TABLE OF CONTENTS

Illuminated "W" used to represent the sound of the initial letter of the Latin word Vere. *The figures represent Ecclesia and Synagoga. Detail from the* Missal of Paris*, France 12th century, Paris, Bibliothèque Nationale, Ms. Lat. 8884, fol. 130.*

WEL-WY

WELENSKY, SIR ROY (**Roland**; 1907–1991), Rhodesian statesman. Welensky was a leading figure in the political life of Northern Rhodesia (now Zambia) and Southern Rhodesia for nearly 25 years. He was a member of the National Council of the Railway Workers' Union and a founder of the Northern Rhodesia Labor Party. During World War II Welensky was director of manpower and a member of the executive council (1940–53). He campaigned for federation of the two Rhodesias in close association with Sir Godfrey Huggins (Lord Malvern), the first prime minister of the Federation, whom he succeeded in 1956. Welensky advocated a policy of "partnership" between the white and non-white races of the Federation. The partnership failed, either because it was unworkable or because, as many claimed, it was never properly applied owing to white opposition, and the Federation broke up in 1963 despite all Welensky's efforts. He retired from politics, settling as a farmer in Southern Rhodesia, and wrote an account of the Federation in *Welensky's 4,000 Days* (1964). In 1966, Welensky tried to come back to politics but was defeated in the election. One of 13 children of Michael Welensky (from Lithuania), a boardinghouse keeper, and his Afrikaner wife who converted to Judaism on their marriage, Welensky maintained links with Jewry. In his teens he was a railroadman, took up boxing, and in 1926–28 was the heavyweight champion of the Rhodesias. He lived his last year in England.

[Lewis Sowden]

WELLER, MICHAEL (1942–), U.S. playwright. Born in New York, Weller was educated at Brandeis and Manchester University. He entered the New York theater scene in 1972 with his play *Moonchildren.* He followed this great success with a number of finely crafted scripts, including *Fishing* (1973); *The Greatest Little Show on Earth* (1974); *The Bodybuilders* (1975); *Grant's Movie* (1976); *Dwarfman* (1977); *Loose Ends* (1978); and *Spoils of War* (1988). Weller's other plays include *Split* (1979); *Barbarians* (1982); *The Ballad of Soapy Smith* (1985); *Ghost on Fire* (1987); *Lake No Bottom* (1991); *Buying Time* (1995); *What the Night Is For* (2002); and *Approaching Moomtaj* (2004).

Weller wrote the screenplay for the film version of the musical *Hair* (1979) as well as for *Ragtime* (Oscar nomination for Best Screenplay, 1981); *Lost Angels* (1989); the TV version of *Spoils of War* (1994); and was a writer/producer of the TV series *Once and Again* (1999–2002).

Weller was a co-founder of the Mentor Project at the Off-Broadway Cherry Lane Theatre. He also worked as an adviser for several emerging theater companies. In 2005 the Broken Watch Theater Company named its new venue in New York City the Michael Weller Theater.

[Jonathan Licht / Ruth Beloff (2nd ed.)]

WELLESZ, EGON JOSEPH (1885–1974), musicologist and composer of Jewish origin. Wellesz, who was born in Vienna, was a pupil of Arnold *Schoenberg and one of the first to follow his twelve-tone system. He was also his first biographer (1921). He studied musicology with Guido *Adler and in 1913 became a lecturer at the University of Vienna. In 1929 he was

appointed professor of the history of music and specialized in research on Baroque opera.

Wellesz's greatest significance, however, lies in his study of Byzantine church music, and the music of the Oriental churches in general, on which he came to be considered the greatest authority of his time. As early as 1915 he discovered the Oriental maqāma *principle in the Serbian liturgy. Soon afterward he found the lost key for deciphering the musical notation of the medieval Byzantine chant. This caused a general reorientation in the study of the early history of music.

Wellesz was forced to leave Austria in 1938. He went to Oxford, where from 1940 he lectured on the history of music. In 1948 he was appointed university reader in Byzantine music. His *History of Byzantine Music and Hymnography* (1949, 1963³) has become an undisputed standard work on this subject, on which he also wrote a great number of special studies.

In 1931 Wellesz became general editor of *Monumenta Musicae Byzantinae*, in 1957 coeditor of the monumental *New Oxford History of Music* (of which he himself edited Vol. 1), and in 1966 coeditor of the periodical *Studies in Eastern Chant*.

Wellesz was also very productive as a composer, his compositions including some ten operas and ballets, eight symphonies, and a great number of orchestral and chamber music.

[Edith Gerson-Kiwi]

WELLESZ, JULIUS (1872–1915), Hungarian rabbi and scholar. Wellesz, born in Budapest, was ordained at the Budapest Rabbinical Seminary in 1890 and received a Ph.D. at Budapest University (1895) for a thesis on Abraham de Balmes as a philologist, *Abrahám de Balmes mint nyelvész*. An eminent preacher, Wellesz served as rabbi in several Hungarian cities, including Csurgo, Nagybittse, and Obuda. Some of his speeches were published separately, and others in the Hungarian Jewish homiletical review, *Magyar Zsinagóga*. He also devoted himself to philological research and contributed various studies on the Hebrew Bible, Midrashim, and Jewish folklore, but his main interest was in researching Franco-German responsa literature of the 11ᵗʰ–13ᵗʰ centuries.

Among his writings are *Isaak b. Moses Or Zaru̇a* (in MGWJ, 48 (1904)); *Ueber R. Isaak b. Moses Or Sarua* (in JJLG, 4 (1906)); *Ḥayyim b. Isaac Or Zaru̇a* (in REJ, 53–59 (1907)); and *Meir b. Baruch of Rothenburg* (in REJ (1909–11), 2 parts). His excellent monograph on Rashi, *Rasi Elete és mv̋ködése* (Hung., 1906) was acclaimed by Jewish scholars and attracted attention abroad.

[Imre Schmelczer]

°**WELLHAUSEN, JULIUS** (1844–1918), German Semitist. Born in Hameln, Wellhausen was the son of a Lutheran clergyman, He studied in Goettingen under H. Ewald and was professor of theology in Greifswald from 1872 to 1882. However, he resigned from this position because he did not believe himself equal to the task of "preparing the students for serving the Protestant Church." He was professor of Oriental studies in Halle from 1882 to 1885, in Marburg from 1885 to 1892, and in Goettingen from 1892.

Wellhausen summed up the conclusions of the 19ᵗʰ-century Pentateuch criticism and based upon it a new comprehensive view of the history of Ancient Israel. He also analyzed the Gospels of the New Testament and the pre-Islamic and early Islamic tradition of the Arabs. In his first important book, *Der Text der Buecher Samuelis* (1871), Wellhausen made consistent use of the Septuagint in order to arrive at the original text of Samuel; in his second important book, *Die Pharisaeer und die Sadducaeer* (1874), he followed mainly Josephus and the New Testament in his description of the two parties and their relationship. He then turned to the tradition concerning the beginnings of Ancient Israel. In *Die Composition des Hexateuchs* (1889), he put forward a new and modified hypothesis concerning the four sources: Jahwist (J), Elohist (E), Deuteronomy (D), Priestly Code (P). Taking as his starting point the works of K.H. Graf and A. Kuenen, he reversed the chronological order: he dated the Priestly Code, which had until then been regarded as the oldest source (*Grundschrift*, "primary source"), from the period after the Babylonian Exile. In 1878, he analyzed the remaining historical books (Bleek-Wellhausen, *Einleitung in das Alte Testament*, "Introduction to the Old Testament," 4ᵗʰ–6ᵗʰ editions, 1878–93) and he applied the conclusions of this research in his historiography *Geschichte Israels* (1878; later *Prolegomena zur Geschichte Israels*, 1882; *Prolegomena to the History of Ancient Israel*, 1885) in which he revived the theses of W.M.L. de Wette and W. Vatke. He considered the Priestly Code and Chronicles as sources not for the history of Ancient Israel but only of post-Exilic Judaism. Ancient Israel did not yet know theocracy as a hierocratic institution but only as an idea. The actual law originated only shortly before the Exile (Deuteronomy); after the Exile it became the basis of the canon in the form of the ritual law written down by the priests. In 1894, Wellhausen wrote his *Israelitische und juedische Geschichte* ("The History of Ancient Israel and of the Jews") as a development of the sentence "YHWH the God of Israel, Israel the people of YHWH," which he called the "foundation on which the collective consciousness of Israel has rested at all times." He included in this history, as a matter of course, a chapter on the Gospels, though later he published this only with reservations. He concerned himself with the Arabs first of all for the sake of the history of Ancient Israel, namely in order to "become acquainted with natural man in whom the law of the Lord was implanted by priests and prophets." He believed that the best explanation of the religion of Ancient Israel was to be found in the religion of the pre-Islamic Arabs (*Reste arabischen Heidentums*, 1887). Here also, a critical ap-

praisal of the sources led him to a historiographic synthesis: *Das arabische Reich und sein Sturz* (1902).

Wellhausen was not only a penetrating analyst, but also an excellent writer. He had a great deal of effect even on his adversaries, who attacked him vehemently, for instance with the claim (today definitely disproved) that he was a Hegelian. The driving force behind his historiography was a delight in the free development of human individuality. His view of Ancient Israel has been corrected in many details by the further development of literary criticism (H. Gunkel) and recent research on the Ancient Near East.

[Rudolf Smend]

WELLS (Heb. בְּאֵר, *beʾer*, pl. בְּאֵרוֹת, once (Jer. 6:7) בַּיִר, perhaps rather to be read בֵּיר), shafts dug from the surface of the ground to the groundwater. They are of utmost importance in countries with limited rainfall, where springs and perennial streams are few, and particularly vital in nomadic society, since they provide water for the tribe and their livestock (Gen. 29:2). At times rivalry develops among the nomads for the possession of a well. Wells range in size from great shafts many feet deep to shallow pits, depending on the geological formation of the area and its general water level. Biblical wells were located in the wilderness (Gen. 16:14), in valleys (Gen. 26:17), near cities (Gen. 24:11), in fields (Gen. 29:2), and in courtyards (II Sam. 17:18). In order to keep the water supply uncontaminated and to prevent people or animals from falling in, wells were covered (Gen. 29:3; Ex. 21:33). Wells were often designated by specific names in order to commemorate tribal history, such as Esek, Sitnah, and Rehoboth (Gen. 26:20–22). *Beʾer* is an element of several place-names, e.g., Beer-Lahai-Roi (Gen. 16:14) and Beer-Sheba (Gen. 21:14), indicating the existence of well-known wells in these places.

Wells are to be distinguished from *cisterns (בּוֹר, pl. בּוֹרוֹת), i.e., subterranean waterproof chambers which store the runoff from roofs, etc. (cf. Lev. R. 18:1, where R. Akiva sees in the word בּוֹרְאֶיךָ (Eccles. 12:1) a combination of בּוֹר, בְּאֵר and בּוֹרָא).

In the Aggadah

Among the "ten things which were created on the eve of the Sabbath" (cf. Creation, i.e., which are of semi-miraculous character) is enumerated "the mouth of the well." The reference is to the well mentioned in the Song of the Well (Num. 21:16–18). According to the *aggadah* this well, which was created to reward *Miriam for singing the Song of the Sea (Exod. 15:21, Num. R. 1:2), accompanied the children of Israel throughout their wanderings in the wilderness, and disappeared when she died. It was, however, restored through the merit of *Moses and *Aaron, who are the "princes" who "dug it" (v. 17), and it disappeared on Moses' death (Shab. 35a, Ta'an. 9a). According

to some, however, the references are to the well of the rock which Moses struck (Num. 20:7–11).

WELLSTONE, PAUL (**David**; 1944–2002), U.S. senator. Wellstone was born in Washington, D.C., and raised in Arlington, Va.; his parents were Russian immigrants. He earned his degrees at the University of North Carolina (B.A. 1965, Ph.D. 1969) and taught political science at Carleton College, Northfield, Minn., from 1969 to 1989. He ran unsuccessfully for Minnesota state auditor in 1982. He was the co-chair of the Minnesota Democratic presidential primary campaign of Jesse Jackson in 1988. In 1990 he was elected to the U.S. Senate, defeating an incumbent Republican, Rudy *Boschwitz, marking the first time in American history that two self-identified Jews had run for the Senate against one another. Boschwitz, itching for a rematch, passed up an open seat in 1994 and ran against Wellstone in 1996, but Wellstone again prevailed, this time handily. While running for reelection again against another Jew, Norman Coleman, Wellstone was killed in a plane crash, along with his wife, daughter, and five other people in October 2002.

Wellstone was an activist in progressive causes from the time he was an undergraduate. He marched for civil rights for African Americans and wrote his doctoral thesis on black militancy. At Carleton, he demonstrated against the Vietnam War and supported other causes, such as ending South African apartheid and providing legal assistance to the poor. In the Senate, Wellstone took active liberal positions on social and political issues, including human rights, health care, social security, worker safety, the environment, abortion, gun control, and campaign finance reform. He sought to strengthen government health, welfare, and education programs and increase their funding.

He opposed the North American Free Trade Agreement (NAFTA) in 1993; he opposed both the Gulf War of 1991 and the Iraq War of 2003, whose authorization he voted against in one of his last Senate votes in October 2002 – the only Democrat in a close race for reelection to do so. He was a loving and critical supporter of Israel, and vigorously opposed Israeli settlements. He enthusiastically supported the peace process. He also was sharply critical of the Palestinian Authority and its failure to conclude peace and accept moves toward a two-state solution. A Wellstone legacy is that he brooked no double standards on human rights and peace and was widely respected for the integrity of his views and for his personal decency. This integrity and decency made him a respected senator, one who could work with the arch right winger Senator Helms on religious freedom and with Conservative Senator Domenici on mental health strengthening government support.

Wellstone had also grown as a Jew, visiting Israel for the first time in 1991, studying Judaism with Rabbi Bernard Raskas of St. Paul, who secured a commitment from Wellstone to study a Jewish text for at least 15 minutes daily. Wellstone felt comfortable in Jewish Progressive circles. He and his wife had not raised their children as Jews, yet their three children

felt themselves to be Jews, an example of what Daniel Elazar calls the permeability of identity boundaries in contemporary America.

Former vice president Walter Mondale was coaxed into running for Wellstone's seat in the last days before the election; Norman Coleman defeated him.

[Drew Silver (2nd ed.)]

WELNER, PINCHES (1893–1965), Yiddish and Danish author and journalist. Born in Lodz, Poland, he joined the *Bund in 1904, emigrated first to Argentina, then to Denmark in 1913, and earned his livelihood as a weaver and tailor. Later he made his name as a Yiddish writer and as Denmark's chronicler of East European Jewish life. He also wrote for the general and Jewish press in Scandinavia and other countries and contributed to Yiddish journals in many countries.

Welner's books only appeared after World War II (his early works were generally written originally in Yiddish, but published first in his Danish translation). *In Yene Teg* ("In Those Days," 1958; Danish tr. *I hine Dage*, 1949) deals with the Nazi persecution of the Danish Jews and their famous escape across the Øresund in 1943, a theme that also inspired a later work, *Bay di Bregn fun Oresund* ("On the Shores of the Øresund," 1957; Danish tr. *Ved Øresunds bredder*, 1953). The Polish *shtetl*, with its traditional Jewish types, retained its hold on Welner's imagination and provides the setting for *Den Brogede Gade* ("The Confused Street," 1960); there is also some vivid description and autobiographical material in *Fra Polsk jøde til dansk* ("From Polish to Danish Jew," 1965), which depicts Jewish refugee life in Denmark before and during World War I. Welner published several other books, the last of which, *Fremmed fugl* ("Strange Bird," 1966) is a collection of short stories. A vice president of *YIVO, Welner was an active Zionist, serving as president of the Danish branch of the Iḥud Olami (*Po'alei Zion), which he himself had founded. In 1946 he published *Krigen mod jøderne* ("War against the Jews"), an attack on the British policy in Palestine.

[Torben Meyer / Jerold C. Frakes (2nd ed.)]

WELSH, ARTHUR L. (Al; 1881–1912), pioneer U.S. aviator. Welsh, who was born near Kiev, Russia, was taken to the United States in 1890. In 1905 he joined the U.S. Navy, serving for four years. His interest in flying led him to join Orville Wright's flying class in 1910, and after several months, when he had learned to fly solo, he joined the Wright Brothers Aviation School in Dayton, Ohio, as an instructor. He tutored many important U.S. aviators, including General Henry H. Arnold, U.S. Army Air Force Chief of Staff during World War II. Welsh established many flying records and won a number of trophies, including the George Campbell Cup for altitude at Belmont Park in 1911. His trophies and records are at the National Air Museum of the Smithsonian Institution in Washington, D.C. In 1912 Welsh was assigned by the Wright Brothers to super-

vise flight training for the War Department at College Park, Maryland. He died in a plane crash during a flight intended to establish a new altitude record.

[S.H. Holland]

WELT, DIE ("The World"), the first modern Zionist weekly, founded by Theodor *Herzl, which first appeared in Vienna on June 4, 1897, and, starting with the Fifth *Zionist Congress (Dec. 1901), served as the official organ of the *World Zionist Organization until World War I. From January 1906, after the Zionist Executive had moved to Cologne (1905), the paper was accordingly published there, but, from October 1911 until its last issue of September 25, 1914, in Berlin.

The paper was initiated by Herzl as a privately financed venture to disseminate the Zionist idea, to prepare the first Zionist Congress, and to reply to Jewish critics like W. *Bambus. Herzl was assisted by his brother-in-law, Paul Naschauer (1867–1900), as official publisher, and by S.R. *Landau as first editor-in-chief, who was succeeded by S. *Werner on October 8, 1897. Herzl himself, who had attended to almost every technical detail and initially supplied much of the content, agreed to stay anonymous in order to defuse a severe conflict with his employers at the *Neue Freie Presse*, E. *Bacher and M. *Benedikt, who strongly opposed Zionism. In the first two years Herzl spent a great deal of his own money on *Die Welt*, until he founded a separate joint-stock company together with Heinrich Rosenbaum. Although the paper, after ten months, had only found 280 subscribers in Vienna, its circulation eventually rose to a high of 10,000 a week.

In his first editorial, on June 3, 1897, Herzl defined the guidelines of the new paper: "Our weekly is a 'Jew Paper' [*Judenblatt*]. We take this word, which is supposed to be a term of calumny, and wish to make it a word of honor. … *Die Welt* will be the organ of those men who wish to lead Jewry out of these times into a better era." Herzl deliberately chose a yellow cover, once the *"badge of shame," now to become a "badge of honor," and inserted a *Magen David with a depiction of the Eastern Mediterranean in the title, designed by H. *York-Steiner. Appearing on Fridays, *Die Welt* reported on Jewish and Zionist events, fought antisemitism and assimilation, introduced Hebrew and Yiddish literature in translation, and demanded improvements in the Jewish life of the Diaspora and Ereẓ Israel. As Elon stated in his biography of Herzl (1975), the paper was "a new turn in 'parochial' Jewish journalism in the West; aggressive, polemical, belligerent, witty, it dared to discuss Jewish problems and travails openly, with uncommon candor."

Until April 1899, *Die Welt* was edited by S. *Werner, succeeded by Erwin Rosenberger (until June 1900), Isidor Marmorek (until Dec. 1900), B. *Feiwel (until July 1901), A.H. Reich (until March 1902) and Julius Upřimny (until Dec. 1905). From January 1906, Feiwel, together with A. *Coralnik, continued the paper in Cologne, succeeded by Julius Berger, and

finally Moritz Zobel, who remained its editor also in Berlin from October 1911. A Yiddish publication of the same name appeared for about a year (1899–1900). From 1907, the Hebrew *Haolam ("The World") also served as an international Zionist organ until 1950. *Die Welt* ceased publication in September 1914. The title of Herzl's paper was revived by the Vienna weekly *Die Neue Welt* (1927–38) of R. *Stricker and again, in 1947, by the Vienna monthly *Neue Welt*, which has continued to appear in the early 21st century as *Illustrierte Neue Welt*. Digitized versions of Herzl's *Die Welt* and Stricker's *Die Neue Welt* are available online in Compact Memory's "Internetarchiv juedischer Periodika."

[Josef Fraenkel / Johannes Valentin Schwarz (2nd ed.)]

WELTSCH, FELIX (Baruch; 1884–1964), philosopher and publicist; cousin of Robert *Weltsch. Born in Prague, from 1910 to 1939 Weltsch served as a librarian at Prague University and from 1940 at the National Library in Jerusalem. From 1919 to 1938 he was editor of the Zionist weekly *Selbstwehr ("Self-Defense") in Prague. He left Czechoslovakia with a group of 150 emigrants to Palestine on the night preceding the occupation by the Germans (March 14–15, 1939). In his first book, *Anschauung und Begriff* ("Intuition and Concept," 1913), written together with Max Brod, he developed his own theory on the relation of concept to observation. In 1918 he published a juridical-philosophical study called *Organische Demokratie* ("Organic Democracy"), followed by his major philosophical work, *Gnade und Freiheit* ("Mercy and Freedom").

Among his major essays are: "*Nationalismus und Judentum*" ("Nationalism and Judaism," 1920); "*Zionismus als Weltanschauung*" ("Zionism as an Encompassing Philosophy," 1925), written together with Max Brod; "*Judenfrage und Zionismus*" ("The Jewish Problem and Zionism," 1929); *Palaestina – Land der Gegensaetze*, ("Palestine – Land of Contrasts," 1929); *Anti-semitismus als Voelkerhysterie* ("Antisemitism as Hysteria of the Nations", 1931).

In *Das Wagnis der Mitte* ("The Daring of the Center," 1937, 1967²) he developed his philosophy of the creative center. In his pamphlet *Allgemeiner Zionismus* ("General Zionism") he tried to apply this philosophy to Zionist ideology and policy.

Among Weltsch's later works is *Ha-Diʾalektikah shel ha-Sevel* ("The Dialectic of Suffering," 1944), in which he revealed his general theory of the dialectics of the "spiral." Thought goes around in a circle, but it rises above it. Thus, from despair, from the destruction of the idea in matter, the flame of the idea bursts forth anew and recharges itself toward its forma-

tion in a new reality. In *Teva, Musar u-Mediniyyut* ("Nature, Morals, and Policy," 1950) he considered how the feeble spirit can survive in the body and the material world. The solution was not the subjugation of nature by the spirit, but the "Law of Minimum." Nature does not have to fill all the vacuum of possibilities, but only a part of it that is required by the spirit in order to exist in the world. In political terms this means security, but the minimum of security; armament, but the minimum of armament; and likewise, the minimum standard of living, violence, etc. In 1954 Weltsch edited *Prag vi-Yrushalayim* ("Prague and Jerusalem"), a collection of essays on Jewry and Zionism in Bohemia and Moravia in memory of Leo Herrmann.

Weltsch was a close friend of Franz Kafka. Among his articles about Kafka are "The Rise and Fall of the German-Jewish Symbiosis: The Case of Franz Kafka" (in the *Year Book of the Leo Baeck Institute*, Vol. 1, 1956), "Religion und Humor im Leben und Werk Franz Kafkas" ("Religion and Humor in Franz Kafka's Life and Work", 1957; Heb. 1959), and "Franz Kafka's Geschichtsbewusstsein" ("Franz Kafka's Consciousness of History") in *Deutsches Judentum, Aufstieg und Krise* (1963). He also published a work on the philosophy of Henri Bergson and a study entitled *Das Raetsel des Lachens* ("The Enigma of Laughter," 1935).

[Samuel Hugo Bergman]

WELTSCH, ROBERT (1891–1982), Zionist editor and journalist. Born in Prague, while a student he joined the Zionist students' society Bar Kochba. During World War I he served as a frontline officer in the Austro-Hungarian army. In 1920 he participated in the Prague Conference at which the Erez Israel *Ha-Poʿel ha-Zaʾir Party formed a union with *Zeʿirei Zion organizations in Eastern and Central Europe (Hitaḥadut). In the same year he was appointed editor of *Die *Juedische Rundschau*, the organ of the Zionist Federation of Germany, which was widely read by German-speaking Zionists all over Europe. In 1921 he was elected by the 12th Zionist Congress at Carlsbad as alternate member of the Zionist Executive representing Hitaḥadut. Weltsch retained his post as editor of *Die Juedische Rundschau* until 1938, when he left Berlin and settled in Jerusalem. Until 1945 he edited the German-language weekly *Yediʿot shel Hitaḥadut Olei Germanyah* (afterward also the organ of the Aliyah Ḥadashah Party) and also contributed articles to *Haaretz*. From 1946 he lived in London as the *Haaretz* correspondent there. He lived his last years in Jerusalem.

In the Zionist movement Weltsch called for an understanding with the Arab national movement, and for many years he was close to the *Berit Shalom movement, which supported the creation of a bi-national state in Erez Israel. A series of articles he wrote in 1933, after Hitler came to power, earned him fame throughout the Jewish world and had a profound effect on the morale of German Jews; one of the articles,

published on April 1, 1933, bore the title "Tragt ihn mit Stolz, den gelben Fleck" ("Wear It with Pride, The Yellow Badge"), which became the slogan for German Jews who had found their way back to Jewish values. The entire series was published in a special volume under the title *Ja-Sagen zum Judentum*. In 1963 he edited *Deutsches Judentum, Aufstieg und Krise*. *Festschriften* were published in his honor for his 60th and 70th birthdays (1951, 1961).

[Walter (Shlomoh) Gross]

°**WENCESLAUS IV** (1361–1419), German emperor from 1378 to 1400 and king of Bohemia from 1378 to 1419; son of Charles IV. Wenceslaus, who was in constant pecuniary need, continued his father's policy of relinquishing his legal and economic rights over the Jews (see *servi camerae regis) in return for financial benefits. After protracted negotiations, on June 12, 1385, he concluded a treaty at Ulm with the Swabian *League, whereby, for an indemnity of 40,000 florins, any debts to Jews of less than one year's standing were to carry no interest, while the others were to be computed as capital and interest and the total reduced by one quarter. In order to carry out this project, all the Jews in the kingdom were imprisoned simultaneously, their pledges and records were confiscated, and they were thrown on the mercy of the city councils which were given the right to arbitrate in disputes between them and their debtors. This measure, which barely alleviated Wenceslaus' financial needs, caused economic havoc throughout the country. Five years later Wenceslaus arrived at an agreement with the chief princes of his lands, secular and clerical, whereby they were to be freed from all debts to Jews in return for high indemnities. This measure, a severe blow to the cities in possession of the promissory notes given by Jews, was not fully carried out. In 1398 Wenceslaus had to promise that he would not again cancel debts to Jews.

Though Wenceslaus offered special rights to the Jews of *Eger (Cheb) in return for compensation, he was prompted by economic considerations. He acquiesced in the massacres of the Jews in *Prague and *Goerlitz in 1389, and tried to profit from them.

WENDLAND, PAUL (1864–1915), German classical scholar. Wendland was professor at the universities of Kiel, Breslau, and Goettingen. His main field of study was the religious beliefs of the classical world and their relations to Judaism and early Christianity (*Die Hellenistisch-roemische Kultur in ihren Beziehungen zu Judentum und Christentum* (1912²). He also edited the Greek text of the Letter of Aristeas (*Aristeae ad Philocratem epistula …*, 1900), as well as some writings by Philo (*Neu entdeckte Fragmente Philos …*, 1891). He wrote the following works on Philo: *Philo's Schrift ueber die Vorsehung* (1892) and *Philo und die kynisch-stoische Diatribe* (1895).

[David Flusser]

WENDROFF, ZALMAN (pseudonym of **Zalman Vendrovsky**; 1877–1971), Yiddish author. Born in Slutsk, Belorussia, Wendroff moved to Lodz at the age of 16, worked in a factory, studied dentistry, and published his first articles about Jewish life in Lodz, in the journal *Der Yud*. Emigrating to England, he was befriended by the anarchist thinker Rudolf Rocker, who helped him publish short stories in anarchist and Zionist journals. The 1905 Revolution found him back in Russia, where he worked as a teacher of English. With the collapse of the revolution, he left for the U.S. In New York, he wrote humorous sketches, articles and short stories for both the anarchist *Fraye Arbeter Shtime* and the Orthodox daily, *Morgn-Zhurnal*. When the latter journal sent him as its correspondent to Russia, he made his home in Warsaw for seven years, also writing for Warsaw's Yiddish daily, *Haynt*. From 1915, he lived in Moscow, working for Jewish organizations during World War I and in the Commissariat for Nationalities after the 1917 Revolution. At the same time he continued to act as correspondent for Yiddish dailies in New York, Warsaw, and Vilna.

Wendroff's stories appeared in various periodicals, in booklets which sold for a few pennies each, and in collections, beginning with *Humoresken un Ertseylungen* ("Humoresques and Stories," 1911, 1921²). Most popular were two Yiddish volumes which appeared under the Russian title *Pravozhitelstvo* (the legal term for the right to live outside the *Pale of Settlement; 1912). In humorous and tragic tales were described the life of Jews who, though not allowed to dwell outside the Pale, somehow managed to circumvent Czarist restrictions and to carry on a harried existence in forbidden cities as artisans, businessmen, and students. Wendroff had difficulty finding his place in Soviet literary circles, and Moses Litvakov criticized him for taking the line of least resistance and becoming an imitator of Sholem Aleichem. In the 1920s, his articles appeared regularly in the New York *Forverts*.

His book, *Afn Shvel fun Lebn* ("On the Threshold of Life," 1941), appeared just before the German assault upon Moscow. During World War II he worked for the Moscow foreign-language radio service. After the war he was accused of cosmopolitanism and contact with enemy agents and was arrested in 1950 and condemned to ten years' imprisonment. Released in 1956, he returned to Moscow, where he was treated as the doyen of surviving Yiddish writers and contributors to *Sovetish Heymland*. His last Yiddish book, *Undzer Gas* ("Our Street") appeared in Moscow in 1967.

[Jerucham Tolkes / Gennady Estraikh (2nd ed.)]

WENGEROFF, PAULINE EPSTEIN (1833–1916), author of *Memoiren einer Grossmutter. Bilder aus der Kulturgeschichte der Juden Russlands in 19. Jahrhundert* ("Memoirs of a Grand-

mother: Scenes from the Cultural History of Russian Jews in the Nineteenth Century"; 2 vols., Berlin, 1908, 1910). Wengeroff was born in Bobruisk into the upper echelons of Russian Jewry. The prosperous Epsteins were pious and strict in their religious practice, but Pauline's father, Judah Epstein, an accomplished Talmud scholar, was also an enthusiast of Haskalah and encouraged his daughters in their study of German. In 1849, Pauline married Chonon Wengeroff, who became a successful banker and served on the city council of Minsk. The couple had seven children. The first volume of *Memoiren einer Grossmutter*, published when Wengeroff was in her seventies, details the observance of the Jewish holy days and festivals in her parental home in the 1840s. Following the success of this work, she wrote a second volume that expanded her childhood recollections into a complex autobiography.

Written after the end of the Russian Haskalah, the memoirs depict traditional Jewish culture and family, their disintegration, and the emergence of Jewish modernity from a female perspective. Wengeroff's two volumes, whose significance for the history of Jewish folklore, haskalah, and assimilation was recognized from the beginning, were republished during her life and posthumously. They are a significant source on women's ritual practices, socialization of girls, and the role of gender in the experience of Jewish modernity. Skillfully crafted and written, they are also the first full-fledged self-referential writing by a woman in the history of Jewish literature to refract an age through the experience of women and to achieve publication through the author's efforts. Wengeroff is not simply an apologist for tradition; she shared many of the core values of the Haskalah and wrote in German. But she excoriates the wanton abandonment of tradition by modernizing Jewish men and their encroachment on women's control of the family, which robbed women of the ability to transmit Judaism, with catastrophic results.

Wengeroff's children included Semyon *Wengeroff, a prominent historian and critic, who converted to Christianity. Her daughter, Zinaida (1867–1941), was a renowned Russian literary critic who emigrated to the United States. Wengeroff considered the conversions of several of her children her greatest tragedy. In her later years, in addition to writing *Memoiren*, she devoted herself to providing vocational and Jewish education to impoverished young women.

Lilienblum, Pauline Wengeroff, and the Telling of Jewish Modernity in Eastern Europe," in: *Polin*, 18 (2005).

[Shulamit S. Magnus (2nd ed.)]

WENGEROFF (**Vengerov**), **SEMYON AFANASYEV-ICH** (1855–1920), Russian literary and intellectual historian. Wengeroff's numerous works include monographs on Turgenev, Goncharov, and Gogol, as well as studies of literary critics such as Belinsky. Wengeroff was also a renowned bibliographer and editor of scholarly reference works, including the unfinished six-volume biobibliographical dictionary of Russian writers and scholars, *Kritiko-biograficheskiy slovar russkikh pisateley i uchenykh* (1889–1904). His other achievements include the establishment in 1917 of the Russian Book Chamber *(Rossiyskaya knizhnaya palata)*, which was still publishing weekly guides to all printed matter published in the U.S.S.R. 50 years after his death. Wengeroff ultimately converted to Russian Orthodoxy, probably because baptism was indispensable to a scholarly career in Czarist Russia. His mother, Pauline *Wengeroff, recalled in her memoirs (in L.S. Dawidowicz (ed.), *The Golden Tradition* (1967), 160–8) that her son was once expelled from school for refusing to kneel before an icon. Of Wengeroff's sisters, one married the writer Nikolai *Minski, another Leonid *Slonimski, a third was Zinaida Wengeroff (see Pauline *Wengeroff), and another was Isabel Wengeroff (Vengerova) 1877–1956), pianist and music teacher at the Curtis Institute in Philadelphia.

WERBEL, ELIAHU MORDECAI (1806–1880), Hebrew author. Werbel was born in Ternopol, East Galicia, and educated at the secular Jewish school established by Joseph *Perl. From 1839 he taught at a similar school in Odessa founded by Bezalel Stern, until the school's closure by government order in 1874. He wrote a long literary poem *Edim Ne'emanim o Ḥuldah u-Vor* ("Faithful Witnesses or a Weasel and a Hole," 1852).

The poem's theme is borrowed from an ancient legend, mentioned in the Talmud and elaborated upon in the *Arukh*, of a weasel and a hole who avenge the disloyalty of a man to a young lady whom he had promised to marry. The poem is written in the euphuistic style of the period and was the source for the play *Shulamit* (1886), by Abraham Goldfaden (son-in-law of Werbel) and for poems by many other authors. Werbel contributed regularly to the monthly *Ha-Boker Or*, in which his *Tokhen Alilah*, four literary poems on the blood libel, appeared in 1881. His Hebrew translations of poetry and prose were collected in his book *Siftei Renanot* (1864). He also completed the Hebrew translation of Lessing's *Nathan der Weise* begun by Abraham Ber Gottlober (1874). Unlike many of his contemporaries he neither criticizes nor satirizes the older generation.

[G.El.]

WERBER, BARUCH (1810–1876), Hebrew author and editor. Born in Brody, Galicia, he began his literary career writing for the Hebrew weekly *Ha-Mevasser*. In 1865, he founded the weekly *Ivri Anokhi* in Brody, editing it until his death. This was devoted primarily to news and popular science, and

although it had a conservative and moderate orientation, sharply attacked the ultra-Orthodox Galician followers of the *rebbe* of *Belz. Among his writings are: *Megillat Kohelet*, an introduction and commentary to Ecclesiastes (1862, 1876); *Toledot Adam*, a biography of the French public figure, Albert Cohen (1870).

[Gedalyah Elkoshi]

WERBLOWSKY, RAPHAEL JUDA ZWI (1924–), scholar in the field of comparative religion. Born in Frankfurt on the Main, Werblowsky lectured at Leeds University, the Institute of Jewish Studies, Manchester University (1951–56), and then at the Hebrew University, Jerusalem, where he was a professor from 1962, and served as dean of the Faculty of Humanities from 1965 to 1969. Among his published works are *Lucifer and Prometheus, a Study of Milton's Satan* (dissertation, with an introduction by C.G. Jung, 1952); *Das Gewissen in juedischer Sicht* (1958); *Joseph Karo – Lawyer and Mystic* (1962; dealing mainly with Karo's mystical experiences as recorded in his *Maggid Meisharim); Anti-semitisme, anti-Zionisme* (with H. van Praage, written in Dutch, 1969); and *Beyond Tradition and Modernity* (1976). Werblowsky translated from Dutch into English J.L. Palache's *Semantic Notes on the Hebrew Lexicon* (1959) and was editor of the *Encyclopedia of Jewish Religion* (with G. Wigoder, 1965, 1990²) and *The Oxford Dictionary of the Jewish Religion* (1997). He represented Israel at many international conferences on Jewish-Christian relations. For the first edition of the *Encyclopaedia Judaica* he was a consulting editor and the divisional editor of Judaism.

WERFEL, FRANZ (1890–1945), Austrian novelist, playwright, and poet. The son of a prosperous Prague manufacturer, Werfel was a friend of Max *Brod and Franz *Kafka. He rejected the business career his father chose for him, and echoes of their disagreement are apparent in the story, *"Nicht der Moerder, der Ermordete ist schuldig"* (1920). While working as a publisher's reader in Leipzig (1911–14), Werfel attended the university there. His earliest verse collections, *Der Weltfreund* (1911), *Wir sind* (1913) and *Einander* (1915), substituted religious intoxication for the skepticism and sophistry to which his Austrian contemporaries were largely addicted. In his *Euripides: Die Troerinnen* (1915), an expressionist adaptation of the classical tragedy, war is seen through the eyes of the conquered and enslaved. Three years in the Austrian army on the Russian front (1915–17) confirmed Werfel in his pacifism, and the war poems of *Der Gerichtstag* (1919) voiced his longing for the rejuvenation of a blood-drenched world through love and universal brotherhood. After the war Werfel became a freelance writer in Vienna and Berlin. In *Beschwoerungen* (1923) he ecstatically called for a new, Dionysian comradeship with all creation – man, beast, and stone. Werfel's marriage in 1918 to Alma (Schindler) Mahler, the daughter of a famous Austrian painter and widow of the composer Gustav

*Mahler, established him in Viennese society. Turning to the theater, he triumphed with the trilogy *Spiegelmensch* (1920) and his drama *Bocksgesang* (1921), but had less success with *Juarez und Maxmilian* (1924), a play about the ill-fated Hapsburg emperor of Mexico, and *Paulus unter den Juden* (1926; *Paul among the Jews*, 1928). In *Der Weg der Verheissung* (1935; *The Eternal Road*, 1937), a biblical play set to synagogal music by Kurt *Weill and staged in New York by Max *Reinhardt, Werfel revealed his spiritual homelessness and the tragic ambiguity of his religious position. When he abandoned expressionism for historical themes, Werfel portrayed not the lords and victors, but rather the lowly and defeated. His epic novel *Die vierzig Tage des Musa Dagh* (1933; *The Forty Days*, 1934) depicted the hopeless struggle of the Armenians against the Turkish hordes. Werfel never actually embraced Christianity, although his essay, *Die christliche Sendung* (1917) was a step in that direction. Toward the end of his life he reassessed his position as a Jew in *Zwischen Oben und Unten* (1946), where he declared that God would one day settle the reckoning in Israel's favor. He also wrote: "Religion is the everlasting dialogue between humanity and God. Art is its soliloquy."

In 1938, Werfel fled to France. When the German army invaded France in 1940, he fled once more and managed to reach the United States. He spent his last years in California, where he completed *Das Lied von Bernadette* (1941), an account of the visionary of Lourdes. This became famous in the English-speaking world as *The Song of Bernadette* (1942) and was later made into a motion picture. *Jacobowsky und der Oberst* (1944; *Jacobowsky and the Colonel*) was a tragicomedy about the flight of a Polish aristocrat and a resourceful little Jew before the German advance into France. During his exile in France, from 1938 to 1940, Werfel wrote a novel depicting the life of the Jews in Burgenland and their sufferings after the annexation of Austria by the Nazis. The manuscript was hidden for years and was first published posthumously in 1954, under the title *Cella und die Ueberwinder* (Frankfurt; republished in East Germany, 1970). The book is one of the most powerful literary expressions of the Holocaust and represents an entirely new aspect of Werfel's creative work. Other novels by Werfel were *Verdi. Roman der Oper* (1924; *Verdi: A Novel of the Opera*, 1925), which promoted a Verdi revival in Germany; *Der veruntreute Himmel* (1939); and *Stern der Ungeborenen* (1946; *Star of the Unborn*, 1946). *Gedichte aus den Jahren 1908–1945*, a collection of Werfel's best poems, was published in 1946.

In the postwar years there was an increasing interest in Werfel both in West and East Germany, and his works continue to appear in English as well. Among the doctoral theses on him, mention should be made of D. Kuhlenkamp's *Werfels spaete Romane* (1971), which contains an extensive bibliography.

[Sol Liptzin / Yehouda Marton]

°**WERGELAND, HENRIK ARNOLD** (1808–1845), Norwegian poet. Wergeland occupies a unique place in the cultural history of Norway as a leading figure in intellectual and national life in the 1830s and 1840s. In his *Norges Konstitutions Historie* ("History of the Norwegian Constitution," 1841–43), he praised the constitution of 1814 but also voiced his displeasure (in Section II of the work) at the illiberal prohibition of Jewish immigration, a view which he also expressed in a number of newspaper articles. In 1839 Wergeland submitted to the Storting (parliament) a detailed proposal to rescind this prohibition (see *Norway), emphasizing considerations of justice and reconciliation. In his popular work, *Indlaeg i Jødesagen* ("Essays About the Jewish Question"), Wergeland spoke out against anti-Jewish prejudice, writing about Jewish religion, nationality, and patriotism, the occupations of Jews, their philanthropic activities, and moral excellence. Although he did not disregard the economic advantages which the admission of Jews would bring to Norway, moral considerations were of paramount importance to him; Christianity, justice, and charity demanded that the prohibition be rescinded. His collections of poetry, *Jöden* ("The Jew," 1842), and *Jödinden* ("The Jewess," 1844), contributed greatly toward creating a sentiment favorable to the Jews. They were translated into German under the title, *Der Jude und die Juedin* (1935), by the Oslo rabbi, Julius Samuel. Many of these poems, which still appear in anthologies, and which are also used in schools, have Jewish themes. In his essay *Jødesagen i det norske storting* ("The Jewish Cause in the Norwegian Parliament"), Wergeland described the parliamentary debate of 1842. He corresponded with prominent Jews in other countries, particularly in Sweden. After his death Scandinavian (primarily Swedish) Jews erected a memorial to him at his grave. It was unveiled in 1849 at a well-attended public ceremony and in the presence of three Swedish Jews, who had come to Norway with letters of safe-conduct. In 1851 the prohibition against Jewish immigration was rescinded.

Wergeland was instrumental in creating the special way Norwegians celebrate May 17, Norway's Constitution Day. Every May 17 children all over Norway march through the main streets in brass bands followed by children dressed in their best clothing or national costumes, singing, cheering, and waving Norwegian flags. On the morning of this day members of the Jewish community of Oslo (DMT) commemorate Wergeland, as they have since the 1920s, by gathering at his grave before the parades begin. A member of the Jewish Youth Organization (JUF) delivers a speech and lays a garland of flowers on the grave. The Norwegian national anthem is then sung. In later years the speeches have addressed the importance of following in Wergeland's footsteps with regard to present-day prejudices.

[Oskar Mendelsohn / Lynn C. Feinberg (2nd ed.)]

WERNER, ERIC (**Erich**; 1901–1988), musicologist and composer. Born in Ludenberg (near Vienna), Werner attended the Berlin Hochschule fuer Musik, graduating in 1924. He studied piano, organ, and composition in Vienna and Berlin (with E. Kornauth, F. Schreker, and F. Busoni), and musicology in Vienna, Prague, Berlin, Göttingen, and Strasbourg (with G. *Adler, R. Lach, G. Schünemann, C. *Sachs, J. Wolff, F. Ludwig, and T. Gerold), as well as Judaic studies and comparative religion (with M. *Buber, I. *Heinemann, J. *Horowitz, and E. Mueller). He earned his doctorate at the University of Strasbourg, in 1928, after submitting his dissertation in Latin, under the guidance of Théodore Gérold. His thesis deals with a comparative study of the Western Christian and Jewish forms of cantillation motives. After teaching at Holzminden and at the conservatory and gymnasium in Saarbrücken, Werner became lecturer at the rabbinical seminary in Breslau in 1935–38, and also taught Latin and music at the Jewish high school there. In 1938, seeking refuge from the Nazi regime, he and his wife emigrated to the United States, where, in 1939, he was invited to join the faculty at Hebrew Union College (Cincinnati) as A.Z. *Idelsohn's successor, remaining until 1951. There his full schedule included teaching, directing the choir and worship services, and serving as organist. The college's magnificent Edouard *Birnbaum collection provided material for his early research. His conception of a school of sacred music in New York, linked with Rabbi Stephen Wise's Jewish Institute of Religion (founded in 1922), was ultimately realized in 1950. Resettling in New York, he continued teaching until his retirement in 1967. From 1967 until 1971 he was the head of the department of musicology founded by him at Tel Aviv University.

A Guggenheim Fellowship (awarded in 1957) supported research on his work *The Sacred Bridge; the Interdependence of Liturgy and Music in Synagogue and Church During the First Millennium,* 2 vols. (London, 1959; New York, 1984), the first major synthesis of a basic direction of inquiry in both Jewish and European musicology. Werner's pathfinding studies encompassed such diverse topics as comparative Jewish and Christian chant, synagogue liturgy in medieval times, and the traditional music of Ashkenazi Jewry. Highly critical of the Wagner circle, he also wrote on Mozart, *Mahler, and Bruckner, and contributed a significant biography on *Mendelssohn. His book *Mendelssohn: A New Image of the Composer and His Age* (1963) is another significant reinterpretation. Mathematics, philosophy, and aesthetics are central facets in many of his writings. His liturgical music set-

tings reflect current musical trends while preserving unity in the spirit of tradition.

[Bathja Bayer / Israel J. Katz (2nd ed.)]

WERNER, HEINZ (1890–1964), psychologist. Born in Vienna, Werner served as professor of psychology at Hamburg University from 1926 and emigrated to the United States in 1933. After teaching briefly at Michigan, Harvard, and Brooklyn College, Werner assumed the Clark University professorship which he occupied for the rest of his career. His major interests centered on the expressive-symbolic and perceptual processes. He did work on child development, especially with regard to word comprehension. His best-known book is *Comparative Psychology of Mental Development* (1948, 1957), which is essentially a revision of his earlier *Einfuehrung in die Entwicklungspsychologie* (1926, 1933², 1953³). In it he expressed the conviction that developmental psychology should not serve merely as a subject matter, but as a method of study. In 1957, Werner's department at Clark University was expanded into an Institute of Human Development, and Werner became a major proponent of the developmental viewpoint in the world of psychology. In 1960 there appeared *Perspectives in Psychological Theory: Essays in Honor of Heinz Werner*, edited by B. Kaplan and S. Wapner, which contains, inter alia, a list of some 150 articles and books by Werner. He coauthored *Symbol Formation* (1963), an organismic-developmental approach to language and the expression of thought. Upon his death, Clark University renamed its department the Heinz Werner Institute of Developmental Psychology.

[Aaron Lichtenstein]

WERNER, MICHAEL (1912–1989), sculptor. Werner was born in France but grew up in Austria, where he was educated, as well as at Oxford University, and in Paris. He settled in England in 1938 and held his first one-man exhibition of sculpture in 1949. He subsequently exhibited regularly in London galleries, as well as in mixed international collections. His commissions include portrait busts of George Bernard Shaw, for the Royal Court Theatre, London; a head of W.H. Auden, and a mural of 18 panels for Foxford School, Coventry. Werner was also a distinguished teacher and in 1968 became Senior Tutor at Watford School of Art and other institutions. In the 1960s he became well known for his innovative collages.

[Charles Samuel Spencer]

WERNER, SIEGMUND (1867–1928), one of Herzl's early aides and editor of *Die Welt*. Born in Vienna, Werner completed his studies in medicine in 1896. In his student days he was a member of national-Jewish and Zionist societies, and when Herzl came upon the scene, Werner became one of his devoted assistants. In 1897, he succeeded the first editor of *Die Welt*, Saul *Landau, retaining the appointment until the middle of 1899 and reassuming the editorship for the period 1903–05. His leading articles, as well as the general policy of the paper, conformed to Herzl's views; during the *Uganda Scheme controversy, he accorded both sides equal treatment, a policy which also coincided with Herzl's wishes. He was at Herzl's side when Herzl died and wrote a gripping description of this experience in *Die Welt*. Werner continued as editor until the paper was moved in 1905 to Cologne, which became the seat of Zionist headquarters. Later he moved to Iglau, Moravia, where he took up the practice of dentistry, while continuing his Zionist activities. He was the author of a book of verse (1903). Werner's exchange of letters with Herzl was published by Joseph Fraenkel in *Dr. Siegmund Werner, ein Mitarbeiter Herzls* (1939); his correspondence with Nathan *Birnbaum was published in *Shivat Ẓiyyon*, 2–3, pp. 275–299.

[Getzel Kressel]

WERSES, SAMUEL, (1915–), Hebrew literature scholar and educator. Born in Vilna, Poland, Werses emigrated to Palestine in 1936, where he studied Hebrew literature, completing his doctorate in 1947. From 1953 until his retirement in 1983, he was member of the Hebrew literature department of the Hebrew University. He was awarded the Israel Prize in 1989 for research in Hebrew literature. His research focused on Haskalah and modern Hebrew literature, with an emphasis on studying literary genre as they developed and their links to world literature. Among his works are *Mi-Mendele ad Hazaz* ("From Mendele to Hazaz," 1982) and *Haskalah ve-Shabta'ut* ("Haskalah and Shabbateanism," 1988), a study of trends and forms in the literature of the Haskalah (1990), a book on Agnon (2000), and *Mi-Lashon el Lashon: Yeẓirot ve-Gilgulehen be-Sifruteinu* (1996). Together with Ch. Shmeruk, he edited a book on the cultural life of the Jews in Poland between the two World Wars (*Bein Shetei Milḥemot Olam*, 1997). A bibliography of his works was prepared by R. Schenfeld in 2002.

[Fern Lee Seckbach]

WERTH, ALEXANDER (1901–1969), British journalist and author. Born in St. Petersburg and educated in Glasgow, Werth started his career on Glasgow papers and became Paris correspondent of the *Manchester Guardian* (1932). He went to Moscow as *Sunday Times* and BBC correspondent in 1940, and from 1949 was Paris correspondent of *New Statesman* and New York *Nation*. He wrote mainly on France and Russia, including *The Destiny of France* (1937), *France and Munich* (1939), *Leningrad* (1944), *The De Gaulle Revolution* (1960), *The Khrushchev Phase* (1961), *De Gaulle* (1965), and *Russia at Peace* (1968). His *Russia at War, 1941–1945* (1964), based in part on his experiences as a correspondent there, remains one of best and most vigorous accounts of the Nazi invasion of the USSR.

Werth entered the Majdanek death camp with Soviet forces in July 1944 and was one of the first Western correspondents to report in detail on a Nazi extermination camp, nine or ten months before the more famous accounts of the liberation of German concentration camps like Buchenwald.

WERTHEIM, family of German department store owners, originating from Stralsund. In 1876 ARTHUR WERTHEIM established a small dry goods store in Stralsund. His son, GEORGE WERTHEIM, introduced new practices, such as fixed prices and low markups, which ensured the store's success and led to the opening of a second store at Rostock. Subsequently George and his three brothers ventured into Berlin, where they concentrated on inexpensive mass consumer goods and soon added two additional stores. The 1905 turnover of the main store reportedly totaled the equivalent of $15 million. The building standing on one of Berlin's main thoroughfares, and designed by Alfred *Messel, became a landmark of the German capital. In 1908 WOLFF WERTHEIM separated from his brothers to open another department store in Berlin which, however, failed to equal the former achievement. In 1933 the company owned seven stores. After World War II it became part of the Hermann *Tietz corporation, Hertie, and descendants of the founders retained a considerable interest in the establishment.

[Edith Hirsch]

WERTHEIM, ABRAHAM CAREL (1832–1897), Dutch banker, philanthropist, and political leader. Trained in banking, he joined the bank of his uncle, Abraham Wertheim (1803–1889), who later became his father-in-law. The firm, Wertheim and Gompertz, developed into a leading banking institution, and Wertheim achieved recognition as a leader in his field. He played a prominent role in the establishment of many important commercial, industrial, and shipping enterprises. He also shared in promoting the development of the state railroads. In the 1870s he successfully introduced many large-scale United States loans on the Dutch market.

The name A.C. Wertheim is proverbial for his welfare work. Every morning before office hours he would receive the needy with their requests for financial support without making any distinction as to religion or social status. When in 1855 the Society for Public Welfare (Maatschappij tot Nut van 't Algemeen) first accepted Jews, Wertheim became a member and advanced to chairman of the national board. Under his direction a modern hospital in Amsterdam, a society for the blind, and an organization for the improvement of common housing were established.

Being particularly erudite Wertheim also participated in the cultural field. He was involved in the founding of the main national theater company (Het Nederlandsch Tooneel) and the Dutch Dramatic Arts Academy. When the Amsterdam Municipal Theater burned down in 1890 he made a gen-

erous contribution to start its immediate reconstruction. He was instrumental in the acquisition of valuable artifacts by museums.

For many years Wertheim served as a member and later as chairman of the board of the Amsterdam Ashkenazi Community. His formula for well-integrated Jewish life in the Netherlands was "to be a Jew in the synagogue and a burgher in the streets."

Politically he was the leader of the Amsterdam Liberals, whom he represented as a member of the North Holland Provincial Council and from 1886 to 1897 of the national Senate. A park in Amsterdam has been named after him.

[Daniel M. Metz (2nd ed.)]

WERTHEIM, MAURICE (1886–1950), U.S. banker. Born in New York, he was vice president and secretary of the United Cigar Manufacturers' Company from 1907 to 1913. In 1915 he joined the investment banking house of Hallgarten and Co., and in 1927 he established his own firm, Wertheim and Co. He served on the War Production Board and the Board of Economic Welfare during World War II. He was a patron of art and education, and his financial contributions enabled the liberal journal *The Nation* to continue publication when it was in financial straits during the Depression. Wertheim was a founder of New York's Theater Guild and a member of the Harvard Fund Council. He was president of the *American Jewish Committee (1941–43) and played a prominent part in bringing together opposing forces in American Jewish communal life. He was the father of Barbara *Tuchman.

[Joachim O. Ronall]

WERTHEIM, ROSALIE (**Rosy**) **MARIE** (1888–1949), composer. Wertheim was born in Amsterdam and exhibited musical gifts from an early age. In addition to studying piano and voice, she studied composition with Bernard Zweers and Sem Dresden. She taught piano and solfege at the Amsterdam Muzieklyceum. Her early interest in social work and concern for the working classes grew into a deep commitment. She taught piano to poor children, supported a number of needy families from her own income, conducted a children's chorus in a low-income neighborhood, and conducted the Jewish women's chorus of the Religieus Socialistisch Verbond in Amsterdam.

In 1929 she moved to Paris to study composition with Louis Aubert. Her home became a haven for Dutch artists and composers, and a veritable salon for leading French composers such as *Milhaud, Honegger, Messiaen, Jolivet, Ibert, and Elsa Barraine. Between 1929 and 1935, her works were frequently included on concert programs in Paris. In 1935 she left Paris for a year in Vienna, studying with Karl Weigl. She spent the next two years in the United States, where her music was well received in the New York Composers' Forum. During her time in the States she also worked as foreign correspondent

for Dutch newspapers, as she had done in Paris and Vienna. She returned to Amsterdam to find a quickly deteriorating situation. Forced into hiding during the Nazi occupation, she gave secret concerts in the basement of her home, frequently presenting works by Jewish composers, whose music had been outlawed.

Like many of her Dutch contemporaries in the 1910s and 1920s, Wertheim was drawn to French music, particularly the works of Debussy, Ravel, and Stravinsky. Among her most successful works were the *Piano Concerto*, written in 1940 and premiered by the well-known and respected conductor of the Residentie Orchestra, Willem van Otterloo; the *Divertimento for Chamber Orchestra* (1934) and the *String Quartet* (1932), both performed in New York; a piano suite; and a *Trio for flute, clarinet, and bassoon*. Her music is often cheerful, neo-classical in style, and at times quite playful.

[Melissa de Graaf (2ⁿᵈ ed.)]

WERTHEIMER, ASHER (1844–1918), British art dealer. One of the most famous fine art dealers of his time, Wertheimer inherited his Bond Street business from his father, SAMSON (d. 1892), who founded it in the mid-19ᵗʰ century. He developed it into one of the most significant in Britain, a rival to *Duveen Brothers and other dealers who sold art to the very rich. Wertheimer bought many works from the Russian nobility for sale in the West, and in 1898 paid the colossal sum of £122,000 for 83 paintings from the Hope Collection. Wertheimer is best remembered today for the famous portraits of him and his family painted by John Singer Sargent. Wertheimer left over £1.5 million at his death, a vast fortune at the time.

[William D. Rubinstein (2ⁿᵈ ed.)]

WERTHEIMER, CHAIM ERNST (1893–1978), Israeli biochemist. Born in Buehl, Germany, he was appointed professor at the University of Halle in 1927. Emigrating to Erez Israel in 1934, Wertheimer became head of Hadassah's Chemical Laboratory in Jerusalem and later of its Clinical Biochemistry Laboratory. He was a founder and the second dean of the Hadassah-Hebrew University Medical School. Internationally known for his research on diabetes and fat metabolism, he was awarded the Israel Prize for Medical Science in 1956 and the Bunting Prize of the American Association for Diabetes Research in 1964.

[Lucien Harris]

WERTHEIMER, EDUARD VON (1848–1930), Hungarian historian. Wertheimer was born in Pest. He became a lecturer at the University of Kolozsvár in 1877 and later held successive professorships at two law schools, Nagyszeben and Pressburg. In 1900 he was elected a corresponding member of the

Hungarian Academy, and in 1903 was knighted and given the surname "de Monor." On his retirement in 1914, he was appointed a privy councilor (Hofrat). He spent the last years of his life in Berlin.

Wertheimer's principal scholarly interests were the foreign policy of the Hapsburg monarchy and the history of Hungary during the early years of the 19ᵗʰ century. His main work in the former field was *Gróf Andrássy Gyula élete és kora* ("Graf Julius Andrássy, his life and his time," 3 vols., 1910–13), a study of dualism and the role of Hungary. His important contributions to 19ᵗʰ-century history were *Ausztria és Magyarország a XIX század első tizedében* ("Austria and Hungary during the First Decade of the 19ᵗʰ century," 2 vols., 1890–92); and *Az 1811–12 magyar orszaggyülés* ("The Hungarian Diet of 1811–12," 1899). Among his other books were: *Bismarck im politischen Kampf* (1929); *Die drei ersten Frauen des Kaisers Franz* (1893), and *Der Herzog von Reichstadt* (1902; *The Duke of Reichstadt, Napoleon II*, 1905).

[Baruch Yaron]

WERTHEIMER, JOSEPH RITTER VON (1800–1887), Austrian pedagogue, philanthropist, and merchant. Born in Vienna of a well-to-do Jewish family, Wertheimer first served as a clerk in his father's commercial activities and soon became his partner. Though involved in the practical world of commerce, Wertheimer used his free time to study pedagogics. In his twenties, he embarked on a trip through Germany, Italy, France, and England in order to broaden his cultural background. His interest in pedagogical matters led him to take particular note of English kindergartens, and he returned home eager to further the building of kindergartens in Austria. As a first step, he translated a work on kindergarten schooling which he called *Ueber fruehzeitige Erziehung und englische Kleinkinderschulen* (1826, 1828). Despite vociferous opposition to the "feather-brained scheme," Wertheimer founded the first kindergarten in Vienna in 1830 with the cooperation of a Catholic priest, Johann Lindner. Subsequently other kindergartens were founded in many Austrian cities. He also established the Allgemeine Rettungsgesellschaft, a society for assistance to released criminals and guidance for juvenile delinquents.

Wertheimer was deeply involved in Jewish activities. In 1840 he organized the Verein zur Foerderung der Handwerke unter den Israeliten, an organization which enabled thousands of Jewish children to learn useful occupations. In 1843 he established a Jewish kindergarten and in 1860 a Society for the Care of Needy Orphans of the Israelite Community, which established an orphan asylum for girls. As trustee, and later as president, of Vienna's central communal body and founder and president of the Israelitische Allianz zu *Wien (1872–87), Wertheimer played a leading role in the struggle to achieve equal social and political status for Jews. In 1842 he advocated the emancipation of Austrian Jews in his *Die Juden in Oesterreich…* (2 vols., 1842), published anonymously, because such works were then prohibited. He also wrote, among other books, *Therese: Ein Handbuch fuer Muetter und Kinder-*

waerterinnen (1835) and *Die Stellung der Juden in Oesterreich* (1852). He was editor of the *Jahrbuch fuer Israeliten* (11 vols., 1855–65).

Wertheimer's services were recognized by the Austrian emperor who, in 1868, conferred upon him the order of the Iron Crown and the accompanying title of nobility.

[Morton Mayer Berman]

WERTHEIMER, MAX (1880–1943), founder of Gestalt psychology. Wertheimer was born in Prague, Czechoslovakia. After studying philosophy and psychology, he spent some years in independent investigation until, in 1910, he arrived at the University of Frankfurt, where he began the studies with which his name is connected. There he met Wolfgang Koehler and Kurt *Koffka, with whom he formed a lifelong association and who helped pioneer the Gestalt movement. In 1916 he went to lecture at Berlin University and returned to Frankfurt in 1929 as professor of psychology. With the rise of Hitler in 1933, Wertheimer emigrated with his family to the United States, joining the faculty of the New School for Social Research in New York City.

Gestalt psychology begins with the observation that experiences and actions are not adequately described as a sum of elements, that there are innumerable psychological facts – such as melodies and visual forms – that also refer to qualities in wholes only. Wertheimer proposed that there are wholes with their own properties and tendencies that are not discoverable in their isolated parts, that a whole determines what the properties of its parts will be. This statement of the problem of part-whole relations, central to Gestalt theory, broke decisively with the presuppositions of atomistic psychology.

Wertheimer's perceptual investigations laid the concrete foundations of Gestalt psychology. In 1912 he showed that the experience of movement cannot be split up into a sum of successive sensations, that it is an effect of stimulus events cooperating to produce a new unitary outcome. His account of the principles of perceptual grouping was another major contribution. How does mosaic of discrete stimulations produce a unitary percept? The discovery of this question was one of Wertheimer's great achievements. Investigators had previously taken the formation of units for granted; Wertheimer showed that this was a central problem for the psychology of perception. He identified certain selective principles of grouping, among them those of proximity, similarity, closure, common fate, and good continuation. He held that one principle, that of Praegnanz, was inclusive of the others, the principle that grouping tends toward maximal simplicity and balance, or toward "good form." In this manner he established that perception is a product of organization. Gestalt psychology revolutionized the modern study of perception and affected the outlook in other areas of psychology. Wertheimer related the problems of Gestalt theory to issues of logic, aesthetics, and

ethics. Keenly sensitive to the human implications of psychological doctrines, he questioned prevalent assumptions about man as a creature of habit and the relativism of his values.

[Solomon Asch]

WERTHEIMER, SAMSON (1658–1724), Court *Jew in Vienna; scholar, *shtadlan*, and philanthropist. Born in Worms of a learned father, Wertheimer studied at the yeshivah in Frankfurt. In 1684 he married the widow of Nathan Oppenheimer and through her family came into contact with Samuel *Oppenheimer, who brought him to Vienna, appointing him manager of his affairs and presenting him to Emperor Leopold I. The wealthiest Jew of his day, from 1694 to 1709 Wertheimer was the chief administrator of the financial affairs of the emperors Leopold I, Joseph I, and Charles VI. He placed enormous sums at the disposal of the government, particularly during the Spanish War of Succession and the war against Turkey, and acted as court agent to the emperor and the rulers of Saxony, Mainz, Trier, and the Palatinate. Emperor Leopold I had such confidence in Wertheimer that he also entrusted him with diplomatic missions. On the occasion of the marriage of the emperor's brother, Prince Charles Philip, to the daughter of the king of Poland, Wertheimer succeeded in obtaining from the latter a dowry of 1,000,000 florins; in appreciation of this the emperor awarded him 1,000 ducats and presented him with his portrait. Paintings of the king of Poland and three prince electors were found in his estate. After the death of Oppenheimer in 1703, Wertheimer was appointed chief agent of the court (*Hoffaktor*); he then found new sources of income for the imperial treasury by improving the salt industry of Siebenbuergen, increasing the export of salt by removing several customs stations and by leasing the mines. At the same time he organized the monopoly of the Polish salt trade, arranging for and financing the transfer of the salt from *Wieliczka to Hungary and Silesia. The conference of Utrecht (1714), which brought to an end the Spanish War of Succession, was financed by the Wertheimers, who also paid the expenses of the Austrian ambassador. Ten imperial soldiers guarded his house and he was known by the title of *Judenkaiser* (Jewish Emperor). He invested his fortune in over half a dozen houses and estates in Vienna, Austria, and Germany. Together with other Court Jews, he saved the Jews of Rothenburg from expulsion by the payment of a large sum of money. He also intervened successfully with the authorities on behalf of the communities of Worms and Frankfurt. Speaking for all the Jewish communities in the empire, in 1700 he appealed to the emperor against the incitement of Johann *Eisenmenger; as a

result, the emperor forbade the latter's antisemitic book to be circulated. Because of poor health, Wertheimer generally conducted his affairs from his home in Vienna and did not travel extensively, as was the custom of other Court Jews.

Wertheimer was offered the office and title of *Landesrabbiner of Hungarian Jewry for his aid in reestablishing communities and synagogues ravaged by warfare; the title was confirmed by the emperor and was the only one he used, though Moravia, Bohemia, and Worms accorded him similar honors. A scholar and patron of scholars, he financed the printing of the Babylonian Talmud undertaken at Frankfurt (1712–22) by his son-in-law, Moses *Kann. Some of the sermons he delivered in the synagogue in his home have been preserved. He also left behind manuscripts that dealt with various aspects of *halakhah*, Midrash, and Kabbalah. He built a large synagogue in Eisenstadt and one in Nikolsburg. Judah *he-Ḥasid and his group were supported by Wertheimer, who bore the title of *Nesi Ereẓ Israel* and was in charge of the transfer of money collected throughout Europe to the Holy Land (see *Hierosolymitanische Stiftung).

In his old age, Wertheimer retired from court affairs, handing them over to his son WOLF, who was instrumental in organizing the diplomatic effort for the repeal of Maria *Theresa's expulsion of Prague Jewry. Wolf went bankrupt in 1733 after Bavaria had refused to honor its debts to him. These were eventually acknowledged after more than 20 years of litigation; payments, in installments, to his sons commenced after his death (1763). Wolf's grandsons, JOSEPH (1742–1811), HERMANN (1750–1812), and LAZAR (1740–1818), became members of the nobility, with the title Edler von Wertheimstein, in 1791, 1792, and 1796 respectively. Most of their descendants were baptized.

[Yomtov Ludwig Bato]

WERTHEIMER, SOLOMON AARON (1866–1935), rabbinical scholar and bibliophile. Wertheimer, born near Pressburg (Bratislava), Slovakia, grew up in Jerusalem. He became interested in the many rare books he found in Sephardi yeshivot and, despite penury, began to collect Hebrew books and manuscripts, particularly Oriental ones, including some unique specimens. Wertheimer was one of the first to publish some of the Cairo *Genizah* treasures.

His Midrash collections, containing some hitherto unknown works, are *Battei Midrashot* (4 parts, 1893–97), *Leket Midrashim* (1903), and *Oẓar Midrashim* (2 parts, 1913–14). A revised and enlarged two-volume edition of these collections appeared during 1948–53, edited by his grandson A.J. Wertheimer. Wertheimer also published geonic and medieval responsa: *Kohelet Shelomo* (1899), *Ginzei Yerushalayim* (3 parts, 1892–97), *Zikkaron la-Rishonim* (1909), and *Ge'on la-Ge'onim* (1925). Among his original works are *Darkah shel Torah* (1891), on the methodology of *halakhah* and *aggadah; She'elot Shelomo* (2 parts, 1932–33), responsa; *Be'ur Shemot Nirdafim she-ba-Tanakh* (1924; 1953²), a work on biblical synonyms. The revised edition of the last by his sons includes a biography and a bibliography of his published books and numerous manuscripts, among them commentaries on Bible and Mishnah, a *siddur*, a Passover *Haggadah*, and a supercommentary on Naḥmanides' Bible commentary. Wertheimer also contributed to learned periodicals and was active as a preacher.

[Zvi Kaplan]

WERTHEIMER, STEF (1926–), Israeli industrialist. Born in Germany, he came to Palestine with his family in 1937. After service during Israel's War of Independence he continued with the development of armaments. In 1951 he founded the ISCAR (Israel Carbides) company, which became a world leader in the production of precision carbide metalworking tools. In 1981, after four years in the Knesset, he devoted his efforts to developing the Galilee, with a residential project, Kefar Veradim, and the Tefen industrial park. He initiated the establishment of several other Galilee industrial parks. These enterprises generated 10,000 jobs in 150 plants and together with ISCAR around $2 billion in annual exports.

Wertheimer was a creative and innovative thinker. The ISCAR complex is enhanced by works of art and even an industrial museum, and to create a bright and cheerful atmosphere, Wertheimer had all the factory floors painted yellow. In 1991 he received the Israel Prize for special contribution to society and the state. In 2006 ISCAR was sold to Oscar Buffett for $4 billion.

[Fern Lee Seckbach]

WESEL, BARUCH BENDET BEN REUBEN (also called **Benedict Reuben Gomperz**; d. c. 1753), German rabbi and author. Baruch Benedict was called Wesel after the town where he was born. He was a member of the distinguished *Gomperz family of Germany and western Europe. His grandfather, Elijah Gomperz, was a Court Jew of Frederick William I of Prussia and through his influence greatly assisted his coreligionists. His father was a wealthy Berlin merchant. In 1724 Wesel was appointed one of the three members of the Breslau *bet din* and wrote a commendation for the *Sha'arei Tefillah* of Solomon Zalman Hanau. In 1728 the *Council of Four Lands appointed him rabbi of the Polish community in Breslau. That same year he wrote a commendation for the printing of the Pentateuch in Dyhernfurth. He inherited a considerable fortune from his father, engaged in business, and did not take a salary from the community. Unsuccessful management of his business affairs, however, led to his financial ruin, and in 1733 the community

reinstated his salary. He subsequently applied to be exempted from the high taxes imposed upon wholesale merchants and to be transferred to the category of second-class taxpayers. His application was rejected, however, and he was imprisoned, compelled to pay, and deprived of the title rabbi. He was expelled from Breslau in 1738, but was permitted to take up residence in the neighboring villages. When Frederick II conquered Silesia in 1740, Wesel sent him a laudatory poem in Hebrew and German, written as an acrostic of his name, and Frederick noted this. Subsequently, in 1744, when 12 Polish-Jewish families were granted a permanent permit to live in Breslau, and when a special privilege was granted to Polish merchants, Wesel was elected chief rabbi of Breslau, and the Prussian government recognized him and his community. The same order also permitted the Jews to establish a cemetery in Breslau (previously they had to use the cemetery of Dyhernfurth). Wesel suggested that the funds for the cemetery and for taxes generally be raised from a special tax imposed on meat. However, he did not live long enough to consecrate the cemetery, and he himself was buried in Dyhernfurth. Ten of his responsa were published in 1745 under the title *Mekor Barukh* and republished with additions by his son in 1771.

[Itzhak Alfassi]

WESKER, ARNOLD

WESKER, ARNOLD (1932–), English playwright. Born of immigrant Yiddish-speaking parents (the father was a tailor) in London's East End, Wesker held various jobs after he left school, including kitchen porter and pastry cook. These laid the foundations of his early plays, which have an autobiographical content. *The Kitchen* (1960), for example, is at once a literal representation of life behind the scenes in a restaurant and an allegory of the struggle, competition, and near-slavery of the social world. Wesker is best known for the trilogy of plays entitled *Chicken Soup with Barley, Roots*, and *I'm Talking about Jerusalem* (1959–60). These constitute an ambitious attempt to probe the symptoms of a sick society. *Chicken Soup with Barley* deals with Jewish society in the East End of London during the 1930s and 1940s; it shows the idealistic socialism, which was the main barricade against Sir Oswald Mosley's fascist movement, giving way to an easy, postwar conformity. *Roots* represents these same decadent values subsisting in a country community. In *I'm Talking About Jerusalem*, Wesker shows a young couple endeavoring to establish an ideal community in the country in the immediate postwar period of 1946. These plays are written in realistic prose with a poetic undercurrent. Though partly inspired by the disillusionment of his time, Wesker also exhibits a visionary quality and a desire for reform and renewal.

In *Chips with Everything* (1962), apparently based upon Wesker's own period of national service in the Royal Air Force, the characters are shallow stereotypes, the officers tyrants and decadents, the men simple philistines or easily led slaves. In the 1960s a great deal of Wesker's energy went into forming and administering "Centre 42." This organization, named after a Trade Union Congress resolution supporting the arts, was intended to sponsor festivals and eventually to institute its own cultural program. Its cultural basis at the beginning rested solidly on Wesker's own plays, which took an unashamedly propagandist turn in *Their Very Own and Golden City* (1966). A late play is *Denial* (2000).

Six Sundays in January has some Jewish interest. The title is that of the first story in the volume and was published in the *Jewish Quarterly* in 1958 and in *Modern Jewish Stories* in 1963. Wesker's writings have been translated into 17 languages. With Harold *Pinter, he is probably the best-known contemporary Anglo-Jewish playwright. He has written an autobiography, *As Much As I Dare* (1994).

[Philip D. Hobsbaum]

WESSELY, NAPHTALI HERZ

WESSELY, NAPHTALI HERZ (**Hartwig**; 1725–1805), Haskalah poet, linguist, and exegete. Wessely's ancestors had fled Poland during the Chmielnicki pogroms and settled in Wesel on the Rhine, from where the family took its name. Born in Hamburg, Wessely spent his childhood in Copenhagen, where his father was a purveyor to the king of Denmark. He received his religious education at the yeshivah of Jonathan *Eybeschuetz, who influenced him greatly, and read literature and scientific works in a number of European languages, Associated with the Feitel Bank, Wessely's business affairs took him to Amsterdam and Berlin. In Berlin he met Moses *Mendelssohn and contributed a commentary on Leviticus (Berlin, 1782) to the *Biur*.

Wessely began his literary career with the Hebrew translation of the apocryphal work *Wisdom of Solomon* (from Luther's German translation), to which he appended a brief commentary, later elaborated into a full-length exegesis, *Ru'aḥ Ḥen* (Berlin, 1780; Warsaw, 1885). He pioneered in the revival of biblical Hebrew, and his translation, written in the vivid and lofty style of the Scriptures, prompted later Haskalah writers to translate apocryphal works into biblical Hebrew. The linguistic problems he encountered led to a number of philological works such as *Gan Na'ul* (or *Levanon*; 2 vols., Amsterdam, 1765–66; Lemberg, 1806), a work on Hebrew synonyms and roots, and *Yein Levanon*, a commentary on the mishnaic tractate *Avot* (Berlin, 1775; Warsaw, 1884), which also concentrates on linguistic aspects. While Wessely's focus is often linguistic, his exegesis shows also wide knowledge and learning, and his commentaries were well received by orthodox scholarship. He is, however, mainly known as a poet – *Shirei Tiferet* (1789–1802) is the major literary work of the German Haskalah – and as a pioneer in education and an advocate of the Enlightenment through his *Divrei Shalom ve-Emet* (1782),

a call in support of the Edict of Tolerance (*Toleranzpatent, 1782) of Joseph II of Austria.

Poetry

Shirei Tiferet ("Poems of Glory"), Wessely's magnum opus, is a long epic on the life of Moses and the Exodus from Egypt, modeled after similar epical works by Klopstock and Schiller. Embellished with legends from the Talmud and the Midrash, the work is essentially didactic and is suffused with the rationalist spirit of the age. Thus the concept of the mission of the Jewish people is reflected in the description of the revelation at Sinai; the quest for salvation and for an end to the suffering of the Jewish people also clearly echo throughout the poem. Divided into six parts, containing 18 cantos, the narrative of the poem stretches from the persecution of the Jews by Pharaoh and Moses' birth to the giving of the Law. Wessely's great prosodic innovation was the introduction of the alexandrine (the 12-syllable heroic line of contemporary French poetry) into modern Hebrew poetry. The poem, however, is little more than a narrative in verse of the Bible story, its principal aim being didactic rather than aesthetical. Wessely, in the rabbinic tradition, intended his poem to be a commentary on certain obscure passages in the Bible, yet at times he used the narrative only as a pretext to display his poetic virtuosity and his structural prowess.

While the work as a whole may be of little literary merit, there are certain beautiful poems, such as the lyrical introductions to the cantos which are invocations to God. There are also a number of fine poetic passages in the cantos themselves: some describe feelings, while others are didactic in content, such as the depiction of Israel's mission and its destiny in the seventh canto. *Shirei Tiferet* served as a model to later Hebrew poets. The epic was published in full after the poet's death (Prague, 1809), and sections of it were translated into German and French.

Among his other poetic works is *Mehallel Re'a*, an introduction to the translation of Exodus. In his commentary to Exodus, Wessely criticizes the inadequate, faulty educational methods in the contemporary Jewish schools. He also wrote a number of occasional poems.

Wessely was a trailblazer in style. The syllabic meter and the strophic structure he introduced became standard models for Hebrew poets for over 60 years. He also revived the biblical Hebrew style in literature and lent to the language flexibility and vividness.

Linguistic Method

Striving to use a lofty biblical style in order to recreate the flavor and form of biblical writing, Wessely tried to arrive at the original meaning of synonyms in the Bible. His approach was philological rather than exegetical, and he viewed the problem not only from a theoretical and abstract point of view, but primarily practically, i.e., how to use the synonyms for rhetorical purposes. This pragmatic approach also determined Wessely's method in his studies of the Hebrew language. He demanded that biblical Hebrew provide him with the necessary linguistic means and devices for his literary needs. His great sensitivity to the language allowed him to grasp the spirit of the biblical tongue and to penetrate its mysteries. Psychology for him was the key to an understanding of the language in general, and of the individual meaning of synonymic words in particular. The Hebrew language seemed to him as vital in his time as it had been in the ancient past and, though it was not spoken, it remained superior to all other living tongues. Hence his philological assumption that there are no synonyms in Hebrew (an assumption which is in accord with the principle accepted in linguistics that language does not suffer excess and either rejects superfluous words or invests them with new meaning), a characteristic he ascribed only to Hebrew because of his mystical relation to the language. Wessely, however, was extreme in his theory and refused to acknowledge the possibility of synonyms even in poetry; he thus attributed new meaning to an idea repeated in different words. The starting point of his philological research is not the word itself, but the concept that the written words give rise to. He therefore ascribed a separate meaning to each word and disregarded the connotations that have accrued to a word in the course of the historical development of the language.

Wessely's linguistic theory also influenced his style and he showed the way for the writing of pure biblical Hebrew. His prose style, however, is a fusion of Hebrew styles of different historical periods.

Commentary

Imrei Shefer, a commentary on Genesis, is the fruit of lectures given by Wessely to young audiences in Berlin. Portions of the work were published by *Mekiẓe Nirdamim (Lyck, 1868–71). Mendelssohn also asked him to write a commentary to Leviticus (Berlin, 1782) for the *Biur*. Writing in a light and flowing style, Wessely explains every Hebrew word and refers to earlier commentators. He attempted to reconcile the plain meaning of the Scriptures with the commentaries in the Talmud and the Midrashim by means of a detailed analysis of every word, a method which often led to lengthy and sophistic distortions of the simple meaning of the text. Mendelssohn edited the work; he shortened it, interpreted difficult passages that Wessely had failed to explain, and added comments to passages in which the opinions of the two scholars differed. The Gaon of Vilna, *Elijah b. Solomon Zalman, praised the work, but the *maskilim* considered it too scholarly.

Educational and Public Activities

Wessely's epistle *Divrei Shalom ve-Emet* (Berlin, 1782), is a call to the Jewish community of Austria to comply willingly with the order of the Edict of Tolerance of the Austrian emperor Joseph II to open schools for Jewish children in which German would be taught. The work is the first methodical composition in Hebrew on Jewish education written in the spirit of the Haskalah. Wessely distinguishes between two types of studies: what he called *Torat ha-Adam* ("human knowledge"), and instruction in the Law of God. The acquisition of human knowledge demands instruction in subjects which are neces-

sary to man's relationship with man, namely, a training in general subjects and ethics, i.e., secular studies common to the human race. The divine teachings are the heritage of the people of Israel alone and are identical with the Torah of Moses. Jewish education should be founded on both studies, with a schooling in human knowledge preceding divine subjects, since these should serve as a basis for the study of Torah. Without general education it is impossible to understand divine teachings. Wessely came to the conclusion that he who studies the Torah without acquiring common human knowledge, will, when he grows up, become a burden upon society.

His opinions were strongly opposed by the Orthodox, especially by Ezekiel b. Judah *Landau of Prague, *David Tevele b. Nathan of Lissa, and the Gaon Elijah of Vilna. A bitter controversy ensued. Wessely responded to the rabbis in his epistles *Rav Tov le-Veit Yisrael* (Berlin, 1782); *Reḥovot* (Berlin, 1785); and *Mishpat* (Berlin, 1784), all of which were later collected under the title *Divrei Shalom ve-Emet*; sections were translated into French, German, Dutch, and Italian.

Wessely also wrote a number of other works, the most important of which is *Sefer ha-Middot* or *Musar Haskel* (Berlin, 1784), a collection of essays on the essence of the soul and its faculties. The work reflects contemporary philosophical and ethical German thought. *Sefer ha-Middot* became popular among learned Jews in Eastern Europe. Some of Wessely's works are still in manuscript.

[Joshua Barzilay (Folman)]

WESSELY, WOLFGANG (1801–1870), Hebrew scholar and jurist; the first Jew to hold a full professorship in Austria. Born at Trebitsch, Moravia, in 1829, he was the first Jew to receive a doctorate in philosophy from Prague University; four years later he received a doctorate in civil law, and later published legal studies. He also applied for a doctorate in canon law, but as a Jew, was rejected. Wessely first served as a teacher of religion at a Jewish school in Prague and compiled a catechism, *Netib Emuna* (1841), which went through eight editions. In 1844, after the death of the Hebrew censor, Carolus *Fischer, Wessely applied for the post of translator at this office, also presenting the authorities with a proposal for the "establishment of an institute for the science of Judaism [*Wissenschaft

des Judentums] and its rabbinical literature at the local university." The conservative leaders of the Prague community, M. *Landau, Samuel Freund, and S. Rapoport, were hostile to Wessely's proposal, and also questioned his qualifications for initiating it. However, Christian academic opinion was on Wessely's side. In 1846 Wessely began to lecture at Prague University on Hebrew and rabbinical literature before a mixed Christian and Jewish audience. In 1851 he was appointed, in addition, extraordinary professor of criminal law. He promoted the introduction of the jury system into Austria. In 1861 he became a full professor at the university.

WEST, MAE (1893–1980), U.S. actress, writer, and singer. Born Mary Jane West in Brooklyn, New York, to John P. West and Matilda Delker-Dolger, a German Jewish model and dressmaker, at seven West was winning talent shows. A year later she joined Hal Claredon's stock company in New York. By 1907, she was a vaudeville performer with Frank Wallace, whom she married in 1911 and separated from a few months later. In September 1911, West appeared on Broadway in *A la Broadway* and then in *Hello, Paris*. In 1912, she appeared in *A Winsome Widow* and developed a solo act later that year. In 1918, she starred in the comedy musical *Sometime*, followed by the musical revue *The Mimic World* (1921). In 1926, West wrote and starred in the play *Sex*, which drew the attention of censorship groups. After more than a year on stage, policed arrested West and the cast of *Sex* on obscenity charges; West served ten days in jail and paid a $500 fine, becoming a national celebrity. West became a success with such plays as *Diamond Lil* (1928), which featured the line, "Why don't you come up sometime and see me?"; *Pleasure Man* (1928); and *The Constant Sinner* (1931) (the latter two closed over censorship issues). West went to Hollywood in 1931, appearing in the film *Night After Night* (1932). She went on to write her next eight films, which included *She Done Him Wrong* (1933), based on *Diamond Lil*; *I'm no Angel* (1933), with Cary Grant; *Belle of the Nineties* (1934); *Goin' to Town* (1935); *Klondike Annie* (1936); *Go West Young Man* (1936); *Every Day's a Holiday* (1938); and *My Little Chickadee* (1940), which paired West with W.C. Fields. In 1942, Wallace returned to sue West for divorce and alimony; West made an undisclosed settlement. Her 1943 film *The Heat's On* did not fare well with critics, and West returned to Broadway with *Catherine Was Great* (1944). In 1948, West starred in the short-lived *Ring Twice Tonight*, which was followed with a revival of *Diamond Lil* (1948–51). West toured with the nightclub act Mae West and Her Adonises from 1954 to 1956, and released several albums of her songs, starting with *The Fabulous Mae West* (1955). She made an appearance on the television sitcom *Mister Ed* (1964) and an ill-fated return to the silver screen in the sex-change comedy *Myra Breckinridge* (1970) and *Sextette* (1978), an adaptation of her play *Sex*.

[Adam Wills (2nd ed.)]

WEST, NATHANAEL (pseudonym of **Nathan Wallenstein Weinstein**; 1903–1940), U.S. novelist. Widely regarded as one of the most distinguished American novelists of the 1930s, West was the son of Russian-Jewish immigrants who had settled in New York City, and a brother-in-law of the writer S.J. *Perelman. He began his first novel during his student days at Brown University. Later published as *The Dream Life of Balso Snell* (1931), this was a surrealistic fantasy dwelling on human corruption. It shows the influence of western European symbolists such as James Joyce and other modern experimental writers, particularly those of France. For six years, beginning in 1927, he was a hotel manager in New York. During that time he worked at developing a prose style marked by economy of diction, poetic richness, and psychological depth, and published his second novel, *Miss Lonelyhearts* (1933). Though it was his masterpiece, it was not a popular success. It depicted a once-cynical newspaper columnist dispensing compassion, love, and help to victims of personal or social failure. *A Cool Million* (1934) satirized American fascists veiling themselves in democratic values, myths, and history. From 1935 he worked in Hollywood, remaining there as a scriptwriter until his death in an automobile accident. His fourth novel, *The Day of the Locust* (1938), was a grim satire of American life set in Hollywood. West's achievement rested primarily upon his ability to portray the sordidness, violence, humor, and tragedy of American life. Self-rejection was epitomized in his change of name from Nathan Weinstein and was perhaps the cause of his virtually antisemitic ridicule of Jews and Jewishness in his novels. West was active in movements against Nazism, economic exploitation, and abridgment of democratic rights.

[Brom Weber]

WESTCHESTER COUNTY, county in New York State. Located immediately north of New York City, and ranked 12th among American counties in per capita personal income, Westchester County is home to the eighth largest Jewish community in the nation, numbering 129,000 in 2002.

Established in 1683, the 500 square mile county was predominantly rural before the introduction of commuter railroads in the mid-19th century. Jews have lived in Westchester since colonial times. In the early 18th century the family of Jechiel Hays migrated from Holland. His sons and grandsons were farmers and shopkeepers in Rye, New Rochelle, Bedford, North Castle, and Pleasantville. The Hays family has preserved Jewish continuity in the county ever since, though some have maintained residences in both New York City and Westchester. Prominent figures were Daniel Peixotto *Hays (d. 1923), Democratic Party figure, Jewish communal activist, and second mayor of Pleasantville; and Arthur Hays *Sulzberger (d. 1968), publisher of the *New York Times*.

The Hays family was not typical; the Jewish population grew only after the eastern European migration of 1880–1924 that formed America's core Jewish population. Most of the immigrants were storekeepers and artisans living and working in cities and villages in the southern, eastern and western fringes of the county. They labored long hours to feed, clothe, and provide simple comforts for local residents and sustain their own large families. Some Jews ventured into the countryside as itinerant peddlers. A few owned and operated farms. Jewish communal life revolved around self-help organizations, kosher grocery and butcher shops, and 17 traditional synagogues. A smaller group of acculturated Jews owned large local businesses or commuted to work in New York City. Along with prospering Russian-born Jews, they established Reform synagogues in the southernmost cities of Yonkers, Mount Vernon, and New Rochelle.

In the 20th century, Westchester Jewry underwent three periods of rapid expansion. The first was the 1920s. A boom in cheap transportation facilitated commutation to Manhattan and the Bronx. When modestly priced automobiles, a new parkway system, and comfortable railroad cars made suburban living attractive, a Jewish middle class found its way to the county. The pattern of settlement was uneven. Jewish commuters and established local businessmen resided comfortably along the tree-lined streets of the southern tier cities and centrally located White Plains. Jewish developers sold Scarsdale lots to other Jews. Jews were not, however, welcome in the other "first class villages" of Bronxville, Rye, Larchmont, and Pelham Manor; nor were they wanted in sections of northern Westchester and some Hudson River villages.

Until the Great Depression Jewish-owned stores and factories brought prosperity to Westchester cities and villages. New wealth facilitated the formation of synagogues as well as the expansion of local communal institutions and chapters of the major Jewish organizations.

Some Jews, however, never made it to the middle class; they remained in low-income, low status occupations, toiling as milkmen, trolley conductors, prison guards, ferry operators, and junkmen, unable to accumulate enough capital to establish stable businesses.

A cohort of radical factory workers and storekeepers from New York City formed summer camps and colonies in northern Westchester. During the summer months they enjoyed fresh air, green grass, wholesome recreation, and endless political debates.

The second period of Westchester Jewry's rapid expansion was the post World War II era (1946–1970), when new social and political factors facilitated increased Jewish settlement. As a result of the increased openness in American society and new laws, heretofore-insurmountable barriers crumbled. After the federal government outlawed restrictive residence clauses in 1948, Jews purchased houses in villages along the Hudson River and Long Island Sound, as well as in developing sections of Mt. Vernon, Yonkers, New Rochelle, and White Plains. The Jewish concentration in Scars-

dale swelled incrementally to form about a third of the population.

That antisemitism was not dead, however, is indicated by two phenomena, one far more disconcerting than the other. Country clubs, long the bastion of upper-class snobbery, remained closed to Jews (who formed 11 of their own). Much more serious were the Peekskill Riots. For several years a consortium of the summer camps and colonies invited bass-baritone Paul Robeson, a multi-talented African-American singer, actor, and political radical, to perform. After the Labor Day concert of 1949, local ruffians, screaming anti-black, anti-Communist and anti-Jewish epithets, pelted cars and buses exiting the grounds. Police looked on impassively while the rioters damaged vehicles, inflicting injuries upon the passengers.

Untouched by the Peekskill incident, many Jews welcomed new opportunities to live and work in the county. Teachers found positions heretofore denied them. Some Westchester-born college-educated sons (and later, daughters) returned from war and university to apply new technology and selling techniques to their fathers' businesses. Others preferred to practice law and medicine near home to commuting to New York.

During the immediate postwar period Jewish communal life flourished. People who had seldom attended religious services in the city joined synagogues when they moved to Westchester. They raised money to help Orthodox, Conservative and Reform congregations relocate existing institutions and construct new ones in villages where none had existed before. Premier architects Philip Johnson, Marcel Breuer, and Louis Kahn designed houses of worship in Port Chester, Scarsdale, and Chappaqua.

As the excitement of newness abated, economic and social circumstances again restructured the Westchester Jewish community. In the 1970s and 1980s embattled school systems, high taxes, and societal problems rendered the southernmost cities less desirable. Major synagogues in Yonkers and Mt. Vernon merged, relocated further north, or gave up the ghost. The second wave of feminism and inflated housing prices brought women into the workplace; consequently fewer devoted energy to congregational sisterhoods and Hadassah. As well, predominantly male Jewish organizations, such as the Jewish War Veterans and B'nai B'rith, no longer attracted newcomers. Remaining service, defense, and charitable organizations moved their headquarters to south-central Westchester – i.e., the area centered in White Plains, Scarsdale, and northern New Rochelle.

Change was also apparent in the business and professional profile of Westchester Jewry. While many Jews continued to commute to New York City, an ever-increasing minority worked closer to home. The professional staffs of area hospitals became disproportionately Jewish. Corporate chains slowly ground down the independent pharmacies, privately owned clothing stores, and dry goods emporia. The result was that few shops along the Main Streets of Port Chester and

New Rochelle, for example, heavily Jewish in the early 20th century, remained under Jewish ownership. Consequently sons and daughters who returned to Westchester after college took over only those family businesses that were sizeable or cutting-edge. Otherwise, they found opportunity in the corporate parks and professional offices constructed all over the county.

The most recent Jewish influx began in the early 1990s. At a time when the population of American Jewry and New York Jewry remained static, Westchester Jewry experienced a 40% growth, from 91,000 in 1991 to 129,000 in 2002. Housing costs and lack of space in built-up areas moved the population northward. By 2005, northern Westchester matched south-central Westchester in Jewish population and affluence. A case in point is the fact that the Reform congregations of Chappaqua and Bedford nearly match the largest temples in Scarsdale and White Plains in size, beauty and membership.

Judaism in northern Westchester presents an uneven pattern. On the one hand Jewish religious practice is weaker in northern Westchester than in areas closer to New York City. More Jews in this area are married to non-Jews, and for many others, Judaism is a seasonal matter. In 2002 about three-quarters attended a *seder* and fasted on Yom Kippur, but only 16% lit Shabbat candles and 7% kept kosher. On the other hand, recent arrivals to northern Westchester have launched a number of new Jewish institutions. Pleasantville, home to the pioneering Hays family, but with a weak Jewish presence through most of the 20th century, now hosts the Richard J. Rosenthal JCC and the Pleasantville Community Synagogue. Newcomers have initiated Jewish study groups, havurot, and congregations in villages with no previous Jewish address. Most Northern Westchester synagogues identify as Reform, but with a decidedly independent streak. Publicity for The Jewish Family Congregation, South Salem, for example, boasts that it "practices Reform Judaism with a traditional flavor."

In the early 21st century, however, the core of Westchester Jewish life nevertheless remained in south-central Westchester. More Jews there than in other sections of the county observe Jewish rituals and attend synagogue on a regular basis, contribute to Jewish causes, visit Israel with some regularity, enroll their children in Jewish schools, and supply leadership for Jewish organizations in the county and New York City.

For all Westchester Jewry, there was a discernable Jewish profile. In 2002 Westchester Jews constituted 9% of Jewish households in the eight counties of the UJA/Federation of New York service area (New York City, Long Island and Westchester). Half (51%) belonged to synagogues, a considerable advance over the 43% regional total. Among Westchester Jews 42% identifed as Reform, 31% as Conservative and 9% as Orthodox, a deviation from the comprehensive New York profile, where the percentages are more balanced: 29%, 26% and 19% respectively. In a child-centered region, over half of the Jewish children are enrolled in supplementary schools connected to synagogues, while 31% attend four Jewish day schools and two high schools that follow Orthodox or Conser-

vative models. A few adolescents travel to Jewish high schools in New York City.

Virtually all children in Jewish families attend college or university, and many do not return to Westchester. The future of Westchester Jewry depends upon opportunities in business and the professions and the continued appeal of life in New York and its environs.

[Baila Round Shargel (2nd ed.)]

WESTERBORK, the main transit camp for Dutch Jewry during the German occupation of Holland. The camp, situated in an extremely isolated region in the northeast of the country, had been set up by the Dutch government in 1939 with a financial guarantee from Dutch Jewry, in order to shelter numerous Jewish refugees fleeing from Germany who crossed the Dutch frontiers illegally. The first group came on Oct. 9, 1939. The camp held some 750 refugees when, on July 1, 1942, the Germans took command, after extending it considerably. From that date, more than 100,000 Jews arrested throughout the country remained for several days or weeks in Westerbork, where they had to work before being deported to other camps, primarily Nazi death camps, as part of the "final solution of the Jewish problem" (see *Holocaust: General Survey). During this period the camp was continually overcrowded. On Oct. 2, 1942, 13,000 Jews were imprisoned in Westerbork in one single *Aktion*. Thousands of them had to sleep on the floor without mattresses or blankets. Food and sanitary conditions were deplorable. By September 1944, a total of 93 trains, consisting of 20 trucks and containing 1,000–2,000 Jews, left Westerbork. Jewish officials were in charge of the internal organization and held responsible for maintaining law and order among the internees. Of those deported 54,930 went to Auschwitz in 68 transports, and 34,313 to Sobibor on 19 transports; most of these prisoners were killed upon arrival. In addition, 4,771 went to Theresienstadt, which itself was a transit camp. Nine transports were sent to Bergen-Belsen with 3,762 inmates. A special Jewish police force was created for this purpose. The most important task of these Jewish officials was to determine the order in which Jewish families were to be deported. Most of the Jewish officials, including their president, had been selected from the German-Jewish refugees who constituted the older segment of the Westerbork population. This frequently gave rise to serious conflicts, especially between Dutch and German Jews. Westerbork had its own theater, where famous German artists who had fled to Holland gave performances, as well as an orchestra. An excellent hospital, with a capacity of 1,725 beds, had 120 surgeons, more than 1,000 employees, and a completely equipped operating theater, various clinics, a pharmacy, and laboratories. The camp also maintained various schools and a playground for children, workshops for the

repair of clothes and shoe shops, a bathhouse, and a post office. At the end of the war, only 900 Jews remained in Westerbork when the Canadians liberated the camp. The German commander, A.K. Gemmeken, was sentenced by a Dutch court to 10 years' imprisonment. Among those deported from Westerbork on one of the last trains in September 1944 was Anne *Frank and her family.

[Abel Jacob Herzberg / Michael Berenbaum (2nd ed.)]

WESTERN WALL (Heb. הַכֹּתֶל הַמַּעֲרָבִי), that section of the western supporting wall of the *Temple Mount which has remained intact since the destruction of the Second Temple (70 C.E.). It became the most hallowed spot in Jewish religious and national consciousness and tradition by virtue of its proximity to the Western Wall of the Holy of Holies in the Temple, from which, according to numerous sources, the Divine Presence never departed. It became a center for mourning over the destruction of the Temple and Israel's exile, on the one hand, and of religious – and in the 20th century also national – communion with the memory of Israel's former glory and the hope for its restoration, on the other. Because of the former association, it became known in European languages as the "Wailing Wall" (or similar appellations). Most of the Western Wall of the Temple Mount, which was about 1,580 ft. (485 m.) long, is hidden by the buildings adjoining it. The accessible portion of the Wall was (until June 1967) no longer than 91 ft. (28 m.) from the Maḥkama building garden on the north to the Prophet's Gate (Barclay's Gate below the Moghrabis' Gate) on the south. In front of it ran a stone-paved alley no wider than 10 ft. (3.3 m.) bordered on its west by a slum area, the Moghrabi Quarter, established in the 14th century. The Wall above ground consisted of 24 courses of stones of different types of dressing and decreasing in size and age, reaching a total height of 58 ft. (18 m.) with 19 ft. (6 m.) above the level of the Temple Mount. In Warren's work in the 19th century 19 more courses were detected buried underground, the lowest founded on the natural rock of the Tyropoeon Valley.

In 1968 the ground in front of the Wall was excavated to reveal two of the buried courses of stone, and the Wall as it exists today consists of eight courses of huge, marginally dressed ("Herodian") stones from the Second Temple period, above which are four layers of smaller, plainly dressed stones from the Moslem (Umayyad) period, eighth century. The upper stones were constructed from the Mamluk period and later. Jewish travelers since the Crusader period used to marvel at the immense dimensions of the lower stones – average height 3¼ ft. (1 m.), and length 10 ft. (3.3 m.), but some as long as 39 ft. (12 m.) and weighing over 100 tons – and believed (incorrectly) that they were part of Solomon's Temple. In order

to withstand the pressure of the soil and debris fills situated behind the Wall, the courses of stone were laid with a slight batter, with each row being set back about two inches relative to the one beneath it. The Wall thus slants slightly eastward. This factor, the weight of the stones, and the accuracy of the cutting accounts for the unusual stability of the Wall.

In Jewish Tradition and History

Since 135 C.E. (the failure of the *Bar Kokhba revolt), the prayers of Israel both in Erez Israel and throughout the Diaspora were directed toward the site of the destroyed Temple. The Temple itself as well as all the structures on the Temple Mount were completely effaced, and thus the walls, the only remnants of the Temple Mount, became endeared to the Jews. It cannot be determined with certainty from what point prayers were offered just at this particular section of the Western Wall. The Midrashim already refer to the general sanctity of the Western Wall of the Temple in the fourth century C.E., perhaps referring to the time of Julian the Apostate. They speak of "the Western Wall of the Temple" or of "the Western Gate," from which the Divine Presence never moves, which was not destroyed and never will be destroyed (Ex. R. 2:2; Num. R. 11:2, etc.). It seems probable, however, that the rabbis were referring to the Western Wall of the Holy of Holies and that its indestructibility is symbolic rather than actual, since that wall was in fact destroyed. The notion of the ever-present *Shekhinah* therefore became associated with the Western Wall (of the Temple Mount). An 11th-century source – referred to as the "prayer at the gates" document – is known from the Cairo *Genizah*, and according to it Jews conducted prayers next to the Western Wall not in the present location but farther north immediately opposite the Holy of Holies of the Jewish Temple, i.e., in the area in front of "Warren's Gate." In the 12th century *Benjamin of Tudela mentions Jews coming to the Western Wall for prayers and to the "Mercy Gate," but it is possible that the other walls to the south and east also served a similar purpose. Later visiting rabbis (12th–15th centuries) also refer to the walls of the Temple Mount, but they, too, are not site-specific in terms of a gathering spot for Jewish worship along the Western Wall. The Western Wall is not mentioned at all by *Naḥmanides (13th century) in his detailed account of the Temple site in 1267 nor in the report of *Estori ha-Parḥi (14th century). It does not figure even in descriptions of Jerusalem in Jewish sources of the 15th century (e.g., Meshullam of Volterra, *Obadiah of Bertinoro, etc.). The name Western Wall, used by Obadiah, refers – as can be inferred from the context – to the southwestern corner of the wall, and there is no hint that there was a place of Jewish worship there.

It is only from the 16th century that Jews began praying at the present location and this is clear from the available sources.

Thenceforth all literary sources describe it as a place of assembly and prayer for Jews. According to a tradition transmitted by Moses *Ḥagiz, it was the sultan Selim, the conqueror of Jerusalem, who recovered the Wall from underneath the dungheap which was hiding it and granted permission to the Jews to hold prayers there. No Muslim sources about Jerusalem bear any evidence of Arab interest in the Western Wall. The nearby area became Muslim religious property at least as early as in the 13th century, and from 1320 there is mention of the Moghrabi Quarter established there.

With the expansion of the Jewish population in Erez Israel from the beginning of the 19th century onward, and with the increase in visitors, the popularity of the Western Wall grew among Jews. Its image began to appear in Jewish folkloristic art (upon ritual articles, seals, and title pages) and later also in modern art drawings (B. Shatz, J. Steinhardt, M. Chagall, and others). It also became a subject of literary creation. The 19th century also saw the beginning of the archaeological study of the Western Wall. In 1838 *Robinson discovered the arch since named after him, immediately south of the Western Wall, and in the 1850s J. Barclay investigated the lintel of an ancient gate (now in the corner of the women's section; see *Temple, The Second). In 1865 C.W. *Wilson described the arched structure previously discovered by Tobler in the 1830s. From 1867 Sir Charles *Warren sank shafts around the perimeter walls of the Temple Mount and was able to ascertain its full height on three sides. Excavations were conducted to the south of the Western Wall, beneath Robinson's Arch, to the southwest corner of the Temple Mount, as well as along the southern Temple Mount Wall, by B. Mazar from 1967 to 1978. More recently excavations were made beneath Robinson's Arch by R. Reich and Y. Bilig. To the north of the Western Wall, excavations were made along the Western Wall of the Temple Mount by the Ministry of Religious Affairs, and following that systematically by D. Bahat.

During the 19th century attempts were made on behalf of the Jewish community in connection with the Wall. In the 1850s Ḥakham Abdullah of Bombay failed in his efforts to buy the Wall. Sir Moses Montefiore tried in vain to obtain permission for placing benches or for installing a protection against rain there. Permission to pave the street was, however, granted. Occasionally a table for the reading of the Torah was placed near the Wall, but had to be soon removed at the demands of the Muslim religious authorities. In 1887 Baron Rothschild offered to buy the whole Moghrabi Quarter, and have it demolished. He proposed to the government that for the funds received the Waqf should obtain other lands and resettle there the residents evacuated from the Moghrabi Quarter. Although negotiations reached an advanced stage the plan never materialized for reasons not properly clarified to the present day. It is probable that objections were raised not only on the part of the Waqf, but also on the part of the rabbis and communal leaders of the Sephardi community on whose full cooperation Rothschild made conditional his handling of this delicate matter. It appears that certain rabbis observed that the conditions laid down for the designated Jewish sacred trust (*hekdesh*) would convert the area into a public domain (*reshut ha-rabbim*) with regard to carrying on the Sabbath and thus create halakhic difficulties. In addition interests and counter-

interests among the trustees of the various Sephardi sacred trusts foiled the plan.

Shortly before World War I, a further attempt to purchase the surroundings of the Western Wall was made by the Anglo-Palestine Bank. These negotiations were interrupted by the outbreak of the war. In 1912 the Turkish authorities ordered the removal of a partition between men and women, benches, a glass cupboard for candles, a table for reading the Torah, etc., about the introduction of which the Waqf had complained.

After the Balfour Declaration and the British Mandate had given the Jews a recognized national status in Ereẓ Israel, they began to add national significance to the traditional religious significance of the Western Wall. The Arab mufti incited his community against the Zionists (who, he claimed, intended to seize control of the Wall) by proclaiming it a sacred Muslim site which he named after the legendary horse "Al-Burak," upon which Mohammed is supposed to have ridden to Jerusalem and which he allegedly tied to this wall during his visit. Many intercommunal conflicts about the Western Wall occurred in the 1920s. In order to antagonize the Jews the mufti ordered the opening of a gate at the southern end of the street thus converting it into a thoroughfare for passersby and animals. In addition the Muslims deliberately held loud-voiced ceremonies in the vicinity. They also complained again about the placing of accessories of worship near the Wall, and a partition (between men and women) was forcibly removed – by the British police – on the Day of Atonement 1928. In August 1929 an instigated Muslim crowd rioted among the worshipers and destroyed ritual objects and, following the excitement and unrest this created, murderous riots broke out a few days later.

The British set up a committee of inquiry and consequently an international committee (consisting of a Swede, a Swiss, and a Dutchman) was appointed by the League of Nations to resolve "the problem of the Wall." Although this committee ascertained that the place was indeed holy to Jews well before the time of Saladin (i.e., 1187), this was most likely a reference to the holiness of the Temple Mount as a whole, with no clear chronological data as to the origins of the worship at the Western Wall being available to them. The committee met in Jerusalem, in the summer of 1930, and the results of "the trial of the Wall," as it became known, were as follows:

(a) the Muslims had absolute ownership of the Wall;

(b) the Jews had the uncontested right to worship and to place seats in the street;

(c) the Jews were not to blow the *shofar* there.

The Arabs objected. The Jews accepted, except for the prohibition to blow the *shofar*, which was considered a searing humiliation. Indeed, each year nationalist youths would blow the *shofar* near the Wall at the termination of the Day of Atonement, which would always lead to the intervention of the British police.

From December 1947, after bloody incidents with the Arabs, Jews were no longer able to approach the Western Wall,

and after the capitulation of the Jewish Quarter (of the Old City) in May 1948, Jews were prevented for 19 years from even looking at the Wall from afar. The paragraph in the cease-fire agreement granting freedom of access to the holy places was not kept by the Jordanians.

The Wall was liberated on the third day of the Six-Day War (June 7, 1967) by Israel's parachutists breaking through the "bloody gate," which the mufti had opened. The Moghrabi Quarter was immediately demolished and on the first day of Shavuot, one-quarter of a million Jews swarmed to the place. Subsequently the buildings placed against the Wall in its continuation southward were removed. The entire cleared area in front of the Western Wall was leveled and converted into a large paved open space. The lower square near the Wall is the prayer area, where one may find people praying or studying, either singly or in groups, day and night throughout the year. Since the liberation of the Wall, it has hosted national events and ceremonies, such as bar mitzvahs, the swearing in of new IDF troops, and memorial and religious services with the attendance of government officials. Under Israeli administration, the excavations made by Warren in 1867, north of the Wall beneath the Muslim structures, were renewed and extended, uncovering the continuation of the Wall northward beyond Wilson's bridge. To the south, too, archaeological excavations progressively revealed the impressive extent of the Wall. One of the main findings of the excavations was the Wall's tunnel, 488 meters in length. The tunnel passes near the foundations of the Western Wall of the Temple Mount and is considered the closest point to the Holy of Holies (*Kodesh ha-Kodashim*). Inside the tunnel is located the Warren Gate, one of the gates to the Temple which were closed by the Muslim Waqf. The tunnel was opened to the public in 1996 by order of Binyamin *Netanyahu, then Israel's prime minister. It led to violent clashes between Palestinians and Israeli police and soldiers which cost the lives of 15 Israelis and numerous Palestinians. Another site in the Wall complex is the archeological garden, located south of the Wall and consisting of remains of Jerusalem from the Second Temple period, mainly *mikva'ot* (see *mikveh*). In addition, there is a Herodian commercial street, with the remains of shops, which led visitors towards the Temple Mount. At the southern edge of the Wall a pile of hewn stones bears witness to the destruction of the Temple. Among the stones, archeologists have found a special one chiseled on five sides. The inscription led them to believe that it was the one used by the priest to announce the beginning of the Sabbath to the people of Jerusalem. Near the archeological garden is the Davidson Center, a glass building with four underground floors where exhibits from the Second Temple and Byzantine periods are on display.

°**WESTERWEEL, JOHAN** ("**Joop**"; 1899–1944), Dutch educator and Righteous Among the Nations. Born in Zutphen, the Netherlands, to parents belonging to the Darbyite Church, also known as the Plymouth Brethren, Johan (better known as Joop) Westerweel attended a denominational teachers college and developed a personal philosophy that combined elements of socialism with his own version of evangelical Christianity. His first teaching job was in the Dutch East Indies (today Indonesia), but he was soon in trouble for protesting the exploitation of the native population by the Dutch masters. When he refused to report for compulsory military training because of his pacifistic beliefs, he was expelled from the colony. Returning home, he joined the teaching faculty of a school, and later became principal of a Montessori school in Rotterdam. It was there, some while later, that he first came into contact with Jewish refugees from Germany and learned about the plight of the Jews under Hitler. Thus came about his contact with the Dutch branch of *He-Ḥalutz, an organization that prepared young people for a life of pioneering and agricultural work in Palestine and which had a training farm in Loosdrecht, near Amsterdam. In August 1942, when the 50-or-so trainees and instructors at the farm learned that they were slated for deportation within a few weeks, the group's leaders, Menachem Pinkhof and Joachim ("Shushu") Simon, turned to Westerweel for help; he had already temporarily hidden several Jews in his home. After listening attentively to their plans to help build a new society in Palestine, though opposed to nationalism in any form, he was impressed by their idealism and concluded that he had at least found a cause worthy of his fundamentalist piety, combined with his faith in socialism and his contempt for the Nazis. Immediately swinging into action, Westerweel set in motion a far-ranging plan to temporarily hide the farm's staff and students with friendly gentile families, assisted by trustworthy persons since then known as the Westerweel group, and then gradually move them to neutral Spain, whence they would proceed to Ereẓ Israel. To get to Spain meant traveling hundreds of miles across German-occupied Belgium and France, armed with forged papers. Westerweel organized and personally directed virtually every aspect of this operation, aided by his wife, Wilhelmina, and about a dozen underground activists, escorting most of the escapees all the way from the Netherlands to the Franco-Spanish border on the peak of the Pyrénées mountains. One of them recalled his parting words one freezing afternoon in 1944 high up in the mountains. "You are on the threshold of freedom. Soon you will arise in the land of freedom and will fulfill your goal of building Ereẓ Israel as a homeland for the world's Jews. I wish each of you happiness and good luck, but do not forget your comrades who fell along the road and by sacrificing their lives paved the way for your journey to freedom.… Remember the world's suffering, and build your land in such a way that it justifies its existence by providing freedom for all its inhabitants and abandoning war." Not long afterward, on March 11, 1944, he was arrested by the Germans at a Dutch-Belgium border-crossing point; Wilhelmina had already previously been arrested and confined to the Vught concentration camp. Brutally tortured, Joop refused to divulge the names of his associates. He was executed on August 11, 1944, just a few days after an attempt to rescue him ended in failure. He had once told his Jewish associates, "You're wrong in thinking I am helping you because you are Jewish. Even if you were blacks or Hottentots, no matter what, I would help you in the name of justice, for you are in need." While awaiting execution, Joop Westerweel penned a farewell message to his Jewish friends. It reads in part: "There they are … all my comrades, standing side by side with me; together we have advanced along this road to confront the enemy.… Whether I die or live is now all the same to me. A great light has dawned within me, enriching me. It is time for silent thoughts. The night is dark and long. But I am fully aglow from the splendor within me." His wife, Wilhelmina, was dispatched to Ravensbrueck concentration camp and luckily survived. The couple's four children were in hiding with friends. In 1963, Yad Vashem awarded Joop and Wilhelmina Westerweel the title of Righteous Among the Nations.

[Mordecai Paldiel (2ⁿᵈ ed.)]

WESTHEIMER, FRANK HENRY (1912–), U.S. organic chemist. He was born in Baltimore, Maryland, and educated at Dartmouth College and Harvard University, where he received his M.A. and Ph.D. He was National Research Fellow at Columbia University (1935–36) before joining the department of chemistry at the University of Chicago (1936–1954) where he became professor (1948). During this period he supervised the National Development Research Council's Explosives Research Laboratory (1944–45). He was Morris Loeb Professor of Chemistry at Harvard (1954–83) after which he became professor emeritus. Westheimer was among the first chemists to apply physical techniques to analyzing biochemical reactions, and he made outstanding contributions to understanding the

molecular mechanics of reactions involving phosphate esters, biphenyls, and beta-keto acids. He was a renowned teacher with a great interest in chemistry education; the Westheimer Report (1965) was the first to assess its relevance to U.S. public affairs. His many honors include the Cope Award (1982), the National Medal of Science (1986), the Priestley Medal (1988), and the Willard Gibbs Medal (2003). He was a foreign member of the Royal Society of London and was a member of the President's Science Advisory Committee (1967–70).

[Michael Denman (2nd ed.)]

WESTHEIMER, RUTH (1928–), sexologist and broadcaster. Born Karola Ruth Siegel to an affluent family in Frankfurt, Germany, she was sent to boarding school in Switzerland while her parents attempted to arrange passage for the rest of the family out of Nazi Germany. She was never to see them again; it is probable that they died in Auschwitz.

A staunch Zionist, she immigrated to Palestine at age 16, where she joined the Haganah and learned Hebrew. She moved to Paris in 1950, where she earned a degree in psychology from the Sorbonne. Moving to the U.S. in 1956, she received her doctorate in education from Columbia University in 1970.

Westheimer became familiar to millions of radio and TV viewers and listeners as Dr. Ruth, dispensing frank, unambiguous, commonsensical advice on sexual matters in a thickly European-accented English to callers. She received her initial break in the media in 1980 when WYNY-FM, a New York City radio station, gave her a late-night slot for her show *Sexually Speaking*. By 1983 it was the top-rated radio show in New York City and cleared the way for her to move into television with the widely syndicated *The Dr. Ruth Show* (1984–91). She also hosted the TV talk show *What's Up, Dr. Ruth?* (1989–90). From 2000 she appeared as Dr. Ruth Wordheimer in the educational/fantasy TV series *Between the Lions* on PBS. She also had a syndicated newspaper column called "Ask Dr. Ruth."

Advocating good sex in the context of loving relationships, Dr. Ruth also used books to spread her message. Her many publications include *Dr. Ruth's Guide to Good Sex* (1983); *Dr. Ruth's Guide to Married Lovers* (1986); an autobiography, *All in a Lifetime* (1987); *Sex and Morality* (1991); *Dr. Ruth's Guide to Safer Sex* (1992); *The Art of Arousal* (1993); *Dr. Ruth's Encyclopedia of Sex* (1994); *Sex for Dummies* (1995); *Heavenly Sex: Sexuality in the Jewish Tradition* (with J. Mark, 1995); *The Value of a Family* (with B. Yagoda, 1996); *Grandparenthood* (1998); *Pregnancy Guide for Couples* (with A. Grunebaum, 1999); *Power: The Ultimate Aphrodisiac* (2001); *Romance for Dummies* (2002); and *Human Sexuality* (with S. Lopater, 2002).

She maintained ties with Israel, visiting frequently and cooperating in joint projects with Israeli academics and publishers. In that sphere, she wrote *Surviving Salvation: The Ethiopian Jewish Family in Transition* (1993).

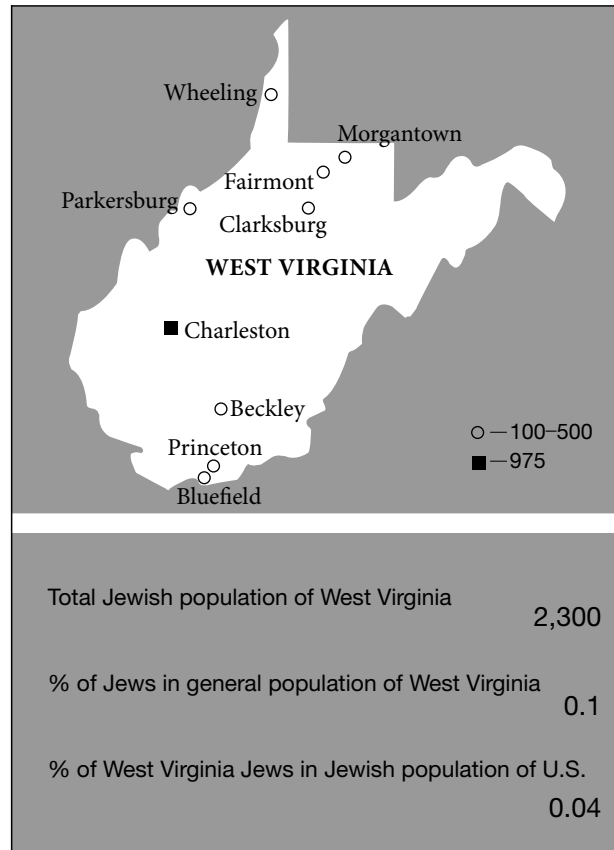
[Rohan Saxena and Ruth Beloff (2nd ed.)]

WESTPHALIA, region in Germany. During the Middle Ages Jews lived not only in the duchy of Westphalia but also in many of the bishoprics, cities, and earldoms of the region known as Westphalia. Jews were present in most areas by the beginning of the 13th century; many came from *Cologne, where a flourishing community existed at the end of the 12th century. They generally settled in small numbers; the first organized communities existed in *Muenster, *Minden, and *Dortmund, where Archbishop Conrad of Cologne granted the Jews a charter of privileges in 1250. Until the middle of the 14th century, they were under the jurisdiction of the country nobles. Later, with the strengthening of the towns, the Jews were placed under the municipal jurisdiction, and the number permitted to settle was limited. They earned their livelihood primarily by moneylending. The Jews of Westphalia were victims of the *Black Death persecutions in 1348–49, but during the second half of the 14th century they returned to the towns from which they had fled or had been expelled. Despite local expulsions, Jewish settlement continued in Westphalia. In the latter part of the 17th century, as well as in the 18th century, Jewish autonomy was severely restricted by governmental control and regulation. Nevertheless, the number of Jews increased. They were engaged not only in moneylending but also as merchants in gold, silver, cloth, and livestock.

The establishment of the Kingdom of Westphalia by Napoleon in 1807 brought a dramatic change in the status of the Jews. The Napoleonic kingdom was located to the west of Westphalia and was made up of portions of Hanover, Hesse, and other states. On January 27, 1808, the Jews were granted civic rights and – as the first Jews of Germany – could settle throughout the kingdom, engage in the profession of their choice, and had total freedom of commerce. After a few months, a *consistory was founded using the French institution as a prototype, and existed from 1808 to 1813 in the capital, *Kassel. Its president was Israel Jacobson, financial adviser to King Jerome Bonaparte, assisted by rabbis Loeb Mayer Berlin (1738–1814), Simon Kalkar (1754–1812), and Mendel Sternhardt (1768–1825). Also participating in the work of the consistory were two scholars, David Fraenkel (1779–1865), publisher of *Sulamit*, and Jeremiah *Heinemann (1778–1855). The secretary was S. Markel, the attorney for the municipal council of Kassel. Its task was the supervision of all Jewish activities in Westphalia. Innovations in the religious service were introduced that aroused considerable controversy, and new schools were formed, including a seminary in Kassel for the training of teachers and rabbis in 1810. Of particular interest was the experimental school in Kassel that combined secular and Jewish studies. Westphalia was divided into seven districts, each with its rabbi and his assistant. Jews were compelled to choose family names. Many were attracted by the liberal policies of the kingdom, and by 1810 the number of Jews had risen to 19,039. In 1813, however, the kingdom was abolished, and with it the consistory was dissolved.

Parts of the region known as Westphalia were included in the Prussian province of Westphalia in 1816, and the sta-

tus of the Jews became similar to that of their coreligionists of Prussia. Together with them, they gradually obtained their *emancipation between 1847 and 1867. In 1881 an organization of Westphalian communities was formed. The notorious anti-semite Adolf *Stoecker was active in Westphalia at the end of the 19th century. The Jewish population of Westphalia numbered 21,595 in 1932 (0.45% of the total). The principal communities were *Gelsenkirchen (population 1,440); Muenster (600); *Bielefeld (860); *Bochum (1,152); Dortmund (3,820); and *Hagen (650).


The rise of Nazism led to considerable Jewish emigration from Westphalia, as well as intensive adult education efforts on the part of the Jewish community. Many synagogues were destroyed in November 1938, and mass deportations emptied Westphalia of its Jews by 1941.

The community was renewed after the war, and a number of synagogues rebuilt. In 1946 Westphalia became a part of the modern federal state of North Rhine-Westphalia. There were 924 Jews living there in 1970. In 1989 the nine Jewish communities in Westphalia numbered 745. In 2004 there were ten communities with 7,204 members. The biggest communities are Dortmund (3,409); Bochum (1,147); and Muenster (753). This remarkable increase of membership is explained by the immigration of Jews from the former Soviet Union after 1990. In 1992 the Jewish museum of Westphalia was opened in the small town of Dorsten.

[Zvi Avneri / Larissa Daemmig (2nd ed.)]

WEST VIRGINIA, state in the E. Central section of the U.S. Coal mining has been the predominant industry, but with automation the number of coal miners has declined and there has been some migration out of the state. The Jewish population has also declined. From a reported high in 1956 of 6,000, the Jewish population fell to 4,755 in 1967 and, in 2001, 2,300

Total Jewish population of West Virginia	2,300
% of Jews in general population of West Virginia	0.1
% of West Virginia Jews in Jewish population of U.S.	0.04

Jewish communities in West Virginia. Population figures for 2001.

out of the total population of 1,808,000. The 2001 figures for the major Jewish communities were Beckley, 120; Bluefield-Princeton, 200; Charleston, 975; Clarksburg, 110; Fairmont, 140; Morgantown 200; Parkersburg, 110; and Wheeling, 290. Jewish life in the state has been largely a coextension of the religious organization. The first congregation, Leshem Shomayim, was formed in Wheeling in 1849; Charleston's B'nai Israel was formed in 1873. West Virginia's congregations, their numbers permitting, have always tried to maintain rabbinical leadership on a regular basis. The smaller congregations, unable to do so, have, especially in the southern part of the state, welcomed Reform student rabbis. Over a period of two or three decades more than 60 such rabbis served the smaller communities.

In addition to the congregations themselves, there are congregational women's organizations in most of the communities and congregational men's organizations in a few. Both the Zionist Organization and Hadassah are represented in five of the communities. The National Council of Jewish Women has a chapter only in Charleston. Fund-raising is conducted by a Federated Jewish Charities organization in Charleston, Huntington, and Bluefield-Princeton; in Wheeling it is conducted under the auspices of a Jewish community council. In the last few years there has been a considerable influx of Jewish students from the northern cities. Morris Harvey Col-

lege in Charleston has roughly 300 Jewish students; Marshall University in Huntington, 65; and West Virginia University in Morgantown, 300. The state university has a Hillel Foundation which was directed by Rabbi Herbert J. Wilner, who also served as spiritual leader of Morgantown's Congregation Tree of Life. Jews have always taken a vigorous part in public affairs. In 1957–58, Harold L. Frankel served as mayor of Huntington. Serving in the West Virginia House of Delegates (lower division of the state legislature) in the early 1970s were Ivor F. Boiarsky, Simon H. Galperin, Jr., and Leo G. Kopelman. Paul J. Kaufman was a member of the Senate. Fred H. Caplan was a member of the five-man Supreme Court of Appeals. Others serving in the previous decade in the House of Delegates were David A. Abrams, David M. Baker, Stanley E. Deutsch, and Fred H. Caplan. Rabbis, too, have been prominently involved in state affairs. Rabbi Martin Siegel of Wheeling was chairman of the West Virginia Arts and Humanities Council; Rabbi Samuel Cooper, from 1932 rabbi of Charleston's B'nai Jacob Congregation, was chairman of the West Virginia Human Rights Commission. Rabbi Samuel Volkman, rabbi of Charleston's B'nai Israel Congregation from 1952 and regional director of the Union of American Hebrew Congregations from 1957 to 1959, served as a member of the West Virginia Advisory Committee to the U.S. Commission on Civil Rights.

[Samuel Volkman]

There were two synagogues in Charlestown, a traditional congregation with an Orthodox rabbi and a Reform Congregation. There was a Conservative Synagogue in Clarksburg and a joint Conservative/Reform Congregation in Huntington. There were Reform Synagogues in Logan, Martinsburg, Parkersburg, Welsch, Wheeling, and Williamson

°WETTE, DE, WILHELM MARTIN LEBERECHT (1780–1849), German biblical scholar and theologian; born at Ulla, near Weimar, and died in Basle. De Wette came from a family of Protestant clerics of Dutch origin. He was appointed privat-docent in theology at the University of Jena in 1805. From 1807 to 1810 he was professor of biblical exegesis at Heidelberg. At *Schleiermacher's suggestion he was invited to join the newly established faculty of theology in Berlin, but his liberal views caused his dismissal in 1819. He returned to Weimar and stayed there until he was offered the post of professor of ethics and theology at Basle in 1822. This marked the beginning of the second phase of his scholarly activity, during which he became more and more conservative in his views, thereby arousing the antagonism of the rationalists, to whom he had himself previously belonged.

In his lifetime, de Wette was one of the most renowned theologians and religious scholars. In Bible criticism, his main contributions are to be found in his early writings – his dissertation on Deuteronomy, written in Latin (*Dissertatio critico-exegetica, qua Deuteronomium a prioribus Pentateuchi libris diversum …*, 1805) and his book *Beitraege zur Einleitung in das Alte Testament* (2 vols., 1806–07). As against the "fragments" hypothesis prevailing at the time, he maintained the unity of the Book of Deuteronomy and pointed out its unique qualities, both in form and contents. It was he who linked Deuteronomy to the reform introduced by *Josiah (II Kings 22–23), concluding that the book had been composed in that period. He also asserted that the Former Prophets were edited by the Deuteronomistic school, and deprecated the historical reliability of the books of Chronicles. These conclusions eventually became cornerstones of modern biblical scholarship and established de Wette as one of the great biblical scholars of the 19th century. Another noteworthy work of de Wette in the field of biblical criticism was his *Commentar ueber die Psalmen* (1811, 1836[4]) which betrays J.G. Herder's influence, stressing as it does the aesthetic aspect of the text. This was also the first attempt to classify the Psalms on the basis of literary genres, a method subsequently developed by Hermann *Gunkel. De Wette's German translation of the Bible (1809–11), including the Apocrypha, is distinguished by its strict adherence to the original, sometimes to the extent of sacrificing the fluency of the translations.

WETTSTEIN, FEIVEL HIRSCH (1858–1924), Polish historian. Wettstein spent his whole life in his native Cracow, where he owned a bookstore. Through the influence of his teacher, Ḥayyim Nathan *Dembitzer, and while still young, he began to study the history of the Jews in Poland, especially in Cracow, from material available in old responsa and in the minute books and archives of communities and societies. His monographs (published in various periodicals) illuminated obscure periods in the history of the Jews of Poland and served as valuable sources for historians of Polish Jewry such as Meir *Balaban and others. Wettstein's studies are distinguished by careful scholarship and the avoidance of unfounded conjectures.

His works include *Kadmoniyyot mi-Pinkesaʾot Yeshanim le-Korot Yisrael be-Polin bi-Khelal u-vi-Cracow bi-Ferat* (1892); a biography, *Le-Toledot S.J. Rapaport* (1900); *Devarim Attikim mi-Pinkesei ha-Kahal bi-Cracow* (1901); and *Le-Korot ha-Yehudim be-Polin u-ve-Yiḥud bi-Cracow …* (1918).

WETZLAR, city near Koblenz, Germany. Evidence for the presence of Jews in Wetzlar dates from after 1250, but Jews probably settled there as early as 1200. Although in 1265 Archbishop Werner of Mainz promised to protect the Jews of Wetzlar, toward the end of the century they were among those Jews

accompanying R. *Meir b. Baruch of Rothenburg in his attempted emigration from Germany. A *Judengasse* (see *Jewish Quarter) in Wetzlar dates from 1292; a synagogue was established by 1318. Both Jews and Christians acted as moneylenders in the city, lending a considerable sum to Emperor Louis IV in 1347. In 1349 the *Black Death persecutions brought an end to the community, but by 1360 Jews were once more residing in the city. In 1382 King *Wenceslaus extended the privilege of admitting Jews to the municipal council of Wetzlar. There were 20 Jews in the city in 1385 and 30 in 1442. In 1524 the municipal authorities sought to regulate *kasher* slaughtering, and in 1544 they unsuccessfully attempted to expel the entire Jewish community. By 1546 there were 50 Jews in Wetzlar. They were all expelled in 1598, but by 1604 some had returned, their number growing to 80 by 1625. A cemetery was consecrated in 1626; until then burial had taken place in Frankfurt. In the second half of the 16th century Isaac Levita, a Jew born in Wetzlar, was appointed to teach at the University of Cologne after he had converted to Protestantism. Also of prominence during the period were R. Joel of Wetzlar (d. 1698) and R. Solomon b. Simeon Wetzlar, author of *Ḥakirot ha-Lev* (Amsterdam, 1731).

The 18th century brought with it a significant rise in Jewish economic activity. Around 1735 Leib Wetzlar was a known business associate of Joseph Suess *Oppenheimer, and Abraham Wetzlar (1715–1799) became a financier of the imperial court. Although the population was legally limited to 12 families of *Schutzjuden* for most of the 18th century, in actuality 18 to 20 families, comprising some 100 persons, lived in Wetzlar during that time. In 1756 a synagogue was dedicated by the Jewish community. Some amelioration of discriminatory practices against Jews was brought about by Napoleonic reforms, beginning in 1803, but a reaction to this followed again after Wetzlar's incorporation into Prussia in 1815. By 1823 there were 101 Jews in the city. In 1880 there were 210; and in 1933 there were 132. Although the community supported a religious school, it considered itself under the jurisdiction of the rabbinate of Marburg. It maintained a synagogue, a cemetery, and a philanthropic organization. During the Holocaust, 41 Jews from the district emigrated and 68 perished.

Jahrhunderts (1200–1850)* (1966); Aronius, Regesten, 291 para. 706; A. Kober, *Cologne* (Eng., 1940), 174–5; FJW, 226; *Statistisches Jahrbuch des deutsch-israelitischen Gemeindebundes* (1903), 78.

[Alexander Shapiro]

WETZLAR VON PLANKENSTERN, aristocratic Austrian family. The first identifiable member of the family was AMSCHEL WETZLAR of Frankfurt (d. 1605?); one of his descendants moved to Offenbach where ABRAHAM WETZLAR (c. 1714–1799) was born. During the Seven Years' War (1756–63) Abraham became an army contractor for Austria and amassed a large fortune. In 1763 he received the title of court agent and six years later obtained permission (together with Isaac *Arnstein) to live among the Christians of Vienna (other distinguished Jews received this privilege only in 1782). On Feb. 17, 1776, he converted to Catholicism and adopted the name Karl from his godfather, Count Pálffy. Shortly thereafter he addressed an obsequious letter to the emperor, enumerating his services to the state, and requesting to be elevated to the nobility with the title of imperial counselor, the one sign of favor from which he had been excluded by his former religion. His request was granted by Joseph *II who remarked: "Since part of his family is already baptized and the rest will soon follow, I agree to the requested ennoblement." During the next three years his ten children were all baptized and received the title von Plankenstern; only LEONORE (1732–1813), his wife, remained true to her religion, unsuccessfully opposing the apostasy of her family. Karl Abraham, determined to become the equal of his fellow noblemen, was accepted into the ranks of the aristocracy and was invested with the estates he had acquired in Lower Austria.

Karl Abraham's daughters married into respected aristocratic families, as did his four sons. The latter did not possess their father's business acumen and the family fortunes gradually declined. All his grandsons entered the army or navy. His son RAYMUND (1752–1810) married Joanna Theresia von Picquigny (1749–1793), herself a daughter of a recently converted French army supplier. Raymund, a music lover, was Mozart's landlord, patron, and godfather to his eldest child. Other distinguished descendants were IGNAZ (1787–1841), who married into the Arnstein family and received Austria's highest military decoration in 1815; HEINRICH ADOLF (1813–60), who joined the Ottoman army and became a Muslim; GUSTAV (1813–1881), who attained the rank of field marshal-lieutenant; and KARL VON BEMBRUNN, who became an actor in 1810 after being captured by the French and forced to swear not to fight against them. He appeared on the stage under the pseudonym Carl Carl, much to the displeasure of his former comrades.

WEXLER, HARRY (1911–1962), U.S. meteorologist. Born in Fall River, Mass., Wexler entered the Federal Weather Bureau in 1934 and was appointed head of the research section of its scientific services in 1946. From 1955 until his death, he was research director of the Weather Bureau and was also chief scientist in the U.S. Antarctic Expedition during the Third International Geophysical Year, of which he was one of the main organizers. One of Wexler's important published contributions dealt with the high concentration of ozone in the Antarctic atmosphere. He advanced a theory which shed light on the mechanism of air circulation at the South Pole and stressed the importance of ozone as a trace element. He studied volcanic dust and its influence on the world's climate and climatic variations and on the expansion of storms in the upper atmosphere.

[Dov Ashbel]

WEXLER, ROBERT D. (1951–), U.S. educator. Wexler was born in Los Angeles in 1951 and received his early Jewish education at Wilshire Boulevard Temple, a Reform congregation. He was introduced to traditional Judaism when he attended a local Orthodox summer camp, where he met his future wife, Hannah Goldhaar, and became profoundly influenced by her family, who were Holocaust survivors and deeply committed to Zionism.

While attending UCLA as an undergraduate, Wexler began taking classes at the Los Angeles branch of the Hebrew Union College (HUC), with the intention of becoming a Reform rabbi. But he was increasingly drawn to a more observant life style and a more traditional theology, and in 1969 he left HUC and enrolled part-time at the University of Judaism (UJ).

After receiving his B.A. in sociology in 1971, he enrolled full-time at the UJ's new pre-rabbinic program, and later spent three years in the rabbinical school of the Jewish Theological Seminary in New York, where he was ordained in 1977. In order to prepare himself for possible future immigration to Israel, Wexler spent those same three years in New York earning an M.B.A. degree from Baruch College of the City University of New York. Wexler also taught at JTS's Prozdor High School. Before returning to Los Angeles in 1978, he spent a year on the faculty of Princeton University in the Department of Near Eastern Languages.

At the invitation of then-president David Lieber, Wexler was invited to join the faculty of the University of Judaism in 1978. Wexler also enrolled in a doctoral program at UCLA, where he received both an M.A. and Ph.D. from the Department of Near Eastern Languages. At the University of Judaism, Wexler filled a variety of administrative positions before succeeding David Lieber as president in 1992.

Wexler became an adherent of the social philosophy of Mordecai Kaplan and the concept of Judaism as a civilization. Recognizing the growing trend away from denominationalism, Wexler quickly steered the UJ toward a nondenominational position within the Jewish mainstream.

During the first decade of his presidency, Wexler launched three major initiatives: the Ziegler School for Rabbinic Studies, the Center for Israel Studies, and the Ziering Institute. In 1995 he founded at the UJ the Ziegler School of Rabbinical Studies, which was the first American rabbinical school in the western United States.

The Center for Israel Studies was created in response to Wexler's growing conviction that American Jews needed to be educated more fully about the history, politics, and culture of the modern state of Israel. In 2001 the UJ inaugurated a lecture series at the Universal Amphitheater, which has been attended by over 5,000 people annually. Serving as moderator of the series, Wexler gained a reputation for his interviews with national political figures, such as former U.S. president Bill Clinton, former Israeli prime ministers Ehud Barak and Shimon Peres, and former U.S. secretaries of state, Henry Kissinger and Madeleine Albright.

In addition to his work at the University of Judaism, Wexler served in a variety of community leadership roles. He chaired the Los Angeles Federation's Commission on Israelis and the Committee on Jewish Education.

[Iris Waskow (2nd ed.)]

WEXLER, WILLIAM ABE (1913–2000), U.S. communal leader. Wexler, born in Toledo, Ohio, was an optometrist practicing in Savannah, Georgia, from 1938. He served a term as alderman in Savannah in 1946–47. He first took on a national leadership position as chairman of the United Jewish Appeal from 1951 to 1956 and led the Israel Bond drive from 1957 to 1963. Wexler was president of B'nai B'rith from 1965 until 1971. Under his aegis B'nai B'rith maintained an action policy that encouraged participation by young people through Hillel Foundations and the Young Adult groups, despite turbulence and disaffection among students; solidified the Jewish community's efforts to support Israel, through B'nai B'rith and through the Conference of Presidents of Major American Jewish Organizations, which Wexler chaired from 1968 to 1972; and aided in the campaign in support of Soviet Jewry. In 1971 he succeeded Nahum *Goldmann as president of the *World Conference of Jewish Organizations.

WEXNER, LESLIE H. (1937–), U.S. entrepreneur, civic leader, and philanthropist. Born in Dayton, Ohio, Wexner moved to Columbus, Ohio, when he was a teenager. After graduating from Ohio State University, he worked briefly in his father's clothing shop. In 1963 his own merchandising career began when he borrowed $5000 from an aunt and opened the first "The Limited" store in Columbus, Ohio. "The Limited" (now "Limited Brands") has grown to encompass thousands of stores throughout the United States, but Wexner's corporate headquarters and home remain in Columbus. In recent assessments by *Forbes* magazine, his wealth has been estimated at $2.6 billion.

The Wexner Foundation and the Wexner Heritage Foundation (now part of The Wexner Foundation) were established by Wexner in 1984. The Wexner Heritage program was designed to provide young American Jewish lay leaders with a two-year intensive Jewish learning program, thus deepening their understanding of Jewish history, values, and texts and enriching their leadership skills. By the end of 2005, approximately 1,500 North American Jewish leaders from 31 cities had participated in the program.

In 1988 The Wexner Foundation introduced a Fellowship Program for outstanding rabbinical students and graduate students in Jewish education and Jewish communal service programs. The same year the foundation established a grants program for academic institutions of all types to build and improve training programs for Jewish community professionals. Eventually, the Fellowship Program was expanded to include top candidates for academic Jewish studies and the cantorate. By the end of 2005, approximately 300 outstanding Jewish professional leaders from a wide array of religious af-

filiations and professional groupings had participated in the Wexner Graduate Fellowship Program.

Additionally, in 1988, the Wexner Israel Fellowship Program was created. Annually, up to 10 outstanding mid-career Israeli public officials are selected to study for a master's degree in the mid-career program of Harvard's Kennedy School of Government. The goal of the fellowship is to provide Israel's next generation of public leaders with advanced leadership and public management training. As of the end of 2005, 163 Israeli public officials had participated in the Israel Fellowship, including leaders who had gone on to become director generals of government ministries, generals and commanders in the Israeli military, and top advisors to prime ministers.

The Wexner Foundation appeared early on the scene of Jewish private philanthropy and in many ways pioneered a new field that has grown to include dozens of private foundations that devote themselves on a national and international scale to the needs of the Jewish people. The Wexner Foundation has never wavered from its focus upon Jewish leadership, and its professionalism, standards of program excellence, and strong relationships with Jewish communities and organizations have created a model of practice for Jewish private philanthropy that has passed the test of time.

Wexner's leadership among major Jewish philanthropists was evidenced by his role in helping to convene and ultimately lead a group of some two dozen philanthropic peers in an effort that was known technically as the "Study Group" but more widely as the "Mega Group." This group of elite Jewish philanthropists was formed in 1991 and developed as an effort to conduct a high-minded philanthropic discussion about the pressing issues of the Jewish people. The group motivated a number of individual and collaborative philanthropic initiatives that, arguably, would not have otherwise occurred, including the Partnership for Excellence in Jewish Education, Birthright Israel, the upgrading of national Hillel, and more. Wexner co-chaired the group with Charles Bronfman during the final years of its existence. While the group no longer exists in its original form, successor groups have surfaced and many of the original members continue to work closely with each other as a result of the associations they developed within the Study Group.

Leslie Wexner's wife, Abigail Wexner, an accomplished attorney, has emerged as a major civic and philanthropic leader in her own right, and has also worked closely with The Wexner Foundation in shaping its programs and future. Mrs. Wexner has served as Chair of The Columbus Foundation and as Chairman of the Board of Children's Hospital, Columbus. She is nationally recognized as a leader who has spearheaded cutting edge programs and services addressing domestic violence in central Ohio and beyond.

Leslie Wexner's philanthropy revolves around a belief in the centrality of leadership and its potential to shape the future. This passion for developing leaders is at the heart of the programs of the Foundation, but extends far beyond them as well.

In business, his storied rise as the son of working class immigrants who became the innovator of specialty retailing in America is near legendary. Wexner began his company in 1963 with one store in Columbus, Ohio. "The Limited" had sales of $473 on the first day of business and first year sales of $160,000. Today, as Chairman, President and CEO of Limited Brands, he leads a company that operates more than 3700 stores, including Victoria's Secret, Express, The Limited, Henri Bendel, Bath and Body Works, and The White Barn Candle Company. Sales for Limited Brands exceeded $9.4 billion in 2004.

In civic life, Wexner's leadership was the force behind the development of the Wexner Center for the Arts at Ohio State University, behind the creation of the Wexner Institute for Pediatric Research at Children's Hospital, and that elevated Columbus' United Way to successes never before imagined. By example, he has sought to "give back" to the community in many ways. He is also a founding member of the Ohio State University Foundation, Chairman of the Columbus Partnership, and Chairman Emeritus of the Ohio State University Board of Trustees.

Wexner serves as Visiting Instructor of Leadership at Harvard University's Kennedy School of Government, where he also sits as a member of the Visiting Committee. His annual lectures on leadership at Harvard are attended by a wide cross-section of students, faculty, and community leaders. The Wexners also spearheaded the development of the Center for Public Leadership at the Kennedy School. Directed by David Gergen, the Center has already become one of North America's most prestigious academic initiatives for the study, teaching, and development of public leadership.

In Jewish life, his leadership activities have been widely acknowledged, including honorary degrees from Yeshiva University, Hebrew Union College, the Jewish Theological Seminary of America, and Brandeis University. In Central Ohio, Wexner's leadership of the Columbus Jewish Federation and his role in developing Wexner Heritage Village (a campus of services and residences for the elderly), the Wexner Jewish Student Center at Ohio State University, and other model programs underscore a personal philosophy that integrity in philanthropy must begin at home, in one's own community, and expand outward from that basis.

In the final analysis, Wexner's impact upon the Jewish people will be his investment in Jewish leaders – in Israel and in North America. Wexner's leadership programs take seriously the responsibility and capacity of leaders to shape a new future for the Jewish people. His programs are pluralistic and embrace the wide sweep of diversity within Jewish life, while building community and commonality from that diversity. Many imagine that there will be Wexner Israel Fellows who will become prime ministers of the State of Israel, Wexner Graduate Fellows who transform Jewish professional leadership into a new force for change in the coming century, and Wexner Heritage alumni who will rethink and rebuild their Jewish communities into more relevant, responsive and dy-

namic organizational forms. Meanwhile, Wexner and his wife continue to exercise their own leadership, in business, politics, and civic and Jewish life – forever learning and teaching the meaning and promise of mobilizing others around the enduring values and challenges of human life.

[Larry Moses (2nd ed.)]

WEYL, MEIR BEN SIMḤAH (1744–1826), German rabbi. Weyl was born in *Lissa and studied under Ẓevi Hirsch of Janow. He arrived in Berlin in 1783 and was soon elected head of the *bet midrash* and *dayyan*. After Hirschel Levin's death (1800) the reform-minded community leaders delayed his appointment as rabbi until 1809, when they reluctantly made him *Vize-Ober-Landrabbiner.* His patriotic sermons of 1809–13 won him renown. One such sermon of 1813 was republished after World War I as proof of Jewish patriotism. Weyl battled against the Berlin *Haskalah movement and its chief representative, David *Friedlaender. An acknowledged talmudic authority as well as a vehement opponent of Reform, in 1818 the Orthodox elements in the community of Copenhagen appealed to him in their conflict with a Reform group. He sharply attacked the use of German in prayer, and largely through his efforts a royal order was issued dated Dec. 23, 1823, that Jews were to pray only according to their previous custom. When in 1824 the elders of the Berlin community contemplated establishing a teachers seminary and invited L. *Zunz and L. *Bendavid to plan the syllabus, Weyl retaliated by appealing directly to Altenstein, the minister of religion, with his own plan, which was approved. For lack of community support, however, the plan for a seminary was soon dropped. Weyl held halakhic discussions with Akiva *Eger of Posen and Solomon Zalman *Posner of Warsaw.

WHEAT, grain belonging to the genus *Triticum*, of which many species exist. Several species of *Triticum* are grown in Israel, some called *ḥittah* (pl. *ḥittim*) and others *kussemet, kusmin*, and *shippon* (for this identification see *Five Species).

(1) *Ḥittah* is the name applied to two species grown in Israel: hard wheat – *Triticum durum*, and bread wheat – *Triticum vulgare* (*aestivum*). The former is called "dark" and the latter "white" in the Mishnah (BB 5:6). The name *ḥittah*, with slight variations, is common to all the Semitic languages, mostly in the form of *ḥintah*, connected with the verb *ḥanot* ("to project"), because the grains project from the pales of the ear of the wheat when it ripens. In rabbinic literature these are termed *levush* ("garment"). When threshed, these *levushim* disintegrate and the grain emerges. Hence the saying: "In the time to come [at the resurrection] the righteous will rise [dressed] in their own clothes. This can be deduced a fortiori from a grain of wheat. If a grain of wheat that is buried

naked sprouts up with many garments …" (Ket. 111b). *Ḥittah* is the most valuable of the five species of cereal. According to one *aggadah*, "the tree of knowledge was *ḥittah*" (Sanh. 70b). It is mentioned first among the seven species with which Israel is blessed (Deut. 8:8). It requires good and well-tilled land, and an abundance of *ḥittim* symbolizes well-being and peace (Ps. 81:17).

Wheat, like *barley, is sown at the beginning of the winter, but it develops more slowly (Ex. 9:31–32) and ripens about two months after barley, from which the *Omer* is brought on Passover. Seven weeks later "the firstfruits of the *ḥittim* harvest" are offered (Ex. 34:22). Ezekiel (27:17) mentions "*ḥittim* of Minnith" which "Judah and Israel" peddled, the reference being to the locality of Minnith in the land of Ammon (Judg. 11:33). Similarly, Arbelite and Midian *ḥittim* are mentioned as excellent varieties (TJ, Sot. 9:13, 24b; Shab. 9:6, 12b). The *aggadah* refers to 500 confections made from *ḥittim* (Lam. R. 3:17 no. 6). The choicest *ḥittim*, used in meal-offerings, came from Michmas and Zoniḥah (Men. 8:1). Wheat was dearer than barley, and according to Josephus (Wars 5:427), it was the food of the rich. During the time of the Mishnah and Talmud, however, when the agricultural situation in Israel improved, wheat became the common food of all. "One who grows wheat is sure of his bread, but one who buys wheat in the market, his future is doubtful" (Men. 103b).

(2) *Kussemet* or *kusmin* has been identified with emmer wheat – *Triticum dicoccum*, a plant which has grown in Israel from earliest times. Remnants have been found in excavations in Israel and in Egyptian tombs. A similar species, *Triticum dioccoides*, grows wild in Israel and apparently is the species from which emmer wheat originated. The discovery of this species by Aaron *Aaronsohn in Rosh Pinah in 1906 caused a sensation in the botanical world. He maintained that it was the "mother" of all species of wheat, an opinion still upheld by some botanists. The general opinion, however, is that it is the "mother" of emmer wheat only. Like the *ḥittah*, the *kussemet* was not smitten by the hail in Egypt because it ripens late and its growth is slow (Ex. 9:32). Isaiah (28:25) enumerates it among the crops sown by the farmer, and it was also included in the mixed bread that Ezekiel ate for 390 days (Ezek. 4:9). In rabbinical literature it is always included among the five species of corn. In taste it is very like *ḥittah* (Ḥal. 4:2; Pes. 35a), but its nutritional value in relation to bulk is less because of the chaff that sticks to the grains (BM 40a). To remove these husks the wheat was moistened and trodden by cattle so as to release the grain (BM 89b and Rashi). In Aramaic *kussemet* is called *gulba* (Men. 70a), a word meaning "cut" or "shorn," a similar connotation to *kussemet*, which comes from *kasam* meaning "clipper of hairs" (cf. Ezek. 44:20). The name derives from the short hairs of the ears which look as though they have been cut. Another species of wheat, spelt wheat or *Triticum spelta*, identified by some commentators with *kussemet*, has similar characteristics, but no remnants of spelt from the biblical period have been found in the region. It seems that it is the *shippon* of rabbinical literature.

(3) *Shippon* is also enumerated among the five species of corn. For the law of *mixing of species it is regarded as belonging to the same species as *kussemet* (*kusmin*; Kil. 1:1), but in taste it is associated with barley (Pes. 35a). These indications are compatible with spelt, which resembles emmer wheat but has a barley flavor. Apparently its growth was not very widespread (at the present day also, its growth is very limited), and it is mentioned only a few times in rabbinical literature. This identification is mentioned by the *Arukh* (s.v. *dashr*). Now, however, it is usual, following Rashi, to identify *shippon* with rye – *Secale cereale*. This identification cannot be accepted, as this plant is not suited to the conditions of Erez Israel and was not grown there. It is also erroneous, as is usually done, to apply the name *kussemet* to buckwheat – *Fagopyrum esculeutum* – since it was never grown in Israel and does not fit any of the descriptions of *kussemet*.

WHITE, HARRY D. (1892–1948), U.S. economist. Born in Boston, Mass., White spent his early years in his father's hardware business, and for several years taught on Sunday mornings at the Home for Jewish Children in Dorchester. After serving overseas during World War I, White became head of Corner House, a settlement house in New York City, and worked as director of a summer camp for boys. While studying for his doctorate at Harvard, he was an instructor in economics; from 1932 to 1934 he taught at Lawrence College in Wisconsin.

White moved to Washington in 1934 to serve as a financial expert at the U.S. Treasury. He became the chief economic analyst for the U.S. Tariff Commission, but soon returned to the Treasury Department to serve as the principal economic analyst in the division of research and statistics, and in 1936 as assistant director of research. In 1938 White was made director of monetary research. His monetary proposals were accepted as the basis for the Bretton Woods Conference, attended by representatives of 44 nations. The "White Plan," which was accepted over the "Keynes Plan," called for the establishment of international trade based on the gold monetary unit. White became assistant secretary of the Treasury in charge of monetary research and foreign funds control in 1945 and the following year was made U.S. executive director of the International Monetary Fund. While in the Treasury Department, he managed the currency stabilization fund, represented the Treasury at committee meetings of the Economic Defense Board, and was a trustee of the Export-Import Bank. He is considered the author of the "Morgenthau Plan" for dealing with postwar Germany, and of other postwar economic plans. White was accused of giving information to a wartime Soviet spy ring and of pushing certain employees toward positions in government in which they would have access to informa-

tion. He endured a congressional investigation while suffering from heart trouble, which was greatly aggravated by the strain of the sessions, and he died before the investigations had been concluded. White wrote *The French International Accounts: 1880–1913* (1933) and he updated F.W. Taussig's *Some Aspects of the Tariff Question* (1934³).

BIBLIOGRAPHY: N.I. White, *Harry Dexter White; Loyal American* (1956); *New York Times* (Aug. 18, 1948).

WHITE, MORTON GABRIEL (1917–), U.S. philosopher. Born in New York, White received his Ph.D. from Columbia University in 1942. He taught physics at City College, Columbia, and at the University of Pennsylvania. In 1948 he joined the staff at Harvard as professor of philosophy, where he taught until 1970. From 1954 to 1957 he served as chairman of the philosophy department. From 1970 to 1987 he was a professor at Princeton's Institute for Advanced Study. After retiring from teaching, he was named philosophy and intellectual history professor emeritus at the institute's School of Historical Studies.

White's main philosophical contributions are in the areas of epistemology and social and political philosophy. Such works as *The Origin of Dewey's Instrumentalism* (1943) and *Social Thought in America* (1949) reveal the influence of American pragmatism in his thought. White also wrote on the paradox of analysis, a dilemma which holds that all analysis is either trivial or false, and on the analytic-synthetic distinction. In his paper "The Analytic and the Synthetic: An Untenable Dualism" in *John Dewey: Philosopher of Science and Freedom* (ed. by S. Hook, 1950), White contends that the distinction is one of degree and not one of kind, as traditional philosophers maintain.

Among his other important publications are *Toward Reunion in Philosophy* (1956); *Religion, Politics and the Higher Learning* (1959); *The Intellectual vs. the City* (with L. White, 1962); *Foundations of Historical Knowledge* (1965); *Science and Sentiment in America* (1972); *The Question of Free Will* (1993); his autobiography, *A Philosopher's Story* (1999); *A Philosophy of Culture* (2002); and *From a Philosophical Point of View* (2004).

[Arthur Stroll / Ruth Beloff (2nd ed.)]

WHITE, ROBERT MAYER (1923–), U.S. meteorologist. Born in Boston, Mass., White received a B.A. degree in geology from Harvard University and M.S. and Sc.D. degrees (1950) in meteorology from the Massachusetts Institute of Technology. White was president of the National Academy of Engineering from 1983 to 1995. Prior to that, he was president of the University Corporation for Atmospheric Research (UCAR). He served in scientific leadership positions under five U.S. presidents. He was appointed chief of the U.S. Weather Bureau and the first administrator of the National Oceanic and Atmospheric Administration. His years of government service include positions as U.S. Commissioner to the International Whaling Commission and U.S. Permanent Representative to

the World Meteorological Organization. He is credited with bringing about a revolution in the U.S. weather warning system with satellite and computer technology. Before joining the government, he founded one of the first corporations devoted to environmental science and services.

White was the Karl T. Compton Lecturer at the Massachusetts Institute of Technology in 1995–96. He was a senior fellow at UCAR and the H. John Heinz III Center for Science, Economics, and the Environment. His many awards include the Rockefeller Public Service Award for the Protection of Natural Resources and the International Meteorological Organization Prize.

[Bracha Rager (2nd ed.)]

WHITE, THEODORE H. ("**Teddy**"; 1915–1986), U.S. journalist and author. White was born in Boston, Massachusetts. He studied at Harvard University, graduating in 1938. His grandfather was a rabbi from Pinsk who spent his last days in pious devotion at the Western Wall in Jerusalem. In his autobiography *In Search of History* (1978), White refers to his Jewish and Hebrew education. "What I learned, then, from age 10 to age 14, when I went on to evening courses at the Hebrew College of Boston was the Bible …." "We learned it, absorbed it, thought in it, until the ancient Hebrew became a working rhythm in the mind, until it became a second language. Memory was the foundation of learning at the Hebrew school, and the memory cut grooves on young minds that even decades cannot erase. Even now, when a biblical phrase runs through my mind, I am trapped and annoyed unless I convert it into Hebrew – whereupon the memory retrieves it from Boston, Mass., where little Jewish-American boys were forced to learn of nomads and peasants of three thousand years ago, forced to learn of spotted lambs, of the searing summer and of the saving rains (Yoreh and Malkosh)." In later years, he used to make his own Haggadah for Passover written on special cards and assigning the parts to his children. In his youth, Teddy White helped to organize the student Zionist activists on the New England campuses in the Avukah (Torch) Society. He helped organize a boycott of German goods in Boston. White was "lured" however to other interests which he defined as Harvard and history. A year after graduating from Harvard, Teddy White was *Time* magazine's war correspondent in China and, by 1945, at the age of 30, he was Time Bureau Chief. His first book (with Annalee Jacoby) was *Thunder Out of China* (1946). Between 1948 and 1953, White was in Europe and wrote *Fire in the Ashes* (1953). Returning to the U.S., White became a national political correspondent for *The Reporter* magazine, then for *Colliers*, and then for *Life*. He also published two novels (*The Mountain Road* [1958] on the evacuation of Chinese and American armed forces and *The View from the Fortieth Floor* [1960] on his 1950s stint at *Collier's* magazine) and one play and wrote several television documentaries.

White achieved his greatest acclaim as the author of a series of books called *The Making of the President* for 1960,

1964, 1968, and 1972 elections, for which he won the Pulitzer prize, and a wrap-up volume called *America in Search of Itself*, published in 1982. He had planned a 1976 "Making of the President" book, but the Watergate scandal led him to write *Breach of Faith* instead.

[Shimshon Arad (2nd ed.)]

WHITE PAPERS, British government statements of policy presented to parliament; they played an important part in the history of Mandatory Palestine. Six such documents were issued between the years 1922 and 1939:

(1) Statement of Policy June 1922 (Churchill White Paper);

(2) Statement of Policy October 1930 (Passfield White Paper);

(3) Statement of Policy July 1937 (on the Peel Commission's report);

(4) Statement of Policy December 1937 (appointment of the Woodhead Commission);

(5) Statement of Policy November 1938 (on the Woodhead Commission's report);

(6) Statement of Policy May 1939 (MacDonald White Paper).

The Churchill White Paper (1922)

This document, for which Winston *Churchill was responsible as colonial secretary, contained the first important official statement of British government policy after the *Balfour Declaration. While reaffirming the declaration, it stated that there was no question of Palestine becoming "as Jewish as England is English" and that the Arabs need have no fear of "the disappearance or the subordination of the Arabic population, language or culture in Palestine." The Balfour Declaration, the statement continued, did not "contemplate that Palestine as a whole should be converted into a Jewish National Home, but that such a Home should be founded in Palestine." The development of the Jewish National Home meant "not the imposition of a Jewish nationality upon the inhabitants of Palestine as a whole, but the further development of the existing Jewish community [which, in another passage, was said to have "national" characteristics] with the assistance of Jews in other parts of the world, in order that it may become a center in which the Jewish people as a whole may take, on grounds of religion and race, an interest and a pride." To enable this community to develop, however, "it is essential that it should know that it is in Palestine as of right and not on sufferance," the statement declared. That was why international guarantees were necessary.

The statement went on to say that Jewish immigration must continue, but must not exceed "whatever may be the economic capacity of the country at the time to absorb new arrivals"; that the government intended "to foster the establishment of a full measure of self-government"; and that, as the next step, it proposed to set up a Legislative Council consisting of 12 elected and ten appointed members, headed by the high commissioner. The Zionist Executive reluctantly ac-

cepted the policy set out in the statement, while the Palestinian Arabs did not.

The Passfield White Paper

This was issued by the colonial secretary, Lord Passfield (Sidney Webb), in the wake of the riots of 1929. The causes of the riots and the situation in Palestine had been investigated by the Shaw Commission (see *Palestine, Inquiry Commissions), and an inquiry into land settlement, immigration, and development had been carried out by Sir John Hope Simpson, who was pessimistic as to the possibilities of further Jewish immigration and settlement without displacing Arabs (see Palestine, Inquiry Commissions). A central theme in the White Paper, which was issued simultaneously with the Hope Simpson report, was the argument that under the terms of the *Mandate and the Balfour Declaration, "A double undertaking is involved, to the Jewish people on the one hand and to the non-Jewish population on the other." It rejected the view that the passages regarding the Jewish National Home were the principal feature of the Mandate.

The statement dealt with practical policy under the heads: security, constitutional development, and economic and social development. It declared that the government "will not be moved from their duty by pressure or threats" and that "any incitements to disorder or disaffection, in whatever quarter they originate, will be severely punished." It proposed the establishment of a Legislative Council, with a composition similar to that proposed in the Churchill White Paper. If any section of the population failed to cooperate, steps would be taken to ensure the appointment of the requisite number of unofficial members. In any case, the statement continued, the high commissioner would continue to have the necessary power to enable the Mandatory to carry out its obligations.

The White Paper accepted Hope Simpson's conclusion that "for the present and with the present methods of Arab cultivation there remains no margin of land available for agricultural settlement by new immigrants," with the exception of reserves held by Jewish agencies. It severely criticized the principle of Jewish labor, which, it implied, was detrimental to the Arab population, and "difficult to reconcile" with Zionist declarations of a desire to live in friendship with the Arab people. Transfers of land would be permitted only insofar as they did not interfere with the land development plans of the Palestine Administration. In determining the "economic capacity" of the country to absorb new immigrants, not only Jewish but Arab unemployment must be taken into account, and Jewish immigration would be suspended if it was held to prevent Arabs from obtaining employment.

The White Paper was severely criticized by some British statesmen as a departure from the obligations of the Mandate. *Weizmann resigned from the presidency of the Jewish Agency in protest, declaring that the White Paper went far toward "denying the rights and sterilizing the hopes of the Jewish people in regard to the National Home" and aimed at "crystallizing the development of the Jewish National Home in

its present stage." A special British cabinet committee entered into negotiations with representatives of the Jewish Agency, which resulted in a letter from Prime Minister Ramsay MacDonald to Weizmann on Feb. 13, 1931, which was to be communicated as an official document to the League of Nations and embodied in a dispatch as an instrument to the high commissioner. Ostensibly, the letter was no more than an interpretation of the Passfield White Paper, but in reality it canceled much of its anti-Zionist implications. It reemphasized "that the undertaking of the Mandate is an undertaking to the Jewish people and not only to the Jewish population of Palestine" and reaffirmed the preamble of the Mandate, which includes the Balfour Declaration and the historical connection of the Jewish people with Palestine. The letter also stressed the positive obligations of the Mandate, such as facilitating Jewish immigration and encouraging settlement by Jews on the land.

The White Paper of July 1937

This was a statement of British government policy issued together with the report of the Royal Commission on Palestine (the Peel Commission). It stated that the British government accepted the commission's partition plan in principle and would take the necessary steps to put it into effect. Until the establishment of Jewish and Arab states, the government would not surrender its responsibilities for peace, order, and good government throughout Palestine. In the interim period, two steps would be taken: "to prohibit any land transactions which might prejudice such a scheme" and to limit immigration between August 1937 and March 1938 to 8,000.

The White Paper of December 1937

This consisted of a dispatch from W. Ormsby-Gore, the colonial secretary, to A.G. Wauchope, the high commissioner for Palestine, announcing the appointment of the Woodhead Commission to consider the details and practical possibilities of a partition scheme. If the government regarded the new partition scheme as "equitable and practicable," it would refer it to the League of Nations. After that body's approval "a further period would be required for the establishment of new systems of government," possibly including a system of cantonization or separate Mandates for the new Arab and Jewish areas.

The White Paper of November 1938

After the publication of the Woodhead Commission's findings, which, in effect, canceled out the recommendations of the Peel Commission, the British government came to the conclusion that the political, administrative, and financial difficulties involved in the "proposal to create Arab and Jewish independent states inside Palestine are so great that this solution of the problem is impracticable." Instead, the government would "make a determined effort" to promote "an understanding between the Arabs and the Jews." With this end in view the government would convene a conference (see *Saint James' Conference) with representatives of the Palestinian Arabs and of neighboring states … and of the Jewish Agency to confer about "future policy, including the question

of immigration into Palestine." If no agreement was reached "within a reasonable period of time" the British government would take its own decision.

The Malcolm MacDonald White Paper (May 1939)

The failure of the St. James' Conference led to the publication of the White Paper of May 1939. Since the Royal Commission's partition proposal had "been found to be impracticable," the British government had devised "an alternate policy." In order to remove any doubts, the statement continued, "His Majesty's Government now declares unequivocally that it is not part of their policy that Palestine should become a Jewish State." Moreover, they would indeed regard it as "contrary to their obligations to the Arabs under the Mandate …" The government was charged with the development of self-governing institutions and regarded it as "contrary to the spirit of the Mandate" to keep the Palestinian population for ever under a Mandatory regime. It announced that "The objective of His Majesty's Government is the establishment within ten years of an independent Palestine State" in which the essential interests of both Arabs and Jews should be safeguarded. There would be a transitional period during which the "people of Palestine will be given an increasing part in the government of the country." Both sections would have an opportunity to participate, but "the process will be carried on whether or not they both avail themselves of it." In the first stage, steps would be taken to place Palestinians – Arabs and Jews in proportion to their respective populations – in charge of government departments.

IMMIGRATION. The government decided to curtail Jewish immigration. The principle of economic absorptive capacity, established in the White Paper of 1922 was to be replaced by a new, political, principle. The British government claimed it could not find in the Mandate any support for the view that immigration must be allowed to "continue indefinitely," or that economic absorptive capacity must be the only consideration. Although Jewish immigration had been absorbed economically, the Arabs' fear of indefinite Jewish immigration had also to be taken into account in deciding immigration policy. To expand the Jewish National Home indefinitely, the government believed, would mean "rule by force," and it had therefore decided "to permit further expansion of the Jewish National Home by immigration only if the Arabs are prepared to acquiesce in it." During the next five years Jewish immigration would be limited to 75,000, bringing the Jewish population up to approximately one-third of the total population of Palestine. After the end of the five-year period no further Jewish immigration would be permitted "unless the Arabs of Palestine are prepared to acquiesce in it," and the government "will not be under any obligation to facilitate the further development of the Jewish National Home by immigration regardless of the wishes of the Arab population."

LAND TRANSFER. In certain areas, the statement declared, there was no room for further transfers of Arab land, and in other areas transfers must be restricted. The high commissioner would, therefore, be given general powers to prohibit and regulate transfers of land, and on Feb. 28, 1940, the high commissioner promulgated the Land Transfer Regulations, in fact dividing the country into three zones: Zone A, including the hill country and certain other areas – 64% of Palestine – in which the transfer of land to anyone other than a Palestinian Arab was prohibited, save in exceptional circumstances; Zone B, including the Jezreel Valley, eastern Galilee, most of the Coastal Plain (except for the Tel Aviv district), and the Negev – 31% of the area – in which transfers were permitted only in specified circumstances; and Zone C – 5% of the country's area – which would remain a "free zone."

The White Paper was regarded by the Zionist movement and many outside it as a final betrayal of Britain's obligations to the Jewish people under the Balfour Declaration and the Mandate. The announcement of this policy at the outset of the Jewish mass flight from Europe became the starting point for the active struggle of the *yishuv* against the Mandatory regime in Palestine.

[Daniel Efron]

WICKED PRIEST (Heb. כֹּהֵן הָרֶשַׁע, *Kohen ha-Resha*), character mentioned in the *Dead Sea Scrolls as the inveterate enemy of the *Teacher of Righteousness. He was a man of whom better things were once expected: "He was called by the name of truth when first he arose, but when he ruled in Israel his heart was exalted and he forsook God, and dealt treacherously with the ordinances for the sake of wealth. He looted and amassed the wealth of the men of [v]iolence who rebelled against God; and he took the wealth of nations, adding to himself iniquity and guilt, and acted in ab[om]inable ways with every defiling impurity" (1QpHab. 8:8–13). He is described as "the priest who rebelled [and transgressed] the ordinances of [God]" (1QpHab. 8:16ff.), "the priest whose shame was mightier than his glory, for he did not circumcise the foreskin of his heart but walked in the ways of drunkenness to quench his thirst" (1QpHab. 11:12ff.). He "wrought abominable works and defiled the sanctuary of God" and in the cities of Judah he "plundered the wealth of the poor" (1QpHab. 12:8–10).

