to Israel at the height of the violence, arguing that it was not fair to use other people's children to make political points. In any case, the movement quickly reestablished its Zionist credentials. New trips were publicized, but it remains difficult to recruit teenagers willing to go or parents willing to allow their children to go. At its height, the summer program sent more than a dozen groups for six-week trips that incorporated touring, educational programs, and leadership training. The Israel trips were inspirational because they immersed the participant not only in the NFTY experience 24 hours a day, but also in the Israeli context. Most participants came back transformed, although it remains unclear how much of that "transformation" endured. But rabbis and educators feel convinced that a trip to Israel is one of the most significant experiences a family can give teenagers. An entirely different style of informal education is available at the Reform movement's summer camps, where generations of youngsters have had some of their most positive Jewish experiences. These regional camps provide "a joyous, invigorating and uplifting few weeks of total immersion in Judaism, with memories powerful enough to last the entire year."

The camps combine a rich Jewish atmosphere, positive development experiences, and a natural setting. As Lee Bycel explained in a temple bulletin: "No matter how much we do here at Fairmount Temple, it is hard to convey the depth and feeling of Judaism in just a few hours each week. At a Jewish summer camp, our young people are immersed in a total Jewish environment. Shabbat is a natural part of the week, which emerges from all they have learned and experienced during camp. For many years, I have spent time in our movement's summer camps. I love watching the faces on our young people as they gather for Shabbat – eager, joyful, immersed in the moment, understanding of the beauty of Shabbat, truly a sight to be seen."

Further, "Jewish summer camps can play an important role in building self-esteem. It is important for our young people to be in a healthy and safe environment, away from parents, where they can learn more about themselves and their own abilities and skills. They gain a lot by having to be responsible for themselves – and it is amazing what they can manage to do without our help." Finally, "hiking, sleeping out under the stars, having the time to see the beauty around them without a car or movies, or video games – teaches some of the most important lessons in life."

The first URJ camp in North America, was Olin-Sang-Ruby Union Institute (OSRUI) in Oconomowoc, Wisconsin. When OSRUI began, the music consisted largely of folk songs and, later, of civil rights movement chants "considered to have religious significance in that they embodied Reform principles." The folk music was slowly supplemented by traditional

Jewish music and a new American Jewish folk music. OSRUI hired Debbie Friedman as a song leader in 1970 as "a new genre of music was coming to the fore. It was a Reform Jewish genre of music, songs that were mainly liturgical, written by [camp] song leaders. She brought her tunes and her compositions to the camp and helped to empower a whole generation in this region." This music continues to inspire many Reform Jews.

Friedman began song leading for her synagogue youth group in 1968, then attended a song leader workshop at the Kutz Camp Institute in Warwick, New York, and soon began writing her own music. "I taught it to a group of kids who were doing a creative service with James Taylor, Joan Baez, and Judy Collins music. Not only did they sing the *Ve-Ahavta*, they stood arm in arm. They were moved; they were crying. Here was something in a genre to which they could relate." In 1972 she recorded *Sing unto God*, an album of Sabbath songs that featured a high school choir. "I had planned [only] to make a demo tape, but when I found out it would cost only \$500 more to make 1,000 LPs, I thought, why not? They sold like hot cakes at camp. That's how it started. It was a fluke." Friedman moved to Chicago, where she began leading services and continued her youth work. Later she took a position as a cantorial soloist in California, began performing more frequently, and recorded additional albums. Soon people began using her melodies in their synagogue services.

Perhaps her most famous creation is "*Mi-she-Berakh*," composed for a *simchat hokhmah*, a celebration of wisdom, to honor a friend on her 60th birthday. The prayer offers the hope of healing for those suffering. "My friend was having a very difficult time in her life and a number of her friends were also struggling. Yet she had arrived at this age and was determined to embrace it." Introduced at the URJ biennial in San Francisco in 1993, the tune has become the most popular adopted liturgical melody in recent decades.

A NEW COMMITMENT TO ADULT EDUCATION. Because study is not solely a youth concern, the URJ leadership has committed itself to creating a "synagogue of the future" that will provide a place of serious learning for all ages. In traditional Jewish thought, God spoke to individuals through their study of sacred texts. But few in the Reform movement could read Hebrew well enough to study the texts in the original, and most of the few English translations were not suitable for adult education programs.

One indication of the URJ's commitment is a resolution on Torah study adopted at the 1997 biennial conference in Dallas:

We recognize that North American Jews face a Jewish literacy crisis. While we are the best-educated generation of Jews that has ever lived, we are often woefully ignorant of our own Jewish heritage. At the same time, we are witnessing a renewed enthusiasm for Jewish learning throughout the Reform movement. Those of us who have had the opportunity to study and taste the richness of Torah have discovered that learning is a source of inspiration and great adventure.

Adults throughout the Jewish community are finding their way back to serious textual study. Kenneth Cohen, a founding executive of the software giant Oracle, became involved in Lehrhaus, a Berkeley, California, adult education program named after Freies Jüdisches Lehrhaus (Free Jewish study center), the pioneer program developed by Martin Buber, Franz Rosenzweig, and a number of other German Jewish intellectuals in Frankfurt during the interwar period. Featured in 1998 in a widely distributed report from the Jewish telegraphic agency, Cohen spoke of his motivation for studying: "It's just inevitable that you say to yourself, 'What do I want to pass on to this kid [his child] other than my stock certificates?' I had to have a higher goal." He found that "doing and receiving Jewish education is a remarkable, rewarding thing. It's passing on not the latest hot computer chip, which will be obsolete next year, but taking the accumulated knowledge of humankind and perpetuating that, passing it on to new generations and pass it on [further]."

In almost every major city today, nondenominational independent institutions offer intensive Jewish adult education. The Florence Melton Adult Mini-School Program offers a two-year, 120-hour course of study to several groups of students at a time in 34 cities. Most students in all of these programs are middle-aged baby boomers searching for meaning. "It's an awakening," says Paul Flexner of the Jewish Education Services of North America. Many had stopped their Jewish education immediately after their bar or bat mitzvah two, three, or four decades earlier. They now feel an acute awareness of how much they have missed and how much they don't know. Many feel their textual illiteracy prevents them from passing on to their children a meaningful Judaism that goes beyond superficial ethnic foods and accents.

Along with the URJ, individual synagogues are developing new approaches to attract the many congregants who do not attend Jewish study sessions. When Congregation Beth Am in Los Altos Hills, California, hired Josh Zweiback in 1998 as adult educator, he took the first full-time position in a Reform congregation in the United States intended to "develop new frontiers of education in synagogue life," according to Richard Block, the congregation's senior rabbi. Funded by the Koret Foundation of San Francisco, Zweiback interpreted his mandate as spanning a very broad spectrum, from Torah study to "all sorts of experiences including praying and giving Tzedakah." He pointed out that "distinctions between mind and body were not made in classical times: living Torah and learning Torah went hand in hand." Zweiback has tried a number of interesting ideas. On the congregation's Tikkun Olam Day, he distributed a tape about the role of social action in Judaism that included mock interviews with famous Jews throughout history, a number of Hebrew concepts relating to the subject, and the senior rabbi teaching a blessing that should be recited before performing a mitzvah.

Among new paradigms being explored are family education, where the entire family – adults and children – study and experience Judaism together, and an intensive immersion

program. Peter Knobel of Beth Emet, the Free Synagogue of Evanston, Illinois, takes about 50 members of his congregation to Jerusalem for one week every other year. "They stay in the dormitory of Hebrew Union College, and I get some of the best Jewish scholars in the world to teach them. They have been required to read a serious book on Judaism by a major scholar – they all have read it and have come prepared – and for a week they study with the scholars. We do no touring; when they are not in class they are free in Jerusalem. The success of this program indicates to me that many Jews really want to learn about the faith in a serious way." Unlike a special interest program for people from all over the country, Knobel's group comes from one temple in a Chicago suburb. The study trip's congregational nature accounts for its success, allowing the intense experience to include both extensive preparation and substantial follow-up.

New Definitions of Jewish Identity

The patrilineal descent resolution was thus less a significant departure from previous Reform policy than a public declaration of inclusivity, a logical step in the open society of the United States. To move in the direction of exclusion would severely limit the pool of potential recruits, just when the Reform movement was looking for new members. The acceptance of patrilineal descent sent a clear message that the children of intermarried couples – even those who were not halakhically Jewish – were welcome in the synagogue.

FEMINISM AND THE REFORM MOVEMENT. Despite the Reform movement's never having opposed equal rights for women, the male hierarchical structure remained in place until the 1960s. The push for egalitarianism was not a high priority for the 19th-century Reformers, who were far more concerned with reforming the liturgy and adapting Judaism's religious beliefs to the surrounding cultural environment.

Yet until the 1960s, most Reform congregations were run by men, and their dominance was accepted without question. Fitting in was important, and congregational social mores reflected the society's. Whether immigrant or native born, American Jews adjusted to American values and wanted to see those values reflected in their congregational structure and activities. This meant that women in the typical Reform congregation were relegated to the traditional woman's role, a situation accepted by almost all parties without dissent. Sisterhoods served central functions in temple life; without them, many if not most activities would have been impossible. Whether they were baking cakes for fundraising purposes, preparing the confirmation dinner, or simply attending services, women constituted the backbone of Reform religious and social life.

But in the 1960s, the feminist movement began to challenge the traditional roles assigned to women. Through the 1970s and 1980s, its impact on the synagogue was immense. As women began to move into roles of responsibility traditionally assigned to men, there was a great deal of dissonance. Rachel Adler, an early Jewish feminist and then a lecturer at

HUC-JIR in Los Angeles, in 1983 summarized the feeling of many women: "Being a Jewish woman is very much like being Alice at the Hatter's tea party. We did not participate in making the rules, nor were we there at the beginning of the party. At best, a jumble of crockery is being shoved aside to clear a place for us. At worst, we are only tantalized with the tea and bread-and-butter, while being confused, shamed and reproached for our ignorance." Women in the Reform movement studied for the rabbinate, the cantorate, and other professional positions, while others became synagogue presidents rather than sisterhood presidents. What had been seen as an oddity became an accepted phenomenon, then so commonplace as to be unworthy of note.

Many of the leading feminists were Jewish, and some of them took an interest in Jewish affairs. Other women admired the feminist leaders and specifically wanted to apply their perspective in a Jewish context. The Reform movement provided an ideal setting for this synthesis because of its non-halakhic nature, allowing a much greater flexibility than could have developed in Orthodox or even Conservative Judaism. Women wanted to be treated on an equal basis with men, both in the synagogue power structure and in their portrayal in the myths of the tradition.

The Struggle for the Ordination of Women as Rabbis

While the issue of women's ordination is only one aspect of the struggle for gender equality in the Reform synagogue, it is important not only for its symbolic value, but also for opening the way for women to increase in their influence dramatically. The ordination of Sally Priesand in 1972 was an extraordinary event, because HUC-JIR was the first major rabbinical program in the history of Judaism to ordain a woman rabbi.

By the time Sally Priesand had finished her studies at HUC-JIR, the impact of feminism had transformed the Reform movement to a degree unimaginable just a few decades earlier. Nelson Glueck supported her petition – there was little basis upon which to deny her the certificate of ordination. Unfortunately, Glueck died before he could actually ordain Priesand, and new HUC-JIR president Alfred Gottschalk conducted the ordination ceremony. After a stint as an assistant rabbi and then as a chaplain, Priesand joined Monmouth Reform Temple in Tinton Falls, New Jersey, where she continued as the rabbi.

THE IMPACT OF FEMINISM ON REFORM LITURGY. Many modern American women found the language of the traditional prayer book restrictive and even sexist. Based on biblical models that portrayed God solely in masculine terms, the prayers assume that public worship is an obligation primarily for men. For example, the prayer that began "Praise be our God, God of our Fathers, God of Abraham, God of Isaac and God of Jacob" now seemed exclusionary. Where were the matriarchs? In 1972, a task force on equality, arguing that such language misleads worshipers about the true nature of both human beings and God, recommended altering masculine references in prayer. In the resulting effort to rewrite the

prayers to reflect the growing egalitarian nature of American Jewish thinking, the names of the matriarchs were added in a series of gender-sensitive prayer books published in the early 1990s. The same prayer now reads, "Praised be our God, the God of our Fathers and our Mothers: God of Abraham, God of Isaac and God of Jacob; God of Sarah, God of Rebekah, God of Leah, and God of Rachel."

Dealing with the names of God framed in the masculine form was more difficult. In English, Reform prayer books had referred to God as "He" and "Him" and called God "the Lord." These references could be changed, but the practical problem of replacing prayer books in use for only a short time was daunting. Some congregations developed a list of gender-sensitive words that could be substituted for masculine references to God. Thus, the word "God" might be used to replace "the Lord" each time that phrase appeared in the prayer book. But this could confuse congregants, who had to be exceptionally alert to make all the correct substitutions in the right places and at the right times. In the mid-1990s a series of soft-cover experimental gender-sensitive prayer books, then a hard-cover gender-sensitive version intended to be semi-permanent, gradually supplanted the original Sabbath prayer book *Gates of Prayer*. A new gender-sensitive edition is under way.

Congregations did not want to replace the new edition of the High Holy Day prayer book, *Gates of Repentance*, so soon. The solution was a gender-sensitive version that matched the original, page for page. Unfortunately, many found the mix of the two High Holy Day prayer books in the same service confusing, as their neighbors seemed to be reading from a different text than they were. But the production of new prayer books would eventually resolve such issues. Most Reform Jews adjusted to the new liturgy and accepted the gender-sensitive wording without a murmur. Many women found it empowering and exhilarating.

Priesand's ordination opened the door for many other women interested in careers to which rabbinical ordination could provide them access. Large numbers applied to cantorial as well as rabbinical programs at HUC-JIR. The Rabbi Sally J. Priesand Visiting Professorship was launched in the fall of 1999 at HUC-JIR in New York. By May 2001, 373 women were ordained. At HUC-JIR in Los Angeles, the very first group of female ordainees in May of 2002 includes five women out of eight rabbinical graduates. Six women have been ordained in the Israeli program on the Jerusalem campus.

The increasingly active role that women are playing in the Reform congregation has fueled concerns that an increasing number of men may walk away from active leadership involvement. This phenomenon is not new; many-19th century Reform rabbis complained that their congregations on Shabbat morning were composed primarily of women, children, and the elderly. But if the new trends increase the alienation of Jewish men from the temple, the yoke of Jewish communal leadership may fall more and more on female shoulders. Others worry that Jewish professional work is starting to be seen as more suitable for women than men. There is a persistent

rumor that HUC-JIR deliberately admits fewer women than men to avoid the “feminization” of the rabbinate. Some older male rabbis have grumbled that the rabbinate is becoming a “woman’s profession” and, like grammar-school teaching and nursing, will decline in professional status and in salary range. They cite studies suggesting that when women enter certain professions in large numbers, those fields undergo profound and – from their perspective – negative changes.

Many women rabbis complain that their career path has been blocked. In Sylvia Barack Fishman’s terminology, they had to break through “Jewish ceilings.” Only a handful have been appointed as senior rabbis of large congregations in recent years. Paula Reimers, a rabbi in Arizona, said in 1992: “It’s the same old story. Everyone is in favor of women rabbis – until it comes time to hire one. A congregation would rather take an incompetent man than a woman. Women are picked last.” Such complaints, frequent in the early years, seem to have diminished, if not disappeared. Although a shortage of rabbis may explain the change in part, an increasing willingness to accept women in the rabbinate is apparent. Many congregations have had positive experiences with women rabbis; many boards may have found that female rabbis are more likely to deliver the type of service their congregation needs. In the face of this pragmatic reality, any residual resistance quickly melts away. Women cantors in the Reform movement have had an easier path in the years since Barbara Ostfield Horowitz was invested in 1975 as the first female cantor. An almost continuous shortage of ordained Reform cantors has guaranteed enough pulpits for all graduates of the School of Sacred Music at HUC-JIR in New York. Furthermore, it is easier for many of the old-fashioned congregants to accept a woman cantor than a woman rabbi, perhaps because cantors are perceived as subordinate to the rabbi. The fine voices of many of the women may also have dissipated potential opposition, as congregants discovered the new cantor’s leading of the service to be a pleasant experience.

An increasing number of congregations simply take the equality of men and women for granted.

Laura Geller, the senior rabbi at Temple Emanuel in Beverly Hills since 1994, believes that she exemplifies a feminine approach to the rabbinate. “My style is one of shared leadership – I would argue that’s a feminine model of leadership. Our congregation is not a hierarchy, but a series of concentric circles. One of my very clear goals is to empower lay people to mentor young people, lead services, teach, and really take responsibility for their own Jewish life.” Credited with shattering the “stained-glass ceiling” by becoming the first female senior rabbi at a major metropolitan synagogue, Geller has been followed by senior rabbis Marcia Zimmerman at Temple Israel in Minneapolis and Amy Schwartzman at Temple Rodeph Sholom in Falls Church, Virginia. Geller wonders: “Are there so few of us in senior rabbi positions because we’re not choosing them, or because we’re not given a shot at it? The answer is a bit of both.”

“I have come to discover, through my involvement over

the years, that when women’s voices are heard, a tradition changes,” Geller says. “What happens when women become engaged in creating and reforming Jewish experience [is that] our experience becomes central and not marginal, and deserving of blessing and ceremony.”

THE ISSUE OF HOMOSEXUALITY. The issue of *homosexuality cuts to the heart of how the Reform movement deals with the conflicting demands of tradition and modernity. Here is a case where the tradition could not be clearer – homosexuality was prohibited in the strongest terms. Yet liberal American Jews felt they had to find a way to reconcile this condemnation with their contemporary values. How the Reform rabbinate handled this sensitive question is worth a close look.

The CCAR first dealt with the issue of homosexuality in the mid-1970s and soon after was supporting human rights as well as civil liberties for gays and lesbians. Most Reform rabbis took liberal positions across the board and so were quick to embrace what many saw as another liberal social cause. One issue that concerned still closeted gay and lesbian rabbis was the impact on their career trajectory should they declare themselves publicly. HUC-JIR did not officially admit openly gay students, and the CCAR did not guarantee to support gay rabbis looking for congregational employment. In 1986, Margaret Moers Wenig and Margaret Holub proposed a CCAR resolution that recommended a nondiscriminatory admissions policy for HUC-JIR and a nondiscriminatory placement policy for the Rabbinical Placement Commission (RPC). The motion was not voted on but referred to the newly created Ad Hoc Committee on Homosexuality and the Rabbinate chaired by Selig Salkowitz.

The 17-member committee – eight congregational rabbis and representatives of HUC-JIR, UAHC, and the RPC – met regularly for study and deliberation for more than four years. They talked often with leaders of other Jewish denominations as well as with the Progressive movement in Israel. Consulting with Reform leaders in Israel was particularly important because any American resolution favoring gay rights would be used as a political weapon by the Orthodox in Israel, who opposed religious pluralism in the Jewish State. Israeli Reform rabbis told the Americans that any such resolution would make their already difficult position even more so, but this information had little impact.

In the belief that gays and lesbians were entitled to equal religious as well as civil rights, many Reform rabbis felt it was important to push ahead. Whereas the Orthodox saw homosexuals as violating an explicit commandment of the Torah, most Reformers saw them as people who needed and wanted the same spiritual sustenance available to heterosexuals. Alexander Schindler, well known for confronting controversial issues head-on, gave a public address in November 1989 adding his voice to those already supporting gay rights. “If those who have studied these matters are correct, one half million of our fellow Jews, no less than one hundred thousand Reform Jews, are gay. They are our fellow congregants, our friends

and committee members and, yes, our leaders both professional and lay.”

In June of that year at a CCAR meeting in Seattle, there was a debate on a widely publicized report issued by the CCAR's Ad Hoc Committee on Homosexuality and the Rabbinate. As a part of the educational process, the committee invited four Reform rabbis to prepare and submit papers on the topic of “Homosexuality, the Rabbinate, and Liberal Judaism.” Despite the appearance of an active debate, it was clear that the movement as a whole would support greater rights for gays and lesbians. It was less clear exactly what the CCAR would decide concerning some of the technical questions.

In 1990 the committee issued a report noting that the Bible uses the harshest terms to condemn male homosexual behavior, referring to it repeatedly as a *to'evah*, an abomination. The Talmud and Codes reinforce the position that any male or female homosexual activity was strictly prohibited. Nevertheless, the committee rejected this position as untenable and stated that “all Jews are religiously equal, regardless of their sexual orientation.” While the committee recognized that, in the Jewish tradition, heterosexual monogamous procreative marriage is the ideal, “there are other human relationships which possess ethical and spiritual value, and... there are some people for whom heterosexual, monogamous, procreative marriage is not a viable option or possibility.” Thus the committee took the position that a homosexual relationship could possess spiritual value for those who could not form a heterosexual union.

One of the most pressing questions was how HUC-JIR should deal with gay and lesbian applicants to the rabbinical program, for although the two are separate organizations, it was expected that all rabbinic graduates of HUC-JIR would become Reform rabbis and join the CCAR. Gary Zola, HUC-JIR's national dean of admissions, showed the committee a written policy statement issued by HUC-JIR president Alfred Gottschalk on February 8, 1990. Gottschalk wrote, “The College will consider any qualified candidate in terms of an applicant's overall suitability for the rabbinate, his/her qualifications to serve the Jewish community effectively, and to find personal fulfillment within the rabbinate.” The HUC-JIR Dean's Council felt that sexual orientation should not be a consideration in a candidate's decision to apply for admission; “I underline, however, that this does not commit us to the acceptance or rejection of any single student. Each applicant is judged as an individual on the basis of his total profile.”

THE CONTEMPORARY REALITY. In the early 21st century, Reform Judaism is a pluralistic American religious denomination. No one could possibly argue that one must accept a specific set of theological principles in order to be a Reform Jew in good standing. Yet the movement is thriving. New congregations are joining the URJ and existing ones are increasing their membership. This popularity has little to do with Reform's specific theological formulations. Rather, the flexibility that has emerged from its theological pluralism has allowed

the movement to draw strength from new types of adherents while creating new enthusiasm among substantial numbers of longtime members.

The Reform movement has come a long way from the theological uniformity of the 1885 Pittsburgh Platform. By the 1970s, there was such full acceptance of a wide range of traditions, customs, and practices that it would have been ridiculous to suggest that one official standard was uniformly accepted and required for a Reform service of any type. Behind this diversity of ritual expression lay the acceptance of the idea that there was no one Reform theology, that Reform Judaism represented many different ways of thinking about God and the relationship between God and the Jewish people.

Eugene Borowitz acknowledges this pluralism explicitly in his book *Liberal Judaism*, published by the URJ in 1984. He asks, “Who is a good Jew?” And he answers, “I consider nothing more fundamental to being a good Jew than belief in God.” But he goes on to suggest that there are many different ways of looking at God, and that many of them can be religiously authentic for a believing Jew. “With our religious and communal authority largely replaced by the insistence of modern Jews on thinking for themselves, no one can easily claim the authority to overrule competing views.” In discussing how Jews may legitimately view God, Borowitz admits: “With our new appreciation of pluralism, we have also gained greater appreciation of the extraordinary openness with which Judaism has allowed people to talk of God. ‘My’ good Jew believes in God but not necessarily in my view of God. We have numerous differing interpretations of what God might mean for a contemporary Jew... I am saying that we Jews have been and remain fundamentally a religion, not that we are very dogmatic about it.” From a theological point of view, the acceptance of such a broad spectrum of beliefs makes it impossible to present a clear and compelling religious vision that could motivate followers to sacrifice for the sake of God. There are simply too many images of God for the group to agree on any one. On the other hand, this theological diversity allows the Reform movement to reach out to a broad spectrum of people who differ not only in their lifestyles, but also in their religious convictions.

The pluralistic nature of American religion has mushroomed over the past 25 years. “Spiritual individualism” has become an important force as congregants became less willing to sit quietly listening to the choir sing and the rabbi sermonize. They expect to participate actively in a common spiritual quest. More and more Americans seek inspiration from their personal life experiences rather than from a doctrine handed down through creedal statements or religious hierarchies. “Spirituality” is becoming more and more detached from traditional religion. In an increasingly therapeutic age, religion will be viewed as just another means of solving or at least coping with emotional and even medical problems.

Despite these trends, the Reform movement would again urge Reform Jews to embrace traditional rituals and to this end would debate and pass yet another theological statement,

the 1999 Pittsburgh Platform. But in spite of arguments over its substance among the Classical Reformers and the neo-Reformers, the movement has continued to grow, further proof that Reform thrives because of, not despite, its pluralism.

Problems Facing the Reform Movement in Israel

With such a diverse population expressing such a multiplicity of views and practicing religion in so many different ways, one might expect the Reform movement to find a ready niche in Israeli religious life. This has not proven to be the case. Since Israel's rabbinate controls all issues of personal status, non-Orthodox rabbis in that country are not able to perform legally binding marriage ceremonies, divorces, or even most burials. Reform and Conservative conversions are accepted by the Jewish Agency, thus allowing such individuals to immigrate to Israel under the Law of Return. Such converts, however, will not be recognized as Jews by the chief rabbinate and may therefore have problems once they settle in the country.

Complex and multifaceted problems face the Reform movement in Israel. The early Jewish settlers came from countries that lacked the pluralistic religious environment that would have allowed alternative forms of religious expression to develop. The settlers arrived in a Palestine ruled by the Turks, who likewise did not encourage Western liberal cultural or intellectual developments. The early Zionist pioneers included few Western immigrants, and most of those who did settle in Israel adapted themselves to the prevailing social and religious norms. While Maurice Eisendrath had argued in favor of the creation of an Israeli Reform movement as early as 1953, not until the late 1960s did the World Union for Progressive Judaism develop an Israeli movement, and not until 1968 did the group hold a biennial conference in that country.

Over the past three decades, the World Union has devoted much effort to building up the Israel Movement for Progressive Judaism (IMPJ), which was incorporated under Israeli law in 1971. The Israeli leaders chose to refer to themselves as the movement for *Yahadut Mitkademet*, Progressive Judaism, avoiding the use of the term "reform." By doing so they hoped to minimize the negative associations that many Israelis have of the American Reform movement. Particularly damaging was a video replayed on Israeli TV a number of years ago of an American Reform rabbi and a priest co-officiating at a wedding ceremony, a sight many Israelis, including many secularists, found shocking and offensive. The 2000 Greensboro, North Carolina, CCAR resolution sanctioning same-sex unions has attracted a great deal of attention and criticism. Israeli Orthodox leaders, including politicians, argue that the Reform movement has encouraged assimilation and has proven itself a destructive force. Periodically, well-known Israeli Orthodox rabbis have attacked Reform Judaism and its adherents, sometimes in the vilest of terms. Nevertheless, Israeli-born Reform leaders such as Uri Regev, founder of the Israel Religious Action Center and now executive director of the WUPJ, have become well-known personalities interviewed frequently by TV news crews. Regev has made a great deal of

progress in pushing for greater rights through the court system. Each time he has petitioned the Israeli Supreme Court, news media interviewed him on the importance of his petition and his understanding of why it was necessary to change the religious status quo, further positive publicity for the Progressive movement.

Many non-Orthodox Israelis have been positively impressed. A few years ago, a number of leading Israeli writers and intellectuals called on the Israeli public to join the Reform movement to protest the Orthodox monopoly on life-cycle ceremonies. The Orthodox in turn renewed their attacks on the Reform movement. Orthodox spokesmen continued to lambaste Reform Judaism, and unknown individuals suspected to be from the ultra-Orthodox community vandalized buildings associated with Reform institutions.

But Orthodox hostility, only one facet of the problem, could work in the Progressive movement's favor, since many secular Israelis harbor resentment toward what they see as the religious coercion of the Orthodox. But the coalition agreements between the Labor and Likud Parties and one or more Orthodox parties have insured that the status quo is maintained in religious matters. As a consequence, an Orthodox rabbi must certify weddings between Jews, for example, although a few sympathetic Orthodox rabbis have signed for a Reform or Conservative rabbi who is the actual officiant. But the Orthodox rabbinate has worked vigorously to clamp down on those who helped circumvent the system. Most Jews who marry in a Reform ceremony in Israel then go to Cyprus to receive a civil marriage license, as the Israeli Ministry of Interior will accept any marriage certificate issued by an official government. Thus, the Israeli government recognizes a marriage certificate signed by a Cypriot judge but not one signed by an Israeli Reform rabbi.

There have been some encouraging developments. As part of a series of public relations campaigns, the IMPJ launched a \$350,000 media blitz right before the High Holy Days of 1999, to encourage Israelis to attend a Progressive or Masorti (Conservative) synagogue. Billboards, posters on buses, and newspaper supplements featured the slogan, "There is more than one way to be Jewish." The accompanying radio campaign became immersed in controversy after the government-owned Israeli state radio tried to cancel the advertisements, claiming the wording would offend Orthodox Jews. The Supreme Court issued a show-cause order, and the campaign was allowed to proceed after IMPJ and Masorti leaders agreed to change the slogan on the radio to, "This is our way – you just have to choose." The IMPJ reported that an estimated 20,000 Israelis filled 27 synagogues and additional facilities rented for the High Holy Days. Many congregations doubled the number of attendees from just a year earlier. The IMPJ received many phone inquiries about membership and even a few requests for information on how to form congregations.

In March 2000, the IMPJ worked together with Israel's Masorti movement to promote non-Orthodox marriage ceremonies. The campaign ran full-page advertisements in the

weekend editions of the major Israeli newspapers and four hundred radio ads featuring couples who had been married in either Progressive or Masorti ceremonies. The ads emphasized the egalitarian nature of the non-Orthodox wedding ceremony, as well as the lack of the intrusive questions Orthodox rabbis usually ask. The campaign also stated clearly that under current Israeli law, the couple would need to marry a second time in a civil ceremony abroad for their marriage to be recognized by the Interior Ministry.

The IMPJ is also continuing efforts to reach Russian-speaking immigrants. In February 2000, Michael Brodsky and a number of other Russian speakers published their first edition of the revised *Rodnik* (The source). Originally geared toward Jews in the Former Soviet Union (FSU), the magazine had shifted its focus to the emerging local movements. Now the editors refocused it on issues of interest to Israeli immigrants from the FSU. Brodsky, previously spokesperson for the Yisrael ba-Aliyah political party, now serves as the IMPJ's liaison with Russian-language media outlets. The IMPJ is also working with a number of Russian-language groups in Haifa, Nahariyyah, Netanyah, and Ra'anannah. In August 2000, a congregation for immigrants from the FSU was founded in Ashdod. The group began meeting for *havdalah* services on Saturday nights and expanded to Friday night services led by HUC rabbinical students from the Jerusalem campus. The IMPJ hired a paraprofessional community organizer for the group and has hired similar community workers for the other Russian-language groups in Israel.

The IMPJ has recently formed a number of new congregations. Yozma in Modi'in, between Tel Aviv and Jerusalem, already has established four kindergarten classes as well as a first grade. Sulam Ya'akov was established in Zichron Ya'akov, between Tel Aviv and Haifa. Gusti Yehoshua-Braverman, the director of community development for the Israeli Progressive movement, states: "We must establish new congregations. However, we must also rejuvenate those that already exist but are struggling because they lack a rabbi or are in the periphery." Some long-standing congregations have expanded their programming, including Ahvat Yisrael in Rishon le-Zion near Tel Aviv, which has also recently hired a community coordinator. The congregation has a growing Jewish study group that regularly brings in well-known guest lecturers and was recently given a city-owned building for its exclusive use. The structure is a former kindergarten in a quiet leafy neighborhood in the city. According to congregational chairperson Shai Eitan, it will need to be extensively renovated but offers "tremendous potential." In Nahariyyah, Emet Ve'shalom offers a lecture and field trip program for about 150 new immigrants. The IMPJ also caters to those with special needs. The movement offers special Shabbat activities for the residents of Kishor, a community of about 70 people with learning, functioning, and adaptive disabilities – a candle-lighting ceremony, *kiddush*, *Kabbalat Shabbat*, and other religious programming three times a month. Joint activities with the IMPJ-affiliated Harhalutz and the IMPJ's Young Adult Leadership Forum are also undertaken.

The Reform movement has built an impressive complex on King David Street in Jerusalem; it includes the Israeli campus of Hebrew Union College and Mercaz Shimshon, the WUPJ's cultural center, which opened in October 2000. Designed by world-famous architect Moshe Safdie, the \$15 million facility was built adjacent to Beit Shmuel, WUPJ headquarters. Both centers offer panoramic views of Jaffa Gate, David's Citadel, and the walls of the Old City.

While the movement faced a great deal of resistance, land has been designated for Progressive congregational building projects in a number of municipalities. Affluent families in the area are enthusiastic about holding their sons' bar mitzvah ceremonies in the beautiful new Beit Daniel in North Tel Aviv. At services, the families seem to adjust without any problem to the mixed seating and the use of *Ha-Avodah she-Balev* (The service of the heart), the Israeli Progressive prayer book. There are now approximately 30 Progressive congregations in the country. Those with their own buildings and full-time rabbis have tended to attract a clientele looking for bar mitzvah celebrations, High Holy Day services, and so forth.

The Reform movement has poured effort and money into building up the Progressive presence in the State of Israel, yet the fear remains that the government would move quickly to pass new laws to bypass any legal gains achieved through future rulings by the High Court of Justice, the Israeli supreme court. Shas and other ultra-Orthodox political parties have already indicated their intention to do just that, if the need should arise. Until the movement can achieve official recognition and equal legal status with the Orthodox, it will remain a small, struggling, barely tolerated denomination on the fringes of Israeli life. The marginalization of the Israeli Progressive movement threatens to undermine the legitimacy of the Reform movement in the United States and throughout the world.

REFUGEES (1933–1949). When the Nazis came to power, many Jews believed that this chapter in German history would soon pass, that Germany would come to its senses, and that Hitler could not last long. Over time, however, the ranks of the pessimists swelled. After **Kristallnacht* (the November 1938 pogroms) for most German Jews the question was not whether to leave but where to go. Could a place of refuge be found? Would some country – any country – be willing to receive Jews? By the beginning of the war, the quest for refuge became a matter of life and death.

The first wave of German Jews seeking refuge began in 1933 when according to Reichsvertretung der Deutschen Juden records, 52,000 Jews left and 37,000 who were abroad remained there. In 1934 the pace of emigration slowed down as conditions stabilized and after the Nuremberg laws of 1935, it once again intensified. Most Jews went to neighboring countries presuming that they were leaving Germany for a time and not for good and never imagining that Germany would conquer the lands in which they had found refuge. By 1938 approximately one in four Jews had left. Some countries were willing to receive some Jews but never in the numbers that would resolve the problem; Turkey imported professors, architects, musicians, physicians, and lawyers to Westernize their country.

The quest for refuge was related to the perception of the viability of Jewish life in Germany. The calmer things remained the more Jews stayed and after periods of turmoil the pace of Jewish emigration quickened. By early 1938 the process of Aryanization had impoverished many Jews, making their lives within Germany ever more difficult and making them even less desirable to potential countries of refuge. In March, Germany entered Austria and as 200,000 more Jews became part of the expanded Reich, the Anschluss reversed, seemingly overnight, the “progress” that Germany had made during the previous years to be rid of its Jews. Efforts were made to speed up the emigration of Jews and Adolf **Eichmann* was dispatched to Vienna to organize the departure of its Jews. His success there propelled his career. The **Evian Conference* of July 1938, convened ostensibly to solve the refugee crisis, proved that countries were unwilling to receive the Jews, at least not in sufficient numbers to handle the crisis. Only the Dominican Republic was willing to receive a large number of refugees, the comfortable euphemism for Jews.

In October 1938, things went from bad to worse. Jews of Polish origin living in Germany were expelled, and in November *Kristallnacht* made matters all the more urgent.

At the beginning of the Jewish quest for refuge, Jews could leave with their possessions and could dispose of what they had in an orderly fashion. Year after year, this became less possible. Economic restrictions on the Jews undermined their basic ability to earn a living and Aryanization deprived them of businesses and resources. By the late 1930s many were impoverished and appeared desperate. The **Haavara agreement* of 1933, which permitted Jews to dispose of their property in Germany and receive a percentage of their capital in Palestine, was not augmented by any other agreements.

[Aryeh Tartakower / Michael Berenbaum (2nd ed.)]

High Commissioner for Refugees from Germany

When Hitler came to power in Germany in 1933, thousands of Jews, together with many non-Jewish anti-Nazis, were compelled to take refuge in adjacent countries. Democratic governments and large Jewish organizations exerted pressure on the League of Nations to deal with the refugee problem. On Oct. 26, 1933, the League appointed James G. **McDonald* as high commissioner for refugees from Germany, with the task of negotiating for international collaboration for solving the economic, financial, and social problems of the refugees. In order to avoid offense to Germany, at that time still a member of the League, the high commissioner worked independently and did not report to the League Council but to its own governing body. Its budget was mainly provided by Jewish organizations. The high commissioner achieved little except for conventions on political and legal protection (in 1933 and 1938), and, convinced that without the authority of the League his efforts were useless, he resigned on Dec. 27, 1935. In February 1936, after Germany left the League, Sir Neill Malcolm (1869–1953) succeeded McDonald as high commissioner, this time with direct responsibility to the League. In May 1938 his office was extended to help refugees from Austria, but it was limited to legal and political protection for refugees and intervention with the governments of the countries of asylum in order to provide residence and work permits. On Sept. 30, 1938, the Assembly of the League decided to merge the existing Nansen Office for Refugees of the League with the Office of the High Commissioner for Refugees from Germany and on Jan. 1, 1939, it appointed Sir Herbert Emerson (1881–1962) as high commissioner for all refugees for a period of five years. Despite the League’s efforts to ease the situation of the refugees, the practical results were not encouraging. However, the Office of the High Commissioner for Refugees from Germany was marginally useful both in securing legal status for stateless refugees and in coordinating the work of the numerous Jewish voluntary and philanthropic organizations.

In 1939 the situation became ever more desperate. Jews were willing to go anywhere. Seventeen thousand Jews arrived in Shanghai. Jews from Eastern Europe were later to join them in Japanese-occupied China. But there were few places to go. The United States operated on a quota system. A British White Paper limited the number of Jews immigrating to Palestine. Cuba and the United States turned away the ship **St. Louis*

carrying affluent Jewish refugees. With nowhere to go, they were forced to return to Europe.

When the Germans invaded Poland in September 1939, some Polish Jews faced a critical decision. History had taught them that refuge was in the West. During World War I, the Germans had been relatively benign during occupation. Did one go west or east to the land of Czar and of the pogroms, a land from which Jews had been fleeing for decades? Those who went against the grain of history and of collective wisdom suffered but were not killed. It is estimated that about half a million Jews left for the Soviet Union in the wake of the German advance. Many of these people were later engulfed by the German conquest of the Soviet-held territories, as were their counterparts, Jews who had left for France and Denmark, Belgium and Holland and other West European countries.

Neutral countries were reluctant to be overrun by Jews. Switzerland received 21,500 but thousands more were turned away. And in the fall of 1938, the Swiss Foreign Ministry requested that the Germans stamp Jewish passports with the letter *J* so that non-Jewish Germans could enter Switzerland freely. Spain received some Jews. Those who made it over the Pyrenees were not turned back; they were sent on to Portugal, from where many managed to leave for the United States. Some German allies, notably Italy and Hungary, received some Jews. Sweden provided a sanctuary for Scandinavian Jews fleeing Denmark, but that was in 1943 when it was understood that Germany would lose the war.

Clandestine passage to Palestine remained an option but the sinking of a stricken ship, the *Struma*, just outside Turkish waters in 1941 by a Soviet submarine, killing all but one of its passengers, underscored the difficulties of such dangerous routes. The Emergency Rescue Committee had a program for the cultural elite of Central Europe, but that was of little use to others. Among the great figures who fled were Jean Arp, Andre Breton, Marc Chagall, Marcel Duchamp, Max Ernst, Jacques Lipshitz, Andre Masson, and Henri Matisse. Eminent musicians included George Szell and Bruno Walter. Many established writers came to the United States, among them Franz Werfel, the novelist whose work, *Forty Days At Musa Dagh*, conveyed the tragedy of the Armenians and was invoked by Jewish resistance fighters in Bialystok and Warsaw. Lion Feuchtwanger and Max Brod, the friend and biographer of Franz Kafka, were forced to flee. Feuchtwanger came to the United States and Brod reached Palestine. Sigmund Freud dispatched his disciples around the globe before he left Vienna for London.

The Jewish refugee movement during the 12 years of Nazi rule (1933–45) differed in its structure from the usual population migrations, including Jewish migrations in previous generations. Among the German-Jewish immigrants to Palestine in the years 1933–37, practically all of whom were refugees, 52.2% were males and 47% females (0.8% were not recorded). The Jewish immigration to the U.S. in 1939–43, all of whom were refugees, showed a ratio of 46.3% males as against 53.7% females. The percentage of women refugees was much higher

in comparison with general migration figures (in 1899–1914, out of every 100 immigrants to the U.S., 68.29% were males and 31.71% females), and even compared with general Jewish migration figures, where the percentage of women was always much higher (55.97% males as against 44.03% females). The refugee movement was thus mostly a family migration. This is also confirmed by the age structure of the movement and particularly by the considerable number of children (21% of the refugee migration to the U.S. in 1939–43; in the German-Jewish migration to Palestine in 1933–39, the age group of 1–20 was 32.5% – considerably more than within the Jewish population in Germany itself (21.5%) due to the fact that children were often sent out alone while the parents stayed behind in Germany) and old people, whereas people of working age were considerably less represented.

There were also differences in the occupational structure. Jewish mass migrations in the 19th and 20th centuries had consisted mostly of artisans and small traders, with no means of their own, who went abroad in search of a living. However, figures relating to German Jews coming to Palestine in 1933–39 showed 25.6% in the liberal professions and 27.7% as merchants, while industrialists and artisans accounted for 24.1%. Figures on Jewish immigration to the U.S. in 1932–43 showed nearly one-fifth (19.8%) in the liberal professions and 41.9% merchants. They brought with them rather considerable amounts of money, when some property could still be taken out of Germany. The estimate of such transfers to the U.S. up to the outbreak of World War II reached \$650,000,000 while for Great Britain up to mid-1938 the figure was £12,000,000 (prewar parity \$48,000,000). The Haavara transferred the equivalent of £8,000,000 (\$32,000,000) in the first years of Nazi rule into Palestine, while capital imported into the country in 1937–41 reached about £14,000,000. These possibilities of transfer gradually disappeared, until the refugees were forbidden to take with them any funds whatsoever and those who departed had less money because of years of economic harassment. Then the family character of the refugee movement and its occupational structure added to the difficulties of admission and absorption. Large numbers of people with commercial or free professions could not easily find employment in the prospective countries of immigration. The few refugees admitted as immigrants not infrequently had to switch over to other, mostly manual, work. For many refugees the abandonment of their occupation or profession and the changeover to physical work meant extreme hardship or even degradation. Only in Palestine was labor, and especially farming, socially favored, as part of the Zionist pioneer effort.

The Nansen Office, established in the early 1920s, when millions fled revolutionary Russia without any travel documents, continued to function up to the end of 1938 and assisted “stateless” Jewish refugees from Germany by issuing them the so-called “Nansen passports,” which established their identity and enabled them to travel. Among the German-Jewish refugees (after 1933) only those from the territory of the Saar took advantage of its assistance. For the rest a special agency was

created by the Assembly of the League of Nations, in October 1933, called the High Commissioner for Refugees (Jewish and Other) coming from Germany (see below). The intergovernmental *Evian Conference convened by President Roosevelt in July 1938, in which 32 governments and representatives of 39 private organizations, among them 21 Jewish bodies, participated, set up a permanent Intergovernmental Committee for Refugees with headquarters in London. In February 1939 it merged with the office of the High Commissioner for German Refugees, but it hardly fulfilled the aims for which it was established. Apart from a few unsuccessful attempts at negotiations with the German authorities, very little was done before and during the war to help the refugees and deportees. The failure was due to the general atmosphere of helplessness during those years and a lack of real understanding for the tragedy of the refugees. Even later, when the German policy of the total extermination of European Jewry was known all over the world, the *Bermuda Conference of Great Britain and the U.S. in April 1943 proved completely fruitless. Its task was to manage a domestic problem, not to solve a refugee problem. Only in January 1944, an election year, after facing enormous pressure from his Secretary of the Treasury Henry Morgenthau Jr. did President Roosevelt establish the War Refugee Board and open a temporary asylum in the United States.

A great deal more was accomplished by private, especially Jewish, relief agencies, which tried to mobilize public opinion, find countries willing to admit refugees, and rescue victims in the occupied territories. But even the accomplishments of bodies like the *Jewish Agency for Palestine, the American Jewish *Joint Distribution Committee, the *World Jewish Congress, and the Rescue Committee (Va'ad Hazzalah) of Orthodox Jewry were also pitifully small compared with the proportions of the disaster. In 1944, under considerable pressure of public opinion, the U.S. government established a special agency, the *War Refugee Board, which succeeded in saving small groups of Jews from German-occupied countries. The only intergovernmental body whose activities proved of some significance was the United Nations Relief and Rehabilitation Administration (*UNRRA), set up by 44 Allied countries in November 1943. UNRRA took care of the *Displaced Persons after the end of the war in the countries of their temporary residence as well as aiding them to return to their countries of origin. However, all attempts to induce UNRRA to extend the scope of its activities to include resettlement of non-repatriable Displaced Persons – as, e.g., the overwhelming majority of the Jews among them who refused to go back to Poland, the U.S.S.R., Hungary, etc. – failed. In this field much more was done in the following years by the International Refugee Organization (IRO), established in 1946 (see below).

[Shalom Adler-Rudel / Michael Berenbaum (2nd ed.)]

The Refugee Movement and its Proportions

An exact evaluation of the size of the Jewish refugee movement in the Nazi period and immediately after World War II presents considerable difficulties due to a lack of reliable sta-

tistics, especially during the last years of the war. An additional difficulty is how to define who is a refugee. Two attempts to produce accurate statistics were made at the end of 1943, one by the Institute of Jewish Affairs of the World Jewish Congress in New York and the other by the International Labor Organization (ILO). The Institute estimated the number of Jewish refugees at 2,391,000, the number of people deported from one country to another at 665,000, and those displaced within the same country at 2,205,000. These figures totaled over 5,000,000 – more than half of European Jewry. The ILO in a study of the war period proper estimated the number of Jewish war refugees at 2,200,000 and the number of deportees outside their country at 1,080,000, while Displaced Persons within their own country were estimated at 1,000,000. The total of this study was 4,150,000 and including Jewish refugees before 1939, the estimate comes to about 4,500,000. A deduction from the overall number of refugees of persons who found temporary admission in the interior of the U.S.S.R. during the war brings the figure to more than 800,000 distributed as seen in Table 1: Countries of Reception for Jewish Refugees 1933–1943. (For emigration of Jews from Germany in the period April 1933 to May 1939, including areas occupied by Germany by May 1939, see Table 2.)

Compared with the overall figure of 5,000,000 Jewish refugees and deportees in this period, those admitted to different countries (most of whom survived), came to no more than one-sixth. The number was everywhere severely limited; only the U.S., Palestine, and to a certain degree England admitted larger numbers than the others. The overall figures of refugees and deportees rose considerably in the remaining years of the war, as the Hungarian Jews were included in deportation in 1944 and the remnants of Jews in several countries of occupied Europe were rounded up and transported to other areas. The grand total may therefore have reached 7,000,000 and perhaps even more, but the great majority of them perished, some during the process of deportation itself (German official sources estimated that 30% of those deported died on the way), and the others in ghettos and in labor and extermination camps. No more than one-fourth survived the war period.

As to the definition of a refugee, two attempts deserve mention. In 1936 the Institute of International Law defined refugees as persons who have left or been forced to leave their country for political reasons, who have been deprived of its diplomatic protection, and who have not acquired the nationality or diplomatic protection of any other state (*Summaire de l'Institut du Droit International*, vol. 1 (1936), 294). The second definition, in 1951, went much further, considering as a refugee any person forced to leave his place of residence for reasons independent of his will (*The Refugee in the Post-War World*. Preliminary Report of a Survey of the Refugee Problem. Published by the United Nations, Geneva, 1951. Part One, Chapter One. The Concept of "Refugee," pp. 3ff.). From the point of view of Jewish experiences, both definitions are unsatisfactory. The first neglects to take into consideration persons displaced within their own country whose number

Table 1: Countries of Reception for Jewish Refugees 1933–1943

Country	Number admitted (thousands)	Percent
United States	190	23.5
Palestine	120	14.8
England	65	8.1
France	55	6.8
Belgium	30	3.7
Holland	35	4.3
Switzerland	16	1.9
Spain	12	1.4
Other European countries	70	8.8
Argentina	50	6.2

Country of Reception	No. of German immigrants
United States	63,000
Palestine	55,000
Great Britain	40,000
France	30,000
Argentina	25,000
Brazil	13,000
South Africa	5,500
Italy	5,000
Other European countries	25,000
Other South American countries	20,000
Far Eastern countries	15,000
Other	8,000
Total	304,500

¹ Estimated figures.

grew into the millions during the years of mass deportations, whereas the second definition is too broad because it includes victims of natural catastrophes, and only man-made events should be taken into consideration. A general definition, based mainly but not exclusively on Jewish experience in the 1930s and 1940s, would consider as refugees persons forced to leave their places of residence because of political or other man-made reasons, independent of their will or their individual character, mostly because of their race, religion, nationality, or political convictions.

[Aryeh Tartakower / Michael Berenbaum (2nd ed.)]

International Refugee Organization (IRO)

The IRO was created by the General Assembly of the United Nations on Feb. 12, 1946, as a specialized agency for refugees and stateless persons to assist in the repatriation, protection, and resettlement of refugees and Displaced Persons after World War II. A special Committee on Refugees and Displaced Persons was then set up to work out a draft constitution for a nonpermanent organization to replace existing refugee organizations (such as UNRRA and the Intergovernmental Committee for Refugees (IGCR)). The Economic and Social Council ratified the draft constitution on Sept. 30, 1946, and the General Assembly gave its final approval on December 15 that year. The IRO constitution determined the criterion for “eligibility” of a refugee or Displaced Person. The signatures of 15 member states who would contribute 75% of the operational budget were required before the organization could function effectively. By Dec. 31, 1946, eight governments had signed the constitution, thereby making it possible to establish a preparatory commission for the IRO (PCIRO) which would immediately assume certain functions and become fully operative. On June 30, 1947, this commission went into effect and the responsibilities of UNRRA and IGCR were transferred to it; but the organization did not formally come into existence until Aug. 20, 1948, when the 15th member ratified the constitution. When the PCIRO began operations there were over 1,000,000 refugees, 20% of whom were Jews, in the liberated countries of Europe. At the peak of its operations in 1948, the IRO was working in about 30 countries and employed an international staff of 2,800. Between 1947 and 1951, it maintained about 1,500,000 refugees, repatriated 75,000, and resettled 1,040,000. These results were achieved at a cost of \$430,000,000 which was contributed by 18 countries. About 20 countries offered to resettle refugees. Three of these countries accepted nearly two-thirds of all the refugees for resettlement: the United States, 330,000; Australia, 182,000; Israel, 132,000. The IRO was helped by many governments and 25 voluntary societies which included six Jewish organizations, the American Jewish Joint Distribution Committee (JDC), the Jewish Agency for Palestine, *United HIAS Service, *ORT, *OZE, and the Jewish Committee for Relief Abroad.

The government of Israel in cooperation with the JDC and the Jewish Agency for Palestine undertook final responsibility for the resettlement and care of 8,700 hard-core cases toward which the IRO provided assistance amounting to \$6,500,000. It contributed over \$10,000,000 for transportation costs toward resettling refugees in Israel. The IRO succeeded the IGCR as trustee for international reparations (amounting to \$25,000,000) for the resettlement of Jewish refugees. The IRO was dissolved in February 1952 when some of its functions were taken over by governments and voluntary agencies; others were handed over to the United Nations High Commissioner for Refugees and to the Provisional Intergovernmental Committee for the Movement of Migrants from Europe.

REFUSENIKS, Jews who wished to leave the U.S.S.R. but were refused permission to do so. Some were allowed to leave in 1977, and under the policy of *glasnost* declared by Soviet leader Mikhail Gorbachev, most of the long-standing refuse-niks were allowed to leave in 1988–89. For a full discussion of the subject see *Russia.

REGAVIM (Heb. רֵגָבִים; “Earth Clods”), kibbutz in the Menasheh Hills, 6 mi. (10 km.) E. of Binyaminah, affiliated with Ha-Kibbutz ha-Me’uḥad. Regavim was founded during the War of Independence by pioneers from Tunisia, Algeria, and Italy. Its farming was based on field crops, fruit orchards, and dairy cattle. The kibbutz also produced building materials. In 1969 Regavim had 288 inhabitants; in 2002, 256.

[Efraim Orni]

REGBAH (Heb. רֵגְבָה), moshav shittufi in N. Israel 2½ mi. (4 km.) S. of Nahariyyah, affiliated with Tenu’at ha-Moshavim. Regbah was founded by veteran soldiers of World War II, some of them Israel-born and some from Central Europe and other countries (1946). The village had highly intensive and fully irrigated farming (field crops, citrus groves, avocado plantations, poultry, cattle) and two factories, for kitchen cabinets and closets and for plastics. In 1969 Regbah had 311 inhabitants; in 2002, 548. Its name is derived from *regev* which means “clod of earth.”

[Efraim Orni / Shaked Gilboa (2nd ed.)]

REGELSON, ABRAHAM (1896–1981), Hebrew poet. Born near Minsk, Regelson arrived in the United States as a boy of nine. Though his formal education was not extensive, he read voluminously and acquired substantial knowledge in poetry and philosophy. He began to publish poems immediately after World War I. Although mainly a poet, he also wrote philosophical essays and satirical sketches, and translated from English into Hebrew, and from Hebrew and Yiddish into English. During his stay in Erez Israel in 1933–36, he wrote a regular column for *Davar* and contributed occasionally to *Davar li-Yladim*. The latter contributions were published in a book of children’s stories *Massa ha-Bubbot le-Erez Yisrael*

(1936; 1954). *Ein ha-Sus* (1967), another book for children, is a paraphrase of Greek legends. When he settled permanently in Israel in 1949, he worked for various newspapers and, sporadically, at the publishing house Am Oved. All of his collections of poetry are assembled in *Hakukot Otiyyotayikh* (1964) which includes translations of American, English, and Yiddish poetry. Influenced by Robert Browning, Regelson developed his own form of dramatic monologue in poetry. His philosophical aperçus were often given expression in longer poems in the form of poetic Midrashim. His most ambitious poem, “Cain and Abel,” depicts struggling opposites: the man of action and the thinker who is poisoned by a sense of vanity of all things. The title poem of his collected works, “*Hakukot Otiyyotayikh*” (*Ha-Tekufah*, 30/31 (1945/46), 271–86), is an ecstatic hymn to the Hebrew language.

Regelson’s prose appeared in three volumes: *Melo ha-Tallit Alim* (1941), *Sham ha-Bedolah* (1942), and *Erelei ha-Maḥashavah* (1969). The last and most important of the three is both a critical evaluation of some contemporary philosophies and past philosophers and a repository of Regelson’s own thought. His translations into Hebrew include stories by Kipling (1935), Melville’s *Billy Budd* (1950); into English Glanz’ Yiddish poems, M. Maisels’ philosophical work *Maḥashavah ve-Emet* (in an abridged version, under the title *Thought and Truth* (1956),) and Jacob Klatzkin’s philosophical essays, *In Praise of Wisdom* (1943). While in New York, he also edited a small literary and philosophical review, *Rivon Katan* (1944), of which only two issues appeared.

[Eisig Silberschlag]

REGEM-MELECH (Heb. רֵגֶם מְלֶךְ), a name of uncertain meaning and origin, occurring in Zechariah 7:1 ff. (cf. Regem in I Chron. 2:47). Regem-Melech is reproduced by the versions as a title: “*rab-mag* of the king” (Peshitta), and in a form that scholars consider to be a transliteration of a title: *arbeseer* (LXX A), a transliteration of the Hebrew *rav saris*, “chief eunuch [of] the king,” and *arbeseer* (LXX B), a transliteration of *rav sar ha-Melekh*, “chief officer [of] the king.” The difficult passage in which the name occurs may mean that Bethel-Sarezzer (see *Sharezer), Regem-Melech, and their men wrote (from Babylonia?) to the prophets and Temple priests in 518 B.C.E., when the reconstruction of the Temple was nearing completion, asking whether they should continue to wail and fast in the fifth month to commemorate the Temple’s destruction.

[Bezalel Porten]

REGENSBURG (Ratisbon), city in Bavaria, Germany. Its Jewish quarter was the oldest in Germany (1020). During the First *Crusade (1096) the whole community was forcibly converted but a year later was allowed to return to Judaism by *Henry IV. In 1182 Emperor Frederick I Barbarossa, apparently renewing a charter originally granted to the Regensburg community by Henry IV, stated the principles of his attitude, as emperor, toward the Jews and added in the preamble: "We concede to our Ratisbon Jews and confirm with our imperial authority their good customs which their ancestors secured through the grace and favor of our predecessors until our time." The economic clauses of this charter relate to the functions of Regensburg Jews in trade with Slav countries, detailing that "they be allowed to sell gold, silver, and any other kinds of metals and merchandise of any sort, and also to buy them, according to their ancient custom" (Aronius, *Regesten*, no. 314d, pp. 139ff.). Thus at this time Regensburg Jewry was regarded as a community of traders continuing the traditions of its founders. When this privilege was renewed by King Henry in 1230, a further provision stipulated that they might be brought before judges of their own choosing only. In the 12th and early 13th centuries, Christians also lived in the Jewish quarter and owned homes there. Between 1210 and 1217 a synagogue was built and a plot for a cemetery acquired in 1210. By the end of the 12th century Regensburg had become a religious and cultural center for German Jewry. Among its rabbis were *Baruch b. Isaac, *Ephraim b. Isaac, and *Isaac b. Moses of Vienna (the author of *Or Zarua*). *Judah b. Samuel he-Ḥasid made the city the cradle and center of the *Ḥasidei Ashkenaz. Even in the 15th century, a time of economic decline and trouble, Regensburg attracted such luminaries as Israel *Bruna. At this time Regensburg yeshivot developed a *pillpul* and *hillukim* style of their own contrasted in the Ashkenazi yeshivot with that of Nuremberg. The economic importance of the community enabled it to weather the *Rindfleisch (1289), *Deggendorf (1338), and *Black Death persecutions (1348/49) and to reach new heights of prosperity by offering asylum to rich refugees. *Moneylending to secular and ecclesiastic princes, in addition to the merchants of the city, was conducted on a large scale.

In the 14th century the community suffered from heavy taxes and was hit by the annulments of debts to Jews decreed by Emperor Wenceslaus II in 1385 and 1390. After the time of the Black Death the municipality's aspirations to "ownership" of the Jews grew; its fiscal extortions were as severe as those of the Jews' other "owners" – the emperor, the duke of Bavaria, and the local bishop. Gradually the Jews were forced to rely mainly on moneylending, and their freedom of movement was severely curtailed. The general decline and impoverishment of Regensburg, combined with growing social tension between the upper and lower classes of the citizenry, made the years 1475–1519 a period of increased bitterness against the Jews, a struggle that ended in their total expulsion. The violent anti-Jewish sermons of Peter *Schwarz (Nigri) resulted in the confiscation of the property of the whole community

(1476); following the accusation by one of the defendants in the *Trent ritual murder trial 17 Jews from Regensburg were imprisoned. After four years, under unremitting pressure from Frederick III, the city was forced to free them. Frederick exacted a heavy fine from the city and also a pledge that it would not expel its Jewry. Balthasar Hubmeier (1485–1528), later the Anabaptist leader, was the most virulent of many preachers who accused the Jews of usury and blasphemy and repeatedly demanded that the synagogue be converted into a church; the guilds insisted on expulsion. In 1498 the community was led by ten elders; its **takkanot* were enacted by majority vote in a council of 31. At this critical period of its history, the community's ordinances dealt with the preservation of internal peace (R. Straus, *Urkunden...* (1960), no. 676, pp. 228–30). When Emperor Maximilian died in January 1519, the interregnum was made the occasion for the immediate expulsion of the Jews, about 800 in all. The synagogue was razed and a chapel, which became the center of mass pilgrimages, was erected on the site. About 5,000 gravestones were wrenched out of the cemetery and used for building. Trophies of the "victory against the Jews" were prominently displayed on walls of houses in Regensburg and other cities. Most of the refugees settled in nearby Stadtamhof, on Bavarian territory, but were later expelled from there too (1551).

In 1545 the city received the privilege of *non recipiendis Judaeis* from *Charles V and guarded it jealously in the future. Nevertheless, Jewish **shtadlanim*, *Court Jews, and physicians continued to be present at the meetings of the Reichstag of the Holy Roman Empire, which were occasionally held in Regensburg. From 1669 the Reichstag convened regularly in Regensburg, and a Jewish settlement affiliated to the assembly sprang up under the protection of the hereditary dukes von Pappenheim. The number of **Schutzjuden* was bitterly contested between the dukes and the city and was finally fixed at three to four families (60–80 persons) throughout most of the 17th and 18th centuries. In the latter half of the 18th century Isaac Alexander gained temporary fame as the first rabbi to write on contemporary philosophical subjects in Germany. Philip Reichenberger (1750–1818), court agent of Ansbach and Brandenburg, and Wolf *Breidenbach led the fight for the abolition of the **leibzoll* ("body tax"). In 1805 the three richest families were granted the right to own land. Reichenberger unsuccessfully requested full citizenship in 1808. Regensburg passed to Bavaria in 1810. A cemetery was consecrated in 1822 and a synagogue in 1841. The community grew from 180 persons in 1810 to 635 in 1880 (1.96%); after this it declined gradually.

Under the Nazi regime the number of Jews decreased from 427 in 1933 to 226 in 1939. On Nov. 9, 1938, the synagogue was burned down, shops and homes were pillaged, and almost all the men arrested. About 230 Jews (including some from the countryside) were deported in 1942 to Theresienstadt, Auschwitz, and Lublin. After World War II a new community was organized, with 140 persons in 1970 (two-thirds over the age of 40) and its own rabbi and *shoḥet*.

The history of Regensburg's medieval Jewish community

became one of the outstanding instances of Nazi historiography when it was falsified by the Nazi historian Wilhelm Grau in his *Anti-semitismus im spaeten Mittelalter* (1934). He used the sources collected by the Jew Raphael Straus (published posthumously in 1960), which had been confiscated by the Gestapo. A new community center was consecrated in 1969. The Jewish community numbered 117 in 1989 and about 1,000 in 2005. The increase is explained by the immigration of Jews from the former Soviet Union.

[Henry Wasserman]

REGGIO, ABRAHAM BEN EZRIEL (1755–1846), Italian rabbi and kabbalist. Born in Ferrara, Reggio was a pupil of Isaac *Lampronti and his son Solomon. He went to Gorizia where he studied under Moses Hefez (Gentili), the local rabbi, and taught in the *talmud torah*. After the death of his teacher, Reggio was appointed to succeed him as rabbi of the town (c. 1796), and he held this office until his death. Reggio was considered an important *posek* in his time. Leading scholars of that period, including Mordecai *Baneth, addressed halakhic problems to him.

His only published work is *Tiglahat ha-Maamar* (Leghorn, 1844), a reply to the pamphlet *Maamar ha-Tiglahat* (Vienna, 1835) by his son, Isacco Samuel *Reggio, on the permission to shave during the intermediate days of a festival. His most important works, *Eshel Avraham*, on general principles and themes in the Bible, Mishnah, Talmud, prayer book and Kabbalah; *Mazkeret ha-Limmud*, novellae; and *Mashal u-Melizah*, letters, poems, and elegies, remain in manuscript.

BIBLIOGRAPHY: Benjacob, *Ozar*, 55 no. 1041; Fuenn, *Keneset*, 63–64.

[Abraham David]

REGGIO, ISACCO SAMUEL (Ia-Sha-R; 1784–1855), Italian rabbi; one of the founders of the *Collegio Rabbिनico Italiano.

He published an Italian translation of the Pentateuch, with a Hebrew commentary (Vienna, 1821), and wrote *Maamar Torah min ha-Shamayim* (“The Torah as Divinely Revealed,” Vienna, 1818) to prove the divine authority of the Pentateuch. Among his other biblical works are a poetic version in Italian of the Book of Isaiah (Udine, 1831); a Hebrew introduction to the Scroll of Esther (Vienna, 1841); and Italian translations of the books of Joshua, Ruth, and Lamentations, and of *Pirkei Avot*. In *Ha-Torah ve-ha-Filosofyah* (Vienna, 1827), written under the influence of Mendelssohn, Reggio tried to show that reason and philosophy were compatible with the Torah. His *Iggerot Yashar* (1834–36) are exegetic, historical, and philosophical notes in the form of letters to friends. He also edited some of the writings of Leone di Modena and wrote *Behinat ha-Kabbalah* (Gorizia, 1852). Reggio published other works on Kabbalah and philosophy in *Bikkurei ha-Ittim ha-Hadashim* under the pseudonym Iashar. His autobiography, *Mazkeret Yashar*, appeared in Vienna (1849). His Hebrew correspondence with S.D. *Luzzatto was collected by V. Castiglione (1902); it shows their mutual esteem and friendship. Reggio also wrote some halakhic and pedagogical works, one of which appeared in English: *A Guide for the Religious Instruction of Jewish Youth* (London, 1855). His views on Judaism did not always conform to tradition and led to polemics with German rabbis as well as his own father, Abraham *Reggio.

[Alfredo Mordechai Rabello]

REGGIO DI CALABRIA, city in S. Italy. The first Jewish settlement in Reggio can probably be traced back to the fourth century, but the earliest documents mentioning its presence date from 1127. The Jewish colony’s main occupations were dyeing and dealing in wool and silk. On Feb. 17, 1475, the first dated Hebrew printed book (see *Incunabula), Rashi’s commentary on the Pentateuch, was issued there by Abraham b. Garton b. *Isaac. In 1492–93 many Jewish refugees from Sicily, Sardinia, and Spain, including the whole Syracuse community, took refuge in Reggio. After Calabria had passed under Spanish rule, the Jews were banished from the town (July 25, 1511), leaving the sale of their property to trustees.

[Ariel Toaff]

REGGIO EMILIA, city in central Italy. The first Jewish settlement of Jewish loan bankers in Reggio Emilia, a fief of the House of Este, dates from the year 1413. For a long time they benefited from the favorable attitude of the ducal house to the Jewish settlements, which sometimes protected them from the persecutions instigated by Franciscan friars. When the papacy secured possession of the duchy of Ferrara in 1598,

the duchy of Modena and Reggio was left in the hands of the House of Este. In the succeeding two centuries the duchy continued to welcome considerable groups of Jews, who engaged in moneylending and commercial activities. The ghetto was instituted in Reggio Emilia in 1669 and the Jews were able to carry on freely their business activities and exercise a variety of entrepreneurial, commercial, and cultural activities, including the production, manufacture, and trading of silk, silver, and diamonds. In 1652–53 the duke of Modena issued charters inviting foreign Jews to settle, proclaiming them “wealthy people and very likely to introduce traffic and commerce” and 60 Sephardi families settled in the duchy, mainly in Reggio Emilia. The majority of these were former Marranos from Spain who had recently reverted to Judaism, usually in Tuscany, and nine of them had migrated from Amsterdam and Hamburg. They were able to build an autonomous Portuguese community.

There was a renowned yeshivah in Reggio Emilia with learned rabbis such as *Benjamin b. Eliezer ha-Kohen Vitale and Isaiah *Bassano. A Jew of Reggio, Moses Benjamin *Foà, was book purveyor to the ducal library in Modena, participated in the Comizi of Lion, and worked actively with Moses Formiggini of Modena for the emancipation of the Italian Jews in the Napoleonic era, when the French occupation of 1796 temporarily brought the right to live outside the ghetto and to participate in public. In 1806–1807 Jacob Israel Carmi was one of the Italian rabbis who went to Paris for the Assembly of Notables and the Napoleonic *Sanhedrin; he gave a penetrating account of his experiences in his letters. In this period a number of Jews began to move to cities affording greater cultural and economic opportunities and at the beginning of the 19th century Reggio Emilia had a population of fewer than 800 Jews. During the Holocaust 18 Jews were deported to the death camps from the province of Reggio Emilia. In the early 21st century few Jews lived in Reggio Emilia and the community was affiliated to the community of Modena; the City Hall and the Italian State Ministry of Culture completed the restoration of the main synagogue in 2005.

[Ariel Toaff / Federica Francesconi (2nd ed.)]

REGHIN (also **Reghinul Săsesc**; Hung. **Szászrégen**; Ger. **Saechsisch-Regen**), town in northwestern Romania, Transylvania. The inhabitants of Reghin included Romanians, German-Saxons, and Hungarians. The city was founded in the 13th century by German (Saxon) and Romanian settlers. Although Jews began to settle there at the close of the 18th century, an organized community was established only during the middle of the 19th century, probably in 1849. The major-

ity of the Jews came from Bukovina and Galicia. As a result of the battles during the Revolution of 1848 against Austria and the riots in Transylvania, Reghin and its Jewish population suffered severely. The first Jewish settlers, who arrived mainly from Bukovina and Galicia, were Orthodox, and the community remained Orthodox throughout its existence. Hasidic influence was also felt. Besides the synagogue, there were two prayerhouses (*kloyz*) where the Hasidim used to pray and had their own rabbis. A prominent figure in the community during its early years was the Orthodox rabbi Hillel Pollak (who was spiritually close to the extreme Orthodox rabbi Hillel *Lichtenstein).

A Jewish elementary school was founded in 1874. (Later it ceased its activities but was reestablished in 1910 and functioned until 1940.) The language of instruction in the school was Hungarian until 1918 after which it was Romanian. In 1885 the community became the administrative center for all the Jews of the district. The community numbered 282 in 1866, about 40 families in 1889, and 394 persons (about 7% of the total population) in 1891. Jews engaged in commerce, industry, and crafts. Their trade and industry were mainly connected with timber and some of them owned sawmills; there were also unskilled Jewish workers employed in the timber industry. The institutions of the community assisted the poor. Some of the *Ḥadarim* established by the community translated the Pentateuch into German instead of Yiddish in order to facilitate study of this language by the children. From 1919 there was considerable Zionist activity in Reghin, and many members of the youth organizations emigrated to Erez Israel. The community numbered 1,587 (about 16% of the total population) in 1930, and 1,653 (about 10% of the total) in 1941.

Between the two world wars the Jews suffered from the nationalist and antisemitic activities of members of the Iron Guard, and from the official antisemitic policies of most of the Romanian governments. The change of rule in 1940 (from Romanian to Hungarian) did not bring with it any improvement, as was hoped by the Jews, who remembered their legal emancipation in 1867 by the Austro-Hungarian authorities.

Holocaust Period and After

In the summer of 1944 the local Jews were concentrated into a ghetto set up in a brick factory. Jews from the surrounding area were also brought there. From this ghetto about 6,000 Jews were deported to *Auschwitz by the Hungarian Horthiite authorities, at the request of the Nazi occupiers.

After World War II, in 1947 a community numbering about 820 was formed mostly by survivors of the death camps and other Jews who had arrived in Reghin from places in different parts of Romania. The community gradually declined as a result of immigration to Israel and elsewhere. In 1971 there were still some 20 to 25 families living in Reghin and even fewer in the early 21st century.

[Yehuda Marton / Paul Schweiger (2nd ed.)]

REGNER, SIDNEY L. (1903–1993), U.S. Reform rabbi and organizational executive. Regner was born in New York City and received his B.A. from the University of Cincinnati in 1924. In 1927, he was ordained at *Hebrew Union College, which also awarded him an honorary doctor of divinity degree in 1954. His career in the congregational rabbinate (1927–54) was spent at Temple Oheb Sholom in Reading, Pennsylvania, where he also served on the executive committees of the Jewish Community Council (1935–54) and the Central Atlantic States Region of the Council of Jewish Federations and Welfare Funds (1943–47); on the Governor's Committee on Children and Youth (1953–54); and as president of the Council of Social Agencies (1942–44). Long active in the *Central Conference of American Rabbis – as financial secretary (1939–52), executive board member, and chairman of its Committee on Publication (1952–54) – he became the CCA's first executive vice president when the position was created in 1954. In this capacity, he represented the Reform movement's rabbinical association on the governing body of the *World Union for Progressive Judaism, the executive committee of the *Synagogue Council of America, and in meetings with heads of other national Jewish organizations. He also supervised the CCA's publications, edited the yearbook and served ex-officio on joint commissions with the *Union of American Hebrew Congregations. Under his leadership, the CCA became a recognized professional association with annual regional *kallot* (study retreats) in addition to its annual convention. He retired in 1971, becoming executive vice president emeritus (1971–93). A lifelong peace activist, he was elected vice president of the Jewish Peace Fellowship in 1980.

[Bezalel Gordon (2nd ed.)]

REHFISCH, HANS JOSE (1891–1960), German playwright. The son of a Berlin physician, Rehfisch was a successful lawyer who turned to literature, publishing many of his works under the pseudonyms Rene Kestner, Sydney Phillips, and Georg Turner. A free-lance writer until 1933, he escaped from the Nazi regime first to Vienna and then to London where he worked in industry. After World War II he taught at the New School for Social Research in New York (1947–49). He returned to Germany in 1950 and settled in Hamburg. Rehfisch wrote many successful plays mostly dealing with contemporary politics and society. He began his career as an expressionist with the drama *Die goldenen Waffen* (1913), but soon changed to realistic subject matter. His comedy, *Nickel und die 36 Gerechten* (1925), was inspired by the Jewish legend of the 36 (*Lamed Vav) Righteous Men.

Among his works most frequently staged were the tragicomedy *Wer weint um Juckennack?* (1924) and *Die Affaire Dreyfus* (1929), a historical drama written in collaboration with Wilhelm Herzog. Rehfisch's play *Quell der Verheissung* (1946) deals with German Jews who settled in Palestine. *Oberst Chabert* (1955) was a tragedy based on the novel by Balzac. In 1944, he edited the symposium *In Tyrannos: 4 Centuries of Struggle against Tyranny in Germany*, published by the Emigre 1943

Club. He was twice president of the Union of German Stage Writers and Composers (1931–33; 1951–53). In 1967 his selected works appeared in four volumes, edited by the Eastern German Academy of Arts in Berlin.

[Rudolf Kayser]

REHINE, ZALMA (1757–1843), merchant and Baltimore communal leader. Rehine was born in Prussia. After his arrival in America, he settled in Richmond, Virginia, and became a storekeeper. In 1793 he helped found the Richmond Light Infantry and served in it until 1800. When Isaac *Leeser went to the U.S. in 1824, he was employed by Rehine who was his uncle. In 1829 Rehine left Richmond for Baltimore, where he organized a *minyān* and, according to tradition, the first communal religious service by Baltimore Jews took place during High Holy Days in Rehine's home. The first Baltimore congregation grew out of this nucleus.

[Isaac M. Fein]

REHOB (Heb. רְהוֹב, רְהָב; "a wide place, square");

(1) Town allocated to the tribe of Asher, mentioned together with Hammon and Kana (Josh. 19:28), but apparently not conquered by the tribe (Judg. 1:31). It may be identical with the Rehob mentioned in the Egyptian Execration texts of the late 19th century B.C.E. and in the list of Thutmose III (no. 87). It is variously identified both with Tell al-Balāt, southeast of Tyre, and with Khirbat al-'Amrī, northeast of Achzib.

(2) A second Rehob in the territory of Asher, mentioned together with Apehek (Josh. 19:30). It was one of the levitical cities (Josh. 21:31; 1 Chron. 6:60). A suggested identification is with Tell al-Birwa al-Gharbī where remains of the Middle and Late Bronze Ages and the Early Iron Age have been found. Some scholars consider it identical with (1) above.

(3) The Roobot of Eusebius (Onom. 142:11) and the Rehob known from various Egyptian inscriptions are identified with the large tell of al-Šārim, south of Beth-Shean, near the present-day al-Sheikh al-Rihāb. This is the most important mound in the Beth-Shean Valley and the remains found there date from the third millennium B.C.E. to about the tenth century B.C.E. It may be identical with the Rehob mentioned in the Egyptian Execration texts of the 20th–19th centuries B.C.E. According to one of the Beth-Shean stelae of Seti I, it was attacked by forces from Pehel and Hamath, but was eventually relieved by the pharaoh's army. The name appears as Rahabu in the Taanach letters (15th century) and in Papyrus Anastasi I (13th century), where it is listed before Beth-Shean. The last mention of the place occurs in the list of towns conquered by Shishak (no. 26) and, therefore, the town must have ex-

isted until at least 925 B.C.E., although it is not mentioned in the Bible.

[Michael Avi-Yonah]

REHOBOAM (Heb. רְחֹבָם; “the [divine] kinsman has been generous” or “the people has expanded”), king of Judah for 17 years (c. 928–911 B.C.E.); son of Solomon by Naamah the Ammonitess (1 Kings 14:21; 11 Chron. 12:13). Rehoboam’s name is connected with one of the most important events in the early history of Israel, namely, the division of David’s united monarchy into two separate kingdoms (see *Israel; *Jeroboam son of Nebat). On Solomon’s death, Rehoboam went to Shechem, “for all Israel had come to Shechem to acclaim him as king” (1 Kings 12:1; 11 Chron. 10:1). The words “all Israel” here evidently refer to only the northern tribes, since Rehoboam seems to have been accepted by Judah as a matter of course (1 Kings 11:43; 11 Chron. 9:31). As a precondition for accepting him as king, the representatives of Israel made the following demand of Rehoboam: “Lighten the hard service of your father and his heavy yoke upon us, and we will serve you” (1 Kings 12:4; 11 Chron. 10:4; see *Solomon). Rehoboam asked the people to wait three days for his reply, and first consulted “the old men, who had served his father Solomon while he was alive” (1 Kings 12:6). They advised him to accede to the people’s request, thereby ensuring himself their loyalty “for ever” (12:7). But the king rejected the elders’ counsel, preferring to be guided by the “young men who had grown up with him” (12:8); who counseled a hard line. He is reported to have used the words: “Whereas my father laid upon you a heavy yoke, I will add to your yoke; my father chastised you with whips, but I will chastise you with scorpions” (12:8–14). He also was swayed by the vulgarism of his advisers, who told him to tell the people, “My little one [i.e., my penis] is thicker than my father’s loins.” The people replied: “What portion have we in David? We have no inheritance in the son of Jesse. To your tents, O Israel! Look now to your own house, David” (12:16). The Israelites chose as their king Jeroboam son of Nebat, who had previously returned from Egypt (12:3, 20).

Naturally, Rehoboam did not recognize the legality of the split and provocatively sent *Adoram “who was taskmaster over the *corvee” in order to assert his rule, but the people stoned Adoram to death (1 Kings 12:18). Rehoboam was forced to flee to Jerusalem and then to wage a prolonged war against Jeroboam, in a vain effort to reunite Israel with Judah (1 Kings 12:21; 15:6; 1 Chron. 11:1; 12:15). The split in the kingdom and the prolonged fighting between Rehoboam and Jeroboam weakened the Israelites, and at the same time encouraged their neighbors not only to throw off Israelite rule and proclaim their absolute independence (see *Aram, *Ammon, *Moab, *Edom, and *Philistines), but even to attempt to enlarge their own territories at the expense of Israel and Judah.

As a defensive measure, Rehoboam ringed his kingdom with a system of forts (11 Chron. 11:5–12). On the west he fortified Aijalon, Zorah, Azekah, Soco, Gath, Mareshah, and Lachish; on the south, Lachish, Adoraim, and Ziph; and on the east, Ziph, Hebron, Beth-Zur, Tekoa, Etam, and Beth-Lehem. Possibly Rehoboam refrained from fortifying his border with the kingdom of Israel as an expression of his refusal to accept the split. Although the list of the fortified cities built by Rehoboam appears in the Bible before the account of Pharaoh *Shishak’s invasion of Palestine, most scholars are of the opinion that Rehoboam carried out the work of fortification only after the Egyptian campaign. According to the two versions found in the Bible, the campaign took place in the fifth year of Rehoboam’s reign (1 Kings 14:25; 11 Chron. 12:2). The Egyptian king advanced into Judah with a large army, took the fortified cities “and came as far as Jerusalem” (11 Chron. 12:3–4). Shishak carried off the Temple treasures, including the gold shields, and the treasures of the king’s house. From the Egyptian list of places and cities captured by Shishak, it is clear that the campaign was not only directed against Judah but also, and mainly, against the kingdom of Israel (see *Jeroboam son of Nebat). Jerusalem is not mentioned in the list (at least, not in the extant sections of it), from which it may be deduced that Shishak did not conquer the city, but only passed threateningly close to it (cf. 12:7–8). Rehoboam went out to the north of Jerusalem to meet Shishak and paid tribute to him, thereby saving the city from conquest. Shishak’s campaign led to the destruction of many of the cities of Judah, particularly those in the Negev, including Ezion-Geber on the coast of the Red Sea. Fortunately for Judah and Israel and the other little states of the region, however, Egypt lacked the unity and strength to maintain a permanent suzerainty over them.

See *Abijah.

[Bustanay Oded]

In the Aggadah

David praised God for having permitted Ammonite and Moabite women in marriage, since this allowed him (a descendant of Ruth, a Moabite woman) and Rehoboam (the son of Naamah, an Ammonite woman) to enter into the assembly of Israel (Yev. 77a). The treasures which the Jews removed from Egypt (Ex. 12:36) were retained, until Shishak, the king of Egypt, took them away from Rehoboam (Pes. 119a). All the curses with which David cursed Joab (11 Sam. 3:29) were fulfilled in David’s own descendants, Rehoboam being afflicted with a gonorrhoeal flux (Sanh. 48b). The rabbis, emphasizing the message to be derived from Rehoboam’s failure, declared that the king is the servant of the people and not their ruler (Hor. 10a–b).

REHOBOTH (Heb. רְהוֹבוֹת).

(1) Rehoboth-in-the-Negev. Rehoboth is the etiological name of a well dug by Isaac in the Negev in order to escape from quarrels with the people of Gerar (Gen. 26:22). Some scholars locate it in the region around al-Ruḥayba, approximately 20½ mi. (33 km.) southwest of Beersheba. Near the tell, an Iron Age fortress was discovered. *Nabatean remains, including a building (caravanserai?) and a bilingual Nabatean and Greek inscription, suggest that the site was a stopping place for traders on the secondary road extending to the Sinai via Rhinocorura. The main remains at the site date to the Byzantine period. After Haluza, ancient Elusa, Rehoboth (22 acres) is the second largest town in the Negev. The ancient town contained a large central church, apparently built in the late fourth or fifth centuries C.E., and two additional churches on the northern and southern edges of the settlement. Found in the north church were small glass plaques decorated with images of saints. On the site are the remains of one of the best-preserved bathhouses in the Negev. Numerous Greek inscriptions were found on tombstones in the cemetery, the earliest from 488 C.E. and the latest from 555 C.E. A kufic inscription was also found at the site referring to Amr ibn-al-As, conqueror of Byzantine Palestine in the seventh century. Excavations were conducted at the site by Y. Tsafirir and R. Rosenthal-Higgenbottom between 1975 and 1979, with further excavations by Tsafirir and K. Holum in 1986.

(2) Rehoboth ha-Nahar (Heb. רְהוֹבוֹת הַנְּהַר; “Rehoboth by the River”), the residence of Shaul, king of Edom (Gen. 36:37; 1 Chron. 1:48). Roman sources (*Notitia Dignitatum* 73:27), the Beersheba edict, and Eusebius (Onom. 142:13–14) mention it as a garrison in the Gebalene. In the Babylonian Talmud (Yoma 10a) it is located on the Euphrates, usually called *nahar* (“river”) in the Bible. It is perhaps to be identified with Khirbat al-Riḥāb on the Sayl al-Riḥāb, a confluent of the river Zered (Wadi al-Ḥasa’). Remains on the site date to the Nabatean and Roman periods.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

REḤOV, TEL (often spelled **Reḥob**; Arabic: **Tell eṣ-Ṣarem**; Israel map reference 197.207; UTM Grid 873.594), the largest mound in the alluvial Beth-Shean Valley, extending over 26 acres (10.4 hectares); its summit at an elevation of 116 m below sea level. Located between the Jordan River and the Gilboa ridge and 5 km south of Tel Beth-Shean, the mound dominates the north–south road through the Jordan Valley. It is located near plenty of water sources and fertile land. The site

comprises an upper mound and a lower mound to its north, each covering about 13 acres.

Tel Reḥov was identified since the 1920s with Reḥob of Egyptian texts, based on the preservation of the name in the Byzantine Jewish town Roḥob and the Islamic tomb of ešh-Sheikh er-Riḥāb, both located nearby. Surveys conducted by W.F. Albright, A. Bergman [Biran], and N. Zori indicated occupation at the site throughout the entire Bronze and Iron ages.

Reḥov (the Hebrew word for “piazza” and “street”) was the name of several cities mentioned in the Bible and Egyptian sources. Two cities by that name in the western Galilee are referred to in the city lists of Asher (Josh. 19:28–30). An Aramean city and state of that name are mentioned in Syria, mainly in relation to David’s conquests (11 Sam 10:6, 8).

Reḥov in the Beth-Shean valley is mentioned as Raḥabu in an Akkadian letter from Taanach (15th century B.C.E.). In the stele of Seti I found at Beth-Shean (c. 1300 B.C.E.), it is mentioned as remaining loyal to the Egyptian imperial rule at a time of local revolts. In Papyrus Anastasi I from the 13th century B.C.E., the city is mentioned in relation to Beth-Shean and the crossing of the Jordan. Pharaoh Shishak’s list of conquered cities (c. 925 B.C.E.) mentions Reḥov (No. 17) after “The Valley” and before Beth-Shean. Several additional Egyptian sources refer to either the city in the Beth-Shean Valley or to that in the Western Galilee. These include the Execration Texts (19–18th Dynasties), Tuthmosis III’s topographic list (No. 87), a 20th-dynasty papyrus in Torino, and a notation concerning the production of chariots parts in Papyrus Anastasi IV. Reḥov in the Beth-Shean Valley is not mentioned in the Old Testament.

Seven excavation seasons were conducted at the site between 1997 and 2005, directed by Amihai Mazar on behalf of the Institute of Archaeology of the Hebrew University and sponsored by John Camp. Four excavation areas (A, B, H, J) were excavated on the upper mound, and five (C, D, E, F, G) on the lower mound.

Third Millennium B.C.E.

A fortification system dating to the Early Bronze Age II–III was revealed in a narrow trench on the slope of the higher mound (Area H). It includes a 9.5-m-wide mud brick wall preserved to a maximum height of 6.5 m, abutted on its outer side by an earthen glacis preserved to 13 m wide and 3.5 m high. This impressive fortification, which apparently surrounded the upper mound, suggests that Tel Reḥov was the site of a major city during this period.

Evidence for an Intermediate Bronze Age (*ebiv/mbi*) settlement and cemetery was revealed in surveys of the alluvial plain west of the mound. Several burial caves from this period were excavated close to the southwestern corner of the mound, containing pottery vessels, metal weapons, and beads.

Second Millennium B.C.E.

The excavations did not reveal any remains from the first half of the second millennium B.C.E. (Middle Bronze Age). An

Old Babylonian seal found on the mound, and few Middle Bronze graves near the mound hint for a possible occupation level which was not yet exposed.

The occupation history during the second half of the second millennium B.C.E. (Late Bronze and Iron Age I periods) was explored in Area D, a 10-m-wide trench on the western slope of the lower mound. At the bottom of the trench (Phase D-11), a layer of dark silt and ash located 1.2 m below the present-day alluvial field west of the mound indicates a significant rise in the level of the plain during historical periods. This layer contained few pottery sherds dated to the 16th–15th centuries B.C.E. This layer was covered by a 2-m-thick layer of travertine (D-10), probably an evidence of a small lake or pond at the foot of the mound during part of the Late Bronze Age. From the 14th century onwards, a continuous urban settlement was detected. The earliest (Phase D-9) included the remains of a substantial building dated to the 14th–13th centuries B.C.E. In the next phase (D-8), still in the 13th century B.C.E., a thick plaster floor covered the remains of the earlier building. Two occupation layers are dated to the 12th century B.C.E.; the earlier (D-7) includes remains of several rooms in a large architectural complex and the later (D-6) includes flimsy walls, plastered industrial installations, and beaten earth floors which were mended several times. Phases D-5 and D-4 represent two architectural phases of an 11th century B.C.E. city, of which a north–south street and parts of houses on either side were excavated. The destruction of stratum D-4 was followed by a total change in the function of this area. In Phase D-3 an open area covered the previous buildings, and more than 40 pits were recovered in a rather small area, used for storage or refuse. The material culture in all phases D-9 to D-3 is Canaanite in nature; painted pottery continued to be utilized until the end of the Iron Age I. Area D thus revealed a continuous development of the Canaanite city from the 13th to the end of the 11th centuries B.C.E., in spite of at least three destructions. No evidence of fortifications was discerned in any of these strata.

The Iron Age IIA: 10–9th centuries B.C.E.

The term Iron Age IIA is used here to define a period of about 150 years, from c. 980 B.C.E. to ca. 830 B.C.E., the time of the Israelite United Monarchy and of the Omride Dynasty. This is the main period studied at Tel Reḥov, and the rich finds contributed much to the study of this debated period in northern Israel. Three strata were defined: VI, V and IV, based on correlation between local phases in various excavation areas. During this period the city was densely built according to a well-ordered town plan, with parallel blocks of buildings. However, no fortifications were found. Both the building technique as well as the buildings' plans are exceptional in the Iron-Age architecture of Israel: the houses were constructed of unbaked mud bricks without stone foundations; wood foundations were constructed for both walls and floors and the buildings lack the pillars which are common in Israelite architecture. An open air sanctuary was found next to one of the dwelling quarters,

perhaps serving the local neighborhood and used for ancestors cult. In another area, beehives were found in a building of Stratum V, the first of their kind to be uncovered in the Levant.

The second of these three Iron IIA cities was partly destroyed by fire, and partly continued to survive in Stratum IV. The third (Stratum IV) was violently destroyed by fire, resulting in the abandonment of the lower city. A large number of 14C dates of grain and olive stones as well as conventional archaeological considerations indicate that Strata VI and V belong to the 10th century B.C.E., and Stratum IV to the 9th century B.C.E. The destruction of V occurred during the last third of the 10th century, perhaps during Shoshenq I raid; Stratum IV was destroyed during the 9th century, perhaps during the Arameans attacks in the days of Hazael.

The destruction layers yielded rich assemblage of finds representing a specific regional aspect of the Iron Age IIA material culture in northern Israel. The pottery is characterized by the appearance of red slip and hand burnish, though in Stratum VI Canaanite tradition of painted pottery was still abundant. The painting diminishes in the following strata, and the red slip and hand burnished pottery become dominant.

International trade is detected in the form of Phoenician, Cypriot, and Greek pottery. Of special interest are several Greek Proto-Geometric, Sub-Proto-Geometric, and Middle Geometric sherds, which are rare imports in the Levant and are of special importance for the study of the Greek Iron Age chronology and international connections.

Objects related to a local cult include a group of ceramic horned altars, some with naked female figurines attached to their fronts. These altars retain traditions known from Syria at the end of the Late Bronze Age. A ceramic model shrine was decorated with unique molding on its roof, depicting a crouching animal with its front paws on two grotesquely-shaped human heads. A variety of clay figurines belong to the Canaanite/Phoenician artistic tradition, others are typical of northern Israel, such as several examples of the "drum player" woman. A unique figurine in a crude local style depicts a naked female crouching on her knees.

A variety of seals and seal impressions represent animals (antelopes, ostriches, crabs, birds), while one example depicts two human figures on either side of a palm tree. A unique type of seal impression on jar handles, known so far only from Tel Reḥov and Tel Beth-Shean, shows schematic human figures (or deities?) striding on mountaintops (?). A unique ivory object shows an enthroned human figure dressed in a long garment. The object is hollow, the head, hands and legs were made separately and attached to the main body.

Three alphabetic inscriptions incised on pottery jars were found. One from Stratum VI reads lnḥ[], perhaps to be reconstructed "belonging to Nach[um]." A second inscription reads: lšq[?] nmš – "belonging to Shky (?) [son of?] Nimshi." The name Nimshi is known from a contemporary inscription at nearby Tel Amal, and in the Bible as the name of Jehu's father or grandfather. The third inscription was broken, only the letters m'.m were preserved and the meaning remains elusive.

Rehov, though not mentioned in the Bible, must have been one of the most important cities in the Northern Kingdom of Israel. The specific material culture found in the 10th–9th centuries levels may indicate that much of its population could have been descendants of the previous Iron Age I Canaanite inhabitants, though now the city was part of the Israelite geopolitical entity.

The Iron Age IIB

During the Iron Age IIB (c. 830–732 B.C.E.) the city was reduced to half its former size and limited to the upper mound. The city was now surrounded by a 9.5-m-wide mudbrick wall, probably intended to stand against the Assyrian threat. Several occupation phases were detected (Stratum I11) ending with dramatic destruction, including evidence of people slaughtered in their houses, most probably during the Assyrian conquest in the year 732 B.C.E.

Two graves with Assyrian pottery, as well as scant occupational remains (Stratum I1), are evidence of a short period of activity after the Assyrian conquest, but the site was soon abandoned.

The Early Islamic to Medieval Periods

After a gap of about 1,000 years, a small village was founded on the summit of the mound in the 8th century C.E., and it survived until the 12th century C.E. Only the edges of this settlement were excavated.

[Amihai Mazar (2nd ed.)]