He is chiefly reprobated for his attack on the Teacher of Righteousness: he laid hands on him in an attempt to kill

him. But God, according to the commentary (from Cave 4) on Psalm 37, delivered the Teacher from him and reserved a fearful judgment for the Wicked Priest, "delivering him into the hands of the violent of the gentiles to execute[vengeance]on him" (on Ps. 37:32 ff.). There was one special occasion when he manifested his enmity toward the Teacher: that was when he "pursued after the Teacher of Righteousness to swallow him up in his hot fury, even to his place of exile, and on the occasion of the sacred season of rest, the Day of Atonement, he appeared among them to swallow them up and make them stumble on the fast-day, their sabbath of rest" (1QpHab. 11:4–8). This suggests that the Teacher and his company observed a different *calendar from the Wicked Priest, so that what was the Day of Atonement for the former was a secular day for the latter.

But condign judgment awaited the Wicked Priest. "Because of the [evil] done to the Teacher of Righteousness and the men of his council, God gave him into the h[ands of]his[en]emies, to afflict him with a stroke, to make him waste away in bitterness of soul, because he acted wickedly toward His elect" (1QpHab. 9:9–12). Because of his rebellion against the ordinances of God, "they smote him with the judgments of wickedness, and wrought horrors of sore diseases on him and deeds of vengeance on his body of flesh" (1QpHab. 8:17–9:2). Because of his shameful drunkenness, "the cup of[Go]d's fury will overwhelm him, to add to his[shame and]ignominy" (1QpHab. 11:15 ff.). Because of his plundering "the poor" (by whom perhaps the members of the Qumran community are specially intended), "God will condemn him to destruction even as he plotted to destroy the poor" (1QpHab. 12:5 ff.).

Since the Qumran community apparently maintained the exclusive right of the house of Zadok to the high priesthood, a high priest of any other line would be to them a wicked (i.e., illegitimate) priest *ex hypothesi*. But the references quoted above point to one Wicked Priest par excellence. Many suggestions about his identity have been made, ranging in date from the apostate Menelaus, appointed by Antiochus IV in 171 B.C.E. (so H.H. Rowley) to Eleazar b. Ananias, captain of the Temple at the outbreak of the war against Rome in the autumn of 66 C.E. (so C. Roth, G.R. Driver). He has even been identified with Paul of Tarsus (so J.L. Teicher). But the majority verdict favors one of the Hasmonean priest-rulers, though there is no unanimity as to which of them should be preferred. The principal choices are Jonathan (so G. Vermes, J.T. Milik, E.F. Sutcliffe); Simeon (so F.M. Cross); Alexander Yannai (J.M. Allegro, W.H. Brownlee, J. van der Ploeg) and Hyrcanus II (A. Dupont-Sommer). In some cases these identifications (e.g., those with Menelaus and Eleazar) are closely tied in with identifications of the Teacher of Righteousness, and since the description of the Wicked Priest is generally applicable to so many figures known to the history of the period, only an agreed conclusion (which is not yet in sight) on the time when the teacher arose and his community was organized will carry with it a definitive solution to the problem of identifying the Wicked Priest.

[Frederick Fyvie Bruce]

WIDAL, FERNAND (1862–1929), French physician, born in Algeria, where his father served as an army doctor. He studied medicine in Paris and worked there. In 1894 he was appointed associate professor, in 1911 full professor, and in 1912 he was elected member of the Academy of Sciences. He instituted a vaccination against typhoid fever in 1888. The innovation was adopted universally and it was used by all the armies that participated in World War I. In 1896 he discovered a method for the serological diagnosis of typhoid fever, which was named after him and became the prototype for the serodiagnosis of other communicable diseases. He also developed methods for diagnosing different diseases by determining the types of cells in inflammatory exudates, thus establishing the basis of cytodiagnosis. His most important contribution to pathological physiology was his recognition of the significance of chloride (in table salt) in causing edema, and he instituted a low-salt diet in cases of fluid retention in the body, which is used nowadays universally. In his research on kidney diseases, he worked on the significance of renal failure, which manifested itself in the defective ability of the body to excrete blood nitrogen. He described the various forms of jaundice, especially those caused by hemolysis, and demonstrated the fragility of red blood cells in cases of familial jaundice. He also did research work on anaphylaxis, streptococcal infections, cardiovascular diseases, and the nervous system.

[Joshua O. Leibowitz]

°**WIDMANSTETTER, JOHANN ALBRECHT** (**Widmanstadius**, or **Lucrecius**; 1506–1557), Austrian statesman, humanist, and Orientalist. An outstanding Catholic scholar, Widmanstetter became chancellor of Lower Austria and rector of the University of Vienna. He traveled widely, learning Arabic in Spain and Hebrew among Spanish Jewish exiles in Naples. He was also able to conduct a correspondence in Hebrew and his bookplate was phrased in Latin, Hebrew, and Syriac. Widmanstetter's teachers included Johann Reuchlin, David b. Joseph ibn Yahya, Baruch of Benevento, and Benjamin d'Arignano. In 1529, he met the Christian Hebraist Egidio (Aegidius) da *Viterbo in Venice, and three years later attended lectures on the Kabbalah held at the Naples home of Judah Abrabanel's brother Samuel. Widmanstetter collaborated with Guillaume *Postel in the publication of the first edition of the Syriac New Testament (Vienna, 1555) and attributed errors in the Koran to the influence of the Kabbalah. He collected many rare Hebrew

and Oriental manuscripts and printed works (some obtained from Elijah Levita), which were later bequeathed to the Munich Royal Library.

[Godfrey Edmond Silverman]

WIDOW (Heb. אַלְמָנָה, *almanah*; pl. אַלְמָנוֹת, *almanot*).

Biblical Period

The Hebrew substantive *almanah*, usually translated "widow," often does not simply denote a woman whose husband is dead, but rather a once-married woman who has no means of financial support, and is therefore in need of special legal protection. Many widows would fall into such a classification because of their husbands' death, but others who could rely on the support of a new husband (by levirate marriage or otherwise), an adult son, or a father-in-law, would not. Thus, the *almanot* as a class in Israelite society in biblical times were often considered as comprising not merely women whose husbands had died but, rather, once-married women who no longer had any means of financial support. Such being the case, many famous biblical widows (e.g., Ruth, Orpah, and Naomi (Ruth 1–4); Abigail (i Sam. 25); Bath-Sheba (ii Sam. 11)), will not be discussed in this article. Since they are never referred to as *almanot*, there is doubt as to whether they were regarded as such. All of them must have had some means of financial support. Only women who are specifically called *almanah* will be dealt with here.

IN EARLY LEGAL CODES. The main evidence for the above definition of the Hebrew word *almanot* comes from several sections of the Middle Assyrian Laws, where the Akkadian etymological equivalent of *almanah, almattu*, denotes the woman in question:

> [If], while a woman is still living in her father's house, her husband died and she has sons [she shall live where she chooses in] a house of theirs. [If] she has no [son, her father-in-law shall marry her to the son] of his choice… or if he wishes, he may give her in marriage to her father-in-law. If her husband and her father-in-law are both dead and she has no son [only then] has she the status of a woman without male support (*almattu*); she may go wherever she pleases (par. 33; in: Pritchard, Texts, 182).

> When a woman has been given [in marriage] and the enemy has captured her husband, if she has no father-in-law and no son, she shall remain for two years [at her husband's estate]. During those two years, if she has not sufficient to live on, she shall come forward and [so] declare; she shall became a ward of the palace; …She will stay for two years [at her husband's estate] and then she may live with the husband she chooses. They [the judges] will draw up a document for her [stating she is] a woman without male support (*almattu*). If in later days, her missing husband has returned home, he may take back his wife

who was married to an outsider… (par. 45; in: Pritchard, Texts, 184; cf. also pars. 28, 34, in: Pritchard, Texts, 182, 183) and Hammurapi Law Code, par. 177 (in: Pritchard, Texts, 174)).

In all the Akkadian codes, women whose husbands have died, but who do have some means of support, are not given any particular title and are never called *almattu* (e.g., Middle Assyrian Laws, par. 46). According to G.R. Driver, "these considerations suggest that a woman became an *almattu* only when there is no one with a duty to support her" (in: Driver and Miles, *The Assyrian Laws*, in bibl., 225). Further evidence for this definition of *almattu* is found in the usage of the Akkadian *almānūtu*, "lack of support by a male householder" (abstract formation of *almattu*): *bēl bīti imâtma bītu šû almānūtam illak*, "The owner of the house will die, and that house will have no male to support it" (A. Boissier, *Documents assyriens relatifs aux presages* (1894–99), 5:2; cf. CAD, vol. 1, pt. 1 (1964), 362). There are only a few cases in the biblical law codes where *almanah* does not agree with the definition of the Akkadian *almattu*. These are the laws concerning the ineligibility of the *almanah* to become the wife of the high priest (Lev. 21:14) or, unless she is the widow of a priest, to become the wife of any priest (Ezek. 44:22; the rabbis, however, by artificial exegesis, make this verse mean the same thing as Lev. 21:14 – ordinary priests are not prohibited from marrying any widow): the right of the priest's daughter to return to her father's house and partake of *terumah* should she become an *almanah* (Lev. 22:13), and the vow of the *almanah* being legally binding on her (Num. 30:10). In these cases, but only in these, *almanah* must be translated as "widow." Note that in each of these cases the term *almanah* is juxtaposed to terms having to do with marital status – *betulah*, "unmarried woman" (Lev. 21:13, Ezek. 44:22) and *gerushah*, "divorced woman" (Lev. 22:13; Num. 30:10; cf. Lev. 22:12; Num. 30:7 ff.). Elsewhere, there is a general pronouncement against the mistreatment of the *almanah* (Ex. 22:21) and there are many other cases, where the humanitarian nature of the author of Deuteronomy (cf. Weinfeld, in bibl.) caused him to prescribe many new laws concerning the protection of the *ger*, "stranger," *yatom*, "fatherless," *almanah*, and levite. In these cases, *almanot* must refer to "women once-married who no longer have any means of financial support." One may not keep the garment of the *almanah* as a pledge (Deut. 24:17), nor turn back and pick up dropped sheaves during harvest time (Deut. 24:19), dropped fruit from olive trees (Deut. 24:20), or grapes that have fallen off the vine (Deut. 24:21); for these must go to the *almanah* and the other classes mentioned above. These socially disadvantaged groups must be permitted to partake of the third-year tithes (Deut. 14:29; 26:12, 13), the freewill contributions made on the occasion of Shavu'ot (Deut. 16:11), and to rejoice during Sukkot (Deut. 16:14). There is also a curse against anyone who would subvert the legal rights of these disadvantaged groups (Deut. 27:19), and God is described as the protector of the rights of these classes (Deut. 10:18). It should also be mentioned that some scholars claim that there is evidence in the Ugaritic texts for the giving of a spe-

cial dispensation to the *almnt* during time of war. However, the passages in question from the Keret Epic (I Krt 96–97, 184–5) are very obscure and have been interpreted by other scholars quite differently. No conclusions should be drawn until some additional evidence of a more concrete nature is found.

AS TITLE OF INDIVIDUALS. The earliest and by far the most famous biblical personage given the title of *almanah* was Tamar, the daughter-in-law of Judah (Gen. 38). When Judah's son Er died, leaving Tamar a childless widow, Judah told Onan, his secondborn, to live with Tamar as husband and wife so as to beget an offspring for his dead brother (see Deut. 25:5–10). Onan, bearing in mind the fact that the offspring, whom he would have to bring up, would not count as his, practiced only *coitus interruptus* with her (Gen. 38:9). For this, God punished him with death, and the responsibility passed on to the third and youngest of the three sons, Shelah. However, Judah, fearing that marriage to Tamar was unlucky, claimed that Shelah was too young to fulfill his duty and sent Tamar away to live in the house of her own father "as an *almanah*" (Gen. 38:11). Given paragraph 33 of the Middle Assyrian Law Code quoted above, it is interesting to note that Tamar was called an *almanah* only when Judah, her father-in-law, sent her out of his house. It might reasonably be asked whether Tamar would have been called an *almanah* at all had she remained in the house of her father-in-law.

When Shelah grew up and Judah still did not give him to her as a husband, she resorted to the following ruse. At a time when Judah was likely to be attracted by a sexual opportunity, she removed "her garments of *almanah*-hood," i.e., "the clothes of her status as *almanah*," and sat down, veiled, in a spot where she knew that Judah was to pass and where a woman sitting alone was likely to be taken for a prostitute. Judah, not recognizing her because of her veil, became her customer. When he later learned that his daughter-in-law was pregnant, Judah at first ordered that she be burned (Gen. 38:24). When Tamar, however, privately proved to him that he was the father of her child, he publicly declared that not she but he was at fault, since her conception through him was justified by his failure to give her to Shelah. The legal background of the episode is not only Deuteronomy 25:5 ff. (levirate marriage), but also the Middle Assyrian Laws referred to above, for only the latter provides evidence that the father-in-law has the privilege of deciding to which of his surviving sons the widow is to be given or even of taking her for himself. Elsewhere, the woman hired by Joab to play the part of an *almanah* so as to induce David to take back his son Absalom (II Sam. 14:1ff.) claims (verse 5): "I am an *almanah*. My husband died." Both Hiram (I Kings 7:14) and Jeroboam I (I Kings 11:26) are designated as sons of an *almanah*. With respect to the latter, who was responsible for the splitting of the United Monarchy, there is a very interesting, somewhat parallel, Akkadian omen, which occurs many times: *mār almattim kussi'am isabbat*. "The son of an *almattum* will seize

the throne" (A. Goetze, *Old Babylonian Omen Texts*; Yale Oriental Series, 10 (1947), 41:30).

Finally, Elijah is sent by a divine call to the house of an *almanah* whose son he later revives (I Kings 17). This woman is described as having no means of livelihood, living in abject poverty, and being on the verge of starvation (I Kings 17:12). Clearly, she is not merely a widow, but rather "a woman once married who no longer has the means of financial support."

AS A SOCIALLY DEPRIVED CLASS WHICH MUST BE PROTECTED. From the time of Urukagina of Lagash (c. 2400 B.C.E.), there is recorded evidence concerning the special responsibility of the Mesopotamian king to protect socially disadvantaged groups. In law codes, both in the prologue of Ur-Nammu (c. 2100 B.C.E.) and the epilogue of Hammurapi (c. 1800 B.C.E.), the king claims to have fulfilled this obligation. Hammurapi, for example, states that he wrote his laws:

> *dannum ensam ana la habalim*
> *ekutam almattam sutesurim*,
> In order that the mighty shall not wrong the weak,
> In order to provide justice for the homeless girl
> and the once married woman without financial support
> (Epilogue, xxvb:59–62).

Also the two Ugaritic kings mentioned in the epics are spoken of as either having fulfilled or not fulfilled this responsibility. In the Keret epic, King Keret's son twice accuses him of neglecting his duties:

> *ltdn dn almnt*
> *lttpt tpt qsr nps*,
> You do not judge the cause of the *almnt*,
> Nor adjudicate the case of the wretched (II Krt 6:33–34; cf. 45–48)
> *lpnk ltslhm ytm*
> *b'd kslk almnt*,
> You feed not the fatherless before you,
> Nor the *almnt* behind your back (II Krt 6:48–50)

Conversely, in the Aqhat Epic, King Daniel is portrayed as a righteous king:

> *ydn dn almnt*
> *ytpt tpt ytm*
> Judging the cause of the *almnt*,
> Adjudicating the case of the fatherless (II D 5:7–8; cf. I D 23–25 [restored]).

Here it should be observed that the parallelism *ytm//almnt*, used in two of the above Ugaritic quotations, is also present in Hebrew poetry (e.g., Isa. 1:17, 23; Ps. 68:6). Another parallel pair of words which exist in both Hebrew and Ugaritic is Hebrew שְׁכוֹל//אַלְמֹן (Isa. 47:8, 9) = Ugaritic *tkl//ulmn* (ss 8–9), which is probably to be translated "bereavement//status of being an *almnt*."

The Hebrew prophets often spoke out against the upper-class exploitation of the *almanah* and the other disadvantaged social groups. These protests can be found in the words of First Isaiah (e.g., 1:17, 23; 10:2), Jeremiah (e.g., 7:6, 22:3), Ezekiel (e.g., 22:7), Zechariah (7:10), and Malachi (3:5). Perhaps the clearest

parallels to the Ugaritic and Mesopotamian evidence quoted above, however, are those biblical passages which speak of God as the protector of these disadvantaged classes:

> Father of the fatherless, and judge of the *almanot* is God in his holy abode (Ps. 68:6; cf. 146:9).

AS A DESCRIPTION OF A CITY. The above definition of *almanah* is indirectly supported by those biblical passages in which cities are called *almanah* (Isa. 47:8, 9; 54:4; Jer. 51:5; Lam. 1:1). In those passages where the city involved is Israel (Isa. 54:4; Jer. 51:5; Lam. 1:1), the traditional interpretation has always been to translate *almanah* as some kind of temporary widow whom God has left for the time being. This image would correspond with the divorce imagery of Hosea concerning God and Israel (Hos. 1–3). However, aside from the problem of understanding what a "temporary widow" is (cf. Rashi, Lam. 1:1), there is also the much more severe problem of understanding how this imagery could apply to Babylon (Isa. 47:8, 9). However, if *almanah* is understood as referring to a city with no means of independent support, i.e., a vassal or tributary nation, all cases of this metaphor then make sense. In the case of Babylon, the nation which was once "mistress of kingdoms" (Isa. 47:5, 7) will now become like an *almanah*. Thus, according to this interpretation, "mistress of kingdoms" and *almanah* are exact opposites and Babylon's punishment becomes much more fitting – she who once subjugated many nations will now become subjugated herself. In the case of Israel becoming an *almanah*, in Lamentations 1:1 this interpretation is further corroborated by the parallelism in that verse: "She has become like an *almanah*//She has become like a tributary nation."

[Chayim Cohen]

In Jewish Law

From the legal point of view, a widow is a woman who was married in a valid marriage and whose husband has died; if any doubt arises as to her widowhood, she will have to prove that she was so married (for the origin of the word "widow," see Levy, J., Neuhebr Tal, s.v. *alman*). The rabbis of the Talmud exegetically explained the name *almanah* ("widow") as being derived from the words *al maneh* ("because of the *maneh*"), i.e., because her statutory *ketubbah* is a *maneh* (= 100 zuz) and not 200 as in the case of a virgin (Ket. 10b).

PERSONAL STATUS. A widow is generally free to marry any man except a high priest (Lev. 21:14); if she marries the latter she becomes a *ḥalalah* (see *Yuḥasin*; Lev. 21:15; Kid. 77a; Sh. Ar., EH 7:12). For the prohibitions imposed upon her in consequence of her previous marriage, see Prohibited *Marriages, and for the law prohibiting the widow of a childless brother to marry without prior *levirate marriage or *ḥaliẓah*.

RIGHTS AND OBLIGATIONS. The widow is entitled to the return of all her property of whatever kind, since her ownership of it is not affected by marriage (see *Husband and Wife; for the difference in this respect between the different kinds of her property, see *Dowry). In Jewish law a widow does not inherit her husband (see *Succession), but she is entitled to her *ketubbah* and the rights due to her by virtue of its provisions, which the husband's heirs must satisfy out of the estate; the most important of these provisions relate to her maintenance. She is entitled to the said rights by virtue of her being the widow, and it is therefore unimportant whether and to what extent she possessed property during the marriage. Her said rights arise upon marriage by virtue of law: "a man, upon marrying a woman, becomes bound to her in respect of the statutory *ketubbah*… and her right to be maintained out of his property and to live in his house after his death throughout her widowhood" (Maim. Yad, Ishut 12:1; Sh. Ar., EH 59:1–2); but they become due only upon her husband's death, since the *ketubbah* is "like a debt payable at some future date and will be recoverable only after the husband's death…" (Maim. Yad, Ishut, 16:3; Sh. Ar., EH 93:1). Since the said rights accrue to the widow by virtue of her *ketubbah*, they do not exist if she has lost her right to the *ketubbah* (see *Divorce).

Inasmuch as the rights of the widow arise upon her marriage and not upon the husband's death, he cannot prejudice them by his will, and any testamentary disposition to the effect that the widow shall not be entitled to her *ketubbah* or maintenance out of his estate is void (Ket. 68b; Sh. Ar., EH 69:2; 93:3). No express reference need be made to these rights in the *ketubbah* deed since they arise upon the marriage as a condition laid down by the *bet din* (*tenai bet din*), i.e., by virtue of law, although they are based upon her being entitled to a *ketubbah* (Ket. 52b; Sh. Ar., loc. cit).

SATISFACTION OF THE WIDOW'S RIGHTS OUT OF THE ESTATE. According to talmudic law, a widow can enforce her *ketubbah* and its provisions, including maintenance, only against the immovable property which forms part of the estate (Ket. 81b; Sh. Ar., EH 100:1). However, since the development of trade and the decrease of landholding among Jews led creditors to rely also upon the movables of debtors for repayment of their debts, the *geonim* ordained that the movable property of the estate should also be attachable for the widow's rights (Tos. Ket. 51a; Rosh to Ket. ch. 6:5; Sh. Ar., EH 100:1). Since the time of Maimonides, it has become customary to include in every *ketubbah* deed a provision rendering the husband's movable property so attachable, whether acquired at the date of the marriage or to be acquired by him thereafter (Maim. Yad, Ishut, 16:8; see *Lien).

SATISFACTION OF THE WIDOW'S RIGHTS AGAINST PURCHASERS. The husband's property being subject to the *ketubbah*, the widow may, in the event of the estate being insufficient to cover it, follow the property in the hands of the purchasers, i.e., recover the amount of the *ketubbah* out of immovable property which the husband or his heirs have transferred to others. This remedy, however, is not available with regard to movables so transferred, since, contrary to the case of immovable property, where the purchaser can be required first to find out whether the vendor can indeed transfer it free from all encumbrances, in the case of movables, owing to regulations of furthering commerce (*takkanot ha-shuk*), that

cannot be required lest commercial stability would thereby be impaired (Ket. 51a; Sh. Ar., EH 100:1). On the other hand, if the husband has transferred his property by way of *donatio mortis causa* (see *Wills), the widow is entitled to be satisfied for her *ketubbah* out of the movable property also, inasmuch as in such a case the property has passed upon death, subject to her rights which accrued to her already in his lifetime (Sh. Ar., ḤM 252:1, EH 100:1, and *Rema* ad loc.). The rabbis, however, also prescribed that for her maintenance the widow cannot proceed against purchasers (see above) even in respect of immovable property, since the amount to be recovered is not a determinate sum but may vary periodically with her requirements, and a purchaser cannot know the precise debt for which the property is charged (Git. 48b, 50b and *Rashi* ad loc.; Sh. Ar., EH 93:20). On the other hand, as in the case of the *ketubbah*, the widow here may also recover from property transferred by way of *donatio mortis causa* (Sh. Ar., ḤM 252:1, EH loc. cit.). The said limitations upon the right of the widow to receive her *ketubbah* and maintenance from the husband's property which has been transferred to others do not apply if it was transferred fraudulently in order to deprive the widow of it, as "the sages of the Talmud set themselves against anyone who intends to defraud and negate his act" (Resp. Rosh, 78:1 and 3). Accordingly, upon proof that the heirs intend as a means of evasion to dispose of the immovable property of the estate and that her maintenance rights will be prejudiced thereby, she may apply to the court for a prohibitory injunction against them; but she cannot do so in regard to movable property of the estate, since the above-mentioned geonic regulation does not extend to such property (Yad, Ishut, 18:11–13 and *Maggid Mishneh* thereto; Sh. Ar., EH 93:21).

THE WIDOW'S MAINTENANCE. The widow is generally entitled to receive the same maintenance as she was entitled to receive during the husband's lifetime. The same rules therefore apply, e.g., maintenance will include clothing, residence, medical expenses, use of household articles, and the like. Similarly, the principle also applies that "she rises with him but does not descend with him," i.e., that she is entitled to the same standard of maintenance she was entitled to during her late husband's lifetime (Ket. 48a and 103a; Sh. Ar., EH 94:1 and 5). To some extent her said right to maintenance is affected by the very fact of her widowhood, since the personal relationship upon which her rights were based during her husband's lifetime is now absent, and she is now alone, so that her requirements are reduced. For this reason, although entitled to reside in the same apartment in which she lived with her husband, she is no longer entitled to occupy the whole of it if she, being alone, is not in need of it even in order to maintain her social status (Sh. Ar., EH 94:1; *Rema* ad loc. and commentaries PD 19, pt. 2 (1965), 338). Similarly, she is not entitled to transfer ownership of the apartment to others nor to let the whole or part of it, since the right of residence is conferred upon her in order to enable her to maintain her social status but not to make a profit (Sh. Ar., loc. cit.). The right of the widow with regard to

the apartment is merely to have the use of it; therefore, upon her death, it returns to the heirs of the husband only, and does not form part of her estate (*Beit Shemu'el* 94, n. 4).

This right of residence is not affected by sale of the apartment by the heirs, and the new owner cannot evict the widow from it (Sh. Ar., EH 94:4). Where the widow is unable to live in the apartment, for instance, if it is destroyed, she is entitled to receive out of the estate an amount necessary for renting another suitable apartment (Ḥelkat Meḥokek 94, nos. 6, 7). If the widow survives with small children of the husband, both boys and girls, and the estate is insufficient to maintain all of them, her right prevails; if, however, the young children surviving with her are either all boys or all girls, they all take equally (Ket. 43a and Tos. ad loc.; note the alternative opinion in Sh. Ar., EH 93:4; see also EH 113:6 regarding the priority of the widow's maintenance to the right of the daughters to their dowry out of the estate, and for the reason for the aforesaid distinction, see *Beit Shemu'el* and *Ḥelkat Meḥokek* to EH 93:8–9).

THE WIDOW'S CLAIM FOR PAST MAINTENANCE. A widow is entitled to maintenance, also for the time prior to her claim, since there is no reason to assume that she has waived her right to it. This contrasts with the right to maintenance of a wife who is entitled to it only as from the date of claim onward. If the widow has not claimed for a long period – such as when, being a wealthy woman, she delays for three years or, being poor, she delays for two years – she is presumed to have waived the past maintenance unless the presumption is rebutted by the facts, such as by the fact of her right having been secured by a pledge or mortgage (EH 93:14 and see *Limitation of Actions).

THE WIDOW'S RIGHT TO HER EARNINGS AND THE INCOME FROM HER PROPERTY. Parallel to the rule prevailing during the husband's lifetime concerning his right to the wife's earnings, the heirs are entitled to the widow's earnings in consideration of her maintenance (Sh. Ar., EH 95:1). On the other hand, they are not entitled to the income from her property, as is the husband to the income from the wife's property – since to the husband it is due in consideration of her redemption only, i.e., of his obligation to ransom her if she is taken captive so that she can return and live with him as his wife, a reason not applicable in respect of the heirs. Correspondingly, the heirs are under no obligation to ransom her either when she has fallen into captivity or finds herself in a similar situation, for instance, when she cannot return from abroad except upon payment of a considerable sum which she does not possess (Ket. 52a; Yad, Ishut, 18:5 and 8; Sh. Ar., EH 78:8; 94:7; 94:4).

EXPIRATION OF THE WIDOW'S RIGHT TO MAINTENANCE. Since the widow is entitled to maintenance by virtue of the provisions of the *ketubbah* (see above), i.e., only while entitled to the *ketubbah*, her right to maintenance will expire upon her no longer being entitled to the *ketubbah*, i.e., if she has lost her right to it by virtue of law or if she has actually

received payment of it from the heirs. Likewise, since one of the conditions in law connected with her maintenance is that she shall not be "ashamed," i.e., to enable her to preserve the honor of her husband, she will lose such right upon her voluntarily claiming her *ketubbah* in court – for by doing so she implicitly declares herself no longer concerned with the honor of her husband or with his heirs (Ket. 54a; Sh. Ar., EH 93:5; and *Ḥelkat Meḥokek*, n. 13).

The widow's right to maintenance also ceases if she remarries (see *Marriage), because under the *ketubbah*, which is the source of her right, she is entitled to maintenance during widowhood only. According to most of the authorities, she even loses her maintenance upon her engagement for a new marriage – although by it alone she does not create a new personal status – because by it she shows that she no longer wishes to preserve the honor of her first husband and remain his widow (Ket. 52b; 54a; Sh. Ar., EH 93:7 and *Rema* ad loc.).

THE PROBLEM OF DENIAL OF MAINTENANCE BY INVOLUNTARY RECEIPT OF THE KETUBBAH. Since the widow – if she has not lost her right to maintenance otherwise (see above) – is entitled to maintenance only so long as she has not received or claimed her *ketubbah* by legal process, opinion was divided already in the time of the Mishnah as to whether the heirs may compel her to receive it and thereby be released from their obligation to maintain her. It was finally decided that this question depends upon custom, because maintenance of the widow is one of the provisions of the *ketubbah*, and in all matters relating to the *ketubbah*, "local custom," i.e., the custom of the place of marriage, applies, such custom being considered a condition of the marriage and therefore not to be varied but with the consent of both spouses (Sh. Ar., EH 93:3 and *Ḥelkat Meḥokek*, n. 5). According to the custom of the people of Jerusalem and Galilee, the choice lay with the widow alone, and therefore they inserted in the *ketubbah* deed a term, "You shall dwell in my house and be maintained in it out of my estate throughout the duration of your widowhood" (Ket. 52b; 54a and Tos. ad loc.). According to the custom of the people of Judea, however, the choice was left with the heirs, and there the corresponding term in the *ketubbah* deed was therefore, "until the heirs shall wish to pay you your *ketubbah*" (*ibid.*). As regards this difference in custom it was said that, while the people of Jerusalem cared for their honor, the people of Judea cared for their money (TJ, 4:15, 29b). The *halakhah* was decided in accordance with the custom of Jerusalem and Galilee, i.e., whenever there is no other fixed custom or rabbinical *takkanah*, the choice lies solely with the widow, and the heirs cannot deprive her of maintenance against her wishes (Ket. 54a and Tos. ad loc.; Yad, Ishut, 18:1; Sh. Ar., EH 93:3; and see *Conflict of Laws).

Inasmuch as economic conditions during marriage may so change that the estate might be insufficient to provide both for the maintenance of the widow and for inheritance for the heirs – a state of affairs which the husband certainly did not intend – many of the authorities were of the opinion that it is proper to make a *takkanah* permitting the heirs to deprive the widow of her maintenance by payment to her (against her will) of her *ketubbah* (*Rema* EH 93:3 and *Pitḥei Teshuvah* thereto, n. 5). Accordingly, various *takkanot* were made in the matter and the most well known, cited also in the Shulḥan Arukh, are those known as the *Takkanot* of Toledo, Spain, of the 13th century, which in their main provisions laid down that the heirs may discharge their obligation for the widow's maintenance by payment unto her of her *ketubbah*, which, if it amounts to more than half the value of the estate, shall be deemed to be discharged by payment unto her of half such value (Resp. Rosh 55; Sh. Ar, EH 118 and commentaries).

In Ereẓ Israel there is a distinction between the Sephardi and Ashkenazi communities. The former follow the author of the Shulḥan Arukh, i.e., that the choice lies with the widow alone and the heirs cannot rid themselves of the obligation for her maintenance against her wishes (Sh. Ar., EH 93:3). The Ashkenazim permit the heirs to do so by payment unto the widow of the *ketubbah* even if she does not agree to it. That is certainly the situation when the widow was the second wife of the deceased, but it is also customary with a first wife, although the rabbinical courts endeavor to get the parties to agree to a fair arrangement under which the widow will not lose her maintenance. At any rate, the heirs are not entitled to evict the widow from the marital home, and she is to be provided with the household utensils and silverware forming part of the estate, the size of the estate being taken into account (*Pitḥei Teshuvah*, nos. 5 and 6 to Sh. Ar., EH 93; *Sha'arei Uzzi'el*, 2 (1946), 244, nos. 14, 15; *Beit Me'ir*, EH 93:3; 94:1).

THE STATE OF ISRAEL. As to the personal status of the widow in the State of Israel, the rules of the *halakhah* generally apply, both in the rabbinical courts and in the secular civil courts, in the latter except insofar as private international law imports other rules. With regard to the widow's financial rights, however, the Succession Law of 1965 provides that the *halakhah* shall apply in the rabbinical courts alone, and only if all the interested parties have expressed their consent to it in writing (sec. 155). Failing such consent, jurisdiction is in the civil courts alone, and these apply the provisions of the said law only (secs. 148 and 151). Under these provisions the widow is entitled to a part of the estate as an heir. In addition, if she is in need of it, she is also entitled to maintenance out of the estate; the amount of such maintenance is fixed by the court, taking into account all the circumstances, and particularly to what she is entitled as an heir and the extent of her *ketubbah* (secs. 56–65).

WIEDENFELD, DOV (1881–1965), *rosh yeshivah* and *posek*, popularly known as the "Tshebiner Rav." Belonging to a prominent Galician rabbinic family, he received his education from his father Jacob, the author of the *Kokhav mi-Yaʾakov* (1933), and from his own brothers, R. Isaac, the rabbi of Grimailov, and R. Nahum, the rabbi of Dubrovitsa. Although widely recognized as a scholar, R. Dov refused to enter the rabbinate and instead became a businessman in Trzebinia. In 1923, following the death of Trzebinia's rabbi, Wiedenfeld acceded to the requests of the community to become its spiritual leader. He now officially opened a yeshivah in Trzebinia which soon attracted 70 students, and his opinion in halakhic questions was eagerly sought by his colleagues throughout Galicia and Poland. Many of his decisions were later recorded in his *Dover Meisharim* (3 vols., 1937–51). During World War II he escaped from Trzebinia to Lvov and was later exiled to Siberia by the Communists. Here, under the most trying conditions, he still continued his talmudic studies, recording his new interpretations on scraps of paper and pieces of wood. In 1946 Wiedenfeld arrived in Jerusalem following Chief Rabbi Isaac *Herzog's intervention with the British government. There he reestablished his yeshivah, which he named *Kokhav mi-Yaʾakov* and continued to respond to the many inquiries on Jewish law which he received. Following the death of R. Isaac Zeev *Soloveichik in 1960, Wiedenfeld was considered the final authority of his generation by many Orthodox Jews.

[Aaron Rothkoff]

WIELICZKA, town in Cracow province, S. Poland, in the historic region of *Lesser Poland. Rights to exploit the celebrated salt mines in Wieliczka were leased by Jews, including Saul *Wahl, from the 14th to the end of the 18th century. However, an organized Jewish community was established there only in the second half of the 19th century. The Jewish population numbered 614 in 1890, 981 (15.5% of the total) in 1900, and 1,700 in 1921.

[Abraham N. Poliak]

Holocaust Period

On the outbreak of World War II there were about 1,300 Jews in Wieliczka. The Germans occupied the town on Sept. 7, 1939. In summer 1942 the Jews from the whole county were concentrated in Wieliczka. The Jewish community was liquidated on Aug. 27, 1942, when 8,000 Jews from Wieliczka and its vi-

cinity were deported to *Belzec death camp, 500 to Stalowa-Wola forced labor camp, and 200 to Plaszow concentration camp. After the war the Jewish community of Wieliczka was not reconstituted.

WIELUN (Pol. **Wieluń**, Rus. **Velyun**), district town in the province of Lodz, Poland. Jewish merchants settled in Wielun about the middle of the 16th century when the town prospered as a station on the commercial route from Poland and Lithuania to Silesia. A privilege, *de non tolerandis Judaeis*, was granted to Wielun in 1566. A Jewish settlement was reestablished at the close of the 18th century. There were 70 Jews (6% of the population) in Wielun in 1808; 642 (16.5% of the population) in 1857; and 2,732 (38%) in 1897. When the town was rebuilt after the great fire of 1858, the head of the local community, Leib Kon, succeeded in thwarting the plans for erecting a Jewish quarter. The overwhelming majority of Jews earned their livelihoods as craftsmen and a minority engaged in commerce. The first synagogue (1799) was situated in an ancient building acquired from a monastery. A large synagogue was built in its place in 1855. Until 1848 the Jews buried their dead in the cemetery of Dzialoszyn. In the early 1850s, as a result of a cholera epidemic, a local cemetery was acquired. From the 1850s the influence of *Ḥasidism began to be felt in the community. At the close of the century R. Menahem Mendel Grynberg held rabbinical office. During World War I hundreds of Jewish workers from Lodz found refuge in Wielun. In 1921 Jews numbered 4,818 (44% of the population). Between the two world wars Jewish craftsmen (65% of the working population in the community) formed trade unions (as builders, carpenters, tinsmiths, locksmiths, barbers, etc.). The town's transportation was developed by Jewish initiative in providing buses and lorries. The community's educational institutions included a talmud torah, Yesodei ha-Torah, *Yavneh schools, a *Beth Jacob school, and a large yeshivah in which about one-third of the Jewish pupils studied. Both the *Zionist movement and *Agudat Israel were active in the community, and delegates from the Jewish population were an important factor in the municipal council. Before the Holocaust there were outbreaks of antisemitism in the town: a boycott of Jewish trade, attacks on the synagogue and its worshipers, and there was an attempt to provoke a blood libel (1937).

[Arthur Cygielman]

Holocaust Period

About 4,200 Jews lived in Wielun in 1939. During World War II the town underwent heavy bombardment and the Jewish hospital was among the numerous buildings destroyed. The ancient synagogue of Wielun was also destroyed and part of the Jewish population escaped to the nearby city of *Zelow. When that town was occupied by German forces, most of the Jews returned and found shelter in barracks and in damaged buildings. The Germans soon began to kidnap able-bodied Jews in the streets for slave labor in what became daily raids. Jewish slave labor was used for the construction and repair of

the roads and buildings, and in demolition work (including that of the synagogue). Another group of Jews was forced to build a swimming pool for the Germans, using tombstones from the Jewish cemetery for paving it. Pillage of Jewish property went on without interruption. Even the liturgical objects and the library of manuscripts in the synagogue were looted by the Nazis. Several hundred Jews from the neighboring villages escaped to Wielun, but the Jewish population constantly decreased as a result of either "voluntary" or forced transfers to other parts of Poland. In February 1942, the Germans publicly executed ten Jews on the pretext that they violated the prohibition against the preparation of kosher meat. In June 1942, the president of the *Judenrat was murdered by the Germans, and during that same summer the ghetto was surrounded by German police and a large number of Jews were deported to an unknown destination. The liquidation of all the Jewish communities in Wielun county began on Aug. 22, 1942, when the entire Jewish population (about 10,000) from the neighboring towns and villages were driven to Wielun and kept in the Augustine Church without food or water for several days. The sick, the weak, and the old were murdered in the church, and the rest, together with the Jews of Wielun, were sent to the death camp at *Chelmno. Only a small number of physically fit were sent to *Lodz Ghetto.

WIENER, family of medalists active in Belgium. JACQUES (1815–1899) was the oldest of three brothers who were to become famous as medalists. Born in the Rhineland of Hungarian immigrants, he was apprenticed at the age of 13 to his uncle L. Baruch, a fine engraver in his own right. The two signed some earlier medals jointly. At the age of 30 Wiener was the first to conceive the idea of engraving in precise detail the exterior and interior of a monument on the obverse and reverse of a medal. He engraved with great delicacy ten medals of famous Belgian churches. This he followed with a series of 41 medals, issued between 1850 and 1865, illustrating the most famous European buildings. He also engraved the first Belgian stamps, and for many years was head of the government plant issuing these stamps. Among the hundreds of medals of this master, there are several of Jewish interest, e.g., the 1841 Opening of the Jewish Home for the Aged in The Hague and the 1861 Opening of the Synagogue at Cologne.

Leopold (1823–1891) studied with his older brother Jacques and then became a pupil of David d'Angers in Paris. In 1847 he returned to Belgium and started engraving a series of large historical medals which commemorated contemporary events and became very popular. In 1864 he was appointed first

engraver to the Belgian mint, holding the post until his death. He was responsible for all the currency of Leopold II – some 150 pieces. At the same time he continued striking medals. He also had a considerable reputation as a sculptor; several of his monumental works still adorn public places in Belgium. One medal of special Jewish interest is his 1859 portrait study of Henri Loeb, chief rabbi of Belgium.

Charles (1832–1888) was the third and youngest of the Wiener brothers and, perhaps, had the most brilliant career. He studied at Brussels and Paris where he was a student of Oudiné. In 1865 he settled at The Hague as engraver to the king of Holland, but moved to London, where he was assistant engraver at the Royal Mint. He then went to Lisbon as chief engraver of the Portuguese coins. Returning to Brussels in 1867, Charles devoted himself to medals, which he produced in large number, some in conjunction with his brother Jacques. His English pieces have best withstood the test of time. Of Jewish interest are three portrait medals: E.A. Astruc, chief rabbi of Belgium; Jules Anspach, mayor of Brussels; and a dual portrait of Sir Moses and Lady Judith Montefiore.

[Daniel M. Friedenberg]

WIENER, ALEXANDER S. (1907–1976), U.S. immunohematologist. Born and educated in New York, he was appointed professor of forensic medicine at the New York University School of Medicine in 1938. Together with Karl *Landsteiner, Wiener discovered the Rh human blood factor. He also worked out in detail the serology, genetics, and nomenclature of the entire Rh blood group system. He discovered the Rh blocking antibody and was the first to introduce exchange transfusion for the treatment of erythroblastosis fetalis. Other blood group factors discovered by Wiener include Kell, Ca, U, M^e, and the I-i blood group system. Wiener wrote books and articles in the field of blood groups and acted as a member of the editorial boards of several leading medical publications.

[Fred Rosner]

WIENER, ALFRED (1885–1964), public figure. An Arabist by education, he served as secretary to Paul *Nathan from 1911 to 1914. After serving in World War I Wiener became active in the CV (*Central-Verein deutscher Staatsbuerger juedischen Glaubens) of which he became secretary general. He belonged to the pro-Palestine wing of the CV which, from 1929, collaborated in the non-Zionist part of the enlarged Jewish *Agency and the Keren *Hayesod. At the end of 1933, with the help of Professor David *Cohen, he founded the Jewish Central Information Office in Amsterdam which was brought over to London in 1939 and was later named Wiener *Library. The rest of his life was dedicated to this institute.

[Yehuda Reshef]

WIENER, ERNEST EDOUARD (1882–1973), Belgian soldier and engineer. A grandson of Jacques *Wiener, he was born in Brussels to a family which played a prominent role in Belgian arts, finance, and politics. He entered the Military Academy in 1899. While a lieutenant, he studied electrical engineering at the Montefiore Electro-Technical Institute in Liège, from which he graduated in 1909. During World War I, he was appointed to important commands and was wounded while trying to rescue some soldiers under artillery fire. From 1929 to 1936, he was in charge of studies at the Military Academy, first as assistant director and then as director. In 1940, he was a major-general commanding Transmission Troops and Services at Supreme Headquarters. As a prisoner of war for five years in German camps during World War II, he showed great dignity both as a soldier and as a Jew, and when he retired from active service in 1946, he was made a lieutenant-general, the highest rank in the Belgian Army.

During his life, Wiener was active in scientific and technical societies and was president, inter alia, of the Belgian section of the International Electro-Technical Committee. Following the family tradition, he became a member of the Consistoire Central Israélite de Belgique, the official representative body of Belgian Jewry. He was elected president in 1938, but could only act as a delegate until 1950, when he assumed the post with full title, occupying it until 1956. Most of his efforts were devoted to the reconstruction of the religious communities throughout the country and to the reorganization of several communal services. General Wiener was decorated by the British, French, and Belgian governments.

[Willy Bok]

WIENER, HAROLD MARCUS (1875–1929), English Bible scholar. Wiener was born in London. Although a lawyer by profession, he devoted most of his life to biblical research. He settled in Palestine in 1924, believing that a religious renaissance was imminent. His main objective was to minimize the conflict between the various religions in the land, and he devoted the last five years of his life to a rapprochement between Arabs and Jews. He supported an Arab school and provided funds for scholarships for young Arabs. His house was called the House of Humanity. Despite these activities, Wiener was killed by an Arab gang on Aug. 13, 1929. He said to his attackers, who did not recognize him, *ana yahud* ("I am a Jew"), and these words sealed his fate.

In his studies Wiener insisted that the Pentateuch was written by Moses, but developed a critical method of biblical interpretation, by which, using the ancient versions, he attempted to establish a correct text. Wiener was prominent among those who opposed the J. *Wellhausen school of Bible research by scholarly methods. Among his major works are *Essays in Pentateuchal Criticism* (1909); *The Origin of the Pentateuch* (1910); *Prophets of Israel in History and Modern Criticism* (1923); *Early Hebrew History and Other Studies* (1924); and *Posthumous Essays* (1932). In addition, the following essays were reprinted separately: *Notes on Hebrew Religion* (1907);

The Date of the Exodus (1916); *The Religion of Moses* (1919); *The Main Problem of Deuteronomy* (1920); and *Altars of the Old Testament* (1927).

[Yehuda Komlosh]

WIÉNER, JEAN (1896–1982), French pianist and composer. He was born in Paris to a family of Austrian origin. He studied at the Conservatoire de Paris with A. Gédalge. After World War I he was among the first to defend jazz music in France. Between 1920 and 1924 he organized the Concerts Wiéner, which contributed to making known his friends, the French "Group of Six" (Honegger, *Milhaud, Auric, Poulenc, Tailleferre, Durey), as well as the works of M. de Falla, I. Stravinski, A. Schonberg, A. Berg, and A. Webern. It was in that framework that D. Milhaud conducted the first performance of Schoenberg's *Pierrot Lunaire*. Along with Clement Doucet he formed a piano duo, which gave 2,000 concerts between 1925 and 1939. His compositions were strongly influenced by American jazz, which he helped to popularize in France. Among his works are *Franco-American Concerto* (1922–23), piano and violin music, an operetta, and music for the cinema, theater, radio, and television.

[Amnon Shiloah (2nd ed.)]

WIENER, LEO (1862–1939), philologist and historian of Yiddish language, literature, and folklore. Born in Bialystok, Poland, he studied at the University of Warsaw in 1880, and then in Berlin. In 1882 he immigrated to the U.S. He became a lecturer in the department of Germanic and Romance languages at the University of Kansas (1892–95), and taught in the Department of Slavic Studies at Harvard University (1895–1930), becoming assistant professor in 1901 and professor in 1911. Wiener published articles on Yiddish linguistic elements in Polish, German, Ukrainian, and Belorussian (1893–1904). In his work *The Popular Poetry of the Russian Jews* (1899), he not only studied Yiddish folk poems but analyzed the poetry of *badḥanim*. He was the first to introduce the poetry of Morris *Rosenfeld, who had been a sweatshop worker, to the general public by translating his poems into English (*Dos Liderbukh*, "The Songbook," 1897) under the title *Songs from the Ghetto* (1898). In 1898, Wiener traveled to Europe to collect material for his pioneering volume, *The History of Yiddish Literature in the Nineteenth Century* (1899). I.L. *Peretz encouraged him and Abraham Elijah *Harkavy, librarian at the Asiatic Museum of St. Petersburg, presented him with a thousand Yiddish books, which formed the basis of the Yiddish collection of the Harvard University library. After the turn of the century Wiener's interest in Yiddish declined. He compiled a valuable anthology of Russian literature (2 volumes, 1902–03) and translated Tolstoy into English (24 volumes, 1904).

He was the father of Norbert *Wiener.

[Sol Liptzin]

WIENER, MAX (1882–1950), Reform rabbi, author, and theologian. Born in Oppeln (Germany), he studied at the University of Berlin, where he received his Ph.D. in 1906, and at the Juedisch-theologisches Seminar in Breslau and the Lehranstalt fuer die Wissenschaft des Judentums in Berlin. He was ordained there in 1908.Wiener served the congregations in Duesseldorf, where he was assistant to Rabbi Leo *Baeck (1909–12), and then as rabbi in Stettin. He was a chaplain in France with the German Army during World War I. In 1926 he moved to Berlin where he was a communal rabbi for the liberal congregations. He succeeded Julius *Guttmann at the Lehranstalt fuer die Wissenschaft des Judentums. He was active as a member of the national board of directors of the Juedischer Kulturverband, which was constituted to give work to unemployed Jewish artists and musicians by having them perform in concerts and theatrical performances, as well as lectures for the Jewish community. He was one of the great scholars saved by the Hebrew Union College and its visionary president Julius *Morgenstein, and brought to the United States, literally plucked from the fire. Together with other scholars, including Abraham Joshua *Heschel, he was invited to HUC, where he became a member of the faculty and a congregational rabbi in Fairmont West, Virginia. He later moved to Congregation Habonim in New York, which was a synagogue in Washington Heights composed of German Jewish refugees, in what euphemistically became known as the "Fourth Reich" in Manhattan.

Wiener saw the essence of Judaism in the teaching of the prophets (*Die Anschauungen der Propheten von der Sittlichkeit* ("The Prophetic View of Ethics," 1909)), but he was critical of 19th-century Reform (*Juedische Religion im Zeitalter der Emanzipation*, 1933 – a standard work) and took a position sympathetic to Zionism and the historical character of Judaism and the Jewish people. Wiener also published *Juedische Froemmigkeit und religioeses Dogma* (1924); *Religion in dieser Zeit* (1934); and compiled *Abraham Geiger und liberales Judentum* (posthumous 1962). He was on the board of the *Reconstructionist* and served as editor of the *Jewish Lexicon* (1927; his work was adapted for the *Universal Jewish Encyclopedia*).

His son THEODORE WIENER (1918–) was librarian at the Hebrew Union College–Jewish Institute of Religion, Cincinnati, from 1959, after serving as rabbi in a number of Reform congregations. From 1964 Wiener was supervisor of the Hebrew Language Unit in the Descriptive Cataloging Division at the Library of Congress. He published bibliographies of Leo Baeck (1954), Samuel *Cohon (1956), and Solomon B. Freehof (1964) and was co-translator with E. Spicehandler of B. Felsenthal's letters to J.H. Schorr (1958).

BIBLIOGRAPHY: Liebeschutz, in: YLBI, 5 (1960), 35–57; K.M. Olitzsky, L.M. Sussman, and M.H. Stern (eds.), *Reform Judaism in America: A Biographical Dictionary and Sourcebook* (1993).

[Jakob J. Petuchowski / Michael Berenbaum (2nd ed.)]

WIENER, MEIR (1893–1941), poet, novelist, and literary critic. Born in Cracow, Wiener received a traditional and secular education and was influenced by his tutor, Ben-Zion Rappaport. During World War I he studied at the universities of Basel and Zurich, later living in Vienna, Berlin, and Paris (1918–26). After immigrating to the Soviet Union in 1926, he became a Soviet citizen, living and working in Kharkov, Kiev, and, from 1933, Moscow. During World War II he volunteered for the Soviet army and was killed near the city of Vyazma during the defense of Moscow. Until his departure for the Soviet Union he wrote mostly in German, including *Messias* ("Messiah," 1920), a collection of mystical meditative elegies; *Die Lyrik der Kabbalah* ("The Lyric of the Kabbalah," 1920), a selection of Hebrew religious poetry in free translation with introductory notes; *Von den Symbolen* ("On Symbols," 1924), an aesthetical-philosophical treatise; political articles, philosophical essays and book reviews, mostly on Jewish subjects, published in the periodicals *Jerubbaal*, *Esra*, *Der Jude*, *Menorah*, *Wiener Morgenzeitung* and others. Together with H. *Brody he published *Mivḥar ha-Shirah ha-Ivrit* ("Selection of Hebrew Lyric," 1922) from the Middle Ages, with his own Hebrew introduction. He began writing Yiddish poetry and fiction in the early 1920s, but was unable to find a publisher for his works outside the Soviet Union. His extensive literary activity up to 1926, which also includes the expressionistic Yiddish novel *Ele Faleks Untergang* ("Ele Falek's Downfall"; written in Berlin in 1923, published in Kharkov 1929), reflects his search for a mode of expression adapted to the conceptual and emotional struggle of the young Jewish intelligentsia between the world wars. He attempted to define Jewish identity and destiny while vacillating between spiritual Zionism and Martin *Buber's teaching on the one hand, and social political radicalism and expressionistic trends in art and literature on the other. He probed deeply into traditional Hebrew poetry and Jewish mysticism and their human and religious significance for modern people in general, and the Jews in particular. His personal and ideological disappointments, lack of a sense of mission, and absence of a place in the intellectual life in Western and Central Europe, as well as his contacts with leftist circles in Berlin and Vienna, including Soviet Yiddish authors Leyb *Kvitko and *Der Nister, caused him to immigrate to the Soviet Union, where he concentrated his energy and talents on Yiddish literature. His main work there was devoted to the research and publications of the Jewish scientific institutes in Kharkov, Kiev, and Moscow in the 1920s and 1930s, where he also played an important role as counselor, editor, and teacher. He headed the Department of Yiddish Language and Literature at Moscow State Pedagogical Institute (1934–38) and directed and participated in the editing of Yiddish literature ranging from folk-song collections and the anonymous comedy *Di Genarte Velt*, to the writings of Solomon *Ettinger, Israel *Axenfeld, Sholem Yankev *Abramovitsh, and *Sholem Aleichem. His editions have served as models ever since; his prefaces to these editions were collected along with additional articles and published in his book *Tsu der Ge-*

shikhte fun der Yidisher Literatur in Nayntsentn Yorhundert (2 vols., 1945–6²). Although this book had not been planned as a comprehensive study, it is, together with his later book, *Vegn Sholem Aleichems Humor* (1941), one of the most notable achievements of criticism and investigation of 19th-century Yiddish literature. Wiener's books evince penetrating knowledge of the subject against a broad literary and cultural background, but also show the author's dependence on Marxist conceptions and Soviet ideological trends predominant at the time. He also published works on Marxist literary theory, theoretical problems in folklore, and criticism of such contemporary Yiddish writers in Russia and abroad as H. Leyvick, David *Bergelson, Perez *Markish, Leib Kvitko, and Itzik *Kipnis. Despite his declared allegiance to Marxist criticism, he had to defend himself in 1932 against critics who accused him of "dangerous deviationism." Towards the end of the 1930s, the emphasis of his research shifted from the sociological aspects of literature towards the issues of style and psychology of literary characters. He continued to write fiction, including the story of Cracow Jews in the 17th century, *Kolev Ashkenazi* (1934, 1939²) and the unfinished novel *Baym Mitllendishn Yam* ("At the Mediterranean Sea," 1936) set in Venice of the first half of the 17th century. Some of Wiener's works were published posthumously in *Sovetish Heymland*: the story *Los Khudios* ("The Jews"; 10, 1968), and his fascinating memoirs which include vivid descriptions of his family and the Jewish Cracow of his childhood and youth (9, 10, 1969). But his major novel, tentatively titled *Der Groyser Roman* ("The Great Novel"), portraying the Jewish literary and artistic scene of Berlin of the early 1920s in which Wiener actively participated, remains unpublished.

[Chone Shmeruk / Mikhail Krutikov (2nd ed.)]

WIENER, NORBERT (1894–1964), U.S. mathematician; inventor of the science of cybernetics. Born in Columbia, Missouri, Wiener was a child prodigy. He was the son of Leo *Wiener, historian of Yiddish language, literature, and folklore and professor of Slavic languages, who made incessant intellectual demands on his son (and who did not reveal their Jewishness – a fact discovered by Norbert Wiener only when he was in his teens). Wiener began to read scientific books at four, and by seven was familiar with the theories of natural scientists, such as Darwin, and with psychiatrists such as Charcot and Janet. He entered Tufts University at 11, and obtained his Ph.D. at Harvard University at 18. At Cambridge, England, he studied under such world-famous personalities as the philosopher Bertrand Russell and the mathematician

G.H. Hardy. Wiener's main innovation as a mathematician was to develop a mathematics based upon imprecise terms reflecting the irregularities of the physical world. He sought to reduce these random movements to a minimum in order to bring them into harmony. During World War II, he applied his concepts to work connected with antiaircraft defense, and this led to advances in radar, high-speed electric computation, the automatic factory, and a new science he created called cybernetics, a word he coined from the Greek word for "steersman," meaning the study of control. This followed his attempt as a mathematician to find the basis of the communication of information, and of the control of a system based on such communication. Wiener suggested the use of cybernetics in diagnostic procedures and indicated the similarity between certain types of nervous pathology and servomechanism (goal-directed machines such as guns which correct their own fixing malfunctioning). His book *Cybernetics* (1948) was a scientific bestseller and transformed him into a public figure as the pioneer of computer development. For the last 17 years of his life he refused to take part in any military research. His book *The Human Use of Human Beings* (1950) sought to alert the layman to the dangerous social consequences of his theories. He wrote an autobiography in two parts: *Ex-Prodigy* (1953) and *I Am a Mathematician* (1956).

[Maurice Goldsmith]

WIENER, PHILIP PAUL (1905–1992), U.S. philosopher. Born in New York, Wiener taught at City College from 1933. He was a founder of the *Journal of the History of Ideas* (1940) and was its executive editor. In 1960 he became the vice president of the International Society for the History of Ideas, and in 1958–59 was the president of the Peirce Society. Wiener's interest was in examining the development of ideas in terms of their cultural connections and relationships.

He wrote *Evolution and the Founders of Pragmatism* (1949) and *Readings in Philosophy and Science* (1953); He edited works on the history and philosophy of science, on the history of ideas, and on C.S. Peirce, and translated works from the French. His edited works include *Leibnitz Selections* (1951); *Roots of Scientific Thought* (with A. Noland, 1957); *Ideas in Cultural Perspective* (with A. Noland, 1962); *Charles S. Peirce: Selected Writings* (1966); *Renaissance Essays* (with P. Kristeller, 1968); *Basic Problems of Philosophy* (et al., 1972); *The Dictionary of the History of Ideas* (1973); and *Violence and Aggression in the History of Ideas* (1974).

ADD. BIBLIOGRAPHY: J. Miller, *Evolution and the Founders of Pragmatism* (1950).

WIENER, SAMUEL (1860–1929), Hebrew bibliographer. In 1887 Samuel Wiener was called upon by the Royal Academy of Sciences in St. Petersburg to work in its department of Hebrew and Yiddish books at the Asiatic Museum attached to the Academy. He assisted Moses Aryeh Leib *Friedland (1825–1899), the wealthy St. Petersburg communal worker and

philanthropist, in acquiring and arranging a large and valuable collection of Hebrew books and manuscripts entrusted to the Asiatic Museum in 1892.

His large bibliographical work *Kohelet Moshe* (Bibliotheca Friedlandiana), which lists all the books in Hebrew characters of the Asian Museum, remained unfinished; the first seven volumes, covering the letters *alef* to *kaf* and a total of 5,507 entries, were published (1893–1918), and the eighth volume, containing the letter *lamed*, was edited by Joseph Bender, and published in 1936. This bibliography is unequaled in Hebrew for its accuracy and itemization. In his work *Reshimat Haggadot Pesaḥ* ("List of Passover *Haggadot*," 1901), Wiener describes about 900 Passover *Haggadot*. He also edited and completed the work of I.T. Eisenstadt, *Da'at Kedoshim* (1897–98).

WIENER GESERA, persecutions of Jews in *Vienna and its environs in 1421. The early 15th century was a period of rising hatred of the burghers of Vienna against the Jews, kindled in part by Jewish wealth. The *Hussite heresy had widespread reverberations in Austria at the time, and it was generally held that Jews and Hussites maintained close contact. Duke Albert V, inclined to religious fanaticism and disturbed by the Hussite rebellion, was also deeply in debt to Jewish moneylenders and without the means of repayment. At Easter 1420 a rumor was spread among the population of Vienna that a rich Jew named Israel had bought consecrated *Hosts from the wife of a Church sexton in Enns, and distributed them among other Jews who desecrated them. The Jews who were implicated were brought to Vienna, imprisoned, and tortured. On May 23, 1420, the Jews were rounded up in all the cities and towns of Austria and their possessions taken from them. The wealthy were imprisoned in Vienna, while the poor were put into boats without oars on the Danube at the mercy of the stream. Some Jews were held captive in houses, others in the synagogues. Children were separated from parents and husbands from wives, and an attempt was made to convert them to Christianity. The rabbis of Italy appealed to Pope Martin V for his intervention on behalf of the Jews of Austria. He reacted by threatening with excommunication anyone who forced Jews to convert. Nonetheless, many of the children taken from their parents were carried off to monasteries and there forcibly converted. A great many of those imprisoned committed suicide, including those held in the synagogues; the last one alive, R. Jonah, set fire to the corpses and died on the funeral pyre. The Jews who were left, 120 women and 92 men, were burned at the stake on March 12, 1421. All the property of the Jews passed to Duke Albert. The stones of the synagogue were used in building the university. Some Jews escaped to Bohemia; a very few managed to maintain an illegal existence in Austria. The proud Vienna community number-

ing between 1,400 and 1,600 existed no longer, and the city became known in Jewish tradition as "Ir ha-Damim" ("The City of Blood").

[B. Mordechai Ansbacher]

WIENER LIBRARY, Jewish information institute in London, founded in 1934 in Amsterdam as the Jewish Central Information Office, by David Cohen, its president, and Alfred *Wiener, its director. The aim of the institute was to communicate material on the realities of *national socialism to Jewish organizations and leaders for effective action with the authorities of their respective countries. It collected, inter alia, Nazi news publications (up to the end of World War II). The institute supplied information for the defense of David *Frankfurter and for the trial of the publishers of *The Protocols of the Elders of Zion* in Switzerland. At the end of 1938 a special collection of material on the November *Kristallnacht* was initiated. In the spring of 1939 the seat of the institute was transferred to London. The Amsterdam branch and most of its personnel became victims of the Nazis. During World War II the library collaborated with the British authorities and the BBC. Special stress was laid on the collection of material on war criminals, which was supplied to the International Military Tribunal in Nuremberg. In recognition of these services the library received the bulk of the copies of prosecution documents. In 1946 a bi-monthly, *The Wiener Library Bulletin*, was initiated. With volume XIX, no. 3 (1965), its publication ceased, but it was replaced by a new publication under the same title with a change in interests and contents. The 19 volumes are a treasure of information on Nazism, Fascism (including neo-Nazism and neo-Fascism), Jewish affairs, and the Holocaust in particular. After the death of Alfred Wiener in 1964, Walter Z. *Laqueur became director of the library. He inaugurated the *Journal of Contemporary History* (1966), catalogs of the book collection, and monographs on the library's research subjects. Four catalogs of the library had been previously published.

[Yehuda Reshef]

At the end of 1974 it was announced that the Wiener Library would be transferred to Tel Aviv University; the move was completed in 1980 with a microfilm library, covering periodicals, press archives, and rare books, to be maintained in London. From 1974 to 1980 Tel Aviv University contributed to the maintenance of the library in London. Despite the move of some of its holdings to Israel, it continues as the Institute of Contemporary History and Wiener Library, at Devonshire Street in central London. It contains one of the largest libraries of books and archives relating to the Holocaust period in Europe, over 50,000 items. Its director in 2005, Ben Barkow, was the author of *Alfred Wiener and the Making of the Holocaust Library* (1997). The Library pub-

lishes a newsletter and other works and holds lectures and conferences.

WIENER NEUSTADT, city in Lower Austria. Jews were living there soon after the city's foundation in 1192. Gravestones in the Jewish cemetery date from 1252 and 1261. In 1277 the rights of the Jews in the city were somewhat curtailed, but the Jewish community developed, flourishing in particular in the 15th century. In proximity to the synagogue were a square, a garden, and a poorhouse. The name of one communal leader, Joseph b. Moses Knoblauch, who "did many good deeds for the congregation," is mentioned in *Leket Yosher* (ed. by J. Freimann, 2 (1903), 40). In 1416, when the Jews of Wiener Neustadt were ordered to pay more than one-fifth of their income in taxes, a "communal regulation was drawn up for collection of the tax by two persons in authority and the other scholars among them" (Israel Isserlein, *Terumat ha-Deshen*). The Jews of Wiener Neustadt took part in its defense, and their rabbi "would permit them to do all manner of work on the Sabbath to protect [the city] from its enemies, in accordance with the instructions of the gentile citizens and noblemen" (*Leket Yosher*, pt. 1, 68).

From the mid-13th century on, many noted rabbis lived in Wiener Neustadt, including *Ḥayyim b. Moses; Moses *Taku; *Ḥayyim b. *Isaac; R. Shalom; Isaac *Tyrnau; and Israel *Isserlein. There was an important yeshivah there during the 15th century. In the second half of that century John *Capistrano visited Wiener Neustadt and preached against the Jews. After several anti-Jewish decrees, the Jews were expelled from the city in 1496. The synagogue was converted into a church. Refugees from Oedenburg (Sopron), Hungary, settled in the city in the early 18th century, totaling 535 persons in 1708. However, clerical agitation and popular pressure forced them to leave soon afterward. Jewish peddlers and merchants, mainly from nearby *Burgenland, continued to visit the city but they were not allowed to stay overnight. In 1848 J.H. Friedenthal settled in Wiener Neustadt, and by 1869 there were 173 Jews living there. Permission to open a cemetery was not granted until 1889. A Moorish-style synagogue was built in 1902; it served 1,059 persons in 1923 when Rabbi H. Weiss officiated.

In the early 1930s there were 1,300 Jews. In May of 1938, there were 347. During *Kristallnacht* (Nov. 9–10, 1938) homes, furniture, and bank accounts of Jews were confiscated by the S.A.; the Jews there who did not emigrate were expelled or transported to Vienna. In January 1968 three Jews lived in Wiener Neustadt.

[Haim Hillel Ben-Sasson]

WIENIAWSKI, HENRI (1834–1880), Polish violinist and composer. Born in Lublin, Wieniawski entered the Paris Conservatory at the age of eight and three years later won the first prize in violin. After his first concert in St. Petersburg in 1848, he appeared in Finland, the Baltic provinces, and Poland. After further study in Paris (1849), he toured Europe with his brother Joseph, pianist, and in 1850 was appointed solo violinist to the czar. He taught at St. Petersburg for a year and then toured the U.S. with the pianist Anton *Rubinstein from 1872 to 1874. From 1874 to 1877 he taught in Brussels. Wieniawski's perfect technique, combined with warmth and delicacy, gained him wide admiration. After the fashion of other virtuosos, he also composed many works for the violin, including two concertos and his popular *Légende*, which he frequently played with his brother. His music is notable for its Slavic idiom and temperament, often exaggerated.

His brother, JOSEPH (1837–1912), studied in Paris and later in Weimar under Liszt. From 1866 he taught at the Moscow Conservatory and founded his own piano school. After a sojourn in Warsaw, where he directed the Music Society, 1875–76, he settled in Brussels and became professor at the conservatory. His works include a piano concerto, waltzes, mazurkas, and Études.

[Meir Katz]

WIERNIK, PETER (1865–1936), U.S. Yiddish journalist. Wiernik was born in Vilna, but emigrated to the U.S. in 1885 and settled in Chicago, where he wrote for the Yiddish Chicago Daily Courier. From 1901 to 1936 he was editor for New York's most important Yiddish daily, the *Jewish Morning Journal.* His editorials, possessed of intelligence, good taste and tolerance, advocated a fusion of modern Orthodoxy and Americanism, and evinced a coolness to political Zionism and hostility to socialism. In addition to Yiddish, he also wrote in Hebrew and English, and was for a time editor of the *Amerikaner.* Besides the editorials, Wiernik's most important work was his *History of the Jews in America* (1912; 1931, reprinted 1972). His Yiddish autobiography, written in 1934, appeared weekly in the *Morning Journal*, Sept. 2–Dec. 23, 1951. He was also active in communal matters and was a member of the executive of the Joint Distribution Committee.

[Joseph Hirsch (2nd ed.)]

WIERNIKORSKI, JUDAH (1823–1901), Russian rabbi. Born in Slonim, Judah was known as an *illui* ("child prodigy"). At the age of 10, he is said to have been completely conversant with three of the six orders of the Talmud: *Mo'ed, Nashim*, and *Nezikin*. At the age of 11, he married a cousin and remained in his father-in-law's house until he was 13. He then went to study

with R. Isaac of Volozhin and in 1840 under R. Israel *Lipkin in Vilna. Deciding to devote himself to teaching rather than accept a rabbinical appointment, Judah was given the position of *rosh yeshivah* of Slonim by R. Joshua Isaac in 1861. He remained there until 1900 when he immigrated to Erez Israel to spend his last days. He died in Jerusalem.

His works include *Penei Yehudah*, novellae on the tractates *Shabbat* and *Ketubbot* (1870); *Leket Yehudah*, sermons (1872); and *Penei Yehudah* on *Bava Kamma* and *Keritot* (1890). The manuscript of his *Penei Yehudah* on *Pesaḥim* and a commentary on the *Sefer ha-Bahir* ascribed to *Neḥunya b. ha-Kanah were burnt in a fire in his town.

WIERUSZOWSKI, HELENE (1893–1978), German-U.S. historian. Born in Elberfeld, her career in historical research was ended in 1933 by the Nazis. After teaching in Spain and Italy, she emigrated to the United States in 1940. In 1949 she joined the history faculty at City College, New York, becoming the first full-time female member of City College's department of history. Her most important books are *Vom Imperium zum nationalen Koenigtum* (1933), *The Era of Charlemagne* (with S. Easton, 1961), *The Medieval University* (1966), and *Politics and Culture in Medieval Spain and Italy* (1971). She wrote an essay on "Peter von Aragon und die Juden; Eine Politik des gerechten Ausgleichs" (in *Estudis Universitares Catalans*, 22 (1936), 239–62).

ADD. BIBLIOGRAPHY: E. Polak, *A Medievalist's Odyssey: Helene Wieruszowski, Scholar* (2004).

WIESBADEN, city in Germany. Individual Jews lived in Wiesbaden in the 14th and 15th centuries. During the 16th century the local count gave them protection against the opposition of the city. In 1620 a number of Jewish refugees arrived there but had to leave after six years. Other Jews, however, were permitted to reside there from 1638. They numbered five families in 1697, nine in 1724, and 11 in 1747. At that time a synagogue, cemetery, and a bathhouse were established. The countess Charlotte in 1732 prohibited the establishment of further synagogues, the public discussion of religion, and profits on moneylending exceeding 5–6 percent. By 1803 there were 14 Jewish families living in Wiesbaden and 42 in the vicinity. Abraham *Geiger introduced his first reforms while acting as rabbi there (1832–38). Forty Orthodox families established an independent community in 1876. The Jewish population numbered 990 in 1875; 2,744 (2.5 percent of the total) in 1910; 3,088 (3 percent) in 1925; 2,713 (1.7 percent) in 1933; and 1,232 (0.7 percent) in 1939. The teacher and reader of the adjacent community of Biebrich was the celebrated scholar Seligmann *Baer. The community maintained a number of educational and welfare institutions, including a "Lehrhaus" for Jewish adult education.

After the rise of the Nazis to power, the Jews of Wiesbaden suffered persecution like those in the rest of Germany. The synagogues were burned in 1938. In 1942, 1,100 Jews were deported from Wiesbaden; during August 1942, 40 Jews committed suicide.

In 1965 there were 350 Jews living in Wiesbaden (0.1 percent of the total population). A new synagogue was opened in 1966. The Jewish community numbered 319 in 1989; 400 in 1990; and 692 in 2004. The increase is explained by the immigration of Jews from the former Soviet Union. A small museum, financed by the city, has an exhibition of the Jewish history of Wiesbaden.

[Ze'ev Wilhem Falk]

WIESEL, ELIE (**Eliezer**; 1928–), journalist, novelist, professor, human rights activist, and Nobel Peace Prize recipient. Born in Sighet, Romania, in a town that became part of Hungary in 1940, Wiesel was raised in a fervently Orthodox and ḥasidic milieu. Prior to 1944, life in Sighet seemed normal, at least to a young studious boy. The Germans invaded Hungary in March 1944, Jews were ghettoized in April, and in May 1944, Elie, his parents, and three sisters were deported along with the rest of Sighet's Jews to Auschwitz, where his mother and younger sister were killed and he survived with his father and two older sisters. He remained in Auschwitz until the infamous death marches of January 1945 and then was forcibly evacuated to Buchenwald, where his father died from exhaustion, starvation, and despair. After his liberation at the Buchenwald concentration camp on April 11, 1945, he was among the 400 Jewish war orphans transferred by the Oeuvre de Secours aux Enfants (Children's Aid Society) to France, where he was later reunited with his older sisters, Hilda and Bea. From 1948 to 1951, he studied philosophy, psychology, and literature at the Sorbonne, and continued his Jewish learning with a talmudic scholar named Shushani, a figure who later would appear in a number of his novels and lectures. He supported himself by writing for the French newspaper *L'Arche* and the Israeli daily *Yedioth Aharonoth*. Wiesel was drawn to the writings of the contemporary French existentialists Albert Camus, André Malraux, and Jean-Paul Sartre, and the Catholic writer François Mauriac, who encouraged the young reporter to write about the suffering of the Jews in the Nazi death camps.

Wiesel had in fact taken notes of his experiences and thoughts from the first days of his liberation, even while recovering in the hospital. He felt compelled "to trace the tragedy back to its origins and causes," but fearing that the event was

"so profound that it cannot be transmitted at all," he vowed to wait ten years before publishing a book on the subject. In 1956, the same year he left Paris and settled in New York, Wiesel's 250-page abbreviated memoir of life in the camps, *Und di Velt hot Geschvign* ("And the World Was Silent"), appeared in Buenos Aires. An abridged version, translated from Yiddish to French (*La Nuit*) with an introduction by François Mauriac, was issued in 1958, and two years later in English (*Night*). A classic in Holocaust literature that is widely used in high schools and colleges, *Night* paved the way for publication of other first-person accounts by Shoah survivors, whom Wiesel recalls "were afraid or shamed to broach the subject."

Night was followed by two novels, *L'Aube* (1960; *Dawn*, 1961) and *Le jour* (1961; *The Accident*, 1962), both dealing with the postwar experiences of Holocaust survivors. Writing in French, Wiesel established his characteristic themes and storytelling style in three subsequent novels: *La ville de la chance* (1962; *The Town Beyond the Wall*, 1964), *Les portes de la forêt* (1966; *The Gates of the Forest*, 1966), and *Le mendiant de Jérusalem* (1968; *A Beggar in Jerusalem*, 1970), which won the Prix Medicis in Paris. Wiesel also publicized the plight of Soviet Jews in a nonfiction account based on his visit to the Soviet Union, *Les Juifs du silence* (1966; *The Jews of Silence*, 1966).

Wiesel's essays on the importance of memory and the struggle against injustice in a post-Holocaust world are included in several collections: *Le chant des morts* (1966; *Legends of Our Time*, 1968), *Entre deux soleils* (1970; *One Generation After*, 1970), *Un Juif aujourd'hui* (1977; *A Jew Today*, 1978), and the three-volume collection, edited by Irving Abrahamson, *Against Silence: The Voice and Vision of Elie Wiesel* (1985). His later essay collections include *From the Kingdom of Memory* (1990) and *After the Darkness* (2002). His autobiography appeared in two volumes: *Tous les fleuves vont à la mer* (1994; *All Rivers Run to the Sea*, 1995) and *Et la mer n'est pas remplie* (1996; *And the Sea Is Never Full*, 1999).

Drawing on his childhood ḥasidic roots, Wiesel based several books on the stories and folklore of famous *rebbe*s, their religious struggles and the battles they waged against despair: *Célébration hassidique* (1972; *Souls on Fire*, 1972), *Four Hasidic Masters* (1978), and *Contre la mélancolie: celebration hassidique II* (1981; *Somewhere a Master*, 1982). From 1967, Wiesel gave an annual lecture series at New York's 92nd Street Y, popularizing Jewish learning and the midrashic style of teaching. These and other lectures, which focus on portraits of biblical, rabbinic, and ḥasidic figures, are collected in *Célébration biblique* (1975; *Messengers of God*, 1976), *Images from the Bible* (1980), *Five Biblical Portraits* (1981), *Silences et mémoire d'hommes* (1989), *Sages and Dreamers* (1991), and *Wise Men and Their Tales* (2003).

Wiesel wrote two plays – *Zalmen, ou la folie de Dieu* (1968; *Zalmen, or the Madness of God*, 1974) and *Le procès de Shamgorod* (1979; *The Trial of God*, 1979), and a cantata, *Ani Maamin* (music by Darius Milhaud, 1973). The idea of *The Trial of God* came from an event he witnessed in Auschwitz – a *bet din* called to put God on trial for failing to act. This play,

with its perplexing, unanswered questions, generated considerable dialogue with Christian theologians. As Wiesel wrote in *Night*, "I did not deny God's existence, but I doubted His absolute justice." Many of Wiesel's works question God's silence, but even more, they question human silence in the face of persecution and injustice.

Wiesel wrote several essays emphasizing the importance of historical memory, particularly in reaction to Holocaust deniers and anti-Zionists. "Anyone who does not actively, constantly engage in remembering and making others remember," he wrote, "is an accomplice of the enemy." For Wiesel, the Holocaust is "the ultimate event" that has changed everything that follows and consequently should change our response to human suffering. This theme reverberates through his later novels: *Le serment de Kolvillag* (1973; *The Oath*, 1973), *Le testament d'un poète juif assassiné* (1980; *The Testament*, 1981), *Le cinquième fils* (1983; *The Fifth Son*, 1985), *Le crépuscle, au loin* (1987; *Twilight*, 1988), *L'oublié* (1989, *The Forgotten*, 1992), *Les juges* (1999; *The Judges*, 2002), and *Le temps des déracinés* (2002; *The Time of the Uprooted*, 2005). His books are written in French, and many were translated into English by his wife, Marion (married 1969; they have one son, Elisha).

Wiesel has taught the humanities, religion, philosophy, and literature at several colleges and universities, including City College, City University of New York from 1972 to 1976, Yale University from 1982 to 1983 as a Henry Luce Visiting Scholar, and Boston University in 1976. As a survivor, author, professor, and public figure (he was the chairman of the United States President's Commission on the Holocaust, then founding chairman of the United States Holocaust Memorial Council in Washington, D.C.), Wiesel has leveraged his moral authority in support of the State of Israel, Soviet Jewry, and oppressed peoples everywhere. He brought world attention to the plight of Miskito Indians in Nicaragua, Cambodian refugees, South Africans under apartheid, Muslims in Bosnia, Tutsis in Rwanda, Sudanese in Darfur, and other victimized groups. Wiesel was also a vocal critic of those who would dishonor the memory of the victims by the denial, trivialization, or political exploitation of the Holocaust. His most famous intervention came on April 19, 1985, on the occasion of President Ronald Reagan's presenting him with the United States Congressional Gold Medal. Wiesel publicly implored the president to cancel his planned visit to the cemetery in Bitburg, Germany, where members of the ss are buried. Speaking "truth to power," Wiesel stated, "that place is not your place, Mr. President. Your place is with the victims of the ss."

Wiesel received a number of international honors, including the Nobel Peace Prize (1986); *Grand-Croix de la Légion d'Honneur* (France, 2001); *Grã-Cruz da Ordem Nacional do Cruzeiro do Sul* (Brazil, 2001); Order of Merit of the Republic of Hungary (2004); the King Hussein Award of the Hashemite Kingdom of Jordan (2005); and more than 100 honorary degrees from universities worldwide.

In awarding him the Peace Prize, Nobel Committee Chairman Egil Aarvik characterized Wiesel as "a man who

has gone from utter humiliation" to become a "messenger to mankind… to awaken our conscience, because our indifference to evil makes us partners in the crime." In 1987, using his Nobel Prize money, he and his wife, Marion, established the Elie Wiesel Foundation for Humanity, which organizes international conferences in pursuit of strategies to combat hatred and indifference.

Refusing to surrender to despair, Wiesel's literary works and public activism continue to stress "the importance of remaining human in an inhumane world, of affirming hope in man – in spite of man."

[Aron Hirt Manheimer and Bonny V. Fetterman (2ⁿᵈ ed.)]

WIESELTIER, MEIR (1941–), Hebrew poet and translator. Born in Moscow, Wieseltier came to Israel as an eight-year-old child. He grew up in Netanyah and later studied English literature, history, and philosophy at the Hebrew University. In the early 1960s, having spent some time in England and France, he became one of the leading figures of the so-called "Tel Aviv Circle" (with Yona *Wallach and Yair Hurvitz) which sought to break with the ironic, impersonal, and non-political writing of poets such as Nathan *Zach and imbue Hebrew poetry with a refreshing, avantgardist and experimental spirit. Wieseltier was co-founder of the literary magazine *Siman Keriah*. His first collection of poems, *Perek Alef, Perek Beit* ("Chapter 1, Chapter 2"), appeared in 1967, followed two years later by *Meah Shirim* ("100 Poems"). Other collections include *Kaḥ* ("Take It," 1973), *Davar Optimi, Asiyat Shirim* ("Something Optimistic, The Making of Poems," 1976), *Penim va-Ḥuẓ* ("Interior and Exterior," 1977), *Moẓa el ha-Yam* ("Exit into the Sea," 1981), *Kiẓẓur Shenot ha-Shishim* ("The Concise Sixties," 1984), Ii *Yevani* ("Greek Island," 1985), *Mikhtavim ve-Shirim Aḥerim* ("Letters and Other Poems," 1986), and *Maḥsan* ("Storehouse," 1994). Wieseltier's poetry is subjective, often unconventional in diction and tone, and occasionally deliberately full of pathos. Loss, death, and the ambiguities of the human predicament are the major themes of his oeuvre. Underlying some of the poems is a pronounced disdain for bourgeois norms and superficial ideologies and at the same time an ambivalent relationship to Tel Aviv, the city in which he resides. His "poetry of iconoclasm," as it was once defined, shows the influence of French surrealism and of modern Anglo-American poetry. Wieseltier is also known as one of the finest translators of English, French, and Russian poetry into Hebrew. He translated a number of Shakespearean tragedies and novels by Virginia Woolf, E.M. Forster, and Charles Dickens. In 2000 he was awarded the Israel Prize for literature. A collection of selected poems in English translation appeared under the title *The Flower of Anarchy* in 2003; individual poems have been translated into various languages. Further information concerning translation is available at the ITHL website at www.ithl.org.il.

[Anat Feinberg (2ⁿᵈ ed.)]

WIESENTHAL, SIMON (1908–2005), the world's most famous "Nazi-hunter," the personification of the efforts to bring Nazi war criminals to justice after World War II. Born in the Galician city of Buczacz, then part of the Austro-Hungarian Empire and after World War I part of independent Poland (today located in Ukraine), Wiesenthal was forced to study architectural engineering at the Technical University in Prague due to restrictive Polish quotas on Jewish students. After completing his studies, he returned to Poland, obtained certification as an architect, and began working in his profession in the (then) Polish city of Lwow (Lvov).

During World War II, Wiesenthal was incarcerated in nine concentration and labor camps, among them Janowska, Plaszow, Auschwitz, Gross-Rosen, and Mauthausen, from which he was liberated, barely alive, on May 5, 1945, by the United States Army. During the course of the war, he narrowly escaped death several times, and twice attempted to commit suicide to avoid being tortured. It was these close encounters with almost certain death, and his conviction that many Jews far more worthy than himself had perished in the war, to which he attributed his strong motivation to lend significance to his own survival. A postwar incident, shortly after liberation, in which Wiesenthal was beaten by a former kapo in Mauthausen, who was summarily punished by the American commander of the camp, who assured the Jewish survivor that the supremacy of the rule of law had been restored, deeply influenced his decision to abandon his profession and devote his life to the efforts to facilitate the prosecution of Holocaust perpetrators.

Wiesenthal began his career with the War Crimes Unit of the U.S. Army in Austria and later, in 1947, established the Jewish Historical Documentation Center in Linz, where he collected the testimonies of hundreds of Holocaust survivors. In 1954, however, Wiesenthal closed the center due to waning interest in the prosecution of Nazi war criminals, which he primarily attributed to the growing tensions of the Cold War. In his opinion, the perpetrators of the Holocaust were the biggest beneficiaries of the hostility between the superpowers, which severely limited the efforts to bring them to justice. He sent his files to Yad Vashem, and went to work for Jewish organizations assisting refugees from Eastern Europe.

In 1961, however, following the *Eichmann trial in Jerusalem, Wiesenthal opened the Documentation Center in Vienna and resumed his efforts to bring Nazi war criminals to justice, a mission which he continued virtually until his death. Although he played no role in the actual capture of Eichmann, who was kidnapped by the Mossad in Argentina in 1960 and brought to Israel to stand trial, Wiesenthal gained international stature due to his connection to the case. In 1947 he had prevented Eichmann's wife, Vera, from having Eichmann declared officially dead by an Austrian court (which would have led to the removal of his name from the lists of wanted criminals) and was the first to point to Argentina as his possible haven. After he closed his office in 1954, Eichmann's file was the only one he kept.

Over the years, Wiesenthal played a crucial role in the exposure and apprehension of numerous Nazi war criminals, many of whom were prosecuted and punished. Among his most famous cases were those of Treblinka and Sobibor commandant Franz Stangl, whom he tracked down to Brazil; notoriously cruel Majdanek guard Hermine Braunsteiner Ryan, whom he found in the United States; Sobibor deputy commander Franz Gustav Wagner (Brazil); and Karl Silberbauer (Austria), the Gestapo operative who arrested Anne *Frank and her family in their hiding place in Amsterdam. In addition, Wiesenthal played a prominent role in the ultimately successful worldwide efforts to convince the West German government not to impose a statute of limitations on the prosecution of Nazi war criminals whose implementation was scheduled to go into effect in 1979.

Throughout his life, Wiesenthal stressed the importance of remembering the crimes of the Holocaust and preserving the accuracy of the historical record. In that respect, he achieved worldwide status as a spokesperson for both the survivors and the victims of the Holocaust, an achievement which perhaps surpasses his role as a "Nazi-hunter." His accomplishments in this role were largely significant during the 1950s and 1960s, when there was little public interest in the subject of the Holocaust.

Wiesenthal's work was guided by three major principles: the primacy of the rule of law, his refusal to categorize people by their religion or ethnic origin, and the importance of noting the fate of the Nazis' non-Jewish victims. Thus he steadfastly opposed revenge attempts, emphasized the fact that the nations that produced killers also had Righteous Gentiles, and consistently stressed the fact that the Jews were not the Nazis' only victims. These points found expression in the numerous books he wrote, especially in his best-known works, *The Murderers among Us* (1970) and *Justice Not Vengeance* (1989). In *The Sunflower* (1970) and the novel *Max and Helen* (1982), he explored the themes of forgiveness and reconciliation.

A stubborn defender of his views, Wiesenthal was involved in two well-publicized controversies, one with Austrian chancellor Bruno *Kreisky, whom he criticized for including former Nazis in his government, and a second with the World Jewish Congress, which questioned his apparent lack of enthusiasm for their campaign to prosecute Austrian president (and former UN secretary-general) Kurt Waldheim for war crimes he ostensibly committed during World War II. Various detractors accused him of claming credit for the achievements of others, particularly in the Eichmann case.

In 1979, the *Simon Wiesenthal Center was established by Rabbi Marvin *Hier in Los Angeles. While a separate organization, its high-profile activities, both in the fight against antisemitism and the continued efforts to bring Nazi war criminals to justice, have added to Wiesenthal's international stature and fame, though his association with the organization that bore his name was limited. The recipient of numerous honors, doctorates, and prizes, his efforts to perpetuate the memory of the victims and hold their killers responsible were most appreciated during his last years, when public interest in the Holocaust reached unprecedented heights.

[Efraim Zuroff (2nd ed.)]

WIESNER, JEROME BERT (1915–1994), U.S. electrical engineer and educator; president of the Massachusetts Institute of Technology (MIT). Wiesner, who was born in Detroit, Michigan, was associate director of the broadcasting station at the University of Michigan from 1937 to 1940 and assisted in developing modern electronic techniques for use in the speech department. In 1940 Wiesner was appointed chief engineer of the Acoustical and Record Laboratory in the Library of Congress. During World War II, he was consecutively: associate leader of the radio frequency development group at MIT's radiation laboratory; project engineer of a key radar development program; group leader of Project Cadillac which was assigned to devise an airborne radar system; and a member of the Los Alamos Laboratory staff (1945). Wiesner returned to MIT as assistant professor (1946), and subsequently held several other university posts before being appointed provost in 1966. In 1971 he was named its president – the first Jew to be appointed to that position, which he held until 1980. He was a member of the President's Science Advisory Committee (1957), served as staff director of the American Delegation to the Geneva Conference for the Prevention of Surprise Attack (1958), and in 1961 was appointed special assistant for science and technology by President Kennedy. From 1962 to 1964 he was director of the Office of Science and Technology. Wiesner played an important role in the development of the concept of scatter transmission and in the application of statistical methods to communications engineering. He was a member of the board of governors of the Weizmann Institute from 1964, and advised on education and science policy in Israel. He wrote *Where Science and Politics Meet* (1964).

WIESNER, JULIUS VON (1838–1916), Austrian botanist. Born in Moravia, Wiesner showed an early bent for botany, publishing his first scientific paper, on the flora of the vicinity of Brno, when he was hardly 16 years old. After receiving his Ph.D. at the age of 22, he taught plant physiology at the Vienna Polytechnic Institute and at Mariabrunn. In 1873, Wies-

ner was made professor of plant anatomy and physiology at the University of Vienna, where he remained for 36 years, until his retirement in 1909. Wiesner was one of the founders of modern economic botany.

His major work in this area was *Die Rohstoffe des Pflanzenreiches* (1873), a comprehensive treatment of the world's plants as sources of gums, resins, fibers, and other economically valuable products. No less outstanding were Wiesner's contributions to basic botanical science. He did important research on the effect of light on plants, on the process of chlorophyll formation, and on the power of movement in plants. In his *Die Elementarstructur und das Wachstum der lebenden Substanz* (1892), Wiesner put forward a theory (now only of historical interest) that the cell is not the ultimate unit of life but is composed of simpler elementary units, which he called "plasomes."

[Mordecai L. Gabriel]

WIEVIORKA, ANNETTE (1948–), historian. She was born in Paris to a Jewish family of Polish origin. Her grandfather Aby was a noted Parisian Yiddish poet and a translator from Yiddish into French. In her youth, Wieviorka was a convinced Maoist who went to China with her husband and her son, and worked as a French teacher in Canton, between 1974 and 1976. She wrote a book about her experience in China (*L'écureuil de Chine*, 1979). A high school teacher in Paris from 1976 to 1990, she started doing research in French history and opened a new field, the history of collective memory of the Holocaust in France. Her important dissertation on the making of the memory of deportation in France just after the liberation, published in 1992, proved to be a pathbreaking work. In her book she thoroughly studied the way French public opinion discovered the atrocities of the Nazi camps, and how the French administrations and the French army helped in liberating the camps. In addition, she focused on the reception of the very first testimonies given in France by Jewish survivors. In her complete scanning of these testimonies, she argued that, far from being shy of testifying, the survivors were immediately active in trying to describe the horror they had witnessed and had gone through, but that nobody was then ready to hear their statements: the handful of survivors wrote numerous books, which were not read. With the passing of time, the French leaders were ready to acknowledge the sufferings of Resistance fighter deportees, more of whom survived their deportation as they were not sent to Auschwitz. The historian concluded that "Buchenwald masked Auschwitz." As a researcher Wieviorka entered the National Center for Scientific Research (CNRS) in 1990, and she continued her work on the memory of the Holocaust in France. Among many other books, she wrote a short work, *The Era of the Witness* (*L'ère du témoin*, 1998; English, 2006), in which she asserted the central role of witnesses in the remembrance of the Shoah in contrast to works of scientific research. Starting in 1961 with the Eichmann trial in Jerusalem, she described this trend up to the early 21st century, when the words of an Auschwitz survivor are almost sanctified. Between 1997 and 2000, she was a member of the official commission, appointed by the prime minister, in charge of searching for looted Jewish assets and properties in France. An advocate for the rights of Jewish families to fully recover what had been taken, she explained the necessity of this research to appease the tensions that arose in France. In France, Wieviorka is a public figure, who regularly appears in the media to explain the Holocaust to a wider audience. Her short book on Auschwitz, targeting a teenage audience, *Auschwitz expliqué à ma fille* (1999), is a worldwide bestseller, translated into a dozen languages. Her publications include *Les livres du souvenir, mémoriaux juifs de Pologne* (1983); *Le procès Eichmann* (1989); *Déportation et génocide, entre la mémoire et l'oubli* (1992); *Mille ans de cultures ashkénazes* (ed. et al., 1994); *Passant, souviens toi…* (1995); *Le Procès de Nuremberg* (1995); *Les Procès de Nuremberg et de Tokyo* (1996); and *Auschwitz, 60 ans après* (2005).

[Jean-Marc Dreyfus (2nd ed.)]

WIGNER, EUGENE PAUL (1902–1995), Nobel laureate in physics. Wigner was born in Budapest and was one of a small number of extraordinarily talented Hungarian-born physicists who contributed to the transformation of Newtonian physics. Wigner obtained his doctorate from the Technische Hochschule (later Universitaet) in Berlin in 1925, where his contacts with physicists of equal standing were established at colloquia of the German Physical Society. He worked at a Kaiser Wilhelm Institute, followed by the University of Goettingen, until his recruitment by Princeton University in 1930, a move precipitated by his early perception of the Nazi menace. In 1936–38 he worked at the University of Wisconsin before returning to Princeton. He moved to the University of Chicago (1942–45) to contribute to the Manhattan Project, before becoming director of research and development at the Clinton Laboratories (later Oak Ridge National Laboratory) (1946–48). However, from preference for teaching and research, he returned to Princeton for the rest of his career. His main interests in theoretical physics concerned quantum mechanics and nuclear reactions but later became more philosophical. He was awarded the Nobel Prize in 1963 (jointly with Maria Goeppert-Mayer and Hans Jensen) for the invariance principle, which concerns the rules governing observable physical events. He was also a practical engineer. His involvement in the Manhattan Project arose from his fear that the Nazis might develop nuclear weapons, and he helped to prepare Einstein's letter to President Roosevelt. He contributed to the design of the first experimental fission reactor in Chicago and the first reactor for plutonium production at Hanford. His honors included the U.S. Medal of Merit (1946), the Fermi Prize (1958), the Atoms for Peace Award (1960), and the U.S. National Medal of Science (1969). In 1970 he was elected a fellow of the Royal Society and other learned societies, including the National

Academy of Sciences and the American Academy of Art and Sciences. He was a member of the General Advisory Committee to the U.S. Atomic Energy Commission from 1952 to 1957, was reappointed to the Committee in 1959, and served on it until 1964.

[Michael Denman (2nd ed.)]

WIGODER, BASIL THOMAS, BARON (1921–2004), British lawyer. Wigoder was born in Manchester, son of Philip I. Wigoder, a prominent local Zionist, and educated at Manchester Grammar School and Oxford. At Oxford he was president of the Union. After his military service in World War II, he joined the Liberal Party and unsuccessfully contested a number of elections. From 1963 to 1965 he was chairman of the Liberal Party executive and in 1965–66 of the Liberal Party Organizing Committee. He ceased much of his political activity in the mid-1960s and concentrated on his legal work, acquiring recognition through his appearances in leading criminal cases. In 1966 he was made a Queen's Counsel and in 1971 a Recorder of the Crown Court. In 1974 he was created a life peer, and served as Liberal Whip in the House of Lords.

WIGODER, GEOFFREY (1922–1999), editor. Born in Leeds, England, Wigoder was educated at Trinity College, Dublin, Oxford, Jews' College, London, and the Jewish Theological Seminary, New York. In 1949 he settled in Jerusalem. He was director of Israeli radio's Overseas Broadcasts, founder-director of the Oral History department and Jewish Film Archives in the Hebrew University's Institute of Contemporary Jewry, historical adviser to the Diaspora Museum (Beth Hatefutsoth) in Tel Aviv, and founder-director of the Steven Spielberg Film Center at the Hebrew University. In 1991 he was visiting professor of Modern Jewish Studies at the University of Manchester. Wigoder succeeded Cecil Roth as editor in chief of the *Encyclopaedia Judaica* in 1970 (having previously been deputy editor in chief) and edited its year books from 1981 and the CD-ROM edition. He is author of *Abraham ben Hayya's Meditation of the Sad Soul, The Story of the Synagogue, Jewish-Christian Relations after World War II*, and *Jewish Culture*. He edited many reference works, including *The Standard Jewish Encyclopedia, Dictionary of Jewish Biography, Encyclopedia of Judaism, The Oxford Dictionary of the Jewish Religion* (with R.J.Z. Werblowsky), *New Encyclopedia of Zionism and Israel, Illustrated Dictionary and Concordance of the Bible, Jewish Art and Civilization*, and the three-volume *Encyclopedia of Jewish Life Before and During the Holocaust*.

Wigoder was one of the pioneers in the field of interfaith relations and Jewish-Christian dialogue. He served as the Israeli representative of the International Jewish Committee for Inter-Religious Consultations for over 20 years, becoming its chairman late in life.

WIHL, LUDWIG (1807–1882), German poet and journalist. Born in Wevelinghofen, near Aachen, Wihl received a good Jewish education and then studied philosophy and Oriental languages. His doctoral thesis on Phoenician inscriptions so impressed his teacher at the Munich University, the philosopher F.W. von Schelling, that he was recommended for a professorship. As he refused to abandon Judaism, the post was denied him, and he had to earn his living as a journalist. Wihl contributed to the periodicals of the Young Germany movement, especially to *Gutzkow's *Phoenix*. After the publication of his first volume of poems in 1836 he visited Paris. There he met *Heine, about whom he wrote in unflattering terms, and Heine's retaliatory attack was so vicious that it destroyed Wihl's reputation as a poet. During the revolution of 1848 Wihl published an article which was so outspoken that he had to flee to France to escape a prison sentence. He taught German literature and philosophy at Grenoble until the outbreak of the Franco-Prussian War in 1870, when he sought a final refuge in Brussels.

Wihl's works include *Geschichte der deutschen Nationalliteratur* (Altona, 1840); *Westoestliche Schwalben* (Mannheim, 1847), a collection of verse; and *Le mendiant pour la Pologne* (Paris, 1864), poems in French and German.

[Sol Liptzin]

WIJNKOOP, DAVID (1876–1941), Dutch Communist. Born in Amsterdam, Wijnkoop was the son of the Amsterdam rabbi Joseph David (1842–1910), who manifested himself as a *"rebbe of the people,"* a position, which led to a serious break with the chief rabbi of Amsterdam, J.H. Dünner (1833–1911). This conflict was one of the factors which turned his son, David, into a rebel. David Wijnkoop, future first leader and talented propagandist of Dutch Communism, was attracted to Marxism as a student. At first he joined the Labor Party (SDAP) and in 1905 he became a member of its executive. But as one of the founders of the radical-Marxist newspaper *De Tribune* he was expelled from the party. In 1909 Wijnkoop founded his own social democratic party, initially called the Social Democratic Party, which became the Communist Party of Holland (CPH; later: CPN) in 1918. He was the CPH's chairman and sat in the Second Chamber of parliament from 1918 to 1940 as a Communist representative. He was also a member of the Amsterdam municipal council and the North Holland provincial council. Between 1925 and 1930 Wijnkoop became involved in a heated party struggle and was dropped by Moscow. He then founded an independent Communist Party. In 1930 the two parties fused after Wijnkoop publicly confessed his guilt.

Though David Wijnkoop is said to have expressed his support for the Second Zionist World Congress, in 1898, this sympathy was short-lived. In 1903, in protest against the *Kishinev pogrom, the Dutch Zionist Movement and the Labor Party (SDAP) each organized a protest. It was Wijnkoop who, on behalf of the SDAP, gave a Marxist interpretation of the Russian anti-Jewish violence. According to him the pogrom was both an expression of the conflict between peasant

and moneylender, and an instrument of the czarist regime to suppress the revolutionary tide.

After his comeback in 1930 Wijnkoops position within the CPH was fairly weak. He died in May 1941, a few months after the February strike against the Nazis in Amsterdam, and was accompanied to his grave by hundreds of people.

[Evelien Gans (2nd ed.)]

WILBUSCHEWITZ, family of pioneers in Erez Israel. The head of the family, ZE'EV WILBUSCHEWITZ, was a landowner who lived near Grodno, Lithuania, and whose children joined the Zionist movement. His eldest son, ISAAC, went to Erez Israel with the *Bilu group in 1882, but contracted yellow fever, returned to Russia, and drowned in the Neimen River. GEDALIAH WILBUSCHEWITZ (1865–1943), a mechanical engineer, went to Erez Israel in 1892 and was a founder of a machine and metal-casting factory in Jaffa. This was the first Jewish enterprise of its kind in the country. During World War I he served as chief engineer of Jamal Pasha's headquarters in Damascus. After the war he worked as an engineer in Haifa. He published "*Mi-Zikhronot Ḥalutz ha-Ta'asiyyah ha-Ivrit*" in *Sefer ha-Aliyah ha-Sheniyyah* (1947). MOSHE WILBUSCHEWITZ (1869–1952), a chemical engineer and inventor, improved the margarine production process and invented a type of whole-meal bread (*leḥem ḥai*). He went to Palestine in 1919 and was one of the founders of the Shemen edible-oil products factory in Haifa. He held novel opinions on meteorology and climatology and established a special laboratory bearing his name at The Hebrew University campus on Mount Scopus in order to engage in research in this field. NAḤUM WILBUSH (WILBUSCHEWITZ; 1879–1971) was a mechanical engineer. He moved to Erez Israel in 1903 and founded Atid, the first edible-oil factory in the country, at first situated in Ben Shemen and later in Haifa. He was a member of the Zionist Organization's delegation to East Africa to survey the possibilities for Jewish settlement in Uganda, and his book *Ha-Massa le-Ugandah* (1963) is a diary of this journey. During World War I, he served as an engineer in the Turkish army and was responsible for supplying water to the forces stationed in the Damascus region. Their sister was Mania Wilbuschewitz *Shochat.

[Yehuda Slutsky]

WILCHEK, MEIR (1935–), biophysicist. Born in Warsaw, Wilchek saw his youth disrupted by World War II, which he spent in Russia, mostly in Siberia. His family came to Israel in 1949 and eventually settled in Reḥovot where he finished high school. He received his doctorate from the Weizmann Institute and joined the department of biophysics, becoming professor in 1974 and later chairman. He was awarded numerous prizes, including the Rothschild prize for chemistry in 1987, the Wolf Prize for medicine in 1987, and the Israel Prize in life sciences (1990) for his discovery and development of the technology of chromotographic linkage. He was a foreign associate of the U.S. Institute of Medicine and National Academy of Science and a member of the Israel Academy of Sciences.

WILD BULL (Heb. רְאֵם, *re'em* or רֵים, *reim*), a powerful animal (Num. 23:22) whose strength is primarily in its horns (Deut. 33:17). It is parallel to the strong ox (*ibid.*; Isa. 34:7) but, unlike the ox, cannot be domesticated (Job 39:10–11). The animal referred to, the *Bos primigenius*, is called in Akkadian *rimu*, and was an extremely powerful animal which is depicted in many Assyrian hunting scenes. It was relentlessly hunted and, as a consequence, was entirely exterminated a few generations ago. In Arabic the name *rim* is given to the *antelope, the *Oryx leucoryx*. The biblical *re'em* apparently applies to this animal also, as in Psalms 92:11, which refers to the yard-long horns of the antelope. Similarly, the *Sifrei Deuteronomy* (323) declares that "the horns of the *re'em* are beautiful but it is not strong." In the *aggadah* the *re'em* is depicted as an animal of fabulous size. Because of its size, Noah could not bring it into the ark and tied it to the outside (Gen. R. 31:13). To David it looked like a mountain (Mid. Ps. to 22:25). In later Midrashim the *shor ha-bar* ("wild ox") is reserved, like the *Leviathan, for the banquet arranged for the righteous in the world to come. In earlier sources, however, the reference is to the *behemoth. In the *halakhah* there is a discussion as to whether the *shor ha-bar* is a *kilayim with the ox (Kil. 8:6; Tosef., *ibid.*, 1:8). R. Yose in the Mishnah (Kil. 8:6) regards it as belonging to the category of beasts (non-domesticated animals), while the sages classify it as a (domesticated) animal. The Jerusalem Talmud explains the difference, in that the latter regard it as an animal that was originally domesticated but escaped and reverted to its wild state, while the former holds that it was always wild (*ibid.*, 8:6, 31c). R. Yose identifies it with the *te'o* of Deuteronomy 14:5, but it is not clear whether he means the bison or the *buffalo.

WILDENSTEIN, French family of art collectors, connoisseurs, and dealers. NATHAN (1851–1934) opened a small shop in the Rue Laffitte in Paris in 1890 and by the end of the century was considered one of the five most important art dealers in Paris. He opened a gallery in New York in 1903.

His son GEORGES (1892–1963), born in Paris, followed the family tradition, studied French art and joined his father in the business. In 1902 his catalog for the Fragonard exhibition at the Louvre became the model for all later catalogs. He wrote several biographies of French painters: Aved (1922), Louis Moreau (1923), a book on Lancret (1924), and one on Chardin (1933). He opened two more branches of the gallery in London and one in Buenos Aires. In 1941 he settled in the United States.

Daniel Leopold (1917–2001), Georges' son, an art dealer, was born in France. He went to the United States in 1940 and from 1959 to 1962 was chairman of the board of Wildenstein and Company Inc., New York. He wrote articles on art for many magazines both in the United States and in France.

WILDER, BILLY (1906–2002), U.S. film director and writer. Born in Vienna, Wilder began as a newspaperman, and got his start in the film industry in Berlin by writing scripts. He left Germany in 1933 and reached Hollywood in 1934. At Paramount studios he collaborated with Charles Brackett, a former drama critic for *The New Yorker*, and together they wrote 14 successful films, including *Ninotchka* (1939); *Ball of Fire* (1941); *Double Indemnity* (1944); *The Lost Weekend* (1945); *A Foreign Affair* (1948); *The Emperor Waltz* (1948); and *Sunset Boulevard* (1950). After they had parted in 1950, Wilder wrote successes such as *Stalag 17* (1953); *Sabrina* (1954); *The Seven Year Itch* (1955); *Love in the Afternoon* (1957); and *Witness for the Prosecution* (1958). Wilder, whose films were characterized by novel situations and swift dialogue, teamed with I.A.L. Diamond to make *Some Like it Hot* (1959); *The Apartment* (1960); *Irma la Douce* (1961); *The Fortune Cookie* (1966); and *The Private Life of Sherlock Holmes* (1970). Many of these he also produced and directed.

Other Wilder films include *The Spirit of St. Louis* (1957); *One, Two, Three* (1961); *Kiss Me, Stupid* (1964); *Avanti!* (1972); *The Front Page* (1974); *Fedora* (1978); and *Buddy Buddy* (wrote, 1981).

For more than a quarter of a century, Wilder was one of the most successful filmmakers in Hollywood. His many accomplishments and accolades include six Oscars – two for direction, three for screenwriting, and one for producing. In 1986 he received a Lifetime Achievement Award from the American Film Institute. In 1988 he received the Irving G. Thalberg Memorial Award, given to "a creative producer who has been responsible for a consistently high quality of motion picture production."

[Stewart Kampel / Ruth Beloff (2nd ed.)]

WILDER, GENE (**Jerry Silberman**; 1933–), U.S. actor. Born in Milwaukee, Wisconsin, Wilder received a B.A. from the University of Iowa. He taught fencing before making his off-Broadway debut in Arnold Wesker's *Roots* in 1961. Moving on to the Broadway stage, Wilder appeared in *The Complaisant Lover* (1961); *Mother Courage and Her Children* (1963); *One Flew over the Cuckoo's Nest* (1963); *The White House* (1964); and *Luv* (1964).

He made his film debut as the undertaker in *Bonnie and Clyde* (1967). Wilder was nominated for an Academy Award for his next film, *The Producers* (1968), and from then has starred in a variety of comedy vehicles (also writing and directing some of them), including *Start the Revolution without Me* (1970); *Willy Wonka & the Chocolate Factory* (1971); *Everything You Always Wanted to Know about Sex but Were Afraid to Ask* (1972); the drama *Rhinoceros* (1974); *Blazing Saddles* (1974); *Young Frankenstein* (written with Mel Brooks; Oscar nomination for Best Adapted Screenplay, 1974); *The Adventures of Sherlock Holmes' Smarter Brother* (wrote, directed, 1975); *Silver Streak* (1976); *The World's Greatest Lover* (1977); *The Frisco Kid* (1979); *Stir Crazy* (1980); *Hanky Panky* (1982); *The Woman in Red* (1984); *Haunted Honeymoon* (1986); *See No Evil, Hear No Evil* (1989); *Funny about Love* (1990); *Sunday Lovers* (1990); and *Another You* (1991).

Wilder also appeared in several TV movies; had guest roles on a number of television shows; starred in the sitcom *Something Wilder* (1994–95); and was the voice of the Letterman on the children's educational program *The Electric Company* (1972–77). In 2003 he was nominated for an Emmy for his appearance on the sitcom *Will and Grace.*

Wilder has been married four times, with his marriage (1984–89) to comedienne and co-star Gilda *Radner the most publicized. After she died of ovarian cancer, Wilder co-founded Gilda's Club, a support group to raise awareness about the disease.

His autobiography, *Kiss Me Like a Stranger: My Search for Love and Art*, was published in 2005. He also wrote *Gilda's Disease* (with Dr. S. Piver, 1996).

BIBLIOGRAPHY: G. Radner, *It's Always Something* (1989).

WILDER, HERTZ EMANUEL (1888–1948), activist, Yiddish journalist, and newspaper editor. Wilder was born in a Romanian village at the foot of the Carpathian Mountains. He was educated in ḥeder and public schools in Craiova, and graduated from a commercial state school in Bucharest, where he became active in Jewish literary and Zionist circles. He immigrated to Canada in 1903 and settled in Winnipeg, where he lived until his death. He was employed in banking, business, and printing.

Wilder was active in Winnipeg Jewish institutional life, and played leadership roles in causes such as education, war relief, and immigrant aid. He also served as first English secretary of the Canadian Jewish Congress, and as vice president of the Zionist Organization of Canada. His Yiddish poems, short stories, and articles on Jewish and non-Jewish issues and

historical materials on Jewish settlement in Western Canada appeared in the *Winnipeg Dos Folk* and *Der Kanader Yid* (re-named *Dos Yidishe Vort*, 1915). In 1915 Wilder assumed owner-ship of the *Israelite Press*, and until 1933 served as president and managing editor of the bilingual Yiddish-English weekly *Dos Yidishe Vort/Israelite Press*, which briefly appeared as a daily in 1928. As editor, Wilder fostered Yiddish literature and en-couraged contributions by young Yiddish writers. Wilder was a pioneer of the Anglo-Jewish press in Western Canada, and in 1920 he founded the short-lived weekly *Guardian*, where he published his English translations of Yiddish literature. Wilder left the weekly *Dos Yidishe Vort* for financial reasons, but returned as co-publisher in 1946 and contributed a regu-lar English language column until his death.

[Rebecca E. Margolis (2nd ed.)]

WILDERNESS or desert; (Heb. צִיָּה, יְשִׁימוֹן, מִדְבָּר). In most biblical passages *midbar* refers principally to an uninhab-ited, uncultivated land (e.g., Jer. 2:2; 22:6; Ps. 107:4, 33–36) but sometimes also denotes complete desolation (e.g., Num. 20:4–5; Deut. 8:15). In defining desolation there is, in effect, no difference between *midbar* and the corresponding nouns, *yeshimon* and *ẓiyyah*, which are partially identical with it. However, *midbar* is the more comprehensive concept since it includes also marginal land on the borders of the *yeshimon*, "the pastures of the wilderness," and even settlements on its fringes (cf. Isa. 42:11, "the wilderness and the cities thereof"). At times *midbar* signifies a pasturage for flocks (Ex. 3:1; Ps. 78:52), the word being derived, it is suggested, from the Ara-maic *dbr*, which denotes leading sheep to pasture.

In the Bible various tracts of wilderness are called after adjacent territories or settlements, such as the wilderness of Edom (II Kings 3:8), Moab (Deut. 2:8), Damascus (I Kings 19:15), Judah (Judg. 1:16), En-Gedi (I Sam. 24:2), Beer-Sheba (Gen. 21:14), Maon (I Sam. 23:24, 25), Shur (Ex. 15:22), Kadesh (Ps. 29:8), Gibeon (II Sam. 2:24), Jeruel (II Chron. 20:16), and Tekoa (20:20).

Palestine was a frontier country which was sometimes raided by marauders from the wilderness who spread havoc and destruction. During the second millennium B.C.E., a period of decline, which continued for centuries, overtook Transjordan as a result of the incursion of nomads of the wil-derness. In the Israelite period (first millennium B.C.E.) too, marauders made inroads into the country and pillaged the permanent settlements, leaving devastation in their wake. The rural culture and urban settlement in Palestine and in coun-tries of the East generally were based on a constant state of vigilance against the tribes of the wilderness.

The Bible mentions perils of the wilderness which en-danger man's life – hunger, thirst, wild animals. The wilder-ness is an "evil place" (Num. 20:4–5), and its wide expanses constitute a threat to human beings (Deut. 1:19; 8:15; Isa. 21:1). It is described as a land of the shadow of death, or of thick darkness (Jer. 2:6, 31).

While not ignoring the hardships of the wilderness, the distress of the Israelites, who had come out of Egypt, in Sinai and in the Negev, their hunger and thirst, their complaints and rebelliousness against the terrors of the *yeshimon*, the Bible sometimes regards the wilderness as the cradle of Israel's sins. The sins in the wilderness – whether the making of the golden calf (Ex. 32–33), the rebellion of Koraḥ and his company (Num. 16–17), or the episode of Baal Peor (Num. 25) – became a symbol for all succeeding generations. Thus several Psalms refer to the Israelites' grave sins in the wilderness which de-termined their fate (Ps. 78:14–41; 106:14–33). Ezekiel makes particularly strong references to the sins of the generation of the wilderness, both fathers and children, and sees in these sins an original sin, as it were, which persisted from the time the Hebrews lived in Egypt, and the punishment for which is visited upon all generations (Ezek. 20:7–26).

In contrast to the negative view of the wilderness period as an age of sin, several prophets refer to it as a time of the na-tion's purification at the dawn of its history. Thus Hosea and Jeremiah compare Israel to the youthful wife of God whom he found "in the land of great drought," and who followed and cleaved to Him "in a land that was not sown" (Jer. 2:2–4:6; Hos. 2:16–17; 9:10; 13:5). Engraved in the people's memory was the tradition of God's revelation at Sinai and in the wilderness of Seir and the Negeb (Ex. 19:20; Judg. 5:4–5; Hab. 3:3–7). At Sinai, according to this tradition, the Israelite religion crys-tallized, the Ten Commandments, the laws, and the statutes were given, and the covenant between Israel and its God was made. There, too, Israel enjoyed the special providence of God and was chosen as His people, a theme emphasized particu-larly in Deuteronomy.

However, the view of the wilderness as the scene of the purification from sin does not mean that the prophets ideal-ized either the essential character of the wilderness or nomadic existence as a way of life (see *Nomadism). This theory, whose main protagonists have been Budde, Stade, Meyer, Flight, and others, is without foundation. The prophets never set the wil-derness in opposition to an agricultural civilization, frequently used by them to symbolize a life of abundance and tranquility. Even the *Rechabites did not advocate a return to the wilder-ness, and there is no proof that they in fact had their home there (cf. the interpretations of Hos. 2:16–17; 12:10 in the Book of *Hosea, and the articles referred to in connection with those interpretations). What can be said on the positive side is that as early as in biblical times the wilderness served as a refuge for anguished, embittered men, whether rebels against society or recluses in search of seclusion (I Sam. 24:1–2; 26:1–4; Job 30:3–8). It is against this background, and not on the basis of idealization, that Jeremiah's yearning, "Oh for a lodging place for wayfarers in the wilderness, that I might leave my people" (Jer. 9:1) is understood. Seclusion in the wilderness, as a his-torical phenomenon, is known from Second Temple times.

In the Aggadah

The two ways of evaluating the generation of the wilderness, alluded to in the Bible, persisted in the *aggadah*, though in a new idiom, and formed the subject of conflicting views between R. Eliezer and R. Akiva. Whereas the latter held that the generation of the wilderness has no share in the world to come and will not stand at the last judgment, R. Eliezer applied to them the verse (Ps. 50:5); "Gather My saints together unto Me; those that have made a covenant with Me by sacrifice" (Sanh. 10:3). The entire subsequent midrashic tradition follows his line of approach. The Israelites of the wilderness generation are called Darda (Heb. דרדע = דר, "generation," and דע, "knowledge"; cf. I Kings 5:11), "because they were extremely knowledgeable [בני דעה]" (Mid. Prov. to 1:1). The verse (Song 3:6) "Who is this that cometh up out of the wilderness" is interpreted as "her [Israel's] rise dates from the wilderness" (Song R. 3:6, no. 1), since from it came all Israel's virtues in Torah, prophecy, and kingship. However, the diasporas are also compared to the wilderness.

WILDMANN, ISAAC EISIK (**Haver**; 1789–1853), rabbi in Poland-Lithuania. He served as rabbi in the communities of Rozinoi, Volkovysk, Tikocyn, Siauliai, and Suwalk. In addition to his eminence in *halakhah*, he was a kabbalist in the tradition of the school of *Elijah b. Solomon Zalman, the Gaon of Vilna, and wrote *Magen ve-Ẓinnah* (Koenigsberg, 1855), a defense of Kabbalah against the attacks of Judah Leone *Modena's *Ari Nohem*. Wildmann was a prolific writer in both *halakhah* and Kabbalah.

His works include *Beit Yiẓḥak* (Suwalk, 1836), on the negative and positive commandments; *Binyan Olam*, responsa on *halakhah* (Warsaw, 1851); *Beit Olamim* (1889) on the *Idra Rabba*, a part of the Zohar; *Yad Ḥazakah* (1842), a commentary on the Passover *Haggadah; Pithei She'arim* (1888), a detailed exposition of Isaac *Luria's kabbalistic system; *Be'er Yiẓḥak* (1889), a commentary on the rabbinical collectanea *Likkutei ha-Gra* of the Gaon of Vilna.

WILENSKY, MICHAEL (1877–1955), Hebrew philologist. Born in Kremenchug, Ukraine, Wilensky was raised in a hasidic family of the *Chabad movement. He studied at a Chabad *yeshivah* and at the University of Berne, where he received his doctorate in 1912. He went on to specialize in mathematics at the University of Kazan, Russia. After the 1917 Revolution he settled in Odessa. There his interest in Jewish studies was aroused by Ḥ.N. *Bialik, and he worked on the staff of Tarbut until 1920. In 1921 he left for Berlin to join *Dvir Publish-

ing. He edited Abraham ibn Ezra's grammatical works, *Safah Berurah* and *Moznayim* (both not published), contributed articles to historical journals and to the German *Encyclopaedia Judaica*, and worked with the Verein zur Gruendung einer Akademie fuer die Wissenschaft des Judentums. His principal accomplishment in Berlin was his publication of Jonah *ibn Janaḥ's *Sefer ha-Rikmah*, accompanied by his own elaborate annotations (vol. 1, 1929; vol. 2, 1931, 1964[2]). In 1934 Wilensky escaped from Germany to Lithuania, and in 1935 he arrived in the U.S. There, upon the invitation of Julian Morgenstern of Hebrew Union College, Cincinnati, he compiled a catalog of all the manuscripts in the institution's library.

BIBLIOGRAPHY: N.H. Tur-Sinai et al, in: M. Wilensky (ed.), *Sefer ha-Rikmah*, 1 (1964[2]), introd.

WILENSKY, MOSHE (1910–1997) Israeli composer. Born in Warsaw, he studied composition and conducting at the state conservatory of Warsaw. After graduating there he left in 1932 for Israel. He was pianist at the "Matate" satiric theater and composed music for songs, as well as background music for documentary movies made by the Carmel studios. At the Matate Theater Wilensky discovered Yemenite songs through the repertoire of singer Esther Gamlieli. When the Li-la-lo Theater was created in 1944, Wilensky was offered the job of "house composer" and met there singer Shoshana *Damari, who was to become the principal performer of his songs. During the War of Independence, Wilensky and Damari toured army posts and performed for soldiers. In 1949, they left for a series of performances in the United States where they remained almost a year. Wilensky wrote the melodies for many of the songs of the Chizbatron, the first of the army bands created during the War of Independence. From the 1950s onwards Wilensky set to music hundreds of songs for singers and army bands. He also wrote the scores for a number of musical comedies such as *Shulamit* (1957), *Fishka*, and *Same'aḥ ba-Namal*.

Wilensky was among the founders of the Artists and Composer's Union. In 1961 he became director of the light music division of Kol Israel, a position he held for many years.

Many of his songs are considered to be among the best of Hebrew music, and Wilensky was awarded the Israel Prize in 1983. He composed songs to the texts of many famous Israeli poets, and his songs appear in hundreds of booklets and discs. Among the books containing selections of his songs are *Tamid Kalaniyyot Tifraḥna* ("Poppies Will Always Bloom," 1978) *Al ha-Kevish Yare'aḥ* ("On the Road Is a Moon," 1982), *Moshe Wilensky, Zer Kalaniyyot* ("Moshe Wilensky, a Bouquet of Poppies," 1980).

[Nathan Shahar (2nd ed.)]

WILENSKY, YEHUDAH LEIB NISAN (1870–1935), Zionist leader. He was born in Chechersk, Belorussia. In 1891, while a student in Berlin, he joined the Benei Moshe Society and the Russian-Jewish Scientific Society. He was a delegate to the First Zionist Congress and attended all subsequent con-

gresses until his death. Responding to Theodor Herzl's call for the "conquest of the communities," he gave up his profession as chemist and became government-appointed rabbi of the Nikolayev community from 1903 to 1906. He democratized the life of the community, introduced modern Hebrew education, and promoted Jewish *self-defense against pogroms. His activities on behalf of an investigation into the role played by the authorities in the pogrom that took place in Nikolayev in October 1905 led to his arrest and expulsion from Russia. For the next five years, Wilensky lived in Berlin, where he was on the staff of the Hilfsverein der deutschen Juden and utilized his position to further understanding between German and East European Jewries. In 1911 he returned to Russia and, after the 1917 Revolution, was elected chairman of the Kharkov Jewish community. In 1919 he led a Jewish delegation that met with the "White" Army general Anton *Denikin to urge the cessation of pogroms by his troops. When the Red Army took over southern Russia, Wilensky had to flee the country by way of the Caucasian border, reaching Palestine in 1920. During the period 1921–32 he served as a Keren Hayesod emissary in Europe and South America (Chile made him its honorary consul in Jerusalem) and was particularly successful in propagating Zionism in Romania. His memoirs and letters, together with a monograph about him written by his daughter Miriam *Yalan-Stekelis, were published in 1968.

WILENTZ, ROBERT N. (1927–1996), U.S. jurist. Born in Perth Amboy, New Jersey, Wilentz attended Princeton University, received his B.A. from Harvard, and his law degree from Columbia. He joined his father's law firm in Perth Amboy and practiced from 1952 to 1979. He was elected to the New Jersey legislature in 1966 and served until 1969. He was in the U.S. Navy in World War II. In 1979 he was appointed chief justice of the New Jersey Supreme Court for a seven-year term, and his appointment was made permanent in 1986. Under his administration, the New Jersey Supreme Court achieved a reputation for not being reluctant to move creatively towards adjudication in areas previously untouched by judicial action.

DAVID WILENTZ (1896–1988), father of the chief justice, was the attorney general of New Jersey who prosecuted Bruno Richard Hauptmann in 1932 for the kidnapping-murder of the twenty-month-old son of Charles A. Lindbergh. In 1919 he founded the law firm Wilentz, Goldman, and Spitzer, which grew to become the largest law firm in Central New Jersey.

[Milton Ridvas Konvitz / Ruth Beloff (2nd ed.)]

WILHELM, KURT (1900–1965), rabbi. Born in Germany, he studied at German universities, at the Jewish Theological Seminary in Breslau, and in New York. Wilhelm officiated as rabbi in Germany from 1925 until 1933 when he immigrated to Palestine. In 1936 he founded the Liberal congregation Emet ve-Emunah in Jerusalem where he served as rabbi until 1948,

when he went to Stockholm to officiate as chief rabbi of Sweden. He also lectured at Stockholm University on Jewish subjects. Wilhelm advocated a positive and moderate liberalism, similar to Conservative Judaism. He belonged to the circle which supported Arab-Jewish understanding, and was active in promoting Jewish dialogue with Christianity and other religions. He published a number of scholarly collections: *Juedischer Glaube* (1961) on Judaism and *Wissenschaft des Judentums* (1967) on German Jewish scholarship, among others.

[Hugo Mauritz Valentin]

WILKES-BARRE AND KINGSTON, cities in N.E. Pennsylvania with a Jewish population of 3,000 (in 2005). The first Jews were Moses Libien from France (1835), Hirsch Koch (1836), and Martin Long (1838) from Bavaria. By the 1840s, 13 Jews lived in Wilkes-Barre and held Orthodox services as Congregation B'nai B'rith which became Reform in 1860. Rabbi Albert Friedlander was their leader. In 1970 they moved to Kingston, had 220 members, and were led by Rabbi Arnold Shevlin. By 2005 they had 200 households, with Rabbi Fred Davidow officiating.

East European Jews arrived in the 1870s, forming five Orthodox congregations. The principal Orthodox congregation is Ohav Zedek, founded by Hungarian Jews in 1902. Rabbi Isadore Mayer Davidson became chief rabbi in 1920.

Conservative Temple Israel was founded in 1922 and is the largest with 450 families, led by Rabbi Larry Kaplan and Cantor Ahron Abraham. Abraham D. Barras was rabbi from 1952 to 1983 and initiated bat mitzvah ceremonies. He took Christian clergy on Temple Israel tours to Israel and Egypt and led a mission to Israel and Rome, where they had an audience with the pope and the chief rabbi of Rome.

The Jewish Community Center was founded as the YMHA in 1863. Louis Smith was the director of the JCC from 1925 until 1976. He was very influential and recognized for his excellence by national UJA. Julia Lieberman created Home Camp, and K'Ton Ton camp was directed by Evelyn Gurbst. In 2005 JCC membership was 901 families, its executive director was Don Cooper. The JCC lists 1,500 men and women who served in the military. A senior kosher meal program and day care were initiated, and the JCC camp was renovated. The Jewish Federation sponsors the United Jewish Campaign. In 1999 there appeared a book on Wilkes-Barre Jewry, *The Jews of Wilkes-Barre: 150 Years 1845–1995 in the Wyoming Valley of Pennsylvania*, edited by S. Spear, P.J. Zbiek, E.C. Levin, and M. Levin.

The first Jew elected to office was Abram Salsburgh who served as district attorney of Luzerne County from 1904 to 1910. Some long-serving communal leaders were Rabbi Marcus Salzman, 35 years; Rabbi Isadore Davidson, 43 years; Rabbi Mayer Pernikoff, 47 years; Rabbi Abraham D. Barras, 31 years; Arnold Shevlin, 22 years; and Louis Smith, 52 years.

Men and women of achievement were Judge Max Rosenn and Jesse Choper, who became dean at the University of California Law School; Dr. David Rutstein, first chair of Harvard Medical School's department of preventive medicine, and Harry Reich, the first surgeon to perform a laparoscopic hysterectomy; Mendy Rudolph, NBCA referee, and Sandy Padwe, dean of Columbia University Graduate School of Journalism. Barbara Weisberger was with the Pennsylvania Ballet; Louis Teicher joined Arthur Ferrante playing duo pianos. Martin Yudkovitz was president of NBC Interactive Media. Sanford J. Ungar, author, editor, and former NPR host, was President of Goucher College. David Horowitz was a United Nations journalist, and his brother Emanuel Winters Horowitz wrote short stories. Their father was Cantor Aaron Horowitz.

The United Hebrew Institute is the local Jewish day school. It provides an academic foundation with modern technology in secular and religious studies. The current director is Rabbi Eli Kugielsky. There are two other denominational Hebrew schools. The Jewish Family Service, directed by Dorothy Schwartz (1952–74) and now by Howard Grossman, offers counseling and assistance.

Wyoming Valley has excellent interfaith relationships. Five churches contributed to the construction of Temple B'nai B'rith's first building. Esther B. Davidowitz was the Jewish editor of *Your Life is Worth Living* by Bishop Fulton J. Sheen.

The five local colleges exemplify this cooperation. Penn State, W.B., had many Jewish advisory board members, faculty, and administrators. Mimi Unger Fredman has been chair of the Penn State Board of Trustees. King's College has Jewish members on its board, faculty and administration. Attorneys Harold Rosenn and Murray Ufberg served on the College Misericordia Board of Trustees as vice chairmen with other Jewish board members. Sister Carol Rittner and Sister Siena Finley taught Holocaust courses. College Misericordia has an outstanding Jewish Elderhostel program. The first president of Wilkes University, Dr. Eugene S. Farley, invited Jewish participation. There were many Jewish faculty, administrators, and trustees. Robert S. Capin was a teacher, dean and president of Wilkes College. Buildings were named by Aaron Weiss, Max Roth, Nathan Schiowitz, Robert Fortinsky, Arnold Rifkin, and Robert S. Capin. Louis Schaffer, Joseph Savitz, and Eugene Roth served as chairmen of the board of Wilkes University. Luzerne County Community College was founded in 1966. William Davidowitz was co-chairman of the building committee. Jewish citizens served on their Board of Trustees and as faculty members. Sheldon Spear taught a Holocaust course. Generous Jewish philanthropy has been consistent for all institutions.

In 1911 Seligman J. Strauss was elected judge on the Luzerne County Court of Common Pleas, followed by Jacob Schiffman from 1962 to 1970. Perry J. Shertz sat on the Superior Court as an associate judge in 1980. Nochem Winnet became judge of the Municipal Court. The Honorable Max Rosenn has a life appointment as judge of the U.S. Court of Appeals on the Third Circuit, with a courthouse named after him. Rosenn, Jenkins and Greenwald was the first law firm with Jewish partners, followed by Winkler, Danoff and Lubin. There were approximately 60 Jewish lawyers (in 2005).

Wilkes-Barre city councilmen included Joseph K. Weitzenkorn, Maurice Ziegler, and Jacob D. Groh. Marvin Rappaport, Sallyanne Rosenn, Mimi Cohen, and Wilbur Troy were elected to Kingston Borough Council. Ethel Price served as County Commissioner. In 1931 Herman J. Goldberg was an assistant district attorney. Richard Goldberg became chief Luzerne County solicitor and retired as a full colonel in the PA National Guard. Arthur Silverblatt was first assistant district attorney. David Schwager became solicitor for the county assessors.

The physicist David Bohn wrote a quantum mechanics text and reformulated Einstein's theories. Architect Samuel Z. Moskovitz designed 600 buildings and was president of the American Institute of Architects. Photographer Mark Cohen exhibited at the New York Museum of Modern Art.

Judge Rosenn said, "The Jews of Wilkes-Barre and Kingston have the support and friendship of the larger community. And we have a history of over one hundred and fifty years to learn from and build upon."

WILLEN, JOSEPH (1897–1985), U.S. social welfare and fundraising executive. Born in Kushnitsa, Russia, Willen immigrated to the U.S. in 1905. He served in the U.S. Army in World War I. Subsequently he joined the staff of the Federation of Jewish Philanthropies of New York. After serving in a number of capacities, he was executive vice president of the federation from 1942 to 1967, serving as executive consultant from 1967. During his tenure, the federation raised approximately $360,000,000 in its annual campaigns. Willen pioneered the federation's fund-raising techniques, organizing donors into separate committees for professions, localities, and fraternal and benevolent societies, as well as professionalizing the Women's Division fund-raising efforts. Known as a master of philanthropic fund-raising, Willen initiated and directed the federation's successful $200,000,000 "City of Life" campaign for new buildings and institutions. He also served as director of the Greater New York Community Council, on the New York City Welfare and Health Council, and on many Jewish institutions. He was a member of the board of trustees of Brandeis University (1963–73).

Willen's first wife, PEARL LARNER WILLEN (1904–1968), was a communal leader in human welfare organizations. She served the National Council of Jewish Women as chairman of the committee on public affairs (1951–54), vice president (1951–63), and president (1963–66), and was president of the

International Council of Jewish Women (1954–57). She was also a member of the board of governors of The Hebrew University and was active in civil rights and poverty programs and organizations. In 1965 she was one of the driving forces in the Women in Community Service's coalition to help at-risk young women in the U.S. find employment through the Job Corps.

°**WILLIAM OF AUVERGNE** (c. 1180–1249), French theologian and philosopher. Born in Aurillac, William was professor of theology at the University of Paris and bishop of that city from 1228 until his death. His principal work is *Magisterium divinale*, a collection of treatises which includes *De primo principio*, or *De trinitate* (1228), *De anima* (1230), and *De universo* (between 1231 and 1236). William's writings are contained in *Opera omnia* (2 vols., Paris, 1674; repr. 1963). In his writing William combined two tendencies, which during their development in the 12th century had been kept apart: the systematization of theological doctrines and the philosophic investigation of man's position in the universe. But methodologically he distinguished between philosophy and theology, holding that philosophy is an independent discipline with its own rules. A member of the first generation of Paris masters to utilize Aristotelian, Islamic, and Jewish thought, William followed Aristotle and Maimonides in his psychology and cosmogony and the Platonic-Neoplatonic tradition, which he knew to a large extent through Augustine, in metaphysics, cosmology, and epistemology.

William had high regard for the Jewish Neoplatonist Solomon ibn *Gabirol, whose *Mekor Ḥayyim* he read in a Latin translation. However, William considered Gabirol, whom he knew as Avicebron, an Arab by nationality and perhaps a Christian by religion. Although he admired Gabirol, William disagreed with him in holding that the world was created directly and freely through God's will without any intermediary beings.

William was also familiar with, and drew upon, Maimonides' *Guide of the Perplexed*, which became known in Latin translation in the West in the 1240s. He utilized, especially, Maimonides' description of the sublunar world and his criticism of the Greek doctrine of the eternity of the world. However, although William cites Avicebron by name, he does not mention Maimonides, probably because he knew Maimonides was a Jew. Evidence for this view is William's contention that the Jews betrayed their own religion and were worthy of condemnation. He held that at first the Hebrew people were content with the Torah and Prophets, but later they were seduced into believing incredible stories, referring to the Talmud. He felt there were only a few exceptions – men who had lived among the Arabs and became philosophers (*De universo* 1:3, 31). This view is paralleled in a papal legate report defending the suppression of the Talmud (1239–47) as not conflicting with the Church's consideration of Judaism as a *religio licita*. William had been a member of the legate's court in Paris.

WILLIAMS, CHARLES (1893–1978), British film and broadcasting music composer. Born Isaac Cozerbreit in east London, the son of a Jewish concert singer, Charles Williams – as he was known from the time of World War I – worked as a freelance musician in silent films in London in the 1920s, becoming one of the most distinguished writers of film music for the British cinema and, later, an equally important composer of theme music for British radio and television. His best-known works include "The Dream of Olwen," often played as a serious short piano concerto, *While I Live* (1947), and "The Jealous Lover," originally composed in 1949 for the film *That Dangerous Age* and revived in 1960 as the theme from Billy Wilder's *The Apartment,* winning an Oscar. Williams also composed the theme music for the Australian Broadcasting Corporation's television programs, played several times a day on Australian television, "Majestic Fanfare" (1952), and such BBC theme music as "The Young Ballerina" (1951) for *The Potter's Wheel.*

WILLNER, ITAMAR (1947–), Israeli chemist. He was born in Bucharest, Romania. He completed his Ph.D. studies in chemistry in 1978 at the Hebrew University of Jerusalem. After postdoctoral research at the University of California, Berkeley, he joined the Institute of Chemistry at the Hebrew University of Jerusalem in 1982. In 1986 he was appointed as professor at the Hebrew University. His research activities over the years attempted to combine biomolecules with synthetic and chemical assemblies to yield materials and systems of new functions and properties, and to prepare man-made materials that mimic biological functions. The research fields developed by him include light-induced electron-transfer and artificial photosynthesis, molecular electronics and optoelectronics, biomolecular electronics and optoelectronics, nanotechnology and nanobiotechnology, and the control of surface properties by functional monolayers and thin films. Until 2004 he co-authored over 420 papers and scientific chapters in books, and presented the research results at numerous worldwide symposia. His pioneering accomplishments were recognized with many international and national awards and distinctions. Among them are the Kolthoff Award (1993), the Max-Planck Research Award for International Cooperation (1998), the Israel Chemical Society Award (2001), and the Israel Prize in chemistry (2002). He is a fellow of the American Association for the Advancement of Science (AAAS), a member of the Israel Academy of Sciences, and a member of the European Academy of Sciences.

[Bracha Rager (2nd ed.)]

WILLOW (Heb. עֲרָבָה, *aravah*). The Bible describes the willow as a tree that grows rapidly near water (Isa. 44:4) and in whose shade the *Behemoth reclines (Job 40:22). The exiles from Judea hung their harps on willows by the rivers of Babylon, loath "to sing the Lord's song in a foreign land" (Ps. 137:2). The willow is one of the *Four Species and is characterized as possessing "neither taste nor fragrance," thus symbolizing those among Israel "who are neither learned nor possessed of good deeds" (Lev. R. 30:12). Although the identification of the *aravah* with the willow is undoubted, it should be noted that in the time of the Mishnah philological problems had already arisen in connection with this identification. The *amora* Ḥisda states that after the destruction of the Temple the name of the *aravah* (*Salix*) and *zafzafah* (poplar, *Populus*) were interchanged (Shah. 36a), and in fact in Arabic it is the poplar which is called *a'rb* (Heb. *aravah*) and the willow, *ẓafẓaf* (Heb. *ẓafẓafah*). The rabbis pointed out the difference between these two genera with regard to validity for the precept of the Four Species: "The willow has a red stalk, an elongated leaf and a smooth [leaf] edge. The *ẓafẓafah* has a white stalk and a round leaf with a serrated edge" (Suk. 34a). The conclusion finally reached is that the willow with the serrated leaf is also valid (*ibid.*). The willow was also used during the festival of Tabernacles, the altar being decorated with willow branches which were brought from Moẓa near Jerusalem. There is undoubtedly a connection between the willow growing by the waterside and the prayer for water on Hoshana Rabba, as well as the prayer for rain on Shemini Aẓeret (eighth day of solemn assembly), the last day of Tabernacles, when "they are judged in respect of water" (RH 1:2).

The willow is a very useful tree. Its soft branches were used for wicker work (Bik. 3:8). The wood withstands rot and was therefore used for building boats called *arba*, the spelling for *aravah* in Aramaic and Syrian. Its fruit contains soft fibers, which are the *petilat ha-idan* ("wick of bast"), used as wicks for lamps (Shab. 2:1). Though not a fruit tree, according to the agricultural folklore of the period fruit trees could be grafted on to it (see TJ, Or. 1:2, 61a). Two species of willow, the *Salix acmophylla* and *Salix alba*, as well as hybrids of both species, grow wild in Israel on the bank of streams and rivers. Another species, *Salix babylonica*, the weeping willow, originated in China.

WILLOWSKI, JACOB DAVID BEN ZE'EV (Heb. רידב"ז, **Ridbaz**; 1845–1913), Lithuanian talmudist and *rosh yeshivah* in Ereẓ Israel. Willowski was born in Kobrin, Russia. In his youth his brilliant attainments were already recognized. In 1868 he was appointed rabbi at Izballin; in 1876 of Bobruisk; and in 1881 "*moreh ẓedek* and *Maggid meisharim*" (teacher and preacher) of Vilna, the title accorded to the spiritual leader of that community, since it had no official rabbi. He later suc-

cessively served as rabbi of Polotsk, Vilkomir, and Slutsk. At Slutsk he founded a yeshivah which soon became famous throughout Russia. In 1903 he moved to the United States where he was appointed chief rabbi of a group of Orthodox congregations in Chicago. He was also designated the *zekan ha-rabbanim* ("elder rabbi") of America by the then newly organized *Union of Orthodox Rabbis. However, due to what he considered to be the neglect of religious life there, he left the United States in 1905 and immigrated to Ereẓ Israel. He settled in Safed where he founded a large yeshivah named Torat Ereẓ Israel, popularly known as "Yeshivat ha-Ridbaz." He took issue with R. Abraham Isaac *Kook, then rabbi of Jaffa, for his lenient ruling permitting farmers to work the land during the Sabbatical Year. When the Sabbatical Year came in 1910, Willowski urged them not to work the land, and established an international charity fund to sustain those who followed his decision. His published talmudic works and responsa gained him a worldwide reputation as a preeminent rabbinical scholar. He was particularly renowned for his two commentaries to the Jerusalem Talmud, one of which followed the method of *Rashi in explaining the meaning of the text, while the other, in the manner of the *tosafot*, was a deeper and more critical exposition. These commentaries, together with the text of the Jerusalem Talmud, were published in 1898–1900.

He also wrote *Migdal David* (1874) and *Ḥanah David* (1876), both containing novellae and comments on the Babylonian and Jerusalem Talmuds; Responsa (1881); *Nimmukei Ridbaz*, a commentary to the Pentateuch (1904); *Responsa Beit Ridbaz* (1908); and annotations on R. Israel of Shklov's *Pe'at ha-Shulḥan* (1912).

[Aaron Rothkoff]

WILLS (Heb. צַוָּאָה). A will is a person's disposition of his property in favor of another in such manner that the testator retains the property or his rights to it until his death. There are three different forms of wills, each governed by different legal rules as regards their time of coming into effect and their scope and manner of execution. These are *mattenat* (or *ẓavva'at*) *bari*, i.e., a (literally) gift by a healthy person; *mattenat* (or *ẓavva'at*) *shekhiv me-ra*, i.e., a gift by a person critically ill; and *mezavveh meḥamat mitah*, i.e., a gift in contemplation of death. There are detailed biblical provisions regarding the legal order of *succession (Num. 27:8–11; Deut. 21:16–17). However, save for isolated hints (see e.g., Job 42:15), there is no biblical provision regarding the possibility of a person determining the disposition of his property after his death in a manner not according with the rules laid down for the legal order of succession.

Mattenat Bari

A person who wishes to give his property to a person who is not his legal heir must divest himself of it during his lifetime so that the property shall not, on his death, automatically be

dealt with in accordance with the laws of succession (*Rashbam*, BB 135b). He may, however, donate the body of the property by way of a gift taking immediate effect, while retaining for himself the usufruct of the property until his death (BB 8:7: "From today and after my death"). This is a *mattenat bari*. In form this disposition by will is identical to donation in the case of regular gift. Since the legator transfers his property to the legatee "from today," he may not afterward retract from the will, although the legatee only becomes entitled to the usufruct of the property after the legator's death (Sh. Ar., ḤM 257:6, 7). A will from which it may be inferred that the transfer (**kinyan*) is "from today and after death," is regarded as one in which these words are expressly stated (BB 136a; Tur and Sh. Ar., ḤM 258). It is not possible for the legator to bequeath by way of *mattenat bari* any property except that which is then in his possession (*Rema*, ḤM 257:7; see also *Contract). If the legator employs the words, "from today if I should not retract until after my death," or "from today if I do not retract during my lifetime," he is free to retract from the bequest (Tos. BM 19b; Sh. Ar., ḤM 257:7).

Mattenat Shekhiv me-Ra

A *shekhiv me-ra* is a person who is "ill and confined to bed." According to Maimonides, a *shekhiv me-ra* is "a sick man whose entire body has been weakened and whose strength has waned because of his sickness, so that he cannot walk outside and is confined to bed" (i.e., critically ill; Yad, Zekhiyyah 8:2). Unlike the *mattenat bari*, the provisions of a *mattenat shekhiv me-ra* come into effect on the death of the legator (*ibid.*), since the scholars enacted that the latter form of testacy should be regarded in law as a form of inheritance which comes into effect on the benefactor's death (BB 149a). The scholars enacted far-reaching alleviations with regard to the formalities of conveyance by *mattenat shekhiv me-ra*, dispensing with the need for a formal *kinyan* since "the instruction of a *shekhiv me-ra* has the same force as a document written and delivered" (Git. 13a) and because this was a *takkanah* of the scholars aimed at easing the mind of the sick person (Yad, Zekhiyyah 8:2). The wishes of the testator may be expressed orally or in writing, or by implication (BB 156b; Git. 15a; Sh. At., ḤM 250:7). The will may be an unwitnessed, handwritten deed, to be delivered to the beneficiary (Git. 71a; see Yad, Naḥalot 4:1).

If this form of will is formulated orally by a *shekhiv me-ra* before witnesses, the latter may reduce its terms to writing for delivery to the beneficiary. The delivery may take place during the testator's lifetime or after his death, since this instrument is written solely as a record of the testator's oral statements which immediately on recital take effect as the will (*Sma*, ḤM 253, n. 77).

The special validity which attaches to a *shekhiv me-ra* will is forfeited if the testator should employ one of the regular forms of *kinyan* for gift (Ket. 55b), since in so doing he manifests his intention to effect no more than a regular *mattenat bari*. This result would follow, for instance, if the benefactor should effect a *kinyen sudar* or *ḥazakah*, a lifting or pulling, or

a gift *aggav karka* (incidental to land generally; Tos. BB 152a; Tur, ḤM 250:28; Yad, Zekhiah 8:10, 11; *Sma*, ḤM 250, n. 54), or, similarly, if he should draw up a deed, or declare his will and tell the witnesses to draw up a deed for delivery to the beneficiary (Yad, Zekhiyyah 8:12, 13). If the testator declares, orally or in writing, that his resort to a *kinyan* customary for a gift is meant to add rather than detract from his true purpose (a procedure known as *yippui ko'aḥ*), or if it should be apparent that he erroneously believed a *kinyan* was required to effect a *mattenat shekhiv me-ra*, the fact of the *kinyan* will not detract from the validity of the will as a *mattenat shekhiv me-ra* (*Taz*, ḤM 250:17).

The will of a *shekhiv me-ra* is valid only if the testator "gave all his property and left nothing [for himself]; but if he left a part it is like the *mattenat bari* which is only acquired by a formal *kinyan*." The explanation for this is that a *shekhiv me-ra* who only disposes of part of his property does not do so in the expectation of his death – otherwise he would dispose of all his property; hence it is inferred that he intends to make a regular *mattenat bari*, which leaves no room for application of the rabbinical enactment that his instruction "has the same force as a document written and delivered" (Sh. Ar., ḤM 250:4; BB 151b). At the same time, even if a *shekhiv me-ra* leaves part of his property (for himself), his disposition will require no *kinyan* if it is made *meḥamat mitah* – that is, when it appears from his statements, explicitly or implicitly, that the disposition is made by him in the apprehension of death (Sh. Ar., ḤM 250:7; BB 151b). This is in fact the position in practically every case of a will made by a *shekhiv me-ra*. The will of a *shekhiv me-ra* may be retracted from by the testator (Yad, Zekhiyyah 9:15) by way of his oral or written expression of the wish to revoke the will (*Rashbam*, BB 152b). The revocation need not be express and will be implied if the testator makes another will relating to the same property (TJ, BB 8:7, 16b; BB 135b; Yad, loc. cit.). Revocation of part of a will is regarded as a revocation of the whole (BB 148b), and the same consequence follows if the testator should will his estate to several persons and afterward revoke his bequest to any one of them (*Rema*, ḤM 250:12). The will of a *shekhiv me-ra* is automatically revoked on the latter's recovery from his illness (Git. 72b), notwithstanding any prior express stipulation by him to the contrary. This is explained on the grounds of an enactment by the scholars that the expressed wishes of a *shekhiv me-ra* should be fulfilled out of apprehension for the mental agony which the latter might suffer if left in doubt about the fulfillment of his wishes; hence, on his recovery, the justification for the *takkanah* falls away, since he is once again in a position to make the disposition in any manner he desires (Resp. Rashba, vol. 1, no. 975).

Meẓavveh Meḥamat Mitah

The scholars widened the concept of a *shekhiv me-ra* in recognizing as equally valid the will of a "healthy" person if made *meḥamat mitah*, that is, in contemplation of death – *mortis causa*. A "healthy" person is regarded as having willed his

property *meḥamat mitah* in one of the following circumstances: when he is seriously ill (even though he does not fall within the definition of a *shekhiv me-ra* – see above); when he is about to be executed under the law of the land; when he sets out with a caravan on a desert journey; and when he leaves on a sea voyage (Git. 65b, 66a and *Rashi* ad loc.). These four circumstances correspond to those in which it is incumbent to offer thanksgiving to the Almighty (Psalm 107; Ber. 54b). A disposition *meḥamat mitah* requires no formal *kinyan*, whether it relates to all or only a part of the testator's property (Yad, Zekhiyyah 8:24; Sh. Ar., ḤM 250:8). The manner of evolution of the law concerning a *meḥamat mitah* disposition is described in the language of the Mishnah, pertaining mainly to the laws of divorce but extended also to the laws of wills, as follows: "At first they used to say: If a man was led forth in chains and was about to be executed under the law of the land and said, 'Write out a bill of divorce for my wife,' they would write it out and deliver it [because being in a state of bewilderment he said only 'write out' and did not manage to say also 'deliver']… Then they changed this and said, 'Also if a man went on a voyage or set out with a caravan.' R. Simeon Shezuri says, 'Also if a man was at the point of death'" (Git. 6:5). The *halakhah* was decided according to R. Simeon (TJ, Git. 6:7, 48a).

Some scholars held that it was only in the matter of granting a divorce that a valid *meḥamat mitah* disposition was constituted in any one of the four above-mentioned circumstances (*Piskei ha-Rosh*, BB 9:18; *Beit Yosef*, ḤM 250, no. 13), and that any other *meḥamat mitah* disposition was only valid in the case of a person seriously ill or one about to be executed, but not in the other two cases. The scholars made this distinction on the basis that in the latter two cases the testator harbors the intention of returning to his home (Rosh, loc. cit.), or that death is not imminent (Nov. Rashba, BB 146b; *Maggid Mishneh*, Zekhiyyah 8:24). Other scholars (*Beit Yosef*, loc. cit., quoting Alfasi, Maimonides, and Naḥmanides) took the view that there was no reason for distinguishing between a divorce and the disposition of property by will for this purpose.

A "healthy" person whose will is not made within the framework of one of the above-mentioned circumstances is not regarded as a person willing his property *meḥamat mitah*, notwithstanding his express declaration that he is acting as such out of fear that he might die suddenly (Resp. Rashba, vol. 1, no. 975; vol. 3, no. 118; Sh. Ar., ḤM 250:14). Hai Gaon was of the opinion that if a "healthy" person willed his property in the apprehension of sudden death and in fact died shortly thereafter, his will was to be regarded as one *meḥamat mitah* (Judah b. Barzillai, *Sefer ha-Shetarot*, no. 54; *Keneset ha-Gedolah*, ḤM 250, *Beit Yosef*, no. 131).

Undertaking and Acknowledgment or Admission (Odita, Hoda'ah)

One of the telling limitations imposed by Jewish law on the different forms of testamentary disposition is the fact that the disposition is valid only in respect of property in the posses-

sion of the testator at the time the will is made (Yad, Mekhirah 22:1, 5). To overcome this limitation there evolved the use of a will formulated as an undertaking, since the law, although it precluded any possibility of a person transferring property not yet in existence or possessed by him (in his *reshut*), presented no obstacle to undertaking an obligation in respect of such property (Resp. Rashba, vol. 3, no. 118). Such an undertaking could be affected in writing or before witnesses, and also by way of an acknowledgment (of indebtedness) called *odita*. According to one view an *odita* may only be affected by a *shekhiv me-ra* (*Ittur*, s.v., *Hoda'ah*; *Or Zaru'a*, no. 477, 4).

If the aforesaid undertaking is made in writing and the instrument is delivered before witnesses, the beneficiary may recover it even from *nekhasim mesh'ubadim* (i.e., encumbered and alienated property; see *Lien; but if not so delivered, the beneficiary may only recover from *nekhasim benei ḥorin* ("free property"; *Maggid Mishneh*, Mekhirah 11:15; Sh. Ar., ḤM 40:1 and *Siftei Kohen* thereto, no. 3). In the case of an undertaking before witnesses, the benefactor declares, "Be witnesses unto me that I obligate myself," and the witnesses acquire from him (Yad and Sh. Ar., loc. cit.). The acknowledgment may also be made by the benefactor acknowledging indebtedness in writing or by declaring before witnesses: "Be witnesses unto me that I am indebted"; in this event the witnesses do not require a formal acquisition (*kinyan*) from the benefactor (*Sma* 40:1; *Netivot ha-Mishpat* 40, *Mishpat ha-Urim* n. 1 and *Mishpat ha-Kohanim*, n. 3).

A testamentary disposition by undertaking or acknowledgment is irrevocable, whether effected by a *bari* or a *shekhiv me-ra*, and in the latter case the disposition is not revoked on the benefactor's death (R. Isaac, in Tos. BB 149a; Sh. Ar., ḤM 250:3). The usual time specified for fulfillment of the undertaking is an hour before the death of the benefactor so that the beneficiary should be unable to demand fulfillment during the benefactor's lifetime, since the due date of fulfillment is ascertainable only after the latter's death. However, it is essential that the due time of fulfillment be fixed at a date within the benefactor's lifetime, since an undertaking falling due for fulfillment after the promisor's death is void (Resp. Maharik, no. 89). Testamentary dispositions of this nature have been customary throughout the Diaspora in various forms and degrees of complexity. It is possible that the use of this form of will was adopted to avoid giving the appearance that the inheritance was being diverted from the legal heir – conduct of which the Mishnah says "The sages do not approve of him" (BB 8:5); it was therefore preferred through the means of such an undertaking to avoid a legal devolution of the estate. Widespread use of such an undertaking was made in the *shetar ḥazi zakhar*, a deed by means of which a father gave his daughter a share of the property equal to one-half of a son's portion (under the laws of succession). This deed, given to the daughter upon her marriage, may be regarded as a form of irrevocable will of the father (the deed being irrevocable in order to ensure the father's donation to his daughter and her husband). In this case, too, the time of fulfillment usually specified is one hour

before the father's death. In order to overcome the difficulty of donating a specified portion of one's estate upon a daughter's marriage, at a time when the exact extent of the estate is still unknown, the following procedure was laid down: the father acknowledges that he owes his daughter a sum of money exceeding the estimated value of one-half of a son's share, adding a condition that the heir shall have the option either to pay this amount to the daughter of the deceased, or to give her a share of the estate equal to one-half of a son's portion (*Naḥalat Shivah*, no. 21; *Rema*, ḤM 281:7 and EH 108:3).

Mitzvah to Carry out the Wishes of the Deceased
Although a will may be invalid for one reason or another, it may still be recognized in certain circumstances in terms of the rule that "It is a *mitzvah* to carry out the wishes of the deceased" (Ket. 70a, Git. 14b). Thus it is the duty of the legal heirs to carry out the wishes of the testator, and this is a duty which the courts will enforce. However, the above rule is not always to be applied as a strict legal duty, and when the duty is merely a moral one, the court will not compel compliance with the testator's directions (*Shevut Ya'akov*, vol. 1, no. 168). The rule applies to the bequest of both a *bari* and a *shekhiv me-ra* (Yad, Zekhiyyah 4:5; Sh. Ar., ḤM 252:2) whether made orally or in writing (Tos., BB 149a). The rule's scope of operation is a matter of scholarly dispute; there are three different views:

(1) that it applies only in respect of property deposited with a trustee, at the time of the bequest, so that he should carry out the latter (Resp. Ritba, no. 54; *Rema*, ḤM 242:2);

(2) that it applies even when the property is not deposited as mentioned above, provided that the legal heir of the deceased has been directed to carry out the bequest and does not object thereto (Resp. Ritba, loc. cit.; *Sha'arei Uzzi'el*, 1 (1944), no. 21);

(3) that it is applicable in every event, and even if the bequest has not been directed to any of the legal heirs, the latter are obliged to carry it out (*Haggahot Mordekhai*, BB no. 666). According to the aforementioned rule, ownership of the bequested property does not automatically pass to the beneficiary, but the duty is imposed on the legal heirs to transfer the said property to him (*Rashi*, Git. 14b; *Mordekhai*, BB, no. 630), from which derives an important distinction between a will taking effect by virtue of the above-mentioned rule and the wills of a *bari* and a *shekhiv me-ra*, namely: in the former case the beneficiary is not entitled to recover the bequested property from third-party purchasers (*Haggahot Mordekhai*, BB, no. 666), where he does have this right in the latter case (Resp. Rosh 86:5; Sh. Ar., ḤM 111:9 and 257:6).

Capacity to Bequeath
A person's legal capacity to make a bequest is generally coextensive with his capacity to make a regular gift, but there are a number of special rules relating to the former:

(1) Although, according to some of the *posekim*, a minor generally requires his guardian's approval in order to make a gift (Yad, Mekhirah 29:7; Sh. Ar., ḤM 235:2), such approval is

unnecessary as regards a *mattenat shekhiv me-ra*. The explanation for this apparently lies in the fact that a *mattenat shekhiv me-ra* falls due after the benefactor's death, whereas guardianship terminates on the minor's death, and also because the primary task of a guardian is to safeguard the minor's interests, a task which falls away on the minor's death (Resp. Maharam Alshekh, 101).

(2) It is doubtful whether the tacit *shekhiv me-ra* bequest of a deaf-mute (*ḥeresh*), is valid, even though his tacit, regular gift is valid. The doubt arises from the fact that both the possibility of alienating by implication and a *mattenat shekhiv me-ra* derive from rabbinical enactment, whereas the rule is that "one does not add one *takkanah* to another" (BM 5b). On the other hand, it is possible that the rule, "the instruction of a *shekhiv me-ra* has the same force as a document written and delivered," applies also to the tacit acts of a deaf-mute – even with regard to his disposition of land and despite the fact that he cannot do so by way of a regular gift (*Kesef ha-Kedoshim*, 250:6).

(3) A proselyte has no capacity to make a *shekhiv me-ra* bequest: "A *mattenat shekhiv me-ra* has been given the same force by the rabbis as an inheritance; therefore where there can be inheritance there can also be gift and where there cannot be inheritance there also cannot be gift" (BB 149a). Hence, in view of the fact that a proselyte who leaves no offspring conceived after his proselytization has no heirs (Tos. BB 149a), he cannot make a *mattenat shekhiv me-ra* (Sh. Ar., ḤM 256:1 and *Rema* thereto). According to some scholars, his capacity to bequeath is only limited as regards offspring conceived before his proselytization and who are not his legal heirs, but his *shekhiv me-ra* bequest made to any other person is valid (Sh. Ar., ḤM 256, *Sma* thereto n. 3). Other scholars hold that the *shekhiv me-ra* bequest of a proselyte is of no effect, regardless of who the beneficiary may be (*Hassagot Rabad* on *Rif*, BB 149a, in the name of Hai Gaon; *Hassagot Rabad* on Yad, Zekhiyyah 9:7). According to another view, the rule that it is a *mitzvah* to carry out the wishes of the deceased does not apply to a proselyte (Tos., BB 149a; Tur, ḤM 256:7–9; *Rema*, ḤM 256:1).

Capacity to Benefit from a Bequest
A person's legal capacity to benefit from a bequest is generally coextensive with his capacity to receive a regular gift, but here, too, there exist a number of special rules:

(1) According to some of the *posekim* a proselyte cannot receive a *mattenat shekhiv me-ra* (Rabad, quoted in *Shitah Mekubbeẓet*, BB 149a and *Tosefot Rid*, ad loc., end of no. 14).

(2) Even the *posekim* who hold that a person cannot give a regular gift to his offspring as long as they are *embryos, agree that it is acceptable for him to make them a *shekhiv me-ra* bequest (*Beit Yosef* and *Derishah*, ḤM 210, no. 3; *Siftei Kohen*, ḤM 210, n. 1).

A person who lacks capacity to benefit from a bequest, may benefit from it if it is executed in the form of assignment to a third party on his behalf. This possibility also applies in the case of a *mattenat shekhiv me-ra*, and it is possible to ben-

efit an embryo in this manner, even according to the *posekim* who reject the possibility of a *mattenat shekhiv me-ra* in favor of an embryo (Tur, ḤM 210:1).

Subject Matter of the Bequest

In general the restrictions placed on the possible subject matter of a regular gift are applicable also as regards the subject matter of a bequest. According to certain *posekim*, a person cannot make a *mattenat shekhiv me-ra* and retain for himself the usufruct of the property in question, even though this may be done in the case of a regular gift (Rabad, quoted in *Beit Yosef*, ḤM 209:10; opinion quoted by *Rema*, ḤM 209:7). The reason for this is that a *mattenat shekhiv me-ra* is acquired after the benefactor's death so that his retention of the usufruct is solely for the benefit of his legal heirs and not for himself. A bequest may be made of property in kind and also in the form of a fixed payment (Ta'an. 21a; Ket. 69b), or by establishing a fund, with the income from it designated for a particular purpose (*Pitḥei Teshuvah*, ḤM 246, n. 2). It is possible for the testator to nominate an executor (*apotropos*) of his estate (Tur, ḤM 250:1 and 33). There is also an opinion that a *shekhiv me-ra* may entrust the executor with the actual decision as to division of the estate (*Mordekhai*, BB, no. 600).

At times wills have included charitable bequests. When such a bequest is made in a manner whereby the principal is established as a perpetual fund, while the income from it is dedicated to the charitable purpose, the estate – or the portion concerned – is known as a *keren kayyemet* (Resp. Rashba, vol. 3, no. 295; *Keneset ha-Gedolah*, YD 253; see also *Consecration and Endowment).

Form and Wording of Wills

It is desirable that it be indicated in the will whether the testator is a *bari* or a *shekhiv me-ra*, although omission to do so does not affect the will's validity (Yad, Zekhiyyah 9:22; Tur, ḤM 251:3). In the case of a dispute between the legal heirs and the beneficiaries under the will, the burden of proof as to the testator's state of health devolves on the latter, since the legal heirs are deemed entitled (*muḥzakim*) to the estate's assets and "the burden of proof rests on the claimant" (Yad and Tur, loc. cit.; Sh. Ar., ḤM 251:2). The following are the customary versions, since talmudic times, to describe the testator's state of health: for a *mattenat bari*, "while he was walking on his feet in the market"; for a *mattenat shekhiv me-ra*, "while he was ill and confined to his bed"; and for a *shekhiv me-ra* will reduced to writing only after the testator's death, "and from his illness he died" (BB 153a, 154a), this version being essential since the disposition will be void if the testator should not die from the illness (BB *ibid.*; Sh. Ar., loc. cit.).

The testator must employ the phraseology which is effective for transfer of title in regular gifts. Thus it is necessary for the testator to use a verb denoting gift (*natan*, "gave," etc.; BB 148b; Sh. Ar., ḤM 253:2). A *shekhiv me-ra* testator who bequeathes in favor of his legal heir may employ a verb denoting inheritance (ḤM 281:3). The phraseology used by the tes-

tator must clearly show that the testator is alienating the asset concerned and not that he is promising to transfer title to it (*Rashi*, Git. 40b). Use of the past or present tense confers title but not use of the future tense (Yad, Zekhiyyah 4:11; Sh. Ar., ḤM 245:1). On the other hand, a *shekhiv me-ra* will couched in the future tense, is valid since in this case the testator speaks of a gift to take effect in the future – after his death. However, even a *shekhiv me-ra* will is invalid if phrased as a mere promise (*Beit Yosef*, EH 51–end of s.v. שנים; *Maggid Mishneh*, Yad, Mekhirah 2:8; *Baḥ*, ḤM 253:2). Language phrased in the form of a request to the testator's legal heirs to give specific assets to the beneficiaries under the will is valid and effective (*Piskei Maharam*, no. 99; *Rema*, ḤM 250:21).

As in all cases of gift, the will of both a healthy person and that of a *shekhiv me-ra* must be executed in public, and the testator must direct the witnesses to sign the will in like manner: "… Sit in the markets and public places and write for him openly and publicly a deed of gift" (Yad, Zekhiyyah 5:1, 4; BB 40b; Tur, ḤM 242:7). A *meḥamat mitah* testator is not required to direct that the disposition be made public (Yad, Zekhiyyah 9:2), but if he should expressly direct the witnesses to keep his will secret, it will be invalid (*Perisha*, ḤM 242:4).

Interpretation of Wills

Wills are generally subject to the same principles of interpretation as are all other documents (see *Interpretation). The process of *umedana* ("estimation") is of particular application to the interpretation of wills – that is the process of endeavoring to fathom the mind of the testator in order to understand his true intention – and the will itself is virtually the exclusive means to do this. The legal heirs of the deceased are deemed to be in possession of his property. Hence, a person claiming under the will is subject to the rule that "the holder of a deed is always at a disadvantage," for the reason that "the burden of proof rests with the claimant" (Bik. 2:10; Ket. 83b), and the beneficiary under the will accordingly has the burden of proving that the testator's intention was such that the will should be interpreted in his favor. The aforementioned rule only applies where doubt has arisen with regard to the interpretation of the will, and it does not operate in order to void the will entirely (Resp. Ribash, no. 145; Sh. Ar., ḤM 42:9).

The principle of estimation may serve to entirely invalidate a will. Thus in a case where a *shekhiv me-ra*, in the belief that his son is dead, bequeaths all his property to another, the disposition will be invalid if it should subsequently transpire that the son is alive – and in this event the latter will inherit from his father (BB 146b). Similarly, in certain circumstances a beneficiary under a will may become the mere custodian of the estate assets should it be so determined as an outcome of estimation that it was this that the testator intended (BB 131b; Sh. Ar., EH 107 and ḤM 246:4–12).

Various rules were determined with regard to the interpretation of certain expressions in a will. Thus with reference to a *shekhiv me-ra* will, it was laid down that the term *banim* means "sons" and excludes daughters (TJ, Ket. 13:1, 35d) and

that the intention of the testator who bequeaths all his property to his *banim*, when he has one son only and daughters, is to bequeath all to his son (BB 143b and see the biblical texts there cited; Yad, Zekhiyyah 11:1). Disputed in the Talmud is the intention of the testator who bequeaths to his *banim* when he has a single son and a grandson, and it was decided that in such a case it is not intended that the grandson be included (*ibid.*).

If a will contains contradictory directions which cannot possibly be reconciled with each other, the direction recorded last in the will prevails, on the assumption that the testator has repudiated the earlier direction (BB 10:2; Yad, Malveh 27:14; Sh. Ar., ḤM 42:5). However, when the contradiction emerges from the directions contained in one and the same passage of the will, the later reference is of no special import and the rule that "the holder of a deed is always at a disadvantage" applies (*ibid.*).

Authority to interpret documents is in general entrusted to the courts. With regard to a *shekhiv me-ra* will this authority is sometimes entrusted to the persons present at the time of its execution (BB 113b; Sh. Ar., ḤM 253:1). Thus if a *shekhiv me-ra* bequeathed his property in the presence of three persons, the latter may adjudge in the matter of the will and with reference to any doubt arising in connection with its interpretation (*Rema*, ḤM 253:1). However, if these persons were requested to be present as witnesses to the will, they will be disqualified from acting as judges in matters concerning the will (*Beit Yosef*, ḤM 7:6; Sh. Ar., ḤM 7:5). Another opinion that they will be disqualified even if they were not requested to serve as witnesses but intended to act as such (*Rashbam*, BB 113b) was rejected by a majority of the *posekim* (Tos. BB 114a; Sh. Ar., loc. cit.). Three persons present at the time of the testamentary disposition may only act as judges in connection with it when the will is made in the daytime, since the *halakhah* is that the adjudication shall not take place at night (see *Bet Din*; Sh. Ar., ḤM 5:2 and 253:1). If sums of money are bequeathed by a *shekhiv me-ra* to several persons, and it transpires that the latter's estate is lacking in funds, the position will depend on the way in which the bequest is worded. If the wording is, "give two hundred *zuz* to A, three hundred *zuz* to B, and four hundred *zuz* to C," each of the persons mentioned receives only his proportionate share of the available amount; if, however, the wording is, "give two hundred *zuz* to A, thereafter three hundred *zuz* to B and thereafter four hundred *zuz* to C," the parties will take precedence in turn in accordance with the order in which their names are mentioned (Yad, Zekhiyyah, 10:13, 14).