REHOVOT (Heb. רְהוֹבוֹת; “Wide Expanses,” a name based on Gen. 26:22), city in central Israel, in the Coastal Plain, 14 mi. (22 km.) S. of Tel Aviv-Jaffa. Rehovot was founded in 1890, by First *Aliyah immigrants from Poland. The land had been

bought from a wealthy Christian Arab owner through the efforts of Yehudah *Goor (Grasovski), Yehoshua *Hankin, and A. *Eisenberg. The founding group, Menuhah ve-Nahalal, was intent on establishing a moshavah independent of Baron Edmond de *Rothschild’s aid and tutelage. Rehovot was then the only Jewish village to achieve this status. Although the moshavah was based on private initiative and property, the settlers showed civic spirit and strove toward cooperation. Initially, they had to overcome many obstacles – the Arab neighbors’ enmity, agricultural failures due to plant diseases and the like, and marketing difficulties of their grape and almond produce. Citriculture was introduced in the first decade of the 20th century and the population increased, particularly after 1906, with the settlement of immigrants from Yemen in the suburbs, e.g., Sha’arayim founded in 1912. In 1914 Rehovot had 955 inhabitants and 2,750 acres (11,000 dunams) of vineyards and almond orchards as well as over 130 acres (530 dunams) of citrus groves. After the hardships of World War I, Rehovot entered a phase of quick expansion. In 1922 the village received municipal council status. In 1932 the Agricultural Research Station of the Jewish Agency (since statehood under the authority of the Ministry of Agriculture) was transferred from Tel Aviv to Rehovot. In 1934 Chaim Weizmann founded the Sieff Institute in Rehovot and built a home in the moshavah in 1936. While throughout the 1930s and 1940s the citrus crop continued to constitute the mainstay of Rehovot’s economy, industrial enterprises, particularly citrus preserve plants, were opened. In 1949, the Sieff Institute was enlarged and became the *Weizmann Institute. In 1952 the Agricultural Research Station became the Faculty of Agriculture of the *Hebrew University. In 1948 Rehovot had 9,000 inhabitants and became a city two years later. The population increased rapidly in the first years of statehood, reaching 23,000 in 1953. Later, its growth continued at a slower pace with 29,000 inhabitants in 1958 and 36,600 in 1968. Citrus and mixed farming still constituted an important element in the local economy, and Rehovot became one of Israel’s principal centers for citrus packing, particularly after the opening of *Ashdod port. Industry was diversified and included the production of artificial leather and chemicals, along with additional food-processing plants. In the late 1960s, a number of scientific enterprises connected with the Weizmann Institute added yet another element to the city’s economy. The Kaplan Hospital is included in Rehovot’s municipal boundaries. In the mid-1990s the population was approximately 83,200, rising to 98,800 in 2002, on an area of 8.5 sq. mi. (22 sq. km.). A third of the population was religious, 21% had an academic education. The economy continued to be based on packing, food processing, and chemicals, services, commerce, and the science and research institutes.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

REHUM (Heb. רְהוּם; probably רְהוּם, an Aramaic hypocoristic of רְהוּמַאֵל, cf. רְהוּמַאֵל in *Murashu tablets), a popular name borne by Jews and Arameans during the Persian period. Written in the Aramaic script, it has been confused by ancient scribes (cf. Ezra 2:2 with Neh. 7:7) and modern scholars (Kraeling, *The Brooklyn Museum Aramaic Papyri* (1953), 10:19, 11:14, 12:34) with the graphically similar Nehum.

(1) One of the 12 leaders joining Zerubbabel in the return from Babylonia (Ezra 2:2).

(2) As chancellor of the province Samaria or the satrapy Trans-Euphrates, Rehūm and the scribe Shimshai succeeded in blocking construction of the Jerusalem wall during the reign of Artaxerxes I (Ezra 4:8–23).

(3) One of the levites who aided Nehemiah in the reconstruction of the Jerusalem wall (Neh. 3:17).

(4) A lay family name affixed to the agreement to observe the Torah (Neh. 10:26).

(5) As the name of a priestly family (Neh. 12:3) it may be a scribal corruption of Harim (cf. Neh. 10:6; 12:15; 1 Chron. 24:8).

[Bezalel Porten]

REHUMEI, name of three Babylonian *amoraim*. **REHUMEI** (I), *amora* of the mid-fourth century and a pupil of Rava and Abbaye (Pes. 39a; Naz. 13a). It is told that he died prematurely on the eve of the Day of Atonement, the circumstances of his death being given as follows: Rehūmei studied with Rava at Maḥoza and returned home to his wife only once a year on the eve of the Day of Atonement. One year he was so involved in his studies that he forgot to return. When he did not arrive, his anxious wife burst into tears. At that moment the roof collapsed and he was killed (Ket. 62b). **REHUMEI** (II), *amora* of the mid-fifth century. He was a pupil of Ravina I, before whom he expounded a saying of Huna b. Taḥlifa (Zev. 77a). He also transmitted the customs of Ravina (Yoma 78a). Rehūmei succeeded Rafram II as the head of the academy of Pumbedita from 443 to 456. He died during the persecution of the Jews by Yazdegerd II. He may have also been called Naḥumai (*Iggeret R. Sherira Gaon*, ed. B.M. Lewin, p. 96; *Seder ha-Qabbalah*, ed. Cohen, p. 34). **REHUMEI** (III), *amora*, is also considered one of the early *savoraim*, although his teachings are still included in the Talmud. He differs with his contemporary Joseph on certain topics (Er. 11a; Men. 33b). He died in 505 C.E.

REICH, ASHER (1937–), Hebrew writer. Reich was born in Jerusalem, grew up in the ultra-Orthodox milieu of Me'ah She'arim and was educated in religious schools. At 18 he defied the norms of his surroundings and joined the army, and later studied philosophy and literature at the Hebrew University. His first collection of poems, *Ha-Shanah ha-Shevi'it* ("The Seventh Year") appeared in 1963. It was followed by a dozen collections, including *Mareh Makom* (1978), *Seder Shirim* ("Collection of

Poems," 1986), *Uvdot Bidyoniyot* ("Fictional Evidence," 1993) and *Penei ha-Areẓ* ("A View of the Land," 1999). Reich's protest poems set up a mirror to the changes in Israeli society and mentality. Other poems are of a personal nature, contemplating love and loss and relating with poignant, sensual images to nature and landscape in Israel and in Europe. Particularly striking is his rich language, a poetic idiom which interweaves the language of the Scriptures and various Jewish sources with modern, colloquial Hebrew. Reich, who was for eight years co-editor of *Moznayim*, the magazine of the Hebrew Writers Association, participated in the International Writing Program at Iowa University and received several awards, including The Bernstein Prize. His autobiographical novel *Zikhronot shel Hōleh Shikheḥah* ("Reminiscences of an Amnesiac," 1993) tells the story of poet Yeshayahu Sonnenfeld, against the background of Berlin after the Unification and Tel Aviv under the threat of Saddam Hussein's SCUDs. The oxymoronic title points to the complex theme which underlies the novel, namely the power of past experiences and the inability to suppress painful memories. A collection of stories *Ish im Kelev* ("Man with Dog") appeared in 1999. Individual poems have been translated into various languages. Three of his collections as well as the novel were published in German. For further information see the ITHL website at www.ithl.org.il.

[Anat Feinberg (2nd ed.)]

REICH, IGNÁC (1821–1887), teacher and historian. Born in Zsámbeke, Hungary, Reich worked from 1851 as a teacher at the Jewish Community School of Budapest, where he proposed that religious subjects be taught in Hungarian. He wrote newspaper articles in favor of the emancipation of Hungarian Jewry and their assimilation as Hungarians. During the 1848 Revolution, Reich voiced his sentiments in patriotic poems. He was a frequent contributor to the Hungarian Jewish press, and translated Genesis and the *Haggadah* into Hungarian for use in schools (1879, 1878).

His main works included a collection of biographies of Hungarian Jews under the title *Beth El: Ehrentempel verdienter ungarischer Israeliten* (5 vols., 1856–65, 1878²), an important source book for Hungarian Jewish history; and *Bet Lehem: Jahrbuch zur Befoerderung des Ackerbaues, des Handwerks und der Industrie unter den Israeliten Ungarns*, a yearbook for the advancement of agriculture, trade, and industry among Hungarian Jews (2 vols., 1872–73).

REICH, KOPPEL (Jacob) (1838–1929), Hungarian rabbi. Born in Verbó into a rabbinical family, he studied under his father

Abraham Ezekiel Reich, rabbi of Bannowitz, and Abraham Samuel Benjamin *Sofer, rabbi of Pressburg. He married the daughter of Israel ha-Ro'eh, disciple of Moses *Sofer and rabbi of Szobotiszt, whom he succeeded in 1860. Twenty years later he became rabbi of Verbó where his grandfather had previously held office and was elected chief rabbi of the Orthodox community of Budapest in 1889. Reich possessed a wide general education and was active in Hungarian Orthodox communal affairs. In 1905 he presided over the convention of Orthodox rabbis and community leaders who drew up the regulations of Orthodox Jewry in Hungary. He delivered the opening speech in Hebrew – an unusual event in Hungary. These regulations were later ratified by the government and became the legal framework for the organization of Orthodoxy in Hungary. In the school which he established and directed, Torat Emet, both religious and secular subjects were taught. In 1927, although he was almost 90 years old, he took his seat in the upper house of the Hungarian parliament. Reich left no works, but he is quoted by rabbis of his generation. All his sons and sons-in-law held rabbinical office in Hungary.

[Itzhak Alfassi]

REICH, LEON (1879–1929), Zionist leader in eastern Galicia and a leader of Polish Jewry. Born in Lemberg, Reich joined the Zionist Movement in his youth and founded the first Zionist students' association in Galicia, called Emunah. By that time he was already known as an able lecturer and writer. After studying political science in Paris for two years, Reich returned to Galicia and became head of the Zionist Movement. He was also active in the political struggle for the civil rights of the Jews. In 1911 he was a candidate for the Austrian parliament, and, in spite of his failure to be elected, his influence increased in all Jewish circles. He was the editor of the Zionist Polish-language weekly *Wschód* and also edited a Polish Zionist almanac in 1910. During the political unrest in Galicia at the end of World War I (1918), he was arrested by the Polish government, accused of treason, and placed in a detention camp. He was released, however, on the intervention of West European leaders. He moved to Paris and became a leading member in the *Comité des Délégations Juives to the Versailles Peace Conference, on whose behalf he edited a book concerning the national rights of East European Jews, *Les Droits nationaux des Juifs en Europe Orientale* (1919). Back in Poland, he was elected a member of the Polish Sejm for the Lvov district, an office which he retained until his death.

In 1924 Reich was made chairman of the Jewish Club in the Sejm and Senate (Kolo Zydowskie). In this capacity he and O. *Thon negotiated an agreement with the Polish government according to which the Jewish members of the Sejm were to support the government, provided that certain concessions be given to the Jews. The agreement (known under its Polish name *Ugoda) met with wide opposition in the Jewish public and became void later, when, after a coup, a new regime was

established in Poland. Reich was forced to resign from the chairmanship of the Jewish Club in the Sejm, but retained his influence, especially in eastern Galicia, where he was reelected to the Sejm in spite of pressures exerted by the Polish authorities in favor of their own candidates. At the same time, he carried on his Zionist work as president of the Zionist Organization in eastern Galicia and deputy chairman of the Zionist General Council. He took part in all Zionist congresses as a leading delegate of the *General Zionists. In order to increase his influence throughout Poland, he founded a second Zionist Polish-language daily in Warsaw, *Dziennik Warszawski*, in addition to *Chwila*, published in Lvov. The new paper was on a high level, but had to be closed because of financial difficulties. Reich's remains were brought to Tel Aviv in 1934.

[Aryeh Tartakower]

REICH, ROBERT BERNARD (1946–), U.S. political economist, educator, and government official. Born in Scranton, Pennsylvania, Reich was raised in Westchester County, N.Y., and educated at Dartmouth College (B.A. 1968), Oxford (Rhodes Scholar, M.A. 1970), and Yale Law School (J.D. 1973). He was an intern in the office of Senator Robert F. Kennedy in 1967, and worked for the presidential campaign of Eugene McCarthy in 1968. He was an assistant solicitor general in the Department of Justice, 1974–76; director of policy planning, Federal Trade Commission, 1976–81; and lecturer at the Kennedy School of Government, 1981–93. Reich was a contributing editor of the *New Republic*, 1982–93, and a cofounder of the journal *American Prospect* in 1990. An advisor to Democratic presidential candidates Walter Mondale in 1984, Michael Dukakis in 1988, and John Kerry in 2004, he was secretary of labor during the first term (1993–97) of the administration of President Bill Clinton, a friend Reich had known as a student at Oxford and Yale. Small in stature, he quipped that he always knew that he was on Clinton's short list. Reich was professor of social and economic policy at Brandeis University, 1997–2005. In 2002 he ran unsuccessfully in the Democratic primary for governor of Massachusetts. He became a professor at the Goldman School of Public Policy at the University of California, Berkeley.

From the early 1980s Reich was a prominent public "policy entrepreneur," an enthusiastic advocate and popularizer of economic policy ideas through public appearances, articles, and books, focusing on jobs, the global economy, and related issues. He was associated with the tendency known as neo-liberalism, which combines a fundamental reliance on markets and free trade to achieve economic growth with a belief in government regulation and at least minimal social provision. Once an advocate of a comprehensive state industrial policy that would direct investment to certain industries, by the time he became secretary of labor he had abandoned

that approach for one that favored education and retraining as a way of adapting the American workforce to a changing global economy whose conditions are determined by essentially unrestrained multinational corporate activities. He did implement generally liberal policies, however, having to do with sweatshops, child labor, minimum wages, worker safety, and pensions, and attempted to get the administration to address seriously the issues of economic insecurity on which it had been elected, but lost influence as Clinton moved politically to the center/right after the 1994 congressional elections. Reich argued against any attempt to keep American manufacturing jobs from being outsourced overseas, believing that such jobs are being lost everywhere because of automation, and that the benefits of cheaper products will generate more American jobs in the long run.

Among Reich's books are *Minding America's Business* (1982, with Ira Magaziner); *The Resurgent Liberal and Other Unfashionable Prophecies* (1989); *Public Management in a Democratic Society* (1990); *The Work of Nations: Preparing Ourselves for 21st Century Capitalism* (1991); *Locked in the Cabinet* (1997); *The Future of Success: Working and Living in the New Economy* (2000); and *Reason: Why Liberals Will Win the Battle for America* (2004).

[Drew Silver (2nd ed.)]

REICH, STEVE (1936–), U.S. composer and performer. Reich was born in New York and began studying drumming with Roland Kohloff at the age of 14. At Cornell University (1953–57) he devoted himself mainly to philosophy but also attended lectures of William Austin in music history. After returning to New York he began his composition studies, first privately with Hall Overton (1957–58) and later at the Juilliard School with Bergsma and Persichetti (1958–61). He received his master's degree under Berio (Mills College, California).

In the middle of the 1960s the idea of "phasing" captured his imagination; he composed some pieces where identical sound elements move out of synchrony with each other, i.e., in and out of phase (*It's Gonna Rain*, for tape, 1965, *Piano Phase*, 2 pianos, 1967, etc.). In this way, Reich became one of the founders of minimalism, or repetitive music. This music demanded a new type of reception, characterized by Reich as follows: "Some critics [...] thought I was intending to create some kind of 'hypnotic' or 'trance' music. [...] But I actually prefer the music to be heard by somebody who's totally wide awake, hearing more than he or she usually does, rather than by someone who's just spaced-out and receiving a lot of ephemeral impressions."

In the late 1960s Reich began giving concerts in New York galleries, where other minimalists (musicians, film artists, and visual artists) were also active. At the same time he and his own ensemble began making records of his music. He studied drumming with teachers from Africa and Asia, and often included percussion in his scores (*Music for 18 Musicians*, 1974–76; *Eight Lines*, 1979). *Music for 18 Musicians* became a new stage in his composition technique: within a

context of many constantly recycling musical figures, each of them gradually changes.

In 1976–77 Reich devoted his time to Hebrew, Torah, and cantillation studies, visited Israel, and heard singers from Eastern Sephardi communities. Following this experience, he composed *Tehillim* for choir and instrumental ensemble (1981). His next opus, *The Desert Music* (1982–84) for choir and orchestra on the lines from William Carlos Williams, refer to the possible destruction of the planet. K.R. Schwarz characterized the opening of the finale as "[...] a solitary human running across a vast desolate plain – a desert at once intimidating and exhilarating"

In his most famous piece, *Different Trains*, 1988, Reich combines his childhood recollections of frequent train journeys between New York and California and his divorced parents with the memory of the different trains taking Jewish children to the death camps. Reich used recordings of train sounds and spoken testimonies of his governess, a retired Pullman porter, and Holocaust survivors, to be played as short melodies by live and recorded string quartets. *The New York Times* hailed *Different Trains* as an "astonishing work of such originality that breakthrough seems the only possible description ... possesses an absolutely harrowing emotional impact." *The Cave*, Steve Reich and Beryl Korot's theater piece (1990–93), was also highly appreciated by the critics. The title is metaphoric: *The Cave* is about the cave at Hebron that is by tradition the burial place of Abraham and Sarah. Exploring the biblical story of Abraham, Sarah, Hagar, Ishmael, and Isaac, the 18-musician production consists of edited documentary video footage timed with live and sampled music. After *The Cave*, Reich and his wife, the video maker Beryl Korot, continued their collaboration in *Three Tales*, a full-evening music-theater piece on the topic of technology and its consequences. Noted choreographers often interpreted Reich's music, including Laura Dean, who commissioned *Sextet* (1984). The ballet, entitled *Impact*, earned Steve Reich and Laura Dean a Bessie Award in 1986. In 1994 Reich was elected to the American Academy of Arts and Letters.

[Yulia Kreinin (2nd ed.)]

REICH, WILHELM (1897–1957), Austrian psychoanalyst. In his earlier years Reich made significant contributions to psychoanalytic theory. He broke away from the orthodox Freudian approach, believing that neurosis is due to undischarged sexual energy and that any blocking of sexual discharge causes actual physiological disturbance of sexuality (*Die Funktion des Orgasmus*, 1927). According to Reich, mental health is the ability to achieve full orgasm. The sexually satisfied person would have already released his aggressions and thus behave in a socialized manner. He related these ideas to the prognos-

sis of treatment in his paper “Concerning genitality from the standpoint of psychoanalytic prognosis and therapy” (1924, Eng., 1925). Another important contribution was Reich’s focus on character and character formation. Previously psychoanalyses dealt mainly with the interpretations of unconscious material. In his study of character resistances he concentrated on the whole person, his habits, tensions, and mannerisms. He went to the U.S. in the 1930s.

He died in prison after he was convicted of fraud. He had sold “orgone boxes” which according to Reich attracted “orgone,” a material found in the air that had therapeutic powers. His books which deal with character are *Der triebhafte Charakter* (1925) and *Charakteranalyse* (1933, Eng., 1945²), his most important work.

[Miriam Gay]

REICHARD, PIROSKA (1884–1943), Hungarian poet, critic, and translator. Piroška Reichard’s verses, which are outstanding for their great delicacy and were collected in *Az életen kívül* (“Out of Life,” 1911) and *Oszi üdvözlet* (“Autumn Greetings,” 1922), reflect the fate of the lonely woman. She was a noted translator from English and French as well as being an important essayist and critic of the *Nyugat* school. She committed suicide during the Nazi era.

REICHENBACH, HANS (1891–1953), philosopher. Reichenbach, who was born in Hamburg, is considered one of the most distinguished philosophers of science of the 20th century. He taught at the Technische Hochschule in Stuttgart (1920–26), and at the University of Berlin (1926–33). When Hitler came to power, he left Germany and obtained a teaching position at the University of Istanbul. From 1938 he was professor of philosophy at the University of California at Los Angeles. Reichenbach belonged to that group of scientifically minded philosophers whose conceptual ideals were embodied in the philosophy of logical positivism, a doctrine that was a blend of the new logic developed by Frege and Russell and of traditional British empiricism, modified by the phenomenalism of Ernst Mach. Though never a member of the Vienna circle in a formal sense, Reichenbach worked closely with its main representatives, especially Rudolf Carnap and Herbert *Feigl, and the spirit of their joint endeavors is well expressed in his *The Rise of Scientific Philosophy* (1951). Reichenbach’s main contributions to philosophy fall into four main categories: (1) his analysis of the relativity theory; (2) his attempt to solve Hume’s classical problem of induction; (3) his development and defense of a frequency theory of probability; (4) his highly original work on nomological statements in the field of inductive logic.

A prolific writer, Reichenbach was the author of 19 books, some of which were published posthumously. His masterpiece is generally considered to be his *Axiomatik der relativ-*

istischen Raum-Zeit-Lehre, originally published in Germany in 1924, but translated into English as *The Philosophy of Space and Time* (1958).

REICHER, EMANUEL (1849–1924), one of the most famous actors of the naturalist movement in Germany. Born in Bochnia, Galicia, Austria, Reicher played first in Hungary, then in Munich, and came in the 1880s to Berlin, where he was promoted by Otto Brahm; he became a leading actor of the Freie Bühne, the Lessing Theater (1892), and the Deutsches Theater (1895, under O. Brahm). In 1902–04 he joined the Kleines Theater of Max Reinhardt, then returned to Brahm. He was a pioneer of the naturalistic play and an actor famous for roles in plays of H. Ibsen and G. Hauptmann. From 1915 to 1921 he lived in New York as an actor, and later as the manager of the Garden Theater. He also directed plays at Maurice Schwartz’s Jewish Art Theater (1918) and later for the Theater Guild. He returned to Germany in 1923 and died in Berlin.

[Archiv Bibliographia Judaica (2nd ed.)]

REICHERSON, MOSES (1827–1903), Hebrew author and grammarian. Reicherson was born in Vilna where he earned his living as a part-time teacher of Hebrew and as a proof-reader and editor for publishing houses. He was a childhood friend of J.L. *Gordon. He produced the first Hebrew translation of the proverbs of the Russian author I.A. Krylov (1860), and published a three-part Hebrew grammar, *Dikduk li-Sefat Ever* (1864, 1873, 1884). In 1890 he immigrated to New York where he translated Lessing’s proverbs and stories in *Mishlei Lessing ve-Sippurav* (1902). He also wrote many essays on linguistics for American and European Hebrew journals.

BIBLIOGRAPHY: R. Brainin, *Fun Mayn Lebns-Bukh* (1941), 203–13; H. Hapgood, *The Spirit of the Ghetto* (1902), 40–51; Kressel, *Leksikon*, 2 (1967), 864.

[Yehuda Slutsky]

REICHERT, ISRAEL (1891–1975), Israeli botanist and agricultural scientist. Born in Ozorkow, Russian Poland, into a well-to-do Orthodox family, Reichert went to Palestine in 1908 and worked first as a laborer and then as a natural history teacher. He went back to Europe to study biology and plant pathology, returning to Palestine in 1921 to organize the plant pathology department at the newly formed Agricultural Experiment Station. In the 29 years he directed the department, it became a renowned research center in plant pathology, vegetable storage problems, disease control, mycology, bacteriology, virology, and lichenology. In 1942 Reichert joined the Hebrew University’s new School of Agriculture at Rehovot as a lecturer. From 1949 to 1959 he was professor of mycology and plant pathology. In 1938 he was a co-founder of the *Palestine Journal of Botany*. In 1955 he received the Israel Prize for natural sciences.

Reichert’s early investigations were on cereal diseases such as rusts and smuts. He went on to diseases of vegetables and plantation crops – grapevines, citrus fruits, and bananas –

and did the earliest pioneering work on the mushrooms of Erez Israel. He created the Hebrew terminology for his field of work, and coined the term “pathogeography” to describe the application of eco-geographical principles to plant pathology and to disease control. He was a world authority on the fungi and lichens of the Near East, which he classified according to these principles. His main contribution was to bridge the gap between plant-physiology and plant-geography.

BIBLIOGRAPHY: H.R. Oppenheimer, in: *Israel Journal of Botany*, 15 (1966), 83–85.

[Julian Louis Meltzer]

REICHINSTEIN, DAVID (1882–1955), physical chemist, born Mogilev, Russia. Reichinstein was professor physical chemistry at the University of Nizhni Novgorod (1918); the Ukrainian Agricultural Academy, (1924); Polytechnicum, Berlin-Charlottenburg (1928–33); and in Prague (1933–38). He was a private consultant in Zurich (1938–55). He wrote *Bestimmung von Geschwindigkeiten von Elektrodenreaktionen* (1913); *Eigenschaften des Adsorptionvolumens* (1916); *Der elektrolytische Stromverstaerkungseffekt* (1920–22); and *Grenzflaechenvorgaenge in der unbelebteten and belebteten Natur* (1930).

REICHMANN, family of international real estate developers, philanthropists. SAMUEL REICHMANN (1898–1975), a wealthy egg merchant from the small Hungarian town of Beled, and his wife, RENÉE (1898–1990), moved to Vienna in 1923. Deeply observant Jews, they eventually had six children. The family was visiting Samuel’s sick father in Hungary when **Kristallnacht* took place and Nazi-inspired gangs attacked Jews and Jewish property in German and Austria. The Reichmann’s did not return to Vienna. Instead, Samuel took his family first to London and then to Paris. When France fell to the Nazis in 1940, the family escaped to the international city of Tangier in then-Spanish-controlled Morocco. In the wide-open business atmosphere of wartime Tangier the family prospered as Samuel became a major currency trader. Renée, with the help of her daughter EVA (1923–1986), used the family’s wealth and influence to pressure Franco’s officials into issuing visas to Jews in Nazi-controlled Budapest, helping to save several thousand lives. Through the Spanish Red Cross, Renée also packed and shipped many thousands of food parcels to the inmates of Auschwitz and other concentration camps.

After the war, Samuel’s son PAUL (1930–) left Tangier to study in yeshivot in Britain and Israel. He returned to Morocco as a rabbi in 1953 and began working to modernize Jewish religious education in Morocco. But like most Jews in Morocco, the Reichmann family would soon pack up and leave. Despite their financial success, the family joined an exodus of Moroccan Jews hoping to avoid turbulence looming in the wake of Morocco independence. Eva settled in London and EDWARD (1925–2005) went to Montreal with its already large Jewish community. In 1955 Edward founded Olympia Flooring and Tile to import and sell tiles from Europe. The rest of the family soon followed him to Canada. LOUIS (1927–) joined

Edward in Montreal but ALBERT (1929–), PAUL (1930–), and RALPH (1933–) settled in Toronto, where they first extended Edward’s tile business but eventually, under the corporate name of Olympia & York, branched out into construction and property development. Edward would later suffer business reversals and, aided by his younger brothers in Toronto, moved to Israel where he became successful in property development.

In Toronto the Reichmann brothers – soon known for their integrity, religious observance, protection of their privacy, and modest lifestyle – first built and operated warehouses and other commercial developments in the burgeoning city’s rapidly growing suburbs. With Paul at the helm, the Toronto company gained a reputation for building structures faster and more cheaply than any other developer. Building success on success, they expanded into the international property development and management business. Among the company’s larger projects were First Canadian Place in Toronto, manor property development projects in Tokyo, and the successful New York City Battery Park development known as the World Financial Center. By the 1980s Olympia & York had grown to be the largest property development firms in the world and, in an effort at diversification, the Reichmann company purchased Abitibi Price, a major pulp and paper firm, and in 1985 bought the Gulf Canada oil company. By the late 1980s the Reichmanns were reportedly among the ten wealthiest families in the world.

In the late 1980s the Reichmanns took a huge gamble when Olympia & York agreed to develop the 83-acre Canary Wharf site in remote east London, the largest development project in the world. They lost. As Britain slid into recession and property values tumbled, the project suffered enormous financial setbacks. With office space at Canary Wharf largely empty, Olympia & York ran out of money. In 1992 the company filed for bankruptcy and was dismembered in February 1993. The Reichmanns were left with only a small property management company known as Olympia & York Properties Corporation. During the decade that followed this new company rebounded to become a multibillion dollar firm, reclaiming a stake in the now prosperous Canary Wharf project, as well as First Canadian Place in Toronto. It also has begun to revitalize its stake in property development in major centers around the world. Today, the family’s business interests are moving to the next generation.

The members of the Reichmann family in Toronto remained steadfast in their adherence to Orthodox religious tradition. At cost to themselves, the Reichmanns closed down their construction sites for the Sabbath and for Jewish holidays. Much honored in Toronto and international Jewish world, they were also generous in supporting an international infrastructure of Orthodox schools, yeshivot, *kolelim*, synagogues, and other institutions. The family was also very active in Soviet Jewry campaigns and in support of other charitable and educational causes in Canada, Israel, and around the world.

[Harold Troper (2nd ed.)]

REICH-RANICKI, MARCEL (1920–), German journalist and literary critic. Born in Wloclawek, Poland, the son of a merchant, Reich-Ranicki moved with his family to Berlin in 1929, where he was able to finish high school in 1938 but – as a Polish Jew – was not permitted to study at the university afterwards. Soon he was arrested and deported to Poland, where he lived in Warsaw, from 1940 in the ghetto working as translator for the *Judenrat. In 1943 he and his wife hid in the underground, while most of his family was murdered by the Nazis. After liberation by the Soviet army, he joined the Communist Party of Poland, working as consul for the Foreign Ministry and also for the secret service of Poland in London from 1947 to 1949. Resigning from these posts, he returned to Warsaw, where he was excluded from the party and arrested because of “ideological alienation.” This termination of Reich-Ranicki’s diplomatic career was also the beginning of his career as a critic. Working as a publisher and journalist, he mediated between German literature and the Polish reader. He translated Kafka’s *Das Schloss* and published a history of German literature from 1871 to 1954 (1955) and a book on Anna Seghers (1957). In 1958, he did not return from a trip to West Germany, remaining in Frankfurt/Main and from 1959 to 1973 in Hamburg, where he worked – supported by his friends Heinrich Boell and Siegfried Lenz – as a critic for several newspapers, such as the *Frankfurter Allgemeine Zeitung*, *Die Welt*, and *Die Zeit*. As a participant in “Gruppe 47” he soon became the most famous and influential as well as the most controversial critic in West Germany. In 1973, he took over the editorship of the literary section of the *Frankfurter Allgemeine Zeitung*, retaining the position until 1988, also editing from 1974 the *Frankfurter Anthologie*. His most influential activity as a critic, however, was to host the television program *Das literarische Quartett* (1988–2001), which was followed by *Reich-Ranicki – Solo*. Beside his many books on major German writers (e.g., Thomas Mann, Heinrich Heine, Heinrich Boell, Thomas Bernhard), he also wrote about the auxiliary streams of the German literary canon, e.g., in his essays *Die Ungeliebten – Sieben Emigranten* (1968) and *Ueber Ruhestoerer. Juden in der deutschen Literatur* (1973, 1989²), where he represents Jewish writers as “outcasts” and “provocateurs,” i.e., as critical voices. In 1999 he published his autobiography *Mein Leben (The Author of Himself)*, which is not only a powerful account of his life as a Jewish intellectual during and after World War II but is also representative of Jewish history in 20th-century Europe as well as the intellectual and literary history of Germany, particularly after 1945.

[Andreas Kilcher (2nd ed.)]

REICHSBUND JUEDISCHER FRONTSOLDATEN (RJF), organization of Jewish war veterans in Germany. Founded in February 1919 in Berlin (and simultaneously in other major cities) by Captain Leo Loewenstein (1877–1956), a scientist who had played an important role in the German war effort, the Reichsbund was formed to counteract the widespread anti-Jewish feeling prevalent after the post-World War I breakdown. These feelings were nurtured by the commonly held prejudice that Jews had either evaded conscription or had held safe office jobs in the army. A further impetus to its formation was offered by the exclusion of Jews from the Stahlhelm, the right-wing paramilitary veterans’ organization. During the chaotic days of 1923–24 some Reichsbund members participated in street fights and guarded the Berlin Fasanenstrasse synagogue. Slighter activities were to discourage Jewish actors from telling vulgar Jewish jokes and persuading Jews not to wear ostentatious clothing and jewelry during the High Holy Days. The Reichsbund grew rapidly and by 1933 had more than 30,000 members in about 400 branches and published a periodical, *Der Schild*. Special stress was put on physical education (after 1933 judo and boxing in particular) and agricultural training. After the Nazi rise to power the Reichsbund tried to obtain preferred treatment for war veterans and for long-settled Jewish families. These demands, acknowledged by President Hindenburg, were ignored by the Nazis. The Reichsbund originally refused to join the Reichsvertretung der Juden in Deutschland (see *Reichsvereinigung) because of Zionist participation, and protested, with official approval, at the outcry abroad against Nazi anti-Jewish excesses. The Reichsbund eventually joined the Reichsvertretung and, with other Jewish organizations, was dissolved after 1938.

REICHSTEIN, TADEUS (1897–1996), Swiss organic chemist, endocrinologist, and 1950 Nobel laureate. Reichstein was born in Wloclawek, Poland, and his family moved to Zurich in 1908. He became professor of organic chemistry at Zurich in 1934 and in 1938 joined Basle University as head of the Institute of Pharmacy. In 1933 he succeeded in the synthesis of ascorbic acid (Vitamin C), the first total synthesis of a vitamin. He worked on other aspects of organic chemistry, and in 1934 began the isolation of the hormones of the adrenal cortex. He separated and characterized some 30 different steroids from adrenal glands, the most outstandingly important being corticosterone, cortisone, and cortisol, which are among the therapeutics used for sufferers from arthritis. In 1950 he, together with the Americans E.C. Kendall and P. Hench, was awarded the Nobel Prize in physiology and medicine “for their discoveries relating to the hormones of the adrenal cortex, their structure and biological effects.” Reichstein used his Nobel prize money for other research work at the University of Basle.

[Samuel Aaron Miller]

REICHSVEREINIGUNG (Reichsvereinigung der Juden in Deutschland – Ger. Reich Association of the Jews in Germany), compulsory organization of all Jews in Nazi Germany (excepting Austria and the Protectorate of Bohemia-Moravia), established on July 4, 1939, by the tenth executive ordinance (*10. Verordnung*) appended to the Reich's citizenship law (*Reichsbürgergesetz*) of 1935. The Reichsvereinigung replaced the previous framework called the Reichsvertretung der Juden in Deutschland (“Reich Representation of the Jews in Germany”), which in turn replaced the Reichsvereuegbung der Deutschen Juden (Reich Representation of German Jews). The name changes are significant, representing a worsening of the situation of the Jews in Germany, who were no longer considered by the regime as German Jews. There were several distinctions between the two organizations. From the Jewish communal perspective, the Reichsvereinigung was imposed upon the Jewish community rather than formed by a consensus of Jewish organizations. More importantly, the Reichsvereinigung included all Jewish subjects of the Nazi Reich as defined by the *Nuremberg Laws (1935), not only Jews by religion, it included those who had converted or even those whose parents had converted. The Reichsvereinigung was supervised by the Ministry of the Interior, i.e., by the security police. Its duties, as fixed by law, were to promote Jewish emigration from Germany – still possible and still desired by both the regime and the Jews in Germany – and to support the Jewish school system and Jewish welfare. A special provision empowered the minister of the interior to assign additional tasks to the Reichsvereinigung. To the Germans, the Reichsvereinigung was an instrumentality of its control much like the Jewish Councils which were later formed in the ghettos. It is clear that the Germans regarded it as useful to have the appearance of continuity of Jewish leadership rather than install their own puppets. This policy was also followed with regard to the Jewish Councils. The centralization of Jewish communal representations into one body was a matter of convenience and effectiveness; instead of dealing with many organizations, the Germans imposed unity on the Jews at least with regard to their dealings with the state. The existence of the Reichsvereinigung enabled the Nazis to implement many of their deadliest orders without much publicity and to play off the Jewish leadership against the Jewish population, who naturally blamed their own leaders, and thus responsibility and guilt was shifted onto a leadership that had few resources and even fewer options. Jewish leadership perceived itself to be struggling under difficult and soon to become impossible conditions for Jewish survival. Emigration was deemed essential, a matter of life and death. The prior leadership of the Reichsvertretung now filled the leadership positions

in the Reichsvereinigung. Rabbi Leo *Baeck, Otto *Hirsch, Paul *Eppstein, and their colleagues continued at their posts until their arrest and deportation. There was no need to set up new departments because all the functions assigned by law to the Reichsvereinigung had already been carried out by its predecessor. The local activities of the Reichsvereinigung were executed by the Jewish communities, called Juedische Kultusvereinigung (“Jewish Synagogue Association”) and its own *Bezirkstellen* (“district offices”). The latter dealt with small communities or with single Jewish families. In the course of time the Jewish communities were dissolved and their property transferred to the Reichsvereinigung. Under the leadership of the Reichsvereinigung Jewish education continued until June 1942. It undertook vocational training to teach Jews basic skills for survival and earning a living abroad and it attempted to provide welfare for the needy. All Jewish publications were suspended and only the publication of the bulletin of the Reichsvereinigung, *Juedisches Nachrichtenblatt*, was permitted. It served as a channel for the Gestapo to inform the Jews of new restrictions and confiscations without stirring up too much dissent from the outside.

From the start of World War II the activities of the Reichsvereinigung were slowed down. In the planning of the “Final Solution” (see *Holocaust, General Survey), the Gestapo used the statistical material prepared by the Reichsvereinigung and even utilized the activity of its statistical section for its own purposes. Its leadership protested the deportations in 1940 and from 1941 onward the central leadership was not involved in the deportations, but various branches were forced to cooperate. In the deportations the Gestapo used the services of the Reichsvereinigung: the organization cared for the deportees in the roundups, with the notion that they could alleviate their suffering – they did not perceive themselves to be an instrumentality of destruction – while the Reichsvereinigung leaders and staff served as hostages against the exact delivery of fixed batches of deportees. Several hostages were deported in place of Jews who escaped. Others were shot in retaliation for sabotage. Under orders of the *RSHA, the Reichsvereinigung concluded the “home buying agreements” (*Heimeinkaufsvertraege*) for *Theresienstadt, i.e., in which Jews were forced to sign away their money to the German government in return for an “alleged” apartment in Theresienstadt to which they were deported. On June 10, 1943, the remaining staff was arrested and the Reichsvereinigung in its original form dissolved. Only two of its leaders, Leo Baeck, who had refused offers to leave Germany and offers of personal safety, and Moritz Henschel, survived the Holocaust. In assessing their behavior one must see the dual function of Jewish leadership as instrumentalities – however unwilling – of the Germans and as representatives, however powerless and ultimately ineffective, of the Jews. The tightrope they walked was the result of their impossible situation. Integrity and wisdom could not compensate for the absolute lack of power and the murderous intent of those in power.

Continuity or Discontinuity?” in: A. Paucker (ed.), *The Jews in Nazi Germany 1933–1943* (1986).

[Yehuda Reshef / Michael Berenbaum (2nd ed.)]

**REICHSZENTRALE FUER JUEDISCHE AUSWANDE-
RUNG** (Center for Jewish Emigration), Nazi central agency for Jewish emigration matters, set up in the Ministry of the Interior by *Heydrich on *Goering’s order (Jan. 24, 1939). Its principal aim was to increase and accelerate emigration, giving preferential exit to poor Jews, and speeding up individual cases. Heydrich appointed Heinrich *Mueller *Geschaeftsfuehrer* (“manager”) of the Zentralstelle, which was run by a policy committee composed of representatives from different agencies and an executive which was, in practice, Department 11 of the *Gestapo. The Zentralstelle was modeled on *Eichmann’s successful Zentralstelle fuer juedische Auswanderung set up in 1938 in Vienna. Employing Eichmann’s methods, the Zentralstelle unified the various emigration authorities and coerced the wealthier Jews in Germany and abroad to pay for the exit of the poor Jews, using pressure and even imprisonment to gain its ends. The chief of the Zentralstelle on behalf of Mueller was Kurt Lischka, who was replaced by Eichmann after the establishment of *RSHA. The Zentralstelle set up its office in Berlin, and later others in Prague (July 15, 1939) and in Amsterdam (April 1941), but functioned in all other cities through the local Gestapo branches. This organization furthered Nazi policy, which prior to 1941 was to get rid of the Jews and to expropriate their property and possessions; it also ironically furthered Jewish interests, as leaving the Reich by whatever means possible was imperative. It literally was life saving. In 1940 the Zentralstelle joined up with the Gestapo section for evacuation but ceased its original functions when the order to stop emigration was issued in October 1941. Its personnel afterward organized deportations in the framework of the “Final Solution” (see *Holocaust, General Survey).

REIFENBERG, ADOLF (1899–1953), Israeli expert in soil chemistry, archaeologist, and numismatist. Reifenberg, who was born in Berlin, studied agricultural chemistry and graduated from Giessen University. A Zionist from his youth, he was among the first *halutzim* who arrived in Erez Israel from Germany after World War I. After working as an agricultural laborer at Kinneret for two years, he joined (1922) the laboratory for agricultural chemistry of the mandatory government. In 1924 he became a member of the staff of the Institute of

Chemistry of the newly founded Hebrew University. He later founded and was head of its department of soil science. In 1947 he was appointed professor at the university. Reifenberg also served as dean of the faculty of agriculture and of the faculty of mathematics and science. In World War II Reifenberg, although overage for military service, volunteered for a Palestinian unit of the British Army, was torpedoed off Malta, but was rescued after a long time in the sea.

Reifenberg’s contributions to agricultural chemistry were mainly in the field of soil research. Through his familiarity with the peculiar climatic and topographical conditions of the Mediterranean countries and his knowledge of chemistry and physiology, he was able to formulate a theory of the red soil (terra rossa) formations in the Mediterranean (*Karka Erez Yisrael* (1938); *The Soil of Palestine*, 1947²). He investigated one of the major problems of Erez Israel: soil erosion and its prevention (*Milhemet ha-Mizra ve-ha-Shimmamon* (1950); *The Struggle Between the Desert and the Sown*, 1955). Reifenberg also dealt with various practical problems connected with the use of the few raw materials provided by Erez Israel, such as the Huleh peat, potash, phosphate, and citrus peel.

Reifenberg was also an archaeologist and numismatist. He built up one of the finest collections of Palestinian and ancient Jewish coins (presented after his death to the State of Israel), and in 1951 became the first president of the Israel Numismatic Society. Together with L.A. *Mayer, he examined several ancient synagogues such as the one at Eshtemo’a (Samoa), south of Hebron, and that of Naveh in Hauran.

His main archaeological publications are *Architektur und Kunstgewerbe im alten Israel* (1925); *Palaestinensische Kleinkunst* (1927); *Denkmaeler der juedischen Antike* (1937); *Ancient Jewish Coins* (1947²); *Ancient Hebrew Seals*; *Ancient Hebrew Arts* (both 1950); and *Israel’s History in Coins...* (1953). In 1950 he founded the *Israel Exploration Journal*, which he edited until his death.

REIFMANN, JACOB (1818–1895), scholar and writer. Reifmann, born in the Lagow district of Radom, Poland, was raised in Apta and subsequently lived in Lublin, Zamosc, and Szczerzeszyn. Growing estranged from Hasidim, who were then dominant where he lived, Reifmann turned more to the Haskalah. His field was criticism of the Bible and the Talmud. Highly respected in scholarly circles for his erudition and critical mind, Reifmann also caused antagonism, especially because he was outspoken. His life was spent in great poverty, and he did not receive any official position or recognition. The conflicts in his attempt to merge his traditional East European background with modern Western scholarship are apparent in his writing, and probably also contributed to his difficulties in adjusting to his environment.

Reifmann contributed hundreds of articles to the Hebrew periodicals of his time, and wrote 17 books. He covered a wide

variety of areas, including Bible, Talmud, rabbinic literature, Aramaic translations of the Bible, liturgy, Jewish philosophy, and biography. He corresponded with such leading scholars of his time as S.J.L. Rapoport, L. Geiger, H. Graetz, M. Steinschneider, and S.D. Luzzatto. His correspondence and some of his unpublished writings are at the library of the Jewish Theological Seminary of America.

Among Reifmann's works are *Tavnit ha-Bayit* (1844) and *Pesher Davar* (1845), critical studies on talmudic matters; *Toledot Rabbenu Zerayah ha-Levi* (1853), a biography; *Hut ha-Meshullash* (1859), on the familiarity of talmudic rabbis with foreign languages, on the history of fables among the Jews, and notes to the book **Mivhar ha-Peninim; Beit ha-Talmud* (vol. 3), on the problems concerning the geonic work, *She'iltot; Sedeh Aram* (1875), on Targum Onkelos; and *Or Boker* (1879), on talmudic criticism. Some of his works were published by M. Herskovics in *Hadarom* (1964–69) and by N. Ben-Menahem, *Iggeret Bikkoret al Seder ha-Haggadah shel Pesah* (1969) and *Iyyunim be-Mishnat Avraham ibn Ezra* (1962).

REIK, ḤAVIVAH (Emma; 1914–1944), one of four *Haganah envoys from Palestine parachuted into Slovakia during World War II. Ḥavivah Reik was born into a working-class family in a small Slovak village near *Banská Bystrica. She settled in Palestine in 1939, joining the Ha-Shomer ha-Za'ir kibbutz Ma'anit. During the critical days of the war she volunteered to be parachuted into Slovakia. She was to reach Bratislava and establish contact with the "Working Group" (see Gisi *Fleischmann) but arrived too late. In mid-September 1944, she reached Banská Bystrica, where she assisted the Jewish remnant that had gathered there. On October 28, when Banská Bystrica (the center of the Slovak uprising) fell, she retreated into the mountains along with a group of Jewish fighters. Captured by Germans a week later, she was imprisoned and executed on November 20, 1944, in Kremnička. Kibbutz Lahavot Ḥavivah, the Israel freighter *Ḥavivah Reik*, and the research and educational center Givat Ḥavivah in Israel were named in her memory.

[Livia Rothkirchen]

REIK, THEODOR (1888–1970), psychoanalyst. Reik, who was born in Vienna, met *Freud in 1910 and received his training analysis from Karl *Abraham in Berlin. After World War I he worked as an analyst first in Vienna, and then in Berlin until he moved to The Hague in 1934. In 1938 he immigrated to the United States. In 1946 he was elected president of the National Association for Psychoanalytic Psychology.

Reik wrote many psychoanalytic articles on literary and musical figures such as Flaubert and *Mahler, on clinical and anthropological themes, and on psychological theory. Four of his best-known papers of the 1920s were collected in *Das*

Ritual, psychoanalytische Studien (1928²; *Ritual, Psychoanalytic Studies*, 1931). The first paper dealt with "couvade," the primitive custom in which the father of a newborn child lies in bed, the last two papers with *Kol Nidrei and the *shofar*. A series of papers on problems of crime – including the compulsion to confess, and Freud's view of capital punishment – were developed in *Der unbekannte Moerder* (1932; *The Unknown Murderer*, 1936), in which he sets forth as a major concept that unconscious guilt motivates the crime itself and also the criminal's need to be caught and punished. Reik held that an analyst's theoretical assumptions may interfere with treatment and that the therapeutic relationship should be an "unconscious duet" between patient and analyst in which surprises to both parties provide important insights. He wrote about his new technique in *Der Ueberraschte Psychologe* (1935; *Surprise and the Psychoanalyst*, 1936), and *Listening with the Third Ear* (1948). In *Aus Leiden Freuden* (1940; *Masochism in Modern Man*, 1941) Reik stated his theory that masochistic suffering is basically a search for pleasure and, as in the case of the Christian martyrs, for final victory. He therefore regarded masochism and the associated death instinct as secondary rather than primary as seen by Freud.

Some of Reik's thought was iconoclastic. In *Psychology of Sex Relations* (1945) he rejected the classical psychoanalytic theory of the libido and some of the sexual concepts that go with it. Among his more than 50 books are the autobiographical *From Thirty Years with Freud* (1940), *Fragment of a Great Confession* (1949), and *The Search Within* (1956). His biblical tetralogy included *The Creation of Woman* (1960), and in 1962 he published *Jewish Wit*. In *Pagan Rites in Judaism* (1964) he endeavors to show that much of the pagan and prehistoric survives in the rites of Judaism as professed today.

Grinstein, *Index of Psychoanalytic Writings*, 3 (1958), 1620–32; 7 (1965), 3940–41 (bibl. of his works).

[Louis Miller]

REINACH, family of French scholars and politicians. JOSEPH REINACH (1856–1921), political leader, journalist, and historian, was born in Paris. He graduated from the University of Paris and became a lawyer, also writing several works on European politics. Reinach's articles on foreign policy in the *Revue Bleue* were noticed by Leon Gambetta, who, when he became premier in 1881, made Reinach his *chef du cabinet*. After Gambetta's death, Reinach became political editor of the *Republique Française*. He was elected to the Chamber of Deputies in 1889 and reelected in 1893. One of the first to demand a new trial for Captain *Dreyfus, Reinach was subject to bitter attacks from the anti-Dreyfusards, lost his seat in the elections of 1898, and was dismissed from the army in which he was a reserve captain. Following Dreyfus' rehabilitation, Reinach was reinstated and reelected to parliament, where he served until his retirement in 1914. Reinach's historical

works include a seven-volume history of the Dreyfus Affair, *Histoire de l'Affaire Dreyfus* (1901–11). While campaigning for the Dreyfus cause, he wrote a history of the case of Raphael Levy who was executed in 1670 on a ritual murder charge (*Raphael Levy*, 1898). Reinach published many works on general history and politics.

Solomon (1858–1932), archaeologist, philologist, and historian, was a brother of Joseph. As a member of the Ecole Française d'Athènes he took part in several excavations in Greece. He taught archaeology at the Ecole de Louvre and from 1886 served as curator of the Musée d'Antiquités Nationales at his native St. Germain-en-Laye. In 1893 he was appointed assistant keeper of the Musées Nationales, becoming keeper in 1902. He was a member of the Institut Français and of the Conseil Supérieur des Beaux Arts. Reinach's scholarly work was devoted primarily to French archaeology and Gallic civilization. He also made numerous contributions to classical and French philology, the history of art, and the history of religion. His major work in the latter field, *Orpheus; histoire generale des religions* (1909, 1926²; Eng. 1909, 1930²; repr. 1942; Ger. 1910), is written in the Voltairean tradition of radical rationalism. It classifies Judaism and Christianity as "barbaric," and accepting the conclusions of contemporary Bible criticism, termed many biblical figures as mythical. Reinach has nothing but disdain for the Talmud and "for those backward Jews who follow its rules." Nevertheless, he took an active part in Jewish affairs. A confirmed Dreyfusard, like his brothers, he published a French translation of H.C. Lea's *History of the Inquisition* (3 vols., 1901–03) at the height of the Dreyfus Affair as a weapon in the fight against religious intolerance. He published various articles in the **Revue des Etudes Juives* and served as president of the Société des Etudes Juives. He was vice president of the Alliance Israélite Universelle and helped in the establishment of the *Jewish Colonization Association. Anti-Zionist in principle, Reinach nevertheless gave assistance to colonization in Palestine.

Theodore (1860–1928), younger brother of Joseph and Solomon, was a scholar and politician. His studies extended to law, archaeology, mathematics, numismatics, and history of music and of religion. Reinach was appointed professor at the Ecole des Hautes Etudes where he taught the history of religions. He was also editor of the *Revue des Etudes Grecques*. A member of the Institut de France, Reinach presented a musical interpretation of a Delphic paean and himself played this resurrection of ancient music. He served in the Chamber of Deputies of Savoy during 1906–14. Active in the rather ineffective movement of French Reform Judaism (Union Libérale Israélite) and a confirmed assimilationist, he strongly opposed Zionism, believing that since the French Revolution Jews no longer were a nation but only a religious community. He presented these views in his widely read *Histoire des Israelites* (1884, 1910⁴). He also wrote a *Histoire sommaire de l'affaire Dreyfus* (1904, 1924). In the field of Jewish scholarship Reinach was important as a student of Jewish numismatics (*Les monnaies juives*, 1887) and as the editor of an impor-

tant reference book, *Textes d'auteurs grecs et romains relatifs au Judaïsme* (1895; repr. 1963). He was the general editor of a French translation of the works of Josephus (7 vols., 1900–32), completed after his death by his brother Solomon. Reinach also contributed to the *Revue des Etudes Juives*, and various French encyclopedias.

[Gerard Nahon]

REINACH, ADOLF (1883–1917), German philosopher. Reinach, who was born in Mayence, was a student of *Husserl and taught at Goettingen with him. Through his lectures, articles, and personal discussions he had considerable influence on Husserl and on the early phenomenologists. Reinach's version of phenomenology was simpler and clearer than Husserl's and more concrete. He stressed the intuiting of the essential core of phenomena and developed a theory of the phenomenological *a priori*, a property of states of affairs rather than of acts of judging. He applied phenomenology to the philosophy of law, and tried to construct an *a priori* theory of law, contending that there are essential elements of law that have an absolute validity, independent of the mind that thinks of them and of temporal conditions. Reinach tried to explore the relationships of these elements. He was killed during World War I. His writings were collected and published by his students in *Gesammelte Schriften* (1921).

[Richard H. Popkin]

REINER, CARL (1922–), writer, actor, and director. Born in the Bronx, New York, Reiner first came to prominence as an actor and writer for two seminal TV programs, Sid Caesar's *Your Show of Shows* (1950–54) and *The Dick Van Dyke Show* (1961–66), for which Reiner won several Emmy Awards. Moving to feature films, Reiner began his career by directing a filmed version of his 1958 semiautobiographical novel *Enter Laughing* (1967). He went on to direct and sometimes cowrite such comedies as *The Comic* (1969), *Where's Poppa?* (1970), *Oh God!* (1977), *The One and Only* (1978), *The Jerk* (1979), *Dead Men Don't Wear Plaid* (1982), *The Man with Two Brains* (1983), *All of Me* (1984), *Summer Rental* (1985), *Summer School* (1987), *Bert Rigby, You're a Fool* (1989), *Sibling Rivalry* (1990), *Fatal Instinct* (1993), and *That Old Feeling* (1997).

A familiar figure on both the small and the silver screen, Reiner appeared in such films as *The Gazebo* (1959), *The Thrill of It All* (1963), *The Art of Love* (1965), *The Russians Are Com-*

ing... (1966), *Generation* (1969), *The Spirit of '76* (1990), and *Slums of Beverly Hills* (1998). On TV, from 1954 he was a guest on dozens of programs, from *The Dinah Shore Chevy Show*, *The Tonight Show Starring Johnny Carson*, and *The Carol Burnett Show* to *Ally McBeal*, *Life with Bonnie*, *Ellen*, and *Boston Legal*. He also appeared many times on television and in a series of record albums (first released in 1960) as straight man to Mel Brooks in their comedy routine "The 2000-Year-Old Man."

Among his many honors and awards, including 12 Emmys and a Grammy, Reiner won the American Comedy Award for Lifetime Achievement in 1992; he was inducted into the Television Academy Hall of Fame in 1999; and in 2000 he was awarded the Mark Twain Prize for Comedy by the Kennedy Center for the Performing Arts.

Reiner wrote *All Kinds of Love* (1993), *Continue Laughing* (1995), *The 2000-Year-Old Man in the Year 2000* (with Mel Brooks, 1997), *How Paul Robeson Saved My Life and Other Mostly Happy Stories* (1999), *Tell Me a Scary Story ...but Not Too Scary* (2003), and *My Anecdotal Life: A Memoir* (2003).

His son is film director Rob *Reiner.

[Jonathan Licht and Ruth Beloff (2nd ed.)]

REINER, FRITZ (1888–1963), conductor. Born in Budapest, Reiner was a student at the Liszt Academy, Budapest, where he studied the piano with Bartók. He worked as répétiteur at the Vigopera, where he made his conducting début in *Carmen* at the age of 19. He became conductor at the Budapest People's Opera (1911–14) and musical director of the Dresden Opera (1914–21). In the United States, he was conductor in Cincinnati (1922–31), in Pittsburgh (1938–48), at the Chicago Symphony Orchestra (1953–63), and at the Metropolitan Opera, New York (1949–53). He taught conducting at the Curtis Institute of Music in Philadelphia (1931–41) where his pupils included *Bernstein and Lukas *Foss. Reiner also was guest conductor of the opera in Halle (1921), Rome (1921), Barcelona (1922), Buenos Aires and Budapest (1926), Philadelphia (1931–2), Covent Garden (1936–7), San Francisco (1936–8), and Vienna (1955). He embraced a wide orchestral and operatic repertory, ranging from Bach, Haydn, and Mozart to Bartók, Stravinsky, and Webern. Between 1954 and 1963 he made series of recordings including his famous interpretations of Bartók's Concerto for Orchestra and Music for Strings, Percussion and Celesta, Rimsky-Korsakov's *Sheherazade*, and Ravel's orchestration of *Pictures at an Exhibition*. He was regarded as a "conductor's conductor," and showed great technical mastery with breadth of interpretation.

[Israella Stein (2nd ed.)]

REINER, MARKUS (1886–1976), Israeli engineer. Born in Czernovtsy, Reiner served as an officer in the Austrian army

during World War I. He emigrated to Erez Israel in 1922, first working as an agricultural laborer. He then became chief construction engineer of the public works department in Jerusalem, where he remained for 25 years, engaged in road, bridge, and housing construction and the restoration of ancient and historical sites, such as Herod's irrigation channels in Jericho. In 1926 Reiner published a paper on his research in the flow of elastic liquid in a capillary. His research was independently and simultaneously duplicated by E. Buckingham of the U.S. National Bureau of Standards, and their findings are thus known as the "Buckingham-Reiner equation." Their work resulted in a new branch of physics and mechanics known as rheology. From 1932 Reiner spent two years at Lafayette College, in Eaton, Pennsylvania, as a research professor, working with Professor E.C. Bingham, whom he joined as coeditor of the *Journal of Rheology*. Reiner's research covered a wide selection of subjects in mechanics, including investigation of rheological phenomena in the body. In 1948 he joined the Technion – Israel Institute of Technology – in Haifa as professor of practical mechanics.

Apart from nearly 200 articles and papers, Reiner published three standard works which have been translated into several languages: *Ten Lectures on Theoretical Rheology* (1943), *Deformation Strain and Flow* (1949), and *Agricultural Rheology* (1957), written together with G.W. Scott Blair of England. Reiner was awarded the Israel prize in 1958. He was a member of the Israel Academy of Science from its inception and of the Israel government's Research Council.

[Carl Alpert]

REINER, ROB (1945–), U.S. director and actor. Born in New York, the son of actor/writer/director Carl *Reiner, Rob Reiner began as a sketch writer for television's *Smothers Brothers Comedy Hour*. Reiner's breakthrough as an actor came in 1971 when he was chosen for the part of Mike Stivic ("Meathead," 1971–78) on the popular TV comedy series *All in the Family*, for which he won two Emmy Awards. Finding only limited movement in his acting career, Reiner turned to directing, and his feature film mock-documentary *This Is Spinal Tap* (1984), which he cowrote, was a surprise hit. Reiner followed this success with a series of well-reputed films: *The Sure Thing* (1985), *Stand by Me* (1986), *The Princess Bride* (1987), *When Harry Met Sally* (1989), *Misery* (1990), *A Few Good Men* (Oscar nomination for Best Picture, 1992), *North* (1994), *The American President* (1995), *Ghosts of Mississippi* (1996), *Spinal Tap: The Final Tour* (1998), *The Story of Us* (1999), *Alex & Emma* (2003), and *Rumor Has It* (2005).

As an actor, Reiner has appeared in such films as the TV movie *More Than Friends* (1979), *This Is Spinal Tap* (1984), *Throw Momma from the Train* (1987), *Postcards from the Edge* (1990), *The Spirit of '76* (directed and cowritten with his brother, Lucas, 1990), *Bullets over Broadway* (1994), *Mixed Nuts* (1994), *Bye Bye, Love* (1995), *For Better or Worse* (1996), *Spinal Tap: The Final Tour* (1998), *Ed TV* (1999), *The Story of Us* (1999), and *Alex & Emma* (2003).

A principal in Castle Rock Productions, Reiner also had a hand in producing a variety of films and TV series. From 1971 to 1979, Reiner was married to actress/director Penny Marshall.

[Jonathan Licht / Ruth Beloff (2nd ed.)]

REINES, ALVIN JAY (1926–2004), scholar of Jewish philosophy. Born in Paterson, New Jersey, his early education was entirely Orthodox. He graduated from the Rabbi Jacob Joseph School in Manhattan and the Talmudical Academy of New York. He then entered Yeshiva University, where he earned his B.A. in 1947. From YU, he went to New York University Law School and left before completing his degree. In a rare move for Orthodox-educated Jews of his generation who when they left the Orthodox world moved over to the Jewish Theological Seminary, Reines went to Hebrew Union College and earned his MHL and ordination in 1952. He received the Mrs. Henry Morgenthau, Jr. Fellowship at Harvard where he earned a Ph.D. in 1958 studying with Harry Austryn Wolfson, and then joined the faculty of HUC-JIR as a professor of Jewish Philosophy and retired in 2003.

His field of specialization was medieval philosophy, particularly the work of Moses *Maimonides, and he struggled both to understand Maimonides as a halakhic and philosophical thinker and to deal with revelation as a source of absolute authority. Rejecting the notion of absolute authority led to his own original philosophical innovation. He developed the concept of polydoxy, meaning a religion of many opinions, in which the notion of absolute knowledge is abandoned and diversity and individual autonomy is not only respected but welcomed. This concept has had significant influence on liberal religious thought in the United States and elsewhere as well as within the Reform movement. He helped create the Institute for Creative Judaism and chaired its board, which was formed to develop religious and educational and liturgical material for free Judaism. It has evolved into The Polydox Institute, which is “committed to serving all polydoxians, be they of Jewish, Christian or other origin, and whether or not they view themselves as belonging to any historic religious group, or as being presently affiliated with any organized religious body.” His work has thus had influence far beyond the Jewish community. For religious communities that reject the existence of infallible knowledge, Reines argued that the only morally justifiable position was to affirm individual autonomy. Such communities should be prepared, Reines maintained, to accommodate diverse and even unconventional beliefs, rituals, and practices.

The Reform Movement’s *Gates of Prayer* (1975), included an edited version of the polydox Sabbath worship service written by Reines. His seminal work is *Polydoxy: Explorations in a Philosophy of Liberal Religion*, (1987). Among his other works are *Elements in a Philosophy of Reform Judaism* (1968), *Maimonides and Abarbanel on Prophecy* (1970), and *Reform Ju-*

daism as Polydoxy (1970–1973). His work on the Institute includes services for Hanukah and Rosh Hashanah as well as a Passover *Haggadah*.

[Michael Berenbaum (2nd ed.)]

REINES, FREDERICK (1918–1998), physicist and Nobel Prize winner. Reines obtained his M.E. and M.S. degrees from Stevens Institute of Technology in Hoboken, New Jersey, and his Ph.D. from New York University in 1944. He was a member and then group leader of the theoretical division of the Los Alamos Scientific Laboratory (1944–59). He was professor and head of the Physics Department at Case Institute of Technology (1959–66) and professor and founding dean of Physical Sciences at UCI.

Reines, the great-nephew of the founder of the Mizrahi movement, Rabbi Isaac Jacob *Reines, was joint winner with Dr. Martin Perl of the 1995 Nobel Prize in physics for their discovery of two fundamental particles of matter, the tau and the neutrino. The existence of the neutrino was first postulated by Wolfgang Pauli in 1930 to account for apparent loss of energy when an atomic nucleus decays, releasing an electron, but it was Reines who first proved that the elusive particle, which has no mass and no charge, exists. The discovery started the new field of neutrino physics. Reines was honored with membership in the National Academy of Sciences and many other awards, including the National Medal of Science.

REINES, ISAAC JACOB (1839–1915), rabbi, one of the founders and first head of the *Mizrahi movement. Born in Karolin, Belorussia, Reines studied at the Eishishok (Eisiskes) and Volozhin yeshivot and was ordained by leading rabbis. He served in the rabbinate in Shavkyany (Saukenai), Lithuania, from 1867; in Sventsyany (Svencionys), Vilna district, from 1869; and in Lida from 1885 until his death. Reines made a distinct contribution to rabbinic scholarship, introducing a new and almost modern methodology which was in contrast to the current system of **pilpul*. It was based upon a purely logical approach and was influenced by Maimonides’ *Millot ha-Higgayon*; it is actually called “*Higgayon*” (“Logic”). In the introduction to his first major halakhic work, *Hotam Tokhnit* (2 parts, 1880–81) he emphasized this new approach, as he did in his later works (e.g., *Urim Gedolim*, 1887). The *Hotam Tokhnit* made a great impression, especially in Western Europe where Jews were not accustomed to works on *halakhah* with a strictly logical approach that had been written by Eastern European scholars. He also applied his new approach in his homiletical books (*Nod shel Dema’ot*, 1891), which, like others of his works, went through a number of editions. Reines tried to introduce the spirit of the times in his public activities, without breaking with tradition, and founded a yeshivah in Sventsyany. Because its curriculum included secular stud-

ies, he aroused the anger of some religious fanatics and was forced to close the school after a few months.

Reines joined the *Hibbat Zion movement from its creation. His attachment to Erez Israel was due principally to the influence of his father, who stayed in Erez Israel in the 1830s. Reines cooperated with Samuel *Mohilewer and proposed settlement programs for Erez Israel that combined Torah study with physical labor. He was among the first rabbis to answer Theodor Herzl's call, and his joining the Zionist movement served as a great encouragement to Herzl in face of the opposition of most of the East and West European rabbis. He devoted much energy to propaganda for political Zionism among rabbis and Orthodox circles. Toward this end he published in 1902 the book *Or Haddash al Ziyyon* ("A New Light on Zion") in which he countered all the claims of those in the rabbinical circles opposed to Zionism. He participated in the first Zionist Congresses and was very close to Herzl, but he opposed the cultural work of the Zionist movement for fear that it would encroach on the status of religion. In 1902 he convened a large conference of rabbis and Orthodox people in Vilna and as a result the Religious Zionist movement, Mizrahi, was formed. Reines was the recognized leader of the movement and the outstanding personality at its founding convention in Pressburg (Bratislava; 1904). Many Orthodox rabbis, especially from Hungary, protested the convening of the founding conference and were against Mizrahi altogether. Reines answered them very sharply, sparing not even the greatest among them. He also founded the first journal of Mizrahi, entitled *Ha-Mizrahi* (published in 1903 under the editorship of Ze'ev *Jawitz). His great attachment to Herzl found expression during the controversy over the *Uganda Scheme, when he proved to be an enthusiastic supporter of the plan.

Despite all his public activities, Reines continued to write. Only a small portion of his works were published, and the rest remain in manuscript (in about 100 volumes). In Lida, he realized his greatest personal dream – the establishment of a modern yeshivah in which secular studies were taught side by side with traditional studies, all within the framework of the meticulous observation of tradition. The yeshivah was established in 1905 and achieved a distinguished reputation. Reines developed the educational principles of the yeshivah in the booklets *Kol Yaakov* (1908), *Mishkenot Yaakov* (1910), and others. Although the Mizrahi movement viewed the yeshivah as its own project, its maintenance rested on Reines' shoulders. While the institution was developing, World War I broke out and the suffering that it brought affected Reines' health. In the past few years some of his works have come out in new editions and in facsimile editions.

[Getzel Kressel]

REINHARDT (Goldmann), MAX (1873–1943), stage producer and director. Reinhardt, a leading force in the theater during the first part of the 20th century, was born in Baden, near Vienna. At 17 he became an actor and assistant director at the Salzburg State Theater. Otto *Brahm, director of the Deutsches Theater in Berlin, noted Reinhardt's work and brought him to the German capital in 1894. After succeeding Brahm as director of the theater in 1905, Reinhardt sought to integrate the two main theatrical traditions, the baroque, which he had learned in Vienna, and the literary and intellectual tradition then dominant in Berlin. "Our standard," he declared, "must not be to act a play as it was acted in the days of its author. How to make a play live in our time, that is decisive for us." Reinhardt offered the public a cosmopolitan repertory – revivals of the classics: Shakespeare, Goethe, Schiller, and Molière; and modern playwrights such as Wilde, Synge, Shaw, Ibsen, Gorki, and Strindberg.

Reinhardt's methods were experimental and spectacular. He used massive crowds and a projecting rostrum. For *A Midsummer Night's Dream* in 1905 he introduced a revolving stage; and for *Hamlet*, which he staged in 1909, he used modern dress. These technical innovations accompanied a revitalized concept of the theater that distinguished Reinhardt's productions and deeply influenced European stagecraft. Avoiding the star system, he was able to use leading performers in either major or minor roles, and he trained actors in his methods at a school which he established at the Deutsches Theater. Reinhardt created a furore in London with his productions of the wordless spectacle *The Miracle* at Olympia (1911) and of *Oedipus Rex* at Covent Garden (1912). In 1920 he produced *Jedermann* ("Everyman") at Salzburg, where until the 1930s it became an annual event at the festival he founded there.

In 1924 Reinhardt returned briefly to Berlin to present Shaw's *Saint Joan* with Elisabeth *Bergner and Pirandello's *Six Characters in Search of an Author*. When the Nazis came to power in 1933, Reinhardt was deprived of all connections with the German state theater. He immigrated to the United States in the following year and staged *A Midsummer Night's Dream* in the Hollywood Bowl, playing to 12,000 people nightly. He made a film version of the play with the same type of massive settings that he used in his stage productions. During his last years Reinhardt ran a school for actors on the West Coast.

[Stewart Kampel]

REINHARDT, STEPHEN R. (1931–), U.S. federal judge. Born in New York City, he received his bachelor's degree from Pomona College in 1951 and he graduated from Yale Law School in 1954. Reinhardt served in the U.S. Air Force General Counsel's Office from 1954 to 1956. He was law clerk to Judge Luther W. Youngdahl of the U.S. District Court in the District of Columbia from 1956 to 1957, then entered private

practice in Los Angeles with the firm O'Melveny and Myers until 1958. He was a partner in the firm Fogel, Julber, Reinhardt, Rothschild, and Feldman from 1959 until 1980, when he was appointed a judge in the U.S. Court of Appeals in the Ninth Circuit, Los Angeles.

Judge Reinhardt ruled in several controversial cases, gaining a reputation as a liberal jurist. In *Phinpathya v. Immigration and Naturalization Service* (1981), he reversed and remanded the Board of Immigration Appeals' denial of an application for suspension of deportation, concluding that the Board erred in its finding that the petitioner had failed to meet the "continuous physical presence" requirement because of a three-month visit to Thailand to aid her sick mother. The Supreme Court reversed the decision, holding that the three-month visit did not fall within the exceptions to the requirement of continuous presence. In *Orhorhaghe v. Immigration and Naturalization Service* (1994), Reinhardt, writing for the panel, ruled that the Immigration and Naturalization Service's seizure of an alien based solely on a foreign-sounding name was a violation of the Fourth Amendment that warranted the suppression of the evidence of illegal status acquired in the course of the seizure.

Other controversial cases involved the right to die and restrictions on assault weapons. In *Compassion in Dying v. Washington* (1996), Judge Reinhardt, writing for the court, ruled that a Washington statute that imposed a criminal penalty on persons assisting in an attempted suicide violated the Fourth Amendment's due process clause. The Supreme Court reversed the decision in 1997. In *Silveira v. Lockyer*, which challenged California's restrictions on assault weapons, he ruled that the Second Amendment guarantees a collective right to bear arms but does not guarantee an individual's right to do so.

Reinhardt served in numerous professional organizations. He served on the California Advisory Committee to the U.S. Commission on Civil Rights from 1962 to 1974, and as its vice chairman from 1969 to 1974. A member of the American Bar Association, he was cochairman of the Committee on Labor Arbitration and Law of Collective Bargaining Agreements from 1967 to 1973. He was a member of the Committee on Legislation of the California Bar Association from 1973 to 1977 and of the Labor Law Section of the Los Angeles Bar Association from 1974 to 1980. In 1998 Judge Reinhardt received the Champion of Justice Award from the Association of Criminal Defense Lawyers.

[Dorothy Bauhoff (2nd ed.)]

REINHARZ, JEHUDA (1944–), Israeli-American scholar. Born in Haifa, he emigrated to Germany in 1958 and the United States in 1961 (naturalized 1966). He was educated at Columbia University (B.S. 1967), Jewish Theological Seminary of America (B.R.E. 1967), Harvard University (M.A. 1968), and Brandeis University (Ph.D. 1972). Reinharz taught at Hebrew College, Brookline, Mass. (1969–70); Brandeis University; Hiatt Institute, Jerusalem (1970); the University of Michigan,

where he was the first professor of Judaic studies (1972–82); and from 1982 at Brandeis, where he became the Richard Koret Professor of Modern Jewish History and was president of the university from 1994. He had fellowships from the Woodrow Wilson National Fellowship Foundation, the American Council of Learned Societies, the Leo Baeck Institute, the Royal Historical Society (U.K.), and other organizations. He was a member of the Association for Jewish Studies, the Leo Baeck Institute, the World Union of Jewish Studies, the National Foundation for Jewish Culture, the Institute for Polish Jewish Studies, and a number of other professional and scholarly bodies. He was also a member of the Council on Foreign Relations, the International Council of Yad Vashem, and the boards of the United Israel Appeal/Jewish Agency and the American Joint Distribution Committee as well as the Presidential Advisory Committee to the president of Israel.

Reinharz is a leading scholar of modern Jewish history as well as a leading public advocate for Israel. His *The Jew in the Modern World* (written with Paul R. Mendes Flohr) is a widely adopted college text, and his two-volume biography of Chaim Weizmann has won many awards. His appointment to the presidency of Brandeis, a private Jewish-sponsored university, after one of his predecessors tried to distance it from its Jewish roots, was widely heralded as a choice to return to its Jewish heritage, and Reinharz did not disappoint. As president of Brandeis, Reinharz presided over a great expansion of its programs and physical plant as well as a significant increase in its endowment. Under his leadership the university flourished, its student body improving and its faculty and course offerings growing in scope and depth. In 2005 he established the "nonpartisan" Crown Center for Middle East Studies, believing that existing academic centers are "infused with ideology" and "third-rate." Among Reinharz's books are *Fatherland or Promised Land? The Dilemma of the German Jew* (1975), *Chaim Weizmann: The Making of a Zionist Leader* (1985), *Chaim Weizmann: The Making of a Statesman* (1993), and *Zionism and the Creation of a New Society* (with Ben Halpern (1998; 20002), and a number of edited volumes, including volume 9 of *The Letters and Papers of Chaim Weizmann* (1977), *The Jew In the Modern World: A Documentary History* (with Paul R. Mendes Flohr, 1980; 1995²), *The Jewish Response to German Culture: From the Enlightenment to World War II* (with Walter Schatzberg, 1985), and *Essential Papers on Zionism* (with Anita Shapira, 1996). He also published many journal articles and contributed to yearbooks and collections of essays.

[Drew Silver (2nd ed.)]

REINMANN, SALOMON (c. 1815–c. 1880), traveler. A native of Galicia, he left his home country in the 1840s and traveled to Burma, where he supplied food to the British army. He amassed a great fortune but soon lost it, and was wounded when involved in battle, losing one eye and part of his left hand. Later he wandered around the Orient as a merchant, then settled in Cochin. Finally he returned to Europe, homeless and without hope, and died in Vienna. While in Austria,

he was urged by Peretz *Smolenskin to write down the impressions and observations gained during his many years of travel. His *Masot Shelomo be-Erez Hodu, Birman ve-Sinim* was edited and annotated after his death by Wolf *Schur of Warsaw and appeared in 1884. Though a rather uncritical account of countries and people, Jews and others, with many inaccuracies, the book is an important source of information on Jewish life in *Bombay (especially on the *Bene Israel), *Cochin, *Calcutta, *Burma, and other communities.

BIBLIOGRAPHY: S. Reinmann, *Masot Shelomo*, ed. by W. Schur (1884), 3–4; Sassoon, in: *Jewish Tribune* (Bombay, Oct. 1933), 10–11.

[Walter Joseph Fischel]

REINSDORF, JERRY (1936–), U.S. baseball and basketball owner, the third owner in the history of North American sports to win a championship in two different sports. Born in Brooklyn, New York, the son of a sewing machine peddler, Reinsdorf graduated from George Washington University in Washington, DC, and went on to receive his law degree from Northwestern University after moving to Chicago in 1957. His first job was as a tax attorney for the IRS, and then he went into private tax law practice. He made his fortune in Chicago real estate, heading up the multi-billion-dollar Balcor Corporation. Reinsdorf headed the partnership that purchased the Chicago White Sox and Comiskey Park from Bill Veeck for \$19 million on January 29, 1981. He was a member of Major League Baseball's Executive Council, served as chairman of baseball's Ownership Committee, and was a member of the Long Range Planning, Restructuring, Expansion, Equal Opportunity, Strategic Planning, Legislative and Player Relations committees. Reinsdorf assumed the position of chairman of the Chicago Bulls on March 13, 1985, when he led the group that purchased controlling interest in the franchise for \$16 million. During his tenure as chairman of the Bulls, the team captured six World Championships for Chicago (1991–93, 1996–98). Reinsdorf was also responsible for the construction of two new sports facilities in Chicago, Comiskey Park (1991), now U.S. Cellular Field, and the United Center (1994). Reinsdorf was the 1997 recipient of the Order of Lincoln Award, and his many contributions to the community have been recognized by such organizations as Keshet, the Interfaith Organizing Project, the American Academy of Achievement, the Cystic Fibrosis Foundation, and the Trial Lawyers Club of Chicago. In addition, he is the recipient of the Chicago Park District's 1990 Chicagoan of the Year Award, the 1992 PUSH Bridgebuilder Award, the National Italian-American Friendship Award, Northwestern University's Award of Merit, the U.S. Air Force American Spirit Award and a honorary degree in humane letters from Illinois College. Reinsdorf was awarded the Ellis Island Medal of Honor in 1993 and the 1997 Mayor's Medal of Honor.

[Elli Wohlgelernter (2nd ed.)]

REISCHER, JACOB BEN JOSEPH (also known as **Jacob Backofen**; c. 1670–1733), rabbi, halakhic authority, and au-

thor. Born in Prague, Reischer studied under Aaron Simeon Spira, rabbi of Prague, and was known as a prodigy in his early youth. Afterward he studied under Spira's son, Benjamin Wolf Spira, *av bet din* of the Prague community and rabbi of Bohemia, whose son-in-law he subsequently became. His brothers-in-law were Elijah Spira and David *Oppenheim. Reischer's surname, borne by his grandfather and uncles (see introduction to his *Minḥat Ya'akov*), derives from the fact that his family came from Rzeszow, Poland, and not, as has been erroneously stated, because he served as rabbi of that town.

While still young, he became *dayyan* of the "great *bet din* of *Prague." He was appointed *av bet din* of Ansbach, capital of Bavaria, and head of its yeshivah in 1709, and in 1715 *av bet din* of Worms. There, students flocked to him from all parts of Europe. He had, however, opponents who persecuted him. About 1718, he was appointed *av bet din* and head of the yeshivah of the important community of Metz. There, too, he did not find peace. He related that in 1728 "malicious men, as hard as iron, who hated me without cause, set upon me with intent to destroy me by a false libel, to have me imprisoned." His first work, *Minḥat Ya'akov*, was published, while he was still young, in Prague in 1689. In the course of time he was accepted by contemporary rabbis as a final authority (*Shevut Ya'akov*, vol. 1, no. 28; vol. 3, no. 61), and problems were addressed to him from the whole Diaspora, e.g., Italy, and also from Erez Israel (*ibid.*, vol. 1, nos. 93 and 99). He made a point of defending the **rishonim* from the criticism of later writers, and endeavored to justify the Shulḥan Arukh against its critics. But there were also those, particularly among the Sephardi rabbis of Jerusalem, who openly censured his habit of criticizing *rishonim* and **aḥaronim* (*ibid.*, vol. 1, no. 22), and criticized him in their works. His replies to these criticisms were not always couched in moderate language (see *Lo Hibbit Aven be-Ya'akov*). The main target of his criticism was Joseph b. David of Breslau, author of *Ḥok Yosef* (Amsterdam, 1730). Jacob's only remaining son, Simeon, *av bet din* of Danzig, died in 1715.

Reischer was the author of the following works: (1) *Minḥat Ya'akov* (Prague, 1689) – part 1 is an exposition of the *Torat ha-Ḥattat* of Moses *Isserles, and part 2, entitled *Torat ha-Shelamim*, is an exposition of *Hilkhot Niddah* of the Shulḥan Arukh together with expositions and supplements to the *Kunteres ha-Sefekot* of *Shabbetai b. Meir ha-Kohen and responsa; a second edition, entitled *Solet le-Minḥah ve-She-men le-Minḥah* (Dessau, 1696), contained the glosses of his son, Simeon; (2) *Ḥok le-Ya'akov*, novellae and expositions on *Hilkhot Pesah* of the Shulḥan Arukh, subsequently included in the large edition of the Shulḥan Arukh; (3) *Shevut Ya'akov*, responsa in three parts – part 1 (Halle, 1710) also contains "P'èr Ya'akov," the residue of his novellae on the Talmud which were destroyed by fire in 1689, part 2 (Offenbach, 1711) contains a revised edition of the laws of *migo* and *sefek sefeka* ("double doubt"), which had been published separately in Prague in 1689, and part 3 (Metz, 1789) contains his "*Lo Hibbit Aven be-Ya'akov*," a reply to the attacks on his first works; (4) *Iyyun*

Yaakov (Wilhelmsdorf, 1729) is a commentary on the *aggadot* in *Ein Yaakov* of Jacob *Ibn Ḥabib, and on *Avot*.

[Ephraim Kupfer]

REISEN, ABRAHAM (Avrom Reyzn; 1876–1953), Yiddish poet, short-story writer, playwright, and editor. Born in Koidanovo, Russia (now Dzyarzhynsk, Belarus), Reisen was the son of the Hebrew and Yiddish poet Kalman Reisen (1848–1921) and the brother of the poet, short-story writer, and translator Sarah (Sore) Reisen (1884–1974) and the celebrated philologist Zalman *Rejzen (1887–1941). While he was still a teenager, his talent was recognized by *Shalom Aleichem and I.L. *Peretz, who arranged for the publication of his earliest poems. After some years in Minsk, Warsaw, Cracow, and Berlin, he settled permanently in New York in 1914. Influenced by Heinrich *Heine, whom he translated into Yiddish, he was one of the first Yiddish poets to make use of folksong material. His poetry, though mostly written in conventional quatrains, is suffused by a refined sensibility that adumbrates the writing of Di *Yunge. In contrast to the verse of the “sweatshop” generation, such as Morris *Vinchevsky or Morris *Rosenfeld, his work is characterized by a certain understated Romanticism and melancholy irony. Reisen shared the preoccupation with poverty and social problems manifested by his predecessors, but he entirely eschews their propagandistic rhetoric. Nonetheless, while most of his poetry is softly lyrical, a proportion has sufficiently social-critical implications to have been sung at clandestine workers’ meetings in the forests. Many of his poems were set to music and became a standard part of Yiddish folk culture.

In hundreds of short stories, often written at a pace of one a week for the many newspapers to which he was a regular contributor, he reflected with transparent honesty the lives of simple Jews whether in the *shtetl* or as immigrants. His style completely lacked didacticism and the mediating narrators of earlier Yiddish fiction. Though set in a Jewish environment, the stories are animated by wider values. His characters are overwhelmingly Jewish, but they are beset by universal human problems. The narration is restrained, with minimal action and is often reminiscent of Anton Chekhov, another writer whom he translated into Yiddish. His stories are masterpieces of concision and evince his particular gift for catching the essential psychological traits of a character or a situation in a few strokes. His characters are ill-adjusted to their environment and suffer all manner of petty tragedies. He is particularly effective in his unsentimental, quietly realistic depiction of the miseries caused by poverty and the daily struggle to survive. Stories such as “Ayzn” (1912; “Iron,” 1974) often constitute brilliant essays in unspoken psychopathology. He wrote with particular effectiveness on a wide variety of themes incorporating characterizations of hungry dreamers, prostitutes, workers, mothers and children, parve-

nus, and factory girls, all treated with equal lack of censoriousness. Though Reisen adopts a seemingly distanced, objective voice, the reader’s sympathy is nonetheless all the more poignantly evoked. Reisen was immensely popular with the general reader and his public appearances were attended by thousands, yet, perhaps on account of his deceptive simplicity, it was only from the 1930s onwards that he began to receive due recognition by intellectual critics.

His valuable autobiography, *Epizodn fun Mayn Lebn* (“Episodes from My Life,” 1929–35) covers events in his varied life up to his participation in the epoch-making *Czernowitz Yiddish Language Conference of 1908. Subsequent episodes were never published in book-form. He was also an indefatigable editor and publisher and brought out many important anthologies and a dozen or so journals of which most were fairly ephemeral. He had a deep interest in European literature, and was eager to disseminate acquaintance with the European writers in Yiddish translation as to promote Yiddish literature as an equal within the broader European context.

[Hugh Denman (2nd ed.)]

REISENBERG, NADIA (1904–1983), U.S. concert pianist and piano teacher. Born in Vilna, Lithuania, Reisenberg moved with her family to St. Petersburg in 1915, where she studied piano at the Conservatory under Leonid Nikolaiev. After the Russian revolution, the family moved, eventually arriving in America in 1922. Under the helpful largesse of Isaac Sherman, Nadia gave private recitals and began to build a reputation. She gave her American debut concert to strong reviews in late 1922 and in 1924 began touring.

Reisenberg possessed a brilliant technique and her audiences were won over by the depth of her musicianship, diverse repertoire, strength and agility, and convincing and serious interpretations.

She married Isaac Sherman, an economist, in 1924, and they had two sons; Reisenberg credited the successful balancing of her concert career and raising a family to having “complete cooperation and understanding” from her husband. In 1930, she began studies with Josef Hoffman at the Curtis Institute, receiving a diploma in 1935 and teaching there from 1934 to 1938. She also taught at Mannes College, Queens College, CUNY, and the Juilliard School; in the 1960s she gave master classes at the Rubin Academy in Israel. Reisenberg focused significant attention on chamber music, which she considered “her first and real love in this world.” She often concertized with the Budapest Quartet, or soloists such as

cellist Joseph Schuster and violinists William Kroll and Erick Friedman.

In 1939–40, Reisenberg amazed radio listeners by performing the complete Mozart Piano Concertos in a cycle of weekly broadcasts, which she called “the most rewarding experience of my career, my private year with Mozart.” Arthur Rubinstein said of this series, “She played brilliantly and I admired her very greatly.”

Reisenberg toured with orchestras, including the New York Philharmonic under John Barbirolli, and was the first soloist to play twice in one season with that orchestra, in 1941. Nadia often played premieres of Russian composers, and frequently included newer compositions on her programs, although she did not like “ultra-modern” 20th century music. She also recorded for commercial labels. Reisenberg’s last solo recital was at Carnegie Hall on November 21, 1947, though she still gave some concerts, such as a benefit for Israeli children at Carnegie Hall in 1948. In general, after 1950, she focused on teaching, becoming a beloved, sympathetic instructor with deep personal interest in all her students.

[Judith S. Pinnolis (2nd ed.)]

REISER, PAUL (1957–), U.S. actor and writer. Born in New York to a health food distributor, Reiser studied classical piano and composition at the State University of New York-Binghamton. He began performing stand-up comedy at New York comedy clubs, such as the Improv and Comic Strip. His big break came in Barry Levinson’s *Diner* (1982). Reiser went on to appear in *Beverly Hills Cop* (1984), *Aliens* (1986), and *Beverly Hills Cop II* (1987). He also appeared on television specials, award shows, and pilots, including a *Diner* pilot in 1983. He starred on the NBC sitcom *My Two Dads* (1987–90). After the show ended, Reiser returned to feature films with roles in *Crazy People* (1990) and *The Marrying Man* (1991). Toward the end of *Dads*, Reiser developed a new show based on his own marriage. *Mad About You* debuted in 1992, featuring Reiser and Helen Hunt as a recently married couple dealing with life after the honeymoon, and ran successfully until 1999. The show’s theme song, *The Final Frontier*, was written by Reiser and musician Don Was. In 1994, Reiser published his first book, *Couplehood*, a bestseller that featured unused material from his sitcom. That same year, Reiser received an Emmy nomination as a lead actor in a comedy series. In 1997, he released his second book, *Babyhood*. He continued to appear in movies, including *The Thing about My Folks* (2005), which he wrote.

[Adam Wills (2nd ed.)]

REISMAN, HEATHER (1948–), Canadian entrepreneur and philanthropist. Reisman was born in Montreal and went to McGill University where she studied social work. Later she moved to Toronto. Drawn to business, she co-founded Paradigm Consulting, a strategy and change management firm in 1979. She left Paradigm in 1992 to become president of Cott Corporation, the regional bottler which she helped grow into

the world’s largest retailer-branded beverage supplier. Harvard University developed two case studies focusing on the company’s growth and development during Reisman’s time as president. Reisman left Cott and in 1996 founded and became chief executive officer of Indigo Books, Music and More. The launch of Indigo was the culmination of a lifelong passion for books and music. After a merger with Chapters Books, Indigo became Canada’s largest book retailer.

Reisman was recognized for her many contributions to the Jewish and larger community. In 2005, she was awarded the Canada Council of Christians and Jews (CCCJ) Human Relations Award for her contribution to a variety of initiatives that span social, religious, racial, and ethnic communities. She served as governor of McGill University and of the Toronto Stock Exchange. In addition to being the CEO of Indigo Books she was also an officer of Mount Sinai Hospital and a board member and adviser to many organizations, including World Literacy of Canada and Toronto’s Holy Blossom Temple, where she and her husband established the Gerald Schwartz/Heather Reisman Centre for Jewish Learning, which sponsors lectures and study classes on a wide range of Jewish-interest subjects. Reisman and her husband were also active in support of the Liberal Party of Canada. Her husband, Gerald *Schwartz, served as chair and CEO of Onex Corporation.

[Mindy Avrich-Skapinker (2nd ed.)]

REISS, LIONEL (1894–1986), U.S. painter, printmaker, watercolorist. Born in Jaroslav, Galicia, a four-year-old Reiss and his family immigrated to New York in 1898. Reiss attended the Art Students League and then worked as a commercial artist for newspapers, publishers, and a motion picture company. Reiss was art director for Paramount Studios and the creator of the now famous MGM lion. In 1930, Reiss made a decision to leave New York to travel to Europe, North Africa, and the Near East, accumulating material for art with Jewish subject matter, often focusing on Jewish life in Eastern Europe. Reiss published some of the fruits of his travels in a limited edition folio titled *My Models Were Jews* in 1938. In part, this work attempted to negate Hitler’s assertion of a distinctive “Jewish type” with images of a wide range of different Jews in varying milieus, including the Venice ghetto, the Jewish cemetery in Prague, and an array of shops, synagogues, streets, and marketplaces. All of his depictions are infused with a great sensitivity to details of dress, hair, facial features, and expression often suggested with an economy of line which still manages to retain a powerful descriptive quality. Reiss’ subject matter was wide-ranging, from the gritty realism of a group of near-derelects escaping the heat on a tenement rooftop in *New York Summer Night* (c. 1946) to more brilliantly colored images such as the watercolor and gouache *Spring Promenade* (c. 1946), which depicts a bevy of well-dressed New Yorkers parading through Central Park. Reiss also completed paintings lighter in hue and spirit which reflect the artist’s observation of life in Israel, such as *Tel Aviv Balconies*, *Boy from Safed*, and *Yeminite Girl*. He published and illustrated *New Lights and Old Shad-*

ows (1954) and *A World at Twilight*, two books featuring text by I.B. Singer. He illustrated many other books including the English edition of Ḥayyim Nahman *Bialik's poem *Hamatmid*, published in 1947, for which he created the etching *The Talmud Student*, a somewhat expressionistically rendered depiction of a reader, his weary but engrossed expression illuminated by vibrant candlelight. Reiss' work has been exhibited at the Art Institute of Chicago, the Carnegie Institute, and the Whitney Museum. His art has been collected by many institutions, including, among others, the Jewish Theological Seminary, the Smithsonian Institution, and the Tel Aviv Museum.

[Nancy Buchwald (2nd ed.)]

REISZ, KAREL (1926–2002), British film director. Born in Ostrava, Czechoslovakia, Reisz came to Britain on a *Kindertransport* in 1938; his family perished in the Holocaust. Reisz served in the Royal Air Force and studied natural sciences at Cambridge. Initially a film critic, from 1959 Reisz became an influential film director, responsible for many hard-hitting and realistic dramas and comedies such as *Saturday Night and Sunday Morning* (1960), *Night Must Fall* (1964), *Morgan: A Suitable Case For Treatment* (1966), and, later, *The French Lieutenant's Woman* (1981). He was often compared to such contemporary dramatists as Harold *Pinter and Samuel Beckett.

[William D. Rubinstein (2nd ed.)]

REITLINGER, GERALD (1900–1978), British historian. Born in London and educated at Westminster School and Oxford, Reitlinger worked as an art dealer and critic while writing important pioneering works on the Nazi era. His *The Final Solution* (1953; revised edition, 1967) was one of the first comprehensive histories of the Holocaust and is still valuable. Reitlinger's *The SS: Alibi of a Nation* (1956) was one of the earliest serious accounts of the Nazis' agents of genocide. Reitlinger also wrote a three-volume history of art sales down the ages, *The Economics of Taste* (1961–70) and exhibited his own paintings.

[William D. Rubinstein (2nd ed.)]

REIZENSTEIN, FRANZ (1911–1968), composer and pianist. Reizenstein was born in Nuremberg, and studied the piano at the Berlin State Academy with Leonid Kreutzer and composition with Hindemith. He settled in London in 1934, undergoing a further period of study-of composition with Vaughan Williams and the piano with Solomon. He was a prolific composer in a lucid, neo-classical style, his works always showing clarity of thought and neatness of design. They include: two radio operas – *Men Against the Sea* (1949) and *Anna Kraus* (1952); the cantata *Voices of Night* (1939), for soprano, baritone, chorus, and orchestra; concerto for cello, violin, and piano (the

first performance of the *Second Piano Concerto* was in June 1961, with Reizenstein as soloist); much chamber music; and pieces for solo piano, songs, etc. Reizenstein taught composition at the Guildhall School of Music, London.

[Max Loppert (2nd ed.)]

REIZES (also **Reizeles**; in Heb. רֵיזֵיט), **ḤAYYIM BEN ISAAC HA-LEVI** (1687–1728), and his brother **JOSHUA** (1697–1728), rabbis and Jewish martyrs in Poland. Ḥayyim was a wealthy and learned man who held the position of *av bet din* in *Lvov (Lemberg) and was rabbi of *Kamenka-Bugskaya. He was also a member of the provincial committee. Joshua headed a yeshivah in Lvov. In the spring of 1728 the bishop of Lvov accused the two brothers and other Jewish personalities of the town of having attempted to induce the Jewish apostate, Jan Filipowicz, to return to Judaism, and of having profaned the symbols of Christianity which he carried with him. The Reizes brothers were arrested, interrogated, tortured by the Inquisition tribunal, and condemned to death by burning at the stake. Information on the tragedy of the Reizes brothers stems from Jewish and Catholic sources. According to the Jesuit source, Joshua committed suicide in prison after which his body was abused, and burned at the stake. It is also related that on the day that Ḥayyim was to be burned at the stake a Jesuit priest attempted to convert him in exchange for a pardon, “but he could not convince his obstinate soul” (“*Sed nihil evicit in obstinato pectore*”). The property of the Reizes brothers was confiscated and set aside for financing a project to strengthen the town walls. Regularly, on the eve of Shavuot, the anniversary of the death of the martyred Reizes brothers, a special memorial service was held in the Naḥmanovich synagogue of Lvov for the repose of their souls.