Accrual of Rights under a Will

The beneficiary under a *mattenat bari* becomes entitled to the disposition in accordance with the terms of it, that is to the body of the property immediately and to its fruits upon the donor's death. In this case the beneficiary's right to the body of the donated property is a regular proprietary right, which he may, therefore, sell even during the donor's lifetime, and

if the beneficiary should predecease the donor, the former's heirs become entitled to the donation (Sh. Ar., ḤM 257:4). The beneficiary under a *shekhiv me-ra* will becomes entitled to the bequeathed property upon the testator's death since a *shekhiv me-ra* will is subject to the same law as is succession according to law (see above). Therefore, if the beneficiary should predecease the testator, the former's heirs do not become entitled to anything at all (Sh. Ar., ḤM 125:9 and *Siftei Kohen*, thereto, 36).

Renunciation of Rights under a Will

In general, a person's refusal to accept property given to him as a gift will be effective if the refusal is made before the property comes into his possession, and in this event he does not become entitled to it (Ker. 24b). In the case of a gift or bequest made in the beneficiary's presence, the latter must at this very stage express his refusal of it (Sh. Ar., ḤM 245:10); if he should wish to renounce a gift or bequest not made in his presence, he must do so immediately on becoming aware of it (Rif, *Halakhot*, BB 138a; *Piskei ha-Rosh, ibid.*; Yad, Zekhiyyah 9:13). A renunciation made by a beneficiary who remains silent for a period after having become aware that the gift or bequest has been made is ineffective (Yad, Zekhiyyah 9:14; Sh. Ar., ḤM 245:10). The renunciation must be made in an unequivocal manner, and the beneficiary must clearly state that he has no intention at all of becoming entitled to the gift or bequest and that it is a nullity *ab initio* (Yad, Zekhiyyah 9:13; Sh. Ar., ḤM 245:7 and *Sma* thereto, n. 18).

Fideicommissary Bequests

The testator may direct that particular assets shall be given to the beneficiary for a limited period and that after this period these assets shall pass to another. A will is generally made in this form when the testator wishes to ensure that his property shall not, after the beneficiary's death, pass to the latter's heirs but shall go to some other person (Yad, Zekhiyyah 3:9; Sh. Ar., 241:6; *Rema*, ḤM 248:3). In principle there is no restriction on the possible order of successive beneficiaries which the testator may determine, but in practice this right is qualified by the requirement that all the beneficiaries must be alive at the time the gift or bequest is made (Resp. Rosh, no. 84:1 and 2). Each beneficiary under such a will in turn enjoys the usufruct of the bequeathed property and has the right to deal with the latter as with his own property – even to sell it.

A moral prohibition was imposed on the sale of such property by any one of the fideicommissaries – save for the last beneficiary mentioned in the will – since this was held to amount to a frustration of the testator's original intention; a sale effected by one of the fideicommissaries contrary to the above prohibition is nevertheless valid (BB 137a; Yad, Zekhiyyah 12:8, 9). A disposition of the bequeathed property by way of a *shekhiv me-ra* will on the part of a fideicommissary is ineffective, since the property only passes into the new beneficiary's possession after the testator's death and at this time the property is no longer the latter's but that of the fideicom-

missary next in line in terms of the original will (bb 137a; Yad, Zekhiyyah 12:10).

In the case where property is bequeathed to an unmarried woman, "to you and thereafter to A," and the woman subsequently marries, the property will not pass in turn to A but the woman's husband will become entitled to it (Ket. 95b); however, if a bequest of this nature is made to a married woman, the beneficiary next in line will in turn succeed to the property, since this will be assessed to have been the testator's true intention (Ket. loc. cit.;Yad, Zekhiyyah 12:12; Sh. Ar., EH 91:2 and HM 248:8).

Where property is bequeathed by a *shekhiv me-ra* will to a legal heir of the testator "to you and thereafter to A," the property will not upon the beneficiary's death pass to A but to the beneficiary's legal heirs (Yad, Zekhiyyah 12:7; Sh. Ar., HM 248:1; bb 129b and *Rashbam*, ad loc.). The explanation for this is as follows: since in a *shekhiv me-ra* will the property only passes to the beneficiary after the testator's death, and since the beneficiary is a legal heir of the testator, the former becomes entitled to the property by virtue of the law of the Torah and the testator may not stipulate that his property shall after the beneficiary's death pass to A and not to the beneficiary's legal heirs, for this is a stipulation contrary to the law of the Torah and therefore void; this rule is referred to in the Talmud as *yerushah ein lah hefsek* ("an inheritance cannot be terminated"; bb 129b, 133a).

Takkanot Concerning the Form and Execution of Wills

In many communities different *takkanot* were enacted with regard to various documents which, in particular, obliged those executing the documents to do so before a scribe or rabbi (Sh. Ar., HM 61:1), both as a protection against forgeries and in order to make the documents publicly known (*Baḥ*, HM 61:1). At times it was laid down that a document executed contrary to a particular *takkanah* was of no effect and a fine was even imposed on the person who executed it (S. Buber, *Anshei Shem* (1895), 225 f.). In some cases it was necessary for certain deeds to be publicly announced in the synagogue (Resp. Ribash, no. 88; Resp. Rashba, vol. 3, no. 431). The manner of execution of wills was specially dealt with in a number of *takkanot*. Thus two years after the expulsion of the Jews from Spain, the *takkanot* of Fez were enacted which included, among others, this *takkanah*: "Whoever shall wish to make a gift or will, whether male or female, shall do so before the *ḥakham* or *dayyan* of the town, otherwise the gift or will shall be of no worth" (*Kerem Ḥamar*, vol. 2, no. 11). This *takkanah* was later extended (*ibid.*, no. 19) and a further *takkanah* prescribed that "any *shekhiv me-ra* will or gift which shall not be made before the *ḥakham* or *dayyan* of the town shall be null and void; that is, everything that a *shekhiv me-ra* shall do is void if not done before a *dayyan*" (*ibid.*, 36a/b, *takkanot* pertaining to HM, no. 4). These *takkanot* were apparently enacted for two reasons: to ensure that the testator was of sound mind when making the will, and so that the scholar could stress before the testator the fact that the latter was transferring the inheritance from his

legal heirs to someone else, a consequence looked upon with disfavor by the scholars (*Mishpatim Yesharim*, no. 2:161, and see above). Similar *takkanot* were enacted also in Jerusalem (Resp. Mabit, no. 2, pt. 2, no. 1).

Jerusalem Takkanot

It was the custom that the estate of a person who died in Jerusalem without leaving any heirs in Ereẓ Israel passed to the public, a custom apparently aimed at preventing the authorities from taking the estate. The public would administer the estate, and if the heirs of the deceased later came to claim the estate, it would be sought to influence them to leave part of it to the community chest. At a later stage a *takkanah* was enacted to the effect that the estate of a deceased person without any heirs in Ereẓ Israel actually passed to the public (see Rivlin, in bibl.). However, even after the enactment of this *takkanah* a person could still keep his estate from passing to the public by making a will. A deterioration in the position of Jerusalem Jewry led to the enactment of a number of further *takkanot* in this connection. Thus in 1730 there was a reinstatement of an ancient *takkanah* which laid down that a will had to be executed before communal representatives and that it was necessary that there be present a representative of the communal leadership of Constantinople, communal appointees, as well as a **parnas* and scribe of the community and, failing this, the will would have no validity. At the same time it was expressly laid down that a person could bequeath as he wished before the above-mentioned persons (*Sefer ha-Takkanot ve-Haskamot… Yerushalayim…* (1883²) 24b, 25b, 26a). In 1737 a far-reaching *takkanah* was enacted which forbade a person without heirs in Ereẓ Israel from making a will (*ibid.*, 18a/b). When this *takkanah* was circumvented by persons who made a *mattenat bari* abroad before coming to settle in Ereẓ Israel, there was enacted a *takkanah* in 1776 which rendered invalid various kinds of wills, including a *mattenat bari* "from today and after my death," whether executed in or outside of Ereẓ Israel (*ibid.*, 29a/b). In 1810 Ashkenazi Jews (*Perushim*) began to settle in Ereẓ Israel, and they objected to the above *takkanot*. For some years a dispute was waged in regard to these *takkanot*, and in the end they were not followed by the Ashkenazi Jews (see Rivlin, in bibl., p. 61).

Takkanot Concerning Disposition of the Property of Spouses

The Toledo *takkanot* enacted in favor of the wife's family were aimed at preventing the entire assets contributed by the wife to her husband from passing to the latter on her death. These *takkanot* provided that the wife's relatives – who would normally inherit from her in the event that she survived her husband – should receive one-half of her estate. It was decided by Asher b. Jehiel that a wife could not dispose of her property by will so as to leave it all to her husband or some other person and thereby frustrate the object of the above *takkanot* (Resp. nos. 55:1 and 40:2). In consequence of the decision, *takkanot* were enacted in the communities of the Spanish exiles which

expressly incorporated the import of the decision into the Toledo *takkanot*. The exiles of 1391 who settled in North Africa enacted – under the guidance of R. Simeon b. Ẓemaḥ *Duran – a series of *takkanot*, the third of which, among others, rendered it forbidden for a woman to make any form of will in which she purported to transfer one-half of her estate "to any person in the world save to any offspring she has by her husband who would be her nearest heir; and if she has done so, it shall henceforth be null and void" (*Tashbeẓ*, 2:292).

From the statements of the *posekim* of the Moroccan communities, it appears that despite the existence of various *takkanot* which followed those of Toledo, it still remained possible for a woman to make gifts to her husband or other persons (*Mishpat u-Ẓedakah le-Ya'akov*, pt. 2, no. 83; *Mishpatim Yesharim*, no. 2:211). On the other hand it was decided there that a *shekhiv me-ra* bequest made by a woman in which she gave a large part of her property to her husband was invalid (*Ner Ma'aravi*, no. 1:16). Another *takkanah* enacted in Fez imposed restrictions on the husband's freedom to make a testamentary disposition of his property by prescribing that if the wife objected to the *shekhiv me-ra* will of her husband, her share – or that of her heirs – in the estate would remain unaffected by the will. Another *takkanah* laid down that before distribution of the estate in accordance with the existing *takkanot*, there were to be recovered from it *mattenat bari* but not *shekhiv me-ra* bequests to which the wife of the deceased objected (*Kerem Ḥamar*, vol. 2, 34b, no. 6; the scholars were divided on the interpretation of this *takkanah* – see *Mishpatim Yesharim*, no. 2:268).

In consequence of the migrations of the Spanish exiles similar *takkanot* to those of Toledo were enacted in many communities of the Mediterranean countries. In some places a woman was expressly precluded from bequeathing part of her property to her husband; this was prescribed, for instance, in the *takkanot* of Arta (*Torat Ḥayyim*, ᴇʜ 24), apparently enacted in 1597 (see Resp. Ranaḥ, no. 25).

In the State of Israel

In the Succession Law of 1965 the Knesset partly adopted and partly rejected different principles pertaining to testamentary dispositions in Jewish law. The *mattenat bari* and *shekhiv me-ra* forms of will were adopted both in formulation and content (sec. 23; M. Elon, in: ᴉʟʀ, 4 (1969), 133f.). The Law – in reception of Jewish law principles and contrary to English law – empowers the court to give effect to a formally defective will when there is no doubt as to its genuineness (sec. 25).

[Shmuel Shilo]

A Will Formulated as a Request

Rabbi Israel Isserlein (Resp. Terumat Ha-Deshen, *Pesakim u-Ketavim*, (Ashkenaz, 15ᵗʰ century), 99) was asked about a will in which the testator turned to his son, requesting him to waive a particular debt that someone owed him; the question was whether this request was in fact an integral part of the will or merely a request or recommendation. His answer was that he was inclined to view this as a will in every respect,

and that the use of the form of request, rather than instruction, was merely in order for the matter to be dealt with amicably. The Rema (Sh. Ar., ʜᴍ, 250:21) ruled, on the basis of this responsum, that where a will is drafted in the form of a request, it is to be considered as a statement of a *shekhiv me-ra*, of one who is critically ill, and therefore to have the binding force of a will. Other halakhic decisors expressed doubts regarding this matter, in view of the fact that further on in this responsum Rabbi Isserlein himself questioned whether this was in fact the law (*Ḥiddushei Rabbi Akiva Eiger*, ad loc.; *Beit Yosef*, ʜᴍ 253).

Rabbi Isserlein's responsum and Rema's ruling were considered in decisions of the rabbinical courts in the State of Israel when adjudicating a case in which the language of the will was framed as a request. The Regional Rabbinical Court in Petaḥ Tikvah (File 1862/28) ruled that, even according to the opinion of the Rema, an additional reason is needed in order for the request to be considered a will, noting that in his responsum Rabbi Isserlein had explained that the provision was framed as a request in order for the matter to be dealt with amicably. Thus, only where there is an additional rationale to explain the background for using the form of request, such as that brought by Rabbi Isserlein, which explained the background of the request, may a request be viewed as a provision of a will. In the appeal, the Israeli Rabbinical Court of Appeals (5731/4, 8 ᴘᴅʀ 240) rejected the reasoning of the Regional Rabbinical Court and stated that Rabbi Isserlein's opinion implies that any request constitutes a will unless there is cause to believe otherwise, in which case an additional rationale is needed, and the decision of the Rema is applicable to any ordinary case of a will written as a request (*ibid.*, pp. 245–47).

A similar question came before the Israeli Supreme Court when the deceased left a letter recommending to the person whom he had designated as his heir not to accept the inheritance (ᴄᴀ 202/85 *Kleine-Beck v. Goldberg*, 41(2) ᴘᴅ 753; *per* Justice Menachem Elon). The family of the deceased argued that this constituted a revocation of the will, whereas the person designated as heir argued that this was only a recommendation. The District Court ruled according to the responsum of Rabbi Isserlein – namely, that a request constitutes a will and thus the earlier will must be viewed as having been revoked. The Supreme Court ruled that a distinction must be made between a request, that must be viewed as a will under Jewish Law, and the case under consideration, in which the document at issue was a letter containing a recommendation, that could not even be considered as a request; hence its language should not be viewed as a will, and the letter did not revoke the earlier will (*ibid*, pp. 768–70).

Enforcing a Defective Will

Wills that are drafted by notaries, in accordance with the laws of the State, often contain elements that would be considered defects according to Jewish Law and that would, prima facie, prevent their execution. Nevertheless, the accepted practice

is to uphold such wills and to regard them as valid, pursuant to the principle of custom (see *Custom). The basis for this position is the responsum of the Radbaz (1:67) ruling that the custom is to uphold instruments of the non-Jewish legal authorities. Even though the rule is that custom generally cannot override or invalidate rulings based on Torah, here there is no actual invalidation of Torah law governing inheritance, but simply a ruling that the gift was a valid gift on the basis of custom. A similar ruling was given by Rabbi David Ḥai Hacohen (*Resp. Radakh* 26:3; Italy-Greece, 16th century).

According to the opinion of some of halakhic authorities such wills should be upheld pursuant to the principle of *dina de-malkhuta dina* (see *Dina de-Malkhuta Dina).* Some are of the opinion that this is only possible when an act of acquisition (*kinyan*) was performed at the time the will was written (*Arukh ha-Shulḥan*, ḤM 68:6), while according to others no such act is necessary (Resp. Iggerot Moshe, *Even Ha-Ezer*, nos. 104–105).

There are additional cases in which a will is inconsistent with the requirements of Jewish Law and the rabbinical courts nevertheless make an effort to uphold these wills relying, inter alia, on the following solutions:

1. In cases in which it may be inferred from the language of the document that the testator is only transferring ownership after his death (i.e., where the testator writes that he bequeaths his property "*after* my death"), this wording may be interpreted as "bequeathing in the contemplation of my death" (see *supra*), inasmuch as there is a tendency in the rulings of halakhic decisors of recent generations to broaden the possibilities of viewing the will of a healthy person as "a will in the contemplation of death."

2. The use of the rule "it is a *mitzvah* to carry out the wishes of the deceased," as cited above, while adopting the approach that broadens its application beyond the cases in which the property has been transferred to a trustee. This is especially the case where the will bequeaths the property for a charitable purpose.

3. Where funds deposited in a bank account are bequeathed. In such cases inasmuch as the funds have been deposited with the bank in accordance with the bank's procedures, which require the bank to transfer the money to the heirs pursuant to the will, which is probated according to civil law, it is authorized to and required to act according to its procedures.

In the State of Israel – Later Developments
As stated above, some of the sections of the Succession Law, 5725 – 1965, adopted various provisions of Jewish Law. An example of this is Section 42(b) of the Succession Law, dealing with the case of consecutive heirs, which provides, inter alia, that the first heir "may deal with what he received as his own and the second shall only take what the first has left." This provision is consistent with the provisions of Jewish Law, as discussed at length above. In a case decided by the Supreme Court (CA 749/82 *Moston v. Wiederman*, 43(1) PD 278), the

testator provided in his will that his property would be bequeathed to his wife and that upon her death it would pass to his legal heirs. After studying and discussing the sources of Jewish Law on this subject, the Court ruled that the testator's wife was entitled to the property and was entitled to carry out any legal transaction regarding them, including their sale, but that she could not bequeath them in her will to other beneficiaries. This was because immediately upon her death the ownership of the property returns to the legal heirs of the first testator, in accordance with the provision of Jewish Law that the first beneficiary may transfer the estate in any manner except by will, not even by way of a *shekhiv me-ra's* will to other beneficiaries (*ibid,* pp. 289–93; *per* Justice Menachem Elon); for a detailed discussion of the aspects of this subject in Jewish law see *Law and Morality).

The origin of Section 23 of the Succession Law in the Jewish Law regarding *shekhiv me-ra* served as the basis for the interpretation given to this section by the Supreme Court in the *Koenig* decision (FH 40/80 *Koenig v. Cohen*, 36(3) PD 701). That case involved a will that a woman left on a piece of paper, undated and unsigned, a moment before she took her life. The justices' opinions were divided regarding the legal validity of the will. Justice Menachem Elon ruled that the document should be regarded as a will in contemplation of death, given that a *shekhiv me-ra's* will and a will in contemplation of death are valid even without a *kinyan*, and even if there were not two witnesses at the time it was drawn up, there is a presumption, by virtue of the special circumstances involved in its drafting, that it reflected her considered wishes and decision (Rambam, Yad, *Zekhiyah u-Matanah*, 8:2, 4, 24, 26; *Sema*, ḤM 253:1). In view of this, the will in the case under consideration, that had no date and to which there were no witnesses, must be validated, notwithstanding its omissions and defects (*ibid*, pp. 733–38).

In another decision (CA 2555/98 *Abergil v. Ben Yair*, 53(5) PD 673), the Supreme Court ruled that the drafting of a will pursuant to the rules of Jewish Law, in the manner of granting a gift while alive, is to be treated by the civil courts as a will and not as a gift, and the provisions of the Succession Law, 5725 – 1965, will apply rather than those of the Gift Law, 5728 – 1968. The Court (Justice Y. Englard) cited the Jewish Law sources discussed above, dealing with the will of a healthy person by way of a gift while living, ruling that Jewish Law indeed considers it a gift, and not a will. However, this is because this is the only recognized way under Jewish Law to distribute the estate to parties other than the legal heirs; hence, this act must be judged according to its *substance*, and should be regarded as a *will* rather than as a *gift* (p. 686 of the decision). In view of this, the Court ruled that even a will drafted in accordance with Jewish Law must fulfill the requirements of Succession Law 5725 – 1965 regarding wills. It should be noted that, regarding this approach of the civil courts, there were those who commented that the decision represents a degree of restriction of the freedom to enter into contractual agreements, inasmuch as it does not permit a person to give

his property as a gift in accordance with the model of a "living gift" under Jewish Law.

WILLS, ETHICAL. The Bible contains examples of wills given by the great sages, especially that of Jacob (Gen. 49), but they possess no special religious or ethical theme. This holds true for the Testament of the Twelve Patriarchs, one of the major works in the *Apocrypha and Pseudepigrapha written during the Second Temple period and shortly after its destruction. The prototype of the medieval ethical will may be found in the Book of Proverbs, where much of the practical ethical advice is given in the manner of instructions from a father to his son.

Talmudic literature contains many aggadic passages quoting or purporting to quote deathbed instructions by great sages to their pupils. These passages, collected by I. Abrahams in the first chapter of his anthology *Hebrew Ethical Wills* (2 vols., 1926), do not concentrate on ethical themes, though some contain ideas similar to those that appear later in the medieval literature. However, Hebrew ethical wills of the Middle Ages are not a direct development of these sayings.

In the Hebrew poetry of the classical Andalusian period there are some examples of ethical wills, for instance, a poem of Samuel ha-Nagid dedicated to his son Yehosef (*Yehosef Kol Asher*) before one of his battles with Granada's army. Seeing death very close, Samuel collected in the poem the best advice for his son.

Medieval ethical wills are an integral part of medieval Hebrew *Ethical Literature, which, although it undoubtedly has deep roots in the traditional talmudic and midrashic literature, is mainly a product of medieval ideologies – i.e., Jewish philosophy, Ashkenazi Ḥasidism (see *Ḥasidei Ashkenaz), and Kabbalah. The aim of ethical literature was to apply theological, psychological, and anthropological conclusions of the ideologies to the everyday life, social and religious, of the average Jew. Various types of literary works were developed for this purpose: ethical treatises dealing with several moral problems, according to subjects or alphabetical order; monographs and homiletical works that deduced ethical norms from the ancient texts; and the ethical will that began to develop in European Jewish communities during the Middle Ages.

Ethical wills differ from other kinds of ethical literature in several ways. Whereas ethical literature usually gives a lengthy theoretical basis for behavioral requirements, ethical wills ordinarily only point out the right way, disregarding the ideological foundations. Thus they are a more practical, behavioral type of literature, close in some respects to the literature of the *hanhagot* (see *Ethical Literature) whose sole aim is to instruct the reader in right behavior in the manner of halakhic literature (but dealing with some subjects not covered by *halakhah*). The literary form of the will – as teachings given by a dying father to his sons gathered around his bedside – does not leave much space for elaborations on or explanations of the traditional basis for the commandments. Ethical wills, therefore, comprise short ethical treatises, very practical in character.

In many ethical wills, every paragraph opens with the words "my son." Sometimes legends arose describing in detail the circumstances under which the will was given. Some wills are described as letters sent by a father, who was far away (in Palestine, for instance), to his sons, instructing them in the basic moral and ethical teachings. In later generations this became an accepted literary form for any short work dealing with the basic ethical norms. The titles of such works, especially in Eastern Europe in the 18th century, suggest a will, e.g., *Naḥalat Avot* ("Inheritance of the Fathers"). It is doubtful whether any extant work of this sort was actually a will, the term "will" having been used only to imply that here in a short form is the essence of the ethical teachings of a certain writer.

Their literary form made ethical wills popular and respected, with readers looking upon them as the last will and testament of a great scholar that should be accepted and followed. Naturally, some writers created pseudepigraphic works, attributing them to great sages of their time who did not happen to write such a treatise themselves. Medieval and early modern times offer examples of such pseudepigraphical works, from the "will" attributed to Maimonides to that attributed to *Israel b. Eliezer Ba'al Shem Tov. The *Ẓavva'at ha-Rivash* (1793) was attributed to the Ba'al Shem Tov, although the work was mainly a compilation of sayings primarily from the writings of Dov Baer of Mezhirech.

The literary form of the will also influenced writers of major ethical works. Jehiel b. Jekuthiel of Rome, author of the *Ma'alot ha-Middot*, a major ethical book of the 13th century, used the form of the will, with the words "my son" beginning many parts of the work. Even Isaiah b. Jacob ha-Levi *Horowitz, whose family produced several ethical wills (see below), used this form in his monumental ethical work *Shenei Luḥot ha-Berit*.

Probably the earliest extant ethical will in Hebrew, a translation from the Arabic, comprises a short chapter in the *Mivḥar ha-Peninnim*, a collection of ethical epigrams attributed to Solomon ibn *Gabirol and translated into Hebrew by Judah ibn *Tibbon. The chapter entitled "The Gate of the Commandment of the Scholar to his Son" includes various epigrams on almost all aspects of human behavior and is part of the philosophical ethical literature, although the philosophical presuppositions are almost nonexistent within the chapter itself.

Another early example is the treatise *Orḥot Ḥayyim* ("Ways of Life"), first attributed to the talmudic sage *Eliezer b. Hyrcanus, and later to the 11th-century Ashkenazi scholar *Eliezer (ha-Gadol) b. Isaac of Worms. Modern scholars disagree about the date of this work – Zunz considers that it was written early in the Middle Ages, about the eighth century, whereas G. Scholem holds that it forms part of the literature which emanated from the same circle that produced the Zohar in the 13th century. *Orḥot Ḥayyim*, a popular work, is a fine example of the literary genre – it includes, in short paragraphs addressed to the writer's sons, advice and instruction about practical, behavioral problems in ethical, moral, religious, and social life, without any specific ideological basis (which is one of the reasons why it is so difficult to determine its time and place of composition). Judah ibn *Tibbon's ethical will, written about 1190 and addressed to his son Samuel, who translated Maimonides' *Guide of the Perplexed* from Arabic to Hebrew, is one of the classics in this genre. Although the will contains the usual detailed and practical instructions from a father to his son on moral behavior, it also is characterized by features rarely found in ethical wills. For example, the will is introduced and concluded by a poem, and within the body of the will there are a number of poetical passages, some of which were taken from *Samuel ha-Nagid's *Ben Mishlei*. A second unusual feature is Judah's reference to many details of family life, his designation of bridegrooms for his daughters and a bride for his son. Apparently the testament is an actual private ethical will from one person to another, and not just a literary work. Thirdly, in this work, also known as "A Father's Admonition" (*Musar Av*), the author clearly reproves his son for his laziness, his lack of interest in books in general and in Arabic in particular, and many other faults of character which seem incongruous in the man who translated the *Guide of the Perplexed*. Perhaps parts of the will were written when Samuel was quite young, and other parts were added later. In addition, the author dwells at length upon the right way to maintain and preserve a library, for Judah possessed one of the most important libraries of his time.

From the 13th century, ethical wills became not only a popular Hebrew literary genre, but also customary practice within certain families. Apparently the custom was maintained in the family of *Asher b. Jehiel (father of the author of the *Turim*), which moved from Germany to Spain. Extant are the "Rules" which R. Asher gave to his family, and a will addressed to the sons of R. Jacob, the son of R. Asher. It is probable that R. Judah, Jacob's brother, also wrote such a will which had come down as an anonymous work.

This custom seems to have been prevalent in one of the most important families in Eastern Europe during the 16th and 17th centuries, the Horowitz family, whose place of residence was usually Prague. In the 16th century Abraham *Horowitz wrote the important ethical will which became widely known as an independent ethical work, *Yesh Noḥalin*. His son, Jacob, wrote a will in the form of emendations of and additions to his father's ethical book, and the two works were often printed together. The grandson, Shabbetai Sheftel *Horowitz, the author of *Shefa Tal*, carried on the family tradition. Although many of this family were kabbalists who helped to spread Lurianic Kabbalah in Eastern Europe, kabbalistic ideas do not occupy a major place in their ethical wills.

Ethical wills sometimes reflect major controversies and trends within Judaism. The 13th-century will of Joseph ibn Kaspi of Provence, known also as *Sefer ha-Musar* ("The Book of Ethics") or *Yoreh De'ah* ("Teacher of Knowledge"), reflects the fierce controversy between the practitioners of Jewish philosophy, especially the followers of Maimonides, of which Ibn Kaspi was one, and their opponents. Ibn Kaspi tries to reconcile the idea of philosophical knowledge as the supreme religious value with the traditional expressions of devotion. Another glimpse into major problems in the history of Jewish thought is provided by the will of *Elijah b. Solomon Zalman of *Vilna (the Vilna Gaon), who addressed a will to his sons when he set out for Palestine (which he never reached). The will expresses the extreme pietism and devotion of the opponents of Ḥasidism in the 18th century. Elijah advised his sons that in order to avoid interrupting their study of Torah they should never set foot outside their houses unless it was absolutely necessary. He even advocated praying at home because the many people congregated in the synagogue might prove distracting or inspire evil thoughts. From these strictures it is not surprising that he was the leader in the opposition to Ḥasidism. In general, ethical wills reflect in a concise and clear way the main concerns of the writer and the social or ideological group within Judaism to which he belongs.

WILLSTAETTER, RICHARD (1872–1942), German organic chemist and Nobel laureate. Willstaetter, who was born in Karlsruhe, became professor at Munich in 1902, and three years later professor at the Technische Hochschule in Zurich. His research showed that chlorophyll, the essential agent for

plants to absorb sunlight and carbon dioxide for synthesis, has two components, contains magnesium, is closely analogous to the red pigment of blood, and contains phytol. He was awarded the 1915 Nobel Prize in chemistry "for his researches on plant pigments, especially chlorophyll." In 1912 he became director of a new Kaiser Wilhelm Gesellschaft zur Foerderung der Wissenschaften in Berlin-Dahlem, and studied other plant pigments, the carotenes, and the anthocyanins. In World War I he was awarded the civilian Iron Cross for work on gas masks. In 1915 he became director of the State Chemical Laboratory. At a time when enzymes were still considered to be mysterious agents specific to life processes, he emphasized the view that they are chemical substances.

When by 1924 suitable Jewish candidates were being rejected for positions in the university, Willstaetter reacted to this manifestation of antisemitism by resigning his chair at the University of Munich. He devoted himself to scientific organizations, publications, special lectures, and industrial consultations. In March 1939 the Gestapo ransacked his house and ordered him to leave Germany. He went to Locarno, Switzerland, where he died. His autobiography, *Aus meinem Leben*, appeared in 1949.

[Samuel Aaron Miller]

WILMINGTON, the largest city in Delaware, midway between New York and Washington, some 27 miles south of Philadelphia and 70 miles north of Baltimore. In 1995, 7,600 Jews, 56% of Delaware's Jews, lived in Wilmington and its suburbs. Since 1879, when Delaware's first Jewish organization, the Moses Montefiore Society, was formed, Wilmington has been the center of Jewish life in the state.

Central European and native-born Jews who came to Wilmington from neighboring American cities established the Moses Montefiore Society. Within a few years, eastern European Jews arrived in large numbers. In addition to working as tailors, shoemakers, milliners, and shopkeepers, many of them worked in Wilmington's expanding shipbuilding, railroad car and morocco plants as carpenters or unskilled laborers. The eastern Europeans quickly outnumbered the founders, but the groups worked together to build Wilmington's synagogues and agencies. (See *Delaware.) Given Wilmington's prosperity, the Jewish population grew quickly from 94 people in 1879 to nearly 4,000 by 1920.

Wilmington's moment of glory was the 1918 War Relief Campaign sponsored by the American Jewish Relief Committee. Recognizing the full extent of the suffering in Europe, the AJRC set a national goal of 30 million dollars, an unattainable goal for Jews alone. The agency chose Wilmington, which was known to have very good relations between the Jewish and general community, for an experimental appeal to non-Jews and assigned it a goal of $75,000. With the generosity of Wilmington's established leaders, Pierre duPont and members of the duPont family, Senator Willard J. Saulsbury, then president pro tem of the U.S. Senate, and Wilmington's industrial leaders, the campaign surpassed its goal and raised $125,000. Wilmington became known nationally as the model city of charity and good will, the place where the campaign became "not only a Jewish movement but a human movement."

During the World War I era, the most affluent members of the Jewish community moved north across the Brandywine River, but most Jews continued to live and work in the downtown area. They ran many of Wilmington's leading stores like J.M. Lazarus' Wilmington Dry Goods, Snellenburg's, Keil's, and Braunstein's. By the 1960s, 35% of Wilmington's Jews had moved to the suburbs; only 53% still lived in the city. To meet the new reality, community leaders closed the old Jewish Community Center and built a new one in northern New Castle County on Garden of Eden Road in 1969. Adas Kodesch Shel Emeth (Orthodox) and Temple Beth Emeth (Reform) also moved out of the downtown area in mid century. Beth Shalom (Conservative) was always north of the Brandywine River.

As Wilmington developed into a corporate capital and then a financial/banking center, many Jews found jobs in those fields as well as in other professions. In 1995, 55% of Wilmington's Jews had a four-year college degree or a graduate degree. The vast majority of Wilmington's Jews lived in the suburbs; few lived in the city. The total population of the city and suburbs had not increased much, from an estimated 7,200 Jews in 1962 to an estimated 7,600 in 1995. A multi-year expansion and renovation of the Garden of Eden Campus began in 2003 following a community wide campaign that raised more than 21 million dollars.

During the World War II era, Jewish education became a community priority. The Jewish Federation of Delaware, which was formed in 1935, led a community effort to establish a United Hebrew School. Although the school closed after about 13 years, the focus on education continued. Wilmington Gratz Hebrew High School, a branch of the successful Philadelphia school, opened in 1965. Albert Einstein Academy, the state's only Jewish day school, began in 1970. The Florence Melton Mini School brought its adult education program to Wilmington in 2001.

At the end of the 20th century, 33.3% of Wilmington's Jews defined themselves as Conservative, 30% as Reform, 7.3% as Orthodox, 0.8% as Reconstructionist and 27.7% as Just Jewish.

[Toni Young (2nd ed.)]

WILNA, JACOB BEN BENJAMIN WOLF (d. 1732?), rabbi, *posek*, and Shabbatean kabbalist. His name indicates that he was born in Vilna. He was a member of the circle of *Judah Ḥasid (Segal) ha-Levi, but it is not clear if he joined this circle while still in Europe and went with them to Ereẓ Israel in 1700 or whether he went there earlier. In any case, he clearly studied Kabbalah in Vilna. While in Jerusalem, he attempted to join the Sephardi community and was a member of the *bet ha-midrash* of Abraham *Rovigo and a member of the *Yeshivah Bet Ya'akov Ferrera* of the Sephardim. In 1707 Jacob signed the ordination of David *Oppenheim with the leaders of the Ashkenazi community in Jerusalem. In Jerusalem he associated with Nathan Nata *Mannheim, a member of the circle of Judah Ḥasid. The two collaborated in the writing of *Me'orot Natan*, which includes the *Me'orei Or* of Meir *Poppers, with their commentary *Ya'ir Nativ* (Frankfurt, 1709). Between 1702 and 1725, he left Jerusalem three times, twice as an emissary of the Ashkenazi community. Jacob visited Turkey, Germany, Holland, and Italy, propagating Kabbalah wherever he went. In 1726 he returned to Safed and from 1728 served as the rabbi of Safed and as head of the yeshivah. He was a moderate Shabbatean and material on his "belief" is included in Shabbatean manuscripts. Jacob was considered the authoritative kabbalist by his contemporaries in Turkey, Ereẓ Israel, Italy, and Poland. His eminence in Kabbalah is attested by Abraham *Gershon of Kutow (Kuty). He died in Safed at an old age. His glosses on *Tikkunei Zohar* were published with the text (in Orta Koi, near Constantinople, 1709).

His son ḤAYYIM NISSIM YERUḤAM (1704?–1775), kabbalist and rabbi, was born in Jerusalem, and was also a Shabbatean kabbalist. He, too, joined the Sephardi community. Ḥayyim left Jerusalem on several occasions on missions for the Ashkenazi community and later became one of its scholars. Apparently he died in Damascus. There is no evidence for the view that Jacob Wilna was the ancestor of the *Elyashar family.

[Abraham David]

WILPON, FRED (1936–), U.S. sports executive and real estate developer. Wilpon, who was born in Brooklyn, N.Y., graduated from the University of Michigan. He worked for Hanover Equities Corporation in New York from 1959 to 1969, rising to vice president. He joined Peter Sharp & Co. as a vice president and two years later co-founded the realty investment concern Sterling Equities of Manhasset, N.Y., which developed and invested in real estate. From 1972, Sterling Equities and its affiliates purchased or developed over 17 million square feet of commercial property, 45,000 residential units, 8.5 million square feet of retail property, and three major sports complexes. In 1980 Wilpon and Saul Katz, the founders of Sterling Equities, acquired a partnership interest in the New York Mets professional baseball team, one of the major sports franchises in the United States. In 1985 Sterling invested in Pathogenesis

Laboratories, a medical research company focused on treatments for cystic fibrosis. Five years later Sterling joined with American Securities Capital Partners to form the first of four investment funds that invested in and managed real estate in 43 states. In 2000, he and Katz co-founded, and Wilpon became chairman of, the Brooklyn Baseball Company, owner of the Brooklyn Cyclones, a minor league team. It marked the return of baseball to Brooklyn, which had been without a professional team since the departure of the Brooklyn Dodgers in 1956. In 2002 Sterling became full owner of the Mets, and Wilpon remained chairman and chief executive through the early years of the 21st century. His son Jeff was senior executive vice president and chief operating officer of the Mets. Other members of the Wilpon family served on the board of directors. Wilpon was a member of the New York City Housing Task Force and served as a trustee of the Jewish Institute for Geriatric Care in New Hyde Park, N.Y.

[Stewart Kampel (2nd ed.)]

°**WILSON, SIR CHARLES WILLIAM** (1836–1905), English army officer and topographer. Wilson entered the Royal Engineers in 1855. He directed the survey of Jerusalem (1864–66) and the survey of Sinai (1868–69) for the Ordnance Survey. He later served as consul in Turkey, intelligence officer during the wars in Sudan (1884–85), and director-general of the Ordnance Survey from 1886 to 1894, when he retired from military service with the rank of major-general. His publications on Ereẓ Israel include the first exact map of Jerusalem (1864), which still serves as the topographical basis of the Old City; explanatory notes on the map (1865); and a map of the Sinai Peninsula (1869). Wilson also contributed to the volume on Jerusalem (1880) in the series *Picturesque Palestine*. During his work Wilson identified remains of the bridge which connected the Temple Mount with the Upper City in the Second Temple period; this has been named after him. He was one of the leaders of the ill-fated expedition to rescue General Gordon in the Sudan in 1885 and was knighted the same year. Wilson again visited Palestine in 1899 and 1904, trying to discover sites relating to early Christianity.

°**WILSON, HAROLD, BARON WILSON OF RIEVAULX** (1916–1995), British prime minister. Wilson was the son of an industrial chemist in Huddersfield, Yorkshire, and was educated at Oxford. He entered Parliament in 1945, serving as the youngest member of Clement *Attlee's cabinet in 1947–51. He became leader of the Labour Party in 1963 and served as prime minister in 1964–70 and 1974–76. Wilson had particularly close relations with members of the Jewish community, especially as his confidential advisors, such as his solicitor and confidante Lord *Goodman and a Yorkshire industrialist, Lord *Kagan, from whom he sought economic advice.

Wilson admired Jews for those qualities he saw in himself: intelligence, social commitment, and an ability to rise above class-imposed obstacles.

No fewer than 40 Jews were elected as Labour members of Parliament at the 1966 general election (out of 363 Labour MPs), and the Wilson years probably marked the zenith of the nexus between British Jewry and the Labour Party, especially among those who were young during the time of fascism. Subsequently, many in the Jewish community moved to the political right. Like most social democrats of his generation, Wilson was a strong supporter of Israel and wrote a book on the subject, *The Chariot of Israel: Britain, America, and the State of Israel* (1981).

WILSON, "SCOTTIE" (1891–1972), painter. Britain's best known "naive" painter, Wilson was an endearing eccentric. He was born Lewis Freeman to eastern European immigrant parents in the Jewish section of the Gorbals slum district of Glasgow. Some sources state that he was born in London, although "Scottie" refers to his place of birth and the broad accent he retained all his life. His formal education ended at the age of nine, after which he worked with an elder brother as a street-trader in Glasgow. In 1906 he enrolled in the Scottish Rifles and served in India and South Africa. His later work bears some resemblance to Indian bazaar painting, and he regularly incorporated in his works the design of the lotus flower. During World War I he served on the western front, after which he returned to street-trading in London and Scotland. In the early 1930s he immigrated to Canada, working as an itinerant trader between Toronto and Vancouver. It was there that his artistic career started. He often related the tale of finding a beautiful gold pen, with a broad nib, which inspired him to doodle; images and faces seemed to flow from the pen involuntarily and he became obsessed with the results. Dozens of notebooks became filled with elaborate decorative patterns, fantasies based on images of childhood, in which nature was always beautiful and humans were always ugly. He began to use colored inks in delightful images of elaborate gardens, with fountains and resplendent flora and fauna. His favorite artist was Blake, whose mystical innocence is reflected in his work. After World War II he returned to London, and within a short time considerable interest was shown in his work. In Paris he was greatly encouraged by the artist Jean Dubuffet, who showed a particular interest in the work of children and eccentrics. Exhibitions of his drawings brought Wilson considerable fame; he was commissioned to paint murals for the National Bank of Switzerland, Basle, and dinner services by the Royal Worcester Porcelain Company. His work was acquired by the Tate Gallery, London, the Museum of Modern Art, New York, the Musée d'Art Moderne, Paris and many other public collections. Among the numerous works about Scottie Wilson is a monograph by Mervyn Levy (1966). More have appeared since his death.

[Charles Samuel Spencer]

WILSON, SOL (1896–1974), U.S. painter, printmaker, educator. Born in Vilno, Russia, now Poland, Wilson emigrated to the U.S. in 1911. He studied art at Cooper Union and the National Academy of Design. Like many other American artists of his generation, he worked for the Works Project Administration during the Depression: among his public works were the paintings *The Indian Ladder* (1940) for the town of Delmar in New York and *Outdoor Sports* (1942) for Westhampton Beach, also in New York. His paintings of figures, interiors, and landscapes reveal the influence of his art teachers, George Bellows and Robert Henri. His visits to Massachusetts fishing villages resulted in numerous images of fisherman, boats, and harbors, such as *Torn Sail* and *Provincetown Deck*, rendered in expressive jewel tones of red, green, blue, yellow, or in a palette of earth tones, exemplified in *To the Island*. Wilson taught at the Art Students League and the American Artists School. He lived predominantly in New York, but also spent time in Provincetown and Rockport, Massachusetts. His work has been exhibited at the Art Institute of Chicago, the Carnegie Institute, the Corcoran Gallery, the National Academy of Design, the Library of Congress, and the Whitney Museum, among other places. His work can be found in the collections of the Biro-Bidjan Museum, Russia, the Brooklyn Museum, the Metropolitan Museum of Art, and the Smithsonian, among other museums.

[Nancy Buchwald (2nd ed.)]

°**WILSON, WOODROW** (1856–1924), 27th president of the United States (1913–21). Wilson tried to remain neutral during World War I but finally led his country into the conflict. After victory, he helped design the Versailles settlement, to which the U.S. Senate refused assent. Although Louis D. *Brandeis, whom Wilson appointed to the Supreme Court, oriented the president to the Zionist program, Wilson's prior approval of the Balfour Declaration derived from Allied grand strategy. Thereafter, Wilson displayed increased interest in the Jewish National Home concept and on several occasions gave it his public blessing, much to the chagrin of State Department personnel. Wilson also helped write into the 1919 treaties guarantees for the minority enclaves (including Jews) in the newly created states of eastern Europe. Wilson's benevolence toward Zionist aspirations reflected his concern for all suppressed nationalities and an idealism toward the future of the Holy Land stemming from a rich Christian background. In Wilson's day, the affinity between the United States and world Jewry was translated into Zionist terms.

[Selig Adler]

WINAWER, BRUNO (1883–1944), Polish playwright and novelist. A Warsaw physicist, Winawer wrote many successful comedies in the style of G.B. Shaw. His belief that technical progress was the basis for social and political change found expression in his novels and in plays such as *Roztwór profesora Pytla* ("Professor Pytel's Chemical Solution," 1919) and *R.H. Inżynier* ("R.H., the Engineer," 1923).

WINCHELL, WALTER (1897–1972), U.S. newspaper columnist. Winchell, a New Yorker by birth, began contributing theatrical gossip to the house organ of a theater chain when he was a young vaudeville actor. This led the New York *Graphic* to give him his own column, "On Broadway," in 1924, and in 1929 he moved to Hearst's *Daily Mirror*. Over the years he gained a position of unmatched power among newspaper writers. His sources included presidents and kings, industrial tycoons, the leaders of show business, and gangster racketeers. His popularity was due mainly to the sensational disclosures for which he became a byword. In the mid-1950s, at the peak of his career, he had an estimated public of more than 35 million readers as a syndicated columnist in more than 2,000 daily newspapers.

Winchell ruled the airwaves from 1930 to 1957, when he captivated radio audiences with his colorful, fast-paced, delivery of entertainment news, gossip, and innuendo. In 1956 he debuted on television, hosting *The Walter Winchell Show*, a weekly variety program; and from 1957 to 1958 he hosted *The Walter Winchell File*, a series about the crime stories he had covered while working with the New York City Police Department. Most memorable to television viewers at the time was Winchell's rapid-fire narration on the popular crime drama series *The Untouchables* (1959–63), based on the 1930s exploits of real-life FBI special agent Elliot Ness and his team, and mobster Al Capone and his henchmen.

The TV biopic *Winchell* was made in 1998, directed by Paul Mazursky and starring Stanley Tucci in the title role. Winchell was inducted into the Radio Hall of Fame in 2004.

His book *Winchell Exclusive: Things That Happened to Me – and Me to Them* was published in 1975.

As founder of the Damon Runyon Cancer Fund in 1946 in memory of his writer friend, Winchell raised millions of dollars for cancer research and care. By 2005 the foundation had invested more than $170 million in cancer research, supporting some 3,000 scientists in the U.S.

WINCHESTER, cathedral city in Hampshire, S. England. Jews are first mentioned there in 1148 when, in the survey of city property, Benedict and Ursulinus are recorded as tenants of the bishop. A community subsequently grew up and was possibly visited by Abraham *Ibn Ezra, who mentions the city in his astronomical writings. It was the only large town in England where there were no anti-Jewish disorders in 1190, but a *blood libel resulted in some disturbance two years later. It ranked fourth in the *Donum*. During the 13th century the community was one of the most important in England and an *archa was situated there. The Jewish quarter was in the heart of the city (the present Jewry Street). The constable of Winchester Castle was also Keeper of the Jews. A tower in the castle was known as the Jews' Tower – either because Jews were permitted to take refuge there or because it was used for their periodical imprisonments. The community experienced a series of child-murder accusations between 1225 and 1235. It may have been in connection with one of these that in 1235 the leading member of the community, Abraham Pinch, was hanged in front of the synagogue which he himself maintained. The most tragic event occurred in 1262, when Simon de Montfort sacked the Jewish quarter in Winchester. Among outstanding local capitalists in the second half of the 13th century was Licoricia, who was murdered in 1277; her son Benedict was among the Winchester Jews hanged in 1278 on a charge of coin clipping. Benedict fil' Abraham of Winchester, on the other hand, was the only known English Jew in the Middle Ages to be admitted to the Merchant Guild (1268). Another son of Licoricia, Asher, scratched an inscription, recorded by John Selden, on the wall of his dungeon in Winchester Castle, where he was imprisoned when the Jews of England were arrested in 1287. About this time, the principal Winchester synagogue was confiscated. Approximately 16 local Jewish householders remained by the time of the expulsion of the Jews from England in 1290, their wealth valued at £44. No organized Jewish community has existed there in recent times.

[Cecil Roth / Joe Hillaby (2nd ed.)]

°**WINCKLER, HUGO** (1863–1913), German Orientalist and Bible scholar. Winckler was born in Graefenhainichen. He became a lecturer at Berlin University in 1891 and professor extraordinary in 1904. During the first years of his scholarly activity, he devoted himself to the study of Assyrian inscriptions; he published the Sargon inscriptions in 1889, as well as various studies on the ancient Near East which included a history of Israel, *Geschichte Israels…* (2 vols., 1895–1900), and a work on the code of Hammurapi, *Die Gesetze Hammurabis…* (1902). In 1903–04 he took part in the excavations

of Sidon and from 1906 to 1912 was in charge of the German excavations at Boghazköy (ancient Hattusas, the capital of the Hittite Empire in Asia Minor). There he was successful in discovering the royal Hittite archives, opening the history of the Hittite kingdom to the scholarly world. Winckler did not, however, live to see the deciphering of the Hittite language. He was one of the founders of the pan-Babylonian school in the study of the Bible. These scholars claimed that there was a single common cultural system, overwhelmingly influenced by the Babylonians, which extended over the whole of the ancient Near East. This school assumed that the Bible was also rooted in this culture, and not merely influenced by it. The other prominent exponents of this school were Winckler's disciples, F. *Delitzsch and A. *Jeremias.

Winckler's other publications included a critical edition (written with L. Abel) of the Tell el-Amarna letters, *Der Thontafelfund von El-Amarna* (2 vols., 1889–1900); a German translation of these letters, *Die Thontafeln von Tell-El-Amarna* (2 vols., 1896); *Das Alte Westasien* (1899); and publications in the series *Der Alte Orient*.

WINDER, LUDWIG (1889–1946), Bohemian journalist and writer. Born in Schaffa in Moravia, Winder grew up in nearby Holleschau, where he was raised in an atmosphere of religious rigor. After moving to Vienna, he worked for the liberal newspaper *Die Zeit* before joining the editorial staff of the nationalist *Deutsche Zeitung Bohemia* in Prague. In 1917, he published his first novel, *Die rasende Rotationsmaschine*, which illustrates the difficulties Jews from religious eastern communities faced in integrating themselves into modern western society. Subsequent novels, such as *Die juedische Orgel* (1922) and *Hugo: Tragoedie eines Knaben* (1924), deal primarily with the desperate struggle of young eastern Jews for a secular existence, and show – as the posthumously published manuscript *Geschichte meines Vaters* suggests conclusively – autobiographical traces. Throughout his writings, Winder perceives modern Jewish existence as a state of alienation and psychic deformation, limited by confining traditions and antisemitism. In later novels, he shifted his focus towards the history and downfall of the Austrian Danube monarchy, vividly envisioned in *Die nachgeholten Freuden* (1927), *Der Kammerdiener* (1945), and especially in *Der Thronfolger* (1938), which, critical of the Austrian Archduke Franz Ferdinand, was immediately banned. A member of the so-called "Prague circle" and a close friend of Max Brod, Felix Weltsch, Johannes Urzidil, and Oskar Baum, Winder fled Prague in 1939 with his wife and older daughter (his younger daughter died in Bergen-Belsen in 1945), settling in England, where he lived until his death. During his last years, he finished two additional novels: *Die Novemberwolke* (1942), a story about emigrants during a bombing night in London, and *Die Pflicht* (1943), which deals with Czech resistance to the German invaders.

[Philipp Theisohn (2nd ed.)]

WINE, fermented grape juice. (For wine in biblical times, see *Food.) Wine was a popular beverage in talmudic times. Produced in winepresses called *bet ha-gat* (Tosef., Ter. 3:7), and stored in wine cellars called *heftek* or *appotik* (Av. Zar. 2:7), the newly pressed wine, prior to fermentation, was known as *yayin mi-gat* ("wine from the vat"; Sanh. 70a); *yayin yashan* ("old wine") was wine from the previous year, and that from earlier vintages, *yashan noshan* ("old, very old"). The last was usually diluted by one-third with water in order to reduce its potency.

Varieties of Wine

Several varieties of wine are mentioned in the Talmud:

(1) *aluntit* ("old wine mixed with clear water and balsam," Av. Zar, 30a);

(2) *kafrisin* ("caper wine," Ker. 6a; according to Rashi, Cyprus wine);

(3) *ilyaston* ("a sweet wine produced by drying the grapes in the sun for three days, and then treading them in the midday heat"; BB 97b; Men. 8:6);

(4) *me'ushan* ("from the juice of smoked or fumigated sweet grapes"; Men. *ibid.*);

(5) *appiktevizi* ("an aperitif"; Shab. 12a);

(6) *pesinyaton* ("a bitter wine"; TJ, Av. Zar. 2:3, 41a);

(7) *zimmukin* ("raisin wine"; BB 97b);

(8) *inomilin* ("wine mixed with honey and pepper"; Shab. 20:2);

(9) *enogeron* ("wine added to oil and garum"); and

(10) *kunditon* ("wine mixed with spices"; TJ, Av. Zar. *ibid.*). Matured sour wine was called *homez* ("vinegar").

Attitude of the Rabbis to the Consumption of Wine

The rabbis considered that wine taken in moderation induces appetite, "sustains and makes glad" (Ber. 35b), and is beneficial to health. "Wine is the greatest of all medicines: where wine is lacking, drugs are necessary" (BB 58b). Old wine, in particular, benefits the intestines, though ordinary wine may do harm (Ber. 51a), an assertion corroborated by the story of the rabbi who was cured of a severe bowel disorder by drinking 70-year-old apple wine (Av. Zar. 40b). R. Eleazar suggested (Meg. 16b) that "old wine" was among "the good things of Egypt" which Joseph sent to his aging father (Gen. 45:23), whereas according to some opinion the "tree of knowledge" of which Adam ate was a vine (Ber 40a; Gen. R. 15:7).

The rabbis deliberately rejected the suggestion that abstention from wine and meat be mandatorily instituted as a sign of mourning for the destruction of the Temple. They maintained that such a decree would impose unbearable hardship on the public (BB 60b). At the end of days wine will form an integral part of the eschatological banquet (Ber. 34b). The

rabbis are known to have indulged; some, notably Mar Ukva (Shab. 140a) could drink with ease, while others, like R. Judah (whose capacity was severely tested by the four *seder* cups, Ned. 49b) could not. The rabbis even suggested that wine was an inducement to the advancement of their chosen calling. R. Huna maintained that it "helps to open the heart to reasoning" (BB 12b), and Rabbah advised students whose supplies of wine were limited to drink it in large mouthfuls, in order to secure the maximum benefit (Suk. 49b). Sleep or a long walk (BB 10a; Er. 64b) was prescribed for those who interpreted this advice too literally and became heavy with drink.

Excessive consumption of alcohol was frowned upon and overindulgence was thought to be injurious to health, as was shown by Abba Saul (a gravedigger by profession), who, upon examining the skeletons of various corpses, deduced what the effect of liquor was on the bones (Nid. 24b). A prayer recited in a state of intoxication is "an abomination" (Er. 64a).

Wine in Religious Ceremonies

The ceremonies of *Kiddush and *Havdalah on Sabbaths and Festivals should be performed with wine (Pes. 105b–6a). Only in countries where beer is the national beverage may the latter be substituted for *Havdalah* (Pes. 107a). Four cups of wine must be drunk at the *Passover *seder*, two cups at weddings, and one at circumcisions. Indeed, the goblet of wine and the benediction recited over it symbolize the festivity of the occasion. During the nine days of *Av, wine may only be drunk at *Kiddush* on Sabbath.

In accordance with the biblical injunction to "give strong wine to him that is ready to perish, and wine unto the bitter in soul" (Prov. 31:6), a "cup of consolation" was offered to the bereaved after a funeral at the "meal of comforting." Originally, it was ten glasses of wine to which were added four more (Ket. 8b). In modern times this practice has been discontinued (Tur, YD 378).

Before drinking wine, a special benediction is recited "for the fruit of the vine" (Ber. 6:1; Sh. Ar., OḤ 202:1), in contrast to the *She-ha-Kol* benediction, which is the normal blessing for all juices extracted from fruit or vegetables. Grace, after eating food prepared from the designated produce of Ereẓ Israel (grapes, figs, olives, pomegranates, or dates), is also recited after drinking wine (Sh. Ar., OḤ 10:8, 11; see *Grace after Meals). One who leads a group of three or more males in the recitation of the Grace after Meals may pronounce the blessing over a cup of wine, which is then sipped by those present (Sh. Ar., OḤ 190). When drinking in company, it is customary to wish one another *le-Ḥayyim* ("to life"; Shab. 67b).

Wine of Gentiles

Wine consecrated by gentiles for idol worship is called *yein nesekh* ("libation wine") and, like anything so dedicated, is absolutely forbidden. A person may not drink such wine, derive any benefit from it, nor handle it (Sh. Ar., YD 133:5–6). Any food or drink brought into contact with more than one-quarter of a *log* of *yein nesekh* (or *setam yeinam*, see below) is rendered unclean (Av. Zar. 31a).

Wine processed and/or bottled by gentiles for regular use (and not idol worship) is called *setam yeinam* ("ordinary wine"). It is, however, equally forbidden in order to avoid the suspicion that it may possibly be *yein nesekh*, and to avert intermarriage with non-Jews resulting from social intercourse with them (Deut. 7:7; Sanh. 106a; Av. Zar. 36b, and Rashi, loc cit). The prohibition did not include "boiled wine" (Av. Zar. 29b); wine whose taste was dominated by its content of honey and spices; nor, according to some opinions, an alcoholic beverage consisting of one part of wine to seven parts of water; nor other alcoholic beverages (e.g., whiskey, beer, etc.).

The interdiction against the drinking of non-Jewish wine is so severe, that even if a gentile merely touches wine prepared by a Jew it is still prohibited, unless the bottle was securely corked and sealed. Most later rabbinic authorities ruled, however, that if a gentile touched the wine of a Jew with the intention of causing him damage by "defiling" it, the Jew may drink the wine; this is done in order to discourage other gentiles from following suit. The "gentile" referred to above is one who "serves idols"; "the wine of a non-Jew who does not serve idols is forbidden as far as drinking is concerned (because of the fear of intermarriage), but the Jew may trade in it since there is no fear of idolatry. If a gentile, however, touches the wine "by accident," it is permitted, even for consumption. Many authorities maintain that since non-Jews have ceased to be idolaters, their touch should always be considered "accidental" and the wine thus fit for consumption (Isserles to Sh. Ar., YD 124:24). Some authorities also state that a Jew who drinks wine belonging to a Christian has not committed a sin which would invalidate him as witness before a rabbinic court (Isserles, Responsa, ed. Cracow 1640, no. 124; later editions omitted this responsum).

In the rapidly changing society of modern times, where the Jewish community must inevitably come into closer contact with the non-Jewish world, these laws are mainly honored in the breach except among the Orthodox. The Rabbinical Assembly of the Conservative movement in the United States has ruled that non-Jewish wine may be consumed generally, but only Jewish (*kasher*) wine may be used for religious ceremonies.

See also the various types of alcoholic beverages.

BIBLIOGRAPHY: Eisenstein, Dinim, 168f.

WINE, SHERWIN (1928–), Humanist rabbi. Born in Detroit, Michigan, Wine left his Conservative Jewish upbringing to found the world's first non-deified Jewish movement known as Humanistic Judaism. Self-described as strongly Jewish but with a focus on culture rather than religion, Wine earned degrees from the University of Michigan and Hebrew Union College in an effort to build a career as a counselor to the Jewish people. In 1963, he founded the Birmingham Temple in suburban Detroit, the first Humanistic congregation.

In the Birmingham Temple's library, a Torah stands on a pedestal, one of the "good books" offered there. Humanism focuses on Judaism as a culture and humans as self-reliant.

Wine established the Birmingham Temple with eight families who wanted to belong to a Jewish community without the trappings of formal religion. The Temple membership now numbers about 400 families.

In 1969, he helped establish the Society for Humanistic Judaism as a national outreach vehicle for the movement. In 1986, the International Federation of Secular Humanistic Jews was formed to connect Humanistic Jews around the world. Wine became the dean of the International Institute for Secular Humanistic Judaism in North America. The movement started ordaining rabbis in 1992, two of whom succeeded Wine upon his semi-retirement in 1997.

He was involved in organizing the Leadership Conference of Secular and Humanistic Jews, the Center for New Thinking, the North American Committee for Humanism, the Humanist Institute and the Conference of Liberal Religion. He is the author of "Humanistic Judaism," "Judaism beyond God," "Celebration," and "Staying Sane in a Crazy World." Wine also contributed to *Judaism in a Secular Age: An Anthology of Secular Humanistic Jewish Thought.*

Before founding the Humanistic movement, Wine served two years in Korea as a U.S. Army chaplain and several years as a rabbi at Reform pulpits in Detroit and Windsor. Wine believes the Jewish people survived history by human will. Today, the secular Humanistic movement involves more than 30,000 people across North America, but it has yet to gain acceptance by the rest of the Jewish movements.

[Lynne Schreiber (2nd ed.)]

WINE AND LIQUOR TRADE.
Talmudic Period
The strict prohibition against the use of gentile wine during the talmudic period, originally limited to wine used in idolatrous libations but later extended to include all non-Jewish wine (Av. Zar. 2:3, and 36b), must of necessity have concentrated the Jewish wine trade in the hands of Jews. Apart from this, however, there is no evidence of any specific Jewish aspect to the wine trade during this period. There are references to Jewish keepers of wine taverns (Lev. R. 12:1). A certain difference may be detected between Erez Israel and Babylonia. Whereas in the former, a Mediterranean country, Jews drank wine in preference to other alcoholic beverages, in Babylonia the brewing of beer and other alcoholic beverages was much more common. Some of the Babylonian *amoraim* were brewers, among them R. Papa, who was regarded as an expert and amassed a considerable fortune from it (Pes. 113a; BM 65a). However the vine was cultivated in the neighborhood of Sura and Jews were engaged in the manufacture and sale of wine (Ber. 5b).

Middle Ages (to 16th Century)
As a result of both the historio-economic and the religious factors, during the Middle Ages viticulture was one of the branches of agriculture in which Jews had traditional interest and technical proficiency. The rabbinical responsa and *tak-*

kanot provide ample instances of the endeavors made by Jews to obtain supplies of suitably pure wine and the arrangements made for doing so. This was perhaps one of the main reasons why the Jews continued to engage in viticulture longer than in other types of agriculture in this period, though from the 11th century the sources mention that Jews in Western Europe also drank mead. In several areas, Jewish winegrowers or vintners also sold wine to Christians. In the region of Troyes, the teacher of *Rashi (b. 1050) used to sell "from his barrel to the gentile" (Rashi, Resp., no. 159). The Jews of Speyer and Worms were licensed by the emperor in 1090 "to sell their wine to Christians" (Aronius, Regesten, nos. 170–1).

The antagonisms created by the sale of a product to which Jews and Christians attached divergent sacral usages and regulations are reflected in complaints such as that "on the insolence of the Jews" by archbishop *Agobard of Lyons, who wrote (c. 825): "As to wine which even they themselves consider unclean and use only for sale to Christians – if it should happen that some of it is spilt on the earth, even in a dirty place, they hasten to collect it and return it for keeping in jars." The problem is even more strongly presented by Pope *Innocent III in his letter of January 1208: "At the vintage season the Jew, shod in linen boots, treads the wine; and having extracted the purer wine in accordance with the Jewish rite they retain some for their own pleasure, and the rest, the part which is abominable to them, they leave to the faithful Christians; and with this, now and again, the sacrament of the blood of Christ is performed." The description may apply either to Jewish vintners and vineyard owners or to Jews who made arrangements with Christian owners to permit the Jews to extract pure wine in accordance with Jewish law.

In the Muslim countries the Jewish wine trade assumed considerable proportions, as indicated by examples from 12th-century Egypt. It is reported in 1136 that "four partners [all Jews] joined in the production of wine with the enormous sum of 1,510 dinars"; upon liquidating the partnership and paying their taxes, all expressed their satisfaction (S.D. Goitein, *Mediterranean Society* (1967), 364). In about 1150 a Jewish estate included 1,937 jars of wine, worth about 200–300 dinars (*ibid.*, 264). The amounts cited indicate that such thriving business had Muslim customers besides Jews and Christians. In England, in the 12th and 13th centuries, Jews imported wine, and "were exempt from paying any custom or toll or any due on wine, in just the same way as the king himself, whose chattels they were" (Roth, England, 102–3; cf. also 115, note). In Central Europe, Jewish drinking habits were already gradually changing in the 13th century, as shown by the man who asked R. *Meir b. Baruch of Rothenburg for his opinion "about beer [i.e., whether this might be used for *Kiddush*], for in his locality there is sometimes a lack of wine." R. Meir answered: "There is no wine in Westphalia, but in all [other] principalities there is abundant wine; and there is wine in your city throughout the year. It seems to me that you personally drink mostly wine; and if at the end of the year there is some dearth of wine you will find it in your neighborhood…. Cer-

tainly you know that it is proper to recite *Kiddush* over wine" (Meir b. Baruch of Rothenburg, Resp., ed. by Y.Z. Kahana, vol. 1, nos. 72, 80).

While by the 15th century Jews must have practically ceased to own vineyards and practice viticulture, trade in wine and other alcoholic beverages was becoming a major Jewish occupation in the German and west Slavic lands. This was part of the general trend of increasing commerce between town and country in this period in which Jews took an active part, not least because they were expelled from the larger cities (see *Expulsions). The competition of the Jewish vintner was an object of complaints by the guilds, such as that of Regensburg in 1516 (cf. R. Straus, *Urkunden und Aktenstuecke zur Geschichte der Juden in Regensburg* (1960), 291, no. 833). In part, this commerce was combined with credit extension, as explained by Jews in Regensburg in 1518, who lent money to the boatmen carrying wine to the city and were sometimes repaid in kind (*ibid.*, 358, no. 988).

In both Muslim and Christian Spain, the sale and consumption of wine in the Middle Ages were subject to taxation by the autonomous Jewish communal administration. The unbroken records give evidence of the significant scale on which Spanish Jewry engaged in business. Copious wine drinking by the upper Jewish social strata is also frequently mentioned in Jewish poetry in Spain. After 1391 exiles from Spain carried their wine trade to Islamic countries, and occasionally aroused opposition from their hosts. These traditions and trends were in part continued, in part considerably modified, in the course of the 16th and 17th centuries.

[Haim Hillel Ben-Sasson]

16th Century to Modern Times

From the 16th to the 19th centuries the production and sale of alcoholic beverages was a major industry in Poland-Lithuania and Russia. It also occupied an important place in the economy of Bohemia, Silesia, Hungary, and Bessarabia. As essentially connected with agriculture, it was carried out in rural estates and formed one of the main sources of revenue for their proprietors. The Jews entered this industry under the *arenda ("rental") system in the rural economy in which by the 16th century they played an essential role. The Jewish tavern keeper became part of the regular socioeconomic pattern of life in the town and village. The association of the Jew with this activity contributed another negative feature to the popularly created image of the Jew while also affecting Jewish living habits and standards. The alcoholic beverage industry afforded to the Jews a variety of occupations and a source of livelihood enabling them to raise their living standards.

In almost all the rural estates in Poland, the owners held the monopoly over the production and sale of alcoholic beverages, and the heavy drinking habits of the peasants in these countries made it a highly lucrative prerogative. The participation of Jews took the form of leasing in one of the following ways: The lease of breweries, distilleries, and taverns which

was part of the wider *arenda* system in Poland and in Ukrainian and Belorussian territories: often, the lease of breweries and distilleries, together with taverns, formed a separate concession; the basic leasehold concession of the single tavern, which was rented either directly from the noble estate owner or from a larger-scale Jewish leaseholder. All leases were granted for a limited term, often for three years, sometimes for one year only. Jewish communal regulations (*takkanot*) effectively limited competition between Jews in bidding for the leases at least to the end of the 17th century (see *Councils of the Lands). Tavern keepers were the largest group of Jews occupied in the industry. They frequently belonged to the poorer class of Jew who had contact with the peasants.

The industry also accounted for an appreciable number of brewers and distillers who worked for the brewery or distillery leaseholders as employees. They were sometimes also employed by taverners. In the middle of the 17th century, this group represented about 30% of the Jews engaged in the production and sale of alcoholic beverages on Polish territory. On the crown estates, the income from the production and sale of alcoholic beverages amounted to 0.3% of the total revenues in 1564, and to about 40% in 1789, an immense increase directly connected with the participation of the Jews in this industry.

Jews also played a similar role in the towns. The location privileges accorded to townships in Eastern Europe usually granted the municipality the right to lease production and sale of alcoholic beverages in the town to an individual local resident. Jews also often competed with other townsmen for this concession, and were generally more ready to supply credit than their Christian competitors. In 1600 the magistrate of Kazimierz complained: "The Jews are not permitted to keep taverns, and yet they deal openly in the sale of vodka, wine, and mead; they hire musicians to tempt in people" (M. Balaban, *Dzieje Żydów w Krakowie i na Kazimierzu*, 1 (1931), 197). Jewish sources confirm the nature of the competition that took place in the cities. The communal regulations for the district of Volhynia of about 1602 enjoin that:

In order to prevent the entry… [to Jewish houses] of gentiles, who came to buy on Saturdays and Festivals, they [the Jewish taverners] should all of them be compelled to take down the sign that they hang up over the entrance to the house on weekdays to let it be known that there is beer and mead inside for sale. That sign shall they take down before the beginning of Sabbath until its end (see H.H. Ben-Sasson, in: *Zion*, 21 (1956), 199).

In *Belaya Tserkov in about 1648, 17 taverns were owned by Jews, although the Jewish population consisted of only 100 families. In towns in Poland and Lithuania where the monopoly was held by the city, it was also leased to Jews. The municipal prerogative was usurped by the manorial owners of the towns during the 17th century, and the concessions for production and sale of alcoholic beverages were leased to Jews on an increasing scale. In the old crown cities, Jews also often leased the tavern from the city authority.

In the second half of the 16th and the first half of the 17th century, a considerable number of Jewish distillers, brewers, and taverners were thus occupied on the estates of the magnates situated in the Belorussian and Ukrainian territories under Poland. Ruin came in 1648–51, following the *Chmielnicki uprising. After the truce was concluded between Poland and Russia in 1667, Jewish taverners could again settle in the Ukraine in the region on the right bank of the River Dnieper; the lands on the left bank passed to Russia, from which Jews were excluded. Jewish taverners were not therefore found in the latter area until the end of the 18th and beginning of the 19th century. The proportion of Jews gainfully engaged in the production and sale of alcoholic beverages amounted in 1765 to 15% of the Jewish residents in the towns, and at the period of the partitions of *Poland-Lithuania (1772–95) to about 85% of Jewish residents in rural areas. In 1791 it was estimated that if the Jews were to be debarred from leasing taverns, about 50,000 people would have to replace them in this occupation, and this was used as an argument against the Russian authorities when they wished to exclude the Jews, in territories then annexed to Russia, from this source of livelihood.

In the period before 1648, Jewish participation in the liquor trade as taverners gave rise to social tensions, which are reflected in contemporary Jewish works and communal regulations, while furnishing a source for anti-Jewish accusations and conflicts between the peasants and Jewish taverners. Antisemites ascribed the drunkenness prevalent among the peasants, and their permanent state of indebtedness, to the wily Jewish taverner, who also extended credit to them. During the 17th and 18th centuries there were uprisings against Jewish leaseholders on numerous estates in Poland, and the complaints of the peasants on the crown estates were often taken up by the courts. After 1648, as opportunities for employment narrowed with the progressive deterioration in Poland of the economy and culture, the hostility intensified and conditions became more difficult for the Jews, in particular for the keeper of the single tavern. He was at the mercy of the despotic noble who ruled the village. In his autobiography Solomon *Maimon recalls vivid childhood memories of the tribulations of a Jewish leaseholder in the 18th century.

Toward the end of the 18th century, in particular after the *Haidamack massacres of 1768, spokesmen of Polish mercantilist and physiocratic theories represented the presence of Jews in the villages and taverns as highly detrimental to Polish economy and society. With few exceptions, the opinion prevailed that the Jewish leaseholders were responsible for the deterioration of the towns and the misery of the countryside. To gain control of these concessions was of greatest importance to the impoverished Polish towns, as the production and sale of alcoholic beverages was a principal branch of the urban economy and its principal source of revenue. Elimination of Jews from this occupation became, therefore, one of the main slogans of the All-Polish middle-class movement between 1788 and 1892. The Polish Sejm ("diet") had passed a bill in 1776 establishing the prior right of the citizen to the lease of the production and sale of alcoholic beverages in smaller towns. However, few candidates with the necessary capital could be found, and these soon had to give it up. As a result, in these towns also the lease passed to Jews. In 1783 an order was issued in Belorussia debarring Jews from traffic in alcoholic beverages in the towns, and the income from taverns was given to the municipalities; but this was canceled in 1785.

Following the partitions of Poland-Lithuania, the Jews in the taverns and villages became the scapegoats of the Russian and Polish ruling classes for the poverty and wretchedness of the peasants. These classes were closely bound by social interests and class consciousness, although divided by national and religious enmities. In the large tracts now occupied by Russia the peasants were of the Greek Orthodox faith, and although despised socially, were now the concern of the Russian authorities. The allegation against the Jew as "the scourge of the village," intoxicating the ignorant peasant because of the misery of his lot, became a spurious slogan for social reform for both the rulers of Russia and their Polish opponents. Elimination of Jewish taverners had started even before the partitions of Poland, and subsequently proceeded with the approval of the Russian governors.

The other states which had gained Polish territory also took up this policy, although with less concentration. The Patent of Tolerance issued by the Austrian emperor *Joseph II in 1782 ordered all the owners of estates to discharge Jewish leaseholders from their domains within two years. This decision was, however, not carried out. About 1805 the Prussian authorities prepared a ban against leasing taverns to Jews, but owing to the occupation of the country by Napoleon, it was never put into effect. In 1804 Russian legislation prohibited Jews from living in the villages. In the period of Napoleon's ascendancy, the Russian authorities refrained from taking action, and in 1812 the orders were suspended. However, after 1830, the stereotype of Jewish guilt for the drunkenness of the peasants was widely propagated in the Polish press. Steps were taken for supervision of the Jews in the name of benefiting the peasant. In Bessarabia the participation of Jews in the production and sale of alcoholic beverages was limited in 1818. Legislation passed in Russia in 1835 prohibited the Jews from selling alcoholic beverages on credit to the peasants, and canceled all the peasants' debts to Jewish taverners. A law of 1866 permitted Jews to lease breweries and distilleries only in towns and villages inhabited by Jews. These measures had little result. In Belorussia between 1883 and 1888, 31.6% of the distilleries in the province of Vitebsk and 76.3% in that of Grodno were Jewish-owned. Full rights to produce and trade in alcoholic beverages in Russia had been permitted to Jews belonging to the category of "merchants of the first class," but after 1882 restrictions were also applied against them.

The part played by Jews in the liquor industry continued to concern the Russian government well into the 20th century, even though assuming other forms. The emancipation of the peasants, cancellation of the compulsory quota of consumption, and abrogation of the monopoly of the estate

owners changed the economic character and social aspects of the problem. In independent Poland between the two world wars, various economic and legal measures were taken to drive the Jews from this branch, including regulations for hygiene and manipulation of the state monopoly on the sale of vodka. The development of capitalist industry and trade in the second half of the 19th century and freer access to Jews to take up crafts, enabled many Jews in Eastern Europe to enter other branches of the economy. Even so, the image of the Jew invoked by antisemites in Eastern Europe still made frequent use of the hated Jewish taverner.

The feelings of loathing with which the Jew regarded his place behind the tavern counter is powerfully expressed by the poet H.N. *Bialik. The taverner and his family saw themselves placed at the:

> meeting between the gates of purity and defilement…/ There, in a human swine cave, in the sacrilege of a tavern, /in streams of impious libation,… /over a yellow-leaved volume, /my father's head appeared, the skull of a tortured matter… /… in smoke clouds, his face sick with sorrow, eyes shedding blood… /the faces were monstrous… the words a filthy stream… /To a child's ear alone… /serenely quietly flowed, the murmur of Torah… the words of the living God… /He [the taverner] would sit… among stretched-out revelers,/… mounting the scaffold each day, thrown to the lions each day… (trans. by Robert Friend, in S.Y. Penueli and A. Ukhmani (eds.), *Anthology of Modern Hebrew Poetry*, 1 (1966), 47–48.)

[Jacob Goldberg]

IN NORTH AMERICA. In addition to the prohibition against partaking of non-Jewish wine, its ceremonial use for various occasions, such as *Kiddush* and on all festive occasions, as well as the need for all wine and liquors to be *kasher* for Passover, observances both practiced even by those who were not particular with regard to non-Jewish wine for ordinary use, resulted in a specific Jewish trade in wine (and for Passover in other liquors) for specific Jewish consumption in all countries. The needs of the Jewish population were met by local manufacturers especially where wine could not be imported from Erez Israel.

U.S. Jews tended to make their wine personally or in small shops. The 19th amendment to the U.S. Constitution and the Volstead Act, which prohibited the manufacture and sale of intoxicating beverages, made an exception in favor of such beverages when needed for religious purposes. Abuses of this privilege by some Jews to supply the illegal liquor market disturbed U.S. Jewry. They led to the issuance of a controversial responsum by the talmudic scholar Louis Ginzberg, *Teshuvah al Devar Yeinot,* etc., permitting grape juice to be used for religious purposes instead of wine. Following the end of Prohibition in 1933, the business of several Jewish wine manufacturers reached national proportions, supplying the non-Jewish as well as the Jewish market. In the U.S. few Jews were tavern keepers. However, they were prominent among distillers and retailers. Such families as Bernheim, Lilienthal, and Publicker were important distillers, and the general prominence of Jews as retail merchants included the selling of bottled liquor.

Some Jewish firms grew to considerable proportions in Europe as well as the U.S. Many expanded their activity to include general trade in wine and liquors and this may be the origin of the extensive representation of Jews in the English public house trade, for example, the firm of Levy and Franks.

Sedgewick's, owned by the *Bronfman family of Canada, became one of the largest distilleries in the world.

WINE INDUSTRY IN EREZ ISRAEL. In Erez Israel a few small winepresses were owned by Jews, mainly in the Old City of Jerusalem and in other ancient cities inhabited by Jews, before the beginning of modern Jewish settlement in the second half of the 19th century. These were simple household winepresses, catering chiefly to local consumption. The raw material was supplied by Arab vineyards in the surrounding hill regions. The first vines of European variety were planted at the *Mikveh Israel agricultural school founded in 1870. The school also built the first European-style wine cellar, which is still in use. With the beginning of modern Jewish settlement, the first vineyards were planted at *Rishon le-Zion and later in other moshavot. Baron Edmond de *Rothschild, who sponsored early Jewish pioneer settlement in Erez Israel, had high hopes that viticulture would develop as one of the main economic bases for the Jewish villages. He invited specialists from abroad, who selected high-grade varieties in order to produce quality wines. After the harvest of the first crops, he built large wine cellars at Rishon le-Zion (1889) for Judea, and at *Zikhron Ya'akov (1892) for Samaria. These cellars were equipped with refrigerators to retard fermentation and thereby improve quality.

The Baron paid high prices for the grapes in order to assure the settlers a decent standard of living. Economic prosperity resulted in a rapid development of viticulture, and, at the end of the century, vineyards covered about half of the total Jewish land under cultivation. In the course of time, millions of francs were paid to maintain high wine prices, and many settlers concentrated on making wine as their sole occupation. A large overstock of wine accumulated, and wine surpluses continued to increase until a crisis was reached. It was decided to uproot one-third of the vineyards in order to reduce the size of the crop and maintain prices. The winegrowers were compensated by the Baron, and, instead of vineyards, planted almond trees, olives, and the first citrus groves. In 1890–91, the vineyards in Samaria and Galilee were attacked by phylloxera, which ruined the *Rosh Pinnah plantations. The infected vines had to be uprooted and replaced by pest-resistant plants brought from India.

In 1906 the management of the wine cellars at Rishon le-Zion and Zikhron Ya'akov was handed over to the farmers, who founded the Carmel Wine Growers Cooperative. At the same time, several private wine cellars, such as Ha-Tikvah and Naḥalat Ẓevi were established. Their wine was sold both locally and abroad. During World War I, the local wine found a greatly increased market among the German, British, and Australian troops passing through the country. After the war,

however, the Ereẓ Israel wine industry lost its principal markets: Russia, because of the Revolution; the United States, because of Prohibition; and Egypt and the Middle East, because of Arab nationalism. The industry had to undergo a period of adaptation. The acreage under grapes was reduced, chiefly in Judea, where vineyards were replaced by citrus groves. On the other hand, additional areas were planted, mainly in the Zikhron Ya'akov area. During World War II, new plantations were developed on a smaller scale, and with the establishment of the State of Israel (1948), the wine-growing areas covered about 2,500 acres (10,000 dunams). At that time there were 14 wine cellars in Israel.

Large new areas were planted in the Negev, the Jerusalem area, Adullam, and Galilee – some of which had never previously been considered suitable for wine growing. With successive waves of immigrants, drinking habits have changed. During the earlier period 70%–75% of the wine consumed was sweet, but later, two-thirds of the total consumption was dry wine. The Israel Wine Institute, established in cooperation with the industry and the government, undertakes research for the improvement of wine production in Israel. Preference is given to wine plantations in the hilly regions. Varieties of better quality are selected, and new varieties are introduced. Israel wine is exported to many countries of the world. It is widely in demand among Jews for ritual purposes but efforts have been made to broaden the market.

[Nathan Hochberg]

The Israeli wine industry underwent a revolution starting in the 1970s and now numbers hundreds of wineries, ranging from leaders like Golan Heights, Carmel, and Barkan Wine Cellars to boutique wineries like the prize-winning Domaine du Castel in the Judean Hills. Israeli wines are now served in quality restaurants in 40 countries, with exports of $13 million in 2005 and domestic sales of around $150 million. Around 7,500 acres of vineyards produce about 50,000 tons of grapes a year

°**WINGATE, ORDE** (**Charles**; 1903–1944), British Army officer who served in Palestine during the 1936–39 riots. Wingate was born in India into a nonconformist family; his grandfather had helped conduct a Church of Scotland mission in Bu-

dapest for poor Jews and his parents served as missionaries. He was raised on the Bible and kept it at his side throughout his life. Wingate was commissioned in 1923. From 1928 to 1933 he served with the Sudan Defense Force and also studied Arabic and Semitics. In February 1934 he was sent on a one-man mission to search for the mysterious Zarzura oasis in the Libyan Desert (reported in the *Geographical Journal*, 83 (1934), 281–308). In 1936, after his promotion to captain, he was posted to Palestine and played a leading role in fighting the Arab terror campaign, particularly the attacks on the Iraqi-Haifa pipeline, for which he was awarded the D.S.O. He gained the confidence of the *yishuv* authorities, established contact with the *Haganah, and with its help formed the Special Night Squads (SNS), a unit made up largely of Haganah fighters whom he trained in unorthodox but highly successful tactics in countering and preventing Arab attacks. Wingate became a passionate supporter of the Jewish cause in Palestine; the *yishuv* responded in kind and referred to him as "*Ha-Yedid*" ("The Friend"). His highly individualistic character, disregard for the conventional rules of military behavior, and his propagation of Zionism finally resulted in 1939 in his being transferred from Palestine with an endorsement in his passport stating that "the bearer … should not be allowed to enter Palestine." He had, however, left a lasting impression upon the country, and some of the young Jews whom he had befriended and trained were to become military leaders in the State of Israel.

In the early stage of World War II, Wingate commanded an antiaircraft battery in Britain. In 1941 he was "rediscovered" and assigned to lead a force against the Italians in Ethiopia. He played a decisive role in the liberation of the country (he was joined in the campaign by some of the former SNS fighters, at his own request) and was at Haile Selassie's side when the emperor reentered Addis Ababa. His talents were then employed in Burma, where he trained and led the Chindits, a special jungle unit that operated behind the Japanese lines. Winston Churchill, who regarded Wingate as a man of genius, invited him in 1943 to join him in his meeting with Roosevelt in Quebec. Wingate was killed in an air crash in the Burma jungle in 1944 and buried at Arlington National Cemetery in Virginia, U.S. By then he had become a major-general.

Wingate's personality and military genius made a profound impact on the *Palmaḥ and the Haganah and, through them, on the Israeli Defense Forces. He, in turn, dreamed of leading the army of the future Jewish state. His devotion to the Jewish people and Ereẓ Israel persisted up to his death. In a letter to a friend in Palestine (1943) he wrote, in Hebrew, "If I forget thee, O Jerusalem…." Israel has not forgotten *Ha-Yedid*. A children's village on the slopes of Mt. Carmel is named Yemin Orde, the College of Physical Education near Netanyah and a forest on Mount Gilboa bear his name, and there is a Wingate Square in Jerusalem. His wife, Lorna, although a gentile, was a leader of *Youth Aliyah in Britain.

[Moshe Dayan]

WINGER, DEBRA (1955–), U.S. film actress. Born in Cleveland Heights, Ohio, Winger spent two years of her youth in Israel (where she served for three months in the army and worked on a kibbutz). She returned to the U.S. and first came to serious notice as John Travolta's co-star in *Urban Cowboy* (1980). She was subsequently chosen for the female lead opposite Richard Gere in *An Officer and a Gentleman* (1982), for which she received her first Best Actress Oscar nomination. Winger went on to appear in such films as *Terms of Endearment* (Oscar nomination for Best Actress, 1983); *Legal Eagles* (1986); *Black Widow* (1987); *Betrayed* (1988); Arthur Miller's *Everybody Wins* (1990); *The Sheltering Sky* (1990); *Leap of Faith* (1992); *A Dangerous Woman* (1993), *Wilder Napalm* (1993); *Shadowlands* (Oscar nomination for Best Actress, 1993); *Forget Paris* (1995); *Big Bad Love* (produced, 2001); *Radio* (2003); and *Eulogy* (2004).

On television, she appeared three times in 1976–77 in the role of Wonder Girl on the series *Wonder Woman.*

She was married to actor Timothy Hutton from 1986 to 1990. She married actor Arliss Howard in 1996.

[Jonathan Licht and Ruth Beloff (2nd ed.)]

WINIK, MEIR (1886–1966), agronomist. Born in Odessa, Winik graduated as a technological engineer from the Polytechnic of Warsaw. Immigrating to Erez Israel in 1906, he was employed as a chemical engineer at the wine cellars of Rishon Le-Zion and in 1910 proceeded to Paris to study the fermentation of grapes and soil problems at the Pasteur Institute and the National Agricultural Institute. Returning to Erez Israel, he introduced many modern scientific processes in the manufacture of wine and the improvement of grape strains and soil quality. He enlisted in the Jewish Legion of the British Army during World War I and after the war taught chemistry at the Agricultural School of Mikveh Israel. He was awarded the Israel Prize for Agriculture in 1956.

WINKLER, HENRY (1945–), U.S. actor, writer, director, and producer. Winkler was born in New York City to Harry Irving Winkler, a lumber executive, and Ilse Anna Maria (née Hadra), German Jews who had escaped the Nazis before the beginning of World War II. Winkler attended high school at the Horace Mann School in Riverdale, New York, and graduated from Emerson College with a bachelor's degree in 1967. After receiving a master of fine arts degree in drama from Yale in 1970, the five-foot-six actor appeared in dozens of commercials before making his film debut in the 1950s gang feature *The Lords of Flatbush* (1974) with the then unknown Sylvester Stallone. Winkler joined the cast of the 1950s sitcom *Happy*

Days (1974–84), achieving pop stardom as the motorcycle-riding mechanic Arthur "Fonzie" Fonzarelli, a role that earned him two Golden Globe awards. While still on *Happy Days*, Winkler starred in films such as *Heroes* (1977) and *Night Shift* (1982), directed by *Happy Days* co-star Ron Howard. In 1978, Emerson College honored Winkler with a doctorate in Hebrew literature. After *Happy Days,* he concentrated on coproducing the television show *MacGyver* (1985–92) and directing feature films such as *Memories of Me* (1988) and *Cop and a Half* (1993). Winkler served as executive producer for Rob *Reiner's *The Sure Thing* (1985) and the film *Young Sherlock Holmes* (1985). He stepped out from behind the camera again to star in the made-for-television movies *Absolute Strangers* (1991) and *The Only Way Out* (1993), as well as for the shortlived sitcom *Monty* (1994). Winkler also returned to feature films with roles in *Scream* (1996), *The Waterboy* (1998), *Little Nicky* (2000), and *Holes* (2003). In 2003, the dyslexic Winkler and Lin Oliver began releasing titles in the ongoing Hank Zipzer book series for young adults, which focused on the misadventures of a fourth-grader with learning difficulties. In 2005 he starred in the CBS series *Out of Practice.*

[Adam Wills (2nd ed.)]

WINKLER, IRWIN (1931–), U.S. film producer. Born in New York City, Winkler graduated from New York University. He served in the army beginning in 1951. After a brief stint as an agent at the William Morris agency, he went to Hollywood in 1966. His first production, with a partner, Robert Chartoff, was *Double Trouble* (1967), starring Elvis Presley (instead of the star he intended for the role, Julie Christie). From that point, Winkler and Chartoff went on to produce some of the most provocative films of the 1970s and 1980s, including John Boorman's *Point Blank* (1967); Sydney Pollack's *They Shoot Horses, Don't They?* (1969), which garnered nine Academy Award nominations; John Avildsen's *Rocky* (1976) and the four other *Rocky* movies; Martin Scorsese's *New York, New York* (1977), starring Liza Minnelli and Robert De Niro; and *Raging Bull* (1980), with De Niro as the boxer Jake LaMotta; as well as *The Right Stuff* (1983), based on Tom Wolfe's book about the nation's first astronauts. On his own, Winkler produced such films as Costa-Gavras' *Betrayed* (1988) and *Music Box* (1989) as well as Scorsese's *Goodfellas* (1990). Winkler then turned to directing, and made films like *Guilty by Suspicion* (1991), which he also wrote, starring De Niro; *Night and the City* (1992), based on Jules Dassin's film noir; the suspense thriller *The Net* (1995), with Sandra Bullock; and *At First Sight* (1999), with Val Kilmer and Mira Sorvino. His films amassed 12 Academy Awards from 45 nominations, including four best picture nominations. He also directed and produced the critically acclaimed drama *Life as a House,* starring Kevin Kline, Hayden Christensen, and Kristen Scott Thomas, and *The Shipping News* (both 2001), based on the Pulitzer Prize-winning novel by E. Annie Proulx and starring Kevin Spacey, Julianne Moore, and Judi Dench. Winkler teamed with Kline again for *De-Lovely* (2004), a biography of the songwriter Cole Porter.

Three of Winkler's films were listed on the American Film Institute list of the top 100 films of all time.

[Stewart Kampel (2nd ed.)]

WINKLER, LEO (**Judah**; 17th century), leader of the Vienna Jewish community at the time of the expulsion of the Jews from the city in 1670. By profession a physician, he graduated from the medical school in Padua in 1629. He corresponded with the Christian Hebraist Johann Christoph *Wagenseil, and ably represented the community when it was threatened with expulsion. In conjunction with Herz *Coma and Enoch *Fraenkel he signed a letter to Manuel Texeira requesting the intervention of Queen Christina of Sweden on behalf of the Jews. With Coma he offered 100,000 gulden to *Leopold I to enable 1,000 Jews to remain in Vienna. He was also among the signatories of the request for assistance to the Venice communities. His sons ISAAC and JACOB graduated as physicians in Padua in 1669. Winkler apparently later settled in *Poznan (Posen), where Jacob was a physician.

BIBLIOGRAPHY: D. Kaufmann: *Die letzte Vertreibung der Juden aus Wien* (1889), 69, 129, 132, 138, 146, 222; M. Grunwald, *Vienna* (1936), index.

[Meir Lamed]

WINNIK, HENRY ZVI (1902–1982), Israeli psychiatrist and psychoanalyst. Winnik was born near Chernovtsy (Bukovina) into a family of intellectuals and Zionists. His postgraduate experience included laboratory work with F. Georgi, and in psychiatric hospitals in Chemnitz and Berlin. In Berlin he met Wilhelm *Reich and Otto *Fenichel, through whom he entered psychoanalysis. He was trained at first at the Berlin Psychoanalytic Institute, leaving with the advent of Hitler in 1933. He continued in Vienna with noted supervisors such as Helene *Deutsch, maintaining his contact with clinical psychiatry. He became a training analyst in 1938 and, on Anna *Freud's advice, left for Bucharest to develop analysis there. Political events there, however, and the outbreak of the war did not permit him to work. He left for Palestine in 1942 where he became the director of the Geha mental hospital of Kuppat Ḥolim, developing modern methods of institutional care. In 1950 he became the director of its Talbieh mental hospital in Jerusalem.

From 1944 he was a member of the executive of the Israel Neuropsychiatric Society, and its chairman from 1961 to 1965. Winnik had met Max *Eitingon in Berlin and joined him at the Psychoanalytic Institute in Palestine. In 1955 he became its chairman – a post he held four times. From 1954 he was professor at The Hebrew University-Hadassah Medical School in Jerusalem. He founded the *Israel Annals of Psychiatry* and served as its editor-in-chief. His testimony in Israel's courts contributed to the establishment of the principle of irresistible impulse. Winnik published many papers on a broad range of psychiatric, psychoanalytic, and forensic subjects.

[Louis Miller]

WINNINGER, SOLOMON (1877–1968), biographer. Winninger was born in Gura-Humorului, Bukovina, and worked as a post office official in Czernowitz (Chernovtsy) until 1941. In 1950 he settled in Israel. Winninger's *Grosse juedische Nationalbiographie* (7 vols., 1927–36) contains 14,000 biographies of prominent Jews. A further 17,000 (Ms., Jewish National and University Library) remained unpublished.

BIBLIOGRAPHY: D. Lazar, in: *Ma'ariv* (Dec. 20, 1968).

[Nathan Michael Gelber]

WINNIPEG, capital of Manitoba, Canada, the province's largest city and the center of Jewish life in the province. In 2001 Winnipeg's 14,765 Jews constituted only 2.2 percent of the city's population of 661,730. However, they also constituted fully 97 percent of all Jews in Manitoba. In 1881 there were only 23 Jews in Winnipeg. That number grew to 1,164 in 1901 and reached a high of 19,376 in 1961 before beginning a gradual decennial decline to less than 15,000 in 2001. Winnipeg has also dropped in size from third to eighth place among Canadian cities, while the city's Jewish population dropped from third to fourth place among Canadian Jewish communities behind Toronto, Montreal, and Vancouver.

Jewish congregational life began early in Winnipeg's history. In 1883, after the first influx of Jews from Russia, an attempt was made to establish a single congregation in Winnipeg, but disagreements between the earlier Jewish residents and recently arrived and more Orthodox immigrants prevented agreement. In 1887 a *Manitoba Free Press* church survey found "three congregations of the Hebrew faith" but no synagogue building and suggested that if united, "the Hebrews would form a congregation of respectable numbers, and … soon possess a building creditable to themselves and to the city." In 1889 unity was achieved and Shaarey Zedek, the first synagogue, was founded, but a group favoring a "*sefardishe minhag*" soon started the Rosh Pina synagogue.

In the 1960s Winnipeg had 12 synagogues plus the Chesed Shel Emes funeral home. The two largest congregations, Shaarey Zedek in the city's south end and Rosh Pina in the north end, were Conservative; the others were Orthodox and all but one in the north end, where most Jews then lived. In 1965 the Reform Temple Shalom was opened in the south end, and in 1976 a new conservative synagogue, Beth Israel, opened in the north. By the end of the century the majority of Winnipeg Jews had moved from the north end to the south end. Declining membership forced a merger of the three largest north end congregations: Rosh Pina, B'nai Abraham, and Beth Israel, to form Etz Chayim on the premises of Rosh Pina. In 2005 Winnipeg had nine synagogues, six in the north end, including a Lubavitch Center with north and south end branches.

In 1883, Beth El religious school opened, teaching Bible and Jewish history in English to 50 students; a year later Russian newcomers opened a ḥeder, with 12 students instructed in Yiddish. In 1902 a King Edward Talmud Torah, named for the new British monarch, opened next to the synagogue. The

B'nai Zion Congregational Hebrew School opened in 1906. Five years later the two schools united with 250 students, and in 1913 a new Talmud Torah building was opened, doubling as a Jewish community center.

Secular Jewish life also flourished in Winnipeg. In 1914 Labor Zionists and Socialists opened the Yiddish Radical School, renamed after I.L. Peretz in 1915. By 1921 the more radical Arbeiter Ring Yiddish school was established, and at one point Winnipeg had five Yiddish secular schools. In 1919 the Peretz School Muter Farein opened the first kindergarten in the city and a year later started a Jewish day school, possibly the first of its kind in North America. By 1963 the I.L. Peretz Folk School was the only remaining Yiddish secular school and in 1983 it merged with the Talmud Torah, which by then had north and south branches, and also operated the Joseph Wolinsky Collegiate. In 1997 the Talmud Torah north and south branches were closed and Jewish education in Winnipeg became consolidated in the Gray Academy at the Asper Jewish Community Campus, opened that year in the south end on the bank of the Assiniboine River. The Herzliah Congregation operates Ohr Hatorah, an Orthodox elementary day school.

There has also been a longstanding Jewish presence on campus. In 1915, a Menorah Society was formed at Winnipeg's University of Manitoba. It sponsored varied Jewish campus activities, including annual Jewish theater productions such as an English-language version of Shalom Aleichem's *It's Hard to Be a Jew*. In response to accusations that the university maintained quotas on Jewish and other minority enrollment in the Medical School, in 1943 the Avukah Zionist Society undertook to investigate. By the end of 1944 they succeeded in exposing the quota system and forced an end to the system. During World War II, Hillel organized on campus and helped initiate Jewish studies courses in 1950–51. By 1964 the University of Manitoba established the first Judaic Studies Department in Canada, headed by Rabbi Zalman Schachter, founder of the Jewish Renewal Movement. In 1989 the department was disbanded, just as Jewish Studies departments were growing in other Canadian universities.

Winnipeg's Jewish community has been characterized by vibrant organizational life. By 1900 *landsmannshaften and benevolent societies were growing, and the Winnipeg Zionist Society had 100 members. In 1909 B'nai B'rith was established and United Hebrew Charities was organized. Concern that United Hebrew Charities was controlled by Jews in the city's south end led to formation of the North End Relief Society, but the two groups joined forces in 1914. That year Winnipeg and the farm settlement in Lipton, Saskatchewan, became the first two communities in Canada to collect funds for Jewish war relief. In 1915 the Western Jewish Fund for the Relief of War Sufferers was established, and in 1916 Winnipeg hosted a conference of 18 western centers that called for the establishment of a Canadian Jewish Congress. A year later Winnipeg hosted the 15th national convention of the Canadian Zionist Federation, and in 1919 a delegation of 20 Winnipeg Jews participated in Montreal meetings organizing the Canadian Jewish Congress.

By 1920 Winnipeg had a Jewish Orphanage and Children's Aid Society, an Old Folks Home, a YMHA Center, and a Jewish Immigrant Aid Society and, by the mid-1920s, the Orphanage, the Old Folks Home, and Hebrew Relief became beneficiaries of centralized fundraising by the Federated Budget Board, and in 1938 a Jewish Welfare Fund was established to raise funds for Jewish schools and social agencies. In the 1950s a new YMHA Community Center was built which housed the Welfare Fund, the Canadian Jewish Congress, and Zionist Organization regional offices. In the 1960s, the Winnipeg Congress Council had representatives of every local Jewish organization, and Congress Western Region Council had members in Beausejour, Brandon, Dauphin, and Portage la Prairie. The Welfare Fund, Congress and the Zionist organization jointly ran the Combined Jewish Appeal for local, national, Israeli, and overseas agencies. During the 1967 Six-Day War crisis, Winnipeg played an exemplary role in the national Israeli Emergency Campaign.

In 1973 the Welfare Fund and the CJ Congress office merged to form the Winnipeg Jewish Community Council – later the Jewish Federation/Combined Jewish Appeal. In 1997 the Asper Jewish Community Campus was opened in three remodeled Winnipeg heritage buildings on the south bank of the Assiniboine River. The campus houses the Gray Academy of Jewish Education, the Rady Community Centre, successor to the YMHA; the Jewish Heritage Centre of Western Canada, including the Jewish Historical Society and Archives, the Marion and Ed Vickar Jewish Musem and the Freeman Family Holocaust Education Centre; the Kaufman-Silverberg Library, the Berney Theatre and offices of Federation / CJA, Jewish Foundation of Manitoba (founded 1964), Jewish Child and Family Services, Winnipeg Jewish Theatre, B'nai B'rith, and Winnipeg Zionist Initiative. Winnipeg North has a thriving Gwen Secter Senior Centre sponsored by the National Council of Jewish Women and a Na'amat Hall (Pioneer Women), which is also used by United Jewish Peoples Order for public forums and a Yiddish Mameloshen group. The Sholem Aleichem Community runs a Sunday school and sponsors secular holiday events.

Concerned with the gradual decline in Winnipeg's Jewish population, in the late 1990s the Jewish Federation started "Grow Winnipeg," a program of outreach to Jews, especially in Latin America. By 2005 this program had brought 168 South American Jewish families to Winnipeg, comprising 482 individuals. The total number of new arrivals was 564 families, comprising nearly 1,500 individuals, including people from Argentina, Russia, and Israel. These newcomers receive special community services and their presence is reflected in the publication of columns in Russian and Spanish, as well as Hebrew and Yiddish, in the *Jewish Post and News*. For most of the 20th century Winnipeg was served by three Jewish papers, the Yiddish-language *Israelite Press* (*Yiddishe Vort*) founded in 1917, which became bilingual before it ceased publication

in 1981, and the English language *Jewish Post* founded in 1925 and *Western Jewish News* founded a year later. The two English language papers merged in 1987.

Very conscious of its history, the Winnipeg Jewish community has been a leader in archival and museum preservation and in celebrating community history. The local Archives Committee was instrumental in organizing both the Canadian Jewish Congress Archives Committee and the Jewish Historical Society of Western Canada. In 1972 the Jewish Historical Society mounted an exhibit entitled "Journey Into Our Heritage," exploring the history of the Jews of Western Canada. It ran for six months at the Manitoba Museum, toured Canada, and was exhibited at the Museum of the Diaspora in Tel Aviv.

Jews in Winnipeg have also made a prominent contribution to the larger community. Perhaps nowhere is this more true that in the legal system. Samuel *Freedman was the first Jew named to the Manitoba Court of Queen's Bench (QB) and later to the Court of Appeal, serving as Manitoba Chief Justice in 1971–83; Israel Nitikman was appointed a judge to the Court of the QB in 1962. In 1967 Roy Matas was appointed a judge to that court and was elevated six years later to the Court of Appeal. In 2005 the Manitoba Court of Appeal had three Jewish judges, the Court of Queen's Bench had seven Jewish judges out of 40, and there were also seven Jews on the Provincial Court.

[Abraham Arnold (2nd ed.)]

WINOGRAND, GARRY (1928–1984), U.S magazine photojournalist and advertising photographer who developed an unusual style of "street" photography that helped change the nature of the genre. He photographed primarily on the streets of New York, the city in which he was born, portraying passers-by with an immediacy and physicality rarely found in still images. "I photograph to find out what something will look like photographed," he said of his method, which incorporated rapid-fire shooting technique, wide-angle lenses and skewed framing for a satirical and sometimes disturbing vision that became popular in the 1970s. His pictures, which deceptively resembled snapshots, were crammed with activity. By traditional standards, critics said, the pictures represent the opposite of real-world photography. But they have the vitality, incongruity, and inexplicability of daily life. John Szarkowski, director of the Museum of Modern Art's photography division, called Winogrand "the central photographer of his generation." In a show at the Modern in 1988, Winogrand's work was divided chronologically: work from the 1960s on women (many published in the 1975 book *Women Are Beautiful*); on zoos (from *The Animals*, a 1969 book and show), and on public events in which the presence of the news media is significant (from "Public Relations," Winogrand's show at the Modern in 1977). In 1978, Winogrand, who freed himself from convention by tilting the frames of his images in an effort to develop

fresh ways to depict the world, moved to Los Angeles. There, where street life took place in cars, Winogrand made many pictures from the front seat of an automobile. The images relegated human beings to a far distance.

To be a great photographer, Winogrand claimed half-seriously in the 1970s, was first, to be Jewish. The best ones, in his opinion, shared this birthright. By his definition, Jewish photographers were nervy, ironic, disruptive of artistic norms, and proud outsiders. Winogrand left behind some 2,500 rolls of exposed but undeveloped film, plus 6,500 developed rolls for which no contact sheets had been made, making a total of 300,000 unedited images. The Modern arranged to have the film developed and contacts prints made.

[Stewart Kampel (2nd ed.)]

WINSTEIN, SAUL (1912–1969), U.S. physical organic chemist. Winstein was born in Montreal, Canada. He did research at the California Institute of Technology, Harvard University, and the Illinois Institute of Technology. From 1947 he was professor of chemistry at the University of California at Los Angeles (1947).

WINSTON, ROBERT, BARON (1940–), British physician, broadcaster, and fertility expert. Winston graduated from London University as a gynecological surgeon and became a noted pioneer of fertility and IVF techniques. He is well-known both for his scientific papers and for his programs on BBC television such as *The Human Body* (1998), *The Secret Life of Twins* (1999), and *Superhuman* (2000), which drew large audiences. Winston was professor of fertility studies at Imperial College School of Medicine, London, and received a life peerage in 1995. He served as chair of the House of Lords Select Committee on Science and Technology and was awarded the Royal Society's Faraday Gold Medal.

[William D. Rubinstein (2nd ed.)]

WINSTON, STAN (1946–), U.S. director and visual effects artist. Winston grew up in Arlington, Virginia. After graduating from the University of Virginia in 1968, Winston moved to Los Angeles to be an actor. Influenced by Lon Chaney, who did his own makeup in *Phantom of the Opera* (1943), Winston became a makeup apprentice with Walt Disney Studios. He worked 6,000 hours for Disney, which culminated in his first Emmy win for the television movie *Gargoyles* (1972). Among his first jobs after leaving the studio in 1972 were cosmetically aging actress Cicely Tyson to 110 in the television movie *The Autobiography of Miss Jane Pittman* (1974), which led to another Emmy win, and makeup work on the set of the miniseries *Roots* (1977). He earned his first feature film makeup credit for *The Wiz* (1978), and received his first Oscar nomination for his work on the robot comedy *Heartbeeps* (1981). In 1978, he founded Stan Winston Studio in Van Nuys, California. Winston provided visual effects and second-unit direction for the groundbreaking science fiction film *The Terminator* (1984). This collaboration with director James Cameron led to his

helming the special effects unit and creating alien effects for *Aliens* (1986), which won Winston his first Oscar. In 1987, he earned a third Oscar nomination for his creation of the alien in *Predator* (1987), and in 1988 he directed his first feature film, *Pumpkinhead*. Winston earned a fourth Academy Award nod for makeup work on Tim Burton's *Edward Scissorhands* (1990), but won Oscars for makeup and visual effects when he joined Cameron on the big-budget *Terminator* sequel, *Terminator 2: Judgment Day* (1991). The Penguin makeup he created for Danny DeVito in Burton's *Batman Returns* (1992) led to his seventh Academy Award nomination, and after directing his second feature, the straight-to-video *The Adventures of a Gnome Named Gnorm* (1994), Winston won a fourth Oscar for creating the life-sized dinosaurs in *Jurassic Park* (1993). Winston, Cameron, and Industrial Light and Magic designer Scott Ross joined forces in 1993 to form Digital Domain, a computer animation special effects company whose first project was the much publicized adaptation of Anne Rice's *Interview With the Vampire* (1994). However, he and Cameron eventually resigned from the company in 1998. Winston signed a development deal with DreamWorks in 1996, and one year later he founded Stan Winston Productions, which provided special effects, animatronics and makeup for films such as *The Lost World: Jurassic Park* (1997), which earned him his ninth Oscar nomination; *End of Days* (1999); *Jurassic Park III* (2001); *A.I. Artificial Intelligence* (2001), his 10th Academy Award nod; *Pearl Harbor* (2001); *Terminator 3: Rise of the Machines* (2003); and *Constantine* (2005).

[Adam Wills (2nd ed.)]

WINTER, GUSTAV (1899–1943), Czech journalist and author (brother of Lev Winter, the statesman). He was press officer of the Czechoslovak mission to the League of Nations in Geneva, and Paris correspondent for *Právo Lidu* ("The People's Right"), the organ of the Social Democratic Party. Winter was regarded as the best-informed Czech correspondent in France.

He published *Státníci dnešní Francie* ("French Statesmen of our Days," 1927), and *Kniha o Francii* ("Book on France," 1930) for which he received the highest Czechoslovak literary award. *To není konec Francie* ("This is Not the End of France," 1941) was published in London, where he had fled after the fall of France. Winter was also the author of a book of poetic reportage on Spain, *Don Quijote na rozcestí* ("Don Quixote at the Crossroads," 1935) and translator of Čapek and Masaryk into French.

[Avigdor Dagan]

His brother LEV (Leo) WINTER (1876–1935), Czech politician, was born in Hroby in S. Bohemia. Winter studied law at Prague University and joined the Czech Social Democratic Party at the age of 19. In 1907 he was elected to the Austrian Reichsrat (Parliament) and reelected in 1911. In the Austrian Parliament he was active in committees on social legislation. In 1918 he was a member of the revolutionary Czech National Council and became minister of social welfare in the first Gov-

ernment of the Czechoslovak Republic. In 1923 he presented to Parliament the Social Insurance Law, which had been drafted primarily by him. He served two more terms as minister of social welfare and was member of parliament until his death. He wrote several books on social and legal problems, and also translated the first volume of Marx's *Kapital* into Czech. Winter took no part in any Jewish activities.

[Chaim Yahil]

BIBLIOGRAPHY: GUSTAV WINTER: F. Klatil, *In Memoriam Gustava Wintra* (Czech, 1944); E. Hostovsky, in: *Jews of Czechoslovakia*, 1 (1968), 447–8, 523; Ceskoslovenski, *Biografie*, 3 (1936).

WINTER, JACOB (1857–1941), German rabbi and scholar. Born in Hungary, Winter served from 1886 as rabbi in Dresden and received the honorary title of professor from the king of Saxony for his scholarly work.

His main achievement was the three-volume encyclopedic work, *Die juedische Litteratur seit Abschluss des Kanons* (3 vols., 1894–96), a prose and poetry anthology with biographical and literary-historical introductions, edited in cooperation with the German Orientalist August *Wuensche and leading scholars of the time. The work became a standard reference book on post-biblical Jewish literature. An earlier study by Winter was *Die Stellung der Sklaven bei den Juden…* (1886). Together with Wuensche, he also translated into German (with annotations) the halakhic Midrashim *Mekhilta* (1909) and *Sifra* (1938), and edited the second volume of M. Lazarus, *Die Ethik des Judentums* (1911).

WINTER, PAUL (1904–1969), New Testament scholar. Born in Czechoslovakia, Winter by profession was a lawyer in his native land until the Nazi occupation in 1939. Escaping from Czechoslovakia, he joined the free Czech forces in the Middle East, where he served for several years and participated in the battle of El-Alamein and the Normandy landings. After his release from the armed forces he settled in England, where he lived until his death. In his later years he suffered great poverty. His main contribution to scholarship was *The Trial of Jesus* (1961), which created a great deal of interest in the scholarly world with its thesis that Jesus was not condemned by a Jewish court but by the Romans for political, not religious, crimes. He was regarded as one of the leading New Testament scholars of his time.

[Seymour Siegel]

WINTERNITZ, EMANUEL (1898–1983), musicologist who specialized in organology, musical iconology, and art history. Born in Vienna, he studied piano, musicology (under his uncle, Oscar Kapp), and composition (under Franz Schmidt). After serving three years in the Austrian army during World War I, he studied law at the University of Vienna (earning an LL.D., 1922), and lectured on aesthetics and the philosophy of law at the Volkshochschule and at the University of Hamburg. From 1929 he practiced corporate law, while undertaking private studies in music and musical instruments. Fleeing

Nazi-occupied Austria, he immigrated to the United States in 1938. There, he was lecturer at the Fogg Museum of Harvard University (1938–41), and in 1941 at the Metropolitan Museum of Art (New York). In 1942 he was appointed Keeper of the museum's musical instruments. From 1949, until his retirement in 1973, he served as curator of musical instruments. His most successful concert series "Music Forgotten and Remembered," utilizing the museum's instruments, ran for 18 consecutive years. In 1972, both he and Barry *Brook established the Research Center for Music Iconography. He was a lecturer at Columbia University (1947–48) and taught as visiting professor at Yale, Rutgers, CUNY, and SUNY at Binghamton. His publications include *Musical Autographs from Monteverdi to Hindemith* (1955), *Musical Instruments of the Western World* (1966) *Musical Instruments and their Symbolism in Western Art* (New York, 1967), and *Leonardo da Vinci as a Musician* (1982).

[Israel J. Katz (2nd ed.)]

WINTERNITZ, MORITZ (1863–1933), Orientalist. Born in Horn, Austria, Winternitz received the degree of doctor of philosophy in 1886 from the University of Vienna. In 1888 he went to Oxford, where he spent the next ten years acting in various educational capacities, including teacher of German and librarian at the Indian Institute (1895). In 1899 he became instructor of Indology and general ethnology at the German University of Prague, and in 1911 was appointed professor of Sanskrit.

Winternitz's main work was *Geschichte der indischen Literatur* (3 vols., 1908–22; *History of Indian Literature*, 3 vols., 1927–59; 1959–63²). His other works include *A Catalogue of South Indian Sanskrit Manuscripts Belonging to the Royal Asiatic Society of Great Britain and Ireland* (1902), *A Concise Dictionary of Eastern Religion: Being the Index Volume to the Sacred Books of the East* (1910); *Die Frau in den indischen Religionen* (1920), and *Rabindranath Tagore* (Ger., 1936). Winternitz also edited several Sanskrit texts.

BIBLIOGRAPHY: *Festschrift M. Winternitz* (1933).

WINTERS, SHELLEY (**Shirley Schrift**; 1922–2006), U.S. actress. Born in East St. Louis, Ill., Winters appeared in the operetta *Rosalinda* (1942). Her first successful film was *A Double Life* (1948). Later she became famous for her interpretation of two prototypes – a street girl and a mother. In 1959 she won an Oscar for her supporting role in *The Diary of Anne Frank*, and in 1965 she won another Academy Award for *A Patch of Blue*. Her other films, which number more than 120, include *The Great Gatsby* (1949); *Frenchie* (1950); *A Place in the Sun* (Oscar nomination for Best Actress, (1951); *Executive Suite* (1954); *Mambo* (1954); *I Am a Camera* (1955); *The Big Knife* (1955); *The Night of the Hunter* (1955); *The Chapman Report* (1962); *Lolita* (1962); *The Balcony* (1963); *Alfie* (1966); *Harper* (1966); *The Three Sisters* (1966); *Enter Laughing* (1967); *The

Poseidon Adventure (Oscar nomination for Best Supporting Actress, 1972); *Blume in Love* (1973); *Diamonds* (1975); *Next Stop, Greenwich Village* (1976); *King of the Gypsies* (1978); *The Magician of Lublin* (1979); *S.O.B.* (1981); *The Delta Force* (1986), *An Unremarkable Life* (1989); *Stepping Out* (1991); *The Pickle* (1993); *Heavy* (1995); *The Portrait of a Lady* (1996); *Gideon* (1999); and *La Bomba* (1999).

On Broadway, Winters appeared in such plays as *Rosalinda* (1942–44); *Oklahoma!* (1943–48); *A Hatful of Rain* (1956); *The Night of the Iguana* (1962); *Who's Afraid of Virginia Woolf?* (1965); *Under the Weather* (1966); *Minnie's Boys* (1970); and *The Effect of Gamma Rays on Man-in-the-Moon Marigolds* (1978).

She appeared frequently at Jewish benefit rallies.

Winters was married to actors Vittorio Gassman (1952–54) and Anthony Franciosa (1957–60).

She wrote the autobiographies *Shelley: Also Known as Shirley* (1980) and *Shelley II: The Middle of My Century* (1989).

[Jonathan Licht / Ruth Beloff (2nd ed.)]

WINTERSTEIN, ALFRED (1899–1960), Swiss biochemist. Winterstein was born in Zurich where his father, Ernest Heinrich Winterstein (1865–1949), was professor of chemistry. He joined the faculty of Zurich's Polytechnicum (1934). He became a senior director of the Hoffmann-La Roche Company in Basle. His fields of research included hematology, vitamins and carotenoids, and hormones.

WINTROBE, MAXWELL MYER (1901–1986), U.S. hematologist. Wintrobe was born in Halifax, Nova Scotia, and graduated in medicine from the University of Manitoba, Winnipeg. He worked in the departments of medicine at Tulane University, New Orleans (1927–30), and Johns Hopkins University, Baltimore (1930–43), before becoming professor and chairman of the department of medicine at the newly established University of Utah (1943–67), where he was distinguished professor of medicine until his retirement in 1977. Wintrobe's main clinical and research interests were in hematology, and he contributed greatly to the major expansion of clinical practice, teaching, and research in this field. He introduced exact laboratory techniques which form an essential part of modern hematological practice. His textbook on clinical hematology, in 2005 in its 10th edition, became a standard work. His many honors include election to the U.S. National Academy of Sciences (1973). He was also a member and chairman of the Scientific Advisory Committee to the Scripps Research Foundation (1964–74).

[Michael Denman (2nd ed.)]

WIRSZUBSKI, CHAIM (1915–1977), classical scholar. Born in Vilna, Wirszubski settled in Palestine in 1934. He taught classics at the Hebrew University from 1948 (from 1956 as professor).

He published *Libertas as a Political Idea at Rome during the Late Republic and Early Principate* (dissertation, 1950) and

edited G.R. Moncada's *Sermo de Passione Domini* (1963). He translated Spinoza's *Theological-Political Tractae* (*Ma'amar Teologi-Medini*, with notes, 1961) into Hebrew and wrote an introduction to the Hebrew translation of Tacitus' *Annals* (*Sifrei ha-Shanim*, 1962). Wirszubski dealt in two lectures with Flavius Mithridates and his Latin translation *Liber Redemptionis* (*Nosaḥ Kadum shel Perush Moreh Nevukhim…*) of Abraham Abulafia's kabbalistic commentary on Maimonides' *Guide* (1964, 1969). He also devoted some articles to the Shabbatean movement.

°**WIRTH, CHRISTIAN** (1885–1944), *ss-Sturmbannfuehrer* instrumental in the mass extermination of Jews in German-occupied Poland. Wirth was born in Oberbalzheim, Wuettemberg, where he was a career criminal police detective. He became a member of the Nazi Party in 1931 and joined the ss in 1939. He was assigned to Operation T-4, the German program to "eliminate life unworthy of living" – to murder the mentally retarded, the physically infirm, and the handicapped – and from October 1939 until August 1941 he was chief of office staff and personnel at the "*euthanasia" killing center at Hartheim. As an inspector of killing facilities at all other "euthanasia" killing centers, Wirth developed gas chambers for killing institutionalized persons with disabilities. In late autumn 1941, he transferred to Lublin District, where he was assigned to develop the Belzec killing center. In 1942 Globocnik appointed him inspector of the ss Special Detachments with overall supervisory responsibility for Belzec, Sobibor, and Treblinka. At these three Aktion Reinhard camps more than 1.5 million Jews were killed. There were less than 200 known survivors. Belzec was open for only ten months as a killing center; the other two camps were open for less than two years each. They were closed when their jobs were done and the Jews of Poland were virtually all murdered. When these camps closed, Wirth and his colleagues Globocnik, Hering, and Oberhauser were transferred to Trieste in December 1943 where he commanded an ss *Einsatzkommando* "R" group. Wirth was reported killed by partisans in Istria in May 1944.

[Michael Berenbaum (2nd ed.)]

WIRTH, LOUIS (1897–1952), U.S. sociologist. Born in Gemuenden on the Main, Germany, Wirth emigrated to the United States as a young man and studied medicine and social work and then sociology. He taught at Tulane University and from 1940 to 1952 at the University of Chicago. He was an editor of the *American Journal of Sociology*, regional director of the National Resources Planning Board, director of planning of the Illinois State Postwar Planning Commission, and president of the Social Science Research Council (1932, 1937), the American Sociological Society (1947), and the International Sociological Association (1949). In addition, Wirth was active in the American Council on Race Relations and the American Jewish Committee.

A foremost representative of the Parkian school of sociology, Wirth combined theoretical insight with intensive practical application. His position was that sociology was concerned with unique phenomena only insofar as knowledge of them was required for the purpose of valid generalization and scientific prediction. His intense concern with the maintenance and development of democratic institutions and the furtherance of social justice led to his interest in the elimination of discrimination against racial and cultural minorities, in systematic socioeconomic planning, and in a workable theory of public opinion and mass communication. Methodologically, Wirth was a typologist, combining the "ideal type" construction of the German sociologists Max Weber and Ferdinant Toennies with the formulation of what may be called "real types," which is the hallmark of the Parkian school of sociology. A typology of minorities is contained in "The Problem of Minority Groups," in *The Science of Man in the World Crisis* (ed. Ralph Linton, 1945), and in "Morale and Minority Groups," in *American Journal of Sociology*, 47 (1941/42). His theory of urban sociology is expounded in "Urbanism as a Way of Life," *American Journal of Sociology*, 44 (1938/39). *The Local Community Fact Book* (1938) presents a model for the investigation of urban phenomena. Wirth's interest in the sociology of knowledge is documented in his preface to the English edition of Karl Mannheim's *Ideology and Utopia* (1936).

Wirth was intensely interested in the sociology of the Jews, as part of his general interest in the incorporation of minorities in a democratic state. His dissertation *The Ghetto* (1928, 1956²) analyzes the Jewish settlement on Chicago's west side not merely as a physical abode but as a state of mind; the outward pull of the larger society and discriminatory rejection by that society correspond to flight from the narrow restrictions of the ghetto and longing for its sheltering intimacy. Wirth saw the solution of the dilemma in the abolition of discrimination and complete acceptance of the democratic way of life.

[Werner J. Cahnman]

WISCHNITZER, MARK (1882–1955), historian, sociologist, and communal worker. In his youth Wischnitzer lived in Galicia, Vienna, and Berlin. On returning to his native Russia, he devoted himself to the study of Jewish history. From 1908 to 1913 he edited the section on the history of the Jews in Europe in the Russian-Jewish *Yevreyskaya Entsiklopediya* (from the third volume on). From 1909 to 1912 he lectured at the institute of Baron David Guenzburg in Petrograd on Oriental affairs and Jewish scholarship. From 1914 to 1916 he was the initiator and editor of *Istoriya Yevreyskogo Naroda* ("History of the Jewish People") in Moscow. He was also a member of the society for Jewish history and ethnography in Petrograd and participated in its quarterly *Yevreyskaya Starina* ("The Jewish Past"). From 1919 to 1921 he stayed in London, where he engaged in journalism and continued his research. From 1921 to 1937 he was secretary of the *Hilfsverein der Deutschen Juden, in which he engaged in welfare enterprises for the Jews

of eastern Europe, visited the regions of Jewish settlement in Russia, and finally (1933–37) concentrated on organizing the emigration of Jews from Nazi Germany to the countries of the West and overseas. During the period he lived in Berlin, Wischnitzer served with his wife, Rachel Wischnitzer, as director of the Jewish publication *Rimon* in Berlin and London (1922–24) and from 1925 was editor of the history section in the *Encyclopaedia Judaica* in Berlin. He occupied himself with the history of the Jewish guilds in Poland and Lithuania during the 17th and 18th centuries and devoted a study to them in Yiddish (1922). His *History of Jewish Crafts and Guilds,* which includes a list of his previous works on the subject, was published posthumously in 1965. He also published *Die Juden in der Welt* (1935).

After leaving Nazi Germany, Wischnitzer entered the service of the *American Jewish Joint Distribution Committee in Paris (1938); however, World War II compelled him to go to the Dominican Republic (1940) and then to the United States (1941). He continued his communal service in the U.S. with the Council of Jewish Organizations and Welfare Funds and worked on editing the *Universal Jewish Encyclopedia*. He devoted his work *To Dwell in Safety, The Story of Jewish Migration Since 1800* (1948) to general Jewish migration. He published the memoirs of Dov Ber *Birkenthal, in the description of whose life and times both literary and social views are intertwined; this appeared as *Zikhronot R. Dov mi-Boliḥov* (1922, repr. 1969; *The Memoirs of Ber of Bolechow* (1922)).

His wife RACHEL WISCHNITZER (née Bernstein; 1885–1989) was a scholar of Jewish art. Born in Minsk, she studied architecture in Paris. She edited the first periodicals for Jewish art, *Rimon* (in Heb.) and *Milgroym* (in Yid.; 1922–24), while she was in Berlin. These were printed by the Rimon publishing house which her husband had established. During this period she was director of the Jewish museum in Berlin (1934–38) and published *Gestalten und Symbole der juedischen Kunst* (1935), as well as contributing to the German *Encyclopaedia Judaica* and many other periodicals. In 1940 she went to the U.S., where she served as contributing editor for Jewish art of the Universal Jewish Encyclopedia (1948) and also wrote on the synagogue of *Dura-Europos. She wrote *Synagogue Architecture in the United States* (1955) and *The Architecture of the European Synagogue* (1964). Rachel Wischnitzer strove to clarify the development of Jewish iconography, especially the literary background to the development of subjects and symbols in Jewish art, e.g., her book on Dura-Europos is replete with biblical and talmudic passages which enlighten the artistic intent. She was also a firm advocate of using the values of traditional Jewish art in the works of modern Jewish art.

WISCONSIN, a state in the north-central U.S.; Jewish population of approximately 28,000 in a general population of about 5.5 million (2001), or 0.5%. German, Bohemian, Aus-

Jewish communities in Wisconsin. Population figures for 2001.

tro-Hungarian, and a smaller number of English Jewish immigrants were among the earliest settlers in Wisconsin, arriving from the 1840s to the 1860s with French, English, German, and Scandinavian gentiles. Yet the first known Wisconsin Jew was Jacob Franks, a fur trader of English ancestry who settled in Green Bay in 1793. His associate and nephew, John Lawe, served in the first Wisconsin Territory Legislature in 1836 and was a county judge. The first organized Jewish community arose in Milwaukee in 1844. By 1856, the city had three synagogues. In Wisconsin's capital, Madison, Jews organized a benevolent society in 1858 and built a synagogue, Shaarei Shamayim, in 1863. The building, one of the oldest remaining synagogues in the United States, has been moved from downtown to a city park. Another early settler, Alsatian-born Bernard Schleisinger Weil, owned thousands of acres of farmland northwest of Milwaukee. The town of Schleisingerville (later renamed Slinger) was named for him. He was the first Jew to serve in the Wisconsin Legislature – four years after statehood was declared in 1848. English-born John Meyer Levy, another influential newcomer, arrived in the Mississippi River settlement of La Crosse in 1845. He succeeded in business and served as mayor from 1860 to 1861 and 1866 to 1868. Levy held the first known worship services there (interfaith) and co-founded the first synagogue in Wisconsin's third

Jewish community. In addition to Milwaukee and Madison, German Jewish immigrants were prominent in business and politics in Appleton, an industrial and university city whose first rabbi was Mayer Samuel Weiss, father of illusionist Harry Houdini, born Erich Weiss. The 19th-century Wisconsin Jewish population was estimated at 2,600 in an 1880 study. So it was the mass Russian and eastern European Jewish immigration from 1881 to 1924 that gave the state most of its Jews. By 1899, the Jewish population had risen to 10,000, then to 28,000 in 1920, and more than 39,000 in 1937, the peak year. Most of the second wave of immigrants came to Milwaukee, where the established Jewish community formed the Settlement House. The facility offered classes to immigrants that led to publication of the long-running *Settlement Cookbook*. Other Russian and eastern European Jews spread around the state, creating Orthodox Jewish communities in two dozen municipalities in the 1920s and 1930s and accounting for a Jewish presence in some 180 more – primarily as merchants. In 1904, five immigrant families cleared land for a Jewish farming settlement in central Wisconsin. Part of a national Jewish agricultural movement, the Arpin settlement grew to 20 families and in 1915 established the county's only synagogue. Poor crop yields and a lack of marriageable young Jews compelled most families to leave by 1922. Sheboygan Jewry exceeded 1,000 in the 1920s and 1930s. With three Orthodox synagogues and several *shoḥatim*, Sheboygan was known among U.S. Jews as "Little Jerusalem." Other traditional Jewish communities with synagogues developed in: Antigo, Ashland, Hurley, Marinette, Superior, and Wausau in the north; Eau Claire and La Crosse in the west; Beloit, Madison, and Monroe in the south; and Appleton, Fond du Lac, Green Bay, Kenosha, Manitowoc, Milwaukee, Oshkosh, and Racine in the east. After the war, most of the smaller Jewish communities shifted to Conservative or Reform Judaism, building or buying new synagogues in a dozen cities. By the year 2000, Wisconsin's synagogues were centralized to 14 municipalities, but Jews remain a presence in nearly 70 communities. Most of the small-town synagogues serve Jews in outlying areas. Regional havurah groups meet regularly in Waukesha County, west of Milwaukee; Door County, on Wisconsin's Lake Michigan peninsula; and the northernmost three counties – Douglas, Bayfield and Ashland. The University of Wisconsin campuses in Milwaukee and Madison house Centers of Jewish Studies, both founded with the help of the Wisconsin Society for Jewish Learning. B'nai B'rith, once a unifier for Jewish men and their families throughout the state, has faded, though the B'nai B'rith Youth Organization reaches a plurality of Jewish teens. Hadassah, National Council of Jewish Women, and Na'amat USA continue to attract women. The Milwaukee Jewish Federation and Madison Jewish Community Council raise funds and coordinate local Jewish activities. Wisconsin Jews who attained national recognition include Israeli Prime Minister Golda *Meir, of Milwaukee; Sens. Herbert *Kohl of Milwaukee and Russell *Feingold of Madison, both Democrats; Socialist Victor *Berger; playwright and novelist Edna *Ferber of Appleton;

Newton Minnow, chairman of the Federal Communications Commission; Martin F. Stein of Milwaukee, national chairman of the United Jewish Appeal and CLAL; Depression-era photographer Esther Bubley of Phillips; Allan H. "Bud" *Selig of Milwaukee, commissioner of major league baseball; jazz pianist and scholar Ben Sidran of Madison; and Yiddish poet Alter Esselin of Milwaukee.

[Andrew Muchin (2nd ed.)]

WISDOM; WISDOM LITERATURE.

Connotation of Wisdom

Wisdom (Heb. *ḥokhmah*) has a wide range of meanings in different contexts, as illustrated in stories about Solomon, the traditional paragon of wisdom: cunning (1 Kings 2:6, 9), moral discernment (3:9, 12), understanding of justice (3:28), encyclopedic knowledge (5:9, 14 [4:29, 34]), literary skill (5:12, [4:32]), and ability as ruler (5:21 [5:7]). In Job 39:16–17 and Ecclesiastes 2:3 it means simply intelligence. Its primary meaning is superior mental ability or special skill, without a necessary moral connotation (Ex. 35:31–33; II Sam. 14:1ff.). The *ḥakham* was the knowledgeable man, hence a counselor, teacher (Ex. 35:34; Prov. 12:15). Skills were acquired through training, *musar* (Prov. 1:2–6); life situations called for counsel, *ʿeẓah* (1 Kings 12:8; Prov. 1:30). The highest skill was that of living successfully, with divine and human approval. The idea of wisdom as a fundamentally ethical and religious quality of life is developed in Job, Proverbs 1–9, the Wisdom Psalms, and Daniel, and later in Ben Sira, Wisdom of Solomon, and Tobit. Special senses of *ḥokhmah* are understanding of dreams and omens (Gen. 41:15, 39; Dan. 1:17); knowledge properly belonging to God alone (Gen. 3:22; Ezek. 28:2–3); and righteousness, in eschatological times (Dan. 11:33; 12:10; the term here is *maskilim*).

As a historical phenomenon, biblical wisdom designates a distinctive cultural tradition and scholarly activity in the history of ancient Israel, continuing in early Judaism and Christianity. It was a way of thinking and an attitude to life that emphasized experience, reasoning, morality, and general human concerns not restricted to Israelites. Its interest was in individuals and their social relationships rather than in the distinctive national religion and its cult. A generalized religious element was present from the first in wisdom's recognition of the rightness of a certain order of life; only in its later stages – as in Ben Sira – were the wisdom and the national-religious traditions joined together. In keeping with this striving for order and equilibrium, the wisdom teachers sought to provide rules and examples of personal morals and, on a theoretical level, meanings and values through reflection, speculation, and debate.

History of the Wisdom Tradition

The history of the wisdom tradition in Israel can be sketched only in broad strokes because the evidence is slight and often ambiguous. Wisdom was a tradition as old as the society itself, a constant factor in its daily life rather than a self-conscious movement. The folk wisdom rooted in the mo-

res of family and tribe has left traces in popular proverbs (Gen. 10:9; I Sam. 24:14; I Kings 20:11) and in references to local sages (II Sam. 14:2; 20:16). With the advent of the monarchy, royal counselors became influential (II Sam. 16:20 ff.; I Kings 12:6 ff.), and in effect, some were cabinet ministers (I Kings 4:1 ff.; Isa. 36:3). Professional scribes and a literate elite court were probably mainly responsible for the production of wisdom and other literature later attributed by tradition to King *Solomon himself (I Kings 5:9–14 [4:29–34]; cf. Prov. 25:1). Temple scribes would be engaged in the composition of psalmody.

In the eighth century Hezekiah's men engaged in collecting Solomonic proverbs (Prov. 25:1) and probably also in assembling the religious and other writings of Judah and Northern Israel. That Isaiah had been a teacher of youth is implied by his opponents' mockery (Isa. 28:9–10; cf. 19:11–12). Both Isaiah and Jeremiah found themselves in conflict with royal counselors who thought themselves wise, i.e., politically expert (Isa. 29:14 ff.; Jer. 9:22 [23]; 38:1 ff.). Jeremiah clashed with the temple scribes as well (8:8). In *Baruch we see a professional scribe at work (Jer. 32:9 ff.; 36:4). When Jerusalem fell to the Babylonians, the exiled scribes undoubtedly carried with them scrolls around which literary activities were centered in their new community.

After the Return, when Judah became a semi-independent temple state under a Persian governor, religious authority was assumed by priests and scribes as custodians of the national-religious tradition. This tradition had now taken form as the Torah and other sacred books, which implied changes in the status of the learned. Ezra the priest bore the official title "secretary of the Law of the God of heaven" (Ezra 7:12). The Torah was both code and creed; it was also the summation of Israel's distinctive religious wisdom (Deut. 4:6). Temple scribes and wisdom teachers turned their attention to Torah study, with two results: the two streams of wisdom tradition and covenant theology coalesced, and a new kind of wisdom piety developed (cf. Ps. 1, 119). At the same time the folk wisdom of home and marketplace continued, but with a more positive ethical and religious orientation as in Proverbs 1–9 and Ben Sira. Independent thinkers like *Koheleth and the author of the Wisdom of Solomon in the Hellenistic period began to write in more philosophic language, and found a following among their compatriots.

International Background and Setting

The international background and setting of Hebrew wisdom are acknowledged in the Bible itself and have become fully evident with increasing knowledge of the literary remains of ancient Near Eastern peoples. Solomon's wisdom is said to have surpassed that of Egypt and the *Kedemites (I Kings 5:10–11 [4:30–31]). The wise men of Egypt are referred to again in Genesis 41:8 and Isaiah 19:11–12; those of Edom in Jeremiah 49:7 and Obadiah 8; those of Phoenicia in Ezekiel 27:8–9; 28:3–5; and those of Persia in Esther 1:13. Although in Babylonia "'wisdom' refers to skill in cult and magic lore… [there is] a group

of texts which correspond in subject matter with the Hebrew Wisdom books" (W.G. Lambert; cf. Dan. 1:20).

In Egyptian thought the cosmic order and the moral order were one, to be realized in thought, speech, and behavior. Characteristic documents are the "Instructions" by a king or high official to his son, such as those of Ptah-hotep, Merika-Re, Ani, and Amen-em-opet (cf. Pritchard, Texts, 412 ff.). Amen-em-opet bears remarkable similarities to Proverbs 22:17–24:12. Other Egyptian wisdom works are The Divine Attributes of Pharaoh, The Song of the Harper, The Eloquent Peasant, and The Dispute over Suicide (Pritchard, Texts, 405–10, 431–34). The last two, like Job, touch on an innocent sufferer's cry for justice and the dubious value of a sufferer's life. Another type of Egyptian wisdom is found in the onomastica or "noun lists" with their comprehensive outline of knowledge; these may have influenced Genesis 1; Psalms 148; Job 38–39; etc.

Mesopotamian wisdom writing originated with the Sumerians. They too produced noun lists of phenomena, and introduced evaluations of them in dispute fables, e.g., between summer and winter, cattle and grain (Pritchard, Texts[3], 592–3). Human experiences and character were portrayed in adages, parables, and anecdotes (Pritchard, Texts[3], 593–4). Corresponding to the "Instruction" form are the Counsels of Wisdom, Counsels of a Pessimist, Advice to a Prince, Teachings of *Ahikar (the last of Assyrian origin but preserved in Aram; Pritchard, Texts[3], 595–6). In the "problem" writings, the main issues are death and the suffering of the righteous. In the Gilgamesh Epic, the hero goes in search of the secret of immortality and learns that only gods are deathless. In the Dialogue of Pessimism, death is seen as the great equalizer. In a Sumerian poem "Man and his God" an upright man who suffers has no recourse but to pray for deliverance. Two works from the Kassite period in Babylonia deal with the same theme: in "Let me praise the Lord of Wisdom" a sufferer reflects that trouble comes without apparent reason, because humans cannot know the will of the gods; in "The Babylonian Theodicy" the issue is debated by a sufferer and his friend, their views corresponding broadly to those of Job and his friends (Pritchard, Texts[3], 589–91, 596–604). The Sumerian gods represented forces with which humans must come to terms, whereas the Babylonian gods were more thought of as subject to moral standards, like human beings. To the Egyptians ma'at ("truth, right, justice") was a cosmic reality to which even the gods were subject. The Egyptians looked for judgment and compensation in the afterlife. In Babylonia (as in Israel until a late period, cf. Dan. 12:2) appropriate rewards or punishments were expected in the present life, and divine justice was often called in question.

No wisdom writings survive from Edom or Phoenicia. Ugaritic literature includes maxims in the father-to-son form, and presumably a more extensive Canaanite wisdom literature existed.

The Wisdom Books of the Hebrew Bible

These wisdom books are *Proverbs, *Job, and *Ecclesiastes, with which *Psalms and Song of Songs are associated in

Roman Catholic tradition. Significantly, all these are among the Hagiographa (*Ketuvim*), the part of the Hebrew Bible most remote from the interests of the Torah, and the last part to be approved as scripture. Most of the other works in the Hagiographa have some connection with wisdom in form, in content, or historically. In addition, though not accepted as canonical in Jewish tradition, two major wisdom books and some shorter works from pre-Christian Judaism were included in the Greek and Latin Bibles: the Wisdom of *Ben Sira, a latter-day Book of Proverbs; the Wisdom of *Solomon, a treatise on Hebrew wisdom addressed both to Jews and to non-Jews; *Tobit, a morality tale incorporating two short collections of precepts; the poem in Baruch 3:9 ff. calling on Israel to return to the ways of wisdom; an account of a wisdom contest inserted in 1 Esdras at 3:1–4:41; and three highly colored parabolic tales added to the Greek version of Daniel.

The great variety comprised within the category of wisdom literature is evident. These writings have in common the theme and practice of wisdom as a distinct way of life and thought, and employ certain favorite literary forms and a characteristic vocabulary. The theme is developed with different emphases: on the one hand traditionally conservative, didactic, and worldly-wise, on the other hand radically critical and theologically innovative. The first is carried out by various methods of authoritative instruction; the second – on a more sophisticated level – by challenging accepted ideas and stimulating original thought. It will be noticed that the religious component of wisdom teaching becomes more explicit as time goes on.

Wisdom was not seen as a natural endowment, though the capacity to attain it might be considered a natural endowment. Wisdom had to be learned, and could be taught. Even so, it remained a divine gift rewarding those who desired it enough to submit to its discipline (Prov. 2). The two principle methods of teaching were *musar* (instruction, training) and *ʿeẓah* (counsel, persuasion), according to whether the teacher's authority was imposed or freely sought. A parent's instruction was mandatory and entailed correction of the disobedient (Prov. 23:13). To the extent that the teacher in a school assumed the parental role (Prov. 1:8) his words had the same dogmatic tone. In the main, however, the teacher's *musar* was an appeal to reason and conscience, and to the pupil's own desire for knowledge and understanding. This is evident in the variety of literary forms found in the wisdom writings, whose primary objective was to teach: the sentence saying or proverb; the rhetorical question; the admonitory precept or maxim and their expansion into longer discourses; soliloquy and debate; descriptive, metaphorical, and meditative poetry; parable and allegory; the imaginative tale and the illustrative anecdote.

Precepts express the imperatives of social order or religious belief; with the teacher they take the form of exhortation to which is added a statement of motive or result (cf. Prov. 19:20; 25:17). Often the imperative is implied rather than expressed (Prov. 25:27a). In Proverbs 1–9 precepts are expanded into ten longer discourses beginning "My son(s)!" In the two poems in 1:20–33 and chapter 8 wisdom itself is personified as a female; in the former she berates fools for their refusal to listen, and in the latter appeals for a hearing on grounds of her priceless worth and her prime role in the creation of the world. Behind this personification lies the reality that there is regular reference to wise women in the Bible (Judg. 4:29; II Sam. 14:2; 20:16) and that a mother might teach her son (Prov. 6:20). Some scholars view Wisdom as an ancient Hebrew goddess. Precepts predominate in 22:17 ff., the section closely resembling the Instructions of Amen-em-opet.

A proverb is a short pregnant sentence or phrase whose meaning is applicable in many situations and which is made memorable by vivid imagery or witty expression, often marked by alliteration or assonance. It draws attention positively or negatively to an order of life, right values, and proportions. The prosaic folk saying is brief and pointed: "From wicked men comes wickedness" (I Sam. 24:14 [13]) or "One donning armor should not boast as if he were taking it off" (I Kings 20:11). The proverbs of two (or more) lines in a parallelism, characteristic of Solomonic proverbs in Proverbs 10:1 ff. and 25:1 ff., have been expanded probably for teaching purposes as cue and response. Examples of folk sayings supplemented in this way are Proverbs 11:2a; 12:11a; and 26:17a. Sayings in the form of a culminating numerical progression like Proverbs 30:18–19 are a kind of riddle, also suitable as a teaching tool.

The art of composing vivid narratives, similes, and metaphors also serves the purposes of the teacher. The word *mashal* ("likeness") has a wider connotation than "proverb." Its commonest form is the simile: "Like clouds and wind that bring no rain is a man who boasts of giving but does not give" (Prov. 25:14). When a simile is expanded into a short story, it becomes a parable. The best-known parables in the Hebrew Bible come from the prophets Nathan and Isaiah (II Sam. 12:1 ff.; Isa. 5:1–7); the only developed wisdom parable also is found in Isaiah, in 28:23–29. Ecclesiastes 9:13–16 is sometimes cited as a parable but strictly this is rather an illustration since in a parable the audience is expected to recognize the analogy and draw its own conclusions. Although the wisdom teachers do not use the parable, they do make effective use of teaching illustrations. In Proverbs 1:11–14 the very words of the thugs who are tempting the unwary youth are quoted, and 6:12–13 is a true-to-life description of the conspirator. In Proverbs 7:6 ff. there is a graphic sketch of the prostitute's behavior and in 23:29 ff. one of the drunkard's.

An allegory relates to a metaphor as a parable relates to a simile. In Ecclesiastes 12 the approach of death is pictured in terms of the onset of darkness in a village street. The metaphor of wisdom, personified as a woman (Prov. 7:4), is developed in the poems of Proverbs 1:20–33, where she speaks like a prophetess, and in chapter 8 (cf. Ecclus.), where she speaks of YHWH's co-worker in the creation of the world. In Proverbs 9 wisdom and folly are personified as rival hostesses inviting men to different kinds of banquets.

The paradigmatic narrative, which evokes admiration for a hero or heroine evincing moral qualities deserving of imitation, was another tool of the wisdom teachers. The story may be quasi-historical, as in the case of the story of Joseph in Genesis. It may be clearly fictional, as with Ruth, Daniel 1–6, Esther, and Judith. The prose folk tale which introduces the poem of Job serves the same purpose. The wisdom characteristics of the Joseph story have been pointed out by G. von Rad: a man of unusual ability, intelligence, and moral integrity is shown as triumphing over all adversities, and becoming the principal counselor at the court of Pharaoh. The story in Genesis 3 of human disobedience and expulsion from Eden also has certain wisdom features. The wondrous tree and the talking snake belong to the world of the fable, but these are only incidental. The story can be read as a parable of human alienation from God through disobedience, and illustrates graphically the subtle process of temptation. More important, it probes profound problems in the sphere of wisdom: the nature and limitations of human knowledge and the relation of knowledge to morality. Humans claim to decide for themselves what is good and what is evil, in response to desire, but in asserting their independence find themselves exiled from life and good to a world of death and evil.

See Books of *Proverbs, *Job, and *Ecclesiastes.

Wisdom Psalms

The Wisdom Psalms are those with resemblances to the characteristic themes, tone, literary forms, and vocabulary of the wisdom tradition. They appear to be the products of a new type of personal piety which developed after the Exile, when the written Torah replaced prophecy as YHWH's living voice to His people. Scribal experts in the handling and interpretation of scripture had assumed a new position of religious authority, and the wisdom, prophetic, and cultic traditions were mingled. "God" in the generalized sense of older wisdom writings was now definitely identified with YHWH, the covenant God of Israel.

Some Psalms, such as 1 and 37, are unified compositions representing this new wisdom piety. In others the sapiential features are apparent only in certain parts (e.g., 94:8–13). In still others a poem of another type has been labeled as a wisdom poem (Ps. 2:12d; 111:10). The Psalms with the best claims to be classed as Wisdom Psalms are 1, 19b, 32, 34, 37, 49, 78, 112, 119, 127, 128, and 133. Their most significant feature is that they are addressed primarily to a human audience rather than to God, and their tone is didactic or hortatory. The presence of wisdom vocabulary and stylistic forms can be observed. Psalm 37 is an alphabetical acrostic comprising a series of precepts and proverbs commending a life of piety. Psalm 49 identifies itself as a *mashal*, or wisdom utterance, concerning a riddle (*ḥidah*). Psalm 127 consists of two expanded proverbs.

The principal themes of the Wisdom Psalms are:

(1) the antithetical ways of life of the righteous and the wicked;

(2) the appropriate rewards and retribution in store for each respectively;

(3) the qualities and behavior of the righteous as evoking admiration;

(4) study of the Torah as the focus of piety and a source of pure delight;

(5) life and vitality as fruits of righteousness, which is true wisdom;

(6) personal trust in YHWH;

(7) the search for light on problems of faith;

(8) encouragement to faith and obedience through reflection on YHWH's mighty acts on behalf of His people (see also *Psalms).

The Concept of Wisdom

The concept of wisdom as developed in the long course of Israel's cultural and religious history is different from and broader than the various meanings and uses of the term *ḥokhmah* (see above). All these denote elements and aspects of one thing – the activity of mind – introducing order in place of confusion, expanding and structuring knowledge, and purposefully directing the actions of men. The continuity of the wisdom tradition lay in the constant enlargement and enrichment of this faculty of applied intelligence.

At first the noun *ḥokhmah* denoted simply the state of being wise. It was no more than a linguistic correlative of the adjective *ḥakham* ("wise") and the verb *ḥakham* ("to be wise"), the adjectival use being basic. The wise were more capable, knowledgeable, skillful, intelligent, imaginative, and resourceful than their fellows, who consequently would look to them for counsel and leadership. The sharing of knowledge made of the wise man a teacher. Confidence in his counsel imbued him with the potentiality for leadership and ultimately for government. The general orderliness observable in the natural world called for an order of values as well as a structure of power in human society, and for meaning to justify both. Stimulated by access, through literacy, to the ideas of other wise men, the counselor became a thinker, concerned with understanding and moral judgments as well as with knowledge. Worshipping a God whose commands were not arbitrary but ethically conditioned, this counsel passed beyond the defensive morality of the tribe and the prudential morality of the individual to an ethic resting on beliefs held to be sacred.

If men could be wise to some degree in this deeper sense, God axiomatically was all-wise, good, and just, despite any appearances to the contrary. The creative and providential ordering of the world were acts of divine wisdom, which is sovereign, creative, and dynamic. Thus wisdom becomes fully conceptualized when personified pictorially in Proverbs 8 as a personal instrument of God in the planning and implementation of the created order.

mie and L. Perdue, *The Sage in Israel and the Ancient Near East* (1990), 3–17. See bibliographies to *Ecclesiastes, *Proverbs, and *Job.

[Robert B.Y. Scott]

WISE, GEORGE SCHNEIWEIS (1906–1987), sociologist; first president of *Tel Aviv University. Born in Pinsk, Poland, he went to the U.S. to study in 1926 and graduated from Columbia University in 1930. He served as associate director of its Bureau of Applied Social Research from 1949 to 1952, and lecturer on the sociology of Latin America from 1950 to 1952. For his assistance in the anti-illiteracy campaign in Mexico in 1944–46 he was decorated with the order Aguila Azteca by the Mexican government in 1946, and was visiting professor at Mexico University from 1956 to 1957. Long a supporter of The Hebrew University, he was chairman of its board of governors from 1953 to 1962. In 1963 he was elected president of the newly established Tel Aviv University, which developed rapidly during his tenure of office. In 1971 he became its chancellor. Apart from wide business interests, he took part in Jewish public activities in the United Jewish Appeal and other bodies. He is author of *The Breakdown of Parental Authority in Polish Immigrant Families in the United States* (1931), *Caudillo* (1951), a study of Latin American dictatorship, and *Mexico de Aleman* (1952).

WISE, ISAAC MAYER (1819–1900) U.S. Reform rabbi, architect of Reform Judaism in America. Wise was born in Steingrub, Bohemia, and studied at yeshivot in Prague and Vienna. In 1843, he became the rabbinical officiant (Religionsweiser) in Radnitz, Bohemia. Disillusioned about career prospects for Jews in central Europe, he emigrated to the United States in 1846. He became rabbi of Congregation Beth El in Albany, N.Y., introducing reforms such as mixed seating, choral singing, and confirmation. In 1847, he joined a *bet din* in New York, presided over by Max *Lilienthal, and conceived the idea of its authorizing a single ritual for the American Jewish community. The attempt proved abortive; but in 1848, he issued a call for a meeting the following year to establish a union of congregations. Again the attempt failed, but Wise persisted in advocating the idea. Meanwhile, he was earning a reputation as a writer, contributing regularly to Isaac *Leeser's *Occident* and the New York Jewish weekly, *Asmonean*. In 1850, as Wise pondered accepting the position of rabbi of Congregation Beth Elohim in Charleston, South Carolina, disagreements among the members of Beth El over Wise's reforms caused a split in the congregation that erupted into an actual melee at Rosh Hashanah services; Wise and his followers left to form a new congregation, Anshe Emeth, the first synagogue in the United States to be established with mixed seating from the outset.

In 1854, Wise became rabbi of Congregation B'nai Jeshurun in Cincinnati, Ohio, where he remained for the rest of his life. Within a few months of his arrival, he began to publish a national weekly, *The Israelite*, later renamed the *American Israelite*, and a German supplement *Die Deborah*. By the end of the year, he had founded Zion College, which combined Hebrew and secular studies. In 1855, he issued a call for a synod that would be the guiding authority of American Judaism, and succeeded in organizing a rabbinical conference, which met that year in Cleveland. The conference agreed to call a synod and adopted a platform that recognized the Bible as divine and declared that it "must be expounded and practiced according to the comments of the Talmud." The Orthodox, as represented by Isaac *Leeser, were at first satisfied, but soon grew suspicious of Wise's intentions. Moreover, the Cleveland Platform was scathingly attacked as treachery to the cause of Reform by David *Einhorn, a radical Reformer from Germany who had just become a rabbi in Baltimore. The plan for a synod collapsed.

Wise nevertheless went ahead with some of the projects discussed at Cleveland. In 1856, he published *Minhag America*, a prayer book that modified traditional Hebrew ritual. Despite repeated setbacks, Wise always returned to his advocacy of a union of congregations, a common prayer book, and a college to train American rabbis. He expounded his ideas not only in his writing but in repeated visits to the scattered Jewish communities of America. The recriminations over the Cleveland Conference, and then the Civil War, deferred practical action. The establishment of the *Board of Delegates of American Israelites (1859) and Maimonides College (1867) by traditionalist forces aroused his sarcastic hostility.

Wise showed no sympathy for the Abolitionist agitation which preceded the Civil War. He venerated the American Union and was prepared to tolerate slavery rather than contemplate its dissolution. During the Civil War, he joined the "Copperhead" Democrats and even accepted their nomination to be a candidate for the Ohio State Senate, until his congregation forced him to withdraw from the race. After the Civil War, Wise renewed his push for a union of congregations. He attended the 1869 rabbinical conference in Philadelphia organized by Einhorn (see *Reform Judaism), but distanced himself from its resolutions, fearing that their radical standpoint would put an end to the dream of a comprehensive union of American synagogues under his leadership.

The next few years were punctuated by fierce exchanges between Wise and the more Germanic and radical Reform eastern rabbis – who refused to attend rabbinic conferences organized by Wise in Cleveland, Cincinnati, and New York. In 1873, lay leaders in Cincinnati closely associated with Wise succeeded in forming the *Union of American Hebrew Congregations, a loose confederation of congregations primarily from the South and West. Wise was particularly focused on one of the UAHC's objectives – the establishment of a rabbinical college. In 1875, he was appointed the first president of *Hebrew Union College. The famous *treife* banquet served on the occasion of the first ordination of HUC rabbis ended all hope for a unified American Judaism. The observant stormed out and, for a time, there was only Reform Judaism and everybody else. (More than 125 years later, at the inauguration of David Ellenson as president of HUC, a kosher

meal was served, a mark of significant transition within Reform Judaism.)

For the remainder of his life, Wise labored in the interests of the college. He was devoted to his students, earning their affection in return. He ordained more than 60 rabbis and continued to lead them as the founding president of the *Central Conference of American Rabbis, a position he held from 1889 until his death. During his lifetime, when it came to key developments in the shaping of the Reform movement's ideology, Wise was relegated to a secondary position: the Pittsburgh Platform of 1885 (see *Reform Judaism) was the work of Kaufmann Kohler, and the Union Prayer Book was based on Einhorn's *Tamid* rather than Wise's *Minhag America*. On another front, the influx of a large community of eastern European Jews thwarted his prediction that Orthodoxy would not survive on American soil; with that reality, Wise's vision of a singular American Judaism was doomed, and the basic pattern of denominational Judaism established. But Wise's foresightedness and tenacity in laying its three institutional cornerstones earned him the title "founding father" of the indigenous Reform movement in America – and insured that his legacy, rather than the short-lived victories of his radical Reform rivals, would ultimately prevail. (His strident opposition to political Zionism also influenced the Reform movement for nearly half-a-century; eventually, however, Reform Judaism joined the Zionist fold.)

Although known more as a leader than a scholar, Wise did write a number of books: *History of the Israelitish Nation* (1854), *Minhag America* (1856), *Minhag America* (1866), *The World of My Books* (n.d.), *Selected Writings of Isaac M. Wise, with a Biography* (ed. Philipson and Grossman, 1900, rev. 1969), and *Reminiscences* (ed. David Philipson, 1901, rev. 1945).

[Bezalel Gordon (2nd ed.)]

WISE, JONAH BONDI (1881–1959), U.S. Reform rabbi. Son of Isaac Mayer *Wise, he was ordained by Hebrew Union College in 1903. In 1904 he was appointed to Mizpah Temple, Chattanooga, Tennessee, and in 1906 to Temple Israel, Portland, Oregon. While in Portland he established a weekly Jewish newspaper, *The Scribe*. In 1925 Wise moved to New York and there served as rabbi of the Central Synagogue until his death. Within his congregation he did not depart from the classical pattern of Reform Judaism; family connections and an aptitude for social life helped to establish his position. In 1934 he established the weekly radio program "Message of Israel." He was an active worker for the *American Jewish Joint Distribution Committee, serving as national chairman 1931–38. He visited Europe several times on its behalf and represented it at the Evian Conference on Refugees, 1938. In the following year he became national chairman of the United Jewish Appeal, though he rejected Zionism.

[Sefton D. Temkin]

WISE, LOUIS ELSBERG (1888–?), U.S. organic chemist. Born in New York, Wise was appointed in 1919 professor of forest chemistry at New York State University (Syracuse). In 1933 he became professor of organic chemistry at Rollins College, and from 1941 was at the Institute of Paper Chemistry at Lawrence College, Wisconsin. His contributions were mostly on the chemistry of wood.

WISE, ROBERT EARL (1914–2005), U.S. film producer and director. Born in Winchester, Indiana, Wise worked at RKO studios from 1933 to 1943, and edited Orson Welles' classic, *Citizen Kane* (Oscar nomination for Best Editing, 1941). He was made a director in 1943 and became one of Hollywood's most successful filmmakers. He won four Academy Awards – as director and producer of *West Side Story* (1961), and co-director and producer of *The Sound of Music* (1965), one of the most profitable films ever made. In all, he directed more than 40 films. Among them are *The Body Snatcher* (1945); *The Set-Up* (1949); *The Day the Earth Stood Still* (1951); *Executive Suite* (1954); *Somebody Up There Likes Me* (1956); *Until They Sail* (1957); *I Want to Live* (Oscar nomination for Best Director, 1958); *Run Silent, Run Deep* (1958); *Two for the Seesaw* (1962); *The Haunting* (produced, 1963); *The Sand Pebbles* (produced, Oscar nomination for Best Picture, 1966); *Star* (1968); *The Andromeda Strain* (produced, 1971); *Two People* (produced, 1973); *The Hindenburg* (produced, 1975); *Audrey Rose* (1977); *Star Trek – The Motion Picture* (1979); *Rooftops* (1989); and the TV movie *A Storm in Summer* (2000).

Among his many honors and awards, Wise received the Irving G. Thalberg Memorial Award in 1967 for his contribution to the industry as a creative producer, and the American Film Institute Life Achievement Award in 1998. Wise served as president of the Directors Guild of America from 1971 to 1975, and as president of the Academy of Motion Picture Arts and Sciences from 1985 to 1988. He was active in the civil rights movement in Hollywood.

[Ruth Beloff (2nd ed.)]

WISE, STEPHEN SAMUEL (1874–1949), U.S. rabbi and Zionist leader. Born in Budapest, Hungary, Wise was taken to the United States at the age of 17 months. From childhood he was determined to become a rabbi like his father, Rabbi Aaron Wise, who, together with Alexander *Kohut and Gustav *Gottheil, rabbi at Temple Emanu-El, helped to prepare him for the rabbinate. He was graduated with honors from Columbia University at the age of 18. Ordained in 1893 by Adolph *Jellinek of Vienna, he became assistant rabbi of New York City's Congregation B'nai Jeshurun, and assumed full responsibility after the death of Rabbi Henry S. Jacobs.

In 1900, shortly before marrying Louise Waterman, Wise became rabbi of Temple Beth Israel in Portland, Oregon, where for the next six years he pioneered in interfaith coop-

eration, social service, and civic leadership. His sermons are collected in *Beth Israel Pulpit: Sermons* (2 vols., (1905–06). He also served as unpaid commissioner of child labor for Oregon.

In 1902 Wise received his Ph.D. degree from Columbia University for his translation and editing of Solomon ibn Gabirol's *Improvement of the Moral Qualities*. For the Jewish Publication Society he translated the Book of Judges for their English version of the Bible, submitting his work in 1908.

Wise had begun his Zionist career during the late 1890s, helping to articulate the movement's ideology and organize its followers. A founder of the New York Federation of Zionist Societies in 1897, he led in the formation of the nationwide Federation of American Zionists in 1898 and served as honorary secretary until 1904, in close cooperation with Theodor Herzl. He had met Herzl at the Second Zionist Congress in Basle in 1898 and at that time agreed to serve as American secretary of the world Zionist movement. In 1914 he was instrumental in creating the Provisional Executive Committee for General Zionist Affairs and later headed it.

He acted as an important intermediary to President Woodrow *Wilson and Colonel Edward House in 1916–19, when, with Louis D. *Brandeis and Felix *Frankfurter, he helped formulate the text of the Balfour Declaration of 1917. He spoke on behalf of Zionist aspirations in Palestine at the Versailles Peace Conference of 1918–19, where he also pleaded for the cause of the Armenian people. He was vice president of the Zionist Organization of America from 1918 to 1920 and president from 1936 to 1938. On several occasions he served as chairman of the United Palestine Appeal. Though he worked closely with Chaim *Weizmann, David *Ben-Gurion, and Abba Hillel *Silver, he often disagreed with them on specific policies and broke relations with Weizmann in the 1920s and with Silver in the 1940s. His views at times conflicted with those of the Zionist organizations as well. Yet Wise always sought unity for the movement, which did not at that time have the backing of a united Jewry or the sympathy of the non-Jewish community. His *Great Betrayal* (1930), written with Jacob De Haas, reviews the history of British policy toward Palestine up to the Passfield White Paper in 1930.

To direct American Jews into pro-Zionist channels, lead them to more liberal objectives in the United States, and create a more democratic base in American Jewish life, Wise led in the organization of the American Jewish Congress, first on a provisional basis in 1916–19, then more permanently in 1920; he served as vice president in 1921–25 and as president or honorary president until his death. It was regarded as an alternative to the more established and more quiescent American Jewish Committee, which was dominated by the German-Jewish establishment that had been in the United States for a generation or more. The American Jewish Congress was more activist and more public in its protests.

Wise sounded the first warnings of the dangers of Nazism to the Jewish and non-Jewish world and sought to organize

opposition to it and protection for the victims of Hitler. He organized a movement to boycott German goods in 1933, seeing it as appropriate public protest, against the advice of some German Jews in Germany who urged caution and that American Jews not to be provocative. In 1936 he organized the World Jewish Congress and headed it until his death in 1949. As a Zionist leader, president of the American and World Jewish Congresses, and co-chairman of the *American Jewish Conference, he presented the Jewish cause to President Franklin D. Roosevelt and the U.S. State Department, as well as to the general public, Jewish and non-Jewish. He was the recipient of the all important telegram from Gerhart Riegner that was sent to him in August 1942 via the State Department but never delivered to him. He received it from a second source, Samuel Silverman, a member of the British Parliament, It said:

> That there has been and is being considered in Hitler's headquarters a plan to exterminate all Jews from Germany and German controlled areas in Europe after they have been concentrated in the east. The number involved is said to be between three and a half and four million and the object to permanently settle the Jewish question in Europe.

The telegram spoke explicitly of Zyklon B. It should be noted that the telegram that Wise received, important as it was, was already long out of date. The Final Solution was already operative policy of Germany in all occupied territories. At Wannsee, the list was of 11 million Jews and the death camps of Belzec, Sobibor, and Treblinka were fully operative, the deportation of the Jews of Warsaw had began more than a month before.

Wise took this information to the State Department, which informed him that they already knew of it but could not confirm it; they requested that he not go public with the information until it could be confirmed. In November they confirmed this information to him and Wise did go public, but the State Department did not confirm it to the press, so Wise's release of this information was unofficial, from a Jewish rather than a governmental source.

Wise led the one meeting that the Jews had with President Roosevelt in 1943, which lasted some half an hour. It began with some banter between the president and Wise, and then a prayer was recited. Wise presented the president with a briefing paper, and the president indicated that he knew what was happening. He asked for concrete suggestions and there were few. The president then spoke for almost all the remaining time and, at the end of the allotted time, the meeting was interrupted by staff and concluded.

History has not been kind to Wise, who tried to lead a divided American Jewish community during the most perilous time in Jewish history. He was known in his day as an activist who had been protesting Nazism at its inception and led Stop Hitler Now rallies in 1943 and onward. Yet he is regarded by the younger generation as a symbol of ineffective and timid Jewish leadership, just when boldness and brilliance were required. He is regarded as too close to President Roosevelt and reluctant to criticize him for fear of wounding

him politically. Some, but not all, of the criticism is unfair, as many who write judge him by the power and influence of the Jewish community in the last third of the 20th century and not by the reality of his time.

Beyond his public role lay the commitment to his vocation as a rabbi. Wise first sprang into national prominence in 1906 when, after preaching trial sermons at Congregation Emanu-El in New York City, he rejected overtures to serve as rabbi because his demand for a "free pulpit," not subject to control by a board of trustees, was refused. His famous "Open Letter to the Members of Temple Emanu-El of New York on the Freedom of the Jewish Pulpit" is reprinted in his autobiography, *Challenging Years* (1949, pp. 86–94), with a discussion of Louis Marshall's denial that the congregation had called Wise to its pulpit (cf. *Louis Marshall, Champion of Liberty: Selected Papers and Addresses*, vol. 2, 1957, note pp. 831–7). A year later he returned from Oregon to New York and founded the Free Synagogue, based on freedom of pulpit, free pews to all without fixed dues, outspoken criticism of social ills, the application of religion to their solution, and an extensive program of social welfare. His sermons are collected in *Free Synagogue Pulpit: Sermons and Addresses* (10 vols., 1908–32).

In 1922 he launched the Jewish Institute of Religion (JIR), a new kind of seminary which provided training of rabbis from all branches of Judaism, education of Jewish scholars, and preparation of leaders for community service. He served as president until 1948, when JIR merged with *Hebrew Union College in Cincinnati, Ohio, and Nelson *Glueck assumed the presidency.

A social liberal, Wise was co-founder of the National Association for the Advancement of Colored People in 1909 and the American Civil Liberties Union in 1920. He pleaded for clemency and justice on behalf of Sacco and Vanzetti in 1927. He was also active in organizations such as the Child Labor Committee, the Old Age Pension League, the Religion and Labor Foundation, and the League to Enforce Peace. Also, he battled for the rights of workers to organize, and championed the strike against the U.S. Steel Corporation in 1919 and the Passaic textile union strike in 1926. He actively campaigned for Woodrow Wilson in 1912 and 1916, and later supported the candidacies of Alfred E. Smith, Norman Thomas, and (from 1936 on) Franklin D. Roosevelt. With John Haynes Holmes, he headed the City Affairs Committee which exposed corruption in New York City and finally succeeded in forcing the resignation of Mayor James J. Walker in 1932.

Like his Christian counterparts and friends, Walter Rauschenbusch, Josiah Strong, and Washington Gladde, Wise was a forthright, forceful, and influential preacher of social concerns. His opinions and attitudes are expressed in his *Child Versus Parent* (1922); *As I See It* (1944), a collection of his articles for the journal *Opinion*, which he edited from 1936 to 1949; *Personal Letters of Stephen S. Wise* (1956, ed. by J.W. Polier and J.W. Wise); *Stephen S. Wise: Servant of the People – Selected Letters* (1969, ed. by CH Voss). The complete collection of Wise's papers, donated by his daughter Justine to Brandeis

University, have been fully catalogued by the American Jewish Historical Society.

[Carl Hermann Voss]

His wife, LOUISE WATERMAN WISE (d. 1947), was a communal worker, artist, and translator. In her youth she came under the influence of Felix *Adler, founder of the Ethical Culture movement, and was imbued by him with a passion for social justice. During her husband's rabbinate in Portland, Oregon, she founded that city's Visiting Nurse Association. In New York she established, in 1914, the Free Synagogue's Child Adoption Committee. She presided over this first Jewish agency of its kind, and by the time of her death, when it was taken over by New York's Federation of Philanthropies, more than 3,500 Jewish children had been placed in private homes. In 1933 she organized and became the first president of the Women's Division of the American Jewish Congress. As refugees from Germany began to come in greater numbers, she established Congress Houses which provided temporary homes for thousands of refugees. Mrs. Wise's translations of Aimé Pallière's *Unknown Sanctuary* and Edmond Fleg's *Why I Am a Jew, My Palestine*, and *The Land of Promise* helped to popularize these works for English readers. Her paintings of portraits, landscapes, and moving representations of persecuted Jews were widely exhibited. Their son JAMES WATERMAN WISE (1901–1983) held various positions as an organization executive, including director of the Stuyvesant Neighborhood House in New York City, and national secretary of Avukah, the U.S. students' Zionist Federation which he helped to found in 1925. He was editor of *Opinion*, a special correspondent for New York dailies, and a popular radio commentator. His published works include *Liberalizing Liberal Judaism* (1924); *Jews Are Like That* (under the pseudonym Analyticus, 1928); *Legend of Louise*, a brief biography of his mother (1949); and *A Jew Revisits Germany* (1950). In the early 1950s he moved to Geneva where, as an art connoisseur, he engaged in the purchase of paintings for private collectors and museums in the U.S.

[Morton Mayer Berman]

Rabbi Wise's daughter, JUSTINE WISE POLIER (1903–1987), attorney and jurist, was born in Portland, Oregon. Admitted to the New York bar in 1928, she subsequently became the first woman referee in the Workmen's Compensation Division of the New York State Department of Labor (1929–34). She subsequently served as a justice in the Domestic Relations Court of New York City from 1935 to 1962. Justine Polier served as a special adviser to Eleanor Roosevelt in the Office of Civilian Defense in 1941 and 1942. From 1962 on she was a judge in the New York State Family Court.

Her Jewish and civic activities included service as president of Louise Wise Services (from 1941), the Wiltwyck School for Boys (from 1960), and the national women's division of the American Jewish Congress (1948–1956); chairman of the national executive committee of the women's division of the American Jewish Congress (1956–1960); member of the ex-

ecutive of the World Jewish Congress (from 1956); member of the White House Planning Conference on Civil Rights (1965); and as New York delegate to the White House Conference on Children (1960). Among her works on child welfare, psychiatry, and the law are *Everyone's Children, Nobody's Child* (1941); *Back to What Woodshed?* (1956); *View from the Bench: the Juvenile Court* (1964); and *The Rule of Law and the Role of Psychiatry* (1968).

WISEMAN, ADELE (1928–1992), Canadian author. Wiseman was born and raised in Winnipeg, Manitoba. Her parents had emigrated from the Ukraine in 1923 and spent two years in Montreal before settling in Winnipeg's North End, a vibrant enclave of Jewish, German, Ukrainian, and Slavic immigrants. Wiseman earned a B.A. in English and psychology from the University of Manitoba in 1949. Following graduation, she lived in London, Rome, and New York, where she wrote and worked at a number of jobs. From 1964 to 1969 Wiseman lived in Montreal, where she taught English at Sir George Williams (now Concordia) University and Macdonald College of McGill University. She was later writer-in-residence at several Canadian universities and head of the May Studios (Writing Program) at Banff Centre for the Arts. She married the marine biologist Dmitry Stone in 1969 (from whom she was later divorced) and had one daughter.

Wiseman published two novels, *The Sacrifice*, which won the Governor General's Literary Award for Fiction in 1956, and *Crackpot* (1974). Both novels employ biblical metaphors, are set in (the unnamed city of) Winnipeg, and explore the lives of Jewish immigrants who settle on the Canadian Prairies. *The Sacrifice* is the tragic story of a butcher who murders a local temptress. The biblical story of Abraham and Isaac resonates throughout Wiseman's narrative. Her own Abraham – once proud and certain – is transplanted from the Old to the New World, where he loses his third son and his precarious hold on life in a novel that charts the demise of a patriarch. *Crackpot* shifts from the tragic to comic mode and experiments with narrative form and perspective. The work celebrates the resilience of Hoda, an obese Jewish prostitute whose life, like Abraham's, is shattered by moral and spiritual challenges.

Wiseman also wrote two plays (*The Lovebound*, ca. 1960; *Testimonial Dinner*, 1978); two books for children (*Kenji and the Cricket*, 1988; *Puccini and the Prowlers*, 1992); and three works of nonfiction (*Old Markets, New World*, 1964; *Old Woman at Play*, 1978; *Memoirs of a Book Molesting Childhood and Other Essays*, 1987). The short story "Goon of the Moon and the Expendables" appeared in *Malahat Review* (vol. 98 (1992), 5–44). Her correspondence with a fellow writer and

friend is available in *Selected Letters of Margaret Laurence and Adele Wiseman* (1997).

[Ruth Panofsky (2nd ed.)]

WISEMAN, FREDERICK (1930–   ), U.S. producer, director, and writer. Born in Boston, Massachusetts, Wiseman graduated from Williams College in 1951 and from Yale Law School in 1953. After serving as a graduate fellow for one year at Harvard, he was drafted into the army, serving from 1954 to 1956. After working briefly as an assistant to the Massachusetts' attorney general, Wiseman went to Paris, where he studied experimental filmmaking from 1956 to 1958. After he returned to the United States, he taught at Boston University's Institute of Law and Medicine from 1958 to 1961 and served as a research associate at Brandeis University from 1962 to 1966. In 1964, he bought the rights to Warren Miller's 1963 novel *The Cool World* and produced a film version directed by Shirley Clarke. He directed his first film in 1966, *Titicut Follies*, a stark documentary about the conditions at the Massachusetts Correctional Institution at Bridgewater. While his films feature no commentary and no music, Wiseman acknowledges that his fly-on-the-wall films are edited in a way that conveys his point of view. After *Titicut Follies*, Wiseman made *High School* (1968), an examination of the experiences of middle-class students in a Philadelphia high school. In 1968, he contributed to the screenplay for *The Thomas Crown Affair*, but was never credited for his work. Wiseman followed up his documentary films with *Law and Order* (1969) and *Hospital* (1970), an emergency room expose that earned Wiseman a best documentary Emmy. In 1970, he established Zipporah Films, a distribution company named for his wife. From 1971 to 1981, Wiseman had contracts with PBS to shoot one film per year with no limits on time or subject, to be shown first on New York's WNET. His studies included *Basic Training* (1971); *Juvenile Court* (1973); *Welfare* (1975); *Meat* (1976); and *Sinai Field Mission* (1978), which featured American soldiers on a peacekeeping mission in the Sinai Desert; and *Manouevre* (1979). In 1980, Wiseman made the fictional film, *Seraphita's Diary*. He continued his documentary filmmaking with such films as *Racetrack* (1985), *Deaf* (1986), *Blind* (1987), *Zoo* (1993), and *High School II* (1994), a return to topics introduced in 1968. His *La Comédie-Française ou L'amour Joué* (1996) was another departure for Wiseman, focusing positive attention on an institution. Wiseman continued to direct documentaries and dramas, most notably the Holocaust drama *The Last Letter* (2002), but also branched out into theater direction. In 2004, Wiseman wrote and directed *The Last Letter*, an off-Broadway show based on Vasily Grossman's 1960 novel *Life and Fate*.

[Adam Wills (2nd ed.)]

WISEMAN, SHLOIME (1899–1985), Canadian teacher, Yiddish and Hebrew translator, and critic. Wiseman emigrated to

Montreal from Dinovitz, Podolia, in 1913. He was the son of the teacher Shmuel Wiseman, who was a *maskil*, a Bible specialist, and a Hebraist. Shloime, following in his father's footsteps, earned both a B.A. (1920) and M.A. (1923) in pedagogy from McGill University in Montreal even as he was beginning his career as a teacher in the city's Yidishe Folk Shule, a leftist afternoon school created in 1914. A gifted teacher, in 1920 he was offered the directorship of the institution. He held that position until his retirement in 1969. He also served as lecturer in Hebrew at Sir George Williams University (1953–55) and was the first principal of Montreal's Jewish Teachers' Seminary (1952).

In addition to teaching, Wiseman immersed himself in Montreal's Yiddish-speaking community and its cultural life. As a young teacher he also began writing for the Montreal Yiddish press about pedagogy and the responsibilities of teachers in the maintenance and dissemination of Jewish culture. His first serious text appeared in 1916 and he continued to submit articles in Yiddish, Hebrew, and English to Canadian Jewish newspapers and specialized American periodicals. But Wiseman did not limit himself to articles about pedagogy. He also wrote about literature and philosophy. In 1931, he published a three-volume literary anthology for Yiddish schools entitled *Dos Vort*. In 1955, working in collaboration with Mordecai Husid, he published a collection of poems written by the late J.J. *Segal under the title of *Letste Lider*. Wiseman demonstrated his skill as a Hebrew literary critic and translator in 1956 when he assembled, translated, and published a selected anthology of 28 American short-story writers entitled *Mesapperim Amerikayim*. In 1976 Wiseman also published a Hebrew translation of the work of the ancient Greek philosopher Epictetus.

[Pierre Anctil (2nd ed.)]

WISLICA (Pol. **Wiślica**), village in Kielce province, central Poland; town in Sandomierz province in the kingdom of Poland until 1795. Jews settled in Wislica at the beginning of the 16th century. In 1542, after the townsmen obtained a royal privilege (*de non tolerandis Judaeis*) excluding Jews from Wislica, the Jews settled in the suburbs outside the town wall. During the war with Sweden (1656), 50 Jewish families were massacred by Stefan *Czarniecki's soldiers. At the end of the 17th century, Jews settled again in Wislica. An organized community was established at the beginning of the 18th century. A synagogue was then built in the outskirts of the town and a cemetery opened. In 1765, 184 Jews living in the suburbs and 72 in the surrounding villages paid the poll tax. In 1815 Wislica was included within Congress Poland. Until 1862, as Wislica was situated near the Austrian border, the settlement of Jews there was restricted. In 1827 there were 785 Jews living in Wislica (47.1% of the total population). Their number increased to 1,370 in 1857 (69%). Their main occupations were commerce on a small scale, crafts, and transportation. In 1921 there were 1,341 Jews living in Wislica (63%).

Holocaust Period

On the outbreak of World War II there were about 1,500 Jews in Wislica. The community was liquidated on Oct. 3, 1942, when 3,000 Jews from Wislica and its vicinity were deported to *Jedrzejow and from there to the *Treblinka death camp. The community was not reconstituted after the war.

°**WISLICENY, DIETER** (1911–1948), German *SS officer. Originally a journalist, he joined the SS in 1934 and also the SD, where he served in its headquarters in Berlin (see *Gestapo). In 1936 he was appointed head of its Jewish subsection (II 112), but was transferred in 1937 to the SD in Danzig. *Eichmann, who had been one of his subordinates in II 112, got him attached in 1940 to the RSHA's Jewish section (IV D4). Wisliceny was sent to Slovakia as "adviser" for Jewish affairs in the German legation. Slovakia was an ally of Germany and quite responsive to it. He supervised the introduction of the anti-Jewish legislation in Slovakia. In the spring of 1942 he organized the deportation of 55,000 Slovak Jews to Poland. When deportations were stopped, inter alia by the intervention of the Church and some say even the government, Wisliceny started negotiations on the *Europa Plan with the "Working Group" (see Gisi *Fleischmann and Michael *Weissmandel), which believed that it had come upon a formula for saving the Jews by ransom. An initial sum was given Wisliceny, who reported it to his superiors; more was promised but could not be delivered. But the initial acceptance spurred the Working Group into activity to obtain the money and offer it to Nazi officials. In March 1943 Eichmann sent him to *Salonika to deport the Jewish community. Wisliceny carried out his task in two months, utterly destroying the Jewish community and sending it to Auschwitz. He stayed in Greece until the end of 1943, when he returned to Slovakia. From March 19, 1944, he served on the staff of Eichmann's special commando in Hungary. He organized the mass deportations of 437,402 Jews on 147 trains within 56 days. Once again Jewish leaders tried to approach him in an effort to save the Jewish community. He was the liaison in the negotiations with the Relief and Rescue Committee of Budapest in the so-called Blood for Goods exchange. In December 1944 Eichmann had become suspicious of him, and arranged his transfer to the section of the Gestapo dealing with Slovak affairs. At the end of the war Wisliceny surrendered to the Americans and served as an inexhaustible source of evidence. After having been both a prosecution and defense witness at the International Military Tribunal in Nuremberg, he was extradited to Czechoslovakia. After a prolonged trial in Bratislava he was condemned to death and hanged (1948). During his incarceration he wrote important affidavits regarding the Final Solution, his boss Adolf Eichmann, the Mufti of Jerusalem, and the proposed Blood for Goods exchange.

[Yehuda Reshef / Michael Berenbaum (2nd ed.)]

°**WIŚNIOWIECKI, JEREMI** (1612–1651), a Polonized Russian prince, one of the most powerful magnates of Poland-Lithuania in the 17th century. Wiśniowiecki owned enormous estates in the Ukraine on the Dnieper River which were exposed to Cossack and Tatar invasions. The Jews who settled there were murdered during the Cossack riots. Wiśniowiecki had a private army of about 3,000 soldiers. He was a gifted military commander and was successful in many battles against the Cossacks and Tatars, especially in the years 1648–51. Wiśniowiecki also defended the Jews living on his estates against the Cossack units under *Chmielnicki. Nathan Nata *Hannover, author of the chronicle *Yeven Mezulah*, written in the 17th century, glorified Wiśniowiecki. He wrote that the latter was the mainstay in the fight against the Cossacks, the cruel enemy of the Jews.

[Jacob Goldberg]

WISSE, RUTH R. (1936–), scholar of Yiddish literature. A naturalized U.S. citizen born in Cernauti, Romania, Wisse received her undergraduate degree from McGill University in 1957 and her doctorate in 1969. She was assistant professor of Jewish literature at McGill from 1968 to 1971 and was a senior lecturer at Tel Aviv University and The Hebrew University of Jerusalem from 1971 to 1973. She returned to McGill as associate professor in 1975 and was appointed professor in 1978 and chairperson of the Department of Jewish Studies in 1986. She joined Harvard University in 1993, serving as director of the Center for Jewish Studies until 1996, when she was named Martin Peretz professor of Yiddish literature.

Wisse is considered a leader in the revival of interest in Yiddish literature and in the study of the Yiddish language. Her critically acclaimed work *The Modern Jewish Canon: A Journey through Literature and Culture* (2000), an overview of what she defines as the notable Jewish literary works of modern times, has been said to define the modern Jewish experience through the Jewish literature of the 20th century. Her literary defense of the State of Israel, *If I Am Not for Myself –: The Liberal Betrayal of the Jews* (1992), generated a divided critique. Here Wisse contends that liberalism, which would seem to offer promise for modern Jews, has instead fostered an environment that has allowed a propaganda campaign against the Israeli cause. Criticized for an oversimplification of the Arab-Israeli conflict and for using revelations about her personal life in what was termed a political diatribe, the book nevertheless was considered a compelling argument by some reviewers.

Wisse's academic reputation rests on her edited collections of Jewish literature and her literary criticism. In addition to *The Modern Jewish Canon,* her works include *The Schlemiel as Modern Hero* (1970), *A Little Love in Big Manhattan* (1988), and *I.L. Peretz and the Making of Modern Jewish Culture* (1991). She served as editor of *A Shtetl and Other Yiddish Novellas* (1972) and *The I.L. Peretz Reader* (1990), and as co-editor, with Irving Howe and Chone Shmeruk, of *The Penguin Book of Modern Yiddish Verse* (1987).

She is also prominent politically, advocating strong support for Israel and combating what she perceives to be a surge in antisemitism at the turn of the 21st century. It was Wisse, among others, whom literary critic Leon Wieseltier had in mind when he described the "ethnic panic" among American Jews. She opposed a chair in Holocaust studies at Harvard. "It's a strange idea," she said, "You don't have a chair in modern Jewish history, but you have one on the destruction of the Jewish people." She was a member of the search committee, which rejected all candidates for the position; the chair remained unfilled and the money was returned to the donor.

A fellow of the American Academy for Jewish Research, Wisse is the recipient of numerous awards and honors, including the J.I. Segal Award for Literature in 1971 and 1989, the Torch of Learning Award from The Hebrew University in 1993, and the Jewish Cultural Achievement Award from the National Foundation for Jewish Culture in 2001.

[Dorothy Bauhoff (2nd ed.)]

WISSENSCHAFT DES JUDENTUMS (Ger.; "Science of Judaism"; in Hebrew Ḥokhmat Yisrael).

Origin and Definition

The term "Wissenschaft des Judentums" first made its appearance among young Jewish intellectuals during the 1810s and 1820s. Its principal objective, as it was then defined in the *Zeitschrift fuer die Wissenschaft des Judentums* (1822), was the study of Judaism by subjecting it to criticism and modern methods of research. It was emphasized that research must encompass Judaism in its most comprehensive sense: its cultural heritage, the totality of conditions under which it existed and faced its destiny, "the knowledge of Judaism through its literary and historical documentation, and… a statistical knowledge of Judaism in relation to the Jews of our time in all the countries of the world" (*ibid.* pp. 1, 18). The use of the term "science" sought to exclude an approach devoid of criticism of tradition and presupposed principles and beliefs to be proved *a posteriori* by debate or casuistry.

The desire for a scientific knowledge of Judaism gave rise to research at first in Germany (during the early 1820s) within a limited circle of young Jews, the second generation of the Berlin Haskalah. Later it became the legacy of all the

important Jewish communities and one of Judaism's outstanding manifestations in modern times. With the development of the Science of Judaism, its ramification into many spheres and subjects (Bible criticism, Talmud, Jewish literature of all periods, history and archaeology, religious philosophy, and the like), "Science of Judaism" came to signify the totality of studies concerning the Jewish people and of Judaism. In several countries these studies came to be referred to by such terms as "Judaistica," "Judaica," and "Jewish Studies."

Motives, Determining Factors, Generations

The desire for a scientific knowledge of Judaism was not solely theoretical, but was essentially a public trend, a response to the demands which had emerged as a result of the changes in the conceptions, the world outlook, and the Jewish feeling of most of the intellectuals of the younger generation. It was connected with the Jewish awakening among the younger generation and which one of its contemporaries (Lazar *Riesser) described as the return to their people of "unruly sons and carefree daughters" who had previously "trodden upon all that was designated as Jewish." This awakening was also a reaction to the violent anti-Jewish propaganda which was conducted in German literature by the German student movements and to the *Hep! Hep! pogroms which deeply affected the second-generation *maskilim*; this awakening was also connected with the improvement of their intellectual standards and in a deepening of their philosophical views. The best among them were attached to the cultural heritage of Judaism and did not reconcile themselves to its abrogation and disappearance within German society. They were aware of the fact that in Germany modern Hebrew literature was being led "to the grave" (Zunz) because of the voluntary integration of the Jews within German culture and language. The indifference of the younger generation to Judaism and their estrangement from the heritage of generations, accompanied by contempt for Judaism, its values, and its honor, not only endangered Judaism but also struck a severe blow at the image of the modern Jew: one who despised his past and was ashamed of it, was regarded as a wretched and deficient human figure by the intellectual and moral leaders of the time.

All the *maskilim*, and those who had been aroused to work in favor of their people, shared a renewed feeling of Jewish identity and a desire to introduce widespread reforms into the "house," to which they were returning, in which they wished to remain, and within which they intended to work; by nature these reforms were widespread and touched upon beliefs and views, ways of life and the structure of society, education, and culture, and schools and synagogues. The "House of Israel" was to be presented, both internally and externally, in all its cultural values and historical splendor. They believed that civic equality of the Jew, which was not accompanied by the recognition of the cultural value of his Judaism, was of little importance. This feeling of Jewishness had permeated into considerably wide circles of that generation. This called for a spiritual self-determination equivalent

to a recognition of Judaism as a subject of scientific investigation. Serious research would also serve as a solid basis in the struggle for the survival of the Jewish community and would lead to the complete adaptation of Jewish life within state and society. That life would thus benefit from a new and more spiritual image of Judaism, of which it stood so much in need.

From the beginning "Science of Judaism" was thus marked by three elements: self-consciousness, propaganda for internal consumption, and the pleading of its cause before the outside world. These three factors were in evidence throughout, though not to an equal extent or in the same form. As the development of Jewish education and culture during the 19th and 20th centuries internally and the struggle for status externally followed the same pattern throughout the Diaspora, so did "Science of Judaism" in all the countries in which it was cultivated.

These views were voiced by L. Zunz in a statement that only "Science of Judaism" of a standard recognized in the world of European scholarship would be able to bestow upon Judaism the status and the respect which was due to it and gradually arouse the best elements of the Jewish people and unite them. It was therefore the task of Jewish science to win for the Jews a recognized and equal status in the world of culture and spiritually unite the Jewish people. Scholarly activities were to be devoted principally to the study of Hebrew literature, in which resided the spiritual uniqueness of Judaism. These basic views of the early days of the movement greatly influenced the choice of research areas and the course of its development.

Five factors determined the development of the movement, established its trends, marked and singled out its spheres of research, and marked the boundaries between successive generations. These were the following:

(1) the extent of Torah erudition and Hebrew Haskalah in the European countries inhabited by Jews;

(2) the level of humanistic studies in these countries and the extent in which Jews could benefit from general education;

(3) the political, legal, and social status of the Jews in these countries and their struggle for equality;

(4) the cultural, religious, and public ferment within the Jewish population of these countries and the internal polemics within the communities; and

(5) the type of Jewish classes to which Jewish Science addressed itself, and the organizations upon which the scientific activity in the research of Judaism was based. In accordance with the permutations and changes in these factors, the history of Jewish Science – from its beginnings until our time – can be divided into four generations:

(A) the generation of its founders – 1822–54, from the appearance of Zunz's *Zeitschrift fuer die Wissenschaft des Judentums* (1822 to that of *Monatsschrift fuer die Geschichte und Wissenschaft des Judentums* in 1851/52 and the establishment of the Juedisch-theologisches Seminar in Breslau (1854);

(B) the generation of consolidation and organization – 1854–96, to the discovery of the *Genizah* (1896) and the first attempts to summarize the achievements of the "Science of Judaism" (1894);

(C) the generation of confusion and compilation – 1896–1925, to the opening of the Judaistic Institute of the *Hebrew University in Jerusalem; and

(D) the generation of renewal and growth – from 1925 to the present day which is the generation of transition "from the Science of Judaism to Jewish Sciences."

Leopold Zunz

"Science of Judaism" was born with the publication by Leopold *Zunz of his pamphlet *Etwas ueber die rabbinische Literatur* (1818) and his first articles in *Zeitschrift* (on place names in Spain mentioned in Hebrew-Jewish literature; on *Rashi, and his outline of a future statistics of Judaism).

Scientific interest in the Jewish cultural heritage and its history was, however, born before Zunz. The Hebrew poet Solomon *Levisohn, who during his brief life and under most difficult conditions engaged in research work into the language of the *Mishnah (*Beit ha-Osef*, 1812) and the phraseology on the Bible (*Meliẓot Yeshurun*, 1816), published many lectures in German on Jewish history (1820) and also wrote the first biblical geography in Hebrew (*Meḥkerei ha-Areẓ* 1819); Zunz's colleague I.M. *Jost also preceded him with his *Geschichte der Israeliten* (9 vols., 1820–29). Though written more in the Haskalah spirit than in that of scientific research, it nevertheless made a considerable impression on the public. Zunz, however, was the man who symbolized the "Science of Judaism"; he was the first to lay down a detailed program for it, and his works were the first which in practice contained the methods of research which it was to adopt. By his idealism and humanistic fervor and by his ambition to introduce the Jewish cultural heritage into general humanism by and through scientific study of Judaism, Zunz became the symbol of the whole of the "Science of Judaism."

The program which Zunz outlined in his *Etwas ueber die rabbinische Literatur* was the study of Hebrew literature and its history; it included the study of Judaism in all its manifestations: theology, religious worship of Israel; Jewish law, Hebrew literature in particular, of every category and form, including that on the natural sciences and technology and the contribution of the Jews to their development. Jewish ethics and education, which in reality are the practical conclusions of the outlook and the views of generations, also figured in Zunz's program. He also had a program for research into the Judaism of his day. In his essay on Jewish statistics he declared that the purpose of these "statistics" (in those days, this term signified "social science," sociology) would be to acquire a complete picture of the contemporary Jewish condition by a systematic study of that entity which was the result not only of "origin and religion" but also of common language and history and which showed itself in specific qualities and outlook, professional structure, and organized arrangements. Zunz also

outlined the methods to be adopted for the collection and the study of data; he had demonstrated them in his earlier work, which abounds in instructions on research methods, such as examination of sources to ascertain the periods and the places of authors, their personalities, and the reliability of the evidence which they handed down. He also pointed out sources which had not yet been exploited (commemorative coins, tombstone inscriptions, etc.), as well as the importance of responsa as a historical source particularly for the history of the economic life of the Jews. Zunz also drew the attention of researchers to community registers and their importance as a historical source.

The methodical innovation in Zunz's work on Rashi lay in the collecting and comparative study of manuscripts of Rashi's commentaries. From Rashi's works he drew information on the man and his work, his family, his studies, the languages with which he was familiar, and the extent to which he employed them – even a description of his library. The little book made a great impression, especially on Torah students in Western and Eastern Europe, who had become familiar with general culture to varying degrees. They discovered that the Torah was a world by itself and could be of interest to an enlightened man. Many of Zunz's contemporaries admitted this influence and the important role which it played in their lives. To a large extent, all the scholars of the first generation of Jewish Science were the disciples of Zunz: they learned from his methods and followed his example.

The First Generation of Scholars

During the first generation of the promoters of the "Science of Judaism" the foundations were laid for research into all the spheres of Judaism. Of the eight outstanding scholars, S.J. Rapoport, Zunz, S.D. *Luzzatto, and Krochmal – the elders of that generation – and Z. *Frankel, *Geiger, *Munk, and Steinschneider – its younger members – each devoted himself to a specific sphere, opened new vistas for their study, and paved the way for their successors.

The first member of the "generation of the founding and establishment" of the "Science of Judaism" was S.J.L. *Rapoport, whose field was the research of talmudic and rabbinic literature and the history of those periods. His work encouraged and paved the way for a scientific approach to talmudic and rabbinic literature as a source for the study of Jewish history. Rapoport aimed at the enlightenment of the Jewish nation and the strengthening of its self-consciousness. Zunz, on the other hand, who came to be influenced by Rapoport, devoted himself mainly to the history of Jewish liturgy. His meticulous attention to detail, and the interlacing of these details with historical periods and localities and the development of Jewish religious and intellectual life, raised his works to the rank of classics, retaining their importance to the present day.

The early scholarly activity of Samuel David Luzzatto was connected with Hebrew linguistics and the Targum Onkelos, followed by biblical exegesis. His main importance lies

in the discovery of numerous and important Hebrew manuscripts and their publication, among them collections of poems by *Judah Halevi ("*Betulat Bat Yehudah*," 1840; "*Diwan*," 1844). The wide influence Luzzatto had on his generation is essentially due to his critical evaluation of the past. He fought against disruptive trends in Judaism, the delusions of the emancipation, and the whole outlook of his generation. He called for the existence of Judaism as a separate religious-national entity living according to its usages and the principles of its ethics. He appraised earlier conflicts with the viewpoint of those of his day (*Meḥkerei ha-Yahadut*, ed. Tevunah, Warsaw, 1913). Thus, he was to a certain extent responsible for extracting the "Science of Judaism" from the domain of individual scholars engaged in research and making it a public concern.

Nahman *Krochmal's *Moreh Nevukhei ha-Zeman* ("Guide of the Perplexed of the Generation") was published in 1851 but was written during the 1830s, after the publication of the biographies of Rapoport, Luzzatto's criticism of A. *Ibn Ezra and *Maimonides, Zunz's work on homiletics, and Jost's history. This "Guide" was an attempt to provide a philosophical-historical answer to the problems of the time: how to prevent the disintegration of Jewry by making it conscious of its unity; by salvaging at least part of the authority of religious tradition and strengthening it through sacrificing some of it; by an attempt to strengthen the belief in the future of Judaism; and by finding methods of adapting it for its future task. Krochmal's work summed up the early achievements of the "Science of Judaism" in fostering Jewish self-consciousness: it included Zunz on the spiritual unity of the nation throughout the generations, the nationalist element in enlightenment (Rapoport), and the faith of Luzzatto in the eternity of the Jewish people and its religious character. Krochmal's historical-critical approach paved the way for further research. Jost had described Jewish history in all its periods but Krochmal was the first to adumbrate a unified conception of Jewish history as a whole. The "Guide," both in content and form, ranks among the most important works of the "Science of Judaism" and Hebrew literature in general.

Frankel, Geiger, Munk, and Steinschneider

Although Zunz had pointed out on the title page of his *Gottesdienstliche Vortraege* (1832) that it was "a contribution to the study of antiquity, Bible criticism, and the history of literature and religion," only the younger members of the founding generation devoted their work to biblical and religious research and laid the foundations for its future development. Zacharias *Frankel did this for Jewish law, the history of *halakhah*, and the study of the Talmud. With scholarly caution and care in phrasing and conclusions Frankel established the historical factor in the evolution of Mishnah, the *Talmud, and the *halakhah*, pointing out its principal stages.

The work of Abraham *Geiger, the leading spokesman of the religious reform movement, extended over many spheres of the "Science of Judaism," such as the study of the Bible versions, the ancient *halakhah*, and Jewish sects, and subjects ranging from the languages of the Mishnah, the Hebrew poetry of Spain, and the biblical exegesis of France to the Jewish scholars of Italy during the 16th and 17th centuries. For Geiger all these had the internal evolution of Judaism in common; the reformer occasionally introduced contemporary polemics, consciously or unconsciously, into the study of the past. His largest work was *Urschrift und Uebersetzungen der Heiligen Schrift in ihrer Abhaengigkeit von der inneren Entwicklung des Judentums* (1857). Though subsequent research refuted most of Geiger's conclusions, his contribution to the development of the "Science of Judaism" should not be ignored. There was a great methodical innovation in Geiger's system: the textual discrepancies in the Bible were used by him as the foundation for a history of Judaism. The "Urschrift" aroused strong polemics and its reformist orientation impaired its influence, though it inspired students in later generations.

Solomon *Munk and Moritz *Steinschneider were the first scholars of Oriental philology, particularly Arabic, among the founders of the "Science of Judaism." They developed new methods of research into medieval Jewish literature, in general, and the contribution of the Jews to the development of the sciences, in particular. Munk was the first to make use of the Arabic sources in the study of the history of Jewish literature and thought. His essays on the medieval Jewish scholars who wrote in Arabic, such as *Saadiah Gaon, Joseph ibn *Aknin, and Jonah *Ibn Janaḥ, were based on Arabic sources and presented these scholars in a new light. His research into the history of Jewish philosophy was of prime importance. In his *Mélanges de Philosophie juive et arabe* (1859) he revealed Solomon ibn Gabirol as the author of *Fons Vitae* and in his edition of the Arabic original of Maimonides' "Guide" (1856–66) he laid the foundation for the study of medieval Jewish philosophy.

Steinschneider opened new vistas of bibliographical Jewish literature which won him the title of "father of Jewish bibliography." Three of his works are of particular value: his survey of "Jewish Literature," his catalogs of Hebrew manuscripts, and his books on the Hebrew translations of the Middle Ages and the Arabic literature of the Jews. His survey of Jewish literature was the first comprehensive review of the literary activity of the Jews in all languages and at all periods, from the conclusion of the Bible until the end of the 18th century. Steinschneider's catalogs of the Hebrew manuscripts of five large European libraries (*Bodleian of Oxford, Leyden, Berlin, Minsk, and Hamburg) disclosed treasures of Jewish literature and culture which had hitherto been hidden. The meticulous accuracy in his description and the astonishing knowledge which underlies them became a wonder; they continue to guide scholars in their research into the numerous problems which these discoveries initiated. His works on the translations and the Arabic literature of the Jews became the basis for research into the Jewish history, literature, and culture of the Middle Ages.

Plans for University Faculties; Periodicals; Influence on a Wider Public

The "Science of Judaism" of the founder generation was concentrated in the hands of individuals. They worked in this field "for its own sake" and in their hours of leisure, as they had to teach in schools (Zunz, Munk, and Steinschneider), hold rabbinical office (Rapoport, Frankel, and Geiger), or were engaged in business (Krochmal). Luzzatto was the only one who, as lecturer at the rabbinical seminary in Padua, was more or less directly connected with his scholarly activity. The ideal of the Jewish scholars of those days was the opening of a faculty for the sciences of Judaism or Jewish theology in one of the universities. Zunz declared this at the outset of his activity, Geiger preached in favor of this, and there was even a public demand for the foundation of a "Jewish theological faculty" and a "Jewish seminary" in Germany. Committees were set up and funds were raised (1838). During the brief spring of the Revolution of 1848, Zunz submitted a memorandum to the University of Berlin on the allocation of a place to the "Science of Judaism," but the university rejected this proposal. In reality, the "Science of Judaism" had little appeal for the public and was restricted to the scholars engaged in the subject.

In about 1838 Geiger attempted to amalgamate all those engaged in the "Science of Judaism" into one group. It was joined by over 20 people, including Jost, Zunz, Rapoport, Munk, J.N. Derenbourg (see *Derenburg family) and others. Even though this society was not properly "organized," it faithfully expressed one of the characteristic traits of the generation: a readiness to assist colleagues, including scientific collaboration. It was no accident that one of the literary forms of the publications of the "Science of Judaism" in that generation was that of the "letter," or "epistle," in which scholars and researchers described their work to each other. There were not periodicals exclusively consecrated to the "Science of Judaism"; even Geiger's *Wissenschaftliche Zeitschrift fuer Juedische Theologie* (1834–48) was mainly devoted to contemporary problems which, in the opinion of Geiger, were bound up with its struggle for Reform by the creation of a "Jewish theology" based on historical criticism.

The research work of the "Science of Judaism" was published in the Hebrew periodicals of the Haskalah movement (*Bikkurei ha-Ittim* (1821–32) of Jeiteles in Prague, *Kerem Ḥemed* (1833–56) of Goldenberg in Galicia; *Ziyyon* (1841–42) of Jost and M. *Creizenach in Frankfurt; *Pirḥei Ẓafor* (1841–44) of Vilna) and in the German-Jewish press, such as L. *Philipson's *Allgemeine Zeitung des Judentums* (1837–1922), J. *Fuerst's *Der Orient* (1841–51) and Jost's Israelitische Annalen (1839–41) of which only one of the latter (*Orient*) contained a special literary supplement of scientific standard. Yet this first generation of the "Science of Judaism" was of great historical importance. A desire to explore the past grew among many of the intellectuals of the younger generation. Dozens of authors and students from every quarter, the old and the young, from Germany, Austria (mainly Bohemia, Moravia, and Galicia), France, Italy, Poland, and Russia – some of whom eventually achieved fame – published studies and reviews, articles and notes on the "Science of Judaism" in Jewish periodicals, in Hebrew and other languages. Among them were also scholars whose principal scientific activity was in other spheres, but who felt the need to engage themselves also in the "Science of Judaism."

Disrespect toward Judaism and contempt for its past was on the decline among Jewish and Christian intellectuals, while self-respect was rising among the Jewish public. From this point of view the influence of the "Science of Judaism" was more powerful among the Jewish masses of Eastern Europe: the inclination toward Hebrew of the Haskalah movement and its nationalist tendencies bore the imprint of the "Science of Judaism" and the new perspective on the Jewish past and culture which it had given to that generation. The polemics on religious reforms which perturbed West European Jewry, particularly German Jewry, were also considerably influenced by the "Science of Judaism" and took place against a scholarly background. As a result of this the public became aware of the necessity to promote the development of the "Science of Judaism," to consolidate it, and to organize it.

Rabbinical Seminaries, Learned Societies, and Periodicals

The establishment of the *Juedisch-theologisches Seminar in Breslau (1854) marked the beginning of the second generation of the "Science of Judaism." This was the first institution which made it possible for scholars to devote themselves entirely to the "Science of Judaism." They also could train new generations of students by associating them in the probing of the problems which held the attention of their teachers. Z. Frankel, who headed the seminary for 20 years, was aware of its scientific mission in addition to its practical objectives – the training of rabbis, and during the first years also of teachers. For the first time a modern curriculum for the dissemination of higher Jewish learning was established. It was based on new methods of research while aiming at appropriate standards of knowledge in Bible, the Talmud, and rabbinic literature. The scientific standard of the first teachers (Frankel, the historian *Graetz, the classical philologist Jacob Bernays (see *Bernays family), and the teacher of Jewish religious philosophy Manuel *Joel), the strict demands on the students' preliminary knowledge, and the relationship between their Jewish education and their university studies, as well as the encouragement given to the students in their research projects, assured the success of the foundation.

Approximately 100 of the 300 students who graduated from the seminary during the first 40 years of its existence engaged in Jewish scholarship and published research work, among them Israel Levy, Saul Horowitz, Adolf *Schwartz, Alexander *Kohut, W. *Bacher, J. *Theodor, M. *Guedemann, D. *Kaufmann, N. Porges and J. Perles, H. *Gross, and J. *Freudenthal and Jacob Gutmann. These scholars published much of their research in the *Monatsschrift fuer Geschichte und Wissenschaft des Judentums*, which was founded by Frankel in 1851 and continued to appear until 1939.

The Breslau Seminary became the model for most rabbinical seminaries founded during this period in several countries, and which became centers of the "Science of Judaism." In Berlin the *Hochschule (Lehranstalt) fuer die Wissenschaft des Judentums was founded by Geiger in 1870, and its Orthodox counterpart, E. *Hildesheimer's Rabbinical Seminary, in 1873. The Bet ha-Midrash Lilmod u-Lelamed of Vienna was founded by A. *Jellinek in 1863; the *Ecole Rabbinique was transferred to Paris in 1859 and Jews' College was established in London in 1856. The Landesrabbinerschule of Budapest was founded in 1877 and the Juedisch-theologische Lehranstalt in 1893. Leading Jewish scholars such as A. Berlin, J. *Barth, D. Hoffmann, I.H. *Weiss, M. *Friedmann, M. *Friedlander, Israel *Abrahams, W. Bacher, D. Kaufmann, L. *Blau, A. *Buechler, and A. Schwarz headed and taught at these seminaries. Higher institutes for the training of rabbis were also founded in the United States, such as the Jewish Theological Seminary in New York and *Hebrew Union College in Cincinnati, although at first they did not influence the development of the "Science of Judaism."

In addition to rabbinical seminaries, several other institutions were founded and a number of societies were organized during this period for the promotion of Jewish scholarship (see *Learned Societies). In 1855 the Institut zur Foerderung der israelitischen Literatur was established by Philipson, Jellinek, and Jost. The Zunzstiftung was established in 1864 (on the occasion of Zunz's 70th birthday); the interest from it was placed at his disposal for the rest of his life, after which it was consecrated to works in the spirit of Zunz. In 1864 the *Mekiẓe Nirdamim society was founded, whose aim it was to publish important Hebrew manuscripts. In 1869 Moses *Montefiore founded the Yeshivat Ohel Moshe vi-Yhudit in Ramsgate; it was to give aged scholars the possibility of pursuing their work in material security. In 1880 the Société des Études Juives was founded in Paris; its organ became the *Revue des Études Juives (1880), which rivaled the "Monatschrift" in importance and is still published. All these institutions and societies helped in the progress of the "Science of Judaism." Important *libraries were attached to them, building up collections of manuscripts and rare books.

About 20 periodicals devoted to the "Science of Judaism" were published during that period. These publications were often somehow connected with the above institutions and published by them with the active collaboration of their teachers and students. Apart from those already mentioned, these were the *Magazin fuer Geschichte, Literatur und Wissenschaft des Judentums*, published in Berlin by A. *Berliner and D. Hoffmann (1874–93), the *Jewish Quarterly Review (London, from 1889), and the *Hebraeische Bibliographie*, published by Steinschneider (1858–82). Important periodicals and literary organs were published in Hebrew, mainly on the initiative of individual scholars, such as Senior Sachs' *Kerem Ḥemed* (1854–56) and *Ha-Yonah, Ha-Teḥiyyah* (1851–57), of Schorr's *He-Ḥalutz* (1852–89); Blumenfeld's *Oẓar Neḥmad* (1856–63); T.H. Weiss' and M. Friedmann's *Beit ha-Midrash*

and *Beit ha-Talmud* (Vienna, 1881–89); and Kobrak's *Jeschurun (1856–78).

Almost all Hebrew periodicals published articles as well as manuscripts in the field of the "Science of Judaism," some of them by prominent scholars. Among them were S.J. *Fuenn's weekly, later monthly, *Ha-Karmel* (1860–80), P. *Smolenskin's *Ha-Shaḥar* (1869–85), and among the annuals Sokolow's *Ha-Asif* (1885–89, 1894) and S.P. *Rabbinowitz's *Keneset Yisrael* (1886–88). *Ha-Maggid* (1856–1903), the first weekly Hebrew newspaper, carried a special section, *Ha-Ẓofeh le-ha-Maggid*, most of which was consecrated to the "Science of Judaism" and published contributions of Jewish scholars from Eastern and Western Europe. The large correspondence on subjects of the "Science of Judaism" also shows the wide interest taken in it within the Jewish communities of the East and the West.

During this period the development of the "Science of Judaism" was marked by a strong historical trend. Much attention was given to the history of the Jews in the lands of their dispersion, to the countries and their communities, and to their beliefs and views. In their usages and institutions it was possible to determine the evolution from one period to another and from one country to another. This historical trend was the result of external and internal circumstances. The struggle for emancipation continued during all the years which followed upon the formal granting of equality. Jews were compelled to struggle not only for the practical application of this equality but also for its public recognition.

The *antisemitism which emerged in the course of the 19th century in the form of a popular movement and as a platform for the political organization of the masses intensified this struggle. Jewish communities were obliged to stress the historical foundation of their demands and claims. It was believed that they would then be regarded as an organic part of the state or country, as they had participated in their political and cultural development. This is evident in the activities of the historical societies and commissions, which were then formed in almost every country (the first in Germany in 1885, from Steinschneider's circle) for the collection of historical records on Jewish settlements and their history, and their subsequent publication.

Historiography

The same trend was responsible for such studies as those of Darmesteter on Rashi's *La'azim* and the French exegetic literature (1872); Guedemann's *Geschichte des Erziehungswesens* (1880–88); and studies on Jewish philosophy during the Hellenistic period (Freudenthal) and the Middle Ages (Jacob Guttmann). Internal conflicts within the communities were also responsible for the historical trend in the "Science of Judaism." All the factions in the polemics on religious reforms sought to find support in historical research: either to prove that non-organic and "incidental" strata had been added to the basic structure of Judaism according to time and place, and these should be rejected; or out of a desire to preserve the integrity of historical Judaism and its continuity while accept-

ing the principle of evolution within it and historical change as a fact; or by explaining by means of historical research the changes within the framework of Judaism which was in itself stable and immutable.

In practice, historical research constituted an encounter of all the trends of Judaism with the past. The historical approach within the "Science of Judaism" was due to a large extent to the influence of H. Graetz and his work. Together with the 11 volumes of his *Geschichte*, Graetz published 150 preliminary studies on all the periods of Jewish history (mostly in the *Monatsschrift*). These studies provided ample material for later historians. Graetz's influence is also reflected in areas in which the "Science of Judaism" made particular progress during this second period: the history of the Oral Law and medieval and modern Jewish history. To the first belongs Karaite studies by Simḥah Pinsker, P. Frankel, and A. *Harkavy; I.H. Weiss' *Dor Dor ve-Doreshav* (1871–91) and the polemical researches of J.H. *Schorr and Abraham Krochmal; and the studies of Leopold *Loew (e.g., *Die Lebensalter in der juedischen Literatur*, 1875). With their many-sided work Bacher and David Kaufmann followed to a considerable extent in the footsteps of their teacher Graetz. They did influential research in the fields of *aggadah* and Hebrew philology (Bacher) and on Jewish and religious philosophy and communal and family history. They also paved the way for a history of Jewish art and archaeology (D. Kaufmann).

Research into the language of the Talmud and the Targums were undertaken by Jacob *Levy in his dictionaries, Kohut's *Arukh ha-Shalem* (1878–92), and Fuenn's *Oẓar Leshon ha-Mikra ve-ha-Mishnah* (1884–1900). A. *Neubauer and A. *Berliner wrote on the geography of the Talmud, and R.N. *Rabbinovitz did pioneer work on the text of the Babylonian Talmud, *Dikdukei Soferim* (1868–86). In the sphere of Jewish history, the most influential writers were M. *Wiener, M. *Kayserling, and Joseph *Jacobs, developing new methods in the use of new sources for the study of history of the Jews in various countries. The growth of large Jewish libraries with their collections of manuscripts and the opening of the great general libraries to Jewish scholars, as well as the publication by them of manuscript catalogs, encouraged scholars to publish the "secrets" of bygone generations. The number of works that were published from manuscripts during this period, whether for the first time or in different versions, amounted to several hundreds of the medieval period alone.

The scholars of the older generation were joined by younger ones who published manuscripts in the fields of their particular interest. These critical editions, with their notes and introductions, succeeded in drawing attention to subjects which had been neglected, perhaps owing to the limited material available. First among the scholars in this field were Solomon *Buber (Midrashim and medieval *halakhah*), Berliner (Rashi's Pentateuch commentary, Targum Onkelos, historical texts), Derenbourg (Saadiah), Harkavy (the period of the *geonim*, texts and records on the history of the Jews in Russia), Senior *Sachs (Gabirol's poetry with commentar-

ies), Jellinek (minor *Midrashim* from Kabbalah literature), A. Neubauer (historical texts), and David Kaufmann (historical and literary texts).

The three elements which fashioned the character of the second generation "Science of Judaism" – the rabbinical seminaries, the concentration on local Jewish history, and the emphasis on the publication of manuscripts – were responsible for a decline in the "Science of Judaism" and the self-criticism with which its past and future prospects were viewed. The framework of the rabbinical seminaries, in which the link between general and Jewish scholarship was tenuous (the student studied general sciences at the universities), kept distinguished scholars away, as they did not wish to confine themselves to a "ghetto" (Steinschneider), or it made them join the universities at a later stage (J. Bernays and I. *Goldziher). This lowered the standard of instruction in these institutions. In addition, the practical objective (the rabbinate) of the seminary course did not assure a continuation of the scholarly work, except for the limited number of those who took up a teaching career. Criticism of the "Science of Judaism" at the close of the 19th century was expressed in a current saying: its protagonists are rabbis who begin with the publication of a medieval text and end with writing the history of their community, or that of one of the neighboring communities.

This was the situation during those years in which the changes in the status of the Jew called for stock-taking by every Jewish intellectual. Antisemitism had succeeded in isolating the Jews socially. The emancipation of the Jews had constantly to be fought for, and this perturbed the Jews in general, as well as every individual Jew to varying extents. As a result of the constant tension, this self-consciousness became a moral necessity for every Jewish intellectual who did not wish to abandon his people in the hour of its plight. The pogroms and persecutions which took place in Russia became a Damoclean sword for all Jews, and the mass emigration from Russia through Central and Western Europe on its way to the transatlantic countries revived universal Jewish ties which had been weakened over the past generations. Collaboration in matters of Jewish concern in various countries was encouraged, and a whole network of world Jewish organizations and institutions of unprecedented dimensions in Jewish history came into being.

These activities, which were marked by high organizing ability and financial generosity, accompanied Jewish misfortunes at the time of the Russian pogroms (1881–1920). They also called for a fundamental assessment and serious scientific study of the Jewish situation. The nationalist movement whose slogan was "Rebellion against the Exile" (see *Ḥibbat Zion and *Zionism) considered as one of its first tasks a renewal of Jewish historic consciousness by imparting to the intelligentsia a knowledge of Judaism and its values, based on the results of scientific research. The nationalist movement did in fact initiate literary activities with the aim of "ingathering" the outstanding works of the past in accordance with contemporary requirements (*Aḥad Ha-Am and the es-

tablishment of the publishing house *Achiasaf*). Preliminary plans were drawn up for a "summing up" of the "Science of Judaism" and its achievements in the form of an *encyclopedia (*Oẓar ha-Yahadut* of Aḥad Ha Am) which would pass on to the present-day generation the "Torah" of Judaism clearly and without scientific discussions.

The Socialist and revolutionary agitation gave Jewish historical research a new subject – the working classes. It called for research into the Jewish economy, the way of life of the masses, and the promotion of a popular national culture for which there was a growing demand; it was to be fostered and had to be considered from a scientific angle. As a result, the objectives of the "Science of Judaism" and its methods became problematical and led to a number of experiments in promoting and planning research. These became the outstanding characteristics of the third generation of the "Science of Judaism."

The establishment of institutions and organizations for the promotion of the "Science of Judaism," such as the *Gesellschaft zur Foerderung der Wissenschaft des Judentums (Berlin, 1902) and the Verein zur Gruendung und Erhaltung einer Akademie fuer die Wissenschaft des Judentums (Berlin, 1920), was an innovation in that these were not connected with rabbinical seminaries and had no other objective but the promotion of science. Another innovation was the establishment of societies and institutions for the promotion of research in subjects with which the "Science of Judaism" had not dealt until then, such as Jewish ethnography (in the framework of "the Historical-Ethnographical Society" of St. Petersburg; the "Ethnographical – Historical Expedition" of *An-Ski, 1912); research into Jewish statistics (Verein fuer Juedische Statistik, Berlin, 1902), the publication of a special periodical for Jewish demography and statistics (in German, under the editorship of A. *Ruppin); Jewish art ("*Society for Jewish Folk Music," St. Petersburg, 1908), the exploration of Palestine and its antiquities (the Palestine Exploration Society was founded in Jerusalem, 1919); and similar projects.

There was also an innovation in the surveys which were carried out by Jewish organizations and were of importance to all subsequent research. The collection of material on the economic situation of the Jews in Russia (in 1898–99) by a team of experts for the *Jewish Colonization Association (*Recueil de matériaux sur la situation économique des Israélites en Russie*, 2 vols., Paris, 1906–08; there is also a Russian edition) became the basis of all subsequent research on the Jewish economy in Russia (Jacob *Lestschinsky). The two volumes which contained the material on the pogroms in Russia (*Die Judenpogrome in Russland*, 2 vols., 1910), which were published by the Zionist Relief Fund (under the editorship of L. *Motzkin), were a contribution of great importance in this sphere. A fresh development was the rise of non-commercial publishing companies such as *Achiasaf*, Warsaw, and the *Jewish Publication Society of America (Philadelphia), one of whose aims was the propagation of the "Science of Judaism."

Such ventures often foreshadowed institutions. Thus "YIVO" (Yidisher Visnshaftlikher Institut, established in 1925) was heralded by *Der Pinkas* ("Yearbook on the history of Yiddish literature and its language, folklore, criticism and bibliography"; Vilna, 1912), edited by S. *Niger. This annual published B. Borochov's "Documents on the Philology of Yiddish Language Research." The friends of Yiddish and popular Jewish culture grouped themselves around him. The third generation of the "Science of Judaism" had three achievements to its credit:

(1) The summing up of the "Science of Judaism" in *The Jewish Encyclopaedia* (see *Encyclopedias; 1901–06), which was devoted to the "history of the Jewish people, its religion, its literature, and its customs from antiquity to the present era";

(2) The planning of basic reference books, which required the collaboration of scholars;

(3) The discovery of the *Genizah*.

The *Jewish Encyclopaedia*, which formed the basis of the *Yevreyskaya Entsiklopediya* (1908–13; see *Encyclopedias) and the *Oẓar Yisrael* (1906–13; see *Encyclopedias), was published with the participation of Jewish scholars from many countries, as well as a large number of non-Jewish scholars. This encyclopedia summed up the achievements of the "Science of Judaism" in every sphere.

The Gesellschaft zur Foerderung der Wissenschaft des Judentums, one of whose principal tasks was the publication of reference books of a high standard, was unable to complete its program, though in those works it did publish it raised the standards of the "Science of Judaism" and met the demands of the time. The society turned to several Jewish scholars who had achieved repute for their contributions to the general sciences and encouraged them to carry out work in the field of the "Science of Judaism." The society thus published, among others: Georg *Caro's *Sozial-und Wirtschaftsgeschichte der Juden im Mittelalter und der Neuzeit* (1908–20), Eduard *Mahler's *Handbuch der juedischen Chronologie* (1916), Samuel *Krauss' *Talmudische Archeologie* (3 vols., 1910–12), and I. *Elbogen's *Der Juedische Gottesdienst in seiner geschichtlichen Entwicklung* (1924). The program for an Akademie fuer die Wissenschaft des Judentums, which was submitted by its first director (Eugen *Taeubler), envisaged a *Forschungsinstitut* whose members, mostly younger scholars, took on specific projects in their respective fields of study. These were discussed at the meetings of the institute under the guidance of its director. Some of the scholars who worked in the Akademie later became prominent in the "Science of Judaism."

The investigation of the Cairo *Genizah* by Solomon Schechter (1847–1915) and the publication and study of its contents had a revolutionary impact on the "Science of Judaism." It made research possible on periods and subjects in which lack of source material had made research difficult. Out of the *Genizah* Schechter published about two-thirds of Ben Sira in the Hebrew original (1899); materials on the life of Saadiah and his writings; material on the history of the Jews

of Palestine during the 11ᵗʰ century; and material on the history of Jewish sects. *Genizah* research enriched the "Science of Judaism" during the first years after its discovery and added new chapters on Jewish history and literature, particularly in the field of Midrash and the literature of the *geonim* (Louis *Ginzberg, Israel *Davidson, and Jacob *Mann), in that of prayers and hymns (Davidson and Elbogen), and in Jewish history in the Orient, particularly Egypt and Palestine (Mann, R. *Gottheil, and others). The progress of the "Science of Judaism" in the United States is also linked with the personality and work of Schechter. At the Jewish Theological Seminary of America, of which he was the head from his arrival in New York (1902), he gathered a team of scholars (Louis Ginzberg, Israel Friedlander, A. *Marx, and I. Davidson), built up its library, which later became one of the largest Jewish libraries – it is particularly rich in Hebrew manuscripts – and raised the seminary to the rank of one of the leading institutions of the "Science of Judaism."

In Eastern Europe, especially in Russia, where almost half of the world's Jewish population lived, the "Science of Judaism" made little progress in spite of intensified Jewish consciousness and a strong nationalist movement. The government – under the influence of the leaders of Orthodox Jewry – would not authorize the establishment of a seminary for the training of modern rabbis and Jewish scholars. Those engaged in the study of Jewish sciences were either authors and scholars, who as a result of publicistic discussions on contemporary problems had passed on to the study of Jewish history (S. *Dubnow, S. *Ginsburg, P. *Marek, J. *Hessen, S.P. Rabbinowitz, B.Z. *Katz), or rabbis and Torah scholars who had adopted, under the influence of the "Science of Judaism," modern methods (such as B. Ratner in his *Ahavat Ẓiyyon vi-Yrushalayim* (1904–17) on the text of the Jerusalem Talmud and H. *Tchernowitz (Rav Ẓai'ir) in his *Le-Toledot ha-Shulḥan Arukh ve-Hitpashetuto; Ha-Shiloʾaḥ*, 1899–1900). Others, speaking out in defense of traditional Judaism by exposing the inner contradictions of the *Haskalah, tried to offer a better understanding of Judaism and its moral values (S.A. Horodezky, W. Jawitz), or to refute the conclusions of the "Science of Judaism" and its historical criticism (Isaac ha-Levi).

Only a few Jewish scholars in Eastern Europe, most of whom had been educated in Western Europe, made a substantial contribution to the "Science of Judaism" writings, at least partly in Hebrew (S.A. *Poznański). Contributing western scholars included Abraham *Kahana in "*Perush Madda'i la-Tanakh*" and *Horodezky in *Ha-Goren*. The influence of the "Science of Judaism" in Eastern Europe extended to Palestine, where particular emphasis was put on Hebrew linguistics and the geography of Ereẓ Israel (E. *Ben-Yehuda's massive *Millon* (dictionary) and his "Memoirs"; the activities of the *Vaʾad ha-Lashon* (see: Academy of Hebrew Language) periodical, 10 volumes; and A.M. *Luncz's *Jerusalem* (1882–1917). These studies also found an echo outside Palestine (D. *Yellin, the brothers J.J. and A.S. *Yahuda, E. *Gruenhut, A.M. Toledano). Some of the leading scholars (M. Friedmann and W. Bacher,

A. Berliner and A.E. Harkavy, S.A. Poznański and S. Krauss, D. Kaufmann and M. Steinschneider) cooperated with them. There was also a certain increase in Hebrew publications dealing with subjects of the "Science of Judaism." The initiative of Bialik in 1923 (with I. Elbogen, J.N. *Epstein, and N.H. *Tur-Sinai (Torczyner)) to publish *Devir* (periodical for the "Science of Judaism") appeared to herald a new era. Its program included "research on the present condition of living, creative Israel," and research into "popular literature" and "Jewish literature of the last century."

With the establishment of the Hebrew University in Jerusalem, a new era began for the "Science of Judaism." For the first time it found itself in its entirety within a framework of an institution of higher education and learning – with Jewish life in all its manifestations and developments as its object – to which the Jewish social reality in its ancient homeland gave a territorial-historical continuity and national and cultural stability. These factors widened the spheres of research. New, or almost new, subjects came to the fore, such as the archaeology and geography of Ereẓ Israel, talmudic philology, Jewish Hellenism, Hebrew law, Jewish mysticism, modern Hebrew literature, Yiddish and its literature, Jewish sociology, and the study of contemporary Jewry. Judaic studies thus replaced the "Science of Judaism." This development also influenced the "Science of Judaism" in the United States, almost the only country in the Diaspora where it continued to advance as a cultural-spiritual factor in the life of its Jewish community. As for other countries, particularly in Central and Eastern Europe, the "Science of Judaism" was integrally bound up with the struggle of the Jewish communities for their survival in an age in which Jewish diaspora existence was threatened by assimilation, on the one hand, and persecution and extermination, on the other.

WISSOTZKY, KALONYMUS ZE'EV (1824–1904), merchant, philanthropist, and supporter of *Ḥibbat Zion. Born in Zhagare (Kovno province), Wissotzky attended yeshivot and then tried his hand at agriculture. Having failed, he became a businessman and, in 1858, he moved to Moscow, where he established the famous tea firm that bears his name (*Aḥad Ha-Am was at one time manager of its London branch). He became a wealthy man and took an interest in public affairs, especially by subsidizing charitable institutions and causes. Wissotzky was one of the earliest adherents and supporters of the Ḥibbat Zion movement in Russia. In 1885 he visited Erez Israel on behalf of the movement and prepared a survey of the general condition of the *yishuv* and of the new settlements that was to have a profound effect upon the practical work of Ḥovevei Zion in the country. For the rest of his life, he maintained his philanthropic activities, supporting Hebrew literature in particular. (*Ha-Shilo'ah, the Hebrew monthly, was financed by him in the first years of its existence.) Under Aḥad Ha-Am's influence he donated 20,000 rubles for the publication of a Hebrew encyclopedia for Jewish studies (1894). This project being canceled, the money was given instead to the society of *Marbei Haskalah* in Russia. According to his will, his entire share in the Wissotzky tea firm (one million rubles) was given to charity, including national Jewish purposes, among them the establishment of the Haifa Technion. In 1898 he published *Kevuẓat Mikhtavim* ("Collection of Letters"), which contains his impressions of the trip to Erez Israel and various other documents relating to his activities in behalf of Ḥibbat Zion.

WISTRICH, ROBERT S. (1945–), British-Israeli historian and writer on antisemitism. One of the best-known contemporary historians of antisemitism and related topics, Robert Wistrich was born in the Soviet Union but lived in England. He was educated at Cambridge and London Universities. Wistrich held chairs at London University and the Hebrew University of Jerusalem. From 2002 he was director of the Vidal Sassoon International Center for the Study of Antisemitism in Israel. His many books include *Revolutionary Jews From Marx to Trotsky* (1976), *Socialism and the Jews* (1982), and *Antisemitism: The Longest Hatred* (1991), which was made into a successful television series.

[William D. Rubinstein (2nd ed.)]

WITKON, ALFRED (1910–1984), Israeli jurist. Born in Berlin, Witkon settled in Palestine in 1935 and engaged in private

practice and teaching at the Jerusalem Law School until 1948, when he joined the Israel Defense Forces, becoming a captain in the Legal Corps. He was president of the Jerusalem District Court from 1948 to 1954, when he was nominated to the Supreme Court. He lectured on tax legislation at the Hebrew University of Jerusalem and at Tel Aviv University and published numerous contributions to law journals, and in particular in the Israel Law Review. His major publications, all of which are in Hebrew, were *Law and Society* (1954), *Law and Politics* (1965), and *Laws of Taxation* (1969).

WITNESS (Heb. עֵד), one that has personal knowledge of an event or a fact. The evidence of at least two witnesses was required for convicting the accused (Num. 35:30; Deut. 17:6; 19:15; cf. I Kings 21:10, 13). Commercial transactions of importance took place in the presence of witnesses at the gate of the town (Gen. 23; Ruth 4); when a document was drawn up, it was signed by witnesses (Jer. 32: 12). The witness of a grave offence, such as enticement to idolatry, was bound by law to expose the offender; if the penalty for the crime was stoning, the witness was obliged to throw the first stone (Deut. 13:7 ff.; cf. Lev. 24:11; Num. 15:33). False testimony is banned (Ex. 20:14 [16]; 23:1; Deut. 5:17 [20]; cf. Prov. 6:19; 14:25, et al.). The convicted false witness bears the penalty that would have been inflicted upon the accused (Deut. 19:16–21; cf. Sus. 60–62; Jos., Ant. 4:219; Code of Hammurapi, 1–4-Pritchard, Texts, 166).

A curse could be publicly uttered against a witness who withholds testimony (Lev. 5:1; Prov. 29:24; cf. Judg. 17:2). Lasting inanimate objects, such as stones (Gen. 31:48), the moon (Ps. 89:38), or poems can be invoked as witnesses: "Therefore, write down this poem and teach it to the people of Israel; put it in their mouths, in order that this poem may be my witness against the people of Israel" (Deut. 31:19; cf. vs 21, 26). The Lord Himself is sometimes called upon as witness (Gen. 31:50; Mal. 2:14), or as a prosecuting witness (I Sam. 12:5; Jer. 29:23; 49:5; Micah 1:2; Mal. 3:5). By its very existence, Israel is a witness of the fact that God is Redeemer and Lord of history (Isa. 43:9–10; 44:6–9). There is nothing in biblical law concerning the qualification of witnesses, but, according to Josephus, the credibility of the witnesses is established by their past life, while neither women nor slaves were allowed to testify (Jos., Ant. 4:219).

In Jewish Law

DEFINITION. Jewish law distinguishes between attesting and testifying witnesses. The former are required to be present at, and then and there attest, formal legal acts which failing such attestation, are normally invalid; the latter are required to testify in court, either to an act previously attested by them or to any fact they have witnessed. The rules on competency (see below) apply to testifying witnesses only. a document duly attested by at least two attesting witnesses and confirmed by the court (see Sh. Ar., ḤM 46:7–8) is admitted as evidence and

equivalent to oral testimony in civil cases, and need not be proved by testifying witnesses (Sh. Ar., ḤM 28:12).

The distinction between testifying and attesting witnesses has practical significance also for purposes of modern Israel law. While the validity of an act governed by Jewish law (e.g., marriage or divorce) may depend on the competency under Jewish law of the attesting witnesses, which will have to be determined according to Jewish law, the competency of testifying witnesses, even concerning acts governed by Jewish law, will always be determined by the law of the court (*lex fori*) in which the evidence is taken.

THE TWO-WITNESSES RULE. As a general rule, no single witness alone is competent to attest or testify: there must always be at least two (Deut. 19:15; Sif. Deut. 188; Sot. 2b; Sanh. 30a; Yad, Edut 5:1). The following are some of several exceptions to the general rule: whenever two testifying witnesses would be sufficient to prove a claim, one is sufficient to require the defendant to take an *oath that the claim is unfounded (Shev. 40a; Ket. 87b; BM 3b–4a; Yad, To'en 1:1); thus, in the case of widow claiming on her *ketubbah* or the holder of a bill claiming on it, where a single witness has testified that the claim had already been settled, the interested party will be required to take the oath before being allowed to recover (Ket. 9:7; Sh. Ar., ḤM 84:5). Conversely, a party who has partly admitted a claim will be excused from taking the oath if he is corroborated by at least a single witness (*Rema* ḤM 87:6; *Beit Yosef* ḤM 75 n. 3); and the testimony of a single depositary who still held the deposit was considered sufficient to prove which of the rival claims to a deposit was valid (Git. 64a; Sh. Ar., ḤM 56:1). A woman is allowed to remarry on the testimony of a single witness that her husband is dead (Yev. 16:7; Eduy. 6:1, 8:5; Ber. 27a; Ket. 22b–23a); and the testimony of a single witness is normally sufficient in matters of ritual (Git. 2b–3a; Yad, Edut 11:7). In criminal cases, both witnesses must have witnessed the whole event together (cf. Mak. 1:9), but in civil cases, testimonies of various witnesses to particular facts, as well as a witness and a document, may be combined to satisfy the two-witnesses rule (Sh. Ar., ḤM 30:6).

COMPETENCY. Maimonides lists ten classes of persons who are not competent to attest or testify, namely: women, slaves, minors, lunatics, the deaf, the blind, the wicked, the contemptible, relatives, and the interested parties (Yad, Edut 9:1).

(1) *Women.* By the method of *gezerah shavah* (see *Interpretation), it is derived from Scripture that only men can be competent witnesses. Maimonides gives as the reason for the disqualification of women the fact that the bible uses the masculine form when speaking of witnesses (Sif. Deut. 190; Shev. 30a; Sh. Ar., ḤM 35:14; Yad, Edut 9:2), but Joseph Caro questioned the validity of this derivation in view of the fact that "the whole Torah always uses the masculine form" (*Kesef Mishneh* to Yad, Edut 9:2). Another reason was suggested in the Talmud: that the place of a woman was in her home and not in court (Shev. 30a; cf. Git. 46a), as the honor of the king's daughter was within the house (Ps. 45:14. It is perhaps

noteworthy that the Tur (ḤM 35) omits women from the list of incompetent witnesses). Women are admitted as competent witnesses in matters within their particular knowledge, for example, on customs or events in places frequented only by women (*Rema* ḤM 35:14; *Darkhei Moshe* ḤM 35, n. 3; *Beit Yosef, ibid.*, n. 15; *Terumat ha-Deshen* Resp. no. 353); in matters of their own and other women's purity (Ket. 72a; Ket 2:6); for purposes of identification, especially of other women (Yev. 39b); or in matters outside the realm of strict law (BK 114b). In post-talmudic times, the evidence of women was often admitted where there were no other witnesses available (cf. e.g., Resp. Maharam of Rothenburg, ed. Prague, no. 920; Resp. Maharik no. 179), or in matters not considered important enough to bother male witnesses (Resp. Maharik no. 190; *Sefer Kol Bo* no. 116). In Israel, the disqualification of women as witnesses was abolished by the Equality of Women's Rights Act, 5711 – 1951.

(2) *Slaves*. Witnesses must be free Jewish citizens (*Benei Ḥorin u-Venei Berit*; BK 1:3), excluding both slaves and non-Jews (BK 15a; Yad, Edut 9:4; Sh. Ar., ḤM 34:19). The evidence of non-Jews is admitted if secular law so requires (*Maggid Mishneh*, Malveh 27:1), as well as to attest or identify documents made in non-Jewish courts, or whenever the court sees no reason to doubt their objectivity (*Tashbeẓ* 1:78; *Beit Yosef* ḤM 34, n. 22; *Baḥ* ḤM 34:32; *Keẓot ha-Ḥoshen* 68, n. 1; Tos. to Git. 9b).

(3) *Minors*. A person is incompetent as a witness until he reaches the age of 13. Between the ages of 13 and 20, he is competent as a witness with regard to movable property, but in respect of immovable property he is competent only if he is found to have the necessary understanding and experience (BB 155b; Yad, Edut. 9:8; Sh. Ar., ḤM 35:3). From the age of 20, all disqualification by reason of age is removed.

(4) *Lunatics*. In this category are included not only insane persons (for definitions see *Penal Law), but also idiots and epileptics (Yad, Edut 9:9–10; Sh. Ar., ḤM 35:8–10).

(5) *The Deaf*. Both the deaf and the dumb are included in this category (see *Deaf-Mute). "Despite the fact that their vision may be excellent and their intelligence perfect, they must testify by word of their mouth, or must hear the warning which the court administers to them" (see *Practice and Procedure), and as they cannot speak or hear, they cannot testify (Yad, Edut 9:11; Sh. Ar., ḤM 35:11).

(6) *The Blind*. "Despite the fact that they may be able to recognize voices and thus identify people, they are by Scripture disqualified as witnesses, for it is written, 'whether he hath seen or known' [Lev. 5:1] – only one who can see can testify" (Yad, Edut 9:12; Sh. Ar., ḤM 35:12).

(7) *The Wicked*. According to the Bible, "the wicked" or "the guilty" are unjust witnesses (Ex. 23:1), therefore they are a priori disqualified. They may be divided into five groups: criminals, swindlers, perjurers, illiterates, and informers. "Wicked" or "guilty" are epithets attributed to persons who have committed capital offenses (Num. 35:31) or who are liable to be flogged (Deut. 25:2), hence these are incompe-

tent witnesses (Yad, Edut 10:2; Sh. Ar., ḤM 34:2). A person who has committed any other offense or who is liable to any other punishment is also deemed incompetent as a witness, although not in the Bible (*Rema* ḤM 34:2). Into the category of swindlers fall thieves and robbers (Sh. Ar., ḤM 34:7); usurers (*ibid.*, 34:10); tricksters, gamblers, and gamesters (Sanh. 3:3; Sh. Ar., ḤM 34:16), as well as idlers and vagabonds who are suspected of spending their leisure in criminal activities (Yad, Edut 10:4; Sh. Ar., ḤM 34:16). Tax collectors who do not work for a fixed salary, but receive as remuneration a portion of the moneys collected, are suspected of appropriating more than is due to them, and therefore are incompetent witnesses (Yad, loc. cit.; Sh. Ar., ḤM 34:14); another reason for their disqualification was said to be that they were suspected of undue preferences and discriminations in assessing tax liabilities (*Rema* ḤM 34:14). Once a witness was found guilty of perjury, he would no longer be a competent witness, even after he had made good any damage caused by his false testimony (Sanh. 27a; Yad, loc. cit. Sh. Ar., ḤM 34:8). A man who has no inkling of Bible and Mishnah, nor of civilized standards of conduct (*derekh erez*), is presumed to be idle and disorderly (Kid. 1:10) and therefore incompetent as a witness (Kid. 40b; Yad, Edut 11:1; Sh. Ar., ḤM 34:17). This presumption is rebuttable by evidence that, notwithstanding the man's illiteracy, his conduct is irreproachable (Yad, Edut 11:2–4; Sh. Ar., loc. cit.). A fortiori, agnostics (*eppikoresim*) and heretics, including those who transgress law or ritual from conviction or malice, are wholly and irrevocably disqualified (Yad, Edut 11:10; Sh. Ar., ḤM 34:22). Though not technically transgressors of the law, *informers are considered worse than criminals and hence incompetent (Yad, loc. cit.; Sh. Ar., loc. cit.).

(8) *The Contemptible*. It is presumed that people who do not conform to the conventions of society, for example, by eating in the streets (Kid. 40b), or walking around naked while working (BK 86b), or accepting alms from non-Jews in public (Sanh. 26b), would not shrink from perjuring themselves, and therefore are incompetent witnesses (Yad, Edut 11:5; Sh. Ar., ḤM 34:18).

(9) *Relatives*. The biblical injunction that parents shall not be put to death "for" their children, nor children "for" their parents (Deut. 24:16), was interpreted as prohibiting the testimony of parents against children and of children against parents (Sif. Deut. 280; Sanh. 27b), and served as the source for the disqualification of relatives in general (Yad, Edut 13:1). The Mishnah lists as disqualified relatives: father, brother, uncle, brother-in-law, stepfather, father-in-law, and their sons and sons-in-law (Sanh. 3:4); the rule was extended to cover nephews and first cousins (Yad, Edut 13:3; Sh. Ar., ḤM 33:2). Where the relationship is to a woman, the disqualification extends to her husband (Yad, Edut 13:6; Sh. Ar., ḤM 33:3). The fact that a disqualified kinsman does not maintain any connection with the party concerned is irrelevant (Yad, Edut 13:15; Sh. Ar., ḤM 33:10). Witnesses who are related to one another are incompetent to attest or testify together (Mak. 6a); similarly witnesses related to any of the judges are incompetent (Sh. Ar.,

ḤM 33:17). As relatives are incompetent to testify for or against the party to whom they are related, a fortiori the party himself is incompetent to testify for or against himself, for "a man is related to himself" (San. 9b–10a; Yev. 25b). But while the incompetency of the relatives results only in their testimony being inadmissible as evidence, there can be no "testimony" of a party at all (*Piskei ha-Rosh* Mak. 13–14; Rosh. Resp. no. 60:1; Nov. Ramban Mak. 6b; Nov. Ran Sanh. 9b; Resp. Ribash nos. 169 and 195), and everything he says in court is properly classified as pleading.

(10) *The Interested Party*. A witness is disqualified where any benefit may accrue to him from his testimony (BB 43a; Yad, Edut 15:1), as where he has some stake in the outcome of the proceedings (Sh. Ar., ḤM 37:1; Yad, Edut 15:4). However, the benefit must be present and immediate and not speculative only (Sh. Ar., ḤM 37:10). The question whether some such direct or indirect benefit may accrue to a witness is often puzzling: "these things depend on the discretion of the judge and the depth of his understanding as to what is the gist of the case at issue" (Yad, Edut 16:4; Sh. Ar., ḤM 37:21). It is a "well-established custom" that where local usages or regulations are in issue townspeople are competent witnesses, even though they may, as local residents, have some interest in the matter (Rosh, Resp. 5:4; Sh. Ar., ḤM 37:22). The same "custom" would appear to apply to attesting witnesses who were appointed as such by authority (cf. Sh. Ar., ḤM 33:18). In criminal cases, there is no disqualifying "interest"; thus, the kinsmen of the murdered man are competent witnesses against the murderer, those of the assaulted against the assailant, and the victim of an offense against the accused (*Rema* ḤM 33:16; *Siftei Kohen* ḤM 33 n. 16).

DISQUALIFICATION. No witness may say that he is (or was) wicked so as to disqualify himself from attesting or testifying (Sanh. 9b; Yad, Edut 12:2; Sh. Ar., ḤM 34:25). A party who wishes to disqualify witnesses of the other party has to prove their incompetency by the evidence of at least two other competent witnesses (Sanh. 3:1; Yad, Edut 12:1; Sh. Ar. ḤM 34:25). Disqualification as a witness is not regarded as a penalty, and hence no previous warning is required; but in cases of improper or contemptible conduct and minor transgressions, it has been suggested that a person should not be disqualified as a witness unless previously warned that this would happen if he persisted in his conduct (Yad, loc. cit.; Sh. Ar., ḤM 34:24).

Where a witness attested an act or a document, he cannot testify that he was incompetent to do so (Ket. 18b & 19b; Yad, Edut 3:7; Sh. Ar., ḤM 46:37). It might be otherwise if his signature could be identified only by his own testimony: if he could be heard to deny his signature, he ought also to be heard to say that his signature was worthless (Ket. 2:3; Sh. Ar., ḤM loc. cit.) – always provided he did not incriminate himself.

Where the court has reason to suspect that a person offered as a witness is incompetent, it may decline to admit his testimony (*Rema* ḤM 34:25; Yad, Toʾen 2:3), and ought to turn

him down as an attesting witness (Sh. Ar., ḤM 92:5 and *Siftei Kohen* ad loc.). Where a witness has given evidence, and it subsequently transpires that he was incompetent, his evidence will be regarded as wrongly admitted and the case be reopened only if the incompetence was derived from Scripture or had been announced by public proclamation (Sanh. 26b; Yad, Edut 11:6; Sh. Ar., ḤM 34:23). A person called to attest or testify together with another person whom he knows to be incompetent as a witness must decline to attest or testify, even though the incompetence of the other is not yet known or proven to the court (Yad, Edut 10:1; Sh. Ar., ḤM 34:1). The rationale of this rule appears to be that since the incompetence of any one witness invalidates the evidence of the whole group of witnesses to which he belongs (Mak. 1:8; Yad, Edut 5:3; Sh. Ar., ḤM 36:1), if the first man attested or testified notwithstanding the other's incompetence, the evidence would be nullified (cf. *Siftei Kohen* ḤM 34, n. 3). In civil cases, parties may stipulate that, notwithstanding any incompetence, the evidence of witnesses named shall be accepted and acted upon by the court (Sanh. 3:2; Yad, Sanhedrin 7:2; Sh. Ar., ḤM 22:1).

Disqualification no longer holds: in the case of criminals, after their punishment is completed (Yad, Edut 12:4; Sh. Ar., ḤM 34:29); in the case of wicked persons not liable to punishment, when it is proved to the satisfaction of the court that they have repented and that their conduct is now irreproachable (*ibid.*) – there are detailed provisions as to what acts constitute sufficient proof of repentance (Yad, Edut 12:5–10; Sh. Ar., ḤM 34:29–35); and in the case of relatives, after the relationship or affinity has come to an end (Yad, Edut 14:1; Sh. Ar., ḤM 33:12).

REMUNERATION. As a financial interest in the testimony disqualifies the witness, the stipulation or acceptance of remuneration for testifying invalidates the evidence (Bek. 4:6). However, where the witness has returned the fee he received before testifying, his evidence is admissible; the acceptance of remuneration in itself is not a cause of incompetence, but is visited with the sanction of invalidating the evidence as a deterrent only (*Rema* ḤM 34:18). The rule prohibiting remuneration is confined to testifying witnesses only; attesting witnesses may always be remunerated (*ibid.*) and there are express provisions for the remuneration of witnesses attesting divorces (Sh. Ar., EH 130:21). A man suspected of accepting money for giving evidence is not a credible witness and should never be believed (Tosef. Bek. 3:8). A man who hires false witnesses to testify for him is answerable to Heaven, though not himself criminally responsible (see *Penal Law; Yad, Edut 17:7; Sh. Ar., ḤM 32:2; *Rema* ad loc.).

DUTY TO TESTIFY. Any person able to testify as one who has seen or learned of the matter who does not come forward to testify is liable to punishment (Lev. 5:1), but the punishment will be meted out to him by God only (see *Divine Punishment; BK 55b–56a). While in criminal cases the witness is under obligation to come forward and testify of his own accord, in civil cases the duty to testify arises only when the man is

summoned to do so (Yad, Edut 1:1; Sh. Ar., ḤM 28:1). Kings are exempt from the duty to testify (Sanh. 2:2; Yad, Edut 11:9) and though high priests are generally exempt, they must testify for the king (Yad, Edut 1:3). The duty relates only to matters which the witness has seen himself, or which he has heard from the mouth of the accused or a party to the action; a man may not testify to things of which he has no personal knowledge (*Rema* ḤM 28:1), nor may he testify on what he has heard other people telling him, however true and trustworthy it may appear to him (Yad, Edut 17:1,5), and any such testimony is regarded as false (*ibid.*).

Persons who were 'planted' and hidden on the premises to overlook a certain act or overhear certain words are not admitted as witnesses (Yad, Edut 17:3), except in the case of prosecution against inciters to idolatry (Sanh. 7:10; Sanh. 29a, 67a). A witness whose memory is defective may be allowed to refresh it by looking at what he had written at the time, or even by listening to the evidence of other witnesses (Ket. 20b; Yad, Edut 8:2; Sh. Ar., ḤM 28:14; *Beit Yosef* ḤM 28, n. 13–14), but not by what the party tells him, unless that party is a scholar and not suspected of using undue influence (Yad, Edut 8:3). Yet the fact that the witness recognizes some contemporary handwriting as his own does not render the writing admissible in evidence if he does not remember the facts to which that writing relates (Sh. Ar., ḤM 38:13; cf. Yad, Edut 8:1). There is no presumption that the passage of time adversely affects any witness' memory (Sh. Ar., *ibid.*).

EXAMINATION. The biblical injunction, "thou shalt then inquire and make search and ask diligently" (Deut. 13:15), was literally interpreted to require testifying witnesses to be subjected to three different kinds of examination: enquiry (*ḥakirah*), investigation (*derishah*), and interrogation (*bedikah*; Sanh. 40a). Originally, the rule was held to apply in all cases, both civil and criminal (Sanh. 4:1), but it was later relaxed to apply in criminal cases only, and possibly in cases of tort, so as not to render the recovery of debts too cumbersome and thus "shut the doors before borrowers" (Sanh. 3a, 32a; Yev. 122b; Yad, Edut 3:1; Sh. Ar., ḤM 30:1). It is the duty of the court, Maimonides says: "to interrogate the witnesses and examine them and question them extensively and probe into their accuracy and refer them back to previous questions so as to make them desist from or change their testimony if it was in any way faulty; but the court must be very careful lest, by such examination, 'the witness might learn to lie'" (Yad, Edut 1:4 based on Sanh. 32b). The purpose of the examination is, of course, to find out if the witnesses are truthful and consistent; even though all potentially untruthful witnesses have already been sifted and excluded by disqualification, further precautionary rules were deemed necessary to make sure of the witness' veracity.

Ḥakirah is the examination relating to the time and place at which the event at issue occurred (Sanh. 5:1; Sanh. 40b). Every examination starts with questions of this kind, which are indispensable (Nov. Ran. Sanh. 42a). The particular legal importance of this part of the examination is due to its function as sole cause for allegations of perjury (Yad, Edut 1:5).

Derishah is the examination relating to the substance of the facts at issue: who did it? what did he do? how did he do it? did you warn him beforehand? etc. (Sanh. 5:1, 40b). Or, in civil cases, how do you know the defendant is liable to the plaintiff? (Sanh. 3:6). As this line of examination is likewise indispensable, it is regarded in law as part of the *ḥakirah* (Yad, Edut 1:4).

Bedikah is a sort of cross-examination relating to accompanying and surrounding circumstances and not directly touching upon the facts in issue (Yad, Edut 1:6). The more a judge conducts examinations of this kind the better (Sanh. 5:2), because it leads to the true facts being established (Deut. 13:15; Sif. Deut. 93, 149; Sanh. 41a). On the other hand, questioning of this kind is dispensable, and judgment may be given on the testimony of witnesses who have not been so cross-examined (Nov. Ran Sanh. 40a). The conduct and amount of cross-examinations is at the discretion of the judges; they ought to insist on it whenever there is the least suspicion of an attempt to mislead or deceive the court (*din merummeh*; Shev. 30b–31a; Yad, Sanh. 24:3 and Edut 3:2; Sh. Ar., ḤM 15:3). Such suspicion may arise, for instance, where several witnesses testify in exactly the same words – which would not normally happen unless they had learned their testimony by heart (TJ, Sanh. 3:8; *Piskei ha-Rosh,* Sanh. 3:32; Sh. Ar., ḤM 28:10). In these cases, cross-examination should concentrate on points on which suspicion arose and not be allowed to spread boundlessly (Nov. Ran, Sanh. 32b; Ribash, Resp. no. 266; *Rema* ḤM 15:3). If, notwithstanding all cross-examination, the witnesses are consistent in their evidence but the judge is not satisfied that they are telling the truth, he should disqualify himself and let another judge take his place (Shev. 30b–31a; Sanh. 32b; Yad, Sanh. 24:3; Sh. Ar., ḤM 15:3), or he might even, if satisfied that there had been an attempt to mislead the court, furnish the innocent party with a certificate in writing to the effect that no other judge should entertain the suit against him (Rosh, Resp. no. 68:20).

DISPROOF. Where two sets of witnesses contradict each other on a matter material to the issue, i.e., under either *ḥakirah* or *derishah* as distinguished from *bedikah* (Yad, Edut 2:1), the evidence of either set is insufficient in law to establish the facts at issue. The reason is that there is no knowing which of the two groups of witnesses is testifying to the truth and which is lying (Yad, Edut 18:2, 22:1; Sh. Ar., ḤM 31:1). Where, however, there are inconsistencies or contradictions within the evidence of one set of witnesses and none within the other, the evidence of the consistent group will have to be accepted – the other being dismissed as untruthful because inconsistent. After a fact has been established judicially on the strength of the testimony of two (or more) consistent witnesses, the findings of fact will not necessarily be affected by contradictory witnesses coming forward after judgment (TJ, Yev. 15:5), but the court may always reopen a case where fresh evidence becomes available (see *Practice and Procedure).

Contradictions on matters not material to the issue will not normally affect the admissibility of the testimony (Sanh. 41a; Nov. Ran ad loc.), though the court may reject the testimony as unreliable because of contradictions on immaterial points (Yad, Edut 2:2). It seems that in civil cases, contradictions must always relate to matters material to the issue in order to warrant their rejection as insufficient (Sanh. 30b; Yad, Edut 3:2; Sh. Ar., ḤM 30:2). Where one witness positively testifies to a fact material to the issue, and the other testifies that the fact is unknown to him, the testimony of the former is deemed to be contradicted; where the fact testified to is not material to the issue, the ignorance of the second witness does not amount to contradiction (Yad, Edut 2:1). As there is no knowing whether the contradicting or contradicted evidence is true, neither will be regarded as perjury. While evidence of perjury must be given in the presence of the perjured witnesses, evidence contradicting previously given testimony may be given in the absence of the former witnesses (Ket. 19b–20a; Yad, Edut 18:5).

Where the evidence of witnesses to the effect that a man is "wicked" and hence incompetent to testify is contradicted by other evidence, even though the first evidence is insufficient in law to disqualify him, the man will not be admitted as a witness because of the doubts arising on his credibility (Yad, Edut 12:3); but there is a strong dissent holding that every man is to be presumed competent until proven otherwise by valid and conclusive evidence (Tos. to Ket. 26b s.v. *Anan*; *Shitah Mekubbeẓet* Ket. 26b).

[Haim Hermann Cohn]

Further Aspects

DEFINITION. In contrast to Western legal systems, in which the litigant has the right to testify, Jewish law distinguishes between litigants and witnesses, and the laws governing the plaintiff and the defendant are distinct from the laws of testimony. Research has thus far illuminated the foundation and legal rationale for the distinction between a litigant – who may plead his/her own case but not testify – and a witness, who testifies for another (Hefetz, *Mikkumah shel Edut ba-Mishpat ha-Ivri*). In modern times, jurists have proposed anchoring the principle that "A litigant cannot be a witness" in the Israeli laws of evidence (Draft Bill for Amendment to Testimony in Civil Cases, by Dr. S. Ginnosar and Dr. Y. Kister).

Certain scholars have attempted to characterize testimony as a special means of proving matters and deciding a case. The institution of testimony (the set of witnesses) is a quasi-judicial one for the determination of facts, similar to the jury in Anglo-American law. Qualification for testimony is determined by competency requirements that are fundamentally similar to those for membership in the judiciary (Hefetz, *Mikkumah shel Edut*; Ettinger, *The Role of Witnesses*).

A person's classification as a witness and his belonging to a set of witnesses turns on the question of whether the witnesses' function is to witness a particular act or to testify in court (this distinction is largely similar to that between constitutive witnesses, *eidei kiyyum*, and testifying witnesses, *eidei ra'ayah*). Witnesses appearing in court officially receive that status at the stage at which the court administers the admonishment (Mishnah, Sanh. 3:6; 4:5). However, the criterion differs regarding witnesses who observe an event for the purposes of attesting to it. One scholar (Radzyner, *Hatra'ah be-Edim u-Teḥilat Edut*) suggested that Rabba's statement in the Talmud, "Did you come to observe an event or to testify?" refers to a case in which the witnesses were summoned in advance to witness a certain act (Makk. 6a). According to this understanding, in all cases in which the witnesses are called upon to attest to an event, or to sign a document, when a question of their legal competency arises the purpose of their coming must be ascertained. If a relative or legally incompetent person states that he came to testify, the contract is disqualified. The first stage in defining the summoned witnesses as a set of witnesses begins from the moment they intended to attest to the event, and not just to observe it.

TESTIMONY RECORDED IN LEGAL DOCUMENTS (SHETAR). A central rule regarding the validity of signed documents as admissible evidence is the dictum of Resh Lakish, that "signatures of witnesses to a document are as reliable as if their evidence had been investigated in the *bet din*." The accepted interpretation of this dictum is that this refers to biblical law, which makes a substantive distinction between attesting to a document and other forms of testimony (including the affidavit). In most forms of testimony one cannot waive the requirement that witnesses be interrogated by the court, whereas documents can be accepted as evidence without the court conducting any enquiry pertaining to the witnesses who signed it. On the other hand, one of the scholars (Sinai, *The Geonic and Maimonidean Approach to Testimony Recorded in Legal Documents*) demonstrated that certain 12th-century *rishonim* (e.g., Maim., Edut 3:4; R. Simḥah of Speyer, cited in *Mordekhai* on Kiddushin, pt. 569–570) had another conception, whose sources are found as early as the works of the *geonim* (see Rav Sherira Gaon, cited in *Sefer ha-Terumot*, Pt. 13, sec. 1:3), and which is also consistent with the simple meaning of the talmudic sources. According to this conception, the biblical conditions for the admissibility of testimony do not distinguish between attesting to a document and other forms of testimony. Under biblical law all forms of testimony must be given by witnesses in court, thus enabling their examination and interrogation by the court, in accordance with the talmudic rule. "By biblical law, both monetary and capital cases require inquiry and investigation" (Sanh. 32a); the admissibility of written testimony was the result of a rabbinic enactment, "so as not to close the door to borrowers" (Maim., *ibid*). Nevertheless, even according to the latter view, written testimony is valid even under biblical law in cases of ritual matters (*issur*) and especially regarding a *get*, because these as distinct from capital and monetary cases, do not need to be clarified by the court (Maim., Yad, Gerushin 7:24; cf. Sinai's interpretation,

ibid., p. 126). This is likewise the conception evinced by Maimonides' comments on examination and interrogation of the testimony that frees a woman from the bonds of *aginut*, regarding which he writes that the Sages allowed a woman to remarry on the basis of testimony that the husband had died, "even on the basis of a written document, and without examination and interrogation." The reason for this is that "the Torah insists upon testimony by two witnesses and the other rules concerning testimony only in those matters, the truth of which cannot be ascertained except out of the mouths of witnesses and by their testimony, as, for example, when they testify that A has slain B or has made a loan to B. But in matters that can be ascertained through means other than the testimony of the particular witness, where he cannot clear himself if he is exposed as a false witness, as when he has testified that so-and-so is dead, the Torah does not so insist, because in such cases it is uncommon for a witness to testify to a falsehood" (Yad, Gerushin 13:29).

In explaining this ruling, one of the scholars focused on the basic distinction between matters requiring a court ruling, such as capital and civil cases, regarding which the stringent rules of testimony are applied, and ritual matters, including the release of an *agunah*, in which the matters permitted or prohibited are applicable by themselves, irrespective of the court ruling (Sinai, *Investigation of Agunah Witnesses*, 360–364).

THE TWO WITNESS RULE. One of the scholars showed that the rule "by two witnesses shall a matter be established" should not be regarded as an all-inclusive and rigid rule and that, in fact, the courts rely as a matter of course on less than two witnesses, as well as on circumstantial evidence (H.S. Hefetz, "According to Two Witnesses?: Circumstantial Evidence in the Bet Din in Practice" (Hebrew), *Takdim*, 2 (1989), 59–84. See also *Evidence.)

In one of the decisions of the Israeli Supreme Court, Justice Silberg relied on the concept that testimony of one witness is sufficient to compel an oath by the opposing litigant, in support of the view that testimony of one witness is only considered as contested if it was rejected by opposing testimony (CA 88/49 *Rosen v. Biali*, 5 PD 72, 73, 78–80).

COMPETENCY. In any case of hearing testimony, courts operating on the basis of Jewish law are required to determine the competency of the witnesses, and in many cases are unable to accept the testimony of incompetent witnesses. Nonetheless, one of the foremost rabbinical judges, who subsequently served as chief rabbi of Israel, stressed that

> It goes without saying that the *bet din* is authorized to hear the truth from any person, in any form, to form an impression. Even where the witnesses are incompetent under halakhic principles, their testimony may aid them in drawing conclusions based on common sense presumptions (*umdana*) or as proof of an objective reality. In many cases, the court is empowered to use its discretion to rule in reliance on other forms of proof and common sense conclusions, even in the absence of valid testimony. (Rav A. Bakshi-Doron, "*Kabbalat Edim be-Bet ha-Din*," in: *Torah she-be-al Peh*, 22 (1981), 81–88, 84).

A comprehensive study by Hayyim Hefetz dealt with the status of circumstantial evidence (Hefetz, *Ra'ayot Nesibatiot*; on matters of evidence and presumption, see *Evidence). The difference between testimony proffered by competent witnesses as opposed to that of incompetent witnesses has been explained by one scholar (Ettinger, *The Role of Witnesses*) as being based on a fundamental distinction between testimony and credibility. This distinction is manifested in the willingness to accept testimony of incompetent witnesses (such as testimony for an *agunah,* that her husband died), even though they are not considered as "witnesses" in the formal sense, though their testimony is relied upon.

Women. The Scriptural source for the disqualification of women as witnesses is both amorphous and disputed. This substantiates the theory forwarded by one scholar, who stated that the disqualification of women as witnesses was an accepted rule among the talmudic sages, who attempted to establish its biblical source even though it was not of explicit scriptural origin (Ettinger, *Isha Ke-Ed be-Dinei Mamonot*, p. 245).

One scholar suggested that the historical reason for disqualification of women as witnesses was based, not on a supposed lack of intelligence, nor on a lack of understanding of the imperative of telling the truth, but rather because, inasmuch as women are not accustomed to dealings in the marketplace, they are not used to earning a living or dealing with public affairs. Their lack of understanding of the ways of the world and the market place, a skill acquired by virtue of practical encounter and dealings with other people, renders them unequipped to understand the actions of others and hence to testify regarding their actions (S. Albeck, *Ha-Ra'ayot be-Dinei ha-Talmud*, Ramat Gan, 1987, p. 97).

Both of these positions served to explain the legal, as opposed to the historical, reason for a woman's disqualification as a witness: is it owing to her lack of reliability (for she is liable to withdraw her testimony "having been tempted or out of fear"; see Tosefta Ket. 3:3, ed. Lieberman; Maim., Yad, Gerushin 13.29); or is the disqualification a "scriptural edict" (*gezerat ha-katuv*), and not based upon unreliability (Resp. Rashba, attributed to Naḥmanides, no. 128). The practical difference between the two approaches is crucial, as demonstrated by one of the scholars (Ettinger, *ibid.*, 249–50). If the disqualification is substantively based on the woman's lack of reliability, there could at least theoretically be a change in the law. Such a change would be effected by way of interpretation, assuming that the factual-social reality had changed, to the extent of eliminating any presumption of a difference of any nature between men and woman in terms of their reliability for testimony. On the other hand, if the disqualification is a formal one, the tendency would be to limit the scope of the prohibition, and to waive it under certain circumstances, in the same way as when the law is altered directly by force of an enactment.

The more lenient approach to acceptance of a woman's testimony is usually found in the Ashkenazi tradition, whereas

the tendency of Spanish medieval scholars is to totally ban women as witnesses. It may be presumed that this dispute reflects differences in the status of women in the two parallel Jewish societies of that time. Scholars of that period have shown that Jewish women enjoyed a better status in Ashkenazi society than in Sephardi society, and that as such the Ashkenazi authorities did not hesitate to limit the scope of the prohibition on women as witnesses (Ettinger, *ibid.* 255).

Two chief rabbis of Israel commented on the issue of accepting women's testimony in our times, as follows: Rav Ouziel argued that a woman was disqualified as a witness because she was liable to lack precision in her testimony due to her lack of experience in commercial-market affairs. Based on this reasoning he infers that in all matters with which they are familiar, we may rely on their testimony, and that the community is therefore empowered to enact regulations to validate a woman's testimony in contemporary times (Resp. Mishpatei Uziel, ḤM no. 20). In this context, a significant step was taken by Rabbi Herzog, as indicated in his decisions given when serving on the Rabbinical Court of Appeals in 1948 (collection of decisions of the Chief Rabbinate, ed. Z. Warhaftig, 1985, p.11). Rav Herzog states that the rabbinical judge has discretion to evaluate the testimonies, and if he deems that the witnesses are telling the truth, he is even entitled to accept a woman's testimony.

The Wicked. The Talmud discusses the question of how to characterize a "wicked" person who is disqualified as a witness (Sanh. 27b). According to Rava, only the "wicked who robs" is disqualified – in other words, a person who transgressed an offense of a monetary nature. According to Abbaye, any "wicked" person is disqualified. The *halakhah* was codified in accordance with the latter view. Their dispute may quite possibly turn on the reason for disqualifying the wicked person for testimony. According to Abbaye, for whom the disqualification also applies to strictly religious offenses, its source lies in a Scriptural edict. Rava, however, who limits the disqualification to the financially wicked, apparently sees its source as being the unreliability of the witness who is a criminal (this interpretation is suggested by *Nimmukei Yosef* on Rif, ad loc. 5b of the Rif, s.v. *itmar*). From Maimonides *Mishnah Commentary*, in Sanhedrin 3:3, one scholar inferred (Sinai, *Be'ur Shitat ha-Rambam be-Inyan Kashrutam shel Resha'im le-Edut*), that a distinction must be made between one who violates prohibitions concerning monetary matters (*ḥamsan*), and one who transgresses non-monetary offences. With respect to the latter the prohibition derives from a Scriptural edict, whereas for the former there is a substantive rational reason – namely, the fear of perjury. A similar approach is taken by *Kezot ha-Ḥoshen*, 52:1). This is also the approach evidenced in the comments of Justice H. Cohn regarding suspected tax evaders, of whom he writes that "This renders them suspect of perjury, for just as they do not recoil from obfuscations and lies in order to evade tax [or another kind of breach of the law], they will similarly not shy away from obfuscation and lies in order to win their case. This is the obvious rationale of the Torah in its disquali-

fication of wicked persons as witnesses, inter alia 'those who take money that is not theirs' (in the language of Maimonides, *Edut* 10.4)" (CA 41/75 *Nili v Shlomi*, 30 (2) PD 3, 6–7).

It is suggested in the research literature that one view the disqualification of the wicked – even if they had not committed monetary offenses – as part of the overall approach of the Torah, and not just as a specific "Scriptural edict" (Sinai, *ibid.*, 298). There are numerous commandments in the Torah in respect of which the "wicked" are not considered as belonging to the community of Israel (Yad, Gezelah va-Avedah 11:2; Mamrim 5:12; Evel 1:10; Edut 11:1). On this basis, we may reasonably surmise that, with respect to testimony, the biblical innovation was that all wicked persons are disqualified for testimony, and as such they are subsumed within the general system of witnesses who are excluded from the Community of Israel. Conceivably, one could add that proffering testimony is regarded as a religious duty, in which not all can partake.

The reason for disqualifying the wicked for testimony has important legal ramifications in our times, regarding the issue of the competence of witnesses who are not religiously observant. In a 1948 judgment, Chief Rabbi Herzog wrote (*Collection of Decisions of the Chief Rabbinate,* ed. Z. Warhaftig, 1985, p. 137) that the offender's disqualification is rooted in his unreliability only, for which reason "one must have taken into consideration that in a time… and place where… non-observance is widespread… this kind of offense will not necessarily impugn the reliability of the witnesses." Consequently, in his view, "If it is clear to the Court that this person [i.e., who does not live a traditional religious life] is not likely to perjure himself for personal benefit, then he may be accepted as a valid witness."

Another legal ramification of the rationale for disqualifying the wicked for testimony that emerges from Maimonides' *Mishnah Commentary* (ibid.) relates to the possibility of the wicked person regaining the status of competent witnesses. As indicated by one of the scholars (Sinai, *ibid.*, 300–308), Maimonides' view is that, with respect to those who committed monetary offenses, their return to the status of legitimate witnesses is contingent upon their allaying our fears that they may perjure themselves for monetary gain. Accordingly, they must abandon "the path of the sinners," and their repentance must be unequivocal. The criterion for such repentance is that they be placed in a situation that invites the commission of the offense that they were accustomed to committing, yet despite having the opportunity of committing the offense, they desisted. This would constitute irrefutable proof of the sincerity of their repentance, that they had freed themselves of their lust for money, and thus we need no longer fear their return to the path of sin. Nonetheless, the recovery of their status as competent witnesses may still be contingent upon the particular circumstances and nature of the crime (Yad, Edut 12).

Persons guilty of non-monetary transgressions only regain competence as witnesses after receiving the punishment of flagellation (Yad, Edut 12.4). The reason, as indicated in Maimonides' *Mishnah Commentary* (*ibid.*), is that those sub-

ject to flagellation return to competence even without repentance, because their initial disqualification is not rooted in the fear that they will lie, but derives rather from the Scriptural edict: "Put not thy hand with the wicked to be an unrighteous witness." Hence, having received lashes, they are once again regarded as "thy brother" and regain their competence, even in the absence of repentance (Sinai, *ibid.*, 309–310).

Incidentally, in one of the judgments of the Israeli Supreme Court, Deputy President Menachem Elon wrote that "based on the overarching principle of 'after receiving lashes – he is like your brother' (Mishnah, Makkot 3:15), Jewish law prescribed a series of rules intended to rehabilitate the criminal who served his sentence, and thus preserve his rights as a human being, as your brother and as your neighbor" (ALA 18/84 *Karmi v. State Prosecutor,* 44 (1) PD 353, 375), and also receives expression in the Crime Register and Rehabilitation of Offenders Law, 1981, which is based on the principles of Jewish law (see judgment, ibid; Elon, *Ha-Mishpat ha-Ivri*, pp. 1434–1435)

In another Supreme Court judgment, Justice Silberg alluded to the concept taken from Jewish law in responsa of the *aḥaronim*: to wit, that a person disqualified as a witness due to the offense committed as a result of and in connection with his testimony, is only disqualified after completing his testimony. (CA 238/53 *Cohen v. Attorney General*, 4 PD 4, 30–31).

The Interested Party. A fascinating question that arose in modern times relates to the status in Jewish law of a witness who turns state's evidence (i.e., one offered immunity from punishment for his own crimes in return for testifying against another criminal). The various problems posed by a conviction resting on the testimony of a person who turned state's evidence is a classic example of the "interested party" and of one who "receives benefit for testifying." All of these issues are dealt with in a comprehensive study (E. Shochetman, *Eduto shel Ed Medinah le-Or ha-Mishpat ha-Ivri*). In terms of being "an interested party," the author argues that such a person should be disqualified as witness, because the consideration given him for his testimony is given by one party (the prosecution – District/State attorney), because he is under pressure for his testimony to be consistent with that given to the police during his preliminary interrogation, and because it must conform with the prosecutor's anticipations. Another problem is the granting of immunity against criminal prosecution in return for giving testimony, which constitutes the granting of benefit to the witness in return for his testimony. This is in direct contravention of the commandment to give evidence gratuitously, and under Mishnaic law, such testimony is invalid (Mishnah, Bekhorot, 4:6). The *halakhah* in this matter is in accordance with the view of Rema (ḤM 34:18). On this basis, the author concludes that even in terms of the law of "he who receives benefit for testifying," the state's witness should be disqualified. On the other hand, Shochetman suggests that the institute of "states evidence" might be validated by the enactment of a regulation allowing the court discretionary power to deviate from regular laws of evidence,

in an attempt to provide a halakhic solution for situations in which an offender whose guilt is clear may still escape punishment altogether.

DISQUALIFICATION. A comprehensive study concerning the prohibition against self-incrimination in Jewish law was conducted by A. Kirschenbaum (*The Criminal Confession in Jewish Law*), some of the main aspects of which will be discussed below. The talmudic principle that invalidates a person's confession to a criminal offense is without parallel in any of other legal system, whether in the ancient world, in the medieval period, or in modern times. Jewish law determined that no person could be convicted on the basis of his own confession, both with respect to considering the confessor as "wicked," his disqualification as a witness, and with regard to punishment. The author of the above study distinguished between the theoretical halakhic rule, which totally denies the admissibility of a criminal confession, and practical *halakhah*, which was prepared to accept it, as dictated by the exigencies of the period. However, even when an admission was accepted, the original *halakhah* left its imprint, and whenever the exigencies of the period did not compel deviation from the classical *halakhah* – i.e., the vast majority of cases – the courts would abide by the classical position of Jewish law. It should be noted that the Israeli Supreme Court also gave expression to the classical position of Jewish law (see e.g. Justice Elon, Cr.A. 543/79 *Nagar v. State of Israel*, 35 (1) 113). Over the last few years there has been growing support for deviation from the principle of admitting a confession of an accused. In fact, in one of the judgments, Justice Dalia Dorner expressed a lone opinion that drew inspiration from Jewish Law, as a system in which human experience lead to the creation of a rule that disqualifies the admission of the accused (FH 4342/97 *State of Israel v. Al-Abid,* 51 (1) PD 736, par. 3 of judgment).

DUTY TO TESTIFY. The religious duty to testify exists even when the witness is not called upon to testify by the interested party, for conceivably the litigant may not even be aware of the existence of that witness. In a decision given by the Tel Aviv Rabbinical Court, File 15453/5745, the court ruled that in view of this halakhic duty, "the claim of immunity is not accepted (i.e., in accordance with Section 90 of the Chamber of Advocates Law, 5721 – 1961), because that claim contradicts the biblical command 'If he does not utter it, then he shall bear his iniquity' (Lev 5:1)."

Unlike the accepted rule in many legal systems, under Jewish law there is no automatic swearing of a witness to tell the truth. However, "Should the court perceive a need dictated by the times, to impose an oath on them so that they shall say the truth – it may do so" (Rema, ḤM 28:2). The halakhic position was adopted in Israeli law in the Rules of Evidence Amendment (Warning of Witnesses and Abolition of Oath) Law, 5740 – 1980, which provides that "Notwithstanding anything provided in any other law, a witness about to testify in any judicial or quasi-judicial proceeding shall not be sworn" (Section 1). Nonetheless, the court was conferred

discretion to swear in a witness "Where the court has reason to believe that swearing a witness may assist in discovering the truth." However, under those circumstances "the witness may, after stating that he does so for reasons of religion or conscience, make an affirmation rather than taking an oath, unless the court is satisfied that he does not invoke those reasons in good faith." Even where the witness does not make an oath, the court must warn him that he must tell the whole truth, and nothing but the truth, and that he will be liable for the penalties prescribed by law if he fails to do so (Section 2). The procedure for warning witnesses is further expanded in *Practice and Procedure.

A highly instructive innovation pertaining to secret monitoring appears in a judgment of Justice Menachem Elon (FH 9/83 *Military Court of Appeals v. Vaknin*, 43 (2) PD 837, 857–859), where it states that "under special circumstances secret monitoring is a mitzvah, as when needed in order to create evidence in a case of serious criminal activity (incitement and enticement), in which case 'witnesses are hidden behind a partition' (Mishnah, Sanh. 7:10) and it is permitted in order to create evidence with respect to any kind of criminality" (see Rabbi Joseph Babad, *Minḥat Ḥinukh*, §462). Justice Elon's comments were cited approvingly by Rav S. Dikhovsky, "*Haʾazanat Seter*," in: *Teḥumin*, 11 (1990), 299–332, at 302–3.

In another interesting decision of Justice Türkel, a precedential rule was crystallized in a matter yet to be addressed by Israeli case law. The question concerned a judge giving testimony at the witness stand (LCA 3202/03 *State of Israel v. Yosef*), 58 (3) PD 541, at par.10 of judgment). Justice Türkel relied on the sources of Jewish law regarding the retaining of the dignity of the *dayyan*, in addition to the sources dealing with the possibility of taking testimony from a learned scholar in his home, in deference to his revered status (Maim., Yad, Edut 1:2). Justice Türkel drew an analogy from these sources to the immediate question of the judge as a witness.

EXAMINATION. In a court procedure conducted in accordance with Jewish law, the judge is charged with the examination of witnesses, and in principle the litigants and their attorneys do not have the possibility of examining the witnesses. (Regarding court's intervention in the judicial proceedings, see *Practice and Procedure.) In this context, the Rules of Procedure of the Rabbinical Courts of Israel establish a new and interesting arrangement. Regulation 89 (Section 1) states that: "The witness presents the testimony and is then examined by the *Bet Din*. After that, he can be examined by the party that summoned him, and then by the opposing party." The principal examination is inquisitorial, conducted by the *Bet Din* itself, and followed by examinations conducted by both parties (examination in chief, and cross-examination). Insofar as the examination of witnesses by the litigants is purely for purposes of promoting the *Bet Din*'s examination, the *Bet Din* has broad discretion in the examination of witnesses, and is even empowered to deviate from this format where circum-

stances necessitate it. Section 3 of the aforementioned regulation states "the *Bet Din* is permitted to ask further questions at all times, and to allow the litigants or any one of them to do so." Regulation 90 provides: "The *Bet Din* is permitted to disallow any question presented to a witness and to terminate the questioning of a witness by the litigants, if the *Bet Din* suspects that the question may mislead or prompt the witness to lie, or if the *Bet Din* deems the question superfluous, insulting or intimidating." A similar arrangement (to that provided in said Regulation 90) was established by the Israeli legislator in the Amendment of Procedure (Examination of Witnesses) Law, 5718 – 1957.

In the Israeli Supreme Court, Justice Menachem Elon relied on the procedures for examining witnesses in Jewish law to indicate the importance of the cross-examination (Cr.A. *Hag' Yichyeh v. State of Israel*, 45 (5) PD 221, 264–265.)

In the vast majority of civil suits and personal status suits, the *Bet Din* is not required to conduct a rigorous, punctilious examination of the witnesses, the like of which is mandatory in criminal cases, and the degree of its intervention (which for the most part did not consist of professional *dayyanim*) in the examination of witnesses was minimal. The following alternative grounds for leniency with regard to procedural strictures relating to competency of the *dayanim* and examination of witnesses were invoked by the Sages: "in order not to lock the door on borrowers" (Sanh. 32b); "in order to lock the door on perpetrators of injustice" (*Piskei Ha-Rosh*, to Sanh. 81.1); and "public policy" or "to distance tortfeasors" (Ha-Meiri, in *Bet Ha-Beḥirah* on Sanh. 3b, at p. 6 (Ralbag ed.)). These reasons are applicable both with respect to matters involving financial loss and, in effect, in most civil matters, as well as in matters concerning personal status. As shown by one of the scholars (Sinai, *The Court's Intervention in Litigation According to Jewish Law*, p. 249), the position adopted by halakhic authorities was that strict compliance with the two aforementioned limitations would severely impair the efficiency of the judicial system, precisely concerning those issues with which the rabbinical courts are frequently engaged on a daily basis. This position relied inter alia on the explicit talmudic testimony that in regular matters involving monetary loss, lenience was permitted and matters were heard even before non-professional judges so that suits could be heard by lay judges who were not experts in the secrets of examination and investigation. This in turn engendered a parallel policy of leniency regarding the extent to which the *dayyanim* were involved in the process of examining witnesses, and the abrogation of the obligation to conduct a punctilious examination and investigation in those fields (i.e., monetary, personal status). The result was the conducting of an efficient hearing in every-day matters. Moreover, even in the realm of personal law, the accepted approach is that the *Bet Din* does not conduct a rigorous, meticulous examination of the witnesses (Yeb. 122b). A number of explanations have been offered to explain this tendency: the purpose and role of the witnesses and of the *Bet Din* in matters of personal status as distinct from capital and

civil matters; or the tendency towards lenience that characterizes the laws of the *agunah*; or against the background of "*takkanat ha-lovim*" (so that lenders will not be deterred from loaning) (Sinai, *Ḥakirat Edei Hagannah – Le-Hithavvutan shel Tefisot Mishpatiyyot*).

With regard to reliance on written records, it should be added that in a recent ruling of the District Court in Jerusalem (CF (Jer) 4177/02 *Ashkenazi v. Gandin,* (unpublished) par. 6; delivered in 2005) Judge Yosef Shapira accepted the testimony of the defendant-doctor in a medical negligence suit, to the effect that the plaintiff had never actually visited her clinic. His acceptance of this testimony was based inter alia on the presumption that had the plaintiff actually visited her clinic, she would presumably have examined him at the time and recorded his particulars in his patient card, in view of his being a new patient. This factual determination was based on Jewish law, which permits reliance on records in booklets or the computer, in accordance with the *halakhah* codified in the Shulḥan Arukh (ḤM 91.5).

An interesting example of reliance on the Jewish law regarding examination of witnesses appeared in a recent decision of District Court Judge Pilpel (CF (TA) 2070/00 *Avidan v. Avidan* (Tak-Dis 2005 (2), 5676, 5681). The case concerned a suspicion of fraudulent signature on a deed, in the context of the English legal doctrine of "*non-est factum.*" In her decision, Judge Pilpel wrote that, "this subject and the decision thereon were already discussed in ancient times by the Babylonian *geonim*" (see *Oẓar ha-Geonim le-Ketubbot*, 183, pp. 92–93). The *geonim* were asked about the validity of a deed when it was known that the witnesses signed thereon were illiterate. They responded that such a situation is "a total farce" and would sow suspicion in any reasonable person's heart, and accordingly the nature of the signature demands examination (Dr. Y. Sinai, "The Geonic and Maimonidean Approach to Testimony Recorded in Legal Documents (*Shetar*)" in: *Dinei Israel*, 22 (2003), 111).

Regarding fraudulent claims see *Practice and Procedure.

DISPROOF. In one of the first decisions of the Israeli Supreme Court it was ruled (per Justice Simha Assaf) on the basis of the Talmud (Sanh. 41a) that a distinction must be made between a conflict that involves the core of a given matter and one regarding trivial conditions. The distinction is explained as follows: "If one of the witnesses was not precise in the details of his testimony, this does not perjure his entire testimony. It is precisely the perjured witnesses, who have carefully coordinated their testimonies, who are more able to submit perfect testimony, without any contradictions. Truthful witnesses, on the other hand, may contradict one another, and even contradict themselves in unimportant details, especially in those pertaining to peripheral aspects of the event, because they were not in a relaxed state of mind, and they were shocked by the confusion and pandemonium that resulted from the event" (Cr.A. 3/48 *Katz-Cohen v. Attorney General*, 2 PD 681,

686–687). Justice Assaf's contention was that contradictory witnesses should not necessarily be disqualified where the contradiction relates to non-substantive matters. In another Israeli Supreme Court judgment, he found additional support for this contention in the words of Rav (TJ Sanh. 4:1, 22a), who when hearing witnesses whose testimony was substantially similar, to the extent of their using the same words, he suspected them of being false witnesses who had coordinated their testimony, and he would investigate and examine them. However if their testimony was not couched in precisely the same wording, each of them describing the event using different words, then he would only investigate to ensure that their testimony provided a sufficiently accurate description of the event so as to be relied upon.

Justice Assaf offered a further justification for this rule stating that, "Just as no two prophets prophesize in the same style, then *a fortiori* two laymen (Resp. *Zikhron Yehudah*, by R. Judah ben Asher, no. 72)" (Cr.A. *Suleiman v. Attorney General*, 6 PD 824, 826).

In another judgment of the Israel Supreme Court, Justice Silberg invoked the principle whereby "testimony that cannot be refuted is not valid" in an interesting manner, as the basis of the requirement for corroborating evidence in sexual offenses. Justice Silberg justified the need for external corroborative evidence in addition to the testimony of the complainant as follows: "Since the testimony of the complainant is almost always 'testimony that cannot be refuted' given that it concerns intimate matters that occurred behind closed doors, where no-one can see, and hence there are no witnesses for the defense who can help the innocent person who is under suspicion" (Cr.A. *Saadia v. Attorney General*, 16 PD 1860, 1862).

°WITTE, SERGEY YULYEVICH, COUNT (1849–1915), Russian statesman. Between 1892 and 1903 he was finance minister and exerted much influence in the economic and foreign policies of Russia. In 1894 he introduced the government monopoly in the alcoholic liquors trade, a measure which removed within a few years tens of thousands of Jewish families from this branch of the economy. Witte was opposed to the aggressive policy of Russia in the Far East and, after the defeat of the Russian army in 1904, led the delegation which signed the Peace Treaty of Portsmouth with Japan (1905). He was among the advocates of the Constitution of October 1905 and headed the Council of Ministers until April 1906. As a result of these activities and his efforts to obtain foreign loans, Witte met with Jews both in Russia and western Europe, as well as in America. He criticized the discriminatory policy and spoke against the persecution of the Jews, which he believed was responsible for the active participation by Jews in the Russian revolutionary movement and the difficulties encountered by the Russian government in its foreign policy and on the international financial market.

When *Herzl visited St. Petersburg, during the summer of 1903, he conferred with Witte on the subject of obtaining authorization for issuance of shares in Russia by the Jewish Colonial Trust. During his last years Witte wrote his memoirs (3 vols., 1922–23), which contain material on the economic and political history of the Jews in Russia.

[Yehuda Slutsky]

WITTENBERG, YIẒHAK (**Itzig**; 1907–1943), first commander of the Jewish fighters' organization in the Vilna ghetto (Fareynegte Partizaner Organizatsye, United Partisan Organization, FPO). He was born into a working class family and worked as a tailor before the war and was a Communist from his youth. During the Soviet occupation of Vilna he was a Communist activist. He became one of the leaders of the Communist underground during the German occupation.

The fighters' organization was established in the ghetto after the Nazis systematically murdered more than 40,000 Vilna Jews, after transporting them to the site of the massacre at *Ponary. After the organization was established, Wittenberg was chosen commander. He headed the training program and was an outstanding officer. On July 15, 1943, one of Wittenberg's contacts was caught by the Nazis outside the ghetto, who were apparently unaware of the existence of the FPO. On the evening of the same day, the leaders of the fighters' organization were ordered to appear before Jacob Gens, the chief of the Jewish police in the ghetto, to provide an explanation. The commanders appeared at the appointed hour, and after a short period *SS men broke into the office by the side door with their guns pointed at the fighters. They were ordered to identify Wittenberg, but refused to answer, until Gens himself pointed him out. Wittenberg was handcuffed and taken out in the direction of the gate of the ghetto, but his captors never succeeded in getting him there. The ghetto fighters attacked the SS men and in an exchange of fire succeeded in freeing Wittenberg. Instead of attacking the ghetto and destroying it with Wittenberg inside, the SS handed Gens an ultimatum that he must turn Wittenberg over to them before 3:00 A.M. or they would destroy the ghetto and all its inhabitants.

Due to the tempestuous situation created in the ghetto after Gens repeated the ultimatum, it was necessary to extend the time to 6:00 A.M. At first, people were unwilling to believe Gens' testimony that the Germans intended to destroy the ghetto. Two camps quickly emerged: representatives of the fighters, who believed that under no circumstances was Wittenberg to be given over to the Nazis; and those who supported Gens and demanded that it was necessary to spare the ghetto and hand Wittenberg over to the Germans at the appointed hour, so as not to endanger the entire ghetto for the sake of one man. They also felt that the time was not ripe for a general uprising. The exchanges between the two sides reached the proportions of a civil war in the eyes of the Nazis, who stood on the side waiting for the time to run out. The fighters opened up negotiations with the chief of police with the intention of offering a volunteer to deceive the Germans or to claim that Wittenberg had escaped. But Gens rejected the suggestion. The fighters were close to despair, seeing all their preparations for the fateful day collapsing because of one incident, and they demanded that Wittenberg give the order to fight. But Wittenberg was not prepared to allow Jew to fight Jew until his fighters reached their real enemy. Full of confidence, he walked out into the deserted street, approached the ghetto gate, and turned himself over to the Germans. He was subsequently tortured and died. Some say that he took his own life in prison.

[B. Mordechai Ansbacher / Michael Berenbaum (2ⁿᵈ ed.)]

WITTGENSTEIN, LUDWIG (1889–1951), Austrian-British philosopher who profoundly influenced Anglo-Saxon analytic philosophy through his analysis of language; brother of the musician Paul *Wittgenstein.

Life

Wittgenstein was born in Vienna in 1889, the eighth and youngest child in a well-off and cultured family. He had three Jewish grandparents. As a child he was baptized, but he never was a religious Catholic. After a private education at home, he attended school in Linz, where, coincidentally, Adolf Hitler also was a pupil. He studied engineering in Berlin and then went to Manchester, England, to study aerodynamics. There he read Bertrand Russell's *Principles of Mathematics* and became interested in logic and the logical basis of mathematics. In 1911 he met Gottlob Frege (1848–1925) who demonstrated that one can derive mathematics from logic, and singled out the problem of the inaccuracy of language. Frege referred him to Russell, whom Wittgenstein visited in the same year, and who stimulated him to be active in philosophy.

What vividly interested him was language. In 1913 and 1914, he worked during long periods in Norway in order to clarify logic. With the outbreak of World War I he became a volunteer in the Austrian army. In 1916 the first version of his famous *Tractatus Logico-Philosophicus*, Wittgenstein's essay on language and logic, was ready. In the same year, he left for the front. In 1918, he was taken prisoner of war in Italy. Upon his return to Vienna, he studied to become a teacher and gave away his personal fortune.

At first, Wittgenstein could not find a publisher for his *Tractatus*. It was finally published in 1922 in the series *Annalen der Naturphilosophie*. He worked as a gardener and also as a teacher in several elementary schools. He was successful when teaching superior pupils, but was a failure with other pupils, whom he treated harshly. In 1925 he again visited England where he became an advanced student, and in 1929 received his Ph.D. on the basis of his *Tractatus*. In 1930 he started teaching in Cambridge. The *Tractatus* was the only work he published, although he desired also to publish his later work *Philosophische Untersuchungen*.

Teaching at the university did not prevent Wittgenstein from opposing any form of academic philosophy. He developed a growing resistance toward the mathematical and scientific way of thinking as the only ways of philosophizing. In 1935 he pondered immigrating to Russia. In 1939 he was promoted to the rank of professor.

During the difficult years of the Shoah, the Wittgenstein family in Vienna were considered non-Jewish, thanks to a friend, the Catholic teacher Ludwig Hänsel, who had access to leading political figures of that time. It was probably on instructions of Arthur *Seyss-Inquart, who was responsible for the destruction of Dutch Jewry and who was tried in the Nuremberg trials, that the family was not killed.

For some time, Wittgenstein left his academic position and worked in a London hospital. In 1948 he left for Ireland. In the summer of 1949, he visited America, where he became ill. In 1950 he returned to London, without a job and without money. During the last months of his life he wrote *On Certainty*. He died in 1951.

Work

Customarily, one distinguishes between Wittgenstein's early work, the *Tractatus* (1922), and his later work, e.g., the *Philosophical Investigations* (published posthumously in 1953).

Fortunately, there exists Wittgenstein's voluminous *Nachlaß,* of which various manuscript were published, as *Zettel*, *On Certainty*, *Remarks on the Foundations of Mathematics*, *Culture and Value*, and *Remarks on the Philosophy of Psychology*. There are further the *Notebooks 1914–1916* and, finally, the notes made by his students, e.g., *The Blue and Brown Books, Lectures and Conversations on Aesthetics,* and *Psychology and Religious Belief*.

The Vienna Circle interpreted his early work in the direction of logical positivism, on the basis of the picture-language discussed in the *Tractatus*. It is, however, questionable if there is enough supporting evidence for speaking of Wittgenstein I and II. It is the same person who, during his entire life, developed a critique of language, attacking the picture theory of meaning. In all of his philosophical activities, he waged "the battle against the bewitchment of our intelligence by means of our language" (*ein Kampf gegen die Verhexung unsres Verstandes durch die Mittel unserer Sprache*) (*Philosophical Investigations*, 109) and wanted the reader to take upon himself the task of clarifying his language. The theory developed in the early work was written to be rejected, and the *Investigations* clarified the questions that were raised in the *Tractatus*. Wittgenstein wanted the old thoughts and the new ones be published together.

Philosophical problems were for him first of all problems of language. He was convinced that, if one would study the logic of language, one would be able to solve many philosophical problems.

Investigation of the Use of Language

The *Tractatus* describes the limitations of language. Logic is what is "true." There is the simple tautological equation $A = A$. Further, there is the formula A is not not-A: I cannot eat and not eat at the same time. Finally there is the dilemma: or A or not-A: or it rains or it doesn't.

Wittgenstein doubts if one really says something with this logic that it is true under all circumstances. Mathematics, too, is logic: it is a priori true, not based upon experiments: 5 and 5, for instance, is 10, and one does not have to verify that. Finally, Wittgenstein maintains in his *Tractatus* that only scientific utterances give certainty about reality. But scientific utterances are not necessarily true: reality could also be different.

The last sentence of the *Tractatus* (7) reads: "Whereof one cannot speak, thereof one must be silent." (*Wovon man nicht sprechen kann, darüber muß man schweigen*). Through this sentence, Wittgenstein makes much of human life unspeakable, at least in the logical picture-language. The entire domain of speaking on ethics and God has to remain separated from the purely descriptive language. Ethical utterances are authoritative, but distinguished from utterances on facts. About God you cannot speak as about things in the world. Aesthetic and ethical judgments cannot be expressed within logical language, they are not facts and cannot be pictured in thought. Real questions, questions of life, are not scientific questions. Picture-language is thus problematical. Wittgenstein therefore found it useful to study ordinary language with its different language games. Philosophy can, accordingly, be a remedy against the bewitchment of thought by language.

THE COMPLEXITY OF ORDINARY LANGUAGE. It was Wittgenstein's life task to understand ordinary language. One may say for instance that one "has" a book, that one "has" children, or that one "has" a headache. All these are different forms of "having" which are not reducible to each other. One cannot solve this complex reality by speaking about the "essence" of having (as did Plato), which would transcend all these forms of "having." Neither can one reduce something to something else, as is frequently done in psychology. All this proves that we are "bewitched" by wrong visions on language.

The word "essentially" was for Wittgenstein a word that one has to avoid. He left out the "eternal" truth beyond or above reality and concentrated upon the detail that always deviates from a preexisting "essence." We should stop using the word "essentially," as if in having a child, a book or a headache the same unchangeable "having" would return. This would come to being guilty of a logical way of speaking (A = A), that says nothing.

Wittgenstein and Judaism

Recent research has investigated Wittgenstein's thought in light of his Jewish background. Rush Rhees has written on Wittgenstein's self-understanding. He notes that, in 1936, Wittgenstein confessed to his friends and family that he was more Jewish than was generally known. In his book on Wittgenstein and Judaism, Ranjit Chatterjee writes that, with this confession, Wittgenstein indicated that in his work, one may find many a Jewish element, and that Wittgenstein developed an intellectual Jewishness and expressed his inner Jewish feeling in a disguised way. Wittgenstein also remarked to his friend M.O'C. Drury that his own thinking is not Greek, but "one hundred percent Hebrew thinking." With his "Hebrew thinking" he wanted to unmask the idolatry of picture language. On the other hand, Steven Schwarzschild saw Wittgenstein as being alienated from his Jewishness, and as suffering from self-hatred.

[Ephraim Meir (2nd ed.)]

WITTGENSTEIN, PAUL (1887–1961), pianist. Born in Vienna, Wittgenstein studied and made his debut there in 1913. During World War I he lost his right arm at the Russian front and embarked on an extraordinary career as a one-handed pianist. He left Austria in 1930 and after 1933 settled permanently in the United States. His repertoire consisted of works he had adapted or those especially written for him, such as Ravel's *Concerto for Left Hand*, Richard Strauss' *Parergon zur Symphonia Domestica* and *Panathenaeenzug*, and many other concert and chamber works by Erich Wolfgang *Korngold, Benjamin Britten, and Hans Gál. He published a pedagogical work, *Schule der linken Hand*.

WITTKOWER, RUDOLF J. (1901–1971), historian of art and architecture. Born in Berlin, he studied at the universities of Berlin and Munich. From 1923 to 1928 he worked in Italy, and in 1924 was appointed lecturer at Cologne University. When Hitler came to power, Wittkower emigrated to England and became professor at the University of London (1949–55). In 1954 he moved to the United States, where he was made chairman of the department of art history and archaeology at Columbia University, New York.

Wittkower is known for his studies of Italian Renaissance and Baroque art, such as *Art and Architecture in Italy 1600–1750* (1958) and books on Bernini and the Caracci. His *Architectural Principles in the Age of Humanism* (1949), a study of the principles underlying the architecture of the Italian Renaissance, influenced the thinking of students of architecture.

Aussenseiter der Gesellschaft*, (1993); R. Wittkower, *Allegorie und der Wandel der Symbole in Antike und Renaissance* (1996).

WITTLIN, JÓZEF (1896–1976), Polish poet, author, and translator. Born in Dmytrów, Galicia, Wittlin was raised in Lvov and served in the Austro-Hungarian army during World War I. From 1919 onward he was connected with the Polish expressionist group centered in the periodicals *Zdrój* and *Skamander* and in 1927 moved from Lvov to Warsaw. An outstanding exponent of Polish expressionism, Wittlin first achieved fame with his verse collection *Hymny* (1920), which resembled German expressionist writing. His two other major works were a modern Polish translation of Homer's *Odyssey* (1924) and the novel *Sól ziemi* (1936; *The Salt of the Earth*, 1939?). A prolific writer, he also published many stories, sketches, and essays, as well as various translations of foreign classics, from the Sumerian *Gilgamesh Epic* (1922) to Hasek's *The Good Soldier Schweik* (1931). Wittlin made his mark as the leading pacifist writer in Poland between the world wars. After fleeing to France and Portugal, he emigrated to the U.S. in 1941 and settled in New York, where he became a coeditor of the Polish émigré weekly *Tygodnik Polski*.

WIZEN, MOSHE AHARON (1878–1953), Hebrew grammarian. Born in Rozwadow, Galicia, Wizen was reared in a traditional ḥasidic atmosphere, and at the same time acquired proficiency in several languages. He started to teach at the age of 18, and in 1904 he went to Switzerland for two years to study at the University of Berne. In 1906 he moved to Lemberg, and worked there until the outbreak of World War I, when he was drafted into the army. After the war he settled in Vienna, where he taught in the Jewish Teachers' Seminary established by Zvi Hirsch Perez *Chajes. In 1938 he immigrated to Erez Israel; he directed Hebrew language courses in Tel Aviv.

As a young man, Wizen published poems and feuilletons in *Ha-Pisgah* and *Ha-Maggid*; but his subsequent labors were devoted primarily to linguistic research. Wizen wrote a comparative grammar of Hebrew and other Semitic languages, *Torat ha-Lashon – Sefer Dikduk Sefat Ever* (1923). However, unlike his predecessors, he did not confine himself to the language of the Bible, but also included in his work linguistic forms found in the rabbinic and post-rabbinic period (indicating by different symbols the time when each word was first used). He dealt systematically with vocalization, inflection, and word-formation. He provided comprehensive paradigms of the conjugations and the declensions, including forms that do not appear in the sources but are nonetheless implied by virtue of the system.

While Wizen's general classification of the parts of speech is based upon that of the medieval grammarians, his internal classifications of words derive from the approach adopted by modern grammarians of the Hebrew language. His division of the noun (greatly influenced by that of Brockelmann into declension groups and groups of derivatives) accords with present-day linguistic theory, as do his description and explanations of the vowels (as for example his treatment of the "intermediate" or "half-sounded" *šewa*). He supported his description of the Hebrew verb-root by comparison with Akkadian and explained the forms of the verb in different conjugations by comparison with proto-Semitic, adding notes to illuminate any apparently irregular form; and following Abraham *Ibn Ezra, he also wrote a section on incompatible consonants in the root – a subject avoided by later grammarians.

[Menahem Zevi Kaddari]

WIZO (Women's International Zionist Organization), women's Zionist movement founded in London on July 11, 1920, at an international conference of women Zionists convened by the Federation of Women Zionists of the United Kingdom.

History and Organization

The leaders of the new movement were Vera *Weizmann, Rebecca *Sieff, Romana Goodman, Edith Eder, and Henrietta Irwell. Rebecca Sieff was the first president of WIZO and held this office until 1963, then becoming honorary life president until her death in 1966. At the time of WIZO's establishment, the British administration in Palestine had just been established and the new Russian regime had given rise to considerable Jewish emigration from Russia that was expected to turn to Palestine. The women Zionist leaders felt that since the women immigrants, even more than the men, would have to adjust to a new way of life, they should be prepared and trained. It was felt that women Zionists throughout the world would be more sensitive to this task than the Zionist movement in general and that therefore a special women's organization was needed. WIZO's original program of activities was divided into three categories: professional and vocational training for women, with special emphasis on preparation for agricultural pioneering; education of women to relate to their society as informed and civic-minded citizens; care and education of children and youth.

During the first 20 years of its existence, WIZO had its headquarters in London and built up a network of federations throughout Europe (with the exception of the U.S.S.R.) and in most other countries of the world (except the U.S., where *Hadassah already existed). The headquarters were then transferred to Tel Aviv. In 1970 Raya *Jaglom was elected president, serving until 1996. During her term of office, WIZO was established in the U.S. in 1981. In 1996, Michal Modai, former chairman of the executive of the Israel Federation and of the World WIZO Executive, was elected president of World WIZO. Helena Glaser, chairperson of the WIZO Israel Federation, was elected chairperson of the World WIZO Executive.

After World War II the number of federations was considerably reduced, since the communist bloc and most of the Muslim countries were excluded, but this was soon counteracted by the gradual reopening of the European federations, some of them actually on the heels of the liberators.

By 1996, with the end of the cold war and the opening up of the communist bloc, WIZO had renewed activities in Hungary and the Czech Republic (then Czechoslovakia), both in 1990, and groups had also been started in Latvia, Lithuania and Estonia. Furthermore, in 1981, after reaching an agreement with Hadassah, it also started working in the United States, where it has a dynamic, constantly growing federation.

WIZO's quarter of a million members are organized in 50 federations throughout the world in the following countries: Argentina, Australia, Austria, Barbados, Belgium and Luxembourg, Bolivia, Brazil, Canada, Chile, Columbia, Costa Rica, Curacao, Czech Republic, Denmark, Dominican Republic, Ecuador, Finland, France, Germany, Gibraltar, Great Britain and Ireland, Greece, Guatemala, Holland, Honduras, Hong Kong, Hungary, Israel, Italy, Jamaica, Japan, Mexico, New Zealand, Norway, Panama, Paraguay, Peru, Portugal, Singapore, South Africa, Spain, Sweden, Switzerland, Trinidad, United States, Uruguay, Venezuela, Zaire, and Zimbabwe.

WIZO is recognized by the UN as a Non-Governmental Organization (NGO) and as such has consultative status with the UN Economic and Social Council (ECOSOC) and UN International Children's Emergency Fund (UNICEF).

WIZO is a member of the *World Zionist Organization and of the *World Jewish Congress and is on the executive of both. It is also on the board of governors of the Jewish Agency.

The highest governing body of the movement is the world WIZO Conference, which meets every four years in Israel, determining overall policy and approving the budget and activity reports. It is composed of representatives from all the federations according to the size of their membership. The conference elects the president of World WIZO and the World WIZO Executive which is composed of 50 members: 25 members resident in Israel (most of them heads of the World WIZO departs that run the various WIZO institutions and services in Israel) together with heads of the 25 largest Diaspora federations. The executive elects the chairman and treasurer. WIZO is a non-partisan organization of volunteers, both at the leadership and grass roots level.

Of all WIZO's federations the Israel federation is by far the largest, with close to 100,000 members organized in 145 branches in all parts of the country. While the Diaspora federations concentrate mainly on Jewish and Zionist education, strengthening the bond with Israel and fundraising to help finance WIZO's work in Israel (and also to some extent social and educational projects in their own countries), the Israel federation works directly with and on behalf of the local population, including those of the minority communities. It defines its aims in these fields as follows: to advance the status of women, defend their rights and achieve gender equality

in all fields; to combat domestic violence; to assist in the absorption of new immigrants and to contribute to family and community welfare, with special emphasis on single parent families, women, children, and the elderly.

Status of women has always been a priority of the Israel federation. The Equal Rights for Women Law of 1952 was passed on the initiative of then WIZO Israel chairman Rahel Kagan, who represented the organization in Israel's first Knesset. Today, WIZO remains active in this field.

World WIZO, too, has in recent years become active in promoting women's rights and the federations work in close cooperation with other women's organization's in their own countries and are represented on all national and international bodies dealing with women's affairs. The movement participated actively in the UN's conferences on the status of women in Mexico, Copenhagen, Nairobi, and Beijing.

In addition to advancing the status of women, the main aims of the entire movement are, nevertheless, focused on Israel and remain largely what they have been ever since the organization's beginning: to provide for the welfare of infants, children, youth, and the elderly. While during waves of mass immigration, the stress was placed on immigrant absorption services, today the most urgent need is deemed to be combating violence in the family. All WIZO's services and institutions in Israel are set up after close consultations with government and local authorities and have their full cooperation.

The following description of WIZO's 800 institutions and services in Israel presents a clear picture of the condition and needs of the population of Israel.

Institutions and Services

EARLY AGE CARE AND EDUCATION. WIZO's 234 day institutions serve 15,000 infants and small children and include day care centers, special multi-purpose day care centers for high risk children, toddlers' homes, pedagogical centers, after-school centers, therapeutic child centers, toys and games libraries, and four residential family units (Neve WIZO).

FOR CHILDREN AND YOUTH. Catering to 34,700 older children and youth are 11 schools and youth villages and 78 youth clubs.

The schools, which were among WIZO's earliest projects, were established originally either to train girls and young women for a pioneering agricultural life or to provide a home for child survivors of the Holocaust. Today, these day and boarding schools provide vocational, agricultural, and artistic training at a variety of academic levels, ranging from special education to a post–high school level college of design. The student populations consist of both native Israelis and new immigrants; outstanding students as well as low achievers; children from well-established families and welfare cases.

Also in this category are a shelter for girls in distress (Beth Ruth), facilities for the rehabilitation and advancement of marginal youth, and remedial army preparation courses for drop-out girls.

FOR WOMAN AND FAMILIES. WIZO has two shelters for battered wives and a half-way house project; four centers for the prevention and treatment of domestic violence; hot lines in Hebrew, Russian, and Amharic, for battered women; a rape crisis center and hotlines; and 28 legal advice bureaus on family matters (also dealing with specific problems of new immigrant women and single-parent families. Beit Heuss is a recreation home with supportive workshops for women and couples with a common problem.

Assistance is given in immigrant absorption, including special services on caravan sites.

For the elderly there are 100 clubs and sheltered employment facilities as well as a Parents' Home.

Other WIZO services are vocational training and advancement for women, summer camps for needy mothers of large families, and care for families of war victims and single-parent families.

[Rosa Ginossar / Aliza El-Dror (2nd ed.)]

WLOCLAWEK (Rus. **Votslavsk**), city in central Poland. Jews began to settle in Wloclawek at the beginning of the 19th century. The Jewish population numbered 208 in 1803, 4,248 in 1897, 6,831 (21% of the total population) in 1909, and 10,209 (18.3%) in 1931. In the interwar period Zionist and other national groups were active in the community. In the census of 1931, 96% of the Jews declared their mother tongue to be Yiddish or Hebrew. Among the outstanding personalities of Wloclawek were R. Judah Leib *Kowalsky, a leader of the Mizrachi movement in Poland, and Abraham Leib Fuks, a physician and a Zionist leader. There was a Jewish gymnasium in the city and two weeklies in Yiddish – one Zionist, and the other Zionist-Revisionist.

[Yehuda Slutsky]

Holocaust Period

When World War II broke out, the Jewish community of Wloclawek, with approximately 13,500 persons out of a general population of 60,000, increased in size as refugees came in from neighboring communities. The German army occupied Wloclawek (renamed Leslau) on Sept. 14, 1939, and incorporated it in the Warthegau district (see *Poland) of Germany. Liquidation of the Jewish community began almost immediately, with the active help of the local Germans (*Volksdeutsche*) and the support of the Polish population. All the synagogues were destroyed by fire. Hundreds of Jews were taken hostage and ransoms for them were extorted. In December 1939 deportations to eastern Poland began. Many Jews fled to nearby towns and to *Warsaw, while 3,000 remaining Jews who were segregated into a ghetto (October 1940) suffered from the food shortage and disease. The *American Jewish Joint Distribution Committee helped many destitute families, and a soup kitchen was opened. Until the liquidation of the ghetto

on April 27, 1942, the Jewish cemetery served as a clandestine meeting place for instructing Jewish children, and even for theatrical performances and a makeshift library for exchanging books. At the end of April 1942 the inmates of the ghetto were all sent to *Chelmno extermination camp, and the ghetto was burned down by the Nazis.

Contemporary Period

When the war was over, the surviving remnants of the Wloclawek Jewish community gradually returned to their home town in search of relatives and friends. In 1946, some Jews who returned from the Soviet Union resettled in Wloclawek. The JDC helped to organize cooperatives of Jewish tailors and dressmakers, and Jewish cultural life was renewed. In the first few years after the war the military commander of Wloclawek was a Jew, Michael Weinstein. In 1946 he successfully averted a pogrom on the Jewish quarter by incited peasants. In the course of the following years most of the Jews of Wloclawek left for Israel, the last ones settling there after the Six-Day War (1967).

[David Dori]

BIBLIOGRAPHY: *Vlozlavek ve-ha-Sevivah, Sefer Zikkaron* (1967, Heb. and partly Yid.); Y. Trunk, in: *Bleter far Geshikhte,* 2 (1949), 64–166; *Yoyvel-Bukh fun Branch 611 Arbeter Ring* (1951).

WLODAWA (in Jewish sources: **Vlodavi**), city in Lublin province, eastern Poland. Jews first settled there in the second half of the 16th century. A community was organized in the early 17th century under the jurisdiction of the *Brest community. In 1648 *Chmielnicki's armies massacred the local Jews, as well as others who had taken refuge there, and set fire to their houses. However, the community was reconstituted soon afterward. In the second half of the 17th century a stone baroque-style synagogue was built; enlarged 100 years later, it was still standing in 1970. In the 18th century the Jews of Wlodawa engaged in the leasing of estates, the timber trade, tailoring, and tanning. In 1765 there were 630 Jews who paid the poll tax. The community grew rapidly, numbering 2,236 (74% of the total population) in 1827 and 4,304 (72%) in 1857. It decreased to 3,670 (66%) in 1897. In the 19th century Wlodawa Jews engaged in commerce in agricultural products and manufacture of alcoholic liquor, as well as tailoring, furriery, and hat-making. *Ḥasidism gained many followers in this period.

Between the two world wars, in independent Poland, all Jewish parties were active in the city. The Jewish population numbered 4,196 (67% of the total) in 1921. In the 1929 municipal elections, 11 Jews were among those elected for the 24 seats. The last rabbi of the community, Moses Baruch Morgenstern, perished in the Holocaust.

[Shimshon Leib Kirshenboim]

Holocaust Period

In 1939 there were 5,650 Jews living in Wlodawa. The German army entered the town in mid-September 1939 and immediately subjected the Jews to persecution. However, no ghetto was established at the beginning, and until the end of 1941 life for Jews in Wlodawa was somewhat easier than in most

of occupied Poland. The situation deteriorated drastically at the beginning of 1942. In April 1942 about 800 Jews from *Mielec, in Cracow province, and about 1,000 Jews from Vienna were deported to Wlodawa. On May 23, 1942, the first deportation to *Sobibor death camp took place (the exact number of deportees is unknown). In June 1942 all the children up to the age of ten were taken to Sobibor and murdered. On Oct. 24, 1942, the entire Jewish population was sent to death in the Sobibor gas chambers. During these deportations hundreds of Jews fled to the forests and organized partisan units, the best known of which was commanded by Yehiel Grynszpan and operated in conjunction with Soviet and left-wing Polish guerrillas. Most of the Jewish partisans fell in the forests, but a few score managed to survive until the liberation of the Wlodawa region, while several others succeeded in crossing the River Bug and joined Soviet partisans in the Polesie forests.

In the late autumn of 1942 the Germans ordered the establishment of a special ghetto in Wlodawa for all Jews who voluntarily left their hiding places in the forests of the northeastern Lublin province. They were promised that no further deportations would take place. Several thousand Jews who had taken refuge in the forests, but who lacked arms and food supplies and could not survive the winter there, trusted the German promise, and settled in the new Wlodawa ghetto. On April 30, 1943, all were deported to Sobibor and murdered. Jews from Wlodawa who managed to survive in the partisan units left Poland immediately after the war. The Jewish community in Wlodawa was not reconstituted.

Wein (ed.), *Żydzi a powstanie styczniowe* (1963), index; N.N. Hannover, *Yeven Meẓulah* (1966), 57, 58; BŻIH, no. 21 (1957), 21–92.

WODZISLAW (Pol. **Wodzisław Sławski**), town in Katowice province, southern Poland. Jewish settlement in Wodzislaw dates from the 17th century. The Jews there mainly engaged in commerce, and a number of wealthy merchants used to do business at the great fairs of Leipzig and Breslau. The community numbered 200 Jewish householders in 1655–56, at the time of the Polish war with Sweden. Toward the end of the 17th and during the 18th centuries, the Wodzislaw community attained considerable influence. It ranked as a principal *kehillah* within the communal framework (see *Councils of the Lands), and its leaders also took an active part in the affairs of Polish and Lithuanian Jewry as a whole. Rabbis of Wodzislaw include Menahem b. Zalman Gabais, author of *Neḥamat Ẓiyyon* (Frankfurt, 1677), Joseph Joske b. Herz of Lvov, and Samuel b. Uri Shraga *Phoebus, author of *Beit Shemu'el.* The Jewish population in Wodzislaw numbered 1,002 in 1765, 1,563 (72.5% of the total) in 1857, 2,667 (73.6%) in 1897, and 2,839 (73.2%) in 1921.

[Nathan Michael Gelber]

Holocaust Period

On the outbreak of World War II there were about 2,400 Jews in Wodzislaw. In September 1942, 300 Jews from Wodzislaw and its vicinity were deported to the *Treblinka death camp. The Jewish community was liquidated in November 1942 when the remaining 300 Jews were deported to *Sandomierz and shared the fate of that community. After the war the Jewish community of Wodzislaw was not reconstituted.

WOGUE, LAZARE ELIEZER (1817–1897), French rabbi, scholar, and journalist. Wogue, born in Fontainebleau, was ordained in 1843 at the École Centrale Rabbinique in Metz. In 1851 he began to teach German and theology there (in 1859 it became the Séminaire Israélite de France and was transferred to Paris), retaining his two chairs until his retirement in 1894. From 1868 Wogue was also director of the *talmud torah* of the Séminaire Israélite. The most important of his many scholarly works is a translation of the Pentateuch with commentaries (1860–69), which is the one used in the *Bible du Rabbinat* edited by Z. Kahn.

Among his other publications are *Le Rabbinat Français au XIXᵉ siècle* (1843), *Le Guide du Croyant Israélite* (1857, 1898²), *Histoire de la Bible et de l'Exégèse biblique jusqu'à nos jours* (1881), a French translation (1882) of the first two volumes of *Geschichte der Juden* by H. Graetz, *Esquisse d'une théologie juive* (1887), and *La Prédication Israélite en France* (1890). He also translated various Hebrew works. Among the manuscripts he left is a tract on theology. A prolific writer, Wogue wrote many articles which were published in such Jewish periodicals as *La Paix* and *l'Union Israélite*. He was editor in chief of *l'Univers Israélite* during 1879–95.

[Colette Sirat]

WOHL, HENRYK (1842–1907), Polish revolutionary. Born in Warsaw into a patriotic family supporting Polish independence, Wohl took part in the Polish uprising of 1863, and became head of a department in the insurrectionist government. After the collapse of the revolt, he was condemned to death by the Russians, but the sentence was commuted to life imprisonment with forced labor in a remote part of Russia. After serving 20 years he was allowed to return to Poland. On his grave in the main avenue of the Jewish cemetery in Warsaw, a memorial of three unpolished stones symbolizes Poland under the three partitions. The memorial was the center of many demonstrations during the Czarist domination of Poland.

[Abraham Wein]

WOHLBERG, MOSHE (**Max**; 1907–1996), ḥazzan. Wohlberg was born in Humene in Czechoslovakia. When he was four, his family moved to Budapest, where he sang with the

choir of the Rombach synagogue. He studied in the *yeshivot* of Nagy Karoly and Szatmar. His family moved to the United States, where he completed his Hebrew studies at the Herzliah Hebrew Teachers' Institute in New York. He studied music with Arnold Zemachson, sang in the choir of the Metropolitan Opera, and held several positions as cantor in the United States. His chief activity was in the field of training cantors, and he had hundreds of students. From 1948 to 1951 he was the second president of the Cantors Assembly. From 1952 he was professor of liturgy at the Cantors' School of the Jewish Theological Seminary in New York. He was considered an authority on prayer rites and published many articles on the history of liturgy. His published compositions can be found in collections such as *Chemdat Shabbat* and *Yaḥad B'kol* (Cantors Assembly). A recording of his singing of 19th-century compositions by ḥazzan-composers of the period is available through Musique Internationale Chicago

[Akiva Zimmerman / Raymond Goldstein (2nd ed.)]

WOHLGEMUTH, JOSEPH (1867–1942), rabbi, educator, and theologian. Wohlgemuth, born in Memel, as a child moved with his family to Hamburg, where his grandfather, Isaiah Wohlgemuth, became stipendiary rabbi (Klausrabbiner). Wohlgemuth studied at the Berlin Rabbinical Seminary and at the university, teaching at the same time and for many years afterward at the Adass Yisroel religious school. In 1895 he was appointed tutor and lecturer in religious philosophy, homiletics, and practical *halakhah* at the seminary, where he exercised considerable influence on several generations of students for the Orthodox rabbinate. In 1932 broken health forced him to retire to a sanatorium in Frankfurt.

Wohlgemuth's published works include: *Die Unsterblichkeitslehre in der Bibel* (1899); *Beitraege zu einer juedischen Homiletik* (1904); *Das juedische Religionsgesetz in juedischer Beleuchtung* (2 vols., 1911–19), a study of the problem of *Ta'amei ha-Mitzvot* (the ideology of the practical commandments); *Bildungsprobleme in der Ostjudenfrage* (1916); *Das Tier und seine Wertung im Judentum* (1930); and *Grundgedanken der Religionsphilosophie Max Schelers* (1931). His *Der badische Gebetbuchentwurf…* (1907) and *Gesetzestreues und liberales Judentum* (1913) are a defense of Orthodoxy against Reform. In *Der Weltkrieg im Lichte des Judentums* (1915), he extolled Germany's "civilizing mission." Wohlgemuth also translated (with J. Bleichrode (1899, 1939[7]) M.Ḥ. Luzzatto's ethical guide, *Mesillat Yesharim* (1906) into German. In 1914 he founded the monthly **Jeschurun*, which under his editorship became (to 1930) the leading Orthodox periodical in the spheres of Jewish scholarship and thought, and to which he contributed important articles – both on scholarly subjects and on current affairs. A Festschrift was issued in honor of his 60th birthday (*Juedische Studien*, 1928).

His son, JUDAH ARI WOHLGEMUTH (1903–1957), educator and author, taught at Jewish schools in Telsiai, Lithuania, and Riga, Latvia, before spending eight years with his family in a labor camp in Siberia. Wohlgemuth published *Vom Denken und Glauben unserer Zeit* (1935); *Fragt immer: gut oder boese* (1954), dealing with the religious and philosophical problems raised by the Holocaust; and a trilingual poem, "Pesaḥ be-Novosibersk 1942" (1963), written in exile in Siberia.

°**WOJDA, CAROL FREDERICK** (1771–1846), senior official in the senate of the Duchy of Warsaw (see *Poland), and member of the committee for Jewish affairs established in 1808. Wojda presented his proposals for solving the "Jewish problem" to the senate in 1809, recommending changes in the Jewish way of life, abrogation of communal and judicial autonomy, educational reform including the teaching of Polish and German, acceptance of European dress, and prohibition of the sale of liquor by Jews. The changes were to have been effected within ten years, after which emancipation was to be granted to Jews in the "productive" professions and to educated businessmen. To accelerate the process of assimilation, Wojda proposed that Jewish residence in the towns not be restricted to special quarters. He also recommended the establishment of a *consistory on the French model to deal with Jewish affairs. Wojda's program was not even debated. In 1815 he presented to the head of the committee for Jewish affairs a memorandum incorporating this plan.

[Nathan Michael Gelber]

WOLBERG, LEWIS ROBERT (1905–1988), U.S. psychiatrist and psychoanalyst. Born in Russia, Wolberg was taken to the United States at the age of nine months. When he completed his training, he was appointed clinical professor of psychiatry at the New York University Medical School and a training analyst at the New York Medical College from its beginning in 1943. He was a founder of the American Academy of Psychoanalysis. Although trained in psychoanalysis in its more classical form, he rapidly became aware of the need for innovations. He was a pioneer in the field of dynamic psychiatry and contemporary psychotherapy. In 1945 he founded the Postgraduate Center for Mental Health, of which he was medical director and dean, and later dean emeritus. Here he created a model community mental health center based upon a multidisciplinary approach to treatment, training, research, and prevention. He was in the forefront of new ways to bring a mental health orientation to the individual, the family, the neighborhood, the nation, and the international community. A leading authority on hypnosis, Wolberg pioneered the use of this technique for more than 50 years. He was an outstanding teacher and a member of many psychiatric associations and published extensively in professional and popular periodicals.

His most important books are *Hypnoanalysis* (1945), *The Technique of Psychotherapy* (2 vols, 1954), *Medical Hypnosis* (2 vols., 1948), *Short-Term Psychotherapy* (1965), *Psychotherapy and the Behavioral Sciences* (1966), *The Dynamics of Personality* (1970), *Hypnosis, Is It for You?* (1972), and *The Practice of Psychotherapy* (1982).

ADD. BIBLIOGRAPHY: P. Buirskl (ed.), *Frontiers of Dynamic Psychotherapy: Essays in Honor of Arlene and Lewis R. Wolberg* (1987).

[Yehudith Shaltiel]

WOLBROM, town in Cracow province, Poland. Jews settled there at the end of the 17ᵗʰ century. An organized Jewish community existed from the 18ᵗʰ century under the jurisdiction of the Cracow community. In 1765 there were 303 Jews in Wolbrom who paid the poll tax. The town was incorporated in Congress Poland in 1815. In 1827 the Jews numbered 724 (27% of the total population). Following the economic development of the town in the 19ᵗʰ century, the number of Jews increased to 1,466 (59%), despite the restrictions on Jewish settlement in force there between 1823 and 1862, because of the town's proximity to the Austrian border. The main occupations of the Jews were petty commerce, weaving, tanning, and locksmithing. In the 19ᵗʰ century Ḥasidism had a strong influence in Wolbrom. Between 1897 and 1921 the number of the Jews increased from 2,901 to 4,276 (59%). Before the outbreak of war in 1939, there were about 5,000 Jews living in Wolbrom.

Holocaust Period
During World War II, under the German occupation, Wolbrom came under the province of Cracow of the General Government. The Germans entered Wolbrom on the first day of the war, Sept. 1, 1939. Scores of people were immediately shot. Afterward all the Jewish inhabitants were driven out of Wolbrom in the direction of Zawiercie. On the three-day march many succumbed to torture by the guards. On September 7 the surviving Jews returned and were set at forced labor, particularly in the forests. In the fall of 1941 a ghetto was established in Wolbrom which the Jews were forbidden to leave, under pain of death. Nearly 8,000 Jews, among them about 3,000 deportees and refugees, were concentrated inside the ghetto. The liquidation of the Jews in Wolbrom ghetto began on Sept. 6 or 7, 1942, when the German police and Ukrainians drove all the Jews to the railway station, where the Germans carried out a *Selektion*. About 2,000 old and weak persons were taken to the forest where mass graves had been made ready. After undressing completely, they were shot. The remaining Jews at the station were loaded on to train cars that evening. At the stopovers the Germans cast away the corpses of those who had suffocated in the cars. The deportees were taken to *Belzec death camp. Some hundreds of men were chosen by selection and transported to labor camps. After the liquidation of the Jewish community in Wolbrom, the Jewish cemetery became the site of executions for Jews found or denounced while hiding. From mid-September 1942 until the end of 1944 nearly 400 Jews were shot in this manner.

Only some 300 Jews from Wolbrom survived the war. They did not resettle in Wolbrom, and most of them emigrated.

WOLF (Heb. זְאֵב), the *Canis lupis*, is frequently mentioned in the Bible and rabbinical literature as a wicked and cruel beast (Ezek. 22:27) found in desert regions (Jer. 5:6) which seizes its prey at night (Zeph. 3:3; Hab. 1:8). Wolves were a serious danger to flocks of sheep (cf. Isa. 11:6). The Mishnah states that "when there is a visitation of wolves," i.e., when they appear in packs, the shepherd cannot be held liable for the loss of the sheep of which he is in charge (BM 7:9). Wolves are stated on an occasion to have killed 300 sheep (TJ, Beẓah 1:160a), and to have torn to pieces two children in Transjordan (Ta'an. 3:6). The wolf is like a big sheep dog (cf. Ber. 9b). According to the Mishnah, "a wolf and a dog," though similar, constitute *mixed species (Kil. 1:6). Even in recent times wolves have been known to attack flocks of sheep in Ereẓ Israel. It can get into the fold and strangle a number of sheep (on occasions sucking their blood, cf. Ezek. 22:27), but it carries off only one sheep, sometimes carrying it a considerable distance to its lair in the mountains of Transjordan. The Midrash to Psalms 10:14 mentions the legend of Romulus and Remus being suckled by a she-wolf.

WOLF, U.S. family of communal leaders with branches in Philadelphia and Washington. The brothers ELIAS WOLF (1820–after 1881) and ABRAHAM and LEVI WOLF (1811–1893) were born in Bavaria and emigrated to the United States. Elias Wolf arrived about 1840, going to Philadelphia. He obtained a good education, particularly in Hebrew. After a few years he went to Wilmington, North Carolina, and in 1850 to Ulrichsville, Ohio. He settled permanently in Philadelphia in 1856, where with his brothers he managed the family manufacturing interests. The family established and kept a close association with Rodeph Shalom Congregation, with Elias Wolf serving as vice president in 1867 and as president in 1871.

All of Elias Wolf's five sons took part in communal life in Philadelphia. EDWIN (1855–1934) was born in Ulrichsville a year before his father returned to Philadelphia for good. He was educated in public schools and then joined his father's business, taking over when the latter retired in 1877. Subsequently he left the firm due to ill health and in the 1880s worked with his brothers in their various enterprises. In later life he held a number of civic and communal positions, serving on the Philadelphia Board of Education, to which he was

elected in 1901, as president of the Jewish Publication Society from 1903 to 1913, and as chairman of the Board of Governors of Dropsie College.

Edwin Wolf's son MORRIS (1883–1978) was born in Philadelphia. He graduated from the University of Pennsylvania and was admitted to the Pennsylvania Bar in 1903. For more than 50 years he was a senior partner of the well-known firm of Wolf, Block, Schorr, and Solis-Cohen in Philadelphia, which he had founded in 1903. He served as assistant district attorney for the city of Philadelphia in 1909–10, as state deputy attorney general in 1913–14, and as a member of the Court of Common Pleas after 1930. One of his legal clients was the noted book dealer Abraham Simon Wolf *Rosenbach. Morris became a prominent bibliophile and book collector in his own right as a result of his contacts with Rosenbach.

Morris' son EDWIN WOLF II (1911–1991) was a librarian, historian of U.S. Jews, and bibliographer. At age 18 he began a long association with Abraham Simon Wolf Rosenbach, preparing most of the catalogs for the Rosenbach Company. Toward the end of his years with Rosenbach (to 1952), whose career he describes in *Rosenbach: A Biography* (1960), he managed the Philadelphia office of the firm. During World War II he served in military intelligence as a French and German interpreter and in counterintelligence. After he left the Rosenbach Company in 1952, he became librarian for the Library Company of Philadelphia (from 1953 to 1984), the oldest subscription library in the United States, with extensive Judaica holdings. In addition to his work in preserving the documents of the past, Wolf was also instrumental in presenting new works through the Jewish Publication Society of America. Elected a trustee in 1935 "in place of his grandfather," as he notes in one of his elegantly concise annual reports (see American Jewish Year Book), he served as president (1954–59) and from 1965 as chairman of the publications committee.

Edwin Wolf II wrote *History of the Jews of Philadelphia from Colonial Times to the Age of Jackson* (1957), with Maxwell Whiteman; *Philadelphia: Portrait of an American City* (1975); and many monographs. His catalogs include *Descriptive Catalogue of the John Frederick Lewis Collection of European Manuscripts* (1937); *William Blake 1757–1827* (1939), prepared with Elizabeth Mongan, *William Blake's Illuminated Books: A Census* (1953; repr. 1968), edited jointly with Geoffrey Keynes; *Bibliothesauri: Or Jewels from the Shelves of the Library Company of Philadelphia* (1966); *A Flock of Beautiful Birds* (1977); and *Legacies of Genius: A Celebration of Philadelphia Libraries* (1988).

[Claire Sotnick and Hillel Halkin]

WOLF, ABNER (1902–?), U.S. neuropathologist. Born and educated in New York City, Wolf was appointed professor of neuropathology at the College of Physicians and Surgeons from 1951 and at Columbia Presbyterian Medical Center from 1964. Wolf served as president of the American Association of Neuropathologists (1951–52) and the New York Neurologi-

cal Society (1956–57). He was a member of numerous professional societies and published extensively. He was editor in chief of the *Journal of Neuropathology and Experimental Neurology* from 1963.

WOLF, ABRAHAM (1876–1948), English philosopher. He was professor of logic and scientific method at University College, London, concurrently lecturing at the London School of Economics and Political Science. From 1931 until his retirement in 1941, he was dean of the faculty of economics and political science at the University of London. He was a member of the editorial board of the *Encyclopaedia Britannica* and was also the editor of the *History of the Sciences Library*. His main works deal with logic and scientific method, Spinoza, Nietzsche, and the history of science. He also wrote on higher education in Nazi Germany and in German-occupied countries.

ADD. BIBLIOGRAPHY: "Abraham Wolf," in: S. Brown (ed.), *Dictionary of Twentieth Century British Philosophers* (2005).

[Samuel Hugo Bergman]

WOLF, ALFRED (1915–2004), rabbi, community leader, and interreligious pioneer. Born in Eberbach, Germany, to Hermann and Regina Levy Wolf, Alfred Wolf was one of five rabbinic students brought to the United States by Hebrew Union College in 1935 to continue their studies away from Nazi persecution.

Wolf earned a B.A. at the University of Cincinnati in 1937, was ordained at HUC in 1940, and completed a Ph.D. in religion at the University of Southern California in 1961. Wolf held pulpits in Toronto, Ontario, and Dothan, Alabama (1940–46), before serving as the Union of American Hebrew Congregation's Southeast Council Regional Director (1945–46) and then moving to Los Angeles to serve as the UAHC's Western Regional Director (1946–49). In 1949, he joined Edgar F. Magnin and Maxwell Dubin to become the third member of Wilshire Boulevard Temple's rabbinic staff, which provided religious leadership for the West's largest congregation. After retiring as Wilshire's Senior Rabbi in 1985, he served as director of the American Jewish Committee's Skirball Institute on American Values and became its director emeritus in 1996.

Wolf's influence on Jewish life in Southern California was immediate and far-reaching. In 1946, there were only six Reform congregations in the greater Los Angeles area. Three years later, thanks in part to his energetic efforts with the UAHC – and the Jewish population explosion – there were 18. Upon his arrival at Wilshire Boulevard Temple, he initially focused his attention on creating programs for Jewish youth. He reinstated the bar mitzvah, built up the religious school to 2,000 students, and, most significantly, started one of the nation's first Jewish summer camp programs, which eventually included Camp Hess Kramer (1952) and Gindling Hilltop Camp (1968) on 200 coastal acres in Malibu. Wolf's concept for Jewish camping had its roots in the hills of Germany, where the life-long hiker led Jewish youngsters on outings

even after Hitler's ascent to power. The Malibu camps have been attended by more than 50,000 children and are used throughout the off-season by numerous community groups from across the region.

Wolf was determined to assume a leadership role in promoting community and interreligious relations in America. He served as chairman of the Los Angeles County Commission on Human Relations, offering important guidance in the aftermath of the 1965 Watts Riots, and in 1969 he co-founded the Interreligious Council of Southern California, which became the first such organization in the U.S. to encompass virtually all of the world's major religions. In 1987, Wolf was selected to address Pope John Paul II on behalf of the entire Southern California Jewish community during the pontiff's historic visit to Los Angeles.

Among Wolf's numerous other active affiliations were the Southern California Board of Rabbis, the Pacific Association of Reform Rabbis, the Hebrew Union College-Jewish Institute of Religion Board of Governors, the National Commission on Interfaith Relations, the American Jewish Committee's Los Angeles Executive Board, the Los Angeles Jewish Federation Council, and the American Academy of Religion.

[Robin Kramer (2nd ed.)]

WOLF, ARNOLD JACOB (1924–), U.S. Reform rabbi. Wolf was born in Chicago, Illinois, and received his B.A. from the University of Cincinnati in 1945. He chose to remain at Hebrew Union College rather than to move to New York's Jewish Theological Seminary when Abraham Joshua *Heschel left HUC along with students such as Samuel Dressner and Richard L. Rubenstein. In 1948, he was ordained at *Hebrew Union College, which awarded him an honorary D.D. in 1973. Following ordination, he served as assistant rabbi of Emanuel Congregation in Chicago (1948–51; 1953–57), interrupting civilian life to serve as a chaplain in the U.S. Navy during the Korean War (1951–53). He was also the first director of the Summer Camp Institutes of the National Federation of Temple Youth (1948–51). In 1955, he became rabbi of Chicago's Congregation B'nai Joshua (1955–57), while launching his own television and radio programs broadcast over the Midwest affiliates of the CBS and ABC networks. In 1957, he was founding rabbi of Congregation Solel, an experimental synagogue in the Chicago suburb of Highland Park (1957–72). He also taught at the University of Chicago Divinity School, Loyola Marymount University, and the College of Jewish Studies (now Spertus Institute).

In 1972, he decided to leave the pulpit, and Wolf was appointed Jewish chaplain at Yale University, where he also lectured in the philosophy department and served as a commissioner of the Board of Ethics of the city of New Haven. His years on campus were marked by a particularly Jewish brand of social activism: he was chairman of Breira, a group that aimed for shared responsibility by Israeli and Diaspora Jewry for Middle East peace (1973–75), opposed Israel's settlements policy, and sought to talk with the Palestinians. He

was a founding contributing editor (with Eugene *Borowitz with whom he had been a fellow student at HUC) of *Sh'ma, A Journal of Jewish Responsibility.* He was also the first official Jewish representative to attend a World Council of Churches Assembly (1975).

In 1980, Wolf returned to Chicago to become rabbi of Illinois' oldest Jewish congregation, Kehilath Anshei Maarav-Isaiah Israel, where he became emeritus in 2000. He resumed leadership roles in the community, becoming president of the Chicago Association of Reform Rabbis (1995–96). In 2002, he was named resident scholar at the Foundation for Jewish Studies in Washington, D.C.

Wolf, who served as theology editor of *Judaism* magazine from 1998, wrote more than 350 essays as well as four books: *Challenge to Confirmands: An Introduction to Jewish Thinking* (1963), *Rediscovering Judaism: Reflections on a New Theology* (1965), *What Is Man?* (1968), and *Unfinished Rabbi* (1998). He also co-edited (with Lawrence *Hoffman) *Jewish Spiritual Journeys* (1997).

[Bezalel Gordon (2nd ed.)]

WOLF, ERIC ROBERT (1922–1999), anthropologist. Born in Vienna, Austria, in 1922, Eric Robert Wolf was an anthropologist who studied peasant societies. Born in an upper middle class family, his family moved to Sudetenland in 1933. His father was an Austrian textile factory manager; his mother was a member of Russian nobility. Wolf grew up on the Czech-German border at the time the Nazi Party was in its ascendancy and antisemitism was on the increase. His father sent him to England to the Forest School in Walthamstow; his family later escaped Germany and immigrated to England, where they were interred as enemy aliens. They eventually moved to the United States in 1940. When World War II broke out, Wolf was studying biochemistry; he left his studies and served in one of the U.S. Army's mountain troop divisions, earning a Silver Star. He returned to school at the end of the war, changing fields to anthropology. He graduated from Queens College in New York City in 1946 and finished a Ph.D. at Columbia University in 1951. He began his career as an academic, first at the University of Illinois and later at the University of Virginia, then Yale and the University of Chicago. He spent 10 years on the faculty at the University of Michigan, from 1961 to 1971, before moving to the Herbert H. Lehman College and Graduate Center at the City University of New York, as a distinguished professor, until his retirement in 1992.

Immediately after graduate school, Wolf focused his work on Mexican history and civilization, looking at the progression of culture and community from pre-Hispanic to Hispanic Mexico. While at Columbia, Wolf became acquainted with Marxism, which led him to his studies of peasantry and their role in complex societies. In the 1950s, he became part of a group of anthropology scholars known as "neo-evolutionists," who challenged the established culturalist tradition. His first book, *Peasant Wars of the Twentieth Century,* examining six political uprisings, was published in 1969. Later in his ca-

reer he did ethnographic research on Alpine communities, integrating historical and ethnographic perspectives, introducing the notion of ecological constraints on development. Active in the antiwar movement during the Vietnam War, he continued his peasant studies, publishing several influential studies of peasant revolutions. He wrote the book many regard to be the masterpiece of his career in 1982, *Europe and the People Without History.* In this book, Wolf argued market forces created tribes just as they created civilizations and nations. These forces changed world populations by creating giant labor migrations such as the European expansions into Africa, the Americas and the Orient and that the common people in the world were both agents of this change as well as its victims. His last work in 1999, *Envisioning Power Ideologies of Dominance and Crisis*, compared the violent regimes of the Aztec, the Kwakiutl of the Pacific Northwest, and the Nazis. In addition to being a scholar of great reputation, Wolf was also a dedicated teacher who embraced teaching undergraduates when he might have easily excused himself from such duties. Wolf died in Irvington, New York, of colon cancer.