[Arthur Cygielman]

REJZEN (Reyzn), ZALMAN (1887–1940?), Yiddish lexicographer, literary historian, and editor. Born in Koidanovo, Minsk province (now Dzerzhinsk, Belarus), Rejzen, together with his elder brother, the poet and short story writer Abraham *Reisen, prepared the Yiddish textbook *Muter-Shprakh* (“Mother Language,” 1908). That year he also published a widely used Yiddish grammar, which he expanded to the more definitive *Gramatik fun der Yidisher Shprakh* (“Grammar of the Yiddish Language,” 1920), thus helping to standardize Yiddish grammar. He also helped to bring greater uniformity to Yiddish spelling by editing a book on Yiddish orthography prepared by a group of Yiddish teachers in 1913. But his most important contributions were in literary history. His *Leksikon fun der Yidisher Literatur un Presse* (“Lexicon of Yiddish Literature and Press”) appeared in a single volume in 1914 under the editorship of S. *Niger and became the basis for his monumental bibliographic *Leksikon fun der Yidisher Literatur, Presse, un Filologi* (“Lexicon of Yiddish Literature, Press, and Philol-

ogy”), published in four volumes in Vilna (1926–29), where he had settled in 1915 and assumed a leading role as journalist, editor, scholar, and stimulator of cultural life. When he became the editor of the Yiddish daily *Vilner Tog* in 1920, he fought for Jewish cultural autonomy and fostered new literary talents. In 1928 he was imprisoned for two months because of his opposition to the Polish government’s attempt to compel Jews to accept Sunday as their day of rest. He also edited the linguistic journal *Yidische Filologi* and several books, including the handbook for the history of Haskalah literature, *Fun Mendelssohn biz Mendele* (“From Mendelssohn to Mendele,” 1923). With A. Fridkin he coauthored a study on Abraham *Gottlober and wrote on the life and works of I.L. *Peretz (*I.L. Peretz – Zayn Lebn un Zayne Verk*, “I.L. Peretz – His Life and His Works,” 1931). He translated European classics into Yiddish. In 1925 he helped found the *YIVO Institute for Jewish Research, edited several of its important scholarly publications, and was especially active in its sections on philology and literature. The posthumous essay collection, *Yidische Literatur un Yidische Shprakh* (“Yiddish Literature and Yiddish Language,” 1965) includes a full bibliography. When Soviet troops occupied Vilna in 1939, he was arrested, and when Vilna was handed over to the Lithuanian Republic, he was taken to Russia, where he was shot in June 1941. No reason was ever given for his imprisonment or execution.

[Moshe Starkman]

REKHASIM (Heb. רִקְסִים, “Ridges”), semiurban settlement in the Tivon Hills of Israel, 10 mi. (16 km.) S.E. of Haifa. Rekhasim, founded in 1951 as *Kefar Ḥasidim (*ma’barot* “A” and “B”), became a permanent settlement and received local council status in 1959. The population, numbering 1,500 in 1951, grew to 2,550 in 1970 as immigrants from Romania and North Africa were absorbed. Most of the inhabitants found employment in the Zebulun Valley. In the mid-1990s the population was approximately 4,970, increasing to 7,750 in 2002 and occupying an area of 1.2 sq. mi. (3 sq. km.). The majority of Rekhasim’s population was ultra-Orthodox, with family income considerably below the national average.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

***RELAND, ADRIAN (Hadrian; 1676–1718)**, Dutch Orientalist and theologian. Reland studied at Utrecht, was appointed professor of philosophy at Harderwijk in 1699, and professor of Oriental languages and antiquities at Utrecht in 1701.

He published *Antiquitates sacrae veterum Hebraeorum* (1708) and *De spoliis templi Hierosolymitani in arcu Titiaco Romae conspicuis liber singularis* (Utrecht, 1716). Reland’s major work was *Palaestina ex monumentis veteribus illustrata* (2

vols., 1714), in which he collected all the knowledge then available on the historical geography of Erez Israel and its ancient sites, arranging the latter alphabetically. His sources included not only the writings of classical authors, but also those of the church historians, the *Lives of the Saints*, and talmudic literature which he quotes in the original. Reland also recorded Nabatean and Palmyrene inscriptions, though he was unable to decipher them. All later Orientalists made use of his monumental compilation which is of value even today.

RELIGIS (Sigler), EUGEN (1895–), Romanian author and journalist. Born in Jassy, Relgis showed an early inclination toward humanitarianism and pacifism. He wrote his first book, *Triumful Neființei* (1913), before embarking on his main journalistic and literary career. He contributed to leading Romanian periodicals and to the Jewish journals *Adam*, the official Zionist *Sțiri din lumea evreească*, *Renașterea Noastră*. For a time, he was on the editorial staff of the Zionist periodical *Mântuirea*. After 1920, he edited *Umanitatea* and *Cugetul liber* (“Free Thinking”).

During the 1920s, Relgis was mainly concerned with his idealistic conception of humanitarianism – ultimately, the struggle to improve the human soul. His fundamental work was *Principiile umanitariste* (“Humanitarian Principles”, 1922), which was translated into 17 languages and made Relgis one of the best-known figures in the intellectual world between the world wars. He developed his ideas in *Umanitarismul și internaționala intelectualilor* (“Humanitarianism and the Intellectuals’ Internationale”, 1922), *Umanitarismul și socialismul* (“Humanitarianism and Socialism”, 1925), *Umanitarismul biblic* (“Biblical Humanitarianism”, 1926) and similar works. Some of his books contained prefaces by such celebrities as Albert Einstein and Romain Rolland who declared Relgis to be his most worthy successor. During this period he wrote *Petre Arbore* (3 vols., 1924), *Glasuri în Surdin* (“Voices in a Low Key”, 1927), and *Prieteniile lui Miron* (“The Friendships of Miron”, 1934).

In the years immediately preceding World War II Relgis was active in the Jewish cultural institute attached to the Bucharest Choral Temple. In 1947, he left Romania and settled in Montevideo, Uruguay, lecturing at universities there and in Argentina and Brazil. He then republished his main works in Spanish. His articles on the values of Judaism, which he identified with modern humanitarianism, originally published in Romania as *Esseuri despre judaism* (“Essays on Judaism”, 1936), appeared in an elaborated form in the volumes *Profetas y Poetas* (1955) and *Testigo de mi tiempo* (1961). Another collection of articles and lectures on Romanian-Jewish subjects, *Mărturii de ieri și de azi* (“Testimonies of Yesterday and Today”), was published in Israel in 1962.

BIBLIOGRAPHY: E. Lovinescu, *Istoria literaturii române contemporane*, 3 (1927), 207–9; G. Călinescu, *Istoria literaturii române...* (1941), 851; *Quaderni degli amici di Eugen Relgis* (1962–); *Homeneja a Eugen Relgis en su 60.º aniversario* (1955).

[Dora Litani-Littman and Abraham Feller]

REMAK, German family of neurologists. **ROBERT REMAK** (1815–1865) was born in the province of Posen and was one of the first Jews to become lecturer (*Dozent*) at the University of Berlin, by special permission of Emperor Frederick William IV. In 1859 he was appointed associate professor of medicine. He made important contributions in the fields of anatomy, histology, neurology, and electrotherapy. He discovered the nonmedullated nerve fibers (Remak fibers), and a sympathetic ganglion in the heart tissue (Remak's ganglion). In opposition to accepted theories, he stated that cell growth to form tissue is achieved by cell division. He also proved that the double middle embryological germ layer is a single structure. His contributions in the field of electrotherapy include substitution of galvanic for induced current and the introduction of galvanic therapy for certain nerve and muscle diseases.

His son, **ERNST JULIUS REMAK** (1849–1911), continued the work of his father in neurology and his contributions to medicine were mainly in electrodiagnosis and electrotherapeutics. He described the so-called Remak's reflex of the first three toes as an indication of disturbances in the spinal cord, and described a form of paralysis of the extensor muscles of fingers and wrists. His publications include *Grundriss zur Elektrodiagnostik und Elektrotherapie* (1909) and *Neuritis und Polyneuritis* (1899). Born in Berlin, he became an assistant in the clinic for nervous diseases at the Charité Hospital of that city. In 1902 he was appointed associate professor of neurology at Berlin University.

[Suessmann Muntner]

***REMBRANDT VAN RIJN** (1606–1669), Dutch painter and engraver, considered Holland's national cultural hero. Born in Leiden, he was probably reared in Calvinism, the official religion of Holland. There has been some speculation that Rembrandt became a Mennonite later in life. Rembrandt has always been associated with the Jews of Amsterdam. His religious-cultural background naturally brought him nearer to the Hebraic than the Hellenistic heritage and, like his fellow Dutchmen, he was well versed in the Old and New Testaments. The new Dutch Republic at that time was celebrating its liberation from Spain, and regarded itself as the chosen people, the "New Israel," and its land as a "New Jerusalem," while the Spanish oppressor was likened to Pharaoh or Haman of biblical times. Like other Dutch artists of the time Rembrandt painted Old Testament subjects and created many wonderful drawings and etchings. His pupils continued this trend, often using his drawings as the basis for their work. For these Old Testament depictions Rembrandt may have used Jewish models, which were portrayed in a sympathetic and, above all, human manner. Rembrandt learned his first lessons in giving form to biblical texts from his teacher Pieter Lastman (1583–1633), and from 16th-century prints. An early work by Rembrandt is *Balaam and the Ass* (1626; Paris), similar to and inspired by Lastman's work on the same subject (1622; Jeru-

salem). In certain instances his treatment of the themes deviates from the traditional and has led scholars to speculate that Rembrandt may have derived his novel interpretations from conversations with rabbinical authorities, who provided him with details from post-biblical Jewish literature. It has been shown that Rembrandt and other artists consulted the *Antiquities* of *Josephus Flavius to enrich their biblical iconography. In his New Testament depictions the Jews, especially when he depicts the Pharisees, are sometimes shown as "suspicious of the Christian Miracle."

Rembrandt lived in the Jewish Quarter in Amsterdam on the Breestraat from 1633 to 1635 and from 1639 to 1658. It has been suggested that his choice of a home in Amsterdam's Breestraat was motivated by its proximity to the city's growing Jewish community. In actual fact quite a few artists resided in this quarter. Rembrandt was friendly with two Sephardi Jews, one of whom was the physician Ephraim Hezekiah *Bueno (Bonus). The Rijksmuseum in Amsterdam owns a small Rembrandt oil portrait of Ephraim Bueno, a preliminary study for the etching of 1647. In World War II this portrait was "bought" by the Nazis for Hitler's museum, from the dealer Mannheimer. Rembrandt's other Jewish friend was *Manasseh ben Israel; Rembrandt's etching of him in 1636 is supposed to have been based on a painted portrait that has disappeared. It is doubtful, though, whether it is in fact a portrait of Manasseh ben Israel, but, on the other hand, there is no doubt that Rembrandt and Manasseh knew each other. In Rembrandt's 1635 *Balthazar's Feast* (National Gallery, London), a mysterious hand writes the words: *Mene Mene Tekel Upharsin* in Hebrew letters on the wall. Rembrandt may have consulted Manasseh about the script and in what manner the writing should be arranged. He wrote the words from top to bottom, according to an old Jewish tradition, which was later quoted in Manasseh's book *De Termino Vitae*. For Manasseh's book *Piedra Gloriosa, o de la Estatua de Nebuchadnesar* ("The Glorious Stone, or Nebuchadnezzar's Statue," 1655) Rembrandt made four etchings, one of which was the *David and Goliath*. His plates were not found acceptable on religious rather than aesthetic grounds, and a new commission was accordingly given to another artist – possibly the Jewish copper engraver Shalom *Italia.

The painting and the four etchings are based on the book of Daniel, and are related to messianic ideas common in Holland at that time. Manasseh was, in many respects, a mediator between Jews and Christians. He, like the philo-Semites, was fostering millenarian hopes for messianic salvation.

There has been much speculation as to whether Rembrandt and Baruch *Spinoza knew each other. The assertion that Rembrandt was Spinoza's drawing teacher has been rejected. Many scholars have claimed to see a likeness of Spinoza in paintings by Rembrandt, yet alleged identifications have remained highly debatable. There is a possibility that the two may have met at the home of Manasseh ben Israel, who was one of Spinoza's teachers, or at the home of Spinoza's Latin teacher, Dr. Frans van den Emden, where one of Rembrandt's

pupils was a lodger, or at meetings of Collegiants and Mennonites which the philosopher occasionally attended.

Much of what we think about Rembrandt and the Jews derives from ideas formulated in the 19th century. E. Kolloff wrote in 1854 about Rembrandt's depictions of the biblical past as bearing a "strong touch of the Judaic." Rembrandt's financial problems, which eventually led to his bankruptcy in 1656, were believed to be the result of his relations with Jewish patrons, especially Manasseh ben Israel, who had allegedly influenced him to spend time and money on kabbalistic ideas.

Evidence of Rembrandt's artistic interest in the Jews he encountered in Amsterdam is provided by his numerous drawings, in pen and bistre, or brown or black chalk, of bearded old Jews in long coats. His early depictions of beggars in high hats are not of Jews, but probably based on J. Callot's prints of vagabonds. His etching known as *Jews in the Synagogue* (1648) shows nine Jews and not a *minyán* (quorum) as has been stated. Nor is it any longer agreed that the setting is a synagogue, and it has been suggested that the picture should be titled, *A Scene in the Jewish Quarter of Amsterdam. The Jewish Bride* (Rijksmuseum; painted after 1665) may not be a portrait of Jews at all, though one scholar maintains that the sitters are the Jewish poet Miguel de Barrios, and his much younger wife, Abigail de Pinna. The title was given to the painting in 1825, and therefore lacks historical justification. It is now believed to be a biblical painting, most probably of Isaac and Rebecca. Already in the 18th century art collectors cataloguing their collections gave Jewish "Romantic" names to some of the artist's works, as for instance two etchings, labeled the *Great Jewish Bride* and the *Small Jewish Bride* by Valerius Rover, but which are not what they are called.

A number of portraits assigned to Rembrandt, including some that may be works by his pupils, are believed to be of Jews, though the titles alone, often supplied by dealers, are not sufficient proof. The sole documentary evidence that Rembrandt found patrons among the well-to-do Sephardim of Amsterdam is a deposition concerning a disagreement between the artist and a certain Diego d'Andrade over a portrait of a young woman (perhaps Diego's daughter) which the patron had found unsatisfactory. This painting has, very tentatively, been identified as one in a private collection in Toronto. All identifications of portraits of unknown Jews based on "racial" features are tentative, though in certain cases the physiognomy and style of clothing appear to be more persuasive than in others. Jewish sitters have thus been claimed for as many as 40 oils, but the number is open to challenge. A painting in Rembrandt's inventory of 1656 which is listed as "a Head of Christ, a study from life" and related works were probably painted after a Jewish model. According to S. Schama some of the types of people dressed in heavy coats and fur hats (*kolpaks*) are actually Polish noblemen from Gdansk, and not Jewish. It is assumed that quite often Jewish beggars, who were poverty-stricken Ashkenazi refugees from Poland, served as paid models.

Among Rembrandt's most celebrated oils on Old Testament themes in major public collections the following may be named: *Samson and Delilah* (1628; Berlin), *Jeremiah Lamenting the Destruction of Jerusalem* (1630; Amsterdam); *Saul and David* (1631; Frankfurt); *Sacrifice of Abraham* (1635; St. Petersburg); *Samson Threatening his Father-in-law* (1635; Berlin); *Blinding of Samson* (1636; Frankfurt); *The Angel Leaving the Family of Tobias* (1637; Paris); *Samson's Wedding Feast* (1638; Dresden); *David's Farewell to Jonathan* (1642; St. Petersburg); *Bathsheba at her Toilet* (1643; New York); *Susanna and the Elders* (1647; Berlin); *Bathsheba with David's Letter* (1654; Paris); *Joseph Accused by Potiphar's Wife* (1655; Berlin); *Saul and David* (c. 1655; The Hague); *Jacob Blessing the Sons of Joseph* (1656; Kassel); *Jacob Wrestling with the Angel* (c. 1659; Berlin); *Moses Holding the Tablets of the Law* (1659; Berlin). In this last-mentioned painting the tablets are inscribed in beautiful Hebrew lettering in accordance with the Amsterdam Sephardi manner.

Rembrandt made numerous drawings and prints of Old Testament subjects. Often he seeks to analyze the human motives and the psychological turning points of the episodes. Many are depictions of the stories of Genesis, such as *Joseph's Coat Brought to Jacob* (1633); *Abraham Casting Hagar and Ishmael* (1637); *Joseph Telling his Dreams* (1638); *Adam and Eve*, (1638); *Abraham's Sacrifice* (1655). The story of Tobias also held his fascination throughout his life. In 1651 he made the print of *The Blindness of Tobit*.

In his famous etching *The Triumph of Mordecai* of c. 1641 Rembrandt shows the Temple of Jerusalem through an arch, which is an allusion to the building of the Third Temple. The print is close in conception and composition to the *Nightwatch*, Rembrandt's great masterpiece.

Jewish artists after the Emancipation considered Rembrandt and his "Jewish" creations as proof of the fact that Jewish art was possible.

[Alfred Werner / Rivka Weiss-Blok (2nd ed.)]

REMÉNYI (Hoffmann), EDUARD (1830–1898), violinist. Born in Heves, Hungary, Reményi studied in Vienna, became involved in the Hungarian insurrection (1848), and after its failure fled to the United States and later toured in England. Pardoned in 1860, he was appointed solo violinist to the emperor of Austria. He was noted for his brilliant technique and intensely individual style. On one of his concert tours his accompanist was the 20-year-old Brahms, and Reményi's playing of Hungarian gypsy tunes became the inspiration for Brahms'

Hungarian Dances. Reményi made violin transcriptions of the piano works of Chopin and Field and wrote a violin concerto. He died in San Francisco, California, while on tour.

REMEZ (Drabkin), MOSHE DAVID (1886–1951), labor leader in the Jewish *yishuv* and Israeli politician, member of the First Knesset. Born in Kopys in the Mohilev district in Belorussia, Remez attended a *heder*, and then studied at a gymnasium in the town of Yeltz. He was a member of *Po'alei Zion in his youth, and published Hebrew poems in *Ha-Shilo'ah*, then edited by Hayyim Nahman *Bialik. He also served for a while as a teacher. After studying law in Constantinople, Remez settled in Palestine in 1913, where he worked as an agricultural laborer for five years in Ben-Shemen, Be'er Toviyah, Karkur, and Zikhron Ya'akov. After World War I, he became one of the leaders of *Ahdut ha-Avodah, and later of *Mapai, and was a key figure in the organizational and economic activities of the *Histadrut. In the years 1921–29 he headed the Public Works Office of the Histadrut, which later became *Solel Boneh, and served as secretary general of the Histadrut in the years 1935–44. Remez was chairman of the Va'ad Le'ummi from 1944 to 1948 and was one of the Jewish leaders arrested by the British authorities on June 29, 1946 ("Black Saturday"), spending several months in the Latrun detention camp. In 1948 he was appointed minister of transportation in the provisional government, and served in this position also in the first government formed by David *Ben-Gurion. In the second government he was appointed minister of education and culture, but he passed away in May 1951.

A linguist and writer, Remez introduced several new words into the Hebrew language, such as *נְתִיקָה* (seniority); *דְּהִיפּוֹר* (bulldozer); *נְתִיקוֹן* (traffic light). The housing complex of Ramat Remez in Haifa was named in his memory.

His only son, AHARON (1919–1994), served in the British Royal Air Force from 1942 to 1947 and from 1948 to 1951 was the first commander of the Israeli Air Force. He was a member of the Third Knesset. In 1965 he was appointed Israeli ambassador to Great Britain. In the years 1970–77 he was the head of the Israel Ports Authority, and in 1977–81 he served as chairman of the Airport Authority.

REMNANT OF ISRAEL (Heb. שְׂאֵרֵי יִשְׂרָאֵל), a term denoting the belief that the future of Israel would be assured by the faithful remnant surviving the calamities that would befall the people as a result of their departing from the way of God. On the one hand the prophets foretold the forthcoming exile and destruction of Israel, and on the other they held forth the hope and promise of its survival and eternity. The doctrine of the Surviving Remnant resolved this contradiction. The doctrine is referred to by most of the prophets. Thus Micah (2:12) states, "I will surely gather the remnant of Israel"; Jeremiah (23:3) "and I will gather the remnant of my flock out

of all the countries whither I have driven them and will bring them back to their folds, and they shall be fruitful and multiply." Joel promises, "For in Mount Zion and in Jerusalem there shall be those that escape and among the remnant those whom the Lord shall call" (3:5), and the first half of the verse is repeated almost literally by Obadiah (v. 17).

It is in Isaiah, however, that the doctrine is found in its most developed form which greatly affected Israel's thoughts about the future. He gives his son the symbolic name Shear-Jashub ("a remnant shall return," 7:3) and in 10:22 the phrase is repeated as a statement of fact "a remnant shall return, even the remnant of Jacob." The most detailed description of the doctrine appears in 6:13. The land shall be utterly destroyed, the children of Israel will be "removed far away," only a tenth will remain – even that tenth "shall again be eaten up" but "the holy seed" shall remain. Isaiah's concept of the remnant may have included both the faithful minority and those who would accept God's message, under the impact of the forthcoming disaster. Paul applied Isaiah's teaching to the Church (Rom. 9:27).

In the daily prayers there are included the prayers "Guardian of Israel, Guard the Remnant of Israel, and suffer not Israel to perish."

After World War II the phrase the "remnant which survives" (*she'erit ha-peletah*) was applied to the survivors of the Holocaust.

REMnick, DAVID (1958–), U.S. editor, author. A native of Hillsdale, NJ, and a graduate of Princeton University with a degree in comparative literature, Remnick became the fifth editor of *The New Yorker* magazine in 1998 after an award-winning career as a reporter and foreign correspondent for *The Washington Post*. Starting in 1982 as an intern in the *Post's* Style section, he worked the night police beat and covered tennis and professional basketball for the Sports section and *The Post's* Magazine before going to Moscow for a four-year tour in 1988. Remnick chronicled the politics and personalities of the upheaval in the Soviet Union, which was soon to disappear as a national entity. He wrote *Lenin's Tomb: The Last Days of the Soviet Empire*, and it won the Pulitzer Prize in 1994. *The Wall Street Journal* compared the reportage with John Reed's influential eyewitness account of the formation of the Soviet Union, *Ten Days That Shook the World* (1919). After a stint as a visiting fellow of the Council on Foreign Relations, Remnick became a staff writer for *The New Yorker* and a frequent contributor to *The New York Review of Books* and other publications. His book, *King of the World: Muhammad Ali and the Rise of an American Hero* (1998), chronicles the early career of the heavyweight champion and placed Ali's career in a wider cultural context. In 1998, after a stellar career at the magazine, publishing more than 100 articles on an array of subjects, everything from Boris Yeltsin's political travails to Luciano Pavarotti's opera career to Mike Tyson's rise and fall, Remnick was named editor of *The New Yorker*, suc-

ceeding Tina Brown. Remnick brought a more serious tone to the magazine, which published major exposes, included articles by Seymour Hirsch exposing degrading treatment of Iraqi prisoners by American military personnel at the Abu Ghraib prison. In addition to editing the magazine, and writing introductions to various collections of articles, Remnick continued to report and write his own lengthy articles for the magazine, some from the Middle East. In New York, he was on the Board of Overseers of *YIVO, which seeks to preserve the foremost resources for the study of the history and culture of East European Jews. His wife, Esther Fein, was a correspondent for *The New York Times*.

[Stewart Kampel (2nd ed.)]

REMOS, MOSES BEN ISAAC (c. 1406–c. 1430), physician, philosopher, and poet. Born in Majorca, he traveled widely, and eventually came to Palermo, where he was condemned to death after having been accused of poisoning a Christian patient. His judges offered to quash the sentence if he would convert (it seems that his grandfather, also named Moses Remos, had done this in Palma, Majorca, in 1391). Remos's reply was laconic: "Better that my body die than my soul. My portion is the Living Rock and the dead shall be His." Thus when only 24 years old he was put to death, his remains being buried outside Palermo, beside the city wall. The few poems which he left are of a philosophical nature, written in a careless, prosaic style.

The only one of his poems in print is an elegy on his forthcoming death: "Who would have thought that a villain's death...." At the beginning of it he wrote: "I lament on this first day of the week, for they have told me that tomorrow they will kill me. Woe unto me! May it be God's Will that my death be the pardon for my sins. Bitterly weeping, without thinking or looking, I have taken my pen and have cried and written. In the name of the Lord, the God of Israel, I conjure the person into whose hands this falls, to read it, copy it, and send it to others until it reaches my unfortunate relatives." This elegy begins by describing a procession of worldly and natural forces, together with the arts which he had mastered during his lifetime, come to bewail the poet's death. In the latter part of the poem, the personal feelings of the author are clearly brought out. He confesses his sins, accepts his fate, and is thus prepared for his last journey.

[Yonah David]

°RENAN, ERNEST (1823–1892), French philosopher and Orientalist. Renan, born in Brittany, was one of the foremost French savants and authors of the 19th century. Educated for the priesthood, Renan rebelled against the oppressive Catholic intellectual atmosphere, and in 1846 abandoned his religious

studies, dedicating himself to independent research. In 1847 he was awarded the Prix Volney for *L'Histoire Generale et Systeme Compare des Langues Semitiques*, in which his thesis was that monotheistic tendencies are inherent in the character of Semitic peoples. While working at the Bibliothèque Nationale in the department of Hebrew and Semitic manuscripts, Renan published an essay on Averroes and Averroism in 1852, a work of great erudition and insight into the world of medieval Arab philosophy. His real inclination toward biblical studies and historical research on the Jewish people and origins of Christianity soon became evident. His translations and commentaries on the Book of Job (1859), the Song of Songs (1860), and Ecclesiastes (1882) were widely appreciated at the time. When in 1860 he was barred from an appointment to the chair of Hebrew and Chaldaic at the Collège de France due to Catholic pressure, Napoleon III appointed him head of a French archaeological mission to Syria and Palestine. There Renan wrote the first draft of his famous *Vie de Jesus* (published in 1863). During this voyage he also conceived the project of a *Corpus Inscriptionum Semiticarum* (1881–92). In 1862 his appointment to the Collège de France was confirmed, but he was suspended due to the furore created by his inaugural lecture.

Vie de Jesus was the first volume of a monumental *Histoire des Origines du Christianisme*, of which the subsequent volumes were *Les Apôtres; Saint Paul; L'Antechrist* (1873), a portrayal of Nero's empire; *Les Evangiles et la Seconde Generation Chretienne*; and *Marc-Aurèle et la fin du monde antique* (1881). Renan made erudite use of rabbinic sources; see his *Le Judaïsme et le Christianisme – identité originale et separation graduelle* (1883). In the later part of his scholarly career, Renan turned to the history of the Jewish people. His five-volume *Histoire du Peuple d'Israël des origines à l'époque romaine* was published during 1887 to 1893. As in an earlier article (*Le Judaïsme comme race et comme religion*, 1883), he declared himself an enthusiastic admirer of the great biblical prophets, who were socialists before their time. Renan collaborated with A. Neubauer in *Les Rabbins français du 14^{me} siècle* (1877) and *Les écrivains Juifs français du 14^{me} siècle* (1893), thus integrating these rabbinic writers into the literary history of France. Renan's work has been analyzed by René Dussaud in *L'Oeuvre Scientifique de Renan* (1951). A bibliography is given in H. Girard and H. Moncel, *Bibliographie des oeuvres d'Ernest Renan* (1923).

[Yohanan (J.-G.) Cohen-Yashar (Kahn)]

RENASSIA, YOSSEF (1879–1962), Algerian rabbi. Renassia was a *dayyan* (rabbinical judge) in *Constantine, *Algeria, the chief rabbi of the community, and a primary force behind all types of Jewish education in that community. He was a significant figure in the entire Algerian Jewish community.

He wrote some 130 works covering the entire spectrum of Torah literature. His major efforts were devoted to translating into Judeo-Arabic and writing biblical commentaries.

Among his translations were the entire Mishnah (*Nishmat Kol Hai*), *Maimonides' *Mishneh Torah* (*Orah ve-Simhah – Sefer ha-Rambam*, for which he received the Zadok Kahn award in 1961), and Isaac *Alfasi's commentary on the Talmud (*Sefer ha-Rif*).

Renassia also wrote works on history and belles lettres and edited the legends of the Talmud (*Ben-David*, 1923), translating them into Judeo-Arabic. He was the author of commentaries on biblical topics and responsa literature. He edited dictionaries as learning aids for students of Talmud and Arabic, French, and Hebrew and popularized basic works from the realm of Jewish philosophy and Kabbalah.

His educational approach was non-elitist seeking to reach everyone, from the uneducated to the advanced scholar. With that in mind he translated into the most commonly used dialect and into the *derush*, which was the sermonic style used in most synagogues.

Renassia's educational philosophy was based on the idea that one must develop students who become familiar with a wide range of subjects at an elementary level so that they continue on to specialization in those to which they are attracted. A direct result of this was that the Ez Hayyim *yeshivah* which he headed was home to a large number of students.

He had a unique attitude to modernity, not rejecting it but applying a selective openness. Renassia knew French very well, served in the French army, and was well acquainted with the basics of French culture, even though he absorbed only those elements he considered positive or worthy of being adopted. His main thrust was on Jewish cultural content which he felt was necessary for the maintenance of Jewish life in the Diaspora.

Upon Algeria's independence in 1962 he emigrated to Israel and at no time linked his destiny to the French people or to Jewish bodies loyal to France, such as the Consistoire or the Alliance, although he did not dissociate or alienate himself from them.

His approach to family, conversion, and observance of the commandments is rooted in his general attitude towards modernity. He felt that the solution to the processes of erosion wearing away the Algerian Jewish communities was in proper Jewish education which should be aimed at emigration to Israel. He acted tolerantly towards the problems of Jewish society as he understood – but did not condone – that it was going through gradual processes of secularization and abandonment of traditional values.

He favored a streamlined, convenient process of conversion, more so than the other Algerian rabbis, particularly after World War II. He thought that the phenomenon of conversion after the Holocaust was akin to a miracle and should be encouraged.

Renassia's correspondence with President Izhak Ben-Zvi was crucial to the saving of his works, since he used to send a dedicated copy of each to the president. If it had not been for that, it is doubtful whether it would have been possible to collect his writings, which were in threat of being lost after 1962.

All of his works are available in Jerusalem at the Jewish National and University Library, the Yad Izhak *Ben-Zvi Institute, and the Gei Yinnasei Institute, established in Jerusalem in his name and memory.

[Yosef Chavit]

RENDELL, EDWARD GENE (1944–), U.S. Democratic politician. Born in New York City and educated at the University of Pennsylvania (B.A. 1965) and Villanova University Law School (J.D. 1968), Rendell was an assistant district attorney in Philadelphia from 1968 to 1977. After entering electoral politics, he was district attorney, 1978–85 (elected 1977 and 1981; he was the youngest DA in the city's history when he took office); ran unsuccessfully for governor of Pennsylvania, 1986; ran unsuccessfully for mayor of Philadelphia, 1987; was mayor, 1992–99 (elected 1991 and 1995); chairman of the Democratic National Committee, 1999–2000; and governor of Pennsylvania (elected 2002). Rendell was briefly in private law practice, 1987–91 and 2000–02. He also lectured on government and politics at the University of Pennsylvania.

Ed Rendell, a Clintonian Democrat, "stocky, balding, gravel-voiced, yet still oddly charismatic," as one journalist has put it, is known as a blunt, outspoken politician with a big personality, an effective campaigner and fundraiser. He was regarded as a law-and-order district attorney. When he became mayor of Philadelphia during a national economic recession, the city was deep in debt, and Rendell managed to balance the city's budget by imposing spending cuts, eliminating jobs, conducting competitive bidding for municipal contracts, privatizing some services, and forcing favorable wage settlements on municipal unions, establishing a national reputation as an effective manager. Legally barred from running for a third term, he was chosen to lead the Democratic National Committee during the 2000 election, but his tenure as chairman alienated him from some in the Gore presidential campaign, who felt that his public statements were frequently "off-message." Elected governor of Pennsylvania on the strength of his performance as mayor, Rendell has managed to get some parts of his legislative program enacted, but in general has had less success than he had in Philadelphia, since the state legislature is controlled by very conservative Republicans. As a Democrat able to win in a large, electorally important state, Rendell has been mentioned as a potential Democratic presidential candidate in 2008.

[Drew Silver (2nd ed.)]

RENE, ROY (known by his stage name, "**Mo**"; 1891–1954), Australian comedian. Born Henry Vande Sluice in Adelaide,

South Australia, the son of a Dutch-born Jewish cigar maker, Rene (the name he adopted from about 1910) became one of the best-known Australian comedians of his day. He originally worked as part of a vaudeville duo, "Stiffy and Mo," which toured the Australian theatrical circuit from about 1916 until 1933. Universally known as Mo, he continued on the stage alone thereafter and became a star on Australian radio in the 1940s and early 1950s in a famous series, *MacCackie Mansions*. He also starred in a film, *Strike Me Lucky* (1934).

Probably the most popular Australian comedian of his time, Mo spoke in an exaggerated "Jewish" lisp and was famous for his risqué material which often sailed close to the wind of Australia's strict laws. Many visiting celebrities, including Jack Benny, said that he was among the best comedians they had ever seen, and urged Mo to try his luck in Hollywood, but he never left Australia. In private life, plagued by ill health, he was often a sad figure. He wrote an autobiography, *Mo's Memoirs* (1945).

[William D. Rubinstein (2nd ed.)]

REPARATIONS, GERMAN. On Sept. 20, 1945, three months after the end of World War II, Chaim Weizmann, on behalf of the Jewish Agency, submitted to the governments of the U.S., the U.S.S.R., Britain, and France, a memorandum demanding reparations, restitution, and indemnification due to the Jewish people from Germany. He appealed to the Allied Powers to include this claim in their negotiations for reparations with Germany, in view of the "mass murder, the human suffering, the annihilation of spiritual, intellectual, and creative forces, which are without parallel in the history of mankind." Due to the deadlock and later interruption of the Allies' negotiations for reparations, no further development took place until March 12, 1951, when the Israel foreign minister, Moshe Sharett, submitted a note to the four Allied governments which claimed global recompense to the State of Israel of \$1,500,000,000 from the German Federal Republic (FRG, i.e., West Germany). This claim was based on the financial cost involved in the rehabilitation in Israel of those who escaped or survived the Nazi regime. The financial expense incurred by Israel in the absorption of 500,000 Nazi victims could be covered at \$3,000 per capita. As a result of unofficial preliminary contacts, Chancellor Konrad Adenauer declared on Sept. 27, 1951, the FRG's readiness to compensate Israel for material damage and losses and to negotiate with her and with representatives of Diaspora Jewry. The latter established a Conference on Jewish Material Claims against Germany (Claims Conference) in New York (October 1951) presided over by Nahum Goldmann.

After a resolution to enter into direct negotiations with the FRG was passed in the Knesset by a small majority after stormy street demonstrations staged by the Herut opposition and a heated three-day debate (Jan. 7–9, 1952), the FRG delegation, headed by Prof. Franz Boehm (d. 1977), first

met with the Israel delegation, headed jointly by Giora Josephthal and Felix Eliezer Shinnar (d. 1985), at The Hague on March 21, 1952. The delegation of the Claims Conference, headed by Moses Leavitt, was in charge of the negotiations on individual claims for indemnification. Israel reduced her claim of \$1,500,000,000 against the whole of Germany to \$1,000,000,000 against the FRG alone. She reserved her right to claim the balance from East Germany (German Democratic Republic), which did not respond. On Sept. 10, 1952, after six months of negotiations, an agreement between Israel and the FRG was signed at Luxembourg by Moshe Sharett and Konrad Adenauer. The agreement was ratified and came into effect on March 21, 1953, after a delay caused by the Arab states' efforts to prevent ratification.

The FRG undertook to pay an amount of DM3,450,000,000 (\$845,000,000) in goods, of which DM450,000,000 (\$110,000,000) was earmarked for allocation by the Claims Conference. This \$845,000,000 was to be paid in annual installments over a period of 14 years (between April 1, 1953, and March 31, 1966). Thirty percent was to pay for Israel's crude oil purchases in the United Kingdom. With the balance of 70%, Israel was to buy ferrous and nonferrous metals, steel, chemical, industrial, and agricultural products. The agreement was carried out by the FRG both in letter and in spirit. The reparations agreement was implemented by the government-owned Shilumim Corporation in Tel Aviv – *Shilumim* refers to recompense for material damage ("For the Lord hath a day of vengeance, a year of recompense for the controversy of Zion" (Isa. 34:8)) – which accepted orders from prospective buyers under the agreement, and by the Israel Purchasing Mission in Cologne, to place these orders with the German suppliers. Goods bought and imported under the agreement represented 12–14% of Israel's annual imports and thus made an important contribution to Israel's economy.

In 1988, the German government allocated another \$125 million, enabling remaining Holocaust survivors to receive monthly payments of \$290 for the rest of their lives. In February 1990, before its unification with West Germany, East Germany admitted for the first time that it was also responsible for war crimes committed by the German people during World War II and agreed to pay reparations.

In 1999, German government and German industry agreed, in response to the filing of numerous class action lawsuits in American courts, to compensate Jews and non-Jews specifically for slave and forced labor they performed for German industry during the war. In return for the dismissal of all such lawsuits and guaranteeing Germany and its industry "legal peace" from any such further litigation, the German government and German industry created a foundation, "Remembrance, Responsibility and the Future," with assets of 10 billion German marks (approximately US \$5 billion). Slave and forced laborers still alive at the time of the settlement could apply to receive a lump sum payment of between \$2,500–\$7,500 from the German foundation. Over 140,000 Jewish survivors in over 25 countries received such payments, and the compen-

sation program to the Jewish survivors was administered by the Claims Conference. Final payments from the Foundation were to be made by September 2006.

[Felix Eliezer Shinnar / Michael Bazylar (2nd ed.)]

REPENTANCE. Repentance is a prerequisite for divine forgiveness: God will not pardon man unconditionally but waits for him to repent. In repentance man must experience genuine remorse for the wrong he has committed and then convert his penitential energy into concrete acts. Two substages are discernible in the latter process: first, the negative one of ceasing to do evil (Isa. 33:15; Ps. 15; 24:4), and second, the positive step of doing good (Isa. 1:17; 58:5ff.; Jer. 7:3; 26:13; Amos 5:14–15; Ps. 34:15–16; 37:27). The Bible is rich in idioms describing man's active role in the process of repentance e.g., “incline the heart to the Lord” (Josh. 24:23), “make oneself a new heart” (Ezek. 18:31), “circumcise the heart” (Jer. 4:4), “wash the heart” (Jer. 4:14), and “break one's fallow ground” (Hos. 10:12). However, all these expressions of man's penitential activity are subsumed and summarized by one verb which dominates the Bible, שׁוּב (*shwb*, “to return”) which develops ultimately into the rabbinic concept of *teshuvah*, repentance. This root combines in itself both requisites of repentance: to turn from the evil and to turn to the good. The motion of turning implies that sin is not an ineradicable stain but a straying from the right path, and that by the effort of turning, a power God has given to all men, the sinner can redirect his destiny. That this concept of turning back (to יְהוָה) is not a prophetic innovation but goes back to Israel's ancient traditions is clear from Amos, who uses it without bothering to explain its meaning (Amos 4:6–11). Neither he nor Isaiah stresses repentance, except in his earliest prophecy (1:16–18 – to which the prophet adds 19–20 by way of interpretation – and 27), not because they believe it is insignificant, but because in their time the people had sinned to such an extent, that they had overstepped the limits of divine forbearance and the gates of repentance were closed (Amos 7; Isa. 6). For Isaiah, the need to turn back indeed continues to play a role, but only for the few who will survive God's purge. This surviving remnant will itself actively engage in a program of repentance to qualify for residence in the New Zion (e.g., Isa. 10:20–23; 17:7–8; 27:9; 29:18ff.; 30:18–26; 31:6–7; 32:1–8, 15ff.; 33:5–6). Indeed, the name of this prophet's firstborn was imprinted with this message: “[Only] a remnant will return” (Shear-Jashub; Isa. 7:3).

In the teaching of both Hosea and Jeremiah, on the other hand, the call to turn back is never abandoned. When Jeremiah despairs of man's capability of self-renewal, he postu-

lates that God will provide a “new heart” that will overcome sin and merit eternal forgiveness (31:32–33; 32:39–40; cf. Deut. 30:6; Ezek. 36:26–27).

[Jacob Milgrom]

Rabbinic Views

The rabbis are eloquent in describing the significance of repentance. It is one of the things created before the world itself (Pes. 54a); it reaches to the very Throne of Glory (Yoma 86a); it prolongs a man's life and brings on the Redemption (Yoma 86b). God urges Israel to repent and not be ashamed to do so because a son is not ashamed to return to the father who loves him (Deut. R. 2:24). God says to Israel: My sons, open for Me an aperture of repentance as narrow as the eye of a needle, and I will open for you gates through which wagons and coaches can pass (Song R. 5:2 no. 2). On public fast-days the elder of the congregation would declare: “Brethren, it is not said of the men of Nineveh: ‘And God saw their sackcloth and their fasting’ but: ‘And God saw their works, that they had turned from their evil way’ [Jonah 3:10]” (Ta'an. 2:1).

The rabbis were not unaware of the theological difficulties in the whole concept of repentance. Once the wrong has been done how can it be put right? The general rabbinic answer is that it is a matter of Divine Grace, as in the following passage, in which it is incidentally implied, too, that the concept of *teshuvah* has only reached its full emphasis as a result of a long development from biblical times: “They asked of wisdom? ‘What is the punishment of the sinner?’ Wisdom replied: ‘Evil pursueth sinners’ [Prov. 13:21]. They asked of prophecy: ‘What is the punishment of the sinner?’ Prophecy replied: ‘The soul that sinneth it shall die’ [Ezek. 18:4]. Then they asked of the Holy One, blessed be He: ‘What is the punishment of the sinner?’ He replied: ‘Let him repent and he will find atonement’” (TJ, Mak. 2:7, 31d). The third-century Palestinian teachers debate whether the repentant sinner is greater than the wholly righteous man who has not sinned, R. Johanan holding the opinion that the latter is the greater, R. Abbahu that the repentant sinner is greater (Ber. 34b). R. Simeon b. Lakish said, according to one version, that when the sinner repents his sins are accounted as if he had committed them unintentionally, but, in another version, his sins are accounted as virtues. The talmudic reconciliation of the two versions is that one refers to repentance out of fear, the other to repentance out of love (Yoma 86b). Even a man who has been wicked all his days who repents at the end of his life is pardoned for all his sins (Kid. 40b). The ideal, is for man to spend all his days in repentance. When R. Eliezer said: “Repent one day before your death,” he explained that since no man can know when he will die he should spend all his days in repentance (Shab. 153a).

The Day of *Atonement brings pardon for sin if there is repentance (Yoma 8:8), but Judah ha-Nasi holds that the Day of Atonement brings pardon even without repentance except in cases of very serious sin (Yoma 85b). The Day of Atonement is ineffective if a man says: “I will sin and the Day of Atonement will effect atonement.” If a man says: “I will sin and re-

pent, and sin again and repent” he will be given no chance to repent (Yoma 8:9). The second-century teacher R. Ishmael is reported as saying (Yoma 86a): “If a man transgressed a positive precept, and repented, he is forgiven right away. If he has transgressed a negative commandment and repented, then repentance suspends punishment and the Day of Atonement procures atonement. If he has committed a sin to be punished with extirpation (*karet*), or death at the hands of the court, and repented, then repentance and the Day of Atonement suspend the punishment, and suffering cleanses him from the sin. But if he has been guilty of the profanation of the Name, then penitence has no power to suspend punishment, nor the Day of Atonement to procure atonement, nor suffering to finish it, but all of them together suspend the punishment and only death finishes it.” This scheme contains all the tensions resulting from the different aspects of atonement mentioned in the Bible.

Repentance involves sincere remorse for having committed the sin. The third-century Babylonian teacher, R. Judah, defined a true penitent as one who twice more encountered the object which caused his original transgression and he kept away from it. R. Judah indicated: “With the same woman, at the same time, in the same place” (Yoma 86b). The penitent sinner must confess his sins. According to R. Judah b. Bava a general confession is insufficient; the details of each sin must be stated explicitly. But R. Akiva holds that a general confession is enough (Yoma 86b). Public confession of sin was frowned upon as displaying a lack of shame except when the transgressions were committed publicly, or, according to others, in the case of offenses against other human beings (Yoma 86b). Confession without repentance is of no avail. The ancient parable, as old as Ben Sira (34:25–26), is recounted of a man who immerses himself in purifying waters while still holding in his hand a defiling reptile (Ta’an. 16a).

The sinner must be given every encouragement to repent. It is forbidden to say to a penitent: “Remember your former deeds” (BM 4:10). If a man stole a beam and built it into his house, he was freed from the obligation of demolishing the house and was allowed to pay for his theft in cash, in order to encourage him to repent (Git. 5:5). It was even said that if robbers or usurers repent and wish to restore their ill-gotten gains, the spirit of the sages is displeased with the victims if they accept the restitution, for this may discourage potential penitents from relinquishing their evil way of life (BK 94b).

[Louis Jacobs]

In Jewish Philosophy

Repentance was a favorite subject in medieval Jewish ethical and philosophical literature. *Saadiah discusses repentance in section five of his *Emunot ve-De’ot*. Bahya ibn *Paquda devotes the seventh “gate” of his “Duties of the Heart,” and *Maimonides, the last section of *Sefer ha-Madda*, “*Hilkhot Teshuvah*.” to repentance.

Saadiah, Bahya, and Maimonides agree that the essential constituents of repentance are regret and remorse for the sin

committed, renunciation of the sin, confession and a request for forgiveness, and a pledge not to repeat the offense (*Emunot ve-De’ot*, 5:5; *Hovot ha-Levavot*, 7:4; Yad, Teshuvah, 2:2). In the case of sins perpetrated against other people it is necessary to beg forgiveness from the person one has wronged before one can receive divine forgiveness (*Emunot ve-De’ot*, 5:6; *Hovot ha-Levavot*, 7:9; Maim. Yad, Teshuvah, 2:9). Maimonides in particular, emphasizes the importance of verbal confession, or *viddui* (Yad, Teshuvah, 1:1), maintaining that one should publicly confess those sins that one has committed against one’s fellow men. Of course, a verbal confession without inner conviction is worthless (*ibid.*, 13:3).

The conditions necessary for repentance, according to Bahya, are:

- (1) recognition of the evil nature of one’s sin;
- (2) realization that punishment for one’s sin is inevitable, and that repentance is the only means of averting punishment;
- (3) reflection on the favors previously bestowed by God; and
- (4) renunciation of the evil act.

There are different gradations of repentance. The highest level of repentance, according to Saadiah, is the repentance which takes place immediately after one has sinned, while the details of one’s sin are still before one. A lower level of repentance is that which takes place when one is threatened by disaster, and the lowest, that which takes place just before death. According to Bahya, the highest level of repentance is the repentance of one, who, while still capable of sinning has conquered his evil inclination entirely. The next level of repentance is the repentance of one who, while managing to refrain from sin, is nevertheless constantly drawn toward sin by his evil inclination. The lowest form of repentance is the repentance of one who no longer has the power or opportunity to sin. Maimonides maintains that he has achieved perfect repentance (*teshuvah gemurah*) who, upon finding himself in the position of repeating his sin, is able to refrain from doing so (Yad, Teshuvah, 2:1).

Among the many other medieval works on repentance are *Iggeret ha-Teshuvah* (“Letter on Repentance,” Constantinople, 1548) and *Sha’arei Teshuvah* (“Gates of Repentance,” Fano, 1583) by Jonah b. Abraham Gerondi (c. 1200–1263), and *Menorat ha-Ma’or* (“The Candlestick of Light,” Constantinople, 1514) by Isaac *Aboab (14th century).

[Samuel Rosenblatt]

Post-Medieval Period

The idea of repentance continued to play a central role in the life of the Jew in the postmedieval period, reinforced as it was by both the penitential liturgy and the rituals of the High Holidays. External stress, pogroms, and expulsions turned the Jew in on himself and led him to ask forgiveness of God for the sins which he assumed were at the root of his suffering. Messianic movements, often largely a consequence of the tribulations which beset Jewish communities, gave further incentive

to renewed religious fervor and “re-turning” to God. Pietist movements, such as that of Ḥasidei Ashkenaz, practiced ascetic penitential techniques to scourge the sinful flesh.

Against this background kabbalistic speculation, which associated repentance not merely with the salvation of the individual soul but with the cosmic drama of redemption, gained ground. This doctrine reached its climax in Lurianic Kabbalah, where repentance was one step, but a most essential one, in the process of *tikkun*, or rectification. Through repentance, the Jew was able to assist God in the elevation of the holy sparks entrapped in the shells and thus usher in the messianic age – the work of creation having been completed and perfected.

The 18th and 19th centuries saw the rise of two important movements in Eastern European Jewry in which the idea of repentance played somewhat different theological roles. In Hasidism, where the highly personal and anthropomorphic relation to the Deity, either on the part of the ḥasid himself or at least on that of the *zaddik*, was emphasized, the severity of the doctrine of repentance was toned down. Confidence in the loving response of God and His forgiveness helped lessen the sense of overburdening sin. By contrast the Musar movement, which may be regarded as the response of the *Mitnaggedim* to the challenge that Ḥasidism presented to traditional Judaism, played up the factor of sin, and thus repentance became the persistent task of the Jew, day after day, year after year. The turning inward to scrutinize one’s deeds and motives – in essence the heart of the Musar movement – gave the follower of this movement an awareness of sin of which the average Jew or the ḥasid would be totally oblivious. This process of self-scrutiny and repentance reached its pinnacle for the follower of the Musar movement in the month of Elul, preceding the High Holidays. This month was wholly given over to soul-searching, and there are well attested cases of great exponents of the Musar movement who inflicted discomfort and even suffering on themselves as part of the self-punishment involved in genuine repentance.

Modern Developments

In the modern period, marked by a drift of Jews away from traditional forms of religion and belief in God, the idea of repentance appears in two guises. On the one hand, there is the traditionalist interpretation which still sees repentance as something of which the believing, as well as the unbelieving, Jew is in need. On the other, there is the re-interpretation of repentance as the way back to God for those who have weak roots in Judaism, or have at some stage abandoned whatever roots they had.

The traditionalist interpretation takes its most original form in the writing of A.I. *Kook who devoted a whole work to the subject of repentance (*Orot ha-Teshuvah*, 1970⁵). Kook weaves together three themes in his concept of repentance: the kabbalistic idea that repentance is not merely something on the personal level, but partakes of cosmic proportions; messianic Zionism; the “re-turning” of the individual to God. By

sinning, man isolates himself from the Deity and disrupts the potential unity and harmony of all existence. Repentance is the overcoming of this isolation, and communion with God, the ideal point of man’s striving. In repentance, the harmony of the world is reestablished, for the repentance of one man helps to bring the whole world back to God. Israel’s return to its ancestral land is seen by Kook as repentance (returning) on the national level and a further step in the reestablishment of the unity of the creative process. The repentance of the individual Jew strengthens national repentance and return, for righteousness is the very soul of Israel.

The importance of Franz *Rosenzweig for the modern reinterpretation of the idea of repentance is first and foremost the example of his own life. Rosenzweig’s personal experience of finding his way back to Judaism has come to be the paradigm of the modern *baal teshuvah* (“one who repents”). In 1913, he was on the verge of converting to Christianity, but while attending a Day of Atonement service in an orthodox synagogue he changed his mind and ultimately his whole life. From then on his mode of life and his writings represent the struggles and ideas of a man on the way back (“re-turning”) to Judaism. Rosenzweig gradually took upon himself the yoke of the *mitzvot* and tried to find means, mainly educational, to bring other assimilated Jews to an awareness of the “inner fire of the Jewish star of redemption.” Rosenzweig’s conception of repentance turns on his portrayal of existential man facing God and the dialectical tension between man’s anticipation of the call of God and God’s love which is ultimately at the basis of such a call. Having been called by God, the man of faith enters into dialogue with Him. The turning to God is not simply this dialogic openness to Him, it also involves the attempt to fulfill the *mitzvot* as far as one can, in the hope and belief that one’s ability to fulfill *mitzvot* will widen. Rosenzweig’s attitude to those *mitzvot* he did not keep was “not yet,” i.e., although he was at the moment not ready to observe these commandments, he hoped that at some future time he would be.

Unlike Kook, who dealt with the subject of repentance in relation to Israel’s return to God and nationhood, Rosenzweig was concerned with the turning away of the individual from Western culture, specifically Christianity, back to Judaism. This feature of his thought, typical of existentialism where biographical experience and philosophy meet, colors his whole discussion of the subject. Whereas Kook is concerned with the repentance of the Jew, orthodox or otherwise, Rosenzweig speaks only to the “hyphenated” Jew, i.e., one who has been strongly influenced by non-Jewish cultural values.

In the thought of Martin *Buber the idea of repentance is essentially the turning of the whole man to God, the Eternal Thou. Though God is revealed to man in his dialogic relationships to other men and the natural world, these relationships continually move from the plane of the “I-Thou” to that of the “I-It.” The relationship with God is always, and necessarily, that of “I Thou” since God is the Eternal Thou who can never become It. Yet in order to maintain this relationship with God, a total response is called for from man, a response

which is often only partially forthcoming. Repentance, “returning” to God, is thus the renewed total response of “I-Thou.” The influence of hasidic thought on Buber is apparent both in the highly personalistic approach to the Deity and in the idea that turning to God involves a relationship with him not merely in religiously separated times and places, but even in the most mundane of situations. Unlike both Kook and Rosenzweig, Buber is addressing man as man, not qua committed or even uncommitted Jew but qua “I.” This is true despite his attempt to locate his philosophy within a distinctly Jewish framework – rejecting the Christian framework of an already achieved redemption.

REPHAIM (Heb. רִפְאִים). The Rephaim are known from biblical, Ugaritic, and Phoenician sources. In the Bible two uses of the term are discernible. The first is as a gentilic (e.g., Gen. 14:5; 15:20; Deut. 2:11) referring to a people distinguished by their enormous stature. Especially singled out are Og king of Bashan (Deut. 3:11) and the powerful adversaries of David’s heroes (11 Sam. 21:16, 18, 20). The biblical authors trace their designation to an apparently human eponym Rapha(h) (e.g., 11 Sam. 21:16, 18, 20; 1 Chron. 20:8). The Bible’s emphasis on the size and might of the Rephaim is responsible for the Septuagint’s renderings *gigantes* and *titanes* as well as for *gabbārē* of the Peshitta and *gibbarāyyā* of the Targums. The *Genesis Apocryphon* (21:28) on the other hand prefers the noncommittal *rephā’ayyā*.

In its second use Rephaim designates “shades” or “spirits” and serves as a poetic synonym for *metim* (מֵתִים; Isa. 26:14; Ps. 88:11). It thus refers to the inhabitants of the netherworld (Prov. 9:18). This second meaning is also found in Phoenician sources. King Tabnit of Sidon curses any prospective despoiler of his tomb: “May there be no resting-place for you with the Rephaim” (H. Donner and W. Roellig, *Kanaanäische und aramäische Inschriften* (KAI, 1962), 13, lines 7–8; COS II, 182), King Eshmunazar (*ibid.*, 14, line 8; COS II, 183) employs the same formula in the plural, adding “... and may they not

be buried in a grave.” The chthonic aspect of the Phoenician Rephaim is made even more explicit in a neo-Punic bilingual which equates the אַרְאִפְאִים [נַם] לְעֵל with *dis manibus sacrum* KAI (*ibid.*, 117, line 1).

The Ugaritic material is most problematic because the relevant texts referring to the *rpum* are fragmentary and difficult to interpret. These *rpum*, like their Phoenician counterparts, are divine in nature, being referred to as *ilnym* (I AB 6:46 ff.; Pritchard, *Texts*, 141; COS I, 357–58), literally “divine ones?” (cf. Heb. *e’lohim*, “ghost[s]”, literally “divine being[s]”) (1 Sam. 28:13; Isa. 8:19, 21). There is, however, no clear indication that the *rpum* are chthonic deities. Moreover, they seem to have a military function. One of their number is referred to as a *mhr*, the Ugaritic term for soldier, and the *rpum* are described as riding in chariots. The nonliterary Ugaritic texts mention a guild of *bn rpiym* who presumably were a group under the patronage of the divine *rpum*, as has been pointed out by B. Margulies (Margalit). In addition, the Ugaritic hero Dnil is described as *mt rpi* which may indicate his membership in such a group. (Margulies errs in equating this last epithet with the alleged *šābe bilaṭi* which should be read *tillati* and which is not restricted to Canaan.) Another Ugaritic hero, Keret, is described as belonging to the *rpi arš* – the Rephaim of the land – a term which is paralleled by the *qbš dtn*, the group associated with Ditanu.

The existence of a god named *Rpu* has long been indicated by personal names such as *Abrpu* (C.H. Gordon, *Ugaritic Textbook* (1965), 311, line 10; Dietrich and Loretz, 2). This is now corroborated by the publication of a text (Ras Shamra 24. 252) that mentions *rpu mlk ‘lm*, “Rpu the eternal king” (Dietrich and Loretz, 187), described appropriately as *gtr*, “mighty” (cf. Akk. *gašru*). Though this text is not free of difficulties, *Rpu* seems to be mentioned along with the *r[pi] arš* possibly as their patron. If the admittedly hypothetical interpretation of the Ugaritic material is correct, the biblical tradition of Rephaim as mighty warriors can be understood. Their huge stature would contribute to their military prowess. Furthermore, the biblical eponym Rapha(h) can be considered as an undeified god *Rpu*, more in keeping with biblical thought.

The Hebrew and Phoenician use of *Rephaim* as “shade, spirit,” however, remains problematic. Various attempts have been made to discover an underlying etymology which would account for the development. The presence of an eponym in both Hebrew and Ugaritic, however, suggests that the ancients were unaware of the connection between Rephaim and any verbal root. It should further be noted that the verb *rp’* is unknown in Ugaritic outside of the onomastica. Notions such as “heal” and “gather” or “unite” attested in other Semitic languages for the root *rp’* were often adduced to explain Rephaim, but in Ugaritic these words are not connected with the root *rp’*. In Ugaritic the word for “heal” is *bny* while that for “gather” is *šp*, *hps* and *dn*, in reference to plants, straw, and troops respectively.

[S. David Sperling]

REPHIDIM (Heb. רִפְדִים, רִפְדִים), a stopping place of the Israelites on their way from Egypt, situated between the Wilderness of Sin and the Wilderness of Sinai (Ex. 17:1; 19:2; Num. 33:14–15). In Rephidim the lack of water caused the people to find fault with Moses and to challenge his position of leadership. Moses struck “a rock at Horeb” and water gushed forth. The place came to be known as Massah and Meribah (Ex. 17:1–7). In a parallel account (Num. 20) the place where this occurred is said to be *Kadesh. The defeat of the *Amalekites which later took place at Rephidim was effected by virtue of the force mustered by Joshua and Moses who kept his hands raised during the whole course of the battle. God’s oath to wipe out Amalek was commemorated by an altar, named “YHWH is my ensign” (Heb. אֱלֹהֵינוּ יְהוָה; Ex. 17:8–16), erected at the spot.

No definite evidence has been forwarded for the exact site of Rephidim, which depends on the location of Mt. *Sinai. Most scholars who identify Mt. Sinai with Jebel Musa locate Rephidim in Wadi Firān, or, according to Abel, at Wadi Rafayd or Jebel Rafayd, about 22 mi. (36 km.) southeast of el-Arish.

REPUBLICAN JEWISH COALITION. Formerly known as the National Jewish Coalition, the RJC began in 1985 as an effort by senior Jewish leaders to craft positive and productive relationships with Republican Party officials, decision-makers, and opinion leaders, and to serve as a bridge between the Republican Party and the Jewish community. RJC leaders worked on the first significant efforts to promote the GOP as a community that should and would welcome American Jews. Across a range of foreign and domestic issues, and over time, the national Jewish political conversation has, indeed, broadened.

In 2005 RJC was at the forefront of efforts within the Jewish community to work closely with a GOP White House and U.S. Congress, through its legislative affairs committee, and its continuing grassroots, media and public affairs outreach efforts. As well, the RJC (and its sister non-profit educational organization, the Jewish Policy Center) worked to communicate the GOP message to the Jewish community, with special focus on Israel, national security, and economic growth issues.

The national Jewish vote for Republican presidential candidates grew from 11 percent in 1992, to 16 percent in 1996,

to 19 percent in 2000, to over 25 percent in 2004. Significant pockets of Jewish Republican support had begun to appear in the Orthodox, Persian, and Russian Jewish communities, and future growth was expected among younger Jews, many of whom have experienced sharp antisemitism from the Left on campuses.

Beyond this vote trend, however, lay a story of successful political fundraising. Many of the top donors to the presidential and congressional candidacies of the Jewish community’s best friends in Washington, D.C., were affiliated with the RJC and the RJC PAC (Political Action Committee). Interestingly, many credited the 1998 RJC governors trip to Israel, wherein then-Texas governor George W. Bush and General Ariel Sharon shared a famous helicopter tour over the tiny Jewish state, as a signal moment in the formation of the political and ideological bond between the two individuals that would be critical during the very difficult and dangerous period of the second Intifada in Israel, rising antisemitism in Europe, and the War on Terror.

Early in the Bush Administration, the RJC national board embarked on an ambitious plan to grow its grassroots base. From six chapters in 2000, the RJC opened regional offices in California, Florida, New York, and Pennsylvania, and had over 21,000 members in 41 chapters by 2005.

With the appearance of President Bush at the RJC 20th anniversary luncheon on September 21, 2005, which honored Bernard Marcus, a founder of Home Depot; Sheldon Adelson, the Las Vegas hotel magnate; and Ken Mehlman, chairman of the Republican National Committee, the RJC had secured itself as an important and effective voice in both Washington and within the American Jewish community. It has assured visibility for Jews – a constituency, which in the last two thirds of the 20th century had been traditionally identified with the Democratic Party – within Republican circles.

[Larry Greenfield (2nd ed.)]

RESEN (Heb. רֶסֶן), according to Genesis 10:12, one of the cities (?) which Nimrod built “between Nineveh and Calah, the latter is the great[er] city.” The verse describes the situation of the cities in the “Assyrian triangle” (inner Assyria) in the latter part of the second millennium, when Calah was still a more important city than Nineveh (cf. the differences of opinion between Rashi and Ibn Ezra). While the traditional interpretation of the verse takes Resen to be the name of a city like Calah and Nineveh, other interpretations have been advanced.

According to one possibility, Resen is related to the Akkadian stem *rsn* and is derived from the verb *rasānu* or *resēnu*, “to wash, to irrigate (?)” whence the noun *risnu*, “washing, cleansing.” A second, more fruitful possibility is that Resen was part of a waterwork (standing between Nineveh and Calah). This suggestion is advanced by D. Dossin and E.A. Speiser, who interpreted Resen as a sandhi of the original *rēš imī* or the Assyrian *rēš ēne* (Heb. רֶאֶשׁ הַעֵין) meaning, especially in Assyrian, “source of water, spring.” The term exists not only as a common noun (see *Chicago Assyrian Dictionary*, 7 (1960),

158) but also as an actual place-name, *URU* (“city”) *Re-eš-e-ne* (see D.D. Luckenbill, *The Annals of Sennacherib* (1924), 79:91), near Nineveh, which was a station of the aqueduct to Nineveh reconstructed by Sennacherib.

RESH (Heb. ר; שׂר), the twentieth letter of the Hebrew alphabet; its numerical value is 200. The initial form of this letter – in the early Proto-Canaanite and Proto-Sinaitic inscriptions – is a pictograph of a human head . The Greek *rho* seems to indicate that the Canaanite name of the letter was *rosh*, while *resh* = “head” in Aramaic.

In the late Proto-Canaanite script the pictograph developed into a linear form , which was preserved in the Greek ρ . Another Archaic Greek variant φ was the ancestor of the Latin R.

While the ancient Hebrew script preserved the closed top of the *resh* , the Phoenician cursive opened the circular head at its lower part  and the Aramaic script opened the top of the letter  (compare with Aramaic *bet*, *dalet*, and *ayin*) already in the late eighth century B.C.E. Later there was a tendency to curve the shoulder  and thus the Jewish *resh*  was developed.

As *resh* and *dalet* resemble each other, in some scripts both were often written in the same way. In Syriac only diacritic marks distinguish between them:  = *dalet*;  = *resh*. In the Nabatean cursive and, hence, in the Arabic script, the *resh* has been assimilated with the *zayin*. Therefore a diacritic point above the *za* () distinguishes it from the *ra* (). See *Alphabet, Hebrew.

[Joseph Naveh]

RESHEPH (Heb. רשף), Canaanite “netherworld” god of the pest (appearing as an element in Mari and Sargonic personal names; see Huffmon, in *ibid.*). As a god, Resheph did not have a significant place in the pantheon of Ugarit, since his name was semantically assimilated in the word *ršp*, “pestilence” (see “The Legend of Keret,” trans. by H.L. Ginsberg, in: Pritchard, *Texts*, 143, line 19, where *ršp* is rendered by “pestilence”). In addition, the name occurs as an element in Ugaritic personal names. In the Ugaritic-Akkadian god list (see *Ugaritica*, 5 (1965), 45:26) Resheph is identified with Nergal, the Akkadian god of the netherworld and pestilence (for further data cf. *ibid.*, p. 57). One mythological fragment from Ugarit reads: *b'l ḥš ršp*, “Resheph, the lord of arrow.”

In late bilingual inscriptions from the Phoenician-Hellenic cult of Cyprus, Resheph is identified with Apollo (cf. also the place-name Arsuf = Apollonia). In one of the Amarna letters (EA 35:13) the logogram *MAŠ.MAŠ* (= Nergal, the pest god) can be read “Resheph” (cf. also *Ugaritica*, 5 (1965), 667; AFO, 21 (1966), 59). Like the above-mentioned fragment from Ugarit, Phoenician inscriptions from Cyprus also read *ršp ḥš* (“Resheph at the arrow”).

Resheph was an important god in the Aramaic pantheon of the eighth century B.C.E. (see, e.g., the inscription of Panammu I; H. Donner and W. Roellig, *Kanaanäische und aramäische Inschriften*, 1 (1967), p. 38 no. 214: 1, where the divine names Hadad and El are followed by Resheph). A Hittite-Phoenician bilingual inscription from Karatepe carries the words *ršp šprm*, “Resheph of the birds” (like “arrow,” a figure of speech for swiftness). An orthostat found at Karatepe features a god with a bird in his hands.

In Egypt, from the 18th Dynasty on, Resheph was known as the god of war (see Pritchard, *Pictures*, no. 473, where Resheph appears together with Qadeš and ‘Anat; see also no. 474, no. 476; cf. further in *ibid.*) and the Pharaoh as a warrior is compared to him. The god Mikal of Beth-Shean, whom inscriptions from Cyprus connect with Resheph, is portrayed with similar characteristics (see Pritchard, *Pictures*, no. 487).

In the Bible

While Resheph is not mentioned in the Bible as a god, the word *reshef* appears in various uses:

(a) Resheph as a personal name in 1 Chronicles 7:25 (some scholars assume that there is some confusion here, questioning the probability of a Canaanite theophoric personal name in an Ephraimite family; but the name may not necessarily mean the Canaanite god; see below);

(b) in the general meanings of: “flame” (of true love, jealousy; Song 8:6); “arrow,” i.e., “flame” of the bow” (*rišpe qešet*, Ps. 76:4);

(c) a synonym of *dever*, “pestilence” (Deut. 32:24; LXX “bird,” thus also the traditional interpretation, Ex. R. 12:4; Hab. 3:5; cf. Ps. 78:48);

(d) “bird”

(?) (Job 5:7; cf. Ber. 5a: *reshef* means demons (?) and (burning) pains).

[Pinhas Artzi]

RESHEVSKY, SAMUEL HERMAN (1911–1992), U.S. chess master. Born in Poland, Reshevsky was a child prodigy. In 1919–20 he gave successful simultaneous displays against large numbers of strong opponents in Europe and America. During the same period he fared well in individual games, drawing against David Janowski. After settling in America he gave up chess during his adolescence in order to continue his education. He returned to the game in the 1930s and won the championship of the United States several times against opposition which included Reuben *Fine and Isaac Kashdan. He also won many of the famous tournaments in the United States, Latin America, and Britain. Against the very strongest opposition Reshevsky did well, but not as well as his great ability would

suggest. Though a player of genius, in tournament play he would lose games “on the clock” because of the long spells of concentration demanded by his perfectionism. This explains his failure to win several candidates tournaments, including the world championship tourney in 1948 in which he was defeated by Mikhail Botvinnik.

Reshevsky’s published collection of his own games, *Reshevsky’s Best Games of Chess* (1960), is usefully annotated. He also wrote *How Chess Games are Won* (1962) and *The Art of Positional Play* (1978). An Orthodox Jew, Reshevsky always subordinated his chess life to his religious observances.

[Gerald Abrahams]

RESH KALLAH (Heb. רִישׁ כְּלָה), title that was awarded to the leading sages in Babylonian academies during the talmudic and geonic periods. R. Nathan b. Isaac *ha-Bavli (Neubauer Chronicles, 2 (1895), 87–88), in his description of the seating order of the *hakhamim* observed in the Babylonian academies, also discusses the status of the *resh kallah*. In Babylonian academies the 70 outstanding *hakhamim* were seated in the first seven rows, ten to a row, in order of their importance; the first and most important row was occupied by seven *reshei kallah*, each of whom was in charge of one row of *hakhamim*. The specific duty of the *reshei kallah* was to preach publicly in the academy. The Babylonian Talmud mentions by name only two *hakhamim* who were *reshei kallah*: R. Nahman b. *Isaac (BB 22a) and R. *Abbahu (Hul. 49a). In talmudic times the *reshei kallah* were accustomed to preach only during the *kallah months, whereas in the geonic period the *reshei kallah* were accustomed to give sermons also on the rest of the Sabbaths. In the geonic period the *resh kallah* also bore the title of *al-luf. In this period the title was awarded also to *hakhamim* who excelled in their studies in the academy, as well as *hakhamim* who resided in places other than Babylonia, such as Kairouan and Spain (e.g., Hisdai ibn *Shaprut). In the prayer *Yekum Purkan*, composed in the geonic period, the *reshei kallah* are mentioned before the exilarchs, the academy heads, and the *dayyanim*, although the latter were superior to the *reshei kallah* in rank; the reason for the *reshei kallah*’s precedence here is not known.

[Abraham David]

RESHUT (Heb. רֶשׁוּת), a word found extensively in rabbinic literature and having three distinct and different connotations: authority, domain, and a duty which is optional or voluntary, in contrast to an obligatory duty, called *hovah*.

Reshut as Authority

The term *reshut* is used in rabbinic literature in the sense of power and authority, such as “Seek not acquaintance with the

reshut,” i.e., ruling power (Avot 1:10), or “Six things serve man; over three he has *reshut* and over three he has no *reshut*; over the eye, the ear, and the nose he has no *reshut*; over the mouth, the hand, the foot he has *reshut*” (Gen. R. 67:3).

Reshut as Domain

From this stems the concept of *reshut ha-yahid* to designate an area over which the individual has authority, i.e., a private domain, in contrast to *reshut ha-rabbim*, a public domain. The distinction is found mainly in the laws of Sabbath, with regard to the permissibility of transferring objects from one domain to another, and in connection with torts. Thus the Tosefta (Shab. 1:1) states: “Four domains are to be distinguished in connection with the Sabbath: the private domain [*reshut hayaḥid*], the public domain [*reshut ha-rabbim*], the semipublic domain [*karmelit*], and the exempted domain [*mekom petor*]” (also Maim. Yad, Shabbat, 14: 1). Similarly, in connection with torts, a differentiation is made between private and public domains. For instance the owner of an animal is liable for the damage done by it in the private domain of another. If, however, the damage is done in a public domain, to which everyone has the right of access, such as an open field or a marketplace, the owner is liable only if the animal gores or bites, since it has no right to cause damage to the people in the locality; but he is exempt from damage caused by the animal grazing or treading (cf. Maim. Yad, Nizkei Mamon, 1:7–8).

Reshut in the Sense of an Optional or Voluntary Duty

In the Talmud there is a difference of opinion between R. Joshua and Rabban Gamaliel as to whether the evening prayer is optional (*reshut*) or obligatory (*hovah*; Ber. 27b). A similar distinction is made between an optional war (to enlarge the borders of Israel) in contrast to an obligatory war, like that against *Amalek or Joshua’s conquest of the land (Sot. 8:7). The word *reshut* is also used in medieval liturgical poetry (**piyyut*) for the introductory poem by the cantor who begs “permission” (*reshut*) despite his personal unworthiness to represent, and intercede for, the congregation.

[Abraham Arzi]

RESNICK, SALOMON (1894–1946), writer, journalist, lecturer, translator from Yiddish into Spanish, and community leader. Born in Russia, he immigrated to Argentina in 1902 as his father, Rabbi Moses Resnick, was hired by the JCA (Jewish Colonization Association) to serve the religious needs of the agricultural colonies. There, Salomon Resnick became a Spanish teacher. In 1914, he moved to Buenos Aires, where he started his literary career in the journal *Juventud*; in 1917 he joined the magazine *Vida Nuestra* publishing essays, articles, and translations from Yiddish writers. In 1918 he joined the founders of the daily Yiddish *Di Presse* as a journalist and editor; and from 1923 to 1933 he established and edited with Leon Kibrick the Spanish weekly *Mundo Israelita*, still appearing in the early 21st century. In 1923 Resnick launched the monthly Spanish journal *Judaica*, editing it until his death; this was his most outstanding project devoted to the promotion of Jewish

culture through the publication of scholarly articles from all lines of thought, both Jewish and non-Jewish. As a community leader in 1923, Salomon Resnick participated in the foundation of the Sociedad Hebraica Argentina, a cultural and sport center oriented to Spanish-speaking Jews. He was named director of its newly created library. In 1924 Resnick was appointed director of public information of JCA; in 1938 he took part in the foundation of the Argentinean branch of YIVO – Yiddishn Wisnshaftechn Institute (Jewish Research Institute) and was elected its first president; and from 1944 until his death he held the position of local director of the JDC – Joint Distribution Committee, Public Relations Office. He wrote four books: *Dos formas de nacionalismo espiritual judío: Ajad Haam y Dubnow* (1931), *La literatura de la post-guerra* (1931), *Esquema de la literatura judía* (1933), and *Cinco ensayos sobre temas judíos* (1943). His translations include the writings of most important Yiddish writers, such as Sholem *Asch, *Shalom Aleichem, Sholem Yankev *Abramovitch (Mendele Mokher Seformim), and I.L. *Peretz. Resnick has been recognized as the preeminent expert in the Spanish version and interpretation of Yiddish literature. Over the years, he received many posthumous tributes in Latin America and Israel. His personal library was donated to Tel Aviv University by his family.

[Rosa Perla Resnick (2nd ed.)]

RESNICK, ZVI (Hirsh) YOSEF HAKOHEN (1841–1912), Russian rabbi and *rosh yeshivah* also known as “Rebbe Hirsh Meitshitzer” (apparently from Molczada, the birthplace of his wife). Resnick taught in Slonim for many years, where his reputation grew to such an extent that he was popularly referred to as “The Slonimer” and in 1894 he was appointed head of the famous Suwalki yeshivah, Ohel Yizhak, established by Rabbi Isaac Eisik *Wildmann, holding the position until his death.

Resnick rejected urgent requests to publish his teachings and commentaries on the grounds that the time involved would detract from his study. Many of his teachings, however, are to be found in the works of his son, Rabbi Menahem Hakohen *Risikoff.

RESNIK, JUDITH ARLENE (1949–1986), U.S. scientist and astronaut and the second American woman to travel in space. Born in Akron, Ohio, to Marvin and Sarah Polens Resnik, she was an outstanding student and a talented classical pianist who received a doctorate in electrical engineering from the University of Maryland in 1977. An early marriage to Michael Oldak, a fellow student, ended in divorce in 1975. Resnik was recruited by the National Aeronautics and Space Administration for astronaut training in 1978. At NASA she worked on a number of projects in support of Orbiter development, including experiment software, the Remote Manipulator System

(RMS), and training techniques. In 1984 Resnik served on the crew of the Orbiter *Discovery*, logging just short of 145 hours in space. The crew earned the name “Icebusters” in successfully removing hazardous ice particles from the Orbiter using the Remote Manipulator System. Resnik was killed with her six fellow crew members when the space shuttle *Challenger* exploded shortly after launch on January 28, 1986. She was posthumously awarded the Congressional Space Medal of Honor.

[Judith R. Baskin (2nd ed.)]

RESNIK, REGINA (1923–), U.S. mezzo-soprano singer. Born in New York City to Ukrainian parents, Resnik graduated from Hunter College, where she sang in Gilbert and Sullivan operettas. She studied as a soprano with Rosalie Miller, who introduced her to the conductor Fritz Busch, under whom she sang the part of Lady Macbeth in Verdi’s opera (1942). In 1943, she reached the finals of the Metropolitan Opera Company’s Auditions of the Air, but instead of finishing the competition, chose to sing the leading soprano parts in *Fidelio* and *Der Fliegende Holländer* in Mexico City. In 1944, as the only woman finalist in the same competition, she received a contract for the 1944–45 season from the Metropolitan, where she made her debut as Leonora in *Il Trovatore*. For the next 30 years, she sang many soprano parts at the Metropolitan, including Ellen Orford in the New York premiere of Britten’s *Peter Grimes*, Alice Ford in *Falstaff* under Beecham, and Sieglinde in *Die Walküre* (she also sang this part at Bayreuth in 1953 and Fricka in 1961). Between 1953 and 1955 she took on several mezzo-soprano roles such as Azucena, Eboli and Herodias (*Salome*); and at the end of this period she decided to adapt her repertory to that of a mezzo-soprano. Her second debut took place at the Metropolitan Opera as Marina in *Boris Gudonov*. In 1957, she first appeared at Covent Garden as Carmen, and was hailed – as she was to be all over Europe and America – as one of the finest living exponents of the part; from then on she sang in almost every major operatic capital in the world. Admired as much for the gripping theatricality of her acting as for the warmth of her voice, Resnik was also acclaimed as Clytemnestra in Strauss’s *Elektra*, Mistress Quickly in *Falstaff*, and Amneris in *Aida*. In later years, she turned to producing opera, such as *Elektra* at the Teatro la Fenice in Venice (1971). A third facet of her career was as stage director, with her husband Arbit Blatas as scenic and costume designer. She directed *Carmen* in Hamburg in 1971 and other works, such as *Salome*, *Falstaff*, and *The Bear and the Medium*. Among her many recordings are the parts written for the characters Sieglinde (1953, Bayreuth), Carmen, Clytemnestra and Mistress Quickly. She also acted in films.

[Max Loppert / Israela Stein (2nd ed.)]

RESPONSA (Heb. שְׁאֵלוֹת וְתַשׁוּבוֹת; lit. “queries and replies”), a rabbinic term denoting an exchange of letters in which one party consults another on a halakhic matter. Such responsa

are already mentioned in the Talmud, which tells of an inquiry touching upon halakhic practice that had been sent to the father of *Samuel (Yev. 105a). It relates of Samuel that he sent to Johanan “13 camels” (some Mss. read פָּרָשִׁים “parchments” for פָּרָשִׁים “camels”) laden with questions concerning **terefot* (Hul. 95b). The same passage speaks of a ramified halakhic correspondence that took place between Johanan in Erez Israel and Rav and Samuel in Babylon. Such “letters,” of which the *amora* *Avin wrote many, constituted a general exchange of opinion in *halakhah* and did not necessarily bear the exact character of “query” and “reply” in the classical sense; they may be considered the inception of the responsa literature. The major novelty lay in the committing of halakhic subjects to writing, the prohibition against committing to writing words transmitted orally (Git. 60b) still being in force at the time. The Talmud (Sanh. 29a) speaks of a litigant who claimed that he could bring a letter from Erez Israel which would support his view, the allusion being to a written “responsum” obtained on presentation of the facts of the case before the respondent in a distant locality.

The Geonic Period

The beginning of responsa literature as a literary and historical phenomenon of important dimensions, however, took place in the middle of the geonic period, when it played a decisive part in the process of disseminating the Oral Law and establishing the Babylonian Talmud as the sole authority in the life of the Jewish people, who were becoming ever more widely dispersed as a result of the Islamic conquests. The Jews of the Diaspora outside Babylon, already strangers to the language and format of the Talmud, turned to the scholars of the Babylonian academies, whom they had always regarded as their spiritual leaders, asking them to send them “such and such a tractate or chapter” together with “its explanation.” They also turned to them for decisions on the many disputes which arose continually between different local scholars and on new halakhic problems for which they could find no precedent. Nor were problems wanting on scriptural subjects, traditions, beliefs, and opinions. Accordingly geonic responsa are divisible into: very short responsa, sometimes consisting of only one or two words, such as the earliest surviving responsa, those by *Yehudai Gaon; and responsa containing the exposition of an entire book, chapter, or topic. There was also, understandably, an intermediate group – the most common – of responsa of average scope, but most of these, too, tended toward extreme brevity. The second group mentioned, the “monographic,” becomes more prominent toward the end of the geonic period, from *Saadia Gaon onward, a classical example of this group (not on a halakhic topic) being the *Iggeret de-Rav *Sherira Gaon*, written in response to an inquiry by *Jacob b. Nissim of Kairouan.

Of the tens of thousands of geonic responsa, only a small portion has been published in the various collections of geonic responsa. The major portion remains in the Cairo **Genizah* fragments and scholars are still engaged in publishing them.

More than half the total of the known geonic responsa was written during the last generations of the geonic period, the most prolific writers being Sherira and his son *Hai. During this period of 300 years (750–1050), responsa literature embraced almost every aspect of Jewish life. Apart from issues of practical *halakhah*, they included explanations of verses and of talmudic themes, theological and ideological discourses, and various chronographic, medical, and scientific discussions, all written at the request of individuals or communities who desired this knowledge, either for the needs of the community or for their polemics with the *Karaites and with their Muslim neighbors. Generally speaking, the queries were assembled by the representatives of the yeshivot from the various Jewish centers of Spain, the countries of North Africa, and those surrounding Erez Israel, to as far as Yemen in the south. These then transmitted them, along with the monetary donation of the communities for the financing and maintenance of the yeshivot, by way of the ramified routes of the postal caravan which passed through Egypt on its way to Babylonia. The representatives, who were usually outstanding scholars, sifted the queries, improved and corrected their language, and as far as possible refrained from answering questions to which answers had already been received on a previous occasion. The answers were copied by the representatives, several copies being preserved in anticipation of similar queries in the future. The yeshivah archives were often drawn upon by later *geonim* for their own decisions. That a large part of this material has been preserved in the Cairo *Genizah* is due to the fact that Egypt served as the postal junction of that time.

The yeshivot followed a set procedure for dealing with queries. In general hundreds of such questions were read and discussed at the yeshivah during each of the two months of **kallah* in the presence of the full forum of its scholars and pupils. At the conclusion of the discussion the yeshivah scribe wrote the decision of the head of the yeshivah at his dictation, and all the senior members of the yeshivah signed it. Urgent queries which could not be delayed were discussed and decided by the *gaon* as soon as they were received. In view of the fact that the questioners generally sent groups of queries, sometimes unrelated to one another, the reply of the *gaon* usually consisted of many sections. The scant mention of previous *geonim* and their rulings in the responsa stems from a desire to give them the character of impersonal finality, representative of the view of the yeshivah as a whole. The geonic responsa, which in themselves and in their many copies had begun to pile up by their thousands in the different centers of the postal route and outside it, were already collected in early times by various individuals into *kovazim* (“collections”) or *kunteresim* (“booklets”), according to differing criteria: subject matter, the names of the respondents, order of tractates, etc. As a result, responsa which had comprised a single entity when written were divided up by the copyists and attached to different booklets piecemeal. The great number of such secondary booklets and the utter confusion in the names of the

respondents, which they carelessly transcribed as a result of the arbitrary order prevailing in them and among their copyists, has rendered the problem of determining the authorship of various responsa one of the most difficult problems in present-day research into geonic responsa. In addition, the habit of most copyists of omitting those opening lines of the questions and answers which had no halakhic significance has increased the problem of identification. Much help is obtained, however, from the lists of responsa (without the responsa themselves) prepared by these copyists for themselves and preserved in the *Genizah*, in which the opening words of the responsa and the name of the author are noted.

Responsa of the Rishonim

Responsa literature acquired a different character during the period of the **rishonim*. Their contents became more and more confined to talmudic *halakhah*; the responsa became by degrees more and more detailed and lengthy, and the discussion of the parallel talmudic themes, whether closely or distantly related to the topic, grew correspondingly longer and all within the context of a definitive dependence upon the rulings of the *geonim* which had already become part of binding *halakhah*, almost like the Talmud itself, especially in the regions of Spain and North Africa. The responsa of the *rishonim* contain for the first time such expressions of humility as “in my humble opinion,” “may the Merciful One save us from the abyss of judgment,” and the like, and such admissions as that the understanding of a certain theme, or the determination of a correct reading, “requires further thought.” One also encounters for the first time, in the middle of this period, an exchange of responsa between rabbis in different countries, for the purpose of clarifying and reinforcing their rulings and in order to diminish their responsibility in the event of their erring (cf. Hor. 3b). This correspondence also had great value in strengthening the ties between different localities. In contrast to geonic responsa, in which the mention of inter-geonic disputes is very slight (a factor to a certain extent attributable to the insistence of the *geonim* that their questioners were not to address the same query to more than one yeshivah), the responsa of the *rishonim* are filled with differences of opinion – another sign of the dwindling authority of the rabbis from the close of the geonic period.

A substantial number of responsa or remnants thereof from the period of the *rishonim* – some among the earliest – have already been published. Many of the numerous responsa of *Ḥanokh b. Moses and *Moses b. Ḥanokh, of the first generation of Spanish rabbis, for instance, have been published in various collections, especially in the compilation *Teshuvot Ge'onei Mizrah u-Ma'arav* (1888). Some of the responsa of *Gershom b. Judah, “the Light of the Exile,” were published by S. Eidelberg (1955). Similarly most of Rashi's extant responsa and remnants of others were collected by I. Elfenbein (1943). Other responsa of the early *rishonim* of France and Germany were published in the *Teshuvot Hakhmei Zarefat ve-Loter* (1881). The situation is different with respect to North Africa,

the responsa of whose scholars from the middle of the tenth century and for a considerable time afterward not being preserved in collected form or in great numbers. There are scattered specimens of these, especially in J. Hildesheimer's edition of the *Halakhot Gedolot* (1886–92) and in various *Genizah* fragments. The responsa of Isaac *Alfasi (the Rif) are chiefly from his last years in Spain.

The *rishonim* of France and Germany did not, in general, make collections of their responsa and such collections in our possession represent the work of their pupils and pupils' pupils, who assembled and edited the comprehensive literary legacy of their teachers. This is the case, for example, with the responsa of Jacob *Tam, which were incorporated by his pupils into his *Sefer ha-Yashar*, together with his novellae, rulings, glosses, etc.; with those of *Eliezer b. Nathan of Mainz; and also, in fact, with the various volumes of responsa which contain the complete literary heritage of *Meir b. Baruch (MaHaRaM) of Rothenburg. In contrast to the geonic responsa, specific collections of the responsa of *rishonim* have not been collected or arranged. This task was first undertaken by modern scholarship, and the work is still being pursued. The situation was slightly different in the countries of Spain and in the later period in North Africa, where many of the scholars, or their children, or pupils made collections of their responsa. To this can be attributed the large collections of responsa of Solomon b. Abraham *Adret (Rashba) and *Asher b. Jehiel (Rosh or Asheri), among Spanish scholars, and of *Isaac b. Sheshet (Ribash), Simeon b. Zemaḥ (Rashbaz), and Solomon b. Simeon (Rashbash) *Duran of North Africa, which were well preserved and frequently republished. Of the responsa of other Spanish scholars, however, such as *Naḥmanides (Ramban), Meir *Abulafia (Ramah), *Yom Tov b. Abraham Ishbili (Ritba), and others, only a minute portion has remained, and no additional manuscripts have been discovered.

Only a modicum of the responsa of *rishonim* has been published in scholarly editions, especially noteworthy among which are the numerous editions of the responsa of Maimonides (Ramban), the most recent and best being that of J. Blau (1957–61); and that of his son, *Abraham b. Moses b. Maimon (by A.H. Freimann, 1937). The fate of the Provençal scholars was completely different. Until very recent years hardly a single book of responsa by one of their outstanding scholars had been published. Only recently have relatively limited collections been published of the responsa of *Abraham b. David of Posquières (Rabad) and Abraham b. Isaac of Narbonne (Rabi [ראב"י]).

Until about the 16th century no self-inspired questions are found in rabbinic literature (with the single exception of the *She'iltot* of *Aḥa (Aḥai), which was also the first Hebrew book to be composed after the completion of the Talmud). They began to reach respectable proportions, however, in the middle of the 17th century, when the correspondence style became the accepted fashion among *maskilim*. For an analysis of this phenomenon see below.

Historical Significance of the Responsa

A special importance attaches to responsa as a primary source for knowledge of the history of the Jews in the various countries. Responsa literature has one advantage over such other accepted historical sources as chronographies, official documents, biographies, etc., since the evidence it affords is undesignated, without any specific historical purpose or intention. Moreover, while in general the accepted sources preserve only important events, the responsa echo the humdrum daily life of the ordinary person, his folkways, beliefs, dialects, and, of particular importance, details about the lives of villagers and townsmen whose identity is completely blurred in the usual sources. Since the beginning of modern Jewish historiography the responsa literature has been drawn upon for this purpose. However, it is only during recent decades that monographs have been devoted both to individual collections of responsa which have been analyzed from the standpoint of their contents as books, and from the point of view of the study of a particular subject. Generally speaking, connected with this research is a study of the biography of the author of the responsa, and as a result, the history of the rabbinate has also benefited. The following works are examples: I. Epstein, *The Responsa of Rabbi Solomon ben Adreth of Barcelona... as a Source of the History of Spain* (1925); idem, *The Responsa of Rabbi Simon ben Zemah of Duran as a Source of the History of the Jews of North Africa* (1930); A.M. Hershman, *Rabbi Isaac ben Sheshet Perfet and his Times* (1943); S. Eidelberg, *Jewish Life in Austria in the xvth century as Reflected in the Legal Writings of Rabbi Israel Isserlein and his contemporaries* (1962). This genre of literature is of additional importance for knowledge of the history of the *halakhah*, since in it is reflected the first reactions of the halakhic authorities of the various ages to new scientific inventions and discoveries which have increased considerably during recent centuries. It is no longer possible to recognize this immediate reaction of the *halakhah* in the codes, since the decisions of the respondents underwent many processes of modification and limitation before being summarized in the classical works of the *halakhah*. In this field a great deal of work was done by Isaak Kahane, who wrote many monographs on the development of halakhic (but also historical) topics in the responsa literature throughout the ages. (See also *Ma'aseh*.)

Boaz Cohen's *Kunteres ha-Teshuvot* (1930), an annotated bibliography of the rabbinic responsa of the Middle Ages, which was one of the first attempts to classify and describe the responsa literature, became a standard reference work. There was, however, no list of individual responsa scattered in works devoted to other themes. The publication of Shmuel Glick's *Kuntress ha-Teshuvot he-Ḥadash: Bibliographic Thesaurus of Responsa Literature Published from ca. 1470-2000*, vol. 1: *aleph-lamed* (2005) is a major contribution toward accessing all types of responsa. In addition to the classic corpus of responsa, the work includes rare responsa found in other works focusing on spheres other than responsa. The *Kuntress ha-Teshuvot he-Ḥadash*, which has a bibliographical descrip-

tion of over 2,000 books of responsa, provides, among other features, authors' biographical details, a list of the editions of each work and their pagination, the original annotations of Boaz Cohen, and much updated scholarly information.

In 1963 the Institute for Research in Jewish Law attached to the faculty of law and the Institute of Jewish Studies in the Hebrew University of Jerusalem began to index the responsa literature. The index is made up of three parts: the first part gives in great detail all the legal material (*Hoshen Mishpat* and *Even ha-Ezer*) found in the responsa literature, classified alphabetically according to legal topics in modern scientific terminology; the second part cites all the halakhic sources mentioned in the responsa (from the Bible onward) while the third part gives all the historical material found in the responsa literature, divided according to subjects. Work has started on *rishonim* literature.

In its final form the project was to analyze the whole of the responsa literature according to a systematic legal index, rendering it possible to find any desired topic discussed in the literature.

[Israel Moses Ta-Shma]

From the Beginning of the 16th Century

After the expulsion from Spain, at the end of the 15th century, the exiles found their way to various countries, but chiefly to North Africa, the Balkans, Erez Israel, and Egypt, where they either formed new centers, or new congregations in addition to those already there. As a result new problems arose. There were disputes about different customs, about the powers of the communities, including communal taxation and the apportionment between the original inhabitants and the newcomers, and about suffrage. Problems also arose in commercial matters regarding contracts and business dealings executed in accordance with the conditions obtaining in the locality from which the exiles hailed and their validity in their new localities, as well as in social and cultural relations. All these had to be given practical solutions in accordance with the principles of the *halakhah*.

In Germany changes also took place. In the wake of persecutions and expulsions German Jewry turned eastward, and new Jewish centers came into existence in Poland and Lithuania, where specific problems of a different type arose. The rivalries between communities with regard to settlement and trading, the apportionment of the taxes within the community itself and between the various communities, communal organization, relations between employee and employer in small industry – all of these had to be solved by means of *takkanot*, bans, and rulings, based on the *halakhah*. The communal leaders thereupon addressed themselves to the great contemporary scholars for solutions to these complex problems. There were in addition problems of *issur ve-hetter*, matters pertaining to marriage and divorce, and civil law. As a result a vast literature of responsa relating to different places and different customs was created. This literature, in addition to resolving the problems in accordance with the *halakhah*, serves as a source of knowledge for all aspects of life in these centers, their forma-

tion and their customs, the internal organization of the communities and relationship between them, and social, cultural, economic, and communal and private life.

Outwardly, this responsa literature was a continuation of that of the previous centuries – arranging the facts, clarifying the problem in all its aspects, and finally coming to the appropriate conclusion. Internally, however, changes took place in the content of the responsum. Discussions on matters of faith and belief and on philosophical views decreased, and were replaced by practical problems. There was also an increase in questions on the exposition of talmudic topics and on theoretical problems raised by the commentators, and on contradictions between halakhic rulings. It is from this century that the “responders” are referred to as **aharonim*, and they generally accept as binding the conclusions of the earlier *rishonim*. In matters already discussed by the *rishonim*, the main discussion was whether the data of the *aharonim* accorded with those of the *rishonim*, since only if there was such a correspondence was the conclusion of the *rishonim* binding. As a result of the examination of cases for this purpose, and because of the need to seek new solutions not given by the *rishonim*, the responsa became longer by the addition of novellae and complicated argumentation which could be followed only by a scholar, and they lost much of the simplicity and clarity that characterized the early responsa. The large number of new centers, the great number of problems, the lack of one central authority for Jewry as had formerly existed in Erez Israel and Babylon, the extension of national and international trade, and the closely guarded principle of not resorting “to gentile courts” resulted in a broadening, deepening, and extension of the responsa literature to such huge dimensions that to date it numbers no less than some 250,000 responsa.

The list which follows, though it gives only the most outstanding and the most famous authors of responsa in the various centers from the 16th century, nevertheless numbers some hundreds. In some cases it notes unusual responsa.

The Turn of the 16th Century

COUNTRIES UNDER TURKISH RULE. While the oldest authors of responsa in the 16th century belonged to the previous century, their main responsa activity belongs to the 16th century. Among them are Elijah **Mizrahi* (Re'em), rabbi in Constantinople; Moses b. Isaac **Alashkar*, *dayyan* in Cairo and then in Jerusalem; Jacob b. Moses Berab II (Ri-Berav; 1475–1546) in Safed; **Levi* b. Jacob b. *Ḥabib* in Jerusalem; **David* b. Solomon ibn Abi Zimra (Radbaz) in Egypt; and Joseph **Caro* in Safed.

ITALY. To this generation belong Meir b. Isaac **Katzenellenbogen* (Maharam) of Padua and Isaac Joshua b. Emanuel **Lattes*, a contemporary of Joseph Caro, rabbi of Bologna and Ferrara, whose responsa were published in 1860 in Vienna. The end of the volume (pp. 139–140) gives the text of the authorizations given to two young women in Mantua in 1556 to practice *shehitah*, and states that “Jewish women are accustomed to study the laws of *shehitah*.”

The 16th Century

COUNTRIES UNDER TURKISH RULE, THE BALKANS, AND NORTH AFRICA. There were Moses b. Joseph of **Trani* (the Mabit) in Safed; Joseph b. David ibn **Lev* (Maharival, Mahari b. Lev) in Constantinople (four volumes, 1–3 in Constantinople 1573, and 4 in Venice 1606), who, urged by his patron Gracia **Nasi*, issued a ban against business dealings with the merchants of Ancona as a reaction against the cruelty of Pope Paul IV to the Jews and the burning of the Talmud in 1556 (no. 115); Samuel b. Moses de **Medina* (Maharashdam) in Salonika; **Elijah* b. *Ḥayyim* (Ranaḥ) in Constantinople; Solomon b. Abraham Cohen (Maharshakh), in Salonika; and Moses **Alshekh*, in Safed; **David* b. *Ḥayyim* of Corfu (Redakh); **Benjamin Ze'ev* b. Mattathias of Arta; Simeon b. Zemah **Duran* in Algiers; Isaac b. Samuel **Adarbi* in Salonika; Abraham b. Moses Di **Boton* in Salonika; Baruch b. Solomon Kalai (see **Kalai*, Mordecai; d. 1597) in Turkey; Yom Tov b. Akiva *Zahalon* Maharitaz (see **Zahalon* Family), in Safed; and Aaron b. Joseph **Sasson* in Salonika.

EGYPT. Jacob b. Abraham **Castro* (Maharikash) was important.

ITALY. There were Azriel b. Solomon **Dienna* in Sabbioneta and Menahem Azariah de **Fano* (Rama [רמ"א]), who deals with the question of whether it is permitted to sway while praying (no. 113).

POLAND. The study of Torah in Poland began to flourish with Jacob **Pollack* and **Shalom Shakhna* b. Joseph of Lublin. Their pupils were among the greatest talmudists in Poland and other countries, as well as the greatest responders. Henceforth Poland became an important source of responsa. Responders included Solomon b. Jehiel **Luria* (Maharshal), who in one of his responsa (no. 72) deals with the permissibility of going bareheaded; Moses b. Israel **Isserles* of **Cracow* (Rema), three of whose responsa (5–7) are a dispute with Luria as to whether the study of philosophy, grammar, and Kabbalah are permitted; Meir b. Gedaliah (Maharam) of Lublin (see **Codification of Law*); Benjamin Aaron b. Abraham **Slonik* (Responsa *Masat Binyamin*, Cracow 1633), who was a pupil of the previous two, and among whose responsa are a number by Joshua **Falk*.

The 17th Century

This period was characterized by the spread of Joseph Caro's Shulḥan Arukh with the glosses of Moses Isserles, and their acceptance as authoritative *halakhah*. As a result the responders henceforth relied upon the Shulḥan Arukh, and from this point of view were neither original nor independent in their responsa except on topics not mentioned in the Shulḥan Arukh.

GERMANY (INCLUDING BOHEMIA AND MORAVIA) AND POLAND. Among the outstanding responders of this generation were Joel **Sirkes* (Baḥ); Menahem Mendel **Krochmal*, rabbi of Holesov and Mikulov, who in one of his responsa banned the purchase of fish for some months to counter the

excessive prices charged by the fishmonger (no. 28); Aaron Samuel b. Israel *Koidonover, rabbi of Brest-Litovsk and Frankfurt; Jacob b. Aaron *Sasportas of Amsterdam and Hamburg; Zevi Hirsch b. Jacob *Ashkenazi (the Ḥakham Zevi); Jacob b. Joseph *Reischer of Prague and Metz; Ezekiel b. Abraham Katzenellenbogen (1668?–1749; see *Katzenellenbogen Family) of Koidanov (Dzerzhinsk) and the joint communities of Altona, Hamburg, and Wandsbeck and author of the responsa *Keneset Yehezkiel* (Altona, 1733); and Jonah b. Elijah *Landsfer of Prague.

ITALY. There were Issachar Baer b. Israel Leiser Parnas Eilenburg of Gorizia; Leone (Judah Aryeh) *Modena; Moses b. Mordecai *Zacuto of Venice and Mantua; and Samuel b. Abraham *Aboab of Verona and Venice.

EREZ ISRAEL, THE BALKANS, AND NORTH AFRICA. Responders included Jehiel b. Ḥayyim Basan (1550–1625), author of the responsa *Mahari Basan* (Constantinople, 1737); Jacob b. Israel ha-Levi of Salonika and Xanthe; Joseph b. Moses *Trani (Maharit), Moses b. Nissim Benveniste, and Abraham b. Solomon *Alegre – all in Constantinople; Jacob b. Ḥayyim *Alfandari; Joseph b. Saul *Escapa (responsa *Ri Escapa*, Frankfurt on the Oder, 1709), Ḥayyim b. Israel *Benveniste, and Aaron b. Isaac *Lapapa – all in Smyrna; Jacob (Israel) b. Samuel *Ḥagiz, Moses b. Solomon ibn *Ḥabib, and Abraham b. David *Yizḥaki, Rishon le-Zion and author of the *Zera Avraham* (Pt. 1, Constantinople, 1732; Pt. 2, Smyrna, 1733) – all in Jerusalem.

EGYPT. There were, all in Cairo, *Mordecai b. Judah ha-Levi; *Abraham b. Mordecai ha-Levi; and Joseph b. Moses ha-Levi Nazir (see Moses ha-Levi *Nazir), author of responsa *Matteh Yosef* (Pt. 1, Constantinople, 1717; Pt. 2, 1726).

SALONIKA. There were Ḥayyim *Shabbetai (the MaHaRḤaSH), who wrote responsa on *Even ha-Ezer* with a *Kunteres Agunot* (Salonika, 1651) and also responsa *Torat Ḥayyim* on the other three parts of the Shulḥan Arukh (*ibid.*, 1713–22); Daniel *Estrosa; Solomon b. Aaron Ḥason (1605–1667), called “the younger” to distinguish him from his grandfather of the same name), who was author of the responsa *Beit Shelomo* (Salonika, 1720), and some of whose responsa were published in the collection *Mishpatim Yesharim* (*ibid.*, 1732) together with those of *Samuel b. Ali Gaon; Shabbetai Jonah (*Shaila-Mora*, Salonika, 1653); Baruch *Angel; Aaron b. Ḥayyim Abraham ha-Kohen *Perahyah; Ḥasda b. Samuel ha-Kohen *Perahyah; Elijah b. Judah Covo (d. 1689; see *Covo Family); Ḥayyim b. Benjamin *Asael; Solomon b. Joseph *Amarillo; and Joseph b. Shemaiah Covo (c. 1660–1721; see *Covo Family).

The 18th Century

GERMANY (INCLUDING BOHEMIA AND MORAVIA). Among the responders were Meir b. Isaac *Eisenstadt; Jacob b. Zevi *Emden; Joseph b. Menahem *Steinhardt of Alsace and *Fuerth; Ezekiel b. Judah *Landau in Prague; and Israel b. Eliezer *Lipschuetz of Cleves.

ITALY. There were Samson b. Joshua Moses *Morpurgo of Ancona; Raphael *Meldola of Pisa and Leghorn; David b. Jacob *Pardo of Spoleto; and Isaiah ben Israel Hezekiah Bassano (see *Bassano Family) in Reggio Emilia.

EREZ ISRAEL. Responders were Ḥayyim Joseph David *Azulai (the Ḥida), who included the writing of responsa in his manifold literary activities; Moses b. Jacob *Ḥagiz; Jonah b. Ḥanun *Navon; Moses Israel and his son Elijah *Mizraḥi (d. 1749), Rishon le-Zion and author of the responsa *Admat Kodesh* (Pt. 1, Constantinople, 1742; Pt. 2, Salonika, 1758) – all in Jerusalem; and Ḥayyim *Modai of Safed and Smyrna.

NORTH AFRICA, TURKEY, AND THE BALKANS. Responders included Yom Tov *Algazi; Judah b. Isaac *Ayash of Algiers, Leghorn, and Jerusalem; Ephraim b. Aaron *Navon of Constantinople; Zedekiah b. Saadiah Huzin of Baghdad, author of the responsa *Zedakah u-Mishpat* (Pt. 1, Jerusalem, 1926); Isaac Bekhor David (1690–1755) of Constantinople, and Isaac b. Judah ha-Kohen *Rappaport of Jerusalem and Smyrna. In Salonika there were Asher b. Emanuel Shalem (turn of the 17th and 18th centuries), author of the *Matteh Asher* (Salonika, 1748); Moses b. Solomon Amarillo (see Solomon b. Joseph *Amarillo; beginning of the 18th century); *Joseph David; and Joseph Raphael b. Ḥayyim *Ḥazzan, in Smyrna, Hebron, and Jerusalem.

YEMEN. Yahya b. Joseph Zalah (second half of 18th and first half of 19th century), rabbi and *av bet din* in Sanʿa wrote responsa *Peʿullat Zaddik* (Tel Aviv, 1946) dealing with problems of the Jews in Yemen such as: whether a leper could act as communal *shoḥet* (no. 71); and whether those going from one town to another on the Sabbath for prayer or for other religious duties or for a festivity, were permitted to carry walking sticks (no. 123). David b. Shalom *Mizraḥi (Misraki; c. 1696–1771) and his son Yahya (1734–1809) in Sanʿa wrote responsa *Revid ha-Zahav* (Tel Aviv, 1955), on the Shulḥan Arukh (*Orah Ḥayyim* and *Yoreh Deʿah*) reflecting the customs of the Jews of Yemen.

The 19th Century

The new age ushered in by the 19th century, the era of *Emanicipation effected by the French Revolution and the advances made in every sphere of life, brought with it a change in responsa literature. A distinction must be made between the literature created in Europe, the focal point of the upheaval, and that created in Turkey and the Balkans. In the latter countries, where autonomous Jewish jurisdiction continued to exist, no change in the responsa literature is noticeable. A substantial part of the responsa is devoted to the *Hoshen Mishpat* section of the Shulḥan Arukh, which deals with civil law and financial matters. In Europe it was otherwise; here the responsa literature bore the marks of the Berlin *Haskalah trend, the emancipation in Germany and Austria (including Galicia, Hungary, and parts of Poland under German or Austrian rule), the *Reform movement, the national movements, and the discoveries of technology. All are reflected in the responsa of this century.

Especially recognizable in the second half of this century is the influence of emancipation, which brought about the abolition of the judicial autonomy of the Jews and deprived rabbinic courts of the legal powers they had previously possessed. As a result, applications to Jewish courts on monetary matters declined, and the responsa on topics belonging to *Hoshen Mishpat* decreased. Such responsa as do occur on these topics are due to the fact that some Jews still preferred to bring their financial disputes to the rabbinical courts, although a number of responsa deal with hypothetical problems in this branch of Jewish law, as in other sections. On the other hand there was an increase in responsa on problems arising from the discoveries of technology and from the Reform and national movements, a number of which will be indicated.

POLAND AND LITHUANIA (UNDER RUSSIA). There were Menahem Mendel *Schneersohn of Lubavich; Isaac Elhanan *Spektor of Kovno; Naphtali Zevi Judah *Berlin of Volozhin; and Samuel *Mohilewer in Bialystok.

GERMANY (INCLUDING MORAVIA, HUNGARY, AND GALICIA). There were Eleazer b. David *Fleckeles of Prague; Mordecai b. Abraham *Banet of Nikolsburg; and Akiva b. Moses Guens *Eger of Posen. Moses *Sofer of Pressburg wrote responsa which reflect the spirit of the time and the changes that had occurred in German Jewry, including discussions on the permissibility of an organ in the synagogue (ḤM 192); whether one may sell one's body to assist the study of medicine (YD 326); Jews in a non-Jewish army (Pt. 6, no. 29); whether a rabbi who preaches heresy should be removed from office (ḤM 162, 207); the opening of one's business on the Sabbath (OH 195); and on prayer in the vernacular (ḤM 192, 193). There were also Ephraim Zalman *Margolioth of Brody; Judah b. Israel *Aszod of Semnitz and Sordihel, author of the responsa *Yehudah Ya'aleh* (Pt. 1, Lemberg, 1873, and Pt. 2, Pressburg, 1880); Jacob Meshullam b. Mordecai Ze'ev *Ornstein, rabbi in Zolkiew and Lemberg, author of responsa *Yeshu'ot Ya'akov* (Piotrkow, 1906); Solomon *Kluger of Brody; Ḥayyim Halberstamm (1793–1876) of Zans; Joseph Saul *Nathanson of Lemberg; Isaac Meir b. Israel Alter (1789–1866) of Gur (see *Gora Kalwaria); Zevi Hirsch *Chajes in Kalisz; Abraham Samuel Sofer (see Moses *Sofer) in Pressburg; Israel (Azriel) *Hildesheimer in Berlin; Isaac *Schmelkes of Berezhany and Lemberg, whose responsa discuss whether a telegram may be given to a gentile for dispatch on the Sabbath if it has been written out before the Sabbath (OH 57) and whether electric lamps may be used for the Ḥanukkah lights (YD 120); Samuel *Ehrenfeld; Abraham Bornstein (1839–1910) of *Sochaczew, author of the responsa *Avnei Nezer* on the Shulḥan Arukh (OH in 2 pts., Piotrkow, 1912; YD, Pt. 1, Warsaw, 1913, Pt. 2, Warsaw, 1914; EH, Lodz, 1926); Isaac Jacob *Reines of Lida; David Zevi *Hoffmann of Berlin; Mordecai Horowitz (1844–1910) of Frankfurt; Jacob David *Willowski (the Ridbaz), rabbi in Russia, Chicago, and Safed and author of the responsa *Ha-Ridbaz* (Vilna, 1881); Shalom Mordecai Schwadron in Berezhany; and Samuel b. Ze'ev Wolf Engel (1853–1935), rabbi of *Radomysl and *Kosice, and au-

thor of the responsa *Maharash Engel* in eight parts, published in various places between 1905 and 1957.

TURKEY, THE BALKANS, AND EREZ ISRAEL. Responders included Ḥayyim *Palache of Smyrna; Raphael Jacob b. Abraham Manasseh (1762–1832), author of the responsa *Be'er Mayim* (Salonika, 1736); Raphael Asher b. Jacob *Covo of Salonika; Ḥayyim *Benveniste of Salonika; Samuel Raphael Arditi, author of the responsa *Divrei Shemu'el* (Salonika, 1891); Ḥayyim David b. Joseph Raphael *Ḥazzan (Hazan), of Smyrna and Jerusalem; Aaron Azriel (1819–1879) of Jerusalem, author of the responsa *Kappei Aharon* (Pts. 1 and 2, Jerusalem 1874); Jacob Saul *Elyashar of Jerusalem; Elijah *Ḥazzan of Jerusalem; Abraham b. Mordecai *Ankawa in Morocco, Tunis, and Algiers; Isaac b. Samuel Abendanan (1836–1900) of Fez (see *Abendanan Family), author of the responsa *YizhakRei'ah* (Leghorn, 1902); Moses Judah Leib b. Benjamin Auerbach (1794–1865) of Lask, Kutno, and Jerusalem, and author of the responsa *Zayit Ra'anani* (Pts. 1 and 2, Warsaw, 1851 and 1869), who was the first Ashkenazi rabbi in Jerusalem whose responsa were published; Moses Joshua Judah *Diskin of Jerusalem; and Raphael b. Mordecai *Ankawa of Salé Morocco.

The 20th Century

The two world wars during the first half of the century brought about profound changes in the world generally and in the map of Jewish centers in particular. Old centers were impoverished, weakened, and even completely destroyed. New centers were created by immigration. Migration had already begun to the United States before World War I and increased as a result of the two wars. Many communities were established in New York and in the provincial towns. Yeshivot that had been uprooted from Poland and Lithuania were founded with outstanding talmudists to head them. Orthodox Jewry sank strong roots. A natural result of this migration was the blossoming for the first time in the New World of creativity in Torah study, and responsa literature. Between the two wars Torah activity had reached a peak in Poland, Lithuania, Hungary, and Czechoslovakia. As a result of the Nazis' rise to power in Germany and of the Holocaust, the centers of Jewry there almost completely disappeared, except in individual countries like Belgium and England. The survivors from Europe found refuge in the State of Israel, as well as in the United States. Both centers now produced responsa literature, mainly in Israel, but some in the United States. Many responsa naturally deal with the new problems which arose as a result of the Holocaust and in the extermination camps. The establishment of the State of Israel with legal recognition of rabbinical law in all matters affecting matrimonial laws and laws of personal status; the problems arising from agriculture, Sabbath and festival rest in the state, work in factories, problems of modern technology, the law of return for Jews, the immigration of intermarried couples, and the desire to base the law of the state on foundations of Jewish law – all these have given rise to halakhic problems that have found expression in the ramified responsa literature created during the last decades. To summa-

rize the rich harvest of responsa literature in the last 70 years, it must therefore be divided into two periods: until the 1930s, i.e., when Europe was still the spiritual center of world Jewry; and after the Holocaust, when it passed to Israel.

EASTERN EUROPE. Responders include David Dov b. Aryeh Jacob *Meisels (the Radad) of Lask, author of responsa on the *Even ha-Ezer* (Piotrkow, 1903) and on the *Orah Hayyim* (*ibid.*, 1905); Aryeh Judah Jacob b. David Dov Meisels, rabbi of Lask, author of *Ḥedvat Yaakov* (Piotrkow, 1919); Zevi David Shapira of Dynow, rabbi and Ḥasidic rabbi in Javornik, author of the *Zevi la-Zaddik* (Bilgoraj, 1936); Abraham Menahem b. Meir ha-Levi Steinberg (1847–1928), of Sniatyn and Brody, and author of the *Maḥazeh Avraham* (Pt. 1, Brody 1927, on *Orah Hayyim*; Pt. 2, New York, 1964), on the four parts of the Shulḥan Arukh; Aryeh Leib *Horowitz of Stanislav; Meir b. Aaron Judah Arik (1855–1926) of Jaslowice, Buchach and Tarnow, the author of the *Imrei Yosher* (Pt. 1, Munkacz, 1913, and Pt. 2, Cracow, 1925); Ḥayyim Ozer *Grodzinski of Vilna; Joseph *Rozin (Rosen), the “Rogachower” of Dvinsk (Daugavpils), who in his responsa *Zafanat Pa’ne’ah* discusses a marriage entered into for the sole purpose of obtaining a legal marriage certificate (Pt. 1, no. 5), a synagogue that would be permitted to exist only if the children went to the Tarbut school where bare-headed boys and girls studied together (Pt. 2, no. 15), and whether photographed scrolls of the Torah are sacred (Pt. 2, no. 26); Judah Leib *Zirelson (1859–1941) of Kishinev, who rules that a synagogue reader may not be removed because his daughter has converted from Judaism (*Azei ha-Levanon*, no. 1); Ḥayyim Ze’ev Eleazar Shapiro of Munkacz; Dov Berish b. Jacob Weidenfeld (1881–1965) of Trzebin, author of *Dovev Meisharim* (Pt. 1, Trebin, 1937; reprinted with Pt. 2, Jerusalem, 1958); Judah Meir b. Jacob Samson Shapiro (1886–1934) of Lublin, author of *Or ha-Me’ir* (Piotrkow, 1926); Jehiel Jacob *Weinberg in Pilwiczki and Berlin, whose responsa dealing with new problems include the permissibility of the stunning of animals before *sheḥitah* (Pt. 1, nos. 1–16), the permissibility of hastening the death of the animal after *sheḥitah* (pt. 1), changing from the Ashkenazi to the Sephardi pronunciation (Pt. 2, no. 5), whether a non-Orthodox rabbi may be permitted to lecture in an Orthodox synagogue (no. 13), women’s suffrage (52), whether fire-proof glass (pyrex) may be used for both meat and milk dishes (76), lecturing on talmudic topics in a gentile college (92), the law with regard to a convert to Judaism who cannot be circumcised because of the condition of his heart (102), transplanting of a cornea from a dead person (129), and whether the bat mitzvah ceremony may be permitted for girls; and Jacob Avigdor (1896–1968) of Drogobych, Borislav, and Mexico, author of *Abbir Yaakov* (Piotrkow, 1934).

WESTERN EUROPE. After the Holocaust other Jewish centers were again organized in Europe and in some were great talmudists who replied to problems addressed to them by the rabbis of the Diaspora. In Belgium there was Moses Jonah Zweig (1910–1963), previously rabbi of Ataki (in Bessarabia) and then

of Antwerp and author of *Ohel Moshe* (in 2 pts., Jerusalem, 1949 and 1960). In Switzerland there was Mordecai Jacob Breisch (1896–?) of Zurich, author of *Helkat Yaakov* (Pt. 1, Jerusalem, 1951; Pt. 2, London, 1959). Among the subjects dealt with are whether a soldier may take leave for the New Year to hear the *shofar*, when it would entail his returning to his unit on the Sabbath (no. 37); whether an animal may be rendered unconscious with a narcotic before slaughter (no. 105); whether Jewish women studying nutrition in state schools may cook forbidden foods (no. 86); and artificial insemination (no. 24).

ENGLAND. Isaac Jacob b. Joseph Judah Weiss of Manchester and later of Jerusalem (1902ff.) wrote *Minḥat Yizḥak* (Pt. 1, London, 1955, Pt. 2, 1958).

EREZ ISRAEL. Abraham Isaac *Kook’s *Mishpat Kohen* (1937) deals chiefly with problems connected with Erez Israel – hybridization of grapefruit and oranges (25), the giving of “first fruits” in the present day (57), and the sanctity of the Temple site (96); in *Da’at Kohen* (1912), he discusses whether spiritualism is forbidden (69). Israel Ze’ev Mintzberg (1872–1962), *av bet din* of the “Adat Ḥasidim” in Jerusalem, wrote *She’erit Yisrael* (Jerusalem, 1963). He discusses: the possibility of re-establishing a Sanhedrin (ḤM nos. 1 and 3), women’s suffrage (no. 2), whether olives growing on the land of Arabs who have fled the country have to be tithed (YD no. 63), and the use on the Sabbath of electricity operated by Jews (OH no. 20). Zevi Pesah *Frank, chief rabbi of Jerusalem, was one of the greatest *posekim* of his day. Both the chief rabbis Ben Zion Meir Ḥai *Ouziel (Responsa *Mishpetei Uziel*) and Isaac ha-Levi *Herzog deal with the permissibility of autopsies. Rabbi Herzog’s responsa particularly reveal the manifold problems which had arisen as a result of the Holocaust and the establishment of the state, and two volumes of his responsa *Heikhal Yizḥak* have been published. Others are Meshullam *Rath; Ovadosh Hadaya (1891–1969), *dayyan* in Jerusalem and author of *Yaskil Avdi* (in six parts, Jerusalem, 1931, 1935, 1939, 1948, 1958, 1959), in all the volumes of which there are kabbalistic responsa appended, entitled *De’ah ve-Haskel*, and which discuss whether one may listen to a woman’s voice on the radio (Pt. 5, no. 2), whether a synagogue reader may wear canonicals (no. 15), and the use of a microphone in the synagogue on Sabbaths and festivals (Pt. 6, no. 16); Eliezer Judah b. Jacob Gedaliah Waldenberg (1917–), rabbi and *dayyan* in Jerusalem and the author of *Ziz Eli’ezer* in 22 volumes (Jerusalem 1945–1998), who discusses departure by airplane on the Sabbath (Pt. 1, no. 21), the use of hearing aids for the deaf on the Sabbath (Pt. 6, no. 6), whether reparation payments from Germany have to be tithed (no. 27), the population census (Pt. 7, no. 3), the use of water from sunheated boilers on the Sabbath (no. 19), the transplanting of another woman’s womb into a childless woman (no. 48), the duty of immigration and settlement in sovereign Erez Israel (no. 12), heart transplants (Pt. 10, no. 25), whether a coffin containing soap made from the bodies of Jews may be reinterred (Pt. 8, no. 35), whether a limb may be donated for transplantation into a sick person (Pt. 9, no. 15), the laws

of war (pt. 3, no. 9), shipping (Pt. 4, no. 5), and the right to strike (Pt. 2, no. 23); Ovadiah *Yosef, chief rabbi of Tel Aviv-Jaffa, who discusses inter alia the use of the telephone and refrigerators on the Sabbath; Joshua Menahem b. Isaac Aryeh Ehrenberg, head of the Tel Aviv *bet din* and author of *Devar Yehoshua* (Pt. 1, Jerusalem, 1970), who discusses whether the victims of mass murders by the Nazis may be exhumed and reburied in a proper cemetery (no. 25). Others are Mordecai Fogelman (b. 1899), rabbi in Kiryat Motzkin, who in his responsa *Beit Mordekhai* (Jerusalem, 1971) deals with problems that arose in Erez Israel after the Six-Day War: e.g., whether the blessing (“*She-Heḥeyanu*”) should be recited when visiting the Western Wall (no. 23); and whether immigrants arriving after the Six-Day War were obliged to recite the blessing for the Land of Israel (no. 28). Ḥayyim David Halevi (b. 1929), rabbi of Rishon le-Zion, wrote responsa *Mekor Ḥayyim*, 1 (Tel Aviv, 1967), 2 (*ibid.*, 1968), 3 (*ibid.*, 1970), as well as *Bein Yisrael la-Amim* (*ibid.*, 1968) on the subject of religion and state, and also dealing with topics relating to the post-Six-Day War era; whether on seeing the Temple Mount after its liberation one must rend his garment (vol. 2, no. 95); when tourists visiting Israel are obliged to recite the blessing on the establishment of the state (*ibid.*); whether there is an obligation to make the pilgrimage on the three pilgrim festivals despite the fact that the temple has not been rebuilt (*ibid.*); *halakhot* on the questions of national security, such as military training and self-defense (vol. 2, no. 99); whether it is permitted to travel on the Sabbath in a ship with a Jewish crew (vol. 2, no. 172); the laws of warfare on the Sabbath (no. 173); automatic lifts, trains, underground trains, and allowing a radar receiver to remain in operation during the Sabbath (no. 174).

In all post-World War II works of responsa, many queries are found that arose among observant Jews, despite the inhuman and unbearable conditions which they suffered in the ghettos and concentration camps. Indeed there are complete works written by rabbis who themselves suffered in the concentration camps and were eyewitnesses to all that transpired. After their liberation they noted down the halakhic problems that had arisen or questions asked by prisoners, and reported the halakhic solutions they found for all these problems. To this category of responsa belongs *Me-Emek ha-Bakha* (Jerusalem, 1948) and *Mi-Gei ha-Haregah* (*ibid.*, 1961) of Simeon b. Yekutiel Ephrati, rabbi of Bendery (Bessarabia), and of Warsaw after the Holocaust, and later head of the *kashrut* department of the Israel chief rabbinate. Among the problems dealt with in the latter work are whether it was murder when the mouth of a child was closed while in a bunker to prevent the Nazis hearing it crying, and the child died (no. 1); whether the ashes of those burnt by the Nazis may be put on show (no. 9); and the status of sites where Jews killed by the Nazis were buried in a common grave (no. 11).

United States

Among the authors of responsa in the United States may be mentioned Moses *Feinstein of New York; a survivor of the

concentration camps, Ephraim Oshry (1914–2003) in his *Mi-Ma'amakim* (New York, 1959) also deals with the problems of the Holocaust. He discusses the case of the Nazis forcing a Jew to tear and desecrate a scroll of the law (no. 1); whether garments stripped from the murdered martyrs may be used (3); whether one forced to cook on the Sabbath by Nazis may himself eat of the food because of danger to life (5); whether a Jew might read a page of Talmud to a Nazi who wished to ascertain its contents (14); whether a Jew may save his life by purchasing a certificate of conversion (15); the prohibition of leaven on Passover in the ghetto (18); the directive of the Nazis that any woman found to be pregnant should be killed with her fetus (18); and whether in view of this the inducing of abortion is permitted (20); and the case of a woman taken to a brothel and on whose arm was engraved: “a harlot for Hitler’s troops” (27).

Recourse to rabbinic responsa is not confined to observant Jews. Reform Jews in the United States have recently developed a responsa literature, as evidenced by the eight volumes of responsa (1960–90), published in English by S.B. *Freehof.

Of the considerable number of volumes of responsa published from the late 1960s through the early 1970s, mostly in Israel, the majority are new editions of responsa which were out of print. Of those published for the first time the following may be mentioned:

She'orit Simḥah (Jerusalem, 1969) by S. Bamberger, rabbi of Stuttgart, which includes the responsa of his father, Rabbi Seckel Isaac of Kissingen.

Be-Ein Ḥazon (Jerusalem, 1969), anonymous, deals with topical halakhic problems. Appended is an exchange of correspondence between Rabbis E. *Wasserman and A. *Karelitz, the author of *Ḥazon Ish*, on a number of these topics. Responsa 1–4 discuss participation in elections to the Knesset: No. 5, participation in elections to urban and local councils; No. 8, the status and authority of the Council of Torah Scholars (Mo'ezet Gedolei ha-Torah) according to the *halakhah*; No. 9, whether visiting the Western Wall is a religious obligation and whether the day of the liberation of Jerusalem is to be regarded as a day of religious thanksgiving.

Az Nidberu Pt. II (Bene-Berak, 1970) by R. Benjamin Joshua Silver discusses *inter alia* the carrying of arms on the Sabbath (no. 44) and the permissibility of purchasing goods manufactured in Germany (77).

Responsa Shevet ha-Levi (Tel Aviv, 1970) by S. Wozner deals *inter alia* with medical injections (no. 61) and the use of a loudspeaker on the Sabbath (66).

Responsa ha-Rabakh (Jerusalem, 1970) by R. Benjamin ha-Kohen of Reggio, edited by former Chief Rabbi Isaac *Nissim.

Part 4 of *Mekor Ḥayyim* (1972) by R. Ḥaim David Halevi, Sephardi chief rabbi of Rishon le-Zion.

Hitherto responsa collections have been those of individual rabbis, but the present century, and particularly recent years, have witnessed a new departure in responsa literature;

the appearance of periodicals devoted exclusively or largely to the clarification of practical and topical halakhic problems, with special stress on the solution of problems arising from new circumstances. The oldest of these, *Ha-Pardes*, a monthly, was founded in Poland in 1913, moved to Chicago in 1925, and is at present published in New York. The editorial policy of the non-halakhic section reflects the extreme right-wing Orthodox attitude, which can be seen in the halakhic sections as well. Among the topics dealt with are the use of the loud-speaker on the Sabbath (Vol. 5), civil marriages (12), adoption of children (1946. 3), and whether it is permitted to pray in the Cave of Machpelah since it is now a mosque (1968. 1).

Ha-Torah ve-ha-Medinah (1949–) is, as its title suggests, devoted particularly to the clarification of halakhic problems in the State of Israel and particularly those arising from its establishment. Thus, among the topics discussed in Volume 1 are the right of extending clemency to those sentenced by the courts of Israel, the authority of the president and the institutions of elected government: the legal status of spoils of war. Vol. 4 (1952) discusses the rights of women according to the *halakhah* and enlistment of women in the armed forces: Vol. 5–6, security measures in the state on the Sabbath and festivals; Vol. 7–8, the powers of municipal authorities according to the *halakhah* (63); Vol. 11–13 (1960–2), the religious duty of *aliyah* (immigration to Israel) and the prohibition against leaving Israel; the liability of rabbis to taxation.

Or *ha-Mizrah* (1959–), issued by the Mizrahi of the United States, is more or less a Diaspora equivalent of *Ha-Torah ve-ha-Medinah*. Among the problems dealt with are: Vol. 1 (1959), No. 3–4, p. 42 – war in the light of the Torah; Vol. 2, No. 11, p. 3 – traveling on a ship on the Sabbath that is manned by Jews; Vol. 3, No. 3–4, p. 4 – use of a corpse for plastic surgery; Vol. 4, No. 2, p. 13 – the halakhic status of Gaza and Sinai; No. 3–4, p. 35 – the determination of paternity; Vol. 5, No. 2, p. 17 – the Karaites; Vol. 6, No. 1, p. 3 – the halakhic definition of a Jew; Vol. 9, No. 3–4, p. 38 – whether one may buy a house in Israel from a gentile on the Sabbath; Vol. 10, No. 3–4, p. 23 – transporting immigrants on the Sabbath; Vol. 16, No. 2, p. 92 – relations between employee and employer; Vol. 17, No. 3, p. 105 – the right to cede areas of Erez Israel liberated in the Six-Day War; Vol. 18, No. 4, p. 251 – *halakhah* appertaining to these areas.

Unlike the above two works, which appear under the aegis of a public body, the Mizrahi-Ha-Poel ha-Mizrahi, *No'am* (1959–), “a platform for the clarification of halakhic problems,” is a venture of the Torah Shelemah Institute of Jerusalem, and its scope is much wider. Among the practical problems dealt with are the use of the birth control pill (11. 167), heart transplants (13. 1), the transplanting of kidneys and artificial kidneys (14. 308), artificial insemination (29), and even whether the laws of the Torah are applicable to the Jew on the moon (13. 196).

Ha-Darom (1957–), published by the Rabbinical Council of America, discusses such problems as whether a *hazzan* from Israel may officiate on the Second Day of the Festival

in the Diaspora (24 (1967) p. 105), whether a blessing is to be recited on seeing the president (No. 25, p. 42), aborting the fetus to save the mother's life (28 (1969) p. 31), the determination of death according to the *halakhah* (32 (1971) p. 48), the *mamzer* (34 (1972) p. 27), and the freezing of prices (34 (1972) p. 106).

Among the topics dealt with in *Talpioth* (1959), a quarterly devoted to *halakhah*, *aggadah*, and ethics, edited by S.K. *Mirsky of Yeshiva University, are levirate marriage in modern times (No. 1, p. 151); whether visiting Israel is a religious duty (No. 2, p. 24); the halakhic status of Transjordan (p. 56); the obligation of those engaged in Torah study to serve in the army (No. 4, p. 720); the proposed regulations for inheritance by daughters put forward by Chief Rabbi *Herzog (No. 9, p. 11); the right of a person over his body with regard to autopsies (p. 79).

To a different category belongs a series of halakhic discussions on actual cases published as brochures by the Beth Din of London. Among the topics dealt with are: presumption of death of a man to enable his wife to remarry (*agunah*) (No. 1, 1956); the removal of the cornea from a corpse for transplanting (No. 5, 1957); the case of a *mamzer* (No. 17, 1967). They resemble to some extent the publications of the rabbinical courts of Israel (OPD) but differ from them in that they are anonymous and selective.

[Shlomo Tal]

The Publishing of Responsa Texts

Among the ongoing publications of historical or present-day responsa, the following deserve special mention.

Many of the contemporary texts published pre-1970 have become multivolume series. The *Yabbia Omer* by Rabbi Ovadiah *Yosef has now reached 10 volumes. In addition, material from his novel innovation, the *Pinnat ha-Halakhah* (“The *Halakhah* Column”), which was broadcast weekly over the Israeli radio network, wherein Rabbi Yosef responded to questions put to him by listeners by mail, has been edited and published under the *Yeḥaveh Da'at* (Vol. 1, 1977; Vol. 2, 1979; Vol. 3, 1980).

Rabbi Haim David *Halevi, Sephardi Chief Rabbi of Tel Aviv, has published *Aseh Lekha Rav* (“Acquire a Rabbi,” 3 volumes, 1976–80), similarly based in part upon his participation in the radio program of the same name, wherein listeners telephoned to the studio with their questions. Rabbi Isaac *Weiss, who headed the *Bet Din* of the Edah Haredit of Jerusalem, expanded his *Minḥat Yizḥak* responsa into a seven-volume set; Rabbi Eliezer Waldenberg's *Ziz Eliezer* reached 22 volumes, while the posthumously published *Har Zevi* of Rabbi Zevi Pesah *Frank consists of three volumes (one on *Yoreh De'ah* and two on *Orah Hayyim*), and the *Igrot Mosheh* of Rabbi Moses *Feinstein of New York reached its eighth volume.

These texts have become an essential basis of contemporary *halakhah* and this activity is ongoing.

MAKHON YERUSHALAYIM. Makhon Yerushalayim (“The Jerusalem Institute of Talmudic Research”) was founded in

1968 by Rabbi Joseph Buxbaum. It inaugurated a series of programs centered around the responsa literature.

Ashkenazi works. In addition to ongoing publishing activities, the *Mifal Hakhmei Ashkenaz* (“The Writings of the Jewish Sages of Medieval Germany”) program has devoted itself to publishing from manuscript, early editions, and sources, the responsa and *minhag* literature of the rabbis of Germany from the middle of the 14th until the 16th century. Prior to the inception of this program, only five responsa texts from this period had been published, and even they were defective and corrupt.

Sephardi works. The *Mifal Or Hamizrah* (“The Writings of the Great Sephardi Rabbis”) program was founded by Rabbi Ovadiah Yosef in 1976 to publish the manuscripts of Sephardi rabbis (primarily responsa) dating from the expulsion from Spain until the 19th century.

The institute also publishes responsa texts from manuscripts not included in the above programs.

RABBINIC COURT DECISIONS. The responsa literature is primarily composed of expert halakhic opinions and decisions of the *battei din* (“rabbinic courts”). The present-day Israeli counterpart of this latter feature is the collection of *Piskei Din Rabbaniyyim* (“Rabbinic Court Decisions”), edited by Rabbi Dov Katz (Vol. 1, 1954; 11 volumes to date). Since Rabbinic courts in Israel have jurisdiction in Family Law, most of the material belongs to this subject.

The Beth Din of London has also issued several important decisions in pamphlet form.

Literary Projects Based upon Responsa

Many literary projects and research institutes make extensive use of responsa for various purposes. The following is a partial listing according to fields of interest.

RABBINICS. Among the literary programs making extensive use of the responsa for rabbinic and talmudic studies, the *Talmudic Encyclopedia* (founded in Jerusalem, 1947) has reached volume 26, up to the letter *yod*. The encyclopedia contains entries covering halakhic topics, from the Bible through the talmudic literature and its commentaries, to the early and later codes, and the relevant responsa sources. It is also available on CD.

Ozar Ha-Posekim, also founded in Jerusalem in 1947, aims at producing a “digest of all extant Rabbinic Responsa bearing upon Jewish Law and ritual, arranged in the order of the Shulḥan Arukh.” It concentrates in particular on the *Even ha-Ezer* section of the Shulḥan Arukh which deals with Family Law – due to the urgency of resolving problems in this sphere created in the wake of the Holocaust, the Ingathering of the Exiles into the Land of Israel, and the jurisdiction given to the rabbinic court in Israel in the realm of Family Law – and 19 volumes have been published to date. It is available on CD-Halachic Responsa Treasury; texts are only in Hebrew.

Kovez ha-Posekim uses the format of *Ozar ha-Posekim* but is centered on the *Hoshen Mishpat* section dealing with

Civil Law. The first volume appeared in Brooklyn, New York in 1969, and a total of three have appeared to date. This is the only literary project of its kind produced outside Israel.

Ozar Mefarshei ha-Talmud (“A Compendium of Talmudic Commentaries”), the first volume of which was published in 1971, is published by Makhon Yerushalayim and five have appeared to date. The commentaries to the Talmud include materials drawn from the responsa.

The new Shabse Frankel edition of the *Mishneh Torah* of the Rambam (Vol. 1, 1975; Vol. 2, 1977) also contains a citation index including references to the responsa literature. Text variants of the *Mishneh Torah* also make use of responsa sources.

The Institute for Science and Halakhah (Jerusalem) has dealt with technological problems relating to *halakhah* in general, with special emphasis on Sabbath and Festivals, in particular those arising in industry and the public services. A team of engineers worked together with rabbinical experts in providing solutions for various problems. A card catalogue of responsa relevant to the various topics has been prepared, and two bibliographical surveys of relevant responsa grouped by topics, *Electricity and the Shabbath* (1975) and *Electricity in Halakhah* (Part 1, 1978) have been published, among other halakhic works.

ACADEMIC. The Israel Matz Institute for Research in Jewish Law at the Hebrew University School of Law, Jerusalem, has prepared a historical and legal card catalogue of the responsa of *Gedolei Sefarad* during the time of the **Rishonim* (11th–15th centuries, Spain and North Africa).

The Institute for Research in Oriental Jewry at Bar-Ilan University, Ramat Gan, Israel has inaugurated a series of programs based upon the responsa of Oriental rabbis, used as the basis for historical, sociological, and economic studies. A number of indices have been produced for various texts, plus a citation index for the place-names found in Ottoman Empire responsa collections, together with a map.

These programs all reflect the interest in applying halakhic materials to present-day real life situations, or for research into the history of Jewish communities.

Computerization of Responsa Literature

The Global Jewish Database (The Responsa Project) at Bar-Ilan University is the largest database of its kind. This database includes the full text of the Bible and its principal commentaries, the Babylonian Talmud with Rashi’s commentary and *Tosafot*, the Jerusalem Talmud, the *Mishneh Torah* of Maimonides, Shulchan Arukh with commentaries, Midrashim, 391 books of responsa, and the *Talmudic Encyclopedia*, representing a period of over three thousand years of Jewish literary creativity. All these and more are included in a CD.

The Halakhah Berurah and Birur Halakhah Institute features a wide variety of collections on its website. The CD-ROM *Mekorot le-Toledot ha-Hinukh be-Yisrael*, vol. 4 (2004), prepared and edited under the direction of Shmuel Glick, provides over 300 responsa from 16th to the beginning of 20th

century dealing with Jewish education in Mediterranean communities and eastern countries. The texts stem primarily from rare first editions.

The website of the Schechter Institute offers six volumes of responsa written by the Va'ad Halakhah (Law Committee) of the Rabbinical Assembly of Israel between 1985 and 1999.

Books Based upon Responsa Materials.

I. Schepansky wrote on the Land of Israel in the responsa literature, *Erez Israel be-Sifrut ha-Teshuvot*, 3 volumes (1966, 1967, 1978).

The use of responsa for the biographies of outstanding scholars is, of course, well established, but during recent years there have been produced a number of works on specific topics in the responsa literature.

Y. Bazak published an annotated two-volume series of selected responsa on various legal topics, *Mishpat ve-Halakhah* (1971, 1975); A. Steinsaltz collected biblical commentary found dispersed throughout the responsa literature, *Perush ha-Mikra be-Sifrut ha-She'elot ve-ha-Teshuvot* (1978); and Dr. Fred Rosner published *Modern Medicine and Jewish Law* (1972) on various medical-ethical problems which are, for the most part, a collection of his articles which appeared in *Tradition*. I. Cahane's various historical legal studies were collected and published posthumously as *Mehkarim be-Sifrut ha-Teshuvot* (1973); and J. David Bleich published a collection of his regular articles in *Tradition* on halakhic topics in book form, *Contemporary Halakhic Problems* (1977).

RESSLER, BENJAMIN (1901–1983), novelist and journalist. Born in Galicia, Ressler visited Erez Israel and many European countries in the 1920s and settled in the United States in 1930.

He contributed Yiddish articles to *Der Tog* and *The Day-Jewish Morning Journal*, and essays and stories to the periodical press in Hebrew. His Yiddish works include a volume of poetry, *Ershte Gezangen* (1922); three novels, *Oyf Alter Erd* (1927);

Nokhn Geretenish (1929); and *Der Veg tsu Yisroel* (1950); and several plays. His one novel in Hebrew, *Nahalat Zevi* (1958), evokes the tragic era of Polish Jewry before the Holocaust.

RESTITUTION AND INDEMNIFICATION (German).

Individual Reparations

RESTITUTION LAWS. After the collapse of Nazi Germany in World War II the Western occupying powers obligated the holders of property which had come into their possession by unlawful means to restore it to the rightful owners. Since the Reich no longer existed, the measures taken were notably inadequate as they did not apply to the Reich as the former legal entity which perpetrated the crimes and was therefore responsible for restitution. Furthermore, there was no access to most of the plundered property. As a result, in Article IV, Part 3 of the *Ueberleitungsvertrag* (the agreement with the Western Powers on the establishment of the German Federal Republic, May 26, 1952), the Federal Republic undertook to provide a remedy. For this purpose it issued a special law on July 10, 1957, the Federal Restitution Law (*Gesetz zur Regelung der rueckerstattungsrechtlichen Verbindlichkeiten des Deutschen Reiches und gleichgestellter Rechtstraeger* – **BRue-G**).

The Federal Indemnification Law (*Bundesentschaedigungsgesetz* – **BEG**). The restitution of property to its rightful owner did not, of course, necessarily repair the damage inflicted by the Reich's criminal acts. Life, health, liberty, and livelihood could not be restored. In the first instance the German Laender attempted to provide a solution to the problem, but this uneven arrangement was eventually replaced by the Federal Supplementary Law (*Bundesergaenzungsgesetz* – **BERG-G**), of Sept. 18, 1953, a uniform law applicable to the entire Federal Republic enacted by the German government in fulfillment of its obligations under the Luxembourg Agreement of Sept. 10, 1952 (see *Reparations, German) and the Hague Protocols. The **BERG-G** was later improved upon by the **BEG** – Federal Indemnification Law – of June 29, 1956, which was further revised and finalized in the **BEG** – Final Law of Sept. 14, 1965. This federal legislation provides indemnification for the victims of national socialism subjected to Nazi persecution for "race," religion, or political views and incurring loss of life, injury to health, deprivation of liberty, loss of property, and damage to professional or economic advancement. German restitution was complemented by additional laws which were also based on the Hague Protocols.

The following are the more important laws in this category: law of reparations to public servants persecuted by the Nazis (*Gesetz zur Regelung der Wiedergutmachung national-sozialistischen Unrechts fuer Angehoerige des oeffentlichen Dienstes*; **BWGoe-D**) of April 1, 1951 (several revisions, final version Dec. 15, 1965). In the versions passed on March 18, 1952 and Dec. 23, 1955, this law also applies to claimants living abroad. Paragraph 31d of the law, in compliance with the Hague Pro-

ocols, also provides for relief to former employees of Jewish communities and other public institutions (cf. the two relevant regulations, dated July 6, 1956 and (April 2, 1963); a law for the redress of National-Socialist Party injustices concerning the relief for war victims (final version June 25, 1958), and the same law for claimants living abroad (final version, June 25, 1958): a law providing rights to social insurance for victims (Aug. 22, 1949) with many subsequent revisions; a law on insurance for employees (Feb. 23, 1957 plus revisions); a law on revised regulations for the payment of social insurance benefits to foreigners and persons living abroad (FANG) dated Feb. 25, 1960; and the revised law on social insurance benefits of June 9, 1965, Dec. 23, 1966, and May 8, 1967. Article X of the BEG-Final Law contains a clause for continuing insurance, apart from past restitution payments; the 11th enactment regulation of the *Lastenausgleichsgesetz* (LAGlaw for the equalization of burdens), passed on Dec. 18, 1956, and revised on Sept. 17, 1957, and Feb. 28, 1961, is also based upon the Luxembourg Agreement and the Hague Protocols. It provides indemnification to victims of Nazi persecution under certain conditions not specified by the BEG and the BRue-G because of the territorial provisions of these laws. Heirless and unclaimed property and the property of disbanded Jewish communities and other institutions (foundations and the like) were to be turned over to the successor organizations – in the former American Zone to the Jewish Restitution Successor Organization (JRSO), and in the former British and later also the former French Zone, to the Jewish Trust Corporation for Germany (JTs).

Collective Reparations

The German Federal Republic also made global agreements with certain states and provided certain funds to indemnify the citizens of these states who suffered under Nazi persecution. Such agreements were concluded with Luxembourg, Norway, Denmark, Greece, the Netherlands, France, Belgium, Italy, Switzerland, Austria, Great Britain and Northern Ireland, and Sweden. The total payments made under these agreements amounted to DM972,000,000 (\$243,000,000).

For bibliography and further developments, see *Reparations, German, and *Conference on Jewish Material Claims.

[Harry Knopf]

RESURRECTION (Heb. תְּחִיַּת הַמֵּתִים), the belief that ultimately the dead will be revived in their bodies and live again on earth. Resurrection is to be distinguished from the belief in some sort of personal existence in another realm after death (see *Afterlife) or in the immortality of the *soul. A major tenet of Jewish eschatology alongside the *Messiah, belief in resurrection is firmly attested from Maccabean times, enjoined as an article of faith in the Mishnah (Sanh. 10:1), and included as the second benediction of the *Amidah* and as the last of Maimonides' 13 principles of faith.

In the Bible

The standard biblical view of death took it as man's final state (cf. 11 Sam. 14:14). Aside from such anomalies as Enoch and

Elijah who were "taken" by God (Gen. 5:24; 11 Kings 2:1), the common lot of all men, as it was then conceived, is aptly described in Job 7:7–9:

Remember that my life is a breath;
My eye will not again see good...
A cloud dissolves and it is gone;
So is one who descends to Sheol;
He will not ascend.

Rabbah correctly inferred that the author of this passage left no room for resurrection (BB 16a). This accords with the biblical doctrine of *reward and punishment which satisfies the demands of justice during the (first) lifetime of men. When in Hellenistic times the doctrine proved inadequate, "the extension of divine retribution beyond the tomb came as a necessary corollary to the idea of God's justice and the assurance of his faithfulness in fulfilling his promise to the righteous" (G.F. Moore, *Judaism*, 2 (1950), 319).

The components of the idea of resurrection were present in biblical thought from early times. That God can revive the dead is one of His praises: "I slay and revive; I wounded and I will heal" (Deut. 32:39; cf. Pes. 68a for the argument that death and life of the same person is meant); "YHWH slays and revives; He brings down to Sheol and raises up" (1 Sam. 2:6; cf. 11 Kings 5:7). His power to do so was exhibited through the acts of Elijah and Elisha (1 Kings 17:17ff.; 11 Kings 4:18ff.).

In poetry, severe misery, mortal sickness, and dire peril are figured as death-like states – the victim has descended into Sheol, the (nethermost) pit, the dark regions, the depths of the sea (Ps. 30:4; 71:20; 88:4–7; 143:3). Divine rescue from such circumstances is "restoring to life" (Ps. 30:4; 71:20; 143:11; Isa. 38:17ff.), "redemption from the pit," and "restoration of youth" (Ps. 49:16; 103:4–5; Job 33:24–30). This world, from which the victim is cut off and to which he wishes to be restored, is "the land(s) of the living" (Isa. 38:11; 53:8; Ps. 27:13; 116:9; 142:6; Job 28:13); in contrast to the dark region of death, it is also called "the light of the living" (Job 33:30; Ps. 56:14).

Biblical usage is identical with that of other Ancient Near Eastern poetry. The Mesopotamian sufferer is "plunged into the waters of a swamp" ("Prayer to Every God," Pritchard, Texts, 392a); Ishtar need but look and "one who is dead lives; one who is sick rises up" ("Prayer of Lamentation to Ishtar," Pritchard, Texts, 384c); the sufferer prays that "radiantly... let me enter the streets with the living" (*ibid.*, 385a). A striking parallel to biblical idiom is the doxology that concludes the "Poem of the Righteous Sufferer" ("I Will Praise the Lord of Wisdom," *ibid.*, 437d):

The Babylon[ians] saw how [Marduk] restores to life,
And all quarters extolled [his] greatness.
Who but Marduk restores his dead to life?
Apart from Šarpanitum which goddess grants life?
Marduk can restore to life from the grave,
Šarpanitum knows how to save from destruction (trans.
by W.G. Lambert, *Babylonian Wisdom Literature* (1960), 59).

In the Bible, similar figures are applied to the people of Israel in Ezekiel 37:1–14 (the vision of dry bones, which the *tanna* R. Judah classed as an allegory (Rashi: “An allusion to the Exile – as a dead man come to life the Israelites would return from Exile”): Sanh. 92b) and in Isaiah 53:8ff. (the suffering and dying servant of YHWH).

The idea of resurrection proper makes its first clear and datable appearance in Daniel 12:2–3. In a future time of great trouble (an allusion to Antiochus IV’s persecution), a deliverance will come:

And many of those who sleep in the dusty earth shall awake, and some to everlasting life, others to everlasting reproach and contempt. Then the knowledgeable shall shine like the brightness of the sky; those who justified the many, like the stars, forever and ever.

That is to say, the generation of the persecution, whose wicked members escaped punishment and whose loyal members died without enjoying a reward for their devotion, would be called back to life to receive their just deserts. Traditional theodicy, explaining national distress as the product of sin, was incapable of consoling the pious victims of Antiochus’ agents, for this time it was precisely the righteous who died, while apostates flourished. The anguish of the moment was assuaged by the belief that in the coming deliverance the injustice perpetrated on earth would be rectified by a judgment rendered to the deceased, called back to life on earth for the purpose.

Isaiah 26:19 speaks in similar terms and in a context of world judgment: “Your dead shall live, my dead bodies shall arise – awake and sing you who dwell in the earth! – for your dew is as the dew of light, and the earth shall bring to life the shades.” Whether this is indeed the later concept of resurrection rather than the earlier, figurative image of restoration is arguable. Critics tend to the first view, dating the passage to Hellenistic times.

Later Jewish exegesis, influenced by the Jewish doctrine of resurrection (see below), read it back into many of the above-cited passages, and others as well. Thus, e.g., the “waking” in which the beatific vision of Psalms 17:15 occurs was explained by Rashi as the resurrection (for the plain sense – a cultic experience – cf. Ps. 27:4; 63:3; and esp. Ex. 24:11). Often enough, however, medieval exegetes give the plain (figurative) sense in addition and prior to the resurrectional one: see Ibn Ezra to Deuteronomy 32:39; David Kimḥi to 1 Samuel 2:6 and Ezekiel 37:1. Their reserve and sobriety contrasts with M. Dahood’s wholesale adoption of the resurrectional interpretation in most of the above-cited Psalm passages, in addition to many others in which “long enduring life” of royal prayers (e.g., Ps. 21:5; cf. the royal prayers in Pritchard, *Texts*, 383d, 394a, 397c) and the “future” of the righteous (often meaning progeny as in Ps. 109:13) are whimsically and uncritically combined and offered as evidence of an early Israelite belief in resurrection and immortality (M. Dahood fails to distinguish between the two; *Psalms*, 3 (1970), xli–lii).

[Moshe Greenberg]

Rabbinic Period

In the rabbinic period the doctrine of the resurrection of the dead is considered one of the central doctrines of Judaism. The tenth chapter of Mishnah *Sanhedrin* begins, “All of Israel has a portion in the world to come, as it is said (Isa. 60:21) ‘And Thy people are all righteous, at the End they shall inherit the land...’ and the following have no portion in the world to come: one who says, ‘There is no resurrection of the dead...’” George Foot Moore in *Judaism in the First Centuries of the Christian Era* (2 (1950), 323) asserts “It must be further observed that, except on the single article of the re-vivification of the dead, there was no dogma and no canon of orthodoxy in this whole field [eschatology].” This dogma was one of the important points of dispute between the Sadducees and Pharisees (see Jos., *Wars*, 2:163; *Ant.*, 18:16; ARN1 5, 14). The rabbis included belief in the resurrection in the canonical liturgy – especially in the second of the 18 benedictions of the *Amidah*.

The doctrine of the resurrection seems to embody two significant areas: (1) the idea of retribution and reward for the Jewish nation as a whole and not merely for individuals; and (2) the idea that body and soul are a single indivisible unit, both essential and equal in the constitution of a human being. These two ideas may have developed, or achieved prominence, at different stages in the development of the doctrine (see below).

As to the first point, in the Israelite worldview the ultimate redemption was always a redemption of the whole people. The prophets predicted a future time when there will be peace, justice, and righteousness in the world. This reward would seem to come, then, only to those living at the time of the redemption. The doctrine of the resurrection of the dead enables righteous souls throughout history to have a share in the world to come (*olam ha-ba*). As Moore points out (*ibid.*, 311–12) the Greek religion was individualistic and needed a doctrine of immortality for the soul, in which the individual was rewarded or punished, but Jewish religion posited a re-constituted nation as the arena of retribution.

The second point is somewhat more sophisticated. A rabbinic parable, however, makes it crystal clear (Sanh. 91a–b):

Antoninus said to Rabbi, “The body and soul could exonerate themselves from judgment. How is this so? The body says, ‘The soul sinned, for from the day that it separated from me, lo, I am like a silent stone in the grave!’ And the soul says, ‘The body is the sinner, for from the day that I separated from it, lo, I fly in the air like a bird.’” He answered him, “I will tell you a parable. To what is the matter likened? To a king of flesh and blood who had a beautiful orchard and there were in it lovely ripe fruit, and he placed two guardians over it, one a cripple and the other blind. Said the cripple to the blind man, ‘I see beautiful ripe fruit in the orchard. Come and carry me and we will bring and eat them.’ The cripple rode on the back of the blind man and they brought and ate them. After a while the owner of the orchard came and said to them, ‘Where is my lovely fruit?’ The cripple answered, ‘Do I have legs to go?’

Answered the blind man, 'Do I have eyes to see?' What did he do? He placed the cripple on the back of the blind man and judged them as one – so also the Holy Blessed One brings the soul and throws it into the body and judges them as one."

Neither body nor soul alone can sin or be righteous, so only the two together can be judged and punished or rewarded. Again the comparison with the Greek idea, in which the soul is the whole personality and the body merely its house, is instructive.

The idea of resurrection, then, for the rabbis was clearly and literally corporeal. Among the questions concerning resurrection discussed in rabbinic literature are whether or not the resurrected will have the same imperfect bodies as in this life or perfect ones, how the bodies will travel to the Land of Israel from the Diaspora, whether they will be clothed or naked, and the like (TJ, Kil. 9:4, 32c; TJ, Ket. 12:3, 35b; Ket. 11a; Sanh. 90b; Eccl. R. 1:4). In the talmudic period and on into modern times this idea has been taken so seriously and literally that pious Jews are often concerned about the clothes they are buried in, the complete interment of all organs, and being buried in Israel.

However, there is a serious problem in rabbinic literature with regard to the historical, or rather meta-historical, position of the resurrection. Some sources seem to imply that it is the final goal and thus last step in the *eschaton*, identical with the world to come, while other sources seem to refer to a resurrection which precedes the final redemption, the world to come. There even seem to be some sources which place the world to come as a stage before the resurrection. Furthermore, there are contradictions with regard to the question of who is to be resurrected, some sources suggesting clearly that only the righteous will be revived, others, that resurrection is the lot of everyone.

Moore resolves these contradictions by suggesting a process of historical development from one set of ideas about the resurrection and world to come to another, although he warns that the periodization and use of terminology is not always exact and consistent (Moore, *Judaism*, 2 (1946), 378ff.). In an earlier stage the "days of the Messiah," "the world to come," and the "coming future" all refer to the same period – the final stage in the development of history. Thus, the righteous dead (at this stage probably only of Israel) are revived to enjoy the benefits of a golden age in the Land of Israel. He states that rabbinic homilies which assign to the world to come such wordly, albeit exquisite, pleasures as eating the flesh of Leviathan and Behemoth, and cultivating infinitely fertile land clearly belong to this earlier idea (which, indeed, persisted alongside the latter; see references there).

In the second, later, stage of the development of the idea it becomes only a preliminary moment in the *eschaton*.

Now the various terminologies are separated out and assigned to different periods. There are the "Days of the Messiah," the golden age for the Jewish people, but this is now only a preliminary stage. There follows a general resurrection of all souls, which are then brought before the heavenly court. Now

comes the period of the world to come, in which the righteous are blessed and sinners in some fashion damned.

Moore further states that in rabbinic literature when the phrase, "the revivification of the dead," is used without any special qualification, it refers to the latter concept, to the resurrection before the "grand assize" (*ibid.*, 380). The additional confusion, by which occasionally the phrase "world to come" refers to a state which completely precedes the resurrection (as in neither of the above systems) is explained by Moore by the fact that occasionally the transition period between death and redemption, which the souls of the righteous spend in heaven and the wicked in hell (cf. *Gehinnom*), is called the world to come. However, this, according to him, is merely a terminological and not an ideological difference (*ibid.*, 391).

Louis Finkelstein (*Mavo le-Massekhtot Avot ve-Avot de-Rabbi Natan*) reconstructs the development of these ideas somewhat differently. In his view, the crucial distinction is precisely in this last point of the "intermediate stage" between death and resurrection. He maintains that from early times there were two schools of thought on this matter. According to one (*ibid.*, xxxii), the soul upon dying goes into Sheol, "the Pit," i.e., grave, and there inactively awaits the resurrection. According to the other school, souls arise to be judged by God immediately after death. In the first view the world to come refers to the resurrection, and in the second it refers to the existence in between death and resurrection. Finkelstein further remarks that the term "world to come" is often used in rabbinic and later Jewish literature in a purposely ambiguous sense so as not to decide between these two opposing views (*ibid.*, xxxv).

Finkelstein maintains that this is an ancient controversy that continued in the controversies between Bet Shammai and Bet Hillel (*ibid.*, 217). Bet Shammai held that the dead souls are either in the grave itself or in a special "treasury" until the redemption, when the righteous are rewarded with resurrection (Moore's "older attitude"), while Bet Hillel held that the souls are immediately punished or rewarded after death in heaven or hell, and at the end of time all are resurrected for a final judgment, a review of the verdict or parole hearing, as it were.

A clear example of the nature of this disagreement (not necessarily between Shammai and Hillel at this point) is shown by comparing two texts (*ibid.*, 220). An early Sabbath prayer (Hertz, *Prayer Book*, p. 28) reads: "There is none of Your value, Lord, our God, in this world, and none beside You in the world to come. Nothing but You, our Redeemer in the days of the Messiah, and none like You for the resurrection of the dead." Clearly according to this text, the world to come is separate from the resurrection and precedes it. However, a passage in *Sifrei Devarim* (ed. by L. Finkelstein (1969²), 62) reads: "'In your going he will lead you' refers to this world, and 'in your lying down he will watch over you' refers to the hour of death, and 'in waking up' refers to the days of the Messiah, 'it will make you speak' refers to the world to come." Here clearly "world to come" is after the resurrection.

Medieval Jewish Philosophy

Among the medieval Jewish philosophers there were many differences of opinion with regard to the resurrection. These controversies depend for the most part on the fact that it was not clear, or certainly not explicit, that there had been controversy in the talmudic period. Consequently some thinkers accepted one of the talmudic opinions, and others contested their views, without realizing that they were simply following different sides of an old argument.

Saadiyah Gaon (*The Book of Beliefs and Opinions*, 6:7) maintains that the dead souls remain in a treasury until the resurrection, when the righteous are resurrected. This constitutes the world to come. He follows, therefore, Finkelstein's "Shammaite" view or Moore's "earlier" view.

It was Maimonides, however, who made the most controversial statements in the Middle Ages regarding the resurrection. In his commentary on the first Mishnah of *Sanhedrin* 10, he makes the seemingly self-contradictory statement that:

The resurrection is one of the foundations of the religion of our teacher, Moses; there is no religion and no connection with the Jewish nation for whoever does not believe in it, but it is for the righteous... but know that man will definitely die and be separated into that of which he is composed.

Furthermore in the *Mishneh Torah* (Yad, Teshuvah, 8:2) he maintains that, "in the world to come there is no body, rather the souls of the righteous alone without a body like the ministering angels..." It is easy to see how readers of Maimonides became confused as to his true opinion, and indeed his main critic Abraham b. David of Posquières takes him severely to task: "The words of this man seem to us to be close to one who says that there is no resurrection for bodies, but only for souls, and by my life this was not the opinion of our sages on this for behold they said [Ket. 11b] in the future the righteous will arise in their clothes... and so they would command their sons, 'do not bury me in white clothes or not in black'..." (Yad, Teshuvah, 8:2). Maimonides, however, in a later work, *Ma'amar Tehiyyat ha-Metim*, "The Essay on Resurrection" (ed. with an introduction by J. Finkel, in: *PAAJR*, 9 (1939), 61–105 and Heb. section), clarified his opinion further, stating that of course there will be a resurrection, but that the resurrection will not be permanent, that it follows upon a period in which the souls of the righteous are rewarded in the world to come, and is followed again by the death of the resurrected and the return of the righteous once more to the world to come, which is their true reward. One of the classic commentators on Maimonides, in the *Lehem Mishneh*, remarks that Maimonides is consistent in his view in that he holds that the world to come and the resurrection are two distinct entities, and therefore he wrote that in the world to come there is no body, it being the fate of man immediately after death. He goes on to say, "The Ravad (Abraham ben David) his memory be blessed, believes that our teacher (Maimonides) holds that the world to come is identical with the resurrection and therefore attacked him... because he (ben David) holds that the world to come is the world of resurrection..." This perceptive remark makes

it quite clear that once again, with some variations, the same controversy that was found in the talmudic period is operative. Modern interpreters of Maimonides (as some of their medieval predecessors) have raised a question concerning his true attitude. Did he, as his words imply, believe literally in the resurrection of the body, or did he, like some Muslim Aristotelians, consider this belief merely a concession to the understanding of the masses, while his true view is that the afterlife consists only of the incorporeal intelligences of those who have acquired theoretical knowledge in this life.

Naḥmanides in *Torat ha-Adam* (at the end of the chapter *Sha'ar ha-Gemul*), discusses Maimonides' view. He contends that, in the opinion of the rabbis, the resurrection is the world to come, but does not deny the existence of the souls of the dead in heaven before the resurrection. He merely maintains, in opposition to Maimonides, that this is not what is meant by "world to come." Moreover, Naḥmanides himself dismisses this difference as merely a matter of terminology and says that the important difference between his view and that of his predecessor is that while Maimonides "decrees death for the Messiah and his generation," Naḥmanides allows them to live forever. However, in answer to Maimonides' contention that there would be no purpose for the body in the world to come, its only functions being mundane, he states that there will be a mysteriously refined body, its functions being mystical and having to do with the fact that the body is a microcosm of the structure of the universe. Naḥmanides, it would seem, if Finkelstein's view is correct, has created a synthesis between the two rabbinic opinions.

Ḥasdai Crescas seems to have been the first medieval philosopher to realize clearly that there was a major difference of opinion among the rabbis of the Talmud. He states, with his characteristic clarity, that there are four questions with regard to the resurrection: "the first, will the resurrection be complete or partial, and if partial, which part? the second, the time of the resurrection? the third... if they will die after their rising or not? the fourth, if there will be in that time the day of judgment, which our sages believe in?" He states, particularly with regard to the second of these questions, that there is controversy among the rabbis themselves, pointing to the view of *Samuel that there is no difference between this world and the days of the Messiah except that Israel will be free. This, he says, necessitates the corollary that the resurrection will take place after the days of the Messiah. He does not hold (or rather does not realize, if Moore or Finkelstein is correct) that the other questions depend to a greater or lesser degree on the answer to this one, and therefore answers them definitely, holding that there will be a resurrection of all but the greatest sinners, that there will be then a court of judgment, and that the righteous will live forever in their refined bodies, in accord with the view of Naḥmanides.

The common denominator of all the views so far discussed, except, perhaps, that of Maimonides, is that they all stress the indivisibility of the body-soul unit for purposes of the accountability of the human personality for its actions,

both good and bad. Whether it is understood that all people are resurrected for judgment, body and soul together, or whether only the bodies of the righteous are resurrected to enjoy the redemption, the central stress is the same. The human being is one essence, a unit, not merely a soul housed in a body which itself is of no worth. The parable above of the two guardians of the orchard is perhaps the best possible illustration of this idea.

Modern Period

In the modernistic versions of Judaism, the belief in resurrection was denied in favor of the seemingly more acceptable doctrine of immortality. In the Pittsburgh Platform it was expressly stated that the Reform movement rejects “as ideas not rooted in Judaism the beliefs both in bodily resurrection and *Gehinnom*.” This idea was reflected in American Reform prayer books and in the prayer book of the Reconstructionist movement, where the statement affirming resurrection is removed. In the European reform movements, the tendency was to retain the traditional formula contained in the liturgy, but to formulate the translation in such a way that it would mean immortality and not resurrection (see J.J. Petuchowski, *Prayerbook Reform in Europe* (1968), 215 ff.).

There has been some sentiment in more traditional circles to retain the belief in resurrection, but rather than taking it literally, to understand it as a symbol affirming that the ultimate salvation of the individual is dependent on God and that what is fulfilled is the entire person – both body and soul – not just the spiritual essence.

RETHYMNON (Retimo), town in Crete, in the W. central part of the island. Jews of Rethymnon lived in their special quarter during the Venetian rule over Crete (1204–1669). At first some of them possessed shops and portions of land outside their quarter. They had the inferior status of *vilani* and not that of Venetian citizens. They were compelled to pay taxes both as Jews and as *vilani*. They were also required to contribute lump sums to the treasury. After the conquest of the town by the Turks in 1647, the Jews left because of economic reasons. They did not return after this date.

RÉTI, RICHARD (1889–1929), Slovak chess master. Born in Pezinok, Réti studied science in Vienna where he won his first tournament in 1910. After World War I he gained first prizes in many tournaments. In matches he drew with Savielly *Tartakover (1919) and defeated the Dutch player Max Euwe (1920). In tournament play he was one of the few to defeat

Capablanca. Réti made an impressive contribution to chess. One of the opening systems bears his name; and he is famous as the composer of many end-game studies which combine great theoretical interest with extraordinary elegance. Playing blindfolded, he was the first to achieve simultaneous play on 24 boards. As a theorist he was a pioneer of the modern school and wrote about chess brilliantly. His books include *Die neuen Ideen im Schachspiel* (1922; *Modern Ideas in Chess*, 1923) and *Die Meister des Schachbretts* (1930; *Masters of the Chess-board*, 1932).

[Gerald Abrahams]

RÉTI, RUDOLF (1885–1957), musical theorist and composer. Reti was born in Uzhitse, Serbia, studied at the Vienna Conservatory, and was later a music critic in Vienna. He was one of the founders of the International Society for Contemporary Music (Salzburg, 1922). After emigrating to the United States in 1938, he wrote *The Thematic Process in Music* (1951) and *Tonality, Atonality, Pantonality* (published posthumously, 1958), two of the century's most important studies in the genesis and processes of musical composition. Reti's own works include the opera *Ivan and the Drum* (so far unperformed), a piano concerto, piano pieces, and songs.

[Max Loppert (2nd ed.)]

REUBEN (Heb. רְאוּבֵן), firstborn son of Jacob and Leah (Gen. 29:32; 46:8), and the eponymous ancestor of the tribe of Reuben. The biblical derivation of the name is not etymological, but was given by Leah because it suggested the verb *ra'ah*, “to see” and the fact that YHWH had seen, i.e., taken note of, Leah's sorrow, and the noun *ben*, “son” (Gen. 9:32; in Ant. 1: xix, 8 Josephus gives the name as Reubel). The attribution of primogeniture to Reuben may indicate that, originally Reuben headed the confederation of Israelite *tribes. He is mentioned first in the listing of the twelve (Gen. 46:8–23; Ex. 6:14–16; Num. 1:5–15, 20–42), and he enjoys a prominent position in the traditions of Israelite history prior to the conquest of Canaan in connection with the sale of Joseph (Gen. 37:21–22, 29–30; 42:22, 37) and rebellion against the leadership of Moses (Num. 16). The change that took place in the standing of the tribe is attributed to a sin of its ancestor; see Genesis 49:3–4; and Genesis 35:21–22 for the incident to which they allude. In Genesis 49:3–4, Jacob rebukes Reuben for “mounting his (Jacob's) couch,” by sleeping with Bilhah, Jacob's concubine, and curses him with the words *paḥaz ka-mayim al totar*, conventionally translated “unstable as water may you not be pre-eminent.” This is interpreted by 1 Chronicles 5:1 to mean that Reuben lost his pre-eminent status as the first born. During the period of conquest and occupation, the tribe of Reuben lost the hegemony to the tribe of Joseph, which grew so that it split into the two tribes of Ephraim and Manasseh, and it was Joshua from the tribe of Ephraim who led the conquest of the land; while in the period of the monarchy, it was the tribe of

Judah that was of prime importance. At one time the tribe of Reuben must have been in danger of extinction, since Deuteronomy 33 has only one short verse on it, and that, a prayer for its survival (Deut. 33:6). A further indication of Reuben's troubles is provided by the more likely construal: *paḥaz, kamayim al totar*, to be translated, "wanton, like water nothing shall be left over of you" (for the thought, cf. 11 Sam. 14:14). It is probably no accident that no judges came from the tribe of Reuben, and still less that it is not mentioned in the *Mesha inscription though Gad is. The tribe, like that of *Simeon, remained semi-nomadic, subsisting principally from sheep-raising (Num. 32:1). Deborah reprimanded Reuben for not taking part in the war against Jabin and Sisera, choosing rather to "tarry among the sheepfolds, to hear the piping for the flocks" (Judg. 5:15–16).

In the early monarchy period, Reubenites still ranged far and wide with their sheep, fighting desert tribes as they wandered through the border regions of Transjordan (1 Chron. 5:9–10, 18–22). At the same time, however, the Reubenites established family ties with these very tribes. Enoch, the son of Reuben (Gen. 46:9; Num. 26:5), is also connected with the tribe of Midian (Gen. 25:4). Reuben's genealogies (Gen. 46:9; Num. 26:5–9; 1 Chron. 5:1–8) indicate that the tribe had family ties with other Israelite tribes.

According to biblical tradition, Reuben, Gad, and half the tribe of Manasseh settled east of the Jordan during the first stages of the conquest, in the time of Moses (Num. 32). When the tribes of Gad and Reuben noted that "the lands of Jazer and Gilead were a region suitable for cattle" they asked Moses and the tribes of Israel for permission to settle there. Moses agreed to their request on condition that they constitute Israel's vanguard in capturing western Palestine (Num. 32; Josh. 1:12–18). Only after Gad and Reuben had kept their agreement and fought alongside Joshua west of the Jordan were they given permission to return east (Josh. 22). The tribes of Gad, Reuben, and half of Manasseh built an altar near the Jordan on that occasion as eternal proof that the tribes of the east bank were an integral part of Israel (verse 27). (See Map: Tribe of Reuben).

According to some scholars, the Reubenites at first settled in western Palestine in an area bordering on Benjamin in the north and Judah in the south, only at a later stage forcing their way to the east of the Jordan. Among the evidence for this is cited the "Stone of Bohan the son of Reuben" (Josh. 15:6; 18:17) which these scholars identify as a point on the boundary between Judah and Benjamin; Migdal-Eder, where Reuben is said to have slept with his father's concubine Bilhah (Gen. 35:21–22), is located in the vicinity of Jerusalem (Micah 4:8); in Ezekiel 48:6–7, Reuben's frontier territory is described as lying north of Judah; the Song of Deborah does not state explicitly that Reuben dwells on the other side of the Jordan, but the mention of the "tribes" *mishpetayim* (Judg. 5:16) and the allusion to the tribe's pastoral habits point in that direction, and there is no decisive proof that Reuben's first settlement was originally west of the Jordan. It is conceivable that the tribe

Territory of the tribe of Reuben.

first settled in the plain north of Moab, as biblical tradition has it, and then later, Reubenite families crossed the Jordan westward settling in the area between Benjamin and Judah.

According to Numbers 32, Reuben's settlement extended south of Gilead, in the tableland, and was interspersed with Gadite settlements. Reuben's cities, Heshbon, Elealeh, Kiriathaim, Nebo, and Baal-meon, were surrounded by the territory of Gad which ran from Aroer near Arnon in the south, to Jogbehah near the border with Ammon in the north (Num. 32:34–38). According to Joshua 13, Reuben's settlement covered the entire tableland, from Aroer near the Arnon Valley to the wadi of Heshbon in the north, to the southern edge of the Gilead, while the tribe of Gad settled from the wadi of Heshbon northward (cf. 1 Chron. 5:8–9). The following are listed among those levitical cities situated in Reuben's area: Mephaath, Bezer, Jahaz, and Kedemoth (1 Chron. 6:63–64, 78–79). These four cities are located at the eastern end of the plain, bordering on the desert. The southernmost of them, Kedemoth, is situated north of the uppermost tributary of the Arnon. The northernmost, Mephaath, is close to the border with Ammon. Since the area of Reuben's settlement given in Numbers 32 is smaller than that given in Joshua 13, it is possible that the information in Numbers 32 reflects a later stage in the history of the tribe when it became weak and was gradually absorbed by

the tribe of Gad. It would seem, however, that it nevertheless retained its tribal identity until Transjordan was annexed by Tiglath-Pileser of Assyria in 733–732 B.C.E. to be sure the description of Transjordan in II Kings 10:33, in connection with events in the ninth century B.C.E., and in I Chronicles 5:26, in connection with events in the eighth century, as “the land of the Gadites, the Reubenites, and the Manassites” may be formulaic, but the notice in I Chronicles 5:6 about the identity of the chieftain of the tribe at the time of Tiglath-Pileser’s conquest of Transjordan and the exiling of its inhabitants seems authentic. In 733–732 B.C.E., thus, Tiglath-Pileser of Assyria exiled Beera, a Reubenite prince, along with his tribe, and Gad and half of Manasseh, to Mesopotamia (I Chron. 5:6, 26).

[Bustanay Oded]

In the Aggadah

Reuben is contrasted with Esau in order to demonstrate his virtue. Whereas Esau looted and plundered the property of others, Reuben demonstrated that he would only touch that which was ownerless when he went to pick mandrakes (Gen. 30:14; Gen. R. 98:4). In fact Leah indicated this distinction when she called him Reuben, i.e., “*re’u bein*” (lit. “mark [the difference] between”) Esau, who sold his birthright and hated his brother (Gen. 27:41), and Reuben who lost his birthright to Joseph, but nevertheless saved him from death (*ibid.*, 37:21; Ber. 7b). The sin of “going up to his father’s bed” (Gen. 49:4 and I Chron. 5:1) is minimized as much as possible and he is specifically exonerated from any charge of incest (Shab. 55b). After the death of Rachel, Jacob had allotted the now vacant place of honor in his private quarters to the bed of Rachel’s handmaid, Bilhah, and the verse is explained to mean that Reuben saw this as a slight upon the honor of his mother (Leah), and his sin consisted in removing Bilhah’s bed (Gen. R. 98:4). Moreover, the extent of his subsequent repentance is commended, and was rewarded by the fact that one of his descendants, Hosea, was the first prophet to exhort Israel to “return unto the Lord thy God” (Hos. 14:2; Gen. R. 84:19). The sincerity of his repentance also earned him a place in the world to come (Sot. 7b), and by the fact that he is nevertheless specifically referred to in both Genesis 49:3 and I Chronicles 5:1 as the “firstborn” (Gen. R. 82:11). It was his prolonged acts of penance which explains his absence at the time of the sale of Joseph (Pal. Targ. Gen. 37:29). According to another source, he was ministering to his father at the time (Gen. R. 84:4). His attempt to save Joseph found divine recognition in the fact that the first of the cities of refuge mentioned in Deuteronomy 4:43, was situated in the territory of his descendants (Gen. R. 84:15). He was, in fact, appointed the head of the children of Israel in Egypt, after Jacob’s death (Num. R. 13:8). He died at the age of 125 (Yalk. Ex. 162).

REUBEN BEN ḤAYYIM (d. before 1276), Provençal talmudist. Reuben studied under Isaac ha-Kohen, a disciple of *Abraham b. David of Posquieres. Few biographical details are known of him. Both he and his brother Abraham composed *piyyutim*. Among his prominent pupils were *Manoah of Narbonne and Menahem b. Solomon *Meiri. The latter praises his teacher at great length both on account of his comprehensive knowledge of the Talmud and his general culture (Introd. to *Beit ha-Behirah to Avot* ed. by B.Z. Prag (1964), 56). Reuben was the author of *Sefer ha-Tamid*, a philosophical commentary on the liturgy, which seems also to have contained laws concerning the prayers together with a commentary.

A fragment of the commentary was published in the collection *Ozar ha-Ḥayyim*, 11 (1935). *Aaron b. Jacob ha-Kohen of Lunel utilized the work in his *Orhot Ḥayyim* and it is evident that *Abudarham also used it. But apart from these it was not widely used nor were copies of it available. It was used as late as the 18th century by Judah b. Meir Toledano, a Moroccan scholar. Azariah dei Rossi (*Me’or Einayim*, section “*Yemei Olam*,” ch. 40) mentions a commentary on the *aggadot* of the Talmud by Reuben. According to Geiger, *Levi b. Abraham b. Ḥayyim was a nephew of Reuben.

[Israel Moses Ta-Shma]

REUBEN BEN STROBILUS (mid-second century C.E.), *tanna*. Little is recorded of Reuben’s scholarly activities. He is best known for his visit to Rome in an attempt to persuade the authorities to rescind certain decrees against the Jews. Disguising his Jewish identity by cutting his hair in the Roman fashion, he suggested to the Romans that if the Jews were allowed to refrain from working on the Sabbath, they would be impoverished; if they were authorized to practice circumcision, they would become enfeebled; and that if they were permitted to observe the laws of family purity, they would decrease in number. The authorities initially were persuaded by his reasoning and repealed the decrees, but they reinstated them when they discovered that he was a Jew (Me’il. 17a). Reuben is quoted as engaging in a dispute with a heathen philosopher in Tiberias, in which he claimed that the most despicable man on earth is he who denies his Creator, and that disregard of the moral laws of the Decalogue constitutes a denial of their author (Tosef. Shev. 3:6). He also taught that, “Suspicion does not come upon a person unless he has done the thing suspected; if he has not done it wholly, he has done it partly; if he has not done it partly, he had the intention of doing it; if he had no such intention, he has seen others doing it and enjoyed the sight of it” (MK 18b). He had two sons, who

studied under *Judah ha-Nasi (TJ, Kil. 9:3). It is possible that one of them was Abtolumus b. Reuben, who mingled freely in Roman society.

REUBEN HOESHKE BEN HOESHKE (Joshua) KATZ (d. 1673), rabbi and kabbalist. Reuben lived in Prague and was the grandson of the famous preacher R. *Ephraim Solomon of Luntshits. He wrote a comprehensive compilation of Midrashim, mostly based on kabbalistic literature, in four parts, two of which have been published: (1) *Yalkut Re'uveni* (Prague, 1660), a collection mostly of kabbalistic legends, arranged in alphabetical order. It is also called *Ha-Kazar* ("The Brief") or *Ha-Katan* ("The Small"), to differentiate it from his second book of the same name; (2) *Yalkut Re'uveni* (Wilmersdorf, 1681), also called *Ha-Gadol* ("The Great"). This work is based on the weekly portions of the Pentateuch (the author's project of writing on the Five Scrolls was not executed). *Yalkut Re'uveni* is an important collection of the kabbalistic lore, similar to the 13th-century anthology of midrashic lore, *Yalkut Shimoni. Its importance lay in the use of kabbalistic texts and manuscripts composed during the preceding 500 years, many of which have been lost and others such as *Sodei Reza'yya* by *Eliezer of Worms, and the Parma manuscript of *Sefer Hasidim* have only recently been rediscovered and published. He lists the works which he used in rhymed verse in the introduction to his book. Additional importance lies in his wide use of the teaching of the *Hasidei Ashkenaz, and his conception of it as an organic part of the doctrine of the Kabbalah. The practical purpose of this anthology was to present to the public and to the preachers literary material not in their possession in an organized and accessible manner. He wrote two additional works of a definitely kabbalistic nature: (3) *Oneg Shabbat* (Sulzbach, 1684), a short compilation of Sabbath laws with mystical intentions and kabbalistic sayings; and (4) *Davar she-bi-Kedushah* (*ibid.*, (1684)), a lengthy treatment in a kabbalistic manner of the matters of sin mentioned in "the confession" (Heb. *viddui*). The popularity of this work is attested to by its numerous editions in print.

[Moshe Hallamish]

°REUCHLIN, JOHANNES (Capnio, or Phorcensis; 1455–1522), German and Hebraist; one of the architects of the Christian *Kabbalah and famous as the defender of the Talmud and Jewish scholarship against the attacks of Johannes *Pfefferkorn and the "obscurantists." Born in Pforzheim, Baden, Reuchlin served Duke Eberhard of Wuerttemberg and Elector Philip of the Palatinate, was ennobled by Emperor Frederick III in 1492, and later served as a member of the Swabian League's supreme court (1502–13). One of the leading Greek scholars of his day, Reuchlin first tried to study Hebrew in Paris (1473) and is said to have learned the Hebrew alphabet from a Jew named Calman in 1486. Another of his early teachers is thought to have been the convert Flavius *Mithridates.

After a visit to the famous library of J. *Trithemius at Sponheim (1496), Reuchlin turned his attention to Hebrew linguistics, publishing *De rudimentis Hebraicis* (Pforzheim, 1506), comprising a lexicon and a students' guide to Hebrew grammar (based mainly on the work of David Kimḥi), which was oddly printed from right to left. Although Reuchlin's younger colleague, Conrad *Pellicanus, had published a brief, crude Hebrew grammar in 1504, the *Rudimenta* was in fact the real pioneering work of its kind by a Christian scholar. However, Reuchlin's *De accentibus et orthographia linguae hebraicae* (Haguenau, 1518) showed many improvements. Apart from various works of general humanistic scholarship, Reuchlin also published an annotated Hebrew text and Latin translation of seven penitential Psalms (Tuebingen, 1512), and a Latin version of Jehoseph *Ezobi's *Kaarat Kesef* (*ibid.*, 1512). Reuchlin's last public appointments were to the chairs of Greek and Hebrew at the University of Ingolstadt (1520–21) and of Hebrew at Tuebingen (1521–22). His lectures drew vast numbers of students and his pupils included the Hebraists Johann *Forster, Sebastian *Muenster, and Philipp *Melanchthon.

"Battle of the Books"

Reuchlin's attitude toward the Jews was, at first at least, far more ambiguous than it was toward Jewish scholarship. Despite his friendship with his Jewish teachers and a few other Jews, he initially shared the prejudices of his age and social class. Thus, while (in the prefatory dedication to his *Rudimenta*) he expressed his fear that the expulsion of Jews from Spain (1492) and other lands might adversely affect Hebrew studies, he showed little sympathy for the unfortunate Jews themselves who – until their conversion – remained in "the devil's captivity." This approach also characterized his *Tuetsch Missive warumb die Juden so lang im Ellend sind* (Pforzheim, 1505). Unlike Erasmus, however, Reuchlin had no strong personal bias against the Jews.

When, early in 1510, Reuchlin was visited by the apostate ex-butcher Johannes Pfefferkorn and was asked to assist in the confiscation and destruction of Hebrew books, he demurred, only to be drawn unwillingly into the affair by the imperial decree setting up a commission to deal with the problem. Although he felt a greater sense of outrage over the suppression of kabbalistic literature, Reuchlin refused to condemn the Talmud and, unlike most of his contemporaries, he would not agree to damn what he himself did not thoroughly know and understand. His reaction was characteristic: "The Talmud was not composed for every blackguard to trample with unwashed feet and then to say that he knew all of it." Only frankly anti-Christian works such as the **Toledot Yeshu* were, in Reuchlin's opinion, liable to condemnation. Pfefferkorn and his backers, notably Jacob *Hoogstraaten and the Cologne Dominicans, accepted the challenge and, during the next decade, the "Battle of the Books" intermittently raged throughout Germany and in scholarly Christian circles further afield. Pfefferkorn's abusive and slanderous *Handspiegel wider und gegen die Juden* (1511) was answered by Reuchlin's *Augenspiegel; Wahrhaftige Entschuldigung gegen und wider ains getaufften Juden genant*

Pfefferkorn ... unwahrhaftigs Schmachbuechlin (Tuebingen, 1511) and supplemented by *Ain clare verstantnus in tuetsch uff Doctor Johannsen Reuechlin's Ratschlag von den Judenbuechern* (*ibid.*, 1512). When Hoogstraaten leveled a charge of heresy against the *Augenspiegel* and its author, Reuchlin appealed to Pope Leo X and, in a famous letter, sought the good offices of the papal physician, Bonet de *Lattes, a professing Jew, in terms reminiscent of the Book of Esther (1513). It may well be as a result of this appeal that Reuchlin stood trial not before Hoogstraaten at Cologne but before the bishop of Speyer, who acquitted him in 1514. This particular episode was more in the tradition of the Italian than of the German Renaissance.

Leo X called a temporary halt to the conflict in 1516, but the battle was resumed when Reuchlin's publication of the *Clarorum virorum Epistolae Latinae, Graecae, et Hebraicae ... ad J. Reuchlin* (*ibid.*, 1514), which contained a list of eminent German scholars who supported him, brought a curious response. An apparent rejoinder appeared, entitled *Epistolae obscurorum virorum* (1515, 1517), the total effect of which was to ridicule Reuchlin's opponents, the "obscurantists" (*Dunkelmaenner*), and bring their cause into utter disrepute. The first edition of this celebrated satire was mainly the work of Crocius Rubianus, and the two editions brought out in 1517 largely showed the hand of another of Reuchlin's allies, Ulrich von Hutten. One of the most advanced claims made by Reuchlin in the course of this battle was that the Jews be accorded proper treatment as "members of the Empire and imperial burghers." So far as the Jews themselves were concerned, victory had been achieved when Hebrew books were saved from the flames; but for the humanist intelligentsia the fight was not yet at an end. Pietro Columna *Galatinus published his *De arcanis catholicae veritatis* (Ortona, 1518) ostensibly as an anti-Jewish polemic, but its printer was Gershom *Soncino and it was, to a far greater extent, a Christian kabbalist's protest on Reuchlin's behalf. The latter's *De arte Cabalistica* (Hagenau, 1517) ended with a letter to Leo X regarding the *Augenspiegel* and this provoked Hoogstraaten's reply, *Destructio Cabale ...* (Cologne, 1519), which in turn drew an answer from Paulus *Ricius. Reuchlin's own final contribution to the "Battle of the Books" was his *Dialogus an Judaeorum libri Thalmud sint potius supprimendi quam tenendi ...* (Cologne, 1519).

Reuchlin's militant supporter, Franz von Sickingen, secured the deposition of Hoogstraaten and the silencing of the Dominicans in 1520, but in the same year Leo X, appalled by the gathering storm of the Reformation, decided the case against Reuchlin, all of whose works were subsequently placed on the Index. This was the supreme irony for, throughout the controversy, which had set Franciscans against Dominicans, Austria against France, and most of the humanists against the erudite reactionaries, Reuchlin had remained a loyal Catholic; and the *Reformation which the "Battle of the Books" had hastened, and in which Reuchlin's own nephew, Melancthon, was to play a prominent part, evoked only bitterness and hostility from the weary, but unvanquished, Hebraist of Pforzheim.

[Godfrey Edmond Silverman]

Reuchlin and the Kabbalah

Reuchlin's interest in the *Kabbalah was aroused by Pico della *Mirandola, whom he met in Italy in 1490, and by Jacob B. Jehiel Loans (d. 1506), the Jewish court physician of Frederick III who taught Reuchlin Hebrew. He sensed the affinity between the neoplatonic elements in kabbalistic teaching and the basic conceptions of the great German platonic philosopher, Nicholas of Cusa (Cusanus), whom he deeply admired. His attraction to Kabbalah remained constant throughout his life and was most probably the positive driving power behind his defense of Jewish literature. Like Pico, he expected to find in the Kabbalah a kind of esoteric Christianity, although in an as yet undeveloped state. In 1494 he published in Basle *De verbo mirifico* ("The miracle-working word"), the first book in Latin devoted to the subject of the Kabbalah. It consists of three conversations between the author (Capnion), an epicurean philosopher (Sidonius), and a Jew (Baruchias). Their common ground is the conviction that all religions express, albeit in different symbols and at various stages of perfection or distortion, the same original revelation of truth. Presenting a highly garbled and largely unauthentic version of Kabbalah (reflecting Reuchlin's very rudimentary knowledge of the subject at the time), Baruchias praises it as against epicurean philosophy. Reuchlin, who, as it were, stands above the parties, presents the Christian point of view in theosophic garb. The conversations still have a strong anti-Jewish bias. Capnion reveals to his Jewish protagonist the true mystery of the word which works miracles, the true Name of God, which is nothing but the unfolded Name of God, as against the Tetragrammaton YHWH , which is said to represent the Name of God in the period of the dominion of the Law of Moses: the miraculous name in the period of the Messiah consists of the five letters YHSWH , representing, according to Reuchlin, the name of Jesus. This innovation was his main contribution to the development of a Christian Kabbalah. The emphasis in the kabbalistic chapters of the book is on the Names of God and their magical implications, seen as some kind of preparation for Christianity.