[David Weinstock (2nd ed)]

WOLF, FRIEDRICH (1888–1953), German playwright, author, and essayist. Wolf, who was born in Neuwied am Rhein, rebelled against his middle-class Jewish upbringing and ran away from home, hoping to become a painter in Munich. After varied experiences working on Rhine steamers and even in the Salvation Army, he qualified as a physician and served as a German medical officer during World War I. Wolf's growing opposition to the war led to his confinement in a mental hospital, where he was allowed to treat other patients. A member of the short-lived Dresden Soviet (1919), he joined the Communist Party in 1928, became active in leftist intellectual circles, and visited the U.S.S.R. in 1931. Two years later he immigrated first to Switzerland, and then to France, where he lived until 1941, except for the time he spent fighting in the republican army during the Spanish Civil War. In 1941 Wolf escaped from a detention camp in occupied France and made his way to the U.S.S.R., where he became a radio propagandist and a co-founder of the Communist-sponsored Committee for a Free Germany (1943). He returned to Germany as a Red Army medical officer in 1945. From 1950 to 1951 he was East Germany's ambassador in Warsaw.

Wolf's early expressionism dominated his plays such as *Mohammed* (written 1917, publ. 1924) and *Der Mann im Dunkel* (1925), but political engagement characterized his many later works. These include the dramas *Der arme Konrad* (1924), *Cyankali* (1929), *Die Matrosen von Cattaro* (1930; *The Sailors of Cattaro*, 1935), *Florisdorf* (1935, Eng. 1935), and *Das trojanische Pferd* (1937). Other works published before World War II (many printed in Moscow) were *Der Sprung durch den Tod* (1925) and *Die Nacht von Béthineville* (1936), stories; and *Zwei an der Grenze* (1938), an autobiographical novel. Wolf's best-known drama, *Professor Mamlock* (1933, first as *Dr. Mam-*

locks Ausweg; Eng. 1935), was widely circulated among exiled democrats and underground resistance workers. He published a stream of stories and plays during and after World War II, including the autobiographical *KZ Vernet* (1941), *Zwei Kaempfer vor Moskau* (1942), *Heimkehr der Soehne* (1944), *Menetekel oder die fliegenden Untertassen* (1952), and the drama, *Thomas Muenzer* (1953). Wolf also wrote essays on the theater and published five volumes of collected plays (1946–49). He was twice awarded East Germany's National Prize (1949, 1950). Between 1960 and 1967, a 16-volume edition of his complete works appeared.

[Godfrey Edmond Silverman]

WOLF, JOHANN CHRISTOPH

WOLF, FRUMET (**Francisca** née **Brilin**; 1770–1849), community leader. Born in Pressburg (Bratislava) into a prominent scholarly and wealthy family, she married a widower, Chajjim Joachim Wolf of Eisenstadt. An intelligent, compassionate woman, Frumet was appalled at the domination of the community by a small oligarchy of wealthy men, who were totally insensitive to the community's needs. In 1793 she wrote a pamphlet, *Pasquill Zettelech*, circulated anonymously in the community, sharply critical of the wielders of power in the community and their policies. The pamphlet was confiscated and destroyed, but not before its content caused a great stir among the Jews of the city. A ban of excommunication was pronounced not only against the anonymous author, but also against anyone involved in the distribution of the pamphlet. At that point, Frumet identified herself as the authoress. She was fined and forbidden to attend synagogue for a certain time after a plea for clemency was made on the part of her husband. The issue remained a subject of public debate, involving, among others, representatives of the patron of Eisenstadt, Duke Esterházy, until it was finally resolved in 1804. After the death of her husband, Frumet Wolf continued to manage his business and even succeeded in strengthening and enlarging it. She was also well known in Eisenstadt and Burgenland as a philanthropist, assisting the poor financially and providing them with counseling in their private lives. Her will, written in German, is preserved, and is an important source for information on the cultural and economic life of the Jews of Eisenstadt.

[Yehouda Marton / Albert Lichtblau (2nd ed.)]

WOLF, GERSON (1823–1892), Austrian historian and educator. Wolf was born in Holleschau (Holesov), Moravia. After a brief preoccupation with talmudic studies in Nikolsburg he moved to Vienna, where he studied pedagogy, philosophy, and languages. In 1849 he published a booklet, *Die Demokratie und der Sozialismus*, and several radical articles. Although he was ordered to leave Vienna in the wake of these publications, he managed to stay with the help of influential friends. In 1852 he was imprisoned for a number of weeks on suspicion of being a revolutionary. In 1854, after having worked in several schools, he was appointed a teacher of religion in the Vienna community and became inspector of its religious studies in 1884. Wolf founded a youth library and, together with others, an aid organization for poor Jewish students in Vienna. In addition to surveys and documents on the history of the Jews in Worms, Bohemia, Moravia, and Austria (particularly of the Jews in Vienna), he published a textbook for Jewish schools and a survey of the Austrian educational sys-

tem. He also wrote biographies of I.N. *Mannheimer and J. *Wertheimer. His works include *Ferdinand II und die Juden* (1859); *Judentaufen in Oesterreich* (1863); *Die Vertreibung der Juden aus Boehmen 1744* (1869); *Geschichte der Juden in Wien 1156–1876* (1876); *Die alten Statuter der juedischen Gemeinden in Maehren* (1880); and *Die Juden* (1883). Wolf wrote regularly for the *Monatsschrift fuer Geschichte und Wissenschaft des Judentums* (1858–87) and published a series of articles in the periodical *Ha-Mazkir* (1858–61).

WOLF, GUSTAV (1887–1947), German artist. Wolf began his artistic training at the private school of Hans Thoma (1839–1924), who wanted to promote Wolf's talent and encouraged him in his own style of art. Wolf's paintings belong to symbolism, including motifs of his own experiences, imagination, and visions, such as mythical creatures, as do his woodcuts *Zehn Holzschnitte I–X* from 1910. Wolf served as professor of graphic arts at Karlsruhe until the Nazis came to power. In 1938, Wolf emigrated to the United States. Living in exile, horrified and frustrated by the Holocaust, Wolf created in 1945 several expressionistic paintings with illustrations of the Jewish victims in the concentration camps. He was primarily a printmaker. His publications include *Die Schoepfungstage* (seven lithographs, with the biblical texts on the creation of the world), color woodcuts for a novel by Jacob Picard, and a portfolio of etchings, *Vision of Manhattan*. His work is characterized by vivid imagination and emotional intensity. Most of his artistic works are exhibited at the Gustav-Wolf-Kunstgalerie in Oestringen, Germany.

°**WOLF, JOHANN CHRISTOPH** (1683–1739), German bibliographer, *Hebraist, and Orientalist. Born at Wernigerode (Prussia). Wolf studied Hebrew at Wittenberg University and, during study tours in Holland and England, met such Christian Hebraists as Vitringa, *Surenhuis, *Reland, and *Basnage. He became professor of Oriental languages and literature at the Hamburg gymnasium (1712) and was an ardent collector of Hebrew books and manuscripts. Deciding to devote himself to publishing a full list of all extant Hebrew books, he utilized the noted David *Oppenheim collection at Hanover for this purpose. The result of Wolf's research was his *Bibliotheca Hebraea* in 4 volumes (Hamburg, 1715–33).

Volume 1 (1715) contains an alphabetical list of Jewish authors with biographical notes. Volume 2 (1721) is divided

into subject headings such as Bible, Apocrypha, Masorah, Mishnah, Talmud, Kabbalah, Hebrew grammar and antisemitic literature, with a short description of the nature of the books listed. Volumes 3 (1727) and 4 (1733) are supplements to the first two. Although he drew upon the works of bibliographers who preceded him (especially *Bartolocci and *Bass), Wolf offered in his *Bibliotheca* thousands of corrections and additions to the works of his predecessors. In 1829, when the Oppenheimer library was acquired by Oxford University for the *Bodleian collection, M. *Steinschneider used Wolf's *Bibliotheca* as the basis for the compilation of his Bodleian catalogue, referring to Wolf's work on almost every page. Until Steinschneider's catalogue, Wolf's *Bibliotheca* was considered the best Jewish bibliography, and Christian scholars for over a century and a half derived their knowledge on such works as the Mishnah and Talmud from Wolf's book.

Wolf also wrote a history of Hebrew lexicons (his Ph.D. dissertation at Wittenberg, 1705) and a book on the *Karaites, *Notitia Karaeorum* (Hamburg, 1714). He bequeathed his library, containing some 25,000 Hebrew books and manuscripts, to the city library of Hamburg.

[Abraham Meir Habermann / Aya Elyada (2nd ed.)]

WOLF, LEYZER (pseudonym of **Eliezer Mekler**; 1910–1943), Yiddish poet. His bizarre parodies, grotesques, and dramatic sketches bridged popular and elite impulses in the literary group *Yung-Vilne. His first book, *Evigingo* (1936), was an exotic parody of Europe printed in the Roman alphabet. The collections *Shvartse Perl* ("Black Pearls," 1939) and *Lirik un Satire* (1940) gathered poems published previously in the Yiddish press. In 1938–39, he mentored *Yungvald*, a group of younger aspiring writers, including Hirsh *Glick. Wolf died of hunger while a war refugee in Soviet Uzbekistan. A posthumous volume, *Di Broyne Bestye* ("The Brown Beast," 1943), satirized fascism. A selection of his best poems, *Lider* (1955), included a critical introduction and biographic sketch by Leyzer Ran.

[Justin D. Cammy (2nd ed.)]

WOLF, LUCIEN (1857–1930), Anglo-Jewish publicist and historian. Wolf, who was born in London, was the son of a Bohemian political refugee who worked as a pipe manufacturer. He began writing for newspapers at the age of 17. His first regular employment was with the *Jewish World*, of which he later became editor (1905–08). His fluency in French and German was an asset in this profession, and he gradually became known as a foreign affairs expert. His articles in the *Fortnightly Review* and elsewhere, under the pseudonym "Diplomaticus," commanded wide attention. From 1890 to 1909 he was foreign editor of the then-influential *Daily Graphic*. Aroused by the pogroms of 1881, Wolf became extremely interested in Russian affairs, acquired a reputation as an expert in the field, and edited the bulletin *Darkest Russia* (1912–14). He was supplied clandestinely with information through a network initiated by Isaac Elhanan *Spektor. Wolf's anti-Russian attitude made it difficult for him to continue to work as a foreign correspondent after Great Britain's entry into World War I as Russia's ally. In 1917 he became the secretary of the Joint Foreign Committee (of the *Anglo-Jewish Association and the *Board of Deputies of British Jews). As such, he attended the postwar Paris Peace Conference, where he was regarded as a spokesman of "western" Jewry. Although he strongly opposed Jewish nationalism in any form, he was largely responsible for the *Minorities Treaties to safeguard the civil and religious rights of central and eastern European Jews. Subsequently, he acquired a reputation as an authority on minorities problems at the sessions of the *League of Nations at Geneva. Originally an admirer and, to some extent, supporter of Herzl, Wolf later became the principal English spokesman of anti-Zionism, though after 1905 he collaborated with *Zangwill in the Jewish Territorial Organization (see *Territorialism). His hopes that the Wilsonian settlement in Europe at the close of World War I would lead to the protection of its Jewish populations proved tragically naïve.

He had early begun research in Anglo-Jewish history, which he continued throughout his life. He wrote the centennial life of Sir Moses *Montefiore (1884), was one of the organizers of the Anglo-Jewish Historical Exhibition of 1887, and founded the Jewish Historical Society of *England in 1893 (serving repeatedly as its president). His principal work was on the "middle period" of Anglo-Jewish history (after the expulsion of 1290) and on the resettlement. His contributions, based almost wholly on original sources, were of primary importance and placed the study of the subject on a new basis. These researches attracted Wolf to the history of the Marranos. He edited reports on trials of Jewish interest from the *Canary Islands Inquisition records and in 1925 prepared a report on the contemporary Marranos of *Portugal, a historical contribution of great importance. He contributed a most important article to the 11th edition of the *Encyclopedia Britannica* on antisemitism, on the history of which he was the recognized authority in the English-speaking world. His collected *Essays in Jewish History,* edited by Cecil Roth in 1934, contains an account of his life. In the non-Jewish sphere he wrote a life of the English statesman Lord Ripon (1921). During the last 30 years of his life, he was hampered by almost total blindness (only partly relieved by an operation) but triumphantly overcame it. An account of Wolf's wartime activities is Mark Levene's *War, Jews, and the New Europe: The Diplomacy of Lucien Wolf, 1914–1919* (1992).

[Cecil Roth]

WOLF, RICHARD RIEGEL (**Subirana Lobo**, **Ricardo**; 1889–1982), plenipotentiary minister of Cuba in Israel (1961–73), scientist, and founder of the Wolf Foundation in 1975. Born in Hanover, Germany, he was a socialist during the government of the Kaiser, member of the then illegal Social-Democratic Party and the German Zionist movements of the left. He immigrated to Cuba in 1913.

As a student of chemistry, he made an important discovery related to the recovery of residual iron during the founding process, which was successfully applied in steel mills around the world, making him a millionaire. In addition to Cuba, Germany, and Israel, he also lived at times in Barcelona, Italy, and Istanbul. In 1924, he married Francisca Subirana, a Cuban, and, contrary to tradition, adopted her surname.

Although a successful businessman, he actively supported the Cuban Revolution and its leader, Fidel Castro, from the beginning. He became an advisor to the government and promoted support for Land Reform. In 1961, he was named head of the Cuban Diplomatic Mission in Israel, the only Cuban embassy that the Revolutionary Government established at no cost because, as he had promised, Wolf paid for the building, salaries, and costs of representation.

He planted the basis for a fertile relationship between Cuba, his adopted country, and Israel, through the creation of a Friendship Association that substituted for official channels and promoted the collaboration of Israeli agricultural technicians with Cuba. Despite the difficulties imposed by the political alliances of the two countries, he added a profound dimension to the understanding of and empathy with Jewish reality among the Cuban leadership.

When Cuba broke off diplomatic relations with Israel in 1973, Wolf, who was 84 years old, decided to stay in Israel. He and his wife Francesca founded the Wolf Foundation that awards prizes to outstanding scientists and artists, irrespective of their nationality.

[Maritza Corrales (2nd ed.)]

WOLF, SIMON (1836–1923), U.S. lawyer, communal leader, and lobbyist. Born in Hinzweiler, Germany, Wolf, the son of Levi Wolf and nephew of Elias *Wolf, went to the United States in 1848 and settled in Ulrichsville, Ohio. In 1860 he served as an alternate delegate to the Democratic national convention, but shortly thereafter formed a lifelong allegiance to the Republican Party. Disillusioned with a business career, Wolf studied law in 1862 and went to Washington, where he opened a law practice. After the presidential election of 1868, when he publicly defended General Ulyssses S. *Grant against charges

of antisemitism stemming from a Civil War incident, Wolf was rewarded with the post of recorder of deeds for the District of Columbia. He held this post until 1877, when political pressures forced his resignation, and then served as a judge of the municipal court in the district. In 1881 he became the United States consul in Egypt, where he tried to foster trade between the two countries. In 1882 Wolf resumed his law practice in Washington, D.C. At that time Washington was sufficiently provincial to allow easy access to all political leaders and Wolf availed himself of this privilege; he soon viewed himself as a spokesman for the U.S. Jewish community to the federal government and claimed a personal acquaintance with every president from Lincoln through Wilson.

A skillful organizer, Wolf was the representative of *B'nai B'rith in Washington, serving as its president in 1904. Early in his career he acquired the permanent chairmanship of the Committee on Civil and Religious Rights of the *Union of American Hebrew Congregations (see *Board of Delegates of American Israelites). He scored several achievements in social justice and liberal legal interpretations, which included a ruling from the immigration authorities that persons dependent on private charities were not liable to deportation as public charges, and the postponement for four years of the enactment of a restrictive immigrant literacy bill. He was said to have saved some 103,000 aliens from deportation through personal intervention. Wolf publicized the plight of Russian and Romanian Jewry by securing in 1870 the appointment of a Jew, Benjamin F. *Peixotto, as consul to Bucharest; by urging the publication of Secretary of State John Hay's Romanian Note, reiterating basic rights for Jews; by helping to effect the quick release of the Kishinev Petition, aimed at world censure of Russian antisemitism; and by working for the abrogation of a discriminatory Russo-American commercial treaty (1911). As a spokesman for Reform Judaism, Wolf opposed governmental attempts to identify Jews as a group and was vociferous in denying Zionist aspirations, a matter in which he claimed assurances from President Wilson. Jealous of his prerogatives, Wolf engaged in internecine quarrels with the *American Jewish Committee. A member of the Washington Board of Charities and of its Board of Education, he served as president of the Washington Hebrew Congregation. Wolf wrote numerous articles and two large works: *The American Jew as Soldier, Patriot and Citizen* (1895), a study of Jews in the U.S. armed forces (1774–1865), and an autobiography, *The Presidents I Have Known* (1918). A collection of *Selected Addresses and Papers* appeared in 1926. His papers are on deposit at the American Jewish Historical Society.

Wolf's son, ADOLF GRANT (1869–1947), was born in Washington, D.C., admitted to the bar in 1893, and for 11 years conducted a law practice in Washington. In the early 1900s he was appointed associate justice of the Supreme Court of Puerto Rico, serving on the bench until 1941, when he retired. He was also a member of the Commission of Uniform State Laws (Puerto Rico) from 1918 to 1930.

[Esther Panitz]

WOLFE, Canadian family. RAY D. WOLFE (1917–1990), entrepreneur and philanthropist, and ROSE SENDEROWITZ WOLFE (1919–), social worker, community leader, fundraiser, and philanthropist, were both born into eastern European immigrant working-class families in Toronto. They married in 1940 after Rose graduated with a degree in social work and Ray with a degree in arts from the University of Toronto.

Ray, who had failed his university courses in finance and commerce, masterminded the growth of a small family produce wholesaler into the Oshawa Group – one of Canada's largest food-drug-department store businesses. After serving in the Royal Canadian Air Force in 1943–46, Ray returned to his floundering family business and as chairman and CEO built it into a major Canadian corporation. He established a personal reputation for business acumen, honesty, and philanthropy. He was appointed to the boards of large Canadian corporations, becoming the first Jew to sit on the boards of Canadian Pacific Limited and the Bank of Nova Scotia. He was very active in the Jewish community, serving on the boards of the Canadian Friends of Haifa University, Canada-Israel Institute for Industrial Research and Development, and the Canadian Council of Christians and Jews. He was chair of the United Jewish Welfare Fund, a governor of Toronto's Mount Sinai Hospital, and founding publisher and chair of the weekly *Canadian Jewish News*. The Ray D. Wolfe Fellowship, which supports advanced research in Jewish studies at the University of Toronto, was established in his memory by the Canadian Jewish News. In 1980 Ray was awarded the Order of Canada.

In 2000, the Rose and Ray Wolfe Chair in Holocaust Studies was established at the University of Toronto. The chair was created by Rose and reflected her long association with the university and her devotion to social welfare and human rights issues. Rose's early social work career with Toronto's Jewish Family and Child Service placed her with Jewish youngsters who had survived the Holocaust and entered Canada as orphans in 1947–48. This professional work led Rose to a career as a volunteer which focused on education, social justice, and community relations. She was active in more than 20 social, cultural, and educational organizations. From 1983 to 1991, while an officer of the Canadian Jewish Congress (Ontario), Rose served as chair of the Joint Community Relations committee devoted to improving Jewish relations with other ethnic groups, the media, and government. She was also a member of the board of the Banting Research Institute, McMichael Canadian Art Collection, and the Pearson College of the Pacific. Among her affiliations, Rose was a director of Mount Sinai Hospital, where the family established the Ray D. Wolfe Department of Family Medicine.

Rose's many positions included the presidency of the Jewish Family and Child Service in Toronto, the Women's Division of the UJA, and the Federation of Jewish Women's Organizations. She became the first female president of the Toronto Jewish Congress (later the UJA Federation of Greater Toronto), responsible for all Jewish social agencies and educational institutions, and in 1991–97 she served as the first Jewish chancellor of the University of Toronto, where she had long been a key fundraiser. She was honored with an honorary doctor of laws degree from the University in 1998, the Human Relations Award from the Canadian Council of Christians and Jews in 1985, and the 1980 Jewish National Fund's Negev Dinner. Rose Wolfe was awarded the Order of Ontario in 1982 and the Order of Canada in 1999.

[Paula Draper (2nd ed.)]

WOLFE, ALAN S. (1942–), U.S. scholar of political science. Born in Philadelphia, Wolfe received his bachelor's degree from Temple University in 1963. He did graduate work in political science at Vanderbilt University and in 1967 received his Ph.D. in political science from the University of Pennsylvania. From 1966 to 1968 he was an assistant professor of political science at Douglass College, and from 1968 to 1970 was assistant professor at the College of Old Westbury of the State University of New York. Wolfe taught as a visiting scholar at several universities, including Harvard and the University of California at Berkeley. In 1979 he joined the faculty of Queens College as an associate professor, later becoming a full professor of sociology.

In 1991 Wolfe was named the dean of the Graduate Faculty of Political and Social Science and the Michael E. Gellert Professor of Sociology and Political Science at the New School for Social Research. In 1993 he joined Boston University as university professor and professor of sociology and political science. He was named the director of the Boisi Center for Religion and American Public Life at Boston College in 1999, also holding an appointment as professor of political science.

A contributing editor of *The New Republic* and *The Wilson Quarterly*, Wolfe also wrote for *Harper's*, *The Atlantic Monthly*, and *Commonweal*. He wrote *America's Impasse: The Rise and Fall of the Politics of Growth* (1981), in which he argues that differences between the Republican and Democratic parties have diminished as the demands of economics have become paramount. His works *One Nation, After All* (1998) and *Moral Freedom: The Search for Virtue in a World of Choice* (2001) were selected as *New York Times* Notable Books of the Year. His many other works include *The Transformation of American Religion: How We Actually Practice Our Faith* (2003), *An Intellectual in Public* (2003), and *Return to Greatness: How America Lost Its Sense of Purpose and What It Needs to Do to Recover It* (2005).

Wolfe received numerous grants and awards, including grants from the Russell Sage Foundation, the Templeton Foundation, and the Lilly Endowment. He was the George Herbert Walker Bush Fellow at the American Academy in Berlin in

2004, and he received the Award for Public Understanding of Sociology from the American Sociological Association in 2001. He served as an advisor to President Bill Clinton for the State of the Union Address in 1995.

[Dorothy Bauhoff (2nd ed.)]

WOLFE, BERTRAM DAVID (1896–1977), U.S. historiographer. Born in New York City, Wolfe became involved in radical politics, first as a socialist and later as a member of the Workers (Communist) Party. He edited the party's organ, *The Communist*, 1927–28. In 1929 he was expelled from the party and became active in the Communist opposition group. He thus became what was called a "Lovestoneite," one of the Right Opposition the party expelled along with Jay Lovestone. Wolfe later broke with the Marxist left.

Wolfe and his wife, Ella, had experience of the Soviet Union in the early years of Stalin's rule and knew the Russian leader personally. Wolfe's scholarly work was chiefly in the field of Marxist history and Soviet affairs. His book *Three Who Made a Revolution* (1948) is a biographical study of Lenin, Trotsky, and Stalin. Among his other works are *Keep America out of War* (with N. Thomas (1939); *Communist Totalitarianism* (1961), first published under the title *Six Keys to the Soviet System* (1956); *Marxism, One Hundred Years in the Life of a Doctrine* (1965); *Strange Communists I Have Known* (1965); *The Bridge and the Abyss* (1967); and *An Ideology in Power* (1969). *A Life in Two Centuries: An Autobiography* was published in 1981. He was also the biographer of Diego Rivera, e.g., *The Fabulous Life of Diego Rivera* (1963).

Wolfe was a fellow of the Russian Institute of Columbia University and the Hoover Library.

[Ezra Mendelsohn / Ruth Beloff (2nd ed.)]

WOLFE, HUMBERT (**Umberto Wolff**; 1885–1940), English poet and critic. He was born in Milan but was taken as a baby to Bradford, England, where his father was a wool merchant. He was naturalized in 1891. Wolfe was educated at Bradford Grammar School and Oxford and went into the civil service, where he rose to be deputy secretary at the Ministry of Labor (1938–40). During World War I, from 1915 to 1918, he held an important position in the Ministry of Munitions. Wolfe's first published poems, a collection entitled *London Sonnets* (1920), were characterized by a certain facetiousness and by an attempt to imitate colloquial speech. Other early works included *Shylock Reasons with Mr. Chesterton* (1920), *Circular Saws* (1923), *Lampoons* (1925), *Humoresque* (1926), and a long verse satire on the popular press, *News of the Devil* (1926). His first real success was a volume of light verse entitled *Cursory Rhymes* (1927). Later volumes, notably *Requiem* (1927), took life more seriously. *The Uncelestial City* (1930) represented an unsuccessful return to his earlier manner, and volumes in

his more usual strain which appeared over the next ten years added little to his reputation. He translated Rostand's *Cyrano de Bergerac* (1937) and wrote an English adaptation of Jenő *Heltai's Hungarian verse comedy, *The Silent Knight* (1937). His critical writings include studies of Herrick, Shelley, and Tennyson. Wolfe was only mildly interested in Jewish affairs but translated Edmond *Fleg's *Wall of Weeping* (1929) and some of *Heine's poems. His autobiographical works, *Now a Stranger* (1933) and *The Upward Anguish* (1938), reveal his sense of alienation from Jews and Judaism; in 1908 he had become an Anglican. Rather incongruously, Wolfe also wrote excellent accounts of the Ministry of Munitions during World War I which are highly regarded as administrative history.

[Philip D. Hobsbaum]

WOLFENBUETTEL, town in Lower Saxony, Germany. There was a small Jewish community in Wolfenbuettel during the 18th century. In 1781 a synagogue was erected to replace the prayer room that had previously been in use. After a new synagogue was dedicated in 1893, the old one was used as a private dwelling. A cemetery was acquired by the community in 1724 (it was desecrated in 1938). The small community is mainly known for the Jewish school that was established in the town. In 1786 Philip Samson and his brother Herz, *Landrabbiner and *Court Jew of the duke of Brunswick, founded a *bet midrash* for poor boys, under the directorship of Philip, where four to five hours a week were set aside for secular studies (German, arithmetic, etc.). Ten years later another school was founded, endowed by Herz's widow. In 1806–07, under the influence of Israel *Jacobson, the schools amalgamated and revolutionized their curriculum. Less emphasis was given to talmudic studies, which were eventually replaced by catechism. The innovations were carried out by one of the first pupils, S.M. Ehrenburg, who conducted the earliest confirmation ceremony in 1807. The first to be confirmed was Leopold *Zunz, who taught in the school for five years; his contemporary at school was the historian I.M. *Jost. Attendance at the Samsonsche Freischule grew from about a dozen pupils in the late 18th century to 150–200 a century later, when it had become a recognized *Realgymnasium* (high school). It included a hostel. French and English were taught, and Jewish studies included Bible with Mendelssohn's translation, Jewish laws and customs, and a little Jewish history. The trend was that of liberal Judaism. The school was closed on Sabbaths and open on Sundays. In 1928 it was closed following the post-World War I inflation. There were 125 Jews living in Wolfenbuettel in 1932 and 112 in 1933. They maintained two philanthropic organizations. The community ceased to exist during World War II. There are memorials at the Jewish cemetery (from the 1970s and 1980s). A memorial (inaugurated in 1988) and a commemorative plaque (inaugurated in 2000) are dedicated

to the former synagogue. In 2005 a new memorial was built to commemorate the Jewish citizens who lived in Wolfenbuettel during the Nazi era.

[Abraham J. Brawer]

WOLFENSOHN, JAMES DAVID (1933–), international peace envoy, Olympian, philanthropist, investment banker and president of the World Bank. Wolfensohn was born in Sydney, Australia, and enrolled at age 16 at Sydney University, where he discovered a latent talent for fencing. Five years later, Wolfensohn fenced for Australia in the 1956 Olympics. That same year he completed his law degree and the following year, was accepted to do an M.B.A. at Harvard.

After a few years, he returned to Australia where his career as an international investment banker took seed. Over the years he held several executive-level positions in firms in Australia, the U.S., and the United Kingdom. In his late forties, he opened his own boutique investment bank.

Passionate about the performing arts, he was always closely involved in a range of cultural activities. As chairman of the board of Carnegie Hall, he was a driving force behind its restoration.

When he was appointed chairman of the board of trustees of the John F. Kennedy Center for the Performing Arts in Washington, D.C., the center was economically and philosophically troubled. He changed its focus, concentrating on education and increasing performance and outreach initiatives. For his contribution to the arts, Wolfensohn received numerous awards, including a Knight Commander of the Most Excellent Order of the British Empire.

As a committed philanthropist, he was devoted to humanitarian causes. He was president of the International Federation of Multiple Sclerosis Societies and personally financed AIDS initiatives for the disabled. Widely recognized for his voluntary work, he was decorated by the governments of Australia, Brazil, France, Germany, Georgia, Morocco, Norway, Peru, Pakistan, and Russia.

A proud Jew, Wolfensohn chaired the Jerusalem Foundation, was a director of the Jerusalem Music Center and a member of the advisory committee of Yad Hanadiv. He won the American Jewish Committee Herbert H. Lehman, Human Relations Award, and was a trustee of the Fifth Avenue Synagogue.

Wolfensohn received nine honorary doctorates, served as chairman of the board of the Institute for Advanced Study at Princeton University, and was a fellow of the American Academy of Arts and Sciences and of the American Philosophical Society. He was a member of both the Council on Foreign Relations and the Century Association of New York and an honorary trustee of the Brookings Institution.

During his presidency of the World Bank between 1995 and 2005, Wolfensohn made poverty reduction the raison d'etre of the Bank and changed its face by describing the challenge of development in terms of people not numbers.

As his term at the bank was ending, in 2005 the Quartet of powers – the United States, Russia, the United Nations and the European Union, which had joined together to help to attain peace in the longstanding Arab/Israeli conflict – appointed Wolfensohn as their special envoy for peace.

[Jill Margo (2nd ed.)]

WOLFENSTEIN, ALFRED (1888–1945), German poet, playwright, and translator. Born in Halle an der Saale, Wolfenstein qualified as a lawyer but lived as a freelance writer in Berlin and Munich until he emigrated to Prague after the Nazis came to power. In 1938 he fled to Paris and, after the German occupation, wandered through France, eventually returning to the capital under an assumed name. The liberation found him seriously ill, and he committed suicide in a hospital. Wolfenstein was an expressionist poet with no overt political or social outlook. He always emphasized the loneliness of the artist but confessed his Jewishness in the essay *Juedisches Wesen und neue Dichtung* (1922).

His verse collections include *Die gottlosen Jahre* (1914), *Die Freundschaft. Neue Gedichte* (1917), and *Menschlicher Kaempfer* (1919). He also published lyrical dramas and a collection of 30 stories, *Die gefaehrlichen Engel* (1936). His other works include a prizewinning biographical study of the French poet Rimbaud (1930) and various translations from French and English. He edited two volumes of the poetry annual *Die Erhebung* (1919, 1920) and an anthology of world poetry, *Stimmen der Voelker* (1938).

BIBLIOGRAPHY: III. Mumm, *Alfred Wolfenstein. Eine Einfuehrung in sein Werk und eine Auswahl* (1955).

[Rudolf Kayser]

WOLFERT, IRA (1908–1997), author and journalist. Best known for his reporting during World War II and for his Pulitzer Prize-winning book, *Battle for the Solomons* (1943), Wolfert also wrote *American Guerrilla in the Philippines* (1945) and published short stories in various magazines. His novel, *Tucker's People* (1943), was based to a very large extent on material he had gathered as a reporter. It was filmed in 1948 as *Force of Evil*. In 1948 he published *An Act of Love*, with characters burdened by their Jewishness. His career fell into eclipse over the next two decades but interest in his work revived somewhat in the 1970s.

WOLFF, ABRAHAM ALEXANDER (1801–1891), chief rabbi of Copenhagen. Born in Darmstadt, Germany, he graduated from the University of Giessen in 1821, writing for his disser-

tation *Der Prophet Habakkuk* (Darmstadt, 1822). Some years later he wrote *Torat Yisrael*, a textbook on Judaism which was translated into Dutch, Danish, and Swedish. After serving in the rabbinate of Giessen for two years, in 1828 he was appointed chief rabbi in Copenhagen, continuing in office for over 62 years. During this period, Wolff, who combined the traditional spirit with a modern outlook, had a decisive influence in shaping the character of the Denmark community. He succeeded in reconciling the traditional and liberal parties. In the new synagogue, built on his initiative in 1833, Wolff was able to unify the disintegrated community. He instituted the traditional services with revisions, accompanied by a sermon. Many of his sermons have been published. He provided a Danish translation of the prayer book (1856) and translated the Pentateuch and *haftarot* (1891–94, part published posthumously). In *Talmudfjender* (1878) he replied to attacks by some Danish clergymen on the Jews and Judaism. Wolff also wrote *Bibelhistorie for Skole og Hjem* (1867), a biblical history for Jewish school and home use, and defended his innovations in the ritual in *Ateret Shalom ve-Emet,* or *Stimmen der aeltesten glaubwuerdigsten Rabbinen ueber die Pijutim* (1857). He was awarded the title of professor and created a Knight of the Order of Danebrog.

[Leni Yahil]

WOLFF, ALBERT LOUIS (1884–1970), conductor and composer. Born in Paris, Wolff was associated with the Opéra Comique, becoming chorus master in 1908, conductor in 1911, and principal conductor in 1922. In 1924 he was made musical director of the Théâtre des Champs Elysées, and later conducted the Concerts Lamoureux and the Concerts Pasdeloup. Famous as a conductor of French music, he toured widely in Europe and in South America (1940–45) and conducted at the New York Metropolitan Opera (1919–21). His best-known work is the opera *L'Oiseau bleu* (1919).

WOLFF, BERNHARD (1812–1879), also **Bendit Wolff** or **Wolff-Benda**, German journalist and publisher. Born the second son of the Berlin banker Marcus Wolff (1759–1835), Bernhard Wolff was trained in medicine but took up journalism. After the death of his father, who had lost all his assets, Wolff joined the old Berlin book publishing firm Vossische Buchhandlung as part-owner, translating scientific works from French and English. Shortly before the 1848 revolution he acquired the *Berliner Bank-, Börsen- und Handelszeitung* and, in April 1848, was among the founders of the liberal Berlin daily *National-Zeitung*, which he managed till 1850, finally becoming its owner.

In 1849, with the backing of the electrical entrepreneur Werner Siemens (1816–1892), Wolff established the world's first telegraphic news agency in Berlin, the Telegraphisches Korrespondenzbuero Bernhard Wolff, later called Wolff's Telegraphisches Bureau (WTB). WTB was to become the most important German news agency, expanding to other German cities and several European capitals, and even taking over *Reuter's office in Berlin. In 1865, WTB was transformed into a joint-stock company, the Continental Telegraphen Compagnie; the Prussian government also started to subsidize WTB. Wolff remained director of the firm until the 1870s; from the 1870s on, WTB had official standing, being virtually owned by the German government. In 1933, the Nazis changed the name of WTB to Deutsches Nachrichten-Bureau (DNB) which, in 1946, became the Allgemeiner Deutscher Nachrichtendienst (ADN), the official news agency of the German Democratic Republic. In 1994, it merged into the Deutscher Depeschen-Dienst (DDP) agency. Wolff's *National-Zeitung* eventually became part of the *Mosse publishing house. Wolff died in Berlin.

[Johannes Valentin Schwarz (2nd ed.)]

WOLFF, CHARLOTTE (1897–1986), pioneering Jewish lesbian physician, psychotherapist, and sexology researcher in Germany and England. Born in Riesenburg, West Prussia, but raised in Danzig and Dresden, Charlotte Wolff matriculated at the University of Freiburg in 1920 and studied in Königsberg and Tübingen before completing her doctorate in medicine in Berlin in 1926. In 1931, she began working in the Institute for Electrophysical Therapy at the Neukölln clinic and was appointed its director the following year. She also had a small private medical and psychotherapeutic practice. An active member of the Verein Sozialistischer Ärzten (Association of Socialist Physicians), Wolff did volunteer work in a marriage counseling center in Berlin, distributing family planning information and providing poor women with contraception devices.

After the Nazi takeover in 1933, Charlotte Wolff was dismissed from her position in the outpatient clinic and was detained briefly by the Gestapo. Soon thereafter, she managed to escape to France and then England and began researching and writing books on chirology; she initially supported herself by analyzing hands because, as a refugee, she was not permitted to practice medicine. In 1937, Wolff became a permanent resident of England and gained permission to practice as a psychotherapist. In 1941, she was made a Fellow of the British Psychological Society and in 1947, she became a naturalized British citizen, but she was not officially reinstated as a physician until 1952.

In the 1960s, while writing her first autobiography, homosexuality became Charlotte Wolff's new field of research. She published *Love Between Women* (1973), a landmark study based on interviews with more than a hundred lesbians. She later wrote a book on bisexuality and a 1986 biography of Magnus Hirschfeld, the pioneering German-Jewish sexologist. In the 1970s, her books began to be translated into German; she was invited to come to Germany to speak about her experiences and her research on homosexuality and bisexuality in 1978 and again in 1979. As a Jew and a lesbian, Wolff believed that she was a quintessential outsider belonging to two persecuted minorities, but towards the end of her life, she found acceptance in British and German lesbian feminist circles, making important contributions to the study of homosexuality in both her adopted country and her native land. Other books include *Studies in Hand Reading* (1936); *The Human Hand* (1942); *The Hand in Psychological Diagnosis* (1950); *On the Way to Myself: Communications to a Friend* (1969); and *Hindsight* (1980).

[Harriet Pass Freidenreich (2nd ed.)]

WOLFF, GUSTAV (1834–1913), British shipbuilder. Wolff was born in Hamburg to a Jewish family which had been baptized as Lutherans. He came to Liverpool in 1849 to join his uncle, a partner in a large firm of shipowners, and served an apprenticeship in engineering. From 1857 he was a partner in the Belfast shipbuilding firm of Harland & Wolff, which became one of the largest in the world and was also a leading manufacturer of shipping equipment such as marine rope. Much of the prosperity of late Victorian Belfast was due to his firm, which employed 15,000 men at the time of his death. Wolff served as a Unionist (Conservative) member of Parliament for a Belfast seat from 1892 until 1910. Although he was an Anglican, he maintained extensive contacts with the Jewish community in Britain and with overseas Jewish entrepreneurs, such as Albert *Ballin in Germany. Wolff died soon after his firm built its most famous ship. Tragically, it was the *S.S. Titanic*.

BIBLIOGRAPHY: ODNB online; DBB, 5, 854–59; M.S. Moss and J.R. Hume, *Shipbuilders to the World: 125 Years of Harland & Wolff, 1861–1986* (1986).

[William D. Rubinstein (2nd ed.)]

WOLFF, HERMANN (1845–1902), concert manager and music critic. Born in Cologne, Wolff served for some time as Anton *Rubinstein's secretary. In 1881 he founded the concert management firm in Berlin bearing his name (later known as H. Wolff and J. Sachs), which became well known throughout Europe and was associated not only with the promotion of individual artists but also with the organization of important concert series in Berlin and Hamburg. Wolff was also editor of the *Neue Berliner Musikzeitung* (1878–79) and coeditor of the *Musikwelt*.

WOLFF, JEANETTE (1888–1976), prominent German Jewish Socialist. Born in Bocholt, Westphalia, she qualified as a nurse, later became an educationist and, after moving to Belgium, joined the Socialist Party and became active in the Labor Youth Movement. She returned to Germany in 1910 where she continued her political activity, and after her marriage took an increasing interest in Jewish activities, joining the German Jewish Women's Organization, which she represented on the Council of the Red Cross during World War I. After the war she became a prominent member of, and public speaker for, the Society of German Citizens of the Jewish Faith. As a result of her fearless denunciation of Nazism, she was placed under protective custody when the Nazis came to power and, although released in 1935, was continually harassed by the Gestapo and was eventually deported to the Riga ghetto and other camps. Returning to Berlin in 1946 she rejoined the Socialist Party, was elected a deputy to the West Berlin House of Representatives, and from 1952 to 1961 was a member of the Bundestag. Wolff continued her Jewish activities. She was cochairman of the Union of German Jewish Women, vice chairman of the Central Council of Jews in Germany, and chairman of the Society for Christian-Jewish Cooperation.

She was awarded the Great Service Cross of the German Order of Merit of the West German Government and the Leo Baeck Prize of the Central Council of Jews in Germany in 1975.

Wolff wrote *Sadism as Lunacy* on her experiences in the concentration camps, in which she attempted to analyze objectively the reasons for Nazi barbarity. Her autobiography *Mit Bibel und Bebel* remained in fragments and was published in 1980.

WOLFF, JOSEPH (1795–1862), world traveler and Christian missionary to the Jews in the Oriental Diaspora. Born in Weilersbach, Bavaria, the son of a rabbi, he converted to Catholicism in 1812. He was admitted to the Collegio Romani in 1816, but after being expelled because of his heretical views, he moved to England and joined the Anglican Church. In 1827 he married the daughter of the Earl of Oxford, and their son was Sir Henry Drummond Wolff, the well-known diplomat and politician. He studied Oriental languages and theology at universities in Vienna and Tuebingen, among others. Thereafter he became a missionary to the Jews, traveling to Palestine, Kurdistan, Mesopotamia, Turkey, Persia, Khurasan, Bukhara, India, Yemen, Abyssinia, and many European countries.

He undertook his first great missionary journey to the Orient in 1821, which he described in *Missionary Journal and Memoirs of Reverend Joseph Wolff* (3 vols. London, 1827–29). After touring the British Isles and Holland in 1827, and Palestine and Cyprus in 1829, in 1831 he undertook his second journey to Asia, which he described in *Researches and Missionary Labours Among the Jews, Mohammedans, and other Sects (1831–1834)* (2 vols., London, 1835). In 1836 he traveled to the U.S., where he delivered a sermon before Congress in Washington, received a degree at Annapolis, Maryland, and was ordained as deacon in New Jersey. In 1838, however, he returned to England, accepting a parish in Somerset and occupying this office until his death. He left in 1843 for a second journey to Bukhara, having offered to search for Charles Stoddart and A. Conolly, two high-ranking English officers imprisoned by the emir of Bukhara. However, they had been executed before his arrival, and Wolff himself narrowly escaped a similar fate. The Bukharan episode is described in *Narrative of a Mission to Bukhara to Ascertain the Fate of Colonel Stoddart and Captain Conolly* (2 vols., London, 1845), which ran into seven editions.

His writings contain interesting and valuable details about the Jews and Jewish communities in the regions he had visited, but because of his missionary zeal and erratic character, Wolff's data lack objectivity and reliability.

BIBLIOGRAPHY: J. Wolff, *Travels and Adventures. An Autobiography*, 2 vols. (1861); H.L. Palmer, *Joseph Wolff; His Romantic Life and Travels* (1935); G. Wint (ed.), *Mission to Bokhara* (1969).

[Walter Joseph Fischel]

WOLFF, THEODOR (1868–1943), German journalist, politician, and editor-in-chief of the *Berliner Tageblatt* (est. 1872). Born in Berlin, the son of a wholesale dealer, Wolff joined the publishing house of his uncle Rudolf *Mosse in 1887. There he trained as a clerk and started writing for the *Berliner Tageblatt*. In 1889, together with Maximilian *Harden, he was among the founders of the Freie Buehne, an independent theater modeled after the Théatre-Libre in Paris. He was appointed chief Paris correspondent in 1894 and reported the *Dreyfus trial, side by side with his colleague Theodor *Herzl from Vienna. In 1906, he was called back to Berlin as editor-in-chief of the *Berliner Tageblatt*, which he made a leading liberal paper in and outside Germany until 1933. In his widely read Monday evening editorials, signed "TW," Wolff followed a policy of Franco-German understanding and Anglo-German rapprochement. At the outbreak of World War I he opposed extreme nationalist tendencies and annexationist demands. Often in difficulties with the censor, he was for some time forbidden to write. In 1918, together with E. *Feder and others, Wolff was among the founders of the German Democratic Party (DDP) but resigned in 1927 largely because of its rather right-wing *Kulturpolitik*. Until 1932, he served as a political advisor to Gustav Stresemann (1878–1929) and Heinrich Bruening (1885–1970).

After the rise of Hitler, Wolff, regarded as a leading representative of the Weimar system, was forced to flee Germany and left Berlin on the night of the *Reichstag* fire (February 27, 1933). Via Munich and Austria, he first went to Zurich and, in 1934, on to Nice. In 1937, he was officially expatriated. He continued his literary and journalistic work, contributing to papers such as the *Pariser Tageblatt* of G. *Bernhard and the *Aufbau* in New York. In autumn 1941, his visa to the U.S. expired before he was able to use it. In May 1943 he was arrested in Nice by the Italian army, handed over to the Gestapo and sent to Germany, where he was detained at several concentration camps, including Sachsenhausen and Oranienburg. In August 1943, he was taken to the Jewish hospital in Berlin-Moabit, where he died the following month.

Besides novels and plays, Wolff published various volumes of political surveys and memoirs, including *Der Heide* (1891), *Der Untergang* (1892), *Die Suender* (1894), *Die stille Insel* (1894), *Niemand weiß es* (1895), *Die Koenigin* (1898), *Pariser Tagebuch* (1908), *Spaziergänge* (1909), *Vollendete Tatsachen, 1914–1917* (1918), *Das Vorspiel* (1924), and *Anatole France* (1924). After 1933 there appeared *Der Krieg des Pontius Pilatus* (1934), *Der Marsch durch zwei Jahrzehnte* (1936; reprinted in 1989 as *Die Wilhelminische Epoche*), and *Die Schwimmerin* (1937); posthumously published was "*Die Juden." Ein Dokument aus dem Exil 1942/43* (1984).

In 1961, the foundation of the Hamburg paper *Die Welt* established the Theodor-Wolff-Preis for outstanding journalistic achievements.

[Erich Gottgetreu / Johannes Valentin Schwarz (2nd ed.)]

WOLFF, WERNER (1904–1957), U.S. existential psychologist. Born in Berlin, Wolff was one of the first to introduce existentialist psychology in the U.S. In 1933 he left Germany, spent three years at the University of Barcelona and then settled in the United States. He worked at Columbia (1940–42) and served as professor at Bard College in Annandale-on-Hudson, New York, from 1942 onward. He studied the expression of personality in complex movements, in children's drawings, and in handwriting, and wrote books on his findings.

WOLFFSOHN, DAVID (1856–1914), second president of the World Zionist Organization. Born in Dorbiany, Russian Lithuania, Wolffsohn received a religious education. In 1873 his parents sent him to live with his brother in Memel (now Klaipeda) in order to avoid conscription to the czarist army. He studied at a *talmud torah* under Rabbi Isaac *Ruelf, who

later became one of the leading forerunners of the *Ḥibbat Zion movement, and who very much influenced Wolffsohn. At an early age Wolffsohn began to earn his living in Loebau, East Prussia, and in Lyck, where he made the acquaintance of David *Gordon, the editor of the Hebrew newspaper *Ha-Maggid* and one of the first proponents of Ḥibbat Zion. He moved from place to place and worked at various jobs, at one time even as a peddler. He finally settled down in the timber trade, first working for others, and later independently, becoming prosperous.

Wolffsohn's bent for public life was first displayed in his activities in various Jewish communities. This did not appear to satisfy him, however, and he joined various cultural and philanthropic organizations. He finally found his place when he chanced to hear a lecture in Cologne given under the auspices of the Society for Jewish History and Literature. This forum was utilized by Max *Bodenheimer to propagate his Jewish nationalist ideas. After one of Bodenheimer's lectures, which had aroused the opposition of the majority of those present, Wolffsohn rose to defend the speaker and his views. After making Bodenheimer's acquaintance in this way, he began to find an outlet for his public activities in Ḥibbat Zion. Wolffsohn was possessed of an unassuming nature, which prevented him from pushing himself to the fore. In later years he was almost the only one of Theodor *Herzl's associates who lacked a formal secular education, and continuous association with all the "Doctors" in Herzl's circle most probably gave rise to guarded feelings of inferiority.

Wolffsohn was one of many whose latent sympathy for the Zionist idea was fired by the appearance of *Der Judenstaat*. He met Herzl in the autumn of 1896, was immediately captivated, and promised his assistance, especially in matters of finance. From then on he was Herzl's constant companion, and is one of those most frequently mentioned in Herzl's diaries. His imagination was set aflame by Herzl's political vision, which, despite Wolffsohn's habitual reserve and cultivated image as a "businessman," motivated him throughout.

Wolffsohn's debt to Herzl is universally recognized; what is less well known, however, is the fact that Herzl owed much to Wolffsohn as well. Herzl, who knew almost nothing of Jewish life, found in him a teacher and a guide. At the height of the preparations for the First Zionist Congress, in the sphere of protocol so dear to Herzl's heart, Wolffsohn gave the Zionist Movement its first two symbols: the colors blue and white on the model of the *tallit*, for the movement's flag, and the ancient term *shekel, for the Zionist members' due. He was the moving spirit behind the founding of the *Jewish Colonial Trust, which he directed until his last days, as well as of all the other financial and economic institutions of the movement. Despite his enormous admiration for Herzl, Wolffsohn never hesitated to disagree with him on matters with which Herzl was insufficiently acquainted. It was this quality above all that endeared him to Herzl, who portrayed him in glowing terms as "David Litwak" in his novel *Altneuland*. Wolffsohn accompanied Herzl on his journey to Ereẓ Israel to see Emperor William II

(1898) and on his journeys to Turkey. Herzl's death was a terrible blow to Wolffsohn, who, in lieu of the eulogy forbidden by Herzl, swore to cherish his memory by repeating the words "If I forget thee, Jerusalem, let my right hand forget its cunning" at his graveside. Herzl nominated him as the guardian of his children, and Wolffsohn, himself childless, was a loving and devoted father to them until he died.

Herzl's death was a critical blow to the Zionist Movement, then split between those in favor of the *Uganda Scheme and those opposed to it, and on more or less parallel lines between the political Zionists and the "practical" ones. Herzl had managed to bridge these differences by his personal authority, but he left no one to take his place. Wolffsohn was a member of the delegation that asked Max *Nordau to take Herzl's place. Nordau refused, but suggested instead that Wolffsohn himself was the most suitable candidate, and, at the conference of the Zionist Federation of Germany (Cologne, April 1905), Adolph *Friedemann offered Wolffsohn the presidency. His consistent rejection of these proposals, which was both honest and modest, was prompted by his conviction that no one person, least of all himself, was worthy to take Herzl's place. In the end, a triple leadership was agreed upon: Wolffsohn, Nordau, and Otto *Warburg. This compromise was accepted by the Seventh Zionist Congress, which elected him chairman of the Executive and the Zionist General Council.

Wolffsohn's leadership of the Zionist Movement was overshadowed by tragedy. The giant figure of Herzl constantly before him and the rest of the movement was the source of a great deal of bitterness in his life and a spur to the opposition that began to appear at the start of his tenure. Wolffsohn built up his self-confidence very slowly, until he came to the point where he was a competent enough speaker to parry the thrusts of the opposition. His roots in eastern European Jewish life added to his confidence and enabled him to introduce elements of humor and traditional associations into his speeches, which the Jewish masses found very appealing.

The Seventh Zionist Congress not only put an end to the Uganda Scheme but also effected a programmatic innovation by achieving a compromise between the "practical" and the political Zionists that called for settlement activity within the framework of the *Basle Program. Practical work in Ereẓ Israel was not made conditional on the attainment of a "charter." Although Wolffsohn tried to reconcile differences in the Zionist camp, full unity was not achieved because each side believed he was putting the other side's program into effect. This moderate position became his guiding policy, but it could not be viable for any length of time because it encountered much opposition, despite the fact that Wolffsohn made executive posts available to his staunchest opponents.

After Wolffsohn moved the central Zionist office to Cologne, the *Jewish National Fund center, under Bodenheimer, was transferred there as well. He invited Nahum *Sokolow to act as general secretary of the Zionist Organization and founded the official Hebrew newspaper of the Zionist Organization *Haolam* (1907), which was initially edited by Sokolow. He

took part in the conference of Jewish organizations in Brussels (1906) that met to organize matters concerning emigration. Although the practical results of the conference were insignificant, its value lay in the fact that the Zionist Organization made its appearance side by side with other worldwide Jewish organizations. When his health collapsed, Wolffsohn set out on a holiday to South Africa (1906), a journey which was transformed into a triumph for Zionism and became the foundation stone of the South African Zionist Federation. On his return he visited Ereẓ Israel and published his impressions in *Die Welt*.

The compromise between the political and the "practical" Zionists, which took place at the Eighth Zionist Congress in The Hague (1907) and was theoretically expressed in Chaim *Weizmann's famous speech on "synthetic Zionism," found its mediator in Wolffsohn, who restrained both sides at once. His emphasis on efficiency in practical work earned him the epithet "*kaufmaennisch*," a barb directed against him by both sides. He revealed his ability as a leader capable of deciding between extremely opposed views and methods, while simultaneously insisting that everything was being done in the spirit of Herzl. All the practical programs then being instituted (the opening of branches of the Jewish Colonial Trust in Ereẓ Israel, the beginnings of settlement, the activities of the JNF) were, in Wolffsohn's opinion, a continuation of the plans and the activities of Herzl's period. He was elected president by 135 votes to 59.

Afterward Wolffsohn went to Turkey, but was prevented from seeing the sultan by the outbreak of the revolution of the Young Turks (1908), which disrupted all his arrangements. At this time he also showed himself capable of decisive action by agreeing to grant a JNF loan to the first settlers of Aḥuzat Bayit, the nucleus of Tel Aviv, despite widespread opposition on the grounds that the requested loan was against the regulations of the JNF. Great demonstrative value was attached to Wolffsohn's journey (accompanied by Sokolow) to Russia in 1908 and to the splendid reception he was accorded by Prime Minister Stolypin, Foreign Minister Isvolsky, and other members of the government. Although his attempts to secure legal status for the Zionist Organization in Russia were unsuccessful, the downtrodden Jews of Russia experienced a degree of gratification at the show of cordiality with which he was received by the government. On the outbreak of the revolution of the Young Turks, Wolffsohn was one of the few Zionists to retain his composure and refuse to be drawn into the excited political scheming rife in the movement. Instead, he proceeded to organize a branch of the Jewish Colonial Trust in Constantinople and found and acquired newspapers there for the propagation of the Zionist point of view. In 1908 he also visited Hungary, where the Zionists were under severe attack from the assimilationists with government assistance, and succeeded in seeing the prime minister and lessening the tension to a certain extent.

Wolffsohn, who enjoyed Nordau's support, was again elected president of the Zionist Organization, despite the opposition to him that gained in strength, reaching its climax at the Ninth Congress in Hamburg (1909). He did everything in his power to bring the opposition, the "practical" Zionists, closer to the leadership, but all his efforts were in vain. His health was rapidly failing and, finally, proved insufficient to meet the demands of the struggle with the opposition. At the Tenth Congress (Basle, 1911) he resigned from the leadership of the movement, retaining only the directorship of the financial and economic institutions. The center of the movement moved from Cologne to Berlin, and Wolffsohn, apart from remaining active in the above institutions, also undertook various journeys on behalf of the cause. He intended to settle in Ereẓ Israel and even learned to speak Hebrew with this end in view, but he died before this could be accomplished. He was buried in Cologne, and in 1952 his remains were brought to Israel and interred next to Herzl's grave on Mt. Herzl in Jerusalem. His estate provided the means for the National and University Library building in Jerusalem, which also houses his archives, including diaries and letters, and contains a room named in his honor.

It was only after Wolffsohn's death that his personality and work were fully appreciated. Only then was he recognized, even by his opponents, as a man of the people who had risen from the ranks by virtue of decades of devoted work. He was also a symbol of the synthesis between East and West, combining the best qualities of both European Jewish communities. His good nature, however, made him an easy prey for all those who considered Herzl's successor fair game for any treatment they cared to mete out to him. This was the source of the tragic quality that permeated the period of his leadership of the Zionist Movement.

WOLFOWSKI, MENAHEM ZALMAN (1893–1975), Hebrew writer and translator. Born in Russia, Wolfowski served in the Russian army during World War I and immigrated to Ereẓ Israel in 1921. After working for three years in road and building construction, he turned to teaching and editing, working for the Miẓpeh and Ha-Kibbutz ha-Me'uḥad publishing houses. Wolfowski published poems, stories, criticism, and articles in various periodicals and literary anthologies in Ereẓ Israel.

His books of poetry are *Sofei Shevilim* (1928) and *Shirim u-Fo'emot* (1953). He also published the short story collections *Yeled Yullad Lanu* (1950) and *Beit Yisrael* (1963), and a series of books for young people. In 1968, a collection of his essays and memoirs appeared, *Kerovim ba-Nefesh*. After the death of M. *Poznanski, he completed the edition of J.Ḥ *Brenner's writings (vols. 2–3, 1960–67). Wolfowski translated more than 50 books, including works by Turgenev, Dostoevski, and Tolstoy, as well as historical works and children's books.

WOLFSBERG, small town in Carinthia, S. Austria; under the rule of the Bamberg bishopric in the 13th century. Jews are first mentioned there in 1289, and in 1304 the duke of Carinthia granted them a charter of privileges, which was renewed in 1311. During the Host libel at *Pulkau (1338), the Jews of Wolfsberg were accused of having stolen the consecrated bread of the Eucharist, having made it bleed, and having tried to burn it. More than 70 Jews were burned at the stake on August 19, and the community disappeared. In 1346 one Jew was permitted to resettle in Wolfsberg.

WOLFSKEHL, KARL (1869–1948), German poet. Born in Darmstadt, Germany, he claimed descent from the patrician *Kalonymus family, which settled in Mainz more than a thousand years before his birth, and insisted on his right to regard himself as a representative of the authentic German spirit. After his university studies he came under the influence of the lyric poet Stefan George (1868–1933) whom he hailed as his master and with whom he collaborated in the publication of the three-volume *Deutsche Dichtung* (1901–03) and the *Blaetter fuer die Kunst* (1892–1919). From 1899 to 1932 Wolfskehl's Munich home was the meeting place of the George Circle and Wolfskehl himself its only Jewish member. His early lyrics, which began to appear in 1897, his *Gesammelte Dichtungen* (1903), and *Der Umkreis* (1927) all follow the standards of George's neoclassicism, and there was also a powerful mystic current in his writing. Three traditions shaped Wolfskehl's poetic personality: the German, the Greco-Roman, and the biblical. The biblical influence appeared in 1905 in the lyrical drama *Saul*, but it was only after he left Germany in 1934 that Jewish themes became dominant in his verse. Wolfskehl lived in Italy and Switzerland until 1938 and thereafter in New Zealand. Because both his German and his Jewish feelings were so deep-rooted, the persecution of Jews by Germans was profoundly shocking to him, and in the autobiographical song *An die Deutschen* (begun in Rome in 1934 and completed in New Zealand in 1944; published 1947) the homesick poet took leave of his native land.

Other poems reflecting his heartbreak are those in *Die Stimme spricht* (1934) and in the volumes published posthumously, *Hiob* (1950), and *Sang aus dem Exil* (1951). The correspondence of Wolfskehl's last decade in Auckland (*Zehn Jahre Exil…*, 1959) gives clear insight into his later, more universalist and cosmopolitan, outlook. In 1960 a hitherto unpublished work appeared in Amsterdam in German under the Hebrew-German title *Kalon Bekawod Namir – "Aus Schmach wird Ehr"* ("We will Exchange Disgrace for Honor"; cf. Hos. 4:7). His *Gesammelte Werke* was published in two volumes in 1960.

WOLFSOHN, JULIUSZ (1880–1944), pianist, critic, and composer. Born in Warsaw, Wolfsohn studied piano at the conservatories in Warsaw, Paris, and in Vienna, where he wrote music and criticism for the *Montagblatt*. On his return to Poland in 1925, he wrote for *Muzykai Rytm* and lectured on Jewish music and musicians and on the interpretation of Chopin. Wolfsohn settled in the United States in 1933. He composed a number of works on eastern European Jewish themes, including *Jewish Rhapsody, Hebrew Suite*, and *Twelve Paraphrases on Jewish Melodies*.

WOLFSOHN-HALLE, AARON (1754–1835), writer. Born in Germany, Wolfsohn-Halle taught in a Jewish public school in Breslau from 1792 to 1807, serving the last five years as its principal. Among the most radical of the early *maskilim*, he was one of the editors of *Ha-Me'assef* during its Berlin period, and editor in chief in 1797. Among his own various contributions to the periodical was the play *Siḥah be-Erez ha-Ḥayyim* (in *Ha-Me'assef*, vol. 7, 1794–97), in which *Maimonides and Moses *Mendelssohn meet in paradise. The author praises Mendelssohn and combines his own radical views of the Haskalah with acrimonious remarks against the Talmud and the Kabbalah. His school text, *Avtalyon* (Berlin, 1790–1814[3]), the first written for Jewish pupils, was a pioneer attempt to relate Bible stories in simplified Hebrew prose. In addition, Wolfsohn-Halle published the books of Job (1826) and 1 Kings (1827) in the Mendelssohn translation, with his own commentary; wrote in German, translating some biblical books into German; and published works in Yiddish, including *Reb Ḥanokh ve-Reb Yosefkhi*, a satirical play replete with Haskalah didacticism. An earlier Hebrew version of this play, written in the 1790s, recently discovered, was published in 1955 (PAAJR, vol. 24, with notes). In 1995, a new transcription of *Leichtsinn und Froemmelei. Ein Familiengemaelde in drei Aufzuegen* appeared, edited by G. Och and J. Strauss, and following the Breslau edition of 1796.

WOLFSON, ELLIOT (1956–), U.S. professor of Judaic studies. He received a bachelor of arts and master of arts degree from Queens College (1979) and a master of arts (1983) and doctoral degree (1986) from Brandeis University. He conducted research at The Hebrew University, Jerusalem, in 1984 and 1985 and was a fellow at the International Center for the University Teaching of Jewish Civilization in the Diaspora. In 1986 and 1987 he was an Andrew W. Mellon Teaching Fellow in the Humanities at Cornell University.

Wolfson taught at Queens College in 1988–89, then at the Jewish Theological Seminary of America from 1989 to 1993. He taught at Princeton University in 1992, was a visiting professor at the University of Chicago and the Russian State University for the Humanities, and an adjunct professor of Jewish history at Columbia from 1989 to 2000. Wolfson became an assistant professor of Hebrew and Judaic Studies at New York Univer-

sity in 1987, then an associate professor in 1991, and he was appointed professor in 1995. In 1996 he was named the Abraham Lieberman Professor of Hebrew and Judaic Studies. He served as the director of Religious Studies from 1995 to 2002.

Wolfson's research interests include the history of Jewish mysticism, comparative mysticism, the phenomenology of religion, hermeneutics, literary theory, and gender studies. His works include *The Book of the Pomegranate: Moses de León's Sefer ha-Rimmon* (1988); *Through a Speculum That Shines: Vision and Imagination in Medieval Jewish Mysticism* (1994); *Circle in the Square: Studies in the Use of Gender in Kabbalistic Symbolism* (1995); *Abraham Abulafia – Kabbalist and Prophet: Hermeneutics, Theosophy, and Theurgy* (2000); *Pathwings: Poetic-Philosophic Reflections on the Hermeneutics of Time and Language* (2004); and *Language, Eros, Being: Kabbalistic Hermeneutics and Poetic Imagination* (2005). *Through a Speculum That Shines* received in 1995 an award from the American Academy of Religion.

Wolfson edited *Rending the Veil: Concealment and Secrecy in the History of Religion* (1999) and coedited, with A. Ivry and A. Arkush, *Perspectives on Jewish Thought and Mysticism* (1998). He wrote extensively for academic journals, including the *Association for Jewish Studies Review, Harvard Theological Review, Jewish Quarterly Review*, and others, and contributed to many collections of essays, including *Gender and Judaism* (1995) and *Perspectives on Jewish Thought and Mysticism* (1998).

A fellow of the American Academy for Jewish Research, Wolfson is a member of the American Academy of Religion, the World Union of Jewish Studies, and the Medieval Academy of America.

[Dorothy Bauhoff (2nd ed.)]

WOLFSON, HARRY AUSTRYN (1887–1974), historian of philosophy. Born in Belorussia, Wolfson received his early education at the Slobodka yeshivah. Emigrating to the United States in 1903, he studied at Harvard and, from 1912 to 1914, held a traveling fellowship from Harvard, which enabled him to study and do research in Europe. In 1915 he was appointed to the Harvard faculty, becoming professor of Hebrew literature and philosophy in 1925. From 1923 to 1925 he also served as professor at the Jewish Institute of Religion. Wolfson received many academic honors for his pioneering researches. He was a fellow of the American Academy for Jewish Research, serving as its president from 1935 to 1937, and a fellow of the Mediaeval Academy of America. He was president of the American Oriental Society in 1957–58, and also held membership in the American Academy of Arts and Sciences. In 1958 he was awarded the prize of the American Council of Learned Societies. In 1965 the American Academy for Jewish Research published the *Harry Austryn Wolfson Jubilee Volume* (in English and Hebrew) in his honor.

Wolfson – whose writings are marked by a mastery of the philosophic literature in the several languages in which it was written, penetrating analysis, clarity of exposition, and

felicity of style – wrote many books and articles. (A bibliography, appearing in the *Jubilee Volume* (Eng. sec., pp. 39–49), contains 116 items, which were published between 1912 and 1963.) His early articles, several of which dealt with issues in the philosophies of Crescas and Spinoza, were followed by his first book, *Crescas' Critique of Aristotle*, which, though completed in 1918, was not published until 1929. The volume contains a critical edition of part of Crescas' *Or Adonai* (the section dealing with the 25 propositions which appear in the introduction to the second part of Maimonides' *Guide*), an exemplary English translation, and an introduction; but of special importance are the copious notes which take up more than half of the volume. In these notes Wolfson discusses, with great erudition, the origin and development of the terms and arguments discussed by Crescas, and he clarifies Crescas' often enigmatic text. In the introduction (pp. 24–29) Wolfson describes the "hypothetico-deductive method of textual study" which guided him in all his works (see introductions to his other books). Akin to the method used to study the Talmud known as *pilpul*, this method rests on the assumptions that any serious author writes with such care and precision that "every term, expression, generalization or exception is significant not so much for what it states as for what it implies," and that the thought of any serious author is consistent. Hence it becomes the task of the interpreter to clarify what a given author meant, rather than what he said, and he must resolve apparent contradictions by means of harmonistic interpretation. All this requires great sensitivity to the nuances and implications of the text and familiarity with the literature on which a given author drew. Like the scientific method, the "hypothetico-deductive" method proceeds by means of hypotheses which must be proved or disproved, and it must probe the "latent processes" of an author's thought.

The investigation of the background of Crescas' thought involved Wolfson in an intensive study of the commentaries on Aristotle's works written by the Islamic philosopher Averroes. However, most of these commentaries existed only in manuscripts, and so Wolfson proposed the publication of a *Corpus Commentarionum Averrois in Aristotelem* (in: *Speculum*, 6 (1931), 412–27; revised version, *ibid.*, 38 (1963), 88–104). This corpus was to consist of critical editions of the Arabic originals, and of the Hebrew and Latin translations; and it was to contain English translations and explanatory commentaries by the editors. The Mediaeval Academy of America undertook to sponsor this project and Wolfson was appointed its editor in chief. By 1971, nine volumes of the series had appeared.

In 1934 Wolfson's two-volume *The Philosophy of Spinoza* appeared. Applying the "hypothetico-deductive" method, Wolfson undertook to unfold "the latent processes" of Spinoza's reasoning. Following the arrangement of Spinoza's *Ethics*, Wolfson explained the content and structure of Spinoza's thought and discussed extensively the antecedents on which he drew. By the time he had completed his *Spinoza*, Wolfson had conceived the monumental task of investigating "the structure and growth of philosophic systems from Plato to

Spinoza," working, as he put it, "forwards, sideways, and backwards." As work on this project progressed, he continued to publish articles. His next book, *Philo: Foundations of Religious Philosophy in Judaism, Christianity, and Islam*, appeared in two volumes in 1947 (1948², 1962³). *Philo had until then been considered an eclectic or a philosophic preacher, but Wolfson undertook to show that behind the philosophic utterances scattered throughout Philo's writings there lay a philosophic system. More than that, he held that Philo was the founder of religious philosophy in Judaism, Christianity, and Islam, and that "Philonic" philosophy dominated European thought for 17 centuries until it was destroyed by Spinoza, "the last of the medievals and the first of the moderns."

After publishing more articles, Wolfson in 1954 completed another two-volume work, *The Philosophy of the Church Fathers* (1964²). However, he decided to publish only the first volume, which appeared in 1956. Following the pattern established in his *Philo*, but allowing for differences occasioned by Christian teachings, Wolfson devoted this volume to faith, the Trinity, and the incarnation, discussing not only the orthodox but also the heretical views.

In 1961 a collection of Wolfson's articles appeared under the title *Religious Philosophy: A Group of Essays*.

[Arthur Hyman]

WOLFSON, SIR ISAAC (1897–1991), British financier and philanthropist. Wolfson was born and grew up in a poor district of Glasgow, the son of a picture frame maker who had migrated from Bialystok. After leaving school at the age of 14, Wolfson worked for his father as a traveling salesman. He moved to London in 1922 and went into business, joining the Great Universal Stores a decade later and becoming its chairman in 1946. He made the GUS Group one of the world's foremost industrial and commercial empires. He built up a chain of nearly 3,000 retail stores, dealing in furniture and soft goods, developed the largest mail order business in Britain, and controlled a road transport organization in Britain second only to the nationalized British Road Services. His interests in Britain and the U.S. extended to banking, insurance, building, real estate, and shipping.

After World War II Wolfson began to devote himself more intensively to Jewish and general philanthropy. In 1955 he formed the Wolfson Foundation which by 1970 had distributed over £20,000,000 (approximately $56,000,000) in charitable contributions to numerous establishments in Britain and the British Commonwealth for the advancement of health, education, the liberal arts, science and engineering, youth and student welfare, and various other humanitarian and academic purposes. He became associated with business undertakings in Israel and used the profits to further his philanthropic interests there. The Edith and Isaac Wolfson Trust provided funds for building the Supreme Rabbinical Center in Jerusalem (Hechal Shlomo, named for his father), 50 synagogues throughout the country, and the Kiryat Wolfson housing projects for new immigrants in Jerusalem and Acre, which

included schools and synagogues. He contributed to the development program of The Hebrew University of Jerusalem, the Technion, and especially the Weizmann Institute of Science. Wolfson was made a baronet in 1962 in recognition of his public services. In 1963 he became the only non-scientist to be elected a Fellow of the Royal Society. He founded Wolfson College at Oxford with a contribution of £2,000,000, which was matched by a similar endowment by the Ford Foundation, and in 1977 also founded Wolfson College, Cambridge. He was appeal chairman of the Joint Palestine Appeal of Great Britain and Ireland from 1950 onward, and president of the *United Synagogue. By the time of his death he had given away £130 million to various philanthropic causes and was probably the greatest British philanthropist of his time. His son BARON LEONARD WOLFSON (1927–) succeeded him as chairman of GUS and was president of the Jewish Welfare Board from 1972 to 1982. Also a great philanthropist, he was given a life peerage in 1985.

WOLFSON, THERESA (1897–1972), U.S. economist. Born and raised in Brooklyn, Wolfson received her B.A. from Adelphi College in 1917, her M.A. from Columbia University in 1923, and her Ph.D. from the Brookings Institution in 1926. A specialist in labor economics and industrial relations, she researched and published studies on discrimination against women in the workplace and within trade unions. A researcher, activist, and educator, Wolfson began her long career investigating wage standards and working conditions in the New York garment industry. She worked as a field agent for the National Child Labor Committee (1918–20), as executive secretary of the New York State Consumers League (1920–22), and then as director of education at the Union Health Center of the International Ladies Garment Workers Union (1925–27). Wolfson married Dr. Iago Galdston in 1920 and the couple had two children. Following a 1935 divorce, Wolfson married Austin Bigelow Wood, a professor of psychology at Brooklyn College, in 1938.

In 1928 Wolfson was appointed instructor of economics at the Brooklyn branch of Hunter College, soon to become Brooklyn College, and was subsequently promoted to the rank of professor of economics and labor relations. She also taught adult education courses for the ILGWU, the Headgear Workers Union, and the Summer School for Office Workers, as well as courses in the continuing education program at Sarah Lawrence College after her retirement from Brooklyn College in 1967. During her lifetime, Wolfson's students dedicated a collection of books on labor-management relations at Brooklyn College Library in her honor; after her death, her colleagues established an annual scholarship for graduate study in labor economics in her memory.

In addition to her book, *The Woman Worker and the Trade Unions* (1926), Wolfson published many scholarly and

popular articles and was on the editorial board of *The Woman Today*. She served on the public panel of the War Labor Board (1942–45); the national panel of arbitrators of the American Arbitration Association; the State Board of Mediation (1946–53); the Kings County Council Against Discrimination (1949–53); and as New York chapter president and member of the executive board of the Industrial Relations Research Association. In 1957, she received the John Dewey Award of the League for Industrial Democracy in recognition of her achievements as mediator of industrial disputes. Theresa Wolfson's extensive papers can be found in the Kheel Center for Labor-Management Documentation in the Catherwood Library at Cornell University.

[Harriet Pass Freidenreich (2nd ed.)]

WOLFSTHAL, CHUNE (1851–1924), composer. Born in Tysmenitsa, Galicia, Wolfsthal was the son of a cantor. Together with his six brothers he organized the well-known Kapelle Wolfsthal ensemble in Tarnopol. It toured widely and entertained both at gentile social functions and at ḥasidic courts. After service as a military bandmaster, Wolfsthal became conductor at the Jewish Theater in Lvov but was forced to flee to Vienna in 1914, and returned to Tarnopol after the war. The operettas which he composed, *Der Teufel als Retter, R. Jehuda Halevi, Der komische Ball, Die Malke Schwo, Die Tochter Jeruschulajims, Die Drei Matunes* (from the story by I.L. Peretz), and *Bostenai* were written in the classical pattern of Johann Strauss and Suppé operettas. They were played in every Jewish theater in the world and made Wolfsthal's reputation second only to that of Abraham *Goldfaden. He also composed waltzes, marches, and dances which attained great popularity. Despite his success, Wolfsthal lived and died in poverty.

WOLKOWISKI, JEHIEL BER (1819–1903), wealthy merchant and leader of the community of Bialystok. A dynamic personality, Wolkowiski was outstanding for his brilliant economic initiative. He amassed a fortune by trading textiles from factories in Germany and succeeded in marketing them in an efficient manner at the fairs of Lithuania and Ukraine. As a result of his connections with the Russian authorities he acted as the leader of the community for 50 years (1850–1900), in spite of its lack of official status. His control over the administration of several banks also enabled him to exert influence on the municipal leaders and the local police, and he developed many charitable institutions in the community. Their officials acted upon his instructions. He did many favors for individuals, and became well known for saving Jewish youths who had been forced into military service. Although he possessed a limited education, Wolkowiski maintained a religious atmosphere in his home and a special *bet midrash*, which continued to exist until World War II. An opponent of Ḥibbat Zion and Zionism, he attacked R. Samuel *Mohilewer. In 1894 the

authorities granted him a special status according to which he could vote and be elected to office.

BIBLIOGRAPHY: A.S. Herschberg, *Pinkas Bialystok*, 1 (1949), 249–68.

[Moshe Landau]

WOLLENBORG, LEONE (1859–1930), Italian statesman. He became famous especially as founder of the savings and agricultural cooperative credit banks. He founded the first of them in 1883. Wollenborg was elected as deputy in 1893; he was appointed undersecretary at the Ministry of Finance in 1898, and he became minister of finance in 1901. Wollenborg became senator in 1914.

[Massimo Longo Adorno (2nd ed.)]

WOLLHEIM, GERT H. (1894–1974), German expressionist painter, born in Dresden. From 1911 to 1913 Wollheim studied in Weimar at the school of fine arts. Among his teachers were Gottlieb Forster and Albin Egger-Lienz. As a young artist he exhibited in Herwarth Walden's progressive Der Sturm Gallery in Berlin. During World War I, he fought on the eastern and western fronts and was wounded in the stomach, an experience which became crucial for his later art work. His work is violent and contorted, and stresses the element of the grotesque. Some of his compositions mingle figures in everyday dress with figures of masqueraders. In 1919 he left Berlin for Duesseldorf, where he created many of his woodcuts, etchings, and paintings to express his terrible experiences of war. The monumental triptych *The Wounded* has the figure of a soldier in the position of the crucified Jesus, with lacerated belly, as its centerpiece (1919, private collection). Wollheim shared his studio in Duesseldorf with his friend Otto Dix and joined the association Das Junge Rheinland as well as the Aktivistenbund 1919, a group of young leftist intellectuals and artists.

In 1933 he emigrated to Paris, where he founded the Kollektiv Deutscher Kuenstler in 1936–37. In 1938 the Nazis showed three works of Wollheim in their exhibition "Degenerate Art" in Munich as examples of accomplished madness. From 1939 to 1942 he was detained in the camps at Vierzon, Ruchard, Gurs and Septfonds, France. In 1942 he was able to escape to Nay, where he and his wife were hidden by a peasant woman. In 1947 he emigrated to New York. In 1961, on the occasion of the exhibition at the Museum of Art, Duesseldorf, he visited Germany for the first time since 1933. In 1971 his work was on exhibition in Berlin. Wollheim died in New York.

Today the art of Wollheim is considered to be a synonym for aggressive avant-garde art and the attempt to illustrate the inner feelings of mankind in hyper-expressionist painting. His surreal and fantastic landscapes with monstrous figures and symbols point to the work of Hieronymus Bosch, such as *Paradis terrestre* (1936, private collection) or *The Kingdom of Punctuation Marks* (1953, private collection). Moreover, he

went on to represent the abuses of the Nazi regime in expressive forms, as in *Gurs VII: Death Transport* (1940, private collection) and *Six Millions* (1962, Museum Duesseldorf). Most of his paintings, some 450 works according to the estimate of the artist himself, were either destroyed in, or have been missing since, World War II.

[Jihan Radjai-Ordoubadi (2nd ed.)]

WOLMAN, ABEL (1892–1989), U.S. sanitary engineer, pioneer in problems of environmental pollution. Born in Baltimore, Maryland, Wolman became professor of sanitary engineering at his alma mater, Johns Hopkins University, lecturing there from 1937 to 1957. Working in the field of water supply and sewage, Wolman did much toward maintaining proper sanitation throughout the United States. He was an early advocate of a national water policy, and as early as 1946 demanded that industry assume responsibility for alleviating pollution. He was consulted by the U.S. Public Health Service, the U.S. Departments of Defense, Agriculture, and the Interior, the Red Cross, the Tennessee Valley Authority, the American Railroad Association, and many municipalities. An authority on environmental sanitation at the UN, Wolman's expertise was sought in India, Ceylon, Taiwan, Argentina, Brazil, and the Arctic. He was chief consultant for Israel's Jordan River project and, from 1958, consultant for all water development in Israel. Disposal problems took on a new dimension with the worldwide proliferation of atomic activity, and Wolman was appointed by the U.S. Atomic Energy Commission to evaluate the dangers of cumulative radiation. In 1967 he became a consultant on biotechnology in the atmosphere for the National Aeronautics and Space Administration (NASA). Wolman served as president of the American Public Health Association and was editor of the *Journal of Public Health.* A prolific contributor to professional journals, he wrote on such diverse subjects as malaria, ice engineering and the legal aspects of water supply. Many of his articles are reprinted in *Water, Health and Society: Selected Papers by Abel Wolman* (G.F. White, ed., 1969). He was co-author of *The Significance of Waterborne Typhoid Fever Outbreaks* (1931), and was the editor of *The Manual of Water Works Practice* (1925). For a period of 60 years Wolman succeeded in focusing his attention on the total human environment, responding in both technological and human terms to the threats to the environment that result from technological progress.

WOLMARK, ALFRED (1877–1961), British painter. Born in Warsaw, he was taken to the East End of London as a child and studied in the Royal Academy Schools. He made his reputation at the Whitechapel Art Exhibition of 1906, where his work was praised by perceptive art critics. In his early period,

he painted Whitechapel scenes and Rembrandtesque studies of Jewish subjects, such as rabbis and talmudic students. Later he developed into a brilliant colorist. His use of color was so bright that in an exhibition of the International Society of Artists no English painter dared hang work next to his. His work was finally placed next to Van Gogh's. Wolmark did portraits of many noted literary figures and, in 1925, provided illustrations for an edition of the works of Israel *Zangwill. A retrospective exhibit of Wolmark's work was held at London's Ben-Uri Gallery in 2004.

WOLOFSKY, HIRSCH (1878–1949), Canadian Yiddish publisher and author. Wolofsky was born in Shidlovtse (Szydlowiec), Poland, into an observant ḥasidic community to which his father was crown rabbi. He received a traditional religious education until orphaned at 15. He moved to Lodz, married, and immigrated to Canada via England in 1900 to join a brother in Montreal. In 1907 Wolofsky founded Canada's first enduring Yiddish daily, the *Keneder Adler* (Canadian Jewish Eagle), and served as managing editor until his death. Wolofsky's newspaper served a wide readership across ideological lines. It promoted Jewish education, establishment of a Canadian Jewish Congress, creation of a Jewish Community Council (Va'ad Ha'ir), and building of a Jewish hospital.

The *Adler* attracted Jewish writers of international renown such as Hebraist Reuben Brainin, who served as editor from 1912 to 1915, and featured many of Canada's Yiddish writers. Wolofsky's *Adler* subsidized the literary and scholarly pursuits of its associates and published many of their books. Among the books published was Canada's first Yiddish book: Moshe Elimelech Levin's *Kinder Ertsiyung bay Yidn* ("Children's Education Among Jews," 1910), and a local edition of the Talmud, the *Adler's Shas Talmud Bavli* or, as it became popularly known, the *Montreoler Shas* ("Montreal Talmud," 1919).

Wolofsky also wrote for the *Adler*. He published three Yiddish books: a travelogue titled *Eyrope un Erets-Yisroel nokh dem Veltkrig* ("Europe and the Land of Israel after the World War," 1922), a volume of contemporary commentary on the weekly Torah portions, *Fun Eybign Kval* ("From the Eternal Source," 1930), and a book of memoirs, *Mayn Lebns Rayze* ("Journey of My Life," 1946; Eng. tr. 1945, Fr. tr. 2000). In addition, Wolofsky served as publisher of the Anglo-Jewish weekly the *Canadian Jewish Chronicle* (founded 1914). He held various leadership positions in the Montreal Jewish community, including the vice presidency of both the American Union of Polish Jews and the Canadian Jewish Congress.

BIBLIOGRAPHY: L. Levendel, *A Century of the Canadian Jewish Press: 1880s–1980s* (1989).

[Rebecca E. Margolis (2nd ed.)]

WOLOMIN (Pol. **Wołomin**), town in Warszawa province, east central Poland. The town developed toward the close of the 19th century, and, situated on the Warsaw-Bialystok railway line, became a commercial and industrial center. Jews

numbered 3,079 (49.3% of the total population) in 1921. Although they were active in the town's development, during the 1930s they were ousted from their positions and by 1939 their proportion in the town's population had fallen to 22% (3,000 Jews). In general, Jews earned their livelihood from commerce, from such crafts as dyeing, baking, tailoring, and joinery, and from renting houses to summer guests. Some Jews also owned tanneries and glass factories. Communal and cultural activities revolved around the Peretz Library and the *Maccabi and *Ha-Po'el societies. Jews won five of the municipal council's 24 seats in the 1934 elections. Ze'ev Bergeisen, who was rabbi from the early 1900s until the Holocaust, had a profound influence on the life of the Jewish community.

[Shimshon Leib Kirshenboim]

Holocaust Period

On the outbreak of World War II there were about 3,000 Jews in Wolomin. A large-scale *Aktion* took place on Oct. 4–6, 1942, when over 600 Jews were shot in Wolomin and the rest deported to the *Treblinka death camp. After the war the Jewish community of Wolomin was not reconstituted.

WOLOWSKI (**Schor**), Christian family in Poland of Jewish origin. In 1755–56, its members joined the *Frankists, after which they converted to Catholicism. Until the 1830s the Wolowski family exclusively married apostate Frankists, but subsequently they also contracted mixed marriages.

ELISHA SCHOR, the first known of the ramified Wolowski family, was a descendant of Zalman Naphtali Schor, rabbi of *Lublin. For many years Elisha Schor held the position of *Maggid* in the community of *Rogatin, and was among the leaders of Shabbateanism in the southeastern sector of the Polish kingdom. In 1755, with his sons and his son-in-law Hirsch Shabbetais, the husband of his daughter Hayyah, he joined the sect of Jacob Frank, whom he regarded as the loyal successor of Shabbateanism. It was at Elisha's initiative and with his participation that the disputation with the rabbis was held at *Kamenets Podolski in June 1757; he also signed the *Patshegen ha-Ta'anot ve-ha-Teshuvot* ("Summary of the Arguments and the Replies"). After the death of Bishop M. Dembowski, the patron of the Frankists, Elisha was compelled in the autumn of 1757 to flee across the Turkish border with his followers. He died there during a popular outbreak against the members of the sect.

The children of Elisha Schor, Solomon, Nathan, Lipman, Hayyah, and their families adhered to the Frankist sect, until their conversion to Christianity in 1759, when they changed their name to Wolowski (Pol. *wol* = Heb. *shor*). They held various positions in the court of Jacob Frank in Poland and in Offenbach.

FRANCISZEK LUKASZ WOLOWSKI, son of Solomon and grandson of Elisha, became secretary of King Stanislaus II Augustus, and was raised to the nobility in 1791. JAN KANTY WOLOWSKI (1803–1864), jurist, great-grandson of Elisha Schor, held the position of secretary of state in Congress Po-

land and was one of the draftsmen of the civil code of Poland. In 1839 he was raised to the nobility by Nicholas I and in 1861 was appointed dean of the faculty of law at the University of Warsaw. He was the only former Frankist not ashamed of his Jewish origin, of which he was even proud.

FRANCISZEK WOLOWSKI (1776–1844), jurist and statesman, great-grandson of Elisha Schor, was a member of the Polish Sejm (Parliament) in 1818 and between 1825 and 1831. He was raised to the nobility in 1823. In 1830, at the time of the Polish uprising, he opposed emancipation of the Jews. After the suppression of the uprising, he emigrated to France with his family. His son LOUIS FRANCOIS WOLOWSKI (1810–1876), French economist and statesman, born in Warsaw, took part in the Polish uprising of 1830–31, and later emigrated to France. In 1834 he began to publish the periodical *Revue de législation et de jurisprudence*. From 1848 to 1851 he was a delegate in the constituent and legislative assembly of France. In 1852 he founded the Crédit Foncier bank. In 1871 he was elected to the National Assembly. His important works are *Etude d'économie Politique et Statistique* (1864); *La Question des banques* (1864); and *L'Or et l'argent* (1870).

[Arthur Cygielman]

WOLPE, DAVID E. (1908–), Yiddish writer. Born in 1908 in Keidan in Kovno province (Lithuania), Wolpe was educated in both the traditional *ḥeder* and in the Tarbut Hebrew high school. Fired early with socialist ideals, he joined the Zionist-socialist youth movement Ha-Shomer ha-Ẓa'ir at 16 and became the founding editor of its Hebrew journal, *Ha-Nesher*. In 1930 he immigrated to Palestine as a pioneer of the organization's kibbutz, today Kibbutz Bet Zera, one of the oldest and most prosperous kibbutzim in the Jordan valley. He also worked in the orange groves and vineyards of the Jewish settlements Binyaminah and Petaḥ Tikvah, before leaving the kibbutz in 1933 to become a building laborer in Tel Aviv. Returning to Europe in 1936, Wolpe joined the Lithuanian army, but from 1941 was interned in the Kovno ghetto, from which, in 1944, he was transported to Dachau. In 1945 he was among the survivors liberated by the U.S. army. Sent to recover in the St. Ottilien Hospital in Bavaria, he met and married there an 18-year-old Jewish refugee and fellow patient. In 1951 Wolpe immigrated to South Africa, where he immediately plunged into the Yiddish literary life of Johannesburg, becoming a prolific contributor to all the local Yiddish and Hebrew journals and serving as editor of South Africa's only Yiddish monthly, *Dorem Afrike* (1954–70). He serialized his memoirs, *A Yid in der Litvisher Armey* ("A Jew in the Lithuanian Army") in

South Africa's only Yiddish newspaper, the *Afrikaner Yidishe Tsaytung* (1959–60).

Wolpe's first love was poetry, and in 1978 he published his collected verse, written over a period of some 30 years, in the substantial volume, *A Volkn un a Veg* ("A Cloud and a Way"). Much praised when it first appeared, this anthology was awarded the prestigious Itsik Manger Prize in Israel in 1983. He also published a volume of literary essays, *A Vort in Zayn Tsayt* ("A Word in Its Time," 1984); a critical study of the work of Abraham *Sutzkever, *Mit Avrom Sutskever iber Zayn Lidervelt* ("The Poetic World of Abraham Sutzkever," 1985); a collection of short stories, *Heymen, Khaloymes, Koshmarn* ("Homes, Dreams, Nightmares," 1987); two further volumes of poems and essays, *Krikveg* ("The Way Back," 1991) and *Iber Mayne Vegn* ("Along My Roads," 2002); and a two-volume autobiography, *Ikh un Mayn Velt* ("I and My World," 1997–99). In his nineties Wolpe continued to write from his home in Johannesburg. His abiding contribution to Yiddish literature was well summed up in the citation for the Manger Prize: "He is full of poetic paradox: his ever-present unrest and doubt are an expression of emotional creative nature."

[Joseph Sherman (2nd ed.)]

WOLPE, DAVID J. (1958–), U.S. congregational rabbi, orator, teacher, and writer. Wolpe was born in Harrisburg, Pennsylvania. His early education was in Jewish day schools in Harrisburg and later at Akiba Academy in Philadelphia. Wolpe's father, Rabbi Gerald Wolpe, served as the spiritual leader of Philadelphia's Har Zion Congregation, one of the flagship congregations of the Conservative Movement.

Wolpe attended the University of Pennsylvania, where he received his B.A. degree in English literature; he also spent a year studying abroad at the University of Edinburgh. Wolpe enrolled in the University of Judaism's (UJ) pre-rabbinical program in 1982 and was immediately identified as one of their most promising students. During his two years at the UJ, Wolpe published his first monograph, "Secret Thought and Normal Mysticism." He also served as a rabbinic intern at Congregation Adat Ariel in North Hollywood. After spending a year studying at the Schechter Institute and The Hebrew University in Jerusalem, Wolpe continued his studies at the Jewish Theological Seminary (JTS) from which he was ordained in 1987.

Wolpe joined the faculty of the University of Judaism in 1987 and taught there for eight years. He also served as director of the library and as special assistant to UJ President Robert Wexler. In 1995 Wolpe took a position at JTS as both an instructor in Jewish Thought and as assistant to Chancellor Ismar Schorsch.

A frequent contributor to a variety of Jewish and general periodicals, Wolpe's first book, *The Healer of Shattered Hearts*, appeared in 1990. This was followed by *In Speech and In Silence* (1992), *Teaching Your Children about God* (1993), *Why be Jewish?* (1995), *Making Loss Matter* (1999), and *Floating Takes Faith* (2004).

Wolpe was persuaded to return to Los Angeles to accept the position of senior rabbi of Sinai Temple in 1997. Since his arrival, the congregation has increased from 1,150 member families to over 1,800. He inaugurated Friday Night Live, an innovative Shabbat evening program that draws over 1,700 single Jewish adults each month. In general, Wolpe attracts in excess of 1,000 attendees for each Shabbat morning service.

After returning to Los Angeles, Wolpe undertook a part-time lecturer position at the University of Judaism, where he teaches homiletics. He also serves as a lecturer in modern Jewish thought at the University of California at Los Angeles.

In 2002, Wolpe generated considerable controversy when, during a Passover sermon, he opined that the Exodus story was most likely not the record of an actual event, citing a lack of archeological evidence. He was, however, insistent that the mythic narrative remains important for the Jewish people.

With the retirement of Ismar Schorsch from the position of chancellor of the Jewish Theological Seminary in 2005, Wolpe was heralded as a likely candidate to succeed him. Nevertheless, Wolpe elected to remain at Sinai Temple. In an article that appeared in the Los Angeles *Jewish Journal* in December 2005, he urged that Conservative Judaism be reconceived in terms of the covenantal relationships that Jews have forged with God, one another, and with the rest of the world. He advocated that the name of Conservative Judaism be officially changed to Covenantal Judaism.

[Robert Wexler (2nd ed.)]

WOLPE, HOWARD ELIOT III (1939–), U.S. congressman and scholar. A native of Los Angeles, Wolpe attended public schools there. He earned his bachelor's degree from Reed College in 1960 and received a Ph.D. in African studies from the Massachusetts Institute of Technology in 1967. His doctoral work included two years of field study in Nigeria.

From 1967 to 1972, Wolpe taught in the political science department of Western Michigan University in Kalamazoo, specializing in African political systems. He also served as a consultant to the Peace Corps. Developing an interest in local politics, Wolpe was elected to the Kalamazoo City Council in 1969. In 1972 he was elected to the Michigan State Legislature, the first Democrat to represent Kalamazoo. He served there until 1976, when he ran unsuccessfully for the U.S. Congress. He was subsequently hired as the regional representative of U.S. Senator Donald Riegle. In 1978 Wolpe was elected to Congress as representative of Michigan's Third Congressional District, traditionally a Republican stronghold.

Following his reelection to Congress in 1980, Wolpe was appointed chair of the Africa Subcommittee of the Foreign Affairs Committee, a position he held from 1981 to 1992. Considered a compassionate proponent of economic aid to emerging African nations, Wolpe was a leading critic of American military aid to Zaire, and he opposed the Reagan administration's requests for increased military aid to Kenya, the Sudan, Morocco, and Tunisia. He was highly critical of South African apartheid. He argued throughout his legislative career for a

more informed consideration of African perspective in formulating U.S. policy toward African nations.

In 1992, following reformulation of Michigan's congressional districts, Wolpe retired from Congress. He then served under President Bill Clinton as special envoy to Africa. He was named the director of the Africa Program at the Woodrow Wilson International Center for Scholars in Washington, DC, a program aimed at promoting dialogue among policymakers and academic specialists regarding U.S. policy toward African nations.

Wolpe is the author of several books, including *Urban Politics in Nigeria* (1974), *Nigeria: Modernization and the Politics of Communism* (as editor, with Robert Melson, 1971), and *United States and Africa: A Post-Cold War Perspective* (with David F. Gordon and David Miller, Jr., 1998). He was a visiting fellow in the Foreign Policy Studies program of the Brookings Institution. Wolpe also headed the Burundi Leadership Training Program, funded by the World Bank and the U.S. Agency for International Development, which aims to reduce factionalism in post-conflict Burundi.

[Dorothy Bauhoff (2nd ed.)]

WOLPE, STEFAN (1902–1972), composer. Born in Berlin, Wolpe studied at the Berlin Academy of Music under Paul Juon and Franz Schreker. In 1933 he settled in Jerusalem, where he taught at the Palestine Conservatory of Music until 1938 and greatly influenced the first generation of locally educated composers. He subsequently settled in the United States and from 1951 taught at various New York institutions. His music belongs to the Schoenberg and Webern schools and shows strong Jewish influence. Among his compositions are a ballet, *The Man from Midian* (1940); an oratorio, *Israel and his Land*; a cantata, *Jigdal*; and chamber and choral works.

WOLPER, DAVID LLOYD (1928–   ), U.S. producer of films and television documentaries. Born in New York, Wolper's first commercial venture was to buy old Hollywood films and to sell them to the infant television industry. In 1958 he formed Wolper Productions. His film *The Race for Space* (1959) established his reputation as an independent documentary producer and earned an Academy Award nomination for Best Documentary. Other notable productions were *The Miracle* (1959); *Biography*, a weekly TV series (1961–64); *The Making of the President, 1960* (1963); the TV series *Hollywood and the Stars* (1963); *The Legend of Marilyn Monroe* (1964); *National Geographic Specials* (1964–75); *Let My People Go* (1965), the story of the creation of the State of Israel; *The Rise and Fall of the Third Reich* (1968); *The Unfinished Journey of Robert Kennedy* (1970); *Victory at Entebbe* (1976); the TV miniseries *Roots* (Peabody Award and an Emmy for Outstanding Series, 1977); *Hollywood: The Gift of Laughter* (Emmy nomination, 1982); the TV miniseries *The Thorn Birds* (1983); *Liberty Weekend* (two Emmy nominations, 1986); *The Betty Ford Story* (1987); *Murder in Mississippi* (Emmy nomination, 1990); *The Plot to Kill Hitler* (1990); *Dillinger* (1991); the miniseries *Queen* (Emmy

nomination, 1993); and the TV miniseries *The Mists of Avalon* (2001).

Wolper also ventured into feature film production. His movie credits include *The Devil's Brigade* (1968); *If It's Tuesday It Must Be Belgium* (1969); *Willy Wonka and the Chocolate Factory* (1971); *This Is Elvis* (1981); *Imagine: John Lennon* (1988); *Murder in the First* (1995); *Surviving Picasso* (1996) and *L.A. Confidential* (1997).

In 1985 he received the Jean Hersholt Humanitarian Award. Wolper wrote *Producer: A Memoir* (with D. Fisher, 2003).

[Jonathan Licht / Ruth Beloff (2nd ed.)]

WOLPERT, LUDWIG YEHUDA (1900–1981), German sculptor and designer. Wolpert was born in Hildesheim, Germany, the son of an Orthodox rabbi. In 1916 he went to Frankfurt-on-the-Main, where he studied at the School for Arts and Crafts until 1920. After a few years working as a sculptor, Wolpert registered again at the school and specialized in metalwork. His teachers, among others, were the Bauhaus artist Christian Dell and the silversmith, sculptor, and designer of Judaica Leo Horovitz, son of the Orthodox rabbi Marcus *Horovitz. Under the guidance of Leo Horovitz, Wolpert became involved in creating modern Jewish ceremonial art. His famous Passover set, created in 1930, is made out of silver, ebony, and glass (replica in the Jewish Museum, New York; the original is lost) and reveals the strong influence of the Bauhaus designers of the late 1920s who worked under the slogan "form follows function." The same concept also guided the creation of a modern set of Torah silver commissioned by the family of Reuben Hecht for the Orthodox Frankfurt synagogue at the Friedberger Anlage, which was destroyed in 1938. Before Wolpert emigrated to Palestine in 1933, some of his works were shown in the exhibition *Cult and Form* (1931, Berlin et al.) and in an exhibition of ceremonial art in the Berlin Jewish Museum (1932). From 1935 he taught metalwork at the New Bezalel School for Arts and Crafts in Jerusalem. Wolpert's personal achievement is the introduction of Hebrew letters as the dominant artistic element in the creation of Jewish ceremonial art. This is visible in one of his most outstanding works, a Torah Ark in copper and silver (1948, Harry S. Truman Library, Independence, Missouri), where the Hebrew text represents an integral part of the whole design. In 1956 he was invited to New York to establish the Tobe Pascher Workshop for Jewish ceremonial objects at the Jewish Museum. During his time in the U.S. Wolpert took part in designing several synagogue interiors and exterior furnishings, such as at Temple Emanuel, Great Neck, New York, and the Beth El Synagogue, Minneapolis, Minnesota. Until his death in 1981 he directed the workshop and had a great influence impact on his students, such as his daughter Chava Wolpert-Richard and Moshe Zabari.

BIBLIOGRAPHY: *Ludwig Yehuda Wolpert. A Retrospective* (Catalogue, Jewish Museum, New York, 1976); M. Spertus, "Ludwig Yehuda Wolpert, 1900–1981," in: *Journal of Jewish Art*, 8 (1981), 86.

[Philipp Zschommler (2nd ed.)]

WOLSEY, LOUIS (1877–1953), U.S. Reform rabbi. Wolsey, born in Midland, Michigan, was ordained in 1899 by Hebrew Union College. From 1899 to 1907 he led Congregation B'nai Israel in Little Rock, Arkansas. He then served as rabbi at Congregation Anshe Chesed, Cleveland, leading in the construction of its Euclid Avenue Temple. When he left this congregation in 1925, it had increased from 150 to over 1,300 families. He was rabbi at Philadelphia's Rodeph Shalom Congregation from 1925 to 1947. Wolsey helped lead Reform organizations as president of Hebrew Union College Alumni Association (1914–16), executive board member of the Union of American Hebrew Congregations (1925–29), and president of the Central Conference of American Rabbis (1925–27). He was a founder in 1926 of the World Union for Progressive Judaism, and was chairman of the committee that revised the *Union Hymnal* published in 1936.

Although comparatively favorable to nonpolitical aspects of Zionism during his Cleveland years, Wolsey was one of the group of rabbis who opposed the Central Conference resolution for the establishment of a Palestinian Jewish military unit in 1942, and he led the dissident group through several conferences that formed the *American Council for Judaism. He resigned his council vice presidency in 1946 to protest its stand against unrestricted Jewish immigration to Palestine, and resigned from the council itself in 1948. Wolsey found it irreligious and anti-humanitarian in the face of "a harried European Jewry," and demanded that it dissolve. Likewise, "the Zionist movement… should dissolve into a unity of world Jewry for the creation of a Jewish culture and a Jewish life in Israel."

WOMAN. This article is arranged according to the following outline:

THE HISTORICAL PERSPECTIVE

Biblical Period

Recovering the lives of Israelite women in the biblical period is difficult because the major source, the Hebrew Bible, focuses on national concerns rather than on the lives of ordinary individuals and also because its principal interest is in the lives of men rather than those of women. In addition, the biblical text postdates, often by centuries, the periods it purports to record. Another problem is that much of the Bible originates

in and reflects the urban setting of Jerusalem, whereas most Israelites lived in agrarian households in small villages or walled agricultural towns that were not true cities. However, a multidisciplinary approach, using biblical data along with information produced by archaeology and also ethnographic data and interpretive models from anthropology, can bring the women of ancient Israel into view.

The Hebrew word *ishah* means both "wife" and "woman," signaling the fact that a woman's identity was virtually inseparable from her status as a married woman. It was inconceivable that a woman might willingly live on her own apart from a family structure. Israelite marriage was not the kind of love-based companionate relationship that is the ideal in the modern world; rather, it was a heterosexual pairing meant to provide offspring to assure generational continuity in a land-based society. The conjugal pair with their children would also constitute a work force sufficient to meet the needs of a family in an agrarian society; and the children would be the ones to care for their parents should they survive into old age. Having children was a non-negotiable necessity.

MARRIAGE AND CHILDREN. The Bible does not have a term for "marriage" as such. The formation of a marital bond is indicated by saying that a man "takes" a woman. The narrative of the courtship of Isaac and Rebecca, for example, culminates in the statement that "he took Rebecca and she became his wife" (Gen. 24:67). That a man "takes" a wife is a reflection of the patrilocality of Israelite households. That is, the bride would move to the household of the bridegroom, who usually resided with his own family. An extended family would thus be formed, although each constituent nuclear family might have its own abode within a family compound. The incest laws in Leviticus may have originated to deter problematic sexual intimacy among members of a complex household group.

Financial arrangements generally accompanied marriage except among the poorest families. Although there are no "marriage laws" as such in the Bible, information in narratives indicates that a bride's family typically provided a dowry, usually consisting of moveable property such as jewelry, clothing, and household utensils. In wealthier families, livestock and servants might also be included (see Gen. 24:59; 29:24, 29). The dowry could be supplemented by the groom and his family (Gen. 24:53). Although her husband would have had some access to the dowry during the duration of the marriage, it theoretically remained the woman's possession.

Another marital payment was made by the groom's family to that of the bride. This betrothal gift, sometimes erroneously called "bride price" (*mohar*; see Gen. 22:17; 34:12; I Sam, 18:25), has often been interpreted as evidence that a man purchased a woman. The fact that a word sometimes used for "husband" is *ba'al*, which can (but does not always) mean "master," has also been adduced to claim that a woman is the property of her husband. Similarly, the use of the verb *kanah*, which can mean "to buy" but more generally "to acquire," to describe Boaz' marriage to Ruth (Ruth 4:10) has also been in-

terpreted as an indication of male ownership of women. However, such assertions are now known to be flawed.

In anthropological perspective, the dowry as well as the betrothal gift functioned in overlapping ways to maintain the viability of a family. The betrothal gift would provide some compensation to a woman's family, who would lose the labor of a daughter upon her marriage. The dowry would constitute a woman's chief means of support in the event of widowhood or divorce, especially if she had no sons or if her father was deceased. And the two payments together served to establish and solidify alliances between a woman's natal family and her marital one. Such connections were important in agrarian communities; they served to increase the likelihood of mutual aid in the event of economic or other difficulties, not unusual in Israelite households living in marginal ecological zones. Betrothal and dowry payments together served important economic, social, and legal functions.

To refute the notion of male ownership of women is not the same as establishing equality in the relationship. Perhaps the greatest imbalance was in the area of sexuality. Once a woman was betrothed, her fiancé, and then her husband, had exclusive rights to her sexuality. The patrilineal nature of Israelite society, with land and property transferred across generations via the male line, is likely the reason for the stringency in biblical legal precepts dealing with a woman's sexuality. The gender asymmetry in the treatment of sexuality is evident in Deuteronomy 22:13–21, in which a bridegroom claims that his wife is not a virgin. The ensuing elaborate procedure for dealing with this accusation reflects the value of virginity as a means to assure a groom of his paternity of children she will bear. Gender disparity is also evident, for similar reasons, in the different treatment of women and men in biblical adultery laws (Lev. 20:10; Deut. 22:22–28), where sex between a married man and an unmarried woman is discouraged but not proscribed. Concern for heirs is also a factor in the institution known as levirate marriage, in which a childless widow would marry her deceased husband's brother, with the first son produced by that liaison considered the dead man's heir (Deut. 25:5–10; cf. the narratives of Tamar, Gen. 38, and Ruth). The case of the daughters of Zelophehad (Num. 26:33; 27:1–11; 36:1–12) would seem to mitigate the absolute nature of Israelite patrilineality; however, the inheritance of land by daughters in that case is accompanied by provisions that the land would remain within the clan.

The powerful male interest in transmitting property to biological heirs is also a factor in the existence of polygamy, or rather polygyny (more than one wife), in ancient Israel, as in the ancient Near East in general. Monarchs may have had multiple wives as a sign of their high status and to solidify political alliances, and wealthy individuals may have had more than one wife as a sign of affluence. But in most instances, taking a second wife or a concubine would have occurred because the first wife did not produce offspring. The Genesis narratives give us the impression that polygyny was common. However, shorter life spans for women than for men (mean-

ing a shortage of women of child-bearing age) and the fact that most people probably lived near the poverty level (meaning the inability of a family to support multiple wives) would have precluded polygyny for all but the wealthy. Indeed, many biblical texts, such as Genesis 2:24, the Song of Songs, several passages in wisdom literature, and even legal rulings such as Exodus 21:4–5, reflect a monogamous norm.

Although dissolution of a marriage was sometimes unavoidable, very little is known about provisions for divorce. Isaiah 50:1 mentions a bill of divorce (cf. Mal. 2:14, which refers to a marriage contract), indicating that formal documents were used for establishing or dissolving a marriage, although probably only for people of means. The sole biblical text with divorce rulings, Deuteronomy 24:1–4, addresses a particular situation, the case of a man seeking to remarry a woman to whom he had once been married. Unfortunately, it gives the impression that only men could initiate divorce in the biblical period. Information from extra-biblical sources (e.g., the Elephantine papyri) and indirect information from other biblical texts, such as the narrative of a Levite's secondary wife leaving him (Judg. 19:2), provide reason to contest that notion.

WOMEN IN HOUSEHOLD LIFE. It would be incorrect to assume that women were subordinate to and dominated by men in all aspects of life. Indeed, with few resources available from outside the household, the relationship between a woman and her husband was one of interdependence and complementarity in the various functions of household life.

As the primary unit of social existence, the family household was the locus of the activities necessary for the maintenance and continuity of life. Family life was task-oriented; without the labor of both women and men, and also children, survival in the marginal habitat of the highlands of Erez Israel would not have been possible. But the responsibilities of all family members were not the same. The division of labor by gender, albeit with some overlap, was the most efficient way to accomplish the myriad of household tasks. In addition to procreation, households served the economic, educational, and religious needs of their members.

Economic Roles. Women's economic roles, which included growing field and horticultural crops and keeping domesticated ruminants (mainly sheep and goats), were manifold and complex. Although they participated to some extent in the male-dominated agricultural tasks of growing grains and also helped tend orchards and vineyards, especially in labor-intensive harvest periods (see Ruth 2: 8–9), their own agricultural activities probably involved growing garden vegetables and herbs. Women's major contributions to the household economy were largely the time-consuming food- and fiber-processing jobs, the former on a daily basis and the latter more likely on a seasonal basis. That is, the agricultural products of the household had to be transformed into edible and wearable form through the expertise and labor of women.

Cereal products were the most important food source in the biblical period, with bread providing an estimated 50% of the daily caloric intake. The transformation of grain into edible form involved parching or soaking, grinding, and heating and/or leavening. With an average family size of six persons, three hours of work per day would have been required to produce enough edible grain. With the assistance of older children, women did the work of bread production and also processed and prepared supplementary foodstuffs, mainly fruits, vegetables, and legumes and also dairy products. Some of these would have been eaten raw; but many, such as milk, olives, capers, grapes, nuts, figs, and dates, were also variously churned, pressed, pickled, roasted, or dried on a seasonal basis. Meat would have been eaten rarely, probably only at festivals.

The onerous nature of these food preparation tasks was offset by certain positive aspects. Unlike the often frustrating male tasks of growing field and horticultural crops, in which yields could be drastically affected by periodic droughts or infestations of insects, food preparation, even of limited amounts, always yielded a finished product. Thus, women experienced constant gratification from their daily work, repetitive as it was. Another positive feature was the mastery of technology involved, for the various food-processing procedures each involved considerable technical skill.

Just as important as the individual benefits were the social and political aspects of food preparation. Grinding implements are often found in clusters in the archaeological recovery of dwellings from the biblical period, indicating that women from neighboring households gathered together, undoubtedly to chat and sing, during the long hours spent preparing grains and other foods. The time spent together helped forge women into informal social networks in a way that the more solitary tasks performed by men did not. These networks also constituted a social safety net for Israelite women, facilitating assistance when illness or emergency threatened a neighboring household. Moreover, as is known from ethnographic studies of agrarian households in pre-modern settings, these networks operated on a political level as well. That is, women gained access to information that influenced community decisions made by male officials. Such indirect female political power is typically unrecognized but nonetheless real.

Women's economic roles extended beyond food processing. They gathered garden or wild herbs and plants to concoct medicinal substances used in folk remedies. Although sophisticated ceramic vessels may have been procured from traveling potters or urban workshops, women, perhaps several in a village, likely produced simple storage jars, cooking pots, and serving bowls for everyday use. However, perhaps the most important household activity, because of its potential for commercial activity beyond the household (see Prov. 31:13 and 24), was textile production.

Spinning, weaving, and sewing were woman's domain in the ancient Near East from time immemorial. The discovery in dwellings of the biblical period of spindle whorls, weights used in vertical, warp-weighted looms, and bone needles and weaving tools testify to the production of fabrics in Israelite households. Like grain processing, the procedures involved

in making textiles were often time-consuming and tedious. It takes several hours of spinning, for example, to produce the amount of yarn or thread needed for an hour of weaving. Women in pre-modern cultures typically do textile work together; indeed, some of the procedures, such as weighting and even working a warp-weighted loom, were best done by women working in tandem. The personal, social, and political benefits that accrued to women (and their daughters) as transformers of food products were intensified by the shared experience of working with fibers to produce garments and coverings for their families and perhaps also for barter or sale.

Educational and Managerial Roles. The primary care of young children was the mother's responsibility. The child-care component of a woman's workday was subsumed into her daily obligations, no doubt with the assistance of older children and elderly parents. From a very young age, children assisted in household tasks, with women supervising offspring of both genders until boys were old enough to accompany their fathers into the fields. Given the absence of any formal or institutionalized education in the biblical period, except perhaps for a handful of upper-class urban males, women were the chief educators and socializers of both boys and girls in their early years and into adolescence. Fathers surely educated sons in the tasks and activities performed mainly by males. The educative roles of women are not very visible in the Bible, where the mention of sages and elders gives the impression of a male monopoly in teaching skills and inculcating traditional practices and beliefs. However, an understanding of the dynamics of an agrarian household indicates the prominence of women in this role.

A mother's educative role was hardly trivial. It involved instruction in the technologies of household life, in appropriate behavior (as reflected in many of the precepts in the book of Proverbs), and also in the transmission of culture and values more generally. However androcentric and upper-class Proverbs may be, it is nonetheless clear from the frequent parallelism of "mother" and "father" (1:8; 4:3; 6:20; 15:20; 19:26; 20:20; 23:22, 25; 28:24; 30:11, 17) that both parents had important educative roles. And because women had more contact hours with children, their interactions with offspring were of foundational significance in transmitting many aspects of Israelite culture from one generation to the next. It is hardly an accident that the very notion of "wisdom," which includes technical expertise as well as social sagacity, has important female aspects, arguably rooted in the broad role of women in caring for and socializing their children. Note that the biblical word for wisdom in the Bible, *ḥokmah*, is feminine; wisdom is personified as a woman in Proverbs (1:20–33; 3:13–18; 4: 1–9; 7:1–5; 8:1–36; 9:1–6; 14:1); the "strong woman" (*eshet ḥayil*) of Proverbs 31 is characterized as speaking wisdom and teaching kindness (verse 26); and two narratives feature "wise women" (II Sam. 14:1–20; 20:14–22) with none featuring a "wise man."

A woman's educative role was not limited to the instruction of her own children. In the complex, multi-generational Israelite households, older women served as household managers, instructing their own children as well as daughters-in-law and nieces in the array of tasks performed by women as well as in appropriate behaviors. The fifth commandment (Ex. 20:12 and Deut. 5:6) and the demanding (and probably idealized) family laws of Exodus 21:15, 17 and Leviticus 20:9, which were likely concerned with the behavior of adult children in multi-generational households, underscore the authority of both parents. This is in contrast to some ancient Near Eastern societies that apparently favored men over women in assigning authority over offspring. Another indication of female authority in household life is the fact that mothers predominate in the Bible as the ones who name their children. In light of women's extensive educative and managerial roles, the appearance of the phrase "mother's household (*bet 'em*)" rather than the usual "father's household (*bet av*)" several times in the Bible is noteworthy. "Mother's household" appears in passages dealing with the internal life of the household (Gen. 24:28; Ruth 1:8; Songs 3:4; 8:2) and seems to indicate that women controlled most household activities (as in the case of the Shunammite woman, II Kings 4:8–37; 8:1–6), whereas men controlled supra-household lineage interactions.

Religious Roles. The predominance of women in household education and management may have been replicated in household religious roles. Although the Bible's focus is on temple or tabernacle and on national or communal practices, there are clear indications of family celebrations that punctuated the annual religious calendar. For example, Passover in its origins was likely a home-based spring festival involving specific kinds of food preparation; the other major festivals, similarly grounded in the agricultural calendar, no doubt involved family feasting. Household Sabbath traditions are difficult to trace back to the biblical period, but the manna provisions for the seventh day, as well as post-biblical sources, indicate festal meals were part of the holy day of rest. The domestic celebration of festivals and observance of Sabbath are inconceivable without special meals requiring women's culinary expertise and labor.

In addition, women undoubtedly participated in celebrations at shrines near their homes and even initiated cultic activity. The Hannah narrative is instructive in this regard (I Sam. 1–2). Hannah accompanies her husband and his secondary wife and their children to an annual sacrifice at the cult center of Shiloh. In addition, she comes "before the Lord" to make a vow and a sacrifice in the hopes of ending her barrenness. Although post-biblical textual traditions try to obfuscate her role, the Masoretic text clearly indicates that Hannah, having become pregnant and given birth to Samuel, fulfills her vow by bringing sacrifices to Shiloh. Although Deuteronomy 16:16 does not enjoin women to participate in the pilgrimage festivals in Jerusalem, they were not precluded from doing so. Moreover, other passages in Deuteronomy (e.g., 12:12; 16:11, 14) are gender-inclusive in their instructions for bringing sacrifices and celebrating at the central shrine. And doz-

ens of priestly passages use the gender-inclusive term *nefesh*, indicating that women as well as men were mandated to offer certain sacrifices (see, e.g., Lev.2:1 and Num. 5:6).

The participation of women in extra-household religious life and in family celebrations was only part of their religious roles. Those religious activities carried out *only* by women, known through archaeological and ethnographic evidence, were arguably the most important aspects of women's religious lives. Women in pre-modern cultures typically coped with the many problems related to childbearing, which today would be dealt with by medicine, through behaviors that might be termed "magic" but were clearly religious in nature. Facing the possibility of barrenness, childbirth complications, difficulty in lactation, and high infant mortality rates (as many as one in two infants did not survive to the age of five), women performed a variety of rituals in order to keep away the evil spirits thought to be the cause of problems and to attract benevolent ones to assure reproductive success. Many of these apotropaic practices, such as wearing shiny amulets or eye beads to avert the "evil eye," tying a red thread around the wrist or ankle of newborn (cf. Gen. 38:28, where such a thread is a marker), keeping a light burning in a birthing room or place where an infant sleeps, salting and swaddling a newborn (see Ezek. 16:4), continued into the post-biblical period and are found in Muslim and Christian as well as Jewish families well into the 20th century.

Women's household religious praxis can be understood to have empowered them in respect to their concerns about life-and-death matters. Their religious activities focused on the welfare of their families and themselves. Women were ritual experts, for they possessed the requisite knowledge to perform rituals in a prescribed and efficacious way using specific materials and artifacts. Such knowledge was transmitted across generations by older women to younger ones, just as experienced priests educated younger ones in the intricacies of communal ritual. Moreover, household rituals dealing with childbirth were carried out for women by women, including neighbors, relatives, and sometimes midwives (I Sam. 4:20; cf. Ruth 4:13–17). Women's religious practices were profoundly important components of their adult lives.

WOMEN OUTSIDE THE HOUSEHOLD. The midwives who assisted Israelite women in childbirth were religious specialists as well as health-care practitioners, since prayers and potions are part of the culture of childbirth in traditional societies. Other female religious specialists may have included temple servitors (Ex. 38:8; I Sam.2:22). There were surely diviners, as is apparent from the strong anti-divination passage in Ezekiel 13:17–23 addressed to a group of female prophets. Yet not all female prophets were viewed so negatively. Miriam (Ex. 15:20) and Deborah (Judg. 4:4), two of the most prominent women in the Bible, are called prophets, as are Huldah, the first person to issue a ruling establishing the authenticity of a text as God's word (II Kings 22:14–16), and Noadiah, a leader of the postexilic community (Neh. 6:14). Many other religious spe-

cialists are reviled, as in the gender-inclusive denunciations in Leviticus 19:31; 20:6, 27; Deuteronomy 18:11, a sure sign that women's services were being utilized. Women served as necromancers, mediating between dead ancestors and their living relatives, as the story of the medium of Endor (I Sam. 28:7–25) suggests. Women also were sorcerers and are specifically condemned as such (Ex. 22:18; cf. Isa. 57:3).

Other female professionals, less explicitly religious, are also mentioned in the Bible. Deborah is a "judge," a charismatic military leader, as well as a prophet. The wise women of Tekoa and Abel help resolve national crises. Troops of female musicians appear in several instances in which military victory attributed to divine intervention in human affairs is celebrated (Ex. 15:21; I Sam. 18:6–7; II Sam. 1:20; Ps. 68:25; Jer. 31:4,13). These cases reflect a special musical genre, unique to women, involving drums, dancing, and singing. Women as well as men are mentioned as professional singers (II Sam. 19:35; Ezra 2:65; Neh. 7:67; Eccl. 2:8; 12:4) and perhaps even temple singers (I Chron. 25:5–6). As is true in many traditional societies, women were deemed more expert in mourning rituals than men (Jer. 9:17–20; Ezek. 32:16). And some women, perhaps those unable to support themselves in any other way, are depicted as prostitutes, an occupation condemned in priestly texts but viewed matter-of-factly in narratives about the heroines Rahab (Josh. 2,5) and Tamar (Gen. 38), and the two women who brought their dispute to Solomon (I Kings 3:16–28).

These varied professional activities are noteworthy because they negate the image of women as confined to the household. In addition, recognizing their existence has important implications for understanding the lives of the women engaged in these occupations on a part-time or full-time basis. Many of these professional specialists, including musicians and singers, mourning women, wise women, and even midwives and prophets, functioned in groups or were connected to each other in loose, guild-like associations. The "daughters" learning dirges in Jeremiah 9:20 and wailing over Saul in II Samuel 1:24 are analogous to "sons" in the phrase "sons [company; disciples] of the prophets" (e.g., II Kings 5:22; 6:1) in that they constituted a guild of professional mourning women. The biblical silence about other such groups does not mean that they did not exist; informal organizations of women with technical expertise in certain areas, such as birthing or healing, are found widely in ancient cultures, including in neighboring Mesopotamia and Anatolia. These women would gather occasionally or even at regular intervals to share knowledge, train newer members of their group, and, in the case of musical professions, compose songs and rehearse in preparation for performances.

Membership in such groups, which typically are organized hierarchically with senior or more talented members earning the esteem of the others and exercising control of group functions, provided women with opportunities to experience prestige and status. Moreover, whether they functioned in groups or as individuals, female professionals provided nec-

essary services for their communities. In so doing, they had the opportunity to experience the benefits of contributing to the public weal. Moreover, those whose roles were performative, as ethnomusicologists have shown, were likely to have subverted or suspended existing hierarchies during performances by virtue of the rhetorical power of their expressive acts. It is noteworthy that societies in which women have rich opportunities for extra-household association are generally considered the least repressive with respect to gender.

CONTESTING THE IDEA OF PATRIARCHY. The term "patriarchy" has not been used in this discussion of women in the biblical period. To be sure, Israelite society was both patrilocal and patrilineal: the major public offices were held mainly by men; and men controlled women's sexuality. Yet the conventional wisdom about pervasive male, or patriarchal, dominance in hierarchical structures affecting all domains of Israelite life can be disputed. If "patriarchy" means that men dominate or monopolize all the pursuits that a society most values, then it is incumbent to ask whether all members of a society value the same pursuits and also whether women themselves have important or even autonomous roles in relation to those pursuits.

Power in pre-modern communities is hardly unitary. There were multiple loci of power in Israelite society, with women as well as men shaping household and community life. The gendered spheres of life within the household, except for sexuality, can be considered complementary rather than hierarchical; men controlled certain activities and subsistence tasks, women had sole expertise and responsibility in others, and some were shared. Furthermore, the existence of female professionals means that there were women's groups with their own hierarchies and that women functioned in public roles, some of which, including mourning, midwifery, certain types of musical performances, perhaps sorcery, were largely or exclusively female.

Anthropologists studying pre-modern societies who are dissatisfied with the shortcomings of existing models of sociocultural complexity have suggested that *heterarchy* rather than *hierarchy* is a better way to understand complex traditional societies. The term *heterarchy* refers to an organizational pattern in which "each element possesses the potential of being unranked (relative to other elements) or ranked in different ways, depending on systemic requirements." Social systems can be related to each other laterally as well as vertically. In this conceptualization, the activities of Israelite women can be considered subsystems, each with its own rankings and statuses. Especially in professional groups but also in informal networks, women exercised leadership and dominance vis-à-vis other women in the system. Looking at women's systems, along with those of men, as constituents of the heterarchical complexity of Israelite society rescues women from the notion of oppression, as implied by the term patriarchy, and allows a more nuanced reading of their lives.

[Carol Meyers (2nd ed.)]

Post-Biblical and Talmudic Period

The authors who left their imprint on history did not view post-biblical Jewish women as equal to men, just as they were not viewed as equal in the Greco-Roman, Semitic, Egyptian, or Persian societies in which Jews lived. The difference between Jews and their neighbors is to be found in the explanations offered for women's lower status. Jews of late antiquity located the origins of female inequality in the narratives and injunctions of the Hebrew Bible. Women's subordinate position was understood as a consequence of Eve's role in Genesis 2:4–3, both as a secondary creation and as guilty of the original sin. Thus, the second century B.C.E. Jerusalemite sage Ben Sira accuses all women of bringing death to the world, obviously referring to the incident in the Garden of Eden (Ecclus. 25:24), and a Jewish pseudepigraphic composition, usually referred to as the *Book of Adam and Eve*, further elaborates this theme. Later midrashic literature continues in the same vein. Women are said to be punished for bringing death into the world: they suffer while giving birth, are subjected to their husbands (as already suggested in Genesis 3:16), and confined at home as in a prison, and must cover their heads when they go out (*Avot de Rabbi Nathan* B, 42). Their function at funerals (preparing the body, mourning the dead) are understood as consequence of their responsibility for human mortality. Even the special commandments reserved for women – lighting the Sabbath candles, setting aside the *ḥallah* portion, and the laws pertaining to menstruation (*niddah*) – are viewed as retribution for that sin (e.g. Gen. R. 17:8).

Contemporary concerns and Hellenistic influence merged with the biblical justification for women's subordination. In one midrash the rabbis compared the biblical story of the creation of women with the Greek Pandora myth, which also depicted woman as a secondary creation who released all evils, including death into the world, when she opened a forbidden box. In the midrashic version, Eve is compared to a woman whose husband gave her all his property save one barrel, which she was not to open. Yet, she could not contain her curiosity, opened it, and unloosed scorpions and snakes (Gen. R. 19:10). The rabbis compare this anecdote to the story of Adam and Eve, who were told to eat from all trees except the tree of knowledge. However, Eve ate from it and consequently she and Adam and all their descendants experienced suffering.

LEGAL POSITION. Jewish women's secondary legal position also has its origins in the Hebrew Bible, particularly in injunctions in the legal sections of the Pentateuch. However, biblical law was of Semitic origin, and reflected a society that upheld polygyny and bride-price marriages. Internal developments, however, as well as influence from Greek and Roman practice, tended toward monogyny and dowry marriages. Thus, some biblical injunctions associated with women were reevaluated and reformed.

Numbers 27 (1–11) discusses the daughter's right in her father's inheritance. The daughters of Zelophad had no broth-

ers, and demanded of Moses the right to inherit. Moses recognized the justice of their claim and ruled in their favor, but his decision clearly stated that Jewish daughters could inherit from their fathers only where there are no sons and if they married within their own tribe (Num. 36:10). Although this ruling is often upheld as an example of an emendation favoring women in biblical law, it was certainly not egalitarian (since it denied other daughters the right to inherit). It also prevented further egalitarian legislation in this field in late antiquity, since the Bible itself made a clear distinction between sons and daughters. Thus, Second Temple Pharisees, in their legal dispute with their Sadducees opponent (TJ, BB 8:1, 16a), zealously upheld this ruling as the final word on the matter. Their opponents, on the other hand, were probably influenced by the Greco-Roman world, in which women were equal heirs to their fathers. They claimed that this law is unfair, and therefore could not reflect the divine intention. Their reliance on the sages of the gentiles (ḥakhmei goyim) is stated explicitly in the source. Yet the Pharisee position won the day.

*Levirate marriage is the obligation of a childless widow to marry her dead husband's brother, discussed in Deuteronomy 25:5–9. The rabbis of late antiquity maintained this institution and an entire tractate in the Mishnah (Yevamot) is devoted to its intricacies. The Talmuds greatly praise Rabbi Yose, who took his sister-in-law in levirate marriage (e.g. TJ, Yev. 1:1,2b). However, the Bible also includes, albeit grudgingly, a move to release the levirate bride from her levir. This action is called ḥaliẓah, and requires a ritual in which the reluctant levir is denigrated – his rejected intended spits in his face and removes his shoe. Despite praise for levirate marriage, its practice was almost completely abandoned by the end of the second century C.E., as it often clashed with a tendency toward monogyny, at least in the Land of Israel. One talmudic text suspects all levirate matches as emanating from lust of the partners, and likens the offspring of such unions to bastards (mamzerim – Yev. 39b). The rabbis ceased to view this release ritual as a negative dereliction of duty and maintained that in their day ḥaliẓah was the norm rather than the exception. Thus, we see how in some cases post-biblical Judaism maintained biblical law without maintaining its spirit.

Some biblical laws concerning women were greatly expanded. One such example is the laws of menstruation (*niddah), which are discussed in Leviticus 15:19–24. It is not clear whether these laws originally applied to the entire female population. Some scholars maintain that they were intended for the separation and special elevation of the priestly caste. During the Second Temple period, however, the laws of niddah were strictly upheld by most segments of Jewish society and greatly elaborated upon by the rabbis in the Mishnah. They state specifically that members of the Sadducee sect and of the Samaritan denomination observed these rites differently (Nid. 4:1–2), obviously indicating that control of women and their actions was a site of sectarian struggle. After the destruction of the Temple, most purity regulations were abandoned. Niddah regulations, however, were upheld

and even expanded. For example, the rabbis demanded that a woman examine her internal parts often, to discover whether she was or was not bleeding. This is because they maintained that everything a woman touches between one examination, when she discovered herself pure, and the next, when she was found to be menstruating, is retroactively defiled (Nid. 1:1). They demanded that women who had ceased to bleed at the end of their menstrual periods further refrain from immersion in the ritual bath (mikveh) and sexual intercourse with their husbands for seven additional "clean" (or "white") days, to ensure absolutely that they would not defile (Nid. 33a). This phenomenon suggests a significant rabbinic anxiety over ritual impurity in the marital context and women's unruly biological functions in general.

Another biblical institution was the test of the bitter water (sotah), according to which a wife suspected of infidelity could be tested by a magical procedure in the Jerusalem Temple (Num. 5). In this ritual the woman was brought to the priest who revealed her hair, tore her clothes and made her drink water mixed with earth and ink. This test, so it was believed, would reveal the woman's guilt. The ritual was still practiced in Second Temple times, but was strongly criticized and perhaps even abandoned altogether toward the end of the period. Rabban *Johanan ben Zakkai, an important rabbi of the last generation before the destruction of the Temple, is reported to have secured the abandonment of this practice (Mish., Sot. 9:9). Whether the report is correct or is a retroactive projection on earlier times is not clear. In any case, the problematic nature of this institution may be reflected in the fact that the biblical text of the sotah was inscribed on a golden tablet and donated to the Temple toward the middle of the first century B.C.E. This donation came from an influential Jewish convert and foreign queen – Helene of Adiabene – probably as a political statement on the sotah debate (Mish., Yoma 3:10). This does not mean, necessarily, that women supported the procedure, while men (like Rabban Johanan ben Zakkai) rejected it. It suggests, more likely, that this woman – Helene – and this man – Rabban Johanan ben Zakkai – were to be found on different sides of the debate. In any case, after the destruction of the Temple the institution was often viewed as ineffective. Guilty women, it was maintained, could withstand the test if they had a meritorious past (Sot. 3:4). The water also tested men who were accused of the same transgressions (Sot. 5:1). This literary trend indicates that rabbinic texts represent Rabban Johanan ben Zakkai's side of this debate.

Many issues associated with women's legal and social status simply are not dealt with in biblical legislation and significant innovations occurred in Second Temple and talmudic Judaism. Thus, according to rabbinic sources, the rabbinic leader *Simeon ben Shetaḥ, instituted the Jewish marriage contract, the ketubbah, during the Second Temple period (Tosef., Ket. 12:1; TJ, Ket. 8:11, 32b–c; TB, Ket. 82b). The meaning of this innovation was that several of the woman's rights in marriage were made legally binding by a written document, including

financial support for the widow and divorcée. Marriage contracts were produced by some of the societies with which the Jews came in contact, such as the Greeks. Furthermore, we know that marriage contracts were a reality and not a rabbinic fiction, because contemporaneous Jewish marriage documents were discovered in the Judean Desert in the mid-20th century. Although all of these documents were written for Jews, they are diverse in nature and are written in Aramaic or in Greek. They also display a plethora of traits that are incompatible with the rabbinic *ketubbah* but can be easily traced to Greek and Roman legal tradition. These documents, most of which predate the Mishnah by several decades, attest to the early legal and historical origins of the rabbinic institution of the *ketubbah*, even as they reveal alternative literary models.

THE CULT AND PUBLIC LIFE. Some scholars speculate that women may have held some sacred offices in the First Temple. However, with the final victory of monotheism in Judaism at the beginning of the Second Temple period (early sixth century B.C.E.), women were completely excluded from officiating in Jewish cultic practices. Their secondary role in the cultus was exemplified by the existence of a women's court in the Jerusalem Temple, beyond which women were not allowed to proceed into the holy precincts unless they were bringing a special sacrifice (Jos., War 5:198–99, Mish., Mid. 2:5–6). Furthermore, women had no official role in the Temple staff. The only mention of women in association with the running of the Temple is that of weavers of the Temple veil (*Syrian Baruch Apocalypse* 10:19; Tosef., Shek. 2:6). Weaving in general was a traditional feminine occupation, and women weavers producing sacred garments were present in many Greek Temples at the time. Nevertheless, in our sources, even this minor appearance of women on the scene of the Temple was played down. Thus, while the Tosefta clearly mentions the women weavers (Tosef., Shek. 2:6), its more authoritative counterpart, the Mishnah, mentions only the male supervisor of these activities in a parallel passage (Mish., Shek. 5:1).

After the destruction of the Second Temple, the exclusion of women from Jewish religious activities continued within rabbinic legislation, which exempted them from virtually all time-bound commandments, including daily prayer, the wearing of phylacteries, residing in the Sukkah, and going on pilgrimages (Mish., Kid. 1:7). These commandments, as opposed to others which are not time-bound, are clearly cultic in nature. Women's exclusion from them meant their expulsion from Jewish cultic life.

However, outside the official Temple cult, women were not legally barred from any office and took part in various public functions. This can be exemplified foremost by the fact that in Second Temple times a female member of the Hasmonean dynasty served as queen (Alexandra *Salome (Shelomẓiyyon); 76–67 B.C.E. – Jos., Ant. 13:407–32). She inherited the throne from her husband (in the same way that contemporaneous Egyptian-Ptolemaic queens gained their thrones). In an earlier episode, *Josephus (the main histori-

cal source for the queen's reign) tells us that Shelomẓiyyon's father-in-law had also attempted to appoint his wife as heir some 30 years earlier, although his attempt failed when his son seized power and had the queen executed (Jos., Ant. 13:302). From this we may surmise that there was a struggle within the Hasmonean dynasty between those who maintained that the queen should succeed her husband and others who believed it was a son's right. Queenship was obviously a secular office, but it is significant that a woman held this office because the monarch (in this case Shelomẓiyyon) was hierarchically positioned above the religious establishment. Thus, it was the queen who nominated the high priest, and not *vice versa*. Not surprisingly, Shelomẓiyyon nominated her elder son to the office.

Following the destruction of the Second Temple (and in the Diaspora even during its existence), the synagogue took over the many of the cultic functions of the Temple. Since the synagogue was not included in the biblical cultic system, exclusion of women from communal and religious participation was not yet entrenched. Inscriptional evidence, particularly from the Diaspora, reveals that some women carried titles such as *archisynagogos (head of synagogue), presbyter (elder), or mater synagogos (mother of the synagogue), apparently indicating that women played central synagogue roles alongside men.

Alternative religious outlets were also available to women during Second Temple times. For example, they took an active interest in the programs of Jewish sects and could join some as full-fledged members. Philo describes the Diaspora ascetic sect of the *Therapeutics. This Jewish-Egyptian group chose to withdraw from human society and live a life of contemplation in the desert. It consisted of both male and female members, whose burdens and responsibilities were of equal value. The nature of the interaction between the sexes in that sect can be described as "equal but separate" (Philo, *De Vita Contemplativa*).

The Pharisee sect seems to have encouraged women's involvement and support. They were sponsored not just by the Hasmonean queen Shelomẓiyyon but also by Herodian women and by women of the high-priestly families. Probably too, women were not just sympathetic supporters but active members of the group. Thus, rabbinic texts dealing with the *ḥavurah* (apparently the Pharisee table-fellowship) indicate that equal demands were made of men and women (Tosef., Dem. 2:16–17). The invisibility of women in Pharisaism, reflected in most rabbinic texts, results from an androcentric authorship, as well as a deliberate attempt by later rabbis to erase women's presence and, indeed, all sectarian characteristics from the earlier Pharisees.

Women may also have been involved in the activities of the *Dead Sea Sect. Dead Sea scrolls mention women elders and female scribes. They also discuss in detail laws applying to all the family and one document describes the responsibility of the sectarian wife to give evidence against her husband in cases were his behavior transgresses sectarian law (see below). Female skeletons, discovered in the cemetery of Qum-

ran, were probably those of members of the Dead Sea Sect buried in the communal cemetery.

It is likely that women were active participants in the various sectarian organizations that fomented the revolt against Rome in the years 66–73 C.E., of which the *Zealots were but one. Most of our evidence for women's participation in these groups refers to the company that followed *Simon bar Giora. We hear both that women constituted part of his entourage (Jos., War, 4:505) and that his wife was one of his constant companions (*ibid.,* 4:538). But more circumstantial evidence is also available. Both the Jewish writer Josephus and the Roman historian Tacitus refer to women who joined in the fighting against Rome (Jos., War 3:303; Tacitus, *Histories* 5, 13:3). Women were present on Masada and took part in the famous suicide pact practiced by the defenders of the rock (*ibid*., 7:393). Furthermore, women served as prime role models in the two main ideological innovations of the Zealot movement of the revolt against Rome. The first was personal zealotry, in which an individual aided his or her community by assassinating a public figure. The best literary example of such an action is the female heroine *Judith, who, by slaying the general Holofernes, delivered her people from foreign conquest. The second ideology typical of the zealot movement was the idea of self-inflicted martyrdom, namely suicide rather than subjugation to the enemy. This was practiced by Jews throughout the war against Rome and is nowhere better exemplified than on Masada. The only literary role model for this action from Second Temple times is the mother of the seven Maccabean martyrs, portrayed in the fourth book of Maccabees. In this later composition, the mother chooses to take her own life rather than subject herself to the will of the Greek ruler (IV Macc. 17:1).

Finally, there is little doubt that Jewish women became important supporters of the Jesus movement prior to the Crucifixion. Jesus' followers included women, and when he was arrested, and all his male supporters deserted him, it was women who cared for his burial, and were thus the first witnesses to his resurrection. These women, it should be remembered, were Jewish and not Christian, and their story belongs to Jewish history.

Women's support for sectarian organizations and nascent religious and ideological movements is a universal social phenomenon. Within Second Temple Judaism, such affiliation was a means of social and vocational expression for marginalized groups, such as women, who were barred from participating in the official power and influence systems. However, once sects like the Pharisees and Christians achieved political success, they not only legislated against women's holding positions of equality and power but also attempted to erase any traces of the central roles women had once played.

Women are frequently portrayed in late antique Jewish sources as exercising magical power; they are accused of being witches and practicing sorcery (e.g. TJ, Sanh. 7:19, 25d; TB, Sanh. 67a). Most stories of witchcraft and magicians in rabbinic literature focus on women: one tradition mentions a female leader of sorceresses (TB, Pes. 110a), while another tells of a woman whose healing powers are a guild secret (TJ, Shab. 14:4, 14d). This association of women with the occult by male writers in androcentric sources may reflect unsympathetic interpretations and misunderstandings of women's religious and even professional activities, of which we now know very little. Women's intensive involvement in the medical profession, as well as their roles as midwives and cooks, gave them knowledge of herbs and chemical processes, adding to their expertise as potential healers. When their healing efforts were unsuccessful, however, these failures could be represented as malicious malpractice, sorcery, and poisoning. At one point in Second Temple history this disparaging attitude toward women's activity seems to have erupted into a full-scale witch-hunt. This event, which probably took place during the reign of Queen Shelomẓiyyon, is recorded laconically in rabbinic literature. The Mishnah states simply that Simeon ben Shetaḥ (apparently Shelomẓiyyon's Pharisee advisor) hanged 80 women in Ashkelon (Mish., Sanh. 6:4). The Jerusalem Talmud, however, specifically identifies the women as witches (Sanh. 6:9,23c). Since witch-hunts are a universal phenomenon, a historical kernel for this story seems certain.

In fact, very few Jewish women frequented public places or filled important offices in late antiquity. Although the sources exerted considerable energy to bring this minority of independent and assertive women under male control, most Jewish women were engaged in home-based activities. For these women the sources are both prescriptive and descriptive.

WOMEN AND THE RABBIS. The most complete literary corpus dealing with women's position in Judaism in antiquity is found in the Order of Women (*Nashim*) in the Mishnah (edited ca. 200 C.E.). This collection is an attempt to organize neatly the messy issue of patriarchal control of women in Jewish law. As a consequence, rabbinic literature, particularly the Mishnah, is more restrictive toward women's participation in public and private life than the picture of actual life that seems to emerge from Second Temple sources. For example, rabbinic literature excludes women altogether as witnesses in a court of law (RH 1:8; Sif. Deut. 190). During the Second Temple period, however, women apparently did serve in such a capacity. In the Dead Sea sect, for example, one text suggests that wives were encouraged to give evidence against their husbands in the sect's tribunal (1QSa 1:10–11). This was not a very feminist piece of legislation, since it was intended to distill in female as well as male members the priority of loyalty for the sect over loyalty for one's spouse. Yet, it indicates that the rejection of women as witnesses, later considered a time honored Jewish tradition, was unknown to the Dead Sea sect. Similarly, in descriptions of Herod's court women are often portrayed as giving evidence in important trials (e.g. Jos., Ant. 17:65).

Divorce constitutes another example. The right to divorce in the Bible, described incidentally as part of the law that forbids a man to remarry his wife after she was married

to another (Deut. 24:1–4), does not give the husband the absolute prerogative to dissolve a marriage. Rabbinic literature, however, constructs divorce as a unilateral action, reserved to the husband alone (Mish., Git. 9:3). Nevertheless, one of the documents discovered in the Judaean Desert seems to indicate that outside of rabbinic circles women could and did initiate divorce proceedings. In this document a woman by the name of Shelomẓiyyon, daughter of Joseph of Ein Gedi, sends her husband, Eleazar son of Hananiah, a document terminating their marriage. The words she uses to describe the transaction are "a bill of divorce and release," just as in the mishnaic text (Git. 9:3). This document is one example of how reading rabbinic literature alone as a reflection of Jewish social reality in late antiquity may distort our view.

The codification of rabbinic sources also brought about a tightening of control over women within rabbinic circles themselves. The entire corpus of rulings associated with the House of Shammai was rejected wholesale by the descendents of the House of Hillel who edited the Mishnah. While the Shammaitic corpus may, in general, have displayed a more somber view of life, it likewise represented a more benign view of the position of women in Judaism. Thus, the House of Shammai supported a woman's right to run her business transactions independently (Ket. 8:1) and argued for the reliability of a widow's testimony regarding the death of her husband, demanding a full payment of her wedding settlement into the bargain (Ed. 1:12). And since Bet Shammai accepted the unilateral nature of rabbinic divorce, they protected women by limiting considerably the grounds on which a husband could sue for divorce (Git. 9:10).

Other examples of the curtailment of women's rights within rabbinic literature are found in the early rabbinic composition *Sifrei Deuteronomy*, usually assigned to the influential school of Rabbi Akiva. In its insistence that various nouns in the Hebrew Bible that could be understood collectively should be understood as referring only to males, *Sifrei Deuteronomy* exempted women from a large number of roles and activities. For example, it interpreted the phrase "and you shall teach them to your sons" [rather than the alternate reading "to your children"] (Deut. 11:19) to mean that the Torah viewed only sons but not daughter as entitled to learn Torah (Sif. Deut. 46). Likewise the biblical words, "You shall set up a king over you" (Deut. 17:14) were understood as ruling queenship illegal (Sif. Deut. 157). Interestingly, the same composition mentions with great admiration the queenship of Queen Shelomẓiyyon (Sif. Deut. 42). Such contradictions, however, are hardly surprising within a literature that was in the process of transforming itself in new directions and attempting to conceal earlier practices.

Rabbinic literature, however, is not uniform, and a tightening of control over women may be evident in one of its compositions, while the reverse may be detected in another. Judith Hauptman has shown that while the Mishnah is restrictive, careful reading of its sister collection of legal traditions, the Tosefta, can reveal a less rigid attitude toward women's posi-

tion. For example, while the Mishnah reserves procreation as a commandment to men alone, the Tosefta can envision a situation where women are equally commanded to fulfill it. Unlike the Mishnah, however, the more benign Tosefta never became canonized and its rulings never became law.

The rabbis who composed rabbinic literature were, in the main, scholars who envisioned a society that valued learning above all. Learning became an important status symbol and a means of achieving social mobility that endowed its initiates with social privileges. Men were encouraged to learn Torah and become literate. For this reason, the rabbis' attitude toward women's literacy and the learning of Torah is of special importance. To begin with, rabbinic literature displays some ambivalence on this question. The Mishnah presents the issue as a dispute between two sages in which one rabbi is specifically quoted as supportive of teaching daughters Torah (Sot. 3:4). The more lenient Tosefta even suggests that women were not altogether absent from rabbinic academies. Thus, a woman by the name of Beruriah is mentioned as formulating a halakhic principle (Tosef., BM 1:6). However, by the time that the Babylonian Talmud came to be composed the idea of a female students was so unusual that the rabbis transformed Beruriah into a superhuman scholar (TB, Pes. 62b). At the same time, their restrictive policy toward the freedom and independence of women in all walks of life eventually won the day in this field as well, and women were exempted and then barred from all participation in Jewish learning (see in particular TB, Kid. 30a). This meant, of course, that throughout Jewish history Jewish women have produced very little written evidence and have, for the most part, remained mute to us.

In most respects, late antique Jewish attitudes towards women, with small nuances, conformed to larger social norms in the cultures in which Jews thrived. While it is difficult to know the extent to which the attitudes and practices codified in rabbinic writings were actually realized in the various environments in which Jews lived, one can confidently state that the idealized society delineated in rabbinic literature is patriarchal and androcentric. Women are constructed as second class dependents whom are generally under the aegis of a male relative. Independent women of means, such as widows and divorcées, were seen as potentially disruptive and social custom strongly encouraged their remarriage and return to male control.

[Tal Ilan (2nd ed.)]

Medieval Islamic World and Spain

THE ISLAMIC EXPERIENCE. The lives of Jewish women in regions under Islamic rule were influenced in many ways by the social mores of Muslim culture. Polygamy and concubines, for example, permitted under Islamic law, were also features of Jewish family life. While Jewish women of prosperous families were not literally isolated in women's quarters as were Muslim women of comparable social status, community norms dictated that the woman's place was in the home. In addition, reports indicate that Jewish women wore black veils outside the home so as not to be distinguished from Mus-

lim women. In some countries, the robes and pants women donned were quite similar to those of the men, but the veil revealed their gender.

Although available information for the early days of Islam is rather limited, sources refer to two unusual Jewish women of this era. A poet from Yemen named Sarah was apparently a contemporary of the prophet Mohammed (570–632); she was said to have been a guerilla fighter who was murdered by a Muslim agent. One of her extant poems in Arabic, recorded in *Kitab l-Aghani*, a 10th-century collection edited by Abu al-Faraj al-Isbahani, immortalizes the infamous massacre of the Jewish tribe, the Banu *Qurayza, by Arab forces.

Dahia Al-*Kahina, a convert to Judaism, led North African Berber tribes who thwarted the Arab military in its first attempt to conquer the Maghreb at the end of the seventh century. The details of her policies are rather muddled as are the dates of her rule, but she apparently destroyed settlements under her own sovereignty in the mistaken hope of dissuading the Arabs from pursuing a second attack from the south. In the long run, the Arabs triumphed and gained access to all of North Africa and eventually to Spain. However, until this defeat, Dahia was a successful ruler of Byzantines, Jews, and Christians in the region for a considerable amount of time. Arab historians record the defeat of this Berber Jewish queen; in his 14th-century accounts, Ibn Khaldun glorified the remarkable victory of Islam over this "cruel" monarch.

With the conquest of Spain in 711, Arab culture strongly shaped the subsequent development of the Spanish Jewish community. Poetry flourished, first in Arabic and later in Hebrew, and a few examples of women who were proficient in this art survive. Qasmunah of Andalusia was adept in writing verses in the genre known as *muwashshaḥ*, a rather difficult style because of the frequent variations that are part of its format, rhyme, and meter. Her writings reflect not only a familiarity with Arabic poetry, but display intelligence, cultivation, and originality. Her father trained her in the art of writing poems in this genre; his technique was to compose a line by himself and then challenge her to complete the verse with her own complementary line. The father is recorded as Ishma'il Ibn Bagdalah and it is possible that this name is a distorted version of Ibn Nagrilla, or *Samuel ha-Nagid (993–1055), who is known to have had a daughter.

Genizah Society. The majority of available source material concerning medieval Jewish women in the Muslim world is found in the documents of the Cairo *Genizah* (950–1250). Painstaking reconstruction of *Genizah* fragments that began in 1947 and ended in 1984 have demonstrated that the wife of *Dunash ben Labrat, the 10th-century poet who initiated the use of Arabic poetic forms in Hebrew, was also a poet in her own right in Spain. Her reconstructed poem begins, "From the wife of Dunash ben Labrat, to him." In a tragic and nobly restrained style, it refers to a forced separation between a husband and his wife and infant son; promises of faithfulness and love abound. In his reply, Ben Labrat refers to his wife as

"an erudite woman like you." Ezra Fleisher has recounted the tale of this reconstruction as well as what is known of the authors; he suggests that this nameless woman might well be the first known proficient female Hebrew poet (E. Fleisher, "On Dunash Ben Labrat and His Wife and His Son," *Jerusalem Research in Hebrew Literature*, 5 (1984), 189–202 (Heb.)).

A similarly fascinating reconstruction from *Genizah* fragments was achieved by Joseph Yahalom and Edna Engel concerning the life of another Jewish woman from the upper echelons of society, in this case a convert from a wealthy French Catholic family who married David Narbonne, a respected member of an elite Jewish family from Provence in the second half of the 11th century. Her conversion to Judaism infuriated her Catholic relatives, so the couple crossed the Pyrenees into Spain to avoid their wrath. Narbonne and his wife eventually settled in Manyo, but as fate would have it, this community suffered a pogrom; Narbonne was murdered in the synagogue and two of the couple's children were taken captive. The community provided the widow with a loan to redeem her children and a letter of recommendation to fellow Jews in other communities to come to her aid. A second letter continues her saga. The convert remarried but was still being pursued by her relatives. The latter eventually located her, at which time she was incarcerated and sentenced to death. A daring rescue was carried out, the prison guards were bribed, and this woman was whisked away from her cell in the dead of night. Since these documents were found in the Cairo *Genizah*, one assumes that she eventually sought refuge in Egypt where her Christian family would have no standing. It is admirable to see how the Jewish communities in Spain supported this woman, giving her loans and letters to enable her survival despite the fact that she was essentially an outsider, a non-Spanish convert to Judaism (E. Engel, "The Wanderings of a Convert from Provence" (Heb.) and Y. Yahalom, "The Manyo Epistles: The Handwriting of a Rural Scribe from Northern Spain" (Heb.), *Sefunot*, 7 (1999), 13–21; 23–33).

While most of the information from the Cairo *Genizah* repository concerns the Jews of medieval Fustat (Old Cairo), *Genizah* sources also document a larger Mediterranean society. This was due to the mobility of numerous members of this community and their ongoing contacts with Jews in Yemen, India, North Africa, and Spain. S.D. Goitein translated the letter of a medieval trader from Fustat who traveled between Aden and India after having lost all of his initial investment in a shipwreck. His wife, and especially her father, felt that he had more or less abandoned her, and one of their missives asks that he send her a divorce writ. His long letter of reply, in which he defended his personal conduct and emphasized his own suffering, alluded to letters from his wife which had been characterized by frequent rebukes. Another letter translated by Goitein contains information about a merchant who left a concubine and son behind in his travels, making no provisions for them; presumably these were not unusual occurrences. Some men were absent for lengthy periods of time, and their wives and other members of the family begged them to

return and rejoin the family. Rabbis such as Maimonides were quite concerned with husbands who abandoned their wives and families, often because they had wed other women and begun parallel families elsewhere.

While the men, in their role as merchants, did the majority of the traveling, some women had to leave their homes because of marital alliances and visits to family members who resided elsewhere; often the *kebira* or matron of the family was sent on a mission that could only be entrusted to her. *Genizah* documents refer to a woman who had fled from the land of Israel during the Crusades and who appealed to the congregation for aid during services, stopping the prayers at the permitted time as was acceptable for those whose cases were urgent and needed to be brought to immediate attention. In a letter stamped with the caliph's seal, a wealthy matron admonishes emissaries assigned to bring funds to the Holy Land not to delay their journey but to set forth immediately to alleviate the suffering of those in need of support.

Literacy. Women were concerned with education and sometimes they themselves were rather literate. Joel Kraemer has unearthed numerous letters from the *Genizah* written by women. While some of these might have been dictated to scribes, the custom of paying a professional to stylize a letter was common for both men and women and does not necessarily establish literacy or illiteracy on the part of the sender. Many of the discovered letters allow us to hear the voices of women whose language was not necessarily as elegant as that of the men, but whose messages were clear and direct, often reflecting a respectable level of literacy.

Some women had dowries that included writing tables and others left instructions in their wills for their sons as well as their daughters to be given private lessons. A question posed to Maimonides referred to a group of girls receiving lessons from a paid teacher; the girls had apparently been misbehaving and had vexed their blind teacher who swore he would never teach them again.

As traditional as *Genizah* society appeared to be, nonetheless there were women who diverged from the norm. In the 12th century, the daughter of Samuel ben Ali of Baghdad, a Babylonian *gaon,* taught at her father's yeshivah in a modest fashion. She was reported to have had expertise in Scripture and Talmud.

At the same time, a study of two responsa by Maimonides reveals the story of an impoverished woman in 12th-century Cairo who was desperately trying to care for two children while her husband was absent for long periods of time. She found a solution by teaching in a school run by her brother. She continued in her capacity at the school even after her brother also left the city, indicating that she was respected for her abilities.

The community's vote of confidence in her teaching was manifested by the fact that the parents of the pupils continued to bring their children to her school even though they had other alternatives. The uniqueness of this set of responsa lies in the fact that one hears both sides of the story. The husband first asked the court if he could have permission to marry a second wife, although their marriage contract clearly stated that he could not do so without the first wife's permission (which was not forthcoming). Maimonides informed him that this was an ironclad clause, but if he desired to restrain his wife from teaching, he could do so legally and with the support of the court. The wife then presented her case. After describing the years of abandonment and neglect with which she had to contend, this anonymous teacher argued that her husband had been repeatedly undependable in the past, that she had built up her student clientele over time, and that were she to give up her teaching she would not easily be able to resume her school should her husband again disappear. Maimonides's remedy is that the Jewish rabbinical court compel the husband to divorce his independent wife on the grounds that he had not fulfilled his legal obligation to support her. Moreover, he advises the wife to refuse all relations with her husband and to forfeit her marriage portion, probably long ago squandered in any case, since these actions, too, would constitute grounds for divorce. After that, Maimonides says, "She will have disposition over herself, she may teach what she likes, and do what she likes"; however, he rules that "if she stays with her husband, he has the right to forbid her to teach."

Innovations and Aberrations in Jewish Law. In medieval Ashkenazi society, women were influenced by the high level of piety that had permeated Christian society and began to initiate changes such as observance of time-bound commandments. No similar developments have been discovered in the medieval Sephardi or Oriental world. The rabbis did not encourage female observance of men's commandments, and women who taught children Bible appear to be among the most learned Jewish females in their Muslim-influenced environment.

However, some women did rebel against religious authority. Maimonides' responsa offer information on a "*Mikveh* Rebellion." At the end of the 12th century, many Egyptian Jewish women discontinued bathing in the ritual bath, preferring to use public bathhouses or to wash their bodies at home under more pleasant conditions than contemporaneous *mikvaòt* apparently afforded. The Egyptian rabbis were infuriated by this tactic, which, in their eyes, was akin to following Karaite practice. This rebellion seemed to have been organized and successful and lasted several years until it was decisively quelled, proving that the women were easily not deterred by the serious threats made by the rabbis.

In later periods, women also banded together to make similar decisions that were unpopular with the rabbis, also around issues of ritual immersion. When the water at the ritual bath was deemed too cold, women refused to go; in Cairo, Jerusalem, and Hebron, women entered the Turkish bath after *mikveh* immersion. Some used the ancient canal of Cairo which was rejected as an option by rabbis like the Radbaz (*David ibn Zimra) because the water did not flow all year round; nevertheless, the women continued using it. Some

women whom did not want to wait until the conclusion of the Sabbath to bathe, moved things up and immersed a day earlier. In sixteenth-century Damascus, there were women who went to bathhouses during the day and when the rabbis discovered this, they had a lock installed; undeterred, some of the women broke down the door in defiance of the rabbis.

Marriage. Polygamy, or more accurately polygyny (the practice of a man having more than one wife) was a feature of Jewish life in the Islamic world where Muslim men were permitted to take up to four wives. Needless to say, a husband's taking a second wife presented a threat to the first wife. As early as 1100, the *nagid* *Mevorakh ben Saadiah, following talmudic precedent, declared that a protective clause could be included in the marriage contract (*ketubbah*) to prevent polygamy. M.A. Friedman has named this "the monogamy clause" and determined that it was included in most contracts in the *Genizah* period. In addition, fathers who were anxious to protect their daughters included clauses regarding their right to work, to retain earned income, etc. While one would assume that only wealthy men could afford second wives, this was not always the case (such as the aforementioned teacher's husband). In some instances, husbands took a second wife when the first wife appeared unable to bear children.

Professions. Women could maintain a certain level of independence if they had monetary sources of their own. On the whole, wealthy working women like the broker *Wuhsha al-Dalala, seem to be the exception to the rule, although there were professional teachers, especially of crafts taught to girls. Many women earned money from needlework, particularly embroidery; entrepreneurial women served as brokers who collected the spun threads, textiles, and embroidery work of other women and sold them to merchants. In addition, there were women in traditional professions such as midwives, keeners, healers, and landladies who rented out property they owned.

WOMEN IN MEDIEVAL SPAIN. Unfortunately, no significant collection of documents about Jewish social life has been found in Spain and thus the reconstruction of women's lives, particularly during Islamic rule (8th–11th/13th century) is not very comprehensive. The influence of Islam on the Jewish community and upon its women was similar to that of *Genizah* society: seclusion of women was considered to be the ideal; polygamy was acceptable; and having sexual relations with concubines appears to have been accepted social custom. The ruling of R. *Gershom mandating monogamy did not apply to the Sephardi or Oriental communities. Although the rabbis in Castile expressed occasional opposition to the practice of polygamy, prominent figures in Spanish Jewry, such as the 14th-century leading Aragonese rabbi *Ḥasdai Crescas, had two wives. In the matter of *yibbum or ḥaliẓah* for a childless widow, Ashkenazi rabbis preferred *ḥaliẓah*, releasing the widow from any obligation to marry her brother-in-law. Sephardi rabbis, however, often showed a preference for *yibbum*

(marriage of the widow to her husband's brother); the fact that he might already be married was not a matter of concern in this environment.

Rabbinical leaders were in disagreement on whether maintaining a concubine was acceptable; many believed this practice would prevent less desirable forms of sexual immorality such as adultery with married women. *Naḥmanides, for example, felt that it was preferable for men to support concubines rather than to indulge indiscriminately in relations with numerous women. Jews often had Muslim female servants or slaves and the masters frequently had sexual relations with them; at times these women converted and married their former masters. A ban was issued by the community of Toledo in 1281 against taking Muslim concubines but apparently was not very effective.

Jewish men frequented bordellos and did not seem to discriminate concerning the prostitute's religious preference. There was a Jewish brothel in 13th-century Saragossa. Some of the rabbis debated as to whether it was preferable to choose a Jewish versus non-Jewish prostitute. Since frequenting a brothel was something of a luxury, it was generally an option for men with financial means.

Girls were engaged to be married at a very early age both in Jewish and Muslim society. Often the groom was considerably older than the bride. In both societies, the young bride was frequently widowed at a tender age; this was the fate of many orphaned Jewish girls who were married off to much older men. If the widow remarried and her second husband died, she was considered a "murderous wife" (*katlanit*). Based on talmudic legal precedent, such a woman was not permitted to marry a third husband, even if she was still quite young, since she was considered dangerous to men. This trend was exacerbated with the growing popularity of mysticism in Spain. The *Zohar discouraged remarriage for widows as the deceased husband was supposedly waiting for the wife whose spirit was linked with his; a struggle with the new husband might even result in the latter's demise. Maimonides objected to branding these young widows as "untouchables" and ruled in favor of a third marriage for these widows. Avraham Grossman has claimed that Maimonides' principled stance against superstition and his pragmatic response to a real social problem had a great impact on sages who acted after him in Spain and in the Muslim world, as well as in Ashkenazi periphery, and saved "thousands" of women from a bitter fate (A. Grossman, "The Killer Wife," *Tarbiz*, 50 (1998), 531–61 (Heb.)). This issue also arose following the riots and forced conversions of 1391 when many women were also left widowed. Following Maimonides, it was generally accepted that if a husband had died as a martyr or as the result of the plague, the designation of "murderous wife" (*katlanit*) would not be applied to the widow and she would be allowed to re-marry.

Jewish women in Spain engaged in traditional professions as midwives, wet nurses (for Christian families too), healers, and peddlers, as well as merchants and moneylenders. Poorer women would work in the ritual bathhouse or for the

burial society. Again, there is sparse material available concerning women in the Muslim period, although they seem to have been more active in the economy under Christian rule. Women were present in the marketplace and many middle class women took over for their husbands in their absence due to travel or after their deaths. In the 14th century, women dealt in foodstuffs, handicrafts, spinning, weaving, leather crafts, and the manufacturing as well as sale of footwear.

Inheritance and Guardianship. The widow stands out as the most active and independent woman in Jewish society, especially if she had financial means. She might have inherited from her father or husband, as a stipulation in the will itself, in the form of a gift, or as a condition in the marriage contract. There seems to have been some positive influence from Christian and Muslim society concerning bequests to widows or daughters who would not normally have inherited anything under Jewish law. In Egypt, for example, daughters were often given a tenth of the deceased father's estate (as compared to an eighth in Islamic law). The option also existed in Muslim countries whereby the father could leave his estate to a Muslim institution such as a children's endowment. The result was that his children, male and female, were granted perpetual use of his estate and Jewish inheritance customs would effectively be bypassed. These unusual methods were accepted, albeit grudgingly, by the Jewish community because claims taken to Muslim courts would have resulted in even more favorable results for the women in the family.

At the beginning of the 13th century, a change occurred regarding the fate of a woman's property if she predeceased her husband. Originating in Toledo, the decision was made that if the couple had children, the surviving husband no longer inherited everything as was customary in talmudic law, but had to share with the next generation. The sons and daughters shared equally with the husband and if there were no children, the woman's mother would receive half the dowry if she had provided it; otherwise, the estate was divided between the husband and heirs from his wife's father's side of the family. This regulation stood out in sharp contrast to the customs in the Levant, such as the Damascus regulation, which favored the traditional method; after the 1492 expulsion from Spain, the regulations co-existed, although some rabbis were unhappy with the situation. In the 16th century a compromise was made whereby two-thirds of the deceased wife's dowry went to her husband and the rest to her relatives, unless there were children; in that case, he was entitled to all of her property. This too was subject to additional changes.

Another difference between local inheritance customs is reflected in the assessment of the marriage contract. The Spanish custom was to record a sum to represent the total value of the dowry whereas the Jews in the Middle East listed the value of each item individually. The latter method proved to be detrimental to the woman as values appreciated and depreciated and items that could still be used were returned in order to deduct their value. According to Lamdan, in dealing with dowries as well as monetary assessments, the Spanish system favored the women; this might have been due to the fact that they were a wealthier community than those of the Middle East and more concerned with protecting their daughters in case they were widowed or divorced.

On the other hand, a husband could sidestep Jewish custom and make his wife an heir, even a universal or main heir, should he predecease her. In Christian Spain, many Jews did so in Latin wills upheld by Christian courts. As a result, the widow gained a large degree of independence. Widows were also named as guardians both of property and of their children, often as part of a committee. This joint guardianship was not due to lack of confidence in the women, but in order to protect them from being burdened with sole liability. Many examples of female guardians as part of a group can be found in Aragon, even though the local law did not advocate the formation of committees. These women often continued their husbands' businesses or engaged in their own. Quite a few of them were engaged in money-lending, particularly in the new community of Perpignan in the 13th century; some were married although most were widows. The tendency in this community, for example, was for widows (both Christian and Jewish) not to re-marry. These women did not want to lose their newly independent status or to complicate the lives of their heirs by collecting their dowries. The communities did not pressure them, most likely because they were contributing to the local economy and were not a drain on local resources.

Post-1492. The expulsion of 1492 resulted in a chain of upheavals for the Spanish Jewish community and affected many other Diaspora communities as well, especially those that received the exiles. Immediate effects included impoverishment and the breakdown of family units, for some members preferred to convert. In addition, many of the exiles were robbed, raped, and killed en route to their chosen destination. Serious problems resulted, including women whose husbands had converted to Christianity and had not given them divorce papers. Dilemmas faced the rabbis in Diaspora communities who needed to decide the fate of these potentially "chained women" (*agunot*). Problems of this sort were particularly acute in Salonika. Many of the rabbis did not want to cut off ties to their *Converso brethren and thus discourage their future possible return to Judaism. In addition, decisions had to be made as to whether an apostate was considered a *levir* in case his brother died childless and left a widowed sister-in-law. If the rabbis ruled that the convert was still part of the community, the decision left the women at a disadvantage as it was nearly impossible either to get a divorce or perform ḥaliẓah long distance. As time passed, the rabbis' attitudes changed and became more lenient in terms of the women's situation.

Most of the Jews who left Spain came into contact with other Sephardi and Oriental Jews; the nature of this contact depended upon their destination. Jewish women in the Ottoman Empire at this time were relatively independent, and

engaged in moneylending, petty commerce, artisanry, and real estate. Some embroidered and others sold needlework. Some were brokers for products made by Muslim women who did not have the option of entering a public domain like the marketplace. There is even a record of a women welder in 16th-century Cairo. Many of these women had stipulations in their marriage contracts stating that their handiwork belonged to them. Goitein commented that in medieval Cairo, ready-made food could be purchased in the market; it seems that this was still the case in the late 15th century as well (R. Obadiah of Bertinoro). Cairo *Genizah* letters written by female exiles from Spain clearly reflect a new level of independence created by the experience of immigration and the encounter with non-Iberian communities.

[Renée Levine Melammed (2nd ed.)]

Medieval Christian Europe

Between the rise of Islam (seventh century) and the 15th century, most Jews lived outside the Land of Israel, with significant populations in the Muslim worlds of North Africa, the Middle East, Western Asia, and Spain (Sepharad). Far smaller numbers of Jews lived in Christian Europe (Ashkenaz). One of the major intellectual endeavors of medieval Judaism was the continuation of the talmudic enterprise through collections of rabbinic answers to legal questions (responsa literature), the production of legal codes, and biblical and talmudic commentaries. These sources confirm that medieval legal authorities continued rabbinic patterns in ordaining separate gender roles and religious obligations for men and women, and in relegating females to secondary, enabling positions. However, norms and customs of local environments were also factors in how Jewish social life developed, since Jews assumed the language, dress, and many of the social practices of their non-Jewish neighbors, including cultural attitudes regarding appropriate female behavior. In medieval Christian Europe where Christian women had a wide range of public and private social, economic, and religious roles, the position of Jewish women markedly improved, relative both to the talmudic era and to the situation of Jewish women in Muslim countries. The reason, beyond a larger environment that was relatively supportive of female initiative, was the economic success that transformed the relatively small Jewish communities of Ashkenaz into a bourgeois society. As Jews prospered in trade and money lending, Jewish women played increasingly vital and often autonomous part in their family's economic lives, both as merchants and as financial brokers, allowing them to achieve almost unprecedented status and power in Jewish communal life.

The small Jewish communities of medieval Christian Europe lived in an atmosphere of religious suspicion and legal disability. Beginning with the period of the major Crusades (1096–1204), Jews were gradually limited from virtually any source of livelihood but moneylending; following 1215, they were often compelled to wear distinctive clothing and badges. By the end of the Middle Ages, Jews were expelled from areas where they had long lived (including England in 1290,

and Spain in 1492); those who remained in Central Europe after the mid-16th century were compelled to live in crowded ghettos. Despite their political insecurity, the Jews of Ashkenaz enjoyed a high standard of living and were significantly acculturated. This is evident in the women's names that appear in extant sources of various kinds: Alemandina, Belassez, Blanche, Brunetta, Chera, Columbina, Duzelina, Fleur de Lys, Floretta, Glorietta, and the like, are far more common in our various sources than biblical appellations. (Jewish women in the Muslim realm similarly tended to have names of Arabic derivation).

WOMEN'S HIGH STATUS. Prior to the mid-12th century, most Jewish men were merchants and many traveled extensively. Like the Christian women of the upper bourgeoisie and lower nobility among whom they lived, Jewish women were often left to manage things at home while husbands were absent. And like Christian women, Jewish women had significantly more freedom of movement and higher social status than women in the Muslim world. This high status is indicated, in part, by the large dowries Jewish women brought into marriage. Since the capital with which a young couple started life had its origin mainly in the bride's portion, parents demanded strong guarantees in the *ketubbah* (marriage contract) that the bride would be treated with respect, that her marriage would have some permanence, and that she would have financial security. While the dowry of a deceased childless wife legally belonged to her husband, a 12th century enactment made all the dowry returnable to the father should his daughter die in the first year of marriage. This was to encourage fathers to endow their daughters generously; if a woman died in the second year of marriage without children, one half was to be returned.

A further recognition of the high status accorded to Jewish women in this milieu, as well as an indication of the influence of the prevailing mores of the Christian environment, is the 11th century *takkanah* (rabbinic ruling) forbidding polygyny for Jews in Christian countries. This change in traditional Jewish law is attributed to Rabbi *Gershom ben Judah (c. 960–1028), the first great rabbinic authority of West European (Ashkenazi) Jewry. A. Grossman suggests that the edict forbidding polygyny was also motivated by the involvement of many German Jewish men in international trade which often involved lengthy sojourns in Muslim countries. Some of these merchants may have married second wives while absent from home for long periods of time; the problem of deserted wives and their children is often referred to in Jewish legal literature from the Muslim environment and R. Gershom's ban (of excommunication) may have been intended to prevent such callous behavior that also strained community welfare resources. The important *takkanah* that no woman could be divorced against her will also originates in this time period. In fact, divorce appears to have been less common among Jews in medieval Christian Europe than in the Muslim milieu, perhaps because it was not a sanctioned act within Christian society. It was also the custom here, as in Muslim lands, for

Jewish husbands to leave their wives with a conditional divorce document when they set out on journeys so that their wives would be free to remarry should they fail to return after a specified length of time.

MARRIAGE. Jewish girls in this society, despite rabbinic prohibitions to the contrary, were betrothed very young, often at the age of eight or nine. A young woman might be married at 11 or 12, while her husband would be almost the same age. The responsa of R. *Meir of Rothenburg (d. 1293) records an instance of a young girl, married before the age of twelve, who went to court against her mother who had interfered in a marital dispute between the young bride and her husband. R. Meir ruled that the young wife is in no way bound by agreements her mother made without her knowledge and he takes for granted that it is the young woman who is in control of the couple's financial resources (*Teshuvot R. Meir*, Cremona edition, no. 217).

Early marriages were motivated by the religious desire to remove young people from the sexual tensions which might lead to sin. Economic factors were also operative since a well-dowered young couple could support themselves immediately, learning the business at the same time. Marriages could form an enduring and profitable partnership between two wealthy families, while settling a young daughter well proved her desirability and increased her family's prestige. Conversely, a broken engagement might give rise to rumors concerning the rejected bride and her relatives that could harm her own future marriage chances and those of other family members. Such anxieties contributed to an 11th-century *takkanah* imposing a ban of excommunication against those who violated a betrothal agreement; in most cases the guilty parties were bridegrooms and their families.

One topic on which the sages of France and Germany spoke out very strongly, and another indication of women's prominent social status, was the impermissibility of spousal abuse for any reason. Wife-beating was recognized as grounds for divorce; methods of enforcing the granting of a divorce in such cases were taken far more seriously than in any other part of the Jewish world. Concerning one such case, R. Meir of Rothenburg wrote, "A Jew must honor his wife more than he honors himself. If one strikes one's wife, one should be punished more severely than for striking another person.... If [the abuser's] wife is willing to accept a divorce, he must divorce her and pay her the *ketubbah*" (*Teshuvot R. Meir*, Prague edition, no. 81; cf. Cremona edition, no. 291).

Jewish medieval literature expresses positive attitudes towards marriage and sexuality that were at odds with medieval Christian teachings, which enjoined celibacy on the representatives of the Church, and taught that the only purpose of marital sexuality should be procreation. It is not surprising that Christian writers criticized Jewish sexual behavior, real and imagined. Influence from the Christian environment may account for the ambivalence towards sexuality characteristic of the German-Jewish pietists of the 12th and 13th centuries, the

*Ḥasidei Ashkenaz, whose writings, such as *Sefer *Ḥasidim* (Book of the Pious), express not only an obsessive concern with the ubiquity of extramarital sexual temptations, but also a profound ambivalence about the joys of licensed sexual activities. Although a happy marital relationship lessened the likelihood of involvement in illicit sexual temptation or activity outside marriage and was, therefore, a good thing, they were concerned that it might also distract a man from God, who should be the focus of his greatest and most intense devotion (Baskin, 2006). One unfortunate consequence of the dissonance occasioned by these contradictory mandates was the objectification of all women and their frequent representation as vessels of sexuality and erotic distraction in certain pietistic Jewish writings.

During the Middle Ages, marriages between Jews and members of other religions were generally forbidden by religious and secular law in both Muslim and Christian realms. This is not to say that liaisons between Jews and non-Jews did not exist; they were common and at many different levels of intensity, but for a romance between a Jew and a non-Jew to progress to a recognized marriage, one of the parties to the relationship would have to convert. Generally speaking, it was the woman who did so.

Even without the possibility of marriage, Jews and gentiles were involved in a variety of sexual contacts, ranging from visits to prostitutes, involvement with maidservants, a recognized relationship with a mistress or lover, to common-law marriages. A romantic relationship which led to tragic consequences may have existed between *Pulcelina, a prominent 12th century moneylender, and Count Thibaud of Blois. All such liaisons were decried by both Jewish and non-Jewish authorities, and offenders, particularly those involved in permanent or semi-permanent relationships, were sometimes prosecuted by Church authorities, occasionally receiving the death penalty. There was more tolerance on the Church's part of Christian men having affairs with Jewish women, probably because Jewish mistresses were likely to adopt their lover's faith; indeed, the seduction/conversion of a Jewish girl by a Christian suitor became a popular theme in Christian literature. Not surprisingly, Jewish authorities objected to such relationships far more strenuously than the much more common occurrence of Jewish men keeping a Christian mistress, or maintaining sexual involvements with non-Jewish servants. There is no doubt that concern about all Jewish-Christian sexual liaisons was among the factors leading to efforts by the Church to isolate Jews from Christians; it was most likely because of fear of sexual contacts between Christians and Jews that Church legislation (beginning with the Fourth Lateran Council of 1215) forced Jewish women to wear a distinguishing badge at a younger age than was required for Jewish men, and often insisted that women wear humiliating attire, such as one red slipper and one black.

ECONOMIC ACTIVITIES. Jewish women's economic activities generally supplied a part or even the whole of the family

income, sometimes allowing their husbands to devote themselves to study. This economic success empowered Jewish women not only in their domestic lives but in the religious and communal realm, as well. The medieval responsa literature is replete with references to women's business undertakings and to their frequent meetings and travels with Jewish and gentile men for business purposes; no objections are cited anywhere to women's wide ranging freedom of action. That women who traveled could be at risk from violent attacks was an accepted part of their economic lives, as it was of men's. *Sefer Ḥasidim* gives evidence of this: "A woman who was traveling heard that a group of gentiles was approaching her and she feared they might rape her. In such a case, she is permitted to dress in a nun's clothing so that they will think she is a nun and not attack her sexually. And if a woman traveling hears that a group of Jewish ruffians is approaching her, she is permitted to dress in non-Jewish dress and say that she is a gentile. She may warn them that she will cry out and report them, and she may also cry out at once in order that gentiles will come to help her, even if they kill the ruffians" (SḤ Bologna ed., par. 702). A responsum of the 12th-century German sage, R. Eliezer b. Joel Halevi, concerns a woman who set out on trade with two Jewish men, one of whom raped her during the journey. On the question of whether or not the woman was also culpable, in that she had acted immodestly by being alone with men contrary to talmudic law, R. Eliezer replied in the negative, saying "Day after day women go forth with two or three men, and seeing that the sages of Torah offer no protest, are unaware that it is forbidden" (*Or Zarua* I, p. 166, no. 615).

Women engaged in all kinds of commercial operations and occupations, but moneylending was especially preferred; widows would frequently continue their financial activities, occasionally in partnership with another woman (see *Banking and Bankers). Such entrepreneurship undoubtedly required some degree of literacy in the vernacular and training in mathematics and bookkeeping skills. *Licoricia of Winchester was a highly successful Jewish businesswoman in England who had direct business dealings with the king. Her five sons, known as "sons of Licoricia," continued their mother's business after her murder in 1277. Some women were involved in craft activities they learned from their fathers or husbands, as well, and there are references in Jewish and Christian sources to independent Jewish women who practiced medicine or worked as midwives. Several medieval obstetrical treatises in Hebrew, apparently intended for female midwives, indicate that at least some women involved in medical practice were literate in that language (Barkai; Shatzmiller).

RITUAL OBSERVANCE. All Jewish women acquired domestic skills in childhood. These included not only the rudiments of cooking, needlework, and household management, but also the rules of rabbinic Judaism applicable to home and marriage. Basic religious training was considered essential so that a woman would know how to observe dietary laws, domestic regulations pertaining to the Sabbath and festivals, and the

other commandments relevant to her family life and her relations with her husband. *Sefer Ḥasidim* ordains that a father is required to teach his daughters those practical commandments and halakhic rules essential for correct observance, but goes on to warn that "an unmarried man should not teach a girl, not even if the father is present, for fear that he will be sexually aroused or she will be overcome by her passions." Rather a father should teach his daughter and a husband should teach his wife (SḤB, par. 313).

Particular anxiety is expressed in several sources that women should not only be assiduous but also expeditious in observing "family purity" regulations. In his 14th-century ethical will, R. *Eleazar of Mainz advised his daughters to "scrupulously obey the rules applying to women," advising that "they should carefully watch for the signs of their periods and keep separate from their husbands at such times …. They shall be very punctilious and careful with their ritual bathing, taking with them women friends of worthy character" (Abrahams, pp. 209–10). *Sefer Ḥasidim* endorses similar sentiments and advises against using *mikveh* immersion as a bargaining pawn in domestic quarrels: "A father should tell his daughter who is about to be married not to postpone the time of her immersion in the *mikveh,* and not to say to her husband, 'I will not immerse in the *mikveh* unless you give me a certain amount of money or such-and-such gift'" (SḤB, par. 506). *Sefer Ḥasidim* also mentions a woman who refused to immerse in the *mikveh* until her miserly husband agreed to purchase books and donate them to charitable purposes. The husband complained to a rabbinic authority who told him, "Blessed is she for having brought pressure on you to perform a good deed. This is her only means of compulsion." To the wife, however, the sage said, "If you can find another way to persuade your husband to act generously, then well and good, but don't pressure him by withholding marital relations, because he will have sinful thoughts, you will keep yourself from becoming pregnant, and you will only increase his anger" (SḤB, par. 873).

Some women used their refusals to immerse in the *mikveh* as a strategem out of an unhappy marriage when their husbands would not agree to a divorce. A wife who refused sexual relations was considered a *moredet*, a rebel, and was subject to a daily monetary fine; when the value of her dowry had been exhausted, the husband was compelled to divorce her. Such an expedient might be acceptable to an unhappy wife who had the financial support of her relatives. In cases where rabbinic authorities determined that a woman had refused sexual relations or fled because her husband was repulsive to her, to escape blatant physical or emotional abuse, or due to a lack of economic support, her husband could be compelled to give her a divorce and return her dowry.

Jewish customary law concerning the menstruating woman (*niddah*) became more exclusionary in the Middle Ages, particularly in the Christian sphere. According to the highly influential *Baraita de-Niddah*, a book apparently of the geonic period, the *niddah* was forbidden to enter a synagogue,

to come into contact with sacred books, to pray, or to recite God's name. These customs were followed in many locales during the medieval and early modern eras, although they have no basis in *halakhah*. Generally, they were endorsed by rabbinic authorities who praised compliant women for their piety. Even where menstruating women did attend and enter fully into synagogue services, one late fifteenth century source reported, "They take care only not to look at the Torah scroll when the sexton displays it to the congregation" (Jacob Landau, *Sefer ha-Agur*, sec. 1388).

RELIGIOUS PRACTICE. While most Jewish boys were literate in Hebrew, and some became quite learned, only a few girls from elite families ever learned much Hebrew. However, lack of Hebrew learning was not seen as an impediment to religious practice and prayer for either women or men, since as *Sefer Ḥasidim* advises, "one should learn the prayers in a language one understands, for prayer is first and foremost an entreaty of the heart and if the heart does not understand what issues from the mouth how can the supplicant benefit? It is better to pray in whatever language [the person] praying understands" (SḤB, par. 588).

An indication of women's high status in Ashkenaz is their voluntary assumption of religious practices from which they were exempt in talmudic Judaism. Women, for example, were permitted in 12th-century Germany and northern France to perform and to recite blessings over time-bound positive precepts, such as putting on *tefillin* (phylacteries) even though they were exempted from them by *halakhah*; the 12th-century scholar, R. *Simḥah of Speyer included women among the quorum of ten people required to recite the grace over meals. Another example of women's assumption of ritual roles in the public domain is the insistence of prominent women in serving as godmother (*sandeka'it*) at the circumcision of a son or grandson. R. Meir of Rothenburg, a major rabbinic leader of the 14th century, attempted to abolish this practice, since he believed the presence of perfumed and well-dressed women in the synagogue among men was immodest. His failure to do so (this custom continued until the beginning of the 15th century), indicates Jewish women's high status and financial clout in the communal realm of Ashkenaz. However, as the political and economic situation of European Jewish communities gradually worsened, beginning in the 13th century, and traditional practice and laws were reasserted, most of the gains Jewish women had achieved, in this and other areas of daily life, were firmly curtailed.

Some learned women, usually from rabbinic families, led prayers for the other women of their communities. Among women who are described as women's prayer leaders are the 12th-century *Dulcea, the wife of R. *Eleazar of Worms, discussed below, and Urania of Worms of the 13th century, whose headstone epitaph commemorates her as "the daughter of the chief of the synagogue singers…. she, too, with sweet tunefulness officiated before the women to whom she sang the hymnal portions." The Worms synagogue had a separate room in which women's prayers took place, perhaps with a peephole into the larger sanctuary so that the prayer leader could keep her place in the service.

Jewish women appear to have been less likely than men to choose the always available option of conversion to Christianity, perhaps because the benefits such conversion offered to a woman were far fewer than those available to a man. A number of legal queries to rabbinic leaders deal with the question of a woman's divorce from a converted husband. The rabbinic authorities did everything possible to free a Jewish wife from such a marriage and guarantee the return of her property so that a remarriage might occur.

Women are strikingly prominent in 11th-century Hebrew Crusade chronicles which describe the devotion of numerous Jewish women who actively sought death for themselves and their children rather than apostasy. Some scholars have suggested that many of the horrific events narrated in these Hebrew chronicles are imaginative reconstructions, meant to express the high esteem in which women were held in Ashkenazi society and to provide didactic models for future generations of women who might confront similar circumstances. Some have also wondered if women are praised so highly in order to cast shame on men of their own times who were very far more likely than women to become Christians. S. Einbinder has pointed out a deliberate downplaying of female agency in later Jewish liturgical poems on themes of martyrdom that focus more on women's passivity and vulnerability to male assault. This difference in the portrayal of women may be no more than a reflection of the formulaic conventions of the poetic genre. However, given the steady deterioration of women's legal status in Ashkenaz during this same time period, Einbinder's suggestion that "the rabbi-poets increasingly emphasized the sanctity of family bonds and rabbinic authority" to the detriment of female agency and independence is quite persuasive. By representing women as "defenseless and violated," male authors enhanced their own communal power in an effort to rally other men in opposition to a common enemy against whom all Jews were increasingly powerless.

PERSONAL DOCUMENTS. Many ideals of medieval Jewish family life, including the value placed on education, are evident in the medieval ethical will. Such moral testaments, left by a parent for his or her children, sum up the author's life's experience and values, and advise offspring on the proper conduct of their lives. One example is the will of Eleazar b. Samuel of Mainz, a 14th-century Jew of whom nothing else is known. Eleazar's will urges all his children to attend synagogue in the morning and evening, and to occupy themselves a little afterwards with "Torah, the Psalms, or with works of charity." His daughters are particularly requested to obey the laws applying to women, "modesty, sanctity, and reverence should mark their married lives," and they must "respect their husbands and be invariably amiable to them." Daughters, as well as sons, are admonished to live in communities among other Jews so that their children may learn the ways of Juda-

ism, and, significantly, he insists that "they must not let the young, of either sex, go without instruction in the Torah [Hebrew Bible]." Eleazar specifically requests that his daughters prepare beautiful candles for the Sabbath, and that they refrain from risking money in games of chance, although they may amuse themselves for trifling stakes on New Moons, days customarily celebrated as holidays by Jewish women. Eleazar urges his children to avoid "mixed bathing and mixed dancing and all frivolous conversation." He further suggests that his daughters "ought to be always at home and not be gadding about." Nor should they stand at the door, watching whatever passes: "I ask, I command, that the daughters of my house be never without work to do, for idleness leads first to boredom, then to sin. But let them spin, cook, or sew." Eleazar's obvious concern for his daughters' educations, for their mode of life, and his knowledge of the pitfalls they might encounter is vibrant testimony to a Jewish society in which women played many active roles (Abrahams, 209–10).

The esteem granted a beloved wife, and a description of her activities, is found in the lament of an important spiritual leader, R. Eleazar ben Judah of Worms, known as the Roke'aḥ, for his exemplary wife, Dulcea and his two daughters, killed by intruders in their home in 1197. He relates that Dulcea, who supported her family and her husband's students through her business ventures, was also involved in religious activities, attending synagogue regularly, sewing together 40 Torah scrolls, making wicks for the synagogue candles, and instructing other women and leading their prayers. Of his thirteen-year-old daughter, the father poignantly wrote that she had "learned all the prayers and melodies from her mother. She was pious and wise, a beautiful virgin. She prepared my bed and pulled off my boots every night. Bellette was nimble about the house, and spoke only truth, serving her Maker and spinning and sewing and embroidering." And of his younger daughter, Hannah, Rabbi Eleazar remembers: "Each day she recited *Shema Yisrael* and the prayer that follows it. She was six years old and could spin, sew and embroider, and entertain me by singing" (Baskin, 2001).

MYSTICISM AND FOLKLORE. While celibacy and monastic living allowed some Christian women to be recognized as scholars, saints, and mystics, rabbinic insistence on universal marriage forbade any access to such life alternatives for Jewish women. Formal Judaism offered no adult avenues through which Jewish women could express their spiritual aspirations beyond marital devotion, maternal solicitude, observance of domestic Jewish rituals, and acts of charity to others. Jewish religious leaders criticized women who adopted ascetic practices such as fasting, prayer, and acts of personal deprivation; these traditional male methods of expressing devotion to God were seen as a dereliction of a woman's primary duties to her husband and family, and were suspect even in the unmarried girl and the widow (cf. Sot. 22a).

Given these prohibitions, it is not surprising that medieval Jewish mysticism was an essentially male endeavor. More-

over, in the gender imagery which pervades medieval Jewish mystical writings, the male, created in the divine image, is construed as the dominant, primary sex, while females are seen as passive and secondary. In sexual union female distinctiveness is effaced, and similarly, by analogy, the *Shekhinah*, the feminine aspect of the divine, will ultimately be absorbed by the preeminent male entity, the *Ein- Sof* (the infinite and eternal aspect of God), from which she was originally derived. While the *Shekhinah* as bride is a positive symbol, pointing to divine unity, the *Shekhinah* alone, sometimes represented as a *niddah*, is dangerous, since the unconstrained female and her menstrual blood are linked to the demonic forces responsible for evil in the world.

Many of the negative attitudes towards women entrenched in rabbinic traditions are prevalent in medieval Jewish folklore, as well. One example is traditions about the demon *Lilith. These are synthesized in the 11th-century *Alphabet of Ben Sira*, where rabbinic speculation about the "first Eve," who refused to submit to Adam's mastery and established herself as an independent sexual entity, merges with legends about demons who kill infants and endanger women in childbirth. In later Jewish folklore and mysticism, Lilith is the exemplar of rebellious wives and the fiendish enemy of submissive women and their children. Associations between women and witchcraft, already present in rabbinic literature, also appear in *Sefer Ḥasidim,* which assumes that even the most pious woman has the potential, however unwitting, to tempt a man to sin or sinful thoughts.

[Judith R. Baskin (2nd ed.)]

Early Modern Period

SEPHARDI DIASPORA. As R.L. Melammed comments above, the experience of immigration and the encounter with non-Iberian communities offered some female exiles from Spain, particularly those with significant financial resources, a new level of empowerment and independence. Powerful widows, such as Benvenida *Abravanel, and Doña Gracia *Nasi (1510–1569), both of the 16th century, continued their deceased husbands' business ventures successfully, intervened with rulers on behalf of threatened Jewish communities, and were renowned for their philanthropy and their support of Jewish culture and learning.

Benvenida Abravanel, niece of the statesman-philosopher Isaac *Abravanel, married her first cousin, Samuel. The couple left Spain in 1492 for Italy and Don Samuel became head of the Jewish community in Naples. Benvenida was an educated woman who established a good relationship with the duchess of Tuscany. When the Jews of Southern Italy were threatened with expulsion in 1541, Benvenida used her influence to negotiate a postponement of the decree. Following her husband's death in 1547, she took over his business concerns and attained important trade privileges. Benvenida also gained renown as a pious and charitable woman, much given to fasting, whose home was a center of study and culture.

Gracia Nasi was born a New Christian and was baptized as Beatriz de Luna in Portugal. Her husband Francisco, whom she married in 1528, left her half of his property when he died in 1536. Once the Inquisition was established in that same year, Doña Gracia realized that Portugal was no longer a viable home for a crypto-Jew and with her family resolved to return to an open observance of Judaism elsewhere, taking care to move slowly to preserve the maximum amount of their fortune. Ultimately, the family ended up in Constantinople where Doña Gracia supported numerous scholars and rabbis and aided in the publication of scholarly works.

Because of her connections, wealth, mobility, and foresight, Doña Gracia managed to escape the reach of the Inquisition. However, many other crypto-Jewish women were not so fortunate. As the Spanish and Portuguese Inquisitions became obsessed with discovering unfaithful New Christians (see also *Conversos), women were particularly at risk, since they played a crucial role in perpetuating Judaism in this period. Without communal institutions or leadership, the home became the sole center of Jewish continuity and women were central in preserving Jewish domestic rituals, especially the dietary laws and Sabbath observance. Such practices were always dangerous, since servants often testified to the Inquisition about their employers' judaizing activities. Numerous crypto-Jewish women were arrested and tortured, and many sacrificed their lives as martyrs for their faith in the course of the 15th and 16th centuries.

WOMEN IN THE PUBLIC SPHERE IN ITALY, 1600–1800. Since the 19th century historians have asserted that Renaissance Italy was a period in which women attained a new and more equal status in society, and Jewish writers have accepted this view concerning Italian Jewish women, as well. Close examination of the various sources of Jewish communal history in the early modern period, however, demonstrates that while women did function in some public capacities in Italian Jewish communities, there was not a significant departure from traditional attitudes about appropriate female roles. Nevertheless, the Jewish communities of Italy were highly acculturated and there were opportunities for a few unusual women to shine in literature and the arts.

At least two Jewish women in 17th–century Italy became distinguished published writers in Italian. Devora *Ascarelli translated Hebrew liturgical poetry into rhymed Italian, presumably for use by female worshippers. Her *Abitacolo degli oranti*, completed in 1537 and published in 1601, may be the earliest published work in Jewish literature written by a woman. The most accomplished Jewish woman of this period in terms of education and literary productivity was the writer and poet Sara Coppio *Sullam (1592–1641). Born to a wealthy and prominent Jewish family in Venice, Sullam married Jacob Sullam, a local Jewish leader. She formed a salon of mostly Christian men of letters for whom she provided financial support as well as intellectual friendships that sometimes soured. As a female Jewish writer, Sullam was an ideal target

for accusations intended to undermine her accomplishments as a woman and a Jew. However, she was able to respond to her detractors in witty and biting prose and poetry. Another talented woman of this period was the professional singer known as Madama Europa De' *Rossi, a highly accomplished performer in the court of the Gonzaga family in late 16th and early 17th century Mantua and the sister of the composer and musician Salamone De' *Rossi.

As early as the 13th century in Italy, certain rabbis allowed girls to receive a Jewish education. Most young women learned to read and write Italian at school or at home, and some learned Hebrew, as well. Teachers of girls were often women and those who taught Hebrew were known as *rabbit* or *rabbanit*. Other women, often widows, offered instruction in domestic skills. Two women of this period exceptional for their learning were sisters, Fioretta (Bat Sheva) Modena and Diana Rieti. According to the Venetian rabbi Leon *Modena (1571–1648), Fioretta's nephew, the women had mastered Torah, Mishnah, Talmud, Midrash, Jewish law, and Kabbalah (Modena, *Ḥayyei*, fol. 15b). At the age of 75, after the death of her husband, Solomon da Modena, Fioretta set out to live in Safed, a city known for its many mystics.

An interesting feature of the early modern Italian Jewish community is the licensing of specific women to act as ritual slaughterers and to porge (*nikkur* or *treibern*) animals. This contrasts with efforts by rabbis elsewhere in Christian Europe to limit women's rights to be involved in kosher slaughtering and porging. The probable reason for this liberality was so women could provide food for their families in isolated locations, such as summer houses in the mountains, or in distressed circumstances (see *Sheḥitah*: Women and Sheḥitah).

CENTRAL EUROPE. The invention of printing in the 15th century, which made the dissemination of popular literature practicable and inexpensive, played an important role in expanding Jewish women's religious lives and piety in Central and Eastern Europe in the early modern period. Female access to reading matter in the vernacular had a transformative effect for many women, deepening their knowledge of Judaism and Jewish traditions and even empowered a few women to become writers, themselves. Rabbinic injunctions against women's learning were believed to apply to Talmud study but not to the Bible or legal rulings necessary for women's everyday activities. While Jewish women were generally ignorant of Hebrew, most were literate in Jewish vernaculars (Judaeo-German (Western Yiddish) in Central Europe and Yiddish in Eastern Europe, written in Hebrew characters), which had long been essential to women's economic activities. Translations of the Hebrew Bible, the first books to be printed in the Jewish vernacular, gave women access to Judaism's holy texts. Particularly popular were the *Taytsh-khumesh*, first published by Sheftl Hurwitz in Prague in 1608 or 1610, and the *Tsenerene*, by Yankev ben Itzkhok Ashkenazy (c.1590–1618), both of which included homilies on the weekly biblical read-

ings from the Torah and Prophets, as well as stories, legends, and parables drawn from rabbinic literature, the Zohar and other mystical texts, and histories and travel accounts. *Musar* literature, ethical treatises which discussed proper conduct, woman's religious obligations, and her relations with her husband, such as the *Brantshpigl* ("Burning Mirror") by Moses ben Henoch *Altschuler (1596), and the *Meneket Rivkah* of Rebecca bas Meir *Tiktiner of Prague (d. 1550; posthumously published in the early 17th century), were also available to female readers. These vernacular books intended for women were also read by Jewish men, many of whom were not possessed of significant Jewish scholarship; they were printed in a special typeface, *vayber taytsh* ("women's vernacular") based on the cursive Hebrew hand women were taught for business contracts, marriage agreements, and correspondence.

Although all the Hebrew and Aramaic prayers of the standard liturgy were translated into Judaeo-German/Yiddish, they were never as central to women as *tkhines*, supplicatory prayers which were intended for female use in Jewish rituals and in worship, both in the synagogue and at home. Collections of such prayers began to appear in the 16th century. C. Weissler has pointed out that while much of this literature was written by men for women, and represents men's conceptions of women's religious lives, *tkhines* do demonstrate what women prayed about and offer insight into how they understood the meanings of their religious acts.

Although some attributions of *tkhines* to female authors or editors seem doubtful, there were women like Rebecca Tiktiner who wrote and published *tkhines* collections. Weissler has written that *tkhines* written by women sometimes articulate both the sanctification of women's traditional roles and a critique of them. Sarah Rebecca Rachel Leah *Horowitz (c. 1720–c. 1800), the highly educated author of the *Tkhine imohes* ("*Tkhine* of the matriarchs"), emphasizes the power and importance of women's prayer. In the *Shloyse she'orim* ("Three Gates"), *Sarah bas Tovim (probably 18th century) made use of rabbinic and mystical texts in Yiddish to construct a new vision of women's religious lives in which women's prayer was as significant as men's.

Collections of prayers and religious texts in Yiddish and in European vernacular languages, intended for female use, were produced into the 20th century. *Stunden der Andacht* ("Hours of Devotion"), a German prayer book for women written by Fanny *Neuda (d. 1894) went through 28 editions by the 1920s and was also translated into English. These prayers for women reflect a personal rather than a communal understanding of Judaism, one in which women often called upon the biblical matriarchs to intercede with God on behalf of the worshiper and her family. Inasmuch as some of these prayers were written by women, they also represent some of the earliest extant expressions of female spirituality in Jewish tradition.

COURT JEWS. One early modern woman who wrote in her own voice was Glikl bas Judah Leib (*Glueckel of Hameln;

1646–1724). Her autobiography, written to drive away the melancholy that followed her husband's death and to let her children know their ancestry, is an engrossing document which interweaves and juxtaposes pious tales and moralizing with Glickl's accounts of events in her own life and those of her loved ones. Born into the prosperous Court Jew milieu of Central Europe, Glikl was well read in Judaeo-German literature, and had some knowledge of Hebrew and German as well; her memorial notice characterizes her as "a learned woman" (*melummedet*), unusual praise in her time and place. Betrothed at 12, married at 14, and the mother of 14 children, Glikl was active in business and pious in religious observance, including regular synagogue attendance. At the threshold of modernity, both as a woman and as a Jew, Glikl's business activities reflect the growing economic participation of Jews in the non-Jewish world, while her religious and secular educations speak to the broader horizons and new educational opportunities available to some 17th century Jews – including women.

Esther Schulhoff Aaron *Liebmann (c. 1645–1714) came from the same milieu as Glikl. Married first to Israel Aaron (d. 1673), supplier to the Brandenburg court and founder of the Berlin Jewish community, Esther subsequently wed Jost Leibmann. Liebmann's first wife, Malka, was Glikl's niece and Liebmann himself learned the jewelry business from Glikl's husband, Ḥayyim Hameln. Esther and her husband were the court jewelers to Frederick I of Prussia and the leading family in the Berlin Jewish community. Esther worked actively alongside her husband and successfully carried on their business after her husband's death. Like many Court Jews, Liebmann's fortunes depended on the favor of the ruler. After the death of Frederick I and the accession of Frederick William I in 1713, Esther Liebmann was put under house arrest and released only after she had paid the king a substantial fine.

WOMEN, MYSTICISM, AND MESSIANIC MOVEMENTS. Women are connected with both mysticism and the messianic movements that are a significant feature of Jewish history in early modern Europe. This phenomenon first appeared among crypto-Jewish women in Spain. As R. Melammed has written, Conversas, observing secretly, in the hope of salvation, were likely candidates for a mystical or messianic penchant. During the post-expulsion period, several women and girls experienced visions and delivered messianic prophecies, particularly in the La Mancha and Extremadura region of Castile. Between 1499 and 1502, Mari Gómez of Chillón and Inés, a 12-year-old from Herrera, inspired a renewal of Jewish observance, with special emphasis on fasting, based on their predictions of the imminent arrival of Elijah, heralding messianic redemption in the Land of Israel. This movement was quickly extinguished by the Inquisition: Inés was burned at the stake in 1500 and Mari Gómez escaped to Portugal.

In 1524–1525, Benvenida Abravanel, a wealthy exile from Spain who had settled in Italy, became an enthusiastic supporter of the messianic pretender David *Reuveni (d. 1538).

She is said to have sent him financial support, a silk banner with the ten commandments written in gold on both sides, and a Turkish gown of gold cloth.

Rachel *Aberlin (second quarter of the 16th century, Salonika (?)–first quarter of 17th century, Damascus (?)), is described as a mystic in *Sefer ha-Ḥezyonot* ("The Book of Visions"), the memoir of her contemporary Ḥayyim *Vital. Vital, the most prominent disciple of the greatest 16th century kabbalist, Isaac *Luria, refers to "Rachel Aberlin" and "Rachel ha-Ashkenaziah" frequently in entries that provide rare insight into the mystical religiosity of early modern Jewish women in the period preceding Shabbateanism. Aberlin is portrayed in *Sefer ha-Ḥezyonot* as a woman who regularly experienced mystical visions, from pillars of fire to Elijah the Prophet. She is said to have been "accustomed to seeing visions, demons, souls, and angels." Aberlin seems to have been an important figure to other women in her community, who regarded her as a spiritual leader.

Sarah, one of the wives of the preeminent messianic figure of the early modern period, *Shabbetai Ẓevi (1626–1676), continues to be an enigma to historians. Apparently a survivor of the 1648 Chmielnicki pogroms in Poland who had been brought up as a Christian, Sarah attracted attention with her beauty and her claims that she was destined to marry the messiah. According to some reports, Sarah was an erstwhile prostitute, who had traveled from Poland to Amsterdam and then to Italy, where she worked as a servant for various Jewish families and institutions. Exactly how she and Shabbetai Ẓevi were brought together is unknown. However, the couple was married in Cairo in March, 1664. At least one source reports that Shabbetai married her because of her ill repute, so as to fulfill the word of the prophet Hosea, "take yourself a wife of whoredom" (1:2). Sarah, who subsequently gave birth to a son and a daughter, converted to Islam shortly after her husband in 1666. In 1671, Shabbetai divorced Sarah, even though she was pregnant, and arranged a marriage with another woman. He then changed his mind and took Sarah back. She died in 1674.

An interesting facet of Shabbetai Ẓevi's messianic claims was his promise to ameliorate the secondary status of women in Judaism. He allowed women in synagogues he visited in Constantinople, Smyrna, and Salonika to be called up to the Torah. According to G. Scholem, Shabbetai is reported to have promised in 1665 that he would lift the "curse of Eve" from women, and added, "Blessed are you, for I have come to make you free and happy like your husbands, for I have come to take away Adam's sin." Scholem has suggested that Shabbetai may have been attracted by "the audacity of Sarah, the reputed harlot, because he cherished the dream of the reparation of Adam's sin and of the consequent restoration of woman to her original freedom" (p. 405). Scholem goes on to say the idea that the messiah would repair Adam's sin was current in Lurianic mystical writings but that Shabbetai seems to have been the first to make the connection in terms of the emancipation of women.

Eva *Frank (1754–1816), daughter of the charismatic Shabbatean leader Jacob *Frank (1726–1791) played a major role in the messianic and antinomian Frankist movement. Originally named Rachel, she is referred to in Frankist writings as the Lady, the Virgin, or *Matronita*, the Aramaic name of the mystical female entity *Shekhinah*. She became known as Eva following the conversion of her family to Christianity in 1760. Jacob Frank saw himself as the eternal messiah and told his followers that Eva-Rachel should be recognized as the mystical royal figure of the *Shekhinah* who would lead them as a messianic redeemer in his temporary absence. Ultimately, Frank claimed, he would be reborn and united with his daughter in "the unity of Messiah and *Shekhinah*." After Jacob Frank's death in 1791, Eva led the Frankist community in its hopes of imminent messianic redemption. Even after she died, many Frankist families continued to keep her portrait and honored her as a saintly woman who was falsely reviled.

ḤASIDISM. The development of the pietistic/mystical movement Ḥasidism in 18th–century Poland had a profound and lasting impact on East European Jewry. Ḥasidism brought no improvements for women's status, however, and in some ways intensified negative views of women already present in Jewish mysticism and traditional rabbinic Judaism. Ḥasidic tradition preserves descriptions of daughters, mothers and sisters of rabbinic leaders who are said to have themselves led ḥasidic communities and to have adopted rigorous standards of personal piety. Among them are Sarah Frankel *Sternberg (1838–1937), daughter of ḥasidic Rabbi Joshua Heschel Teomim-Frankel and wife of the *ẓaddik* Ḥayyim Samuel Sternberg of Chenciny, a disciple of the famed Seer of Lublin. After her husband's death, she is said to have functioned successfully as a *rebbe* in Chenciny and was highly regarded for her piety and asceticism. Her daughter, Hannah Brakhah, the wife of R. *Elimelekh of Grodzinsk, was an active participant in the life of her husband's court. A. Rapoport-Albert has pointed out that there is little written documentation about these women and that their authority was based on their connection to revered male leaders.

The one apparent example of a woman who crossed gender boundaries to achieve religious leadership in a ḥasidic sect with some success was the well-educated, pious, and wealthy Hannah Rochel Werbermacher (1815–1888?), known as the Holy Maid of *Ludomir. Werbermarcher, who acquired a reputation for saintliness and miracle-working, attracted both men and women to her "court," to whom she would lecture from behind a closed door. Reaction from the male ḥasidic leaders of her region was uniformly negative, and pressure was successfully applied on Hannah to resume her rightful female role in marriage. Although her marriages were unsuccessful, they had the intended result of ending her career as a religious leader, at least in Poland. Around 1860, Werbermacher moved to Jerusalem where she re-established herself as a holy woman. Here, too, she attracted a following of ḥasidic women and men, as well as Sephardi and possibly some Muslim Arab

women, and led gatherings at the Western Wall, the Tomb of Rachel, and her own study house.

Ḥasidism, in its emphasis on mystical transcendence, and on male attendance on the rabbinic leader, the *zaddik* or *rebbe*, to the exclusion of the family unit, contributed significantly to the breakdown of the Jewish social life in 19th–century Eastern Europe. Similar tensions between family responsibility and devotion to Torah were also present among the non-ḥasidic learned elite of this milieu, where wives tended to assume the responsibility for supporting their families while husbands were studying away from home. D. Biale has noted that the sexual ascetism of the homosocial ḥasidic courts and rabbinic yeshivot of the 18th and 19th centuries offered young men a welcome withdrawal from family tensions and the threats of modernity. However, the negative attitudes toward human sexuality they found in these environments were often openly misogynistic, incorporating many demonic images of women from rabbinic, kabbalistic, and Jewish folklore traditions.

[Judith R. Baskin (2nd ed.)]

Modern Central and Western Europe: 1780 to 1939

The *Haskalah, the Jewish Enlightenment movement which began in late 18th century Germany, brought enormous changes to Jewish religious, political, and social life in Central and Western Europe. Receptive to modernity and European culture, the Haskalah insisted that Jewish acculturation to the mainstream mores and customs of the public sphere was not incompatible with adherence to Jewish tradition and rituals in the private domain of home and synagogue. While the goals of Jewish political emancipation and achievement of full civil rights, with their accompanying economic benefits, were central to this movement, some of its supporters also championed religious change within the Jewish community. Most modern forms of Jewish religious practice, *Reform Judaism, *Conservative Judaism, and Modern *Orthodoxy, were shaped in this milieu. Moses *Mendelssohn, the founder of the Haskalah in Central Europe, and others of his circle, also advocated social change in gender relations, opposing arranged marriages and advocating love matches.

Adoption of the language and values of the non-Jewish world tended to occur first among the wealthiest Jews who had frequent economic dealings with non-Jews. D. Hertz and B. Hahn are among those who have chronicled the lives of women from Berlin's wealthy Jewish elite in the last decades of the 18th century. In a Jewish society in which girls received only minimal religious education, instruction in music and modern languages, together with exposure to a new world of secular novels, poetry, and plays, distanced young women from brothers and husbands whose lives were focused on traditional Jewish learning and commerce and finance. It is not surprising that many of these wealthy and accomplished women, such as Henriette *Herz, Dorothea *Mendelssohn, Rahel Levin *Varnhagen, and Fanny von *Arnstein (a Berlin native who moved to Vienna), found success in a *salon society where gentiles and Jews mixed socially. For some of

these women, divorces from Jewish husbands were followed by conversions to Christianity and marriage to gentile suitors, often from the impecunious nobility. The absolute number of women who followed this course was small and their motives for doing so were complex. However, for these Jewish women, abandoning Judaism meant integration into the dominant upper-class culture and society. In making the choices they did these women experienced "at an early date and in a gender-specific way the basic conflict between group loyalty and individual emancipation that would torment so many European Jews in the two centuries to follow" (Hertz, 1991, p. 198).

The experiences of Jewish women of the salon world were not typical for most Western and Central European Jewish women. Scholars like M.A. Kaplan and P.E. Hyman have shown that by the mid-19th century processes of acculturation and assimilation, followed in some cases by dissolution of minority ties through conversion and/or intermarriage, were generally quite different for women and men. Gender tended to limit the assimilation of Jewish women, rendering their progress to integration halting and incomplete in comparison to Jewish men. Confined to the domestic scene, restricted in their educational opportunities, and prevented from participating in the public realms of economic and civic life, Jewish women had far fewer contacts with the non-Jewish world. Rather, women were encouraged to cultivate a home-based Judaism in which spirituality was expressed in domestic activities. As Kaplan has demonstrated through memoirs, diaries, personal correspondence, and cookbooks, at a time when male synagogue attendance and ritual performance was declining, it was most often women who transmitted Jewish values to their families through a form of domestic religion which united traditional Jewish cooking and some form of home observance of the Sabbath and other holidays. Perhaps because they had been excluded from so many public rituals to begin with, women's Judaism was essentially domestic, and in secularized homes they were often the last to preserve elements of Jewish tradition. Sigmund Freud, for example, persuaded his wife to drop all religious practices, but throughout their marriage Martha Freud and her husband argued over her wish to light candles on the Sabbath.

Rachel *Morpurgo (1790–1871), the Italian Hebrew poet, is an exceptional example of the impact of the Haskalah on a Jewish woman. Born in Trieste, she was a relative and close friend of Samuel David *Luzzatto (1800–1865), a major figure in modern Jewish thought and Hebrew literature, with whom she studied Hebrew religious texts and poetry for many years. Morpurgo's extensive education was acquired at home, alongside her brother and cousin, from private tutors and family members. Like Italian Jewish women of previous generations Morpurgo worked in the family business, as a turner on a lathe, a skill she learned from her uncle and father. After her marriage to Jacob Morpurgo in 1819, she was no longer able to give much time to study and writing since her husband disapproved of these activities and insisted that she devote herself to domestic duties. Prior to her marriage Morpurgo had

maintained an extensive Hebrew poetic correspondence with Luzzatto; he published her writings 30 years later in *Kokhevei Yiẓḥak* (1847) to enormous acclaim. Morpurgo's poems and letters were collected and were published as an anthology entitled *Ugav Raḥel* (ed. V. Castiglioni [1890], rep. 1943).

In 19th century England, a significant number of Jewish women worked in the public domain to hasten Jewish enlightenment and emancipation and to further religious reform. These include active advocates of liberal Judaism like Lily *Montagu, and writers of both fiction and non-fiction with Jewish themes directed to Jewish and gentile audiences such as Grace *Aguilar (d. 1847), and the sisters, Marion *Moss (1821–1907) and Celia *Moss (1819–1873). In her extremely popular book, *The Women of Israel*, Aguilar defended the exalted position of women in Judaism, highlighting what she described as women's traditional role in hastening redemption as "teachers of children" and through other domestic activities. M. Galchinsky has noted that despite their uplifting messages, Jewish women's success in the world of literature was profoundly threatening to the men of their milieu; while male Jewish reformers were compelled to support at least a degree of female emancipation in principle, they were determined to limit, trivialize, and undermine women's writing and influence in the public sphere.

Nineteenth century domestic Judaism throughout Central and Western Europe not only reflected traditional Judaism's preferred positioning of women in the private realm of husband and family, but was also a form of Jewish conformity to the Christian bourgeois model of female domesticity which put religion in the female sphere. Jewish literature and the Jewish press of the late nineteenth century, both in Europe and the United States, where the Jewish community prior to 1881 was overwhelmingly of Central European origin, described the Jewish woman as the "guardian angel of the house," "mother in Israel," and "priestess of the Jewish ideal," and assigned her primary responsibility for the Jewish identity and education of her children. This was a significant indication of acculturation in an ethnic group in which men had historically fulfilled most religious obligations, including the Jewish education of their sons. Moreover, this shifting of responsibility for inculcating Jewish identity and practices to women led rapidly from praise to denigration, as commentators began to blame mothers for their children's assimilation. Such criticisms not only allowed men to ignore the implications of their own assimilationist behavior, but also revealed central tensions in the project of acculturation itself, including a communal inability to prevent individual defections to the larger society.

Reform Judaism, which sought to offer 19th century Western and Central European Jews a modernized form of Jewish belief and practice emphasizing personal faith and ethical behavior rather than ritual observance, proclaimed that women were entitled to the same religious rights and subject to the same religious duties as men in both home and synagogue. Emphasis on religious education for girls and boys, includ-

ing the introduction of a confirmation ceremony for young people of both sexes, and an accessible worship service in the vernacular, also made the new movement attractive to many women. Pressure from young women may have prompted the Reform rabbinate to adopt the innovation of double ring wedding ceremonies in which not only men but women made a statement of marital commitment. In fact, however, European Reform Judaism made few substantive changes in women's actual synagogue status, offering no extension to women of ritual participation in worship and maintaining separate synagogue seating for men and women well into the 20th century (see *Synagogue: Women and the Synagogue).

Emulation of Christian models of female philanthropy and religious activism played a significant part in middle-class Jewish women's establishment of service and social welfare organizations in the 19th and early 20th century centuries in Germany and England. Such organizations as the *Juedischer Frauenbund in Germany (founded in 1904 by Bertha *Pappenheim), the Union of Jewish Women in Great Britain (founded in 1902), and the *National Council of Jewish Women in the United States (founded in 1893), cooperated in the international campaign against coercion of poor women into prostitution. They also argued for greater recognition of women within their respective Jewish communities as "sustainers of Jewish communal life and guardians against defection from Judaism." Women's activism in Europe and Great Britain positively affected the Jewish community in such areas as social welfare services, feminist trade unionism, support for women's suffrage, and agitation for religious change. Women who worked for these goals also blurred the boundaries between traditional male and female spheres as they acquired administrative expertise and assumed authoritative and responsible public roles.

While most Jewish women in Central Europe in the first decades of the 20th century conformed to the bourgeois models of early generations and focused their energies on home responsibilities and volunteer organizations, some achieved less conventional lives. Jewish women made up a disproportionately large percentage of the early generations of women who sought university education and professional training in Germany and Austria in the early 20th century. Many of these women made important contributions as academics, educators, social scientists, scientists, and physicians and helped pave the way for far larger numbers of middle-class professional women in the late 20th century. H.P. Freidenreich, has written that in an era when married women had a difficult time advancing their professional lives, many university women chose to devote themselves to their careers, tending not to marry or to marry later in life. While most university-educated non-Jewish women tended to become teachers, Jewish women followed the patterns established earlier by Jewish men, and became physicians, scientists, and social scientists, as well as academics and lawyers. A number applied their professional skills to improving the lives of women and children. Many female Jewish physicians specialized in gynecology or

pediatrics and advocated for the widespread availability of contraception and legalized abortion; female psychiatrists and psychoanalysts often focused on childhood disorders and trauma. Unlike most of their Christian counterparts, Jewish university women tended to be on the political left. Mostly from highly acculturated middle class Jewish homes, few of these women were connected with the organized Jewish community prior to 1933.

Most of the discrimination these women faced in the early inter-war period was due to their gender, since educated women, in Europe and elsewhere, were often unpaid and underemployed. Even those who achieved academic positions rarely achieved tenure or the recognition they deserved, whether in Germany or Austria, or elsewhere after emigration. Antisemitism also played a role in limiting job opportunities before 1933. With the advent of the Nazi era, professional women, as all Jews, were forced to flee Europe in order to survive. Those who were able to leave Germany and Austria, often at a relatively advanced age and under adverse circumstances, had mixed success in reconstructing their lives and careers.

M.A. Kaplan has chronicled the everyday tyranny German Jews experienced under the Nazi regime from the perspectives of gender, delineating the ways in which women were more sensitive to the experience of discrimination, how women were usually more anxious to leave and risk uncertainty abroad, how women often were compelled to assume "male" roles within and outside the family, and how being female shaped an individual's destiny. After 1933, drastic changes for Jews in the public domain transformed occupational patterns in Jewish families. As Jewish businessmen and professionals were forced from their occupations, many married women had to enter the job market for the first time, often after training in service occupations. Although economic prospects were poor for all, women showed more adaptability than men. And as the family became a refuge from Nazi-imposed social, economic, and psychological hardships, women felt obligated to run their households smoothly even while functioning as the family's wage earner and advocate in the outside world.

Kaplan has also shown that parental desires to keep daughters at home, and preferential treatment of boys by Jewish welfare organizations providing career training, meant that girls were usually only 25 to 30 percent of participants in these vocational programs, often to their detriment. Still, as the situation of Germany's Jews worsened, community efforts to save all young people grew. By 1939, 82 percent of children 15 and under and 83 percent of young people between 16 and 24 had managed to escape Germany.

Following the pogrom of November 1938, more than 20,000 Jewish men were arrested while women witnessed the vandalizing of their homes. From this point on women rescued men, pulled together immigration papers, and where possible extricated their families from increasingly certain disaster. However, gender also played a role in emigration; by 1939, women, mostly elderly, were 57.5 percent of Germany's Jewish population, and they died disproportionately in Hitler's camps, a trend that has been documented for all European Jewish women.

Kaplan has also examined the situation of Jews who had intermarried, noting that almost all German Jews who survived Nazism without emigrating were partners in mixed marriages. While the Nazis condemned such unions and encouraged their dissolution coercively, gender played a crucial role, since Nazi sexism privileged couples with "Aryan" men over those with Jewish men. Nevertheless, "Aryan" men were more likely than "Aryan" women to divorce or abandon a Jewish spouse, although many mixed unions endured almost unbearable pressures.

[Judith R. Baskin (2nd ed.)]

Eastern Europe in the 19th and 20th Centuries

Jewish women in Eastern Europe were marginalized by both ethnicity and gender. In some respects, their individual and collective stories were cut from the same cloth as the larger Jewish historical narrative; at the same time, gender also had a distinct impact in the arenas of religion, family and work, education, culture, and political life.

Female spirituality was deeply embedded in Ashkenazi Judaism. While women possessed a rudimentary understanding of Jewish theology, commandments, and values, they were excluded from participation in public worship and study. As a result, "female variants" of elite male culture emerged with new styles of prayers and learning. The recitation of *tkhines or supplicatory prayers formed an integral part of women's piety. Unlike formal liturgy, these Yiddish prayers, which addressed everyday concerns and the three female commandments (*ḥallah, *niddah, and hadlakah or lighting *candles), were voluntary, personal, and could be recited at any time. In lieu of Hebrew and Aramaic texts, women (and "men who are like women" in their lack of Hebrew knowledge) read popular religious literature in the vernacular such as the Tsenerene ("Go Forth and See"), a collection of homilies on the weekly Torah portion. To facilitate greater participation of women in their section of the synagogue, architects in Poland began to include women's annexes (wibershule) starting in the 16th century, which later became integral parts of the buildings as "women's sections" (ezrat nashim). Moreover, the sacralization of popular customs such as kneytlakh legn (candlemaking from wicks used to measure graves) lent greater value to female religious rituals.

Gender ideals also shaped Jewish women's status and roles in the family and in the social world of the *shtetl (see *Shtetl: Women and the Shtetl), the small towns where most East European Jews lived. A patriarchal division of labor allocated domestic chores and child rearing to women. However, in contrast to the cult of middle class domesticity in the West, economic necessity and cultural ideals forced the majority of East European women to contribute to the family economy. As a rule, most couples labored together to earn a livelihood by running a family business or earning separate wages. Some-

times, however, the onus of breadwinning fell disproportionately on the shoulders of Torah scholar's wives so that the husbands could study. I. Etkes suggests that elite society of religious learning was successful in constructing women's tacit acceptance of these roles as a privilege that bestowed cultural prestige. While they formed a small minority, these wives in turn served as a "legitimating symbol" to be emulated by ordinary women. Ḥasidic wives whose husbands spent all their time in the company of fellow Ḥasidim or the *rebbe* assumed a similar burden. Yekhezkel *Kotik (1847–1921) was particularly critical of the extreme poverty in which many of these families lived. With the onset of industrialization in the late nineteenth century, many Jews left the shtetl for the large cities of the Pale of Settlement. Women began to work in workshops and factories where they dominated the needle and garment trades. By 1921, Jewish women who worked in industry comprised 55.9 percent of Jewish wage earners in Poland.

Despite the modicum of power that Jewish women exercised in the family economy and household, they were vulnerable in matters of family law. In czarist Russia, where Jews retained autonomy over their own marriages and divorces, rabbinic authorities adjudicated all cases based on *halakhah*; in Galicia, Jews rejected civil marriage, which had been introduced by the Hapsburg state in 1783, and continued to follow religious procedures. Jewish women became increasingly powerless in divorce suits and not simply because of their husband's unilateral prerogative to dissolve marriages. More important was the breakdown of rabbinic control over these broad rights, which had served to protect women previously. As a result, wives found it difficult to secure a *get* (bill of divorcement) from husbands for wife beating and other reasons or to protest a coerced divorce. In response, some resorted to new strategies by turning to state courts and government institutions to enforce or overthrow a rabbinic decision and to secure their monetary rights. Despite these innovative venues, Jewish women still suffered from specific disabilities under Jewish law, especially as *agunot* ("chained" women who were unable to remarry).

The Jewish Enlightenment movement in Eastern Europe, which began in the last few decades of the nineteenth century, was very different from the Haskalah in the West, lacking both the emphasis on Jewish achievement of political rights and civic equality, and the impetus for religious reform, since neither were likely to be achieved in the conservative Eastern European environment. Nor was the impoverished and predominantly small town Jewish population an appropriate constituency for the middle-class norms and values of the West. Rather, the Haskalah in Eastern Europe was a secularizing process which caused many to discontinue religious observance while fostering a Jewish national/ethnic identity, often linked to socialist and/or Zionist political goals. East European women were frequently in the forefront of this movement of cultural transformation.

Women's political involvement was due, in part, to the fact that Jewish women gained greater exposure to the secular world as a result of a gendered system of education in Eastern Europe. While boys received a formal religious schooling starting at an early age, most girls obtained an informal domestic education. The Orthodox community did not begin to provide vehicles for female religious education until after World War I (see Sarah *Schenirer, founder of the *Beth Jacob school network). At a minimum, a large segment of women gained literacy in Yiddish in order to read devotional literature. Alongside these sacred books, it was not uncommon to find popular tales about knights (*Bove Maaseh*) or the adventures of Sinbad the Sailor (*Centura Ventura*). These reading habits made it easy for women to shift to secular Yiddish popular literature by Isaac Meir *Dik, *Shomer, and others. In middle-class and wealthy families, daughters studied foreign languages, music, and art with private tutors without any censure from the Orthodox establishment. Others attended the newly secular schools for girls throughout the Russian empire. Ita Kalish, who grew up in a ḥasidic family observed that the sons studied at the *shtibl* while the girls learned about the "purity of Polish culture" in foreign schools. While not all women were educated, the "benefit of marginality" granted them access to new, modern ideas and prepared them to serve as agents of acculturation in their homes.

Moreover, girls and women in East European Jewish society, where the strong capable woman shrewdly interacting with the outside world was the dominant cultural ideal, were also secularized by their active participation in public economic life. In many ways late 19th century Eastern European women were far more involved in the process of Jewish assimilation than women in Western Europe or the United States. This is evident in the large numbers of East European Jewish women who sought higher education and professional training in Western Europe, a significantly higher percentage of female conversions to Christianity, and particularly in female involvement in a wide range of political movements, discussed below, which offered women opportunities for activism and leadership unavailable in traditional Jewish society.

The Jewish community of Eastern Europe had many social strata. Jews at the higher economic levels moved beyond shtetl society and had closer contacts with the wider world far earlier than their less prosperous co-religionists. The memoirist Pauline Epstein *Wengeroff (1833–1916), who grew up in a wealthy household in the 1830s and 1840s with a father and brothers-in-law who were extremely receptive to the promises of the Haskalah, was an unusually well-informed and well-read woman for her time and place. She received private tutoring in German and Russian as an adolescent, and she became a great enthusiast of literatures in both these languages. In the early days of her marriage she helped her husband improve his German skills, a necessary accomplishment for success in business. This emphasis on a Jewish culture deeply intertwined with the broader intellectual and artistic interests of the modern world was central to the Wengeroffs' family life and values. C. Balin has studied the literary remains, both published and unpublished, of a number of Russian-speaking daughters of prosper-

ous middle-class urban Jews in the late 19th and 20th centuries. Like Wengeroff's daughters, some of these acculturated young women attended gymnasia, learned European languages, and earned university degrees, following educational, artistic, and professional paths comparable to those of many contemporaneous middle-class Jewish girls in Western Europe.

However, with education and acculturation, many Jews of the higher social echelons lost any sense of allegiance to the Jewish people or heritage. Wengeroff wrote her autobiography, *Memoiren einer Grossmutter: Bilder aus der Kulturgeschichte der Juden Russlands im 19. Jahrhundert* (Berlin, 1913; 19192), towards the end of her life. She presents herself as the casualty of significant social transformations which had undermined the female role for which she had been prepared and called into question many of the values with which she was raised. Nor did she see her tragedy as affecting only herself. As she wrote of the baptisms of her children: "Gradually this sorrow lost the significance of a personal tragedy and turned more and more into a national tragedy. I grieved not just as a mother, but as a Jew, for the entire Jewish people, which was losing so many of its strong members" (p. 226).

Wengeroff, in her own way, was part of a larger cohort of Jewish women in Eastern Europe at the end of the 19th and in the early decades of the 20th century who began to explore the greatly enlarged opportunities for self-expression offered by modern secular culture by writing poetry and prose, in languages that included Yiddish, Hebrew, Polish, Russian, and German. While male supporters of the Haskalah in Eastern Europe lauded the process of modernization, they expressed deep ambivalence about the notion of female equality and the intrusion of women into their cultural domain. Nonetheless, *maskilot* like Miriam *Markel-Mosessohn, Devorah Ephrati, Hannah Bluma Sultz, Sarah Shapira, Sarah-Feiga Foner Meinkin, and others became an integral part of the Haskalah movement as producers of culture. The "anxiety of authorship" led some to write under pseudonyms while others adopted palimpsestic writing to hide the true meanings in hidden layers – a strategy used by *maskilim* in general. However, in the case of the *maskilot*, their hidden layers concealed an authentic feminine voice as well as the opinions of an enlightened individual. Up through the interwar years, Jewish women continued to contribute to the Russian and Polish language press and published their own volumes of literature, poetry, or history. However, estrangement from Jewish life frequently accompanied self-realization: to become a Jewish woman writer was to become a cultural anomaly. Often the price of such achievement was equivocal exile from a male culture profoundly uncomfortable with female intellectual assertiveness.

Disillusionment with the old order and aspirations to create a more egalitarian society drew Jewish women into the public political arena. Inspired by the works of Alexander Herzen, Nikolai Chernyshevskii, and other influential writers, women joined the Russian revolutionary movements in disproportionate numbers starting in the 1870s. From the onset, personal and political liberation were intricately connected as Jewish women rebelled against patriarchal oppression and legal disabilities. The most famous revolutionary, Gesia Gelfman, ran away from her prosperous Orthodox home on the eve of her wedding to join the People's Will and participate in the assassination of Alexander II.

However, by the end of the 19th century, the composition and nature of Jewish involvement with socialism (see *Socialism: Women and Socialism) was transformed by the growth of a massive Jewish artisanal working-class in the cities of Eastern Europe. As Jewish women flocked into light industry, primarily the needle trades, but also tanning, bristle making, and cigar and cigarette production, many began to organize as workers and as Jews to protest their exploitative working conditions. Jewish women joined the socialist-oriented *Bund when it formed in Vilna in 1897, comprising one-third of its membership, and occupied many of its middle rank leadership roles, much to the chagrin of traditional families. In the early 1920s, the Bund established a separate women's division, the Yidishe Arbeter-Froy Organizatsie (YAF) and two sister youth groups (Zukunft and Sotsialistisher Kinder Farband) – a common practice among leftists groups in Poland. The women's auxiliary focused on the critical needs of working women, especially the need for child care. While the Bund articulated egalitarian ideals, female activists complained that gender relations and roles had changed little in the family. Male activists expected their wives to perform all their traditional domestic roles even at the expense of missing meetings and activities. As in most revolutionary parties, broader political goals took precedence over the woman's question. Jewish feminist activists persisted and founded the Jewish Women's Association in 1920.

Other women, like Puah Rakovsky, chose to devote their political energies to *Zionism. Two newspapers, *Di froy* (The Woman) and *Froyen-shtim* (Women's Voice) appeared in the mid-1920s with the goal of combining Zionist and feminist aspirations. Both sought to encourage women in their dual struggle as the female half of an oppressed and persecuted people.

Jewish women's lives changed abruptly with the outbreak of World War II. Studies have shown that gender played a critical role in the different male and female responses to crisis and strategies for survival during the Shoah. Prewar socialization proved critical in the early years. In Poland, Jewish women who had significant familiarity with the Polish language and customs as a result of sex-segregated education comprised the majority of Jews who lived on the Aryan side. A Yad Vashem survey found that women were more successful in their disguise due to greater confidence in their physical appearance (i.e., no circumcision), lack of a Jewish accent, fine Polish mannerisms, and attentiveness to the feelings and reactions of others. Moreover, they were more likely to receive assistance from non-Jewish individuals and organizations. These women participated in resistance and rescue activities as couriers and fighters.

Prewar gender roles also persisted in the ghettos. Women assumed the traditional role of caring for their families; how-

ever, basic domestic tasks such as feeding the children now required great ingenuity and courage. All Jews, including former housewives, were forced to work in order to survive. Wage differentials in the ghetto were substantial: women often received two-thirds or three-quarters the pay of male workers; moreover, they had a more difficult time finding scarce jobs due to their lack of skills. Another obvious distinction was women's reproductive capacity, which was the target of infamous Nazi policies. In the ghettos, Germans instituted a policy of compulsory abortion. Women with young children and visibly pregnant women were immediately exterminated in the death and labor camps. Women were also more likely to experience rape and sexual harassment at the hands of foster family members, fellow inmates and guards. Testimonies reveal that German commanders selected the most beautiful girls as personal "housemaids" at their own discretion. Some women had no choice but to enter sexual relationships in order to obtain better rations or conditions. In the ghettos and camps, women devised new strategies to survive emotionally and mentally. In contrast to men, many of whom stopped washing or shaving, the majority of women attempted to take care of their personal hygiene. They also formed surrogate families, especially camp sisters and mothers, to provide mutual aid and sustenance.

At the end of World War II, the majority of East European Jewish women survivors opted to immigrate to Israel or America, leaving behind a rich historical legacy.

[ChaeRan Freeze (2nd ed.)]

North America

FROM THE COLONIAL PERIOD TO 1945. Jewish women in colonial America continued their accustomed domestic roles while simultaneously integrating themselves into the wider culture. Often they did so ingeniously, adjusting, adapting, and reinterpreting American forms to serve their Jewish purposes. The first two Jewish women known by name in North America, Ricke Nunes and Judith Mercado, most likely widowed heads of families, were among the 23 Jews who arrived in New Amsterdam in 1654 from Brazil.

Most colonial Jewish women were respectable matrons; their households, as in the case of Rebecca Machado *Phillips (1746–1831), who bore twenty-one children, could be quite large, but others were much smaller. Certainly, dietary laws were followed in many homes. When, in 1774, Hetty Hays suspected that she had bought meat that was not properly kashered, she was ordered to "do Cassarar [kasher], or properly Clense, all her Spoons, plates and all other utensals, used in her House" (Snyder, 25). The extent of observance of traditional *niddah regulations in this early community is unclear. The first known communal *mikveh was built by the Jews of Philadelphia in 1786.

Abigaill *Franks (1696?–1756), whose letters form the largest body of writings by a Jewish woman in North America, honored the Sabbath and holidays and kept kosher. She told her son Naphtali never to eat anything at her brother's home,

because she knew his household did not observe the dietary laws. Franks ensured that her daughters as well as her sons learned Hebrew. But, she also displayed an independence of mind typical of other American Jewish women. Yearning for a modernized Judaism, she wrote in 1739, "I Must Own I cant help Condemning the Many Superstions wee are Clog'd with & hartly wish a Calvin or Luther would rise amongst Us[.] I Answer for my Self… I don't think religeon Consist in Idle Cerimonies" (Smith, 17). The costs of the open society and such impulses were high. When Franks's daughter Phila married outside the faith, her spirit was crushed; none of Abigail's two dozen grandchildren seems to have passed on Judaism to the next generation.

On Sabbaths and festivals Jewish women joined their male relatives in worship. The second synagogue built in colonial America, in Newport, Rhode Island in 1763, was constructed with an upper level women's gallery that dispensed with the additional grilles and curtains found in European synagogues. This established a pattern in American synagogue architecture in which woman could see and be seen (see *Synagogue: Women and the Synagogue).

In 1820 the Jewish population in the United States was less than 3,000. Jews lived out their lives among their Christian neighbors and represented Judaism to them, inviting Gentile friends to celebrate with them at their weddings and circumcisions. Early America's Jewish women joined these Christian friends and neighbors to aid others. In 1801, Rebecca Machado Phillips and some 20 other Philadelphia women, Christians and Jews, including Rebecca *Gratz (1781–1869), founded the Female Association for the Relief of Women and Children in Reduced Circumstances. Jewish women also supported the needs of their own community; in 1782, when Philadelphia's Jews built a new synagogue, Rebecca Phillips and Grace Nathan raised funds to purchase its ritual objects.

In the 19th century Rebecca Gratz was the epitome of Jewish American female volunteerism. Also a founder of Philadelphia's Orphan Asylum, she is best remembered for her endeavors on behalf of the Jewish people. Gratz founded the Female Hebrew Benevolent Society in 1819 to aid the Jewish poor and protect them from Christian missionizing. In 1838, when she established the first Hebrew Sunday School in America, she launched the prototype of a new educational setting for America's Jewish children and opened a new avenue for Jewish women's communal activism as teachers.

Between 1820 and 1880, America's Jewish population grew to 250,000, mainly due to immigration from German-speaking lands. In 1846, eleven women from New York's Temple Emanu-El established the Unabhängiger Orden Treuer Schwestern. The only independent female fraternal order then in America, it eventually sparked a web of lodges offering newly American Jewish women mutual aid in times of emergency and sickness and guaranteeing members a decent burial.

Another important public avenue for Jewish women's piety was literature. Penina *Moïse (1797–1880) of Charleston, South Carolina, published poems in the leading papers and

periodicals of her day. She was superintendent of Beth Elohim Congregation's Sunday school and was the author of the first American Jewish hymnal; many of her hymns were used in the Reform movement well into the 20th century. Periodicals directed at American Jewish women, such as *Die Deborah*, published in German between 1855 and 1902, and *American Jewess*, the first English-language periodical for American Jewish women, edited by Rosa *Sonneschein in 1895–99, informed and entertained female readers and also provided vehicles for Jewish women's writing.

The best known Jewish female writer was poet Emma *Lazarus (1849–1887). In the early 1880s, deeply disturbed by the Russian pogroms whose refugees she met through her work with the Hebrew Emigrant Aid Society, she called for founding a Jewish state in Palestine ("The Jewish Problem," 1883). Her 1883 magnum opus, "The New Colossus," inscribed on the pedestal of the Statue of Liberty, portrays America as the "Mother of Exiles" welcoming "the huddled masses yearning to breathe free."

Between 1881 and 1924, some two million East European Jews streamed to America. Propelled by grinding poverty, violent pogroms, and the dislocations of revolutionary turmoil and war, theirs was overwhelmingly a migration of families. When the male head of the household journeyed ahead, as Israel Antin, father of author Mary *Antin, did in 1891, he spent the next years scrimping and saving to buy passage for his wife and children. This migration utterly transformed American Jewry. By 1930 the 4.4 million American Jews, 3.6 percent of the U.S. population, comprised nearly a third of world Jewry.

Domestic concerns were central to the East European Jewish immigrant women and their daughters who lived in the crowded tenements of immigrant enclaves such as New York's Lower East Side, Boston's North End, and Chicago's West Side. Many strove to adhere to Judaism despite significant economic need. When the price of kosher meat soared from 12 to 18 cents a pound in New York in 1902, immigrant mothers broke into butcher shops, set meat afire, and shared recipes for meatless meals to compel their neighbors to honor their kosher meat boycott.

Established and prosperous American Jewish women, generally of Central European origin, were anxious to help their struggling and impoverished co-religionists. The *National Council of Jewish Women, founded in 1893 by Hannah Greenebaum *Solomon (1858–1942), protected Jewish immigrant girls traveling without guardians from falling into *prostitution. They and other middle-class American Jewish women established vocational training and classes for immigrants to learn American customs. East European Jewish immigrant women also established their own social welfare agencies. Poor immigrant women who had fallen upon hard times, like the newly widowed, and entrepreneurial women, who wanted to buy cloth to sew or coal to heat the bathhouse, could borrow money from immigrant women's credit networks operated by those just slightly better off than they.

Jewish American women had frequently participated in the economic lives of their family. In the colonial era, married Jewish women managed family businesses while their husbands traveled and widows kept kosher boardinghouses. In the 19th century, many Jewish women "helped out" in family businesses, selling clothing and canned goods, saddles and blankets from behind the counters of the dry goods stores their husbands owned in the small towns dotting the landscape of the South and the West. But 19th-century middle-class propriety in America, as in Western and Central Europe, expected women to busy themselves with their homes and families while leaving economic concerns to their men. Following these bourgeois ideals, many Jewish women, prior to 1880, eschewed the public world of business for the private sphere of their homes.

East European Jewish immigrants, however, came from a world which desperately needed and valued women's contributions to the family economy. In Russia young Jewish women had worked primarily in the needle trades. Their mothers sold goods in the marketplace. Immigrant Jewish women came to America expecting to work, and they, especially the unmarried, found employment in the burgeoning ready-made clothing industry. Married Jewish women contributed to the family economy in other ways, taking in piecework to sew at home or opening their tenement apartments to boarders. They also sold goods from pushcarts on the streets or worked in the family's five-and-dime or soda fountain. Later in the 1920s and 1930s, their daughters, aspiring to white-collar work, became salesclerks and bookkeepers. Those who were able to take advantage of New York's tuition-free Hunter College would go on to teach in the city's ever-expanding public schools.

But it was Jewish women's employment in the garment industry, especially in the dress and waist trade, that shaped their politics. Some immigrant working girls had already participated in political movements, unions, and workers' actions in Europe. Low wages, poor working conditions, and frequent layoffs propelled many others into the *International Ladies' Garment Workers Union (see *Socialism: Women and Socialism). In the 1909 "Uprising of the 20,000" the shirtwaist makers struck, seeking a fifty-two-hour workweek and paid overtime. This labor action helped launch "The Great Revolt," which spread to Philadelphia, Chicago, Cleveland, and Kalamazoo and emboldened the American labor movement. By 1919, half of all garment workers were members of a union. Fannia M. *Cohn,* Rose *Schneiderman,* Pauline *Newman, and Clara Lemlich *Shavelson,* all East European-born, experienced the shirtwaist strike as the formative event of their activist youth, as did Theresa *Malkiel, who later became an important Socialist Party activist and immortalized her experiences in the novel, *Diary of a Shirtwaist Striker* (1910). Many female Jewish trade unionists such as Bessie Abramowitz *Hillman, continued their socialist-inspired activism through progressive and reform politics in the New Deal. Labor unrest also provides a context for the neighborhood politics of kosher meat boycotts and the rent strikes Jewish women would

stage into the 1930s. Not surprisingly, these same immigrant women actively campaigned for the New York State suffrage bill in 1917.

As immigrant Jewish women and their American-born daughters ascended to the middle-class, they acculturated to middle-class norms that presented women as wives and mothers who were largely uninvolved in economic endeavors and political crusades. American Jewish women with time for leisure pursuits adopted the Chinese game of mah jongg; vacationed with their children in Jewish bungalow colonies in the Catskills, while their husbands spent the week at work in the city; and became consumers of culture, of the theater, movies, and literature. But, most importantly, middle-class leisure allowed America's Jewish women to invent new spaces for themselves in American Judaism that became essential to sustaining Jewish life in America (see *Synagogue: Women and the Synagogue; *Philanthropy: Women and Philanthropy).

Synagogue sisterhoods encouraged women to be exemplary Jewish wives and mothers, to extend the boundaries of their home to the synagogue, equipping its kitchens, and catering its lunches. By 1923, women affiliated with each of the denominational synagogue movements of American Judaism, Reform, Conservative, and Orthodox, had created national organizations of synagogue sisterhoods (see *National Federation of Temple Sisterhoods, *Women's League for Conservative Judaism; Carrie Obendorfer *Simon; Mathilde Roth *Schechter). Other American Jewish women found places in the ladies' branches of *landsmannschaften or the socialist brotherhood of the Yiddish-speaking *Arbeter Ring*, or *Workmen's Circle.

Zionism, the movement for a Jewish homeland in Israel, also commanded American Jewish women's energies, enthusiasms, and commitments. In 1912, Henrietta *Szold, one of the most remarkable Jews of her era, transformed a small Zionist study circle into *Hadassah, the Women's Zionist Organization of America, which would grow into the largest women's organization in America. Through it and other women's Zionist groups, including *AMIT (Mizrachi Women's Organization of America), founded in 1925 by Bessie Goldstein *Gotsfeld; *ORT (Organization for Rehabilitation through Training); and *Pioneer Women, American Jewish women would help support human needs in the State of Israel into the 21st century.

Jewish women in America continued these commitments at home and abroad, even as the Great Depression strained their household economies and propelled some back into the workforce. In the 1930s, America's Jewish women also struggled against the growing menace of Nazi persecution. In the 1930s, the women of the American Jewish Congress picketed Woolworth's to boycott the sale of German goods and battled antisemitism at home. The shelters they established in the 1930s to house refugees fleeing Nazism would soon house allied soldiers as America entered World War II.

Not all Jewish women were concentrated in the Eastern part of the United States. Nevertheless, even those in the Midwest and West, like Rachel *Calof (1876–1952), who was

a homesteader in North Dakota, faced the same challenges: how to raise and sustain a Jewish family in the midst of America. They found similar answers in the synagogue sisterhoods they joined in Omaha, Nebraska, and the Hadassah chapters they founded in Detroit, Michigan. Frances Wisebart *Jacobs (1843–1892), known as Denver's "Mother of Charities," helped organize and led the Hebrew Ladies' Benevolent Society, founded the nonsectarian Denver Ladies' Relief Society, and served as the impetus behind the founding of National Jewish Hospital for Consumptives. Florence Prag *Kahn (1866–1948) of San Francisco, the first Jewish congresswoman, was elected in 1924 to the United States House of Representatives for the first of six two-year terms. And Ray *Frank (1861–1948), a California native who spent some years in the Pacific Northwest, was the first Jewish woman to preach and lead religious services from a North American pulpit.

1945–2005. In the 60 years since the end of World War II, America's Jewish women remained devoted to their homes and families, synagogues and Jewish organizations, although they lived out these commitments in new settings These included the emerging Jewish suburbs and cities with growing Jewish populations, like Miami and Los Angeles. Making these neighborhoods their own, women shopped at the Jewish bakeries and kosher butchers that cropped up. They helped start new synagogues and supported educational and social programs for their children from pre-school through the high school years. They imported Ḥanukkah lamps and candlesticks from Israel and sold them in gift shops run by the sisterhoods in their new temples. With antisemitism waning in American life, these women, increasingly the daughters and the granddaughters of the East European Jewish immigrants, also discovered opportunities to acculturate more fully into the American scene. Hence, for many, Jewish commitments became but a single strand in the design of their lives, perhaps more intensive when their children were young, and less so earlier and later.

Ḥasidic communities took shape in North America in the interwar period and grew substantially after World War II. Ḥasidic women continue to stand out from the rest of America's Jewish women with distinctively modest dress and head coverings (see *Ḥasidim: Women in Ḥasidism). Ḥasidic daughters mostly eschew higher education, marry young, usually meeting their husbands through professional matchmakers, and have large families. While many in the ḥasidic world were born into it, some Jewish women have entered this world from the outside.

A high level of education is characteristic of most American Jewish women: 1990 figures indicated that over 85 percent of Jewish women aged 30–39 had gone to college and 30 percent had gone on to graduate school. Similarly, three-quarters of Jewish women aged 25–44 and two-thirds of those aged 45–64 were part of the labor force. Moreover, an increasing number of Jewish women over the decades have entered and achieved in the professions, the entertainment industry, and

the arts. American Jewish women have a long history, as well, of success as business entrepreneurs in a number of industries, including cosmetics, dolls and children's toys, fashion, and the food and hotel industries (see Beatrice *Alexander; Jennie *Grossinger; Ruth Mosko *Handler; Estee *Lauder; Judith *Leiber; Mary Ann Cohen *Magnin; Regina *Margareten; Mollie *Parnis; and Ida Cohen *Rosenthal). The ground-breaking two-volume reference work, *Jewish Women in America: An Historical Encyclopedia*, ed. Paula E. Hyman and Deborah Dash Moore (1997), provides biographies of the hundreds of Jewish women who have made significant contributions in numerous areas of endeavor to American and American Jewish life from the colonial period to the present.

American Jewish women, including Betty *Friedan, Gloria *Steinem, and Letty Cottin *Pogrebin, have been in the forefront of the second wave of American feminism that began in the late 1960s (see *Feminism). At the same time, individual Jewish women have carved out personal places in American judicial and political life. Among them are Congresswomen Bella *Abzug, n.y. Supreme Court judges Birdie *Amsterdam and Judith *Kaye; Supreme Court Justice Ruth Bader *Ginsberg; and United States Senators Barbara *Boxer and Dianne *Feinstein, both from California.

Feminism has also led to major changes in women's status and roles in American Judaism, including the equality of women in synagogue worship outside of Orthodox Judaism (see *Synagogue: Women and the Synagogue; *Liturgy), a plethora of new opportunities for Jewish learning for girls and women across the denominations, and the flourishing of Jewish feminist scholarship and theology (see *Feminism; *Theology: Feminist Theology). The public honoring of young women's coming of age in the synagogue, the *bat mitzvah, had become widespread by the late 1960s.

Since the 1970s American Jewish women have also been ordained as rabbis and cantors (see *Ḥazzan; *Semikhah: Ordination of Women; *Rabbi, Rabbinate; *Synagogue); the first American female rabbi, Sally *Priesand, was ordained in 1972. Occupying a historic place in the annals of Judaism, female rabbis have sought to open worship and practice to women's particular concerns. Their astonishing creativity, part of the emergence of feminist Judaism, has produced new prayers and ceremonies for conception, pregnancy, and childbirth; for those grieving infertility, suffering stillbirth, and turning to adoption; for the onset of menses and the completion of menopause; and for healing after rape, for remaining single, and for acknowledging marital separation (see *Ablution; *Birth; *Marriage; *Mikveh; *Niddah; *Feminism; *Theology: Feminist Theology; *Liturgy). Furthermore, feminism has also encouraged the inclusion within the Jewish community of many women formerly marginalized, including single women, divorced women, and lesbians (see *Feminism; *Lesbians; *Synagogue: Women and the Synagogue).

Feminism has brought alterations to all sectors of Jewish communal life. Certainly many women have given up the hours they once devoted to volunteer activities for fulltime employment, Many women who continue to volunteer now divert their energies to causes beyond the Jewish community, especially those that support and further gender equality. This has resulted in a decline in numbers and an aging of volunteers in many of the established Jewish women's organizations and synagogue sisterhoods at century's end. Nevertheless, feminism has also allowed for the creation for new avenues for Jewish women's communal and religious activism. These include adult *b'not mitzvah*, feminist *seder*s, *Rosh Ḥodesh* groups (see *Bat Mitzvah; *Passover: Women and Passover; *New Moon), and the new spaces for women's projects which have sprung up in Jewish community centers and federations.

Although an increasing number of qualified women professionals are employed in Jewish agencies, the Jewish communal sphere has been slow to recognize and encourage female leadership potential. This resistance to women in positions of authority is indicative of the sexual politics of contemporary Jewish identity in general. While some men will continue to resist what they perceive as female encroachment on male hegemony in the public domain, others may simply abandon Jewish communal institutions and Judaism to women altogether. As S.B. Fishman has cautioned, the stakes for American Jews are significant since, "The American Jewish community not only shares in all the human consequences of feminism but also carries with it the additional responsibility of preserving three thousand years of Jewish history and culture and confronting the problems of a numerically challenged population as well" (Fishman, 247). However, if the past is any indication, forces from outside the Jewish community will be as influential as any from within in determining the roles of women in American Judaism and American Jewish life in the 21st century.

[Pamela S. Nadell (2nd ed.)]

Modern Muslim Worlds

The position of Jewish women and gender relations in the countries of the modern Muslim world, including Turkey, Iran, Iraq, North Africa, Yemen, and the Middle East, were shaped by Jewish law and traditions, the practices of the surrounding Muslim society, and the gradual penetration of Western ideas, customs, and political influence. Due to the wide geography and heterogeneous social and cultural composition and political life of the Muslim world, the amount of external influence on Jewish life varied. It tended to be strongest in urban centers (where most Jews lived) in those countries with closer ties to the West. Internal communal initiatives also brought about new developments and with the passing of time gender relations among Jews in most regions gradually changed from patterns developed in the medieval era.

A division between the realms of women and men was intrinsic to the Muslim world: women were in charge of maintaining the home, while men provided the material means for the family's existence. These well-defined differences in gender roles were also followed in Jewish communities and they had implications for behavior, division of physical space, work,

religious activity, education, spirituality, and recreation. An unquestioned gender hierarchy led to different attitudes towards men and women throughout their lives. The birth of a boy was welcomed and celebrated with traditional Jewish rites and particular local ones, while the birth of a girl was rarely celebrated, and at times even deplored. Upon death, too, formal attitudes were different; ceremonies honoring deceased women were rare. Gender preference also had an impact on marriage since lack of male children was considered the woman's fault. If the first wife did not give birth to a son within a certain period of time (usually ten years), a husband could divorce her or marry a second wife, even if daughters had been born.

Gendered space was characteristic of the Muslim world and of the Jewish communities who lived within it. Women spent most of their time within their household whereas men went outside for work and spiritual activities. Most occupational, social, cultural, and religious activities were gender-based; any mixed gender activities occurred mainly within the family circle. Consequently, the internal structure of the home was gender-based, with kitchens and sleeping quarters perceived as the women's space, with men's temporary admittance there at night, while men occupied the public areas of the house. Women in towns rarely stepped outside the house; when they did, they were usually accompanied and veiled. Clothing restrictions were usually less strict for young girls. Urban women were also restricted regarding the places they could visit, usually limited to the homes of other women, the gender segregated ritual bath, the cemetery, and the synagogue. The latter, however, was considered men's space, and most did not have a special women's section until modern times. Sporadic female synagogue attendees observed the service from windows or gates. Markets were also male space and men usually did the daily shopping. Some urban women carried out trades among women, Jewish and even Muslim, but this was unusual, and rarely brought them in contact with men. Gender segregation and clothing restrictions were somewhat lighter in rural areas where most community members were relatives and women's work required departure from the restricted limits of the house.

These social divisions by gender had implications throughout life. Males were part of the women's world only as toddlers; partial separation started when the boys went to school, and culminated once they went out to work. As they grew older, both genders met mainly in close family circles or among a somewhat larger group during special family or seasonal celebrations. Even on these occasions, men and women were often segregated; in many regions men and women ate apart at home and celebrated separately during larger gatherings. This lengthy separation resulted in shyness between married couples; in some locales they hardly spoke with each other, did not use each other's names, and were ignorant about sexual issues, resulting in late pregnancies.

Many female responsibilities remained the same throughout life, but their degree, intensity, and character were also based on the woman's stage within the overall life cycle. Upon their marriage brides usually moved to the extended family household of their husbands where the mother in-law or oldest matriarch headed the female hierarchy. The position of women was also influenced by socioeconomic and geographical settings. Women on the margins – the poor and those living in small isolated villages – had more freedoms.

Regular female household duties included food preparation and serving, cleaning and heating, and care taking, especially of children. The basic duties of women in urban and rural regions were similar, but concepts of what constituted a household were different, based on socioeconomic and geographic conditions. In the village, demographic conditions enlarged the physical space: since the community was smaller, most members were in various degrees of kinship, thus allowing women to have freer contact with men. This enabled women to carry out regular duties outside the house, not only in the attached garden, but also in far away fields. These duties, in turn, made it possible for women to mingle with women outside their family as well as with men, both Jewish and gentile.

The position of rural women was also shaped by economic factors. Women worked in the vegetable garden attached to the house and drew water and fetched wood. Rural girls drew water daily from a source that either belonged exclusively to Jews or to the whole village. This resulted in the village well becoming a center for social interaction. Men were attracted to these gatherings of young women, but due to the large concentration of members of both genders who were often kin, there was little opportunity for privacy in these meetings. Still, these gatherings could result in the formation of couples, although parental approval for marriage was required. In town, on the contrary, until a late period, male water sellers brought water to homes, and rain water was collected in reservoirs.

In the village, wood for cooking and heating was usually fetched weekly by a group of women who left early in the day. They often had to walk a great distance and returned carrying a heavy load on their heads. This activity was accompanied by songs which strengthened group identity and consolidation and served as a diversion from hard labor. Although fetching wood was carried out in groups, and usually did not bring women in contact with men, some urban rabbis objected to it because it was in contrast to city modes of behavior and modesty.

Traditionally, some women worked outside their home due to economic need or in order to perform unique female assignments. In the first category were maids, petty merchants, peddlers, and even ritual butchers (in Yemen), while in the second category were midwives, cosmeticians (mainly for brides), and mourners. Some women gained income from handicrafts which they produced at home by spinning, knitting, weaving, or embroidery. Most women gave their earnings to their male guardians – be it father, brother, or husband. Nonetheless, throughout the period, women often had

independent authority over their dowry, and thus some economic power. Older women, and especially widows, had the most social and economic independence, and could invest in economic enterprises and contribute to various private and communal causes, including the establishment of religious institutions and the writing of Torah scrolls.

Towards the second half of the 19th century changes emerged in urban areas as a result of harsher economic conditions, the growing presence of European enterprises, and the increase of employment opportunities following the introduction of new jobs. Increased availability of formal education, including vocational training, also played a significant role. At first, female wage earners were mainly from among the poor, who worked outside their household as long as they were single; married women still rarely worked outside their homes. Initially most jobs were an extension of traditional women's tasks or related to their handicrafts. Thus, a large number of women worked as maids, mostly, but not exclusively, in Jewish households. Those with skills such as needlework and ironing worked either in gender segregated workshops or at home. Only gradually, in the 20th century, did women start to enter mixed-gender workplaces, as nurses, factory workers, and office employees. Even then, women often worked separately. Nonetheless, opportunities for unsupervised intergender interaction increased among Jews and between Jews and gentiles. The opening of kindergartens and girls' schools called for the employment of female teachers and directors. This led to temporary migrations of single women and married couples, mostly within the *Alliance Israélite Universelle (AIU) educational network, mainly from Turkey and Morocco. With the spread of state schools, especially after independence, Jewish women also began to teach in non-Jewish schools (e.g., in Morocco).

With the passing of time, a growing number of women wanted to join the workforce not only out of economic necessity, but also in order to satisfy their personal ambitions, interests, and desire for public service; some regarded it as a means for self affirmation and independence. This tendency was the strongest in those urban centers which were exposed to Western influences, in countries such as Turkey and Morocco. However, despite the growing numbers of women in the workforce, they rarely reached leadership positions, even in fields where their number was high, like teaching. This resulted from their lesser leisure time due to continued responsibilities at home and from continuing gender bias against women in managerial roles.

The different status of women and men was reflected in their educations. Education for men was intended to enable them to participate in synagogue worship and communal affairs and to prepare them to support their families financially. Girls' education, too, provided them with tools to perform their specific tasks. Since their world was mainly domestic, they learned how to maintain a Jewish home, mostly from older female relatives. All home activities had a specific Jewish character and were performed within a broader Jewish framework. Thus, the preparation of food was ruled by strict religious laws regarding *kashrut*, with further instructions for the Passover festival. In addition, girls learned some Hebrew prayers which related to women's religious obligations, such as lighting the Sabbath lights. In time, girls were instructed in regulations governing ritual purity and received some sex education. Girls, who were mainly illiterate, memorized appropriate religious rules and prayers from their female relatives, most of whom had gained their knowledge in a similar way.

Women were not required or expected to participate in the formal male conducted communal service in the synagogue and thus had no need to be instructed in Hebrew. Some girls did learn to read Hebrew, usually from male relatives. On a few occasions, little girls were sent to mixed-gender schools, but their studies lasted a shorter time than the boys'. Although it was very rare, some women became teachers of little children, while a very few others were renowned for their Jewish learning. While all males had a Hebrew name (sometimes in addition to one in the local dialect), many women had names in the vernacular or in European languages, further distancing them from the more prestigious male culture.

A major component of female spirituality was women's poetry, which was part of their life and in their local dialect. Such poetry expressed the individual and the group at work, recreation, celebration, and worship. It dealt with daily issues and events, including specific feasts and celebrations, matters of belief, and private life. Girls were exposed to it from an early age, hearing older female relatives sing individually or together in private or at work, during leisure time, family celebrations (especially at weddings), seasonal feasts, and while honoring the Torah and local places of worship like synagogues and tombs of saints.

Since women tended to be illiterate, their poetry was oral and given to constant change. While many songs had a basic pattern, individuals often improvised to emphasize specific events, personalities, and places relating to a particular occasion. Women usually sang only for women or in family gatherings. Those who sang to a larger non-kin, mixed-gender audience were often from a lower social status and were despised. Female poetry was also a channel for inter-communal and inter-denominational contact and influence. At times, women mixed with the crowds surrounding singers of another group, even belonging to another religion, to learn new songs and melodies. Thus, female poetry and music eased the burden of heavy labor, strengthened group ties, served as a means of artistic expression and form of worship, and even served as a bridge between communities.

Men's poetry, on the other hand, was more rigid and less understood by the masses. Much of it was religious poetry in Hebrew, unintelligible to the majority who knew only the local Jewish dialect. It was mostly created by known poets and sung by professionals. Even the poetry in the local dialect was generally composed by individuals and much less given to improvisation. Consequently, it was easier to preserve and study men's poetry. But although many men listened to this art

form, only relatively few could fully understand and appreciate it or contribute to its development. Women, on the other hand, could enjoy, participate, and contribute to their poetry throughout life, regardless of age, status, or occupation.

Women of several households used to gather in their limited leisure time, talking, singing, and doing their handicrafts, which were often intricate artistic creations, unique to specific regions and the bearer's stage in life. During these meetings, female poetry was sung by any member of the group. Girls were exposed to this rich creative environment from an early age, observing visual art in its development, hearing poetry while it was composed, and becoming aware of intimate issues related to family life. Thus, although most girls were illiterate, they acquired the skills of creativity from a tender age and developed their own forms of spirituality in a supportive environment.

The long established cultural equilibrium in Jewish communities under Islam was shattered when new educational systems were introduced, although in many cases schools were established in response to indigenous requests. Among the major elements active in modern Jewish education, including female education, were the Paris-based Alliance Israélite Universelle, beginning in the 1860s (mainly in Morocco, Turkey, Palestine, Iraq and Iran), and the Zionist movement, through local activists and emissaries from Palestine (mainly in Iraq, Tunisia, Morocco, and Libya) during the 20th century. Other modern schools were mostly foreign or, later, run by the state. Communal educational systems were slow to change, and usually did so in response to outside competition. Jewish leadership often opposed modern education because it was geared towards alien value systems and threatened to dispossess traditional functionaries. The opposition was less fierce towards formal female education, both because the community did not provide one and because a secular or Jewish system could draw girls away from missionary schools. Still, in some places, like Iraq and Palestine, there was rabbinic opposition to any formal female education out of fear that educated girls, as the mothers of the next generation, would champion change. Formal female education not only made women literate, but also facilitated another major departure from tradition, the mass entry of women into teaching.

Early girls' schools emphasized vocational training, complemented with a few academic subjects. The focus on vocational education was an effort to attract poor girls, who would acquire profitable professions which could be performed at home. There was a fear that emphasis on academic studies would come at the expense of mastering household skills and would make girls feel superior to their environment and even equal to men, thereby diminishing their chances to marry. Since Muslim girls rarely received formal vocational training at the time, Jewish girls encountered little competition in the professions they learned in school.

Jewish girls' schools were established later than schools for boys, there were usually fewer female than male students, and even fewer girls passed the level of primary education.

This was due to continued communal desire for women to marry young and to the fact that secondary education was usually mixed. Schools were mostly segregated by gender, but mixed schools (with either separate-gender classes or mixed ones) existed too, mainly for economic reasons in small communities. Although the attendance of Jewish girls at missionary or state schools increased their chances of meeting gentiles, some Jewish parents sometimes selected missionary schools, as was the case in Egypt and Aden, because of the European languages they taught and the free tuition they offered. Similarly, parents opted at times for state schools, as was the case in Iraq and Iran, because of their sheer number in comparison to Jewish schools, especially at the high school level. In the republic of Turkey, all foreign, religious, and communal schools were gradually closed beginning in the late 1920s.

Those Jewish girls who did receive modern educations often became agents of change. However, the gap between expectations and reality tended to be wide for educated young women. Even when they managed to enter the "men's world," they generally held lower rank jobs with virtually no likelihood of advancement.

Leisure time activities were traditionally gender-based. Women's meetings often incorporated an element of work, private or communal. In addition to home gatherings, adult women met towards the week's end to clean the synagogue and prepare it for the Sabbath, while neighboring women provided them with refreshments. On these occasions female poetry was sung in praise of the Torah scroll. Women frequented the synagogue for worship much less than men. Most women could not pray from prayer books and usually voiced improvised prayers, blessings, and wishes in the vernacular, sending kisses to the Torah scroll. Women were also active in self-help societies, mainly for the needy, including poor brides and the sick. Men's leisure time activities were more text-oriented, usually in the form of prayers or community sponsored study groups, where men passively listened to readings from religious literature or chanted Psalms. Men also met for recreational purposes in coffee houses and drinking places.

Towards the end of the 19th century, new leisure time activities sprang up side by side with traditional ones. Many of the new patterns resulted from foreign influences and the new educational systems. The AIU was very active in this respect, especially in Morocco and Turkey. In anticipation of the foundation of an AIU school, a local AIU committee was established to advance AIU goals, to promote the establishment of an AIU school, and then to serve as a support group for the school. Most AIU committee members were men, but a few women participated too, usually when supporting girls' and mixed schools. The AIU also triggered the establishment of welfare-oriented organizations, which included many female members. Following a few years of a school's existence, an alumni organization was established, supporting the school, mainly through paid cultural and social activities. These organizations were at first often gender-based, but gradually attracted women and men for mixed-gender activities.

The 20th century witnessed the establishment of specific organizations for youth, focusing at first on recreation (mainly sports, parties, and performances), often as an offshoot of an adult organization (e.g., the Maccabi sport organization establishing Young Maccabi). The earlier organizations of this kind were mainly for men, but women were accepted as guests; only at a later stage (mostly in the 1940s) were women admitted as full members or in a separate branch.

The next step, taken mainly in Palestine, Iraq, Tunisia, Morocco, and Libya, was the establishment of ideologically focused Zionist youth organizations. Established by local Zionists and with the support and at times the guidance of emissaries from Palestine, these youth organizations aimed to change the world view of the youth and thus of the community at large. One of their central goals was to create a "New Jew," a term incorporating both men and women, based on an ideal of gender equality. Consequently, the youth movements were for both genders, although some of their activities were gender-based. Deep-rooted concepts, however, were slow to change: girls were less active in mixed group discussions, there were fewer girls than boys in most movements, and fewer still in leadership positions. And although the movements advocated the equal place of women in the new, productive (i.e., agricultural and industrial) workplace, fewer women joined the agricultural training farms (*hakhsharah*), and both there and in the clubs women carried out traditional female tasks, such as cleaning and cooking. Most often, "New Women" found themselves living in a conceptually old world, regardless of their personal spiritual and professional metamorphosis.

Traditional gender divisions had implications on marriage. Only in the village could young people of both genders meet relatively freely, usually when girls performed their daily task of drawing water. Even in villages, however, the final decision concerning marriage rested with the parents. In some regions, young men could influence the choice of their bride through the intervention of local, even Muslim, dignitaries. In urban settings, where most Jews lived, the opportunities for young people to meet were very limited. Apart from family gatherings, which were often gender segregated, some regions had special events which enabled the youth to meet. A very famous occasion took place in Tripoli, Libya, on the last day of Passover, when girls stood beautifully dressed outside their homes, waiting for young men to indicate to their parents which girl they wanted to marry, leaving the negotiations to the parents. Much of the matchmaking was conducted during the informal meetings of family and neighborhood women, who knew quite well the most intimate details about each other and their families. Although girls were usually allowed to reject a prospective bridegroom, they were not supposed to initiate the choice, and the decision of the couple was based mainly on an occasional glimpse. The older women, on the other hand, knew much of the family background and the character of the younger generation and based their decisions on this information. The economic details of the marriage were settled by the fathers. After a decision was made, the couple was not supposed to meet until the wedding.

Most first time brides were in their early teens with somewhat older grooms. At times, though, girls were forced to marry old men. In many places girls unmarried by their mid-teens were considered old spinsters, almost unmarriageable, except to less sought after men, including the poor, disabled, or old. Marriage of minors, even below the age of ten, took place relatively rarely, and happened mainly in Yemen. In some places, babies were given out in marriage, but these agreements were sometimes broken. As a result of Muslim influence, polygyny was accepted among Jews in the Muslim world, but Jewish law required that both wives be treated equally, sexually and economically. Polygyny was not widespread and happened mainly among Yemeni and Kurdish Jews and in rural areas or when the first wife did not give birth to a son.

Preparations for weddings were elaborate, culminating in a week of festivities. The bride, for whom this was the major public event of her life, was adorned and wore luxurious clothing and jewelry (which at times passed from one bride to another). Before the wedding, the bride and her female relatives went to the *mikveh* (ritual bath), an occasion which could be used by her future female in-laws to watch for any hidden physical imperfection.

The introduction of European educations, the operation of youth movements, and the entrance of women into the workforce gradually changed these practices, mainly in the urban centers. Modern educators tried to keep girls in school, in part to postpone the age of marriage. The AIU was active in this trend from the late 19th century on, trying to influence communal leaders to permit marriage only above a certain age. Many couples met as a result of the activities of youth movements (mainly beginning in the 1940s). The entrance of women into the workforce delayed the age of marriage and facilitated contacts among young people, even of different religions and nationalities. As a result, over time most engaged couples knew each other and even chose each other and the marriage age rose, although parental consent for marriage was usually required. These changes took place mainly in the urban centers and on the Mediterranean and Atlantic coasts. They were much less common in Iran, Yemen, and rural hinterlands.

[Rachel Simon (2nd ed.)]

Israel

THE OLD YISHUV. Throughout the early modern and modern periods, until the end of the 19th century, the Jewish population of Palestine was centered in Jerusalem. This population, primarily made up of spiritual seekers from all parts of the Jewish world, survived on charitable contributions from Diaspora communities. These *ḥalukkah payments, distributed separately by Ashkenazi and Sephardi religious authorities, were originally intended to enable Jewish men to devote their lives to Torah study and prayer. However, demographic data demonstrates that women, mainly widows who had come to

the Holy Land to spend their remaining days visiting sacred sites and preparing themselves for the next world, were the majority of the Jewish population of Jerusalem in the 19th century and they also benefited significantly from ḥalukkah. As M. Shilo has shown, in the course of the 19th century the male religious establishment linked ḥalukkah to pious and modest behavior by the enforcement of by-laws (*Takannot Yerushalayim*) that applied to men and women alike. A number of these regulations constructed all women as objects of sexual temptation and attempted to limit severely women's presence in the public domain. Any mingling between men and women was looked upon as a sin, and husbands and the fathers were expected to supervise the women of the family to preserve the sanctity of the community and to ensure that the family received its allotted share of ḥalukkah. Women and their needs were always subordinated to a traditional male view of how society should be arranged.

From the late 19th century on, with the growth of Zionist movements of various kinds, the population of the Old Yishuv (Jewish settlement) was augmented with increasing numbers of immigrants, from both Eastern Europe and from Middle Eastern Jewish communities, such as Yemen. Zionists from Eastern Europe were particularly intent on building up the land and engaging Jews in economic endeavors. In this era the highly religious nature of the Jewish communities of Jerusalem (of both European and Middle Eastern origins) slowly began to change owing to the influx of largely secular immigrants and infusions of funds from Zionist organizations abroad. The areas of transformation with special impact for women included the introduction and external funding of various educational alternatives for girls, including vocational training, and gradual improvements in health care options.

THE NEW YISHUV. The inequality in the treatment of the sexes exemplified in the Old Yishuv community of Jerusalem continued to be a reality in the modern Jewish settlement of the land. The pioneers of the First Aliyah (1882–1903) and Second Aliyah (1904–18), included both men and women. Most of the women of the First Aliyah accompanied their husbands and settled into domestic roles in agricultural settlements (moshavot) or urban environments. The women of this immigration, many of whom were as deeply committed as their husbands to their new lives in Palestine, faced a difficult struggle to achieve any public recognition and participation. Many of the idealistic young people of the Second Aliyah, inspired by the fervor of Labor Zionism, had been trained to work the land in Zionist training schools in Russia, which stressed the equality of women and men. On arriving in Palestine, most young single women, a significant minority among the second wave of immigrants (17–18%), found their options limited and their choices narrowed, simply as a result of their gender. Feeling betrayed by their male comrades, who did not support their struggle, and limited by male perceptions of their biological inequality, unmarried women were virtually unemployable as agricultural workers, and were forced to survive

by providing the men with kitchen and laundry services. As Raḥel *Yanait, wife of Israel's second President, Izhak *Ben-Zvi, and a noted educator and writer recalled of those days. "In the thick of that passionate movement toward the land the women workers suddenly found themselves thrust aside and relegated once more to the ancient tradition of the house and the kitchen. They were amazed and disappointed to see how the cleavage was opening, the men comrades really united themselves with the land, but they, though on it, not becoming part of it. The united front was cracking" (*Plough Woman*, 109). Or as Ziporah Bar-Droma put it, "In Palestine there came a parting of the ways. Over there in the Russian exile, men and women had been equal comrades in the movement. We worked together, suffered together in the prisons and in the remote countries to which we were expelled; the moment the first pioneer certificates reached us, admitting us into Palestine, we were divided into the two classes: men comrades and women comrades…. And when we landed we were actually separated into two groups: In the one group were those who were 'building the country' and in the other were those who would take care, in every day matters, of 'the builders of the country'" (*PW*, 145).

Denied membership as single women in most collective settlements, and refused employment as agricultural workers, a few women founded successful female agricultural and urban collectives, and women's training farms. Such women's farms excelled particularly as tree nurseries. Raḥel Yanait, as an early settler, wrote: "With our own hands we raised, on our soil, tens and hundreds of thousands of shoots, and a kind of bond was created between our fruitful little corners and the wild bare hills around us. We were participants in the great task of re-afforesting the country" (*PW*, 112). Here on their own farms, women were able to forge their own connection to the land, and their belief that they were helping to build something new went hand in hand with their own feeling of self-renewal. Yet for every place for a woman in such a settlement, there were dozens who were turned away for lack of resources to provide them support and employment.

In the years following World War I, the majority of single women in the Yishuv were unable to find agricultural employment. In order to survive, many ended up working in cities as cooks or laundresses, seamstresses or clerks, or maids in private homes. Under the immigration regulations imposed by the British mandate on the Third Aliyah (1919–23), women were allowed to enter Palestine as dependents, wives, and elderly mothers, but only to a limited extent as prospective workers who could receive a labor immigration permit. Although men and women immigrated in roughly similar numbers (36 percent were women), two-thirds to 90 percent of all women came as dependents, as compared to 10 to 20 percent of all men. Labor permits were allocated to over 50 percent of all men and to only 10 percent of the immigrant women. Moreover, the vast majority of adult Jewish women who immigrated to Palestine had little relevant occupational experience to enable them to become active, equal partners,

let alone self-sufficient members, of their new community. In these years many of the goals of the Second Aliyah were being implemented, including the establishment of the Histadrut, the General Federation of Hebrew Labor (1920) and the Women Workers' Movement (1921).

Some of women's complaints about the inequity of their situations were met by the *kibbutz movement, at least for that small group of women who gained entry into a kibbutz. Many of these kibbutzim were dedicated to bold social restructurings of the family in order to create a society in which each individual would achieve economic independence. In such a social setting wives would not be dependent upon their husbands and would no longer be subservient to them. In the kibbutz the family was to be renewed in such a way that men and women would be equal and independent partners sharing common goals; here, women were to be emancipated from the demands of the home and from childcare so that they might work productively and creatively with men in building the land.

Yet even on the kibbutz, women mainly worked in the kitchens and laundries. And here, in this experimental setting, woman's role in childcare raised issues which remain problematic. Many kibbutzim opted for bringing up children collectively in children's houses under the care of nurses and teachers. Parents would only see their children for an hour or two each day. In this way mothers would be freed to function as independent members of the collective, and children would benefit from a feeling that all the adults of the kibbutz were concerned for their development and care. Yet as one kibbutz theorist, Eva Tabenkin, admitted in the early 1930s, perhaps collective child rearing asked too much, "We are worried constantly by one thought: how can we bring into the life of the child which is being cared for in the home, the bright glance and the loving smile of the mother for which even the tiniest creature instinctively longs?" "But," she went on to say, "we cannot forget what was in our minds when we approached the whole problem at the beginning, what ideals and wishes we had regarding life in Palestine generally and our own lives in particular. For it is only as part of a high cultural life that the group upbringing of children has meaning, and only in the larger setting of a general ideal will we find the strength to continue seeking, through this form, a loftier and finer life for ourselves and our children" (*PW*, 159).

Most women in the Yishuv were married mothers of children. The pre-Zionist communities of both the Ashkenazi Orthodox and Jews of Middle Eastern origin were strongly committed to the establishment of families. Women of these communities tended to marry at a relatively early age. Many among the more recent Zionist immigrants arrived already married and most others married, as well. Community studies conducted in Jerusalem and Haifa in the 1930s indicate that by 35 to 40, all but five percent of Jewish women in the Yishuv had married, and the majority of women bore children. Despite the varied Zionist utopian visions of the new Jewish society to be built in Palestine, traditional gendered divisions of

labor and patterns of authority tended to be preserved in the Jewish families of the Yishuv, with the exception of the kibbutz experiment described above.

Few married women in the Yishuv worked outside their homes. Those who did faced the inevitable conflicts of the working woman who must leave her children in the care of another with few social supports. "What is a mother to do," one woman asked, when, "in spite of the place which the children and the family as a whole take up in her life, her nature and her being demanded something more. This woman cannot divorce herself from the larger social life. She cannot let her children narrow down her horizon. And for such a woman there is no rest" (*PW*, 164). "Am I at fault," asked the writer, Golda *Meir (then Meyerowitz), "if after giving my family a place in my heart there is something left over which has to be filled by things outside the family and the house?" Society, she acknowledged, can offer no easy answer, for as Meir wrote, "This eternal inner division, this double pull, this alternating feeling of unfulfilled duty today toward her children, the next day toward her work. This is the burden of the working mother" (*PW*, 165).

As D. Bernstein has written of pre-State Israel, women's unequal and marginal position in the labor market, and their sole responsibility for family care, created a distinctly different life pattern for women as compared to that experienced by men. Since the private sphere, where women were central, was all but invisible and since women were only intermittently visible in the all important public sphere, women were essentially excluded from power and influence as the Yishuv moved towards the immense challenges of statehood in the years following World War II.

ISRAEL SINCE 1948. Modern Israel continues to be far from progressive where the status of women in concerned, and is, at the beginning of the 21st century, more conservative than most other western democracies on women's issues (see *Feminism: Feminism, Zionism, and the State of Israel). Despite significant achievements and continuing progress, as a whole Israeli women continue to earn less that their male counterparts, are less visible and influential in the political arena, do not share equal responsibilities or privileges in the military, have unequal rights and freedoms in family life and law, and are secondary in shaping the nation's self image and cultural orientation.

The unequal status of Israeli women is a result of generations of past discrimination in Jewish tradition in general, as well as the additional impact of highly conservative Middle Eastern cultures on many Israelis from Muslim countries. Women suffer numerous disadvantages in the workplace, mandated by paternalistic legislation and the expectation that women will also assume most household responsibilities. Israeli women continue to fulfill the traditional Jewish role of enablers, supporting their husbands and sons, who hold the primary power and powerful jobs, and whose lives are at risk in defending the state. Only a small number of Israeli women

reject women's subsidiary roles; most believe that women will not achieve equality as long as war and conflict is a dominant theme in Israeli society.

Jewish women in Israel are significantly disadvantaged in personal status issues. When the State of Israel was established in May, 1948, the Declaration of Independence stated that "The State of Israel will maintain equal social and political rights for all citizens, irrespective of religion, race, or sex," a sentiment reiterated in 1949, in the basic guidelines of the first government of Israel. Yet 1953 legislation awarded the Orthodox religious establishment monopolistic control over marriage and divorce for all Jewish citizens, thus legalizing women's substantial legal disadvantages in the *halakhah*, particularly in areas of family law. There is no civil marriage or divorce in Israel, nor do Reform, Conservative, or Reconstructionist Judaisms, with their more egalitarian approaches, have any official standing. Particular problems are connected with the dissolution of Jewish marriages since, according to *halakhah*, a Jewish woman cannot obtain a divorce without the permission of her husband. Many men refuse to grant their wives a divorce document, sometimes attempting to extort large sums of money from the estranged wife's family before they will comply with a religious court's ruling and agree to the legal dissolution of the marriage. Many refuse to comply at all, leaving the wife in legal limbo. The issue of the over 5,000 *agunot*, women who cannot obtain a divorce because their husbands refuse to grant one or because the husbands cannot be located, is the best known instance of the inability of the Orthodox rabbinate to deal with real social problems which cause immense pain and suffering to women and their families. Only recently have women begun to fight back, forming an International Coalition for *Agunah* Rights, reflecting an intensive effort to reform what are perceived as unjust and discriminatory divorce proceedings in rabbinical courts worldwide.

Although women are eligible for military service, most women in the army are assigned to education, clerical work, and training. Fewer than half of all eligible women are actually conscripted because they are not really needed, although army technology is beginning to create more equal tasks for the Israeli woman. Moreover, since the beginning of the 21st century rapid changes in women's opportunities in the military have been underway. In early 2000, the Israeli Defense Forces decided to deploy women in the artillery corps, followed by infantry units, armored divisions, and elite combat units. The Navy also decided to place women in its diving repair unit. At the beginning of 2004, about 450 women were in combat units; in late 2005, it was announced that three female pilots, including one combat pilot, would shortly complete training and join the nine other female soldiers in Israel's Air Force.

Given the historical pattern of secondary female military roles, however, women remain poorly represented in the upper echelons of the military, as they are in public and political life and in the civil service and academia. Since an important premium is put on military background as the necessary precondition for public office, women have found it very difficult to break into the political system.

Prolonged military conflict highlights various norms which are antithetical to the promotion of gender equality. These include the glorification of the hero and of macho-like ideals which may be necessary to ensure a continued commitment to defense and security. These values tend to glorify military prowess and to stress loyalty and commitment which are carried over from military to civilian life. One consequence of the emphasis on national security is that what are seen as women's issues, particularly in the areas of health, education, and welfare, are almost always given low priority in terms of policy considerations. More significantly, women have not been able to articulate their position on matters of general concern because the primary questions on the national agenda have come to be defined as male issues requiring an expertise that only men have acquired.

A report on the status of women in Israel in 2004 presented by the Israel Women's Network to the Committee for the Advancement of the Status of Women is Israel's parliament (Knesset) indicates that of 121 countries in which women are included in the legislature, Israel, despite having once been led by a woman prime minister, ranks 66th. Women constitute only 15% of Israel's 120-member Knesset, placing Israel somewhere between the Arab world and developing countries in its attitude to female politicians. The Committee for the Advancement of the Status of Women and individual female Members of Knesset are attempting to advance women's status through legislation. Their initiatives address a variety of gender issues such as equality at work, violence against women, welfare, health, and fertility concerns. The Authority for the Advancement of Women, established by law in 1998, is authorized to encourage, coordinate, promote and monitor the government's and the local authorities' activities regarding women's status, to promote legislation, and to advise the government on the enforcement of laws promoting the status of women. It is also expected to initiate research and to enhance public awareness through the media and education. The growing awareness of the status of women in the early 21st century has led to an increasing presence of women in managerial and decision-making positions. Prime Minister Ariel *Sharon included a record number of women ministers (three) and deputy ministers (two) in his government.

Israeli women are highly educated. Approximately 22% of Israel's women have 13–15 years of formal education compared to 20% of men, although 4.5% of women have no schooling compared to 1.8% of men. However, while 57% of all academic degrees are earned by women, and 46% of the doctoral students are women, only 22% of senior faculty members and 7.8% of full professors are women.

Government figures indicate that in 2000, 45.44% of the labor force were women, of whom only 15.8% worked full time, compared to 34.1% of the men. The average monthly salary for women was 60.18% of men's wages and the average

wage-per-hour was 80.5% of that of men. In general, women worked mostly in lower-paying jobs, in services, education, health, welfare and clerical positions, and were significantly less represented in prestigious and lucrative occupations. Government statistics also indicate that violence against women is a serious problem in Israel, ranging from spousal abuse, sexual violence, sexual harassment, incest, and trafficking in women for prostitution. It is estimated that a significant number of women suffer from domestic violence. Facilities for their support and care are woefully inadequate.

The Israel Women's Network, founded by Alice Shalvi in 1984, is an advocacy group for women's rights that concentrates on legislative and political efforts to overcome discrimination against women in the workplace, military, religious courts, and in the healthcare and educational arenas. With particular attention to violence and sexual harassment, the IWN helped secure passage in 1998 of legislation criminalizing sexual harassment and holding both the harasser and employer responsible for civil damages. In recent decades, Israel's nascent feminist movement has begun to bring cases to Israel's Supreme Court (see below: The Judicial Perspective) on issues as diverse as access to abortion, women's right to be elected to and hold seats on municipal religious councils, and the ability of women's prayer groups to hold services at the Western Wall.

Several feminist organizations emerged beginning in the 1980s that called for return of the occupied territories to Palestinian control, and condemned the violence and impoverishment in those territories. Women in Black was founded in 1988 to hold weekly silent vigils of Israeli and Palestinian women calling for an end to the occupation. It now has an international peace network and has been nominated for the Nobel Peace Prize. New Profile is a feminist organization that seeks to change Israel from what it perceives to be a militarized to a peace-seeking culture, and works especially on educating children for peace (see essays in Fuchs). At other end of the political spectrum, Women in Green advocates the annexation of Judea and Samaria and supports continued Jewish settlement there.

This increased feminist activity, influenced by the women's movement throughout the Western world, is indicative of the gender and religious tensions that characterize Israeli society in 2006.

Similar concerns are also evident in the kibbutz movement at the beginning of the 21st century. Recent studies indicate that the ideology of equality with which the movement began has never been realized. At present, the division of labor parallels occupational profiles outside the kibbutz, with women predominating in education, childcare, food preparation, and laundry, while men more commonly choose revenue producing occupations in agriculture and industry. One consequence is that women are seen as providing services while men, who are seen as earning money for the kibbutz, come to be regarded as the experts in management and fiscal policy making. Thus men are far more likely to be elevated to leadership positions in the kibbutz, thereby gaining disproportionate power, status, and respect. Similarly, changes in the organization of family life on the kibbutz have added to women's burdens. Where once virtually all kibbutzim provided separate housing for children, who would spend a few hours of relaxation time with their parents, today children almost never sleep in children's houses. This means that women assume the primary responsibility for child care and the increase in household tasks associated with a family sharing living quarters which were often intended only for two. It is not surprising that there is growing dissatisfaction with kibbutz life among younger women who struggle with the contradiction of being "homemakers without homes" (Palgi; essay in Fuchs).

In microcosm, the status of women in Israel is a result of generations of past gender discrimination from a variety of sources, both religious and cultural, together with the problems of inequality which surface in a society experiencing an ongoing state of military conflict. The legal advocacy and political activities of some women in recent times constitute alternative approaches to combating women's unequal roles, but fundamental transformations in Israel's legal structure are necessary if these are to be realized. Similarly, true change for women will only come when the adjudication of family law issues is removed from the sole control of the Orthodox rabbinate which has been inflexible in easing the discriminations against women inherent in halakhic tradition.

[Judith R. Baskin (2nd ed.)]

THE JUDICIAL PERSPECTIVE: WOMEN AND THE ISRAELI COURTS

The issue of the status of women, by its very nature and its significance for society and the family, exemplifies the importance of finding a synthesis between *halakhah* and the needs of the place and time. This was true over the generations, in the worlds of the *tannaim,* the *amoraim* and the *geonim,* in the world of the medieval authorities (*rishonim*) as well as of the *aḥaronim,* during their various periods and dispersions. Since the beginning of the Emancipation period, new considerations and elements have arisen, and special creativity has been evident since the restoration of Jewish political independence in the State of Israel.

Justice M. Elon opens his discussion of the topic (*Ma'amad ha-Ishah – Mishpat ve-Shipput, Masoret u-Temurah: Arakhehah shel Medinah Yehudit ve-Demokratit* (2005), pp. 17–18 (henceforth Elon, *Ma'amad ha-Ishah*) with the following words:

> The issue of the status of women is one of the striking examples of creativity in the world of *halakhah* in days of old and in our times. The word *halakhah* is derived from the root *halokh* ("go"), as explained by Rabbi Nathan ben Rabbi Yehiel of Rome, author of the *Arukh,* in the 11th century: "that which goes from of old until the end [of time], or [that way] in which Israel goes." I am inclined to add that the word *halakhah* bears the additional aspect of creativity. That is, the halakhic Sages viewed themselves as commanded to *go* forward, to *lead halakhah* in a creative manner and in accordance with the circumstances of their time; that is, *halakhah* goes (*holekhet*) forward. Regarding

the issue of the status of women, this "going" of the *halakhah*, which includes accommodating its foundations and principles to the needs of the time and the place, is given very prominent and creative expression. Nonetheless there are a number of grave issues relating to the status of women that have been partially resolved, but have not yet found their full resolution, such as the problem of women who have been refused a divorce, abandoned wives, and the like; and we must work hard to find a convenient and satisfactory solution (see *Agunah). In general, however, the status of women in Judaism has from its very beginning been dynamic, in a state of constant creativity, especially in comparison with parallel systems. Halakhic creativity has always found expression in *theoretical study*, through examination of the halakhic principles and statutes, and in the *practical application* of those principles in changing circumstances. In every realm, but especially in that of the law and all its branches, *halakhah* is forced to deal with the question of how on the one hand, to continue the past, from the starting point of the existing *halakhah* – to continue the chain; while, on the other hand, to study and apply the *halakhah* with creativity and in a manner appropriate to the times. Creativity in this context means resolving the needs of the *present*, its problems and demands, through a deep and fitting analysis of the world of Jewish Law and its principles in the *past*, in order to find the appropriate path toward the *future*.

The issue of the status of women, with the great creativity that has been demonstrated therein, serves as an example of the manner in which Judaism has found a *synthesis*, which today is called a synthesis of the values of the State of Israel as a Jewish and democratic state (see *Values of Jewish and Democratic State).

This article will give a number of concrete examples taken from Israeli law and the rulings of the Israeli Supreme Court, an appreciable portion of which are the rulings of Deputy Chief Justice of the Supreme Court, Justice Menachem Elon, who gave a number of concrete decisions on issues pertaining to the status of the women. These examples provide a wealth of material regarding the reciprocal influence of *halakhah* and society; of pluralism and differences of opinion; of activism and restraint; creativity and the avoidance thereof; and the like. All this material provides an impressive picture of how and in what manner the "Jewish" and "democratic" elements of the State of Israel have been combined, how the "Jewish" element has been influenced by the "democratic" and how it has preceded it. Some topics relating to the status of the women have already been discussed at length in other entries; see, for example, *Agunah; *Husband and Wife; *Parents and Child; *Wills; *Succession; *Maintenance, *Ketubbah. These topics will not be discussed here in detail, but references will be made to certain conclusions that may be drawn from them.

Husband and Wife

The relationship between husband and wife is central to the issue of the status of women, and has been discussed extensively and often in the legal system (see, for example, Cr.A. 92/2157, *Padida v. the State of Israel*, 47 (1) PD 81; CA 79/458 *Nir v. Nir*, 35 (1) PD 518; and cf. *Husband and Wife). It has been

noted that the fundamental legal principles underlying this relationship are based on the words of the *beraita* (Yev. 62b): "Our Rabbis taught: The man who loves his wife as himself, and honors her more than himself [Rashi, s.v. *yoter*: Because disgrace is more difficult for a woman than for a man] who guides his sons and daughters in the right path and arranges for them to be married near the period of their puberty, of him Scripture says: 'And you shall know that your tent is at peace, and you shall visit your habitation, and shall miss nothing.' (Job 5:24)." This, in brief, is the structure of the family cell, as viewed by the Sages. Maimonides codified this law in similar fashion: "Therefore the Sages laid down that a man shall honor his wife more than his own self and shall love her as he loves himself, and shall constantly seek to benefit her according to his means… and shall speak gently with her; that he shall be neither sad nor irritable" (Yad, *Ishut* 15:19). Similarly, the Talmud states: "Rabbi Helbo said: A man should always be careful about his wife's honor, for blessing is found in a man's house only on account of his wife. As it is stated: 'And he treated Abraham well for her [= Sarah's] sake' (Gen. 12:16)" (BM 59a). In his discussion of this issue, Justice Elon states (*Ma'amad ha-Ishah*, pp. 194–228, at 195):

> These are the fundamental demands. But social reality, throughout the generations and the dispersion, did not always meet them. Thus, a series of judicial rulings discuss cases of violence and abuse on the part of a husband toward his wife, and aggressive and inappropriate behavior on the part of a wife toward her husband. The halakhic authorities responded in resolute fashion, whether by way of judicial decisions or by way of legislation of special enactments. These issues have been discussed in the rulings of the Israeli courts, and the deliberations and rulings follow Jewish Law – its sources, its deliberations, and its rulings.

The substantive difference between Jewish Law over English law with respect to the rape of a woman by her husband has also been discussed in this context (see: CA 80/91, *Moshe Ben Meir Cohen v. the State of Israel*, PD 35(3) 281). Justice Elon summarizes the issue as follows (*Ma'amad ha-Ishah*, p. 228): "Jewish Law rescued the honor of women in the State of Israel from the dread of the 'democratic' norm, taken from English law, by which a husband has the right to rape his wife. The ancient Jewish norm, established thousands of years ago, established that a woman is not 'a captive in the hands of her husband,' and thus protects the rights and dignity of a woman. This is the law that is appropriate for the State of Israel as a Jewish and democratic state, Jewish *before* democratic."

A Woman's Economic Rights

The mutual respect that must be demonstrated between husband and wife in their personal relations has already been noted. A number of examples of creativity regarding the status of women in the area of economic rights should also be noted. They include: the independence of a woman's economic status; her right to compensation at the time of divorce; joint property rights in assets acquired during the marriage (see also Elon, *Ma'amad ha-Ishah*, pp. 229–54). These topics have

been discussed at length in the entry *Husband and Wife, *Maintenance, *Ketubbah, and others.

In terms of halakhic creativity and the protection of the status of women in Judaism, a fundamental principle is that "a woman is not considered her husband's daily laborer in exchange for maintenance." According to *halakhah*, a man is obligated to provide his wife with maintenance (not only food, but also medical expenses, raiment, lodging and all her other necessaries), and in exchange is entitled to the benefit of her handiwork (Yad, Ishut 12:1–4). The woman may, of her own choice, waive her maintenance, keeping for herself the proceeds of her handiwork. The husband does not have the parallel right: he cannot deny his wife maintenance by waiving the benefit of her handiwork.

Creative decisions regarding the woman's status were also given with respect to property relations between husband and wife. This began in the rulings of the rabbinical courts in the 1940s, even before the establishment of the State of Israel. The issue is discussed in CA 2/77 *Azugi v. Azugi*, PD 33(3) 1, 17 ff [henceforth: *Azugi*] and in CA 630/79, *Lieberman v. Lieberman*, PD 35(4) 359, 372–73. Justice Elon summarizes the issue as follows (*Ḥakikah Datit* (1968), pp. 165–67):

> One of the great innovations of the rabbinical courts in the area of divorce law is the wife's right to receive a certain financial sum at the time of divorce, in addition to her *kettubah*. This sum varies according to the circumstances of the particular case. The rabbinical courts refer to this additional sum as compensation. According to the accepted law prior to this innovation, except for in certain cases, at the time of divorce a woman was entitled to receive her *kettubbah* and to take back the property that she had brought into the marriage. This property included: (a) *nikhsei zon barzel* – that part of the woman's property that the couple agree will be given to the almost total ownership of the husband, to the extent of his accepting responsibility for any damage caused thereto, and which, upon the termination of the marriage, the woman would receive the value of in accordance with the sum stipulated in the *kettubah;* and (b) *nikhsei melog* – that part of the woman's property whose principal remains in the wife's ownership even after the marriage, but whose fruits (the proceeds of the principal) belong to the husband. The husband bears no responsibility for damage to *nikhsei melog*. Upon dissolution of the marriage – whether by death or divorce – the woman receives the value of the *nikhsei melog* at the time of termination of the marriage. Hence, if their value rises, she profits, and if their value decreases, she loses. The *halakhah* did not recognize the wife's right to receive, at the time of divorce, a share of the assets accumulated during the period of the marriage, unless the parties had an agreement to that effect, even though these assets often come into existence through the combined efforts of husband and wife. This problem has troubled every legal system, and the Knesset considered various private bills regarding a married couple's joint property. It was against this background that the institution of monetary compensation awarded to a woman at the time of divorce came into being through the rulings of the rabbinical courts.

Another innovation related to the woman's economic rights was the establishment, through the rulings of the Israel Supreme Court (*Azugi ibid.*), of the principle of partnership in property acquired during marriage according to Jewish Law. The law regarding partnership in property was created and developed by the justices of the Supreme Court on the basis of the presumed intention of the two spouses to join their assets, and does not follow automatically from the marital bond between them. This bond serves as the background for the couple's conduct and for additional factors in the lives of the married couple that serve as the basis for the legal presumption of partnership in their assets. The legal reasoning that gives validity to the partnership in assets lies in the presumption of implied agreement that may be inferred from these facts and circumstances. This presumption draws its legal force from the fundamental principles of Jewish Law regarding freedom of contract and power of custom – in all its various forms – that finds expression in tendencies in Israeli society and in the creative and decisive power of presumptions.

Succession Rights of Daughters and Wives

The issue of succession in Jewish Law was treated in the entry *Succession. The daughter's standing as lawful heir of her father's estate went through many stages of development and creativity: beginning with the story of the daughters of Zelophehad, who claimed that, as their father had died without leaving a son, and that unless they inherited him, his name would disappear from his family, because his estate would not remain within his family (Num. 27:1–11; 36:1–12); continuing in talmudic law, through the periods of the *geonim*, the medieval and early modern authorities; and down to the post-Emancipation period, in the various centers of Jewish life. The influences of the diverse socio-economic realities at the various stages are evident. Prior to the establishment of the State of Israel, the inheritance rights of daughters were discussed by the two chief rabbis, Herzog and Ouziel. The issue found its resolution in Succession Law, 5725 – 1965, which recognizes no distinction between sons and daughters (see *Ma'amad ha-Ishah*, pp. 255–78).

According to the early *halakhah*, the husband is heir to his wife's estate, but the wife is not a legal heir to that of her husband (Yad, Naḥalot 1.8). By rabbinic enactment, a widow is entitled to reside in the same apartment in which she lived with her husband, and to receive the same maintenance from his estate as she was entitled to receive during his lifetime. These provisions apply automatically, even if the husband did not explicitly commit himself to them in his wife's *ketubbah*. This issue underwent many changes over the course of the generations. In the Ordinances of the rabbinical courts of the Land of Israel of 5703 (1943) (Ordinance 174, 182–183), the rabbinical court agreed that the husband's estate be divided in accordance with the Mandatory Succession Order of 1923, which awards a woman a share in the estate (see: *Ma'amad ha-Ishah*, pp. 279–96).

The Right to Vote and the Right to Be Elected to Public Office

THE RULING IN THE SHAKDIEL CASE. The issue of a woman's right to vote and to be elected to public office was dis-

cussed in the *Shakdiel* case (HC 87/153 *Leah Shakdiel v. Minister of Religious Affairs et al.*, PD 42(2) 221). This ruling is the subject of a detailed discussion in *Ma'amad ha-Ishah* (pp. 51–101), which opens as follows:

> The ruling in the *Shakdiel* case, which was given in May 1988, prior to the passing of Basic Law: Human Dignity and Liberty in 1992, constitutes a classic example of the need for creative interpretation for the resolution of new problems arising in different times and places, and the method of this interpretation. Through an analysis of this ruling, we learn about differences in opinion among the halakhic authorities regarding the necessity and appropriateness of fitting a particular issue in the world of *halakhah* into the new social reality in which they are living. The great creativity evident in their method may serve as an important source of inspiration as we occupy ourselves with the question of the synthesis of the Jewish heritage with the needs of a modern democratic state.
>
> Mrs. Leah Shakdiel – a resident of the town of Yeroḥam in the Negev, a teacher of Judaic studies, an Orthodox Jewess and a member of the Yeroḥam Municipal Council – turned to the Israeli Supreme Court sitting as the High Court of Justice regarding the decision that had been taken to disqualify her from serving as a member of the religious council of Yeroḥam. The claim of the respondents to the petition – the Municipal Council, the local rabbi, the Minister of Religious Affairs and the Committee of Ministers – was that a tradition exists, according to which women are not to be nominated for membership in a religious council. This was supported by an opinion of the Council of the Chief Rabbinate that women may not be permanent members of religious councils. The concern was likewise raised that Mrs. Shakdiel's membership would disrupt the orderly course of activity of the religious council.
>
> After examining all the factual material before him and the claims and arguments of the parties, and after taking note of the sources of *halakhah* and Jewish Law, and the legal material of the laws of the Knesset and the rulings of the courts, Justice Elon concluded that Mrs. Shakdiel's petition should be allowed. The ruling therefore stated: "We therefore decide that she (i.e., Shakdiel) shall be included in the membership of the Yeroḥam religious council, as a nominee on behalf of the municipal council, as her nomination had been presented to the Minister of Religious Affairs with the formation of the religious council."

The Bible, the Talmud, and later sources mention distinguished women – prophetesses, judges, queens, and wise and scholarly woman. These were isolated incidents; the guiding rule – one of great significance in the edifice of the Jewish family over the generations – was: "All the glory of the king's daughter is within" (Ps. 45:14). This verse was taken to mean that a woman earns merit by educating her children and managing her home, and that it is not womanly to be involved in public affairs. A clear and concise expression of this theme is found in Maimonides' reading of Deuteronomy 17:15: "'You shall set a king over you.' "One does not place a woman on the throne, as it said: 'a king over you' – and not a queen. Likewise, for all offices in Israel, only a man may be appointed" (Yad, *Melakhim* 1.5). Maimonides' opinion that men alone may be appointed to public office, and not women, was the accepted

position for many years. This was the customary and accepted norm in the general social and economic realms as well. This position was subjected to question in light of changing time and place at the beginning of the previous century, when the question arose whether women should be granted the right of franchise. The question arose primarily in relation to elections of the institutions of self-government of the Jewish community in the Land of Israel just after the end of World War I. It might be recalled that, until then, women had been denied the right to vote in most countries throughout the world, and that it was only during the latter half of the 1910s that women were given full rights to vote and to stand for election in most states and provinces of the United States and Canada, and in Russia, England, and Germany. In some countries, such as France, this right was only granted as recently as 1944, and in Switzerland as late as 1971.

The views of the rabbinical scholars on this issue fell into three camps. The majority opinion was that women should not be granted election rights, whether active, i.e., the right to vote, or passive, i.e., the right to be elected. Some of the authorities held that women have active election rights but not passive ones. A third camp was of the opinion that there is nothing in the *halakhah* to prevent women from exercising both active and passive election rights – that is, women may both vote for and be elected to public and governmental office.

Rabbi Abraham Isaac ha-Kohen Kook, chief rabbi of the Land of Israel, one of the leading halakhic authorities and thinkers of the Zionist movement, belonged to the camp that denied women both active and passive election rights (see: *Ma'amarei ha-Ra'ayah*, *Kovez Ma'amarim me-et ha-Ra'ayah Kook zazal*, Jerusalem 1984, pp. 189–94). Rabbi Kook discussed the matter from three perspectives: in terms of the law – whether it is permitted or forbidden; in terms of public welfare – whether or not granting women the right of franchise will bring good to the community; and in terms of the ideal – whether our moral consciousness obligates granting election rights or denies it. From the legal perspective, Rabbi Kook followed the earlier halakhic authorities in maintaining that the duty of public service is imposed on men, and not on women. He was also concerned about problems of modesty stemming from a mingling of the sexes in public life. As to the public welfare, Rabbi Kook advocated maintenance of the connection with the sources of Judaism and the Bible, in the name of which the nations of the world recognized at that time the rights of the people of Israel to the land of Israel. "As regards the ideal status of women" – that is, absolute equality of men and women – Rabbi Kook says that "that was a vision for the future… that is as yet entirely unreflected in contemporary cultural life, which is corrupt from within, even though it sparkles from without." Out of concern about injury to the delicate fabric of life and the balance between family life and public life, Rabbi Kook had reservations about granting election rights to women. In his usual manner, he based his decision not only on abstract halakhic principles, but upon his understanding of the delicate balance in the social reality of his time. This position was also advocated by Rabbi

Hayyim Ozer Grodzinski, of Vilna, Lithuania, and Rabbi Israel Meir ha-Kohen of Radin, near Vilna.

An entirely different approach was taken in a responsum written by Rabbi Ben Zion Ouziel, chief Sephardi rabbi of the Land of Israel (see *Resp. Mishpatei Uziel*, vol. 3, ḤM, no. 6). Regarding active election rights, Rabbi Uziel argued that there is no halakhic rule, implicit or explicit, that denies such rights. As for passive election rights, he was of the opinion that the position of Maimonides, according to which " only a man may be appointed for all offices in Israel" only applies to appointments by the Sanhedrin. Regarding a woman's eligibility for public office, however, there is no question of *appointment*, but only of *acceptance*. For by means of the elections a majority of the community expresses its opinion, consent, and trust as regards the elected persons, empowering them to supervise all public affairs; "even Maimonides admits that there is no hint of prohibition in this respect." As for the considerations of public welfare and modesty, Rabbi Ouziel wrote that:

> Reason would have it that there is no licentiousness in any serious conference or useful discussion; and every day, men meet with women on commercial business and negotiate with each other, yet none of this produces any alarm or outcry. Indeed, even those given to sexual abandon do not contemplate forbidden acts while they are seriously bent on their business affairs. The admonition of our Rabbis, 'Do not converse too much with a woman' (Mishnah, Avot 1:5), refers to unnecessary idle talk, the kind of conversation that leads to sin. It does not apply, however, to a conversation or debate about important public affairs; and sitting together for the purpose of public work, which is Divine service, does not engender sinful habits or lead to levity. The entire Jewish people, men and women, are holy and are not to be suspected of breaching the bounds of modesty and morality… In conclusion: (a) A woman has the full right [to participate in] elections so that she may be obligated to obey the representatives chosen to lead the people. (b) A woman can also be elected if the community consents and so legislates (*supra*, pp. 34–35).

Other views expressed on this issue were based on a different analysis of the social reality of the period, through which women were granted an allowance to vote and to be elected to public office by distinguished Rabbis (Shakdiel case, pp. 251–54). A different line of reasoning appeared in a responsum by Rabbi Yehiel Weinberg, who served as head of the Rabbinical Seminary in Berlin (*Resp. Seridei Esh*, vol. 2, no. 52, vol. 3 no. 105). He writes:

> "With respect to your question of women's election rights, Rabbi D.Z. Hoffman allowed them to vote but not to be elected; but the Rabbis in the Land of Israel, as well as Ḥafez Ḥayyim and Rabbi Ḥayyim Ozer Grodzinski and others, barred even this active election right. On the other hand, Chief Rabbi Ouziel, in his *Resp. Mishpatei Uziel*, permits women to both vote and to stand for election. So why should I thrust myself into the controversy between those who permit and those who prohibit; *let time take its course and render the decision*."

Justice Elon interpreted this position as follows (*Shakdiel* case, pp. 260–61):

That expression should not be regarded as an evasion of decision-making duty; rather, it embodies one of the methods employed in halakhic decision-making. As is known, custom is one of the sources of *halakhah*. At times custom serves to decide the law where there are different opinions among the halakhic authorities; sometimes it decides the law on a question that has arisen in practice and to which there is no known answer in the existing *halakhah* (a lacuna); and at times custom not only adds to the existing *halakhah* but even alters one of its rules. This latter function of custom is limited to civil or monetary law alone and, with certain exceptions, does not apply to matters of religious law (*issur*)… As for the role of custom in deciding the religious law where there are differences of opinion among the halakhic authorities, it states in the Talmud, in response to the question of how to decide the law when the authorities are divided: "Go out and see what the people are doing" (Ber. 45a; Eruv. 14b; TJ Pe'ah 7:5). "Let time take its course and render the decision," as Rabbi Weinberg put it, is thus an accepted method of decision-making: let the ultimate ruling be in accordance with the custom followed by the public. (See *Custom.)

Rabbi Moses Feinstein also discussed this issue in the course of a responsum (*Resp. Iggerot Moshe*, YD, vol. 2, no. 44) regarding "the widow of a scholar who was a *kashrut* supervisor, who has been left penniless and lacking means of sustenance for her orphan sons. She being a modest woman and truly God-fearing, and also wise, understanding, and responsible, [the question is] whether one may rely upon her to take the place of her husband as a supervisor, in this manner to provide for herself and her sons." Rabbi Feinstein ruled that "there is no reason for apprehension regarding her trustworthiness, for if she is regarded as a worthy woman who knows and understands how and what to supervise, she may be relied on." Further on, Rabbi Feinstein concludes that, while the office of *kashrut* supervisor is a position of authority, a woman may nevertheless be appointed to this office. In Rabbi Feinstein's view, Maimonides' ruling that only men may be appointed to an "office" is not based on any Talmudic source, but represents "his own reasoning," and there were many authorities who disagreed. "Therefore, because of the widow's great need for her sustenance and that of her orphan sons, one may rely on those who disagree with Maimonides and appoint her as a supervisor in her husband's stead" (*Shakdiel,* pp. 261–62).

The ruling on the sensitive matter of the *Shakdiel*, which was based on Jewish Law, concludes as follows:

> We are aware of the sensitivity of the halakhic, social, and public aspects of the matter. We are also aware of the grave reservations entertained by those entrusted by law with the power of decision, who have rightly sought to avoid an ideological or quasi-halakhic confrontation with the halakhic authorities in Israel today… But none of this is sufficient to free us from the decree of the Israeli law which prohibits discrimination against the petitioner that would exclude her from membership in the Yeroḥam religious council… It pains us that the decision [of the Chief Rabbinate of Israel] was not in favor of the petitioner, even though a decision in her favor would have the sanction of the *halakhah*, according to the opinion of prominent authorities" (*Shakdiel* pp. 271–72).

The Halakhah and Women's Study of Torah

THE RULING IN THE NAGAR CASE. Another example of creativity regarding the status of women in our time – which was also the subject of judicial rulings – relates to the study and teaching of Torah by women and to women. In the *halakhah*, this issue also relates to the issue of parent-child relations (see *Parent and Child). The issue of Torah study and the related issue of parent-child relations was subject to the judicial rulings of the Israeli Supreme Court, especially in the *Nagar* case, which was brought before a "Special Tribunal" composed of Chief Justice of the Supreme Court Meir Shamgar, Deputy Chief Justice Menachem Elon, and *dayyan* of the Rabbinical Court of Appeals Rabbi Joseph Kapaḥ (ST 81/1, *Yehiel Nagar v. Orah Nagar*, PD 38(1) 365 (henceforth *Nagar*)). The case began as a question of parent-child relations, but it came to include a comprehensive discussion of the issue of women and Torah study – both learning and teaching. It should be noted that the Nagar ruling relates to the status of women in the *domestic-social setting*, whereas the ruling in the Shakdiel case (which was given after the *Nagar* ruling) relates to the status of women in the *public setting*. The question to be decided in the Nagar case was: who has the right to decide about a child's education, his father or his mother? The case involved a divorced couple who disagreed about the educational system in which to enroll their children. The father, who was newly Orthodox, wished to enroll his children in the religious educational system, whereas the mother who continued her previous life-style, objected. The rabbinical court ruled that since *halakhah* imposes the obligation to educate his children on the father, he is entitled to decide on the type of education. In the framework of this case, the Supreme Court discussed two issues: the one, a parent's right and obligation to decide on a child's school; and the second, Torah study for women.

A PARENT'S RIGHT AND OBLIGATION TO DECIDE ON A CHILD'S EDUCATION. Justice Elon opened his discussion regarding the right and obligation to decide about a child's education as follows:

> With all due respect, it seems to me that the unequivocal assertion of the rabbinical court, that the obligation to educate his children devolves upon the father, and therefore it is he who has the exclusive right to decide on the form of that education, would not have withstood appeal in the Rabbinical Court of Appeals, had such an appeal ever been heard. Not only does this assertion contradict the Women's Equal Rights Law regarding equal rights of guardianship of the father and the mother, which requires that equal consideration be given to the preferences of the father and the mother regarding their children's education; with all due respect, it seems to me that this assertion does not even correspond to the accepted view on this issue in the world of *halakhah* of our time.

The ruling notes that various medieval authorities were of the opinion that Rabbi Johanan and Resh Lakish disagree on the question whether the obligation to educate a child in the performance of *mizvot* falls exclusively upon the father or also upon the mother (Naz. 28b; and Meiri, *Bet ha-Beḥirah*, ad

loc.). Modern authorities also disagree on this matter (see: R. Abraham Danzig, *Ḥayyei Adam*, Sect. 66, no. 2: "A father is obligated to educate his son and daughter, and some say that the duty of education applies to the mother as well"; Rabbi Jacob Ettlinger, *Arukh le-Ner*, Suk. 2b). Moreover, the primary burden of education usually falls upon the mothers, "who send their children to school, oversee them to assure that they engage in Torah study, show them compassion when they come home from school, and encourage them with treats to desire Torah study" (Rabbi Jonah Gerondi, *Iggeret ha-Teshuvah*, no. 72). Mothers also bear greater responsibility for rebuking their children than do fathers, "because they are available and found more often at home" (Rabbi Isaiah Horowitz, *Shenei Luḥot ha-Berit*, *Sha'ar ha-Otiyot*, *Derekh Erez*). A mother's obligation finds explicit mention in Scripture: "My son, hear the instruction of your father, and do not forsake the Torah of your mother" (Prov. 1:8).

The right and duty to educate a child is a central factor with respect to his custody. In the context of custody rights, according to *halakhah*, the term education, includes, in addition to Torah study, vocational training and, most importantly, fashioning the child's personality. It is thus that halakhic scholars account for the assumption that the daughter must always be with her mother and, above the age of six, the son with his father: "For just as a mother will instruct her daughter in the way of girls, so a father will instruct his son what befits him" (Rabbenu Yeroḥam, *Toledot Adam ve-Ḥavah*, *Sefer Ḥavah*, Sect. 23:3); "And he must teach him the method of study and the ways of men" (*Resp. Rashba, ha-Meyuḥas la-Ramban*, no. 38; see also *Resp. Radbaz*, vol. 1, no.429). This is the basis for the ruling of the Rabbinical Court of Appeals that the distinction between boys and girls with respect to custody of a child over the age of six applies even when the parents are not religiously observant: "Even in a case where the two parties fail to educate their children toward the practice and study of Torah, the obligation of a father to his son and the right of the son vis-à-vis his father, is that the son should be near his father and in close connection with him, so that he may strengthen his masculine identity and character traits" (Rabbinical Appeal 33/39, p. 259, following R. Kapaḥ). Moreover, as for a son's education, "a father can teach his son what he is obligated to teach him, even if he is not with him, e.g., by hiring a teacher or apprenticing him to a craftsman" (responsum of R. Isaac Molina, published from a manuscript by Abraham David, *Kiryat Sefer* 44 (1969), 557). This has special significance in our day, when a child's education, in all its various forms, takes place in a wide variety of educational institutions. Thus, the Rabbinical Court of Appeals issued a ruling relating to the aforementioned distinction and making reference to a disagreement between Maimonides and Rabbi Abraham of Posquières (Yad, Ishut 21.17): "However, regarding a son who studies Torah, surely Maimonides writes… that the teacher must teach them all day long and part of the night, in order to train them to study during the day and at night… Thus, the father is not left with any time to teach his son, but

only that he should be under his supervision for eating and sleeping, and regarding this it may be argued that the father has no priority over the mother" (File (Jerusalem) 24/42, p. 17, per R. Abraham Shapira).

This was also the conclusion in the *Nagar* case (p. 403): "While these arguments were put forward regarding the right of custody over the son, they also have considerable implications for the question of the priority given to the father to decide the form of [his son's] education-schooling. Since the child's education is no longer provided personally by the father, and it is not the father who teaches him, but rather the teachers in his school and his rabbis, it stands to reason that these should act as the agents of both the parents and with their consent."

TORAH STUDY FOR WOMEN. According to the *halakhah* in the Mishnah and Talmud, a father must teach his son Torah, but a mother is exempted from this obligation (Kid. 29a, Mishnah and Gemara *ibid.*). This law is summarized by Maimonides (Yad, Talmud Torah 1:1): "Women… are exempt from the study of Torah; but a father is required to teach his minor son Torah; as it is said: 'You shall teach them to your sons and speak of them' (Deut. 11:19). A woman is not required to teach her son, since only those who are obligated to study are also obligated to teach."

As early as in the tannaitic period, differing views were expressed regarding this "triple" exemption of women – the exemption of a mother with respect to teaching her son, of a woman with respect to study, and of a daughter with respect to being taught by her father. According to Ben Azzai, "One is obligated to teach his daughter Torah," while Rabbi Eliezer ben Horcanus took the view, "Whoever teaches his daughter Torah is considered as if he taught her *tiflut*" – licentiousness (M., Sot. 3:4). Although various talmudic and post-talmudic sources have spoken in praise of wise and learned women, the view of Rabbi Eliezer came to be accepted as the law.

With the passage of time, the law on this subject underwent a number of changes; the prohibition against teaching Torah to women was constructed more narrowly, both in terms of the subjects permitted to be taught (the Written Law and various laws with practical relevance) and how deeply the material should be taught. The *halakhah* established that a woman is under no obligation to study Torah, and therefore is not obligated to teach Torah. This was essentially the situation until different rulings and conceptions penetrated the world of *halakhah*, a small number over the course of history, and far more in recent generations.

The social changes that have transpired in recent times have had an evident and far-reaching effect on halakhic decision making regarding Torah study for woman and by women. Rabbi Zalman Sorotzkin, one of the leading authorities in the world of yeshivot, has ruled: "Recent times are not like earlier times: in earlier times, Jewish families lived according to the rules of the Shulḥan Arukh, and it was possible to learn the entire Torah from daily life at home… But today… not only

is it *permitted* to teach Torah and reverence towards God to the daughters of our generation, but there is *an absolute duty* to do so, as we have explained; and it is a great *mitzvah* to establish schools for girls to implant in their hearts a pure faith and [to teach them] Torah and the commandments…" (Rabbi Zalman Sorotzkin, *Moznayim la-Mishpat*, 1955, sec. 42).

Halakhic decision-making does not break completely with the existing *halakhah*, but rather limits it, and distinguishes between prior and newly developing *halakhah*. In light of the contemporary social and ideological reality that is undergoing fundamental changes, women today are integrated in all areas of activity, in the academic world, in the business world, and in all social life. This reality is no longer commensurate with the conclusions drawn in a different time and under different circumstances, based upon the principle of "All the glory of the king's daughter is within" (Ps. 45:14). Familiarity with and knowledge of the halakhic sources is necessary for both men and women in order to deal with the challenges of the time. For this reason the prohibition to teach one's daughter Torah has been restricted. Rabbi Moshe Malka, head of the rabbinical court of Petaḥ Tikvah, summarized the matter as follows: "Rabbi Eliezer would certainly admit that it is not at all forbidden to teach a woman even the Oral Law, so that she may be able to exercise care in observing all the laws of the Torah that pertain to her work and activities. Indeed, it is our duty to educate her to the fullest extent possible…" (*Resp. Mikveh ha-Mayyim*, vol. 3, YD, no. 21).

The permission granted to women to study Torah, which has been understood by some as an obligation, was expanded in a ruling of Justice Elon, with the agreement of Dayyan Kapaḥ, to also include an obligation imposed on the woman to teach her children Torah (*Nagar,* pp. 406–7):

> In summary, as we have seen, the law that a father is obligated to teach his son Torah, but the mother is exempt, is based on the law that the father himself is obligated to study Torah, and the woman is exempt from such self-study, following the rule that only one whose duty it is to learn has a duty to teach. In our day, after such an fundamental change has taken place, that not only is there no prohibition, but women are even obligated to study Torah, and women not only study for themselves, but also teach the children of others, the conclusion seems to follow that the obligation to teach a son Torah falls equally upon the father and the mother, following the rule that whoever has the duty to learn has also the duty to teach. All the more so this is true when we are dealing with fulfilling the obligation by way of expressing an opinion regarding the school to which the son should be sent. And were I not hesitant, I would say that the Rabbinical Court of Appeals, had it been asked to deal with obligation of educating children, both sons and daughters, would have concluded that it is a joint right and obligation falling upon both parents, subject of course to the special education that a father must give to his son and a mother to her daughter through understanding of and identification with the children of their own gender.

WOMEN'S PRAYER. Another issue that the Supreme Court was asked to consider in connection with the status of women in

the world of *halakhah* was that of public prayer conducted by women (see: HC 257/89 *Anat Hoffman et al v. the Trustee over the Western Wall et al.*; and HC 90/2410, *Susan Alter et al. v. the Minister of Religious Affairs*, 48 (2) PD 265–358 (henceforth Women of the Wall); Elon, *Ma'amad ha-Ishah*, p. 119–193).

The issue of women's prayer, their obligation and their exemption, and other related topics, has been discussed at length in the literature of *halakhah* and Jewish thought. The discussion has greatly expanded in recent times in light of the social changes that have transpired. The halakhic questions that have arisen in this connection relate to the laws of prayer: First, is a woman permitted to wear a *tallit*? And second, is she permitted to carry a Torah scroll and read from it? These two questions relate to another issue, namely, the nature of public prayer conducted by women.

Underlying these issues is the halakhic principle stating that women are exempt from time-bound positive commandments, that is, those whose performance depends upon a fixed date or time (e.g., during the day and not at night, during particular hours of the day, on specific days or festivals, and the like; M., Kid. 1:7; Kid. 32a; Maim. Yad, Avod. Zar. 12:3; Yad, Ẓiẓit 3:9; Sh. Ar., OḤ, 17:2; S.J. Berman, "The Status of Women in Halakhic Judaism," in: *Tradition,* 14 (1973) 11–13). Various rationales have been offered for this exemption (see, for example, R. Elyakim Ellinson, *Bein ha-Ishah le-Yoẓerah: Ha-Ishah ve-ha-Mitzvot* (vol. 1, second ed., Jerusalem, 1982), p. 30 ff.) According to the prevalent view, a woman is exempt from these obligations so as to make it easier for her to fulfill her role in the world, and not because of any inferiority in relation to the man. In the world of Judaism, the primary role assigned to a woman is to build the home and family – "All the glory of the king's daughter is within" (Ps. 45:14). Hence, the Sages determined that any *mitzvah*, whose performance depends on a particular time, is not binding upon a woman, so as not to make it more difficult for her to fulfill that role.

This rationale is already found in the halakhic literature of the Middle Ages (see: *Sefer Abudraham ha-Shalem: Seder Tefillot shel Ḥol*, Pt. III, *Birkot ha-Mitzvot*), and was well-summarized by Rabbi Moses Feinstein (*Resp. Iggerot Moshe*, OḤ, pt. 4, no. 49):

> For most women in the world are not wealthy, and the burden of child-rearing, which is the most important work for God, blessed be He, and for the Torah… Women's nature is more amenable to child-rearing, for which reason they were granted the leniency of not being obligated in Torah study and the time-bound positive commandments. Therefore, even if the circumstances of living in the world would change for all women, and for wealthy women at all times, and even were it possible to transfer child-raising to certain men and woman, as in our country – Torah law would not change, nor even rabbinic law. … You must understand that this is not because women are lower in the level of holiness than men, for with respect to holiness they are equal to men regarding obligation in *mitzvot*. For the command of *mitzvot* is due only to the holiness found in Israel, and all the verses regarding holiness were said to the women as well. At the beginning of the conditions for receiving

the Torah: "You shall be My own treasure from among all peoples… and you shall be to Me… a holy nation." All this was said to the house of Jacob, namely, the women, and told to the children of Israel, that is, the men. And wherever you find the matter of the holiness of Israel, it also refers to women. Therefore, women also recite blessings over the commandments, using the formula, "Who has sanctified us with His commandments," like men, even over those commandments that the Torah did not obligate her [to fulfill]. It is merely a leniency for some reason that God, blessed be He, wished to be lenient with them, as explained above, but not because of some deficiency, God forbid. As for the obligations between husband and wife, the husband is obligated to honor his wife, and the wife her husband, with no distinction. And many women were prophetesses and they were governed by all the laws of prophecy like men. They are praised for many things, both in Scripture and in the words of the Sages, of blessed memory, even more so than men. There is no belittlement of their dignity or anything else in the fact that they are exempt from Torah study and the time-bound positive commandments. And there is no reason for resentment whatsoever. This, you must explain over and over again."

A unique rationale for the exemption regarding time-bound positive commandments given to women was suggested by Rabbi Samson Raphael Hirsch, pioneer of the school of Torah with *derekh erez* (in his commentary to Lev. 23:43): "Their exemption from time-bound positive commandments is most certainly not on account of their being considered in any way of lesser worth or importance. Rather, it seems to us much more likely that the Torah did not impose these commandments upon women because it did not consider it necessary that they be demanded of women. God's Torah takes it for granted that women have greater love and more devoted enthusiasm for their God-serving calling, and that this calling involves less danger in their case than for men whose devotion to Torah is more exposed to the temptations which occur in the course of business and professional life. Accordingly, it does not find it necessary to give women these spurring reminders to remain true to their calling, or warnings against weaknesses in their business lives.

Justice Elon summarized the issue in his ruling in the Women of the Wall case (pp. 305–6):

> The "exemption" from time-bound positive commandments – such as public prayer, *shofar* blowing (on Rosh ha-Shanah) and taking the *lulav* (on Sukkot) – does not deprive a woman of permission to fulfill these positive commandments if she so desires. According to many halakhic authorities, when a woman fulfills a time-bound positive commandment, she is also permitted to recite the same appropriate blessing as that said by men: "Who has sanctified us with His commandments and commanded us…" (*Tosafot*, Kid. 31a, s.v. *delo mafkidna*; Ramban, ad loc., s.v. *man de-amar li*; Ritva, novellae, ad loc., s.v. *katvu ba-Tosafot*; Ra'avyah, vol. 2, no. 597).

Based on the above, the halakhic authorities ruled that a woman who wishes to participate in congregational prayer is not counted toward a *minyan*, the required quorum of ten. This was based upon the reasonable and logical reason that one who is exempt from the *mitzvah* cannot be counted in the

obligatory quorum that constitutes the *minyan*. The same rationale has been applied to a man who is exempt from *mitzvot* under certain circumstances. Thus, for example, a person whose close relative died but has not yet been brought to burial is classified as an *onen* – a person in the initial stage of mourning immediately after the death prior to the burial. During this period, he is exempt from the obligation to fulfill *mitzvot*, due to his emotional state and his preoccupation with the burial. According to many halakhic authorities, during this period of *onenut*, since he is exempt from the obligation to pray, he is not counted toward a *minyan* (*Sheyarei Keneset ha-Gedolah*, oḥ, 55; *Hagahot Bet Yosef*, 4; *Resp.* Paraḥ Mateh Aharon, vol. 1, no. 19; *Resp.* Shevut Ya'akov, vol. 2, no. 25).

For this reason, women are counted toward the required quorum with respect to obligations that for one reason or another bind them (e.g., Megillah reading, public sanctification of God's name, and others). Moreover, according to some halakhic authorities, women are obligated in prayer, but they are not obligated in *congregational prayer* (Ber. 20a–b; Maim. Yad, Tefillah 1:2; Sh. Ar., oḥ, 106:1–2, and *Magen Avraham*, ad loc., no. 2).

There is a difference of opinion as to whether women are obligated in all three daily prayers – the Morning, Afternoon, and Evening services – or only in some of them. According to one of the most noted authorities of the past century, Rabbi Israel Meir of Radin, women are obligated to recite the morning and afternoon services (*Mishneh Berurah* on Sh. Ar., oḥ 106.4). Others are of the opinion that women are not at all obligated in prayer, given that it is a time-bound positive commandment. According to *halakhah*, a *minyan* of ten men is required in order to fulfill the obligation of communal prayer, and only in a *minyan* may "matters of holiness" – that is, prayers and blessings which sanctify God, such as *kaddish*, *barekhu* and *kedushah* – be recited (Meg. 23b), and only in a *minyan* does the prayer leader repeat the *Amidah* prayer. Women are not counted toward a *minyan* of ten, for reasons that we will explain below. There are other matters as well – e.g., the priestly blessing, the special *zimmun* recited in the presence of ten, and others – that require a quorum of ten men. The halakhic authorities disagree about the underlying rationale (see Maim., Yad, Tefilah 8:4–6; Sh. Ar., oḥ, 55:1, 69:1). As stated above, women are not counted toward the required minyan, except in certain special cases, according to certain halakhic authorities (see: A. Frimer, "Women and Minyan," in: *Tradition*, 23:4 (1988), pp. 54ff.; A. Weiss, *Women at Prayer* (1990 (13–56)).

It follows from all the above that *halakhah* does not take a hierarchical or condescending attitude toward women. On the contrary, women have "greater affection and more devoted enthusiasm" than men, and it was unnecessary for time-bound positive commandments to be required of them. The halakhic exemption granted women is rooted in *halakhah*'s great attentiveness to the special circumstances of a woman's life, the fact that the burden of child-rearing falls primarily on her shoulders. It is, therefore, clear that she is permitted to take part in

the observance of such *mitzvot*, even if she is not obligated to do so (see: D. Sperber, "*Tefilat Nashim*," in *Minhagei Yisra'el* (vol. 7, Jerusalem, 2003), pp. 68–81).

Halakhah's attitude toward the new phenomenon of women's "prayer groups" has been discussed in light of the sources cited above. The discussions begin with concrete halakhic questions, e.g., wearing a *tallit* and reading the Torah.

Women are exempt from wearing *ẓiẓit* (ritual fringes) and wrapping themselves in a *tallit*, for this is a *mitzvah* that is considered among the time-bound positive commandments, its obligation being limited to daytime, as opposed to night. However, as stated earlier, while women are *exempt* from the obligation to fulfill time-bound positive commandments, they are *permitted* to do so. This applies to the *mitzvah* of *ẓiẓit* as well. In fact, it is in the context of his discussion of this *mitzvah* that Maimonides records the general principle. He states as follows (Yad, Ẓiẓit 3:9): "Women… are exempted by scriptural law from the obligation of having fringes on their garments… If women… desire to wear garments with fringes, no objection is raised, but they do not recite the blessing. The same is the rule with respect to other positive precepts from the obligation of which women are exempt. If they wish to fulfill them without reciting the blessing, no objection is raised." R. Abraham of Posquières agrees that women may fulfill such precepts (*Hagahot ha-Rabad*, ad loc.), and adds that they may even recite a blessing (see also Rabad's comment to *Sifra*, *Vayikra*, *parshata* 2).

There are divergent views in the world of *halakhah* regarding whether or not women who fulfill time-bound positive commandments of their own volition are permitted to recite a blessing. Rabbi Moses Feinstein, in the previously mentioned responsum (*Resp. Iggerot Moshe*, oḥ, part 4, no. 49) rules that, just as women are permitted in general to fulfill time-bound positive commandments and to recite a blessing over them, so too regarding *ẓiẓit*, "a woman who so desires may don a four-cornered garment that is different than a man's garment, put fringes on it, and fulfill the *mitzvah*." But he adds a reservation that runs throughout the responsum: "Clearly, however, this only applies when her soul yearns to fulfill the precepts, even though she was not commanded. Since, however, this is not her intention, but only an aspect of her protest against the Torah, this is not at all an act of *mitzvah*, but, on the contrary, a forbidden act, involving the heresy of believing that the laws of the Torah can be changed." Justice Elon commented on this reasoning (*Ma'amad ha-Ishah*, pp. 131–32):

> "The requirement is that one must perform a *mitzvah* for the purpose of fulfilling the mitzvah, and not out of disregard for a halakhic rule, motivated by 'the alien consideration' of objecting in principle to the exemption because it is offensive to women. In the world of *halakhah* this requirement serves as a firm foundation for legislating enactments, instituting customs and introducing changes into them. The litigants presented us with a letter written by Rabbi Tendler, Rabbi Feinstein's son-in-law, clarifying his father-in-law's position as to his concern that the women's prayer groups are motivated by alien considerations, as stated above, and that the permission to wear a *tallit* applies only when it is clear that their intention is for the sake of

Heaven, without any questioning of Israel's Torah and customs. This argument is included among the moral understandings of the world of *halakhah*, which serve as a weighty factor in *halakhah*'s policy of decision-making in general, and in especially sensitive issues, like the one before us, in particular.

In both earlier and more recent generations, there were women who were accustomed to wear a *tallit* and recite a blessing, with the approval of the halakhic authorities (see Y.Z. Kahana, *Teshuvot, Pesakim u-Minhagim Maharam mi-Rotenburg*, p. 141, no. 24; *Resp. Zemah Zedek*, OḤ, no. 3, which goes into a full and detailed discussion of the issue; Y.M. Toledano, *Ner ha-Ma'arav*, p. 155; and see S. Ashkenazi, *Ha-Ishah ba-Aspaklariyat ha-Yahadut*, 1953, vol. 1, p. 137). It was nevertheless not the general custom of women, at least not in recent generations, to wear *zizit* or enwrap themselves in a *tallit*, unlike the case regarding other time-bound positive commandments, such as blowing the *shofar*, waving the *lulav*, or sitting in the *sukkah*, which they were accustomed to fulfill. The reason lies in the custom, first mentioned by the Maharil, that women should abstain from so doing (*Resp. Maharil ha-Ḥadashot*, Jerusalem, 1977, OḤ, no. 7, pp. 13–14). The custom is cited by the Rema (Sh. Ar., OḤ, 17.2) as follows: "Nevertheless, if [women] wish to wrap themselves [in a *tallit*] and recite the blessing, they are permitted to do so, just as is the case with the other time-bound positive commandments… It appears, however, as haughtiness. Therefore, they should not wear *zizit*, since it is not an obligation on the person." According to some more recent authorities, the common practice today is in fact that women do not wear *zizit* (*Kaf ha-Ḥayyim*, OḤ, 17, no. 8; *Arukh ha-Shulḥan*, OḤ, 17:2–3, and see there the explanation offered by the author of the *Arukh ha-Shulḥan* regarding what the Rema says that "it appears as haughtiness," and his conclusion: "Therefore, we do not allow her to practice this *mitzvah*, and thus is the custom, and there must be no deviations"; cf. Rabbi S. Yisraeli, "*Nashim be-Kiyyum Mitzvot*," in *Ha-Ishah ve-Ḥinukhah* (Emunah, 1980, p. 29).

As for the issue of Torah reading by women, most halakhic authorities maintain that a woman is exempt from the obligation of public Torah reading, since it is regarded as a time-bound positive commandment (*Tosafot*, R.H. 33a, s.v. *ha-Rabbi Yehudah, ha-Rabbi Yose*; and see there a detailed discussion of most of the topics discussed here; Ran on Alfasi, Meg. 23a, s.v., *ha-kol olin le-minyan shiv'ah*; *Resp. Maharsham*, vol. 1, no. 158; *Arokh ha-Shulkhan* OḤ, 182:6). The *mitzvah* of public Torah reading is defined as a time-bound positive commandment, since it is limited to specific times. Women, therefore, are not counted toward the quorum of ten required for the Torah reading, just as they are not counted toward the quorum of ten required for congregational prayer. They are, however, permitted to read the Torah in the context of women's prayer groups. A question arises regarding the *barekhu* blessing that accompanies the Torah reading, since that falls into the category of *devarim she-bi-kedushah*. Rabbi Tendler summarized the issue in his aforementioned letter: "They may also read from a Torah scroll, but they must be careful to do so in such a way that it not be mistaken for public Torah reading. For example, they may not recite a blessing in public; either they should rely on a blessing that had been recited earlier, or if such a blessing had not yet been recited, they should recite it quietly to themselves." The letter concludes: "There is no absolute prohibition for a menstruating woman to gaze upon or touch a Torah scroll. While it is proper to be stringent, nevertheless it has become customary to be lenient in the matter." It is on this basis that the question of a women's *minyan* was discussed.

Before the modern period, women generally did not go to synagogue for the purpose of congregational prayer. In modern times, women began to attend synagogue services on the Sabbath and festivals. The prayer service and Torah reading was conducted entirely by the men and in the men's section. The woman sat in the women's section that was set apart from the men's section. They played a solely passive role in the service, that is to say, in the women's section, they recited the entire prayer service that was recited and conducted in the men's section. In the last generation, certain women have expressed the desire to conduct a prayer service that would be composed and conducted entirely by women, but not as was customary in a *minyan* composed of men – that is, with *kaddish*, *barekhu*, and other such elements – but rather without these passages, so as not to violate the laws of *halakhah*. These women referred to such services as "prayer groups" or "*tefillah* groups," in order to distinguish between them and a men's *minyan*. Some Orthodox rabbis have supported these women's prayer groups; others, however, while recognizing and encouraging the social and intellectual achievements of religiously observant women in our day, object to women's "prayer groups," and view them as a serious violation of *halakhah* (Women of the Wall, pp. 306–7).

Today, the number of women's "prayer groups" is not large; they were first established in the United States, and there are only a few of them in the State of Israel. The two approaches of Orthodox Jewry, while agreeing on many points, differ bitterly on this issue, the controversy having found widespread written expression. Rabbi Herschel Schechter ("*Ze'i Lakh be-Ikvei ha-Zon*," in *Beit Yizḥak*, 17 (1985), 118, at p. 127 (henceforth: Schechter)) maintains that: "We have never seen nor heard of such a practice of arranging a separate Torah or *megillah* reading for women, or of arranging separate *hakafot* for women. The obligation falls upon us to continue the tradition of our fathers and their fathers before them regarding the manner of observing the *mitzvot*." Therefore, "since women had never been accustomed to observe the *mitzvot* of prayer and Torah reading in this manner, we must not deviate from the tradition of our fathers, and make up new practices… Not only must we continue the tradition of our fathers, but there is also a prohibition to deviate from customary practices. While it is true that 'we have never seen' is not proof, nevertheless, the *Shakh* (YD 1:1) has already explained… that in any event such conduct establishes a custom… and thus these practices involve [the violation of] the prohibition of changing customs" (*ibid.*, pp. 128–29).

This approach was not accepted by Justice Elon who stated (Women of the Wall, p. 313): "This assertion is not free of uncertainty. The absence of a custom does not necessarily constitute proof of the negation of that arrangement; in certain situations there exists a lacuna which may be filled, when the time and the need arrive – obviously, when this does not involve [the violation of] a halakhic prohibition."