Twenty years later, Reuchlin returned to the subject. He had in the meanwhile studied some kabbalistic manuscripts, especially Gikatilla's *Ginnat Egoz* and *Sha'arei Orah* (the latter in a Latin translation by Paulus Ricius, published 1516) and a codex of kabbalistic collectanea which indeed contained much valuable information concerning kabbalistic doctrine. In his new work, *De arte Cabalistica* (Hagenau, 1517, Basle, 1550³), which he dedicated to Pope Leo X, he again developed his theme in conversations between Simon, the Jewish kabbalist, the Muslim, Marannus, and Philolaus, who represents Pythagorean and mystical philosophy. Unlike in his former book, Reuchlin here identifies himself more or less with the Jewish kabbalist and explicitly underlines the affinity of some central kabbalistic teaching on God with that of Nicholas of Cusa. The first and third books of the work discuss the Kabbalah at considerable length and with a fair amount of objectivity and sympathy, while the second book contains a long

dialogue on Pythagoras' philosophy. Citing many passages from his sources (most of which are found in Ms. Halberstam 444 in the Jewish Theological Seminary, New York), Reuchlin lays equal stress on the theosophic school of Kabbalah as on Abulafia's and Gikatilla's teachings on the Holy Names and their permutations and combinations, although he dissociates himself from the magical misuse of such speculations. Christology no longer plays a part in these expositions and appears, if at all, in marginal comments. The quiet and dignified tone and the wealth of new information assured wide interest in the book and made it a classic of the "Christian Kabbalah." In his polemical *Destructio Cabale* ... (Cologne, 1519), Jacob Hoogstraaten denounced the "kabbalistical perfidy" propagated by Reuchlin, but because of his ignorance of the subject he failed to undermine the considerable influence of Reuchlin's kabbalistic studies.

Brod, *Johannes Reuchlin und sein Kampf* (1965).

REUSS, EDUARD (1804–1891), Protestant Bible scholar. Reuss was professor in the University of Strasbourg, his native city, from 1834. According to his own account, as early as the summer semester of 1834 Reuss defended in his lectures the thesis that the Books of the Prophets antedate those of the Law, and the Psalms postdate both. In his search for a "...psychologically understandable process of development of the Israelite people..." he used the legal element in the Bible as an "Ariadne's thread," and discovered that the early history of Israel did not presuppose the levitical cult, and that in the case of many psalms there is no question of Davidic or Solomonic authorship. Initially, Reuss did not dare to publish in a systematic form these, at first rather intuitive, ideas, which were similar to those of W.W. de Wette (*Beitraege zur Einleitung in das Alte Testament*, 1806/07) and W. Vatke (*Die biblische Theologie*, 1, 1935); rather he hinted at them in various articles that he wrote for lexicons and in book reviews. Only after his disciple and friend K.H. Graf defended them in his

Die geschichtlichen Buecher des Alten Testaments (1866) did he himself make them known, first in his large biblical work *La Bible, traduction nouvelle avec introductions et commentaires* (16 vols., 1874–81), and then in the *Geschichte der heiligen Schriften des Alten Testaments* (1881, 1890²), in which he deals with biblical literature in the framework of the history of ancient Israel. Following F.C. Baur, but at the same time correcting him, Reuss also placed the early Christian sources in their historical context (*Die Geschichte der heiligen Schriften des Neuen Testaments*, 1842, 1887⁶; *Historie de la théologie chrétienne au siècle apostolique*, 1852).

[Rudolf Smend]

REUTER, PAUL JULIUS, FREIHERR VON (1816–1899), originally **Israel Beer Josaphat** (also called **Josephthal**), German banker, bookseller, news entrepreneur and founder of the Reuters Ltd. news agency. Born in Kassel, Germany, as the third son of the Provisional Rabbi Samuel Levi Josaphat (died 1829), the 13-year-old Israel Beer was sent to his uncle in Goettingen where he was trained in a local banking house. At Goettingen University, he made the acquaintance of the famous mathematician and astronomer Carl Friedrich Gauss (1777–1855), who was experimenting in electrotelegraphy. In 1845, after having settled in Berlin, he converted to Protestantism, assumed the name Paul Julius Reuter, and married Ida, the daughter of Friedrich Martin Freiherr von Magnus (1796–1869), a Berlin banker. In 1847, together with Joseph Stargardt (1822–1885), he took over a bookshop and publishing business, "Stargardt & Reuter," in Berlin, assisted by his father-in-law's capital. After being charged with spreading "democratic" pamphlets in 1848, he managed to escape to Paris. There, as a successor to Bernhard *Wolff, Reuter first worked as a translator for the established French news agency "Agence Havas," founded by Charles-Louis Havas in 1835 (since 1944 "Agence France-Press," AFP). Noting the demand for political news, Reuter embarked upon a career of news gathering on his own. In 1849, together with his colleague Sigmund Englaender (died 1902), who had fled from Vienna in October 1848, he started a lithographed "Correspondence," directed at the provincial papers of Germany, but tightened political censorship under Louis Napoléon Bonaparte soon brought this to an end. When Europe's first commercial telegraph line, the Prussian State Telegraph Berlin-Aachen, was opened on October 1, 1849, Reuter returned to Germany and established his own telegraphic agency in Aachen (later also in Brussels, Verviers, and Quiévrain), first supplying local clients with financial news from the Prussian capital, but soon expanding. In spring 1850, when the French opened a line from Brussels to Paris, Reuter bridged the gap of about 95 miles between Aachen and Brussels by a regular pigeon post service until 1851.

In June 1851, when the Dover-Calais cable was laid, Reuter moved to London on the advice of Werner Siemens (1816–1892) and, together with S. Englaender, opened his "Telegraphic Office," later to be called "Continental Telegraph,"

"Mr. Reuter's Office" and, from 1865, "Reuter's Telegram Company Ltd." (RTC). At first limited to the dispatch of commercial telegrams, Reuter's agency soon added news, serving clients and newspapers on the Continent, the provincial press, and by 1858 the London daily newspapers, including the *Times*. In 1869, three years after the laying of the first transatlantic cable, Reuter laid his own undersea cable connecting Brest and Duxbury, Massachusetts. By the 1870s, Reuters Ltd. had established itself as the leading international news agency, extending its services from Europe to North and South America, to the coastal regions of Africa, to the Far East, including China and the East Indies, as well as to Australia. From 1870 till 1934, secret "news cartel" agreements with the competing "Agence Havas" in Paris and Bernhard Wolff's "WTB" in Berlin (from 1893 also with the Associated Press in Illinois) secured "reserved areas" of gathering and spreading news, leaving the entire British Empire to Reuters. In 1871, Reuter who had become a British citizen in 1857, was raised to a German baronage (*Freiherrnstand*) by Ernst II, the Duke of Saxony-Coburg-Gotha, which was later recognized by Queen Victoria. During the 1870s, Reuter's son HERBERT VON REUTER (1852–1915) gradually took over Reuters Ltd., succeeding the father upon his retirement in 1878. The family's association with the news agency ended with Herbert's suicide in 1915. Reuter's grandson, BARON OLIVER DE REUTER (1894–1968), an art collector and genealogist, was the family's last offspring.

After 1915, Reuters Ltd. was transformed into a private company, in 1941 into the Reuters Trust, with independent trustees, and in 1984 into a public company. In 1923 Reuters pioneered the use of radio to transmit news internationally, in 1962 for the first time via satellite, and in the early 21st century controlled the world's largest satellite and cable network.

REUTLINGEN, city in Wuerttemberg, Germany. Jews are first mentioned in Reutlingen in a declaration of Feb. 10, 1331, in which Ulrich III of Wuerttemberg waived his right to the pledges in his possession. In 1339 there is a record of Jews from Hagenau and Hessenberg settling in the town, where a major source of their livelihood was pawnbroking; a source dated 1334 notes a loan made by a Jew to a monastery. Jews owned houses in the town, and Jews from outside the town were permitted to own property and to conduct business there. A synagogue housed in a stone building dates from this period. In 1338 the mayor, Albrecht der Rote, successfully protected the Jews during the *Armlerder uprisings. However, on Dec. 8, 1348, many Jews suffered martyrdom during the *Black

Death persecutions. Apparently some Jews survived, as is evident from documents dated April 20, 1349, in which Emperor *Charles IV pardoned the crimes perpetrated against the Jews and distributed the properties of the victims among the rulers of the regions where they had lived at the time of the massacres. The municipal registers of Wuerttemberg mention Jews in Reutlingen in 1371. After they had received authorization to return to the town, they rebuilt their houses and reestablished their institutions. Reutlingen Jews are commemorated in several **Memorbuecher*.

At the close of the 19th century there were 45 Jews in the town. At the beginning of the 20th century, their numbers had increased to about 100, but by 1933 they had again declined to 50, while in the official census of 1939 only six Jews were recorded in Wuerttemberg. In 1942 the last Jews were deported to *Theresienstadt and to *Riga; none returned. After World War II a monument was set up in the city cemetery in memory of the Jews who perished during the Holocaust.

REUVENI, AHARON (1886–1971), Hebrew writer; brother of Izhak *Ben-Zvi, second president of the State of Israel. Born in Poltava, Ukraine, Reuveni went to the U.S. in 1904, returned to Poland in 1906, was exiled to Siberia in 1908, escaped the following year, and reached Palestine in 1910. Active in public affairs, Reuveni published in a wide variety of fields: articles for the press, poems, novels, essays on Hebrew and general literature, studies on social and biblical subjects, and research in early history of the Jewish people and Erez Israel.

Collections of his works include *Sippurim* (3 vols., 1928, 1951, 1954), a collection of his short stories, among the first to describe the period of the Second Aliyah; *Kol Sippurei A. Re'uveni* (1967); and *Shirim* (1965), a collection of his poems. Reuveni's novels are a trilogy on Jerusalem during World War I, *Bereshit ha-Mevukhah*; *Ha-Oniyyot ha-Aharonot*; and *Shammot* (first published in the 1920s and again in 1954 as a single book, *Ad Yerushalayim*); *Izzavon* (1930); and *Gilgul Neshamot* (1966). Among his studies of the ancient world and the Bible are *Shem, Ham ve-Yafet* (1932), *Kadmut ha-Ivrim* (1962), and *David ha-Melekh* (1965). Reuveni's *Ir Yerushalayim* was published in 1987, preceded by *Yalkut Sippurim*, a collection of stories edited (with an introduction) by H. Bar-Yosef (1980). A. Pilovski edited Reuveni's Yiddish stories in *Gezamelte Derzeylungen* (1991). Reuveni translated many works from English and French.

[Getzel Kressel]

REUVENI, DAVID (d. 1538?), adventurer who aroused messianic hopes in the first half of the 16th century. The main sources of information about his life are his “diary,” written in Hebrew, and contemporaries’ letters. Yet the “diary” accounts of his travels in the East prior to his appearance in Europe seem mainly fictitious, based on myths prevalent at the time. His true name and identity are unknown. He claimed to be the son of a King Solomon and brother of a King Joseph who ruled the lost tribes of Reuben, Gad, and half Manasseh in the desert of Habor: hence his name “Reuveni.” At other times, however, he claimed descent from the tribe of Judah and even compiled a pedigree tracing his ancestry back to King David. Although scholars disagree about his origins, there is some evidence that he was of Sephardi origin and lived in Israel and hence had good knowledge of the land, and especially the holy places. It also seems that he was connected to the sages of the Jerusalem Yeshivah, particularly the famous rabbi and kabbalist Avraham ben Eliezer Halevi.

His first historically recorded appearance was in Venice in autumn 1523. According to contemporary accounts, he appeared to be aged about 40. He claimed to be commander in chief of his brother’s army and requested the Jews of Venice to aid him on an important mission to the pope. Although most of the Jews doubted his story, he found support among certain notables including the artist Moses da *Castelazzo. In February 1524 he arrived in Rome, riding on a white horse, and was received by the humanist Cardinal *Egidio da Viterbo, whose support strengthened Reuveni’s position with Rome’s Jews and it seems they were ordered to attend to his needs. Shortly afterward he was received by Pope Clement *VII to whom he proposed a treaty between his state and the Christian world against the Muslims.

According to his diary, he requested the pope to give him letters to the Holy Roman emperor Charles v and to Francis I of France, recommending them to extend him their help, mainly in the form of armaments. He also asked for a letter to the mythical “Prester John” in Ethiopia. Yet it seems that his real purpose was to get to Portugal, for to which he indeed received a letter of recommendation, so that the description in his diary is only a cover-up, written after the failure of his mission in Portugal. In Rome Reuveni found support in some enlightened Jewish circles, including the bankers Daniel and Vitale da Pisa and Benvenida Abravanel, wife of Samuel *Abravanel, who sent him money and a silk banner embroidered with the Ten Commandments. This and the other banners he carried created a theatrical impression wherever he traveled.

In 1525 Reuveni was in Portugal where the king, John III, received him as an official ambassador. He was immediately acclaimed by some of the *Marranos, who flocked to see him and kiss his hands, convinced that he heralded the coming messiah. To the representative of the sultan of Fez he openly said that the time had come for the Jews to take Jerusalem and Erez Israel from the hand of the Ishmaelites. Reuveni also established contact with the Jews of North Africa and sent them letters of encouragement. However, while his prestige as a harbinger of redemption grew among the Crypto-Jews, his reputation with the nobility and officials gradually declined. The unrest he caused aroused serious suspicions at court and Reuveni was summoned to the king, who accused him of coming to suborn the Marranos to revert to Judaism. When Diego Pires (Solomon *Molcho) declared himself a Jew, Reuveni was ordered to leave Portugal. He left amid the grief of the Marranos, but he encouraged them by saying that he had come on that occasion only to inform them that redemption was near. He was arrested off the Spanish coast and imprisoned until, as he says, he was released on the instructions of the emperor Charles v. Here the “diary” breaks off but additional facts are known. A short while afterward he was shipwrecked off the coast of Provence, imprisoned for two years by the lord of Claremont, and released at the request of the king of France on the payment of ransom by the Jewish communities of Avignon and Carpentras. In November 1530 he was back in Venice, after having visited various places in Italy. He tried to have consultations with the city governors and attempted to bring his plans to the attention of the emperor. At the suggestion of Frederick, marquis of Mantua, he traveled to that city. However, Frederick was informed by some of Reuveni’s enemies among the Jews that he had forged several letters – to himself, to the pope, to Charles, and to the Jews from his brother King Joseph – to replace the documents which he claimed had been lost during his travels. The marquis now warned the pope and Charles v against Reuveni and when he and Molcho appeared before the emperor in the summer of 1532 they were imprisoned. Molcho was burned at the stake while Reuveni was taken to Spain in chains. He perished in due course (probably at Badajoz in 1538), charged with having seduced New Christians to embrace Judaism.

From his “diary” Reuveni emerges as a man in whom the misery of the Jews aroused strong feelings. He admired the Jews of the West (while despising those of the East) and addressed himself to them; they in turn were impressed by those very qualities in him which he found in them. His deep feeling, fearlessness, and steadfast character are greatly praised by the banker Daniel de Pisa. Reuveni aroused the greatest fervor among the Marranos and downtrodden Jews brought up in the new spirit of the Renaissance and longing for redemption. Reuveni was the first to move the messianic idea and activity to a rational political sphere. He felt that an impressive appearance and a seemingly realistic political program were likely to help the messianic propaganda among the

Jews and Marranos. Hence his constant stress that he is not a prophet nor a messiah but only a military commander and occasionally he evaluates the martial qualities of the Jews he has encountered. All his exaggerated stories about his many expenses, his wicked servants, and his great treasures reflect his naive idea that nobles acted in this fashion. His activity is in sharp contrast with the messianic magical-mythical activity typical of that period, and in this he seems to continue in the path of R. Avraham ben Eliezer Halevi. It appears that Reuveni was interested in creating a certain geopolitical situation which would have messianic meaning for the Jews (a Christian-Muslim war which would become the war of Gog and Magog). This was probably the purpose of his traveling with Solomon Molcho to meet the Emperor Charles v in Regensburg. He re-edited his diary after his failure in Portugal, in the hope that it would help him reestablish his credibility and continue in his messianic activity. This is the explanation for the many contradictions in the diary. However, all his pretentious posturing does not hide the fact that he was a deeply religious man, scrupulously observing the Jewish precepts, fasting six days in the week, and feeling that Providence had chosen him to announce the coming redemption to his oppressed fellow Jews.

The story of David Reuveni fascinated subsequent generations and was the subject of a number of novels (e.g., by Max *Brod).

[Shmuel Ettinger / Moti Benmelech (2nd ed.)]

REVADIM (Heb. רֵבָדִים), kibbutz in the southern Coastal Plain of Israel N.E. of Kiryat Malakhi, affiliated with Kibbutz Arzi ha-Shomer ha-Za'ir. Revadim was originally founded in 1947 as the fourth settlement of the Ezyon Bloc (see *Kefar Ezyon) in the Hebron Hills. The young settlers participated in the bloc's heroic defense and suffered grave losses. On May 13, 1948, their village fell and was totally destroyed. The survivors were taken to Jordan as prisoners of war. After their return, they were allocated the present site where they established a new kibbutz (November 1948). They were soon joined by immigrants from Bulgaria and other countries. In 1970 Revadim had 251 inhabitants; in 2002, 296. The kibbutz economy went over from mainly farming to tourism and small industry (guest rooms, a museum of antiquities, the Roman Glass Co. designing original jewelry for a worldwide market). The name, meaning "Terraces," refers to the landscape of the original site in the Hebron Hills, where terracing and afforestation constituted the settlers' principal occupation.

RÉVAH, ISRAEL SALVATOR (1917–1973), French hispanist. Révah was born in Berlin to a family originating from Salonika. Educated in Paris, he began his research career on 16th-century studies under the guidance of Lucien Febvre and Marcel Bataillon. Wartime persecution put a temporary halt to his academic career. He worked as a school teacher and in 1946 took a post as a Spanish teacher in Bordeaux and Saint-Maur. From 1946 he worked at the French Institute in Lisbon, where he elaborated his method of blending literary and archival research, first as research fellow and from 1948 as professor, editing its bulletin and publishing Portuguese texts related to Judaism as well as several works by Gil Vicente. In 1955 he was called back to Paris as a directeur d'études at the École des Hautes Études, and in 1966 he was appointed professor at the Collège de France, holding the chair of Language and Literatures of the Iberian Peninsula and Latin America. During the last decade of his life, he lectured almost exclusively on Sephardi subjects, leaving most of his studies unpublished at his untimely demise. As a linguist, Révah elucidated the origins of Judeo-Spanish (see *Ladino), his mother tongue, from the scientific viewpoint of medieval peninsular dialectology. As a historian, he explored the vicissitudes of Jewish consciousness among the Spanish and Portuguese Marranos by way of large-scale family monographs, coining the definition "potential Jews" for this profoundly inconsistent group. Révah is best known for his discovery of historical links between the Iberian crypto-Jewish environment and the anti-religious revolt of Uriel da *Costa and *Spinoza; he published several studies on the intellectual history of the Marranos, on Spinoza, and on Uriel da Costa. In his evaluations of the role of Jews and New Christians and the Inquisition in Iberian culture, he defended the centrality of religious factors against the sociological approaches of Americo Castro and António José Saraiva on this subject.

Among his works are: *Spinoza et le dr Juan de Prado* (1959), *Des Marranes à Spinoza* (1995), *Antonio Enríquez Gómez, un écrivain marrane* (2003), and *Uriel da Costa et les Marranes de Porto* (2004).

REVEL, BERNARD (Dov; 1885–1940), U.S. educator and scholar, leader of modern Orthodoxy. Revel, born in Kovno, Lithuania, studied at the yeshivah of Telz. In 1906 he emigrated to the U.S., where he studied at New York University and Dropsie College in Philadelphia. For a time he had an oil refining business in Oklahoma. In 1915, as *rosh yeshivah*, Revel began reorganizing the Isaac Elchanan Theological Seminary in New York, opening it to laymen and teachers as well as rabbinical students; and in 1916 he founded Talmudical Academy, the first combined academic high school-yeshivah in the U.S. In 1928, despite strong opposition from those who feared that Torah study would be undermined, Revel founded Yeshiva College as an extension of the seminary. It was the first liberal

arts college under Jewish auspices and represented the first attempt to offer a traditional talmudic education with a modern course of secular studies on the higher level based on the principle of *Torah im Derekh Erez*. Revel, who served as president of the college, organized the graduate school of Jewish studies, named after him, in 1937. He was the first institutional head to give *semikhah* to Orthodox rabbis in the U.S. Revel was honorary president of the Union of Orthodox Rabbis of the United States and Canada, and was vice president of the Jewish Academy of Arts and Sciences from 1927. He was associate editor of *Ozar Yisrael* (1913), a Hebrew encyclopedia. His scholarly interests included Targum Jonathan, Josephus, Jubilees, the development of ancient exegesis, Karaism, and, especially, the evolution of *halakhah*. He published his doctoral dissertation for Dropsie College, *Karaite Halakah and its Relation to Sadducean, Samaritan and Philonian Halakah* (1913), which refuted A. *Geiger's claim that Karaism was a continuation of Sadduceism. Revel's many articles and novellae were published mainly in the *Jewish Quarterly Review*, *Ha-Pardes*, *Horeb*, and *Talpioth*. A biography of Revel by A. Rothkoff has been published by the Jewish Publication Society of America (1972).

BIBLIOGRAPHY: S.B. Hoenig, *Rabbinics and Research; the Scholarship of Dr. Bernard Revel* (1968), with full bibliography; B.A. Poupko (ed.), *Eidenu, Memorial Publication in Honor of Rabbi Dr. Bernard Revel* (1942).

[Sidney B. Hoenig]

REVEL, MICHEL (1938–) Israeli virologist. Revel was born Strasbourg, France, where he obtained his M.D. and Ph.D. in 1963 from the University of Strasbourg. After a postdoctoral fellowship at Harvard Medical School in Boston, he held research positions at the Institut de Biologie Physico-Chimique in Paris, working with Prof. François Gros, a director of the Pasteur Institute. In 1968, he joined the Weizmann Institute of Science, Rehovot, Israel, became a full professor in 1973, and headed for several periods the departments of virology and of molecular genetics. Revel together with Gros discovered the initiation factors of protein synthesis, which play a major role in the control of mRNA translation and gene expression. Revel is best known for his work on the mechanism of the action of interferon and the cloning of the genes for human interferon beta (IFN-β) and interleukin-6 (IL-6). His work led to the establishment in 1979 of InterPharm-Serono, the leading Israeli biotechnology company that produces recombinant interferon-beta (Rebif), a medication approved and used worldwide for the treatment of multiple sclerosis. Other uses of IFN-β include genital herpes, viral hepatitis, and some papillomavirus infections. Interleukin-6 (Atexakin) is being developed for the repair of nerve myelin in neuropathies and for differentiating embryonic stem cells as a means to transplant myelinating cells in the nervous system. Revel is the chief scientist of InterPharm, and pursues his research at the Weizmann Institute of Science. He received the Israel Prize for medicine in 1999 and the EMET Prize in 2004 for

his contributions to medicine and biotechnology. He holds many honorary memberships in professional societies including the European Molecular Biology Organization (EMBO) and the Human Genome Organization (HUGO). He was the chairman of the National Biotechnology Committee for Israel (1999–2002). From 1993, he was a member of the International Bioethics Committee (IBC) of UNESCO. He contributed to the UNESCO Universal Declaration on the Human Genome and Human Rights and authored IBC reports on genetic counseling, on therapeutic research with human embryonic stem cells (including cloning), and on behavioral genetics. In Israel, he serves as chairman of the Bioethics Advisory Committee of the Israel National Academy of Sciences and Humanities and the National Bioethics Committee of Israel, appointed by the Israeli government in 2003.

Revel has published or edited three books, over 220 scientific articles, and writes on bioethics, emphasizing the viewpoints of the Jewish tradition. He directs a study group on the *Zohar and ḥasidic teachings

[Bracha Rager (2nd ed.)]

REVELATION, an act whereby the hidden, unknown God shows Himself to man. To be sure, this phenomenon belongs to the realm of human reality, but it is experienced by man as coming from God. Phenomenologically, every religion finds its starting point in a revelation. The ancient Hebrews expressed this idea in different ways. The reflexive form, *nif'al*, of the verb *galah* ("to uncover, reveal"), is used only rarely to denote divine revelation (Gen. 35:7; 1 Sam. 2:27; 3:21). In the biblical tradition, revelation consists less in the disclosing of a secret or a mystery, than in the manifestation of the invisible God, unknowable to man on his own. This view of revelation results unmistakably from the widespread use of the *nif'al* of the verbs *ra'ah* ("to see"), and *yada'* ("to know"), to express in biblical Hebrew the idea of revelation.

The word *nir'ah*, "he let himself be seen, showed himself," refers originally to a visionary manifestation of God in a holy place. It occurs principally in narrative passages whose aim was to explain the origin of a holy place. In fact, holy places are often regarded as sites where theophanies took place. The accounts of such divine appearances belong to the genre of etiological tales. They are found in the Bible too, insofar as the ancient Israelites attributed the sacredness of several holy places to the fact that they were sites of divine revelations. According to Genesis 12:6–7, for instance, Abraham passed through the land to the holy site of Shechem, i.e., to the terebinth of Moreh (cf. Judg. 9:37). There the Lord "showed Himself" to Abraham, and there Abraham built an altar to the Lord. The particular holiness of the altar marking the sacred place is explained by its origin, namely, the appearance of the Lord to the patriarch. It should be noted, however, that no attempt is made to describe the apparition, and only what words were uttered and what promise was made are recorded. Nevertheless, since in this narrative there is no suggestion of a dream, the revelation probably took the form of a vision accompa-

nied by divine words. These words are an essential element, for revelation as an event generally needs further explanation. It is only after the Lord has spoken that His manifestation can be understood and acquires importance for human life. These characteristics are common to most divine revelations in the Bible when marked by the use of the *nif'al nir'ah*.

There is, however, the belief, which originated in ancient times, that it is deadly for man to see the Deity (Ex. 33:20; Judg. 13:22). Dreams and the mediation of angels have no mitigating effect, since the dream gives a stronger vision and the *mal'akh YHWH* ("angel of the Lord") is the epiphanic medium of the Lord, even "the Lord Himself in self-manifestation or, in other words, a personification of the theophany" (J. Skinner, *Genesis* (1910), 286). It is only rarely and to special persons, therefore, that YHWH makes Himself visible, and communicates to man His purposes and intentions. He does so to Abraham (Gen. 12:6-7; 17:1-2), Isaac (Gen. 26:24), Jacob (Gen. 35:9-10; 48:3-4; cf. Ex. 6:3), Moses (Ex. 3:2ff., 16-17), Manoah (Judg. 13:21-22), and Solomon (1 Kings 3:5ff.; 9:2ff.). Nevertheless, He may show Himself to the whole of the people at the Tent of Meeting (Lev. 9:4, 6, 23; Deut. 31:15; cf. 31:11), which is "a kind of permanent image of the revelation on Mount Sinai" (M. Haran, in: *JSS*, 5 (1960), 50-65, esp. p. 58). What the people see, however, is the *kavod*, the "Presence of the Lord" (Lev. 9:6, 23), or the *'ammud he-'anan*, the "pillar of cloud" (Deut. 31:15). The latter indicates the Lord's Presence, but, at the same time, veils Him from sight. The *kavod*, whose original conception goes back to early times (cf. 1 Sam. 4:21; 1 Kings 8:11; Ps. 24:7-10), likewise signifies a veiled appearance of God, an appearance in a manner in which no precise form can be discerned. It probably alludes to a manifestation by fire, light, and smoke, connected initially with the circumstances in which the cult operated.

Other texts use the word *noda'*, "he made himself known," which avoids the anthropomorphic connotations of the root meaning "to see." The author of the Priestly document of the Pentateuch, however, uses both words, but opposes *noda' to nir'ah* in Exodus 6:3, the latter denoting the Deity's self-identification by name. Exodus 6:2-8, in turn, is obviously the inspiration of Ezekiel 20:5-9 and hence also of Ezekiel 35:11-12, 38:23, and 39:7 as well, where the causative form *hif'il* is used with the Lord's Name as object (cf. Isa. 19:21). In all these texts, *noda'* is connected with the formula *'ani YHWH* ("I am the Lord"). These texts may be compared with similar expressions known from Mesopotamia: "I am Ningirsu," "I am Ishtar of Arbela," "I am the god Nabú," etc. The difference between these Oriental self-revelation formulas and the biblical one consists in the fact that the Tetragrammaton (YHWH) is usually followed by the statement that the Lord is the God Who brought Israel out of Egypt, and Who guides them through history. The God of Israel thus reveals Himself as acting in historical events. It may reasonably be inferred, therefore, that, according to the Bible, history is the milieu of God's revelation.

It has been objected that God's acting in history plays no real role in the biblical wisdom literature. This has, in fact,

been a very awkward point for those who assert that revelation in history is central to Hebrew thought. The difficulty, however, seems to have originated in a confusion between revelation as understood by ancient Israelites and as viewed by modern scholars who are aware of a systematic biblical theology.

In the Pentateuch and the Former and Latter Prophets, God reveals Himself, His plans, or His will, through words or events. The other books of the Bible are generally thought not to contain revelations of this kind. In relation to modern theology, it must be emphasized that both revelation and wisdom phenomenologically proceed from experiences of life. Wisdom characteristically classifies the elementary experiences of daily life, whereas revelation results from "prophetic" interpretations of exceptional events in the life of the people or even of the "prophet" himself. (For the revelation on Mt. Sinai, see the Book of *Exodus.)

[Edward Lipinski]

In Talmudic Literature

The manifestation of God in acts or appearances which overawe man (*gillui Shekhinah*) is the theme of many passages in talmudic and midrashic literature. However, the main concern of talmudic thought is not so much with God's revelation of Himself or of His attributes (although this too is an important topic), but rather with God's revelation of His word to man (*devar Adonai*). Much is said regarding the revelation of God's word to the forefathers Abraham, Isaac, and Jacob, as well as to other biblical characters, and especially to the prophets; a vast number of talmudic sources deal with the revelation of God's word par excellence, the Torah. Favorite topics of the Midrashim are the giving of the Torah (*mattan Torah*), the importance of the Torah for the world and for the people of Israel, the nature of the Torah, its permanence, etc.

Much less attention is devoted to the nature of the act of revelation, and what is said regarding the process in which God's word is revealed to the Jewish people and to the prophets is not nearly so systematic as the treatment of these topics in philosophy and in patristic literature. Talmudic sources assume a hierarchy of different forms of revelation, varying from inspiration by the Holy Spirit (**Ru'ah ha-Kodesh*) to *prophecy itself; and of prophecy there are different degrees, of which the prophecy of Moses represents the highest. However, this scheme comes to demarcate the Torah, which represents the prophecy of Moses, from the works of the prophets, and these again from the other books in the Bible which are inspired by the Holy Spirit. It is bound up, therefore, with the sanctity and authority to be assigned to the different holy writings. Similar remarks apply to the talmudic sources regarding the psychological aspects of revelation. Sometimes the divine manifestation takes place in a vision or in a dream or through the mediation of an angel; but Moses speaks to God face to face whenever he wishes. He beholds God as in a translucent mirror, whereas the other prophets see as in a dark glass (Lev. R. 1:14; Yev. 49b). The stature of Moses as a

prophet thus guarantees the sanctity and authority of *Torah Moshe* – the Pentateuch.

The Torah is identified with the wisdom which had existed before the creation of the world (Sif. Ekev 37; Gen. R. 1:4) and is regarded as the instrument with which the world was created (Sif. Devarim 48; Avot 3:14). The concept of Torah is thus broadened to include not only God's commandments, the admonitions to observe the commandments, and stories of the forefathers, but also the admonition of all the other prophets and the ethical maxims of the other books of the Bible. Thus there occurs the notion that all the prophecies of all the prophets were included in the revelation on Sinai – they were formulated and publicized by later prophets when the need arose (Ex. R. 29, 6; Tanh. Yitro 11).

The notion of the sanctity of the Torah as being the word of God is, therefore, the core of the talmudic teaching regarding revelation, and forms the theme of several passages which are specially important as representing the sources for the doctrines concerning revelation which came to be formulated in medieval Jewish philosophy.

One such passage is the Mishnah (Sanh. 10 (11):1) which tells that among the Israelites who have no portion in the world to come are those who deny that the Torah is from Heaven (*Torah min ha-Shamayim*). An expansion of this is afforded by the *Sifrei* (*Shelah*, ed. Horowitz, p. 121) which says that also he who admits that the Torah is the word of God but maintains that one particular matter was said by Moses of his own accord is to be regarded as "a despiser of the word of God" (Num. 15:31). The *baraita* parallel to this is quoted in the talmudic discussion as an explanation of the Mishnah in *Sanhedrin* 99a and differs from the *Sifrei* only in emphasizing in more detail that even he who says a particular verse, a particular point, a particular a fortiori argument, or a particular inference by analogy was said by Moses of his own accord is to be regarded as a despiser of the word of God. Thus the concept of *Torah min ha-Shamayim* is associated primarily with the notion that every syllable of the Bible has the verity and authorship of the word of God. The contents of the sacred books are to be regarded throughout as conscientious and homogeneous, with not only no contradiction in them, but also no real differences (G.F. Moore). This concept of the underlying unity of the Scriptures, and especially of the Pentateuch, is connected with the notion of layers of deeper meanings beneath the words of the Written Torah of which the plain literal meaning is only the surface. Such a conception not only leads to the mystic notion of the oneness of the Torah, which is hinted at in several talmudic passages and comes to be expressed in particularly striking form by the medieval mystics (particularly Nahmanides); it also forms the basis (cf. Y. Baer) for the explication of the traditional distinction between the Written and the Oral Law, the latter providing the real significance and true interpretation of the words of the written text.

Scholars such as Joel, Kohler, Boaz Cohen, and Heschel (see also below) have argued that Abbaye's statement (Meg.

31b) that the curses in Deuteronomy were said by Moses "of his own accord" (*mi-pi azmo*), and other statements in similar vein (see A.J. Heschel, *Torah min ha-Shamayim*, vol. 2, chs. VII and IX), reflect the dissenting view that there are parts of the Torah that are not literally inspired. However, this may be an error based on the ambiguous meaning of the expression "of his own accord" (for traditional sources concerning this see M.M. Kasher, *Torah Shelema*, 19 (1959), 333–42).

The concept of the literal inspiration of the Torah is an important premise of the *hermeneutics of the Oral Law (*Torah she-be-Al Peh*) which sometimes treats the written text as little more than a series of mnemonic signs. Such an attitude is especially characteristic of the hermeneutics of R. Akiva and his school, but even R. Ishmael and his school, although they maintained that the Written Torah speaks the "language of men," nonetheless regarded each word as divinely inspired. The contrary has been argued by A.J. Heschel (*Torah min ha-Shamayim*, vol. 1, p. 16 and vol. 2, chs. VI and VII) in a work attempting to show that the two schools held basically different concepts of the Torah and of the nature of revelation.

The chief revelation of God to Moses and to His people took place at Mount Sinai. It is not explicitly stated either in the Pentateuch or in talmudic literature that this was a case of mass prophecy. Differing views concerning this are expressed in medieval Jewish philosophy. However, the revelation of the Torah to Moses is naturally interpreted as a prophetic phenomenon. That the revelation at Mount Sinai consisted of the giving to Moses of the whole Torah (including the Oral Law), and not merely the Ten Commandments, is stated in many talmudic and midrashic sources. This would seem to imply that the whole of the Torah was revealed to Moses, detail by detail, during his 40 days on Sinai in such a way that when he came down there was nothing left to be revealed. However, other commandments are said to have been given in the Tabernacle and at Arboth Moab. Talmudic sources offer different opinions to reconcile these statements. Different opinions are also offered regarding the writing of the Torah. The Mishnah in *Avot* 1, which is one of the primary talmudic sources associating the Torah with Sinai, seems to be referring particularly to the Oral Law. Some sources, however (TJ, Shek. 6:49d and Sot. 8:22d; Song R. 5:11 and Deut. R. 3:12, etc.), mention a scroll which was given at the same time. Other opinions maintain that the Torah was written piecemeal (scroll by scroll) during the 40 years of wanderings in the desert, or that it was written down all at once at the end of those 40 years (Git. 60a). There are also sources which speak of the existence of scrolls before Sinai (Kasher, pp. 356–62).

The attribution of the Written Torah to Moses is affirmed by a tannaitic source (quoted in BB 14b and TJ, Sot. 5:6–end) which relates that Moses wrote his own book, the portion of Balaam and Job, while Joshua wrote the book which bears his name and the last eight verses of the Pentateuch. In the discussion arising out of this passage a dissenting opinion is quoted which ascribes even the last eight verses of the Torah (describing his own death) to Moses. The authorship referred

to in this passage is ostensibly comparable to Joshua's authorship of the book bearing his name. However, such a straightforward conception of literary authorship will be modified by the claim that the Torah is literally inspired and is the revealed word of God to Moses. Nevertheless, that the Torah is written by Moses is everywhere assumed in talmudic and midrashic literature, and the Torah is frequently described as *Torat Moshe* – the “Torah of Moses.”

It has been plausibly argued (J.J. Petuchowski) that of the two traditional notions, the heavenly origin of the Torah (*Torah min ha-Shamayim*) and Mosaic authorship, the former is dogmatic in character in talmudic thought, whereas the latter is more in the nature of an accepted truth about literary authorship. The two notions are at any rate disparate in importance.

In receiving the Torah, Moses acted as a scribe writing from dictation, as was the case with Baruch and the prophet Jeremiah (BB 15a). This is the passage that has been dominant in subsequent attempts to describe the nature of the Mosaic revelation in medieval Jewish philosophy. But there are midrashic sources which would seem to support a less mechanical and more instrumentalist conception of revelation. Thus the Midrash (Ex. R. 47–end) relates that the angels, jealous of the role entrusted to Moses in bringing the Torah to mankind, voice suspicions that Moses might write his own ideas into the Torah. God replies that Moses would not do so; but even if he did he could be trusted to represent reliably the divine will. There is, however, no attempt in talmudic thought to provide the sort of instrumentalist analogies of revelation which are offered in patristic thought – the inspired writer as a vessel which the Holy Spirit proceeds to fill, etc. On the other hand, revelation, like prophecy, comes to each individual in accordance with his capacities. When the voice went forth at Sinai, God addressed each person with a voice he could endure (Ex. R. 5:9).

The voice from Sinai (*kol mi-Sinai*) is a characteristic talmudic theme. This voice already included all the words of the prophets, and indeed the rabbis of later ages received what they say at Sinai (Ex. R. 28:6; Tanḥ. Yitro 11, etc.). This may be interpreted (E.E. Urbach, p. 270) as a talmudic attempt to restrict revelation so far as possible to a onetime act in order to emphasize the irrelevance in matters of *halakhah*. On the other hand, according to other sources, the voice from Sinai has not yet stopped; so that even though the Holy Spirit has departed from Israel with the cessation of prophecy and subsequent revelations are confined to a Heaven-inspired echo (*bat kol*; 13:2; Sanh. 11a), this heavenly echo still goes forth each day from Sinai to announce that woe will befall all those who slight the Torah (Avot 6:2).

[Jacob Joshua Ross]

Ancient and Medieval Jewish Philosophy

Understanding the nature and process of prophetic revelation and especially its relation to reason constitutes one of the major areas of interest in Jewish religious philosophy. The ques-

tion of the authority of the Mosaic revelation appears in its purest form in the works of *Philo, who wrote before the rise of Christianity and Islam. In later periods the differing claims of the other two monotheistic religions had to be taken into account: Islam, primarily in the Judeo-Arabic phase of medieval Jewish philosophy, and Christianity, in the Hebrew phase from the 13th through the 16th centuries in Spain, southern France, and Italy.

PHILO. The Mosaic revelation is central for Philo. In his view, statements in the Pentateuch can be divided into three categories: that of the direct revelation of God Himself by means of a created voice which Moses heard; those which came about as a result of the questions of Moses; and those which are the result of divine inspiration (Mos. 2:188). Moses himself is viewed as a philosopher king, in accordance with Plato's *Republic*, as well as a legislator, high priest, and prophet. “Moses necessarily obtained prophecy also, in order that through the providence of God he might discover what by reasoning he could not grasp” (*ibid.* 2:6). The allegorical method of interpreting revelation is the tool by means of which the conflict between the demands of philosophy and the apparent meaning of revelation can be reconciled. The use of allegorical interpretation is mandatory in respect to anthropomorphic expressions about God which must not be taken literally. The purpose of the revealed law is to serve as the constitution of the ideal state, caring for both the spiritual and material welfare of mankind.

SAADIAH. In the age of *Saadia Gaon the claim of the Mosaic revelation to authority had to be justified against the Christian and Islamic assertions that it had been abrogated (*Book of Beliefs and Opinions*, 3). Confirmation of the prophet's mission lies in the miracles performed by him. The confirmation of the truth of revelation for those living after the time of its promulgation lies in tradition which, for Saadiah, is the fourth source of authentic knowledge in addition to sense perception, the first principles of reason, and logical inference. The commandments themselves fall into two major divisions: the rational and the nonrational or “obediential.” Saadiah supposes that even rational commandments need to have been revealed in order to fix the details of their performance. Furthermore, he is of the opinion that revelation is necessary for those who would take a long time in arriving or never arrive at the truth by unaided reason. Allegorical interpretation plays a much more restricted role than in the case of Philo.

NEOPLATONISM. It is interesting to note that the chief representative of the neoplatonic trend of Jewish thought, Solomon ibn *Gabirol, does not even consider the problem of the relation of reason to revelation, nor does he quote Scripture in his *Mekor Hayyim*. His predecessor, Isaac b. Solomon *Israeli, does deal with the problem of the prophet and prophecy in passing. The prophet and the sage on the highest level, he who has achieved union with the Divine, are identified. But the prophet expresses himself in imaginative language in order to teach and guide the vulgar masses. One of the functions of

the imaginative faculty of the prophet is to express in figurative symbols and sensible images material derived from reason, a view which is related to that of al-^{*}Fārābī and which is to be found in Maimonides' *Guide*.

JUDAH HALEVI. With ^{*}Judah Halevi, the autonomous character of revelation and its superiority to reason come to the fore. In Judah Halevi's thought, the "divine command" (*al-amr al-ilāhī*), which is the link between God and man, clings to the prophet chosen by God to reveal His will to man. The prophet is superior to the philosopher by the very fact that his knowledge is derived directly from God, whereas the science of the philosopher is subject to doubt. Judah Halevi's concept is based on the neoplatonic concept of nature being ordered hierarchically in a great chain of being, that is, an upward progression from ordinary man to philosopher to Israel and the prophets and then the Divine. Contrary to his predecessor, Judah Halevi considers the unique quality of revelation to lie in its nonrational character. The ritual commandments are the true link between the people of Israel and God. In the first treatise of his *Kuzari*, the claims of Christianity and Islam to have supplanted the Mosaic revelation are dismissed on the grounds that the beliefs of Christianity are inherently improbable while the Muslim claims lack supporting evidence at the same time that the divine origin of the Mosaic revelation is conceded.

MAIMONIDES. Maimonides returns to a more Aristotelian concept of revelation in which he follows in the footsteps of his Islamic predecessors al-Fārābī and ^{*}Avicenna. Essentially Maimonides treats prophecy as a natural phenomenon: "Know that the true reality and quiddity of prophecy consists in it being an overflowing from God ... through the intermediation of the Active Intellect, toward the rational faculty in the first place and thereafter toward the imaginative faculty" (*Guide*, 2:36). If the rational faculty alone comes into play, the individual is a philosopher and if only the imaginative faculty is brought into play, the individual belongs to the class of statesmen. Therefore, essentially the prophet is a philosopher statesman in accordance with the Platonic tradition. Thus Maimonides takes a position similar to that of Philo mentioned above. The position of Moses in this scheme is problematic since, according to Maimonides in both his *Guide* and his *Mishneh Torah*, the imaginative faculty did not play any role in his prophecy and he prophesied whenever necessary. In a famous passage Maimonides states that "the Law as a whole aims at two things: the welfare of the soul and the welfare of the body" (*Guide*, 3:27). For the masses, belief has a political role to play, for the masses cannot achieve the heights of metaphysical speculation which alone insure true happiness and the immortality of the intellect. For the philosopher, the Law insures his political well-being and allows him the necessary leisure to indulge in the delights of the mind. Therefore, the function of revelation may be defined as essentially political in nature, not as a means to individual salvation. In order to reconcile any conflicts between philosophy and the apparent

meaning of revelation, the allegorical method of interpretation is used. It would seem just to conclude from Maimonides' historical analysis of the origin of the sacrificial cult that he was satisfied with the status quo existing in his time and envisaged the possibility of the abrogation of part of the Mosaic code, although in speaking as a legist he took of course a completely different position in his *Mishneh Torah*.

CRESCAS. Maimonides exercised great influence on the development of philosophy in Hebrew by way of both support and criticism. Ḥasdai ^{*}Crescas, writing in 14th-century Christian Spain, and pressed by the attacks of the Catholic Church and its inroads on the Jewish community, emphasized the idea that the happiness of man lies essentially in the love of God and in the service of God through the observance of the commandments of the Torah. Here revealed religion is given intrinsic value contrary to the view of the Aristotelians.

ALBO. Joseph ^{*}Albo tries to steer a middle course between the conservative position of Judah Halevi and the more rational position of Maimonides. He begins his *Sefer ha-Ikkarim* by stating that "human reason is not capable of comprehending things as they are in reality ... There must therefore be something higher than the human intellect by means of which the good can be defined and the true comprehended in a manner leaving no doubt at all. This can only be done by means of divine guidance ..." (*Book of Principles*, ed. and tr. by I. Husik, 1 (1929), 5). For Albo, intellectual perfection is not the ultimate goal, but rather "belief in God and His Torah brings man to eternal happiness and causes his soul to cleave to the spiritual substance" (*ibid.*, 1, ch. 21). His definition of prophecy is worded very much like that of Maimonides (*ibid.*, 3:8, p. 71), but emphasis is laid on the intervention of the divine will which interferes with the natural process more drastically than in the case of Maimonides. It would seem that Albo's limitation of the rationalistic approach of Maimonides is due to the pressure of Christian polemics.

SPINOZA. Baruch ^{*}Spinoza in his *Tractatus Theologico-Politicus* ("Theological Political Treatise"), combating both the conservative and rational attitudes represented by his Jewish predecessors, clearly strips revelation of all authority except in the sphere of morals and ethics, and pleads for freedom from the thrall of revealed doctrine, thus laying part of the foundation for the emergence of the modern era.

[Lawrence V. Berman]

Modern Jewish Philosophy

In modern Jewish philosophy the term "revelation" embraces a variety of meanings, ranging from the supernatural communication of divine truth and instruction to the apprehension of God's will and attributes through the exercise of man's spiritual or rational faculties.

In conformity with deistic doctrines concerning "natural religion," Moses ^{*}Mendelssohn maintained that the "universal religion of reason" contains all the doctrinal elements and moral perceptions needed for salvation. The supernatural

revelation received by Israel at Sinai does not impinge upon the domain of the “universal religion of reason,” for Judaism is not a revealed religion but revealed legislation, providing specific laws for the regulation of conduct but not concepts (*Jerusalem* (1862), pt. 2, ch. 3).

Idealistic thinkers reformulated the concept of revelation as a gradual process. Divine truth is revealed to man through his intellectual faculties in an educational process of “continuous” or “progressive” revelation. Nachman Krochmal, whose views were influenced to a large extent by Hegelian categories of thought, considered revelation the process of ever-increasing consciousness of the immanent Divine Spirit. Similarly, Solomon Formstecher and Samuel Hirsch maintained that revelation constitutes the recognition of the Divine Spirit manifesting itself in man, not the communication received from a transcendent sphere. The last vestiges of opposition between reason and revelation are overcome in the neo-Kantian system of Hermann Cohen. God reveals His will by creating man as a rational creature who through his reason is capable of apprehending the laws of logic and ethics. Thus, revelation no longer refers to any historic event nor even any special mode of cognition; it characterizes a trait of man, who through the possession of his rational faculties becomes the bearer of divine revelation (*Die Religion der Vernunft aus den Quellen des Judentums* (1919), 82–92).

In radical opposition to all idealistic trends, Solomon Ludwig Steinheim emphasized the inadequacy of speculative reason in the realm of religious truth. Objecting also to Mendelssohn’s position, he stressed the primacy of the doctrinal, rather than legislative, elements in the content of revelation. Only through revelation can belief in a freely creating God arise (*Die Offenbarung nach dem Lehrbegriffe der Synagoge*, 1 (1835), 318). Although Steinheim did not regard revelation as a process, but as a particular event in which the word of God is communicated to man, he was not committed to the doctrine of the verbal inspiration of the Scripture. The latter doctrine is the basis of Samson Raphael Hirsch’s system, which stresses the belief in the divine origin of both the Oral and the Written Law.

Existentialists opposed the theories that consider revelation primarily as the transmission of content consisting either of metaphysical principles or moral and ritual laws. Martin Buber advocated a conception of revelation involving a dialogic relationship between man and God. Revelation is the encounter of the Presence of God, not the communication of ideas or instructions. Revelation constitutes a wordless address, which in turn stimulates a human response (*Eclipse of God* (1952), 135). This response, according to Buber, never gives rise to a general law, but only to a unique, subjective deed or commitment.

Although Franz Rosenzweig subscribed to the premise that revelation represents the manifestation of a relationship in the form of a dialogue, he emphasized that it depends upon the will of God, Who chooses to reveal Himself at specific times to different individuals. Through revelation a cov-

enantal relationship is established between man and God. As a responsible partner in this dialogue, man is expected to respond to God’s demand, embodied in the revelational event, by concrete action. Thus, the commandments arise through man’s response to God’s revelation (N.N. Glatzer (ed.), *On Jewish Learning* (1965), 109–24).

According to Abraham J. Heschel, revelation represents an event in which God communicates His teachings and concern for man. The act of revelation is a unique, mysterious event that cannot be reduced to the categories of mystical experience or psychophysical processes. The recipient plays an active role in casting the content of the revelation into the mold of his own personality, but he must not be considered merely an inspired visionary; he is a witness to a specific act of “God’s turning towards man” (A.J. Heschel, *God in Search of Man* (1955), 198).

Naturalist thinkers such as Aḥad Ha-Am and Mordecai Kaplan do not see in revelation anything more than a purely subjective experience. Opposed to them, Orthodox thinkers are committed to the traditional view of revelation as the disclosing of God’s will to man in the form of specific commandments. They view the process of the development of the Oral Law as an extension of the original revelation at Sinai, which continually provides new insights into God’s will for man. Yet, revelation as a process is not necessarily limited to the elucidation or development of the content of the Sinaitic revelation. Drawing upon kabbalistic categories of thought, Abraham Isaac Kook maintained that revelation is the apprehension of reality in the light of the *Shekhinah*, or “Divine Presence,” resulting in the perception of the underlying unity of all existence (*Orot ha-Kodesh*, pt. 1 (1963), 73). In the view of Joseph B. Soloveichik, the height of religious development is the experience of the Presence of God. It is in the “covenantal community” that man in dialogue with God “re-experiences the rendezvous with God in which the covenant . . . originated” (“Lonely Man of Faith,” in: *Tradition* (1965), 46).

REVERE, GIUSEPPE PROSPERO (1812–1889), Italian poet and patriot. Born in Trieste, Revere studied in Milan, where he became well known as an active participant in the movement for the unification of Italy and as a follower of Mazzini during the 1848 Revolution. In 1849 he joined Daniele *Manin in Venice but, as a supporter of Mazzini, broke with him after some disagreement and took part in the defense of Rome. For many years he served in the Italian Foreign Office as editor of the *Bollettino Consolare*, and in 1869 was one of the Italian delegates at the opening of the Suez Canal.

Revere wrote minor historical dramas including *Lorenzino de' Medici* (1839), *I Piagnoni e gli Arrabbiati...* (1843), and *Sampiero da Bastelica* (1846). In his patriotic verse, mostly collections of sonnets – *Nuovi sonetti* (1846); *Persone ed ombre* (1862); *Osiride* (1879); and *Sgocciolii* (1881) – he gave personal expression to the tastes and poetic tendencies of the second Romantic generation, taking *Heine and Ugo Foscolo as his models. His impressionistic sonnets voice an inner dissatisfaction with contemporary society and a mood of rebellion. Among his outstanding books are some witty travel impressions, *Bozzetti alpini* (1857) and *Marine e paesi* (1858), and *Variazioni* (published only in 1957) which describes the landscape and customs of Piedmont and Liguria. His *Opere Complete* appeared in 1896–98.

RÉVÉSZ, BÉLA (1876–1944), Hungarian journalist and author. Révész was on the staff of the Social Democrat daily newspaper *Népszava* from 1906 and became a permanent member of its editorial board. Socialist in outlook, he often dealt with Jewish subjects and showed religious sentiment. His friendship with the great Hungarian poet, Endre Ady (1877–1919) led to his able biographical studies of Ady, published in 1935. Révész also wrote a biography of M. *Nordau (1940). After the Nazi invasion he was arrested together with other Jewish journalists, and is thought to have perished in

Auschwitz. His works include *Vonagló falvak* (“Villages in Agony,” 1914), *Emberék arca* (“Faces of Men”), and *Velük-értük* (“With Them – For Them,” 1961).

REVESZ, GEZA (1878–1955), psychologist. Born at Siofok in Hungary, Revesz qualified first in law and then studied psychology. At the University of Goettingen, he was influenced by both his teacher, Georg Elias Mueller, and by David *Katz, under whose influence he became a phenomenologist in his thinking and with whom he collaborated in a number of studies. In 1908 he went to the University of Budapest, and was appointed professor of experimental psychology. He also lectured to the staff of Budapest's military academy and is credited with being the first to give European military training a pedagogical basis by setting up psychological tests for use by the army instructors. With the rise of anti-democratic and antisemitic movements in Hungary during the 1920s, Revesz's professorship was threatened and he departed for Holland. From 1923 he lectured there in industrial psychology, and in 1932 he was appointed to the Municipal University of Amsterdam as professor of psychology and director of the psychological laboratory. In 1935 he founded the journal *Acta Psychologica*, and edited it until the Germans occupied Holland during World War II. Publication was resumed in 1950, and Revesz remained editor until his death.

His work encompassed varied fields. His early interest centered on visual perception, and later he concerned himself with the psychological aspects of music. He carried out tests on the sense of touch, and identified those elements of tactile perception that are not shared by the optic and acoustic senses. This research brought him in contact with blind persons, and Revesz, in part moved by sympathy, conducted studies on the personal life of the blind. He also devoted himself to understanding the basic differences between humans and animals, in which connection he produced his study on the origins of languages. Several of Revesz's books appeared in English, including: *The Psychology of a Musical Prodigy* (1925), *Psychology and Art of the Blind* (1950), *The Origins and Prehistory of Language* (1956), and *The Human Hand* (1958).

°REVICZKY, IMRE (1897–1957), Hungarian colonel; commander of the East Hungarian (Transylvanian) brigade of the labor battalions during World War II. Reviczky had about 30,000 Jewish forced laborers under his command, to which he was appointed in 1943. From the first he opposed every attempt to maltreat them, granted interviews to their relatives, and assisted them whenever possible. Reviczky was especially helpful after the German invasion of Hungary, when conscription orders were issued to all male ghetto inmates, regardless

of age. On the approach of the Red Army, Reviczky dispersed the brigade in the neighborhood, and instead of sending the Jews to Germany, he loaded the wagons for their transport with lumber. When the Germans discovered Reviczky's stratagem, they sought to arrest him. He tried to escape with his staff, but was caught and sent to *Dachau. After the war Reviczky served in the Hungarian army but was later dismissed. He had to work at manual labor until he was granted a pension. He was recognized in 1966 by *Yad Vashem as one of the *Righteous of the Nations (Hasidei Ummot ha-Olam).

REVISIONISTS, ZIONIST (full name: **Union of Zionists-Revisionists**; abbr. Hebrew name, **Ha-Zohar**; later **New Zionist Organization**), movement of maximalist political Zionists founded and led by Vladimir *Jabotinsky. In the later 1920s and in the 1930s the Revisionists became the principal Zionist opposition party to Chaim *Weizmann's leadership and to the methods and policy of the World Zionist Organization and the elected Jewish leadership in Erez Israel. The initial nucleus of the Revisionist movement consisted of a group of Russian Zionists who had supported Jabotinsky during World War I in his campaign for the creation of a *Jewish Legion. Their organ became the Russian-language Zionist weekly *Razsvet published in Berlin (1922–24), later in Paris (1924–34). This group was joined by other Zionist circles and personalities, such as Richard *Lichtheim, Robert *Stricker, Jacob de *Haas, the Hebrew poet Jacob Cohen, and others, who opposed Weizmann and his policy.

The Revisionists based their ideology on Theodor Herzl's concept of Zionism as essentially a political movement, defined by Jabotinsky as follows: "Ninety per cent of Zionism may consist of tangible settlement work, and only ten per cent of politics; but those ten percent are the precondition of success." The basic assumption was that as long as the mandatory regime in Palestine was essentially anti-Zionist, no piecemeal economic achievements could lead to the realization of Zionism, i.e., the establishment of a Jewish state with a Jewish majority in the entire territory of Palestine, "on both sides of the Jordan."

At its inception, the Revisionist program centered on the following demands: to reestablish the Jewish Legion as an integral part of the British garrison in Palestine, to develop the *Jewish Colonial Trust as the main instrument of economic activity, and to conduct a "political offensive" which would induce the British government to adapt its policy in Palestine to the original intention and spirit of the *Balfour Declaration. The Revisionist program soon became more elaborate, asking, in addition to the demand for Jewish military units, etc., for the introduction of a whole new system of policy in Palestine, defined as a "settlement regime" – a system of legislative and administrative measures (such as land reform, state protection of local industries, a favorable fiscal system, etc.) explicitly de-

signed to foster Jewish mass immigration and settlement. The Revisionists criticized the system of small-scale immigration and settlement based on "schedules" of immigration certificates and on the emphasis of agriculture. Economic and social methods, designed to bring to Palestine "the largest number of Jews within the shortest period of time" should include support of private initiative and private capital investment, mainly in industry, intensive agricultural cultivation of small plots (the *Soskin method), as well as compulsory arbitration of labor conflicts and the outlawing of strikes and lockouts "during the period of state-building." While strongly critical of British policy in Palestine, the Revisionists denied being "anti-British." Their conception was that constructive Anglo-Jewish cooperation could be brought about only through determined political pressure on the British government exerted on an international scale.

History

The founding conference of the Union of Zionists-Revisionists took place in Paris in 1925. The first president of the Union was Vladimir (Zé'ev) *Tiomkin. At its inception, the movement was an integral part of the World Zionist Organization. It attracted a large following in Eastern and Central Europe, where masses of Jews were waiting to emigrate. From four Revisionist delegates to the 14th Zionist Congress (1925), its representation rose to 52 delegates at the 17th Congress (1931). Subsidiary organizations sprang up under Jabotinsky's leadership: *Betar, a mass movement of youth; Berit ha-Ḥayyal ("union of army veterans"), existing mainly in Poland; Orthodox adherents organized in Aḥdut Israel; the women's Berit Nashim Le'ummiyyot; high school students in Masada, and the Nordia sports organization. In Palestine, the Revisionists achieved the position of the second-largest party in the Asefat ha-Nivḥarim by gaining 17% of the votes in 1931. The Zionist majority, in particular the labor parties, rejected the ideology and tactics of the Revisionists, often attacking them as "fascists." Growing conflicts in the Palestine labor market led to the withdrawal of Revisionists and members of Betar from the *Histadrut and the establishment of an independent National Labor Organization in 1934. Bitterness reached a climax in 1933 when two young Revisionists in Palestine were accused of assassinating the labor leader Chaim *Arlosoroff. Palestinian courts acquitted both, but the antagonism remained and poisoned the political atmosphere for many years.

From the late 1920s, especially after the enlargement of the *Jewish Agency through the inclusion of 50% non-Zionists (1929), Jabotinsky pressed for independent political action of the Revisionist movement in the international field, though the Zionist Executive considered it a breach of discipline. When Jabotinsky urged the secession of the Revisionist Union from the World Zionist Organization, allowing individual Revisionists to maintain their membership in it, he was opposed by members of the Revisionist executive, Meir *Grossman, Lichtheim, Stricker, and others. When the internal controversy reached an impasse at the session of the Re-

visionist Party Council at Katowice (1933), Jabotinsky “suspended” the Revisionist executive and assumed “personal responsibility” until the forthcoming world conference. A plebiscite among the membership endorsed Jabotinsky’s move by a large majority, but his opponents seceded and founded the small *Jewish State Party, which was represented at the 18th Zionist Congress (1933) by seven delegates, as against 46 Revisionist delegates.

The first large-scale political action of the Revisionist Union was a world petition (1934) addressed by Jewish men and women to Britain’s king and Parliament and to the governments and parliaments of the states of which they were citizens. More than 600,000 Jews in 24 countries signed the petition. After the Arlosoroff murder trial, an attempt at a reconciliation between the Revisionists and the Zionist leadership was made in 1934. At the initiative of Pinḥas *Rutenberg, Jabotinsky and David *Ben-Gurion met in London and, after lengthy negotiations, signed three agreements. The first enjoined all Zionist parties to refrain from certain forms of party warfare, notably “libel, slander, insult to individuals and groups.” The second was a labor agreement providing for a *modus vivendi* between the Histadrut and the Revisionist workers, including the controversial issues of strikes. The third provided for suspension of the Revisionist boycott against the Zionist funds and a guarantee of immigration certificates for members of Betar. The agreements were welcomed by Zionist public opinion, but the labor agreement was submitted to a referendum of Histadrut members and rejected by a majority. The atmosphere of goodwill petered out. When the Zionist General Council voted a “discipline clause,” intended to preclude independent political activities of Zionist parties (1935), a plebiscite held among Revisionists decided to secede from the World Zionist Organization and to establish a new Zionist body. Elected by 713,000 voters, the constituent assembly of the New Zionist Organization (NZO) met in Vienna with de Haas as chairman (September 1935). Jabotinsky was elected president (*nasi*). The aim of the NZO was formulated as “the redemption of the Jewish people and its land, the revival of its state and language, and the implanting of the sacred treasures of Jewish tradition in Jewish life. These objectives were to be attained by the creation of a Jewish majority in Palestine on both sides of the Jordan, the upbuilding of a Jewish state on the basis of civil liberty and social justice in the spirit of Jewish tradition, the return to Zion of all who seek Zion, and the liquidation of the Jewish Dispersion. This aim transcends the interests of individuals, groups, or classes.”

In the later 1930s the NZO called for a policy aimed at speedy “evacuation” of the Jewish masses from the “danger zone” in Eastern and Central Europe, based on “alliances” with the governments of those countries. A ten-year plan for the transfer to and absorption in Palestine of 1,500,000 Jews was prepared in 1938. In 1938–39 the scheme gained the sympathy of Polish government circles, which seemed to be ready to intervene with the British government and raise the problem of Jewish mass emigration at the League of Nations. But Jew-

ish public opinion overwhelmingly opposed the “evacuation plan” as unwarranted and irresponsible publicity, playing into the hands of “antisemitic governments.” At the same time the Revisionists were instrumental in transforming “illegal” immigration to Palestine from a trickle into a mass movement, which brought thousands of European Jews in “illegal” ships to the shores of Palestine until 1940. The NZO opposed and combated the partition of Palestine as proposed in 1937 by the Palestine Royal Commission. Jabotinsky testified in London before the commission, while B. *Akzin gave evidence before the Palestine Partition Commission and advocated the “evacuation scheme” before the Intergovernmental Refugee Committee in Evian, France, in 1938.

With the outbreak of World War II, NZO activities ceased in continental Europe and political work was confined to Jerusalem, London, and New York. In 1939 Jabotinsky called for the suspension of the struggle against the British for the duration of the war, the concentration of all efforts to defeat Nazi Germany, and the creation of a Jewish army to fight alongside the Allies, and of a Jewish World Council to represent the entire Jewish people at the future peace conference. Jabotinsky’s death in New York (August 1940) deprived the movement of its founder and leader. His successors continued their work, mostly in the United States, by information campaigns intended to arouse the attention of governments and public opinion to the plight of the Jewish people in Europe. They published full-page advertisements in leading American newspapers calling for the abolition of the White Paper and later for the relinquishment of the British Mandate over Palestine. They raised money for the *Irgun Zeva’i Le’ummi (IṢL) and to help the survivors of the death camps.

In the early 1940s a minor split occurred in the Revisionist Party in Palestine. With the tacit approval of its leadership, one of the members of its central committee, Binyamin Eliav (then Lubotzky), held private talks with the *Mapai leaders Berl *Katznelson and Eliyahu *Golomb, as a result of which a draft agreement between the Revisionist movement and Mapai was prepared and signed by them on the basis of two principles:

(1) a common platform of Jewish war aims, including the establishment of “the Jewish state in the historical boundaries of Erez Israel,” and

(2) the return of the Revisionists to the World Zionist Organization and the merging of the Revisionist labor organization with the Histadrut and of the Irgun Zeva’i Le’ummi (IṢL) with the *Haganah. Eri *Jabotinsky also signed the draft. Talks on the proposal came to naught, however, mainly because of a forceful veto by David Ben-Gurion, who was in the United States at the time. An opposition group, Hitna’arut, led by Eliav, was formed in the Revisionist movement, demanding its unconditional return to the official Zionist and *yishuv* institutions. In 1944 most of its members seceded and took the lead in founding an independent party Tenu’at ha-Am, which was active until 1948.

After the war, when the creation of a Jewish state had of-

ficially become the aim of Zionism and “illegal” immigration was conducted on a large scale by the Haganah, while some cooperation was established between the Haganah and IZL, the Revisionist leaders decided to rejoin the Zionist Organization, and 42 Revisionist delegates were elected to the 22nd Zionist Congress (1946). In Palestine, two Revisionist representatives signed the Declaration of Independence of the State of Israel on May 14, 1948, but their party was not invited to participate in the Provisional Government. When the IZL disbanded, its veterans founded the new *Herut Party in Israel (October 1948); it won 14 seats in the First Knesset (1949), while the Revisionist list was unable to seat a single deputy. In the Diaspora, Revisionist groups remained mostly loyal to the old framework, but in 1950 a world union was founded called Berit Herut ha-Zohar, with Herut as its organization in Israel. A Revisionist representative was elected to the Jewish Agency Executive in April 1963 by a majority vote, against strong opposition from the Zionist labor parties. But the rift between the Revisionist and the labor camps was largely healed in the later 1960s, when the *Eshkol government decided to transfer Jabotinsky’s remains to Mount Herzl in Jerusalem and particularly after Herut leaders, as part of the *Gaḥal bloc, joined the government of national unity in 1967. In the 1968 World Zionist Congress, Revisionists accounted for 69 delegates out of 644 (10.7%).

In the 1920s, and particularly in the 1930s, the Revisionist movement maintained a number of newspapers and periodicals in several countries. Apart from *Razsvet*, a French-language weekly *La Voie Nouvelle* appeared in Paris. In Poland the Yiddish weekly *Der Nayer Veg* enjoyed popularity in the mid-1930s, when it was edited by the poet Uri Zevi *Greenberg. In the late 1930s the great Yiddish daily in Warsaw, *Der Moment*, became closely linked with the Revisionist movement. Robert Stricker’s *Neue Welt* in Vienna served the Revisionist movement as long as Stricker himself was one of its leaders. In London *The Jewish Standard* was edited by Abraham Abrahams. In Johannesburg, South Africa, *The Jewish Herald* is the organ of the Revisionist movement.

In Palestine the daily *Do’ar ha-Yom* purchased by Jabotinsky in 1928 had a Revisionist-oriented editorial policy. It continued to be published for about two years. A maximalist Revisionist faction, led by Abba *Aḥimeir, Y.H. *Yeivin, and U.Z. Greenberg published in the early 1930s its own paper *Ḥazit ha-Am*. The daily *Ha-Yarden* existed in Jerusalem for several years in the mid-1930s but for lack of funds became a weekly and was transferred to Tel Aviv in 1935. In 1938 *Ha-Mashkif* began to appear again and continued to be published through the period of statehood. The monthly *Beitar*, edited by Joseph *Klausner and B.Z. Netanyahu was published in Jerusalem in the mid-1930s and became the ideological and literary organ of the Revisionist-oriented public in Palestine. In the State of Israel, the daily *Herut* served the movement until its merger with *Ha-Boker* in 1960 into the daily *Ha-Yom*. The latter closed in 1970.

[Joseph B. Schechtman]

Some Historical Notes on the Development of the Right in Zionist and Israeli Politics

INTRODUCTION. The history of the parties of the “right” within the Zionist movement and the development of a society outside that of the General Labor Federation (the Histadrut) is much less known than that of the latter and of the Labor movement. The political dominance and ideology of the latter went unchallenged, both in theory and in practice, at least since the early 1930s. The “national right” or the “radical right”¹ was, in this respect, in a much better position than the “liberal” or “civil” right but its historiography nevertheless concentrated on several periods and a succession of events and is far from being complete. The Zionist “right” was generally credited with a monolithic image: for its supporters, the national and political movement was the only one in Zionism that fought, without aberrations, for the establishment of a Jewish State; for its opponents, it was an expression of “reactionary” foundations, a barren movement, whose historical function was negative from beginning to end. Both attitudes are generalizations with a clear ideological coloring. Both hold, but from different starting points, with Leonard Fein that “Herut remained faithful to the Revisionist platform...”² i.e., that there have been hardly any changes in the Zionist “right” since its founding in 1925, apart from varied emphases stemming from the changes in status and circumstances of Zionism in the last 50 years, principally in the wake of the Holocaust and the establishment of the State of Israel. Both, to a large extent, ignore one of the questions that interest historians and sociologists dealing with political and social movements, namely, that of the internal dynamic during times of change and the appearance of adaptation or response to changing circumstances.

The rise to power of the Likkud, with Herut as the main component of this new political constellation, has created a certain interest in its ideological heritage and political style. This interest focused mainly not on the history of the movement but on the political and spiritual heritage of Zēev Jabotinsky, the founder of the Revisionist movement.

Within Herut this was an attempt to give credence to actual positions from Jabotinsky’s teachings, in order to defend or criticize the political behavior of the government headed by Menahem Begin. An internal dispute broke out in Herut following presentation of their Peace Plan, regarding fidelity to the Jabotinsky platform, and reached its peak in January 1978.³ Opponents viewed the government as a condemnable continuation of the Jabotinsky heritage, which was judged as wrong, barren and dangerous. Their intention was to point out that Herut – and in its footsteps, the Likkud – was unable to free itself of the negative tradition of Revisionism in both foreign and home policy. To a very large extent the process of personification of the “right” continued; previously Revisionism had been identified with the personality of Jabotinsky, but the “right” is now identified with that of Menahem Begin.⁴

The purpose of this article is not to propose chapter headings for a history of the “right” from its inception with

the founding of the Revisionist Zionists and Betar in the early 1920s (see "Revisionists, Zionist"), by way of the struggle of Irgun *Zeva'i Le'ummi* in the years 1937–48, and founding of *Herut* and, subsequently, of *Gaḥal* (1965) and the *Likkud* (1973) until *Likkud's* victory in the elections of May 1977. The intention is to throw some light on a few of the basic problems in the development of the Zionist and Israeli "right," and to concentrate in particular on the above-mentioned question of continuity and change, of tradition and alteration, on both the ideological and socio-organizational levels.

REVISIONISM AND HERUT – CONTINUITY OR CHANGE. As noted, it is commonly held that there is an uninterrupted and almost single-minded continuity between the Revisionists under Jabotinsky and *Herut* under Menahem Begin. The avowed fidelity to Jabotinsky's heritage, identical ingredients of leadership and political style, a certain organizational continuity, partial social-demographic identity, and a continuance of fundamental axioms, have created and given root to this. It is, however, clear that the far-reaching changes in the patterns of reality from the time of Revisionism to those in which *Herut* functioned since 1949 should have left some mark of change and alteration. In fact, Revisionism did undergo a process of change and adaptation to the reality of the sovereign Jewish State after May 1948, as did all the other political and social movements in Israel. The Revisionists, however, were faced, at least in theory, with one problem of principle that did not worry the other Zionist and Israeli movements. In 1934, Ze'ev Jabotinsky wrote to David Ben-Gurion: "It is a matter of indifference to me whether the state of the Jews will be an orthodox Jewish state or a socialist state – the main thing is that there should be a state." Jabotinsky thus repeated what had been written by J.B. Schechtman in the Russian-language Revisionist organ, *Rassviet*, in December 1925: "(Revisionism)'s program and ideology contain no socialist or religious aspects that are unacceptable to Zionism as a whole... Revisionism is a political movement... On socialist questions our opinion, like that of the World Zionist Federation, is neutral." The ideology and declared Revisionist program stressed that they related only to the *period of building up* a Jewish majority in the Land of Israel as an essential base for the establishment of the State of Israel. But Revisionism did not dissolve in 1948. Revisionism was a social and ideological movement deeply anchored in Jewish public life, and, from its very beginning, had set aims beyond the establishment of a sovereign state. It considered establishment of the state as a partial and incomplete achievement both in terms of its territorial boundaries and from the point of view of its social and cultural image. Revisionism, therefore, had to adjust to the decisive change in reality in the Land of Israel with the transfer from an autonomous society to a sovereign society equipped with the apparatus of statehood. It had to reexamine its philosophy, renew its organizational structure and find new social support.

FROM POLAND TO THE LAND OF ISRAEL. Prior to 1939, Revisionism's main strength as a social and cultural movement in

Eastern Europe was principally in Poland. There Revisionism quickly developed from a small political faction and a number of youth and student organizations into one of the largest and most crystallized popular movements within Zionism. This base was destroyed immediately on the outbreak of World War II. Revisionism's strength in the Land of Israel was relatively weak; it grew much more slowly and its organization was feeble. But even before the War, and with greater resolution afterwards, the center of gravity of Revisionist activity moved with the founding of the **Irgun Zeva'i Le'ummi*. The *IZL* (and subsequently *Lehi*) drew much of their strength from the Revisionist public life in Poland, mainly from Betar, but after 1939 that source was blocked. Henceforth the strength of Revisionism and of *IZL* were drawn from within the Land of Israel only. After 1944 support for *IZL* in Israel expanded far in excess of the support that the Revisionists had had prior to World War II. Members joined *IZL* who had belonged neither to the Revisionist Zionists nor to Betar. *Herut's* electorate in the First Knesset in January 1949 was composed of veteran supporters of Revisionism, members of *IZL* and supporters of its struggle between 1944 and 1948. From this point of view *Herut* was a new demographic and social entity, even if its political elite comprised ex-members of *IZL* and Betar.⁵ *Herut* obtained 49,782 votes in 1949, 45,652 in 1951, 107,190 in 1956, 130,515 in 1959 and 138,590 in 1961. It was only the establishment of *Gaḥal*, a union of *Herut* and the Liberals, descendants of the *General Zionists, that doubled the number of voters for the new political framework of the "right" to 256,975 in 1965, 296,294 in 1969, 423,309 in 1973, and finally 583,968 in 1977. The membership of the *Irgun Zeva'i Le'ummi* comprised 45% born in Eastern Europe, 17% in Erez Israel and 10% in the countries of Asia and Africa. Following the mass immigration to Israel of the 1950s, *Herut* began to draw more and more supporters from voters from Asian and African countries. It is true that Revisionism had previously gained support from these quarters, but in the 1950s it became the main reservoir for the electoral growth of *Herut*, and this happened without ignoring the continuity of the East European elite, most of whom were members of the free professions, employed and self-employed and with a formal education. In addition to the waves of immigration and the feeling of deprivation and alienation on the part of the manual laborers from Asia and Africa and the sympathy that they held for the nationalist-activist position taken by *Herut* and its political culture, its growth was assisted by the differentiation among the Israeli working classes between the private and public sectors. Both before and after 1948 Revisionism and *Herut* were anchored in Jewish public life, which rejected the philosophy and Zionist-pioneering make-up of its various components – both in theory and in practice. The most significant change was that the *Herut* voting public increasingly became manual and white collar employees of a social and economic ilk that differed entirely from that of Jewish society in Poland of the 1920s and 1930s. This affected both the style of the movement, which acquired a new popular image, and the contents of its philosophy. After

a difficult internal struggle, Ḥerut drew the conclusions from this change and established a faction within the Histadrut – the *Blue-White* faction – which expressed radical formulations in wages and in the realm of social policy different from the formulation that had been acceptable to Revisionism in the Mandatory period.⁶ Fidelity to the ideological tradition and ideological change gave rise to a network of philosophies that, on the one hand, included emphasis on the priority status of the private sector and the demand for maximum reduction of state involvement in the economy while, on the other, there was support for widespread social legislation (minimum salary, national health insurance, etc.). What was described by Revisionism's opponents as "speaking with two voices" was an authentic expression of the internal complexity of Ḥerut and the change in its social structure.

FROM PARTY TO UNDERGROUND AND FROM UNDERGROUND TO PARTY. The adaptation to changes was not achieved without a severe organizational upheaval. Even prior to 1944 Revisionism was far from being a one-dimensional movement in terms of the opinions held by its members, and its organizational structure was split as well. There was a big difference between the Zionist Revisionists, the political arm, and Betar, the youth organization, and in 1933 the tension between the various groups caused the first split in Revisionism with the breaking away of a group of veterans headed by Meir Grossman and the founding of the *Jewish State Party. Within the party there was a tendency to undermine the basic axioms of Revisionism that expressed a nationalist-activist philosophy and demanded a change in the methods of operation of the movement. The IZL grew within Betar in an underground fashion and contrary to the stand of the Betar leaders. Not till 1944 did the IZL become the main and most active organization within Revisionism; after Jabotinsky's death and the outbreak of World War II, they disbanded. There were still those within the Zionist Revisionists and Betar who felt that the IZL was a temporary entity and that at the conclusion of the struggle against the British its role would be over, and the leadership would be returned to the veterans of the two groups. This attitude gave rise to severe tension among them, but in practice Revisionism as a political movement was eliminated after 1939 and the IZL took over. The latter was not the underground arm of a bona fide political party (as was the Haganah), but a sovereign underground organization.

The IZL was not merely a new organizational entity but made a break that affected history of Revisionism, a break that came about not only because of the personal identification between the leaders of the IZL and the former leaders of Betar, and the fidelity of the IZL leaders, not to Revisionism as a movement, but to Ze'ev Jabotinsky as leader and teacher. Jabotinsky and Revisionism believed in the need for the existence of the movement as a *bona fide* party, functioning on a political plane and believing in the power of moral pressure and in the moral stand of Zionism, and in the force of common interests between Zionism and Great Britain. The IZL

rejected this attitude and placed its trust mainly on the pressure generated by armed struggle. To a large extent, this was a transition from the political philosophy of Jabotinsky to the revolutionary philosophy of Abba Ḥimeir which Jabotinsky completely rejected although he understood its roots and motives.

Menaḥem Begin's personality and activity mark the combination of the political philosophy and the revolutionary, despite the fact that at the Warsaw Convention of Betar in September 1938 he expounded the revolutionary philosophy in opposition to Jabotinsky's legal philosophy. Begin rejected the reasoning of the Loḥamei Ḥerut Israel and linked the revolutionary and political philosophies. Although the IZL, under his leadership, didn't believe in the need for joint action by Zionism and Britain and indulged in underground activity for the removal of the British from Erez Israel, his underground activity was largely designed to stress the hardship in which Jewry found itself after the Holocaust and the aspirations of the Jews to realize the moral and historical right to a Jewish state. Contrary to the Leḥi, the Irgun Ze'va'i Le'ummi was closely linked to Jabotinsky's inheritance, even though its activity was contrary to his philosophy. The spirit of Ḥimeir and Uri Ze'vi Greenberg held great sway in the IZL but it was Begin who underscored and strengthened the attachment to Jabotinsky and expressed the ideological continuity between Jabotinsky and Betar, and the Irgun Ze'va'i Le'ummi.

The IZL did not go out of existence in 1949, nor did it return the mantle of leadership to the veterans of the Zionist Revisionists and Betar. The Zionist Revisionist leadership brought the party back into the Zionist Federation in 1946 and took part in the Provisional Council of State; three of its members were amongst the signatories of the Scroll of Independence. There was a low of distrust between the leadership of IZL and that of the Zionist Revisionists, with the former considering itself as the new leadership. The IZL emerged from the underground and established a new political party in the State of Israel, "the Ḥerut Movement, founded by the Irgun Ze'va'i Le'ummi. It replaced the Zionist Revisionists and created an amalgamation with the Zionist Revisionists in the Diaspora under the aegis of the Zionist Movement – Brith Ḥerut-ha-Zohar. The veteran Zionist leadership ran independently in the elections to the First Knesset but its list – the Jabotinsky Movement – Brith ha-Zohar – gained only 2,892 votes (0.7% of the votes). Part of the veteran leadership joined the Ḥerut Movement while others left Revisionism. (Some of them joined the General Zionists, while others, such as Dr. Benjamin Lubotsky, after a short-lived attempt to establish an independent party called Mifleget ha-Am, even joined Mapai.) In the 1950s a significant change took place in the leadership of Ḥerut, with some members of the IZL and its supporters in Israel and abroad, such as Hillel Kook, Shmuel Marlin, Shmuel Katz and Uri Ze'vi Greenberg, leaving the movement, while Revisionists who had belonged to the "moderate" line in Revisionism joined and were included in its Knesset list.

The new party's main problem was twofold: on the one hand it had to establish its right of legitimization as a democratic-parliamentary movement, free of its past as a breakaway underground movement and meriting widespread political support irrespective of any sympathy for its struggle against the British; and, on the other, for the right of legitimacy as a political party in opposition to a political and national structure it considered faulty and negative. In the 1950s, the Herut Movement deleted the words "Founded by the Irgun Zeva'i Le'ummi" and toned down its policy to some extent. The claim-cum-aspiration for Israeli sovereignty over Transjordan was dropped from the party platform, and it adjusted to the rules of parliamentary-electoral contest, particularly after the serious crisis that broke out in the wake of the dispute over German reparations and the violent demonstration against the Knesset in January 1952. Voices were now heard within the Herut claiming that it had no chance of defeating Mapai at the polls and that its excessive parliamentarianism was blunting its revolutionary character and turning it into a regular Israeli political party of the establishment. At this point Menahem Begin was the link between the democratic parliamentary approach of Jabotinsky and that of Herut as against the revolutionarism and anti-parliamentary tendency within the movement. Victory for his line was complete when several of Lehi's former leaders (led by Yizhak Shamir, current Speaker of the Knesset) joined the Herut Movement. The anti-parliamentary tendencies in Herut disappeared completely during the 1950s and the heritage of the underground and the separation of Revisionism and IZL faded from the movement's behavioral patterns. During the 1960s the process of legitimization was completed with the establishment of the Herut-Liberal Bloc (Gaḥal).

HISTORICAL RIGHT AND NATIONAL SOVEREIGNTY OVER WESTERN PALESTINE. The various groups and schools of thought within Revisionism had no uniform position with regard to the Arab problem. The conclusion, however, was the same: Revisionism, IZL and Herut stood for the historical right of the Jewish people to national sovereignty over Western Palestine.⁷ Up to the Six-Day War, the Herut Movement was the only Israeli political party that maintained in its manifestos the necessity for the "wholeness of the homeland." The policy and ethics of the "iron curtain" were acceptable to Revisionism and Herut, both of whom felt that the Arabs would come to terms with the Jewish state only after it became clear to them that it was an existing and organic fact in the Middle East. However, while Jabotinsky felt that the main point was that the Arabs of Palestine were a national minority living in a territory where the Jewish national majority ruled and that within this context they were entitled to the full legal rights of a national minority, the Herut Movement spoke about civil equality of rights of the Arabs of Palestine, not in a separate autonomous framework.

Following the Six-Day War the principle of national sovereignty over Western Palestine became the main issue in

Gaḥal's platform and the moderate Liberals also adopted it. From this point of view, the traditional position of the Liberals had become more extreme, but from a different point of view it created unity in the Gaḥal framework, and subsequently moderation in that of the Likkud in positions of the Herut Movement, for the 1977 election manifesto no longer explicitly determined the need to apply Israeli sovereignty forthwith to Judea and Samaria.⁸ In this area a gradual process of withdrawal can be detected – initially a retreat from the demand for sovereignty over Transjordan and subsequently a tactical renouncement of the demand for the introduction of sovereignty over Western Palestine. Begin's Peace Plan was anchored in Jabotinsky's political program by offering provisional autonomy to the Arabs of the territories, but not in the context of Jewish sovereignty. The question of national sovereignty over Judea and Samaria remained open, at least theoretically, although there was a declared objection to the application of any other

sovereignty over these territories. There was therefore opposition to the Peace Plan within Herut. In effect, Begin's opponents of various hues within Herut accused him of deserting the fundamental principle of Revisionism, i.e., that there should be no retreat from the public declaration concerning Israel's right of sovereignty over all of Western Palestine. This opinion – supported by that of Revisionism – maintains that for Zionism to relinquish, even with reservations, any part of Western Palestine, would be tantamount to recognizing the legitimacy of another national claim over it. The Premier, on the other hand, considered his Peace Plan as taking due account of current political facts as well as of Jabotinsky's political heritage, inasmuch as it proposed autonomy for the Arabs of the territories but opposed the introduction of any other national sovereignty over them. The debate revealed to a large extent not only the unique reliance of Herut on the Jabotinsky heritage but also the current ideological hangover from the ideological struggle of the thirties and forties. As Prime Minister, Begin continued to practice Jabotinsky's belief in the power of the moral claim, of historical right and cooperation based on common interests with the Western Power (the U.S.A. replacing Britain), but not Jabotinsky's philosophy that Zionism does not need to conceal the full scope of its national and political aspirations. It is an irony of history that the argument between Begin and his opponents within his movement recalls to a certain extent the dispute between Jabotinsky and Mapai at the 17th Zionist Congress in 1931. Jabotinsky had demanded that the Congress publicly declare that the aim of Zionism was to establish a Jewish state in Palestine and Transjordan, while the leaders of Mapai considered such a declaration dangerous and superfluous and preferred a vague formulation.⁹

PRIVATE ECONOMY AND STATE INVOLVEMENT. Jabotinsky failed in his attempt to gain the political cooperation of the "civilian" parties in the *Yishuv* and Zionist movement. From this point of view, the establishment of Gaḥal in 1965

was something Begin achieved where Jabotinsky failed. This amalgamation was not based solely on the assumption that only a unification of the camp of the right would be able to overcome the continued hegemony of the Labor movement. It was created because Herut and the Liberals shared the same platform in their economic and social ideology. Revisionism, and subsequently Herut, considered the private sector and private initiative as the main motivating force of the economy, in which they demanded a minimum of state involvement. Both parties considered this involvement as strengthening the base of the ruling party. Jabotinsky, more than any other Zionist leader, accredited the bourgeoisie and private initiative with moral justification and moral validity within a comprehensive socio-economic theory that had no room for partisan-class interests. However, the cooperation with the Liberals, based on an appreciation of, and belief in, the primacy of the private sector and a reduction of state involvement, was accompanied in Herut by the demand by some sections for state involvement in various social and economic areas that were contrary to the Liberal program, such as the introduction of a minimum wage, national health insurance, etc. The tension between Herut's bourgeois ideological foundation and its statist tendencies was accentuated as a result of the increase in the number of organized workers in Herut, principally after the establishment of the Blue-White faction in the Histadrut. This internal tension was blunted to a great extent because Herut was in the position of being a critical opposition with whose political nationalist outlook employees could identify, and also because it was a vehicle for expression of socio-economic bitterness, frustration and deprivation. During the first year of the Likkud rule, this internal tension did not surface, but it can be clearly seen as one of the most difficult problems of the Likkud as the party in power, having to honor both ideological commitments and its loyalty to the ideological heritage of Revisionism and Jabotinsky as well as its electoral commitments to the voting public at large. Herut has absolutely opposed the socio-economic structure of the Israeli economy and society as they took shape during the period of Labor Movement hegemony, but the ideological tradition and commitment to work for a basic change of this structure has not yet been realized.

SETTLEMENT AS A STATE FACTOR. During the Mandatory period, Revisionism did not attach political importance to the pioneering settlement activity and strategy adopted by the Labor Movement. It viewed collective settlement as an element that channeled to itself vast amounts of money from the capital, beyond the degree of its importance, which were thus wasted on superfluous collectivist experiments. Collective settlement was seen in the main as the great rival of the private economy and its victor over the monies of the limited resources of national capital. The advantage of the various forms of agricultural settlements was judged by the criterion of how many jobs they could ensure. On the political level, Revisionism believed that political facts should be determined

by political negotiations, their commitments, and not by the creation of settlements. This inimical attitude softened after the Six-Day War, with Herut and the Likkud supporting, morally and politically, Jewish settlements and settlement activity in Judea and Samaria, and applying political and moral pressure on the government to guarantee their existence and expansion. This support stemmed mainly from recognition of the fact that in view of the Alignment government's preparedness for territorial compromise in Judea and Samaria, settlement in the territories was the most outstanding and concrete expression of the Israeli demand for sovereignty over them. The Gaḥal and Likkud manifestos declared that Jews have the right to settle in Judea and Samaria and demanded that the government increase the settlement momentum. The testing point of the Likkud after it came to power was in keeping the promises and fulfilling the expectations in all aspects of settlement. The Likkud Peace Plan did indeed ensure urban and rural settlement throughout Judea and Samaria, but political circumstances have caused a freeze on settlement activity. This was interpreted by those favoring settlement within the Likkud and its supporters within *Gush Emunim and The Land of Israel Movement (see 9: 41ff; 2: 774; 6: 575; 14: 1291; 10: 840), as an expression of the old tradition of Revisionism which had not valued pioneering settlement and had not accorded it any supreme political or Zionist value.

THE WEIGHT OF PERSONALITY. Ze'ev Jabotinsky and Menahem Begin were dissimilar both in character and in the projection of their intellectual and emotional world. The degree of esteem in which Begin held Jabotinsky is unique, far in excess of what is usual amongst political leaders. For Begin, Jabotinsky was the only true leader and guide in his generation, both as an ideological authority and by personal example.¹⁰ For many years both of them wielded a large degree of authority in the movement that overcame many internal divisions and tensions. The personal trials that Begin underwent during his period of Zionist activity were much harsher than those of Jabotinsky, and the political and human decisions which confronted him, particularly during the struggle against the British, were of a nature that Jabotinsky never had to face. In terms of their political standing within their own movement (outside it both were leaders who were held in disrepute and reviled in a more extreme and bitter way than any other Zionist leaders), Begin has the same position of authority held by Jabotinsky, although the political patterns are entirely different. It would nevertheless appear that the connecting link between them is not merely that of continuity, but rather in the fact that the ideological, political and moral authority of Jabotinsky's achievements were the main factor that turned a social and political movement into a stable and ongoing political and social entity; Begin with his personality serves not only as the main connecting link to the Jabotinskian tradition of the past, but, like Jabotinsky, he is the cement binding together the various elements in the party. In the figures of Jabotinsky and Begin can be found a revelation as to the

great weight of personality in history, for it would be difficult to understand how the continuity was created between Revisionism and the IZL and Herut without Begin, since the status of Revisionism was irrevocably dependent on the figure of Jabotinsky and that of Herut on the figure and personality of Begin. It is a case of a social and political movement which, although its roots are deep, needs an authoritative personality in order to exist.

Notes

1. The problem of defining the ideological and social face of the Revisionist movement has engaged the attention of members of the Movement, its opponents and scholars. The accepted distinction into "right" and "left" which defines the latter as accepting the socialist or social democratic world outlook, that views the working class as the main social stratum and the collective economy as the ideal one, and "right," on the other hand, as anti-socialist, considering the middle class and private initiative as the keystone of society and the economy, is here adapted, despite the fact that these accepted definitions largely ignore the special nature of the "left" and of the "right" in the Zionist movement and Israeli society as compared with "left" and "right" in the countries of Western democracy.
2. Leonard J. Fein: *Israel* (Boston, 1967), p. 89.
3. During the dispute in the Central Committee of Herut, Menahem Begin battled against the critics of his Peace Plan: "There are some here who sat at his (Jabotinsky's) feet, and we never turned our backs on him." This barb was directed principally at MK Geula Cohen, the most bitter opponent of his policy, with Begin referring to the fact that Lehi, to which Geula Cohen belonged, had explicitly rebelled against the heritage of Jabotinsky, and that she was not therefore entitled to quote Jabotinsky in support of her opinions in opposition to the Premier. In August 1955 Begin had called upon Geula Cohen and her friends from Lehi to return to the Herut Movement and the Jabotinsky heritage: "My second appeal is addressed to all those pupils of Ze'ev Jabotinsky, to all those who have ever sat at his feet or learned from him. I call on you, from the bottom of my heart, not, heaven forbid, out of any sense of achievement, but in all humility: Come, return to the rock from which you were hewn; join us again. Among us are those who left him at a time of double weakness, our weakness of organization and public spirit and their spiritual weakness... but now, as the turning-point is heralded, let us each forgive the mistakes of the other... for the chain of Ze'ev Jabotinsky's disciples has not yet been broken, nor will it ever be." Menahem Begin: On conclusion of the election campaign (Tel Aviv, August, 1955). The most comprehensive biography of Menahem Begin is that of Eitan Haber, *Menahem Begin – The Legend and the Man*, Delacorte Press, N.Y., 1978.
4. See: Yaacov Shavit, "Revisionism in Zionism – The Revisionist Movement: the Plan for Colonizatory Regime and Social Ideas," 1925–35 (Tel Aviv, 1977. Heb), pp. 27–34.
5. The average age of IZL members was 26, half of whom were manual workers and half white collar workers and members of the free professions; 65% lived in the main cities.
6. The "Blue-White" faction joined the Histadrut in 1965 after a legal struggle, and in the elections to the Labor Federation they won 15.2% of the votes to the Histadrut Committee.
7. The first manifesto of Herut declared that "the Hebrew homeland, whose area stretches on both sides of the Jordan, is an historical and geographical whole." The Likkud manifesto for the Ninth Knesset, March 1977, determined that "the right of the Jewish people to the Land of Israel is eternal, indisputable and integral to the right to security and peace; accordingly, Judea and Samaria will not be handed over to any foreign rule; between the sea and the Jordan there will be Israeli sovereignty only."
8. It did state that Judea and Samaria would be under Israeli sovereignty only, but did not determine a date for its implementation. The Likkud Peace Plan postponed the decision regarding sovereignty.
9. The text of the Resolution proposed by Ha-Zohar at the 17th Congress in Basel in July 1931 was that the Congress declare that "the demand for the establishment of a national home for the Jewish people in Palestine was promised unambiguously" and that the reestablishment promised under the Mandate of "the Jewish national home in Palestine," meant making all of the Mandatory territory, on both sides of the Jordan, into a Jewish state, i.e., a commonwealth with a Jewish majority. A critical examination of the position of Begin in the light of the ideas and policy of Jabotinsky was made by Israel Eldad in the article "Bein Mahapakh le-Mahapekchah" in *Ha-Uma*, 54, May 1978, pp. 170–83.

REVISTA CULTULUI MOZAIC ("Jewish Religious Review"), a fortnightly review published in Romanian by the Federation of Jewish Communities of Romania. It was founded in 1956, and by 1970 was the only Jewish newspaper in Romania. Appearing in three languages, Romanian, Yiddish, and Hebrew, it was the only periodical in the countries of Eastern Europe with a Hebrew section. It was edited by Moses *Rosen, chief rabbi of Romania. The review's propaganda for the government was, generally speaking, slight, appearing chiefly for special occasions such as parliamentary elections. Other articles have dealt with the Romanian national festival, the eastern bloc's version of the struggle for peace, and similar subjects. In addition to traditional religious material, the review devotes much space to articles on the history of Romanian Jewish communities, Jewish personalities, Jewish writers, and economic life. News appears from Israel and Jewish groups in the Diaspora. Other features are translations from Yiddish and rabbinic literature.

REVIVIM (Heb. רִבְיִים), kibbutz in southern Israel, 21 mi. (34 km.) S. of Beersheba, affiliated with Ha-Kibbutz ha-Me'uhad. It was founded in 1943 as the southernmost of three observation outposts established to explore natural conditions

and farming possibilities in the Negev and to create contacts with the Bedouin. Revvim was initially named Tel Zofim (“Mound of Scouts”) and had only 15 young men and women. Lack of water constituted their central problem. In 1944, a system was worked out to divert flash flood waters from a nearby wadi to irrigate plantations of date palms, pomegranates, and olives. In December 1947, after the outbreak of hostilities which culminated in the Israel *War of Independence, the kibbutz rebuffed strong attacks of Bedouin irregulars; later, completely cut off by the invading Egyptian army, it held out until Israel forces broke through in Operation Yo’av (December 1948). After the war, Revvim had to be entirely reconstructed. In 1970, it had 429 inhabitants, increasing to 644 in 2002. Farming became feasible on a larger scale after the kibbutz was connected with the national water network. Field crops (in partnership with nearby kibbutzim), olive orchards and an olive press, dairy cattle (in partnership with Kibbutz Nir Eliyahu), and poultry were the mainstays of its farm economy. Its factories produced plastic products and ventilation systems. Revvim has a local museum in a patio courtyard reconstructed from the original observation post. Northwest of Revvim are the ruins of ancient Hāluza (see *Elusa). Its name, meaning “Dew Drops,” is mentioned in Psalms 65:11.

REVSON, CHARLES HASKELL (1906–1975), U.S. industrialist. Born in Boston, Revson got his first job as a textile buyer in New York City. He was sales manager for a nail polish firm when, in 1923, he resigned to begin his own company, Revlon, Inc., with his brother Joseph and a chemist, Charles Lachman. His first important innovation was the introduction of true-color nail enamels, to replace the old transparent nail polish. He sold them first through salons and then through department stores. In 1939 he inaugurated matched lipstick and nail colors and introduced marketing innovations such as giving the colors of the products exotic, evocative names. This concept sparked the whole cosmetics industry into new growth, catapulting Revlon, Inc. to prominence. Revlon became the world’s largest cosmetics manufacturer, with 26 companies in 12 European lands and in Israel, Australia, and Japan, and with markets in 80 countries. Revson served as president of Revlon from 1932 to 1962 and then as chairman from 1962 until his death in 1975.

In 1956 he established the Charles H. Revson Foundation, through which he donated more than \$10 million during his lifetime. The majority of these donations went to organizations serving the Jewish community, medical institutions, schools, and universities. Revson helped found the Albert Einstein School of Medicine of Yeshiva University. He served as chairman on a number of national drives, including the United Jewish Appeal and United Cerebral Palsy.

REVUE DES ÉTUDES JUIVES (REJ), Jewish scholarly periodical in Europe. The *Revue* was founded in 1880 as the organ of the Société des Études Juives, on the initiative of Zadoc *Kahn and Isidore *Loeb to stimulate Jewish studies in France. It was to deal with all aspects of the Jewish past, excluding dogmatic or purely denominational matters. The *Revue* published many important articles on the history of French Jewry, and also touched on all other fields of Jewish studies. It included a valuable and extensive book review section. Maintaining a high scholarly level, the *Revue* gained an important place among learned journals. The publication of the *Revue*, interrupted during World War II, was resumed afterward with the assistance of the Centre national de la recherche scientifique, the École pratique des hautes études (VIth section) and, for a few years, the Memorial Foundation. In 1961 the *Revue* merged with *Historia Judaica*, whose editor, Guido *Kisch, became co-editor of the *Revue*. The editorship of the REJ was held successively by Isidore Loeb, Israel Levi, Julien Weill, Maurice Liber, Georges *Vajda (1946–1980), G. *Nahon and Ch. *Touati for a time with G. Dahan, S. Mimouni (1997–), E. Oliel-Grausz (1997–2002), J.P. Rothschild (from 2001). Toward the end of the 20th century and into the 21st, ancient studies became more prominent, while medieval and French studies decreased slightly, and the bibliographical sections were expanded. A general index of vols. 1–50 (1910) was prepared by A. Hertz; a table of contents of vols. 50–100, appeared in 1936. G. *Nahon edited the *Tables et index* of vols. 101–125 (REJ 132:3, 1973); 126–131 (REJ 135:4, 1976); 132–138 (REJ 139:4, 1980); J.P. Rothschild, the *Tables et index...* [for vols. 139–158 (1980–1999)], (2003). The last issues are partially available on line.

REVUSKY, ABRAHAM (1889–1947), leader of the *Po’alei Zion movement and Zionist worker. Revusky was born in Smela, Ukraine, but spent his childhood years in Rehovot, Israel, which his parents helped to found. The family returned to Russia for reasons of health and Abraham was educated in Russia and Austria. He returned to Russia before World War I, and joined the Po’alei Zion party, contributing to both the Russian and Yiddish press. During the Revolution of 1917–18, he was an administrative member of the Jewish community in Odessa. He became associated with Ukrainian nationalist circles and at the beginning of 1919 for a short while he held the position of minister for Jewish affairs in the nationalist Ukrainian government. He resigned from this position as a result of attacks perpetrated against the Jews by units of the Ukrainian army. His memoirs of this period (*In di Shvere Teg oyf Ukraine*, 1924) provide a historical document of much interest. From 1920 to 1921 his party sent him to Palestine to fight the anti-Zionist trends that had appeared within the Palestinian branch (Mifleget Po’alim Sozyalistim, MPS; see *Israel, State

of: Political Life and Parties). He participated in the founding conference of the Histadrut as a delegate of the MPS. In the summer of 1921 he was expelled from the country as a result of the publication of his pamphlet, "From Balfour to Samuel," in which he voiced what was considered to be destructive criticism of the Mandatory government. He left for Western Europe, and settled in Berlin, and in 1924 he went to the United States. After some hesitation he joined the "Rightist Po'alei Zion," contributing to Zionist propaganda activities in both Yiddish and English. His principal work, *Jews in Palestine*, was published in various editions and in several languages, the last in English in 1947. Revusky died in New York.

REWARD AND PUNISHMENT. The doctrine of reward and punishment is central to Judaism throughout the ages; that man receives his just reward for his good deeds and just retribution for his transgressions is the very basis of the conception of both human and divine justice, and it is with the latter that this article deals. The doctrine of reward and punishment is incorporated in every classical enumeration of the fundamental principles of Judaism (see below, in philosophy). In the Bible the doctrine of reward and punishment – individual, national, and universal – is of this world. It is regarded as axiomatic that God rewards the righteous by granting them prosperity and well-being and punishes the wicked with destruction. It is the basis of the second paragraph of the *Shema* (Deut. 11:13–21): adherence to God's commandments will bring "the rain of the land in its seasons"; disobedience will cause Him "to shut up the heaven, that there be no rain, and the land will not yield her fruit." It is the subject of the two dire comminations in the Bible (Lev. 23 and Deut. 28). The reward of honoring one's parents will be "that your days may be long upon the earth which the Lord thy God giveth thee" (Ex. 20:12). The seeming prosperity of the wicked is fleeting; in the end he will be utterly destroyed (Ps. 92:8). Only in the drama of *Job is the doctrine of the suffering of the righteous examined, but even that book concludes with the banal and almost apathetic statement that the possessions which he had before the trial of his faith were doubled after he successfully passed that trial (cf. Job 1:2–3 with 42:12–13). Such agonizing cries as "why does the way of the wicked prosper" (Jer. 12:1) are made with the implication that they will receive their just retribution in the end.

The Talmud is equally insistent on the validity of the doctrine of reward and punishment, but the simple and even homely thesis of the Bible goes through various stages of refinement, finally reaching the view that in the end virtue is its own reward and vice its own punishment. It should be emphasized, however, that these stages are not necessarily in chronological succession, and side by side with the refinement and spiritualization of the biblical doctrine there is ample evidence of the belief in reward and punishment in this world. It is even given an almost mathematical exactitude with the often reiterated belief in "measure for measure" (*middah keneged middah*): "all the measures [of punishment and reward]

taken by the Holy One, blessed be He, are in accordance with the principle of measure for measure" (Sanh. 90a; cf. Sot. 8b); and "from the very creation of the world the Holy One, blessed be He, arranged that by the measure with which a man measures is he measured" (Gen. R. 9:11). It finds its epigrammatic expression in the maxim of Hillel, "He saw a skull floating on the water and said 'Because thou didst drown someone, thou wast drowned and the end of him who drowned thee will be that he will be drowned'" (Avot 2:7). It was made a principle of the punishment meted out on various occasions. Such statements as "with boiling liquid they sinned, and with boiling liquid they were punished" (RH 12a) are almost standard in explaining the punishments meted out to sinners. In addition, there is a whole list of punishments which come in this world for specific transgressions: "for three things women die in childbirth" (Shab. 2:6), or "seven kinds of punishment come into the world for seven important transgressions," which are detailed (Avot 5:8).

Side by side with this approach, however, there was developed the nonmaterial concept of reward. It emerges with the dawn of the development of the Oral Law. *Avot de-Rabbi Nathan* ascribes the emergence of the two sects of the *Sadducees and the *Boethusians to two disciples of Antigonos of *Sokho, Zadok and Boethus, who interpreted the maxim of their master "Be not like servants who serve their master upon the condition of receiving a reward, but be like servants who serve their master without the condition of receiving a reward" (Avot 1:3) to be a denial of the doctrine of reward. R. Tarfon's maxim, "faithful is thy employer to pay thee the reward of thy labor" (*ibid.* 2:15), continues "and know that the grant of reward unto the righteous will be in the time to come," but this addition is missing in most of the manuscripts, and appears to be a later addition in order to make the statements agree with the more spiritualized attitude which developed. That attitude is vividly connected with what is given as an actual incident. It gives as the reason for the apostasy of Elisha b. *Avuyah that a man once told his son to go up to the roof of the house on a ladder and bring down some nestlings. The son obeyed his father and took care to drive away the mother before removing them. He thus fulfilled the only two injunctions of the Bible of which it is explicitly stated that he who fulfills them will be vouchsafed long life – honoring parents (Ex. 20:12) and driving away the mother (Deut. 22:7). On his descent from the ladder he fell down and was killed. It was this apparent flagrant denial of the truth of the doctrine of reward and punishment as laid down in the Bible which caused Elisha's apostasy. The Talmud explains that had he interpreted these verses as did "his daughter's son" R. Jacob ben *Kors-hai, who explained that the words "that thy days may be prolonged" refer to "the world that is wholly long" and "that it may be well with thee" to "the world that is wholly good" (i.e., the world to come), he would not have gone astray. From that the doctrine is laid down that "there is no reward in this world for the fulfillment of precepts" (Hul. 142a). The spiritualization of the doctrine, that virtue is its own reward and vice its own

punishment, finds expression in the statement of Ben Azzai: "one good deed brings another in its train, and one sin another sin; for the reward of a good deed is a good deed, and the wages of sin is sin" (Avot 4:2).

Among the problems which exercised the minds of the rabbis, and to which they found no satisfactory answer, was that of "the righteous who suffers and the wicked who prospers." Among the solutions proffered is one which makes reward and punishment partake of both this world and the next. The suffering of the righteous is his punishment on earth for the sins he has committed so that his reward in the next world for his righteousness may be complete, and vice versa (Lev. R. 27:1). With the gradual acceptance of the doctrine of reward and punishment belonging to the world to come, the idea was developed that this world is the place where one, so to speak, accumulates a credit or a debit balance of good or bad actions, the results of which one enjoys or suffers in the world to come (cf. Avot 4:22, Er. 22a), and material joys in this world are at the expense of eternal bliss, while suffering is compensated for by that bliss. To that there is a notable exception with regard to certain good deeds which bring both. It is in that sense that the first Mishnah of *Pe'ah* which in an elaborated form has become part of the daily prayers, is to be understood: "These are the things of which a man enjoys the fruit thereof in this world, while the stock remains for him in the world to come." The attitude of the Apocrypha to reward and punishment, particularly in transferring their implementation to the world to come, largely follows that of the Talmud. The views expressed in the Wisdom of *Solomon are representative of the general approach.

In Medieval Jewish Philosophy

Although the positions taken by the medieval thinkers on retribution display great diversity, no two being exactly alike, they fall largely into two major categories, which may be termed traditional supernaturalism and philosophic naturalism.

TRADITIONAL SUPERNATURALISM. The traditional supernatural theories of retribution, despite the philosophic context in which they appear, retain the basic beliefs regarding reward and punishment that are expressed in the talmudic literature. *Saadia (*Book of Beliefs and Opinions*, 4 and 5), whose exposition may be taken as representative of traditional supernaturalism, states the position this way: God exercises a miraculous and absolutely just providence over man. Thus He has revealed in the Torah the commandments man is to keep. Man is rewarded or punished in accordance with his obedience or disobedience of the Torah. His deeds are known to God and recorded by Him. Reward and punishment are meted out both in this world and the next. Still, the fact that a person suffers or prospers in this world is no necessary indication that he is righteous or wicked. There are reasons other than sinfulness for suffering in this world, as there are reasons for prospering other than virtue. A righteous person may suffer in this world as atonement for his few bad deeds so that, his

punishment over, he can receive reward alone in the hereafter for his many good deeds. Even a person who has not sinned at all may suffer in this world, as, for example, a baby who sickens and dies, in order that his future reward may thereby be increased. This is known as "afflictions of love" (*yissurin shel ahavah*). On the other hand, a sinner might prosper in this world either to receive now whatever reward he merits so that he will receive only punishment in the afterlife; to increase his future punishment; or for the sake of some righteous person. Absolute retribution will be dispensed in the world to come, which will be preceded by the messianic age when the exiled of Israel are ingathered to Palestine, and the resurrection takes place. At the conclusion of the messianic age, this world will come to an end and the world to come will emerge. Here reward and punishment will be meted out to both the body and the soul in combination. The world to come will never end and similarly the reward or punishment of the individual will be eternal.

Included among the medieval philosophers who hold the traditional supernatural positions are David *Al-Mukammi; Judah *Halevi (*Kuzari*); Hillel b. *Samuel (*Tagmulei ha-Nefesh*); Ḥasdai *Crescas (*Or Adonai*); and Joseph *Albo (*Sefer ha-Ikkarim*). According to the latter two, reward and punishment are dogmas of Judaism. For Crescas, although reward and punishment is not a fundamental principle, it is one of the true beliefs the rejection of which constitutes heresy. Joseph Albo maintains, however, that reward and punishment is one of the three fundamental principles of Judaism.

PHILOSOPHIC NATURALISM. Reward and punishment as conceived in philosophic naturalism differs from the view of traditional supernaturalism in essentially three points. These are that: retribution comes naturally rather than through a supernatural providence; it is primarily an intellectual process that in this life relates directly to the rational soul and only indirectly to the body; retribution in the hereafter concerns only the rational soul since there is no resurrection of the body. *Maimonides and Levi b. *Gershom (*Milḥamot Adonai*) are the two great exponents of a philosophic naturalistic theory of reward and punishment among the medieval Jewish philosophers. However, Maimonides' exposition of the position, which appears in the *Guide of the Perplexed*, is greatly obscured by his deliberate efforts to keep his philosophic religious beliefs from the uninformed masses. Gersonides' exposition, therefore, which is plainly stated, may be taken as representative of the position, although throughout his discussion his dependence upon Maimonides is apparent. Providence over man is exercised by nature. As the creator of nature, God is the ultimate ground of providence and, consequently, of retribution, but not the direct source. There are two basic forms of natural providence: general and special. General providence is extended to the entire human species. Its dispensation is determined by the positions and motions of the heavenly bodies which, in pursuing their natural courses, order the fortunes of human existence by their action upon the elemental quali-

ties of the sublunar world. Special providence comes only to certain select individuals. It is attained by the person who has realized his intellect to the point where he possesses a highly actualized intellect called the acquired *intellect. This state of actualization is produced by the study of science and metaphysics. Traditional study of the Torah, and obedience to its ritual and ethical commandments are useful preliminaries, but science and metaphysics alone constitute the essential requirements for the attainment of the acquired intellect that brings one under the aegis of special providence. Those who do not achieve special providence cannot expect absolutely just retribution. General providence, dispensed as it is by nature, has for its end the general good of the entire species rather than the particular fortunes of an individual. Hence persons who appear to be righteous may suffer, while the seemingly wicked prosper. Nonetheless, for two reasons neither injustice nor imperfection can be attributed to God. First, nature provides the best possible order for the universe as a totality, and to remove it, therefore, because of the occasional evil it produces would be destructive for man rather than beneficial. Second, the person who has failed to realize his intellect is not truly good, and the misfortune he receives, therefore, is ultimately deserved. For the one who attains special providence there is reward in this world and in the afterlife. In this world, the reward is that he comes to possess a superior knowledge of natural causation and can, therefore, through the exercise of his free will, avoid the harm that is destined for him by the natural action of the heavenly bodies. Regarding the afterlife, the reward is immortality, for inasmuch as the one immortal part of man is the acquired intellect, only those who have actualized their intellects survive death. There is no resurrection of the body, and those whose destinies are governed by general providence suffer annihilation. Gersonides and Maimonides seem to differ on the nature of human immortality. Maimonides apparently takes the position that the acquired intellect becomes one with the active intellect and thereby loses its individual nature, whereas Gersonides is of the opinion that there is individual immortality and the individual thus retains his identity after death and continues to receive intellectual pleasure for all eternity. Among other Jewish thinkers who subscribed to the position of philosophic naturalism were Abraham ibn *Ezra and Abraham ibn *Daud (*Emunah Ramah*). Bahya ibn *Paquda (*Hovot ha-Levavot*), who emphasizes intention and intellectual accomplishment for immortality and maintains that the soul is the immortal part of man, seems to take a position similar to philosophic naturalism, although he retains various traditional elements in his thought.

For Kabbalah see Eschatology.

[Alvin J. Reines]

Modern Jewish Thought

In modern Jewish thought the doctrine of reward and punishment has not played a major role but has been discussed insofar as it is a part of the network of ideas that link *providence, *redemption, and good and *evil. An attack upon the

traditional conception of reward and punishment was that the doctrine provided the prime motivation for a Jew's obedience to the word of God. If a Jew fulfills the *mitzvot* only to reap the promised reward then the implication is that the difference between good and evil, which depends on internal motivation and conscious intent, is emptied of meaning. Jewish thinkers such as K. *Kohler, M. *Kaplan, and M. *Buber attempted to show that the classic doctrine of reward and punishment was not to be taken literally nor was it to be understood as applying to the individual, but rather to society as a whole. The concept of reward and punishment means that in the long run good deeds produce good results and evil deeds lead to a world of evil. Man's intention is thus important for the long-term "reward" of a good world. The harmony of intention with act makes goodness easier to transmit from one person to another, for the harmony is felt by the other and convinces him to accept the way of goodness. Once this choice is made evil can be redeemed.

A second aspect of dealing with the doctrine of reward and punishment is the discussion around the classic problem of the suffering of the righteous and the prosperity of the wicked.

The credibility of the doctrine that God rewards compliance and punishes rebellion was once again subjected to great strain as a result of the Nazi extermination of the Jews. The phrase "after Auschwitz" became a theological code word for the question of whether it is still possible to believe in the election of Israel and the God Who acts in history, especially Jewish history, in view of the Holocaust.

Although conservative Christian theologians responded almost immediately after the Holocaust with their conviction that the awesome events expressed God's will, there was almost no response in Jewish theological circles until about 1966. With the exception of Martin Buber who wrote of an "eclipse of God" in reaction to the Holocaust, representative thinkers of the postwar period such as W. *Herberg, E. *Fackenheim, and A.J. *Heschel initially exhibited no special concern with the Holocaust as a crucial theological problem. In 1970 Fackenheim wrote of his initial response to the Holocaust: "I was at work on a theology which sought to show that nothing unprecedented could call into question the Jewish faith – that it was immune to all 'secular' events between Sinai and the Messianic days" (*The Christian Century*, May 6, 1970).

Richard L. Rubenstein in his work *After Auschwitz* (1966) stated categorically that he was no longer able to accept the credibility of the traditional belief in the existence of the biblical God Who elects Israel and acts decisively in history, because such a God would have to bear ultimate responsibility for Auschwitz. The Holocaust was unique among the onslaughts visited upon the Jewish people both in terms of its comprehensiveness and the technological thoroughness it presupposed. Since the camps witnessed the nearly total annihilation of the European Jewish community, especially that segment which was religiously most compliant, Rubenstein

maintained that no divinely guided pedagogic purpose could be ascribed to the event. He rejected any theological response which might suggest that Hitler and the Nazis were unwitting agents of the Lord of history. The translation of the works of Eli *Wiesel into English gave the problem literary immediacy. Wiesel, a survivor of Auschwitz, maintained a Job-like posture of faith in his coming to grips with the catastrophe. Wiesel was joined by Fackenheim in the reaffirmation of the traditional God of their people in spite of the Holocaust. Fackenheim argued that to reject the traditional God was “to give Hitler the victory” (*The Christian Century*, May 6, 1970). Rubenstein responded that loyalty to the Jewish past did not involve uncritical acceptance of its perspectives and that a God who was even remotely involved in Auschwitz was a deity unworthy of Jewish faith.

REXINGEN, village in Wuerttemberg, Germany. Fleeing from the *Chmielnicki massacres in Poland, the first two Jewish families settled in Rexingen in 1650. Later, other families from Austria and neighboring countries settled in the village. Jews made their living mainly through trade in leather and peddling. A synagogue was built in 1710, and in 1760 a cemetery was consecrated. A limited emancipation granted in 1828 was completed in 1848. That year David Gideon, a Jew, was captain of the citizen's militia. In the 19th century Rexingen Jews were horse and cattle dealers, merchants of textiles and agricultural products, shopkeepers, bakers, butchers, innkeepers, almost all of whom possessed land (and worked it) and raised their own cattle. In the middle of the 19th century, 50% of the village population was Jewish; toward the end of the century, the Jews were 30% of the total population. There were 240 Jews in 1807; 330 in 1831; 427 in 1854; 387 in 1900; and 262 in 1933. The community was served by a district rabbi, whose seat was in Muhringen until 1914, when the responsibility was passed on to the rabbi of Horb. A Jewish school came into being in 1824. In 1924 there were six different community organizations, including a *hevra kaddisha*. Under the pressure of Nazi persecution, a group of 38 Jews (15%) immigrated to Erez Israel in 1933 and was joined by others from nearby villages and towns. They set up the *Shavei Zion settlement near

Nahariyyah (April 1938). In November 1938 the interior of the synagogue in Rexingen was destroyed; in 1939 the 126 Jews left in the town were deported; only three survived. All that remains of the once flourishing community is the cemetery, the synagogue building that has been converted into a church, and a memorial that was erected to the concentration camp victims. A damaged Torah scroll from Rexingen is preserved in a memorial hall in Shavei Zion in Israel.

REZEKNE (Rus. **Rezhitsa**; Ger. **Rositten**), city in Latvia, one of the larger cities of the E. Latvian province of Latgale. In the late 18th century Jews expelled from Makasan (a nearby town) settled in Rezekne. The Jewish population grew steadily; in 1847 there were 542 Jews and in 1897 they numbered 6,478 (60percent of the total population). By 1920 the number of Jews had declined to 4,148 (41.5 percent); in 1925 to 3,911 (31 percent); and by 1935 to 3,342 (25.4 percent). Most Jews were either merchants or artisans, and during the period of Latvia's democratic regime (1918–34) there was a very active Jewish communal life. Rezekne had a yeshivah (Bet Yosef), several Yiddish and Hebrew schools, including a Jewish high school founded in 1922 (349 pupils graduated until World War II), and a variety of communal organizations and institutions. The town was occupied by the Nazis on July 3, 1941, and together with the Latvian police they began the systematic murder of Jewish men, and later of the women and children. German sources speak of about 1,219 killed in Rezekne. A census taken in 1959 indicated a figure for the total population, but did not give any information on the number of Jews living in Rezekne. It is known that in 1960 the baking of *matzah* was prohibited and that there was one synagogue in the town. In 1970 the number of Jews was estimated at about 250.

REZIN (Heb. רִזְיָן), properly **Rašyān**, the Hebrew form of Aramaic *Rašyān*, “the man of favor,” in cuneiform transcription *Rašianu*, the last king of *Aram-Damascus (11 Kings 15:37; 16:5; Isa. 7:1ff.). His name is attested in a tribute list of Tiglath-Pileser III dating from 734 B.C.E. Shortly after, in alliance with *Pekah of Israel, he attempted to depose *Ahaz of Judah and enthrone a rival candidate. This pressure from the north compelled Judah to evacuate definitively the port of Elath in the far south (11 Kings 16:6). However, Tiglath-Pileser, being solicited with an enormous payment by Ahaz, attacked Aram and Israel. Upon the capture of Damascus, in 732 B.C.E., Rezin

was killed (11 Kings 16:9) and his former kingdom annexed to the Assyrian Empire.

REZINA, city in the region of Bessarabia, E. Moldova. Jewish settlement during the first half of the 19th century turned Rezina into an urban community. In 1847, 248 Jews were registered in Rezina; in 1897 there were 3,182 Jews (85% of the total population). A considerable part of the Jewish population engaged in viticulture and tobacco production, Rezina being the most important center for tobacco growing in Bessarabia. In 1925 200 Jewish families cultivated an area of 1,567 hectares, 1,400 of which were rented. Before World War II communal institutions included a hospital built in 1916, and a kindergarten and elementary school both maintained by the *Tarbut organization. In 1930 there were 2,961 Jews in Rezina (39.4% of the total population). The community was destroyed when the German and Romanian armies entered Bessarabia in July 1941.

[Eliyahu Feldman]

In March 1960, the only synagogue was broken into by the militia who stopped the services and confiscated two Torah scrolls and other religious articles. Upon protest Jews were informed that all the articles would be placed in a local museum. The synagogue was closed down by the authorities and converted into municipal archives.

REZNIK, DAVID (1923–), Israeli architect. Born in Rio de Janeiro, and a pupil of the Brazilian architect Oscar Niemeyer, Reznik immigrated to Israel in 1949. After working with Ze'ev *Rechter and Heinz *Rau, he set up in private practice in 1958. His varied works include the Hyatt hotel in Jerusalem, the Mormon University, the Kennedy Memorial, the Hazor Museum in Kibbutz Ayyelet ha-Shaḥar, and the Israeli embassy in Brazil. He executed the Israel Pavilion for Expo '67, Montreal, in partnership with A. *Sharon. In 1995 he was awarded the Israel Prize in architecture.

REZNIK, LIPE (1890–1944), Soviet Yiddish writer and educator. Born in Chernobyl, Ukraine, Reznik was, for most of his adult years, closely associated with the Yiddish literary and educational life of Kiev where he settled in 1910. His early symbolist verse – for which he was later politically attacked – reveals him as an imitator of *Der Nister. His writing grew more conformist in the 1930s. During World War II he wrote poems of strong Jewish national feeling. He died in Kazakhstan, to which he had been evacuated. He published five volumes of verse, four plays, and wrote, edited, and translated much material for children (see Shmeruk, in bibliography).

[Leonard Prager / Gennady Estraiikh (2nd ed.)]

REZNIKOFF, CHARLES (1894–1976), U.S. poet. Despite his personal humility, his lack of recognition until late in life, and his deceptively understated, straightforward literary stance, Reznikoff is one of the most important Jewish poets of the 20th century. He was born in the Jewish neighborhood of Brownsville, in Brooklyn, the child of Russian immigrants who arrived in the United States a few years before his birth. Reznikoff's early years were marked by poverty and antisemitism, as were the lives of his parents and grandparents both in the old and new worlds. The compelling force of these conditions may be seen in the way Reznikoff drew upon the autobiographical impulse throughout his life in prose works such as *By the Waters of Manhattan* (1930; Reznikoff also used this title for his selected poems of 1962) and the poetic sequence *By the Well of Living and Seeing* (1969). In 1910, Reznikoff went to the University of Missouri to study journalism; he returned to New York and entered the Law School of New York University in 1912, receiving his degree in 1916. Reznikoff never practiced law, though years later (1930–34) he worked as an editor for *Corpus Juris*, the legal encyclopedia. Indeed, as Milton Hindus puts it in his biographical sketch of Reznikoff, "What else he did to earn money – selling hats for his parents, doing research for organizations, translating books, helping to edit a magazine, or being a general factotum for a friend, Albert Lewin, who was a successful Hollywood film producer – was more or less a matter of chance and largely indifferent to him." Reznikoff married the writer, teacher, and Zionist Marie *Syrkin in 1930, and their relationship was often troubled by career and financial woes. When Syrkin accepted a teaching position at Brandeis in 1950, Reznikoff remained in his beloved New York, an arrangement that lasted 17 years. Reznikoff based his bitter novel *The Manner "Music"* (1977) on their relationship, though it was only discovered and published after his death. Yet Syrkin also helped Reznikoff, securing an editorship for him at the Zionist journal *Jewish Frontier* – a job which, characteristically, he did not relish. Only in his later years did Reznikoff begin to find a larger audience, as renewed interest in the Objectivists grew, and younger poets, including Allen *Ginsberg, Robert Creeley, David *Ignatow, Harvey Shapiro, Michael Heller, and Paul *Auster, addressed his work.

Reznikoff's poetry was shaped by the experiments in free verse and imagism of the somewhat older first generation of American modernists. His first volumes were self-published, but by the early 1930s he joined Louis *Zukofsky and George *Oppen as a member of the short-lived Objectivist group and published a number of important books under the imprint of the Objectivist Press. Reznikoff's work, with its emphasis on the testimonial quality of the poem, served as a model for Zukofsky, who formulated the group's theoretical position, that of "thinking with the things as they exist." As an Objectivist,

Reznikoff favors relatively short, direct poems built on perception and sympathetic observation of urban life; these concentrated lyric units are almost always structured into larger sequences or serial forms. As Charles Bernstein notes, “There is no poet more dedicated to foregrounding the detail and the particular than Reznikoff and no poet more averse to blending these details into a consuming and totalizing form.”

To a much greater extent than any of his colleagues, including Zukofsky, who came from the same Yiddish-speaking immigrant background, Reznikoff consistently addresses Jewish history, religion, and culture, and frequently documents contemporary Jewish life in America. Through much of his writing career, Reznikoff’s work appeared in the *Menorah Journal*, and the Jewish-American intellectual movement associated with that publication also played a crucial role in his writing and thinking about Jewish identity. Reznikoff’s poetry may be regarded as an open-ended debate around such issues as language, religious belief and practice, Diaspora, and above all, the historical fate of the Jewish people. As Paul Auster puts it, “In spite of this deep solidarity with the Jewish past, Reznikoff never deludes himself into thinking that he can overcome the essential isolation of his condition simply by affirming his Jewishness. For not only has he been exiled, he has been exiled twice – as a Jew, and from Judaism as well.” Thus, in the volume *Jerusalem the Golden* (1934), the tensions of assimilation and devotion to Jewish tradition manifest themselves among modern Jews of New York, but also mirror the lives of the Hebrews in the ancient city of King David. The culmination of Reznikoff’s poetic investigation into Jewish fate is *Holocaust* (1975), based on the transcripts of the Nuremberg and Eichmann trials. Yet Reznikoff is equally concerned with America’s historical destiny, as seen by his longest work in his mode of poetic documentary, *Testimony: The United States*. Based on American court reports from 1885 to 1900, including industrial accidents, hate crimes, and domestic violence, *Testimony* is a dark vision of one of the most hectic periods of modernization, a deliberate response to any optimistic notion of American progress and civic life. L.S. Dembo, who contributed immensely to the rediscovery of Reznikoff and his fellow Objectivists through a series of interviews he conducted with them in 1968 and 1969, sums up Reznikoff’s status as a Jewish-American poet as follows: “Being himself, however, really meant not just a Jew or just an American but both and neither... An exile, he sits down by the waters of Manhattan to weep; a wry smile comes over his face, for he realizes that he is home. And then he really weeps.”

RHEIMS, city in the Marne department, N. France. It was not the Church council of Rheims (624–625) that laid down legislation on the Jews, as has sometimes been thought, but the council of Clichy (626–627). Jews are first recorded in Rheims in 1077; in 1103 they lived in the *Vicus Judaeorum*, later known as the Rue de Gieu (Juifs) and after 1355 the Rue des Elus. The site of the medieval synagogue is disputed, but it was perhaps No. 18 Rue des Elus. The cemetery was situated at the junction of the roads to Châlons and Cernay. Jewish scholars from Rheims participated in the *synod convened by Solomon b. Abraham *Adret and Jacob b. Meir *Tam in the mid-12th century. According to Petrus Cantor (d. 1197), dean of the cathedral chapter, theological disputations between the Jews and the Christians of Rheims were a frequent occurrence in the second half of the 12th century. Although the community was greatly reduced in the latter half of the 13th century, nevertheless the royal officer and the archbishop disputed about who had paramount authority over the Jewish community. There is no evidence of a new community between 1315 and 1322 (after the expulsion from the kingdom of France in 1306), but there certainly were Jews in the city once more in 1389. It may be that the successive expulsions led to a marked number of conversions to Christianity; a number of Christians are recorded who bore the surname “le Juif.” A few Jews settled in Rheims in 1820, but a community was not formed until the arrival of Jews from *Alsace and *Lorraine after 1870. In 1879 a synagogue was built. Although just before World War II an appreciable amount of real estate belonged to Jews, the number of Jews living in the city remained small. In 1971 there were 600 Jews in Rheims; they had a synagogue and community center.

RHINEWINE, ABRAHAM (1887–1932), Canadian journalist and historian. Rhinewine, who was born in Mezhiroch (Miedzyrzec), Poland, studied for several years in the yeshiva in Slobodka. To avoid arrest for political activity he fled to London, where he lived from late 1907 to late 1908. He emigrated to Toronto in 1909. Already involved in journalism and editing before his arrival in Canada, in 1912 he joined the staff of Toronto’s *Hebrew Daily Journal*, and from 1915 to 1931 served as its editor. For 15 years Rhinewine wrote almost daily for the *Hebrew Daily Journal*, reporting on a wide range of communal and cultural issues, as well as contributing some of his own fiction and drama. As the paper’s editor, Rhinewine managed

to appeal to a broader spectrum of the Jewish community, but the newspaper's editorial policy was decidedly pro-labor and Zionist. Rhinewine was an active member of the Labor Zionist movement. As a Labor Zionist delegate, he attended the founding convention of the 1919 Canadian Jewish Congress in Montreal and remained an active supporter of the organization's work. He was also an advocate of Jewish secular education and a founder and volunteer teacher at the National Radical School in Toronto, which opened its doors in 1911 with the support of various left-wing community groups. In addition Rhinewine chaired the Sholem Aleichem Library. An author in both Yiddish and English, Rhinewine did pioneer research in Canadian history. His writings include *Erets Yisroel in Yidishn Lebn un Literatur* (1921); *In a Kanadishn Shtot* (1921), a novella; the two-volume *Der Yid in Kanada* (1925–27); and *Looking Back a Century on the Centennial of Jewish Political Equality in Canada* (1932). A year before he died, Rhinewine was pushed out of his position at the *Hebrew Daily Journal*. He founded a rival weekly, the *Yidische Velt*, but died of a heart attack while working on the second issue.

RHODE ISLAND, state in N.E. United States. America's smallest state, it was the last of the original 13 colonies to ratify the Constitution and the first to gain a Catholic majority. Its population in 2000 was 1,048,000, the eighth smallest in the United States. Named for Aquidneck Island in lower Narragansett Bay, the state is still known officially as Rhode Island and Providence Plantations.

Roger Williams, an outcast from Massachusetts Bay Colony, founded Providence, located at the head of the bay, in 1636. He established the First Baptist Church in America and a tradition of religious tolerance. After the American Revolution, Providence succeeded Newport, on Aquidneck Island, as the state's dominant city. The second of five rotating capitals, Providence became the permanent capital in 1901.

Growth and Decline

The first Jews settled in Newport in the mid-17th century, although the exact date is disputed. The earliest recorded date is 1658, when some Dutch Jews arrived from Curaçao, and the early Jewish community of *Newport flourished before the American Revolution. Such families as Rivera, Lopez, Hart, Seixas, Levy, and Pollock were leaders in industry and shipping, and were generally respected in the community. Most of the colonial period Jews were Sephardim and most of them supported the revolutionary cause. By 1822, the last Jew had departed Newport. Sixteen years later, Solomon Pareira, a Dutch merchant, became the first Jew to settle permanently in Providence. In 1849, he was a founder of the city's first Jewish institution, a cemetery on New London turnpike. By 1878,

there were approximately 1,000 Jews in Rhode Island, almost all in Providence and nearby Pawtucket; most had relocated from New York City.

By 1905, there were approximately 8,000 Jews in Providence, a national leader in the production of woolens, jewelry, files, screws, steam engines, and silverware. Jews settled in two neighborhoods: those from Lithuania, Poland, and Byelorussia in the North End; those from Galicia, Romania, and Ukraine in South Providence.

In 1937, the Jewish community reached 30,000. In 1963, according to a scientific survey, the Jewish population of greater Providence was 19,600, including 13,440 in Providence and Pawtucket. In 2001, there were 16,000 Jews in Rhode Island, including 14,200 in the Providence area.

Business and Labor

During the early decades of the 20th century, many immigrant Jews labored in jewelry factories. A large number were self-employed as peddlers, tailors, shopkeepers, grocers, and shoemakers. Compared to Jews living in other middle-sized cities, those in Providence were exceptionally entrepreneurial.

The most enterprising, such as the Lederer brothers and the Silverman brothers, achieved success as jewelry manufacturers. In 1894, the Samuels brothers opened the Outlet Company, which became Providence's largest department store and, eventually, the anchor of a retail chain and a broadcasting network. Jacob Shartenberg's department store, begun in 1882, was the largest in Pawtucket. Across Rhode Island, Jewish businesses were familiar fixtures on Main Street and High Street.

In the decades following World War II, major businesses emerged. Ann & Hope was a national pioneer of discount department stores; Ross-Simons became widely known for its catalogue sales. American Tourister luggage and Hasbro toys became world leaders.

Congregations

The first congregation, Sons of Israel, was chartered in 1854. After merging with Sons of David in 1874, it affiliated with the Reform movement. Jacob Voorsanger, a graduate of Hebrew Union College, became the first Rhode Island rabbi ordained in America. Sons of Israel and David's first building was erected in downtown Providence in 1890. The second, known as Temple Beth-El, was built in South Providence in 1911. The third synagogue, designed by Percival Goodman and built on Providence's East Side in 1954, remains one of the finest examples of modern synagogue architecture in New England. The 42-year tenure of William *Braude, Beth-El's scholarly rabbi, has been the longest in Rhode Island.

The oldest congregation in Providence remaining Orthodox was Sons of Zion, organized in 1875. Beth Jacob's synagogue, erected in 1906, is the only Jewish building to survive the North End, which was demolished during the 1950s and 1960s for highway construction and urban renewal projects.

The oldest Conservative congregation was Beth Israel, established in 1921 in South Providence. The next was Temple

Jewish communities in Rhode Island and dates of establishment. Population figures for 2001.

Emanu-El, which in 1927 erected a magnificent domed edifice, the first synagogue on the East Side and is still thriving in the same building site.

By the turn of the 19th century, Jewish communities sprouted in many of Rhode Island's smaller and somewhat isolated cities and towns. Newport's famous Touro congregation was revived, and others arose in Pawtucket, Bristol, and Westerly. In 1961, when Woonsocket's Conservative congregation built a second synagogue, it commissioned magnificent stained glass windows, textiles, and metalwork.

Hastened by the decline of South Providence and the availability of single-family housing elsewhere, new congregations were established around Narragansett Bay. In 1952, the first suburban synagogue was built in Cranston, only a few miles south of Providence. With the construction of new highways, such distant towns as Barrington and East Greenwich also became bedroom communities. In 2005, there were six congregations in Providence, 11 located elsewhere around the state.

Organizations

A B'nai B'rith lodge was organized in Providence in 1870, a Ladies Hebrew Benevolent Association a decade later. New immigrants established scores of mutual aid societies. For example, three Hebrew free loan associations have existed for more than a century. Except for Lawrence Spitz, who led Woonsocket's Independent Textile Union in the 1930s, Jews played minor roles in organized labor. They were active in a bevy of Zionist organizations, however.

Over the past century, almost all of the Jewish community's social service agencies have been built on or relocated to Providence's East Side. These have included a home for the aged, a hospital, an orphanage, a community center, a family counseling center, and a Holocaust museum. There are two day schools and a bureau of Jewish education. Since 1954, the Rhode Island Jewish Historical Association has published an annual journal.

Recurring efforts to unify fundraising did not succeed until 1945, when Providence's General Jewish Committee was established. In 1970, this body became the Jewish Federation of Rhode Island. Since early in the 20th century Rhode Island has produced several leaders of national stature, Selma Pilavin, Sylvia Hassenfeld, and Roberta Holland who were chairs of the Women's Division of United Jewish Appeal – Hassenfeld also headed the American Joint Distribution Committee; Norman Tilles, president of HIAS; Harry Cutler who was president of JWB, and Marian Misch was president of the National Council of Jewish Women.

Education

For generations, Jewish children flourished in Rhode Island's public schools. In recent decades, however, large numbers have enrolled in Jewish day schools and private academies. The number of Jewish public school teachers, administrators, and union officials has declined significantly.

Since its establishment in 1764 under Baptist auspices, Brown University, in Providence, has never imposed a religious test for admission. The first Jewish students (male and female) did not graduate until the 1890s, however. Samuel Belkin, who later became president of Yeshiva University received his Ph.D. from Brown, which recognized his rabbinic ordination at a European yeshivah and his manifest erudition as sufficient for entry into its graduate school without a secular undergraduate degree. In recent decades, Brown's undergraduate enrollment has reached 20 percent. There have been many distinguished Jewish scholars, including William *Braude, Ernest Freirichs, Calvin Goldscheider, Sidney *Goldstein, David Kertzer, Nelson Vieira, and Alan Zuckerman. For almost two decades Jacob *Neusner taught at Brown and during his era, Brown became the most influential American University in Jewish Studies producing scholars who went on to lead major programs throughout the United States. In 1971, Brown appointed the first Jewish chaplain in the Ivy League, and its Hillel program now occupies expansive quarters. Many Jews from Rhode Island and elsewhere have been trustees and donors. Sidney Frank of New York has become Brown's greatest benefactor.

Jews have taught and studied at most of Rhode Island's universities. Like Brown's Maurice Glicksman, the University of Rhode Island, in Kingston, has had a Jewish provost, David Gitlitz. Aaron Siskind, a master photographer, taught at the Rhode Island School of Design. Jews have also taught and studied at Providence College, a Dominican institution. Sol Koffler donated buildings to many campuses.

Prominent in the professions, most Jews have obtained postgraduate training beyond Rhode Island. Brown established its medical school in 1972, under the deanship of Stanley Aronson.

Government

As Democrats and Republicans, Jews have served in the state legislature since the 1890s. There have been two Jewish governors: Frank *Licht, first elected in 1968; and Bruce Sundlun,

first elected in 1991. Jews have been elected to every statewide office, including three as attorney general. David N. Cicilline is currently mayor of Providence.

Leonard Holland was the longest serving adjutant general of the National Guard. Three Jews have served on Rhode Island's Supreme Court, and several have been close advisers to Senators.

Wider Impact

Jews have actively participated in Rhode Island's cultural life, especially during the past half century. The state's major theatrical company, Trinity Repertory, originated at the Jewish Community Center. Daniel Robbins, the first Jewish director of Rhode Island School of Design's Museum of Art, helped create its core collection of modern art, the gift of Selma Pivavin.

Active in civic affairs, Jews have helped lead the United Way, the Rhode Island Foundation, and the ACLU. Rhode Island's Children's Hospital was named for its largest donor, Hasbro. Irving Fain championed fair housing legislation, and in 1965 three rabbis marched from Selma to Montgomery, Alabama. A Jewish philanthropist donated the Roger Williams Spring, where Providence began, to the city.

[George M. Goodwin (2nd ed.)]

RHODES (Rhodos), Greek island in the Aegean Sea, with city of the same name. It is the largest of the Dodecanese Islands in the Aegean Sea and also known as the Island of Roses.

Ancient Period

The biblical reference to Rhodes is in Genesis 10:4–5. Dodanim, the son of Yavan (Greece) and the biblical figure after whom the Island of Rhodes is named and to whom it belonged, was Noah's great-grandson on the side of his son Yefet. It is written, "By these were the isles of the nations divided in their lands; everyone after his tongue, after their families, in their nations" (Gen. 10:5). Although it is uncertain when the first Jews settled in Rhodes, it appears that a Jewish community existed on the island at least toward the end of the Hellenistic period. Rhodes is listed in a Roman decree among those areas notified of the renewal of the pact of friendship between the Roman senate and the Jewish nation under the high priest Simeon (142 B.C.E.), and numerous scholars have concluded from this document that a Jewish community existed on Rhodes at the time (cf. Suetonius, Tiberius 32, where a "Diogenes Grammaticus" is mentioned who used to dispute on the Sabbath; cf. also IG, XII, *fasciculus* 1, n. 11, line 5, where one should probably read "Menippus of Jerusalem"; cf. *corrigenda*, p. 206).

Herod the Great had occasion to visit the island a number of times. His first visit was in 40 B.C.E. when, having set

sail for Pamphylia on his way to Rome, he was nearly shipwrecked and with difficulty made his way to Rhodes. There, according to Josephus' account (Ant., 14:377–8, see also Wars, 1:280), he found the city devastated by the war against Cassius and "did not hesitate to help it even though he was in need of funds, but actually exceeded his means in restoring it." It is probable that he thereby intended also to benefit the local Jewish population. Following the battle of Actium (31 B.C.E.) Rhodes was the scene of a meeting between Herod and the victorious Octavian. On this occasion Herod proclaimed his loyalty and friendship to the new Roman emperor and as a result was reconfirmed king of Judea (Wars, 1:387–8, Ant., 15:187–8). Josephus states that Herod continued to offer economic aid to Rhodes: "again and again he made contributions for shipbuilding, and when their Pythian temple burnt down he rebuilt it on a grander scale at his own expense" (Wars, 1:424; Ant., 16:147).

[Isaiah Gafni]

Middle Ages and Ottoman Rule Until 19th Century

Jews are again mentioned in Rhodes at the time of the Arab conquest in the seventh century C.E. In 653 the Arab conqueror, Mu'awiya, ordered the destruction of the remains of the Colossus of Rhodes. It was sold to a Jew from Edessa who carried away 90 camel loads of bronze (Theophrastus, *Chronographia*, 1:345). *Benjamin of Tudela, the 12th-century traveler, found some 400 Jews in the city of Rhodes. Some Jews, upon fleeing Aragonese territory during the 1280 persecutions, went to Rhodes, then still under Arab rule. During the rule of the Knights Hospitalers of St. John of Jerusalem (1309–1522), the Jewish quarter (*vicus Judeorum*) was next to the city wall near the port. During the 38-day siege of the city by the Turks in 1480, the Jews fought valiantly in defense of the city. Their houses were torn down to reinforce the wall, and the fighting reached the synagogue before the Turks were forced to retreat. The grand master of the order, Pierre d'Aubusson, erected two churches on the site to commemorate the event and the synagogue had to be abandoned. In recognition of their bravery, the Jews were later allowed to rebuild it. Meshullam of *Volterra and Obadiah of *Bertinoro visited Rhodes in 1481 and 1488, respectively. The latter found only 22 Jewish families, the others having left after the 1481/82 earthquakes which again destroyed the Jewish quarter. The remnant was living in poverty, mainly on its womenfolk's earnings (the anonymous Pilgrim of Cologne noted the Jewesses' skill in making silk clothes), but some men worked in tanning. After a plague (1498–1500), the order decided to expel within 40 days all Jews who would not become baptized. They could leave with their belongings but had to sail for Nice, in order not to settle in Turkish territories. In the next two decades from 2,000 to 3,000 Jews captured by the order's ships, were brought to Rhodes, and kept there as slaves to work on fortifications.

In 1522 these captives helped the Turks conquer the fortress of Rhodes. Under the benevolent Ottoman rule, Rhodes became an important Sephardi center, the Jews outnumbering the Turkish population. The community numbered 144 Jew-

ish household heads during the reign of Suleiman the Great (1520–66), but the number was probably higher. Expulsees from Spain and Portugal, as well as returned *anusim* (Marranos) strengthened the Jewish community and fortified it as an important Judeo-Spanish-speaking center. Also some 150 Sephardi families were transferred from Salonika to Rhodes for economic and strategic reasons as part of the *sorgun* by order of the sultan in order to strengthen the population base. Jews from Izmir, Istanbul, and Jerusalem were also relocated there; as well as Jewish political prisoners. Rhodes became known as the “small Jerusalem.” In the Ottoman period, the community had two main synagogues: Kahal Grande and Kahal Shalom, founded later, in 1577, and renovated in 1593. Noteworthy of the time was the 16th century local poet Judah Zarko, who published his work *Lehem Yehudah* in 1560. Among the noteworthy rabbis of Rhodes were: Judah ibn Verga (16th century); Moses Bussal (17th century); Jehiel Bassan (18th century); Michael Jacob Israel (1790–1856) author of the responsa *Yad Yamim*; Judah Moses Franco, who became *Rishon le-Zion* in 1911; and, above all, the long line of the rabbis of the Israel family, beginning with Moses Israel of Erez Israel, who was appointed chief rabbi of Rhodes in 1714. The Jews of Rhodes were merchants, manufacturers of arms, moneychangers, tax farmers, and physicians; the middle class were craftsmen: carpenters, tanners, goldsmiths, and bookbinders, and others made a well-known wine, silk clothes, and wove cloth.

Moses de Vushal of Safed, chief rabbi of Rhodes in the mid-17th century, presided over a flourishing yeshivah on the island. He wrote *Yismah Moshe* and lived in a time of messianic hysteria within the community prompted by the messianic activity of *Shabbetai Zevi of nearby Smyrna (Izmir). Shabbetai Zevi stayed at the rabbi's house for a month in 1662 when he was en route to Erez Israel. Rabbi Vushal's son, Solomon, became an ardent follower of Shabbetai Zevi. After this false messiah converted to Islam by order of the Ottoman authorities in September 1666 in order to avoid a death sentence, Solomon Vushal also converted to Islam, like many of Shabbetai Zevi's devout followers throughout the region and the world. The rabbis who followed Moses de Vushal had to cope with the problem of maintaining rabbinical authority due to the turbulence caused by Shabbateanism. The community also suffered a plague in 1667, which caused many to flee temporarily to the villages of the island. In the 18th centuries the community was led by the Chief Rabbis H̄ayyim Algazi; Shmuel Sadok; the above Moses Israel (1714–38); Ezra Malki (of Safed), who died in 1768; Moses ben Eliyahu Israel (Moses Israel II) of Jerusalem, who was appointed in 1773 but died at the early age of 34 in 1782; Jedidiah Samuel Tarica (whose family originated in Candia); and H̄ayyim Tarsa, author of the responsa *H̄ayyim Shenayim* and student of Rabbi Moses Israel II.

Aharon Raḥamim Franco was the Austro-Hungarian consul in Rhodes beginning in 1769. In addition, he was appointed by the Emperor Franz Josef as minister of the post.

In the 19th Century

The wealthier Jews were merchants in cloth, silk, sulfur, and resins, and the rest were small shopkeepers and artisans, ambulant vendors, and fishermen. In 1819, Behor Alhadeff founded a bank which later became Solomon Alhadeff and Sons. The bank eventually became a powerful financial house in the Levant and the family established commercial enterprises and clothing factories throughout the region. The community was governed by a council of seven *memunim* (“officials”). The council decided on taxes to be levied, and together with the rabbi it gave *askamot* (“decisions”) on current matters. Government taxes were collected by a Jew who was appointed by the Turkish governor. The rabbi was recognized by the authorities as the judicial authority in all questions concerning marriage, divorce, inheritance, etc. The Kahal Gadol synagogue was built under Knights Hospitalers' rule, and the Kahal Shalom synagogue in 1593; there were also two small synagogues, Kahal Kamondo (from 1865) and Kahal Tikkun H̄azzot, called also Keila de los Vicos (“the Synagogue of the Rich”). There were many yeshivot used as meeting places for prayer and study, and many smaller prayer rooms called *midrashim*. The Israel yeshivah dated from the 17th century and Moses Menashe founded the Menashe yeshivah in 1850. His son Boaz “Effendi” was a Turkish judge. The education of boys was given over to private teachers, usually employed by a group of families. In 1882, Moses Franco, who also was the French vice consul, opened the modern Progress school where Hebrew, Turkish, and French were taught, but it closed after five years due to fierce objection from the local rabbis. In 1895, the noted educator and historian Abraham *Galante founded the Tifereth Israel school, which had a similar curriculum and agenda as the progress school, but it only lasted two years. In 1899, he founded the *talmud torah*. In the early 1900s the Alliance Israélite Universelle opened separate boys' and girls' schools. The latter was opened when parents feared that their daughters who studied at the Catholics Soeurs school were exposed to proselytism and a 15-year-old girl converted to Catholicism. Life under Turkish rule was easy, except in 1840 when in the wake of the Damascus blood libel the rabbi and the leading members of the community were arrested and held until the innocence of the Damascus Jews was proven. According to various reports, the number of Jews during the 19th century was between 2,000 and 4,000.

At the end of the 19th century, young poorly educated teenage boys from Rhodes began migrating to Africa to search for a better future with dreams of getting rich. Eventually, they reached the Belgian Congo and Rhodesia and founded synagogues in Elizabethville and Salisbury. At the beginning of the 20th century, Rhodian Jews also followed Greek-Orthodox fellow townsmen to the United States and South America.

Among the noted rabbis of the second half of the 19th century was H̄ayyim Raḥamim Joseph Franco (b. 1835; “the H̄arif”), who wrote *Sha'arei Raḥamim*, *Shenot Yamim*, *Ot le-Raḥamim*, *Midat ha-Raḥamim*, and *Kevod Ya'akov*. He was *av bet din* locally and later in Livorno and Jerusalem (1868), and

finally served as chief rabbi of Hebron (1878–1901). Reuben Eliyahu Israel was the last chief rabbi of Rhodes, appointed in 1921 and serving until his death in 1932.

The *Mahzor Sefarad* was used by all; parts of prayers and especially *piyyutim* were recited in Ladino. Before marriages, the dowry was assessed and the amount inscribed in a register and later in the *ketubbah*; the dowry was exhibited on carts in the Jewish quarter. On the Sabbath after the marriage the groom was called to the *tevah* and recited Abraham's order to his servant to find a bride for his son Isaac in Mesopotamia (Gen. 24); the congregation sang each verse in the Aramaic Targum. Those who recovered from serious illness or grave danger would offer a sacrifice – a cow or sheep – whose blood the *shohet* would smear on the door and the doorposts.

Italian Rule

In 1912, after the Balkan Wars, Rhodes and other Dodecanese islands came under Italian rule. There were about 4,500 Jews in Rhodes at the time. Rhodes became the center of the Italian possessions in the Levant and Italian Jews settled on the island. An Italian rabbinical seminary, the Collegio Rabbinico, was founded by the Italian government in 1928 to serve the Italian Levant (the Balkans, Erez Israel, Egypt, and Ethiopia); it was closed in 1938 before the Fascist racial laws were promulgated. It was headed by such scholars and luminaries as Rabbi Marcus Breger, Riccardo Pacifici, Prof. Isaiah Sonne, and Rabbi Michel Albagli. The musicologist Albert Hemsli did important fieldwork with Rhodian Judeo-Spanish speaking Jews to annotate their knowledge of romances, coplas, and other cultural literary forms and religious musical rituals.

Jews who had arrived in Rhodes after 1919 (103 families from Bulgaria, Greece, and Turkey) were expelled and most of them sailed for Tangier. Others later fled in the face of the discriminatory measures, mainly to the Belgian Congo and Rhodesia; where Rhodian enclaves had existed since the early 20th century. Some 200 local Jews embarked the illegal immigration boat *Rim* to Erez Israel after its North European Jewish passengers on the shipwrecked *Agios Nikolaos* had been stranded in Rhodes for six weeks and housed at the local stadium. After the capitulation of Italy to the Allies in September 1943, the Germans occupied Rhodes, and on July 24, 1944, deported to Auschwitz all of the 1,820 Jews who were left on the island; only 179 survived. The future UN Secretary-General and Austrian President Kurt Waldheim, then a young Wehrmacht Intelligence officer, was present for the collection of gold when the Rhodian Jews were interned at the Chemenlik warehouses, formerly an early Ottoman aeronautical base, and assisted in arranging logistics for their deportation to the Haidari Camp in Piraeus, from which they would be deported to Auschwitz/Birkenau. Twenty-nine-year-old Turkish consul and Righteous Gentile Salahattin Ulkumen saved some 46 Jews from deportation.

Post-World War II

When Rhodes became a part of Greece in 1947, some 50 Jews lived there. In 1969 there were 32 Jews on Rhodes. In the early

21st century some 20 Greek Jews lived in the city of Rhodes and the Kal Grande synagogue functioned and also served as a museum for the history of Rhodian Jewry.

Despite the destruction of Rhodian Jewry in the Holocaust, an active Rhodian Diaspora still exists. In addition to the above-mentioned communities in the Diaspora, the former Rhodian Jews and their descendants relocated after the nationalization of the Belgian Congo in the 1960s and established communities in Seapoint, outside of Capetown, South Africa, and Brussels, Belgium; each having a Rhodian synagogue building. From this exodus, a Rhodian enclave was also created in Ashdod, Israel. A second-generation group in Israel, led by the Jerusalemites Mario Soriano, Maggie Cohen, and Dr. Yehuda Leon, publishes a periodical called *Ahi Rhodes*, and produced a film called *Rhodes: Story of a Community that Disappeared*.

RIBALOW, MENACHEM (1895–1953), U.S. Hebrew editor and essayist. Born in Chudnov, Volhynia (Russia), Ribalow received a yeshivah education and also studied at the University of Moscow; he immigrated to the United States in 1921. Two years later he was appointed editor of the Hebrew weekly *Hadoar*. For 30 years he wrote his weekly editorials under his pseudonym, M. Shoshani, and hundreds of essays which appeared in various periodicals and, eventually, were collected in five volumes. As an essayist he concentrated on literary criticism, especially of Hebrew poetry. Though his love for Hebrew sometimes led him to hyperbolic evaluations of Hebrew writers, he was a perceptive critic. Many Hebrew authors in the U.S. made their debut under his guidance.

Ribalow also edited a short-lived quarterly *Mabbu'a* (1952/53); two jubilee volumes of *Hadoar* (1952); several volumes of a literary annual *Sefer ha-Shanah li-Yhudei Amerikah* (“The Year Book of American Jews”) between 1931 and 1949; a literary annual; and memorial volumes for various writers. He also edited an anthology of American-Hebrew poetry in Yiddish, an anthology of Hebrew writers and *Ahisefer* (1944), a volume designed to foster greater understanding between Hebrew and Yiddish writers in the U.S. A collection of some of his literary essays appeared in English translation, *The*

Flowering of Modern Hebrew Literature (1959, tr. and ed. by J. Nadich). Ribalow was a leader of Histadrut Ivrit of America, an organization for the propagation of Hebrew culture in the United States. With Israel's President Izhak *Ben-Zvi, he was co-president of the World Hebrew Union.

His son, HAROLD URIEL RIBALOW (1919–1982), was a writer and anthologist with a special interest in Jewish participation in the world of sport. He published *The Jew in American Sports* (1949) and *Fighter from Whitechapel: The Story of Daniel Mendoza* (1962). He served as editor of Congress Weekly from 1946 to 1951, the *American Zionist* from 1951 to 1953, and as sports editor of the Jewish Telegraphic Agency after 1956.

[Eisig Silberschlag]

°RIBBENTROP, JOACHIM VON (1893–1946), German Nazi leader and foreign minister (from 1938). First introduced to Hitler in 1932, Ribbentrop soon became a foreign policy advisor and was appointed ambassador to England in 1936. He returned in February 1938 to become foreign minister. He reached the height of his career by negotiating the Ribbentrop-Molotov pact with his Soviet counterpart that divided Poland, with Germany invading from the west and the Soviet Union from the east, into three zones, territory annexed by Germany, territory occupied by Germany, and territory occupied by the Soviet Union. Given his previous service, Ribbentrop initially favored a pro-British foreign policy and later sought to maintain the Soviet-German alliance until the invasion. Vain and incompetent, Ribbentrop was useful even if not a fanatical antisemite. His power diminished as Germany took less interest in foreign policy and resorted to war. In late 1942 he perceived the depth of Hitler's commitment to the Final Solution and became devoted to its execution. He pressed this policy, most especially for Hungary. For this the ministry had a special section in Germany (later Deutschland III) dealing with Jewish questions in German satellites. At the head of the department stood Franz *Rademacher (until 1943) and afterward Eberhard von Thadden. Ribbentrop's visits and those of his subordinates to satellite states were partly aimed at implementing the extermination policy in those countries. He was hanged as a major war criminal after his condemnation by the International Military Tribunal.

RIBEAUVILLÉ (Ger. **Rappoltweiler**), town in the Haut-Rhin department, E. France. By 1311 there was a Jewish community in Ribeauvillé large enough to own a synagogue, but

it was decimated in the *Armleder massacres of 1338 and the *Black Death persecutions of 1349. In 1375 a few Jews again lived in Ribeauvillé, but it is not known if there was a community in continuous existence until 1530 when Jews were again expelled from the town, not to return until the close of the 17th century. At the end of the 18th century there were over 300 Jews in Ribeauvillé. During the 19th century the expanding community erected a new synagogue. From the beginning of the 20th century, however, the number of Jews declined to the point where, before the outbreak of World War II, the community had practically ceased to exist.

[Bernhard Blumenkranz]

RIBEIRO, BERNARDIM (1482–1552), Portuguese poet. Ribeiro was a prominent courtier, but beyond this little is known about his life except that he is said to have become insane after losing his mistress to a rival. The most talented Portuguese poet before Camões, Ribeiro wrote eclogues that created a vogue for bucolic verse. His outstanding work was the *Hystoria de Menina e Moça* (also known as *Saudades*), the first edition of which was published by the Jewish printer Abraham *Usque at Ferrara in 1554. The work is a novel of romance and chivalry in pastoral disguise, remarkable for its sensitivity, its realistic detail, and its prevailing melancholy. Some passages have been given a kabbalistic interpretation, or have been seen as referring to the persecution of the Jews. It has been suggested that Ribeiro was befriended by the Usque family, after he had fled from the Portuguese court; and it has even been conjectured that the similarities between the *Menina* and the *Consolaçam* of Samuel *Usque stem from the fact that the latter and Ribeiro were one and the same person. One of the most important pieces of imaginative literature produced in the 16th century, Ribeiro's novel had considerable influence on later writers.

[Kenneth R. Scholberg]

RIBEIRO DOS SANTOS, ANTONIO (1745–1818), Portuguese jurist, philologist, and humanist. Ribeiro was born in Oporto, Portugal. After studying under the Jesuits in Brazil, he returned to Portugal in 1764, where he studied Canon Law at Coimbra. He was ordained subdeacon in 1796, and fulfilled important ecclesiastical functions in Viseu, Faro, and Evora, where he served as Deputy of the Holy Office. He was a strenuous defender of the principle of democratic rule as opposed to the divine right of absolute monarchy.

In 1776 Ribeiro was appointed the first Director of the Public Library of Lisbon, in which capacity he served until his death.

He left many works on literature, history, law, and philology, among them studies on the history and literature of Portuguese Jewry. His *Memoria da literatura sagrada dos Judeus portugueses desde os primeiros tempos da Monarquia até aos fins do sec. xv* ("An Account of the Sacred Literature of the Portuguese Jews from the Early Days of the Monarchy until the End of the 15th Century"); *Memoria da literatura sagrada dos Judeus portugueses no sec. xvi* ("An Account of the Sacred Literature of the Portuguese Jews in the 16th Century"); *Memoria da literatura sagrada dos Judeus portugueses no sec. xvii* ("An Account of the Sacred Literature of the Portuguese Jews in the 17th Century"); *Memoria da literatura sagrada dos Judeus portugueses no sec. xviii* ("An Account of the Sacred Literature of the Portuguese Jews in 18th Century") were published by the Portuguese Academy of Sciences.

He bequeathed several manuscripts to the Public Library of Lisbon, among them two studies entitled *Do estado civil religioso dos Judeus em Portugal e da sua emigração para varias partes do mundo* ("On the Civil and Religious Status of the Jews in Portugal and Their Emigration to Various Countries in the World") and *Memorial dos feitos de Jeronimo de Santa Fé contra os Hebreos* ("An Account of the Activities of Jeronimo (Geronimo) de Santa Fe against the Jews").

Ribeiro revealed his Jewish origin to a friend, Attilio Zuccagni Orlandini, an Italian geographer, and asked him to copy his manuscript on the "Civil and Religious Status of the Jews in Portugal" and to publish it "in his happy Tuscany, where one enjoys that honest freedom of opinion which in Portugal is almost always denied and punished, so that my work on the unfortunate Israelite Nation, so painstakingly compiled, should not remain forever buried in the Archives of the Public Library."

Zuccagni Orlandini in fact copied the manuscript and translated it into Italian, but failed to publish it.

[Jeonathan Prato]

RIBEIRO SANCHEZ, ANTONIO (1699–1782), Marrano physician, born in Pernamacor, Portugal. Denounced to the Inquisition in 1726, apparently on flimsy grounds, he fled to London where he was circumcised without, however, joining the Jewish community. In 1731 he went to Russia, where in 1733 he became court physician to the empress Anna, being made a councillor of state. After the accession of the empress Elizabeth, his Jewish origin became known and he was dismissed and retired to Paris, where he worked among the poor. Although now out of sympathy with official Judaism, he wrote an important memorial, advocating the amelioration of the condition of the Portuguese New Christians and the restriction of the power of the Holy Office. In his opinion its severity was often responsible for arousing Jewish sympathies in

New Christians formerly of unblemished orthodoxy. He was the first person to popularize in Western Europe the medicinal value of Russian vapor baths, and was a pioneer both in educational and in penal reform.

[Charles Reznikoff]

RIBICOFF, ABRAHAM A. (1910–1998), U.S. politician. Ribicoff was born in New Britain, Connecticut, the son of a poor Polish immigrant factory worker. After working his way through school and college, Ribicoff won a scholarship to the University of Chicago Law School, graduating in 1933. He entered law practice in Hartford, Connecticut, and became active in the Democratic Party. In 1938 Ribicoff was elected to the General Assembly of the state legislature. He served there until 1942, when he was appointed a municipal judge in Hartford. In 1948 Ribicoff won election to the U.S. House of Representatives. After four years in the House, he ran unsuccessfully for the Senate in the Eisenhower Republican landslide of 1952. Two years later he ran as the Democratic candidate for governor in a campaign marked by antisemitic appeals. Ribicoff responded to the hate campaign against him in an impassioned speech affirming his faith in the "American dream" of equal opportunity. He won a narrow victory over the incumbent, the only Democrat to win a statewide election in Connecticut that year. He served as governor of Connecticut from 1955 to 1961. In that capacity he became extremely popular, especially for his crackdown on automobile driving violations. In 1958 he was reelected by a margin of 246,000 votes, the largest ever recorded in the state.

In 1960 Ribicoff led the campaign to gain his party's presidential nomination for John F. Kennedy. When Kennedy became president, he appointed Ribicoff to his cabinet as secretary of health, education, and welfare. After 19 months, marked by both success and frustration, Ribicoff resigned to run for the Senate, where he hoped to be able to promote needed changes in health and welfare programs more effectively than he could as an administrator. In the Senate, where he served from 1963 to 1981, his first major triumph came with the passage of the Medicare Act, in which he played a prominent part. Other reform causes that he championed included automobile safety, control of air pollution, aid for dependent children and the mentally ill, and increased federal help for the urban areas and for the arts and education. Ribicoff frequently spoke out in the Senate on issues of special concern to Jews. In 1965 he warned against resuming aid to Egypt so long as it continued to threaten Israel with extinction. He also denounced discrimination against Jews and the denial of Jewish cultural and religious rights in the Soviet Union. Although generally identified as a staunch advocate of social reform and the raising of social welfare standards, and as a defender of the rights of minorities, Ribicoff won general respect for his practicality, his concern for economy in government, and his criticism of those who seek redress of their grievances through violence.

Ribicoff served as chairman for the Committee on Government Operations (94th and 95th Congresses) and the Committee on Governmental Affairs (95th and 96th Congresses). After serving in the Senate, he returned to the practice of law in New York City.

Ribicoff wrote *America Can Make It!* (with P. Danaceau, 1972). *The American Medical Machine* (with P. Danaceau, 1972). *Politics: The American Way* (with J. Newman, 1973). *Nixon's Good Deed: Welfare Reform* (with V. Burke, 1974). and *Mental Health and Retardation Politics* (with D. Felicetti, 1975).

ADD. BIBLIOGRAPHY: J. Lieberman, *The Legacy: Connecticut Politics, 1930–1980* (1981); S. Isaacs, *Jews and American Politics* (1974); L. Tanzer (ed.), *The Kennedy Circle* (1961); S. Opatowsky, *The Kennedy Government* (1961).

[Sanford A. Lakoff / Ruth Beloff (2nd ed.)]

RIBLAH (Heb. רִבְלָה).

(1) Ancient Syrian town situated between Lebo-Hamath and Kadesh on the Orontes, south of Lake Homs, on the crossroads of the military highways to Mesopotamia and Egypt; present-day Ribla. Perhaps because it was better known than nearby Lebo-Hamath in Ezekiel's time (see below) it is named in Ezekiel 6:14 (read רִבְלָה), instead of the latter, as the theoretical northern limit of the Land of Israel. Around this point there are many important tells. The great battle of Kadesh between Pharaoh Ramses II (19th Dynasty) and the Hittite king Muwatalliū was fought there in 1286 B.C.E. The name of Riblah was then probably Sabtūna^c (Pritchard, Texts, 256). This place was strategically situated for northwestern or southwestern conquerors of the West. After a short reign of three months, King *Jehoahaz of Judah was deposed and imprisoned in Riblah by Pharaoh *Neco, presumably while the latter was still in northern Syria in the year 609. Later he took Jehoahaz with him to Egypt (II Kings 23:33–34). *Nebuchadnezzar chose Riblah as his headquarters during his last campaign against Jerusalem in 588–586 B.C.E. After two years of siege, King *Zedekiah saw that the situation was desperate and tried to flee the city, but the Chaldeans overtook him at Jericho and brought him to Nebuchadnezzar at Riblah. All of Zedekiah's children were slain before his eyes; he himself was then blinded by order of Nebuchadnezzar and brought to Babylon (II Kings 25:1–7; Jer. 52:9ff.).

(2) Shepham Hariblah (Num. 34:11) is a still unidentified boundary point on the northeastern boundary of the Land of Israel.

RICARDO, DAVID (1772–1823), British economist. He was born in London into a Sephardi family which in 1760 had immigrated from Holland. He was sent to Holland for a traditional Jewish education. After his return to London in 1786, Ricardo joined his father, Abraham Ricardo (d. 1812), a successful member of the stock exchange. In 1793 he married the daughter of a Quaker, broke with his family and left the faith, although he persistently advocated religious liberties and the

removal of Jewish disabilities. Having become a member of the stock exchange on his own, Ricardo showed unusual ability and soon achieved financial independence. In 1814 he retired from business, turned to the study of economics, and became one of the founding fathers of modern economics. His interest in this field dated back to 1799 when he read Adam Smith's *Wealth of Nations*. His publications were widely discussed and in 1819 Ricardo entered parliament, and took an active interest in current affairs. Ricardo's major contributions to economics were embodied in his *Principles of Political Economy and Taxation* (London, 1817).

Ricardo was a rigorous theorist, and much of today's knowledge about currency, taxation, and international trade is based on Ricardo's analysis. His monetary views foreshadowed the 1844 Bank Act and laid the foundations of an "economical and secure currency" which has remained the major objective of modern monetary policy. In the field of fiscal policy he expounded the broad economic consequences of taxes on capital accumulation, the distribution of national income, and price levels. His theory of international trade and his principles of the comparative advantage provided the scientific basis for the rule of free trade. Although critics differ on the validity of Ricardo's doctrines, there is agreement on his permanent merits as a methodologist. Ricardo introduced the first abstract models and established the concept of political economics as a body of principles dealing with material resources. His lasting merit is the definite transformation of economic speculation into a scientific discipline. His collected works and correspondence, edited by the great economist Piero *Sraffa and by M.H. Dobb, were published in 1951–73. With Adam Smith, Thomas Malthus, and Karl Marx, David Ricardo is regarded as among the seminal figures in Britain who, between the late 18th and mid-19th centuries, invented modern economics. Ricardo died at the age of only 51, leaving an enormous fortune of £500,000 that he had earned as a stockbroker, and much land. Many among Ricardo's family also had notable careers. His sister SARAH RICARDO PORTER (1790–1862) was one of the first Englishwomen to write on education. His nephew JOHN LEWIS RICARDO (1812–1862) was a member of Parliament and a key promoter of the electric telegraph in the 1840s. His collateral descendants include the architect HALSEY RALPH RICARDO (1954–1928) and his son, the mechanical engineer SIR HARRY RALPH RICARDO (1885–1974), who was a crucial figure in the development of the tank for the British army in World War I and who served as president of the Institution of Mechanical Engineers in 1944–45. He wrote an autobiography, *Memories and Machines* (1968).

BIBLIOGRAPHY: P.H. Emden, *Jews of Britain* (1943), 47–59, index; J.H. Hollander, *David Ricardo, a Centenary Estimate* (1910); M. Blaug, *Ricardian Economics* (1958). **ADD. BIBLIOGRAPHY:** ODNB online; T. Peach, *Interpreting Ricardo* (1993).

[Joachim O. Ronall / William D. Rubinstein 2nd ed.]

RICARDO, DAVID (1904–1982), scholar of the liturgical music of the Spanish and Portuguese Jews. Born in Amster-

dam, Ricardo acquired his knowledge and love of this music from his grandfather Elyakim Alvarez Vega, who was *hazzan* of the Spanish and Portuguese synagogue in Amsterdam from 1885 to 1923. He was also the conductor of the Sephardi children's choir Santo Servicio, which performed at religious services there. Ricardo settled in Erez Israel in 1933 and although a mechanical engineer by calling, devoted himself from 1940 to recording the musical traditions of his community, collecting some 300 melodies. His recordings were donated to the National Sound Archives in the late 1950s and remain an important musical document for scholars. He published three booklets titled *Ne'im Zemirot* containing 170 notated traditional tunes from the Portuguese Jews Congregation (Amsterdam 1975) with an introduction by E. *Gerson-Kiwi; he dedicated the work to his late grandfather.

[Akiva Zimmerman / Israela Stein (2nd ed.)]

RICCHI, RAPHAEL IMMANUEL BEN ABRAHAM HAI (1688–1743), Italian rabbi, kabbalist, and poet. Ricchi was born in Ferrara, but when he was two years old his family moved to Rovigo. When he was six his father died and his mother's brother, Jedidiah Rabbino, undertook to provide for the family and the education of the children. On Rabbino's death his son took charge of the family and married Ricchi's sister. At the age of 20 Ricchi began to travel around various Italian cities, making his living as a teacher. Although his great wish was to study Kabbalah with *Benjamin b. Eliezer ha-Kohen Vitale of Reggio, he had to abandon his aim for economic reasons. In 1717 he was ordained rabbi in Trieste by R. Hillel Ashkenazi of Canea. Immigrating to Erez Israel in 1718, he settled in Safed, where he devoted himself to the study of Lurianic Kabbalah. In Safed he was ordained rabbi by Ḥayyim Abulafia, the rabbi of Safed. Because of a plague that ravaged the country, in which his daughter died, Ricchi left Erez Israel after two years. On his way back to Italy, his ship was captured and taken to Tripoli, but he was released after 40 days. He settled in Leghorn, but later journeyed to Smyrna, Salonika, Constantinople, and London. He spent two years in Aleppo and in 1737 he arrived in Jerusalem, where he stayed for three years. In 1741 he returned to Leghorn to settle business matters connected with his books. While on one of his trips he was murdered by robbers.

His books, in the order in which they were written, are (1) *Ma'aseh Hoshev* (Venice, 1716), a commentary on the building of the tabernacle; (2) *Hoshev Ma'hashavot* (Amsterdam, 1727), on the size of a *mikveh*, on phylacteries, and homiletic commentaries on the Bible and Talmud; (3) *Hon Ashir* (Amsterdam, 1731), commentaries on the Mishnah, written in Gorizia and completed and expanded in Safed. The tractates are interspersed with poems with explanations by the author beside them; (4) *Mishnat Ḥasidim* (Amsterdam, 1727), an exposition of Lurianic Kabbalah according to topics. With the aim of teaching the subject in a methodical fashion, the book is modeled on the six orders of the Mishnah, with each order divided into tractates. The division into three parts (*maftehot*) is the author's own: (a) *Maftē'ah ha-Olamot*, consisting of the

orders *Zera'im*, *Kodashim*, *Tohorot*, and *Nezikin*; (b) *Maftē'ah ha-Neshamot*, containing the order *Nashim*; and (c) *Maftē'ah ha-Kavvanot*, containing the order *Mo'ed*. Ricchi's sources were books based on the Lurianic tradition according to Ḥayyim *Vital and Israel *Sarug. A commentary on *Maftē'ah ha-Olamot*, written by Moses b. Jekuthiel Zalman of Dragichin (later *dayyan* in Pinsk) and entitled *Maggid Mishneh*, was printed in the margin of the text in Zolkiew in 1745; (5) *Yosher Levav* (Amsterdam, 1737), considered by the author as “the soul of the Ḥasidic tradition.” Written in Jerusalem, the book deals with basic kabbalistic problems of *zimzum* (“withdrawal”), *beriah* (“creation”), and *kavvanot* (“intentions”). Here Ricchi considers the problem of whether the Lurianic *zimzum* was a real act or not. While believing that God actually withdrew into Himself in order to make room for the created worlds, he contends that this is not the main question: just as it is impossible to understand that the worlds could be created without God (who fills everything) withdrawing in order to make room for them, so it is impossible to grasp how God could withdraw into His own Being. It is beyond the power of the human intellect to decide in this matter or to comprehend the possibility of *zimzum*. Ricchi arrives at this conclusion because the assumption that *zimzum* was not a real act might lead to the inference that the essence of God is to be found in the lowly material world and in places unsuited to His majesty. He interprets the saying “There is no place which does not contain Him” as referring to the providence of God, which is everywhere. His discussion of the problem of *zimzum* is intended to counteract the arguments of his contemporary, Irgas; (6) *Adderet Eliyahu* (Leghorn, 1742), explanations of difficult passages in the Talmud, responsa, homilies on various verses in the Bible, and riddles; and (7) *Ḥozeh Ziyyon* (Leghorn, 1742), a kabbalistic commentary on Psalms. The introduction contains Ricchi's autobiography. As Ricchi died before the printing was completed, the story of his death was added to the end of the book along with an elegy on him composed by Solomon Joseph Carpi.

[Efraim Gottlieb]

RICE (Heb. אֲרֵז, *orez*), *Oryza sativa*, introduced to Erez Israel at the close of the Second Temple period. Within a short time it became a product of considerable economic importance. The rice of Erez Israel was of excellent quality and an important export. There was said to be “none like it outside Israel” (TJ, Dem. 2:1,22b) and as a result it was laid down that it had to be tithed as *Demai even outside Israel (Dem. 2:1). The Israel rice was distinguished from rice grown outside Israel, for example rice grown in “Ḥulata,” i.e., “Ḥulat [“the plain of”] Antiochia” in the valley of the Orontes, it being noted that the latter was red (cf. Tosef. *ibid.*). Some good rice was sown in Paneas in the valley of Dan, but most of the excellent rice (the white species apparently) came from other parts of the country (TJ, Dem. 22d). Rice is a summer crop (Shev.

2:7), growing in water and requiring careful and prolonged preparation in sowing and planting, three months before the New Year (TJ, Dem. 2:2, 33d in accordance with the reading of the Rome Ms.). Instead of plowing, the earth was stirred with water (Shev. 2:10). The rice was eaten after the husk had been removed by threshing and the thin skin of the seed by pounding (TJ, Ter. 1:4, 40d).

Rice dishes were many and varied, and many formulas were suggested for the appropriate blessing, among them that of Simeon he-Ḥasid for a rice delicacy: "Who has created delicacies with which to delight the soul of every living being" (TJ, Ber. 6:1, 10b). The nutritive value of rice was regarded as double that of wheat (see TJ, Pe'ah 8:5, 20d; and cf. Pe'ah 8:5). According to Johanan b. Nuri "rice is a variety of grain," therefore the same blessing must be recited over it as over bread, and the full *grace after meals recited after eating it, but the other rabbis disagreed (Ber. 37b). He also holds that "*karet is incurred for eating it in its leavened state [on Passover] and a man may discharge the duty of eating unleavened [bread] with it on Passover" (Pes. 35a). On this point, too, the other rabbis disagreed, holding that "rice, *sorghum, *millet, and *legumes do not ferment but merely decay" (TJ, Ḥal. 1:1, 57a; Pes. 2:4, 29b). Since rice was not regarded as leaven, dishes made from it were permitted on Passover, and some used to eat them with beets on the night of Passover (Pes. 114b). It was decided that rice was not a species of grain, hence rice bread is exempt from *ḥallah* (Ḥal. 1:4). However, in the time of Ashi there were localities in Babylon where rice was the only bread of the inhabitants. In such places *ḥallah* was separated from the bread as a symbol in order "that the law of *ḥallah* be not forgotten by them" (Pes. 50b–51a).

From the sources quoted above it is clear that rice was not regarded as belonging to the class of legumes. Both Maimonides and Samson of Sens, however, included it among legumes and since there were authorities who forbade the use of legumes on Passover, rice too came to be included in the prohibition. Combined with this was the fact that some commentators and decisors held that both *orez* and *dohan* (sorghum) are species of millet (Rashi to Ber. 37a). However, the Tosafot (ad loc.) rightly render *orez* as rice and *dohan* as millet. To this day Ashkenazim refrain from eating rice during Passover whereas Sephardim permit it. The description of *orez* in rabbinical literature as well as its etymology clearly prove that *orez* is to be identified with the Greek ὄρυζα and the Latin *oryza*, i.e., rice. In recent times a number of attempts have been made on a small scale to grow rice again in Israel (previously the Arabs grew red rice in the swamp of Ḥuleh and its vicinity).

[Jehuda Feliks]

RICE, ABRAHAM JOSEPH (1802–1862), U.S. Orthodox rabbi and businessman. Rice (Reiss) was born in Germany,

where he was ordained at the Wurzburg yeshiva. Since he lacked a university education, he could not be a rabbi in Bavaria, so he taught Talmud at the Zell yeshiva. In 1840, a council of Bavarian rabbis sent him to serve the American Orthodox Jewish community as the first traditionally ordained rabbi in the United States. After trying to revive the venerable Yeshuat Israel congregation (now known as the Touro Synagogue) in Newport, Rhode Island, he became rabbi of Congregation Niche Israel, also known as the Baltimore Hebrew Congregation. As one of the few rabbinical scholars in the country at the time, Orthodox congregations all along the eastern seaboard as far north as New York turned to him for answers to particularly complicated questions of **halakhah* (Jewish law). In fact, Orthodox communal leaders repeatedly attempted to establish for Rice, who founded the first German-Jewish all-day school in America in Baltimore, the office of "chief rabbi of the United States." In 1849, Rice left the rabbinate to become a merchant and serve as unpaid religious leader of a small congregation he founded, Sherith Israel. He was an active supporter of charitable initiatives; during the Crimean War (1853–56), he spearheaded an emergency drive to help the Jews in the Holy Land. A vigorous defender of Orthodox tradition against the inroads of Reform Judaism, Rice engaged in polemics with Reform leaders, going so far as to excommunicate influential Reform leader Isaac M. *Wise for propagating heresy. Towards the end of his life, Rice resumed his position as rabbi of the Baltimore Hebrew Congregation. He was described in newspapers as the chief rabbi of America, a title he might have felt he merited but did not achieve.

[Bezalel Gordon (2nd ed.)]

RICE (Reizenstein), ELMER LEOPOLD (1892–1967), U.S. playwright. Born in New York, Rice studied law and used his familiarity with legal procedure in at least two plays. His first, *On Trial* (1914), was also the first play on the American stage to use the flashback technique of the cinema. *Counselor-at-Law* (1931) was remarkable for its realistic detail and dialogue. Rice became known as an experimenter, though it took him some years to repeat his early success. Working in many styles, he wrote an expressionist satire on office drudgery, *The Adding Machine* (1923); *Street Scene* (1929), a tragedy of New York slum life which won the Pulitzer Prize, was made into a film, and was later turned into a musical by Kurt *Weill and Langston Hughes; *We, the People* (1933); and a fantasy, *Dream Girl* (1945).

A radical in his social outlook and a champion of freedom of thought, Rice resigned as regional director of the Federal Theater Project in New York City in 1936 as a protest against Washington censorship. In order to be independent of producers, he joined Maxwell Anderson, Robert E. Sherwood, and S.N. *Behrman in forming the Playwrights' Company. *Judgment Day* (1934), based on the Reichstag fire trial, and *Flight to the West* (1940) were both strong anti-Nazi dramas. *Between Two Worlds* (1934) dramatized the contrasts between American beliefs and Communist ideology. Rice held that the

theater was a forum for “the discussion of problems... that affect the lives and happiness of millions,” but that did not prevent him from writing appealing little plays like *The Left Bank* (1931) and *Two on an Island* (1940). *Not for Children* (1935) was a satire on the theater.

His other plays include *See Naples and Die* (1929), *A New Life* (1944), *The Grand Tour* (1951), and *Love Among the Ruins* (1963). Two of his novels were *Imperial City* (1937) and *The Show Must Go On* (1949). Rice published an autobiography, *Minority Report*, in 1963.

[Joseph Mersand]

RICE, ISAAC LEOPOLD (1850–1915), U.S. lawyer and promoter. Rice was born in Wachenheim, Bavaria, and taken as a child to Philadelphia. He abandoned a career in music to study law, graduating in 1880 from Columbia Law School where he taught from 1882 to 1886. He devoted himself to railroad law, and was instrumental in reorganizing several southern railroads, which later constituted the Southern Railway, and the Philadelphia and Reading Railroad. In the 1890s Rice turned to electrical inventions, working on the electric storage battery, electric automobiles, and electric boat industries. He was president of the Electric Boat Co., the National Torpedo Co., the Electric Storage Battery Co., the American Casein Co., and numerous other firms manufacturing railway and marine vehicles and rubber tires. A prominent chess player, Rice invented the “Rice Gambit” opening and received the silver trophy for the International Universities Chess Match. Rice wrote *What Is Music?* (1875) and contributed to several periodicals, including *The Forum*, which he founded.

RICE, JAMES P. (1913–1997), U.S. organization executive. Born in Cleveland, Ohio, Rice graduated from Case Western University and received a master’s degree in social administration from Adelbert College. From 1936 to 1945 he served as a caseworker and later as an administrator in Cleveland, Chicago, and New York. At the end of World War II he was appointed by the *American Jewish Joint Distribution Committee to supervise its program for the resettlement of Jewish refugees in Italy, France, Switzerland, and Austria, where he oversaw programs that helped more than 500,000 Holocaust survivors. From 1955 to 1966 he served as executive director of *United HIAS Service, in which capacity he worked to strengthen the organization’s ties with other international Jewish bodies. During this period he also served as representative to the United Nations on behalf of the International

Council on Jewish Social and Welfare Services, working with government officials to codify a new immigration law that would ease entry restrictions for refugees. Rice then served as executive vice president of the Jewish Federation/Jewish United Fund of Metropolitan Chicago (1966–79). He helped the federation form a merger and structured a reorganization plan that expanded its services to people in need. After his retirement, Rice served as a consultant to several organizations, such as the United Jewish Appeal and Chicago’s Council for Jewish Elderly.

[Hillel Halkin / Ruth Beloff (2nd ed.)]

RICE, JOSEPH MAYER (1857–1934), U.S. physician, editor, and educator. Rice, who was born in Philadelphia, Pennsylvania, was a pediatrician. Interested in problems of prophylaxis, he became increasingly concerned with school programs, and from 1888 to 1890 studied pedagogy at Jena and Leipzig. When he returned to the United States, he launched a journalistic crusade to reform the schools along progressive German lines. He first published his criticisms and recommendations in *The Forum and Century*, and then in a book entitled *The Public-School System of the United States* (1893). Later, while serving as editor of *The Forum and Century*, he undertook some of the first scientific investigations into teaching, beginning with a study of the effects of systematic instruction on achievement in spelling. Rice’s studies and conclusions were collected in *Scientific Management in Education* (1913).

[Lawrence A. Cremin]

RICH, U.S. department store owners. The Rich family came from Kaschau (Hungary), from where Morris Rich (1847–1928) and his brother William moved to the United States in 1860; they became peddlers in Cleveland (Ohio). In 1865 Morris moved to Atlanta (Georgia) where in 1867 he opened a retail store which was the first of a leading chain of department stores in the South. His brothers Emanuel (1849–1897) and Daniel (1843–1920) who had come to the United States in 1862, and later Walter Henry (1880–1947), joined him in his successful business. Rich’s of Atlanta was the first major retail store in the area to introduce liberal credit terms and home-spun ways of merchandising, which popularized the store among the large black population. The firm’s credit policy was a major factor in its rehabilitation after a disastrous fire swept Atlanta in 1917. The company also simplified internal administration and became famous for its excellent labor relations. Its owners and senior officers were prominent in many local and national civic organizations and charities which included the Rich Foundation, a major endower of Emory University’s School of Business Administration.

BIBLIOGRAPHY: H.G. Baker, *Rich’s of Atlanta: the Story of a Store Since 1867* (1953).

[Joachim O. Ronall]

RICH, ADRIENNE (1929–), U.S. poet. Rich was the daughter of a Jewish father who distanced himself from Judaism,

and a gentile mother. Her Jewishness, and her response to it, inform much of the poignancy of her poems about claiming a heritage. No less importantly, her poetry is often bound up with her father, patriarchal authority, and her lesbianism. A revolt against, as well as a feminist reading of, a Judaism that is male-dominated, gives Rich's poetry a characteristic strength, compassion, and large embrace. In "Yom Kippur 1984," she reflects: "Am I writing merely about privilege/ about drifting from the center, drawn to edges..." Rich, often writing about the shared experiences of females and about historical women, began her career with tightly controlled poetry which brought her early recognition by critics and other poets. Her first book of verse, *A Change of World* (1951), was chosen by W.H. Auden for the Yale Younger Poets Award; a Guggenheim Fellowship followed (1952–53). *The Diamond Cutters and Other Poems* (1955) won the Ridgely Torrence Memorial Award of the Poetry Society of America. She was also awarded the National Institute of Arts and Letters Award for poetry (1960); another Guggenheim Fellowship (1961–62); and a Bollingen Foundation grant for translation of Dutch poetry (1962). In 1994, she was awarded a MacArthur Fellowship.

Rich married an economist, had three sons, and served as Phi Beta Kappa poet at William and Mary College, at Swarthmore College, and at Harvard College. After Rich and her family moved to New York City in 1966, she grew active in protests against the war in Vietnam. Rich's poetry became radicalized as well, moving away from the precise blank verse that had been her trademark to freer meters. *Leaflets* (1969) expressed her new conviction that the goal of poetry should be to illuminate the moment, rather than to be worked over for posterity.