Rabbi Schechter views Orthodox women's prayer groups as a "falsification of the Torah" (p. 119), because "it is their intention to show everyone that women are as important as men." According to Rabbi Schechter, the congregational prayer of these Orthodox women involves a violation of the prohibition against adopting non-Jewish practices (*ibid.*, p. 131). For "it is known that these practices were not introduced in our time in a vacuum, but as a result of the general movement for the liberation of women, whose objective in this area is licentiousness, to equate women with men in every way possible" (*ibid.*). The reference here is not to non-Jewish practices in general, but to "non-Jewish practices regarding the performance of religious duties" (*ibid.*). Justice Elon commented on this (Women of the Wall, pp. 321–25):

> With all due respect to the distinguished author, it is difficult to fully understand what he means. Why should we suspect those who participate in the public prayer groups designed for women and conducted by them of such grave intentions and objectives, when their entire conduct demonstrates their meticulousness about *halakhah*: for example, not to recite *devarim she-bi-kedushah*, such as the prayer leader's repetition of the A*midah* and the like? Does this not in itself prove that the objective of the organizers of the women's public prayer services – with their observance of the framework of *halakhah* and its laws – is [to fill] a spiritual need that stems from knowledge of the *mitzvot* and *halakhah*, of the Torah and the ways of Torah scholars and thinkers? This seems so, particularly in light of the fact that these young girls, teenagers, and women, are meticulous about the ways of *halakhah*, both trivial and serious, and have studied for many years in educational institutions that promote Torah and *derekh ereż*, and it is because of this education that they seek their own expression, within the framework of *halakhah*, by way of prayer groups, the subject of our discussion.

In Rabbi Schechter's sharp objection to women's prayer groups, even when they do not constitute a "*minyan*," he relies on the rulings of two of the generation's leading authorities, Rabbi Moses Feinstein and Rabbi Joseph B. Soloveitchik. Rabbi A. Weiss correctly noted that Rabbi Schechter was imprecise on this point. As for the position of Rabbi Soloveitchik, nothing was ever committed to writing, and the view that is attributed to him was reported by rabbis and disciples who had consulted with him. According to their reports, Rabbi Soloveitchik did not object to the existence of women's prayer groups per se, but to particular elements that were practiced in such groups, such as the recitation of the blessing before and after the Torah reading (see Rabbi Weiss, *ibid.*, pp. 107–8). As for the position of Rabbi Moses Feinstein, this is stated explicitly in a detailed responsum (*Resp. Iggerot Moshe*, oḥ, pt. 4, no. 49), mentioned earlier. This responsum does not give voice to an objection

in principle to women's prayer groups, when their intentions are in fact for the sake of Heaven, but only to certain changes adopted in such prayer groups regarding Torah reading (see Rabbi Weiss, *ibid.*, pp. 108–10). As stated in earlier comments, according to Rabbi Schechter, the world of *halakhah*, by its very essence, is not stagnant; it is open to new laws and enactments, according to the needs of the time and place. There are, however, matters and principles regarding which halakhic creativity must demonstrate great caution, and according to him, the matter under discussion is included among them. He is aware of the changes that have occurred in recent generations regarding the social standing of women, their knowledge of *halakhah* and their general education, but he argues that all these do not justify the changes involved in women's prayer groups, that are influenced by alien and non-halakhic considerations, with all that they involve with respect to the centrality of prayer and the synagogue in Jewish tradition (see, *ibid.*, end of p. 125 and p. 127 ff. regarding "the pillar of *mitzvah* in the deeds of *mitzvah*, and pp. 130–31 regarding the special stringency concerning "synagogue traditions").

Rabbi Weiss espouses the opposite view. In his comprehensive monograph on the topic, he concludes his discussion of women's prayer groups with the following (pp. 123–24): "Within Halakhic guidelines, woman may participate in women's prayer groups, as long as these groups fall into the halakhic category of *tefillah* and not *minyan*… Participants in such groups are not rebelling against Torah Judaism. Quite the contrary. They are seeking to instill greater religious meaning in their lives. Their purpose is not to diminish the Torah, but to enhance their Jewish commitment and halakhic observance… Their quest to reach nobly to attain this lofty objective should be applauded."

THE WOMEN OF THE WALL CASE. The issue of women's prayer was dealt with by the Israeli Supreme Court on several occasions. The first ruling (Women of the Wall case) involved two petitions presented by women who wished to conduct their prayer service in the Western Wall plaza, while carrying Torah scrolls, wearing *tallitot*, and reading out loud from the Torah. The prayer of these women aroused the fierce objection of the overwhelming majority of those praying at the Wall – both men and women – which was accompanied by disturbances and physical and verbal violence. Justice Elon issued a detailed and comprehensive ruling on the matter, close to a hundred pages in length, based on the above-cited and other sources. While he was of the opinion that a women's *minyan* does not contradict the Jewish character of the state, *he ruled that there must be no deviations from local custom, because changes in custom will result in strife and quarreling.* He concludes his ruling as follows (pp. 350–51):

> It is clear beyond all doubt that granting the petitions before us will give rise to exceedingly difficult, bitter, and sharp controversy, accompanied by violence that will end in bloodshed. It is an uncontested fact that the overwhelming majority of people visiting the Western Wall day and night for the purpose of prayer are counted among those who maintain and believe,

honestly and innocently, that the changes sought in the two petitions before us involve a desecration of the prayer site adjacent to the Western Wall. Not only would these changes lead to very difficult and violent controversy, but the laws of *halakhah* would prevent people, men and women, from conducting their prayers at the Wall… It is clear and unnecessary to say that the petitioners have the right to pray as they please in their congregations and synagogues, and nobody will prevent them from doing so. The freedom of worship of the petitioners remains firmly in place. However, owing to the uniqueness of the Western Wall, and the great sensitivity in the holiest place to the entire Jewish people, prayer in this unique and special place should be conducted in accordance with the common denominator that allows for the prayer of every Jew; namely, in accordance with the custom that has prevailed there for generations.

It should be noted that the Supreme Court addressed the issue in two additional, later occasions (HC 3358/95 *Anat Hoffman et al v. Administrative Director of the Prime Minister's Office et al*, PD 54(2) 345; HC 4128/00, *Administrative Director of the Prime Minister's Office v. Anat Hoffman et al*, PD 57(3) 289).

BAT MITZVAH CELEBRATIONS. As we have seen, practice and custom (see **Minhag*) have had great impact upon decision-making in matters related to the status of women. In this context it is interesting to examine the attitude of the halakhic authorities to the celebration of bat mitzvah of a young girl who has reached the age of maturity (*Ma'amad ha-Ishah*, pp. 137–42). It should first be noted that Rabbi Yehiel Weinberg discussed the issue (*Resp. Seridei Esh*, vol. 3, nos. 93–96) whether it is permissible to perform circumcision of an infant, or that of an adult who had not been circumcised in infancy, under anesthesia, in order to lessen the pain and suffering caused by the procedure. He answers in the negative, especially with respect to the circumcision of an adult. In another responsum, Rabbi Weinberg was asked about celebrating the bat mitzvah of a girl upon reaching her 12th birthday, just as it has always been customary to celebrate a boy's bar mitzvah upon his reaching the age of 13. On this matter, he answered in the affirmative, namely, that a celebration should be held for a girl as well. What is common to the two responsa is that they both deal with innovative practices, the one regarding circumcision, and the other regarding the celebration of bat mitzvah. In a lengthy and detailed responsum, Rabbi Weinberg explains his negative reply regarding the use of an anesthetic during circumcision, arguing that this possibility had already existed in ancient times, during the Talmudic period, but it had met with the opposition of the halakhic authorities for the halakhic reasons detailed in his responsum. This being the case, we apply the principle that "the custom of Israel is considered Torah," and do not deviate from the customary practice. In contrast, regarding the celebration of a girl's bat mitzvah, Rabbi Weinberg's reply was in the affirmative, and the reasoning expressed in his responsum is very instructive. Indeed, bat mitzvah celebrations had not been customary in previous generations, and thus, "there are those who argue against allowing a bat mitzvah celebration, on the grounds that it contradicts the custom of the earlier generations, who

did not practice this custom" (*ibid.*, p. 297, col. 1). However, he refutes this argument:

> In truth, however, this is not a [valid] argument, for in earlier generations it was unnecessary to engage in girls' education, for every Jew was full of Torah and fear of God, and the air of every community in Israel was filled with the spirit of Judaism… Now, however, the generations have drastically changed… [Moreover,] It pains the heart that with regard to general education – the teaching of languages, secular literature, natural sciences, and humanities – people are concerned about girls in the same way that they are concerned about boys, but they totally neglect religious education – the study of Scripture and the ethical literature of the Sages, and training in the practical *mitzvot* that are binding upon women. Fortunately, the leading authorities of the previous generation recognized the problem and established institutions of Torah and religious strengthening for Jewish girls. The establishment of the great and comprehensive network of Bet Ya'akov schools is the noblest demonstration of our generation. Common sense and pedagogical principle almost demand that we celebrate a girl's reaching the obligation of *mitzvot*. The distinction made between boys and girls regarding the celebration of their maturity seriously offends the sensitivities of the girl who comes of age (*ibid.*, p. 297, col. 2).

As for the concern of "alien considerations" underlying the introduction of the new practice of celebrating a bat mitzvah – that is to say, such celebrations involve an imitation of non-Jewish practices – Rabbi Weinberg says as follows:

> Our brothers who have recently introduced the practice of celebrating a bat mitzvah say that they have done so in order to strengthen in the heart of a girl who has reached [the age of] *mitzvot* her love for Judaism and its commandments, and to arouse a feeling of pride in her Judaism and in her being the daughter of a great and holy people. It is of no concern to us that the Gentiles also celebrate confirmation whether for boys or for girls; they conduct their ceremony and we ours; they pray and bow down in their churches and we bow down and prostrate ourselves and give thanks to the King of Kings, the Holy One, blessed be He (*ibid.*, p. 297, col. 1).

Justice Elon summarizes this issue in the aforementioned Women of the Wall case:

> In summation, a custom that deviates from a pre-existing custom, such as using anesthetics during circumcision, should not be accepted; for this is the power of custom, that it becomes law, and there is no halakhic justification to change it, unless it is justified in the light of the social changes and legitimate ideological changes in the world of *halakhah*. On the other hand, introducing a new custom, such as celebrating a girl's bat mitzvah, which does not contradict the existing law, and whose non-existence in the past stems from a specific social-ideological reality that has now entirely changed… It is right and fitting that it be accepted, on its own merits and in order to prevent a situation in our generation, as formulated by Rabbi Yehiel Weinberg, in which "the distinction made between boys and girls regarding the celebration of their maturity seriously offends the sensitivities of the girl who comes of age."

The practice of celebrating a girl's *bat mitzvah* upon her reaching the age of 12 was also discussed by Rabbi Moses Feinstein (*Resp. Iggerot Moshe*, OḤ, no. 104). Rabbi Feinstein raises

doubts about the propriety of introducing the custom of a bat mitzvah celebration, and he sees such a celebration, not as a *se'udat mitzvah* [a meal constituting a *mitzvah*], but merely a birthday party." Rabbi Feinstein absolutely forbids the celebration of a bat mitzvah in a synagogue, but permits it at home. He adds that this celebration involves the alien consideration of imitating a practice observed in circles that do not accept *halakhah* whatsoever.

Rabbi Feinstein's responsum implies that he was not in favor at all of introducing the custom of celebrating bat mitzvah. In this connection, there is an interesting ruling of the former chief Sephardi rabbi of Israel, Rabbi Ovadiah Yosef, who views the celebration in a positive light, and even promotes it: "It seems that there is certainly a *mitzvah* to arrange a joyous meal for the bat mitzvah, according to what Maharshal (R. Solomon Luria) says in *Yam shel Shelomo* (*Bava Kamma*, Ch. 7. 37) that there is no *se'udat mitzvah* greater than a bar mitzvah banquet… Since she becomes obligated in the *mitzvot*, and she is like an adult who is commanded to perform the *mitzvot*, regarding all the *mitzvot* that are binding upon a woman, [the celebration] is certainly a *mitzvah*" (*Resp. Yabi'a Omer*, Vol. 6, OḤ, no. 29, sec. 4). Rabbi Yosef discusses the issue again in another responsum (*Resp. Yeḥavveh Da'at*, vol. 2, no. 29), where he writes (p. 111): "In truth, opposing bat mitzvah celebrations allows sinners to accuse the Sages of Israel of depriving the daughters of Israel and discriminating between boys and girls." He also cites and relies upon the words of Rabbi Yehiel Weinberg, in responsum no. 93, that this does not involve emulation of non-Jewish practices, and the non-celebration of a bat mitzvah involves discrimination against girls and a serious offense to a girl's sensitivities. Further on, R. Yosef relies on additional responsa of contemporary Sephardi sages, including Rabbi Ovadiah Hadayah, who allow bat mitzvah celebrations (*Resp. Yaskil Avdi*, vol. 5, OḤ, no. 28). Rabbi Ovadiah Yosef refers to the position of Rabbi Moses Feinstein, who raised doubts about the propriety of celebrating a bat mitzvah, as stated earlier, and expresses his disagreement: "But with all due respect, his words are incorrect, for since she becomes obligated in the *mitzvot*, and she is like an adult who is commanded to perform the *mitzvot*, regarding all the *mitzvot* that are binding upon a woman, [the celebration] is certainly a *mitzvah*" (*Resp. Yabi'a Omer*, ibid.)

Rabbi Ovadiah Yosef summarizes his ruling as follows (*Resp. Yeḥavveh Da'at*, ibid.): "The practice of making a celebration and festive meal of thanksgiving in honor of a bat mitzvah girl on the day she reaches 12 years and a day is a good and fitting practice. And it is preferable that they speak there words of Torah, as well as praises of God. One must be meticulously careful to observe the rules of modesty according to our holy Torah… And God will not withhold good from those who walk uprightly." (Regarding bat mitzvah celebrations, see *Ma'amad ha-Ishah*, pp. 137–42, 145, 149–150).

AGUNOT. A major and central topic relating to the status of woman in the world of Judaism is the topic of *agunot* (wives who are unable to receive a *get* due to husband's recalcitrance or disappearance). This discussion of this issue began in the tannaitic period and continues to this very day, and it is a striking example of creativity and decision-making in the world of *halakhah*, in accordance with the time, place and situation, and in accordance with the truth of the law and the truth of the judge. It is an instructive example of the influence of historical reality on the methods of creating and fashioning *halakhah*, and regarding the integration of *halakhah* and society in the world of Judaism – thoughts, doubts and differences of opinion. The issue is multi-faceted – an entire world of *halakhah* and Jewish thought. (For a detailed discussion, see *Agunah*).

In this context we will cite the following comments of Justice Elon's (M. Elon, *Ḥakikah Datit be-Ḥukei Medinat Yisra'el u-bi-Shefitah shel Batei ha-Mishpat u-Batei ha-Din ha-Rabbaniyyim* (1968), pp. 182–84):

> *Halakhah* has the capability, the authority, and the duty to resolve, those problems, the results of which contradict the goals of the halakhic system itself, and which from the perspective of *halakhah* itself, must be resolved. The classic example of such problems are cases of *agunah*, whether resulting from the disappearance of the husband or other similar situations. Needless to say, *halakhah* has no interest in causing the woman pain and suffering; *halakhah*'s sole interest is that a married woman not take another husband, and that a *yevamah* (widow whose husband died without offspring) who did not perform *halitzah*, not be permitted to others. There may be ways of not regarding the woman as a married woman, for example, by way of a condition attached to the marriage and by way of a nullification of the betrothal – as a result of which the widow will not be regarded as a *yevamah*. This manner of solution was introduced by Mahari Brin (Sh. Ar., EH, 157:3). In such cases, *halakhah* has both the authority and the duty to resolve these problems, for it is the goal of *halakhah* that the woman – every woman –not remain an *agunah*. This is the background of the extensive discussion found in halakhic literature of ways to release an *agunah*, beginning with Rabban Gamaliel the Elder through countless generations of those who made enactments and proposed solutions in order to save a woman from being and suffering as an *agunah*. It should be stated and emphasized that the way to resolve the matter is not easy, if only for the reason that in recent centuries the tendency has been to make little or no use whatsoever of ordinances in this sensitive and delicate area of marital law. However, the needs of the individual and the community, and most importantly, the essence and goals of *halakhah* itself, necessitate the speedy resolution of these problems in the framework of *halakhah* and by the halakhic authorities.

It should again be noted that a partial resolution of the problem of *agunot* has been reached through the legislation and judicial rulings of the State of Israel, i.e., through the sanctions (*harḥakot*) mentioned in Rabbinical Courts Law (Enforcement of Divorce Judgments) 5755 – 1995 (see: *Ma'amad ha-Ishah*, pp. 351–52). These sanctions follow in the footsteps of the enactments of Rabbenu Tam, one of the greatest Tosafists of the 12th century. The coercive force of such sanctions is limited, when the husband refuses to submit and continues in

his perverse and abusive ways, despite the sanctions imposed upon him. Similarly, these sanctions are effective only when the *agunah's* husband lives within the borders of the State of Israel, but not when he lives outside the country, where Israeli law cannot be executed or enforced. It may, however, be assumed that the very passage of the law of sanctions in the State of Israel has had a certain impact on Jewish courts around the world, especially when the sanctions are based and rooted in the world of *halakhah* in the ordinances of Rabbenu Tam.

The fitting and complete resolution of this problem would lie in the enactment of a *takkanah* allowing for the retroactive nullification of the marriage, based on a two-thousand-year-old enactment of Rabban Gamaliel the Elder, *nasi* of the Sanhedrin in the Land of Israel. Today, when the Land of Israel and the State of Israel have once again been reestablished as the center of the Jewish people – out of this new reality there have emerged the need and the possibility of resolving the problem of *agunot* by way of the enactment of a *takkanah* allowing for nullification of the marriage, an enactment initiated in the Land of Israel and in the State of Israel, around which the entire Jewish people throughout the Diaspora will rally.

A change as blessed and as momentous as the change that has transpired in our days with the establishment of the State of Israel can and should bring about the restoration of the enactment, the basis of which is found in the tannaitic period, and which was in effect for many generations– namely, nullification of a marriage based on the principle that a man takes a woman under the conditions laid down by the rabbis, and the rabbis – the halakhic authorities in the Land of Israel and the dispersion – may annul the marriage. This is the way of resolving the *agunah* problem and of redeeming the *agunot* from their plight (see *Ma'amad ha-Ishah*, pp. 297–372).

Conclusion

In one of the major rulings the Israeli Supreme Court dealing with the status of women, the court stated the following: (Shakdiel case, pp. 269–70):

> It need scarcely be said that in the world of the *halakhah* we do not discuss purely legal-halakhic questions, in the sense of juridical rights and duties. Rather, the ideological and normative values of Jewish religious life are inherent in and inseparable from the subject of the discourse. For there is a great principle: "Read not *halikhot* [ways], but *halakhot* [laws]." In the same way we can say by way of paraphrase: "Read not *halakhot*, but *halikhot*. For the laws of justice and the ways of life are intertwined. The scholarly passages here cited are not limited to the exposition of the legal issues, but also contain lengthy and detailed discussions of the conceptual implications of Jewish family life – the roles of the father and the mother, of woman and man, domestic harmony, the concept of modesty, and so on. This is because examination of these concepts is essential to the juridical-halakhic ruling on our subject. However, these important concepts must be addressed according to both their original significance and their contemporary setting, as we have learned from the passages quoted.

At the end of the book, *Ma'amad ha-Ishah – Mishpat ve-Ship-put, Masoret u-Temurah: Arakhehah shel Medinah Yehudit ve-Demografit* (pp. 453–56), Justice Elon writes:

> We have chosen a concrete example, a specific topic, which contains a combination of "Jewish" and "democratic," with the objective of analyzing the detailed laws, *halakhot* and principles in it; how the laws, *halakhot* and principles work and how they were applied in the social, economic and practical reality in which they were activated and applied; how "this one came and taught about that one, and that one came and completed this one, and they became as one in our hands." For there is no comparison between a general examination of principles and a detailed discussion of its practical applications in daily life… which is an issue that lives, breathes, acts, is acted upon, is activated and activates, diversified and many-faceted – in every period and in every society.

Rabbi Samuel Harkevalti writes (*Resp. Ma'ayan Ganim*, no. 313): "The women whose hearts made them willing to approach the work, the work of God, out of their choice of good, they will ascend the mountain of God, and rest in His holy place, for they are distinguished women. And it is incumbent upon the Sages of their generation to glory and honor them, and strengthen their hands, 'Go and succeed, may Heaven help you.'" It seems that the issue of the status of women that is dealt with in many entries in this Encyclopedia and in many rulings of the Israeli Supreme Court have created a synthesis between its being a Jewish state and its being democratic.

Justice Elon concludes his book (p.456):

> Out of all this, so we hope, it will be easier for us to understand the importance, the necessity and the possibility of executing and fulfilling the role and mission imposed upon us, as stated in Basic Law: Human Dignity and Liberty and Basic Law: Freedom of Occupation: "to establish in a Basic Law the values of the State of Israel as a Jewish and democratic state" – the strength and creativity of the Jewish together with the democratic. May this be the reward of our toil and study.

[Menachem Elon (2nd ed.)]

WOMEN'S LEAGUE FOR CONSERVATIVE JUDAISM.

Founded in 1918 as the National Women's League of the United Synagogue of America, this new organization responded to the call of Solomon *Schechter to harness women's energies and talents to promote an American Judaism that was rooted in history and tradition. In 1918, his widow Mathilde Roth *Schechter, Women's League founding president, drafted the blueprint for its future work as the coordinating body of Conservative synagogue sisterhoods. She led Women's League to set an agenda that included service to home, synagogue, and community, with special concern for youth and adult education, the blind, and the welfare of students at the Jewish Theological Seminary. By 1925 Women's League had grown from 26 founding sisterhoods to 230, with a membership of 20,000 women. In 2005, its goals remained much the same as at its founding: to strengthen and unite its 700 synagogue women's groups; to help their 120,000 members perpetuate Conservative Judaism in the home, synagogue, and community; and to strengthen their bonds with Israel and with Jews worldwide.

In its first decades Women's League created student houses, the first in New York in 1918, to serve as homes away from home for Jewish students and also Jewish servicemen on leave. Its education department published books to deepen its

members' Jewish knowledge, including Deborah Melamed's *The Three Pillars: Thought, Worship and Practice* (1927) and the popular *Jewish Home Beautiful* (1941) by Betty D. Greenberg and Althea O. Silverman. Women's League also began publishing its magazine Outlook in 1930. Educating its members and enhancing their observance of Jewish tradition remained a priority of Women's League over the years. In 1931 it helped establish the Women's Institute of Jewish Studies at the Jewish Theological Seminary. In 1993 it formed *Kolot Bik'dushah* to recognize those of its members who have mastered the skills of leading services and reading from the Torah. Women's League saw as its special task to help raise funds to enhance student life at the Seminary. In addition, Women's League helped the Jewish blind though the Jewish Braille Institute. The organization's commitment to liberal political and social issues emerged in the resolutions its members adopted over the years.

In 1972 the association formally changed its name to the Women's League for Conservative Judaism, signifying that it was no longer a subsidiary of the United Synagogue, but rather an independent body of Jewish women dedicated to Conservative Judaism. At the same time Women's League expressed an increasingly forceful position calling for egalitarianism in the Conservative synagogue.

[Pamela S. Nadell (2nd ed.)]

WOOD. In Hebrew the word ʿeẓ (עֵץ) means both "tree" and "wood" (also "stick"). The Bible speaks of special craftsmen for woodworking, *ḥarashei ʿeẓ*, who worked in the various branches of wood manufacturing (Ex. 31:5; II Sam. 5:11; I Chron. 22:15, et al.). The Bible also mentions several types of wood which were treated for various purposes; gopher wood (Gen. 6:14), cedar wood (Ezra 3:7; et al.), acacia wood (Ex. 38:1, et al.), juniper wood (בְּרוֹשׁ; I Kings 6:34), almug wood (I Kings 10:11), and olive wood (I Kings 6:31). Apparently, cedars and cypress trees were used primarily for the construction of ornate buildings, while the other types were used mainly in the construction of furniture, other articles, and utensils. Cedars and almug wood were imported from abroad, mainly during the period of the monarchy, while acacia and olive trees were common in Palestine.

The Bible mentions wooden handles and axes (Deut. 19:5), spear handles (II Sam. 21:19), etc. Stone implements were attached to the wooden handles by tying them together with sinews or ropes, while metal blades of various shapes and having different uses were attached to wooden handles by tying them with cords, by driving one end into the wood, and by making a metal hole into which the wood was inserted and riveted. The Bible mentions a number of pieces of wooden

furniture which were used in the Temple and the Tabernacle: the table of display (Ex. 25:23–30), the ark (Ex. 25:10–14), the altar for burnt offerings (Ex. 38:1), and the incense altar (Ex. 37:25). In connection with the laws of uncleanness and purification, the Bible mentions various wooden articles (Lev. 15:12). These are mainly various household utensils: mortars, dishes, spoons, etc. The number of wooden objects from the biblical period which have been discovered in the archaeological excavations in Israel is very small because of decay. The richest in wooden furniture and vessels are the MBII tombs in Jericho, where many tables, bowls, combs, jugs, and toilet boxes were preserved. When the Bible sharply criticizes idol worshipers, it indicates that they are worshipers of wood and stone, the work of men (Deut. 4:28). The use of wood in the construction of houses in Palestine is most variegated. It began with the building of huts from branches which were cut down and left in their natural state, and continues, until today, with the use of processed wood in the consolidation of frames of building and in the covering of wooden structures, as columns for reinforcing walls, for the roofing of clay, stone, or straw buildings, and for making doors and windows.

[Ze'ev Yeivin]

Wood Offerings

On nine different specified dates during the year, designated families brought wood offerings for the Temple sacrificial service. On the 15th of *Av, the priests, levites, and all those not certain of their tribal descent were permitted to join the family designated for that day in bringing the wood offering (Ta'an. 4:5). One of the reasons given for the joyful celebrations on the 15th of Av is that each year on this day felling trees for the altar was discontinued. The reason given is that after this time the strength of the sun lessens and its rays are no longer sufficiently strong to dry the fresh-cut logs (Ta'an. 31a). The wood most preferred for the altar was boughs of fig trees, nut trees, and oil trees (Tam. 2:3).

The rabbis praised the family of Salami Netofah for their efforts in getting wood to the Temple at a time when the ruling authorities placed guards on the roads to prevent Jews from bringing wood to the altar. This family conceived the stratagem of making the logs into ladders which they carried on their shoulders. When stopped by the guards the family explained that they were going to use the ladders to take down young pigeons from the dovecote. Once past the guards, they dismantled the ladders and brought the logs to Jerusalem (Ta'an. 28a).

WOOG, MAYER (1833–1896), Yiddish playwright. Born in Hegenheim, Woog was the most representative writer of 19th-century Alsatian Yiddish theater. His comedies of village manners present a Jewish world in tension between tradition and modernity as well as in its relations with the gentile environ-

ment. The plays are characterized by their quadrilingualism (Yiddish-Alsatian, Alsatian, German, and French) and their written form (Gothic script). Their primary themes are marriage (*Der Gaasejopper macht Chasene*, "The Goat-Seller Marries," 1877), medicine (*Bas Jechido*, "The Only Daughter," 1884), and market conversation (*Schmues-Berjendes*, "Gossip," 1880, and *Deforim Beteilim leeri Keilim*, "Chatter," 1888).

[Astrid Starck (2nd ed.)]

WOOLF, BOB (1928–1993), pioneering U.S. sports and entertainment agent who emerged in the mid-1960s as the first of a generation of agents and lawyers who altered the way athletes are paid – from five-figure salaries in the 1960s, before free agency, to $250 million for multiyear contracts today. His sports clients included Larry Bird, Carl Yastrzemski, Joe Montana, Julius Erving, Doug Flutie, and Vinny Testaverde; his entertainment clients included Larry King, Gene Shalit, and New Kids on the Block; he negotiated big deals with Donald Trump, Ted Turner, Roone Arledge, and Red Auerbach. Woolf's family moved from Portland, Maine, to Boston when he was 16, and he graduated from Boston Latin School, and later from Boston College (1949), where he received a four-year basketball scholarship. After obtaining his law degree from Boston University Law School, and enlisting for a two-year stint in the U.S. Army, Woolf opened a successful Boston practice. In 1964, Earl Wilson, a Boston Red Sox pitcher who used Woolf as a tax lawyer, asked him also to handle his endorsement contracts. This led, in 1966, to Woolf's first contract negotiation with a team for Wilson. Since most players had no contract representation, Woolf quickly built a stable of clients, representing nine of the 12 Boston Celtics in their late 1960s championship years, and 14 of the members of 1967 Boston Red Sox. Within five years, Woolf had acquired 300 clients in all sports in all major cities. Woolf was not only an agent, he was a fan. His office in Boston's John Hancock building overlooked Fenway Park, with a telescope aimed at the mound and batter's box. Woolf estimated that he had negotiated more than 20,000 contracts by 1992, but grew increasingly concerned by the spendthrift ways of young clients who did not know the value of a million dollars. "I'm very Jewish-oriented," said Woolf in 1992, "[and] … I'm proud of the basketball tournament that's been held in my name in Israel for the past 15 years." Woolf's widow, Ann, administers the Bob Woolf Foundation. Woolf is the author of *Behind Closed Doors* (1976) and *Friendly Persuasion: My Life as a Negotiator* (1990).

[David Brinn (2nd ed.)]

WOOLF, SIR HARRY, BARON (1933–), British judge. Born in Newcastle-upon-Tyne, the son of a builder and architect who later moved to Scotland, and was educated at Fettes, a leading Scottish public school, and London University, Woolf was a barrister before being appointed a High Court judge

in 1979, serving until 1985 when he began an impressive rise up the ranks of the British judiciary. He served as a lord justice in 1985–95, a lord of appeal in ordinary with a seat in the House of Lords in 1992–96, master of the rolls in 1996–2000, and lord chief justice from 2000. He is known for his often controversial decisions, generally in the direction of insisting on the welfare of prisoners. Woolf was president of the International Jewish Lawyers' Association from 1993. He was knighted in 1979 and made a life peer in 1992.

[William D. Rubinstein (2nd ed.)]

WOOLF, LEONARD (**Sidney**; 1880–1969), English publisher and writer. The son of a London barrister who was a member of the Reform synagogue, Woolf had ambivalent feelings about family and religious loyalties and, as a convinced rationalist, saw little virtue in any religion. Woolf's father died when he was 12, leaving his family in some difficulties. He attended St. Paul's School and Cambridge on scholarships. As a classical student at Cambridge, he became friendly with a group of intellectuals who were to form the nucleus of London's famous "Bloomsbury Circle." They included John Maynard Keynes, Lytton Strachey, E.M. Forster, and J.T. Stephen, whose sister, Virginia, Woolf married. At Cambridge, Woolf was the first Jew elected to the "Apostles," the famous secret debating society. From 1904 until 1911 he was a colonial administrator in Ceylon, responsible for governing 100,000 people while still in his twenties. From this experience he acquired a lifelong hostility to British imperialism. In 1917 Leonard and Virginia started the Hogarth Press as a hobby: it became famous through the publication of Virginia's novels, T.S. Eliot's *The Waste Land*, the English translation of *Freud's works, and S.S. Koteliansky's translations from the Russian. Just as his experiences as a civil servant in Ceylon had led Leonard Woolf to disapprove of imperialism, so the sight of poverty in the East End of London converted him from liberalism to socialism. He joined the Fabian Society and became involved in the political, trade union, and economic aspects of the British Labour movement.

His two outstanding political works were *International Government* (1916), an early blueprint for the League of Nations, and *Empire and Commerce in Africa* (1920). Woolf was on the editorial staff of the *Contemporary Review* (1920–21), literary editor of *The Nation* (1923–30), and coeditor of *The Political Quarterly* (1931–59). He was also closely associated with *The New Statesman and Nation*. His books include: *The Village in the Jungle* (1913), inspired by his stay in Ceylon; *Hunting the Highbrow* (1927), essays; *Quack, Quack* (1935), a book about dictatorship; *Barbarians at the Gate* (1939); and *After the Deluge* (2 vols., 1931–39), and its sequel, *Principia Politica* (1953), a study of communal psychology. Woolf wrote an outstanding series of autobiographical works: *Sowing* (1960), *Growing* (1961), *Beginning Again* (1964), *Downhill All the Way* (1967), and *The Journey, Not the Arrival, Matters* (1969). Although a significant figure in his own right, Woolf is best remembered today as the husband of Virginia (1882–1941), who has attained almost cultlike status since her death. The nature of their rela-

tionship, and Woolf's own role in formulating her iconic status, have been the subjects of continuing debate, as has been her response to his Jewish origins. Similarly, the "Bloomsbury Group" has generated a veritable industry among biographers and literary historians.

[Renee Winegarten / William D. Rubinstein (2ⁿᵈ ed.)]

WOOLF (Wulff), MOSHE (1878–1971), Israeli psychiatrist and author. Born in Odessa, Russia, Woolf studied medicine in Berlin. Here he started his psychiatric training under Mendel and Jolly and soon became Ziehen's first assistant in the laboratory of the Charité, the university hospital in Berlin. In 1907, while working at Mendel's psychiatric sanatorium, he made his first acquaintance with Freud's works, which proved crucial to his further scientific development. He joined the sanatorium of Berlin-Lankwitz and in 1908 became Juliusburger's assistant. When Karl Abraham returned from Zurich at that time and joined the same sanatorium, he became Woolf's teacher and introduced him to psychoanalysis proper. In 1911 he returned to Russia as the only trained analyst in that country, where his many widespread and diverse activities eventually resulted in the acknowledgment and development of psychoanalysis. After the revolution he joined a large psychiatric outpatient clinic and taught at the second medical clinic of the University of Moscow. At the same time he did additional work at the psychoanalytically oriented children's home of Zermakow. Although he lived in Russia, he became a member of the Vienna Psychoanalytical Society in 1912. In 1927 he left Russia for political reasons and returned to a psychoanalytic institution, the Tegelsee sanatorium, where he worked under Ernst Simmel until 1930.

In 1933 he emigrated to Palestine. Max Eitingon, who arrived in Palestine in the same year, together with Woolf and I. Schalith founded the Palestine Psychoanalytic Society in 1934. After Eitingon's death, Woolf became president of the Israel Psychoanalytic Society, a position he held for ten years.

Woolf's earliest paper on children was "Beitraege zur infantilen Sexualitaet" (1912), which dealt with some cases of momentary loss of consciousness which Woolf considered caused by hysteria. "Phantasie und Wirklichkeit im Seelenleben des Kleinkindes" (1934) was delivered to an educational board of the Communist Party, in order to influence it not to forbid the reading of fairy tales. His paper, "Prohibitions Against the Simultaneous Consumption of Milk and Flesh in Orthodox Jewish Law" (1945), historically and analytically traces the sources for ritual laws applying to food and to Passover. Some of his publications are considered basic contributions to the psychoanalytic theory, for example, "Fetishism and Object Choice in Early Childhood" (published in *Psychoanalytical Quarterly* 15 (1946), 450–71).

[Gad Tadmor]

°**WOOLLEY, SIR CHARLES LEONARD** (1880–1960), English archaeologist. From 1905 to 1907 he was assistant keeper in the Ashmolean Museum, Oxford. His earliest excavation work was carried out in England (Corbridge, 1906–07), Nubia (1907–11), and at Carchemish, Turkey (1912–14). In 1914 he took part, along with T.E. Lawrence, in the expedition surveying Sinai and the Negev, which was a cover for the British military mapping of the Sinai Peninsula. Their report, *The Wilderness of Zion* (1915), presents the first detailed description of the Byzantine cities of the Negev. During World War I Woolley served as a military intelligence officer and was taken prisoner by the Turks in 1916. He was an officer in the military administration in north Syria in 1919, at which time he resumed excavation at Carchemish. This was followed by work at Tell *el-Amarna in Egypt (1921–22), and at *Ur of the Chaldees (1922–34), where he discovered the royal tombs of the first dynasty with their magnificent treasures, and also uncovered the city dating from the time of Abraham (Ur III). He then directed excavations in southern Turkey (Hatay province), first at el-Mina (ancient Greek port of Poseidium) from 1936 to 1937 and afterward at Tell Atshana (1937–39), where he unearthed the remains of the *Alalakh kingdom. During World War II he was archaeological adviser to the British War Office and after the war again excavated at Tell Atshana (1946–49). In addition to his excavation reports, he wrote *Ur of the Chaldees* (1929); *The Sumerians* (1929); *Middle East Archaeology* (1949); *A Forgotten Kingdom* (1953); several popular works, especially *Digging Up the Past* (1930); and his memoirs, *Spadework in Archaeology* (1953).

[Michael Avi-Yonah]

WORCESTER, town in central England. It was founded around 1159 and had a small Jewish population until the late thirteenth century. After the persecutions under John, the regents for Henry Ill confirmed the right of Jews to live there unmolested. In 1219, however, Bishop William de Blois promulgated restrictive measures against them. The so-called "Parliament of Jews" was held at Worcester in 1241, when 109 representatives of the 21 recognized Jewish communities were summoned to apportion a tax levy among themselves. The Jews suffered greatly in the Barons' Revolt (1264–65). Their expulsion from the city to Hereford was secured by Eleanor, the queen mother, in 1275. There were few Jews in Worcester in the 19ᵗʰ century. A small community was founded during World War II. The Jewish population in 1968 was 56, but no organized community exists today.

[Vivian David Lipman / Joe Hillaby (2ⁿᵈ ed.)]

WORCESTER, U.S. city in Massachusetts, 40 mi. (64 km.) W. of Boston. Its population was 172,648 (2000 census), with an estimated Jewish population of 10,000 in the city and surrounding area, which includes such communities as Westborough, Northborough, Shrewsbury, Fitchburg, and Leominster.

The earliest settlement of Jews in the Worcester area occurred during the American Revolution when the British occupied *Newport, R.I., and several Jewish families, headed by Aaron *Lopez, a wealthy shipping merchant, left that city to live for the duration of the war in Leicester, five miles from Worcester. After the war the Leicester community dissolved when the Jewish families returned to Newport. Worcester had no permanent Jewish settlement until after the Civil War, when the *Straus and Gross families established stores in the city. In 1870 Jewish immigrants from Eastern Europe began to come to Worcester in larger numbers.

Congregations

The first congregation, Sons of Israel, was established in 1877, and a burial society was formed the same year. As the Jewish population grew, congregations – all located on the East Side – multiplied to total 13. With the shift of the Jewish population to the West Side of the city, most of them closed. Sons of Jacob and Shaarai Torah (1904), which was merged with Sons of Abraham (1887), have survived.

In 1968, three Orthodox congregations remained on the East Side – Sons of Jacob; Sons of Zion, a small congregation; and Shaarai Torah – Sons of Abraham, at the synagogue erected in 1906. A West Side branch of Shaarai Torah – Sons of Abraham was established in 1959. Rabbi Joseph Gold, who came to the congregation in 1954, served both branches. Earlier rabbis included Meyer Greenberg (1947–54) and Gershon Appel (1943–47), who pursued his Ph.D. at Harvard and went on to congregations in Seattle and New York before becoming a professor of philosophy at Stern College. In addition to Shaarai Torah – Sons of Abraham, there were in 1968 five other congregations on the West Side.

Temple Emanuel (Reform), established in 1921, moved to permanent quarters in 1923. In 1949 it erected a large synagogue which was considerably expanded in 1961. The congregation grew rapidly to become the Jewish community's largest, with a membership of over 1,300 families. Maurice M. Mazure, the first rabbi (1923–26), was followed by Julius Gordon (1926–29), Levi A. Olan (1929–48; d. 1984), and afterwards by Joseph Klein and Jordan Milstein. Hugo Chaim *Adler, who achieved fame as a composer of synagogue music, was cantor of Temple Emanuel from 1939 until his death in 1955.

Congregation Beth Israel (Conservative), formed in 1924, built a house of worship in 1939, and in 1959 erected a larger synagogue. Its rabbis included Herbert Ribner (1948–55), Abraham Kazis, who began in 1955, and was followed by Joel Pitkowsky.

Congregation Beth Judah (Orthodox), founded in 1948, was headed in 1968 by Rabbi Reuven Fischer. Congregation Tifereth Israel (Orthodox), established in 1959, was led in 1968 by Rabbi Herschel Fogelman. It was associated with the Chabad *Lubavitch movement. Temple Sinai (Reform) was established in 1957; its rabbi (1970) was John J. Rosenblatt. In 2005 Seth Bernstein was the rabbi.

Congregations in Westborough include Beth Tikvah, whose rabbi was Fred Benjamin, Bnai Shalom, whose rabbi was Laurence Milder, and Chabad, whose rabbi was Micoel Green.

In addition to the congregational school, the Ivriah School, a community *talmud torah* supported by the Worcester Jewish Federation was formed in 1927 by combining the Hebrew Free School (established 1905) with the existing Orthodox congregational schools. It ceased to exist in the 1980s, but in the early 21st century there were two day schools, the New Jewish Academy established in 2005 (the successor to the Solomon Schechter Day School), a community transdenominational school which recognizes and respects all forms of Jewish practice, and the Yeshiva, the Chabad-Lubavitch day school.

Community Organizations and Leadership

In 1920 a number of existing charitable organizations were combined to form the United Jewish Charities, later the Jewish Social Service Agency, and in 1968 called the Jewish Family Service. The Jewish Community Council, formed in 1936, and the Jewish Welfare Fund, established in 1939, were merged in 1947 to form the Worcester Jewish Federation. The Jewish Community Center, established in 1950, used the old Temple Emanuel building until its new structure was built in 1966. The Jewish Home for the Aged, founded in 1915, at first served also as an orphanage but by 1968 was restricted to caring for the aged and infirm.

In the early years of the community Jews were mainly peddlers and small-scale shopkeepers. By the 1960s they were engaged in every branch of industry and commerce and in all professions. Among Jews in public office was Joseph C. Casdin, a member of the City Council from 1956, who served his fourth term as mayor in 1968. Past City Council members include Louis Glixman, Elias Pofcher, and Israel Katz. Other officials include Elton Yasuna, who served on the School Committee, and Edward Landau, elected to the committee in 1967; Archibald M. Hillman (d. 1959), assistant city solicitor and, later, city solicitor; Wilfred B. Feiga, assistant clerk of Superior Court (1922–65) and president of the Free Public Library (1932; 1966); Judge Jacob Asher (d. 1956), special justice of the Central District Court; and Judge Joseph Goldberg, appointed to the Central District Court in 1953. There was an additional Jewish mayor in Worcester, Jordan Levy. First elected to the City Council in 1978, he was mayor for eight years.

The playwright S.N. *Behrman has described some of the colorful personalities in the Jewish community during his youth in his partly fictional and partly autobiographical *Worcester Account* (1954). A weekly newspaper, the *Jewish Civic Leader*, served the community from 1923.

[Joseph Klein]

The Worcester Jewish Federation was re-named the Jewish Federation of Central Massachusetts in 1997 to more accurately reflect the area that the Federation serves: not just the city of Worcester, but all of Worcester county, including the Westborough area (which includes Westborough, Northborough and Shrewsbury). The Westborough area is the home to a JCC, a Conservative congregation, Beth Tikvah, and a Reform Temple, Bnai Shalom. Chabad has a presence there as well.

Clark University is located in Worcester. It has a distinguished Judaic Studies program staffed by, inter alia, Everett Fox, who wrote an important translation of the Torah based on the principles of the Buber-Rosenzweig translation of the early 20th century, and Debórah Dwork, who headed its graduate program in Holocaust Studies, the first of its kind in the United States. Clark boasts that it was the only university to invite Sigmund Freud to lecture during an American visit. Neighboring Holy Cross University has an annual lecture on the Holocaust and programs in Jewish-Catholic relations.

BIBLIOGRAPHY: Mopsik, in: JSOS, 7 (1945), 41–62.

[Howard Borer (2nd ed.)]

WORD, in the Bible, primarily renders the Hebrew *davar*, but also *omer* (pl. *amarim*), *imrah*, and *peh* (lit. "mouth"). "The word of the Lord," an oft–recurring scriptural phrase, signifies a divine communication to man that reveals God's character or His will, as in Isaiah 50:4ff. This revelation can assume many forms, such as oracles (e.g., Judg. 20:18ff.), visions (e.g., Amos 7:1ff.), and dreams (e.g., Gen. 15:12ff.), as well as prophecy and religious teaching in general, including the divinely given laws. In the broadest sense, the Scriptures taken as a whole, and subsequently the totality of Jewish spiritual teaching, fall within the connotation of God's word. In certain biblical passages, the divine word is personified, e.g., "So shall My word be that goeth forth out of My mouth: it shall not return unto Me void, except it accomplish that which I please, and make the thing whereto I sent it prosper" (Isa. 55:11; cf. also Ps. 33:6; 147:15). This biblical feature has antecedents in Sumerian and Babylonian literature, where the "word" is an agent of the gods' beneficence, but more especially of their wrath. In wisdom literature this process of hypostatization becomes even more marked, only *ḥokhmah* ("Wisdom") is substituted for the divine word, to which it is closely related ideologically (e.g., Prov. 8:1ff.; 9:1–6; Job 28:12–28). However, throughout the Hebrew Bible the figurative character of the personification is never in doubt.

A further stage in the evolution of the concept of the divine word is reached in apocryphal and rabbinic literature. Here the Word emerges as a distinct entity (cf. Wis. 18:15; Mekh., Be-Shallaḥ, 10; Avot 5:1). Furthermore, there arose a negative attitude toward the attribution to God of any anthropomorphic characteristics or the use of language that appeared to detract from the divine dignity. To avoid anthropomorphisms, the Targum employs the *memra* ("utterance"). For example, Deuteronomy 1:32 is rendered, "… ye have not believed in the *memra* of the Lord." Thus the *memra* connotes the manifestation of God's power in creating the world and in directing history. It acts as His messenger and is generally analogous to the *Shekhinah* ("Divine Presence") and the Divine Wisdom. New and fateful significance was given to the Word by Philo's doctrine of the Logos (the Greek term means both "word" and "reason"). On the one hand, Philo borrowed some of his ideas from the Stoics (Logos as the active and vivifying principle of the universe), who in turn are indebted to Heraclitus ("the dividing Logos," which creates by the fusion of contrasts); he was also influenced by Plato's "theory of ideas." On the other hand, Philo's Logos is rooted in the biblical idea of the creative word of God, the Targum's *memra*, the mystical concepts of the *merkavah* ("divine chariot"), the *Shekhinah*, the name of God, and the names of the angels. The multi-faceted character of the Logos is reflected in the many metaphorical epithets applied to it by Philo: "divine thought," "the image of God," "the firstborn son," "the archpriest," "the paraclete of humanity." Philo paved the way for later Christian theology. In the prologue to John's Gospel (1:14) this is carried farther, and "the Word made flesh" is identified with Jesus. Philo's Logos is no more than an "archangel of many names," the rational principle in the divine nature, the creative mediator between God – the One who is all-perfect and all-good – and the world of matter, which is inherently evil; but the Johannine Logos is a separate divine entity. At this stage the Word created an impossible gulf between Judaism and its daughter faith.

[Israel Abrahams]

WORKMEN'S CIRCLE (Yid. **Arbeter Ring**), U.S. socialist and culturally oriented Jewish fraternal order; founded in New York in 1892 by Jewish immigrant workers and chartered on a national basis in 1900 for the twofold purpose of providing its members with mutual aid, health, and death benefits, and other fraternal services, and of supporting the labor and socialist movements throughout the world. Dedicated to the promotion of progressive Yiddish culture, the Workmen's Circle developed a broad spectrum of cultural activities, including publication of books and magazines, promotion of adult education, sponsorship of singing and dramatic clubs, etc.

During its early period, the leadership of the Workmen's Circle shared the assimilationist-cosmopolitan attitudes of some of the earliest founders of the Jewish labor movement in North America. Later, with an influx of *Bundist immigrants who had either been active in or supporters of the unsuccessful Russian revolution of 1905, a more explicitly Jewish consciousness – secular, progressive, and Yiddish-language–based – was introduced to the Workmen's Circle. These ideas permeated its governing bodies, while individual branches included within their ranks individuals associated with a range of secular movements on the political left.

In 1916, it entered the field of Jewish education by resolving to establish schools for Jewish children, with the first Workmen's Circle afternoon school opening in 1917. The I.L. Peretz schools subsequently became the largest network of

Jewish secular *shuln* (schools) in the United States and Canada.

For many years, the Workmen's Circle was an important repository of socialist sentiment. Many of its activists were active in the Socialist Party, trade unions, and the larger Jewish labor movement. As a result, it became known as "the Red Cross of the labor movement," and was proud of the appellation. A founder and leader of the People's Relief Committee during World War I years, in 1934 it was a founder, and for many years the backbone, of the *Jewish Labor Committee. It also spearheaded the formation of the *Congress for Jewish Culture in 1948.

While initially sympathetic to the Bolshevik Revolution and the new Soviet regime, the Workmen's Circle was critical of the Soviet government's repression of non-Communist socialists. Internecine battles of the early 1920s within the entire U.S. left, not just the Workmen's Circle, pitted Communists against Socialists, and by 1929, the organization became explicitly anti-Communist in orientation. Communists and their allies either left of their own accord or were expelled at that time. Many of those who left were active in the formation of the International Workers' Order and its Jewish People's Fraternal Order. After that breach, the Workmen's Circle often struggled against Communist ambitions within the Jewish community in general, and the environment of the Jewish labor movement in specific.

Starting with the Roosevelt Administration, many in the organization left the socialist world, joining New Deal Democrats. Some left out of conviction that the Democrats were enacting parts of the socialist program. The anti-war position of the Socialist Party in the pre-Pearl Harbor period affected others. The post-war years brought about a gradual move from socialism and social democracy. Bundist anti-Zionism was never as strong in the U.S. as in Europe, and it has been a staunch, albeit not uncritical, supporter of the State of Israel since its formation. At the turn of the 21st century, the organization was far from its explicitly socialist origins, but in a more general sense part of the liberal/left, having as a general goal the creation of *a shenere un besere velt*, "a more beautiful and better world."

Along with other groups that were initially fraternal organizations which drew their membership primarily from the immigration community, the Workmen's Circle had to confront the challenge of establishing a following among native-born Jews, and those whose first, and often only, language was English, not Yiddish. This challenge was especially severe as the founders and their children died off, although it did make headway among the offspring of the older members. In 1925, the Workmen's Circle had its peak membership of 87,000. This was when the wellspring of Jewish immigrants from Europe was closed by U.S. immigration policy changes, and the organization's membership began to decline. In 1967, it was down to 64,000, in over 420 branches, 98 of which were English speaking. By 1978, the number was 55,000; in 1998, 25,000; and by 2005, 15,000, in some 200 branches, virtually all of which were English speaking. As the organization moved away from a "benefits" orientation to focus on public programs of Yiddish and Jewish culture, education and social action, however, the historic definition of "dues-paying membership" has become less relevant to the organization: in 2005, it was estimated that nearly 50,000 individuals were involved to some degree with the Workmen's Circle via attendance at WC-sponsored events, as contributors, purchasers of goods and services including benefit policies, Jewish Book Center, etc. The same is true when looking at the branch structure, which was formed when communication was primarily face-to-face, and the Jewish community was less mobile. In recent years, WC activities and structure are more district- or region-oriented (e.g., Boston, Los Angeles, Detroit), and often WC work is national in nature. Some branches are simply remnants of the structure of earlier generations.

At the end of 2005, there were 15 WC-sponsored or associated *shuln*, many of which were the core of a local Workmen's Circle group. It maintains two geriatric centers for aged community members, and operates Circle Lodge, a summer resort/vacation center, and Camp Kinder Ring, a children's camp founded in 1927, both in the Catskills, Dutchess County, New York. The WC also sponsors the Folksbiene Theater, a Yiddish theater founded in 1915 as an amateur venue, which today operates under professional direction and supports several choirs. The Yiddish publication, *Der Fraynd*, founded in 1910, and the English-language *Workmen's Circle Call*, founded in 1933, both ceased publication in the 1990s. Ironically, in 2005, negotiations with the English-language *Jewish Currents* – which had roots in the U.S. Jewish Communist camp – led to a cosponsorship by the Workmen's Circle and the Association for Jewish Secularism.

[Charles Bezalel Sherman / Arieh Lebowitz (2nd ed.)]

WORLD CONFERENCE OF JEWISH ORGANIZATIONS (COJO), roof organization established in Rome in 1958 with the participation of the following organizations: *American Jewish Congress, *B'nai B'rith, *Board of Deputies of British Jews, *Canadian Jewish Congress, Conseil Représentatif des Juifs de France (CRIF), Delagación de Asociaciones Israelitas Argentinas (*DAIA), Executive Council of Australian Jewry, Jewish Labor Committee, South African Jewish Board of Deputies, and the *World Jewish Congress. Avraham *Harman of the Zionist Executive participated in convening the first meeting of COJO (together with Nahum *Goldmann of the World

Jewish Congress and Philip *Klutznick of B'nai B'rith), but the World Zionist Organization decided not to affiliate with COJO formally. At the initial meeting, these organizations decided to establish COJO as a consultative group on a two-year trial basis, after which they would decide whether they wished to disband or create a fully functioning world Jewish organization dealing with all matters concerning Jewish life. They also decided to explore the desirability of establishing a world council on Jewish education.

Two years later, at a meeting in Amsterdam, the organizations decided neither to disband nor to transform COJO into a fully functioning international organization but to continue COJO on an ongoing basis as a consultative group, meeting from time to time to keep each other informed on problems of mutual concern. Nahum Goldmann was elected as chairman, Label *Katz (of B'nai B'rith) as co-chairman, and Yehuda Hellman as secretary-general. COJO subsequently met regularly at least once a year and deliberated such problems as Soviet Jewry, the Middle East situation, Jews in Arab countries, the Arab boycott, problems of Jews in South America, and other issues.

In 1962 COJO convened in Israel a world conference on Jewish education. Although elaborate plans were laid down, administrative difficulties, differences of opinion, and a lack of funds prevented these plans from fully materializing. At a meeting in Geneva in 1969, COJO adopted the recommendation of a special subcommittee and abandoned the plans for a world conference on Jewish education in favor of a more modest project under the aegis of a COJO Commission on Jewish Education to be established in Jerusalem. Elected to head this commission were Ḥayyim Finkelstein, chairman of the Jewish Agency's Department on Jewish Education, and Jay Kaufman (d. 1971), executive vice president of B'nai B'rith.

At the meeting in Jerusalem in the winter of 1965, COJO further regularized its work by adding to the list of its officers a vice chairman representing the Board of Deputies of British Jews. One year later a representative of DAIA was also elected as a vice chairman. In 1967 the World Zionist Organization became a full member of COJO, and Louis A. *Pincus and William A. *Wexler became co-chairmen. (In 1971 W.A. Wexler was elected president.) On the eve of the Vatican Council II meeting (Feb. 27, 1962), COJO submitted a memorandum to the Vatican on behalf of its member organizations. At their 1970 meeting, the officers of COJO recommended that a clearinghouse be established for the dissemination of relevant documents and information to serve the needs of member organizations and enhance the airing of views and ideas. Although the growth of COJO was slow and undramatic, the members managed to keep together and met regularly to discuss problems of mutual interest.

[Yehuda Hellman]

WORLD JEWISH ASSOCIATIONS. This article is confined to organizations that encompass Jews and Jewish activities cutting across the borders of various countries. Associations of this nature have existed for more than a century. Among the histories of dispersed communities of ethnic, religious, or any other character, nowhere can one find the same wealth of organizational experience in the political, social, and cultural spheres as among the Jews. Three interrelated features characterize these organizations: (1) all their activities are international, as Jews throughout the world constitute a single entity; (2) through its organizations Jewry relates itself to international bodies and their laws; (3) organization is the quality that all Jewish communities must have in common and is what unites them. A nation without president, government, or distinct framework of services, it nevertheless has representatives – "*negotiorum gestores*" in Herzl's terminology – and leaders of sectional organizations who engage in deliberations on lines of policy, "administrative" activities, and independent political action in both the foreign and social arenas. The community, scattered as it is, has its common needs and services, its financial structure, and its patterns of loyalty.

Nevertheless, all of its services are decentralized, and since they must be geared to practical demands they are in constant flux. They include organs of protection and are based on principles of protection. In these efforts, Jewry has to rely on international law and its institutions, and it can only do so through organization. However, there can be no comprehensive organization – whether for protection, welfare, education, fund-raising, or emigration – unless there is a non-governmental organization (NGO) arrangement for it.

Since World War II, the special status of NGOs has been consolidated, mainly in the form of "consultation" with the main intergovernmental organizations (IGOs), primarily the United Nations. As a social phenomenon, however, the NGO is far older, as are its functions and achievements in the history of Jewry. Jews, on their part, played an important role in developing the awareness, within the organized international community, of the need to recognize the status of NGOs and their public services. Jewish world organizations became a pioneering force in the field of international group activity and group protection. The history of this policy, often pursued under the greatest sacrifices and against the heaviest odds, is a vital part of Jewish history. Organization proved to be the main precondition for self-assertion and protection. The whole organizational preparation of Israel's statehood developed within strict NGO patterns, and the same holds true for minority protection in the interwar period and the negotiation of restitution after the Holocaust.

Early Conditions and Organized Charity (19th Century)
With the possible exception of the struggle for Greek independence (and the political activities of Irish emigrants to the United States) international organization developed within Jewry earlier than within any other dispersed community. It was a response to dire need, preceding any clear definition or practicable anticipation of its future. This transition from the generally amorphous condition of Jewry as late as the 18th century occurred with the French Revolution (the Emancipation Act of 1791) and Napoleon's *Sanhedrin, which, whatever

the purposes it was meant to serve, or the objections to it, established an organ representing several branches of the Jewish world community. In addition to the French participation, there were 18 representatives from Piedmont, 16 from Regno, and several rabbis from Germany. Joseph David *Sinzheim, the rabbi of Strasbourg, presided. His summary of the session was issued in a proclamation in French and Hebrew, an indication that it was also addressed to Jews abroad. In one of the early Jewish papers in French, *L'Univers Israélite* (1851), Jules Carvallo proposed the establishment of an international Jewish congress, mainly with a view to protecting Jews in the Middle East.

After the Napoleonic era certain developments took place at the intergovernmental political level, and already at the Congress of Vienna (1815) a number of Jewish problems was discussed. The rise in status of some wealthy Jews on the one hand, and new concepts of law invoked by outstanding Jewish lawyers and politicians on the other, initiated a new kind of activity, as symbolized in the joint journey to Cairo of Moses *Montefiore from London and Adolphe *Crémieux from Paris to appeal against the judgment in the Damascus blood libel. In a sense, the establishment of the *Alliance Israélite Universelle (1860), the first Jewish NGO and one of the first international NGOs in general, was a formal expression of the change in organized Jewish activities. Sister organizations in London (*Anglo-Jewish Association) and Vienna (*Israelitische Allianz zu Wien) followed soon after. At the same time, certain wealthy Jews had been carrying out widespread international charity work, serving in effect as substitutes for entire welfare organizations, with knowledgeable secretaries at headquarters and agile agents abroad. These included such renowned figures as Sir Moses *Montefiore, Baron Maurice de *Hirsch, Baron Edmond de *Rothschild, Baron Horace *Guenzburg, Jacob H. *Schiff, and Julius *Rosenwald. Later, the work initiated by them was carried on either by foundations which they established (*Jewish Colonization Association, *PICA) or formal organizations like *ORT and the American Jewish *Joint Distribution Committee (JDC).

Organization for Welfare and Protection

The foreign interests of the Alliance Israélite Universelle and the Anglo-Jewish Association soon shifted from the Middle East to Russia and Eastern Europe. A series of conferences, missions, and welfare organizations characterized the next half century. "The public demonstration, the conference, the international gathering for Jewish purposes, now a phenomenon of everyday life in Jewry, owe their origin to the [Anglo-Jewish] Association and to the Alliance" (Nahum Sokolow). Matters took a similar course in the United States, though still focusing on local welfare and the settlement of Jewish immigrants, mainly from Russia. A vast network of organizations was created: *B'nai B'rith, founded in 1843, became an international order in 1882; HIAS (see *United Hias Service) developed during the 1880s; the *American Jewish Committee was founded in 1906, and the American Joint Distribution Committee in 1914. The three latter organizations, though American only,

developed worldwide services for Jews in many countries – the Jewish response to World War I and the postwar disaster in Russia and the Succession States.

With the rise of Emancipation, European Jewry experienced several severe shocks: in the 1880s pogroms and persecution in Russia and Romania and a ritual murder trial in Austria-Hungary (*Tiszaeszlar), and in 1890s the Dreyfus affair in France. Jewry began to react, both out of great and urgent need and as a result of the consolidation of the economic and professional power of individual Jews. Up to World War I, the main organizational effort was concentrated in areas of distress. It found its expression in a proliferation of welfare organizations (including the *Hilfsverein der deutschen Juden, founded in 1901) and in the emergence of organizations for "self-emancipation" and other activities, such as the *Ḥibbat Zion, the socialist *Bund (established in 1897), and the Zionist Organization (founded in the same year, see *Zionism).

Jewish Political Activity: Zionist "Negotiorum Gestio"

Radical reforms were proposed by Theodor Herzl. He rejected both the affirmation of Diaspora life and belief in assimilation or socialism or a retreat into a secluded religious community as enduring solutions of the Jewish problem. He emphatically denied that welfare and charity should be envisaged as long-term methods. Only the establishment of a Jewish state was comprehensive enough a foundation upon which to build a permanent edifice. Herzl quickly arrived at the conclusion that here was need for a world Jewish organization which would take account of all principal factors involved: exodus, settlement, and protection. Organizations should not only be an instrument for foreign policy, but also a body as democratic as possible under the specific conditions of a dispersed nation, designed to incorporate the political will of Jewry; to represent it, to elect its leaders, and to plan its policy. Before providing the nation with territory on which to settle, Herzl wanted to provide it with those organs necessary for its full identity, political activity and functioning. In Herzl's vision, Jewish national self-determination, as an organizational and political proposition, would have to crystallize according to two legal postulates: first, that the Zionist movement be recognized as the *negotiorum gestor* for Jewry as a whole; and second, that Jewry's return to Ereẓ Israel would give rise to a "national home for the Jewish people secured under public law." Herzl did not succeed in obtaining the charter for the "national home," but he succeeded in organizing the Zionist movement, first of all by convening a Zionist Congress "as our first national institution," with several functional subsidiaries.

The First Test: World War I and Its Aftermath

The great test came under the conditions that brought about the dismemberment of the Ottoman Empire, the victory of the principle of national self-determination, and the establishment of the League of Nations as guarantor of the mandates and minorities regimes. In this context, the Zionist vision became politically relevant. Herzl's yearning for a "charter" now proved to have opened a door toward internationalization of

the Jewish problem in regard to both method and settlement. The League of Nations' Mandate for Palestine was based on the idea of a Jewish National Home. Thus, at the end of World War I, Palestine was drawn into the orbit of supra-governmental as well as Jewish non-governmental organization. Article 4 of the League of Nations' Mandate called for the establishment of a Jewish Agency, by implication a Jewish body broader than the Zionist Organization, which was nonetheless recognized as such *per interim*. At the Annual Zionist Conference of 1922, the Zionist Organization formally assumed the rights and duties of the Jewish Agency for Palestine. It also expressed the wish that "the Jewish Agency shall represent the whole Jewish people. "The Zionist General Council also passed a resolution (in February 1923) providing that "the controlling organ of the Jewish Agency shall be responsible to a body representative of the Jewish People." Consent was also given to negotiate with leading non-Zionists and various Jewish associations for their participation in an "Agency" to be active in Palestine. An agreement for the establishment of this Jewish Agency was signed in Zurich on Aug. 14, 1929.

Simultaneously with the establishment of the mandate system, the League of Nations created the Permanent Mandates Commission, a supervisory organ for mandate administration, thus creating the formal prerequisites for the protection of group rights, through which representatives of the group organized as an NGO had *ex lege* access to the leading intergovernmental organizations and the possibility of appeal against the mandatory. The procedure was by way of petition and reviews ("observations") or mandatory reports. The Jewish Agency for Palestine came to be regarded by Jews and many non-Jews as the "Jewish State *in statu nascendi*" (*ha-medinah be-derekh*). It assumed a vital function: to represent effectively the interests of Jewry at large in matters pertaining to its National Home. Great Britain, as the mandatory power, was thus faced by an organization representing not only the Jews of Palestine but world Jewry in its relation to Palestine. This role was revived after World War II, when it prevented Great Britain from disposing of Palestine in a deal with the Arabs. Thus, during the interwar period, when Jewry had just acquired a certain minority consciousness (see below), the Zionist movement pressed it in the direction of a community consciousness, or, properly speaking, a definite nationalist consciousness.

Minority Rights and Organization for Reconstruction and Protection

With the Peace Conference of 1919, a stage was reached whereby an organized Jewish world effort for minority rights and self-protection could have developed, having for the first time a definite organization with which to apply at first to the Peace Conference itself and later to the resulting League of Nations. Nevertheless, this development was uneven and fortuitous. From the end of 1918, several Jewish delegations began to converge toward Paris, mainly from the vast belt of political chaos that spread from the Baltic to the Black Sea. New states were emerging and claiming recognition, and the question

was whether the international community should not insist on prior guarantees for the rights of minorities and of those groups (being the most outstanding) which would have no state of their own to protect their rights and interests. Anxious to establish a united Jewish front, these Jewish delegations associated themselves with the initiative of the representatives of the *American Jewish Congress, to set up (on March 25, 1919) a coordinating Comité, des Délégations Juives auprès de la Conférence de Paix, presided over by the president of the American Jewish Congress, Julian *Mack, with Louis *Marshall of the American Jewish Committee and Nahum *Sokolow of the Zionist Organization as vice president and Leo *Motzkin as general secretary. Most regional bodies were represented on the Comité as was the B'nai B'rith. However, the Alliance Israélite and the British Joint Foreign Committee refused to participate, although they too intervened politically. Formally, the Jewish delegations had only the status of petitioners. They spoke in the name of elected "congresses," "councils," or federated Jewish communities, and the Comité des Délégations Juives claimed to be the spokesman for more than 10,000,000 Jews. The main approach in 1919 was based on the idea that a minority had rights that an organized representative organization could invoke before an authoritative diplomatic forum acting in the name of international law. In words more appropriate to current procedural concepts, a situation developed in which the protection of beneficiary rights arising out of minority treaties was confined to non-governmental entities operating in constant "consultation" with the IGO.

Nevertheless, the impetus of 1919 soon slackened. In 1927 the Comité des Délégations Juives was reorganized, and a Council for Jewish Minority Rights was established at Geneva to underscore its permanent role. In truth, the real struggle still lay ahead when the Council reentered the arena. In May 1933 it had to plead before the League Council (and in October 1933 before the General Assembly) for the Bernheim petition, to the effect that certain measures of the newly established Hitler regime in Germany were "null and void for Upper Silesia." The petition was successful and showed that individual complaints, if based on international law, could be processed with the aid of an interceding non-governmental body of international standing.

An additional form of consultative function for non-governmental bodies was created in October 1933, when an autonomous Office of the High Commissioner for Refugees (Jewish and other) coming from Germany was established by the General Assembly of the League of Nations. The Office had a governing body consisting of government representatives and an advisory council made up of representatives of "private organizations."

Organizations for relief operated alongside political ones. About a dozen new Jewish organizations had sprung up or had been reorganized since the end of World War I, most of them of welfare type. The enormous devastation resulting from World War I, the new regime in Soviet Russia and the famine there, and the establishment of other regimes gave rise to

activities which generally confirmed the existence of Jewish solidarity throughout the world. An immense organization had emerged in the United States for fund-raising (mainly the JDC) and in Europe and other parts of the world for on-the-spot relief, reconstruction, and emigration.

The World Jewish Congress

Hitler's successes on the domestic front made it apparent that Jewry had to prepare for a fight on an international scale against Nazism, its agents – the German settlements throughout the world – and their local antisemitic allies. Leo Motzkin was one of the first to assert that the Council for Jewish Minority Rights must become a fighting political organization in the name of Jewry as a whole. Stephen *Wise, Louis *Lipsky, and other leaders of the American Jewish Congress associated themselves with his initiative, as had Nahum *Goldmann and others in Europe. A reorganization of such scope proved necessary, since it became clear that the postwar period of protection of minority rights under League of Nations patronage was drawing to an end.

In 1932 the first world Jewish conference was convened in Geneva: 17 countries were represented, but the American Jewish Committee, the B'nai B'rith, the Board of Deputies of British Jews, and the Central-Verein Deutscher Staatsbuerger juedischen Glaubens in Germany still refused to participate. Four years later, in August 1936, the *World Jewish Congress (WJC) was formally Founded by 280 delegates from 33 countries assembled at Geneva. Their aim was to create "a permanent address for the Jewish people." The WJC became a voluntary, cooperative association of federations of local Jewish organizations. It did not interfere with the internal life of any federation or community, but it also maintained that no single community or organization, however important and influential, should be entitled to act unilaterally on behalf of the community or any branch of it without being empowered to do so; nor should any community, however small, be excluded from joint action. The WJC declared that it "does not seek to be regarded as [the] 'Government' of the Jewish people outside Palestine." At the international level, it had to assume the function of the Comité des Délégations Juives. It directed a few diplomatic campaigns against Germany, Poland, Romania, and Nazi-occupied Austria. In 1938, at the International Refugee Conference at Evian, the WJC had to fight for the very right of the Jew to be considered a refugee and thus claim the rights of first asylum and transit migration in the countries bordering on Germany.

World War II

Jewry entered World War II as its first victim rather than an ally; it lacked even the limited status and facilities of the various governments-in-exile. The possibility of non-governmental action was considerably reduced, being limited to a few humanitarian efforts *in extremis*. The paradox was that at a time when community consciousness was at its peak, operational capacity was at its lowest. Nevertheless, two problems kept organized efforts alive: the welfare problem of the remnants of European Jewry and the political problem of Jewry in Palestine. It is a tribute to their organizational capacity that the postwar Jewish organizations succeeded in realizing three major aims:

(1) to ensure favorable developments in regard to Palestine;

(2) to secure reparations from West Germany and thus a modicum of relief for more than a million survivors; and

(3) to maintain consultations and later consultative status with the newly established IGOs, particularly the United Nations, UNESCO, and the Council of Europe.

In San Francisco, where the United Nations was established in 1945, it was again the Jewish Agency for Palestine that acted as the representative of the Jewish people vis-à-vis Palestine as well as the nascent Jewish State, particularly when the "first round" was fought in UNCIO for what became Article 80 of the Charter. After the War, when the Anglo-American Commission arrived in Palestine in 1946, it reported that the Jewish case was "presented at full length and with voluminous written evidence, in three series of public hearings: in Washington by the American Zionists, in London by the British Zionists, and finally, and most massively, by the Jewish Agency in Jerusalem. The basic policy advocated was always the same – the so-called Biltmore Program of 1942." The same can be said about the discussions with *UNSCOP in Palestine as well as at UN headquarters on the basis of the UNSCOP report. In this struggle, the Jewish case, as presented by the Jewish Agency, was supported by all the major Jewish organizations. As earlier, the mere fact of having been organized in a democratically structured world organization – the Zionist Organization – had allowed Jewry to respond to events through organized representations, which had been the case from 1917 on, when the Balfour Declaration had been published, up to July 7, 1948, when for the first time a representative of the State of Israel was invited to attend a meeting, the 330th, of the Security Council of the United Nations.

Another aim during the postwar years was to provide for the preservation of human rights in at least three of the five peace treaties with former Nazi satellites – Romania, Hungary, and Bulgaria. By coincidence, these countries were the only ones still to have Jewish minorities, to have turned communist, and to have been obligated by post-World War I arrangements. However, the effort was unsuccessful: no trace remained of the minority rights established in Eastern Europe after World War I. The situation was different in the West. The experience leading to Jewish world community consciousness, which had become rooted in 1933 with the ascension of Hitler to power, did not cease after the War. The War ended with valuable property remaining without owners but traceable to public or private Jewish ownership. It was pointed out that survivors within a given group had the most valid right to advance the thesis of collective restitution. After the Paris Reparations Conference of December 1945, the Jewish Agency for Palestine and the JDC were appointed as "field organizations" for the implementation of a part of the program established by the Conference, and a new era commenced for Jewish NGOs. A

major achievement was the establishment in 1951 of the World *Conference of Jewish Material Claims against Germany, the most representative body established thus far, and of a parallel committee for Austria in 1952. These organizations, as well as the Jewish Restitution Successor Organization (JRSO) and the Jewish Trust Corporation for Germany (JTC), established the principle that NGOs can be partners in international legal negotiations and agreements with sovereign or other entities, the outstanding case being the Wassenaar Protocol of Sept. 10, 1952, between the Claims Conference and the government of the Federal Republic of Germany. Moreover, JRSO, together with the JTC for Germany, Ltd., London, and the Branche Française de la JTC, entered into agreements with Bonn (1956) on the payment of compensation in lieu of restitution. Among all the Western states, only in the case of Austria have these efforts met with frustration during all these years.

Jewry's transition from World War II into a greatly changed Europe must be viewed against the background of the Holocaust. The Claims Conference, powerful enough to guarantee annual allocations of $10,000,000 for public use over 12 years, began to plan reconstruction. Roughly 75% of this sum went for basic programs of relief, economic rehabilitation, emigration and resettlement, and 10–15% was allocated for cultural and educational reconstruction. The balance was divided more or less equally between legal aid and historical research into the Holocaust. In 1960 a Standing Conference on European Jewish Social and Welfare Services was established to make formal the *de facto* cooperation existing among local communities and voluntary agencies, such as JDC, ORT, HIAS, etc. Its greatest achievement was the resettlement of refugees from Algeria in France and Israel. Upon winding up its activities, the Claims Conference used its last allocation of over $10,000,000 to establish the Memorial Foundation for Jewish Culture.

Summary

If within a decade or so after the end of World War II, the most urgent needs for Jewish survival were fulfilled – the establishment of the State of Israel, the resettlement of *Displaced Persons, survivors, and refugees, and the repossession of ownerless Jewish property – the continued existence of Jewish NGOs nevertheless became necessary. There were many reasons for this. The need for protection of Jewish minorities became progressively acute in Communist and Arab countries. The B'nai B'rith Anti-Defamation League (active in the United States, Canada, and Mexico) also found a vital field of activity. The fight against racial and religious prejudice and intolerance and several other issues concerning human rights became one of the central themes within leading IGOs (the United Nations, UNESCO, ILO, the Council of Europe). Finally, there has been a tendency for education to replace welfare as the major Jewish concern.

The American Jewish Conference on Soviet Jewry, which, together with similar bodies in Israel and Europe, sponsored the World Conference of Jewish Communities on Soviet Jewry (Brussels, 1971), became a potent factor in the struggle for the rights of the Jews in the Soviet Union. Despite the looseness of its organization, or perhaps because of it, participation and representation on a very wide scale was made possible. The same also holds true for the Comité International pour la Déliverance des Juifs au Moyen Orient established in Paris (1970) to act on behalf of the remaining Jews in distress in Arab countries.

Since 1945 there has been a tendency to establish new organizations and seek consultative status for them with the United Nations or their agencies. Up to 1961 there were no less than 22 new or regrouped Jewish NGOs. Thus, out of 20 Jewish NGOs in the group of principal organizations (international or national with several areas of operation: see chart), six are postwar creations or adaptations, nine have direct and five indirect consultative status with the UN Economic and Social Council (ECOSOC), and several an analogous status with other IGOs. Moreover, six national organizations indirectly enjoy such consultative status (see also *United Nations, Specialized Agencies and Other Bodies).

The proliferation of organizations added impetus to a phenomenon long observed in Jewish organization: their coalition or federalist nature. Thus, the Zionist Organization and the Jewish Agency have been governed for decades by carefully balanced coalitions, under conditions of continually renewed attempts at broadening partnership. They became the operational vehicle for world Jewry's participation in Israel's activities and development as the National Home of Jewry. (According to the Jerusalem Program of 1968, the main aim of Zionism is the unity of the Jewish people and the centrality of Israel in Jewish life.) In this sense it should be compared to earlier organizations. The Comité des Délélegations Juives was formed in response to external circumstances. Its membership was heterogeneous in many respects, but they united in what they viewed as a common purpose. Later, the World Jewish Congress was established as a federation of "national" Jewish associations. If these were "roof organizations" with functions of coordination, some less formal solutions were adopted wherein coordination required no permanent executive apparatus, such as the *World Conference of Jewish Organizations (COJO, founded 1958) and the U.S. Conference of Major Jewish Organizations (generally known as the Presidents' Conference). The main Jewish organizations are represented in all, or most, of these coordinating bodies: the JDC, the Jewish Agency, B'nai B'rith, and the World Jewish Congress. On the other hand, in some of them the absence of the American Jewish Committee is conspicuous. In many of them there is little contact between the organization and the Jewish population at large, and the situation is still similar to what it was at the time of Baron de Hirsch and his welfare secretariats. Jewry is still to a large degree governed by self-perpetuating oligarchic establishments, and the process of full democratization, as envisaged by Herzl, remains a vision of the future.

Jewish world organizations have until now contributed little that is new toward maintaining the consciousness of a common faith, culture, and destiny in Jewish communities.

It is still the position that while many organizations engage in educational activities on a local and national scale, only the Zionist Organization is at present important, though still an inadequate, educational agency on a world scale. (Attempts to establish a World Council for Jewish Education have failed so far; a well-attended World Conference on this subject had met in Jerusalem in August 1962). The main problem of contemporary Jewish world organization is whether its current political activity is sufficient to create a meaningful pattern of activity on behalf of the dispersed Jewish community as a whole – that is, a pattern in which both the Israel-centered part of Jewish identity and heritage and the contribution of Diaspora Jewry to the world's pluralist societies will be recognized as representing an independent entity. Both are confronted with obstacles – the main ones being old-fashioned antisemitism and the latter-day New Left. Nor has much changed in local intergroup relations, the various guest-nations still finding it easier to accommodate the different shades of local acculturation and compromise of Diaspora Jewry than an Israel-oriented Jewry. On the other hand, considering matters in the light of Jewish experience. it would seem that there is hardly any more support, or room, for a Dubnovian affirmation of a Diaspora Jewish culture, notwithstanding the need of the various Jewish NGOs to derive authority for their fight for the consolidation of human rights in general, and Jewish rights in particular, as representatives of a definite cultural identity and interest within a structuralized open society.

Nota Bene

While it is quite clear that the sole purpose of Jewish associations has been the maintenance of the Jewish community, particularly in its dispersal across the often fortuitous boundaries of non-Jewish nations, there have been malicious allegations that it was the intention of Jewry "to rule the world," even if this involved the destruction, or at least corruption, of the non-Jewish nations (see *Elders of Zion, Protocols of the Learned). While it is difficult to eradicate such aberrations, a study of the activities of the organizations previously described reveals nothing more than a desire to be left in peace to develop freely and autonomously.

[Josef J. Lador-Lederer]

WORLD JEWISH CONGRESS (WJC), a "voluntary association" of "representative Jewish bodies, communities, and organizations" throughout the world, organized to "assure the survival, and to foster the unity of the Jewish people" (arts. 1 and 2 of its constitution). The central Jewish communal bodies and major representative organizations of more than 60 countries belong to it (1969). Its immediate aims are: to coordinate the common interests of its member organizations; to defend the rights, status, and interests of Jews and Jewish communities; to encourage and assist the creative development of Jewish social and cultural life throughout the world; and to act on behalf of its member organizations before governmental, intergovernmental, and other international authorities with respect to matters which concern the Jewish people as a whole (art. 2 of the constitution). The organization does not intervene in the domestic political affairs of any country (art. 3). Only democratic bodies which remain autonomous are entitled to membership, which will be granted, as a general rule, to only one representative national Jewish body of any country (art. 4). A plenary assembly is the supreme authority of the Congress (art. 5), and an executive committee and a governing council conduct the affairs of the organization (art. 8).

History

The origin of the concept of the World Jewish Congress may be found in the early cooperative efforts by Jewish communities around the world in religious, legal, political, and relief matters. The origin of the World Jewish Congress can be traced to ideological developments within the American and European Jewish communities during and after World War I. In 1919 the *Comité des Délégations Juives was established, led by Leo *Motzkin, and, after three preparatory conferences, the first World Jewish Congress convened in Geneva, Switzerland, in 1936. 280 delegates represented the Jews of 32 countries under the leadership of Stephen *Wise and Nahum *Goldmann.

Policy and Action

The history of the World Jewish Congress is involved in the most tragic period of contemporary Jewish life – Nazi barbarism, rescue attempts, and relief and rehabilitation programs. The World Jewish Congress played a central role in the creation of Jewish policies with regard to the peace treaties, the prosecution and trial of Nazi war criminals, the adoption of a scheme of indemnification and reparations for Jewish victims of the Holocaust, and the rehabilitation of Jewish life in the years after the war.

Action on behalf of Jewish communities exposed to particular dangers, like those of Eastern Europe and Arab countries; relations with non-Jewish religious bodies; the fight against neo-Nazism and antisemitism; representation before international organs (the United Nations, UNESCO, regional intergovernmental organizations, and others); and, above all, the preservation of the identity of Jewish communities in view of the increasing trend to assimilation, are on the agenda of the different departments of the WJC. It maintains four branches of its executive – in North America, South America, Europe, and Israel – as well as a research branch, the Institute of Jewish Affairs, formerly in New York and presently in London, to execute its policies and direct its activities.

In 1981, Edgar M. *Bronfman was elected president of the World Jewish Congress. Under his leadership through the early years of the 21st century the WJC was in the forefront of the struggle for Soviet Jewry, the campaign to expose the

Nazi past of Kurt Waldheim and achieve moral and material justice for victims of the Holocaust and their heirs, and the fight against antisemitism and right-wing extremists like Jorge Haider as well as defense of Israel in the international arena.

[Natan Lerner]

WORLD LABOR ZIONIST MOVEMENT, organizational framework encompassing the *Israel Labor Party and groups in the Diaspora actively supporting it. Until 1968, before the merger of *Mapai, *Aḥdut ha-Avodah (B), and *Rafi in Israel, this function was carried out mainly by "Iḥud Olami Po'alei Zion-Z.S. Hitaḥadut," which served as the world union of Mapai and its Diaspora supporters. From the earliest days of organized Zionism, there have been groups that combined a belief in Zionism with an attachment to the doctrines of socialism. The emphasis of these groups would sometimes be placed on one or another of the ideologies. Socialist Zionist circles criticized the Zionist movement in its early days because it concentrated on the political task of securing a National Home, disregarding the need to create a Jewish working class imbued with progressive ideas and a search for social justice. The Zionist socialist groups had their divisions and different trends. They had developed independently in various countries and were directly influenced by the revolutionary and social democratic movements of their respective countries. As far back as the First Zionist Congress (1897), an attempt was made to create an international union of Zionist socialists. In the early part of the 20th century, groups began to be established in the large Jewish centers of Russia, Poland, Austria, Galicia, and England. The publications of Ber *Borochov and Nachman *Syrkin, the former following Marxist reasoning and the latter a more idealistic approach, influenced the groups toward different ideological trends.

After World War I the differences crystallized. On one end was the Left Po'alei Zion, almost completely Marxist, which opposed cooperation with "bourgeois" Zionism; in the center the *Po'alei Zion, which sought to become the labor wing of the organized Zionist movement; and at the other end *Ẓe'irei Zion-Hitaḥadut, a moderate Jewish labor movement centered on the pioneering efforts in Ereẓ Israel. The two parties, Po'alei Zion and Hitaḥadut, were linked ideologically with the labor parties in Ereẓ Israel; Po'alei Zion with Aḥdut ha-Avodah and Ẓe'irei Zion – Hitaḥadut with *Ha-Po'el ha-Ẓa'ir. The contacts with parties in Ereẓ Israel had a decisive influence upon the development and the activities of the Zionist labor groups in the Diaspora. Thus when the two main labor parties in Palestine united and established the Mapai Party (1930) the merger prepared the ground for the union of the two parallel parties in the Diaspora.

In 1931–32 a number of consultations were held in the countries of the Diaspora and the conditions for attaining a complete union of the two parties were discussed. These discussions were successful to the degree that the decisive majority on both sides were won over to the idea, although there were smaller groups that did not accept the merger and broke away. It was not until 1932 that a world organization was established at a conference in Danzig, where organized labor movements from Palestine were also represented for the first time. The Palestine parties had themselves effected union, and the parties in the Diaspora followed their lead. The movements united in most European countries, notably Poland, Eastern Galicia, Germany, Romania, Czechoslovakia, Lithuania and Latvia, Bulgaria, Yugoslavia, Greece, and in the United States and South America. In each case, however, there were groups which did not join the merges, especially the left Po'alei Zion groups, which broke away and later aligned with the internal Mapai opposition group, Si'ah Bet, later called Aḥdut ha-Avodah after it split from Mapai (see *Aḥdut ha-Avodah B). The world organization centered on Mapai became known as the Iḥud Olami and its secretaries were Anselm Reiss and Aryeh *Tartakower.

The Iḥud Olami was not only an ideological movement. Although no obligation was placed upon its members to settle in Palestine, the atmosphere created encouraged *aliyah* and "self-realization." The movement extended the maximum help to the *He-Ḥalutz groups that had sprung up all over Europe. The parties affiliated with the Iḥud Olami organized professionals and artisans within the framework of Ha-Oved. The deteriorating economic position of the Jewish masses in Eastern Europe brought tens of thousands of people into the movement. In the course of time it became a valuable and large source for *aliyah*. The movement also took an active part in the struggle for Jewish rights in postwar Europe but its main emphasis was on building up Ereẓ Israel in accordance with pioneering labor ideology. Material that flowed from the nerve center in Ereẓ Israel was distributed, and emissaries, particularly from collective and cooperative labor settlements in Palestine, were encouraged to work in the Jewish communities in order to intensify their Zionism and promote Hebrew education and *aliyah*, pioneering, and settlement. The Iḥud Olami maintained contact with branches in Europe, the United States, South America, South Africa, and Australia. In North Africa there were well-organized groups in Algeria, Tunisia, and Morocco.

The Iḥud Olami formed a united labor wing of the Zionist movement and played a leading role in the debates at the Zionist Congresses and in the manning of the various positions. For many years, the principal positions on the *Jewish Agency Executive were held by representatives of the Iḥud Olami. In 1936–37 the head office of the Iḥud Olami was transferred to Palestine, and a succession of leading members of Mapai acted as secretary-general: Melech Neustadt (Noy); Haim *Shurer; Yiẓḥak Harkavy; and Meir Argov.

In 1968, following the creation of the Israel Labor Party by merging Aḥdutha-Avodah (B), Mapai, and Rafi, in Israel, a

world conference was called to amalgamate the two supporting movements in the Diaspora (Rafi had no Diaspora organization). A single organization was created at this conference called the World Labor Zionist Movement. Yiẓḥak Korn, who had been serving as secretary-general of the Iḥud Olami, was elected secretary-general of the united movement. In the last years of the 1960s the united labor Zionist movement became an influential factor in the World Zionist movement. It was the initiator of the move to separate the functions of the Jewish Agency from those of the Zionist Organization in order that the latter might concentrate on the tasks of encouraging *aliyah*, Jewish education, and the mobilizing of the Jewish masses for Zionism. The creation of a special *aliyah* movement in the Western countries was largely the fruit of Labor Zionist movement initiative. The movement extended its activity to embrace work among students and the parents of children attending Jewish day schools. Its constituent parties were active among non-Jewish labor movements, notably the Labor Friends of Israel in Britain, which did much to combat anti-Israel propaganda. In the ensuing decades it continued to promote the Labor Zionism philosophy, supporting youth movements and other organizations abroad.

WORLD SEPHARDI FEDERATION. Since the establishment of the Zionist movement, efforts have been made to organize the Sephardi communities throughout the world in support of settlement in the Land of Israel, and were accelerated after World War I and the Balfour Declaration. Various organizations were formed, particularly among the youth, and a Conference of Sephardi Communities was held during the World Zionist Congress in Vienna in 1925. Many Sephardi leaders opposed this on the grounds that it would give rise to separation between Sephardi and Ashkenazi Jewry. Mr. Picciotto, a Syrian Jew who lived in London, was elected chairman. As a result of his efforts, a number of agricultural settlements of Sephardi Jews were established, including Kefar Ḥittim, Zur Moshe, and Beit Ḥanan. However, the organization was dissolved after a short time.

In 1947 an organization of Sephardi Jews in the Land of Israel was set up under the leadership of E. Eliyashar, who visited South America to establish links between the Sephardi communities there and the *yishuv* in the Land of Israel. In 1950 contacts were also made with Sephardi communities in France, England, and the United States. A preparatory meeting was convened in Paris to establish a Sephardi World Congress, and among its members were David Sitton, Ovadiah Kimhi, Mr. Kaxbalko of London, and Simian Nissim of the United States.

The Congress was held in Paris in November 1951, and A. Ben-Roy of London was elected president with E. Eliyashar and Bekhor Shitrit (then Israel's minister of police), Elias Taubal of South America, and the Ḥakham S. Gaon of the English Spanish and Portuguese Congregation, as vice presidents.

Headquarters were established in London, but because of the opposition of the Left Sephardi workers in Israel, an attempt to make it a worldwide organization failed.

During the Second Sephardi Congress held in Jerusalem in May 1954, additional efforts were made to reach an understanding between the two parties, but they failed. As a result of this crisis, Mr. Ben-Roy resigned, and Mr. Sebag-Montefiore of London was elected. The new president, a non-Zionist, opposed joining pro-Zionist organizations in general and the Zionist Federation in particular. Both the Left and the Right in the Israeli branch tried in vain to persuade him to change his attitude. As a result, Sebag-Montefiore resigned and two months later Eli Nachmias, of the Sephardi community of Paris, was elected president. Though he warmly endorsed all cultural activities in Israel, he refused all contact between the Federation and any Zionist organizations. This attitude was strongly criticized by Sephardi Zionists both in the Diaspora and in Israel, and as a result Mr. Nachmias resigned.

After 1967, a new leadership emerged under Eliyahu Eliyashar of Jerusalem and Edgar Abravanel of Paris. The dynamic director-general Gad Ben-Meir in London added much vitality to the World Sephardi Federation. Emphasis was placed on scholarships for disadvantaged Oriental youth in Israel, and strengthening programs that would help them finish high school, pass matriculation exams, and advance to university.

In February 1973, Nessim David Gaon, a leader of the Sephardi community in Switzerland, was elected fourth president of the Federation. His activity on behalf of the economically distressed and his support for educational institutions in Israel were well known and appreciated, and he was highly regarded by the heads of the state and of the Zionist movement. His election gave the Federation considerable power.

Even before his election, during the 28th Zionist Congress held in Jerusalem in February 1972, the Sephardi Federation had been accepted as a member of the Zionist Organization, which gave the Federation new status in the eyes of Sephardi Jewry. In response to a request by the Federation's delegates to the Congress – which numbered 15 members from Israel and abroad – a special department of the Zionist Organization was established to deal with their problems on an international basis. As a result, delegates were sent to Sephardi communities in the United States, Canada, France, and England. For the first time in the history of Zionist activities among Sephardi Jews, youth groups from the United States, Canada, France, S. America, and Iran participated in special seminars organized for them in Israel. This youth, hitherto dissociated from Zionism and the building of the Jewish State, began to absorb the Zionist doctrine, and on their return became enthusiastic supporters of the State of Israel. The activities in Israel were concentrated mainly in the field of education. Thanks to the initiative of the Federation's president, a special fund was established for students and the economically underprivileged.

It was agreed to establish a special course at the University of Haifa for the training of public leaders from among the inhabitants of development towns and distressed areas. The course opened with 90 students who were chairmen of councils and heads of departments in development towns. It was agreed to establish similar courses in the universities of Beersheba, Bar Ilan, Tel Aviv, and Hebrew University of Jerusalem, and by the end of 1977 a total of 800 students participated. At the end of the 1970s funds were made available to establish an institute for Sephardi studies at the Hebrew University of Jerusalem called Misgav Yerushalayim, which now publishes scholarly works on Sephardi and Oriental Jewry in literature, history, and language, and organizes large-scale international conferences every four years.

At a plenary conference held in Geneva in 1979, a new structure was decided upon for the Federation, whereby the presidium was to consist of ten representatives each, from Israel and the Diaspora, the former including four delegates from the Likud, three from the Labor Alignment, two from the religious parties, and one independent, while the latter would have two delegates each from the U.S., Latin America, and France, and one each from Britain, Canada, Spain, and the rest of Europe.

In the 1980s and 1990s, the World Sephardi Federation was dormant. By 1985 the budget of the Department of Sephardi Communities of the Jewish Agency was cut to such an extent that it had no funds for activities and only paid salaries. By and large the World Sephardic Federation failed to deal with issues of Sephardi identity, education, rabbinic training, intermarriage and assimilation in the Diaspora, and Sephardi/Mizraḥi poverty and alienation in Israel. The organization remains closed to the outside world and to the Sephardic public in the Diaspora and Israel, and has failed to cultivate or attract young leadership, admit women, and include and unite the extremely fragmented Sephardi/Mizraḥi public consisting of more than 70 diverse ethnic groups throughout the Diaspora and in Israel.

The World Sephardi Federation has since moved its headquarters to Israel. Since the death of Shelomo Abutbul, who was the head of the Va'ad Edah ha-Sefardit of Tel Aviv-Yaffo, the archives of the World Sephardi Federation have remained in a warehouse in Tel Aviv and off-limits to the public and interested researchers.

[David Sitton / Yitzchak Kerem (2nd ed.)]

WORLDS, THE FOUR. The use of the term "world" in the sense of a separate spiritual unit, a particular realm of being, came to the halakhic kabbalists from the heritage of neoplatonism. At an early stage, from the beginning of the 13th century, many such "worlds" are mentioned, representing a mixture of original Jewish, gnostic, and neoplatonic concepts. In the development of the doctrine of the ten *Sefirot, each Sefirah was considered as a complete world in itself which, in a way, had a mystical topography of its own. The world of *emanation could be seen as such a unit, but so could every single component or some of its configurations. Medieval philosophy knew of three worlds: the higher world comprising

the separate intelligences often identified with the angels, the middle world of the spheres of heaven, and the lower, sublunar, world of nature and man. It was a natural step to add the world of the Godhead which could be identified with the world of emanation (Aẓilut, or the ten emanations) to this scheme. That way, four worlds would emerge. However, this did not occur in the development of the Spanish Kabbalah, where the doctrine of the four worlds originated. Rather, it had its origin in speculations connected with the interpretation of Isaiah 43:7: "Everything called by my name – for my glory I have created it, have formed it, yea I have made it." The three words used here, creation, formation, and making or achieving (beri'ah, yeẓirah, asiyyah), were interpreted by many authors as pointing to the progressive stages of divine activity. These stages could be seen in two perspectives: as declining from the purely spiritual to the material, or as progressing from as yet undetermined forms of being to more and more manifest ones, which in the stage of "making" would achieve a perfect shaping of the original divine purpose. In kabbalist literature these two tendencies complement each other and appear beside one another, first in the writings of the kabbalists of Gerona and later in several parts of the *Zohar. The Hebrew word asiyyah combines the two meanings of making and acting, and it was in this latter sense of activity that the term was frequently used by the kabbalists.

In the writings of *Azriel of Gerona, the three potencies of creation, formation, and activity are already defined as being comprised within the highest potency of divine emanation (Aẓilut), but they are never spoken of as worlds. This transition occurred first in the writings of *Moses b. Shem Tov de Leon. In one of his Hebrew books, *Maskiyyot Kesef*, written after 1293 (MS Adler, 1577), he quotes from an unknown source called *Yerushalmi* – in fact a lost part of the *Midrash ha-Ne'lam* in the Zohar – a statement according to which the soul of man "is from the world of creation and from the world of formation, and its completion [or perfection] is nowhere but in the world of action which is this our world." When a man leaves the world, his soul is comprised of all the three worlds – if he actually has fulfilled his task. Allusions to such three worlds are indeed found in the Aramaic text of the Zohar without being elaborated (for instance: 1, 62a). Another stage of this development is documented by the *Tikkunei Zohar*, the latest stratum of the Zohar which clearly differentiates between four stages in the development of creation without calling them "worlds." The author knows of "ten Sefirot of Aẓilut in which the king, his real self and his life, are one," whereas this is not the case in the "ten Sefirot of beri'ah, or creation": "The highest cause radiates into the ten Sefirot of Aẓilut and the ten of beri'ah, and also shines in the ten orders of the angels and the ten spheres of heaven, and he calls these ten ranks of angels the ten Sefirot of Yeẓirah, or formation." In other passages of the same stratum four manifestations of the figure of man are already mentioned, clearly pointing to four layers of being: they know of an "Adam of Aẓilut, an Adam of beri'ah, of yeẓirah, and of asiyyah" (1, 22b, and end of Tikkun 67).

These are the preparatory stages from which a fully fledged theory of four worlds emerged at the beginning of the 14th century, particularly in the writings of *Isaac b. Samuel of Acre and the anonymous "treatise on emanation," Massekhet *Azilut. Here, God is said to have created four worlds, corresponding to the four letters of His name:

(1) the world of *Azilut*, which is like a garment of light to the source of all being;

(2) the world of *beri'ah*, creation, which is essentially the sphere of the throne of God and the seven palaces surrounding it;

(3) the world of *yezirah*, formation, which is the world of the *Merkabah seen by Ezekiel, and of the ten ranks of angels, dominated by *Metatron;

(4) the world of *asiyyah*, filled with the lower ranks of angels, who receive the prayers of man, but also with the hosts of *Samael and his devilish companions. This world is dominated by the angel *Sandalfon. Evidently there was no clear-cut definition of the status of the sublunar terrestial world which sometimes is made a part of the fourth and sometimes remains outside of this hierarchy. The realm of the powers of evil, the *kelippot*, could be identified with the world of *asiyyah*, at least as a part of it, but could be located outside this scheme, as indeed it sometimes was in later writings.

It is equally clear that this order of four worlds expressed a declining order of being, from the divine down to the nearly or completely material. This scheme could be relatively easily combined with the teachings of the Zohar, and became accepted doctrine of the kabbalists from the early 16th century onward. Especially the worlds of *beri'ah* and *yezirah* were elaborated in great detail in the writings of Moses *Cordovero and Hayyim *Vital, Isaac *Luria's disciple. Cordovero tended to include the realm of the *kelippot* and the whole visible creation within the fourth world of *asiyyah*, whereas the Lurianic Kabbalah tended to differentiate between them. According to Luria, only the fall of Adam brought about the confusion between the spiritual world of *asiyyah* and the material world of the *kelippot* which, in the messianic period, will again be completely separated from each other. The basic structures of the five *Parzufim*, the configurations of the ten *Sefirot* described under anthropomorphic symbols, are repeated all over the four worlds. Luria's descriptions of the world of *beri'ah* is much more complicated than in former sources. The seven palaces in this structure are seen as exterior projections of its basic substance, and there is considerable vacillation regarding the place of Metatron and Sandalfon who appear in the worlds of both *beri'ah* and *yezirah*, apparently representing different stages of their manifestation. Metatron, the highest of all angelic structures, is even said to have his head in the world of *beri'ah*, his ethereal body in *yezirah*, and his feet in *asiyyah*. The teachings regarding the latter three worlds in Luria's Kabbalah are almost completely new and were meant to add to the many stages which the mystical *meditation must traverse in order to fix itself on the realm of divinity.

WORM. The word *tola'at* or *tole'ah* is employed in the Bible and the Talmud both for destructive caterpillars and for the rain-worm; sometimes the combination *rimmah ve-tole'ah* (= maggots and worms) occurs. One of the curses in the commination of the Bible is that "the worm" shall eat the vines (Deut. 28:39). The Talmud (Ḥul. 67b) speaks of "the worm in the roots of the vines," referring to the beetle *Schistocerus*. The worm which smote Jonah's *kikayon* (Jonah 4:7) was presumably the caterpillar of a beetle of the genus *Capnodis* or *Cerambyx*. The Midrash states that "this worm makes the tree barren" (Mid. to Ps. 22:7). The worms that caused the manna to rot (Ex. 16:20) were fruit-fly maggots. In the Bible *rimmah ve-tole'ah* symbolizes the decomposition of the body after death (Isa. 14:11; Job 21:26), since these feed upon the decaying corpse. Man is compared to them because of his end and his frailty (Isa. 41:14; Job 25:6). They are the maggots of the carrion flies *Lucilia* and apparently also the rainworm *Lumbricus*, found in large quantities in soil rich in rotting organic material. This last is called *shilshul* in rabbinic literature (RH 24b) and in modern Israel.

WORMANN, CURT (1900–1991), librarian. Born in Berlin, he served from 1923 as assistant head and, later, head of the department for Adult Education of the Kreuzberg district of Berlin, as well as teaching at the Berlin Library School. In 1933 he settled in Palestine and became academic librarian at the Tel Aviv Municipal Library (1937–47). He then became director of the Jewish National and University Library in Jerusalem (1947–68). When the library on Mount Scopus became inaccessible (1948), Wormann showed great resourcefulness in providing books for faculty and students. Under his direction, hundreds of thousands of books looted by the Nazis were salvaged after the war and acquired for the University Library. The library collection tripled and the collection of manuscripts grew to 25,000 items. Many valuable collections of printed books and manuscripts were acquired during this period.

In 1956 Wormann founded, with the aid of UNESCO, a graduate library school in Jerusalem, which significantly improved library standards in Israel. He served as president of the Israel Library Association from its establishment in 1952 and represented Israel at UNESCO and International Federation of Libraries conferences.

Wormann's published works include: *Der deutsche Bauernroman* (1923); *Die russische Literatur der Gegenwart* (1931); and *Autoritaet und Familie in der deutschen Belletristik nach dem Weltkrieg* (1936).

[Shlomo Shunami]

WORMS, city in Germany. Documentary evidence points to the settlement of Jews in Worms at the end of the tenth century. The community grew during the 11th century, and a synagogue was inaugurated in 1034. In 1076–77 there was already a Jewish cemetery, which has been preserved and is the oldest in Europe. At the end of the 11th century the role of Jewish merchants in Worms was of such importance that they are mentioned by King Henry IV in a privilege document of 1074 before "the other inhabitants of Worms." Around 1090 the king granted to the Jews of Worms a charter of privileges similar in most respects to the charter granted to the Jews of *Speyer. The Jews of Worms were granted freedom to travel without restriction throughout the kingdom (they visited the fairs of *Cologne) and to engage in commerce without paying customs duties. They were authorized to function as moneychangers, and could hire Christian workmen, wetnurses, and maidservants. The Jews were granted the right to own movable and real property. It was forbidden to convert their children forcibly to Christianity, and a Jew who converted lost his share in his father's property. In lawsuits between Jews and Christians, each litigant was to be judged according to his own legal code; Jewish as well as Christian witnesses were necessary before judgment could be passed against a Jew. Lawsuits between Jews would be judged according to Jewish law. The Jews were subject to the king's jurisdiction only. They were given extensive autonomy and could choose their own leadership, subject only to certification by the king.

A number of distinguished scholars were active in Worms during this period: among the "Sages of Worms" were Judah b. Baruch, a disciple of R. Gershom b. *Judah and a prominent halakhic authority; the hymnologist Meir b. *Isaac; Jacob b. *Yakar and Isaac b. *Eleazar, teachers of *Rashi during his stay in Worms; Kalonymus b. Shabbetai of Rome, who became head of the yeshivah after the death of R. Jacob b. Yakar; and Solomon b. *Samson, a halakhic authority and hymnologist who may well have been the *Episcopus Judaeorum* ("Bishop of the Jews") to whom the charter of Worms was addressed. While the scholars of *Mainz engaged exclusively in the study of Talmud, those of Worms also commented on Bible and Midrash and composed *piyyutim*.

This flourishing period was interrupted by the persecutions of the First *Crusade that took place in May 1096. The crusaders, drawn from the simple townfolk and the peasants of the surrounding villages, attacked the Jews in Worms. Some of them were killed in their homes or took their own lives, while others found refuge in the palace of the bishop, until they were overwhelmed and massacred or chose to kill their children and then themselves. The number of martyrs reached 800. Only a few saved themselves by accepting baptism, but in the following year Henry IV allowed them to return to Judaism.

After a short while a new community was established in Worms, and in 1112 Emperor Henry V renewed the customs exemption which his father had granted to the Jews of the city. In the meantime, Jewish economic activity there had taken a new direction: commerce was replaced by *moneylending. At the time of the Second Crusade in 1146, the Jews of Worms fled to fortresses in the surrounding region until the danger had passed. Subsequently the community grew in numbers. The synagogue was renovated (1174–75) and a women's gallery was added (1213); a new *mikveh* was constructed (1186), and the cemetery was enlarged (c. 1260).

During the 13th century the Christian bishop assumed jurisdiction over the Jews in lawsuits with Christians, as well as in criminal law. He also collected a tax from them, in addition to that imposed by the king. The civic status of the Jews was determined by the municipal council. The Jews received its protection and were obligated in return to defend the town in case of attack. During the siege of Worms, in 1201, the Jews took part in its defense. Their obligation to military service later was exchanged for a payment toward the fortification of the city. A regular tax which the Jews paid to the city is first mentioned in 1265. During the 13th and 14th centuries the kings transferred to the city an ever greater portion of the taxes paid by the Jews, and the municipal authority over the Jews thus became more extensive. Finally, in January 1348, Charles IV waived all the royal rights over the Jews of Worms in favor of the city. The community was led by 12 elected *parnasim*. The bishop of Worms appointed one of them "Bishop of the Jews" for life. The last "Bishop of the Jews" died in 1792.

The scholars of Worms took part in the rabbinical *synods which were convened in the Rhineland, as well as in the drafting of communal regulations for the three communities of Speyer, Worms, and Mainz, which had wide-ranging influence on Ashkenazi Jewry (see *Shum). The most important halakhic authorities of Worms in the period were the *paytan* Menahem b. *Jacob; Eleazar b. *Judah, disciple of Judah he-Ḥasid ("the *Pious"), the author of *Sefer ha-Roke'aḥ*; and Baruch b. Meir and his son Meir of Rothenburg (*av bet din* of Worms; d. 1281). From the beginning of the 14th century there was, however, a spiritual decline in the community, and its influence waned.

On Second Adar 10, 5109 (1349), at the time of the Black *Death, anti-Jewish violence broke out in Worms. Some Jews managed to escape to Sinsheim, *Heidelberg, and other localities in the *Palatinate; all the other members of the community set fire to themselves in their homes or were massacred by rioters. The property of the Jews was confiscated by the town, but the latter was also compelled to pay assignments which the king had granted to several of his creditors on account of the tax which was due to him. The local authorities therefore considered it advantageous to authorize the settlement of the Jews in the city once more (1353–55).

This third community fixed the day of Adar 10 as a perpetual fast day. The new community did not acquire the splendor of the past. Even so Jacob Moses *Moellin (the Maharil)

preferred to live there in his old age and died in Worms in 1427. The kings and governors of the Palatinate renewed the "seals" of the community from time to time, but an uprising of craftsmen in 1615 caused the Jews to flee from the town; the synagogue and the cemetery were desecrated. Samuel Bacharach, the rabbi of the community, was among the refugees. In 1616 the uprising was subdued by the governor, and the Jews returned to Worms. The first *parnas* of the renewed community was David Joshua Oppenheim, who in 1624 built the *bet midrash* attributed to Rashi. Another *parnas*, Abraham b. Simeon Wolff Oppenheim, was the father of the noted David *Oppenheim. Samuel *Oppenheimer and Samson *Wertheimer, who achieved fame in Vienna, were also natives of Worms. The rabbinical office was then held by the kabbalist Elijah b. Moses *Loanz. From 1650 to 1670, Moses Samson b. Abraham Samuel *Bacharach acted as rabbi and *av bet din* of Worms. It was in his days that Jephthah Joseph Yozpa, a scribe, recorded the legends then current in Worms on the glorious past of the community (*Sefer Maʾaseh Nissim*, Amsterdam, 1696).

Ten years after Worms had been set on fire by the French, in 1689, the community of Worms was again reconstituted. The first rabbi appears to have been Jair Ḥayyim b. Moses Samson *Bacharach (d. 1702), author of *Ḥavvat Yaʾir*. During the 18th and 19th centuries Worms no longer ranked among the important communities of Germany, even though it was still renowned and remained attached to its ancient customs. During the 19th century there were about 800 Jews living in the city. They were granted civic rights along with the Jews of *Hesse, and in 1848 a Jew was elected mayor of Worms.

Holocaust and Contemporary Periods

On the eve of the rise of the Nazis to power, in 1933, there were 1,016 Jews living in Worms. Many Jews emigrated following the boycott of Jewish goods and other forms of harassment. A concentration camp was set up in the vicinity of the city. Nazi persecution stimulated communal activity in the sphere of Jewish adult education, and, after the expulsion of Jewish children from the public school, a Jewish school was founded in Worms in 1936. The ancient synagogue and the *bet midrash* of Rashi were destroyed on *Kristallnacht*, Nov. 9–10, 1938, but the cemetery was saved from destruction by Dr. Ilert, a benevolent non-Jew. Ninety-seven Jews were taken to concentration camps. By May 1939 only 316 Jews remained in Worms. During World War II, in 1941–42, the remaining Jews in Worms were deported to concentration camps and few survived. After the end of the war some Jews again settled in Worms, but the community was not reorganized. The German authorities rebuilt the synagogue and the *bet midrash* from their ruins (1961) and preserved the ancient cemetery. The archives of the community of Worms of 1522 were sent to the General Archives of Jewish History in Jerusalem.

In 1982 the Jewish museum of the history of the Jewish community in Worms was opened at Rashi House, located on the site of the former *bet midrash*. The cellar and parts of the first floor originate from the second half of the 14th century; the rest of the building was erected in 1982. In 2005, a celebration was held in the city to commemorate the 900th anniversary of Rashi's death. In 2005 there were 133 Jews living in Worms, members of the Jewish community in Mainz. The majority are immigrants from the former Soviet Union who moved to Germany after 1990.

[Zvi Avneri]

WORMS, AARON (1754–1836), rabbi in France, born in Geislautern, Saar, son of R. Abraham (Aberle) Joseph. Aaron attended the yeshivah at Metz directed by R. Aryeh Loeb b. Asher *Guenzburg. In 1777 he became rabbi in Kriechingen (Créhange), Lorraine, and in 1785 was appointed *dayyan* in Metz and principal of its yeshivah. From 1813 he served as deputy rabbi, and from 1831, rabbi of Metz.

Although strictly orthodox, he was sympathetic to those desiring the integration of Jews into gentile society through "improvement of morals." During the French Revolution, he joined the National Guard and served as a member of the *Assembly of Jewish Notables and the Great *Sanhedrin (1806–07), where he expressed the view that the granting of civil rights to the Jews would encourage them to assume added responsibilities toward the state. In the Sanhedrin he gave an address on the relations between Jews and non-Jews according to the Talmud, in which he maintained that the phrase *ovedei kokhavim u-mazzalot* (idolaters) does not apply to the non-Jews of the present time. On the contrary, the Talmud enjoins a spirit of brotherhood between Jews and non-Jews. He also expressed the view that it is preferable to pray in the vernacular and to understand what one is saying

than in Hebrew if one could not understand it. For this reason he took no part in the "temple controversy" in Hamburg in 1818/19. Worms also opposed the retention of customs which had their basis in superstitious beliefs, as well as the exaggerated use of *piyyutim* in the prayers. R. Aaron encouraged the foundation of an educational institution in Metz where children were also taught secular subjects. He urged Jews to learn and practice crafts.

His work *Me'orei Or* was published anonymously in seven parts, the first three between 1790 and 1793; the last four, published between 1819 and 1831, were entitled *Be'er-Sheva, Or la-Mo'ed, Ben Nun*, and *Ken Tahor*. It examines questions of *halakhah* in the Talmud and Shulḥan Arukh and the origins of *minhagim*, and elucidates *aggadah*. Certain sections of the work include a "*mahadura batra*" ("final rescension") which complements the commentary and notes in the body of the work. He included in his works a considerable number of poetical compositions, *piyyutim* for festivals, Sabbath songs and hymns, and *seliḥot* for the High Holydays. He also published a commentary on the *Maḥzor* and the Passover *Haggadah*.

[Yehoshua Horowitz]

WORMS, ASHER ANSHEL (1695–1759), German physician and Hebrew author. In 1723, Asher was appointed physician at the Jewish hospital at Frankfurt on the Main, a position he occupied until his death. He was interested in a wide range of subjects: mathematics (in his youth he wrote a textbook entitled *Mafteaḥ ha-Algebrah ha-Ḥadashah* ("Key to Modern Algebra"; Offenbach, 1721), physics, logic, ethics, metaphysics, grammar, and, particularly, Hebrew literature and the masorah. His most important work in this last area was *Seyag la-Torah* ("A Fence around the Torah"), published posthumously by his son, the physician Simeon Wolf Worms (Frankfurt on the Main, 1766). It comprises three essays dealing with the nature of the masorah, the masoretes and their times, their identification with the Tiberias schools or with *Ezra and his group, an explanation of the abbreviations used by them, and a correction of the errors that had crept into the masorah. Asher held that "in every generation diligent scribes arose" who preserved the masorah, until the masoretes of Tiberias "corrected all the errors that had occurred in it from the days of Ezra to their own times," and that the masoretes were not the inventors of vocalization, but its transcribers. In the introduction to the work, Worms accused Joseph Heilbronn of Eschwege, who had seen the manuscript before publication, of plagiarizing whole sections of it in his commentary on the masorah, *Mevin Ḥiddot* (Amsterdam, 1765). Heilbronn attempted to defend himself in a pamphlet, *Merivat Kodesh* (Amsterdam, 1766), to which Simeon Wolf Worms replied in his pamphlet *Prodgma Ḥadashah* (Amsterdam, 1767). The controversy was settled by Wolf *Heidenheim who confirmed,

on the basis of the first page of *Mevin Ḥiddot*, which he had in his possession, all the charges of plagiarism leveled against Heilbronn.

[Yehoshua Horowitz]

WORMS, DE, family originating in Frankfurt and prominent in finance and politics in England in the 19th century. They traced their descent back to R. Aaron *Worms whose grandson, BENEDICT DE WORMS (d. 1824), married Jeanette von Rothschild in 1795. The family subsequently settled in London where Benedict, with his sons, MAURICE BENEDICT (1805–1867) and GABRIEL BENEDICT (1802–1881), established the family retailing business. As a result of a visit to Ceylon, his sons built up one of the biggest and best cultivated tea plantations on the island, known as the Rothschild Estate. Their brother, SOLOMON BENEDICT (1801–1882), spent some time there doing pioneering work on the estate. In 1871 he was made a baron of the Austrian Empire for financial services and charity, and three years later was granted a warrant to use this title in Britain in recognition of his work in Ceylon. His eldest son, BARON GEORGE (1829–1912), was vice president of the Royal Society of Literature (1896–1900) and headed the family firm. He wrote *The Currency of India* (1876). Solomon Benedict's third son, HENRY (first Baron Pirbright; 1840–1903), was educated at London University and became a barrister, but, after a short time at the bar, assisted his brother George in conducting their father's retailing business. He entered Parliament in 1880 as a Conservative and in 1885 was made parliamentary secretary to the Board of Trade in Lord Salisbury's first government. He was the first professing Jew to hold ministerial office in a Tory government. In 1888, the year he was made a member of the Privy Council, Henry represented Britain at the international conference for the abolition of sugar bounties and was elected its president. He was undersecretary of state for the colonies from 1888 to 1892. In 1895, in Lord Salisbury's third administration, he was given a peerage. In Parliament he championed the cause of oppressed Romanian Jews. He held a number of communal offices, including those of treasurer and vice president of the United Synagogue. He was also president of the Anglo-Jewish Association (1872–86) until forced to resign after attending the marriage of his daughter at church. He was a Fellow of the Royal Society and a man of considerable erudition. His books included *The Earth and Its Mechanism* (1862); *The Austro-Hungarian Empire* (1870) and *England's Policy in the East* (1877).

WORMS, RENÉ (1869–1926), French social scientist. He taught chiefly economic subjects at the University of Caen, the École des Hautes Études Sociales, the Institut Commercial, and the École des Hautes Études Commerciales in Paris. Worms' importance for sociology rests largely with his organizational activities. He was the founder of the *Revue internationale de sociologie* (1892), the Institut International de Sociologie (1893), and the organizer of the annual sociological congresses, as well as the Bibliothèque Sociologique Internationale. Worms and the institutions which he helped to create became the major points of resistance against the prevailing Durkheimian influences in French sociology. As an author, he started by standing for an organicistic approach to society but modified his position later in life.

The best-known work of Worms's organicistic period is *Organisme et société* (1896); others are *Eléments de philosophie scientifique et de philosophic morale* (1891), *Psychologie collective et psychologie individuelle* (1899), *Philosophie des sciences sociales*, 3 vols. (1903–07; 2nd ed. 1913–20), *Les principes biologiques de l'évolution sociale* (1910), *La sociologie; sa nature, son contenu, ses attaches* (1921), as well as numerous articles in the *Revue internationale de sociologie*.

[Werner J. Cahnman]

WORMSER, ANDRÉ (**Alphonse Toussaint**; 1851–1926), composer. Born in Paris, Wormser won the Rome Prize in 1872 for the cantata *Clytemnestre*. He composed successful operas, orchestral and choral works, piano pieces, and songs. His best-known composition is the pantomine "wordless opera," *L'Enfant prodigue* (1890).

WORMSER, OLIVIER BORIS (1913–1985), French diplomat and member of banking family, born in Paris. He began his career in 1933 as a foreign service officer upon his appointment as an attaché to the French embassy in Rome. He taught law briefly at the University of Dijon (1938–39) and in World War II joined the Free French movement in London. After his return to France, he occupied key posts in policy formulation, particularly in the field of economics, and as an administrator in the Ministry of Foreign Affairs. In 1966 he became French ambassador to the Soviet Union and in 1969 governor of the Banque de France.

[Joachim O. Ronall]

WORMSER, SECKEL (**Isaac Loeb**; 1768–1847), talmudist and kabbalist, born in Michelstadt in Hessen. He received his talmudic education in Frankfurt on the Main, in the yeshivah of Nathan Adler, and followed in his footsteps, accepting a rigorously ascetic "hasidic" way of life and turning to kabbalistic studies. After his first marriage he returned, about 1790, to Michelstadt where he maintained a yeshivah for many years and served, at first unofficially, until 1822 as a recognized district rabbi. About 1810, after the death of his wife, he lived for some time in Mannheim. For years, his "ḥasidic" behavior and extreme vegetarianism created considerable tension between him and the majority of his small community, but his reputation as a master of occult powers spread rapidly and Wormser became known throughout Germany as the "Ba'al Shem of Michelstadt." He denied any such supernatural power but agreed to receive people who sought his advice and guidance, giving them natural remedies, specifics, and sometimes amulets. He became particularly known for his treatment of lunatics. Among the Jews of southern Germany many traditions survived regarding his miraculous cures and other feats. He studied German philosophy and was particularly attracted by Schelling. In 1825 his house and large library were destroyed by fire. Of his talmudic writings, preserved by his descendants, almost nothing was published. A catalogue of his second library is preserved in Ms. Heidenheim 206, in the Central Library in Zurich.

[Gershom Scholem]

WORMWOOD, according to most commentators to be identified with the scriptural לַעֲנָה (*la'anah*). It indicates evil (Deut. 29:17; Amos 5:7; et al.) as does the drinking of the liquid extracted from it (Lam. 3:15; et al.). In Arabic it is called *shi'ah* and in Syriac *shiha*. Consequently the opinion has been expressed that the *si'aḥ* in the phrase עֲלֵי שִׂיחַ in Job 30:4 means "the leaves of the wormwood." The Peshitta identifies *aḥad hasiḥim* ("one of the shrubs") of the desert under which Hagar cast Ishmael with wormwood (Gen. 21:15).

Several species of wormwood grow wild in Israel in the sandy and desert regions. The most common is *la'anat hamidbar* ("desert wormwood"), the *Artemisia herba-alba* whose juice has a very bitter taste. It is possible that wormwood juice was extracted from it, as, despite its bitterness, it was regarded by the ancients as having therapeutic qualities. The Romans used to give it (absinthium) to the victors of the chariot races to drink since "health is an honorable prize" (Pliny, *Historia Naturalis* 27:45–46). In Greek, wormwood is called *apsinthion* (as the Septuagint translates *la'anah*). The Talmud (Av. Zar. 30a) mentions "bitter *apsintin* wine," i.e., wine to which *apsinthion* (wormwood) was added, not unlike modern vermouth, which is wine to which the species *Artemisia absinthium* has been added ("wormwood" is probably a corruption of the word vermouth).

[Jehuda Feliks]

WOROSZYLSKI, WIKTOR (1927–1996), Polish poet, editor, and translator. Born in Grodno, Woroszylski began writing in 1945 and was chief editor of the literary weekly *Nowa Kultura* (1956–57). His works include the verse collections *Ojczyzna*

("Fatherland," 1953) and *Wiersze i poematy wybrane* (1955); *Noc komunarda* ("Night of the Communards," 1949); and a comprehensive study of the Soviet poet Mayakovski (1965; *The Life of Mayakovsky*, 1970). He also published translations from Russian literature.

WORSHIP, service rendered to God and comprehending both the attitude of reverence and love toward the Deity and the activity – in conduct as well as ritual – in which the homage finds expression.

Terminology

The biblical vocabulary of worship is extensive and varied. The following are the principal terms employed:

1. *hishtaḥawah*, "to prostrate oneself," is the most frequently used (86 times);

2. *ʿavad*, "to serve";

3. *yareʾ*, "to revere";

4. *sheret*, "to minister," especially in a cultic sense;

5. *darash*, "to seek, inquire";

6. *sagad* (Heb.), *seged* (Aram.) (both in Daniel), "to bow."

There are also other terms used to express various liturgical acts and the feelings of joy awakened by worship.

Ideological Basis

The earlier version of this entry hewed closely to the position of Yehezkel *Kaufmann whose work, though ingenious, overstated the contrasts between Israel and its neighbors. In addition, as was true of his contemporaries, Kaufmann equated the religion of ancient Israel with the religion of the Bible. The present revised entry concentrates on the biblical view of worship, namely that Israelites must worship Yahweh alone, without equating that view with the actual patterns of worship in ancient Israel, which require separate investigation. For all its distinctiveness, Israelite religion fit neatly into ancient Near Eastern patterns. Like their neighbors, the Hebrews had no concept of nature or its immutable laws. As such, they believed that it was possible to influence the powers that be in human favor by acts of ritual and worship. God might sometimes be spoken of as beyond human understanding (Isa. 40:28; 55:9; Ps. 145:3; Job 5:9) but is accessible nonetheless. Humans turn to the divine, sometimes out of a sense of wonderment and awe, of reverence and gratitude, of joy and trust, which call forth a desire for adoration and thanksgiving. At other times distress and danger impel people to seek God's help, for He is the ultimate source of salvation (Isa. 43:11; Hos. 13:4). God is perceived as both near (Ps. 145:18) and far (Ps. 22:12). Sin estranges humans from God. In biblical thinking rebellion against the Divine will, revealed in His commandments, and the breaching of His eternal covenant, creates a gulf between divinity and humanity, which only atonement can bridge. Penitents seek expiation for their transgressions through confession and sacrifice (Lev. 4 and 16). There are times when the acts of an inscrutable providence result in human challenge and protest (Gen. 18:24; Jer. 12:1ff.; Job, passim). Biblical worship had room for all these human reactions.

Israel's contemporaries had forms of worship analogous to those of Israel; Hebrews and their neighbors shared the notion that it was possible for humans to have some control over their destinies. Both Yahweh and his divine contemporaries demanded the service of the clean of hand and pure of heart (Ps. 24:4; Egyptian Book of the Dead, chapter 125).

Humans have always been conscious of a certain duality in divine worship. In a Hittite inscription designated *Instructions for Temple Officials* it is stated:

> Are the minds of men and of the gods generally different? No! …When a servant is to stand before his master, he is bathed and clothed in clean [garments]; he either gives him his food, or he gives him his beverage. And because he, his master, eats [and] drinks, he is relaxed in spirit and feels one with him. But if he [the servant] is ever remiss, [if] he is inattentive, his mind is alien to him. And if a slave causes his master's anger, they will either kill him… (ANET, Pritchard, Texts, p. 207).

The author discerns a twofold approach to the deity:

(a) the avoidance of uncleanness and whatever else may vex the divinity;

(b) the provision of offerings.

The same negative and positive approaches to God are reflected in the positive precepts and prohibitions of the Torah. The two aspects are found, for example, in the ritual laws of purification and the ceremonial observances, respectively. They are likewise discerned on the higher level of ethical conduct: wrongdoing is to be eschewed and righteousness is to be pursued in the service of God (Isa. 1:16–17). For worship is not solely or even primarily a matter of ritual. It is of supreme significance that in Micah's formulation of the fundamentals of religion two of the three requirements ("to do justly and to love loving kindness") concern human relationships, and only the third ("to walk humbly with thy God") refers to the Deity (6:8). The Hittites and the Hebrews depicted their gods in human imagery. Both required just and ethical conduct along with ritual, as did the Egyptian and Mesopotamian gods.

Emphasis is often given to the antithesis between cultic observances and righteous conduct. The former is deemed to belong to the priestly conception of religion, whereas the prophets, it is held, rejected ritual and stressed the spiritual approach to God. To some extent this is true. The fact that prophets often railed against the mechanical potency of ritual proves that the concept had deep roots, encouraged of course by the priesthood (Lev. 16:30, 34), whose income depended on it (Hos. 4:8). Yet, the Bible does not show a hard and fast dichotomy. Priests could also be prophets (Jeremiah, Ezekiel); prophets, when necessary, emphasized the importance of ritual requirements (Ezek. 40–48; Haggai 1:2ff.; Mal. 1:8, 12–14). The Torah ordains cultic regulations in juxtaposition to its formulation of ethical principles (e.g., Ex. 20:8–14; Lev. 19:15–22), or synthesizes them into a single law (e.g., Deut. 16:14). Late prophetic teaching lent support to this view (Mal. 3:4–5). The attempt to interpret liturgical and ethical requirements as diametrical opposites serves to compartmentalize the life of the worshiper; the Bible seeks to make it whole. It

points to the ultimate purpose of religion in key passages like these: "And thou shalt love the Lord, thy God…" (Deut. 6:5); "And thou shalt love thy fellow as thyself" (Lev. 19:18); "For I desire loving kindness and not sacrifice…" (Hos. 6:6). Worship unites in itself both outward forms and religious inwardness. At the same time some of Israel's religious teachers realized that there was a tension between the observance of the external rites and the inner content of religion in which lurked the danger of formalism and hypocrisy. The prophets inveighed against these tendencies. They denounced corrupting wealth and callous indifference to the needs of the poor (Amos 3:12, 15; 4:1 ff.; 5:11; 6:4–6); sacrifices and celebrations that were rooted in unrighteousness and insincerity (Amos 5:21 ff.; Isa. 1:11 ff.); and taking advantage of religious festivals to engage in illicit sexual behavior (Amos 2:7; Hos. 4:13 ff.); whoring after the Baals (Hos. 2 ff.; Jer. 3:1 ff.); the intemperance and evildoing of priests and false prophets (Isa. 28:7 ff.; Hos. 4:4–10); and the horror of sacrificing children to Moloch/Baal (Jer. 7:31; 32:35; cf. Lev. 18:21; Deut. 18:10). Even the Temple was not spared when it ceased to be a center of holiness (Jer. 7:11 ff.; Micah 3:12). The prophets did not hesitate to condemn practices that were inherently good but had become vitiated by dishonorable conduct and iniquitous living (Amos 5:21–24; Isa. 1:11 ff.; Jer. 6:20). The prophets did not disapprove of sacrifices if offered in sincerity and truth (Mal. 3:4). It was to falsehood and evil that they were opposed. They demanded loyal obedience to the will of God instead of the sacrilege of a cult that was no more than blasphemous hypocrisy (Hos. 6:6; Jer. 7:21–23; Micah 6:6–8; cf. Ps. 51:16 ff.). Righteous living was fundamental to true worship. But in a different constellation of circumstances the later prophets, in particular, urged earnest devotion to the forms of organized religion as vital to the survival of the faith and the nation.

The Elements of Biblical Worship

The fabric of Israel's worship was woven of many strands. These may be summarized as acts of purification; dietary laws; sacrifices, tithes, and other offerings; the observance of the Sabbath, festivals, and fast-days; and prayer understood in its broadest sense.

The laws of defilement and purity – largely in Leviticus (e.g., 14:9; 15:11; 17:15–16), Numbers (ch. 19), and Deuteronomy (e.g., 21:1–9) – and the dietary regulations (Lev. 11; Deut. 12:16; 14:4 ff.), irrespective of their conjectured origin, form in the Bible part of the law of holiness (Lev. 11:44). "I shall wash my hands in innocence" (Ps. 26:6; cf. 73:13; 24:4).

In a sense, the sacrifices – both public and private – the firstlings, the first fruits, as well as the tithes and other priestly and levitical dues (Ex. 13:11 ff.; Lev. 1–7; 27:30–33; Num. 5:9 ff.; 15:18 ff.; 18:8 ff.; Deut. 12:17 ff.; 14:22–29; 15:19 ff.; 24:19–21; 26:1–14) are comparable to taxes, rents, and fines (R.H. Pfeiffer). Yet as was true in other ancient religious systems, the sacrificial system was a dramatic approach to the divine, an act of homage and thanksgiving (Ps. 24:1; I Chron. 29:14), or of expiation (in His grace God accepts the oblation instead of

the sacrificer's life). Hence when the true significance of the offerings was forgotten it was said that God actually revoked them (Isa. 1:11; Ps. 50:8 ff.).

The Sabbath and the other holy days of Israel's calendar have played an immeasurable role in developing and ennobling Israel's worship. The attempt to find the origin of the Sabbath in the Babylonian *šapattu* has proved abortive. Whatever its origin, the idea of the Sabbath in the scriptural context is a unique institution, meant to articulate divine sovereignty over time, just as the sabbatical year articulates divine sovereignty over territory. From one point of view, it was Israel's answer to the Egyptian bondage; any human being, even a slave, needs rest. Not only humans, but also animals require recuperation from toil (Ex. 23:12; Deut. 5:12–15). In the Exodus version of the Decalogue, the Sabbath assumes cosmic significance; it becomes a memorial to the story of Creation (Ex. 20:8–11; cf. Gen. 2:1–4). Nor were the prophets less emphatic in stressing the hallowed character of the day (Isa. 58:13–14; Ezek. 20:20), and Nehemiah took stern measures to enforce its observance. An extension of the Sabbath idea is to be seen in the sabbatical year (Ex. 23:10 ff.; Deut. 15) and in the year of jubilee (Lev. 25).

Like the Sabbath, the festivals were designed to bring the worshiper nearer to God. They were occasions of deep religious joy (Deut. 16:15; Neh. 8:10 ff.). Biblical religion, while deploring all forms of intemperance and overindulgence, nevertheless looked askance at asceticism. Wine was created to gladden the human heart (Ps. 104:15). The Lord was to be served in gladness (Ps. 100:2; cf. Shab. 30b). Modern research has conjectured that certain biblical festivals are derived from earlier lunar and solar celebrations in antiquity, or are related to Canaanite agricultural feasts, which have been adapted to Israelite thinking. Without entering into the validity of these theories, it must be stressed that the religious significance of these observances is not in their supposed origin, but in their scriptural presentation. The paschal offering and the Feast of Unleavened Bread (Ex. 12; Deut. 16:5–6; Ezek. 45:21), and the Feast of Tabernacles (Booths) or of Ingathering (Ex. 23:16; 34:22; Lev. 23:34 ff.; Num. 29:12–39; Deut. 16:13–15; 31:10–13) mark respectively the barley harvest and vintage time. As such they had a thanksgiving character; they gave expression to the Israelite's gratitude to God for the earth's bounty. But to the agricultural aspect a historical element was added: Passover calls to mind the deliverance from Egyptian bondage (Ex. 12–13; 23:15; Deut. 16:1–8) and Tabernacles is a reminder of the Lord's care for Israel during their desert wanderings (Lev. 23:43). Israel found God not only in the phenomena of the world, but also in the providential course of events. This historical insight plays an important role in Israel's worship, both in its ceremonial and in its prayers (e.g. Ps. 136; I Chron. 16:8 ff.). The Feast of Weeks (Ex. 34:22; Deut. 16:10 – also called the Feast of the Grain Harvest (Ex. 23:16) and the Day of First Fruits (Num. 28:26) – is in its biblical setting a purely agricultural celebration, but in rabbinic times it evolved into the festival of the giving of the Torah at Sinai. Characteristically, too, when farmers brought their first fruits before the Lord, they expressed

gratitude in a succinct historical review (Deut. 26:5–10). Minor celebrations, such as Purim (Est.) and Ḥanukkah (the Festival of Dedication; see I *Macc. and II *Macc.) based on Hellenistic models, obviously have a historical motif. The same is true of the fast days of the fifth and seventh months (Zech. 7:3–5), recalling the fall of Jerusalem. But the Day of Atonement (Lev. 16) is entirely religious in character; and the Day of Blowing the Horn, called New Year – Rosh Ha-Shanah – in rabbinic literature (Lev. 23:24; Num. 29:1), and the New Moon (Num. 28:11 ff.; I Sam. 20:5 ff.; II Kings 4:23, etc.) and the Feast of the Wood Offering (Neh. 10:35; 13:31) were likewise unrelated to historical events. It should also be noted that the special sacrifices (Num. 28–29) which marked all the major celebrations served to emphasize the religious nature of these occasions; and the inwardness of these observances was illuminated by prophetic teaching (Isa. 1:11 ff.; 58:3 ff.; Joel 2:13).

Finally it should be observed that biblical worship might be individual and collective. Examples of personal worship abound throughout the Bible: the Patriarchs, Moses, Joshua, Hannah, and Hezekiah, among others. Without doubt David composed a number of prayers (cf. II Sam. 7:18–29) and some of his compositions are certainly in the Book of Psalms. But apart from this, the Book of Psalms contains a variety of prayers and hymns that voice the personal supplications, hope, faith, and joy of the authors. These may have been subsequently adapted to national or congregational use, but their individual significance was not wholly lost. To the same category of worship belong also the private sacrifices brought to the Temple, although the ritual formed part of the general priestly ministrations.

At the same time the Bible ordains and illustrates various forms of public worship. Of this aspect of worship the Bible likewise furnished innumerable examples (the public sacrifices; the Temple choral services; the statutory assembly prescribed in Deut. 31:10 ff.; and historic occasions like those described in I Kings 8:1 ff.; Neh. 8:1 ff., etc.). The synagogue services of a later period continued the tradition of congregational prayer and study, without excluding opportunities for personal religious meditation.

Developments in Israel's Worship

Biblical religious rites clearly underwent a continuous process of development. The biblical account of worship in the patriarchal age reflects practices originating in different times and places. Altars were built and the name of YHWH proclaimed (Gen. 12:7–8; 13:4). Tithes were given (Gen. 14:20) and sacrifices offered (Gen. 22:13; cf. 4:3–4; 8:20). The Lord entered into a covenant with Abraham, the accompanying ritual being reminiscent of *Mari customs (Gen. 15; cf. Jer. 34:18). Prayer (Gen. 24:12 ff.) and acts of purification (35:2 ff.) are mentioned. The Patriarchs blessed their children (27:27–29, 39–40; 49:3 ff.) and Jacob made a vow (28:20 ff.). The Lord blessed the Patriarchs, assured them of His salvation, and promised the land of Canaan to their children (12:2 ff.; 26:3–5; 24; 28:13–15, etc.). In some cases the patriarchal tales reflect family religion that

persisted through time in ancient Israel, without an elaborate priesthood or sanctuary; the theophany granted a family elder could determine the site of worship.

The *Tabernacle and its cult (Ex. 25–31; 35–40) reflect worship in monarchic as well as exilic and post-exilic Israel. Prophets like Amos, Hosea, and Jeremiah held that the wilderness period determined the basic character of Israel's authentic worship (Amos 5:25; Hos. 2:16–17; Jer. 7:21–23).

At times, syncretism was rife; the prohibitions against taking over Canaanite sacred sites and practices (Deut. 12:2–3; 30–31) prove that such was the case. At times YHWH was worshiped under the guise of Baal; or along with him (I Kings 18; II Kings 21:3). Saul, Samuel, and David were zealous advocates of the worship of Yahweh alone to exclusion of all other gods, while other kings like *Solomon (see I Kings 11:4), *Ahab, and *Manasseh worshiped other gods alongside Yahweh. David united the nation and chose a central site for worship at the new capital, Jerusalem. He assembled the material for the future Temple and reorganized the priesthood (II Sam. 8:7–12; 17–18). He is said to have enriched Israel's psalmody and introduced instrumental music into public worship (Amos 6:5; I Chron. 15, 16, and 25). He also organized a processional ceremony in which the Ark of the Covenant was brought to Jerusalem, perhaps on one of the great festivals (II Sam. 6; cf Ps. 24 and 132). Solomon built the central Temple in Zion, where worship was strongly ecclesiastical – mediated by the priests and levites – and markedly national, with universal tones appearing in Second Temple writings (Isa. 56:6–7; 66:23; Zech. 14:16–19).

[Israel Abrahams / S. David Sperling (2nd ed.)]

Second Temple

The Babylonian Exile seemed at first to be the final catastrophe which must quench the last flickering flame of Israel's true faith (Ezek. 20:32; Ps. 137). But it was just at this tragic juncture in its history that the Jewish people rose to the full stature of its national greatness. Under the inspiration and direction of prophets like Ezekiel and the so-called Deutero-Isaiah, the exiled people transmuted disaster into a new vision of life, which they proceeded to implement with unflagging vigor. Prayer, by no means absent from pre-Exilic worship, began to play an ever greater role; many psalms were composed or elaborated at this period. The first tentative steps were also taken towards the collection of Israel's sacred literature. It may well be that the foundations were then laid of the concept of synagogal worship, which differed radically from the Temple service. It was decentralized, the stage replaced the priest; prayer was substituted for the altar-offerings, scriptural reading and interpretation became a vital component of religious life; and the seeds of religious study and preaching began to burgeon. The accent was on spiritual education. In the words of R.T. Herford: "In all their long history, the Jewish people have done scarcely anything more wonderful than to create the synagogue. No human institution … has done more for the uplifting of the human race." Even if there were no synagogues actually established in the Exile (but see Ezek.

11:16; 33:30–32), they were certainly to be found in Judea by the fourth century B.C.E. They did not rival the Temple but complemented and survived it.

Upon the return of the exiles, in several stages, under the benignant Persian rule, Jewish religious life assumed new spiritual dimensions and an unprecedented dynamism. The people turned their back completely on idolatry, and worship became more spiritualized (cf. Ps. 26:6ff.). Under the persistent urging of the prophets Haggai, Zechariah, and Malachi, the Temple was rebuilt and its worship acquired new dignity and earnestness. The daily and festival sacrifices were, in time, accompanied by a unique treasury of psalmody, to which choral and instrumental music lent great beauty. Ezra, like a second Moses, made the nation Torah conscious as never before (cf. Ps. 1 and 119). Nehemiah, by his firm and able administration, gave the people greater unity and inner strength. According to some historians (notably L. Finkelstein), some of the earliest rabbinic traditions are to be traced back to the Exile period. Be that as it may, Judaism became in the early days of the Second Temple era an impregnable religious citadel that served to preserve Jewish identity, without government or country, through long centuries. But in the final analysis Israel's worship was neither primarily prophylactic nor narrowly national. It was perhaps Israel's greatest contribution to spiritual civilization, and its seminal power was such that it provided the framework and much of the content of Christian and Islamic worship to this day.

WORTSMAN, YECHESKIEL CHARLES (1878–1938), Zionist journalist. Born in Zvonets, Podolia, Wortsman completed his studies in chemistry at Basle University. During his student days he was active in the Zionist Movement and, together with Chaim *Weizmann, Nachman *Syrkin, and others established the first Zionist society in Berne. He also participated in the First Zionist Congress in Basle (1897). Wortsman began his journalistic activities at an early age and contributed articles to the Yiddish press on current affairs which were devoted principally to promoting Zionism. He also wrote one of the first Zionist propaganda pamphlets in Yiddish, *Vos Vilen di Tsionistn* (1901), and a booklet on the Jewish National Fund (1903). In 1904 he began to publish a Yiddish journal in London entitled *Di Yidishe Tsukunft.* From 1907 Wortsman lived in the United States, and for the rest of his life played a role in the Yiddish press there and in Canada, both as an editor and a regular contributor.

[Getzel Kressel]

WOSK, family of Canadian businessmen and philanthropists. Brothers BENJAMIN (1913–1995) and MORRIS (1917–2002) came to Vancouver, British Columbia, from Russia in 1929. They were sponsored by their cousin ABRASHA WOSK (1899–1980), one of the founders of the Vancouver Jewish community's Home for the Aged and the Achduth Society, which provided loans to immigrants. Together, Ben and Morris built the Wosk department store chain and acquired considerable real estate holdings, concurrently becoming major philanthropists and community leaders. For Ben's work with such charities as the B.C. Heart Foundation and Lions' Club, and many hundreds of individuals whom he helped without fanfare, he was named to the Order of Canada in 1978. He was also a major donor to the Schara Tzedeck synagogue and new Vancouver Jewish Community Centre, which is home to the Wosk Auditorium. Morris Wosk likewise made many significant contributions to both local and international causes. He was a prominent promoter of Israel Bonds and the Jewish National Fund of Canada, as well as numerous educational and health facilities such as the Vancouver General Hospital. In 1995 he commissioned four Torah scrolls for Vancouver's newest Jewish congregations. His long association with Simon Fraser University (SFU) included capital fund donations for the construction of the Morris J. Wosk Centre for Dialogue, an institute for the promotion of discussion and mutual understanding. In 1999 Morris and his son, Rabbi Dr. YOSEF WOSK, provided an endowment to establish a publishing arm for the Vancouver Holocaust Education Society. As the director of SFU's Interdisciplinary Program in the Department of Continuing Studies, Yosef has continued the Wosk family's close relationship with the university, as well as the tradition of philanthropy and support of Israel. He is the founder of SFU's Philosophers' Café, the world's largest series of café discussion gatherings. Morris's other two sons, Mordechai and Ken, have also been active in Jewish causes and philanthropy in Vancouver. Morris's wife, Dena, was a supporter of the arts, especially music.

[Barbara Schober (2ⁿᵈ ed.)]

WOUK, HERMAN (1915–), U.S. novelist and playwright. The son of Russian immigrants, Wouk was born in New York City. For six years he worked as a radio writer and, when the United States entered World War II, joined the Navy as a line officer, serving in the Pacific for four years. Wouk's wartime experiences gave him the material and background for his best seller *The Caine Mutiny* (1951). It sold 3,000,000 copies, won the Pulitzer Prize for fiction, was turned into a successful Broadway play by the author (*The Caine Mutiny Court Martial*, 1954), and was later made into a motion picture. Wouk's other novels include *Aurora Dawn* (1947), a satire on the advertising business; *The City Boy* (1948); *Marjorie Morningstar* (1955), the story of a stage-struck Jewish girl; *Youngblood Hawke* (1962), about the tribulations of a successful writer; and *Don't Stop the Carnival* (1965). A leading Orthodox layman, Wouk taught English at Yeshiva University. *This Is My God*

(1959) was his best-selling affirmation of faith in traditional Judaism, reached after much self-examination and exposure to the non-religious influences of his college years and public life. Wouk's *Winds of War*, regarded as one of his best novels, was published in 1971. It led the *New York Times* bestseller list for 24 weeks. The sequel, *War and Remembrance* (1978), dealing with the Holocaust in the framework of the major battles of World War II, also topped the *New York Times* bestseller list. His later works include the novel *Inside, Outside* (1985) which deals with Judaism in private life and in politics, and *The Will to Live On: This Is Our Heritage* (2000). He was vice president of the Fifth Avenue Synagogue and endowed several Jewish educational causes in the U.S. and Israel.

[Joseph Mersand]

WOYSLAWSKI, ZEVI (1889–1957), Hebrew writer and critic. Woyslawski studied at the Odessa yeshivah, at the Oriental Studies Academy founded by Baron Guenzburg in St. Petersburg, and at Odessa University. His literary career began in 1918 in *Ha-Shiloʾah*. Three years later he left Russia as one of the group of writers headed by *Bialik and settled in Berlin. There he contributed to the periodical *Haolam* and edited the publication *Atidenu* (1923–24). He emigrated to Palestine in 1934 and played a prominent role in literary life: as a member of the Central Committee of the *Writers' Association, editor of its literary journal *Moznayim* (1942–47), chairman of the Israel branch of PEN, and a member of the Hebrew Language Academy. In his philosophical writings, Woyslawski examined the essence of recent Jewish culture against the background of European culture. His main contribution to the study of Hebrew literary criticism was the introduction of the sociocultural method of analysis. He wrote *Yeḥidim bi-Reshut ha-Rabbim* on the Jews in European culture (1956), and translated Shemaryahu *Levin's autobiography into Hebrew, as well as works by Hermann Cohen, Martin Buber, Schopenhauer, Freud, and other philosophers. Woyslawski felt that the test of the Hebrew language was its ability to convey other cultures, a strength that he displayed in his translations.

His books include *Eruvei Rashuyyot* (1944); *Ḥevlei Tarbut* (1946), a sociological study of national and linguistic problems; *Be-Mazzal Maʾadim* (1952); *Al ha-Miẓpeh* (1959); *Orot ba-Derekh* (1960); *Ha-Roman ve-ha-Novellah be-Sifrut ha-Meʾah ha-Tesha Esreh* (1961); *Mishnat Zimmel al Ruʾaḥ ha-Rekhushanut* (1966).

BIBLIOGRAPHY: S. Halkin, *Modern Hebrew Literature* (1950), 167; G. Elkoshi, *Naḥalat Ẓevi* (1966), bibliography of his works: *Atteret Ẓevi: ha-Ish ve-Haguto* (1962).

[Efraim Shmueli]

WRESCHNER, ARTHUR (1866–1932), psychologist. Born in Breslau, Wreschner began his career in the field of philos-

ophy, writing a doctoral dissertation on Kant's and Platner's theories of knowledge for the University of Berlin. He remained at the university to study medicine, and after receiving his degree in 1900, moved to Zurich. There he became instructor in psychology at the Technische Hochschule and at the university where, in 1910, he was appointed professor. Wreschner wrote a number of scholarly books, his specific interests being reflected in *Methodologische Beitraege zu psychophysischen Messungen* (1898); *Die Reproduktion und Assoziation von Vorstellungen* (1907–09); *Die Sprache des Kindes* (1912); and *Das Gefuehl* (1931). His son WALTER WRESCHNER (1904–), an attorney, became president of the Israelitische Kultusgemeinde in Zurich in 1955, and was president of the Keren Hayesod for Switzerland.

WRITERS' ASSOCIATION IN ISRAEL (Heb. אֲגֻדַּת הַסּוֹפְרִים הָעִבְרִים בְּיִשְׂרָאֵל), organization of Hebrew writers established in 1921 in Tel Aviv by a conference of 70 writers, presided over by Nahum *Sokolow. Attempts to found a Hebrew writers' association in Russia and other East European countries had been made by Mordekhai b. Hillel Hacohen, but they proved unsuccessful, generally due to difficulties in procuring a license from the czarist authorities. When the association was founded in Ereẓ Israel, its objectives were set as "the cultivation and growth of Hebrew literature through the cooperative efforts of Hebrew writers; and the defense of the spiritual and material interests of those in the field of literature." The founding conference of the Writers' Association also accepted a resolution "to demand that the Zionist Organization regard Hebrew literature as an integral part of Zionist work and support it."

In the middle of the 1920s, after Ḥayyim Naḥman *Bialik and a group of Hebrew writers from Russia settled in Palestine, substantial impetus was given to the activities of the association. Bialik actively participated in the literary life of the country and declared that:

> The goal toward which the Writers' Association aspires is not to make writers in a flock, all of whose members dance to the tune of the same pipe and are under the staff of the same shepherd. We desire and aspire to diversify, to the joy of blessing and plenty. Each must travel his own special path, the path with which God has blessed him; each will demand of himself according to the path he has chosen and according to the gift God has given him. We ask only one thing: that we will all be infused with one consciousness-that the writers are the servants of the nation and of its eternal values.

In 1928 Bialik was elected president of the Writers' Association. Its organ, *Moznayim* ("Scales"), began as a weekly and then became a monthly. Over the years, many changes were made in the journal and it went through crises and periods during which publication ceased. Editors changed, and with them so did the trends of the publication, but the journal survived and provided an opportunity for literary men of various schools and points of view to contribute. After Bialik's death in 1934, Saul *Tchernichowsky was elected president of the association, and he continued to serve in this capacity until his death in 1944.

The association published series of books, founded funds to aid writers, and in special instances concerned itself with finding work for writers in need. It maintained ties with publishers to determine fair fees for writing and translation. Under the aegis of the association, literary collections were published, meetings and conventions held, a rest home was established for writers at Zikhron Ya'akov, and a house was purchased in Nehorah, in the heart of the newly developed Lachish region, for writers to use.

From 1948, with the establishment of the State of Israel, the mass immigration and growth of the population, the association received new members and broadened the scope of its activities. Among its projects are: the Makor Library for the encouragement of original works, in whose framework six books of fiction, poetry, criticism, and philosophy appear each year; Nefesh Books, which serve as a memorial to writers by publishing their works for the first time or reissuing them; the regularly published "Popular Selection of Our Literature" – selections of the representative works of various authors in popular editions; and the *Collection of Israel Writers*, a large annual in which works by authors of various ages and literary schools are brought together.

From 1951 the association ran the Asher Barash Institute of Records, which serves as one of the important bio-bibliographical sources for research into modern Hebrew literature, especially for students. The institute operates in the following fields: bibliographical records, keeping of archives, collection of newspaper items on writers, and the collection of photographs of writers from various periods of their lives. Among the publications of the institute are the collection *Genazim*, which appears every two years and includes material from the archives never before published; the quarterly *Yedi'ot Genazim*, which provides material about dead authors when the anniversary of their birth or death falls during the period of publication.

The Writers' Association is represented in a substantial number of literary prizes awarded in Israel, such as the Fund for the Encouragement of Original Creations, established in honor of Yiẓḥak Lamdan, which is funded by part of the association's budget. Each year it frees a specific number of writers for a period so that they may complete their literary work. The Prime Minister's Fund for Creative Writing was founded by Levi Eshkol in 1968 on the initiative of the Writers' Association. Each year it awards prizes to five authors in order to free them from their daily work for a year and enable them to devote their time to realizing a literary goal. The association also hosts authors – both Jewish and non-Jewish – from abroad.

More than 300 writers belonged to the association in the beginning of the 1970s, and anyone who has published two books is eligible to submit an application for membership. Efforts were made to bring new immigrant writers into the association, and a decision was taken to accept new immigrant authors who did not write in the Hebrew language. The association initiated a project to translate works by these writers into Hebrew (Shevut) in order to both bring these works to the Hebrew-reading public and aid in the cultural absorption of the writers themselves.

The conference of the Writers' Association serves as a forum to discuss problems in the field of Hebrew literature and often resulted in intellectual clashes between different generations and schools of writers. It meets every two years during Passover, and its deliberations also cover problems of a political nature. The offices of the association, including the editorial offices of *Moznayim*, and the Asher Barash Institute, are housed in Bet ha-Sofer, in Tel Aviv, named in honor of Tchernichowsky. The building also contains the Tchernichowsky Museum. The Writers' Association is represented in the Institute for the Translation of Hebrew Literature. The association maintains branches in Jerusalem and Haifa, which carry out their own literary activities, lectures, symposia, and the publication of the yearbooks *Jerusalem* and *Carmelit*, respectively.

[Dov Chomsky]

WRITING (**Scripts**, **Materials**, **and Inscriptions**).

SCRIPTS AND MATERIALS

General Survey

From the end of the third millennium B.C.E., the art of writing was practiced in the ancient Near East (see *Alphabet). Here, the pictographic, cuneiform, and hieroglyphic scripts were invented and developed. In particular Canaan, situated on the cultural crossroads between Egypt and Mesopotamia and beneficiary of their scribal traditions, produced new indigenous writing systems. Some, like the Byblian pseudo-hieroglyphs, the enigmatic Balua stele, or the inscribed bricks from Deir 'Allā, ancient Succoth, were limited to specific centers. These short-lived systems indicate a high degree of scribal experimentation and originality. It is no wonder then that the Canaanites invented the alphabet. They discovered that their language contained some 30 phonemes and that each one could be represented by an individual sign. The social effects of this revolutionary discovery were not to be felt for several generations.

Between the 17th and 12th centuries B.C.E., the primitive, pictograph-like alphabet was employed in Shechem, Gezer, Tell al-Ḥāsī, Tell al-ʿAjūl, Beth-Shemesh, Megiddo, Tell Rehov, Tell Beit Mirsim, and Lachish. These inscriptions are generally called Proto-Canaanite. Another, larger group, the so-called Proto-Sinaitic inscriptions (1500 B.C.E.) were probably written by a colony of northwest Semitic slaves who worked the mines in Wadi Maʿara, near Sarābīṭ al-Khādim. It seems that this script generally served a religious function and may have been developed by a Canaanite priesthood. Certainly, all official government documents were written in cuneiform (e.g., el-Amarna letters) which obscured the alphabetic script.

It was during this period that a novel attempt to employ the alphabet was initiated at *Ugarit (1370–1200 B.C.E.). Per-

haps as a result of the desire to express the local literature in its own medium, a cuneiform alphabet, influenced by the dominant Mesopotamian system, was devised. A similar trend may be noted in other Canaanite cities as well (Beth Shemesh, Taanach, Mount Tabor). This script as well as an earlier attempt to adapt the cuneiform signs to surfaces other than clay by giving them linear form (personal name incised on a pottery jar from Hazor, arrowhead from Lebanon) did not survive the disappearance of the Babylonian scribal centers in Canaan and Syria toward the end of the Bronze Age.

The political and cultural break with Mesopotamia, as well as the administrative needs of emerging young societies, accelerated the development of the linear alphabet. The letters were simplified, beginning the process that was to evolve into a cursive form. The first alphabetic system to emerge was the 22-letter Phoenician script, which appeared by about 1100 B.C.E. Most likely it was this script, or a slightly older form, that is found on bronze arrowheads in Beth-Lehem and Lachish. This system retained the general form and order of the earlier alphabetic scripts and probably the mnemonic device for its study – all thanks to a strong local scribal tradition. It was the Phoenician alphabet that was to be adopted by the Israelites, Arameans, and later by the Greeks. The new medium was adopted early in Israel's history and deeply affected its civilization. Monotheism was grasped now in terms of a written covenant between God and Israel. The central cult object was the Decalogue cut in stone, and later became the Torah scroll. Israelite religion elevated writing from a means of recording the mundane to a medium of revelation.

Perhaps it was because of the relative simplicity of the alphabet or the fact that Israel had no conservative scribal class with vested interests, that biblical society as a whole became "book-centered." Any tribesman, even a non-priest, could emerge as a literate leader (Josh. 8:32–35; 24:26). The establishment of the monarchy and the process of urbanization resulted in a greater diffusion of writing (among members of the government service, army personnel, the mercantile class, stonemasons, ivory cutters, potters, and others; see the following section). By the time that Deuteronomy appeared in the late seventh century, it might be taken for granted that a king could read, and that there would be enough people in a town who could write the Decalogue or a portion of it on the gates of a city or a house (Deut. 6:9; 17:18).

By Hezekiah's time, a great deal of literary activity was going on. Older written traditions were collected and edited (Prov. 25:1). The classical prophets, or their disciples, wrote down their messages. Prophesies were illustrated by written texts (Isa. 8:1; Jer. 17:1; Ezek. 37:16; Hab. 2:2), which could only have meaning for a populace with a reasonable number of readers (cf. Isa. 10:19). Furthermore, a paleographic study of Hebrew epigrapha indicates an increased diffusion of this skill toward the end of the monarchy. Similarly, the wide use of inscribed personal seals bearing fewer designs and iconographic motifs again argues for a growing literate social body during the First Temple period.

Writing Surfaces

STONE. Stone is the earliest known writing surface; it continued to be used throughout the ages, especially when permanence was desired. Three main types of stone inscriptions can be noted in the ancient Near East: a) monumental inscriptions for public display; b) seals made of semiprecious stones; and c) flakes or pieces of soft stone (e.g., limestone) which constituted cheap writing material.

Monumental Inscriptions. Both Egypt and Mesopotamia had long traditions of writing on stone. The latter area, poor in natural stone, imported the material for royal inscriptions. During the second millennium B.C.E. several Egyptian kings set up their victory stelae in Canaan: Thutmose III, Seti I, Ramses II, and Ramses III. This custom was followed by Sheshonk I (935–915), the biblical Shishak, at Megiddo. Assyrian kings, as well, left several stone monuments describing their victories in Canaan and indicating the extent of their rule. Tiglath-Pileser I (1114–1076 B.C.E.) set up an inscription at Nahr el Kalb, as is already noted by Shalmaneser III (858–824 B.C.E.) who did the same. The latter erected a second stela on Mt. Baal Rosh, which some scholars identify as Mt. Carmel, while Tiglath-Pileser III (745–727 B.C.E.) erected one in the vicinity of Wadi el-Arish, the biblical Brook of Egypt. Isaiah, in referring to such "boundary stones," said: "In that day there shall be an altar to the Lord in the midst of the land of Egypt and a pillar at the border thereof 'To the Lord'" (19:19).

Fragments of a three-dimensional stone inscription of Sargon II, discovered during excavations at Ashdod and dating to between 712–705 B.C.E., have also been published. Prior to the establishment of the Israelite monarchy, there seem to have been few local stonemasons in Canaan (II Sam. 5:11). The earliest stone monuments were probably not inscribed at all. They were composed of natural, unfinished stone found at hand (Gen. 31:45–48; Josh. 4:3; I Sam. 7:12; 15:12; II Sam. 8:13). The emphasis upon unhewn stones in the cult reflects the presedentary stage of Israelite history (Josh. 8:31). While this was generally the case, it was during this period of Israelite history that stone was first used as a writing surface for documents of religious importance. Foremost was the Decalogue, incised on two stone tablets (Ex. 24:12; 34:1; Deut. 4:13). At Shechem, the covenant was rewritten on large natural stones, smoothed over with plaster (Deut. 27:2–3; Josh. 8:32; cf. 24:25–26).

With the establishment of the Davidic monarchy and the subsequent influence of Phoenician material culture (I Kings 7:13ff.), monumental inscriptions must have been composed though they have yet to be found (cf. II Sam. 18:18; Ps. 2:7). This is suggested by the many monumental inscriptions discovered in neighboring countries (see below). These monumental inscriptions can be classified into four types: (1) Display inscriptions proclaiming the king's achievements in subduing his enemies and bringing prosperity to the local citizens. Among the northwest Semites, these documents are characterized by the introductory formula: "I, N. (son of N.) king of PN." Generally, much credit is given to the patron deity

who came to the king's aid in the time of his distress. The document usually concludes with a series of curses against those who might want to damage its text. (2) Votive inscriptions recording donations, the name of the donor, and the name of the recipient deity, and noting the donor's piety. The text concludes with a request for a blessing, usually long life (cf. I Kings 3:11ff.). (3) Funerary inscriptions noting the name of the deceased and his title or profession, and containing a word to potential grave robbers that there are no valuables in the sepulcher, and a curse on anyone who disturbs the dead. These notices were written on the sarcophagus or at the entrance to the tomb. (4) Border markers and treaties, a legal genre defining the relationship between two parties. The former, known as *kudurrus* in Mesopotamia, were most extensively used during the Kassite period. The most impressive known treaty written on stone is the Sefire inscription between Matti'el and Barga'yah (c. 750 B.C.E.) composed in Aramaic.

Seals. Many *seals found in and around Israel are decorated with various scenes or designs that are derived ultimately from Egyptian or Phoenician iconographic motifs. Most often, there was a space or register left empty for the name of the buyer. Besides his own name and that of his fathers, he would note also his title ("scribe," "chamberlain," "servant of king…"). Some seals have a dedicatory formula, as well, and may indicate that the seal was a votive offering, especially when cut in the positive. The seal was used to indicate ownership, and was often impressed on jars before firing. It also served to verify standard measures, or, in official documents and letters, the name and authority of the sender (I Kings 21:8; Esth. 8:8).

Flakes. Flakes or small pieces of stone were used as a cheap writing surface for business notations or school texts. The most famous Hebrew inscription of this type is the *Gezer Calendar written on limestone and shaped to roughly resemble the rectangular form of a writing tablet. It is most probably a school text, an assumption corroborated by the fact, among others, that at least one side is a palimpsest.

PAPYRUS. The papyrus reed, cultivated from earliest times especially in the Delta, was a major natural resource of ancient Egypt. The hieroglyphic sign for Lower Egypt is the papyrus plant. Papyrus was found in the Ḥuleh swamp, though in limited quantities, and near the Naḥal Arnon in Transjordan. During the Arab conquest it was introduced into Sicily where it can still be found.

In Egypt, it was an all-purpose plant used for making, among other things, clothing and boats (cf. Ex. 2:3; Isa. 18:2); primarily, it was employed as a writing surface. The earliest written papyri date from the Fifth Dynasty (2750–2625 B.C.E.), though uninscribed rolls have been found dating to as early as the First Dynasty (c. 3000 B.C.E.). Pliny the Elder, the Roman naturalist (d. 79 C.E.), gives a detailed description of the manufacture of papyrus writing material:

> The raw material taken from the tall plants – some as high as 35 feet – consisted of strips cut lengthwise from the pith of the three-sided stalks. Strips of equal length and quality were then arranged on a flat surface, in the manner of latticework, in a horizontal and vertical layer, the former representing the recto and the latter the verso side of the sheet. Through the application of pressure and water from the Nile – perhaps with the occasional addition of glue – the layers were merged into a fairly homogeneous mass, which was then exposed to the sun. After drying, the sheets were rubbed smooth with shells or ivory and perhaps whitened with chalk. Excess moisture was forced out by additional pounding.

The manufacture and trade in papyrus was probably always a royal or state monopoly. Such was the case in the time of the Ptolemies and Caesars. J. Černy has even suggested that the Greek word "papyrus" is derived from an original, though undocumented, *p3 – pr – ʿȜ*, "the [stuff] of Pharaoh," indicating a royal monopoly. The earliest reference to papyrus in Canaan is found in the Egyptian text "The Journey of Wen-Amon to Phoenicia" (c. 1090 B.C.E.). Smendes (Ne-su-Ba-neb-Ded), the founder of the 21st Dynasty and ruler of Lower Egypt, sent 500 rolls of papyrus to Zakar-Baal, king of Byblos, in partial payment for a shipment of cedars. This large quantity of writing material most likely reflects the extensive use of the alphabetic script by this time in Canaan, which is corroborated by the repeated references to written documents in the story (letters, royal records, and stelae). Byblos became an agent for the export of papyrus throughout the Mediterranean lands. So much so that it gave its name to the product: in Greek, *biblos* came to mean "book" or "papyrus," and from this the word "Bible" is derived. By Herodotus' time, papyrus had become the standard writing material for most of the ancient world surrounding the Mediterranean Sea (*Persian Wars*, 5:58). It was to remain in use until replaced by true paper, brought from China between the seventh and tenth centuries C.E. There is no specific reference to papyrus in the Bible (but cf. Isa. 23:3). Some scholars, though, infer from the description in Jeremiah 36:23–25 that the prophet's scroll was made of papyrus, which is more easily cut and less odorous than leather.

The earliest Hebrew papyrus dates from the late eighth or early seventh century B.C.E. and was discovered in 1951 in Wadi Murabba'at in the Judean Desert. This palimpsest contains the remains of a letter and instructions for the delivery of food supplies. Several clay bullae from the sixth century bear the marks of papyrus fibers upon which they were impressed. The most famous is the impression of *Igdlyhw ʾšr ʿl hbyt* (*Le-Gedalyahu ʾasher ʿal ha-bayit*; cf. II Kings 25:22) found at various sites in Judah.

The oldest known Aramaic papyrus is a letter discovered in Saqqāra, Egypt, from a king by the name of Adon to his Egyptian overlord. Most scholars agree that it was sent from the Philistine coast, possibly from Ashdod, just before Nebuchadnezzar's invasion in 604 or 598 B.C.E.

The second half of the first millennium B.C.E. saw the widespread use of papyrus for sundry government, religious, and personal documents. Of particular Jewish interest are the *Elephantine papyri (late fifth century). They include official

letters and private papers that shed much light on the internal affairs, religious life, and relations with gentile neighbors in this military colony situated near the First Cataract on the Nile. Among these documents, is a fragment of the oldest known version of the Sayings of Ahikar. A small number of the Dead Sea Scrolls were also written on this material.

ANIMAL HIDES. Sheep, goat, and calf hides, after proper preparation, served as one of the principal types of writing surfaces in the Fertile Crescent. There is no contemporary record of preparation of this material, which probably did not differ from the modern process. The skins were washed, limed, dehaired, scraped, washed a second time, stretched evenly on a frame, scraped a second time, inequalities being pared down, and then dusted with sifted chalk and rubbed with a pumice. In the earlier period, the skin was prepared to receive writing only on the hairy side, though in exceptional cases, such as in a long text, it was inscribed on both sides (Ezek. 2:10; cf. Er. 21a).

During the Hellenistic period the skins were treated so as to receive writing on both sides. The improved method was attributed to Eumenes II (197–158 B.C.E.), whose capital, Pergamum, gave its name to the new product – "parchment." In due time, a distinction was made between the coarser and finer types of this material. The latter was manufactured from more delicate calfskin or kidskin, especially from stillborn calves or lambs, and was called "vellum." By the second century C.E., vellum began to compete with papyrus. In the next two or three centuries, with the introduction of the codex, its popularity was assured and it superseded ordinary parchment for the most valued books.

The earliest mention of a leather writing surface is found in an Egyptian text from the Fourth Dynasty (c. 2550 B.C.E.), while the oldest extant example of such a writing surface dates from the 12th Dynasty (2000–1800 B.C.E.). It continued to be used in Egypt until the Arab conquest, though to a limited extent, because of the ubiquitous papyrus.

The use of skins as a writing surface first appeared in Mesopotamia in eighth-century Assyrian reliefs. No doubt, this surface was introduced by the Aramean scribes who found clay tablets unsuitable for their alphabetic script. The fifth-century Greek historians Herodotus and Ctesias noted that the barbarians continued to use leather for writing, while on the Greek mainland this substance had been replaced by papyrus. Ctesias remarked that the Persians wrote their royal records on *diphtherai*, i.e., skins. This has been corroborated by the discovery of 12 letters belonging to Arsames, the satrap of Egypt (fifth century B.C.E.), where the cache was found.

There is no explicit biblical reference to writing on leather, nor are there extant leather rolls, prior to those discovered at Qumran. In spite of this, there is general agreement that throughout the First and Second Temple periods the ancient Israelites primarily used animal hides on which to write their official documents and religious literature. Leather is a much more durable surface than papyrus. The sheepherding

Israelites, like the Arameans and the Transjordanian nations, were more likely to use this local resource than to import Egyptian papyrus. During the Second Temple period the references to writing on animal hides are clearer. They no doubt reflect a continuation of the earlier period, since there was no reason to change suddenly to leather at this time.

The Dead Sea Scrolls are the earliest Hebrew texts written on leather that have been discovered so far. They provide firsthand evidence of the ancient scribal technique of preparing and writing on this surface. This scribal tradition was codified by the rabbis (Tractate *Soferim*) and is still followed in the writing of Torah scrolls, *mezuzot*, and **tefillin*.

POTTERY. By far the largest number of inscriptions from the biblical period were written on *pottery. The material can be classified into two distinct types: (1) whole pots that bear a short notice, inscribed either before or after firing and (2) *ostraca, or broken potsherds, generally bearing longer inscriptions. While there is no biblical reference to this writing surface, this cheap and easily available material was widely used not only in Israel but throughout the ancient world. The inscriptions on pottery usually give the owner's name, the capacity of the jar, i.e., *bt lmlk*, "royal bath," or a dedicatory notice. An example of the latter has been found on a pot bearing the word *qdš*, "holy," at Hazor, and on another container in the excavations at Tell Beer-Sheba, which was probably used for a *minḥah* offering at the local sanctuary (Y. Aharoni).