In 1970 Rich's husband died and she became increasingly involved in the radical feminist movement. She won the Shelley Memorial Award of the Poetry Society of America in 1971 and served as the Fanny Hurst Visiting Professor of Creative Literature at Brandeis University in 1972–73. When she was awarded a National Book Award for her 1973 book of verse, *Diving into the Wreck*, she refused to accept the award as an individual, and instead accepted it in the name of all women. Her books of poetry include *Poems: Selected and New* (1975) and *A Wild Patience Has Taken Me This Far* (1981). Of special interest is Rich's volume of poetry *Your Native Land, Your Life* (1986) which speaks about her Jewish identity. Her *An Atlas of the Difficult World: Poems 1988–1991* was published in 1991; her *Collected Early Poems, 1950–1970* in 1993; *The School Among the Ruins: Poems, 2000–2004* in 2004. She has written several volumes of essays, among them *On Lies, Secrets, and Silence: Selected Prose, 1996–1978* (1979); *Blood, Bread, and Poetry: Selected Prose, 1979–1985* (1986); and *What Is Found There: Notebooks on Poetry and Politics* (1993).

[Sylvia Barack Fishman / Lewis Fried (2nd ed.)]

RICH, BUDDY (Bernard; 1917–1987); U.S. drummer, bandleader, tap dancer. The son of a vaudeville team (Wilson and Rich), he was on stage at the age of 18 months, or so the legend goes. He was definitely a professional entertainer by age four, playing drums and tap dancing in the Broadway show *Pinwheel* in 1921, and by the time he was 11, Rich had formed his own band. As soon as he looked old enough, he was sneaking into clubs and sitting in on the drums whenever he could. In 1937, Rich was hired by Joe Marsala, and he then moved on to gigs with Bunny Berigan, Artie Shaw, and Tommy Dorsey. His musical career was interrupted by military service during World War II, but he picked up where he had left off when he returned, rejoining Dorsey. According to a contemporary source, Rich was "cocky, rashly outspoken and brutally sarcastic." With a temper as explosive as his all-out playing style, he was also quick with his fists, fighting nearly everyone in the Dorsey band, including star singer Frank Sinatra. Yet when Rich left Dorsey to form his own band, Sinatra was one of his financial backers, so completely did he believe in the tempestuous drummer's talents.

Although his sense of rhythm was exquisite, Rich's timing as an entrepreneur was less sterling; he blossomed as a big-band drummer just as the economic foundations of the Big Bands collapsed. He toured with Norman Granz's Jazz at the Philharmonic troupe, worked as a vocalist after a heart attack in the mid-1950s, then came roaring back with a new Big Band in 1966. That fire-breathing group stayed intact in one form or another for about a dozen years. A second heart attack in the mid-1970s forced Rich to pare the band down to a sextet, but he remained musically active and a frequent guest on such TV staples as *The Tonight Show* almost up to his death from a brain tumor.

Siders, "Buddy Rich," in: *Down Beat Magazine* archives, at: www.downbeat.com; G.T. Simon, *The Big Bands* (1981).

[George Robinson (2nd ed.)]

RICH, MARC (1934–), international commodities trader. Born Marc David Reich in Antwerp, Belgium, he and his family emigrated to the United States in 1942. He attended New York University, but did not graduate, and worked as a commodities trader for his father, who was a successful producer of burlap sacks. Rich then worked with Philipp Brothers, a dealer in raw metals, learning about the international trading of raw materials with Third World nations. He later focused on trading with dictatorial regimes and embargoed nations such as Iran. In 1983 Rich and his partner, Pincus Green, were indicted on charges of tax evasion and illegal trading with Iran. According to the indictment, Rich set up a scam to have his company's oil relabeled by a reseller, and thus seemingly exempted from price controls. Rich's lawyers sought a deal to end the prosecution and spare him jail time. They offered \$100 million if all charges were dropped. This was on

top of \$50,000 a day Rich was paying in contempt-of-court fines. During this period, Rich and Green were in Europe. When the deal was finally rejected, Rich and Green became fugitives when they decided to stay abroad. The resellers who were the main co-conspirators in the fraud were convicted and served 12 months in jail. Rich's companies pleaded guilty to 78 counts and paid over \$150 million while he and Green remained fugitives.

Rich was joined in Switzerland by his wife, DENISE EISENBERG RICH (1944–), the daughter of Holocaust survivors who fled Germany for Worcester, Massachusetts. Her father made millions in a shoe factory while Denise went to Boston University, where she taught herself to play the guitar and began a songwriting career. They married in 1966 and she stayed with her husband in Europe. After about 10 years, she returned to New York City with their three daughters and reportedly received a large divorce settlement. Denise began pursuing her songwriting career in earnest, contributed heavily to the Democratic Party and the campaign of Bill Clinton, whom she met in 1993, and became famous for large parties in New York City. Over the years, her songs were nominated for Grammys and Oscars and she wrote songs for pop stars like Celine Dion, Aretha Franklin, and Patti LaBelle. The songs and parties continued until 1996 when the Riches' middle daughter, Gabrielle, died of leukemia at the age of 27. Denise then created the G & P Charitable Foundation (G for Gabrielle, P for Philip, her daughter's husband) to finance cancer research. Since its formation in 1998 the foundation raised millions, aided by an appearance at the first gala by then-President Clinton.

While in exile, Rich continued his questionable business practices. In 1988, the Defense Logistics Agency lifted its bar on contracting with a Rich company and between 1989 and 1992, the U.S. Mint issued at least 21 separate contracts for nickel, zinc, and copper to the company.

Over the years, Rich kept trying to win a pardon, his lawyers arguing that he was the victim of overly zealous prosecutors. Many of those who wrote letters of support for a presidential pardon were leaders of Jewish philanthropy in the United States and Israel. Rich had given to a variety of major institutions in Israel, including Shaare Zedek Medical Center, Ben-Gurion University, the Israel Museum, and the Jerusalem Foundation. He also helped bring dozens of Jews from Ethiopia and Yemen to Israel and was one of 14 people who pledged five million dollars to Birthright Israel, a program that sends young, primarily North American, Jews on free trips to Israel. On January 20, 2001, only hours before leaving office, Clinton granted Rich a pardon. Clinton explained his decision by noting that similar situations were settled in civil, not criminal, court, and cited clemency pleas from Israeli government officials, including Prime Minister Ehud Barak.

After his pardon, Rich began lucrative business dealings with Saddam Hussein of Iraq, which were disclosed in 2005 in connection with the United Nations oil-for-food scandals.

[Stewart Kampel (2nd ed.)]

RICHARDS, BERNARD GERSON (1877–1971), U.S. journalist, widely active in Jewish affairs. Richards was born in Keidan (Kedziniai), Lithuania, and was taken to the U.S. in 1886. He began his journalistic career as a reporter on the *Boston Post*, and wrote for several Boston and New York papers, as well as for Yiddish and other Jewish journals, including the *American Hebrew* and *The New Palestine*. He also edited the magazine *New Era*. From 1906 to 1911 Richards served as secretary of the Jewish Community of New York City, an organization designed to further the cause of Judaism, and in 1915 helped found the *American Jewish Congress, of which he was executive director until 1932. At the end of World War I he was a member of the American Jewish delegation to the Versailles Peace Conference. He also founded the Jewish Information Bureau of Greater New York (1932), and the American Jewish Institute, New York (1942) to further adult education. He was director of both these institutions. He was also a member of the Zionist Organization of America, and his revised edition of I. Cohen's *The Zionist Movement* (1946) included a supplementary chapter of his own on Zionism in the U.S. His other books were *The Discourses of Keidansky* (1903), and *Organizing American Jewry* (1947). His papers are in the library of the Jewish Theological Seminary, New York.

[Irving Rosenthal]

RICHARDS, MARTIN (**Morton Richard Klein**; 1932–), U.S. stage and film producer. Morton Richard Klein grew up in the Bronx and got his first job at the age of 10 as a newsboy in the Broadway show *Mexican Hayride* with June Havoc. He did other shows and commercials until his voice changed. At 17, a baritone, he began performing in nightclubs under his new name. He spent two years at New York University studying architecture, his grandfather's profession, while singing at night, but quit to pursue show business full-time. Realizing he would never make it big as a singer, Richards landed jobs as a casting director. He found actors for small roles in Manhattan-location movies like *The Seven Year Itch*, *Sweet Charity*, *The Boston Strangler*, and *Sweet Smell of Success*. He then raised funds to stage an Off-Broadway show, *Dylan*, which proved a success, and his producing career was born. Richards was determined to stage the dark musical *Chicago*, and he spent 27 years before it had its premiere on Broadway in 1975. The show, a smashing success, ran for more than 900 performances. That same year, Richards met Mary Lea Johnson, one of several children who were heirs to the Johnson & Johnson medical supply fortune. Johnson, a former actress and a woman who had two failed marriages, and Richards, an acknowledged homosexual, married. In 1976, with one million dollars from his wife, they established the Producers Circle, with Robert Fryer and James Cresson. The partnership produced such Broadway musical hits as *On the Twentieth Century* (1978), *Sweeney Todd* (1979), *La Cage aux Folles* (1983), *The Will Rogers Follies* (1991), and *Grand Hotel* (1989) among others. Their shows won more than 36 Tony Awards. *Crimes of the Heart* won a Pulitzer Prize. Off Broadway, the Circle pro-

duced *March of the Falsettos* and *Mayor*. Among their films were *The Boys from Brazil* (1978), *The Shining* (1980), *Fort Apache, the Bronx* (1981), and *Chicago*, which won an Oscar for best film of the year in 2003, along with five other Oscars. Five years after the death of her father, Mary Lea Richards and her brothers and sisters challenged their father's last will, which disinherited five of his six children and left the vast bulk of the \$350 million estate to his third wife, his former maid. The case was the largest inheritance contest in the history of New York before it was settled out of court with the children dividing about 12 percent of the total. Legal challenges continued for Richards into the early years of the 21st century, years after the death of his wife. Richards spent millions establishing the Mary Lea Johnson Richards Institute at NYU and the Children's Advocacy Center of Manhattan.

[Stewart Kampel (2nd ed.)]

RICHIETTI, JOSEPH SHALLIT BEN ELIEZER (17th century), rabbi and emissary of the Holy Land. Richietti apparently came from Mantua and settled in Safed some time after 1659. From 1674 to 1676 he was an emissary of Safed in Italy. Moses *Zacuto welcomed him with great honor upon his arrival in Mantua in 1674. He was a Shabbatean of Zacuto's circle. During his mission he published his *Hokhmat ha-Mishkan* (Mantua, 1676) on the erection of the Tabernacle, at the end of which he republished the *Iggeret Mesapperet Yahasuta de-Zaddikei de-Ara de-Yisrael* ("A genealogical table of the righteous men of Erez Israel"). In the introduction to the work he speaks of having drawn up a map of Erez Israel. He appears also to have spent some time in Verona. According to documents of the Mantua community, he lent a sum of money to the community during a time of need. He possessed important manuscripts, among them a copy of the **Midrash ha-Gadol*, and was the first European scholar to make use of it.

[Abraham David]

RICHLER, MORDECAI (1931–2001), Canadian author. Richler's satiric portrayal of Montreal's Jewish Main gained both prominence and notoriety in 1955 with the publication of his second novel, *Son of a Smaller Hero*. Published in Britain, this slim, young man's novel of leaving one's community caused a stir in Canada, with its depiction of working-class Jews coming to terms with the breakdown of tradition and the speed with which a prosperous postwar Canada allowed middle-class Jews to assimilate and suburbanize themselves. These themes recur – more fully fleshed out and with greater humor – in Richler's breakthrough 1959 novel *The Apprenticeship of Duddy Kravitz*.

Richler's career would prove to be a writing away from and back to his childhood experiences in the neighborhood around Montreal's St Lawrence Boulevard, which existed as a Jewish enclave, with English Montreal to the west and French

Montreal to the east. Between the middle 1950s and the early 1970s Richler made his home in London, England, raising a family and supporting himself by writing screenplays. Upon returning to Montreal to stay, Richler told friends that he worried that being too long away from his home turf might weaken his relationship with his richest material. The major novels that best reflect his ability to weave Montreal Jewish themes into a larger fictional tableau are *St. Urbain's Horseman* (1971), *Joshua Then and Now* (1980), and *Solomon Gursky Was Here* (1989). In the first of the three, Montreal plays the slightest role, and Richler addresses the Holocaust with deft, dark humor and moral outrage. *Joshua Then and Now* presents a loving portrait of a St. Urbain Street childhood. And in *Solomon Gursky Was Here*, Richler's most ambitious book, he takes liberties with the Bronfman liquor dynasty, the role of Jewish wealth and power in Canada, alongside a fanciful consideration of Jews in the Arctic. These major books confirmed Richler's place at the forefront of Canadian letters.

Richler's output also included three children's books featuring a character named Jacob Two-Two, as well as an excellent memoiristic collection, *The Street* (1969). Among his many literary awards are two Governor General's Awards, the Giller Prize, and the Commonwealth Writers Prize.

Alongside his fiction and memoir, Richler embraced freelance journalism and published regularly in Canada and abroad on subjects as varied as Israel and the sporting life. His willingness to editorialize aggressively and acerbically placed him at the center of the political and cultural debate concerning Quebec's national aspirations. Richler dismissed the *indépendantiste* movement as destructive, incoherent, and self-serving, insisting that its roots could be found in the xenophobic right-wing ideologies of 1940s Quebec. His influential, as well as provocative contributions to this discussion include a long essay, which appeared in *The New Yorker* in 1991, and his full-scale study and memoir *Oh Canada! Oh Quebec: Requiem for a Divided Country* (1992). With the latter's publication Richler found the Montreal Jewish community fully behind him – possibly for the first time in his career – as they applauded his criticism of Quebec nationalism. In the French-speaking community, Richler solidified his position as the Anglophone *bête noir* of French cultural life in the province.

In his last years, Richler was elevated to the role of cultural icon in Canada, a development that propelled his final novel, *Barney's Version* (1997), to bestseller status. The novel also became an unlikely success in Italy, where readers embraced Richler's characteristic brand of political incorrectness.

[Norman Ravvin (2nd ed.)]

RICHMAN, JULIA (1855–1912), U.S. educator; the first woman district superintendent of schools in her native New York. She prepared for her teaching career at the Female Normal School (now Hunter College) and at New York University.

First serving as teacher and vice principal of Public School 77, she became the principal of its girls' department in 1884. In 1903 she was appointed district superintendent of schools, a post which she held until her death. Julia Richman helped immigrant children to adjust to American life, combated truancy and juvenile delinquency, and advocated educational programs for mentally retarded children. She organized an employment agency for school dropouts and provided medical and social services for pupils. She also pioneered in organizing the Parent-Teacher Association. She directed the Hebrew Free School Association and, as first president of the Young Women's Hebrew Association, 1886–90, influenced adult Jewish education. From 1895 to 1899 she was chairman of the committee on religious school work of the Council of Jewish Women. As educator and author of *Good Citizenship* (1908), with Isabel Richman Wallach, *The Pupils' Arithmetic* (1911–17), and *Methods of Teaching Jewish Ethics* (1914), she stressed the development and welfare of every child. A girls' high school in Manhattan was named after her.

[William W. Brickman]

RICHMOND, state capital of Virginia, U.S. and commercial center on the James River; 2001 population of metropolitan region 1,138,000 and within the city itself 192,000; Jewish population, 12,500.

There is evidence of Jews residing in Richmond as early as 1769. Revolutionary war veterans and business partners, Jacob I. Cohen and Isaiah Isaacs, the city's earliest known Jewish residents, were instrumental in the establishment of the state's first Jewish congregation in 1789. Kahal Kadosh Beth Shalome was the sixth and westernmost congregation in the colonies, and one of the six that congratulated George Washington upon his inauguration as first president. The 1790 census shows Richmond with the fourth largest Jewish population, following only New York, Charleston and Philadelphia. The first Jewish burial ground in the state was established on Franklin Street in 1791 and, the first synagogue was dedicated on Mayo Street in 1822.

The early Richmond Jews appear to have integrated easily into the city's life, holding a number of elective and civic positions. Jacob Cohen was elected to the City Council in 1793 and served as a Master of his Masonic Lodge; Samuel Myers became alderman in 1800; Benjamin Wolfe and Joseph Darmstadt were elected to the City Council in 1816; and Solomon Jacobs was elected recorder, the second highest municipal office after that of the mayor, in 1815 and again in 1818. Gustavus A. Myers (1801–1869), known as the most prominent Jew of the city in his day, served on the City Council for nearly 30 years, 12 of which as its president. Judah P. *Benjamin, former U.S. Senator from Louisiana, lived in Richmond while serving as secretary of state for the Confederacy.

In 1841 the German Jewish community broke from Beth Shalome to establish Beth Ahabah, a new synagogue in the

Ashkenazic tradition. In 1898 the two congregations merged as Beth Ahabah, which continues as Richmond's largest Reform congregation. A Polish congregation, Keneseth Israel, was organized in 1856, while an influx of Russian Jews beginning in 1880 led to the establishment of the Sir Moses Montefiore Congregation. By the 20th century such ethnic distinctions had faded away and the latter two synagogues joined with the Aitz Chaim Congregation in forming the Orthodox Temple Beth Israel.

Jews played a vital role in reviving the city's economy after the U.S. Civil War (1861–65) left the capital of the Confederacy in shambles. Philip Whitlock, a Confederate veteran, and his tobacco firm, P. Whitlock, helped establish the city as a major tobacco center. Gustavus A. Myers and Edward Cohen established the Merchants and Savings Bank in 1867, and Charles Hutzler and William H. Schwarzschild Sr. founded the Central National Bank in 1911.

A number of early Jewish firms were still owned and managed by the same families for over a century after their inception, such as the Thalhimers department store, established in 1842 and the Binswanger Glass Works. Schwarzschild Jewelers, established in 1897, remains the last of Richmond's carriage trade stores.

Richmond's first public school was founded by the Beth Ahabah Congregation. Sir Moses Jacob *Ezekiel, an internationally known 19th-century sculptor, was born in Richmond and attended the Virginia Military Institute. Gustavus Millhiser (1850–1915) of the Millhiser Bay Company and Richmond Cedar Works was greatly respected in his time. William B. Thalhimers Sr. helped to convince President Franklin D. Roosevelt to legalize the deduction of charitable gifts from income tax returns. He was active on behalf of Richmond's Byrd Airport, group hospitalization, the conservation of wildlife in Virginia, and the settlement of refugees from Germany in the 1930s. Samuel Z. Troy and his wife were also active for refugees. At the end of World War II, a group of Jewish businessmen from Richmond, including Israel November and H.J. Bernstein partnered with friends from Virginia Beach to purchase and retrofit the former Chesapeake Bay ferry boat that became known to the world as the *Exodus* ship.

In 2006 the Jewish community continued to be heavily concentrated in various branches of manufacturing, merchandising, banking, medicine, law, real estate, and the wholesale and retail trade.

As of 2006 eight congregations continued to function: two reform – Beth Ahabah and Or Ami; three Conservative – Or Atid, Beth El, and Beth Shalom; and three Orthodox – Young Israel, Keneseth Beth Israel, and the Chabad Community Shul.

The social welfare structure of the Jewish community centers around the Jewish Community Federation of Richmond, formed in 1935 to galvanize the Jewish community in raising funds to assist co-religionists seeking refuge from the Nazi regime. In 2006, member agencies include the Beth Shalom Home of Virginia, which has a nursing home, assisted liv-

ing, senior living apartments, and a rehabilitation clinic; the Carole and Marcus Weinstein Jewish Community Center; Jewish Family Services, the oldest family welfare agency in Virginia, established in 1849; two days schools – Rudlin Torah Academy (K-12) and the Solomon Schechter School; and two high schools for the Orthodox community – Shaarei Torah, a high school for girls, and Yeshiva of Virginia, a high school for boys. There are four summer camps and a religious school for children with special needs. The department of religion at the University of Richmond teaches Judaism and holds the endowed Weinstein-Rosenthal Chair. Virginia Commonwealth University has a Center for Judaic Studies headed by Rabbi Jack Spiro, rabbi emeritus for Beth Ahabah. There are four *mikva'ot* and a Kosher Conference and Retreat Center.

Richmond is the home of two Jewish museums, the Beth Ahabah Museum and Archives that chronicles over 300 years of Richmond Jewish History, and the Virginia Holocaust Museum that teaches tolerance through the experiences of local survivors. Spearheaded by Jay Ipson, the Holocaust Museum recently relocated to a 19th-century tobacco warehouse deeded to the museum by the State of Virginia. In 1997, "Commonwealth and Community: The Jewish Experience in Virginia" opened at the Virginia Historical Society and traveled through the state to The Chrysler Museum in Virginia Beach and Roanoke. Saul Viener and the Jewish Federation of Richmond partnered with the Historical Society to develop the exhibit that remains on view at the Beth Ahabah Museum & Archives. The Jewish Experience is also part of a permanent exhibition on Virginia history at the Virginia Historical Society. In 2001 a Virginia Historical Marker was installed on South 14th street marking the site of the first Beth Shalome synagogue.

Throughout the late 19th and the 20th century Richmond Jews continued to serve in a variety of elected offices and civic positions. William Lovenstein, served in the Richmond Light Infantry Blues during the Civil War and later as president *pro tem* of the Virginia State Senate. Alfred Moses, Julius Straus, A.H. Kaufman, Clifford Weil, Joseph Wallerstein, Lee A. Whitlock, and Nathan Forb were elected to City Council. Sol L. Bloomberg was a council president. Dr. Edward N. Calisch, the rabbi of Congregation Beth Ahabah from 1891 until 1946, was an important leader in the community. Norman Sisisky was elected as the delegate representing Petersburg in the Virginia General Assembly in 1973 and to nine terms as U.S. Representative for Virginia's Fourth Congressional District. Eric Cantor served as the chief deputy majority whip, U.S. House of Representatives, as the U.S. Representative for Virginia's Seventh Congressional District (2000); and as Henrico County delegate in the Virginia House of Delegates from 1992 to 2000. Michael Schewel served as Virginia's secretary of commerce and trade under Governor Mark Warner.

Jewish-Christian relations in the Richmond area were characterized for many years by the indifferent Christian response to Jewish efforts to establish a meaningful religious dialogue. In the late 1990s, Congregation Beth Ahabah forged new ties with its neighbor St. James Church when it was se-

verely damaged by lightning. St. James held worship services at Beth Ahabah for two years during the restoration, and later partnered to build shared parking facilities for the two congregations.

[Susan Morgan (2nd ed.)]

RICHTER, BURTON (1931–), U.S. physicist and Nobel prize winner. Born in New York, Richter received his doctorate from the Massachusetts Institute of Technology in 1956. In the same year he joined Stanford University as a research associate, becoming assistant professor (1960). He moved to the Stanford Linear Accelerator Center as an associate professor (1963) and full professor (1967). In 1979 he was appointed the Paul Pigott Professor of Physical Science. He was director of the Center from 1984 to 1999. He served as president of the American Physical Society (1994), and the International Union of Pure and Applied Physics (1999–2002). He was a member of the National Academy of Sciences, the American Academy of Arts and Sciences, and the American Philosophical Society. Richter shared the 1976 Nobel Prize in physics with Samuel Ting of MIT for their discovery in 1974 – each working independently – of a new subatomic particle, called “psi” by Richter and “J” by Ting, three times heavier than the proton and with a life-span some 10,000 times longer than anticipated by theory at that time. This significant contribution in the field of elementary particles provided evidence for a fourth quark.

RICHTER, ELISE (1865–1943), Austrian professor of Romance languages. Born and raised in Vienna, Elise Richter was among early matriculants when the University of Vienna opened its doors to female students in 1897. Richter passed her doctoral orals in comparative linguistics *summa cum laude* in 1901, and her post-doctoral dissertation defense for her university teaching credential (*Habilitation*) in Romance philology in 1905. It took two more years before she received her official appointment as the very first *Privatdozentin*, or female unsalaried lecturer, in Austria. In 1921, she was promoted to the rank of untenured associate professor, another first for an Austrian woman. She taught a wide range of courses on various Romance languages and published extensively, especially in the field of historical grammar. Only in 1923, however, did she finally receive a paid university teaching contract, which guaranteed her financial independence. She continued to teach phonetics courses at the University of Vienna until she was seventy-three years old, several years past the normal age of retirement.

Elise Richter participated actively in Austrian political life during the interwar years as a member of the small liberal

Bourgeois-Democratic Workers' Party. Despite her personal reticence, she helped to establish and then chaired the Federation of University Women of Austria from 1922 to 1930. This organization aimed at assisting women to break into previously inaccessible fields within academia.

After the *Anschluss* in March 1938, Elise Richter suffered many humiliations due to her Jewish descent. Not only was she dismissed from her teaching position, but she was also banned from using the university library and prevented from visiting museums and theaters. Her property, including her library, was confiscated and, although she continued her scholarly work until 1941, she could no longer publish in Germany. In October 1942, together with her sister, the English literary specialist Helene Richter, Elise Richter, was deported to Theresienstadt on the last large transport from Vienna; both elderly women became Holocaust victims.

Richter's students and disciples did not forget her, but continued to publish her work posthumously. The Austrian government erected a plaque in her memory as the first woman professor at the University of Vienna.

Adolf, "In Memoriam Elise Richter," in: *Romance Philology*, 1 (1947–48): 329–41; B.M. Woodbridge, Jr., "A Bibliography of the Writings of Elise Richter," in: *Romance Philology*, 26 (1972): 342–360.

[Harriet Pass Freidenreich (2nd ed.)]

RICHTER, HANS (1888–1976), German artist and film maker. Born in Berlin, Richter was one of the first to make abstract feature films. He studied art in Paris and was attracted by the cubist and surrealist schools. In Zurich in 1916 he participated in the Dada movement and later joined Viking Eggeling, a Swedish painter, in making abstract films. His "scroll paintings," inspired by a desire to express Bach's fugues visually, was the forerunner of *Rhythm 21* (1921), which consisted of squares hypnotically regrouping themselves into evolving sets. Later films employed surrealistic glass eyes and bowler hats flying through the air. Richter was forced to flee from Germany, while he was making an anti-Nazi film, and he settled in the United States, where he produced *Dreams that Money Can Buy* (1946), a surrealistic fantasy. Among his other well-known experimental films were "8 × 8" (1947) involving squares on a chess board, and *Dadascope* (1961). His book *Dada – Kunst und Antikunst*, published in 1964, became a classic which was followed two years later by an exhibition that toured internationally, *Dada 1916–1966: Documents of the International Dada Movement*. Richter served as head of the Institute of Film Technique at the City College of New York (1943–56) and then specialized in teaching documentary film making.

mann and W. Schobert (eds.), *Hans Richter. Malerei und Film*. Exh. cat. Deutsches Filmmuseums (1989); G. Hoßmann, *Hans Richter 1888–1976. Das bildnerische Werk* (1985).

[Jihan Radjai-Ordoubadi (2nd ed.)]

RICHTER, RAOUL (1871–1912), German philosopher. Richter, who was born in Berlin, was the son of the non-Jewish painter, Gustav Richter, and Carola, the daughter of the composer Giacomo *Meyerbeer. He grew up in the rich artistic and cultural atmosphere of his parents' circle. He became a teacher at Leipzig, and in 1905 a professor. His first writing was *Zur Loesung des Faustproblems* (1892).

In 1903 he published his important biographical study of Nietzsche, *Friedrich Nietzsche, sein Leben und sein Werk*. His *Der Skeptizismus in der Philosophie und seine Ueberwindung* (2 vols., 1904–08) is a historical and philosophical study of skepticism from ancient times up to Nietzsche. His last book, *Religionsphilosophie* (1912), contains his critique of positive religion, his opposition to theism and atheism, and his advocacy of pantheism. Richter believed God was neither personal nor impersonal, but rather a suprapersonal organism. In 1913 a volume of his *Essays* was published containing works on Faust, Nietzsche, and Pascal.

[Richard H. Popkin]

RICHTMANN, MÓZES (1880–1972), Hungarian scholar, teacher, and Zionist. Richtmann was born in Homonna (now in Slovakia). He completed his studies at the rabbinical seminary and University of Budapest, where he obtained a doctorate in philosophy (1904) and rabbinical diploma (1906). A gifted teacher, Richtmann taught at the Jewish Teachers' Seminary in Budapest over a period of 40 years, starting in 1907; from 1950 he lectured at the rabbinical seminary. Richtmann first attracted attention in Hungarian Jewish academic circles as a philosophy disciple of D. *Kaufmann. His doctoral thesis was "Az arab zsidó neoplatonikusok etikai nézetei" ("The Ethical Views of Arab-Jewish Neoplatonists," 1904). Richtmann also published works in Jewish history: *Landau Ezékiel prágai rabbi és a magyar zsidók* ("Ezekiel Landau Rabbi of Prague and the Jews of Hungary," 1905), and *A régi Magyarország zsidósága* ("The Jews of Ancient Hungary," in: *Magyar Zsidó Szemle*, vol. 29, 1912).

Principally, however, Richtmann devoted himself to work on behalf of Zionism, which he considered to be the solution for the spiritual crisis within Hungarian Jewry, especially among its intellectuals, and which would assure the continuity of Jewish vitality. He contributed to the official Zionist organ *Zsidó Szemle* and was its editor for a period during World War I. He was a frequent contributor to the general Jewish press, especially *Zsidó Ujság* (1925–38) and the Orthodox *Zsidó Ujság* (1939–44). After World War I and the ensuing revolutions, Richtmann's assimilationist rivals denounced him before the disciplinary tribunal of government teachers for the crime of "lack of patriotism," i.e., Zionism, but the minister of education annulled the proceedings against him. From then

onward he published his articles anonymously. During the fascist regime in Hungary, he was among the few who were active in the resistance, and he published a number of anti-regime pamphlets illegally. Richtmann was elected member of the *Pest bet din* after World War II, and he devoted himself exclusively to research. The works *Orthodoxia és cionizmus* ("Orthodoxy and Zionism," 1920) and *Szombat Almanach* ("Saturday Almanac," 1927) were published under his editorship. In 1955, on the occasion of his 75th birthday, a tribute was published which includes a bibliography of his writings.

[Baruch Yaron / Alexander Scheiber]

RICIUS, PAULUS (Rici, Rizzi, also known as *Paulus Israelita*; d. 1541), humanist, translator, and apostate. Probably born in Germany, Ricius was baptized in Italy about 1505 and in the following year met Erasmus at Pavia, where he became professor of philosophy and medicine. Ricius was one of the very few converted Jews of the age who made a serious contribution to Christian Hebraism, although he also wrote a series of works (*Sal Foederis*, 1507, 1514) designed to confirm his new faith and refute Jewish arguments by means of the Kabbalah. From 1514 he was body physician to the Emperor Maximilian in Augsburg; he was elected to the chair of Hebrew at Pavia in 1521; and the favor which he enjoyed at the imperial court led to his being ennobled as Baron von Sparzenstein in 1530. The works which Ricius published include translations of Jewish and Muslim texts and some original writings, mainly on mystical themes. The translations are: part of Joseph *Gikatilla's *Sha'arei Orah*; the sole surviving Latin edition of a medical treatise by the 12th-century Spanish scholar Albucasis; and works by Averroes.

It is, above all, as one of the architects of the Christian Kabbalah that Ricius is now mainly remembered. The *Sha'arei Orah* translation – *Portae lucis* (Augsburg, 1516) – was consulted by Conrad *Pellicanus while it was still in manuscript and inspired many later scholars to tackle similar projects (e.g., the Zohar translations of G. *Postel). Ricius helped to popularize the "prophecy of Elijah" (based on Sanh. 97a) and, like *Pico della Mirandola (whose knowledge of Kabbalah Ricius disparaged), he was able to "discover" the Trinity and other Christian doctrines in Jewish mystical works, which he defended against the attacks of Jacob *Hoogstraeten in his *Apologeticus sermo* (in Pistorius, *Artis Cabbalisticæ ... Tomus I*, 1587).

Other works by Ricius include the treatises *De anima coeli* (1519) and *Responsio ad interrogationem de nomine Tetragrammato* (1519), and *Statera prudentium* (c. 1532), which led to a controversy with the humanist Girolamo Aleandro because of the author's evident toleration of Protestantism. *De coelesti agricultura libri quattuor* (1541), a collection of Ricius' major works which appeared shortly before his death, contained a preface by his former teacher, the philosopher Pietro Pomponazzi.

[Godfrey Edmond Silverman]

RICKLES, DON (1926–), U.S. comedian and actor. Born in New York, New York, the comedian started out as a shy child, but by the time he attended Newton High School in Elmhurst, Long Island, Rickles was performing in school plays. During World War II, Rickles served with the U.S. Navy aboard the *USS Cyrene*. Rickles studied drama after his discharge in 1946, and two years later he started working stand-up routines in small clubs. His impressions and jokes were nothing remarkable, but the audience instantly connected with the off-the-cuff remarks he threw back at hecklers, which gave rise to his insult style of comedy. In 1957, Frank Sinatra walked into a Hollywood nightclub where Rickles was performing when the comedian famously told the crooner, "Make yourself at home Frank. Hit somebody." Sinatra found the comic hilarious, and by 1959 Rickles had signed to his first performance at the Sahara in Las Vegas; Rickles continued to headline in the city at different hotels for decades. In 1958, Rickles made his feature film debut with *Run Silent Run Deep* (1958), followed by such films as *The Rat Race* (1960) and *Beach Blanket Bingo*. On October 7, 1965, Rickles made his first of many appearances on Johnny Carson's *Tonight Show*. He recorded his bestselling first album, titled *Hello Dummy!*, for 7 Arts Records in 1967; his follow-up album was titled *Don Rickles Speaks*. Rickles and actor Ernest Borgnine starred in West Coast performances of *The Odd Couple* in 1967, and in 1968 ABC debuted the short-lived variety program *The Don Rickles Show*. Rickles had a starring turn in the World War II feature *Kelly's Heroes* (1970), and from 1971 to 1972 CBS ran a sitcom, the *Don Rickles Show*, which featured the comedian as an advertising executive. From 1977 to 1978 Rickles starred as a Navy chief petty officer in the NBC comedy *C.P.O. Sharkey*. On February 7, 1982, Sinai Temple in West Los Angeles, California, dedicated the Barbara and Don Rickles Gymnasium. In the 1990s, Rickles enjoyed a film comeback with parts in *Innocent Blood* (1992) and *Casino* (1995), and as the voice for Mr. Potato Head in the Disney/Pixar features *Toy Story* (1995) and *Toy Story 2* (1999).

[Adam Wills (2nd ed.)]

RICKOVER, HYMAN GEORGE (1900–1986), U.S. naval officer; "father" of the atomic-powered submarine. Rickover, born in Russian Poland, was taken by his family to Chicago in 1906, where his father became a tailor. He graduated from the United States Naval Academy in 1922 and was commissioned an ensign in the U.S. Navy.

After sea duty, Rickover studied electrical engineering at the U.S. Naval Academy at Annapolis and Columbia University. He served aboard submarines for three years and then held increasingly important staff and command positions. During World War II Rickover headed the Electrical Section, Bureau of Ships in the Navy Department, and was decorated for his effectiveness in obtaining men and materials to produce electric power and equipment necessary for naval shipbuilding and maintenance. Serving at Oak Ridge in 1946, site of the development of the atomic bomb, and visiting other nuclear research installations, Rickover became convinced of the feasibility of constructing nuclear-powered submarines. Almost alone against considerable opposition, he persuaded the navy to undertake the effort in late 1947. Rickover was soon placed in charge of the project, working with the Atomic Energy Commission, which designed and built the reactors. The "Nautilus," the first atomic-powered submarine in the world, was launched in January 1954. Despite his success, Rickover would have been forced to retire in 1953 if Congressional intervention had not kept him on duty and ensured his subsequent promotions to rear admiral and vice admiral. He made other contributions to nuclear-power developments, was active in the field of education, and received many decorations. In 1973 Rickover was promoted full admiral. In 1979 he was awarded the Harry S. Truman Good Neighbor Award and in the following year the Medal of Freedom by President Carter.

RIE, DAME LUCIE (1902–1995), British potter. Born in Vienna, the daughter of Benjamin Gomperz, a professor of medicine and a friend of Freud, Lucie Rie became a potter in the mid-1920s. She came to Britain with her husband, Hans Rie, in 1938, but after their divorce lived alone in London and worked at a studio in Bayswater. Her high standards made her one of the most famous potters in Britain and she was created a dame in 1990. Originally specializing in earthenware and jewelry, she later worked in stoneware and porcelain. Much of her later work was done in collaboration with her student and fellow refugee Hans Coper (1920–1981), a leading potter in his own right.

[William D. Rubinstein (2nd ed.)]

RIEGLMAN, HAROLD (1892–1982), U.S. lawyer and public official. Riegelman, who was born in Des Moines, Iowa, entered private law practice after service in World War I. His public posts included: New York State veteran relief commissioner (1922–32); special assistant New York State attorney general (1929–30); special counsel to the U.S. Treasury Department (1935); delegate to the New York State Constitutional

Convention (1938); and special counsel to the New York State Department of Taxation and Finance (1947–48). Riegelman was a pioneer in drafting housing legislation, first in New York and later of the 1937 National Housing Law. In 1953, at President Eisenhower's request, Riegelman served briefly as acting postmaster of New York City and in the same year he was the unsuccessful Republican mayoral candidate. He later served as one of the members of the U.S. delegation to the UN.

Active in Jewish affairs, Riegelman was vice president of the American Jewish Committee (1949–52), a member of its executive committee from 1951, and finance chairman of the American Friends of the Hebrew University. Riegelman, who served in the U.S. Army with the rank of colonel from 1942 to 1945 and was decorated for bravery, wrote three books about his experiences in the two world wars. These are: *War Notes of a Casual* (1931); *There's a Nip in the Air* (1946); and *Caves of Biak* (1955).

RIEGER, ELIEZER (1896–1954), Hebrew educationalist. Born in Gribov, Galicia, Rieger settled in Palestine in 1920. He made notable contributions to methods of instruction in Hebrew, Jewish history, and modern Arabic in Erez Israel and pioneered in the teaching of civics and the social sciences. He was supervisor of Jewish secondary schools in Palestine (1937–38) and professor of education at the Hebrew University (1939–50). He compiled the first Hebrew frequency word list (1935), which served as a basic guide for educators in Israel and the Diaspora. His textbooks on modern Jewish history were widely used, and he wrote comprehensive surveys on Jewish education in Palestine (1940 and 1945). Rieger was among the founders of the Hebrew University's teacher training department and its secondary school. He was one of the chief opponents of the "trend" school system (see Israel, State of: *Education), and as director general of the Ministry of Education and Culture (1951–54) was in charge of its replacement by a system of state education.

[Alexander M. Dushkin]

RIEGER, PAUL (1870–1939), German rabbi, scholar, and historian. Rieger, who was born in Dresden, served as rabbi to the Reform congregations at Potsdam (1896–1902), Hamburg (1902–19), Brunswick, and Stuttgart (1922–39) where he died. He published works on the terminology and technology of handicrafts in the Mishnah, *Versuch einer Technologie und Terminologie der Handwerke in der Mischnah* (1894), and on various aspects of contemporary German-Jewish history. His major work was his participation, in collaboration with his friend Hermann Vogelstein, in a massive work on the history of the Jews in Rome (*Geschichte der Juden in Rom*), as the result of a prize competition sponsored by the Moritz Rapoport Foundation in Vienna in 1890. Rieger wrote the entire second volume (1895), dealing with the period from 1420 to 1870, as well as some parts of the first volume (1896). Notwithstanding the somewhat arid treatment and heavy style, it remains the standard work on the subject and is the basis of the work

Rome, a history of the Jews in Rome, published in English by Vogelstein in 1940.

[Cecil Roth]

RIEGNER, GERHART (1911–2002), Jewish public figure. Born in Berlin and trained as a lawyer, from 1936 Riegner was associated with the World Jewish Congress: first as legal officer and then as director of the Geneva office (1939–48), as a member of the World Executive and as director of coordination (1959–64), as secretary-general (1965–83), and as cochairman of the Governing Board from 1983. He was directly involved in virtually all major Jewish problems from the middle 1930s on. As international chairman of the World University Service (1949–55) and as president of the conference of non-governmental organizations in consultative status with the UN (1953–1955) and with UNESCO (1956–1958), he established a wide network of international relations among the international leadership and became a leading specialist in this field. The main features of his activities in the service of the Jewish people include protection of Jewish rights in the League of Nations under the minorities treaties; decisive information and rescue activities during and after World War II, when he was the first to uncover the plan of systematic extermination of the Jews by the Nazi government in August 1942; active involvement in important international conferences, such as the Paris Peace Conference and UN meetings, where he was influential in the shaping of the UN Universal Declaration of Human Rights; a pioneering role in interreligious consultations with the Catholic Church (before, during, and after Vatican Council II), the World Council of Churches, the Lutheran World Federation, the Orthodox churches, and the Anglican Communion; and participation in the foundation of and, from 1982 to 1984, chairmanship of, the International Jewish Committee for Interreligious Consultations (IJCIC), which was created in 1969 as a representative platform of the Jewish community in its relations with official church bodies. In 1992, the Vatican conferred on him a papal knighthood of the Order of St. Gregory.

[J. Halperin]

RIESMAN, DAVID (1909–2002), U.S. sociologist. Born of Jewish parents in Philadelphia, Riesman became a Unitarian. Graduating from Harvard Law School in 1934, he served as a law clerk to U.S. Supreme Court judge Louis D. *Brandeis (1935–36) and taught at the University of Buffalo Law School (1937–41). He then served as deputy assistant district attorney for New York County (Manhattan) (1942–43).

After World War II Riesman turned to sociology and became a professor at the University of Chicago in 1946. In 1958 he was appointed professor of social sciences at Har-

vard, where he taught until his retirement in 1980, when he assumed emeritus status.

He became widely known as the principal author (the others were N. Glazer and R. Denney) of *The Lonely Crowd: A Study of the Changing American Character* (1950; 1962¹⁰). His description of human types as “tradition-directed,” “inner-directed,” and “other-directed” have become part of the general vocabulary.

Among his numerous other publications are *Faces in the Crowd* (1952, 1960²); *Constraint and Variety in American Education* (1956, 1965³); *Thorstein Veblen: A Critical Evaluation* (1960); *Abundance for What?* (1964); and a collection of his social-critical essays, *Individualism Reconsidered* (1954, 1966²). Riesman was an active pacifist. In 1958 he published, together with Lazarsfeld and Thielens, *The Academic Mind: Social Scientists in a Time of Crisis*, an analysis of academic attitudes under the impact of the witch-hunt of liberals in the period dominated by Senator Joseph McCarthy. In 1960 he became one of the founders of the Committees of Correspondence, an organization under the auspices of the American Friends Service Committee, which explored moral and political issues regarding nuclear weapons.

Other works by Riesman include *Conversations in Japan* (with E. Riesman, 1967), *The Academic Revolution* (with Christopher Jencks, 1968), *Academic Values and Mass Education* (with J. Gusfield and Z. Gamson, 1971), *Academic Transformation* (1973), *The Perpetual Dream* (with G. Grant, 1978), *On Higher Education* (1980), and *Is My Armor Straight?* (with R. Berendzen, 1986).

Patterson, “The Last Sociologist,” in: *New York Times* (May 19, 2002); H. Gans et al., *On the Making of Americans: Essays in Honor of David Riesman* (1979).

[Werner J. Cahnman / Ruth Beloff (2nd ed.)]

RIESS, LUDWIG (1861–1928), German historian. Born in Thuringia, Riess studied at the University of Berlin. Although his doctorate *Geschichte des Wahl rechts zum englischen Parlament* (1885; abridged translation *History of the English Electoral Law in the Middle Ages*; 1940) was widely hailed for its brilliant scholarship, Riess was unable to obtain a university position because he was a Jew. He therefore accepted an appointment at Tokyo Imperial University in 1887, and during the following 15 years was instrumental in furthering the spread of western historical methods, particularly of his mentor, Leopold von Ranke, in Japan. In 1902 he returned to Germany where he served as lecturer, later associate professor, at the University of Berlin.

A prolific writer, he produced many works on European history and a number of studies on Japanese topics. Best known are his *Lectures on English Constitutional History* (1891); *Allerlei aus Japan* (1904); and *Historik* (1912).

[Hyman Kublin]

RIESSER, GABRIEL (1806–1863), pioneer of Jewish emancipation in Germany. Born in Hamburg, Riesser studied law at the universities of Kiel and Heidelberg. After trying in vain to become lecturer in one of the universities, and after being refused permission to practice as a notary in Hamburg because of his faith (1830), Riesser decided to devote his life to the struggle of the Jews to achieve *emancipation. He published in 1831 a pamphlet, *Ueber die Stellung der Bekenner des Mosaischen Glaubens in Deutschland*. Addressed to Germans of all religious persuasions, it marked a turning point in the struggle for emancipation. Riesser demanded emancipation for the Jews in the name of honor and justice. In his view the claim that the Jews must convert in order to obtain full civil rights was evidence of contempt for religion. The Jews themselves must fight for their own rights, and for that purpose they must organize themselves in special associations, since only by a common effort and not as individuals do they have a chance of success. His call struck a responsive chord and the pamphlet soon had to be reprinted.

Riesser and his ideas were severely criticized, especially by the rationalist theologian and professor, H.E.G. Paulus from Heidelberg. Paulus maintained that the adherence of the Jews to their religion made them a different – Jewish – nation, and therefore they did not have the right to be citizens (*Staatsbuenger*). In the controversy with Paulus, Riesser tried to prove that the Jews had ceased to be a nation. He held that their religion was a religious denomination and therefore they were equal to all other Germans, Protestants or Catholics, in a country in which they had lived for many generations. Riesser vigorously rejected Paulus' claim that the Jewish identification with Germany would be delusive. He argued that the long-awaited political union of Germany could be achieved only in a state built on the principles of justice, liberty, and equality, and these principles also necessitated the granting of emancipation to the Jews. He propagated his views in comprehensive essays about the problem of Jewish emancipation in the constitutional debates of his time, which he published in his periodical *Der Jude, Periodische Blaetter fuer Religion und Gewissensfreiheit* (1831–1833). Its very name indicated Riesser's self-consciousness at a time when German Jewry was seeking to substitute the word "Jewish" with "Mosaic." He published in 1838 *Einige Worte ueber Lessing's Denkmal, an die Juden Deutschlands gerichtet*. Riesser expressed the hope, in messianic vein, that the struggle for the sake of human values would be crowned with success, and that love of mankind and tolerance would defeat religious hatred and the suppression of free conscience. At the same time Riesser tried in vain to be naturalized in Hessen and to take part in forming its constitutional regime. In 1840 he was permitted to open a notary's office in Hamburg. In the years preceding the 1848 Revolution, ideological and political strife in Germany intensified and this found expression in his work, *Juedische Briefe, Zur Abwehr und Verstaendigung* (1840–42), in which he entered into polemics with Bruno *Bauer and Wolfgang Menzel, who was a rabid opponent of Heinrich *Heine and Ludwig *Boerne. Riesser

had already defended Boerne in 1831 when the latter was attacked because of his *Briefe aus Paris*.

Riesser's aspiration to function simultaneously as a German statesman and as an advocate of Jewish emancipation materialized during the Frankfurter Vorparlament und National Versammlung in 1848–49. Distinguishing himself in the National Assembly as a powerful speaker, he was vice president (for two months) and a member of the constitutional committee. He belonged to the right wing of the center in the National Assembly, expressing his views on "a free, united, great, and strong" Germany in his article, *Ein Wort ueber die Zukunft Deutschlands* (1848). The climax of his activity was the "Kaiserrede" (March 29, 1849), which was considered one of the most brilliant speeches delivered in the National Assembly. It contained the summary of the debate on the proposed constitution, and in it Riesser sought to provide justification for offering the imperial German crown to the king of Prussia; he was later one of the members of the delegation to the king, who declined the offer. Riesser proudly fought in the National Assembly for the acknowledgment of the Jews' right to full civil rights. His very status in the National Assembly was a partial expression of emancipation, which was given further expression in his later years. In 1849 not only was he naturalized in Hamburg but he became its representative in the Erfurt parliament (1850). With the formation of a citizens' council (*Buergerschaft*) in Hamburg, Riesser was elected to it and became its vice president (1859), and in 1860 he was appointed a member of the Hamburg High Court, the first German Jew to receive this title. Among his many travels outside Germany, Riesser visited the United States in 1856. He returned from this trip disappointed and shocked by the status of the American Blacks, which he regarded as a grave blow to the principle of equality and freedom, especially in a country whose democracy was theoretically the model for the rest of the world.

Riesser abandoned the observance of all Jewish tradition in his private life, but he insisted that those who wished to observe these traditions should do so of right and not on sufferance. Riesser was one of the leading members of the Hamburg Temple and associated himself generally with the moderate wing of the *Reform movement. He opposed giving up a special Jewish character in order to achieve emancipation. Only from the religious point of view were the Jews a minority, according to Riesser, a minority whose rights should be recognized by the ruling Christian majority.

The Jewish struggle for emancipation was identified with the figure of Riesser, whose sharp intellect and upright personality won him much reverence. Medals were struck in his honor and declarations of gratitude were presented to him during his lifetime. After he died a special association to perpetuate his memory was formed; M. Isler published Riesser's biography and writings under the auspices of this society (*Gabriel Riesser's Gesammelte Schriften*, 1867–68; repr. with an epilogue by J.H. Schoeps, 2001).

[Leni Yahil / Archiv Bibliographia Judaica (2nd ed.)]

His father LAZARUS JACOB (1763–1828) was born in the Bavarian village of Oettingen im Ries (hence his name) to a distinguished rabbinical family (*Katzenellenbogen) and studied Talmud under R. Raphael *Kohen, chief rabbi of *Altona. He subsequently married the latter's daughter, and served as secretary of the *bet din*; he also wrote his father-in-law's biography *Zekher Zaddik* (Altona, 1805) in fluent Hebrew. He lost his post in 1799, but later returned to Hamburg (after 1819).

RIESSER, JACOB (1853–1932), German jurist and banker. A nephew of Gabriel *Riesser, Jacob Riesser was born in Frankfurt. He was baptized in his youth. In 1880 he opened a lawyer's office in his home town. In 1888 he moved to Berlin and served as a director of the Darmstaedter Bank fuer Handel und Gewerbe until 1905, when he became a professor of law at the University of Berlin. His writings on legal aspects of the German capital market decisively influenced stock exchange and banking legislation. It was on his initiative that the Zentralverband des deutschen Bank- und Bankiergewerbes was formed in 1901, and in 1905 he became the editor of *Bankarchiv*, the profession's leading periodical. In 1909 he was a cofounder of the Hansabund, an industrial-commercial organization designed to oppose the government's pro-agricultural policies and attitudes. During 1916–28 he served as deputy in the Reichstag, first with the National Liberals, and from 1918 with the Volkspartei, and as vice president of the German parliament from 1921 to 1928. He was also a member of the 1919 Weimar Constituent Assembly.

His many publications include the standard work *Die deutschen Grossbanken und ihre Konzentration im Zusammenhang mit der Entwicklung der Gesamtwirtschaft in Deutschland* (1905; *The German Great Banks and Their Concentration in Connection with the Economic Development of Germany*, 1911), and *Finanzielle Kriegsbereitschaft und Kriegsfuehrung* ("Financial Preparation for War and for Making War," 1913²).

[Joachim O. Ronall]

RIETI (da Rieti, Rietti, Arieti (?)), family of bankers in Italy originating from the town of Rieti, located in the Latium re-

gion. First mentioned in the 14th century, some of the family moved from their town of origin to Rome, Florence, Siena, Bologna, and Mantua. One of its leading members was ISAAC RIETI (Maestro Gaio) father of Moses b. Isaac *Rieti. From 1469 to 1473, the physician MICHAEL BEN JUDAH DA RIETI lived in Terni; the family is found in the 15th century in Mantua, Rieti, Perugia, Rome, and Cesena. Around 1480, Moses ben Elchanan da Rieti established himself in Siena as a loan banker; his son LAUDADIO ISHMAEL continued his father's activity, while his brothers went to Bologna. This branch of the Da Rieti had strong family ties with another important family of Jewish bankers, the Da *Pisa. He also founded a small yeshivah, headed by Joseph d'Arles from 1537, followed by Isaac Lattes in 1552; Ismael also hosted Johanan b. Joseph *Treves. He established other loan banks in Tuscany, and probably exercised a certain degree of authority over the other Jewish bankers of the region. Due to the difficult situation in Siena after a popular insurrection, the family obtained the authorization to found a bank in Pisa (1547), until then forbidden to the Jews as in all the Duchy of Florence. Ishmael was on friendly terms with Duke Cosimo Medici and in high favor with Donna Benvenida Abrabanel. He gave hospitality to the pseudo-messiah David *Reuveni (1526), but did not show any enthusiasm for Reuveni's programs and refused to give him financial assistance. He undertook various philanthropic activities, followed in this by his son MOSES DA RIETI. When a hostile movement broke out against the Jews in Empoli (Tuscany), as a result of the prohibition by the Church against Christians engaging in trade with Jews and doing work for them on their Sabbath, Moses gave the money necessary to send a Jewish delegation to Rome and obtain from the pope a bull in favor of the Jews of Empoli. With his brothers, SIMONE and ANGELO, Moses used his influence with Cosimo to prevent the seizure of the Talmud ordered by Paul IV. At that time, SOLOMON MOSES DA RIETI was practicing in Rome as a physician.

An important branch of the family moved from Siena to Bologna where, in 1546, ELHANAN BEN ISAAC ELIAKIM DA RIETI was buried; his tombstone is preserved at the University of Bologna. In this town lived also, in 1556, Moses' nephew, son of Isaac, ASAEL RAPHAEL RIETI, father of ELIJAH ISAAC and HANANIAH ELIAKIM (1561–1623) the pupil of Judah b. Joseph Moscato. He served as rabbi of Mantua (1589) and Luzzara (1604) and was active in establishing the Shomerim la-Boker society in Mantua. Also a *hazzan*, he composed prayers and liturgical poems, many of which are included in the *Ayyelet ha-Shaḥar* (Mantua, 1612); others, especially for the morning of Hoshana Rabbah, form the *Mekiz Redumim* (Mantua, 1648), published, with an autobiographical foreword, by his son DAVID NAPHTALI; other liturgical poems have been collected in the *Minḥat Hananyah*, still in manuscript (Bibl. Oxford). In his compositions Hananiah harmoniously blended the elements from earlier **piyyutim* with those of his time. Other talmudic and ritualistic works (*Peri Megadim*; *Seder Levanon*; *Seder Tappuḥim*) have not yet been published. His

wife Malkah studied the laws of *shehitah* with R. Solomon ben Samson Basilea who allowed her to practice (1581): as is recorded in various responsa.

The heirs of MORDECAI BEN ISAAC DA RIETI opened one of the five loan banks authorized by the duke of Mantua; other members of the family were in Scandiano, under the house of Este. SIMONE DA RIETI was a member, in 1590, of the Jewish delegation which discussed the placing of the Talmud on the papal index of prohibited books. In the 17th century there lived in Siena JOSEPH BEN SHABBETAI ELHANAN, rabbi and copyist. ELIEZER BEN ISAAC RIETI, a pupil of the yeshivah of *Conegliano, published in Venice in 1612 a *Lu'ah Ma'amarei Ein Yisrael* ("alphabetical index of Ein Yisrael"); another of his works was on the *Kelalei ha-Talmud*. Still in Venice HEZEKIAH BEN GABRIEL RIETI published in the "*Lingua Tosca*" ("Tuscan Language") an Italian translation of the Book of Proverbs dedicated partly to SERENA RIETI of Mantua; the book is preceded by a letter dedicated to Ria and Isaiah Massarani. In this period members of the Rieti family lived also in Padua, where in 1706 AARON VITA DI ANGELO, from the region of Veneto, received a doctorate in medicine and philosophy. In the 19th century, the painter ARTURO RIETI of Trieste was noteworthy. VITTORIO RIETI (1898–1994) was an important composer of ballet scores (*The Ball*, 1929, produced by S. Diaghilev, choreography by G. Balanchine, scenery and costumes by G. De Chirico), opera, and a variety of instrumental combinations in the tonal and neo-classical style; from 1948 to 1964 he was a teacher in American music academies and conservatories. His son FABIO RIETI (1925–) painted murals in Paris and other French cities ("Les piétons des Halles"; Les fenêtres de Beaubourg"). FABIO'S SON NICKY RIETI (1947–) worked as a stage designer for the major French and Italian theaters (Opéra Bastille; La Scala).

The genealogy of the family, reconstructed by M. Vogelstein and P. Rieger (Vogelstein-Rieger, 74), was completed by U. Cassuto (*Gli Ebrei a Firenze ...* (1918), 349, n. 6), S. Simonsohn (*Toledot ha-Yehudim be-Dukkasut Mantovah*; 1964, 544 n. 305), and Y. Boksenboim (*Iggerot Beit Rieti*, 1988).

[Alfredo Mordechai Rabello / Alessandro Guetta (2nd ed.)]

RIETI, MOSES BEN ISAAC DA (1388–after 1460), Italian scholar, physician, and poet. He was born in Rieti. He devoted himself to medicine and philosophy, practicing as a physician in his home town until the death of his father (1422). Under the papacy of Eugene IV, he went to Rome where he held the position of chief rabbi to the local community, and later became private physician to Pope Pius II. His first literary work is the poem *Iggeret Ya'ar ha-Levanon*, an epic describing the decorations and vessels in the Temple (Parma, de Rossi Ms. 1394/2).

At the age of 24, Rieti wrote his most important work, *Mikdash Me'at*, after the fashion of Dante's *Divine Comedy*, and influenced by the philosophical work of Solomon ibn *Gabirol. Written in a rhetorical rather than poetic style, it is in many ways comparable to Dante's *Paradise*. The work consists of two parts. The first, *Helek ha-Ulam*, is subdivided into five chapters and contains 435 strophes. It opens with the author's prayer resembling Dante's "Invocation", in which he introduces himself and his work. Then, in the form of a parody, he reviews Maimonides' 13 Principles of Faith, and the number of sciences and their ramifications according to Averroes, Avicenna, Ghazali, Alfarabi, and Maimonides, the Isagoge of Porfirio, and the commentary of Averroes, as well as Aristotle's *Book of Categories* with the commentaries of Averroes and Levi b. Gershom. The second part, *Helek ha-Heikhal*, consisting of eight chapters containing 615 strophes, gives a description of the Celestial Court, where the patriarchs, the prophets, and the nation's saints occupy places of honor. In *Me'on ha-Sho'alim* he addresses a personal prayer to Moses, begging for a speedy redemption. *Ir Elohim* ("The City of God") reviews all the biblical figures, while *Oniyot ha-Nefesh* presents the Mishnah and the Talmud, omitting not a single one of the *tanna'im*, *amora'im*, *geonim*, and their pupils' pupils, down to the rabbis of his own time. The thematic variety and harmonious poetic form made these works a treasure of Hebrew literature. The author himself was referred to as the "Hebrew Dante" and "Master of Poets", titles which suited neither the author nor his work. The complete text of *Mikdash Me'at* was published in 1851 by J. Goldenthal, with an introduction in Italian and Hebrew. Rieti lived to see parts of his poetic work sung in the synagogues of Italy. Some parts of *Mikdash Me'at* were even translated into Italian, while *Me'on ha-Sho'alim* was translated by Eliezer Mazli'ah b. Abraham Kohen (Venice, c. 1585), Deborah Ascarelli (Venice, 1601–02), and Samuel de Castel Nuovo (Venice, 1609). At the end of his life, Moses abandoned poetry and devoted himself entirely to philosophy and apologetics. His last poetic work was an elegy in memory of his wife.

RIETI, VITTORIO (1898–1994), composer. Born in Alexandria, Egypt, Rieti studied with Giuseppe Frugatta in Milan and later in Rome with Ottorino Respighi. During the 1920s and 1930s he was part of a group of French composers known as “Les Six” and spent most of his time in Paris, where he composed ballet and theater music in a neoclassical style. After moving to the United States in 1940, he became an instructor at various colleges and concentrated on symphonic and chamber music. Among his compositions are the music for Balanchine’s ballets *Barabau* (1925) and *Le Bal* (1929) presented by Diaghilev, the ballet *David Triumphant* (1926), the operas *L’Arca di Noe* (1922), *Orfeo tragedia* (1928–29), *Teresa nel bosco* (1934), *Don Perlimplin* (1952), *Viaggio di Europa* (1954), *The Pet Shop* (1958), *The Clock* (1959–60), *Maryam the Harlot* (1966), oratorios, symphonies, orchestral works, chamber music, songs, and piano pieces.

[Israella Stein (2nd ed.)]

RIFKIND, SIR MALCOLM (1946–), British Conservative politician. Rifkind was born in Edinburgh, the son of a credit draper of Lithuanian origin. He was educated locally and graduated with a degree in law from Edinburgh University, where he was involved in politics, becoming chairman of the university Conservative Association in 1967. Called to the Bar in 1970 (he was later a Queen’s Counsel), in the same year he was elected to Edinburgh Council and unsuccessfully contested the Parliamentary seat of Edinburgh Central. Elected to Parliament for Pentlands in 1974, he was appointed opposition front bench spokesman on Scottish Affairs in 1975. Having served on the Parliamentary committees dealing with foreign affairs, following the Conservative election victory in 1979 he served as minister for home affairs and the environment at the Scottish Office from 1979 to 1982 and Parliamentary undersecretary of state, Foreign and Commonwealth Office, 1983–86. In January 1986 he became the youngest member of the Cabinet and first Jewish secretary of state for Scotland. He held this office until he was appointed secretary of state for transport in 1990. In 1992–95 he was the first postwar Jewish secretary of state for defense since Emanuel *Shinwell. From 1995 to 1997 he served as foreign secretary, the first Jew to hold this post since 1931. Rifkind lost his seat in Parliament in the Labour landslide of 1997 and received a knighthood the same year. Subsequently he worked for the BHP oil company and, in 2004, was selected as the Tory candidate for the safe seat of Kensington and Chelsea. In public life he consistently maintained an interest in the affairs of Israel. He opposed the visit of PLO officials to London in 1975 and was honorary secretary of the Parliamentary group of Conservative

Friends of Israel 1976–79. He was also an opponent of the 2003 Iraq war.

[David Cesarani / William D. Rubinstein (2nd ed.)]

RIFKIND, SIMON HIRSCH (1901–1995), U.S. attorney and jurist. Rifkind, who was born in Meretz, Russia, was taken to the United States in 1910. He graduated from the City College of New York in 1922 and received his LL.B. from Columbia Law School in 1925. He worked with Senator Robert F. Wagner as legislative secretary from 1927 to 1933, and from 1930 to 1941 practiced law as a partner in Wagner’s law firm, Wagner, Quillinan & Rifkind. In 1941 Rifkind was appointed U.S. district judge of the Southern District of New York, holding this position until 1950, when he resigned to return to private practice with Paul, Weiss, Rifkind, Wharton & Garrison. In 1957 the firm opened a Chicago office with Adlai Stevenson as senior partner. Rifkind returned to judicial service as special master for the U.S. Supreme Court in the Colorado River case during 1955–61.

He served on administrative commissions and on quasi-judicial fact-finding bodies involving sociopolitical questions. He served New York City on the Board of Higher Education (1954–66); as a member of a state commission on city governmental operations (1959–61); in the 1963 teachers strike mediation; and on the commission that investigated the 1968 Columbia University turmoil. He served as chairman of John F. Kennedy’s Presidential Railroad Commission in 1961–62. Rifkind represented New York State Democrats in reapportionment litigation in 1965–66, and was cochairman of the Presidential Commission on the Patent System in 1966–67. In the pamphlet *Reflections on Civil Liberties* (1954), Rifkind emphasized the constitution’s circumscription of the status and function of congressional committees as lawmaking bodies.

Rifkind served as temporary special adviser on Jewish affairs in the European Theater to General Dwight D. Eisenhower in 1945–46, and in 1946 he testified before the Anglo-American Commission of Inquiry on Palestine that the only resolution of the plight of displaced persons was the opening of Palestine to settlement. He served as vice chairman of the board of directors of the Jewish Theological Seminary from 1947; as chairman of the “committee of five” on United Jewish Appeal allocations from 1949; and as chairman of the administrative board (1953–56) and of the executive board (1956–59) of the American Jewish Committee.

Some of his later landmark cases include the defense of Jacqueline Kennedy Onassis against paparazzi, and Pennzoil Company in its successful fight against Texaco in 1986. His many awards include the Medal of Freedom, presented to him by President Harry S. Truman.

In 1986 the City College of New York established the Simon H. Rifkind Center for the Humanities and the Arts, whose primary goal is to promote cultural activities in the humanities.

Rifkind wrote *The Basic Equities of the Palestine Problem* (1972), *One Man’s Word: Selected Works of Simon H. Rifkind* (3

vols., ed. A. Bellow and W. Keens, 1986, 1989), and *At 90, on the 90s: The Journal of Simon H. Rifkind* (1992).

RIGA (Lettish **Rīga**), Baltic port, capital of Latvia; under Russian rule from 1710 to 1917, capital of Livonia (Livland); 1944–1991 in the Latvian S.S.R. The first documentary evidence of Jews in Riga – the record of a sale of merchandise to a Jew named Jacob – is dated 1536. During Polish and Swedish rule in Livonia (1561–1621 and 1621–1710, respectively) restrictions were imposed on Jewish residence, but in the course of time a number of Jewish merchants arrived there. By 1645 there was a special Jewish inn in the city where visiting Jewish merchants had to stay. In 1710 the Livonia region was incorporated into Russia and, according to reports by English merchants dating to 1714, Jews and Catholics then enjoyed religious freedom. In 1725 a few privileged Jews were given the right to reside outside the Jewish inn. In that same year they were permitted to bury their dead in Riga, whereas previously they had to be taken to Courland for burial. Despite requests from the city authorities and the provincial governor, Empress Elizabeth Petrovna's decree of 1742, ordering the expulsion of Jews from Russia, was also applied to the Jews in Riga. It was not until 1766, under Catherine II, that Jewish merchants were allowed into Riga, although they were restricted to a visit of six weeks and to residence at the Jewish inn; a few privileged Jews were given special permission to stay elsewhere.

Permission was granted for Jews to reside at Sloka (Ger. Schlock), a nearby town, in 1785, where in 1792 they were permitted to open a prayer room. A few managed to settle in Riga, although the official ban was still in force. In 1798 there were seven Jewish families living in Riga, and by 1811, 736 Jews in the city and suburbs including over half in Sloka. As Riga was outside the Pale of Settlement, it continued to be difficult for Jews to enter the city. However, in 1813 the Jews of Sloka were given the right to settle there. The same year a community is mentioned. In 1822 Jews were permitted to engage in crafts. The "Jewish statute" of 1835 (see Russia) confirmed the permanent residence rights of part of the population. In 1840 Sloka Jews were allowed to open a school in Riga which became one of the few modern institutions in Russia at that time. Max Lilienthal was invited to Riga to become principal of the school and rabbi of the "German" synagogue. After he left there, Reuben Wunderbar became principal of the school.

In 1841 Jews were allowed to register officially as inhabitants of the city, and later were permitted to build synagogues, own real property, and engage in commerce and trade; an organized community was officially founded in 1842 and continued to function until 1893. In 1850 the community asked for permission to buy land for a synagogue, on which building commenced in 1868. The number of Jews increased from 5,254 in 1869 to 22,115 (8 percent of the population) in 1897 and 33,651 (6.5 percent) in 1913. They played an important role in commerce, the export of goods (especially grain, timber, and flax), in industry, banking, and the various crafts. Jews owned timber mills, tanneries, and engaged in clothing and

shoe manufacture. Before the outbreak of World War I the majority of dentists and 20 percent of the physicians were Jews, while only a few practiced as lawyers. There were a number of synagogues and Hasidic prayer rooms, schools, *hadarim* both of the traditional and the reformed type, a library, charitable institutions, and various clubs and societies. Zionist activities were organized at the end of the 19th century and a delegate from Riga attended the First Zionist Congress. In 1898 the third branch of the Society for the Promotion of Culture among the Jews in Russia (after St. Petersburg and Odessa) was formed in Riga. Among the official rabbis (see *kazyonny ravvin*) were two Hebrew authors, A.A. Pomiansky (1873–93) and J.L. Kantor (1909–15). During the war, in 1915, Riga Jews gave refuge to the Jews from Courland, who had been driven out of their homes by the czarist authorities. During the war and the subsequent changes of regime in the area the Jewish population in Riga decreased.

After the establishment of the independent Latvian Republic, Riga became the capital of the new state; its Jewish population grew from 24,721 (13.6 percent of the total) in 1920 to 39,459 (11.68 percent) in 1925, 42,328 (11.20 percent) in 1930, and 43,672 (11.34 percent) in 1935. In 1935 Riga Jews formed approximately 47 percent of the total of Latvian Jewry. The increase was largely the result of internal migration, especially from the province of Latgale. Riga was the economic, political, cultural, and social center of Latvian Jewry.

Under the democratic regime of the country (1918–34), an autonomous Jewish school system was administered from Riga. A manifold network of Hebrew and Yiddish elementary and secondary schools was established. These included around 12 Hebrew and Yiddish schools, mainly supported by the city council; private secondary schools whose language of instruction was Russian or German; two vocational schools, one of ORT and one of the Society for the Promotion of Culture among the Jews in Russia; a pedagogical institute; and a Froebel institute for kindergarten teachers where a large number of students were from Lithuania who returned to teach there. There was also a "Jewish university." The yeshiva in Riga was headed by its chief rabbi Menahem Mendel Sack, who was also active in the general communal affairs of Latvian Jewry; he perished in the Holocaust.

Chairman of the community was Mordecai Dubin, leader of Agudat Israel and its representative in parliament. For a short time Riga was the center of the Lubavitch Hasidim where their leader Joseph Isaac Schneersohn stayed for several years after leaving the Soviet Union. Several charitable institutions, among them Jewish hospitals, were established by contributions of philanthropists. The Yiddish theater of Riga was known even outside the borders of Latvia for its high level of artistic performance. There were also several sports clubs, headed by Maccabi. Two or three Yiddish daily newspapers were published, and newspapers and various periodicals in other languages were published by Jews: the best known was *Frimorgn* (1925–34), edited by J.Z.W. Latzky-Bertholdi and Jacob Hellman. The general Russian newspaper *Sevodnya*,

which was known among Russian readers outside Latvia, was owned by Jews and devoted considerable space to Jewish affairs. There were a number of Karaites in Riga, among them owners of two cigarette factories. The Jewish share in the commercial, industrial, and banking activities of the city was substantial; the central office of the Association of Latvian Jewish Credit Cooperatives was situated in Riga. Jews sat on the city council, and there were Jews on the teaching staff of Riga University and the state music conservatory.

Holocaust Period

During the first period of Soviet regime in Latvia (from June 1940 to June 1941), Communist rule was introduced: Jewish, especially Zionist, public activity ceased, and Jewish commerce and industry were nationalized. After war broke out between the U.S.S.R. and Germany, Riga was occupied on July 1, 1941, and persecution began of the 40,000 Jews there. Anti-Jewish attacks were organized by the *Einsatzgruppen*, aided by Latvian fascists, resulting in the death of 400 persons; mass arrests of Jews took place and the synagogues were set on fire. In the period September–October 1941 a walled ghetto was established in the Moscow quarter to which 30,000 Jews were confined. On Nov. 30, 1941 (10 Kislev, 5702), approximately 10,600 Jews were shot in a nearby forest by *Einsatzgruppe A*; later similar *Aktionen* took place on December 7–9; a total of 25,000 Jews were killed, about 80 percent of the ghetto population (one of the victims was the historian Simon *Dubnow). The first ghetto (also known as the “large ghetto”) was then liquidated, and the 4,000 remaining male Jews were put into a forced labor camp (the “little ghetto”). Women were imprisoned in a separate camp.

At the end of 1941 and the beginning of 1942, Jews deported from Germany, Austria, and Czechoslovakia began arriving in Latvia; most of them were murdered in the forests. About 15,000 of the deportees were put into a special camp in Riga (the “German ghetto”) under a special Judenrat whose authority was later imposed on the whole ghetto. Several Jewish labor camps were also established in Riga and the vicinity. On Nov. 2, 1943, an *Aktion* took place in the Riga ghetto, in which the old, the very young, and the sick were murdered. Afterward the ghetto was liquidated, and the surviving Jews taken to the Kaiserwald concentration camp, near Riga. Latvian and other local inhabitants collaborated with the Nazis in the persecution and murder of Jews. In the summer of 1944, as a result of the Soviet offensive in the Baltic area, the Kaiserwald concentration camp was liquidated, and the remaining Jews deported to various camps in Germany; few of them survived. After the war the survivors chose to stay in the camps for *Displaced Persons rather than return to Riga (which was occupied by the Soviet Army on Oct. 13, 1944). Eventually most of them settled in Israel, and some in the United States and other countries.

[Joseph Gar]

Contemporary Period

The 1959 census indicated a Jewish population of 30,267 (out of 600,000 inhabitants of Riga), 14,526 of whom designated Yid-

dish as their mother tongue. Unofficially the number of Jews in Riga was estimated in the late 1960s at about 38,000, most of whom were originally not Latvian Jews, but had settled there from the Soviet interior after World War II. The Riga Jewish community contained about 80 percent of the Jews in the Latvian S.S.R. Only one synagogue was left in Riga, in the old city. In the 1950s bar mitzvah ceremonies continued to be held in synagogue and religious marriage ceremonies were performed there; but the number of these considerably diminished in the 1960s. After the last rabbi died, he was not replaced. In 1960 the congregation was fined 115,000 rubles for “overcharging” the price of *matzah* baked under its supervision. The following year *matzah* baking was prohibited, and a local paper reported in 1963 that *matzah* were being “smuggled” in from Vilna. Later, *matzah* baking by the congregation was again permitted. In 1964 the Jewish cemetery was declared a “general” cemetery, and non-Jews were subsequently buried there also. A Jewish choir performing Jewish songs was formed in Riga in 1957 within the trade union of commercial employees. In 1960–63 an amateur Jewish drama circle was formed which also performed in Vilna.

As young Jews in Riga began to display increasing and almost open interest in Jewish affairs and their identification with Israel, the town was considered by the Soviet authorities as a “hotbed of Zionism.” In the Rumbuli forest, near Riga, where about 130,000 Jews had been massacred during the German occupation, young Jews organized rallies from 1962, and in 1964 collected the scattered remains of the victims, buried them in a mass grave and erected a monument to them. The authorities did not interfere with this action then, but ultimately insisted that a different “official” memorial should be erected there for the “victims of fascism,” without mentioning that they were Jews. Eventually, through the efforts of the young Jewish initiators, a decision was reached that the inscription should read not only in Latvian and Russian but also in Yiddish. Mass gatherings in memory of the victims continued to be held there every year. Young Jews demonstrated their pro-Israel feelings on several occasions, as when Israel sports teams visited Riga to compete with local teams, and when the popular singer from Israel, Geulah Gil, performed in Riga. On the last occasion there were clashes between Jewish youth and the police near the concert hall (1965). In 1969–70 scores of Jews and Jewish families in Riga protested against the refusal of the authorities to grant them exit permits to Israel, addressing their protests not only to the Soviet government but also to the United Nations, the Israeli government, Western Communist parties, etc. In December 1970 a group of young Jews from Riga was tried in *Leningrad, and sentenced to severe terms of imprisonment for allegedly planning to hijack a Soviet plane in order to land abroad and eventually reach Israel.

With the mass exodus of Jews of the former Soviet Union in the 1990s, the Jewish population of Riga dropped to around 8,000 in the early years of the 21st century. At the same time Jewish life revived in independent Latvia. Two Jewish day

schools, a community center, matzah factory, Jewish newspaper, and Jewish hospital were all in operation in Riga.

RIGHT AND LEFT (right: Heb. יָמִין; Akk. *imnu, imittu*; Ugaritic, *ymn*; left: Heb. שְׂמָאל; Akk. *šumēlu*; Ugaritic, (*u*)*šmāl*; and common Semitic). The biblical usages of “right” and “left” are basically fourfold: right as opposed to left; directions (cardinal points); strength and weakness; merism. As is the case in many cultures, right is favored over left in various contexts. Examples for each of these usages will be presented below, as well as Ancient Near Eastern parallels wherever appropriate.

Right as Opposed to Left

Right and left play an important role in Jacob’s final blessing to his grandsons, Ephraim and Manasseh (Gen. 48: 12–20), whom Joseph places at the left and right sides of Jacob, respectively (verse 13), expecting his father to place his right hand on Manasseh (the firstborn) and his left on Ephraim, and then bless them. But Jacob crosses his hands, placing his right hand on Ephraim (verse 14) and his left on Manasseh, despite Joseph’s objections (verse 18). Jacob explains his actions by stating that Ephraim will be greater than Manasseh (verse 19). Right and left parts of the body also play an important role in sacrifices as may be seen from the following phrases which occur many times in the Book of Leviticus and elsewhere: “the right thigh” (Ex. 29:22; Lev. 7:32, 33; 8:25, 26; Num. 18:18, etc.); “the right ear and the right thumb [or big toe]” (Ex. 29:20; Lev. 8:23, 24; 14:14, 17, 25, 28, etc.). Two Ancient Near Eastern parallels to this usage in sacrifice have been found at Ugarit. In one (RŠ 24.253; *Ugaritica*, 5 (1955), no. 13), in a sacrificial context, the phrase *ššb šmāl dalp̄m* appears which may be provisionally translated: “the left protuberances [?] of two bulls.” In another (RŠ 261.247; not yet published but quoted by C.H. Gordon, *Ugaritic Textbook* (1965), Glossary, nos. 1107, 2393a), the phrase *šq ymn* occurs, which is the same as the Hebrew *šoq ha-yamin*, שׂוֹק הַיָּמִין, “right thigh,” quoted above. Finally, the right side (of the throne) is usually the side on which the king’s or God’s associates sit (1 Kings 2:19, the queen; Zech. 3:1, Satan; Ps. 109:6, Satan, etc.). This is paralleled in Ugaritic literature by the following passage: *t’db ksu wyttb lymn aliyn B’l*, “A throne is placed and he is seated to the right of Puissant Ba’al” (II AB 5:108–10; Pritchard, Texts, 134).

Direction (Cardinal Points)

Because the Hebrews – like others – oriented themselves by the place where the sun rises, in many biblical passages “right” means “south” and “left” means “north.” In Abra-

ham’s separation from Lot (Gen. 13:9ff.), Abraham says (according to one interpretation): “If [you go] north [הַשְּׂמָאל], I will go south [הַיָּמִין]; And if you go south [הַיָּמִין], I will go north [הַשְּׂמָאל].” The southern border of Manasseh is described in the Book of Joshua as *ha-gevu’ el ha-yamin* (מִיָּמִין אֶל-הַגְּבוּל הַיָּמִין, Josh. 17:7) “the boundary of the right,” while “north of Damascus” is expressed as *mi-semōl le-Dammeseq* (מִשְׂמָאל לְדַמְשֶׁק), “to the left of Damascus” (Gen. 14:15). Perhaps the most instructive passages for this usage are those which use right and left together with the regular words for the other directions: “North and south [יָמִין וְצָפוֹן] You [God] have created them” (Ps. 89:13); “Then it [the border] turns eastward [מִזְרַח הַשְּׂמָאל]... and touches... northward [צָפוֹן], then it continues northward [מִשְׂמָאל; lit. “left”]...” Josh. 19:27). Finally, the tribe *Benjamin (*ben-yamin*, “son of the right”) was the most southern tribe in “the House of Joseph” (II Sam. 19:17–21), and this usage has a direct parallel in the Mari letters where both the *DUMU-Iamīna*, “southern tribe,” and the *DUMU-Simal*, “northern tribe,” are often mentioned (e.g., *Archives royales de Mari*, 1 (1950), 60:9, p. 116). Semantically, *DUMU-Iamīna* (probably to read *mārē-yamīna*) is exactly parallel to Benjamin, though there is no valid evidence for any historical connection between the two.

Strength and Weakness

It is clear from several biblical verses that “right [hand]” was often a symbol for strength. The “right hand of God” was that which overcame Israel’s enemies (Ex. 15:6, 12; Isa. 62:8; Ps. 17:7; 44:4, etc.) and which was worthy of the Psalmists’ praises (Ps. 98:1; 118:15, 16, etc.). The “right eye” was considered the more valuable (Zech. 11:17) and it was the putting out of “every right eye” which Nahash the Ammonite demanded in return for making a nonaggression pact with the inhabitants of Jabesh-Gilead (I Sam. 11:2). Conversely, that left-handedness was conceived of as a weakness, even a malady, is seen from the description of Ehud (Judg. 3:15), where the latter is called *ish ’itt̄er yad yemino* (אִישׁ אִטְרֵר יַד יָמִינוֹ), “a man obstructed [in the use of] his right hand.” The word used for “obstructed” is of the nominal construction that is usually utilized for physical defects – e.g., “blind” (עוֹרֵר), “dumb” (אֶלֶם), and “deaf” (חֵרֵשׁ). Left-handed men are mentioned elsewhere in Judges 20:16, where it is stated that (despite their left-handedness) they never missed the target, and in I Chronicles 12:2, where both right-handed and left-handed men are mentioned. The right side of a man is the side on which God “marches” when assisting him in battle (Isa. 63:12; Ps. 109:31; 110:1, 5) and it is the right hand which God grasps as a symbol of election (Isa. 41:13; 45:1; Ps. 73:23). Finally, the pair “hand//right hand” is often used in synonymous parallelism to evoke the image of the might of God (Ps. 21:9; 74:11; 89:14; 91:7 (emended); 138:7; 139:10), the brave deeds of Israel’s war heroes (Judg. 5:26), or God’s power of creation (Isa. 48:13). In extra-biblical sources, the Ugaritic parallel pair *yd//ymn*, “hand//right hand,” is often found conjuring up the same image of power as its biblical counterpart (e.g., II 76:6–7): *qšthn ahd bydh wqšth bm ymh*,

“His bow he has taken in his hand, also his darts in his right hand.” The Akkadian creation epic, *Enūma eliš*, yields an interesting parallel to the use of “the right hand of God”: *iššima miṭṭa imnašu ušāhiz*, “He [Marduk] lifted the mace, grasped it in his right hand” (*Enūma eliš* 4:37; Pritchard, Texts, 66). Finally, the Epilogue of the Code of Hammurapi has a parallel to God’s proceeding on the right side when helping someone in battle: *Zababa... āliku imniya ašar tamhārim kakkīšu lišbir*, “May Zababa ... who goes at my right side break his weapons on the battlefield” (27:81–87; Pritchard, Texts, 179; cf. Isa. 63:12). Related to the opposition strength/weakness is the opposition good luck/bad luck, which seems to be represented in Ecclesiastes 10:2; as interpreted in the (Hebrew) commentary of H.L. Ginsberg: “The wise man’s mind (tends) to his right (i.e., to what brings him good luck), and the fool’s to his left.” The belief that omens that appear on the right side are lucky and such as appear on the left unlucky is implied by Ezekiel 21:27. Parallels from other cultures are very numerous. In Arabic, for example, *šimāl* means both “left hand” and “bad omen” (see also the Arabic dictionary on the verbs *šāama* and *yamana* and their derivatives).

Merism

Perhaps the most common usage of right and left in the Bible is as a merism meaning “everywhere, in any direction.” The phrase “to deviate from the path in any direction” (Num. 20:17; 22:26; Deut. 2:27; 5:29; 17:11; 1 Sam. 6:12, etc.) is so common that it had probably reached the level of a cliché in early biblical times. Aside from “path,” “instructions” (e.g., Josh. 1:7; 23:6), “commandment” (e.g., Deut. 17:20), and “commandments” (e.g., Deut. 28:14) may also be the object of deviation. In the same way, the verbal forms “to go right” and “to go left” are used together meaning “to depart from in any way” (11 Sam. 14:19; Isa. 30:21). The meaning “everywhere” is also very common for this merism (1 Kings 22:19; Isa. 9:19; Zech. 12:6, etc.). In extra-biblical sources, right and left are often used as a merism which may be seen from the following Akkadian and Ugaritic passages: *panukki Šēdu arkātuk Lamassu immuk mešrū(!) šumēlukki dumqu*, “Before you is the protective spirit, behind you is the protective goddess, at your right riches, at your left prosperity” (E. Ebeling, *Die akkadische Gebetsserie Šu-ilu “Handerhebung”...* (1953), 60:16–17); *y’db uymn ušmal bphm* “[things] are placed in their mouths ‘on right and on left’” (C.H. Gordon, *Ugaritic Textbook* (1965), 52:63–64; cf. Isa. 9:19).

[Chayim Cohen]

In Talmudic Literature

Although there does exist some evidence that the left was regarded as “sinister” in the Talmud, the general opinion, both in *halakhah* and *aggadah*, is merely that the right is more important and significant than the left. The word *yad* (“hand”), without qualification, was taken to refer always to the right hand, as the word *ezba* (“finger”) to the index finger of the right hand (Zev. 24a). All religious duties had normally to be performed with the right hand (or foot, see below). The only

exception is the laying of *tefillin* which are laid (except in the case of a left-handed person) on the left hand. The reasons given are, firstly, that the plene spelling *יד כהה* (“thy hand”) in Exodus 13:16 is taken to indicate *יד כהה* (“the feeble hand”), and also that since the injunction is “and ye shall bind” (Deut. 6:8) and not “and ye shall place,” the essential commandment is the binding, which must therefore be done with the right hand (Men. 36b, 37a). Thus it is stated, “the right hand controls all the precepts except for the *tefillin*” (Mid. Ps. 17). As a result, particularly because “one uses the right hand to point to the cantillation of the Torah,” it was not to be used for unclean or unseemly purposes (Ber. 62a). Added to that was the statement, based on Deuteronomy 33:2, that the Torah was given with the right hand of God.

The right was the position of honor. All the turns of the high priest in the Temple as he encircled the altar to perform the sprinkling of the blood had to be to the right (Yoma 15b). It was regarded as a boorish lack of etiquette to walk on the right of one’s teacher; but when he was accompanied by two, he walked in the middle and the greater of his companions walked on the right (Yoma 37a).

Left-handedness was not regarded as a disability, but it was naturally assumed that a person was right-handed. Nevertheless, it was regarded as so essential that *halizah* be performed on the right foot of the *levir* (Yev. 12:2) it was stated that in the case of a left-footed person the ceremony had to be performed twice, once on each foot, and there is even one opinion that it cannot be performed at all (Sh. Ar., EH 169:25).

Since the **etrog* was regarded as the most important element of the **Four Species*, it had to be taken in the right hand and the *lulav* and the other two in the left. Nevertheless, there is one statement to the effect that it is the *lulav* which is to be taken in the right (Yal. Ps. 670).

In rabbinic theology, God’s right hand represents the Attribute of Mercy, his left hand, the Attribute of Judgment (MRY, p. 134). Similarly the question of the Midrash on the verse 1 Kings 22:19, “I saw the Lord sitting on his throne, and all the Host of Heaven standing by him on his right hand and on his left,” namely, “Is there then a left on high? Is it not all right there?... (Song. R. to 1:9, no. 1) indicates that in the upper realm there is only mercy, and no judgment. This reflects an abstraction of the identification of right with mercy, even where there is no spatial or physical opposition to any “left.” To give more encouragement than discouragement was expressed in the words, “Let thy left hand repulse and thy right attract” (Sot. 47a). Solomon ibn Gabirol says: “A man without a companion is like the left without the right” (*Mivḥar ha-Penininim* 20:11; cf. Meiri to Prov. 17:17).

RIGHTEOUS AMONG THE NATIONS (Heb. חֲסִידֵי אֻמּוֹת הָעוֹלָם, *hasidei ummot ha-olam*), term applied to non-Jews who saved Jews from their Nazi persecutors by endangering their own lives. (For earlier use of the term see *Hasidei Ummot ha-Olam.) In 1953 the Israeli parliament (Knesset) enacted the “Martyrs’ and Heroes’ Remembrance (Yad Vashem) Law.” By authority of this law, *Yad Vashem was established in Jerusalem, to conduct research into the Holocaust and to document it in every possible aspect. The law also specifically charged Yad Vashem with carrying out the task of perpetuating the names of the Righteous Among the Nations “who risked their lives to save Jews.” In the course of the formation and organization of Yad Vashem, a special public committee (Commission for the Designation of the Righteous) was established in 1962, to specify the criteria for the awarding of the Righteous title. Israel Supreme Court justice Moshe *Landau, who presided over the Eichmann trial, was appointed chairman of the commission, which comprised lawyers and jurists, Holocaust historians, public figures, representatives of organizations of former partisans, and Holocaust survivors. At Yad Vashem, a special department was set up to assist the commission in the gathering of material for its deliberations and for carrying out its decisions. In 1970, Moshe Bejski, also a Supreme Court Justice, and a Holocaust survivor thanks to Oskar *Schindler, replaced Justice Landau as chairman of the commission, and in 1995, he was followed by retired Supreme Court Justice Yaakov Maltz. Owing to the large number of applications three sub-committees were organized in 1978, which meet at fixed intervals in Jerusalem, Tel Aviv, and Haifa, each holding separate sessions. The three sub-committees meet together as a plenary commission to decide on problematic cases. Every request for the recognition of a person with the Righteous title is carefully scrutinized on an individual basis. The fundamental criteria established include: personal involvement in help to at least one Jewish person; risk to the safety of the person when extending such aid; no material or other compensation or reward to the rescuer as a precondition for his/her help; the availability of testimony from the side of the rescued person, or other valid documentary material. Although the basic principle of granting individual recognition, whether the rescuer saved one or many persons, has been adhered to in general, the Commission for the Designation of the Righteous has seen fit in certain instances to avoid an overly rigid interpretation of the criteria and has granted recognition in exceptional cases to persons who either risked their life to speak out against the persecution of Jews (such as church bishops) or bent the rules to allow many Jews to emigrate out of Nazi-controlled countries (such as diplomats).

Up to January 1, 2005, some 20,750 persons had been awarded the Righteous title, including men and women from all European countries, as well as persons from other countries who acted to save Jews in Europe during the Holocaust. A person honored with the title of “Righteous Among the Nations,” whether living or dead, is entitled to a medal and certificate of honor, as well as inscription of the person’s name

on honor walls in the Garden of the Righteous Among the Nations. The planting of trees in honor of the Righteous was discontinued in 1989, due to the lack of space, after close to 2,000 trees had been planted representing some 3,000 persons (some trees were for couples and in some cases also their eldest children). The medal was designed by the Jerusalem artist Nathan Karp; depicted on it are two hands holding onto a rescue line woven out of barbed wire. The rescue line is wound around the globe and there is a feeling of movement in its rotation. The globe is surrounded by the rabbinic saying, “Whosoever saves a single life, it is as if he has saved an entire world.” The reverse of the medallion has a schematic drawing of the memorial site of Yad Vashem in Jerusalem and the inscription of the honoree’s name. The ceremonies at which the title of Righteous Among the Nations is bestowed – at Israeli embassies, or at Yad Vashem – are held with wide media coverage. Of equal importance, Righteous persons in need of financial and medical assistance are helped by two voluntary organizations in the United States and Switzerland. The Jewish Foundation for the Righteous, in New York, assists some 1,700 Righteous, mostly in Eastern Europe, with monthly stipends. The Anne Frank Fonds, in Basel, assists several hundred Righteous with hard-to-get medicine in the Righteous person’s country of residence. Finally, at Yad Vashem, the current multivolume *Encyclopaedia of the Righteous Among the Nations* gives a summary of the deeds of the rescuers, who are listed alphabetically and by country.

Forms of Aid

There were four principal types of aid for which the Righteous title may be awarded to rescuers of Jews. These are: sheltering, dissimulating, moving, and help to children.

SHELTERING. This represents the principal form of aid. It consists of finding a secure hiding place for the fleeing Jew, either in the house of the rescuer, or nearby; of a remote and well-hidden space, unobservable to a visitor’s eyes; a place where no one would suspect that a living human being was in hiding. Hiding places varied in size and personal comfort. It could be a dark corner in the attic, a space under the rescuer’s home, with only mice and insects as close companions, or worse, a pit under the barn or pigsty, with its terrible stench. In several isolated cases, people hid in tombs, after removing the coffins, such as in the Manko Swierczszak story, where three people lay huddled in a tomb in Buczacz, Poland, for over one-and-a-half years. In less unpalatable circumstances, it could be a dark corner in the rescuer’s home, hidden from outside view by a piece of furniture; an unused section of a commercial storeroom, such as was the case with the Anne Frank family in Amsterdam, Holland; or within a large double wall or ceiling; or, again, as in the case of Reverend Gerrit Brillenburg, in Utrecht, Holland, in the garret of a church. All this, for as long as it might take: from a temporary arrangement lasting only days or weeks, to perhaps several months, and in some cases for as long as two-and-a-half years – that is, until the danger had passed and a particular area had been liber-

ated from the Germans. In all these instances, the helpless hidden Jew was at the mercy of his rescuer for basic needs, such as food, washing, and the removal of bodily wastes. All these needs were now the responsibility of the rescuer and his family. In the Netherlands, Victor Kugler and Miep Gies, former business associates of Otto Frank, cared for his and another family, and saw to their daily needs while they remained hidden for two years in an annex of their former business premises. In Warsaw, Poland, the Wolski family hid several dozen Jews, including the famed Polish-Jewish historian Emanuel Ringelblum, in an underground garden shelter near their home, on the non-Jewish side of the city. Outside Kaunas, Lithuania, Jonas Paulavicius hid a dozen Jews in several shelters outside his home, so that in the event that one was uncovered, the captured persons would not, even under torture, know and disclose the presence of the other hidden persons.

DISSIMULATING. Another major form of aid was helping a fleeing Jew disguise his real identity; that is, assist him in assuming a new and fictional non-Jewish-sounding name, together with a new biography, and help in learning local customs, especially the prevalent religious rites. This implied getting new documents for the rescued person, including birth or baptismal certificates, and a new place of residence. This was easier said than done, for one had to first carefully ascertain whether the Jew had what was considered a Jewish-looking appearance. This was not something one could take lightly, for the slightest error could be fatal. It was, moreover, not sufficient that the Jew did not have pronounced Jewish features, such as curly hair or inquisitive and sad-looking eyes, but he had to be well acquainted with the local customs, proper language inflection, folk mannerism, jokes, and religious beliefs; in short, everything needed to disguise otherness as well as to assume a type of behavior that would not make him or her immediately stand out in a crowd. Anyone wishing to try passing as a non-Jew, and there were thousands of such persons all over Europe, needed other persons to assist him, first in obtaining proper papers, then in moving to a new location, arranging living quarters and a place of work – requirements which were not necessarily accomplished by a single person. Another form of dissimulation was registration as an essential worker in a war-related industry under German supervision. Berthold Beitz employed over 1,000 generally unqualified Jews through the ruse that they were needed to run the oil refinery installations in Drohobycz, Poland. Julius Madritsch and Alfred Rossner did likewise for their many Jewish workers in the military uniform firms in Cracow and Bendin, and Hermann Graebe for his Jewish workers in railroad installations in Zdolbunov, Ukraine. The most celebrated case in this category is of Oskar Schindler, who claimed that his 1,200 Jewish workers were doing vital work in producing ammunition, in his factory in Brunnlitz, Moravia, when in fact very little of military value was produced during the whole eight months of the firm's operation. A third form of deception was that adopted by certain diplomats who claimed that certain groups

of people were nationals of a foreign country with which Germany maintained friendly relations, and should therefore not be harmed. Numerous such “protective letters” were issued by the ambassadors of neutral countries in Budapest, in 1944, which were thus able to prevent the deportation of thousands of Jews. Included in this group one may mention Raoul Wallenberg, of Sweden; Giorgio Perlasca, an Italian who masqueraded as the Spanish charge d'affaires; Carl Lutz, on behalf of Sweden, and Monsignor Angelo Rotta, the papal nuncio. All these diplomats utilized the “protective pass” ruse to try to save in combination tens of thousands of Jews in the Hungarian capital during the most critical phase of the Holocaust in that country.

MOVING. An additional principal form of help was to assist Jews who wished to flee from an endangered place to another location; either within German-controlled areas, or across frontiers to countries not embroiled in the war, such as Switzerland, Sweden, Spain, and Turkey. Even in areas under German spheres of influence, conditions for Jews varied. In France, for instance, it was somewhat easier to survive in the southern Vichy, so-called “free” zone, where antisemitic measures were applied with less severity than in the German-occupied north (including Paris). Conditions were even more favorable in southeastern France, in the provinces under Italian administration, where Jews were not mistreated. Similar conditions prevailed in other regions under Italian rule, up to September 1943, in western Yugoslavia, Albania, and the Italian zone in Greece, which included Athens. In Poland, conditions were bad and dangerous everywhere. At the same time, for people trying to pass as non-Jews it was safer to do so far away from one's own hometown, so as not to be recognized on the streets. Some persons also wished to flee from one to another ghetto, where it was felt life was relatively more tolerable, such as the Warsaw ghetto up to summer 1942, as compared with the Lvov (Lwów) ghetto. In Ukraine, persons close to the Romanian zone of occupation wished to flee there; again, because of the less severe conditions prevailing for Jews after the initial period of widespread pogroms by the Romanian military. In Ukraine and Belarus, one could also try fleeing into the deep forests, to join up with friendly partisans fighting the Nazis. In Greece, after the whole country came under Nazi rule in September 1943, Jews sought to escape into the hills, to enlist with the partisans, or by boat to neutral Turkey, where they were permitted to land. Similarly, in Norway and Denmark, thousands of Jews escaped, either by boat or by negotiating tortuous paths through the hills, to Sweden, where they were welcomed. In France, after the whole country, including the Italian zone, came under direct Nazi control, after September 1943, Jews sought to flee either to Switzerland or to Spain. In all these endeavors, to travel over long distances and tortuous trails and negotiate well-guarded border crossings without being apprehended, help was needed from non-Jews since the use of public transportation and public accommodations was forbidden to Jews by

law. Of the many examples in this category, only a few may be mentioned. Tadeusz Soroka helped a group of nine Jews flee from the Grodno ghetto, in Poland, which was about to be liquidated in March 1944, aboard a German military train on its way to the front. Himself a railroad worker, Soroka accompanied them for a long night ride, as they lay huddled on the roofs of the cars. After Vilna, they jumped off, hoping to reach the partisans known to be operating in the vicinity. In Italy, Father Beniamino Schivo constantly moved a Jewish family from one location to another, and past German lines; in one instance hiding them in a monastery dressed as nuns, until he had seen them to safety with the arrival of the allied army. In the Netherlands, Joop *Westerweel arranged and led groups of Jewish youth on a long trek through occupied Belgium and France and up to the Spanish border, high in the Pyrenees. Several diplomats also facilitated the flight of many Jews from German hands. Such as Aristides de Sousa *Mendes, the Portuguese consul-general in Bordeaux, France, who freely issued thousands of Portuguese transit visas to Jewish refugees in the city, on the eve of its surrender to the Germans; Jan Zwartendijk and *Sempo Sugihara, the Dutch and Japanese consuls, respectively, in Kaunas, Lithuania, who likewise issued transit visas to thousands of Jews stranded in that country; finally, Paul Grueninger, the Swiss police border officer in St. Gallen, Switzerland, who issued false entry permits to several thousand fleeing Jews who appeared at his border outpost. Some of these senior government officials disobeyed instructions from their superiors that forbade the issuing of visas to fleeing Jews, or their entry into the country. Such open defiance by senior public servants on a moral issue, which led to the saving of at least several thousand lives, merited them the Righteous honor.

CHILDREN. The fourth and final major category pertains to the rescue of children. One need not belabor the point that saving children presented a special problem. For in most cases, where adult Jewish persons had to fend for themselves, such as in hiding places where silence and strict discipline were of the utmost importance, or circulating freely under an assumed identity, children could hardly be part of this conspiracy of subterfuge. If both parents and especially their children were to have a chance to survive, the two sides had to separate, and perhaps never to see each other again. This meant turning over one's child for an indefinite period for safekeeping and adoption in either a children's home or with a private family. Children old enough to distinguish between their natural and adopted parents had to be "reprogrammed," that is, to erase from their minds the remembrance of their true parents and their own earlier names, forget their Jewish affiliation and religious customs – all this for reasons not fully, if at all, understood by these tender minds – and readapt to totally new filial and group relationships, and new cultural and religious environments. Persons involved in this rescue operation included those who traveled long distances to make the proper arrangements, escorted the children to their new homes, and made

routine inspection visits to make sure the children were well cared for. Nor should we overlook the host families who took the frightened children into their homes and showered them with love and affection, and patience, while fabricating stories to neighbors to explain the sudden appearance of a strange child in their household. Rough estimates place the number of children saved through the help of non-Jewish rescuers at several tens of thousands. Also included under this category are persons who led children across great distances and difficult terrain to cross well-guarded frontiers, such as into Switzerland. Of the many examples, one may mention Yvonne *Nevejean, who as head of Belgian's national child care agency opened the agency's doors for hundreds of Jewish children on their way to host families. In the Netherlands, the NV group is the most noteworthy of the several clandestine cells dedicated to rescuing Jewish children by dispersing them with various host families in distant locations. In France, Dr. Rita Breton dispersed several hundred children in the Normandy countryside, while Denise Bergon sheltered children in religious institutions. Rolande Birgy, who worked on behalf of a Catholic youth organization, and the Quaker-affiliated Helga Holbek and Alice Synnestvedt spirited many children across the Swiss border. In Poland, Irena *Sendler spirited children out of the Warsaw ghetto, and with the help of trustworthy aides helped disperse them in private homes and religious institutions. Still in Poland, Sister Matylda Getter is one of several nuns awarded the Righteous title for sheltering many Jewish girls in her religious orphanage.

Risks to the Rescuer

The Nazis, although they did not reveal the exact nature of their murderous intent with regard to the Jews, made it clear that they consigned them to a bitter fate. It also soon became clear to the local population that the Nazis intended to deal harshly with anyone who would place obstacles in their way by offering aid to Jews. To remove any doubts, the Nazis warned the local population of dire punishment, including the death penalty, for any violation of regulations forbidding aid to Jews in distress. In Poland, for instance, large posters appeared on bulletin boards in the major cities threatening the death penalty for various forms of aid to Jews on the run, including sheltering them in one's home, selling them provisions, and moving them from one place to another. Such was the following public warning, one of many, posted in Przemysl, on November 19, 1942, which stated in no unclear terms that: "(1) Every Pole or Ukrainian who admits a Jew in his home, or affords him hospitality, provisions and refuge, will be shot. (2) Every Pole or Ukrainian who assists in whatever way a Jew who is found outside the Jewish quarter, will be shot. (3) Every Pole or Ukrainian who even attempts to carry out items 1 and 2 will be shot." Similar dire warnings were repeated in Warsaw and other major cities in Poland. Some rescuers indeed paid with their lives for helping Jews. Such was the case with the rescuers of the noted Polish-Jewish historian Emmanuel Ringelblum, who was hidden together with a large group of

Jews in an underground shelter on the Aryan side of Warsaw. When the place was discovered, the Germans shot all the bunker's inhabitants, including their rescuers – the Polish Wolski family. Rescuers in other countries fared no less well. In Germany, the farmer Heinrich List was sent to the Dachau camp in 1942, where he died the same year, after being apprehended for sheltering a Jewish acquaintance on his farm. In Italy, Giovanni Palatucci was also sent to Dachau, where he perished, for aiding Jews and other persons sought by the Nazis, in Fiume. In Denmark, Henry Thomsen was arrested and sent to the Neuengamme camp, where he died, for his involvement in ferrying Jews across to Sweden. In France, Father Jacques (Lucien Bunel) was arrested in his Catholic seminary, in Avon, after it was discovered that he was sheltering three Jewish boys. He was sent to a concentration camp, where he died. Suzanne Spaak, deeply immersed in the rescue of Jewish children in the Paris region, was executed by the Nazis on the eve of the liberation of the city, in August 1944. In the Netherlands, Joop Westerweel, Jaap Musch, Joop Woortman, and Albertus Zefat, were executed on Dutch soil for their involvement in the rescue of Jews. Sometimes, not directly aiding but merely showing sympathy with Jews could land the person in a concentration camp. Adelaide Hautval, who complained of the treatment of Jews in a French prison, was dubbed a “Friend of the Jews,” and deported to Auschwitz, which she luckily survived. These are but a few of many examples of rescuers who suffered martyrdom, or severe physical damage to their health, for their attempt to help Jews elude the Nazi dragnet. Much as the rescuers feared the Germans, the danger did not only stem from them but also from other quarters as well, such as local collaborators, anti-German partisans units who also attacked Jews and their protectors (especially in Eastern Europe), various antisemitic elements (pro- or anti-Nazi), and plain blackmailers holding to no particular political agenda.

Problematic Issues

Most rescue stories placed before the Commission for the Designation of the Righteous do not present problems, and do not therefore occasion serious divisions of opinion among commission members, insofar as the Righteous title is concerned. However, as with all issues dealing with human behavior during times of extreme stress and tension, from time to time cases of a special and unique character come to the fore which may not accord in all its aspects and contours with the criteria for the Righteous title. Such cases, due to their special and unique character, may require a different approach and judgment. Over the years, the Commission has acted in such specific cases, as follows:

1. The testimony of a rescued person who was an infant at the time is acceptable but not sufficient for the Righteous title, as it may be assumed that it is based on hearsay. What is required is an additional corroborative statement from someone who was at the age of understanding, or supporting documentary material in lieu of eyewitness testimony.

2. The rescuer saved one or more Jews, at the risk of his life, but at the same time was involved in reprehensible acts, inflicting harm on other Jews or members of other nationalities. He is not recognized. Such is the case with police officers who rounded up Jews for deportation but spared some out of personal friendship. A person having antisemitic sentiments is not automatically disqualified, if no acts followed upon such personal feelings. The noted Polish author Zofia Kossak-Szuczka, who made no secret of her antisemitic views, in 1942 issued a manifesto to her underground colleagues to step forward and save Jews from annihilation. She inspired the creation of *Zegota*, the sole Polish clandestine organization dedicated to the rescue of Jews, and herself sheltered a Jewish woman in her home. She was recognized.

3. A person who rescued but also collaborated with the enemy, or belonged to a Nazi or Fascist political movement – this requires a careful study of the person, his standing and influence in the community and the measure of the collaboration. Simply belonging to the Nazi Party does not, as in the case of Oskar Schindler, disqualify the person, if such membership was not coupled with the authority to delineate anti-Jewish policies, and the rescuer otherwise saved Jews at the risk of his life. At the same time, membership in the SS militia has so far automatically disqualified a person from bearing the Righteous title.

4. The rescuer carried out his operation at the behest of a clandestine, or partisan organization. In general, if he did not go beyond merely following orders, he would not be recognized. But if he went above and beyond instructions, and increased the risks to his person in affording aid to Jews, as was for instance the case of the Polish underground leader Henryk Wolinski, he would be recognized.

5. Persons who did not rescue but undertook great risks to themselves to try to stop the Holocaust. The German industrialist Eduard Schulte and the Polish underground courier Jan *Karski were awarded the Righteous title for trying to alert the world to the Final Solution, hoping that the free world would intervene to stop it.

6. Diplomats who saved – if they acted in contravention of instructions from above, coupled with a sizable number of Jews saved – would be awarded the Righteous title. This ruling has allowed the Portuguese diplomat Aristides de Sousa Mendes and the Japanese diplomat Sempo Sugihara – two of a larger group – to earn the Righteous title.

7. Rescue inside monasteries and convents – in general the Father or Mother Superior, in other words, the person with ultimate authority and responsible before the authorities, is recognized and not monks and nuns inside these houses, unless they acted in a special and unique way to save their Jewish wards.

8. The rescuer of his, or her, Jewish spouse would not earn the Righteous title, unless the rescue act also included family members of the Jewish spouse.

9. Baptized Jews who acted either as rescuers or rescued. In general, a Jew who freely and out of inner conviction and

persuasion converted out of Judaism before the advent of Nazism and anti-Jewish laws in his country is considered to have willingly left the Jewish fold, and his, or her, case (be it as rescuer or rescued) is not considered with the framework of the Righteous program. Such a ruling would not apply if the conversion was done to avoid persecution by the Nazis and their allies.

Motivations and Lessons

Several studies have been made to try to explain the motivations of the rescuers. Nechama Tec, in her research on Polish rescuers, concluded that most rescuers in her sample stood out from their immediate surroundings, since they did not identify with the behavioral norms of their neighbors. In short, rescuers tended to be nonconformists and individualists who preferred to draw their own conclusion as to the proper responses to various human issues confronting them. Samuel and Pearl Oliner researched rescuers from many European countries, and found, as opposed to Tec, that most rescuers had so completely internalized the social norms of their society, such as compassion and aid to the less favored, that whereas most others only paid lip service to the values taught in their society, rescuers in fact had taken these teachings so seriously that they became behavioral codes in their day-to-day lives – to a greater degree than non-rescuers and bystanders. Whatever the ultimate reasons for this unique kind of behavior (risking one's life to help strangers), the example of the Righteous Among the Nations suggests that man, left to his own devices, while not a saint – is not necessarily prone solely to evil deeds. When confronted and challenged, ordinary people have the capacity to perform acts of goodness for their own sake. The lessons to be drawn include the following: (a) That it was possible to save Jews at the individual level, even in spite of the risks involved; that the individual, left to his own devices, can decide to act right morally and can make a difference, and thereby serve as an example and role model for the behavior of others. (b) That helping others in distress may be a natural, not coerced, human behavioral mode, and represents man at his best. The French Jewish philosopher Emmanuel *Levinas has stated that a true ethic begins with a turning towards and responding to the Other, since such an encounter makes possible a true dialogue with one's own conscience – the questioning of oneself in light of the Other, who is somehow also present in ourselves, in our consciousness, yet is not of it. (c) An added dimension to the uniqueness of the behavior of the rescuers comes to the fore when one compares their responses with that of the perpetrators. Perpetrators usually say: "I did not do it exactly as described. Besides, I was forced into it, for orders have to be obeyed. Personally, I have nothing against Jews, and I am not responsible for my deeds. I am passing the buck." Rescuers, in contrast, generally say: "Of course I did it, and I would do it again, if called upon. I take full personal responsibility for my deed. I was not coaxed into it, and no one forced me to do it. Besides, it was the most natural thing." Herein lies the

abyss separating these two types of moral conduct. (d) The example of the thousands of Righteous who risked their lives to save Jews from the Nazis is testimony to the human spirit as a potent creative force. Primo *Levi has stated this idea best when he reflected on the significance of his rescue by the Italian Lorenzo Perrone in the hell on earth that was Auschwitz: "However little sense there may be in trying to specify why I, rather than thousands of others, managed to survive the test, I believe that it was really due to Lorenzo that I am alive today; and not so much for his material aid, as for his having constantly reminded me by his presence, by his natural and plain manner of being good, that there still existed a just world outside our own, something and someone still pure and whole, not corrupt, not savage, extraneous to hatred and terror; something difficult to define, a remote possibility of good, but for which it was worth surviving... Thanks to Lorenzo, I managed not to forget that I myself was a man." In conclusion, the importance of the saving of even one life is an important Jewish moral principle; again, as it is stated in the Talmud (and etched on the Righteous medal): "Whosoever saves one life is as though he has saved an entire world."

[Mordecai Paldiel (2nd ed.)]

RIGHTEOUSNESS, the fulfillment of all legal and moral obligations. Righteousness is not an abstract notion but rather consists in doing what is just and right in all relationships; "...keep justice and do righteousness at all times" (Ps. 106:3; cf. Isa. 64:4; Jer. 22:3; Ezek. 18:19–27; Ps. 15:2). Righteous action results in social stability and ultimately in peace: And the work of righteousness shall be peace (Isa. 32:17; cf. Hos. 10:12; Avot 2:7).

In the Bible righteousness bears a distinctly legal character; the righteous man is the innocent party, while the wicked man is the guilty one: "And the judges judge them by justifying the righteous and condemning the wicked" (Deut. 25:1; cf. Ex. 23:7; 11 Sam. 15:4; Isa. 5:23). Righteousness requires not merely abstention from evil, but a constant pursuit of justice and the performance of positive deeds (Deut. 16:20; Jer. 22:3; cf. Prov. 16:17; Gen. R. 30:9; Jub. 7:20; Tob. 3:2; Kid. 40a). The meaning of righteousness is broadened to include actions beyond the letter of the law in the realms of ethics and ritual (Ezek. 8:5; Tob. 1:10–12; Eccles. 7; Lev. R. 27:1). Paralleling the concept of righteousness is that of wickedness (see *Zedaqah and *Rish'ah). Failure to perform obligations leads indirectly to the upsetting of social stability and, ultimately, to the deliberate undermining of the social structure (Isa. 5:23; Hos. 10:13; Amos 5:12; Avot 5:18; Sanh. 101b; RH 17a).

Against the juridical background of righteousness, the paradox of divine justice comes into prominence. A doctrine

of exactly balanced rewards and punishments contradicts the reality in which the just man suffers in consequence of his very righteousness (Eccles. 7:15; cf. Gen. 18:23; Jer. 12:1; Hab. 1:13; Mal. 3:15; Ps. 32:10; Job, *passim*; Wisd. 2–3; Lev. R. 27; Ber. 7a; Shab. 55b; Hor. 10b). This individual problem takes on a national character in Jewish history, throughout which an innocent nation is constantly being persecuted (Wisd. 10:15; IV Ezra 10:22). The paradox becomes even more striking in view of the legal character of the covenant between God and His people: “And I will betroth thee unto Me in righteousness and in justice” (Hos. 2:21).

Attempts to come to grips with this paradox account for the notion that the righteous man suffers for and with his generation, and that his death expiates for their sins (MK 28a; Ex. R. 43:1; cf. Gen. R. 34:2; Sanh. 108a). Often, however, man’s anger and righteous indignation in the face of overwhelming injustice causes him to invoke that absolute righteousness which rests only with God: “for Thou art righteous” (Neh. 9:8; cf. II Chron. 12:6; Isa. 5:16; 45:22–25; Ps. 89: 16; II Macc. 12:6; Hag. 12b).

Because righteousness is not an inherent human characteristic, but rather a learned trait resulting from sustained performance of obligations, man can never attain the peak of righteous perfection: “For there is not a righteous man upon earth that doeth good and sinneth not” (Eccles. 7:20; cf. Ps. 143:2; Job 4:17; 15:14; Dan. 9:18). The impossibility of achieving absolute righteousness, however, does not preclude the constant striving toward this end. The Jew emulates the Patriarchs, conscious that God evaluates even their righteousness in relative terms (Gen. R. 30:9; Shab. 55a; Sanh. 107a; cf. Hab. 2:4; Yoma 38b; RH 16b; Sanh. 93a; Num. R. 3:1; Song R. 3:3; Zohar, Gen. 9). Judaism holds in contempt those who assume a pretense of piety and righteousness: “Be not righteous overmuch neither make thyself overwise” (Eccles. 7:16; cf. Eccles. 7:5; Nid. 30b), while, on the other hand, it exalts the *zaddikim nistarim* (“the hidden righteous”) of each generation (Suk. 45b; Hul. 92a; Gen. R. 35:2).

The prophets conceive of the ideal society in terms of righteousness (Isa. 28:17; 60:21; Jer. 23:5–7; Hos. 10:12; Zech. 8:8; Ps. 7:10; 18:25; Dan. 9:24). Subsequent attempts to formulate a code for an ideal society rest heavily on practical principles of daily righteous conduct (En. 10:21; 13:10; Ps. of Sol. 17:27; Meg. 17b; cf. the teachings of the “Teacher of Righteousness” in the Dead Sea Scrolls). Eschatologically, righteous action within a righteous society will restore peace in the world and will reestablish Jerusalem as the citadel of righteousness: “And I will restore thy judges... afterward thou shalt be called the city of righteousness” (Isa. 1:26–27; Jer. 31:22).

[Zvi H. Szubin]

In rabbinic literature the term *zedakah* means “charity,” “almsgiving,” “practical benevolence,” but does not refer to righteousness in general for which there is no special term. However, the name *zaddik*, “righteous man” (pl. *zaddikim*), is found throughout rabbinic literature denoting the good man,

the man free from sin, the one who carries out his obligation to God and to man by obeying the precepts of the Torah. Occasionally in the literature the term *zaddik* denotes the specially pious, the man of extraordinary goodness, the holy man or saint, as when it is said that there are never less than 36 *zaddikim* in the world who see the Divine Presence each day (Suk. 45b). But in general the term *zaddik* does not necessarily suggest unusual piety, but simply the carrying out of God’s will. This can be seen from the division of men (RH 16b) into the thoroughly righteous (*zaddikim gemurim*), the thoroughly wicked (*resha'im gemurim*), and the average persons (*beinonim*). In one passage (Ber. 61b) the distinction is made that the *zaddikim* are governed by the good inclination, the wicked by the evil inclination, and the average by both inclinations. When *Rabbah commented that he was an average person *Abbaye objected that this would mean that most people are wicked. The term “righteous” is used of women as well as of men (Song. R. 1:17; Sot. 11b). The *zaddikim* among the gentiles have a share in the world to come (Tos. Sanh. 13:2).

The *zaddikim*, in their humility, promise to do only a little for others but in reality do much (BM 87a). The *zaddikim* are so scrupulous in avoiding the slightest taint of theft that their honestly acquired property becomes dearer to them than their own person and they risk their lives to preserve it (Hul. 91a). They have a strong social conscience. They rise up early in the morning to attend to the needs of the community (Yal-kut, Ex. 264). Even at the time of their death they worry not about their own affairs but about their communal responsibilities (Sifrei, Num. 138).

Even when they are dead the *zaddikim* are called “living,” unlike the wicked who are called “dead” even while they are still alive (Ber. 18a). When a *zaddik* resides in a city, he adorns that city so that when he departs its glory departs with him (Gen. R. 68:6). The very stones of a place quarrel among themselves for the privilege of serving as a pillow for the *zaddik* who is obliged to sleep out of doors (Hul. 91b). Beauty, strength, riches, honor, wisdom, old age, gray hairs, and children are comely to the *zaddikim* and comely to the world (Avot 6:8). But the *zaddikim* suffer in this life. Whenever they wish to have a life of comfort Satan complains that they ought to be satisfied with the reward stored up for them in the hereafter and not wish to enjoy, too, the ease of this world (Gen. R. 84:3). God causes the *zaddikim* to suffer in this world to purge them of the few sins of which they are guilty, just as when a tree stands in a clean place with its branches overlapping an unclean place the branches are lopped off so that the whole tree can stand in a clean place (Kid. 40b). In another passage, however, it is said that Moses received no answer when he asked God why it is that one *zaddik* meets with good fortune in this world while another meets with evil (Ber. 7a).

A man can repent sincerely in his heart of the sins he has committed and by so doing change his status from that of *ra-sha* (“wicked”) to that of *zaddik*. Thus if a man who is thoroughly wicked betroths a woman on the understanding that he is a *zaddik* the act is valid. Conversely, if a known *zaddik*

betrothed a woman on the understanding that he is a *rasha* the act is also valid because he may have been guilty of an acceptance of idolatry in his heart and this would change his status (Kid. 49b). A man who has been a perfect *zaddik* all his life and is sorry for the good deeds he has done thereby cancels out all those good deeds. Conversely, a complete *rasha* who repents of his evil deeds at the end of his life cancels out thereby all those evil deeds (Kid. 40b). Nevertheless, a good deed is not disqualified by any self-seeking motive. For example, a man who gives charity so that his children may live or that he may have reward for it in the hereafter can still be considered a perfect *zaddik* (Pes. 8a–b).

In medieval Jewish thought a definite tendency can be observed to extend the scope of righteousness. Not only is greater inwardness demanded of the *zaddik*, but he is expected to observe as the norm rules of conduct which in rabbinic literature are set down as the ideal for the especially pious. The medieval moralistic literature consists mainly of such demands classified and codified as standards to which all should aspire. A typical example is the anonymous work with the revealing title of *Orhot Zaddikim, “The Ways of the Righteous” (tr. S. Cohen (1969)). Thus the saying of R. Yose, who is described (Avot 2:8) as a *hasid* (“saint”), that all man’s deeds should be for the sake of heaven (Avot 2:12), is formulated in the Codes (Tur, OH 231) as the rule for all men. When a man eats and drinks, for example, it should not be in order to enjoy his food and drink but to have strength for God’s service. The same applies to his working, sleeping, marital relations, and conversing with others. All should be done for the sake of heaven and not for personal gratification.

In Maimonides’ writings, the life of righteousness is made to embrace the Greek ideal of harmony and balance in choosing the middle way. The good man should be neither too prone to anger nor as indifferent to insult as a corpse; neither too ambitious nor too lazy; neither frivolous nor melancholic; neither greedy nor a spendthrift (Yad, Deot 1:4–5). Man is free to choose the way he wishes to follow. It is given to every man to be as great a *zaddik* as Moses or as great a *rasha* as Jeroboam (Yad, Teshuvah 5:2). Maimonides defines the *zaddik* as the man with more good deeds to his credit than bad. The *rasha* has more bad deeds than good ones, while the average man (*beinoni*) has his good and bad deeds equally balanced. The same assessment is made by God of a country and of the world as a whole. But it is not the mere quantity of the deeds which counts in this assessment. A good deed can be of such quality that it can succeed in outweighing many bad deeds, and the converse is also true (Yad, Teshuvah 3:1–2).

Among the kabbalists the term *zaddik* is given, as in a few instances in rabbinic literature, the meaning of “saint.” The *zaddik* is no longer simply the ordinary good man but a holy man of elevated degree. In the Zohar, *zaddik* is the name of one of the **Sefirot* – *Yesod*, “foundation.” This is the creative principle and is symbolized by the phallus. Consequently, the *zaddik* on earth is especially careful to avoid any flaw in the “sign of the covenant,” i.e., he keeps himself free from all forms

of sexual impurity. “One who does not guard the sign of the Covenant as he should cannot be called a *zaddik*” (Zohar, Gen. 94a). Among the biblical heroes, the counterpart of *Yesod* is Joseph who refused to yield to the blandishments of Potiphar’s wife and who, as a result, is called “Joseph the *zaddik*” (Zohar, Ex. 23a). In Ḥasidism, too, the *Zaddik* is the miracle-working saint and holy man, the hasidic master. The term *hasid* could not have been applied to him since this was the name given to his followers, the ḥasidim. Once the term had been used in this sense the rabbinic references to the *zaddik* were interpreted in the Hasidic literature as referring to the holy man. In Ḥabad theory the terms *zaddik* and *rasha* are acknowledged to be used in the rabbinic literature, in some instances in the loose sense of one who is acquitted in judgment by God and one who is declared guilty. But the true definition of the *zaddik* is that he is the man “who has no evil inclination because he has killed it by fasting” (*Likkutei Amarim*, I, 1). The prescriptions for leading the good life found in the classical sources are not for such rare souls who do not need them, but for the “average men” (*beinonim*). The *beinoni* is now, in fact, not “average” at all but the righteous man who struggles against the evil within him in order to do God’s will.

The pursuit of righteousness was the aim of the Lithuanian Musar movement but the approach was decidedly non-mystical. In response to the claim of Ḥasidism that the *zaddik* is invested with the power to cause harm by his curse, Israel Salanter, the founder of the movement, is said to have retorted that if that were so, the *zaddik* can be a danger to others and should be obliged to pay for any harm he may do in this way. The followers of Israel Meir ha-Kohen (the Ḥafez Ḥayyim) used to say that while it was the boast of the *hasidim* that their *zaddik* decrees and God fulfills, of the Ḥafez Ḥayyim it was rather true that God decrees and the *zaddik* fulfills. The righteous man, according to the Musarists, is other-worldly, ascetic, profoundly concerned with his ethical obligations, and devoted to the study of the Torah and the practice of the precepts. The Musar leaders and teachers were frequently referred to as *ha-rav ha-zaddik*, “The rabbi, the *zaddik*...”

In modern writings on Jewish religious thought, especially those in Western languages, the emphasis is chiefly on the ethical and moral content of righteousness and on its universal application.

RIGHTS, HUMAN. The following article deals with the subject of human rights, their essence and the contents of various fundamental rights as reflected in the sources of Jewish Law. The interpretation of Israel’s Basic Laws concerning human rights in accordance with the principles of a Jewish and democratic state, and the principles of the Israeli Declaration

of Independence, and the disputes over the method of finding a synthesis between these values are discussed at length in the entries: *Values of a Jewish a Democratic State; *Law and Morality; *Human Dignity and Freedom.

Rights and Obligations

Rights play a central role in contemporary legal systems in general, and in the field of public law in particular. A substantial part of constitutional law deals with various human rights, such as the right to equality, the right to freedom of expression, freedom of occupation, freedom of movement and so forth. This approach is anchored in various philosophical, humanist and liberal theories, such as those of J.S. Mill, Locke, Hobbes and others, which emphasize the central place of man and his right to freedom. The existence of and respect for human rights are also a fundamental principle of democracy, and therefore any discussion of the combination of Judaism and democracy or of the “Jewish and democratic state” (see *Values of a Jewish and Democratic State, and M. Elon, *Kevod ha-Adam ve-Heruto be-Darkei ha-Hoza'ah le-Po'al – Arakheha shel Medinah Yehudit ve-Democratit* (Jerusalem 2000); M. Elon, *Ma'amad ha-Ishah – Mishpat ve-Shippat, Masoret u-Temurah, Arakheha shel Medinah Yehudit ve-Democratit* (Tel Aviv 2005); idem, *Ha-Mishpat ha-Ivri* (1988); idem, *Jewish Law* (1994)) must also take into consideration the place of human rights in Jewish law, their origin, their scope and the principles that accompany them.

The basic approach taken by religious legal systems, and in particular of Jewish law to the issues dealt with in the realm of human rights place *God*, rather than *man*, at the center. As a result, man is perceived first and foremost as having *obligations* and not *rights*. It is true that in contemporary legal theory, obligations are accompanied by parallel rights (thus, for example, the prohibition “you shall not kill” as applying to one individual consequently results in the right of another individual to life; the obligation “you shall not steal” implies the right of the other to property; the obligation to return what has been lost [see *Lost Property] implies the property rights of the one who has sustained a loss; and so forth). Nevertheless, the point of departure being from obligations rather than from rights creates a completely different legal system than that existing in modern constitutional law, and the point of balance between rights and obligations changes accordingly (M. Elon, *ibid.*; Rabbi Yitzhak Breuer, *Ziyyunei Derekh* (Jerusalem 1982), 57–86; M. Silberg, *Kakh Darko shel Talmud* (Jerusalem 1982), 66; R.M. Cover, “A Jewish Jurisprudence,” in: *Journal of Law and Religion*, 5 (1987) 65; H.H. Cohn, *Zekhuyot ha-Adam ba-Mikra u-va-Talmud* (Tel Aviv, 1988); idem, *Ha-Mishpat* (Jerusalem 1992), 512–13; M. Vigoda, “*Bein Zekhuyot Hevratiiyyot le-Hovot Hevratiiyyot ba-Mishpat ha-Ivri*,” in: *Zekhuyot Kalkaliot ve-Tarbutiiyyot be-Yisrael* (2005), 233–96).

An expression of Jewish law’s basic approach to man’s obligations can already be found in the first book of the Bible, in which Adam is placed in the Garden of Eden and commanded “to tend it and to keep it.” Man is first and foremost

“commanded,” obligated, given duties rather than rights. Under this basic approach of Jewish law, as noted earlier, human rights are often formulated by way of negation, that is, by proscribing infringement of the various rights. Thus, for example, the Torah says “you shall not go around as a talebearer among your people” (Lev. 19:17) as an expression of the right to a good name; “you shall not rule over him with rigor” (Lev. 25:43) as an expression of man’s dignity; “you shall not go into his house to fetch his pledge” (Deut. 24:10) as an expression of his liberty and right to privacy (see *Imprisonment for Debt), and so on, with “you shall” implicit in “you shall not.”

Together with this, there are cases in which man is required, as a positive commandment, to respect various rights. Thus, regarding the obligation to maintain human dignity and physical integrity: “therefore take good heed unto yourselves” (lit., “your souls,” interpreted as “your lives”; Deut 4:15) and, regarding freedom of movement: “proclaim liberty throughout the land unto all the inhabitants thereof” (see below).

Man’s right to “self-fulfillment,” or self-realization so extolled in the Western, humanist and liberal culture of our times as a central foundation of various rights, is by no means self-evident from the standpoint of Jewish law, because this conception places man in the center, whereas the Jewish religion, like other religions, places God at the center (A. Lichtenstein, “*Im ke-Vanim, im ka-Avadim’ – Zekhuyot ha-Perat le-Or ha-Halakhah*,” in: *Alon Shevut Bogrim*, 12 (1997), 103–110; idem, “*Aseh Rezono, Batel Rezonkha’ – Hirhurim al ha-Mifgash bein Halakhah u-Moderniiyyut*,” in: *Alon Shevut Bogrim*, 13 (1999), 125–33; and see the ruling of Justice Y. Englard, HC 2458/01 *New Family v. The Committee for Approving Agreements to Carry Fetuses*, 57 (1) PD 419).

This basic distinction between “human rights” and “human obligations” is not merely a semantic difference, but also carries moral significance and consequences with regard to the desired balance between conflicting values. Whereas contemporary constitutional law speaks of the realization of *interests*, Jewish law stresses human *responsibility*. Thus, while contemporary theories emphasize man’s “self-fulfillment,” in Jewish law, notwithstanding that this value exists to a certain degree (see comments below on “Freedom of Expression and Creation”), the focus is on man’s obligations and responsibilities towards others.

Another substantive difference between the approach of Jewish law and the basic premises of modern law, relates to the essential nature of human rights and their practical implications. In contemporary legal systems, the various rights afforded to human beings are of significance mainly in relation to other people. The modern theory of human rights holds that society (whether the state or individuals in society) must allow individuals to realize their right to freedom of expression, freedom of occupation and movement, and so forth. The rights are “theirs” – although they are, of course, entitled to waive them. This is not the attitude of Jewish law, where the emphasis is on man’s obligations. According to this

approach, in many cases people are not allowed to waive their rights, which are in fact obligations. Thus, they may not waive the “right to life” and commit suicide (see *Suicide), nor waive their “human dignity” and remove their clothes in public, even if no one else sees them.

This approach was uniquely expressed in a ruling of the Israel Supreme Court concerning a person who wished to waive his right to dignity and insisted that a police officer carry out a search of his person in the streets of the town. Justice Elon, on the basis of Jewish law, denied the request, stating that the preservation of “human dignity,” which results from man being created in God’s image, is not only a right but also an obligation imposed on human beings; hence, one is not entitled to waive it (see at length under *Human Dignity and Freedom, Cr. App. 2145/92 *State of Israel v. Guetta*, 46 (5) PD 704).

Terminology: “Right,” “Liberty,” “Freedom”

Like many other legal terms – such as **hazakah* (possession, ownership, acquiring or proving, presumption); **kinyan* (legal rights, act of acquisition); *ones* (Elon, *Ha-Mishpat ha-Ivri*, 71–72; *Jewish Law* (1994), 79) – the various terms used in the theory of human rights in Jewish law also have multiple meanings. Thus, for example, the term *zekhut* as used in Jewish law carries various different meanings depending on the context. At times it is used in the sense of a “right,” as in modern legal terminology (thus, for example, M. Ketubbot 4:4: “The father has a right to receive his daughter’s betrothal [money]”; Yad, Sekhirut 6:9 “You have no greater right in this house than I do”), but it frequently bears other meanings, whether those related to the world of law or those outside it. Thus, for example, the word *zekhut* may be used in the sense of “permission” (as in the legal term, *zekhut yozerim*, “copyright”), or in the sense of “merits” or “good deeds” chalked up to man’s credit. The term *zekhut avot* – “ancestral merit” – is used to denote the special treatment a person enjoys because of his parents or his lineage (M. Avot 2:2) Similarly, “Every person has merits (*zekhuyyot*) and sins: one whose merits outweigh his sins is a righteous man; and one whose sins outweigh his merits is evil; half and half – mediocre” (Maim., Yad, Hilkhot Teshuvah 3:1). Another aspect of the term *zekhut* in the legal context relates to arguing on behalf of a person and defending his actions: “All are allowed to argue for acquittal, and not all may argue for conviction” (M. Sanhedrin 4:1); “Always judge a person leniently” (M. Avot 1:6). In yet other sources, the term is used to denote an advantage or benefit: “A slave benefits from gaining his freedom” (BM 19a).

In like fashion, the terms *herut* (liberty) and *hofesh* (freedom) bear a number of different meanings in different contexts, which in any case are not identical to the modern term “freedom.” On the contrary: according to different sources in Jewish law, man’s “freedom” does not express the fact that he is free of all obligations and responsibilities, but rather that he is subject to a system of obligations and precepts. This is clearly evident in the Mishnah, which states that “No one is free but

one who studies Torah.” In like fashion, Rabbi Judah Halevi, one of the great Jewish poets of medieval Spain, writes in one of his poems that “Slaves of time are under the greatest servitude; only the servant of God alone is free.” An echo of this approach is found in the rabbinic dictum that man is not at all free in this world, because he is subject to commandments of “you shall” and “you shall not,” and that only in death one becomes free, because when a person is dead, he is free, in the sense of being exempt of the obligation of the commandments (Shab. 30a).

Consideration should be given to the fact that in the Bible itself the word *hofesh* does not appear in its modern sense of freedom, except in the phrase *bigdei hofesh* (“precious clothes,” Ezek. 27:20, where its meaning is not altogether clear), or in the sense of an action or result (e.g., Exod. 21:5, “I will not go out free”; Deut. 15:12–13, 18: “you shall let him go free from you”; Exod. 21:2, 25–27: “He shall go out free... he shall let him go free”). In later sources, the term appears as an expression of freedom and liberty. Thus, for example, in the ancient book of Ben Sira it says: “Treasure an educated slave, do not keep him from freedom” (Sira 7:22).

The term *herut* likewise does not appear at all in the Bible, and is mentioned for the first time in the words of the Sages (thus, for example in the Passover blessing: “You have brought us out from slavery to liberty,” *Pesahim* 10:5, and from there in the Passover *Hagaddah*). At the same time, another term, *deror*, which in later generations was seen as standing for liberty and freedom, does appear in the Bible. Its first appearance relates to the commandment of the jubilee year, in a verse also inscribed on the Liberty Bell of the United States, commanding Israel: “And you shall hallow the fiftieth year, and proclaim liberty throughout the land unto all the inhabitants thereof” (Lev. 25:10). The Sages noted the special use of the word *deror*, which appears only once in the Torah, here and nowhere else. (In the words of the prophets Isaiah, Jeremiah, and Ezekiel, this expression appears another six times, expressing the freedom of one who is liberated from slavery. See, for example, Isaiah 61:1: “to proclaim liberty to the captives”; Jeremiah 34:8: “to proclaim liberty unto them”; and *ibid.* 15: “proclaiming liberty every man to his neighbor”; *ibid.* 17: “to proclaim liberty, every man to his brother, and every man to his neighbor; behold I proclaim for you a liberty”; in Ezekiel 46:17: a “year of liberty” is mentioned as a synonym for the jubilee year. It should be noted that the word *deror* as the name of a bird already appears in the book of Psalms (84:4): “Yea, the sparrow hath found a house and the swallow [*deror*] a nest for herself”). According to the Sages, the word *deror* here signifies freedom of movement and the right to live anywhere (with regard to freedom of movement, see below).

Classification of Rights

There is a tendency in contemporary law to distinguish among different kinds of rights. One distinction made is between “human rights,” afforded to all human beings as such (as broadly manifested in the Universal Declaration of Human Rights ad-

opted by the General Assembly of the United Nations in 1948), and “civil rights,” only granted to the citizens of a state per se (such as the right to vote and to stand for election). There is a similar tendency to distinguish between “primary rights,” such as a person’s right to life, and “political rights” (freedom of expression, freedom of association, freedom to demonstrate, assemble and march, freedom of movement, etc.; see below), whose power and scope is wider, and secondary rights (such as some of the social rights), whose scope is more limited.

A similar, though not identical, distinction exists in Jewish law. Notwithstanding that it is a universal legal system, applying and operating throughout the world and not only within the borders of particular country (as is the case with modern “territorial” legal systems, which only apply within the territory of a given country, within defined borders), Jewish law also recognizes the distinction between what are known today as “human rights,” applicable to all human beings as such, and rights with less force and scope, afforded to a more limited group. Thus, for example, the right to vote and stand for election (see below) is not afforded to all residents, but only to those who meet certain conditions of competency.

The Source of the Rights

In Jewish law, man’s rights and liberty stem from the fact that he was created in God’s image, as described in the book of Genesis (Gen. 1:27). From Adam on, this theory developed and was also introduced into the laws of nations.

Man’s uniqueness, and his resultant obligations, are emphasized in the Talmud (Sanhedrin 38a): “Accordingly man was created as an individual, to teach us that whoever destroys a single soul, is as if he destroyed an entire world; and to ensure peace among men, so that no person can say to another, ‘[My] father is greater than your father!’... and to praise the greatness of the Holy One blessed be He, for when a man mints a number of coins from the same material, they are all identical to one another, whereas the King of Kings, the Holy One blessed be he, created all men in the image of the first man and yet not one of them is identical to another. Therefore each and every one must say ‘the world was created for me.’”

Another source of great importance for human rights and the liberty that goes with them is the Exodus from Egypt, which served as the basis for the formation of Jewish culture and Jewish law, particularly with regard to man’s freedom (see *Imprisonment; *Imprisonment for Debt, and see R. Hirsch’s Commentary on Exodus 22:20, Gateshead (1973), vol. 2, p. 373).

Alongside those rights explicitly mentioned in the Bible, over the centuries, a theory of human rights developed in Jewish law. Scholars of the Mishnah and Talmud, followed by the *geonim* and the earlier and later authorities in all of Israel’s Diasporas, developed and cultivated a defense of the different rights, and by means of various legal tools (such as regulation and custom, explication and rulebooks) created a broad system of rules and norms intended to protect human rights. In the sub-sections below examples are given from different

places and times, expressing the wonderful creativity of Jewish law in developing a theory of human rights in all its shades.

The law courts in Israel and throughout the world acknowledge that Jewish law is one of the potential sources of human rights. An eloquent expression of this can be seen in the ruling of the Supreme Court, as given by Justice M. Elon: “Our sages taught us ‘Beloved is man in that he was created in [God’s] image’ (Avot 3:14). This fundamental value in the world of Judaism serves as the infrastructure, the very heart of the principle of man’s liberty (Justice M. Elon: M. App. 1/87 *Denenashvili et al. v. State of Israel*, 41 (2) PD 289, and Cr. App. 2145/92 *State of Israel v. Guetta*, 46 (5) PD 710–711. See also: M. Elon, “*Le-Zikhro shel Moshe Silberg*,” in: *Shenaton ha-Mishpat ha-Ivri* 2 (5735), p. 4; ALA 184/87 *Attorney General v. Anon. et al.*, 42 (2) PD 676. And cf. the ruling of Justice Elon, CA 506/88 *Yael Shefer, minor, v. State of Israel*, 38 (1) PD 116, under *Medicine and Law). Similarly, the Supreme Court represented by Justice Orr based itself on the principle of the sanctity of life inferred from the creation of man, ruling that dialysis treatment should be given to a minor patient even in contradiction to the parents’ wishes (ALA 5587/97 *Attorney General v. Anon*, 51 (4) PD 838–839).

The Supreme Court also invoked the idea of man’s creation in the image of God in disqualifying a Knesset election list whose platform contained racist motifs. Sharply criticizing the temerity and sham involved in this list claiming to speak in the name of the Torah of Israel, Justice Elon said, among other things: “A basic foundation of Judaism is the idea that man is created in God’s image (Gen. 1:27). This is how the Torah of Israel begins, and it is from this that *halakhah* derives fundamental principles regarding the value of man – all men – their equality and their being beloved [of God]. ‘He [i.e., Rabbi Akiva] used to say: Beloved is man, who was created in [God’s] image. Even more beloved is he, that it was made known to him that he was created in the Image, as it says (Gen. 9:6) “In the image of God He made man” (Avot 3:18). And thus, in this last verse, the prohibition against the spilling of blood by the sons of Noah is explained, even before the Torah was given” (EA 2/84 *Moshe Naiman v. Chairmen of the Central Elections Committee for the Eleventh Knesset*, 39 (2) PD 298. See also his comments in CA 294/91 *Havra Kadisha Kehillat Yerushalyim v. Kastenbaum*, 46 (2) PD 512; and the comments of Justice M. Cheshin in FH 7325/95 *Yediot Aḥaronot Ltd. et al. v. Kraus* 52 (3) PD 1).

On a number of occasions, the Supreme Court relied on the biblical concept of man being created in God’s image, as well as its stringent approach towards murderers who have taken the life of any human being. Thus, in a ruling dealing with the case of a Jew who murdered innocent Arabs, Justice Cheshin wrote:

A person – any person – is a world in himself. A person – any person – is one, individual and unique. No one is like any other. One who was will not be again, and one who has gone will not return. And our teacher, the Rambam, taught regarding the uniqueness of man (Yad, Sanhedrin 12:3): “Man was created

alone in the world, to teach us that one who destroys a single soul in the world, is as if he has destroyed the whole world, and one who saves a single soul in the world is as if he has saved the whole world. For all those who come into the world are created in the form of Adam, and the face of no man is the same as that of any other. Accordingly, each and every one can say: the world was created for me.” This is man, and this is his uniqueness. Who can dare say such a thing about a book or about a safe? (Cr.A. 1742/91 *Ami Popper v. State of Israel*, 51 (5) PD 305; and cf. Cr.A. 6841/01 *Yosef Biton v. State of Israel*, 56 (6) PD 800; Cr.A. 6535/01 *Kusirov v. State of Israel*, 57 (3) PD 565; Cr.A. 9804/02 *S.S. v. State of Israel*, 58 (4) PD 462; FTA (Tel Aviv-Jaffa) 1137/02 *State of Israel v. Nasser Mahmoud*, unpublished).

The creation of man in God’s image also served as the foundation for a National Labor Court ruling (NLC 265–56/04 *Shimon Hassid v. The National Insurance Institute*, unpublished), in which the court accepted the claim of a homeless person that the National Insurance Institute should give positive consideration to awarding an income allowance to him and others like him, giving a broad interpretation to the law intended to ensure that the indigent have the right to live in dignity (see below). Similarly, the biblical description of the creation of man, both male and female, served as the basis by which the Supreme Court, represented by Justice Cheshin, anchored, among other things, the obligation to provide equal opportunities to both sexes when entering the workforce (HC 2671/98 *The Israel Women’s Lobby v. Minister of Labor and Social Affairs*, 52 (3) PD the 36), as well as with regard to the terms of retirement from it (HC 6845/00 *Itana Niv et al. v. National Labor Court*, 57 (6) PD 663).

The Various Rights

THE RIGHT TO LIFE. The right to life is a value of prime importance, set down at the beginning of the various bills of rights. As the fundamental approach of Jewish law speaks, not only of man’s *rights*, but first and foremost of his *obligations*, it imposes upon the human being an obligation to guard his/her own body, its most important expression being the commandment “Therefore take good heed to yourselves” (Deut. 4:15). Apart from exceptional cases (e.g., the prohibitions of bloodshed, idolatry and adultery), when cardinal values enter into the balance, the obligation to preserve life outweighs all other duties. A person is therefore commanded to desecrate the Sabbath in order to save a life, “for nothing stands in the way of saving life.” The Sages expounded the verse “He shall live in them” (Lev. 18:5) – “and not die in them,” (Yoma 85b) as meaning that the Torah’s commandments have been given to live by and not to die by. According to some of the Sages, even with respect to those transgressions about which it was said that a person must allow himself to be killed rather than commit the transgression, this law only applies in public, in the presence of ten or more people. In private, however, a person must commit the transgression rather than allow himself to be killed. A special problem exists when a balance must be struck between two rights of the same type (see EA 84/2 *Naiman v. Chairman, Central Elections Committee*, PD 39(2)

225, per Justice Elon, and see *Euthanasia in *Medicine and Law). The definition of the State of Israel as a “Jewish and democratic state” finds expression in various ways related to human dignity and freedom. Thus, for example, with the exception of certain crimes of exceptional severity (e.g., crimes against humanity and the Jewish people, and the Nazis and Nazi Collaborators Punishment Law) the Israeli legislator abolished the death penalty that had been administered during the mandatory period. Similarly, corporal punishment was abolished by the Punishment of Whipping (Abolition) Law 5710 – 1950 (see *Values of a Jewish and Democratic State; *Human Dignity and Freedom; *Punishment).

THE RIGHT TO DIGNITY. Unlike contemporary law, Jewish Law views human dignity not only as a *right*, but as an *obligation* imposed upon man, stemming from the fact that he was created in the image of God. For this reason, he is neither permitted nor able to waive his dignity, even if he so desires (see *Human Dignity and Freedom).

THE RIGHT TO EQUALITY AND THE PROHIBITION OF DISCRIMINATION. The right to equality derives from the creation of man, as described in the Torah, as a solitary individual and a free man, from whom all of mankind has descended, such that no man can say to his fellow, “My father is greater than yours” (see above). An echo of this is found in the preamble to the United Nations’ Universal Declaration of Human Rights, which recognizes “the inherent dignity and of the equal and inalienable rights of all members of the human family.” Various expressions of the value of equality already appear in Scripture. Thus, for example, the Torah commands: “One law shall be to him that is homeborn, and to the stranger that sojourns among you” (Ex. 12:49; and see below, in the section dealing with the equality of nations). Many expressions of the value of equality are to be found in rabbinic literature. Thus, for example, the *tanna* Ben Azzai, maintains that the value of the equality of the sexes – embodied in the verse, “male and female He created them” (Gen. 1:27) – is “the greatest principle in the Torah,” as opposed to the position of his colleague Rabbi Akiva, who sees the verse, “you shall love your neighbor as yourself” (Lev. 19:18) as the Torah’s greatest principle (TJ Ned. 9:4 (41c)).

The value of equality also finds expression in the words of certain Sages with respect to specific issues. Thus, for example, two contradictory approaches are found in rabbinic literature regarding Torah study. The one is patently non-egalitarian, awarding the right to education exclusively to the children of the intellectual and economic elite (see below, sub-section dealing with the right to education). In contrast, there is an egalitarian approach that opens the gates of the study hall to all: “You might say that only the children of the elders, the children of the distinguished, should study. Therefore, the verse states: ‘For if you shall diligently keep’ (Deut. 11:22) – teaching that all are equal in Torah. Similarly it says: ‘Moses commanded us a Torah, the inheritance of the congregation of Jacob’ (Deut. 33:4). It is not written there: ‘Priests,

Levites and Israelites,' but rather 'Jacob.' Similarly it says: 'You stand this day all of you' (Deut. 22:9)" (*Sifrei*, sec. 48 (ed. Finkelstein, p. 112)).

The obligation of equality applies likewise to legislation enacted by the king, which must be fitting and non-discriminating: "Any law promulgated by the king to apply to everyone and not to one person alone is not deemed robbery. But wherever he takes from one particular person only, not in accordance with a law known to everyone but by doing violence to this person, it is deemed robbery" (Maim., *Yad*, *Gezelah va-Avedah* 5:14).

Alongside such statements, Jewish Law contains no small number of laws that appear to violate the principle of equality and seriously discriminate on the basis of sex, race, nationality, age, or some other factor. In many, but not all such cases, the discrimination can be explained as a "permissible distinction" based on the principle that there are no absolute rights, and that even the value of equality is set aside by other values, and that the discrimination is for an "appropriate purpose and to an extent no greater than is required" (Section 8, Basic Law: Human Dignity and Freedom). Thus, for example, the preferred status of the priests and Levites is explained by historical reasons (their non-participation in the sin of the Golden Calf), or by their unique role as officiants in the Temple. Similarly, the disqualification of women for positions of public authority, and the absence in Scripture of their right to inherit (see *Inheritance) can be explained as stemming from the different social role they play from that of men (see at length the entry *Woman). Nevertheless, alongside the attempts, some clearly apologetic, to justify laws that appear to be discriminatory, the Sages of Israel have over the course of the generations made courageous attempts to mitigate the severity of these cases of discrimination to the point of their total abolition. For example, the ruling that prevents a non-Jew from serving in the Israeli Knesset or government, based on the biblical prohibition, "You may not set a stranger over you, who is not your brother" (Deut. 17:15), has effectively been abolished in the State of Israel. Similarly, the prohibition preventing woman serving in the Knesset or in any other public role (see *Woman: The Judicial Perspective) has in practice been abolished. Mechanisms have been established allowing a woman to receive an equal share of an inheritance (see *Inheritance, and see: R. Isaac Herzog, *Tehukah le-Yisra'el al pi ha-Torah*).

The obligation of equality has ramifications in various circumstances and contexts. Thus for example, it is stated that a master/employer must provide his servant/worker with living conditions similar to his own: "'He shall be with you' – with you in food, with you in drink, with you in clean clothing: you [= the master, employer] may not eat fine bread while he eats coarse bread; you may not drink old wine while he drinks new wine; you may not sleep on cotton-wool while he sleeps on straw" (*Sifra*, *Behar*, sec. 5). Special emphasis was placed on the equal treatment of litigants in court (see *Bet Din), this being a fundamental principle of natural jus-

tice. Similarly, the rabbinic authorities have stressed not only the equality of rights, but also the equality of obligations and responsibilities.

In ancient legal systems, the "other" – the blind, the deaf, the crippled, the leper, and the like – was often rejected and subjected to unfavorable discrimination. Some viewed his condition as "a heavenly decree," a punishment for his sins, and hence as a reason to distance him from society. Thus, for example, during the Middle Ages, the term "leper" was applied to all of society's outcasts. Various popular beliefs that adhered to lepers contributed to their being cut off from community life. Testimony to this phenomenon is found in various sources of Jewish Law: for example, in the words of R. *Moses of Coucy, a 13th-century French Tosafist, who wrote in his *Sefer Mizvot ha-Gadol* that a leper who wishes to enter a synagogue must "construct for himself a high partition four cubits wide, and enter first and exit last" – all this in order not to come into contact with the other members of the community.

As opposed to this approach, some authorities of Jewish Law viewed physical deformities as a "force majeure," which does not constitute grounds for denial of the "other"'s rights or discrimination against him. An example of the caution that must be practiced in this matter may be found in a responsum authored by Rashi (*Resp. Hakhmei Zarefat ve-Loter*, no. 40; see also A. Grossman, *Hakhmei Zarefat ha-Rishonim* (Jerusalem 1995), p. 140). In this responsum, Rashi rejects the argument of a man who wished to divorce his wife because she had been stricken with leprosy, and sharply reproaches him for his conduct.

PLURALISM, FREEDOM OF EXPRESSION, AND THE PUBLIC'S RIGHT TO KNOW. In modern constitutional law, pluralism – the multiplicity of views and the freedom to express them – has a most important place among human rights; some see it as the "queen of rights." This finds expression in various constitutions (such as the United Nations' Universal Declaration of Human Rights and the U.S. Constitution) that have established this principle and ascribed it supreme importance. Freedom of expression includes not only the right to express opinions, but also the right to hear them or, as it is usually called, "the public's right to know." The world of Jewish Law contains many expressions of praise for pluralism and multiplicity of views (see *Majority Rule; and see below Pluralism in the World of *Halakhah*). The great principle in this matter is mentioned already in the words of the Sages with respect to the controversy between the school of Shammai and the school of Hillel, who "disagreed for three years, these saying: The law is in accordance with us, and these saying: The law is in accordance with us. A heavenly voice issued forth and said: Both are the words of the living God" (Eruv. 13b). Nevertheless, on the practical level the matter was eventually decided: "And the law is like the school of Hillel" (*ibid.*).

As part of the recognition of pluralism and its importance as a value in its own right, Jewish Law assigns a place of honor to speech and to free speech, speech representing man's

preeminence over the beast. This was given pointed expression in Onkelos's translation of the verse in the biblical account of Creation: "And man became a living soul" (Gen. 2:7) – *le-ru'ah memalela*, "a talking spirit." Man is speech, and the freedom to speak is the breath of life. However, even though man was given this freedom, he is commanded to use it wisely, for "in the multitude of words, sin is not lacking" (Prov. 10:19), and "too much talk brings sin." If this is true regarding neutral speech, all the more so regarding talk that involves slander and gossip, about which it is stated: "Guard your tongue from evil, your lips from deceitful speech. Depart from evil, and do good" (Ps. 34:14–15; and see above regarding man's right to a good name).

Despite the great similarity in certain matters, Jewish Law's conceptual starting point regarding freedom of speech is different from that generally accepted in our day, and thus its normative ramifications are also different. Modern law tends to justify this right with various principles inherent in it, including: clarifying the truth; strengthening democracy; "letting off steam," which in the absence of freedom of speech is liable to burst out in violent and undesirable channels; and self-realization. An examination of these principles teaches that most if not all of them are compatible with the principles – if not necessarily the particulars – of freedom of expression in Jewish Law. Nevertheless, it should not be inferred from this that the normative rights stemming from them, and especially its scope and application, are identical to those of Jewish Law.

Whereas modern law is occasionally ready to retreat from the truth in order to actualize freedom of expression and allow "freedom of false expression" (HC 6126/94, *Senesh v. Broadcast Authority*, PD 53(3) 817; HC 316/03, *Bakri v. Film Censorship Board*, PD 58(1) 249), Jewish law has sharp reservations about such an approach, and commands a person to distance himself even from that which contains the "dust" of falsehood. The sole allowance for veering from the truth is "for the sake of peace," and even this is strictly limited (Yev. 65b; Maim., Yad, Gezeleh va-Avedah 14:13).

In contrast to modern law, which sees freedom of expression as an important component of man's autonomy and ability to achieve self-realization, various approaches in Jewish Law see speech as a necessity that should be limited. It is against this background that one needs to understand the dicta of the Sages in praise of silence (e.g., "a protection of wisdom is silence" (M. Avot 3:13); "a word for a *sela* (Talmudic measure of value), silence for two") (Meg. 18a).

Freedom of expression finds an anchor in Jewish Law in the sharp criticism of the prophets of Israel, who severely reproached both the authorities and private individuals. For example, "Your princes are rebellious, and companions of thieves; everyone loves bribes, and follows after rewards; they judge not the fatherless neither does the cause of the widow reach them" (Isa. 1:26; and see H. Cohn, *Zekhuyot Adam ba-Mikra u-ba-Talmud*; and the words of Justice Elon, EA 2/84 *Naiman v. Chairman, Central Elections Committee*, PD 39(2)

294; *idem*, *Ha-Mishpat ha-Ivri*, 1553–1557; *Jewish Law* (1994), 1846–1850; *Jewish Law (Cases and Materials)* (1999), 523–38. Indeed, the words of the prophets frequently stirred up the wrath of the ruling power, which did not always limit itself to a sharp verbal response, but at times adopted severe measures to forcibly suppress this freedom (see, for example, 1 Kings 18). According to one tradition, King Manasseh killed the prophet Isaiah and the people stoned the prophet Jeremiah for the opinions they voiced, and echoes of this tradition are found in the Talmud (Yev. 49b). It should also be remembered that the words of a prophet do not express full freedom of speech, for he is not free to say what is on his heart, but rather he is obligated to impart the word of God as he received it, without adding or detracting anything. This is exemplified by the attempts of Moses, "father of the prophets" (Exod. 3:11–12; 4:10–17), and the prophet Jeremiah (1:4–9) to avoid fulfilling the mission cast upon them, and their forced compliance. The obligation to proclaim God's word is so severe that the Sages asserted that a prophet who suppresses his prophecy is liable for death at the hand of Heaven. Moreover, the obligation to prophesy is conveyed exclusively to the prophet, and even he is not permitted to realize it whenever he wants, to the point that sometimes he "prophesies without knowing what he is prophesying" (see BB 119b). The prophet is thus frequently limited in his prophecy, and does not enjoy full freedom of expression, as is accepted in modern law. A prophet is also not permitted to say things that contradict the words of the Torah (Deut. 18:20; Shab. 104a).

Many testimonies are found in the responsa literature of attempts to reduce to a minimum infringement upon freedom of expression, even when committed for an "appropriate purpose" cause. This is sometimes accomplished through narrow interpretation of a rabbinic or communal enactment that clashes with freedom of expression, and at times even through the assertion that the enactment is null and void owing to its clash with this freedom. Thus, for example, Maimonides narrowly interpreted a communal enactment that attempted to prevent individuals from mentioning the name of the head of the Babylonian yeshivah (*Resp. Rambam*, no. 329 (ed. Blau, p. 596)). Similarly, R. Samuel de Medina narrowly interpreted a communal enactment that prevented members of the community from hearing the words of a sage who had fallen out of favor in the eyes of those who made the enactment (*Resp. Maharashdam*, vol. 1, no. 16; this responsum only appears in the first edition, and was omitted from later editions). These attempts to limit the freedom of expression of certain sages and silence them lest they compete with the community's leadership are known to us from other places and were not always successful (see, e.g., *Resp. Avkat Rokhel*, nos. 179–181).

Attention should also be paid to the fact that in contrast to the approach of contemporary constitutional law, according to which freedom of expression ensures the right of every individual to say anything, provided that he does not harm the interests of others, Scripture sometimes reflects a different ap-

proach, as exemplified by the attempt of Joshua bin Nun, servant of Moses, to silence Eldad and Medad who were “prophesying in the camp” (Num. 11:27) and his request of Moses to restrain them. In contrast, Moses’ cold response, “Would that all the Lord’s people were prophets” (Num. 11:29), expressed pluralism in “the marketplace of prophecy,” and prevented their punishment, though *halakhah* has laid down that even when prophecy existed in Israel, not everyone who so desired was permitted to take the crown of prophecy for himself.

IN ISRAELI COURTS. The issue of freedom of expression in Jewish Law has been raised by the Israeli courts in various contexts, both in connection with libel suits (see *Slander) and in connection with constitutional issues, such as the right to run for office in the Knesset, which is part of the freedom of political expression (see below, subsection dealing with the right to vote and be elected), freedom of expression on grave-stones, and other matters.

Two court rulings relate to the issue of freedom of expression on gravestones. The Israeli Supreme Court (per Justice Elon) discussed the issue of freedom of expression in Jewish Law at length, noting that, like other rights, this right is also not absolute and can be set aside if its realization clashes with other values, e.g., *human dignity and the sensitivities of other people (CA 92/1482, *Hager v. Hager*, PD 47(2) 793; CA 294/91. *Hevra Kadisha Kehillat Yerushalayim v. Kastenbaum*, PD 46(2) 464). The Supreme Court discussed this issue in another case dealing with the inscription of a date according to the Gregorian calendar on a gravestone. Justice England based his minority opinion on sources in Jewish law that ban such inscriptions, and in such circumstances prefer to set aside freedom of expression in favor of other values that conflict with it [CA 97/6024, *Fredrika Shavit v. Hevra Kadisha Rishon Le-Zion*, PD 53(3)600]. Another ruling discussed the broadcasting of a film on the Sabbath, where the main figures in the film, who were religiously observant, objected to its broadcasting owing to the Sabbath desecration profanation involved. Justice Dorner (in a minority opinion) sided with the plaintiffs, basing her opinion upon the views of those halakhic authorities who set aside the principles of freedom of expression and the public’s right to know because of the Sabbath desecration that the realization of these rights would involve (HC 1514/01 *Ya’akov Gur Aryeh v. Television’s and Second Television Authority*, PD 55(4) 282). She reviewed the various opinions on the matter in Jewish Law, and referred to the lenient approach that allows an observant film producer to sell his films to the Broadcasting Authority even when he knows that they will be broadcast on the Sabbath (M. Elon R. David Setav, “*Zulam be-Yom Ḥol, Shudar be-Shabbat*,” in: *Nekudah*, 211 (1998), 52; and see R. Shlomo Zalman Auerbach, “*Shiddur Radyo Hozer be-Shabbat*,” in: *Teḥumin*, 17 (1997), 13).

FREEDOM OF CONSCIENCE. Another important aspect of the modern idea of freedom is freedom of conscience, allowing a person to believe whatever his heart desires – not limited to matters of religious faith (see below, sub-section on the free-

dom of religion and ritual) – and to act in accordance with the demands of his conscience. This freedom is anchored in article 18 of the Universal Declaration of Human Rights and in the Declaration of the Establishment of the State of Israel, which promises “freedom of religion and conscience” to all its citizens and inhabitants.

As with other rights, Jewish Law does not speak of freedom of conscience, but of duty of conscience: i.e., that a person is not exempt from fulfilling his civic responsibilities because of the call of his conscience. Jewish Law deals with this issue at length in relation to the question of releasing people from their obligation to share the burden of community troubles owing to reasons of conscience. The issue is discussed in particular in the context of the question of the exemption granted to full-time yeshivah students from service in the Israeli army, and the question of conscientious objectors to military service. Many of the halakhic authorities who addressed this issue emphasized the duty falling upon every individual to share the burden of an “obligatory war,” which overrides the duty of studying Torah.

Some have relied on the sharp call of Moses to the members of the tribes of Gad and Reuben: “Shall your brothers go to war, and you sit here?” (Num. 32:6; and see Judges 5:23). Others based their view on the biting Talmudic statement: “Who shall say that your blood is redder; perhaps the blood of the other is redder” – i.e., just as you ask your neighbor to risk his life to defend you, so are you obligated to risk your life on his behalf (Pes. 28b).

This issue of conscientious objection and Jewish Law was discussed in the Israeli Supreme Court, with respect to the refusal of a conscientious objector to serve in the Israeli army during the Lebanese war (HC 734/83, *Shein v. Minister of Defense*, PD 38(3) 404). Justice Elon denied the petitioner an exemption from military service, basing his ruling on numerous sources of Jewish law dealing with those seeking an exemption from army duty (e.g., Deut. 20:1–9; Judges 7:3; 1 Macc 3:55; M. Sotah 8:2–7; Tosefta (ed. Zuckerman), Sot. 7:18–24; *Sifrei, Devarim*, secs. 192–197; Yad, Melakhim, 7; *Sefer ha-Hinukh*, Aseh #502; and others). (See *Military Law.)

THE RIGHT TO VOTE AND TO BE ELECTED. The right to vote and to stand for election is one of the most important of all civil rights, as a clear expression of the democratic process. Because of its importance, in various legal systems, such as American law and Israeli law, this right has been established as an “entrenched section of the law,” which can only be changed by a special majority of members of the House of Representatives (the Knesset).

Study of the sources of Jewish law shows that, notwithstanding that the system of governance reflected in many of them is very different from the democratic system in use today, there are many principles to be found in them that are equally valid and applicable today. (See in greater detail: M. Elon, “*Demokratyah, Zekhuyot Yesod u-Minhal Takin be-Pesikatam shel Ḥakhmei ha-Mizrah be-Moza’ei Gerush*

Sefarad,” in: *Shenaton ha-Mishpat ha-Ivri*, 18–19 (5762), 9–63.)

A study of the Bible and of early rabbinic sources reveals that actual “election” processes are hardly to be found, and that the majority of “elected representatives” mentioned there are actually appointed and not elected to their position in a democratic process – nor did the biblical king receive his office through any actual process of election. Despite the fact that from the literal meaning of the verse, “you shall surely set him as king over you” (Deut. 17:15) it might be concluded that there was indeed a democratic process here of election by the people, the rest of the verse – “whom the Lord your God shall choose” – shows that this is not the case. This passage also shows us that the right to be elected was not given to everyone, but was limited only to the children of Israel: “from among your brethren shall you set a king over yourselves, you may not put a foreigner over thee, who is not your brother” (*ibid.*, and see above with regard to equality). Alongside this limitation, a further restriction was added at a later stage, by which “no king may be raised first other than in accordance with a court of 70 elders, and according to a prophet” (Maim., Yad, Melakhim 1:3). This restriction ensured a kind of “judicial review” of the selection process.

Restrictions relating to the right to vote may also be found in the sources of Jewish law. Thus, for example, it states in the Frankfurt Rulebook from 1774 that anyone who has not paid his taxes that year may not take part in the elections, and the same is true of one regarding whom “at least two years have not passed since his wedding” (Rabbi R.D. Dessler, *Shenot Dor ve-Dor* (Jerusalem 2000), p. 413). A similar restriction existed in the Mantua community in Italy, where only people who had paid all their dues to the congregation and had lived within the city for a long time, at least 25 years, could participate in elections (S. Simonson, *Toledot ha-Yehudim be-Dukhasut Mantova* (Jerusalem 5723), p. 240).

Various restrictions were also placed on the right to stand for election, clearly reflected in the **Takkanot ha-Kahal* (communal enactments). Thus, for example, in a number of towns of Europe there was a regulation preventing a doctor or a broker from standing for election as “trustee” of the congregation, because these occupations were considered to be of low rank and were likely to undermine the public’s faith in its leadership (Y. Baer, *Toledot ha-Yehudim be-Sefarad ha-Nozerit* (Tel Aviv 1965), 256). The regulations of the Frankfurt congregation included a rule stating that a person standing for appointment as a community leader must have been married for at least nine years; for the position of “community dignitary” – at least six years; and for the position of *gabbai* (manager of synagogue affairs) – at least three years (Dessler, *ibid.*, p. 413). Another community rule enacted in Frankfurt states that only a person with considerable financial capital may be elected to the community committee (Y. Heilperin, *Zion*, 21 (1956), 64). This requirement apparently arose from the need to ensure the financial independence of the elected

representative: in the absence of a salary for public positions, representatives needed to be of independent means in order to be able to devote their time to the position and to be free of extraneous pressures and considerations. In a number of communities in Christian Spain, a minimum tax payment was set as a condition for realization of the right to stand for election (Y.T. Assis, *Ha-Yehudim be-Malkhut Aragonya ve-Ezorei Hasutah*, in *Moreshet Sefarad*, H. Beinart, ed., Jerusalem 1992, p. 62 and note 115).

Restrictions of a different kind were applied to the expenditure permitted in an election campaign. Thus, for example, a rule was enacted in one of the Polish towns under which election expenses were limited to no more than six gold pieces, to prevent the waste of public money on the elections (S. Idelberg, “*Pinkas Schnadai*,” in: *Galed*, 3 (1976) 304 #30). A similar provision was introduced in Israeli law, in the Parties Law 5752 – 1992, and the Party Financing Law, 5733 – 1973, which imposed a ceiling on the expenses permitted in an election campaign.

Another form of disqualification from election applied to individuals with a criminal past. In modern legal systems such as the Israeli system, criminals do not lose the right to vote, and a certain time after they complete their sentence they are entitled to stand for election, even if the crime they committed carries moral turpitude. On the other hand, in some Jewish congregations the right to vote and stand for election was taken away permanently from criminals (I.Z. Kahane, “*Sheloshah Kheruzim mi-Pinkas de-Kehillah Kedoshah Tribitsh*,” in: *Kovez Al Yad* 14 (1948), p. 187). A case came before the Ḥatam Sofer regarding one of the leaders of a congregation whose other community leaders wanted to take away his right to vote or to stand for election for a period of ten years because of a crime he had committed. The Ḥatam Sofer fiercely denounced the faulty procedure they had followed, insisting that disqualifying a person from realizing his right to vote and stand for election only be done after review by the *bet din* and the local rabbi. In this regard, he added that, even if there had been defects in the election procedure, there was no reason to rush to invalidate it if these defects were only discovered after the election was over (Resp. Ḥatam Sofer, *Likkutim*, YD no.38).

IN THE COURTS. The issue of a criminal’s right to vote recently came up in the Israeli Supreme Court regarding the matter of a prisoner who wanted to realize his right to vote. Justice Elon, sitting in judgment, based his decision giving the prisoner the right to vote on the basic principle of Jewish law “once he has been flogged – he is like your brother” (M. Makkot 3:15) (HC 337/84 *Hokama v. Minister of Interior*, 38 (2) PD 826; and see **Imprisonment*). The question of the right of women to vote and stand for election was also discussed in depth in the ruling of Justice Elon in the Shakdiel affair (HC 153/87 *Shakdiel v. Minister of Religious Affairs*, 22 (2) PD 221, and see under **Woman: The Judicial Perspective*).

Freedom of Demonstration, Assembly, and Procession

Freedom to demonstrate, assemble and march is an aspect of freedom of expression. In a modern, democratic country this freedom is one of the most important expressions of freedom of political expression, which differentiates a totalitarian regime from a democratic regime. A considerable portion of rules of Jewish law originated in entirely different political realities, which did not necessarily operate according to the democratic rules accepted today. But notwithstanding the differences, many democratic principles can be found which are similar, if not always identical, to the generally accepted rules today. Thus, for example, Jewish law provided a real possibility for those in disagreement with the leadership to express their opinions, and even to make use of the public domain for this purpose. Nevertheless, attempts can be seen on several occasions in the sources of Jewish law to silence these protesting voices – attempts which are not always successful. An early manifestation of this can be seen in the figure of the biblical prophet, crying out in public against various injustices, such as the strong words of the prophet Isaiah (1:21–23): “How is the faithful city become a harlot! She that was full of justice, righteousness lodged in her, but now murderers. Your silver is become dross, your wine mixed with water. Your princes are rebellious, and companions of thieves; everyone loves bribes, and followed after rewards; they judge not the fatherless, neither does the cause of the widow come before them.”

One of the wonderful expressions of the right of the individual to “demonstrate” and protest against an injustice that has been done is the custom of “delaying [prayer] services” (alternatively referred to as: “canceling prayers,” “cancellation of regular prayers,” “delaying the public reading of the Torah”). This custom originated in the Jewish congregations of the Middle Ages, and it is used even today as a demonstrative sanction by a person who wishes to protest against an injustice he has suffered. The “delayer” is given permission to stop the prayers or the Torah reading, and will not allow the congregation to continue until his complaint has been heard. The responsa literature has preserved fascinating answers illustrating the considerable power of protest of this custom, often leading to a solution of the dispute that was the cause of the protest. (*Teshuvot Maimuniyyot*, Nashim #25; Maharam of Prague, 249; *Or Zarua*, 1 no.52; and see also: A Grossman, “*Reshito ve-Sodotav shel Minhag Ikuv ha-Tefillah*,” in: *Millet*, 1 (1983), 199–219; M. Ben-Sasson, *Ha-Z'akah le-Zibbur be-Beit ha-Knesset be-Arazot ha-Islam bi-Ymei ha-Beinayim*, in: S. Elitzur et al. (eds.), *Knesset Ezra* (Jerusalem, 1994), 327–350; Y. Ta-Shma, *Minhag Ashkenazi ha-Kadum*, 303 and note 13; S. Golden, *Ha-Yihud ve-ha-Yahad*, 157–61).

FREEDOM OF ASSOCIATION. In contemporary discussion of human rights, the right of association constitutes a fundamental right. Some view it as an independent right, while others see it as a sub-category of freedom of expression. In light of the different legal reality, association in Jewish Law is not established in a formal manner as is common today (by

means of the establishment of a corporation, non-profit association, cooperative society, or the like (see *Partnership; *Legal Person), but principles relating to the right of association are already found in various contexts within Jewish Law. Thus, for example, already in the tannaitic period (first and second centuries C.E.) enactments were made recognizing the right of members of a particular profession to join together to organize work relations between them – enactments reminiscent of those ordained by the members of the medieval guilds: “The wool dealers and dyers may declare: ‘We shall be partners in all merchandise that comes into the town.’... The donkey drivers may declare: ‘We will provide another donkey to anyone whose donkey dies.’... The boatmen may declare: ‘We will provide another boat whenever anyone’s boat is lost’” (*Tosefta*, BM, 11:24–26). Similar ordinances were established in the modern period. Thus, for example, R. Moses Feinstein ruled that workers are permitted to organize in trade unions and to enact ordinances that are binding upon all of their members (*Resp. Iggerot Moshe*, vol. 2, הַמ, no. 58).

Responsa literature contains many testimonies to attempts to reduce infringement upon the freedom of association. This is sometimes accomplished through narrow interpretation of a rabbinic or communal enactment that clashes with freedom of association, and at times even through the nullification of the enactment owing to its clash with that freedom. Thus, for example, communal enactments that attempted to prevent individuals from establishing their own synagogues, that would give expression to their special customs, were reduced to a minimum. Such enactments were particularly common in the lands of the Ottoman Empire, following the expulsion of Jews from Spain and Portugal, when they established new “congregations” in many cities. The native residents saw the expansion of these “congregations” as posing a threat of the establishment of unbridled opposition and a breakdown of the social structure that had enormous economic importance. On the other hand, sweeping prohibitions limiting the right of association violated the freedom of the residents, and therefore they were interpreted narrowly, out of a desire to prevent such violation to the extent possible, unless it was done for “a worthy cause.” Thus, for example, R. Samuel de Medina narrowly interpreted a communal enactment that indiscriminately prohibited the establishment of new synagogues in Salonika (*Resp. Maharashdam*, YD, no. 152).

FREEDOM OF MOVEMENT: In modern law, freedom of movement is perceived as among the most basic of all human rights. Man’s liberty is manifested, among other things, in his ability to move freely from place to place, to live wherever he chooses, to leave the country and to enter it. In the modern discussion of rights, this right is an additional expression of the autonomy and liberty of the individual. Like other rights, this right is not absolute and must be balanced against such other fundamental rights as security of the state, public order, property rights etc.

Limitations on freedom of movement are divided into many stages: the most severe restriction of freedom of movement and the right to liberty is locking a man in prison, under an arrest warrant or detention order, and restricting him to movement within the prison walls. Of lesser severity is restricting freedom of movement to a particular place of residence, an alternative to imprisonment making the accused's release contingent upon his remaining at a particular address, known as "house arrest." A less severe measure is the restriction of his movement to a particular city, and even less severe is the restriction of freedom of movement by prohibiting a person from leaving the country, or prohibiting an accused from leaving the country, or curtailing the freedom of movement of a debtor which conflicts with the desire of society and the legislator to protect the property rights of his creditor and to enable him to collect the debt. An even less severe measure is a prohibition against a person from entering a certain country, such as prohibiting visits to an enemy state. In addition to the general restrictions mentioned above, there may at times be restrictions on freedom of movement in specific cases, both by force of legislation or by force of a court decision. Thus, for example, in the case of a demonstration or visit by a state personage, there may be restrictions on movement in certain areas for a limited time period in order to maintain public order and ensure the safety of the participants. Needless to say, the freedom of movement of an individual in the public domain is restricted by virtue of the wish to maintain public order and security. In certain cases (such as closing roads to traffic on the Sabbath), freedom of movement is set aside in favor of freedom of religion or the wish to avoid harming "religious sensibilities."

Jewish law rejects limiting freedom of movement and justifies it only for an appropriate purpose and insofar as it does not exceed the minimum required. The emphasis on freedom of movement as a significant component and basic principle of human freedom is expressed in the verse relating to the precept of the Jubilee year (also inscribed on the American Liberty Bell): "And you shall hallow the fiftieth year, and proclaim liberty throughout the land unto all the inhabitants thereof" (Lev. 25:10). The Sages took note of the special use of the word *deror* (liberty), which only appears this one time in the Torah and not in other places, where the word used is usually *hofesh* [freedom]. They interpreted this as referring specifically to freedom of movement and the right to live anywhere, and said that "liberty [*deror*] is the language of freedom [*herut*]... like a person who lives everywhere and carries his merchandise to every country" (Rosh Hashanah 9b). Rashi adds (*ad loc.*) "one who lives wherever he wants, and is not subject to others."

On the other hand, even in the Bible there are already a number of restrictions on freedom of movement of a person or a group of people in various circumstances. Thus, for example, freedom of movement in or around holy places was restricted. At the time the Torah was given, the children of Israel were forbidden to even approach Mount Sinai (Exod. 19:12). There

were special commandments with regard to the Tabernacle (and later, the Temple), whereby people who were unclean for various reasons, lepers, those with gonorrhoea and those contaminated by the dead were not allowed to come near. On the other hand, the High Priest was proscribed from leaving the confines of the Temple during mourning: "neither shall he go out of the sanctuary, nor profane the sanctuary of his God" (Lev. 21:12). Another restriction on freedom of movement is given with regard to the tribes of Israel on the Sabbath: "see that the Lord has given you the Sabbath; therefore he gives you on the sixth day bread for two days; abide ye every man in his place, let no man go out of his place on the seventh day" (Exod. 16:29). This restriction was the source for the prohibition against going beyond "the Sabbath boundary," a concept developed in the Oral Law. Further restriction on freedom of movement is found in the institution of cities of refuge. A person who has committed murder by mistake or mishap is commanded to flee to one of the cities of refuge, and is forbidden to leave "until the death of the High Priest." (Num. 35:25) This restriction, however, is voluntary and not mandatory, and is intended to protect the killer from being avenged by the "blood avenger."

An extensive review of the limitations on freedom of movement can be found in the literature of the Sages and in post-talmudic halakhic literature. Thus, for example, a person is prohibited from leaving the land of Israel and going abroad unnecessarily. Similarly, there is mention of a prohibition against Jews traveling to Egypt or living there, based on the verse: "You shall not see them again any more forever" (Exod. 14:13; TJ Sukkah 5:1 (55b)). In later generations, there were those who sought to impose a similar "boycott of movement" on Jews returning to Spain (following the expulsion from Spain) or to Germany (following the Holocaust), but these prohibitions never took root in practice.

In different communities, where the number of Jewish residents was very limited, members of the congregation were prohibited from leaving the area because it was likely to result in it being impossible to find a *minyan* (prayer quorum of ten) for prayer on the Sabbath and festivals. An echo of this already appears in early responsa from Ashkenaz (Franco-Germany), as well as in the later period. Another regulation found in the sources of Jewish law restricts the freedom of movement of young people of the congregation to travel outside the town, lest this lead to "acts of immorality" (R. Joseph Caro, *Resp. Avkat Rokhel*, no. 206). Other examples of restrictions on freedom of movement imposed for "an appropriate purpose" appear in the community rulebooks. Thus, for example, the Lithuanian rulebook (p. 9 #39) mentions a prohibition against the leaders of the congregation going to Warsaw without the authorization of the State Council, lest they participate in the Polish Sejm assembly and contribute to decisions taken against the interests of the community as a whole. The regulation ends with the imposition of severe sanctions against anyone breaching this prohibition, stating that the infringer will be punished with "corporal punishment and financial

punishment.” Another restriction was imposed in Lithuania on the freedom of movement of wandering beggars. As it appears from this regulation, the increasing number of itinerant beggars wandering from town to town harmed the local poor and opened the way to acts of fraud. Accordingly, the Lithuanian rulebook (p. 17, #88) states that it is prohibited to allow indigents from other cities “to set foot in the towns / cities of Lithuania and Russia” unless they have relatives in town. Similarly, a woman can prevent her husband leaving for another country if there is a suspicion that he will not return and will leave her as an abandoned woman (see **Agunah*). In such a case, the “appropriate purpose” of preventing a woman’s abandonment takes precedence over his freedom of movement. This restriction is also anchored in Regulation 96(d) of the Rules of Procedure for the Rabbinical Courts: “the Court may discuss an application to prevent a man from leaving the country on the grounds of fear of abandonment.” At the same time, if the man deposits a *get* (religious divorce papers), or even a conditional *get* (one that comes into force only if he does not return within the stated period of time), the appropriate purpose of preventing the woman’s abandonment is achieved, and in this case the man may realize his freedom of movement (Sh. Ar., EH 154:8). The same holds true if there is a ruling that does not impose the obligation of a *get* on the man: in that case, the woman is not “entitled” to a divorce and the man’s freedom of movement takes precedence. Consequently, if the man deposits a guarantee ensuring his return, there is no reason for denying him the freedom of movement. The Supreme Court in Israel has adopted this, among its other considerations, as a possible basis for refusing to extradite a criminal abroad if this is likely to leave his wife in a state of abandonment (see **Extradition*).

A prohibition in principle against denying a woman’s freedom of movement, alongside a recommendation severely limiting her freedom for reasons of modesty (apparently under the influence of Islam) is mentioned by Maimonides (Yad, Ishut 13:11):

Every woman is allowed to go out to visit her father, or to go to the house of mourning or to a house of celebration to do kindness to her friends and relatives, so that they will also visit her. For she is not in prison, so that she can never come and go. Nevertheless, it is a disgrace if a woman is constantly going about, at times outside and at times in the street. And her husband is to prevent this, and not let her go out more than once or twice a month as is needed. For there is nothing more fitting for a woman than to sit in the corner of her home, as is written, “All the glory of the king’s daughter is within” (Psalms 45:14).

At the same time, as we can see from contemporary historical sources, as well as in later periods, this “suggestion” to restrict women’s freedom of movement was almost certainly influenced by what was customary in the surrounding Muslim society, and was not upheld in practice: “One who imposes a vow upon his wife that she not go to the house of mourning or to the house of feasting, must give her a divorce and pay her *ketubbah* money, for he locks her in; but if he does so be-

cause of ‘another reason’ he may do so.” That is, restricting the woman’s freedom of movement, so to speak “locking her in,” is grounds for divorce, unless he claims “another reason” – e.g., that it is known that where she is going there are unruly and licentious people. According to Maimonides, a person who has made a vow denying his wife’s freedom of movement must either retract his vow or divorce her, “since it is as if he has imprisoned her and locked her in.”

Yet, notwithstanding the restrictions imposed on freedom of movement in certain cases, the halakhic sages imposed strict conditions on their use, limiting it to cases where the “appropriate purpose” was of greater value than denying the person’s liberty – and even then they tended to reduce the restriction to the minimum necessary. For that reason, the use of imprisonment in Jewish law was considerably limited. Recognition of man’s freedom of movement was also often manifested in rejecting the validity of a stipulation or other charge in an agreement that sought to deny a person this right.

In the State of Israel. The courts in the State of Israel often based freedom of movement on the principles and sources of Jewish law. Thus, for example, in a number of cases applications were made to prevent a husband from leaving the country lest he make his wife an *agunah*. In one case the Supreme Court discussed the case of a criminal suspected of committing a murder in France where extradition was requested. In connection with the question of extradition, Justice Elon discussed the source of Jewish law on this subject (see in greater detail **Extradition*).

FREEDOM OF OCCUPATION. In modern law, freedom of occupation means man’s *right* “to engage in any occupation, profession or trade” (Section. 3, Basic Law: Freedom of Occupation). According to the democratic understanding, this right is intended to allow a person autonomy in choosing his occupation, and assist him in fulfilling himself, but it does not obligate him to engage in any particular occupation, nor indeed to work at all, but leaves the decision to his individual judgment.

Following from Jewish Law’s fundamental approach (see above), occupation is understood by Jewish Law not only as a right or a freedom, but also as an *obligation and duty*. Whereas modern law allows a person to engage in any profession, but does not obligate or command him to do so, Jewish Law commands a person to work and toil in some occupation that contributes to the promotion of civilization. Like any other right in law in general, and in Jewish Law in particular, freedom of occupation is not an absolute right. Over the course of the generations, various limitations were imposed upon it, some of which stemming from religious laws, others from public interests, and yet others from private interests. The various limitations set upon freedom of occupation may be divided into sub-groups: absolute limitations on certain occupations (e.g., commerce in articles connected to idolatry, lending at interest); conditional limitations that restricted the right to engage in a particular occupation to those who had received a license

or authorization (e.g., ritual slaughter); limitations imposed upon members of a certain class (e.g., limitations imposed upon a Torah scholar or a judge not to engage in occupations deemed demeaning in the eyes of the public (or in order to free to study Torah and fulfill the commandment, “And you shall meditate therein day and night” (Josh. 1:7)); limitations on the times of certain occupations (e.g., on the Sabbath and festivals, during the *sabbatical and *jubilee years, and during a period of mourning); and limitations dependent upon time, place, and circumstances (e.g., the prohibition of monopolies and encroachment).

Some of these limitations were imposed through **takkanot* (enactments) or **takkanot ha-kahal* (communal enactments). Thus, for example, the Talmud records “enactments legislated by Joshua and his court,” one of which relates to freedom of occupation with respect to fishing in “the lake of Tiberias.” Anyone may catch fish in that lake, provided he uses “only a fish-hook,” so as not to interfere with the movement of boats. But only members of the tribe of Naphtali, in whose territory the lake is located, may catch fish by spreading a net or keep a boat there (BK 80b; Maim., Yad, Nizkei Mammon 5:3; and cf. M. Elon, *Ha-Mishpat ha-Ivri*, 1452; *Jewish Law*, vol. 2, p. 552). Similarly, limitations were imposed upon merchants who wished to compete unfairly with their colleagues or in cases where they were liable to deprive them of their livelihood (see **Hassagat Gevul*). So too, a prohibition was imposed upon the formation of a *ma'arufyah* (a form of private monopoly), cartel, or monopoly that would be injurious to the public interest (*Or Zaru'a*, BM 10a, no. 28; *Resp. Ge'onim Kadmonim*, and elsewhere). Limitations were also placed on freedom of occupation for the purpose of preventing profiteering (see **Hafka'at She'arim*).

Various testimonies may be found in the sources of Jewish Law regarding agreements that were reached to limit the freedom of occupation of members of a particular group of people, such as those who engaged in a particular occupation. Thus, for example, the Talmud tells of an arrangement made by an association of butchers, dividing the work days among its members, and imposing a penalty upon those who violated the agreement (BB 9a; and see M. Elon, *Ha-Mishpat ha-Ivri*, 1:608; *Jewish Law*, vol. 2, p. 752). In the case under discussion, the agreement had been reached by way of an enactment of all “the townspeople,” and nothing may be inferred from it regarding the law applicable to parties who reach a similar arrangement as individuals. Various testimonies regarding similar arrangements that were made as part of an agreement between individuals are found in the responsa literature, where the arrangements are called “restraints of trade” (*ketav issur*). The halakhic authorities issued various rulings regarding the validity of such arrangements (see, for example, *Resp. Divrei Malki'el*, vol. 3, no. 153; *Resp. Maharsham*, vol. 2, no. 22; *Resp. Havalim ba-Ne'imim*, vol. 3, YD, no. 38). Such stipulations were prevalent in employment contracts, where the employer wished to prevent his employee from exploiting knowledge gained during his employ for his own future advantage or for

the advantage of some other employer. The validity of such a stipulation is in doubt, because according to Jewish Law there is a difficulty entailed in acquiring ownership of something not yet in existence or having no substance (see **Acquisition*). The problem was resolved, however, by way of an *obligation* that a person accepted upon himself to perform a certain act in the future, which is valid (*Haggahot Maimuniyyot*, *Shutafin* 4:2; *Hiddushei Ramban* to BB 9a; *Resp. Rashba*, vol. 3, no. 65; *Sefer ha-Terumot*, Section 64, Sect. 2:1; Tur, HM 60:10).

Alongside the problem of creating the obligation, a doubt exists as to the validity of a stipulation that seeks to violate a person's freedom of occupation. In this regard, it was established that when a limitation benefits none of the parties, but is intended only to restrain one of them, it reflects the trait of Sodom. This term was interpreted by most of the *Rishonim* as “inordinate privatism, that leaves one preoccupied with personal concerns to the neglect of others, or a degree of selfishness so intense that it denies the others at no expense to oneself.” (See A. Lichtenstein, “Does Jewish Tradition Recognize an Ethic Independent of Halakhah?” in: M. Fox (ed.), *Modern Jewish Ethics*, 1975.) As such there are grounds for the nullification of stipulation reflecting those traits. On the other hand, when the stipulation is intended to prevent economic damage or is based on some other relevant consideration, it is not to be disqualified (*Ateret Hakhamim*, *Hashmatot*, *Resp.* HM, no. 21; *Resp. Imrei Yosher*, vol. 1, no. 169).

There is extensive evidence in the responsa literature of attempts to restrict infringement upon the freedom of occupation by narrowly interpreting laws and communal enactments that infringe upon that freedom. Echoes of this tendency are found already in the tannaitic literature. Thus, for example, the command regarding a Hebrew **slave*: “And he shall remain his slave for life (*le'olam*, lit. ‘forever’” Exod 21:6), was not interpreted in accordance with the plain sense of the text. Since the verse limits the slave's freedom and deprives him of the possibility of emancipation and choosing where to work, the Sages interpreted the term *le-olam*, not as “for life,” but “until the jubilee” (i.e., until the next jubilee year) (*Mekhilta*, *Mishpatim*, sec. 2, ed. Horowitz-Rabin, p. 254; *Kiddushin* 21b; Josephus Flavius, *Antiquities of the Jews*, 4, 8:28; and see Elon, *Jewish Law*, vol. 3, p. 1031). In another case, a stipulation limiting freedom of occupation was interpreted narrowly (R. Abraham of Botosani, *Resp. Heses le-Avraham*, second series, YD, no. 7). Another case in which one may void or restrict a stipulation that infringes upon freedom of occupation is when it infringes upon a public interest, leading to reduced competition and inflated prices (Nahmanides, BB 9a; *Resp. Maharsham*, vol. 2, no. 22).

THE RIGHT OF PROPERTY. The right of property is anchored in various constitutions, its purpose being the protection of a person's property. The Basic Law of Israel states that this value must be interpreted in accordance with “the values of the State of Israel as a Jewish and democratic state” (secs. 1A, 3 of Basic Law: Human Dignity and Freedom).