From the end of the eighth century B.C.E., it became customary to indicate important data on the handles of jars. Generally, this was done by impressing a seal on the soft clay before firing. Some 80 "private" and about 800 *lmlk* seal impressions were counted. The latter indicate a standard capacity assured by the king, as well as noting one of the four Judean cities where the contents were "bottled" (Hebron, Ziph, Socoh, and *mmšt*). Most of the inscribed handles from Gibeon were incised after firing and probably indicate a tax formula: *Gb'n, Gdr, Amryhw*, i.e., "(To) Gibeon (from the village) Gedor (sent by) Amaryahu."

Ostraca (singular: ostracon) is the technical term for potsherds that were used for writing. Pottery was particularly suitable for those scripts employing pen and ink or brush and paint, though the surface might be incised as well. The earliest literary reference to ostraca is that of the fifth-century Athenian custom of voting powerful and dangerous citizens into exile. In order to do so, 10,000 ostraca had to be inscribed with the unlucky man's name. The term "ostracism" is derived from this custom. In Israel, small pieces of potsherds seem to have been used in local lotteries in biblical Arad and Masada of the Second Temple period. (For a list of the ostraca of ancient Israel known at present see Inscriptions, below.) A survey of the ostraca shows that this surface was used for letters, tax dockets, fiscal notices, name lists, and at least one court petition. The cheapness of the material indicates the secondary importance of most of the inscriptions or possibly the hardpressed circumstances at the time of writing, when papyrus

and leather were reserved for more important documents. Furthermore, the ostraca provide some idea of the caliber and diffusion of writing among the bureaucracy, army personnel, and local scribes in ancient Israel.

CLAY. This substance was the standard writing material in Mesopotamia from the third to the first millennia B.C.E. The alluvial soil of the Tigris-Euphrates valley made clay the most readily available and thus the cheapest form of writing material in this area. This medium spread with the cuneiform script to the Elamites, Hittites, and Canaanites.

The Ugaritic literature and the el Amarna letters, in addition to other smaller archives (Alalakh, Taanach) and single documents from Syria and Canaan, were inscribed on clay. With the decline of Mesopotamian influence toward the end of the second millennium B.C.E., this writing surface became obsolete. Furthermore, suitable clay was not commonly found in this area, nor was it easily adaptable to the emerging linear alphabet. The only biblical reference to an incised clay tablet is one found in a Babylonian context and interestingly not an inscription but rather a "blueprint" of Jerusalem: "Son of man, take thee a tile [*levenah*] and lay it before thee and trace upon it a city, even Jerusalem" (Ezek. 4:1).

METALS. Various inscriptions from the ancient and classical worlds have been found written on gold, silver, copper, bronze, and lead. These artifacts corroborate the many Hebrew and north Semitic literary sources which mention these writing surfaces. A small (6.7 cm. × 2.2 cm.) gold case from the north Syrian kingdom of Sm'al bears the dedicatory inscription: "This *smr* fashioned by Kilamuwa son of Ḥayya, for Rakabel. May Rakabel grant him long life" (c. 825 B.C.E.). Similarly, Yehawmilk, king of Byblos (fourth century B.C.E.), presented a gold votive inscription to his divine patroness. In ancient Israel, this precious metal was employed in Temple ornaments and priestly vestments. The high priest's diadem was made of gold and inscribed: "Consecrated to the Lord" (Ex. 28:36–38).

Examples of ex-voto inscriptions on silver platters were found near Ismailiya in north Egypt. One of them reads: "This Qinu the son of Gashmu, king of Kedar, offered to Hani'ilat." These date from the fifth century B.C.E. The donor may be the son of Nehemiah's enemy Geshem the Arab (Neh. 6:1ff.).

The famous Copper Scroll from Qumran is a unique find. This writing surface was chosen specifically to record a list of fabled treasures. Its weight and inflexibility would make it an impractical writing surface for frequently read scrolls.

Bronze seems to have been a more common writing surface. Beginning in the 1950s and 1960s, inscribed bronze arrowheads and javelin heads as well as a spatula were discovered in Phoenicia and Israel. Some have been explained as cultic or magical texts. These inscriptions date from the 12th century to 950 B.C.E. and, therefore represent paleographically the earliest form of the Phoenician alphabet. Several inscriptions in the so-called pseudo-hieroglyphic script of Byblos were written on bronze as well.

There is a growing collection of bronze weights, many of which were cast in the form of animals or parts of the human body. One turtle-shaped weight found at Ashkelon reads "quarter shekel" (cf. 1 Sam. 9:8) and weighs 2.63 gm. Another of the same design from Samaria reads "a fifth" and weighs 2.499 gm.

There are many references in Greek and Roman sources to lead as a surface for magical texts and even for such literary works as that of Hesiod. Probably following this tradition, a lead scroll inscribed with Psalm 80 in Greek was found at Rhodes. No such material is known from ancient Israel, though some have understood the term *'oferet*, "lead" (Job 19:24), as referring to such a writing surface. Apart from the bronze weights, inscriptions on metal were generally of a religious nature, many of which bore dedicatory formulas and were ultimately donated to a temple treasury.

IVORY. Excluding several personal seals, most, if not all, inscriptions on ivory can be classified into two types: joiners' markings and dedicatory formulas (cf. below Wax). The former are single letters of the alphabet incised on the back of ivory inlays in order to facilitate the process of assembling them. The ivory inlays found in the palace at Samaria are indicative of contemporary styles of decorative art favored by the Israelite aristocracy (Amos 3:15).

As was the case with precious metals, ivory was donated to the patron deities. Of particular interest is one of the Megiddo ivories dated between 1350–1150 B.C.E. which bears the hieroglyphic inscription:

> The Singer of Ptah, South-of-His Wall
> Lord of the Life of the Two Lands [i.e., Egypt] and Great Prince of Ashkelon. Kerker.

The dedication is to the Egyptian god Ptah, who is here called by three of his titles, the third of which indicates a cult seat in Ashkelon. The votaress Kerker seems to be a singer at that Canaanite temple. W.F. Albright has suggested that she be identified with Calcol, a pre-Israelite singer of renown (1 Kings 5:11).

Ivory gifts were presented to the king as well. An example may be found in a recently discovered ivory piece from Tell Nimrūd, ancient Calah, dating to the mid-eighth century B.C.E. The legible part of the inscription is in good Hebrew (probably from Samaria) and reads *mmlk gdl*, "from the Great King." This title is probably a Hebrew translation of the well-known Akkadian royal epithet *šarru rabû* (cf. II Kings 18:19; Isa. 36:13). There is a similar ivory inscription from Arslan Tash, north Syria, which reads *lmrn ḥz'l* "for our lord Hazael" (1 Kings 19:15). It was most likely among the spoils taken from Damascus in 796 B.C.E. by Adad-nirâri III, king of Assyria.

WOOD. Wood was employed throughout the ancient world as a writing surface. Egyptian inscriptions have been preserved on wooden statues and sarcophagi, as well as on wooden tablets coated with stucco which were frequently used for school exercises. The Bible seldom explicitly mentions this surface.

The earliest clear reference to writing on wood is found in connection with an attempt to challenge Aaron's priestly authority and is employed in substantiating his legitimacy: "Speak to the Israelite people and take from them – from the chieftains of their ancestral houses – …12 staffs in all. Inscribe each man's name on his staff… also inscribe Aaron's name on the staff of Levi…" (Num. 17:17–26). The inscription is the simple type indicating ownership and was probably incised *le-Aharon* – the writing surface being almond wood (verse 23).

Ezekiel employed a wood writing surface in his famous prophesy of the restoration of national unity (37:16–23): "And thou, son of man, take thee one stick [*ʿez*] and write upon it: 'For Judah' [*li-Yhudah*] and for the children of Israel his companions; then take another stick, and write upon it: 'For Joseph' [*le-Yosef*], the stick of Ephraim, and all the house of Israel his companions; and join them for thee one to another into one stick, that they may become one in thy hand" (verses 16–17).

P.J. Hyatt has suggested, *en passant*, that the prophet may have used wooden writing tablets and joined them together in the form of a diptych, i.e., a two-leaved "book." This suggestion might be reconsidered in the light of the later discovery of such writing material from Mesopotamia (see following paragraph) as well as the prophet's known use of other local surfaces (Ezek. 4:1) and general familiarity with the scribal art. Wooden writing boards may be implied in the undefined term *luḥot* (Hab. 2:2). Since clay tablets were not used in Israel at this time and stone tablets are usually defined as such (Ex. 24:12; 31:18; Deut. 4:13, et al.), the prophet may have been referring to tablets of wood. Furthermore, the verb *beʾer*, as shown by Z. Ben Ḥayyim, means to incise on a hard surface.

WAX. It has long been known that wax writing surfaces were employed in Egypt, Greece, and Italy during the Classical period. In addition to much pictographic evidence, especially from Italy, a school text from Fayyum, Egypt, from 250 B.C.E. was found that had a red wax surface and on the reverse one in black. Properly treated, wax has the quality of being a lightweight substance that can be easily reused.

This surface is mentioned in older literary sources from Mesopotamia. An important discovery at ancient Calah during the 1950s were 16 ivory boards with the same number of wooden boards in a well in Sargon II's palace (717–705 B.C.E.). They were constructed so as to contain an inscription on wax. One of the tablets was still covered with beeswax, compounded with sulphide of arsenic or orpiment, bearing the text of a well-known astrological text *Enuma Anu Enlil*. Since these boards were tied or hinged together forming a diptych, triptych, or polyptych, they may be called the earliest known form of the book.

An Aramean scribe holding an oblong, book-shaped object, with ribbed markings at the edge for hinges, is clearly depicted on the stele of Bar-rākib, king of Smʾal. This picture predates the above Calah material by about a quarter of a century and demonstrates the Western Semites' familiarity with this writing surface.

GRAFFITI. These are rough scratchings of names, short notices, and etchings incised by an unpracticed hand on walls or on natural stone surfaces. Two examples of graffiti from the biblical period were discovered during the 1960s. In 1961 several short notices were found in a burial cave northeast of Lachish dating from the sixth century B.C.E. One or two seem to be prayers and another a series of curses. The longest inscription reads: "The Lord is God of the World, the mountains of Judea are His, the God of Jerusalem." From ninth-century Kuntillet Ajrud in Sinai we have mention of YHWH and his *Asherah. Later, several other graffiti have come to light from Khirbat al-Kawm, in the same general vicinity as the above. From this eighth-century site we have again mention of YHWH and his Asherah. Here again several curse formulas have been scribbled on the walls of a family tomb.

TATTOO MARKS. A more unusual writing surface was the human skin, originally incised with a slave mark indicating ownership, but occasionally with a sign demonstrating fidelity to a deity. It was done by cutting into the skin and filling the incision with ink or a dye. This method is already noted in the Mishnah: "If a man wrote [on his skin] pricked-in writing [he is culpable]… but only if he writes it and pricks it in with ink or eye-paint or aught that leaves a lasting mark" (Mak. 3:6). The Bible categorically forbids this practice: "You shall not make gashes in your flesh for the dead or incise any marks (*ketovet qaʿaqaʿ*) on yourselves; I am the Lord" (Lev. 19:28). While this was generally the rule, there seem to have been cases where devotees of YHWH did incise His name on their arms. Isaiah may be referring to this custom when he says: "One shall say: 'I am the Lord's'; And another shall call himself by the name Jacob; and another shall inscribe his hand 'Belonging to the Lord'…" (44:5; cf. also Job 37:7), and perhaps figuratively: "Surely I have graven upon your palms: Thy sealings (!) are continually before me" (Isa. 49:16). Furthermore in Elephantine, slaves of Jews were marked with the name of their owner (Cowley, Aramaic, 28:2–6), as was the general practice.

Writing Equipment

THE PEN. Several different types of writing implements were employed in accordance with the different types of surfaces. Inscriptions on stone or metal required a chisel, whereas for clay or wax a stylus would suffice. In Mesopotamia, the stylus was made of reeds, hardwood, or even bone and metal. There is no pictographic evidence from ancient Israel nor is there any artifact that can be definitely identified as a stylus. The literary sources do mention at least two kinds of tools for writing on stone: an "iron pen," *ʿeṭ barzel*, and a hard stone stylus, *ẓipporen shamir* (Jer. 17:1; Job 19:24). The *ḥereṭ* may have been a tool for working on metal or wood (Ex. 32:4).

The Egyptians used a rush, cut obliquely and frayed at the end forming a brush, to write with ink on papyrus, hides, ostraca, and wood. A similar type of pen seems to have been used on the Samaria and Lachish ostraca. This instrument was probably called "the scribe's pen," *ʿeṭ sofer, [soferim]* (Jer. 8:8;

Ps. 45:2), in order to differentiate it from the stone engraver's "iron pen." Likewise, the *ḥereṭ ʾenosh*, the "common or soft stylus" (Isa. 8:1), is not the same as that mentioned above.

At the end of the third century B.C.E., Greek scribes living in Egypt invented a new type of reed pen pointed and split at the end. The quill, used to this day by Torah scribes (*soferei setam*), was introduced during the Middle Ages in Ashkenazi communities.

From earliest times, the Egyptians wrote in black and red ink. Black ink was made from carbon in the form of soot mixed with a thin solution of gum. This solution was molded and dried into cakes, which were mixed with water before use. In producing red ink, red ocher, or red iron oxide was substituted for carbon.

In Israel, a similar type of black ink was probably used, though the Lachish ostraca show traces of iron. The Hebrew word for ink is *deyo* (Jer. 36:18), a term whose etymology is uncertain. In at least one of its solutions, the ink did not easily penetrate the writing surface and could be erased with water (Num. 5:23). Most of the Dead Sea Scrolls were written with a carbon ink, while the badly damaged *Genesis Apocryphon* was written with the metallic mixture.

The copy of the Septuagint presented to Ptolemy II was written with a gold additive (Aris. 176), a practice followed among some circles in writing the Tetragrammaton but which the rabbis specifically forbade (Sof. 1:9).

PEN CASE AND PALETTE. The ancient Egyptians carried their brushes in a hollow reed case. They added to this a wooden palette containing two depressions for the cakes of black and red ink. This was joined by a cord to a small cup designed to hold water for moistening the ink. A stylized drawing of these three pieces became the hieroglyphic sign S Š, meaning "writing" or "scribe." Later the pen case and palette were combined and easily carried on the belt (cf. Ezek. 9:2–3, 11). An Egyptian ivory pen case dating from the time of Ramses III was found at Megiddo. The biblical term for this item is *qeset*, derived from the Egyptian *gsti*. A razor for cutting leather or papyrus (Jer. 36:23) and probably a straight edge for ruling lines as well as a cloth or sponge for erasures completed the equipment required by the scribe.

[Aaron Demsky]

INSCRIPTIONS

The number of inscriptions found in Palestine is relatively small. The only monumental inscription of the type known from neighboring lands found there (except for a three letter fragment from eighth-century B.C.E. Samaria) is the Tell Dan Inscription (bibliography in Schwiderski, 409). This Aramaic inscription has attracted wide attention because it appears to mention "the House of David." This paucity of material is undoubtedly due to the fact that Palestine often served as a battlefield and many of its principal cities were frequently destroyed.

The earliest inscriptions in a language closely related to Hebrew are (a) those in the Proto-Byblian script, which has not been fully deciphered as yet, from the early second millennium; (b) those in the Proto-Sinaitic pictographic script from the 15th century B.C.E. found at Sarābīṭ al-Khādim; and (c) those in the *Ugaritic cuneiform alphabet from Ras Shamra. The Proto-Canaanite inscriptions on artifacts from Gezer, Lachish, and Shechem ranging from the 17th to the 14th centuries B.C.E. are closely related to the Proto-Sinaitic, while short tablets in a form of the Ugaritic alphabet from Beth-Shemesh, Kawkab al-Hawāʾ, and Taanach are from the 14th–13th centuries B.C.E. and early alphabetic writing comes from a variety of sites of the 13th–12th centuries B.C.E. There is still some degree of disagreement as to the deciphering of these brief inscriptions. Inscribed bronze arrowheads from the end of the 12th century found at Al-Khaḍr, near Beth-Lehem, and similar artifacts from a slightly later period found at other sites provide a link with the later developed Phoenician-Hebrew script.

The earliest Phoenician inscriptions are those from Byblos, beginning with that on the Ahiram sarcophagus from the tenth century and those of the other members of Ahiram's dynasty. The earliest Hebrew inscription is on a limestone plaque from Gezer; it contains an agricultural calendar and was written toward the end of the tenth century (see *Gezer Calendar). The Moabite stone from about 840 B.C.E. (discovered in 1868) recounts, in a dialect close to Hebrew, the rule of Omri over Moab (II Kings 3) and subsequent Moabite victories over Israel. It is of prime linguistic importance, but also gives an insight into Moabite religion and the history of the period (see *Mesha Stele). The fragmentary Amman Citadel Inscription, whose language is very close to Hebrew but whose meaning is far from certain, is also from this period. The Kulamuwa inscription in Phoenician from Zenjirli, in southwestern Turkey, celebrates the victory of Kilamuwa over his enemies and records his role in bringing prosperity to his people. One of the earliest Aramaic inscriptions was found near Aleppo. It is dedicated to Melqart, god of Tyre, and comes from the middle of the ninth century B.C.E. (COS II, 152–53). Of great importance is the bilingual Aramaic and Akkadian royal inscription found at Tel Fekherye in 1979 (Swiderski, 194, with bibliography; COS II, 153–54). Minor Aramaic inscriptions have also been found at En-Gev, Hazor, and Tell Dan in Galilee.

From the late ninth and the eighth centuries there are a number of Hebrew inscriptions: (a) a series of small inscriptions from Hazor which contain primarily names; (b) the *Samaria ostraca: 63 dockets written in ink on potsherds referring to deliveries of oil and wine. Although they are short – listing the regnal year, a place name, a personal name, and a quantity of oil and wine – they allow an insight into the administration of the Northern Kingdom. They shed light on the northern dialect of Hebrew and since they contain many Baʿal names, they are of use in discussion of the religious situation in the Northern Kingdom; (c) the Tell Qasīla ostraca: one refers to a shipment of oil, while another reads: "gold of Ophir for Beth-Horon, 30 shekels"; (d) a series of *seals that can be ascribed to this period, some containing names familiar from the Bible

such as Ahaz, Jeroboam, and Isaiah; and e) the inscription *qdš* on vessels from Beer-Sheba and Hazor.

The *Siloam tunnel inscription, discovered in 1880, dates from the end of the eighth century. It commemorates the completion of the tunnel between the "Virgin's Spring" and the pool of Siloam – whose purpose was to bring water to the city (cf. ii Kings 20:20; ii Chron. 32:30). The six-line inscription is written in straightforward Hebrew. From this period also come tomb inscriptions found in caves in the village of Silwān such as that of the royal steward "…yahu, who is over the house" (cf. Isa. 22:15). The papyrus palimpsest from Murabbʾāt may be dated to the end of this period, while a jar inscription found at Azor, near Jaffa, reading *lšlmy* is in the Phoenician script.

It is from this century that there are important Phoenician and Aramaic inscriptions from Syria and southwest Turkey. The Karatepe inscription, from the Adana area, is the longest Phoenician inscription known to date. It commemorates the victories and deeds of King Azitawadda of the Danunians and was inscribed upon orthostats and statues as part of the city gate along with a version in hieroglyphic Hittite. In phraseology and idiom it is often very close to biblical Hebrew and sheds light on the religious practices of the period. There are also texts in the Ammonite language from this period: a) the inscription of King Yariḥʿazor of Beth ʿAmmon; and b) the Ammonite text in Aramaic script from Deir ʿAllā.

The Aramaic inscriptions include the Zakkur inscription (c. 775) commemorating the victory of Zakkur of Hamath and Luath over the Aramaic league under Bir-Hadad son of Hazael of Damascus. This inscription contains important references to prayer and prophecy. The Sefire treaty inscriptions from north Syria contain the treaty made by the king of Arpad and his overlord, the king of the Kashkeans. This is the longest extant inscription in early Aramaic. It contains details concerning the parties to the treaty, the witnessing gods, imprecations upon the treaty breaker, details of the treaty's provisions, and also geographic information. Besides its philological importance, it has supplied considerable information of a cultural and historical nature and has clarified biblical terms and formulas. Of the Aramaic inscriptions from Zenjirli, two (Hadad, Panamu) are in the local dialect (Samalian; known already from Kulamuwa's time) while the others are in Early General Aramaic. They are important for Aramaic religion and also attest to the growing power of the Assyrians under Tiglath-Pileser iii.

Phoenician had spread during these centuries to the Mediterranean isles and inscriptions have been found in Cyprus, Sardinia, and elsewhere. The incantation plaque, in Aramaic script but Phoenician language, from Arslan Tash in upper Mesopotamia attests to the continuity of literary idiom and to the symbiosis of the Canaanite and Mesopotamian cultures among the Arameans in the early seventh century. The spread of Aramaic as the lingua franca of the Near East (cf. ii Kings 18:26) is seen in the use of Aramaic on an ostracon containing a letter found at Ashur and also in the use of Aramaic dockets

on cuneiform tablets at Ashur and elsewhere. Two inscribed funerary stelae in Aramaic come from Neirab near Aleppo. An interesting ostracon from Nimrūd presents a list of exiles with typical Israelite names. Excavations at Nimrūd have also produced inscribed objects (bronzes, ivories, and ostraca) in Hebrew, Aramaic, and Phoenician.

In Palestine during the seventh century, Hebrew inscriptions are found on seals, weights, measures of capacity, and jar handles. *Weights bearing the inscription *bqʿ* or *pym*, both known from the Bible, and *nṣp* are found in many Judahite sites and the words *hīn* and *bat* (*bt lmlk*) – well known from the Bible as names of units of cubic measure – have been found on pots and jugs. There are, from the mid-seventh century onward, an important series of jar handles engraved with the winged sun disk scarab seal, or *ṭet* symbol, with the royal stamp reading *lmlk*, "of the king," and the name of one of four cities: *šwkw* (Socoh), *hbrn* (Hebron), *z (y)p* (Ziph), and *mmšt* (unidentified). The legend *lmlk* refers to weights and measures standardized by the royal administration. The *lmlk* and *ṭet* symbols are found at a later period on jars from Phoenicia, Elephantine in Egypt, and Carthage. The jars were in all likelihood used for wine. From the reign of Josiah there are a number of ostraca from a site south of *Yavneh-Yam. The longest one consists of 14 lines in which an agricultural worker, protesting his innocence, petitioned a superior asking for the return of a cloak wrongly taken from him (cf. Ex. 22:25). The language reflects the legal terminology of the period (i.e., line 10: "and all my brothers will testify for me," *y ʿnw ly*). The graffiti from the area of El-Qom, near Hebron, are primarily tomb inscriptions recording the name of the owner of the tomb. Inscriptions on a bowl and a decanter were also found there, as well as inscribed weights. The Hebrew ostraca found at *Arad are from the late seventh century. They are concerned mainly with the delivery of wine, flour, bread, and oil to certain persons and also to the Kittim (*ktym*), a term used in the Bible for people from Cyprus or the Aegean isles. Small ostraca bearing the names of the priestly families Pashhur (*pšḥr*) and Meremoth (*mrmwt*), known from the Bible, were also found. One ostracon has a reference to the Korahites (*bny qrh*), and another to the Kerosites (*qrwsy*), known from Ezra 2:44 and Nehemiah 7:47 as a family of temple servants, and also to the Jerusalem temple (called *byt whwh*). There are also references to the city Ramath-Negeb and to the Edomites and to events in the area.

The Ophel ostracon found in Jerusalem and containing a poorly preserved list of names with patronymics and residences in all likelihood belongs to the beginning of the sixth century. The jar handles from al-Jīb reading *gbʿn* (together with personal names) has clinched the identification of that site with Gibeon. Three inscriptions in a cave at Khirbat Beit-Lay, south of Jerusalem, are of religious significance since they ask help of yhwh and refer to Judah and Jerusalem. The 21 ostraca found at Tell al-Duwayr (commonly known as the "*Lachish letters") are of prime importance since they come from the period shortly before the destruction of the Temple

in 587 and reflect the circumstances of that period. Only seven are well enough preserved to offer a continuous text. They contain lists of names, simple business documents, and the correspondence of the military governor Yaush and his subordinates. They are written in idiomatic classical Hebrew and contain interesting expressions such as the oath *ḥyhwh*, "as Yahweh lives." There is also a reference to a prophet in these texts. Many of the personal names found in these ostraca are familiar from the literature of the period. Seals of the period contain names such as Gedaliah, Jaazaniah, and that of King Jehoiachin. Seals from Ammon, Moab, and Edom are known from this and earlier periods. An Aramaic letter, written by a ruler of one of the cities of the Philistine coast, was found at Saqqarah in Egypt.

The excavations at Lachish produced for the post-Exilic period an interesting inscribed incense altar (*lbnt*ʾ) which may have been dedicated to the Lord (line 3: *lyh* – if this reading is correct). Recent excavations have greatly increased the number of inscribed objects found in Palestine from the Persian and Hellenistic periods. From Arad alone there are about 100 ostraca in Aramaic from the late fifth century; they deal primarily with matters of local economy. An ostracon from approximately the same period was found at Ashdod referring simply to a plot of land as 'Zebadiah's vineyard' (*krm zbdyh*; in Ashdodite? cf. Neh. 13:24). Ostraca in Aramaic from this period have been found at Tell al-Fārʿa and Beer-Sheba in the south and at Tell Saʿīdiyya in the Jordan Valley. An ostracon from a slightly earlier period was found at Heshbon in Moab.

The earliest stamp seals of the Persian period are those inscribed *msh* (or *mwsh*). There are several types of *yhd, yhwd*, and *yh* stamps from this period with the *yh* stamps presumably the latest. The coins from Judah are also inscribed with the legend *yhd* in archaic Aramaic lapidary script. Some stamps have *yhwd* plus a name; the stamps from Ramat Raḥel contain a name and in all likelihood the word *pḥrʾ*, "the potter."

The Aramaic papyri found in a cave in the *Wadi Daliya are dated from 375 to 335 or slightly later. The content of all the papyri is legal or administrative and they were executed in Samaria. They deal with possession of slaves and also with loans, sales, and marriages. The name Sanballat appears on both papyri and sealings. The papyri were probably hidden in these caves by refugees from Samaria at the time of Alexander the Great's conquests. Aramaic ostraca from En Gedi and Elath from the early fourth century have been published; and from the latter site ostraca in Phoenician and Edomite are known. The Tobiah inscriptions from ʿAraq el-Emir in Transjordan stem typologically from this period.

A revival of the Paleo-Hebrew script takes place during this period. It is found on seals from Daliya and Makmish and also on several coins. It is frequently found on the jar stamps of the third century from Judah, on stamps inscribed with *yhwd* (Yehud) plus symbol, and on the pentagram stamps bearing the inscription *yršlm* (Jerusalem). This script is then used for some texts found at Qumran and on Hasmonean coins and

also on those of the first revolt and the Bar Kokhba revolt. It is from this late Paleo-Hebrew script that the Samaritan script developed. The earliest Samaritan inscription, found in the Ionian capital at Emmaus, stems in all likelihood from the first century C.E.

Many of the important inscriptions from the Phoenician coast such as the Eshmunazor, Bodashtart, and Tabnit funeral inscriptions, etc., as well as those from Umm al-ʿAwāmid, come from the Persian and Hellenistic periods. These inscriptions are replete with phrases reminiscent of biblical idiom (e.g., stock (usually, but erroneously, "root") below, boughs (usually, but erroneously, "fruit") above) and religious phraseology that clarify biblical references (e.g., "a place to lie on with the Rephaim"). Inscribed ostraca, seals, and coins are also found. In the east, Phoenician spread to Greece and Egypt; Cyprus, Malta, Sardinia, Sicily and the isles remain a source of written material. In the west, Carthage, rich in inscriptions, became an important center of Phoenician culture, and from there it radiated to Spain, the Balearic islands, and southern France. The sacrificial tariffs from Marseilles and Carthage list animal offerings with payments due to the priests and the sharing of sacrifices. Scholars have noted marked similarities to the Priestly Code. The bilingual Phoenician-Etruscan Pyrgi inscriptions from fifth-century southern Italy have great linguistic importance, while many Punic and neo-Punic inscriptions from North Africa provide an insight into the continuity of Canaanite culture and language outside the Phoenician mainland. Jars inscribed in Phoenician were found at Bat Yam and Shiqmona; a lead weight was found at Ashdot-Yam.

Aramaic became the official language of the Achaemenid Empire and inscriptions in this language are found for this and later periods in North Arabia, Egypt, Turkey, Georgia, Syria, Iraq, Iran, Afghanistan, and India. The many papyri and ostraca from Elephantine, Hermopolis, and elsewhere in Egypt, and the Arsham letters are of prime importance. The Sheikh Faḍl inscriptions (fifth century) mentioning Tirhaka, Neco, and Psammetich and the silver bowls from Wadi Tumilat, mentioning Gashmu the Kedarite (cf. Neh. 2:19; 6:1, 2, 6) are noteworthy. Aramaic versions (on papyrus) of the Behistun and Naksh-i Rustam inscriptions of Darius I, albeit fragmentary, are known. The Taymāʾ inscription attests to the penetration of Aramaic culture into North Arabia and the many Aramaic dockets on Neo-Babylonian cuneiform tablets (fifth century) attest to the spread of Aramaic there. These tablets often record business transactions of the Judean exiles.

The Aramaic-Lydian bilingual from Sardis and the boundary, funerary, and commemorative inscriptions found elsewhere in Turkey and later in Armenia are of philological and cultural interest. In these countries, Greek often superseded Aramaic during the Hellenistic period. In those areas in which Aramaic remained a language of spoken or written communication, national scripts developed such as the Jewish, Nabatean, Palmyrene, Elymaic, Hatrene, and Syriac. The earliest Nabatean script was found at Ḥaluṣa (c. 170 B.C.E.); other inscriptions were found at ʿAvdat and in the Sinai Peninsula. It

is in this script that the inscriptions in Palestine of the late Second Temple period are written. Among the inscriptions from the late period of the Second Temple besides those found at Qumran on jars and ostraca, leather parchment, papyrus, and metal, which cannot be enumerated here, the following may be noted: (1) the Jason Tomb inscriptions in Aramaic from the period of Alexander Yannai; (2) the inscriptions on ossuaries usually listing simply the name of the person reinterred therein. Three are worthy of particular attention: (a) from the Bethpage cave whose lid contained a list of workers; (b) from Givʿat ha-Mivtar in north Jerusalem mentioning "Simon, builder of the sanctuary" (*smwn bnh hklh*); and (c) from Jebel Hallat eṭ-Ṭūri which declared that all the valuables in the ossuary were a *qorban* to God; (3) the Bene Ḥezir inscription on a tomb in the Kidron Valley; (4) the Aramaic inscription now in the Israel Museum in Jerusalem that announced the removal of Uzziah's bones to their new resting place; (5) the inscriptions found during the excavations at the Western and Southern retaining walls of the Temple mount, especially the one reading *lbyt htqyʿh*, "to the place of the (trumpet) blowing," which surely came from the Herodian Temple; (6) the small stone weight found in the "burnt house" in the "Jewish Quarter" of Jerusalem bearing the name of the highly placed priestly family Kathros (*qtrs*); (7) the relatively long Aramaic inscription in Paleo-Hebrew script found in a burial cave in Givʿat ha-Mivtar; (8) inscribed objects from Masada including 14 biblical, apocryphal, and sectarian scrolls. Jugs are inscribed with their owner's name; column drums are marked, and a great number of ostraca contain Hebrew names and a variety of letters. The name Ben Yaʾir (*bn yʾyr*) surely refers to Eleazar ben Jair the Zealot leader.

[Jonas C. Greenfield]

IN THE TALMUD AND HALAKHAH

The tremendous importance attached by the talmudic sages to the art of writing is reflected, according to one interpretation, in Mishnah *Avot* 5:6, which includes among the "ten things which were created on the eve of the Sabbath" (of creation, i.e., which partake of the semi-miraculous) *ha-ketav ve-ha-makhtev* ("writing and the instrument of writing"). The usual explanation is that the phrase applies to the writing of the Decalogue, which is mentioned afterward, but another view is that it applies to the art of writing as a whole. On the other hand there was the realization that the committal of doctrine to writing had a possibly deleterious effect in that it introduced an inflexibility and a finality to doctrine which should remain flexible and elastic. According to I.H. Weiss (Dor, I, 1–93), it was this which lay behind the prohibition on committing the Oral Law to writing. The Written Law was final and decisive; its interpretation had to remain open to adjustment.

Writing, its materials, its regulations, and its instruments play a prominent part in the *halakhah*. They are important in the laws of writing a **Sefer Torah*, which must be written on parchment with a quill and indelible ink (the same applies to **tefillin* and **mezuzot*, with slight variations). An exception is

the portion of the **Sotah* (the woman suspected of adultery – Num. 5:11–31), since the Bible explicitly states that the writing had to be erased in the bitter waters. There are different regulations for the writing of a bill of divorce, and lastly there is the prohibition of writing on the Sabbath, and the regulations as to what constitutes writing. It is almost entirely in connection with those laws that the many details concerning writing and writing materials occur (cf. especially Shab. 12:3–5, Git; 2:3–4 and the corresponding Tosefta and the relevant discussion in the Talmuds). Whereas for the writing of the *Sefer Torah* and other sacred writings only parchment made from the hide of permitted animals could be used, after the required treatment, bills of divorce could be written on paper made from papyrus. The prohibition of writing on the Sabbath applied to all permanent writing materials. A differentiation is made between permanent writing materials and non-permanent ones. In the former the Mishnah enumerates olive leaves and a cow's horn, to which the Tosefta (Shab. 11 (12):8) adds carob leaves or cabbage leaves. It is difficult to see how they could be used widely. Non-permanent writing materials are given as leaves of leeks, onions, vegetables, and the sorb apple tree.

Owing to the scarcity and high cost of paper, particularly parchment, it was used more than once, by rubbing out the writing with stone and superimposing new writing. It is this palimpsest which is referred to in the dictum of Elisha b. Avuyah, who compares learning as a child to "ink written on clean paper" and learning in one's old age to "ink written on erased paper" (Avot 4:20; Git. 2:4, where erased paper is equated with *diftera* (Gr., διφθέρα), hide which has been treated with salt and flour, but not with gall nuts).

A similar distinction is made between permanent and non-permanent inks. To the former belong ink proper (*deyo*), caustic, red dye, and gum (Shab. 12:4; Sot. 2:4). The Tosefta (Shab. 11 (12):8) adds congealed blood and curdled milk, as well as nutshells and pomegranate peel, which were widely used for making dyestuffs. Ink was made from a mixture of oil and resin, which hardened and to which water was added. Any oil or resin could be used, but the best quality was that of olive oil and balsam (Shab. 23a; 104b). The most permanent ink, however, was made by adding iron sulphate or vitriol (*kankantum* or *kalkantum*, properly קלקנתים, Gr. χάλκανθον) to the ink, which made it a deep black, and it was therefore also used as boot-blacking (Git. 19a). This admixture made the ink completely indelible and was therefore prohibited for use in writing the passage of the *Sotah* (Er. 13a). Non-permanent inks were made from "taria water" (juice of wine), fruit juices, and juice of gall nuts (Git. 19a). There is an interesting reference to invisible writing: "These people of the East are very cunning. When one of them wishes to write a letter in secret writing to his friend he writes it with melon water and when the recipient receives it he pours ink over it and is able to decipher the writing" (TJ, Shab. 12:4, 13d; Git. 2:3, 44b).

It would appear originally the custom to use gold lettering for the writing of the *Sefer Torah*, since the Midrash (Song. R. 1:11; cf. *ibid.* 5:11) applies the verse "we will make the circlets

of gold, with studs of silver" (Songs 1:11) to the writing and the ruled lines respectively. According to the Letter of Aristeas, the *Sefer Torah* presented by Eleazar the high priest to Ptolemy Philadelphus was written in letters of gold (cf. Jos., Ant., 12:89). However, such ostentation was later forbidden and tractate *Soferim* (1:9) states, "it is forbidden to write [a *Sefer Torah*] in gold. It happened that in a *Sefer Torah* of Alexandria all the divine names were written in gold, and when it was brought to the notice of the sages they ordered it to be hidden away." There is also mention of Queen *Helena of Adiabene having the passage of the *Sotah* written on a gold tablet (Yoma 37a; Git. 60a). Simeon b. Lakish, however, said that it referred only to the initials. The professional scribe, the *livlar* (librarius), used a *kalmus* (calamus), a quill made of reeds (Shab. 1:3; cf. Ta'an. 20b). For ordinary writing the *makhtev*, a two pointed pin, or stylus, was used, one end for writing and the other for erasing (Kel. 13:2; Tosef., Kel.; BM 3:4). The inkwell, called a *kalmarin* (καλαμάριον), was provided with an inner rim to prevent spilling (Mik. 10:1). This inkwell was used by ordinary people. The inkwell of the scribe, called the *bet deyo* (ink container), had a cover (Tosef., Kel. BM 4:11) and mention is made of the "inkwell of Joseph the Priest which had a hole in the side" (Mik. 10:1).

Pen, paper, and inkstand are referred to as "things of honor" in a peculiar context. Rabban Simeon b. Gamaliel states that any idol which bears something in its hand is forbidden. The Jerusalem Talmud makes an exception in the case of "something of honor" and specifies "paper, pen, and inkwell" (Av. Zar. 3:1, 42c bottom). The word *kalmarin* is also used for the pen-case (Yalk, Num. 766). Among the other instruments of the scribe were the *olar*, the pen-knife used for cutting the reed to make the quill (Kel. 12:8; Tosef. Kel.; BB 7:12); the *izmel*, a knife for cutting the paper (Targ. Jon. to Jer. 36:23; Heb. *ta'ar*, cf. Targ. Jon. to Ps. 45:2); and the *sargel*, a sharp instrument for drawing the lines on the parchment or paper. For sacred writings the *sargel* had to be made from a reed (TJ, Meg. 1:11, 71d; Sof. 1:1). "Writer's sand" was used to dry the ink (Shab. 12:5).

After the invention of printing, the question was raised whether the laws of writing – e.g., with regard to the *Sefer Torah*, the prohibition of writing on the Sabbath, and the writing of a bill of divorce – apply to the printed word (cf. Resp. Samuel di Medina (Maharashdam) YD 184; B. Slonik, Resp. *Masat Binyamin* 94).

WRONKI (Ger. **Wronke**; in Jewish sources: **Vronik**), town in Poznan province, western Poland. The Jewish community of Wronki was first organized in the early 17th century. In 1607 permission was granted to build a synagogue, and in 1633 a royal privilege confirmed the rights of the Jews in the town. They engaged in wholesale trade and crafts; toward the end of the 17th century they participated in the *Leipzig fair. At that time representatives from Wronki served in important posts on the *Council of the Lands. In 1765 the poll-taxpaying Jews of Wronki and surrounding villages numbered 483. Their occupations included tailoring, goldsmithery, and weaving. The debts of the community then reached the enormous sum of 200,000 zlotys. From 1793 up to 1918 the town was under Prussian rule. In 1808 there were 543 Jews in Wronki (32% of the total population); 791 (35%) in 1840; 604 (24%) in 1871; 528 (12%) in 1895; 380 (8%) in 1905; 314 (6.5%) in 1910 and 187 (4%) in 1921. In the 1860s the local Jews started to move westward to Berlin and other large German cities. When the city was annexed to Poland in 1918 the Jewish population continued to dwindle.

[Shimshon Leib Kirshenboim]

Holocaust Period
On the outbreak of World War II Wronki had 31 Jews. On Nov. 7, 1939, all the Jews were deported to the Generalgouvernement via Buk, in Nowy Tomysl county. In the small town of Buk about 1,300 Jews from many other places in the districts of Poznan (Posen) and Inowroclaw (Hohensalza) were concentrated, and sent a month later to the Mlyniewo camp near Grodzisk Poznanski (Suedhof). From there they were sent on to Sochaczew-Blonie county in the Warsaw District, where they were allowed to disperse among the small towns of the region.

WRONSKY, SIDDY (1883–1947), expert in social welfare and social pedagogy. Born in Berlin, she was an influential figure in bringing about the professionalization of social work in Germany and Palestine. She began her training as a teacher and specialized in *Heilpaedagogik,* working as a volunteer in a school for developmentally disabled children. In 1908 she became the director of the Archiv fuer Wohlfahrtspflege, and she also served as co-editor of the prestigious journal *Deutsche Zeitschrift fuer Wohlfahrtspflege.* She taught at the social work training school that was founded by Alice Salomon, the Soziale Frauenschule, in Berlin, as well as at the Deutsche Akademie fuer soziale und pädagogische Frauenarbeit. Through her writing and teaching, she introduced new and modern methodologies for the treatment of welfare recipients through an emphasis on individualized care.

In addition to her role in German social welfare, she was also a centrally important figure in Jewish social welfare after World War I. She became a member of the board of the newly founded Zentralwohlfahrtsstelle der deutschen Juden (Central Welfare Bureau of German Jews) and served on a variety of its commissions dedicated to reforming Jewish social welfare. Wronsky became a Zionist through her work with East European refugees in Berlin during World War I and helped found a Zionist women's organization. In 1933, she was dismissed from her positions and fled to Palestine shortly thereafter. In Palestine, she worked in the social department of the Va'ad Le'ummi and founded the first social work education school, the Sozialschule Jerusalem of the Va'ad Le'ummi. She died in 1947, shortly before the founding of the State of Israel.

Her major works include *Leitfaden der Wohlfahrtspflege* (with Alice Salomon, 1921); *Methoden der Fuersorge* (1930); and *Sozialtherapie und Psychotherapie in den Methoden der Fürsorge* (1932).

°**WUENSCHE, AUGUST KARL** (1839–1913), German scholar of the Bible and *aggadah.* Wuensche, who was born in Haimwalde, Germany, was a pupil of Franz *Delitzsch and Julius *Fuerst. He wrote commentaries on Joshua (1868) and Joel (1872), and also general studies such as *Die Schoenheit des Alten Testaments* (1906), and *Die Bildersprache des Alten Testaments* (1897). His main researches, however, were in rabbinic literature. His translations into German of the *aggadot* of the Jerusalem and Babylonian Talmuds, *Der Jerusalemitische Talmud … Haggadischen Bestandteilen* (1880), and *Der Babylonische Talmud…* (1886–89) gave Wuensche a great reputation among scholars. He also translated the *Midrash Rabbah,* the *Pesikta de-R. Kahana,* and the Midrash of the five scrolls, as well as a five-volume collection of Midrashim from the *Beit ha-Midrash* of A. *Jellinek entitled *Aus Israels Lehrhaus* (1907–10). Of great importance is Wuensche's three-volume anthology of Jewish literature after the conclusion of the Bible, *Die juedische Literatur seit Abschluss des Kanon,* (1894–96), which he edited with Jacob *Winter. His other works include: *Neue Beitraege zur Erlaeuterung der Evangelien aus Talmud und Midrasch* (1878); *Die Raetselweisheit bei den Hebraeern* (1883); and *Die Freude im Alten Testament* (1896).

[Jerucham Tolkes]

WUERTTEMBERG, state in Germany. There is evidence that the Jewish community of *Heilbronn in Wuerttemberg was one of the earliest in Germany. An inscription bearing the name of "Nathan the Parnes" on the entrance of the *mikveh* apparently dates from the latter half of the 11th century. Information on Jewish settlement in Wuerttemberg becomes more definite in the early 13th century. Jews are known to have

settled in 65 localities there before the *Black Death persecutions. These settlements suffered during the *Rindfleisch massacres of 1298 and again in the *Armleder uprising of 1335–37 but soon recovered. At that time the more important Jewish communities were centered in Heilbronn, *Ulm, *Esslingen, and Schwaebisch Gmuend. At first the Jews paid their taxes directly to the king, the count of Wuerttemberg, or to a nobleman to whom the king had granted taxing privileges; from the middle of the 14th century, however, most cities acquired taxation rights over the Jews living within them. Jews in positions of financial responsibility were helpful to many cities during a period of territorial expansion in the 14th century. During the 15th century, however, many Jews in Wuerttemberg became impoverished due to heavy taxation and the official cancellation of debts that were owed to them. Throughout the 15th century the Jews were alternately enabled to settle or expelled by the nobles, and by the end of the century they had been banished from most of the towns. In 1521 a decree was issued expelling the Jews from the entire duchy. Nevertheless, some of them managed to remain in many of the small villages during the 16th and 17th centuries. Jewish settlement in Wuerttemberg was substantially renewed only in the 18th century when Jews were first allowed to visit fairs and trade in cattle; later they were allowed to settle permanently in the duke's private lands and several other limited areas. With the aid of Joseph Suess *Oppenheimer, several Jews were granted residence in *Stuttgart and Ludwigsburg.

The dukes subsequently enacted more liberal regulations concerning Jewish settlement, such as the Hochberg Regulation of 1780. During the 18th century they retained a number of *Court Jews who aided significantly in the economic development of the duchy. When Napoleon added large areas to Wuerttemberg in 1806, the Jewish population rose from 534 to 4,884; by 1817 there were 3,256 Jews living in 79 localities. Jews were permitted to live in cities such as Ulm, from which they had previously been excluded. The body tax (*Leibzoll) was abrogated and Jews were accepted in the army. The improved attitude toward the Jews did not deteriorate after Napoleon's downfall. In 1828 a law was issued obliging Jewish children to receive a secular education; this, however, applied only to shopkeepers and craftsmen and discriminated against peddlers, cattle traders, brokers, and moneylenders. The law recognized the organization of local communities, and in 1831 a central Jewish executive was created in Stuttgart that functioned under governmental supervision. The constitutions of the local communities were drawn up along similar lines to those applied to the Christian communities. The chief rabbi was a government official; but when the chief rabbi Joseph Meir, who was of Reformist bent, tried to introduce the 60 Hymns of Israel, mostly of his own composition, into the traditional liturgy, most congregations refused to adopt the proposal, although it came from an official source. However, the Jews did not gain full civil equality in Wuerttemberg until April 25, 1828, and their religious life still remained subject to governmental supervision. Full autonomy was granted in 1912

and was supplemented by additional legislation approved in 1924. The Jewish population increased from 8,918 in 1828 to 11,916 in 1925, organized in 51 communities. By 1933 the number had decreased to 10,023, in 43 communities.

Holocaust Period

Antisemitism was already a significant political factor in Wuerttemberg at the end of the 19th century. With the growth of Nazism from 1925 to 1933, the party became increasingly active in its propaganda campaign against the Jews. After the rise of the Nazis to power, the boycott of Jewish goods, as well as general harassment, led many Jews to emigrate from Wuerttemberg, and 9,000 left there in 1935. While the Zionist movement had not been generally strong in Wuerttemberg, 200 Jews from the village of Rexingen immigrated to Palestine in 1938 to found the settlement of *Shavei Zion.

In October 1938 Jews of Polish extraction were deported back to Poland. On Nov. 9–16, 1938, 18 synagogues in Wuerttemberg were burned to the ground, and 12 others were severely damaged; 875 Jews were imprisoned. Jewish enterprises were "aryanized" and a systematic plan was put into action to rid Wuerttemberg of its Jewish communities. From 1941 to 1945, there were 12 deportations totaling 2,500 Jews from Stuttgart; 260 committed suicide before deportation. Only 180 survived the war; 200 Jews who had intermarried were spared deportation.

[Zvi Avneri]

Contemporary Period

After the Holocaust a few Jews returned to Wuerttemberg. The community of Stuttgart was reconstituted and a new synagogue built; for the most part, what was left of the Jewish community in Wuerttemberg were unused synagogues and abandoned cemeteries.

The Jewish community of Wuerttemberg numbered 677 in 1989 and 2,881 in 2004. The increase is explained by the immigration of Jews from the former Soviet Union. In 1989 the majority lived in Stuttgart; in 2004 about 45 percent lived outside Stuttgart. There are branch communities in *Ulm (founded 2002), Reutlingen, and Hechingen. New branches were to be established in Heilbronn, Heidenheim, and Schwaebisch-Hall.

WUERZBURG, city in Bavaria, Germany. The Jewish community of Wuerzburg was founded around 1100. The Jews settled near a swampy area that was, however, in the center of the town. Some lived outside this quarter, and there were Christians living among the Jews. In 1147, at the time of the Second Crusade (see *Crusades), the Crusaders, reinforced by rabble from the surrounding countryside, attacked the community. Three rabbis, a scribe, and three other Jews were publicly martyred. The bishop of the town ordered that the bodies of the martyrs be gathered and buried in his garden; he later sold the site to the community, which converted it into a cemetery. During the 13th century the number of Jews grew considerably, not only as a result of natural increase but also through the addition of newcomers ariving from *Augsburg, *Mainz, *Nuremberg, and *Rothenburg. A *Judengasse* is noted in 1182, a school in 1170, and a synagogue in 1238. In the 12th and 13th centuries Wuerzburg became an influential and important center of Jewish learning. Foremost among the scholars associated with the city during the period were Joel ha-Levi, son-in-law of *Eliezer b. Nathan (Raban) of Mainz; his son, *Eliezer b. Joel ha-Levi (Rabiah); *Isaac b. Moses ("Or Zaru'a") of Vienna, who taught in the yeshivah at Wuerzburg; and his celebrated students *Meir b. Baruch and Mordecai b. Hillel. Of note also were *Eliezer b. Moses ha-Darshan, Samuel b. Menahem, and Jonathan b. Isaac. This large community was destroyed in the *Rindfleisch persecutions of 1298. About 900 Jews lost their lives, including 100 who had fled from the surrounding area to seek refuge in Wuerzburg.

The community was subsequently renewed, this time principally by Jews from *Cologne, *Strasbourg, *Bingen, and *Ulm, as well as from Franconia, Thuringia, and Swabia. The Jews paid taxes to both the bishop and the king. In practice, the Jews were under the protection of the bishop, who governed them through a series of regulations issued on his own initiative. His protection aroused the objection of the townspeople, but after the Jews had aided in the financial expenditure of fortifying the city, the burghers were more sympathetic. However, during the *Black Death persecutions of 1349, the Jews were accused of poisoning the wells in Wuerzburg; in desperation they set fire to their own houses on April 21, 1349, and perished. Among the martyrs was Moses ha-Darshan, head of the yeshivah. The survivors fled, some to *Erfurt, *Frankfurt, and Mainz, and the bishop took possession of their property.

By 1377 Jews were to be found once more in the city; at the beginning of the 15th century a community had been reconstituted and the cemetery returned to Jewish possession. A new synagogue was built in 1446, but the community remained small in the 15th century. In 1567 the Jews were expelled from the town and settled in nearby Heidingsfeld. Bishop Julius expropriated the cemetery in 1576, and he founded a hospital on its site, which still exists. While a few Jews lived in the city during the following centuries, the community was not renewed until the 19th century. In 1813 there were 14 families in the city, and the rabbi of Heidingsfeld then settled in Wuerzburg.

The synagogue was inaugurated in 1841. Isaac Dov (Seligman Baer) *Bamberger acted as rabbi from 1839 to 1878. In 1864 he founded a teachers' seminary from which hundreds of teachers graduated and taught in the Jewish schools of Germany. The yeshivah founded during his lifetime was also renowned. Wuerzburg became the spiritual center for the numerous village communities of Franconia. They prayed according to the *minhag* of Wuerzburg and addressed their halakhic questions to the rabbis there. In 1884 a Jewish hospital was founded in Wuerzburg. The Jewish population numbered 2,600 (2.84 percent of the total) in 1925, and 2,145 (2.12 percent) in 1933.

With the rise of Nazism, many Jews emigrated from Wuerzburg. On Nov. 9–10, 1938 (*Kristallnacht*), the synagogue was destroyed. From 1941 to 1945 the 1,500 remaining Jews were deported to concentration camps. After the war, 52 Jews returned to their city. In 1967 there were 150 Jews living in Wuerzburg; they had a community organization and possessed a synagogue and an old-age home.

The synagogue was consecrated in 1970. The Jewish community numbered 179 in 1989 and 1,045 in 2004. The increase is explained by the immigration of Jews from the former Soviet Union. In 2001, construction began on Shalom Europa, a new cultural and community center located next to the synagogue. Slated for completion in 2006, the center was to house offices, classrooms, a club for senior citizens, the Ephraim Gustav Hoenlein Genealogy Project of the Ronald S. Lauder Foundation (founded in 2002), and a documentation center of Jewish history and culture in Lower Franconia. The former old-age home, which is part of the complex, was rebuilt by the Ronald S. Lauder Foundation and houses the Lauder Chorev Center for educational seminars and youth get-togethers.

In 1987, when a house in Wuerzburg-Pleich was demolished, 1,508 Jewish gravestones and gravestone fragments were discovered, dating from 1138 to 1347. This was the largest such find in the world. The stones will be exhibited in the community center.

[Zvi Avneri / Larissa Daemmig (2ⁿᵈ ed.)]

WUHSHA AL-DALLALA, 11ᵗʰ century *Cairo businesswoman or banker. Born in *Alexandria as Karima, the daughter of a banker named Ammar, she became known as Wuhsha (the desirable one or the one pined for) al-dallala (the broker). After moving to Fustat, she married Aryeh of Sicily and gave birth to a daughter whose name does not appear in her will, but rather in later documents; the couple subsequently divorced. Her name is mentioned in many *Genizah documents, either because of her extensive business transactions, including loans, or because her descendants were identified by their connection to her.

*Goitein first discovered Wuhsha's existence from a document dated 1098 in which she expressed annoyance at receiving a court summons based on a business associate's minor claim. Unlike most of the more secluded women in the Jewish community, no introduction was deemed necessary when she appeared in court. One of the most impressive documents extant is her will, written in Arabic at the turn of the century. In it, she provided for ornate funeral arrangements and left considerable sums of money to her surviving brother and to one of her two sisters; the largest bequest was to her son, as well as funds to provide him with a private tutor. Generous donations were left for all four Cairo synagogues, for the needy, and for the cemetery.

Wuhsha never re-married but rather took a lover from Ashkelon with whom she shared an apartment. When she became pregnant, Wuhsha feared social ostracism of her son (which would prevent a desirable marriage) and arranged a surprise visit to her chambers by male witnesses so as to record a deposition confirming that Hassun was the father of her child. Apparently Wuhsha chose not to marry her companion in order to deny him access to her wealth. In her will Wuhsha canceled a considerable debt Hassun owed her but made clear that he was not to receive a penny from her estate.

Wuhsha's deviation from social norms did not pass unnoticed; on one Yom Kippur the president of the Iraqi synagogue expelled her from the congregation. Her later bequest to this very synagogue could be interpreted as acceptance of her fate or, alternatively, as a way for her to have the last word, knowing that her money would not be refused. Wuhsha was an independent and determined woman whose life decisions were not always popular. She clearly left a distinct impression on her peers and on their descendants.

[Renée Levine Melammed (2ⁿᵈ ed.)]

WUNDERBAR, REUBEN JOSEPH (1812–1868), Latvian-born educator and historian. Wunderbar wrote a book about the Jewish colonists in the Kherson region (1840) and was invited by Max *Lilienthal to become a teacher at the Jewish school in Riga of which he was for a time the director. In 1848 he returned to his native Mitau (Jelgava) and became a teacher of religion and a government interpreter, and on several occasions he served as the community's government-appointed rabbi. He published many articles in German-Jewish periodicals and wrote a study on the Jewish calendar. Wunderbar's importance as a historian rests primarily on two of his books which have retained their value as a source of information and research. The first, *Geschichte der Juden in den Provinzen Liv und Kurland* (1853), is a pioneer work on the history of the Jews in *Courland, based on independent research in archives and the use of rare manuscripts and paintings. The second book, *Biblischtalmudische Medicin* (1850–60), is also a pioneer work in the field, despite several inaccuracies and some errors. Although Wunderbar had no formal training, he had a surprising understanding of medical matters.

WUNDERLICH, FRIEDA (1884–1965), economist. Born in Berlin, she became a leading expert in the fields of national economy, labor legislation, sociology, and social politics. She taught at the Vocational Institute (Berufspaedagogisches Institut) in Berlin and from 1924 to 1933 was an editor of the periodical *Soziale Praxis*. She took an active part in political life and was town councilor for Berlin (1926–33), and a member of the Prussian Parliament (1930–33). When Hitler rose to power she left Germany for the U.S., where she became professor of sociology and social politics at the Graduate Faculty of Political and Social Science at the New School for Social Research.

In Germany she published many books and articles, such as *Hugo Muensterbergs Bedeutung fuer die Nationaloekonomie* (1920); *Die Bekaempfung der Arbeitslosigkeit in Deutschland seit Beendigung des Krieges* (1925); *Der Kampf um die Sozialversicherung* (1930); and *Versicherung, Fuersorge und Krisenrisiko* (1932). In the U.S. she wrote *Labor under German Democracy* (1940) and *British Labor and the War* (1941).

[Shalom Adler-Rudel]

WUPPERTAL, city in North Rhine-Westphalia, Germany; formed by the amalgamation of Elberfeld, Barmen, and other towns in 1929. Elberfeld had a Jewish population by the latter part of the 16ᵗʰ century – in 1593 every Jew had to contribute ten thalers for the defense of the town. An expulsion order of 1598 was carried out only half-heartedly. Sixty Jewish families were admitted in 1671. A new *Judenordnung* ("Jews' Statute")

was introduced into the duchy of Juelich in 1749, imposing a heavy tax burden. The yarnmakers of Elberfeld had always strenuously opposed Jewish settlement, and in 1794 all Jews were expelled from the town, returning when it was under French rule (1806–15). Their position then greatly improved. In 1808 there were nine Jewish families in the town, and 21 in 1818. A synagogue was built in 1865. In 1875 the number of Jews in Elberfeld was 813, growing to 1,104 in 1880; 1,705 in 1905; and 3,000 in 1932. The poet Else *Lasker-Schueler was born there.

After the 1794 expulsion, Jews were admitted into Barmen under French rule; however, by 1877 there were no more than ten families in the town. The community numbered 584 in 1905, and 750 (0.33 percent of the total population) in 1926 (unchanged in 1933).

The number of Jews in Wuppertal was approximately 3,500 (0.8 percent) in 1933, but had decreased to just over 1,000 in 1939, plus about 650 so-called *Mischlinge* (mixed Jews). In November 1938 the synagogues were destroyed and many Jewish inhabitants deported to *Dachau. Most of those who remained at the outbreak of war in 1939 perished in the Holocaust. A "branch" of the *Buchenwald concentration camp operated outside Wuppertal in 1942–43. A small Jewish congregation was re-established after 1945, numbering approximately 150 persons in 1967.

The Jewish community numbered 82 in 1989 and 2,293 in 2004. The increase is explained by the immigration of Jews from the former Soviet Union. A new synagogue was consecrated in 2002. In 1994 a new cultural and educational center was opened in memory of the members of the Jewish community who were expelled and killed during the Nazi era. Built on the site of the destroyed synagogue in Elberfeld, it serves as a venue for exhibitions, lectures, and seminars. Wuppertal is the seat of the Else Lasker-Schueler Society, founded in 1990.

[Larissa Daemmig (2nd ed.)]

WURZBURGER, WALTER S. (1920–2002), rabbi, academician, communal leader. Wurzburger was among the most important Modern Orthodox rabbinic leaders and intellectuals in the latter half of the 20th century. Born in Munich, he escaped the Holocaust by immigrating to the United States in 1938, ultimately receiving ordination at the Rabbi Isaac Elchanan Theological Seminary of *Yeshiva University and an M.A. and Ph.D. in philosophy from Harvard University. After

serving as rabbi of Chai Odom in Dorchester, Massachusetts (1944–53) while at Harvard, Wurzburger was called to the pulpit of Congregation Shaarei Shomayim in Toronto, Canada's largest Orthodox congregation, and was regarded as a shining light in Canadian Jewry. In 1967, he assumed the pulpit of Congregation Shaarey Tefila in Far Rockaway, New York, which, under the leadership of Rabbi Emanuel *Rackman, had become one of America's preeminent Orthodox synagogues. He taught philosophy at Yeshiva College from 1961 and served both as president of the (Orthodox) Rabbinical Council of America and of the Synagogue Council of America. Wurzburger was one of Rabbi Joseph B. *Soloveitchik's most ardent disciples and he carried his teacher's philosophy and theology into the public arena through his articles and lectures, and as editor-in-chief of *Tradition*, the widely respected journal of the Rabbinical Council of America. He received the National Rabbinic Leadership Award of the Orthodox Union. Wurzburger's most important work was *The Ethics of Responsibility* (JPS, 1994) in which he described the Jewish ethical value system which flowed from the *halakhah*, Judaism's legal parameters. He also wrote *A Treasury of Tradition* (1967, 1994). He was a contributing editor of *Sh'ma* and a representative of a time when Modern Orthodoxy was liberal in its orientation, embracing all denominations of Jews and cooperating with the non-Orthodox rabbinic world.

[Stanley M. Wagner (2nd ed.)]

WURZWEILER, GUSTAV (1896–1954), U.S. banker and philanthropist. Wurzweiler was born in Mannheim, Germany. After serving in the German forces during World War I, he established his own banking firm and accumulated a fortune. When he left Nazi Germany for Belgium in 1936, Wurzweiler managed to take out much of his wealth. He lived in Brussels from 1936 to 1941, and then emigrated to the United States where he again established himself successfully as a financier. In 1950 he became a member of the New York Stock Exchange. An Orthodox Jew, Wurzweiler established the Gustav Wurzweiler Foundation in 1950 to aid Jewish cultural, social, and educational agencies, with emphasis on higher education, research in Jewish history, aid to the handicapped, and support for congregations.

By 1970 about 100 institutions had received grants, with the Leo Baeck *Institute a major beneficiary. Among the foundation's grants was $1,000,000 in 1962 to the Graduate (renamed Wurzweiler) School of Social Work of Yeshiva University, augmented in 1968 by a $500,000 grant to establish a doctoral program.

WYDEN, RONALD STEPHEN (1949–), U.S. senator. Ron Wyden is the son of a German Jewish refugee, Peter Wyden, who was the author of *Stella*, a book about the most beautiful girl in his class in Germany who used her beauty as a weapon in survival. One of his grandfathers edited the works of Schopenhauer. His father worked for the *St. Louis Dispatch* and *Newsweek*, so Ron Wyden grew up in St. Louis and Washing-

ton, D.C. Among his classmates was Hubert Humphrey III, son of the senator and vice president. He then moved to Palo Alto where he played basketball in high school and at the University of California Santa Barbara before an injury ended his playing days. Only then did he begin to take his studies seriously, and he graduated from Stanford before moving to the University of Oregon to study law.

In Portland, he worked as a campaign aide to Senator Wayne Morse and then as director of the Gray Panthers organizing the elderly. His first effort in politics was to sponsor a referendum for reducing the price of dentures. He ran for Congress at the age of 31 from Portland and, after Robert Packwood resigned, he ran for the Senate in 1996, defeating Gordon Smith, who later became his Senate colleague, by a small margin in a tight race. It was the first race in the country to use mail ballots alone.

In the Senate he worked with Charles Grassley to insist on disclosures of senatorial holds. He was known for his work on behalf of the elderly. During the Reagan Administration and again in the George W. Bush Administration he was an ardent defender of Social Security. He joined with Republican colleagues of the Senate and the House to ensure that the Internet be tax-free, and restricting spam. He was active concerning the environment, sponsoring with Henry Waxman the Clean Air Act. He was also active in the campaign against tobacco. Although he opposed Oregon's assisted suicide law, he defended it against Congressional efforts to override state law with federal regulation. He was a strong advocate for a woman's right to choose and sought to bring RU 486, the morning after pill, to the United States. He also served on the Senate Intelligence Committee and was a firm voter against the Iraq war.

WYGODZKI, STANISLŁAW (1907–1992), Polish poet and author. Born in Bedzin, where his father, Isaac Wygodzki, was a leading Polish Zionist, Wygodzki was attracted to Communism in his youth and in 1925 was condemned to two years' imprisonment for his political activities. He began his literary career in 1928 with contributions to the literary weekly *Wiadomości Literackie*, later writing for *Głos Literacki, Miesięcznik Literacki*, and other periodicals. Wygodzki's first verse collection appeared in Moscow in 1933. During World War II he was deported from the Bedzin ghetto to Auschwitz, where he managed to survive until the liberation. In 1947 Wygodzki returned to Poland and resumed his literary work. He published many volumes of poetry and prose, including *Pamiętnik miłości* ("Diary of Love," 1948), *W kotlinie* ("In the Dell," 1949), *Widzenie* ("Encounter," 1950), *Pusty plac* ("Empty Square," 1955), and *Koncert życeń* ("Request Concert," 1960). Wygodzki's works reflect his deep concern for the fate of his fellow-men, their moral purity and strength, and his struggle

against social evils. His books were translated into many languages. Wygodzki also published translations from Yiddish literature (including Sholem *Asch). *Zatrzymany do wyjaśnienia* ("Detained for Explanation") which, confiscated in Poland in 1957, appeared in Israel (in Hebrew) in 1968. He emigrated to Israel in that year. He was the *Encyclopaedia Judaica* departmental editor (first edition) for Polish literature.

WYLER, WILLIAM (1902–1981), U.S. film director and producer. Born in Mulhouse, Alsace, Wyler emigrated to the United States in 1920 with his uncle, Carl *Laemmle, head of Universal Pictures. In 1925 he directed the first of 50 two-reel Westerns, starting his long series of major works, first with Universal and then in association with other studios. An early success was the film version of Elmer *Rice's play *Counsellor-at-Law* (1933), as well as the adaptation of Sinclair Lewis' *Dodsworth* (Oscar nomination for Best Director, 1936). He broke new ground with *These Three* (1936), the successful adaptation of Lillian Hellman's *The Children's Hour*, a play with a lesbian theme. Four more milestones in his directorial career were *Jezebel* (produced, 1938); *Wuthering Heights* (Oscar nomination for Best Director, 1939); *The Letter* (Oscar nomination for Best Director, 1940); and *The Little Foxes* (Oscar nomination for Best Director, 1941). During World War II he served as an officer with the U.S. Air Force, where he made the documentary *The Memphis Belle* and the Navy film *The Fighting Lady*, which won an Oscar for Best Documentary.

After the war, Wyler directed such distinguished films as *The Heiress* (produced; Oscar nomination for Best Picture and Director, 1949); *Detective Story* (produced; Oscar nomination for Best Director, 1951); *Roman Holiday* (produced; Oscar nomination for Best Picture and Director, 1953); *The Desperate Hours* (produced, 1955); *Friendly Persuasion* (produced; Oscar nomination for Best Picture and Director, 1956); *The Big Country* (produced, 1958); *The Collector* (Oscar nomination for Best Director, 1965); *How to Steal a Million* (1966); *Funny Girl* (1968); and his final film, *The Liberation of L.B. Jones* (1970).

Wyler was among Hollywood's foremost filmmakers and was the recipient of many honors, including three Academy Awards, for directing *Mrs. Miniver* (1942), *The Best Years of Our Lives* (1946), and *Ben-Hur* (1959). In 1966 he received the Irving G. Thalberg Memorial Award, for the consistently high quality of his motion picture production. In 1976 he received the American Film Institute's Lifetime Achievement Award.

[G. Eric Hauck / Ruth Beloff (2nd ed.)]

WYNN, ED (**Isaiah Edwin Leopold**; 1886–1966), U.S. comedian. Born in Philadelphia of an immigrant family from Prague, Wynn was known for 60 years as "The Perfect Fool." His early appearances on Broadway included *The Deacon and the Lady* (1910); *Ziegfeld Follies of 1914*; *Ziegfeld Follies of 1915*; *The Passing Show of 1916*; and *Sometime* (1918). In 1919, when earning $1,700 weekly, he joined a choristers' strike and was then blacklisted by managements. Using his savings, Wynn wrote, staged, composed the music, and performed in the *Ed Wynn Carnival* (1919–21); *The Perfect Fool* (1921–22); and *The Grab Bag* (1925) on Broadway. He later performed in *Manhattan Mary* (1927), and wrote, staged, produced, and performed in *Simple Simon* (1930–31); *The Laugh Parade* (1932); *Boys and Girls Together* (1941); and *Laugh, Town, Laugh* (1942). During the 1930s he became one of the first radio comedy stars, creating the role of the Texaco Fire Chief.

His films roles include *Follow the Leader* (1930); *The Chief* (1933); the voice of the Mad Hatter in *Alice in Wonderland* (1951); *The Great Man* (1956); *Marjorie Morningstar* (1958); *The Diary of Anne Frank* (Oscar nomination for Best Supporting Actor, 1959); *Cinderfella* (1960); *The Absent-Minded Professor* (1961); *Babes in Toyland* (1961); *Son of Flubber* (1963); *The Patsy* (1964); *Mary Poppins* (1964); *Those Calloways* (1965); *The Greatest Story Ever Told* (1965); *The Daydreamer* (1966); and *The Gnome-Mobile* (1967).

Wynn had many forays into television as well. He hosted the *Camel Comedy Caravan* variety show (1950), starred in *The Ed Wynn Show* sitcom (1958–59), and was a guest on dozens of panel, variety, and drama series. He appeared in the TV drama *Requiem for a Heavyweight* (1956) and the TV movies *Meet Me in St. Louis* (1959), *Miracle on 34th Street* (1959), *The Golden Horseshoe Revue* (1962), and *For the Love of Willadean* (1964). In 1950 he was awarded an Emmy for Most Outstanding Live Personality, and *The Ed Wynn Show* won an Emmy for Best Live Show. He earned Emmy nominations for three of his drama series performances (1957, 1958, and 1961).

He was the father of actor Keenan *Wynn (1916–1986).

BIBLIOGRAPHY: K. Wynn, *Ed Wynn's Son* (1959).

[Ruth Beloff (2nd ed.)]

WYNN, KEENAN (**Francis Xavier Aloysius**; 1916–1986), U.S. actor. Born in New York, the son of Ed *Wynn (1886–1966). Keenan toured in stock companies and appeared on the New York stage and on television before making his debut in films in *See Here, Private Hargrove* (1944). His Broadway performances include *Remember the Day* (1935), *Hitch Your Wagon* (1937), *The Star-Wagon* (1937), *One for the Money* (1939), *Two for the Show* (1940), *The More the Merrier* (1941), and *Strip for Action* (1942).

A long-standing character actor, Wynn made more than 100 television appearances and performed in more than 170 films. He was nominated once for an Emmy for his performance in an episode of the TV series *Police Woman*. Of his career Wynn is said to have commented, "My billing has al-

ways been 'and' or 'with' or 'including.' That's all right; let the stars take the blame."

Wynn's feature film roles include *The Hucksters* (1947), *My Dear Secretary* (1949), *Annie Get Your Gun* (1950), *Royal Wedding* (1951), *Kiss Me, Kate* (1953), *The Man in the Gray Flannel Suit* (1956), *Don't Go Near the Water* (1957), *A Hole in the Head* (1959), *The Absent-Minded Professor* (1962), *Dr. Strangelove* (1964), *The Patsy* (1964), *The Americanization of Emily* (1964), *The Great Race* (1965), *Finian's Rainbow* (1968), *MacKenna's Gold* (1969), *Loving* (1970), *The Mechanic* (1972), *Snowball Express* (1972), *Nashville* (1975), *High Velocity* (1976), *Just Tell Me What You Want* (1980), *Best Friends* (1982), and *Black Moon Rising* (1986). Wynn's final role was as Butch in the TV pilot and comedy series *The Last Precinct* (1986).

Wynn's autobiography, *Ed Wynn's Son*, was published in 1959.

BIBLIOGRAPHY: N. Wynn, *We Will Always Live in Beverly Hills* (1990).

[Ruth Beloff (2nd ed.)]

WYNN, SAMUEL (1891–1982), Australian wine merchant and communal leader. Born Shlomo Weintraub near Lodz, Wynn was educated at a local yeshivah and joined the family wine-making business. He came to Melbourne, Australia, in 1913 to escape conscription into the czarist army and opened a vineyard near Stawell, Victoria. Wynn bought his first wine-retailing shop in Melbourne in 1918 and began bottling his own vermouths and wines in the mid-1920s. In 1927 he established Australian Wines Ltd., which, by the mid-1940s, were the largest winemakers and retailers in the country. In the post-war era Wynn Estates Pty. Ltd., as it was then known, became internationally known and probably Australia's most famous brand of wines. Wynn was also closely connected with Jewish causes, twice serving as president of the Zionist Federation of Australia. His wife IDA (née Siegler, c. 1896–1948), a Canadian, was a philosopher who was a friend of Martin *Buber, as well as a leading Australian Zionist and president of Australian WIZO.

BIBLIOGRAPHY: ADB, 12, 590–91; H.L. Rubinstein, Australia I, 193–94, 559–60; A. Wynn, *The Fortunes of Samuel Wynn: Winemaker, Humanist, Zionist* (1948).

[William D. Rubinstein (2nd ed.)]

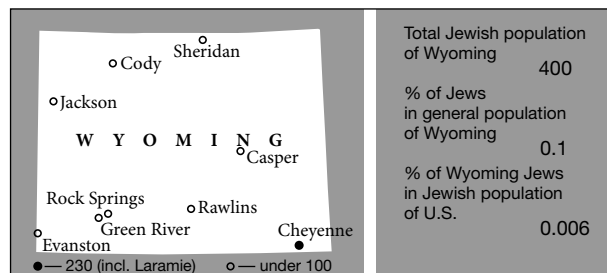
WYNN, STEVE (**Stephen Alan**; 1942–), U.S. casino developer. Wynn was born in New Haven, Conn., and raised in Utica, N.Y. His father, Michael Weinberg, ran a string of bingo parlors in the eastern United States and died shortly before Wynn graduated from the University of Pennsylvania in 1963. Wynn took over the family's bingo operation in Maryland and did well enough to accumulate the money to buy a small stake in the Frontier Hotel and Casino in Las Vegas. In the early 1970s, Wynn was part of a land deal with two titans of the Las Vegas casino industry, Howard Hughes and Caesars Palace, and they won a controlling interest in the Golden Nugget. Wynn renovated, revamped, and expanded the Golden

Nugget, whose annual profit soared from a little over $1 million to over $12 million. Wynn built another Golden Nugget in Atlantic City, N.J., in 1984. In 1984 Wynn was estimated to be worth $100 million. In 1986 he bought a large piece of land next to Caesar's Palace. He then sold the Atlantic City Nugget for $440 million and used much of the money to build the Mirage, a 3,000-room hotel and casino, in 1989. The Mirage set a new standard for size and lavishness. It featured an indoor forest and an outdoor "volcano," and with high-quality room appointments the Mirage was a great success. The Mirage was financed largely with junk bonds issued by Michael *Milken and it proved to be enormously successful, further enhancing Wynn's image in Las Vegas. Wynn expanded further on his concept of the luxury casino with the Bellagio, which had an artificial lake, an indoor conservatory, and an art gallery in which Wynn displayed museum-quality artworks, and branches of high-end boutiques and restaurants located in Paris, San Francisco, and New York. Mirage Resorts was sold to MGM Grand in 2000 to form MGM Mirage. With the money he made on the deal, Wynn built a new resort, the Wynn Las Vegas, which opened in 2005. According to Forbes magazine, Wynn became a billionaire in 2004, when his net worth was estimated at $1.3 billion. Wynn's art collection, on display to the public at Wynn Las Vegas, includes paintings by Picasso, Vermeer, Van Gogh, Gauguin, Warhol, and Matisse.

[Stewart Kampel (2nd ed.)]

WYOMING, a central Rocky Mountain state in the western United States. Its total population in 2000 was 493,782, ranking it the least populated state in the nation. Its Jewish population was approximately 400. The 140-year history of the Jews of Wyoming is a paradigm for the Jewish experience in the West and in America.

By 1868, the gleaming tracks of the Union Pacific Railroad had reached southeastern Wyoming. The opportunities in Cheyenne and Laramie, both nicknamed "Hell On Wheels," attracted a number of German Reform Jews, who had deserted their homeland after the egalitarian reforms of the Revolution of 1848 failed to materialize. Those who ventured to Wyoming were mostly peddlers or frontier merchants who dealt in clothing, liquor, cigars, and sundry items. Intent on fitting in, they noted with satisfaction that they were readily accepted as fellow pioneers. Ernestine Rose, a close friend of Susan B. Anthony, rode up and down the territory on horseback and in stagecoaches campaigning to grant full equality to women. Her mission was successful. In 1869, Wyoming granted women the right to vote and is nicknamed "The Equality State." "Jew Jake" (Jacob Louis Kaufman) built a roadhouse in La Belle in 1879 to service the cowboys as they rode through during the great Texas cattle drives. And legend has it that, as early as 1890, Max Meyer's dry goods store contracted with the John B. Stetson Company to make 10-gallon hats to sell to both rodeo and range cowboys.

Between 1881 and 1914, a flood of eastern European Jews from the Pale of Settlement crowded into the United States.


Jewish communities in Wyoming. Population figures for 2001.

Philanthropist Baron de Hirsch funded the Jewish Agricultural Society, an organization whose mission was to spread Jews throughout America. They sent some newly arriving immigrants to Wyoming to fulfill their agricultural dreams. The population of these would-be farmers in towns like Huntley was so high that it was necessary to hire a Yiddish-speaking teacher to instruct their children in public school. Other Jews were lured to Wyoming as a result of two Congressional Homestead Acts, which gave land to settlers in exchange for improving upon it. Primarily Orthodox Jews, this second wave of immigrants brought with them their customs, tools, and rituals; setting up synagogues, sacred burial grounds, and kashering capabilities. By 1919, the Orthodox synagogue in Cheyenne quietly absorbed the remnants of the Reform community into its own. Wyoming was indeed a place to strive for "a sack and a shovel, and shovel in the gold."

Opportunities for Jews in this rugged land were limited only by the extent of their imaginations.

Fred Goodstein, operating American Pipe and Supply, came to Casper in 1923 to take advantage of Wyoming's oil boom. He undoubtedly became the wealthiest man in the state, and more likely, the entire Rocky Mountain region. In 1930, Sol Bernstein opened what would become the largest mail-order western-wear store in the world. From the mid-1930s to the mid-1950s, Wyoming's Jewish communities reached their strides. Anchored by stable marriages and successful businesses, Wyoming's Jews continued to be gratified by the feeling that both America and their adopted state had smiled upon them. New synagogues were built in Casper and Cheyenne. Weddings and bar mitzvahs were frequent enough to make full-time rabbis a necessity. Prayer books, Torahs and worshipers were plentiful throughout the state. The *Wyoming Jewish Press* was published in newspaper form by Abe Goldstein between 1930 and 1940. During WWII, a burgeoning of Jewish military personnel brought more Jews to Wyoming. Those that stayed and married invigorated and further strengthened Wyoming's vibrant and visible Jewish community. Subsequent to the war, a small wave of Holocaust survivors found the people and opportunities of Wyoming to be safe and relatively free of antisemitism.

From the mid-1950s to the mid-1970s, college education of Wyoming's Jewish youth was an expected norm. The comforts and success of Jewish life in Wyoming was now perceived as a possible liability for the immigrants' progeny. The

entire baby-boom generation was encouraged by their parents to seek Jewish mates and professional career opportunities in locations other than the high plains. Intermarriage, divorce and a seeming lack of religious observance ran rampant among Wyoming's Jews, just as it did throughout most of America.

The end of the 20th century marked a new pattern of immigration and observance for Wyoming's Jews. No longer concerned with escaping the political and social persecutions of their ancestors, this new immigration is often comprised of people searching for the rewards of material success they have achieved in other places. Jackson Hole in the Grand Tetons is a prosperous second-home destination for those wanting a reprieve from the pressures of frenzied city life, and is the fastest-growing Jewish community in the state. James Wolfensohn, former head of the World Bank, and Alan Hirschfield, former president and CEO of Columbia Pictures, call Wyoming their home. Throughout the state, women no longer are content to silently witness ritual practices previously reserved for men only. And other long-time residents make conscious choices to live meaningful Jewish lives apart from an organized Jewish community.

Questions abound. Are the new Jews of Wyoming or merely in Wyoming? Are they observing real Judaism or inventing a new style that is far afield from the laws of the Torah? Is the strain and excitement of changing religious interpretation inherent to keeping Jewishness alive? Is it simply a divine right to be a Jew, regardless of the details? Answers vary, but it is certain, after more than 140 years on the high plains, that the Jews of Wyoming still find ways to keep themselves and their progeny ever-conscious of their Jewish lives. To those that have wandered in the wilderness for thousands of years, the landscape called Wyoming is familiar territory.

Institutional Data

The highest concentration of Jews in Wyoming is to be found in the areas surrounding Jackson, Casper, Cheyenne, and Laramie. There are synagogues in Casper and Cheyenne and ongoing official community gatherings in Jackson and Laramie. The University of Wyoming supports an active branch of Hillel. There is currently no full-time rabbi in the state, though Jackson brings in a rabbi monthly and on holidays. Cheyenne employs a part-time cantor and Casper and Cheyenne have weekly lay-led services. Laramie's community has monthly and holiday lay-led services. All communities bring in a trained rabbi or cantor for High Holy Day services. Casper, Jackson, and Cheyenne have sacred burial ground, with Cheyenne having an active ḥevra kaddisha. All communities have at least one Torah, women are counted in minyanim, and each has an education program for youth and adults. Cheyenne, the oldest congregation, has a stream-fed mikveh and a fully equipped kosher kitchen.

[Penny Diane Wolin (2nd ed.)]

WYSZKOW (Pol. **Wyszków**), town in Warszawa province, eastern central Poland. The first Jews settled in Wyszkow in the late 18th century. In 1827 the Jewish population numbered 278 (29% of the population). Throughout the 19th century no restrictions were put on Jewish settlement, and in 1857 the Jewish population had reached 1,067 (67%). The wealthier Jews engaged in the timber trade and the brewing of beer; others engaged in tailoring, fishing, carpentry, tanning, haulage, and shopkeeping. In the late 19th century the community was influenced by the ḥasidic groups of *Aleksandrow and Gur (*Gora Kalwaria). In 1897 Wyszkow contained 3,207 Jews (64%). At the beginning of the 20th century a Jewish workers' union was formed, and during the uprisings of 1905 the Jewish youth organized *self-defense. A Jewish library opened in 1909. After the Red Army retreated in 1920, some officers of the Polish army accused the Jews of Wyszkow of treason, almost inciting a pogrom.

Between the two world wars Abraham Cytryn headed the "Bet Yosef" yeshivah, which had 250 students. There was a CYSHO school (see *Education) between 1925 and 1930 and a *Beth Jacob school. Jacob Aryeh Morgensztern, who later led the *Radzyn Ḥasidim, served as rabbi of the community until 1932. He was succeeded by his son, David Shelomo Morgensztern, who was killed in the Holocaust. Economic competition in the 1930s caused an increase in antisemitism. Mordecai *Anielewicz, commander of the Warsaw ghetto uprising, originated from Wyszkow.

[Arthur Cygielman]

Holocaust Period

At the outbreak of World War II there were about 5,000 Jews in the town. The German army entered Wyszkow on Sept. 11, 1939, and organized anti-Jewish riots in which 65 Jews were shot. A few days later, the entire Jewish population was expelled and forced to move eastward into Soviet-occupied territory. After the Warsaw ghetto uprising, the survivors of the Jewish Fighters' Organization formed a partisan unit named after Mordecai Anielewicz that operated in the forests near Wyszkow. After the war, no Jewish community was reconstituted in Wyszkow.

WYSZOGROD (Pol. **Wyszogród**; Yid. **Vishegrod**), town in Warszawa province, eastern central Poland. A Jewish settlement in Wyszogrod is mentioned for the first time in 1422, when Jews received authorization from Prince Ziemowit IV (c. 1352–1426) to engage in commerce and crafts and to establish their own institutions. During the 16th century Jews established workshops for weaving. In the second half of the

18th century a synagogue was erected, built of stone in the late baroque style according to plans by the architect David Friedlander; it was destroyed by the Nazis in 1939. In 1765 the 684 Jews paid the poll tax, and 1,410 Jews paid the poll tax in 208 surrounding villages. The community numbered 2,883 (90% of the total population) in 1808; 2,458 (73%) in 1827; and 2,841 (74%) in 1857. From the mid–19th century many Jews moved from Wyszogrod to Plock and Warsaw; in 1897 there were 2,735 (66%) Jews in the town and in 1921, 2,465 (about 57%). During the 1920s eight of the 12 members of the municipal council were Jews. Because of the town's location on Poland's principal waterway, the Vistula River, Jews there engaged in interurban trade. Their position deteriorated, however, on the eve of World War II as a result of antisemitic pressure and boycott propaganda. N. *Sokolow was born in Wyszogrod. The last rabbis to hold office were David Bornstein (until 1922) and Naphtali Spivak, both of whom died in the Holocaust.

[Shimshon Leib Kirshenboim]

Holocaust Period

At the outbreak of World War II there were about 2,700 Jews in Wyszogrod. On Nov. 19, 1942, the Jewish community was liquidated when the Jews were expelled to Czerwinsk and Nowy Dwor, and from there deported to the *Treblinka death camp. After the war the Jewish community was not reconstituted.

Pazyra, *Geneza i rozwój miast mazowieckich* (1959), passim; I. Schiper, *Dzieje handlu żydowskiego na ziemiach polskich* (1937), index; A. Kubiak, in: BŻIH, 8 (1953), 77, 89–91.

WYZANSKI, CHARLES EDWARD, JR. (1906–1986), U.S. jurist. Born in Boston, Massachusetts, Wyzanski received his A.B. from Harvard College in 1927 and his LL.B. from Harvard Law School in 1930. He served as law clerk to Judge Augustus N. Hand and Judge Learned Hand, practiced law in Boston, and then joined the New Deal Administration of President Franklin D. Roosevelt as solicitor, later serving as acting secretary of labor in the Department of Labor (1933–35). From 1935 to 1937 he was on the staff of the solicitor general, arguing the constitutionality of the Wagner National Labor Relations Act and the Social Security Act. Named U.S. district judge for the district of Massachusetts, he took his seat in 1942, becoming the first Jewish judge of the United States District Court of Massachusetts. In 1966 he was elevated chief judge of the court and served in that capacity until 1971, when he assumed senior status.

Wyzanski served as president of the board of overseers of Harvard University and, from 1952, was a trustee of the Ford Foundation. In the role of teacher, Wyzanski was a lecturer in government at Harvard University (1942–43) and in law at Massachusetts Institute of Technology (1949–50) and Stanford University (1949–51). In 1974 he was a professor of law at Columbia University.

Wyzanski received many public and academic honors. His essays have been collected under the title *Whereas: A Judge's Premises* (1965; paperback repr., *New Meaning of Justice*). He contributed to the *Harvard Law Review* and other professional and popular magazines. Considered one of the ablest judges on the federal bench, Wyzanski's decisions were respected as far-reaching and erudite. He believed that, although it was important to learn the principles of the law, it was even more necessary to accept the challenge of understanding them. In his analysis of the Nuremberg Trials in 1946, he noted that law is not power but restraint on power, a maxim he endeavored to apply in his legal thinking.

Harvard established the Judge Charles Wyzanski Award, a prize given to students who are interested in the law, vigorous conversation, and theoretical and practical issues of justice.

XANTEN, town in Germany. The first documentary evidence for the presence of Jews in Xanten dates from the period of the First *Crusade when Jews from *Cologne sought refuge there. On June 27, 1096, the crusaders reached Xanten as well, and some 60 Jews were either killed or had committed suicide. Among the martyrs were Moses ha-Kohen, rabbi of Xanten, and an unidentified proselyte. In 1197 the Rhenish communities paid the bishop for permission to bury the six martyrs of Neuss in the Xanten cemetery. Though Jewish moneylenders were found in Xanten in the 13th century, the market day was held on the Sabbath so as to exclude Jews from trade (1236). The community suffered badly during the *Black Death persecutions of 1349. Reports from the 15th and 16th centuries point to Jewish activity as moneylenders. In the 17th and 18th centuries there were apparently only small numbers of Jews in Xanten. From 1690 Xanten was the meeting place for the Rhenish Jewish Diet and in 1787 a special building, which also contained a synagogue, was set aside for the assembly's meetings. In 1860 the community had its own elementary school; in 1890 it counted 85 persons. A butcher and former *shoḥet*,

Adolf Wolff Buschoff of Xanten, was the victim of a blood *libel in 1892. Accused by a Catholic of murdering a Christian boy, a charge taken up by the antisemitic press, Buschoff was arrested but then discharged for lack of evidence. A debate in the Prussian Diet, which gave the antisemite A. *Stoecker an opportunity to fulminate against the Jews, resulted in the arrest of Buschoff for a second time; but a jury at Cleves found him innocent (1892). The community did not survive this agitation and gradually decreased to 30 persons (9.6 percent of the population) in 1916 and 14 in 1930. The synagogue was destroyed by the Nazis in November 1938.

XANTHI (**Ksanthi**, **Xanthie**, **Eskedje**), city located in northeastern Greece in the region of Greek Thrace between Drama

and Cuomotini. This town in the past has had the reputation for producing the best tobacco in the world.

At the beginning of the 20th century, several Jewish families came to the city from Adrianople, Didymoteikhon, and Salonika. In 1913, they established a Jewish community there. The Jews spoke Judeo-Spanish and only in 1926 did they establish a synagogue. In 1924, the Jewish community represented by David Arditis, Abraham Tabach, Abraham Bellos, and Yehuda Cohen purchased a plot of land for a synagogue and community center at the junction of Anatolikis Thrakis Street and Stavrou Hadjistavrou Street. The basilica of the synagogue was influenced by the Reform synagogues of Europe and the Great Synagogue of Edirne. Next to the synagogue was a two-floor community center, where the school was on the ground floor, the first floor was for the office of the headmaster, and the second floor housed the community center. The Sephardi Jewish community of Xanthi was a central cultural community for the Jews of Thrace.

In 1913, after the Balkan wars, Xanthi was annexed to Bulgaria. In 1913, there were 1,290 Jews in the area of Xanthi. Under the Bulgarians, a branch of the organization Hahistadrut leSafa veLeTarbut Ivrit (The Federation for the Hebrew Language and Culture), which was founded in Bulgaria in 1914, was started in Xanthi. In 1918, in Xanthi a branch of Kadima was formed for the dissemination of the Hebrew language and culture and to educate toward Jewish nationalism through Hebrew language, Hebrew literature, Jewish history, and Erez Israel geography classes. The branch also organized literary evenings, hikes, and parties, started a library, and translated material from Bulgarian and Hebrew to Judeo-Spanish. It had 55 members, most of whom were graduates of the Jewish French Alliance Israélite Universelle school system.

Many of the Jews were tobacco workers, artisans, and small merchants. The Jewish community had two philanthropic organizations: Agudat Bikur Holim and Agudat Nashim, a women's organization.

After World War I, in 1919, Greek sovereignty replaced Bulgarian rule. During the Bulgarian retreat, the Bulgarians accused the Jews of having received the Greek army joyfully. One of the Bulgarian newspapers exploited this accusation and attacked all of Bulgarian Jewry. In 1919, there were 70–74 Jewish families (some 300–350 people). During the Asia Minor war of 1922, the community had 700 members. At the beginning of the 1920s, it was estimated that 250 Jewish families lived in relative prosperity. Most Jews lived in the poor neighborhood of Pournali or Pournari, the wealthier Jews lived in Ano Poli (Upper Town).

In 1910, Mois Bassat, an anti-Zionist assistant principal of Alliance Israélite Universelle schools, changed his outlook, became a Zionist, and was chosen as president of the new B'nai Zion Zionist league in Xanthi.

In the early 1920s, the Zionist organization B'nai Zion was active, led by the dentist Isaac de Botton. From time to time, the organization raised money for the Jewish National Fund. In 1922, Isaac de Botton edited the Judeo-Spanish Zionist newspaper *La Fuerza*. In 1924, he published the Judeo-Spanish periodical *El Progreso*. The periodicals wrote on local and regional events, and news from the Jewish world. On the occasion of the inauguration of the Hebrew University of Jerusalem in 1925, he issued *Leumi* (National) in Judeo-Spanish. In 1922 the youth of the community organized into the Zionist HaTikva sport organization. In the mid-1920s, a Jewish scout troop organized in Xanthi, and they eventually allied with the Salonikan Jewish Boy Scout Chapter Maccabee. There was also a Jewish youth theater group, which was highly praised in the local press, and a Music and Sports Association. The community also had the club Cercle Israélite.

In 1923, Yitzhak Daniel was named the honorary president of the Jewish community, and David Arditti was president. Another six men were on the Executive Committee, as well as the chief rabbi Haim ben Avraham and school principal Yitzhak Meshulam. The Executive Committee determined community dues, and appointed members to committees that dealt with Bikur Holim, the synagogue, and education. The community received an annual allotment from the municipality for operating expenses, and the Ministry of Public Education via the governor general of Thrace contributed an annual sum for religious institutions and communal education. The next communal rabbi was Avraham Haviv for most of the 1920s, followed by Rabbi Raphael Nissim Latin.

In the early 1920s, the new Jewish school had 44 boys and 67 girls. The students paid tuition and there were teachers for Greek and French. Yitzhak Meshulam was the principal. In the absence of Hebrew, which was criticized in the Zionist organ *La Fuerza,* it was decided to give the management of the school to the Alliance Israélite Universelle, and Avraham Benveniste of Salonika was hired to be principal and French teacher. In 1924, 150 children were enrolled in the school. In the early 1930s, during the depression, the construction of a school ran into financial problems, and in 1934 the Bank of Athens proposed to sell the school structure in a public auction. The community went into action, found financial help from private businessmen like Karl Shefer, and businesses, and managed to pay the bank. The new principal was Vitali Matalon, who also taught French. The Zionists demanded that Hebrew be taught and that it be taught by members of the Zionist organizations Hatze'irim Hayehudim, which was founded in 1934 and had 80 members, and HaTikva. In 1936, after a court case involving the Jewish community and the widow of the deceased, the community finally received the estate of the tobacco worker Yitzhak Daniel, who died in 1924. A large sum of 1,200,000 drachmas was to be divided as follows: 200,000 for the building of the synagogue, 500,000 for the land for a synagogue, and a scholarship fund of 500,000 for scholarships for two students annually.

In 1937, during the Metaxas dictatorship in Greece, the school received an increased allocation from the government, and solved the school's water shortage problems by putting in a water system. On the other hand, the same nationalist gov-

ernment in the same year ordered that weekly hours for the instruction of Judaism be cut, including the teaching of Hebrew, religion, and history. In 1938, the community was further enraged when, within a few days, the government ordered the school to collect all religious books, i.e., prayer books, weekly Torah portion lessons, holiday *maḥzor* prayer books, psalm books, Midrashim, and commentaries on *Me'am Loez*.

Three major tobacco companies in Xanthi belonged to Jews: Commercial, Herman Spearer, and David Arditis' company, which manufactured cigarettes. Jews also worked in the flour industry, the textile trade, ready-made clothes, haberdashery, leather accessories, and other industries.

In 1934 Leon Amarilio sat on the Municipal Council, and in 1938, David Attas was president of the Jewish community.

In 1934 the community numbered 1,100, but by World War II the community only numbered 120–140 families (600 people).

In April 1941, Xanthi was occupied by the Bulgarians, allies of the Nazis, who already decided in December 1940 to implement anti-Jewish legislation and the Nuremberg laws. The Bulgarian military forces began pillaging and plundering the Jews.

The Jews were compelled to wear the yellow Star of David, and they were forbidden to work in their professions in commerce and industry.

Jews had to mark their homes with a sign stating they were Jews. They could not leave the city and they had a nightly curfew. Gangs robbed Jewish stores and there were random checks in Jewish houses. Communication with the outside world was blocked and the Bulgarian government confiscated Jewish property. On February 22, 1943, the Bulgarian commissar for Jewish affairs, Alexander Belev, came to Xanthi to supervise deportation plans and preparations. At midnight March 4, 1943, the Bulgarians arrested 550 Jews in Xanthi and took them to a tobacco warehouse on 1 Salaminas Street. Only six escaped from the internment. The day of the arrest, the local tobacco merchant Yehuda Perahia was in Cavalla and managed to escape to Salonika. They were transferred to Drama by trucks and from there they were loaded on trains to Dupnitza in Bulgaria and were exposed to horrid conditions. Then on March 19, 1943 they were sent to Lom by train and from there taken by boat to Vienna and then sent by train to Treblinka where they met their deaths. The Bulgarians looted Jewish homes and shops. After the liberation, Yehuda Perahia returned to Xanthi and resumed his job as the head of a commercial tobacco company. He eventually donated his Judeo-Spanish newspaper collection from before World War II Salonika to the Ben-Zvi Institute Library in Israel. He would pray in Cavalla on holidays. In the 1960s the members of the family of Jak Cazes left the city to migrate to Israel.

In 1963, the community center was sold to the Boy Scouts. The dilapidated synagogue building in Xanthi was sold in 1992 and demolished in 1995. The cemetery is still on Xanthis-Diomidias Street beyond the train tracks. It is walled, but abandoned, and contains a few graves dating after 1923.

On March 3, 2001, the Municipality of Xanthi organized a memorial event for the annihilated Jews and the next day a memorial plaque was put in a wall in the tobacco warehouse at 1 Salaminas Street, to remind the local residents of the forced exodus of the Jews from there, their removal from the city, and the end of the Jewish community. Thomas Exarhos' book in Greek on the Jews of Xanthi, published by the Cultural and Development Center of Thrace, was presented within the framework of the special events.

[Yitzchak Kerem (2nd ed.)]

XENOPHON OF LAMPSACUS (second century B.C.E.), author of a fanciful travel book in Greek. He has been identified with Xenophon, author of a guide to Syria, quoted anonymously on the subject of Jerusalem's topography in Eusebius, *Praeparatio Evangelica*, 9:36.

XIMENES, SIR DAVID (1776–1848), English army officer. Born in London, into a distinguished Jewish family, Ximenes joined the British army and served in North America. He returned to Britain in 1805 and commanded the 62nd Regiment in Ireland. He later fought in Italy, Spain, and Portugal. Ximenes was knighted in 1832 and retired with the rank of lieutenant general in 1847. He had no direct connection with the Jewish community.

ADD. BIBLIOGRAPHY: J. Picciotto, *Sketches of Anglo-Jewish History* (1875), 303–4.

XIMENES, SIR MORRIS (**Moses**; c. 1762–1837), English magnate. Born in London, Xiemenes was a member of the Stock Exchange and made a fortune. In 1792 he was the leading spirit in an unsuccessful expedition, partly composed of and mainly supported by London Sephardim, for the colonization of the island of Bulama off the west African coast. In 1802 he declined to serve as warden of the Bevis Marks synagogue and was converted to Anglicanism. During the Peninsular War (1812–15) Xiimenes raised and commanded a brigade of Wargrave Rangers. He acquired a country estate and built a mansion at Bear Place in Berkshire. Ximenes became a captain of militia, sheriff of Berkshire, and a knight. He is mentioned by name in Frederick Marryat's novel *Olla Porida* (1841) as the only well-known person in England whose name began with an "x." He was the brother of Sir David *Ximenes.

[Cecil Roth / William D. Rubinstein (2nd ed.)]

XIMENES (**Ish Yemeni**), **SOLOMON MORDECAI** (d. 1825), Sephardi rabbi. Ximenes' antecedents are unknown, but from

1769 to 1770 he served as the last Hakham of the Sephardi community of Hamburg, succeeding Jacob Bassan. Later he entered the service of the London Sephardi community as a teacher and member of its *bet din* and gave expert evidence of Jewish marriage law in lawsuits in 1793 and 1798. His views embroiled him in disputes with the community; he expressed contrition in December 1804 but was again at loggerheads with it in 1811. In 1800 he published in London Part 1 of his bizarre work *The Expected Good end … containing the birth of Jacob, his dream of the ladder, various objections on some of the verses of King Solomon. Some observations on the structure of the Tabernacle. Temple of Solomon …, etc.* He was active in Freemasonry. He hebraized his name to Ish Yemeni.

XIMENES (JIMENES) DE CISNEROS, FRANCISCO

(originally Gonzales, 1436–1517), ecclesiastical statesman and regent of Castile from 1516 to 1517. After studying at Salamanca and Rome until 1465, Ximenes claimed the archpriesthood of Uceda, despite the archbishop of Toledo's wish that he resign; he was consequently imprisoned for six years. Inflexible resolution and personal austerity characterized his career. He joined the Franciscans, becoming Queen Isabella's confessor in 1492, archbishop of Toledo and chancellor of Castile in 1495, and grand inquisitor and cardinal under Ferdinand in 1507. He died hours after his dismissal by the youthful Charles v.

Ximenes, allegedly with the help of Jews, captured Oran in 1509 while crusading against the Moors of Africa. Although he was an unrelenting inquisitor of lapsed "New Christians" (2,500 were burned during his office), he strove to check inquisitional abuses (extortionism, immorality, etc.), but could not enforce central registration of "familiars" or gangs maintained by the inspectors. Since inquisitional charges without the naming of witnesses were preferred, defense was hampered; when the New Christians offered Charles (as they had earlier with Ferdinand) 800,000 crowns to reform the procedure, the monarch refused, dissuaded by Ximenes' intervention.

Conversos suffered no discrimination at the university founded in 1500 by Ximenes at Alcalá de Henares (Latin, "Complutum") – the site of his early schooling – unlike the situation at other Spanish universities. The "Complutensian Polyglot" Bible (6 vols., 1513–17), produced through Ximenes' personal initiative and patronage, was the first Bible with parallel Hebrew, Greek, Latin, and (for the Pentateuch) Aramaic texts; a Hebrew vocabulary was appended. For this work, significant manuscripts and competent editorship were sought, the latter from among converted Jews (Alfonso de *Zamora, Pablo Coronel, Alfonso de Alcalá). Four of the Hebrew codices utilized survived, but the form of the text presupposes also manuscripts from no later than the ninth century with the simpler Babylonian punctuation. These were apparently sold as waste to a fireworks maker in 1739, but their survival in Spain until the expulsion testifies to the strong Babylonian influence on medieval Spanish Jewry.

Ya-Yz

YA'ACOBI, GAD (1935–), Israeli politician, member of the Seventh to Twelfth Knessets. Ya'acobi was born in Kefar Vitkin where he attended high school. After serving in the IDF in 1953–56, he studied economics and political science at Tel Aviv University and completed an M.A. in economics in 1959. Ya'acobi was assistant to Minister of Agriculture Moshe *Dayan in 1960–61, and headed the Agricultural Planning and Development Center in the Ministry of Agriculture (1961–66). In 1965 he was one of the founders of the *Rafi Party, and in 1966–69 was a member of the Histadrut Central Committee, and of the Ḥevrat ha-Ovedim Executive. In 1967 he participated in the Harvard University International Seminar, headed by Professor Henry *Kissinger. Ya'acobi became a member of the Labor Party Bureau in 1968, when the party was first established. He was first elected to the Seventh Knesset in 1969, and served as deputy minister of transportation under Golda *Meir in 1969–74, and as minister of transportation under Yitzhak *Rabin in 1974–77. In 1977–84, when the Labor Alignment was in opposition, he served as chairman of the Knesset Economics Committee and as chairman of the Socioeconomic Committee of the Labor party. In 1980–82 he taught political science at Haifa University.

In the National Unity Government formed in 1984 Ya'acobi was appointed minister of economics and inter-ministerial coordination. He later changed the name of his ministry to the Ministry of Economic Planning. In this position Ya'acobi stood behind the organization of the Task Force established together with Jewish businessmen from abroad to encourage investments in Israel. After making numerous proposals over the years for electoral reform, soon after the formation of the National Unity Government he was appointed chairman of a joint Labor-Likud Committee on electoral reform that proposed changing the Israeli electoral system to a mixed system in which half the Knesset members would be elected in multi-member constituencies and the other half on the basis of proportional representation. However, while the reform was approved by the Labor Central Committee, it was rejected by that of the Likud, and the idea was buried. In 1987, following the resignation of Amnon *Rubinstein from the Ministry of Communications, Ya'acobi was appointed in his place, and continued

to serve in this position from 1988 until March 1990 when the Labor Party left the National Unity Government. After Ya'acobi failed to be elected to the Thirteenth Knesset, he was appointed by Minister for Foreign Affairs Shimon *Peres as Israel's permanent representative to the United Nations, serving in this position in 1992–96. Next he served as chairman of the board of directors of the Israel Electric Corporation until 1998, and in 2000–03 was chairman of the Ports and Railways Authority. Ya'acobi started teaching political science at Tel Aviv University in 1998, and from 2003 taught at the Interdisciplinary Center in Herzliyyah. He was a member of the Ben-Gurion Foundation, the Rabin Center, the Alterman Foundation, and served on the boards of directors of several corporations.

In addition to having written numerous books on politics and reminiscences, Ya'acobi has written three children's books, poetry, and articles in the press. Among his works are *The Government of Israel* (1982) and an autobiography, *Ḥesed ha-Zeman* (2002).

[Susan Hattis Rolef (2nd ed.)]

YA'ALEH VE-YAVO (Heb. יַעֲלֶה וְיָבֹא; "may [our remembrance] arise and come … before Thee"), the name of the additional prayer recited on the new moon and on festivals, during the evening, morning, and afternoon *Amidah* (with the exception of Rosh Ha-Shanah and the Day of Atonement), and during the *Grace after Meals. First mentioned in the Talmud (Ber. 29b; Sof. 19:7), its style is similar to that of the early *paytanim*. The name is derived from a phrase in its opening line. Specific mention is made of the occasion on which it is said (e.g., "this day of Passover") in the body of the request for "deliverance, happiness, grace, kindness, mercy, life, and peace." According to Rashi, it is also a "supplication for Israel and for Jerusalem, and for the reinstitution of the Temple service and of the sacrifices of the day" (Rashi to Shab. 24a). For this reason the prayer is recited during the 17th benediction in the *Amidah* and the third in the Grace after Meals, which deal with those subjects. The problem as to whether its omission during the recital of either of these benedictions requires that it be repeated is answered differently according to the occasion and the festival (Sh. Ar., OḤ 424: 1). In communal worship, when in the course of this prayer the reader recites the phrases "remember us O Lord our God, thereon for good," "be mindful of us for blessing," and "save us unto life," it is customary for the congregation to respond to each with "Amen."

YA'ALON, MOSHE (1950–), 17th chief of staff of the IDF; known by the nickname Boogie. Ya'alon was born in Israel as Moshe Smolansky. He was a member of the No'ar ha-Oved ve-ha-Lomed youth movement and joined kibbutz Geroft. During the Yom Kippur War he fought on the southern front as part of the paratroop reserves. After the war he rejoined the army and underwent officer training. From 1974 to 1978 he commanded a platoon and company in the Naḥal brigade.

In 1978 he commanded the paratroop reconnaissance unit in the Litani operation in Lebanon. In 1986 he was promoted to colonel and given command of the elite General Headquarters reconnaissance unit, while in 1990 he was given command of the paratroop brigade. Subsequent command positions included Judea and Samaria, Army Intelligence, and the Central Command. In 2000 he became deputy chief of staff and in 2002 chief of staff, serving just three years, without the customary one-year extension, against the background of his opposition to Sharon's Gaza disengagement plan. During his service as chief of staff, the IDF had to contend with the second Intifada and terrorist attacks on Israel's civilian population. During his long service he completed a B.A. in political science at Haifa University.

[Shaked Gilboa (2nd ed.)]

YAARI, ABRAHAM (1899–1966), bibliographer, historian, translator, and librarian. Yaari, brother of Yehudah *Yaari, was born in eastern Galicia and settled in Palestine in 1920. He taught at a Tel Aviv school, and worked in the Hebrew National and University Library from 1925. Beginning his literary career by publishing reviews and articles on education, Yaari later specialized in literary studies, bibliography, and the history of Jewish settlement in Palestine. He rediscovered little-known Hebrew books, especially those printed in the Oriental countries, see e.g., his *Reshimat Sifrei Ladino* (1934) and *Ha-Defus ha-Ivri be-Arẓot ha-Mizraḥ* (1936–40). He published letters, memoirs, travel descriptions from hitherto unknown manuscripts, and many bibliographies which he supplemented by comprehensive introductions.

Among Yaari's works are *Sheluḥei Ereẓ Yisrael* (1951), a comprehensive anthology concerning the emissaries of Ereẓ Israel; *Iggerot Ereẓ Yisrael* (1934, 1950²), an anthology of letters relating to Ereẓ Israel from the Babylonian Exile to modern times; *Diglei ha-Madpisim ha-Ivriyyim* (1943), about Hebrew printers' marks; *Zikhronot Ereẓ Yisrael* (2 vols., 1947), 120 memoirs from the 17th–20th centuries in Palestine (abridged English version, *The Goodly Heritage*, 1958); *Ha-Maḥazeh ha-Ivri ha-Mekori ve-ha-Meturgam…* (1956²), a bibliography of plays presented in Hebrew and in Hebrew translation; *Bibliografyah shel Haggadot Pesaḥ* (1960), a major work describing 2,717 different editions of the Passover *Haggadah; Toledot Ḥag Simḥat Torah* (1964), describing customs of the festival in various communities in different eras; and the posthumously published *Ha-Defus ha-Ivri be-Kushta* (1967), a history of Hebrew printing in Constantinople (Istanbul) from 1504. He also translated many writers into Hebrew and was one of the editors of the bibliographical journal *Kiryat Sefer*.

BIBLIOGRAPHY: I. Tishby, *Netivei Emunah u-Minut* (1964), 108–42; KS, 42 (1966/67), 246–51 (obituaries); N. Ben-Menaḥem, *ibid.*, 252–7 (list of Yaari's writings).

YA'ARI (Wald), ME'IR (1897–1987), ideologist and leader of *Ha-Shomer ha-Ẓa'ir and *Mapam; member of the First to Seventh Knessets. Ya'ari was born in Rzeszow, Galicia. He

moved to Vienna before the outbreak of World War I, and volunteered for the Austrian army at the age of 17, serving as an officer until the end of the war. In 1919 Ya'ari began agricultural training on the estate of a Jewish landowner near Vienna. He joined one of the first groups that constituted Ha-Shomer ha-Ẓa'ir in Vienna, which at the time combined romanticism with Martin *Buber's philosophy and Gustav *Landauer's socialism. In 1920 Ya'ari settled in Palestine, living at first in Kinneret, where he participated in the construction of the Tiberias-Ẓemaḥ and Tiberias-Tabgha roads. Later he lived in Upper Bitania with a group of friends who engaged in hard physical labor. The nightly conversations there eventually evolved into the collection of essays titled *Kehilliyyatenu* ("Our Community"), describing the conflict between the romantic Zionist dreams and the harsh reality of Ereẓ Israel.

As the leading ideologist of Ha-Shomer ha-Ẓa'ir Ya'ari was largely responsible for changing it from a romantic youth movement into an indigenous political and educational body with a defined Left-wing ideological platform. For close to half a century he played a key role in forging the basic principle of "ideological collectivism," stating that the *kibbutz could not exist unless it was based on collectivism, in the economic, socio-cultural, and ideological-political spheres.

Ya'ari adhered to Ber *Borochov's doctrine of a synthesis between settlement work and class struggle, and attempted to base Mapam, established in 1948, on "an alliance between city workers and agricultural settlements." Although for many years Ya'ari, who was a Marxist, openly and emphatically supported the socialism of the Soviet Union, he denounced its injustices, and voiced his criticism of the Soviet attitude toward Soviet Jewry, and toward Zionism. Ya'ari was the first secretary general of Mapam, serving in this position from 1948 to 1971. He was first elected to the First Knesset as the leader of Mapam. By the mid-1950s, following the doctors' trials in Moscow, and Mordechai Oren's trial in Prague, he became increasingly disenchanted with Soviet socialism. After the 1967 Six-Day War he strongly supported the alignment of Mapam with the *Israel Labor Party, and in his last Knesset – the Seventh Knesset elected in 1969 – ran on the Alignment list. He supported the Alignment until 1984, when the Labor Party decided to join a National Unity Government with the Likud.

Among his writings are *Be-Meri Vikku'aḥ* ("In the Revolt of Debate," 1940); *Be-Derekh Arukah* ("The Long Road," 1947); *Ketavim* ("Writings," 1947); *Kibbutz ha-Galuyot ba-Aspaklaryah shel Yameinu* ("Ingathering of the Exiles in Our Time," 1954); *Mivḥanei Dorenu* ("Trials of Our Generation," 1957); *Be-Siman Aḥdut ve-Aẓma'ut* ("For Unity and Independence," 1968); and *Ba-Ma'avak le-Amal Meshuḥrar* ("In the Struggle for Freed Labor," 1972).

[Jacob Amit / Susan Hattis Rolef (2nd ed.)]

YAARI, MENAḤEM (1935–), Israeli economist. Yaari was born in Jerusalem and studied at the Hebrew University and Stanford University in California. A professor of mathematical economics at the Hebrew University, Yaari was director of its Institute for Advanced Studies between 1985 and 1992. From 1991 he was a member of Israel Academy of Sciences and Humanities and served as a vice president in 1994–95. In 1992–97 he was president of the Open University. In 1999 he became chairman of the Jerusalem Music Center Executive Committee. Yaari published papers on subjects such as consumerism under conditions of uncertainty, the allotment of resources over time, and insurance and economic justice. In 1987 he received the Israel Prize for economics. In 1994 he was awarded the Rothschild Prize in social sciences.

YAARI, YEHUDAH (1900–1982), Hebrew writer; brother of Abraham *Yaari. Born in Galicia, Yaari joined the Ha-Shomer ha-Ẓa'ir movement, and in 1920 emigrated to Palestine. He worked in Ruḥamah and Kiryat Anavim, as well as on the building of the Afulah-Nazareth highway. He became one of the founders of the first Ha-Shomer ha-Ẓa'ir kibbutz, eventually settling with the group in Bet Alfa. In 1926 he left the kibbutz and moved to Jerusalem, where he was employed at the National Library. He studied librarianship in New York (1928–30), and afterward took on a teaching post in Canada (1931–33). On his return to Palestine, he was appointed to a position in the head office of the Keren Hayesod, which he held until 1955. From 1955 to 1957 he was cultural attaché at the Israel Legation in Sweden and other Scandinavian countries. He served as director of the Department for Cultural Relations of the Foreign Ministry (1957–61) and as consul general in Amsterdam (1961–62). Yaari is one of the representative writers of the Third Aliyah, depicting the lives and struggles of those Jews who went to Ereẓ Israel after World War I. In his novels and stories he recreates the figures of the devoted young ḥalutzim who cleared the swamps of the Ḥuleh in the Galilee (as Yaari himself did). But his ties to Europe are still strong, and he contrasts the destruction of the *shtetl with the rise of the new settlement in Palestine. His publications include the novels *Ka-Or Yahel* (1932; *When the Candle was Burning*, 1947) *Shoresh alei Mayim* (1950), and several collections of short stories.

[Getzel Kressel]

YAD (Heb. יָד). The word *yad*, in addition to its primary meaning of "hand," has three secondary meanings in Hebrew.

(1) The pointer used by the reader to indicate the place during the reading of the Torah (see *Torah Ornaments). The *yad*, however, of which there are many artistic designs, is more than an ornament. In order to ensure that the scroll would not be touched by the bare hands because of its sanctity, the rabbis enacted that hands which touch the scroll (see *Sefer Torah) become unclean in the second degree (Yad. 3:2 and 4:6, where Rabban Johanan b. Zakkai answers the satirical question of the Sadducees about this apparently paradoxical law that the holiest of articles should render unclean). Although the laws of ritual cleanness no longer apply, the Talmud states "He who holds a *Sefer Torah* naked will be buried naked" (Shab. 14a), and as a result the *yad* was introduced.

(2) A memorial or a monument (cf. Isaiah 56:5). In II Sam. 18:18 it is stated, "Now Absalom in his lifetime had taken and set up for himself a pillar which is in the king's valley… and he called the pillar after his own name and it is called the Yad of *Absalom unto this day." On this basis the word is used in modern Hebrew for memorial. It is, however, largely applied to a memorial institution rather than to a monument. Thus the institution set up in Jerusalem to commemorate the victims of the Nazi Holocaust is called *Yad Vashem, the memorials for fallen soldiers Yad la-Banim, and for individuals, Yad Ben-Zvi, Yad ha-Rav Herzog, and so on.

(3) The *Mishneh Torah* of Maimonides is most commonly referred to as the Yad, the first word of the phrase "*yad ha-ḥazakah*" (the "mighty hand" – cf. Deut. 34:12). Maimonides did not give this name to the work. It refers to the fact that it contains 14 books, the numerical equivalent of *yad* being 14.

[Louis Isaac Rabinowitz]

YADAYIM (Heb. יָדַיִם), tractate in the order *Tohorot – Mishnah and Tosefta – dealing with the laws of washing the hands (see *Ablution) and their ritual impurity. The Mishnah contains four chapters.

The first deals with the quantity of water needed, and the vessels and water suitable for washing the hands. The second chapter discusses invalid washing of hands, the part of the hand to which the law of impurity applies, and doubtful cases of impurity of the hands. Chapters 3 and 4 deal with the *halakhot* of impure hands, in particular with the Holy Scriptures that "render the hands ritually unclean" (see *Ablution). Included in this is the question of whether the Songs of Songs and Ecclesiastes render the hands unclean. As this was one of the problems which occupied the attention of the sages "on that day" (when they appointed Eleazar b. *Azariah (3:5 in place of the *nasi* Rabban *Gamaliel), many other *halakhot* are included which have nothing to do with impurity of hands but were discussed "on that day" (4:1–4), since they were all found together in the source before Judah I *("Rabbi"). For the same reason when at the end of the tractate (4:6) a dispute is cited between the Pharisees and the Sadducees about holy writings rendering the hands impure there are added three other disputes between the Pharisees, Sadducees, and Judeo-Christians (4:7–8). As a result *Yadayim* contains valuable sources for the problem of the establishment of the biblical canon and the history of the *halakhah*.

The Tosefta contains two chapters. Chapter 1 and the beginning of chapter 2 (1–8) are parallel to chapters 1 and 2 of the Mishnah, but they include many *halakhot* not mentioned in the Mishnah and at times their order differs from that of the Mishnah. On the other hand the second part of the Tosefta (2:9–20), corresponding to chapters 3 and 4 of the Mishnah, is poorer. It contains mainly *beraitot* parallel to the Mishnah or adding a few details to it. At the end of the tractate (2:20) there are preserved two more disputes on the Second Temple period that are of great historical importance; one between the Pharisees and the Boethusians, the second between the Pharisees and the *tovelei shaḥarit* ("the morning bathers"; see *Ablution).

[Moshe David Herr]

YAD ḤANNAH (Heb. יַד חַנָּה), two kibbutzim in central Israel near Tūl Karm, founded as a single settlement in 1950 by Ha-Kibbutz ha-Me'uḥad. The members, immigrants from Hungary and Israel-born youth, split in 1954 into two parts. One, affiliated with the Israel Communist Party, maintains the existing village and constitutes the only communist-affiliated settlement in the country. The group remaining with Ha-Kibbutz ha-Me'uḥad built Yad Ḥannah Bet in the vicinity. Both settlements were exposed border outposts until the Six-Day *War (1967). Both kibbutzim had economies based on irrigated field and fodder crops, citrus groves, flower cultivation, and other branches. In the mid-1990s, the kibbutz affiliated with the Communists had 76 inhabitants, while the kibbutz belonging to Ha-Kibbutz ha-Me'uhad had 140. In 2002 the combined population was 117. Subsequently the kibbutz filed a request to change its status to a moshav in order to absorb new members and ensure the future of the settlement. The name commemorates Hannah *Szenes.

[Efram Orni / Shaked Gilboa (2ⁿᵈ ed.)]

YADIN (Sukenik), YIGAEL (1917–1984), Israeli archaeologist; second chief of staff, and politician, member of the Ninth Knesset. Born in Jerusalem, Yadin was the son of the archaeologist Eliezer Lipa *Sukenik. He went to the Hebrew Gymnasium in Jerusalem, and at the age of 15 joined the Haganah. In 1935 he started studying archaeology, history, and Arabic at the Hebrew University of Jerusalem. Following the outbreak of the Arab disturbances in 1936, Yadin left his studies in favor of active military service. He was first engaged in field units, and later in command and training. In 1939 he was appointed as Yitzhak *Sadeh's adjutant. In 1943 he was appointed head of the Operations Section in the Haganah General Staff. Following disagreements with Sadeh, he returned to his studies, receiving his M.A. in 1945. In 1947, not long before the UN approval of the partition plan of Palestine, he was recalled by David *Ben-Gurion for active military service, filling a variety of positions in the course of the War of Independence. When Ya'akov *Dori fell ill, Yadin served as acting chief of staff. In

this period he objected to the plan to capture the Latrun area, and Ben-Gurion's decision to disband the *Palmaḥ. Yadin served as the military advisor to the Israeli delegation to the armistice talks with Egypt in Rhodes, and participated in the talks that followed in Lausanne. In 1949, following Dori's retirement, Yadin received the rank of lieutenant general, and was appointed as Israel's second chief of staff. As chief of staff he reorganized the IDF and established the standing army, compulsory military service, and the reserves system. In December 1952, at the age of 35, he resigned, as a result of differences of opinion with Ben-Gurion over cuts in the IDF budget. He then devoted himself to scientific work at the Hebrew University in the field of archaeology and research into Israeli antiquities. He became a lecturer at the Hebrew University in 1953, and received his Ph.D. in 1955 for a thesis on the "War of the Sons of Light against the Sons of Darkness," one of the *Dead Sea Scrolls. For this study Yadin received the 1956 Israel Prize for Jewish studies. In 1955 he was appointed lecturer in archeology at the Hebrew University and ran the excavations at *Hazor, which continued from 1955 to 1958, and again in 1968. His other famous excavations were in the Qumran caves in the Judean Desert in 1960–61, at *Masada in 1963–65, and at Megiddo in 1966–67. He was appointed professor in 1963. In his excavations Yadin employed thousands of volunteers from Israel and abroad and trained a new generation of young archaeologists in Israel. He also helped bring archaeology to the general public and was a popular lecturer and broadcaster. He gained international acclaim for his historical-philological decoding and interpretations of the Dead Sea and Judean Desert scrolls. Upon his initiative, the Shrine of the Book was built at the Israel Museum in Jerusalem, to house the scrolls. In 1968 Yadin became editor of the archaeological journal *Kadmoniot*. Yadin often cast new light on basic problems of the biblical, Second Temple, mishnaic, and talmudic periods, not only through the excavations themselves, but through an original approach that brought the actual artifacts into a general cultural context, with special reference to contemporary literary evidence. Yadin was critical of Moshe *Dayan's private archaeological exploits and collection of antiques.

On the eve of the Six-Day War, Yadin served as military advisor to Prime Minister and Minister of Defense Levi *Eshkol, until Dayan was appointed minister of defense. Following the Yom Kippur War, Yadin was appointed one of the five members of the Agranat Commission established to inquire into the events and developments leading up to the war. In the late 1950s he headed a movement that called for reform of Israel's electoral system. However until 1976 he rejected all offers to enter the political arena. In that year, against the background of popular dissatisfaction with the ruling Labor Alignment, and growing protest, he established the *Democratic Movement for Change (DMC), together with Prof. Amnon *Rubinstein, Shmuel *Tamir, Me'ir *Amit, and others. The DMC ran in the elections to the Ninth Knesset in 1977, receiving an impressive 15 seats. However, even though the DMC joined the new government established by Menaḥem *Begin,

and Yadin was appointed deputy prime minister, Begin had a majority in the Knesset without it, and soon the new party disintegrated. Yadin remained in the government until Begin formed his new government in August 1981 after the elections to the Tenth Knesset, but had little influence, and lost much of his popularity. From September 1978 to March 1981 he belonged to a parliamentary group called the Democratic Movement, and after this group ceased to exist remained a single MK, without any formal status. In August 1981 he retired from politics to return to academic life until his death in 1984.

Among his writings are *Ha-Megillot ha-Genuzot mi-Midbar Yehudah* ("The Hidden Scrolls from the Desert of Judea," 1957); with Chaim Rabin, *Aspects of the Dead Sea Scrolls* (1958); *Military and Archeological Aspects of the Conquest of Canaan in the Book of Joshua* (1960); *The Scroll of the War of the Sons of Light against the Sons of Darkness* (1962); *The Art of Warfare in Biblical Lands in the Light of Archaeological Study* (1963); *Apocrypha Ecclesiasticus: The Ben Sira Scroll from Masada*, with introduction, emendations, and commentary (1965); *Masada: Herod's Fortress and the Zealots' Last Stand* (1966); *Bar Kokhba: The Rediscovery of the Legendary Hero of the Second Jewish Revolt Against Rome* (1971); *Hazor, the Rediscovery of a Great Citadel of the Bible* (1975); *The Temple Scroll; the Hidden Law of the Dead Sea Sect* (1985); and *Investigations of Beth Shean: The Early Iron Age Strata* (1986). Among works he edited are *Jerusalem Revealed: The Archeology in the Holy City 1968–1974* (1975), and *The Documents from the Bar Kokhba Period in the Cave of Letters: Hebrew, Aramaic and Nabatean-Aramaic Papyri* (2002).

Yigael Yadin's brother YOSEF (1920–2001) was one of the founders of the *Cameri Theater in Tel Aviv and participated in numerous plays and films. He was awarded the Israel Prize for screen and theater arts in 1991.

BIBLIOGRAPHY: *Masada: The Yigael Yadin Excavations. Final Reports* (1989–99); N. Asher Silberman, *A Prophet from Amongst You: The Life of Yigael Yadin: Soldier, Scholar, and Myth Maker of Modern Israel* (1993).

YADLIN, AHARON (1926–), Israeli politician. Yadlin was born in Ben Shemen, Israel. He became a member of kibbutz Ḥazerim, of which he was general secretary. From 1950 to 1952 he was a member of the Executive Council of the *Histadrut and from 1955 to 1957 served as principal of Bet Berl, the Labor Party's educational center. Yadlin was elected to the Fifth Knesset in 1961 and re-elected through the Ninth Knesset, serving as deputy minister of education from 1966 to 1972. In the latter year he was elected secretary of the Israel Labor Party, and in 1974 was appointed minister of education and culture, retaining the office until the general election of May 1977 when the Alignment was defeated. He was reelected to the Ninth Knesset, but in January 1979 resigned, in accordance with a kibbutz decision on the rotation of Knesset members, and returned to his kibbutz. After his retirement he served as chairman of the Prime Minister's Fund for Hebrew Writers and as chairman of the Postal and Philatelic Museum at the Eretz Israel Museum.

YAD MORDEKHAI (Heb. יַד מָרְדְּכַי), kibbutz in southern Israel, between Ashkelon and Gaza, affiliated with Kibbutz Arẓi, Ha-Shomer ha-Ẓa'ir. Yad Mordekhai was founded by a group from Poland in 1943, during the Nazi Holocaust in Europe, in a drive to enlarge Jewish settlement in Ereẓ Israel toward the south and Negev. In the *War of Independence (1948), the invading Egyptian army, in its advance along the coastal highway, concentrated its tank, artillery, and aircraft forces in an attack on the kibbutz, but was held at bay by the sparse number of settlers for six days. The village was by then reduced to ruins and the survivors, carrying their wounded, succeeded in slipping through the ring of siege and reaching Jewish positions miles away (May 1948). The site was retaken in October 1948. The kibbutz was rebuilt on a far larger scale, but still occupied a border position (close to the Gaza Strip) until the *Six-Day War in 1967. In 2002 the population was 699. The economy was based on farming and the kibbutz also marketed honey and manufactured computerized irrigation systems as well as operating a shopping center. The kibbutz maintains a museum of the *Holocaust and ghetto resistance. A large bronze statue in memory of the ghetto fighters and a reconstruction of the 1948 battle site are located there. The name commemorates Mordecai *Anielewicz.

[Efraim Orni]

YAD VASHEM (**The Holocaust Martyrs' and Heroes' Remembrance Authority**), Israel's and the Jewish people's national Holocaust memorial institution. The name is taken from Isaiah 56:5, "And I will give them in my house and within my walls a memorial and a name (a *Yad Vashem*)… that shall not be cut off." Yad Vashem is dedicated to perpetuating the memory of the victims of the *Holocaust, and to research, documentation, publication, and education. Plans for a project for a lasting remembrance began during World War II, initiated by Mordechai Shenhavi, and were approved at the first post-war meeting of the General Zionist Council (London, 1945) whereby an institution was set up, headed by the *Va'ad Le'ummi. After the creation of the State of Israel, the minister of education and culture, Ben-Zion *Dinur, proposed the setting up of a Remembrance Authority in Jerusalem, on Har Hazikaron (the Mount of Remembrance), for the "six million members of the Jewish people who died a martyrs' death at the hands of the Nazis and their collaborators." The task of Yad Vashem is "to gather in material regarding all those Jewish people who laid down their lives, who fought and rebelled against the Nazi enemy and their collaborators, and to perpetuate their memory and that of the communities, organizations, and institutions which were destroyed because they were Jewish…"

The complex that makes up Yad Vashem extends over 50 acres. It includes the Holocaust History Museum and Hall of Names, Holocaust Art Museum, Exhibitions Pavilion, Visual Center, Learning Center, synagogue, unique outdoor monuments, and the most important repository of information on the Holocaust in the world. At its height, the annual number of visitors to Yad Vashem has surpassed two million people.

A decade in the making, the new Holocaust History Museum combines the best of Yad Vashem's expertise, resources, and state-of-the-art exhibits to take Holocaust remembrance well into the 21st century. The new Holocaust History Museum occupies over 4,200 square meters, mainly underground. Both multidisciplinary and interdisciplinary, it presents the story of the Shoah from a unique Jewish perspective, emphasizing the experiences of the individual victims through original artifacts, survivor testimonies, and personal possessions. Its 180-meter–long linear structure in the form of a spike cuts through the mountain with its uppermost edge – a skylight – protruding through the mountain ridge. Galleries portraying the complexity of the Jewish situation during those terrible years branch off this spike-like shaft, and the exit emerges dramatically out of the mountainside, affording a view of the valley below. Unique settings, spaces with varying heights, and different degrees of light accentuate focal points of the unfolding narrative. The museum building was designed by renowned Israeli architect Moshe Safdie. The display was designed by Dorit Harel.

At the end of the Museum's historical narrative is the Hall of Names – a repository for the "Pages of Testimony" commemorating the names and biographic details of Jews who perished during the Holocaust. Pages of Testimony are filled out by family members, friends, or neighbors, many of them survivors of the Holocaust, and serve as symbolic "*maẓevot*" or "tombstones" for their loved ones. On these special acid-free pages the following are inscribed in full: the name of the victim, his or her date and place of birth, the place of residence before the war, the profession, the parents' and spouses' names, and where and when they perished during the Holocaust. A photograph is attached when available. The Pages of Testimony are preserved in special "Yizkor files," classified according to the Hebrew alphabet by the family name and the first name of the victim. The Pages of Testimony have now been digitized and are available online in the Central Database of Shoah Victims' Names, which also includes names from historical documentation and other sources. The number of Jews commemorated in the database to date is close to 3.1 million.

The Hall of Remembrance is a solemn tent-like structure that allows visitors to pay their respects to the memories of the martyred dead. On the floor are the names of some of the Nazi murder sites throughout Europe, and in front of the memorial flame lies a crypt containing ashes of victims. The Hall of Remembrance was designed by architect Aryeh Elhanani.

The Valley of the Communities is a massive outdoor monument to the Jewish communities that were destroyed or damaged in World War II. Seen from the floor of this unique site, the rock walls rise up to a height of some 30 feet or more, and are engraved with the names of more than 5,000 communities, symbolically embedded forever in the very bedrock of Israel. The Valley itself extends over two and a half acres, and

is a labyrinth of courtyards and walls, of openings and dead ends arranged to roughly correspond to the geographic arrangement of the map of Europe and North Africa. The Valley of the Communities was designed by Israeli architects Dan Zur and Lippa Yahalom.

The Children's Memorial, hollowed out from an underground cavern, is a tribute to the approximately 1.5 million Jewish children who perished during the Holocaust. Memorial candles, a customary Jewish tradition to remember the dead, are reflected infinitely in a dark and somber space, creating the impression of millions of stars shining in the firmament. The names of murdered children, their ages, and countries of origin can be heard in the background. The Children's Memorial was designed by Moshe Safdie.

The Memorial to the Deportees is an original cattle-car, appropriated by the German Railway authorities and given to Yad Vashem by the Polish authorities. It stands on an iron track which juts out from the slopes of Yad Vashem into the Judean hillside.

Other features are the Avenue and Garden of the Righteous Among the Nations, which honor those non-Jews who risked their lives to help the persecuted Jews in the Holocaust, the Monument to the Jewish Soldiers, the Partisans' Panorama, and the sculpture garden.

The Yad Vashem Archives is the largest and most comprehensive repository of documentary material on the Holocaust in the world. In its ongoing work collecting documentary materials, it has accumulated approximately 68,000,000 documentary pages on the Holocaust to date, close to 300,000 still photographs, as well as thousands of audio and video-taped testimonies of survivors. Yad Vashem's library has the world's most comprehensive collection of books on the Holocaust. It holds more than 112,000 titles in 52 languages, and thousands of periodicals.

The International School for Holocaust Studies is the only school of its kind in the world. With 17 classrooms, a modern multimedia center, resource and pedagogical center, an auditorium, and more than 100 educators on its staff, the school caters annually to more than 100,000 students and youth, 50,000 soldiers, and thousands of educators from Israel and around the world. Courses for teachers are offered in eight languages other than Hebrew, and the school also sends its professional staff around the world for the purpose of Holocaust education. In addition, the school arranges symposia and offers online teaching courses, as well as developing a variety of educational programs and study aids on the Holocaust. The educational rationale of the School places a strong emphasis on Jewish life before the war, daily life of Jews during the Holocaust, and the return to life of Holocaust survivors. Yad Vashem age-appropriate educational materials are multidisciplinary, multidirectional, and multifaceted and are available in many languages both in print and online.

In 1963, Yad Vashem embarked upon a worldwide project to grant the title of Righteous Among the Nations to non-Jews who risked their lives to save Jews during the Holocaust, and

did not precondition such aid by any reward or compensation. To this end, Yad Vashem set up a public commission headed by a retired Supreme Court justice, which is responsible for granting the title. The commission is guided by certain criteria, and meticulously studies all pertinent documentation, including primary evidence by survivors and other eyewitnesses before reaching its decision. As of January 2006, 21,310 people had been recognized as Righteous Among the Nations. A person thus recognized is awarded a specially minted medal bearing his/her name, a certificate of honor, and the privilege of his/her name being added on the Righteous Wall of Honor in the Garden of the Righteous Among the Nations. An amendment to the Yad Vashem Law stipulates that any Righteous is entitled, on request, to receive honorary citizenship.

The International Institute for Holocaust Research plans and carries out often groundbreaking research projects, organizes international seminars and conferences, coordinates joint projects with far-flung research institutes, and hosts research fellows from Israel and around the world. Research publications include the annual journal *Yad Vashem Studies*, since 1957, and a series on Jewish communities in Europe under the title *Pinkasei ha-Kehillot* ("Encyclopedia of the Communities"). Through its Publications Department, Yad Vashem publishes approximately 40 books in Hebrew and English annually, including research publications, documents, diaries, and memoirs. Yad Vashem's landmark publications include *Documents on the Holocaust* (1981), *The Encyclopedia of the Holocaust* (a joint publication, 1990), and Yad Vashem's international conference proceedings, the first of which discussed rescue attempts during the Holocaust (1968). Recent important publications include *The Encyclopedia of the Righteous Among the Nations* (six volumes through 2006), *The Auschwitz Album, A Comprehensive History of the Holocaust* (11 volumes to date in Hebrew; the whole series is being published in English in cooperation with the University of Nebraska), the Search and Research series, *Last Letters from the Holocaust*, and *The Wolfsberg Machzor 5705*. Yad Vashem also issues a quarterly magazine in Hebrew and English.

Yad Vashem's website, www.yadvashem.org, contains extensive online resources about the Holocaust, including thousands of photos, documents, testimonies, and artifacts as well as online exhibitions, classroom activities, commemorative ceremonies, and lesson plans. In addition, the Central Database of Shoah Victims' Names provides online access to the names and biographical details of millions of Holocaust victims.

The official State ceremony opening Holocaust Martyrs' and Heroes' Remembrance Day, on 27 Nisan, is held at Yad Vashem, attended by the president and prime minister of Israel, government ministers, Holocaust survivors, and thousands of members of the public.

Yad Vashem is the most visited site in Israel after the Western Wall. Many hundreds of official visitors of the State come to Yad Vashem each year, and it is protocol for all visiting foreign ministers, prime ministers, and heads of state to in-

clude Yad Vashem in their itinerary. On March 23, 2000, Pope John Paul II paid a historic visit to Yad Vashem and spoke of the imperative to remember the Holocaust.

Ben-Zion Dinur and Aryeh L. Kubovy were respectively first chairman of the Yad Vashem Directorate and first chairman of the Yad Vashem Council. Subsequently, Katriel Katz, Gideon *Hausner, Yosef *Burg, and Prof. Szewach Weiss have been chairmen of the Council and Yitzhak *Arad (1972–93) and Avner *Shalev (1993–), chairmen of the Directorate.

YAGUPSKY, MÁXIMO (1906–1996), Argentinean Jewish intellectual, community leader, and teacher. He was born in La Capilla, one of the Jewish agricultural colonies administrated by ICA, in the province of Entre Ríos, Argentina, to parents who were immigrants from Bessarabia. He started his general and Jewish studies in the local Jewish school in the colony and later studied in public schools. He continued studying Jewish subjects with his father and with a local rabbi. He was a teacher in Buenos Aires in Jewish schools of the Cursos Religiosos network maintained by the Congregación Israelita and ICA and in the 1930s was supervisor of the schools of this network in the provinces. Appearing in the local Jewish press, his articles expressed a Jewish national and Zionist position. Yagupsky was director of the Editorial Israel which published many Jewish books in Spanish in the 1940s and in the 1950s. From 1946 to 1948 he directed the Latin American Department of the American Jewish Committee in New York and in 1948 he opened a branch of this institution in Buenos Aires and acted as its director until 1961. From then and until 1968 he was the director of the American Jewish Committee in Israel. In that year he returned to Buenos Aires.

Yagupsky translated the *siddur* and the Torah into Spanish. He published *Soliloquios de un judío* ("Monologues of a Jew," 1986). In the book *Conversaciones con un judío* ("Conversations with a Jew," 1977) edited by Mario Diament, Yagupsky shared his thoughts and memories. He edited the journals *Comentario* ("Commentary") in Buenos Aires and *Amot* in Tel Aviv. He was also active in Jewish journals in Spanish, Hebrew, Yiddish, and English. In 1988 he received the Prize for Intellectual Merit of the Latin American Jewish Congress.

[Efraim Zadoff (2nd ed.)]

YAGUR (Heb. יָגוּר), kibbutz in northern Israel, in the Zebulun Valley, 7 mi. (11 km.) S.E. of Haifa, affiliated with Ha-Kib-butz ha-Me'uḥad. Yagur was founded in 1922 by the "Aḥavah" group of *Gedud ha-Avodah ("labor legion"), whose members came to the country with the Third *Aliyah. Yagur soon became the largest kibbutz in the country. In addition to developing mixed, intensive farming and industry, it provided a large number of laborers for the Haifa port, and the Haifa industrial zone. In the 1936–39 Arab riots, Yagur suffered from repeated attacks. In June 1946 the kibbutz was subjected to a severe arms search by the British Army. After the *Haganah's central arms cache was discovered there, many members were taken to detention camps. In 1970 Yagur had 1,150 inhabitants. In the mid-1990s the population was approximately 1,390, but by the end of 2002 it had dropped to 1,080. Yagur is considered a wealthy kibbutz. It operated a packaging plant in partnership with American National Can, a kitchen cabinet plant, a large plant nursery, a TV studio, a theme park and activity center for children. Yagur's farming branches were field crops, orchards, dairy cattle, and poultry and included the manufacture of cooking and table oil. Inside the kibbutz is a disco club attracting people from all over the area. Yagur also ran a vocational training school for alternative medicine as well as several cultural institutions. The name Yagur is mentioned in Joshua 15:21, in reference to a different site.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

YAḤAD (Heb. יַחַד; "union" or "unity"). This term is used in the Bible most often adverbially in the sense of "together." In some of the *Dead Sea Scrolls it appears as a designation of the group usually identified as the *Qumran sect or community. The Qumran *Community Rule is entitled the "Rule [*serekh] of the *yaḥad*," and the members of its community are called "men of the *yaḥad*" (IQS 6:21, etc.; possibly also CD 20:32). Knowledge of this community must be based principally on those Dead Sea Scrolls which can reasonably be recognized as its own documents, along with such evidence from the excavations at Khirbet Qumran as can be correlated with the contents of these documents. The identification of the word *yaḥad* on an ostracon discovered in 1996 at Qumran, and which would have confirmed its location at Qumran, has been challenged.

Origin and Organization

The origins of the *yaḥad* appear to be described in the *Damascus Document, which suggests a number of stages (1:3–12). First, a remnant of Israel was allowed by God to survive the Babylonian exile; then these were "visited" by God and a "seedling" (*shoresh matta'at*) sprouted "to possess the land." After 20 years of "groping the way," God raised for them a "*Teacher of Righteousness" to "guide them in the way of his heart." It is this last stage, under the leadership of the "Teacher," that in the opinion of most scholars accords with the formation of the *yaḥad*. The earlier stages appear to represent a wider movement that, after the emergence of the *yaḥad*, no doubt continued, since the Damascus Document (1:13–2:1)

suggests that the Teacher's appearance generated conflict with a group led by the "Spouter of Lies" – presumably a polemical reference to a rival leader within the existing group. The death of the *moreh ha-yaḥid* (perhaps to be emended to *moreh ha-yaḥad*) is mentioned in CD 20:14. In the Habakkuk *pesher, no doubt a product of the *yaḥad*, the "Liar" is mentioned also, though the Teacher is opposed mainly by a "Wicked Priest," a figure thought to be a national leader but absent from the Damascus Document. Because of this and other discrepancies between the accounts, it is impossible to decide why the *yaḥad* came into existence. Broadly speaking, two possibilities exist: that it consisted originally of the followers of a "Teacher" who split with the leadership of an existing movement; or that the Teacher was the founder of a new movement that separated from the rest of Judaism and later assumed different forms, including the *yaḥad*. On the former view, inner-sectarian motives may have been instrumental in the formation of the *yaḥad* – such as the Teacher's claim to be an eschatological leader (see CD 6:11), in which case the existing movement arose for reasons (such as differences over calendar and purity laws) that the *yaḥad* inherited in addition to its own distinct ideology. On the latter view, the *yaḥad* is more probably a penitential movement, reacting to the conviction that divine anger was about to befall Israel. Further possible clues might lie in the *Thanksgiving Hymns (*Hodayot*), if they could be read autobiographically as compositions of the Teacher, for they represent the author as the persecuted founder of a community, articulating a profound belief in his existential, and probably eschatological, redemption and fellowship with the heavenly beings. The Community Rule itself does not mention the teacher, but contains passages (cols. 8–9) that in the opinion of many scholars, represent the original aims and organization of the *yaḥad*. On this view, a nucleus of 15 men – three priests and 12 laymen – formed its core. Among the convictions held in these passages is that the land cannot be atoned for by the existing sacrificial cult, which is corrupt; instead a human sanctuary, containing an inner, priestly "holy of holies" must fulfill this function, without sacrifice, by living lives of utter holiness. To this end the members were to segregate from the "sinful" and make a "way in the wilderness" (Isa. 40:3) in order to study the law. This is often interpreted as entailing a physical withdrawal to the Judean Desert, to the west shore of the Dead Sea.

That the *yaḥad* evolved over its history has long been deduced by scholars on the basis of analysis of the Community Rule, and has been confirmed by the recovery from Cave 4 of editions differing from the Cave 1 text. For example, the "men of the *yaḥad*" in 1QS 5:1 are "men of the Torah" in 4QSe 1:1, while the Cave 4 texts refer only to the authority of the "congregation," but in 1QS, the "sons of Zadok" usually (but not always) hold sway. In addition, the "discourse on the two spirits" in 1QS 3–4 is absent from many of the Cave 4 editions. Reconstructing the growth of this document is complicated by the fact that while literary and structural considerations suggest that the Cave 1 version is the latest, it seems palaeographically to be the earliest. However, the disciplinary rules in 1QS 5–7 appear in all editions and are thus part of the earliest organization of the *yaḥad*, and in many respects they agree with a similar code in the Cave 4 versions of the Damascus Document. There were two stages in the novitiate, each lasting one year. Those who completed the first year deposited their private property with the community treasurer, but not until the completion of the second year, if the candidate made the grade, was it merged with the common stock. Anyone who "knowingly deceived with regard to property" was excommunicated for one year from "the purity of the many" and had his rations reduced by one quarter. Longer or shorter terms of this excommunication from sharing in the solemn acts of fellowship, together with reductions of rations for a stated period, were the customary penalties for breaches of discipline. For more heinous offenses complete expulsion was laid down. "The many" (*ha-rabbim*) is the designation of the general membership of the community, while the spiritual leader is called *maskil* (both terms appear in Daniel 11 and 12). The whole membership met in assembly from time to time. Rules of precedence were laid down with regard to the taking of their seats – first the priests, then the elders, then the others, each in his position – and standing orders were strictly enforced. Anyone who wished to speak might stand up and say, "I have a word to say to 'the many,'" and if he received permission he might speak. Speaking out of turn, interrupting, or behaving indecorously during the session received appropriate punishment.

Religious Practice

The *yaḥad* appears to have been a celibate, male group. Communal meals, worship, and consultation were regular features of daily life. Such activities could be carried out by any group of ten, provided one of them was a priest. Among other things, it was the priest's privilege to say grace before he and his companions partook of a communal meal. In each group of ten, there was always one (though not always the same one) engaged in the reading and exposition of the Law. The night was divided into three watches, and during each watch one-third of the membership stayed awake to listen to the reading and exposition and to voice the appointed blessings. The community's abstention from common worship at the Temple was primarily due to their belief that such worship was unacceptable to God under the prevailing establishment; but participation would have in any case been difficult since they observed as a matter of religious duty the *calendar prescribed in the Book of Jubilees and not the lunisolar calendar by which the sacred years in the Temple were reckoned. The *yaḥad* attached great importance to ceremonial washing; the purificatory ablutions which the levitical law prescribes for the priests appear to have been obligatory for all the members. They were not merely initiatory but were performed frequently. Yet it is made clear that ceremonial washing in itself had no cleansing efficacy if a person's heart was not right with God. The washing of the body was acceptable only if it was the outward sign of inward purity.

Eschatological Expectations

Beliefs about the future are not entirely consistent among the writings of the *yaḥad*, though it certainly believed, whether prompted by scripture or calculation or both, in an imminent divine judgment. The members of the community came to regard themselves not merely as the remnant of Israel but as on one side of a dualistic universe, in which light and darkness (or truth and falsehood) were balanced and opposing forces. Each side comprised both angelic and human beings, and was led by its respective heavenly "prince," and light would finally conquer darkness. Such a developed dualistic doctrine is found only in texts associated with the *yaḥad*, though dualistic and predestinarian tendencies are also present in the Damascus Document. Zoroastrian influence on this developed dualism is probable. Yet more traditional, Jewish expectations of the future are represented by belief in the coming of a prophet and the "anointed ones of Aaron and Israel" (1QS 9:11). In that new age the anointed priest would be paramount, the lay Messiah being subordinate to him (as in Ezek. 44:3ff.). The Davidic Messiah may be the "star … out of Jacob" (Num. 24:17) to whom reference is made in a number of Qumran documents (CD 7:19; 4Q *Testimonia*; 1QM 11:6), in which case he should be the commander of the Children of Light (see *Sons of *Light) in their end-time struggle against the children of Darkness (depicted in the *War Scroll), though strangely he does not appear, only his shield. In this depiction of this final struggle, which can be assigned to the *yaḥad*, dualistic and nationalistic perspectives are combined, with the "children of Light" taking on the identity of Israel, and the "children of Darkness" led by the Kittim, almost certainly the Romans. The war would end in the defeat of the nations and victory for "Israel" but would also represent light vanquishing darkness and evil disappearing forever. That cosmic, national, and sectarian perspectives can be merged into a single coherent expectation is hard to imagine, but the War Scroll (in its various editions) may represent an attempt to do just that.

Suggested Identifications

The members of the *yaḥad* – and those of its parent movement – have been identified at one time or another with Essenes, Zealots, Sicarii, Pharisees, Sadducees, Jewish Christians, and Karaites. The majority verdict favors the Essene identification. Qumran fits the elder Pliny's description of the Essene community, but Josephus and Philo suggest a wider dispersal, which fits better the community of the Damascus Document. There are impressive similarities between the evidence of the Qumran texts and the first-century accounts of the Essenes; yet there are points of difference too. The identification of the community with the Zealots was once supported by several scholars, and Hippolytus says that one branch of the Essenes was known as Zealots (Philosophumena 9:21). Some scrolls possibly originating at Qumran were found at Masada. Qumran itself was apparently attacked by the Romans during the war of 66–70; and the War Scroll envisages a battle that involved Rome. But there are links with Pharisees in the exten-

sion of levitical purity beyond the priesthood and in devotion to Torah observance, while connections with Sadducees might be seen in some of the *halakhah* preserved among the Scrolls. It remains possible that the *yaḥad* was none of these, but an otherwise unknown sect among many movements that may have arisen during one of the most turbulent religious and political eras in Jewish history, between the Maccabean revolt and the war with Rome.

[Frederick Fyvie Bruce / Philip R. Davies (2nd ed.)]

YAHIL (**Hoffmann**), **CHAIM** (1905–1974), Israeli diplomat and Zionist. Yahil was born in Wallachisch Meseritsch, Austro-Hungary (later Czechoslovakia), and founded there the local branch of the Zionist youth movement, Blau-Weiss, and later became a member of the movement's national council in Czechoslovakia.

He immigrated to Ereẓ Israel in 1929, but later returned to Europe where he received his Ph.D. in political science, in Vienna. He then engaged in social and Zionist activity in Prague, returning to Ereẓ Israel in 1939.

During World War II he was a member of the Haifa and, subsequently, Tel Aviv Labor Councils. In 1945 he was among the first Palestinian emissaries to liberated Europe, as director of the Palestinian Relief Unit under the auspices of UNRRA, sponsored by the Jewish Agency. In this connection he was involved in all activities concerning Jewish Displaced Persons, their organization, education and movements into Germany by *Beriḥah and from Germany by *Aliyah Bet*.

Upon the establishment of the State of Israel he was accredited to the Occupying Power as the first Israeli Consul in Munich. From 1951 he was a member of the Israeli Foreign Service, serving successively as director of information, deputy-director of the Reparations Mission to Germany, ambassador to Scandinavia, and director-general of the Israeli Foreign Ministry (1960–64). Subsequently, he established and headed the Diaspora Center, a joint enterprise of the Israeli Government and Jewish Agency (1965–68) which enabled him to foster Israeli-Diaspora relations. He was appointed the first chairman of the Israel Broadcasting Authority (1965–72). He was the *Encyclopaedia Judaica* divisional editor for contemporary Jewry.

During his term of office relations with Africa were developed and technical cooperation with developing countries institutionalized. Yahil was a firm believer in socialism, but after a life-long association with the Labor Zionist party, he left it in 1972, becoming a founding member and leader

of the Land of Israel Movement, which advocated an undivided Israel.

His first work *Trager der Verwirklichung, Die Zionistische Arbeiterschaft im Aufbau* (1938) was published under his original name Chaijim Hoffmann; he also published *Scandinavian Socialism in its Implementations* (Hebrew, 1966). After his death there appeared *Hazon U-Ma'avak* (1977), a selection of articles he wrote between 1965 and 1974, and *Israel's Foreign Relations*, Vols. I and II (1976), jointly with Meron Medzini.

YAH RIBBON OLAM (Aram. יָהּ רִבּוֹן עָלַם; "God, master of the universe"), one of the most popular Sabbath table hymns (*zemirot). The hymn, written in Aramaic, was composed by the 16th-century kabbalist poet, Israel b. Moses *Najara ("Israel" is the acrostic of the five verses), and is based on Daniel 3:32–33. It was first published in a second and enlarged edition of his *Zemirot Yisrael* (Venice, 1600). The hymn, which has been set to innumerable tunes, contains no allusion to the Sabbath. It is a song of praise to the "King of Kings," who rules the world in His endless power and glory. After describing the wonders of God's creation, the poem concludes with a prayer that God may redeem Israel and restore Jerusalem, "the city of beauty."

YAHRZEIT (Yid.; Ger. **Jahrzeit**; lit. "year time," i.e., anniversary), the anniversary of a death. For the determining of the *yahrzeit*, see *Mourning. The commemoration of the *yahrzeit* (on the Hebrew date of the anniversary) is observed both for outstanding individuals and for parents; though some extend it to the other five close relatives for whom mourning is enjoined, brother and sister, son and daughter, and spouse. With regard to the former, *Rashi finds authority for it as early as the amoraic period. He quotes from a geonic responsum on the *riglei* ("festivals"), there mentioned as an amoraic institution: "the anniversary of the death of a great man was established in his honor, and when that day arrives, all the scholars in the region assemble and visit his grave with the ordinary people, and hold a ceremony there" (to Yev. 122a). The only *yahrzeits* which occur in the calendar in one way or another are the 7th of *Adar, the traditional date of the death of Moses (though observed only by minor liturgical changes and as the most common date for the annual banquet of the *ḥevra kaddisha*), *Lag ba-Omer, the traditional date of death of Simeon b. Yoḥai (observed by popular pilgrimages to his grave at Meron); and the 3rd of Tishri, the Fast of Gedaliah (see *Fasts and Fasting), which is stated to be the day "on which Gedaliah b. Ahikam was murdered" (RH 18b; this was not observed as a *yahrzeit* but for its historical implications). The only biblical worthy whose day of death is recorded is Aaron (Num. 33:38), but the day is not commemorated. The Ḥasidim commemorate the *yahrzeit* of their respective dynastic leaders, but the commemoration takes a joyous form as the day on which he was translated on high. In recent times annual commemorations

of such national figures as Herzl, Bialik, Rabbi A.I. *Kook, Z. *Jabotinsky, and past presidents of the State of Israel have been instituted.

Detailed regulations have been laid down for the observance of family *yahrzeits*. Where he is able to do so, the *yahrzeit*, as the person observing it is also called, conducts the weekday service, and even if not, recites *Kaddish. If the Torah is read on that day, he is called to the reading of the Torah; otherwise, he is called on the preceding Sabbath. A 24-hour memorial candle is lit for that day, as a symbol of the verse "the soul of man is the lamp of God" (Prov. 20:27). Fasting is recommended as an act of piety (Isserles, YD 402:12), but is not commonly observed.

The first known authority to employ the word *yahrzeit* was *Isaac of Tyrnau in his *Minhagim* book, and he is followed by Mordecai Jaffe (*Levush Tekhelet*, no. 133). Among the Sephardim the observance is called *naḥalah*, but so widespread is the use of the word *yahrzeit* that despite the fact that it is Yiddish, it is often found in Sephardi religious works. Filial piety has made the *yahrzeit* one of the most widely held observances in Judaism. Even in small communities where there is difficulty in assembling the necessary *minyan* for the congregational service, special arrangements are made for such worship when there is a *yahrzeit*. Its observance is an act of pious commemoration and emphasizes faith in the immortality of the soul.

[Louis Isaac Rabinowitz]

YAHŪD, collective noun and appellative for Jews in pre-Islamic Arabian poetry, the *Koran, and Islamic literature, cognate with the less common plural *hūd* and the uniquely Koranic *hāda,* a verb that means "to be Jewish" or "to practice Judaism." For the most part *Yahūd* is used to describe either the Jews of, or slightly preceding, *Muhammad's time or Jews living anywhere between then and the time of the writer employing the term. This is in distinction to the equally widespread *Banū Isrā'īl* which – with some significant exceptions in the Koran and its commentaries, where it refers to Muhammad's Jewish contemporaries – generally indicates ancient Israelites from the period of the patriarchs and the exodus from *Egypt all the way down to Jesus and the destruction of the Second Temple (and thus this designation often includes Christians). A third term, *ahl al-kitāb* (people of the book, scriptuaries), is essentially a timeless epithet for the Jewish people (though it, too, frequently encompasses Christianity). While the latter two labels are sometimes employed in neutral or even positive contexts, the *Yahūd* are almost invariably portrayed as evildoers.

According to Islamic tradition Muhammad first came into consistent contact with Jews after the *hijra* – the emigration of the fledgling Muslim community from Mecca to Yathrib/Madīna (*Medina) in 622 C.E. – where a number of Jewish tribes (chief among them the Banū *Qaynuqāʿ, *Naḍīr,

and *Qurayẓa) had once dominated, but now were dominated by, the pagan Aws and Khazraj. Though at the beginning Muhammad wooed the Jews – including them in his "Contract of Madīna," adopting many of their rites, and presenting himself as the successor to the illustrious line of biblical prophets – their unwillingness to accept his new dispensation (and their frequent mocking of the same) soon soured relations between the Muslim and Jewish communities. After the Battle of Badr (624 C.E.) the Banū Qaynuqāʿ were exiled from Madīna and their property confiscated in punishment for alleged fifth-column activity, and the Banū Naḍīr shared their fate the following year in the wake of the Battle of Uḥud. The Banū Qurayẓa were dealt with far more harshly following the Battle of the Trench (627 C.E.), their 800 or so men publicly executed in the center of town and their women and children sold into slavery. In 628 C.E. the northern Jewish fortress of Khaybar, whither many members of the exiled tribes had fled, was reduced by Muslim forces. The survivors were allowed to remain on their land in exchange for a tribute consisting of half the annual produce. (Muhammad married the wife of the "king of Khaybar" – the 17-year-old Ṣafiyyah – after torturing her husband to death for not revealing the whereabouts of his treasure. This was his second wife of Jewish origins.) The Jews of Khaybar were finally expelled after Muhammad's demise by the second caliph, ʿOmar, in fulfillment of Muhammad's dying injunction that "two religions shall not coexist in Arabia."

The portrayal of Jewish norms and historiography in Islamic classical literature ranges from the impressively accurate (including near verbatim recapitulations of biblical and midrashic passages and relatively sophisticated rehearsals of talmudic *sugyot*) to the confused, propagandistic, and fantastic (Jews excise urine-splattered flesh, pluck each other's eyes out in retribution, are enjoined by the Torah to forgo booty in war, and believe Ezra is the son of God as Christians believe Jesus is the son of God; Jewish law forbids the consumption of geese and ducks, prohibits the use of sand for purification if water cannot be found, and commands its adherents to slaughter a yellow heifer if an unidentified corpse is found in a field; the Second Temple was destroyed by Antiochus, the *shekhinah* was the head of a dead cat, the messiah is known in Jewish tradition as *al-dajjāl* ("the deceiver"), King David had one hundred wives and Moses accompanied his people into the promised land). With rare exceptions, the Jews are perceived in Muslim literature as the historical epitome of excess and evil and – having been abandoned by God as a result of such noxious traits – also the model of misery. They may be said to function as the emblem of all that Muslims should not be, a kind of *sunna* (exemplary tradition) in reverse. They will ever be Islam's nemesis (far more so than the Christians), until they are ultimately defeated and destroyed in the Eschaton.

YAHUDA, ABRAHAM SHALOM (1877–1951), Orientalist. Born in Jerusalem of a Baghdad family, Yahuda was taught by his brother ISAAC EZEKIEL YAHUDA, who was 13 years his senior and the author of a comprehensive collection of Arabic proverbs (*Mishlei Arav,* 1932). At the age of 15 he published his first book (*Kadmoniyyot ha-Aravim,* "Arabs' Antiquities," 1895²). He went to Europe to study Semitics at Heidelberg and Strasbourg, where he was the pupil of Th. *Noeldecke. From 1904 to 1914 Yahuda lectured at the Berlin Hochschule (Lehranstalt) fuer die Wissenschaft des Judentums and from then to 1922 was professor at the University of Madrid. During World War I, while in Madrid, he tried to persuade King Alfonso XIII to use his influence with the emperors of Germany and Austria on behalf of the Jews of Ereẓ Israel. These activities were later criticized by Chaim Weizmann in his autobiography *Trial and Error* to which Yahuda replied in his *Dr. Weizmann's Errors on Trial* (1952). After 20 years of travel during which time he acquired a valuable collection of books and manuscripts – part of which he later sold to the British Museum – he became professor at the New School for Social Research, New York in 1942. He died in New Haven, Connecticut.

Yahuda's published works include his critical edition of the Arabic text of Bahya ibn Paquda's *Duties of the Heart* (1912), to which he also wrote *Prolegomena* as his doctoral thesis (1904); a volume of Hebrew poems (*Kol Arvi ba-Midbar,* 1903); *Bagdadische Sprichwoerter* (1906); *Jemenische Sprichwoerter aus Sanaa* (1911); and a collection of papers on Jewish-Arab relations (*Ever ve-Arav,* 1946). The publication of his *Die Sprache des Pentateuch in ihren Beziehungen zum Aegyptischen* (1929; *The Language of the Pentateuch in Its Relation to Egyptian* (1933); popular English edition *The Accuracy of the Bible*, 1934), in which he claimed strong Egyptian influence on the language of the Pentateuch – particularly in the stories of Joseph, the exile in Egypt, and the Exodus – produced worldwide discussion, but his theories were rejected by Bible and Oriental scholars as well as Egyptologists. Yahuda himself did not change his views, which he continued to proclaim in lectures.

A considerable part of Yahuda's library was bequeathed to the Jewish National and University Library. It contains about 1,500 manuscripts, mostly Arabic, but some hundreds are in Hebrew and other languages; some are illuminated and very valuable.

[Martin Meir Plessner]

YAHUDI, YUSUF (1688–1755), Bukharan poet. Yahudi was an exponent of that branch of Persian poetry in Hebrew characters which began with *Shahin and *Imrānī of Shiraz. His poems included an ode devoted to the praise and glory of Moses and hymns in honor of biblical heroes such as Elijah as well as other poems bearing his name in acrostic, some of which are bilingual and trilingual and form even today an integral part of the spiritual heritage of the Persian-speaking Jews of Bukhara. His Tajiki version of *Haft Braderan* ("The Seven Brothers"), based on the Midrash on the martyrdom of *Ḥannah and her seven sons, and his commentary to *Megillat Antiochus* are still popular. Yusuf Yahudi was also noted for his translations of the religious songs of Solomon ibn *Gabirol and Israel *Najara, which were collected in *Judeo-Persian songbooks such as *Yismaḥ Yisrael*.

Under his influence a school of Jewish poets in Bukhara came into existence whose members followed his example in composing Judeo-Persian poetry in their own dialect.

YA'ISH, BARUCH BEN ISAAC IBN (15th century), philosopher and translator. Probably born in Spain, Ibn Ya'ish lived and died in Italy. He had a good knowledge of Hebrew, Latin, and Arabic. Ibn Ya'ish wrote a Hebrew commentary in ten chapters on Avicenna's *De Medicamentibus Cordialibus* ("On Cardiac Remedies") entitled *Be'ur la-Sammim ha-Libbiyyim*, in which he quotes Aristotle and Averroes (Bodl, Ms. Mich., Add. 16).

He translated Aristotle's *Metaphysics* into Hebrew from the Latin at the request of Samuel Ẓarphati, under the title *Mah she-Aḥar ha-Teva* (Bodl. Mich., 421). In the introduction to his translation Ibn Ya'ish explains that he based his translation on the Latin, rather than the Arabic, because the Arabic was confused. It also seems that Ibn Ya'ish had a role in producing a Hebrew translation of an anonymous Latin commentary on Aristotle's *Ethics*. A commentary on the Song of Songs, Ecclesiastes, Proverbs, and Job, which is called *Mekor Barukh* (Constantinople, 1576), and which bears the name Baruch ibn Ya'ish, was written by Ibn Ya'ish's great-grandson and namesake.

YAKHINI, ABRAHAM BEN ELIJAH (1617–1682), kabbalist and preacher, one of the leaders of the Shabbatean movement. Yakhini was born and lived his entire life in Constantinople. He was a pupil of R. Joseph di Trani and an influential preacher in the community. From adolescence, he was attracted by Lurianic *Kabbalah and wrote books and sermons according to the Lurianic system. He would note his dreams in his books. These dreams are of great interest. Yakhini was

also a rhetorician and a poet; in 1655 he published *Hod Malkhut*, an imitation of Psalms. He knew of Shabbetai *Ẓevi while the latter was in Constantinople in 1658. However, there is no indication that Yakhini believed his messianic claims. His detailed notes on Kabbalah from 1658 to 1663 are preserved in a manuscript (*Sefer Razi Li*) and contain no indication of Shabbateanism. Only with the outbreak of the Shabbatean movement in the fall of 1665 did Yakhini join the "believers." He became its leading disciple and major spokesman in Constantinople. He also traveled to Smyrna and was appointed as a "King of Israel" by Shabbetai Ẓevi in December 1665. After Shabbetai Ẓevi's apostasy, Yakhini persisted in his belief and remained the head of the Shabbatean minority in Constantinople. He maintained personal contact and corresponded with Shabbetai Ẓevi and the rest of the movement's leaders. His relations with the rabbis of Constantinople, who now took a negative view of Shabbateanism, were tense. But apparently they did not dare harm him. He circulated books and poetry in honor of Shabbetai Ẓevi and the Shabbatean faith until his death, and in the last year of his life he contacted Abraham Miguel *Cardozo. Even after his death, Yakhini continued to influence Shabbatean circles, especially the sect of converts to Islam, the *Doenmeh of *Salonika. The many tales about him in *Me'ora'ot Ẓevi*, (1813) are not based on historical sources but are the products of the imagination of an anonymous author who wished to write a novel on Shabbetai Ẓevi.

Of Yakhini's numerous works there have been preserved in manuscript *Sefer Razi Li* and *Peli'at Da'at* (Ms. Adler), *Sefer Vavei Ammudim* (Ms. Oxford), sermons on Shabbetai Ẓevi written between 1681 and 1682, a book of various notes which was in the possession of R. Abraham Danon, several pamphlets on the Lurianic Kabbalah, and sermons and poems in honor of Shabbetai Ẓevi. A long letter to the Christian scholar Warner (Ms. Leiden) is preserved.

YAKIR, YONAH (d. 1937), Soviet general. Born in Kishinev, Yakir commanded the 45th division of the Red Army during the Civil War and was later promoted to general with command of the Kiev district. He was one of the founders of the Red Army armored corps and in 1937 was made military commander of the Ukraine and a member of the Supreme Military Council. Shortly afterward Yakir was arrested on charges of spying and executed. He was posthumously rehabilitated in 1945 and a postage stamp was issued in 1954 in his memory.

YAKNEHAZ (Heb. יקנה״ז), abbreviation composed of the initials of the Hebrew words; יַיִן *yayin* ("wine"), קִדּוּשׁ *Kiddush* ("sanctification"), נֵר *ner* ("light"), הַבְדָּלָה *Havdalah* ("separation"), and זְמַן *zeman* ("time," meaning blessing of the time, i.e., *She-Heḥeyanu*). The word served as a mnemotechnic

aid for the correct sequence of the benedictions of the *Kiddush* on the eve of a festival which coincides with the conclusion of a Sabbath. The abbreviation originates in the Talmud (Pes. 102b–103a), and sounds similar to the German phrase "*jag den Has*" ("hunt the hare"). Hence also the hare-hunting scenes in many illustrated Passover *Haggadot* (e.g., *Haggadah of Mantua*, 1561).

YAKNEHAZ (pseudonym of **Isaiah-Nissan Hakohen Goldberg**; 1858–1927), Yiddish and Hebrew writer. Born in a village near Minsk, Yaknehaz began, in 1878, writing Yiddish and Hebrew literary essays which aroused great interest. A decade later, *Sholem Aleichem reprinted the most famous of these, *A Brif fun Lite keyn Amerike* ("Letter from Lithuania to America"), in which, as in hundreds of later tales and sketches, Yaknehaz portrayed the life of the small Jewish town in a simple unsophisticated style. He was popular among the masses for almost half a century. His influence on young Abraham *Reisen was considerable. After the Russian Revolution, he continued to publish in the Soviet Yiddish periodicals. The government of Soviet Belorussia granted him a pension. His collections of stories appeared in Minsk in 1940–41.

YAKUM (Heb. יָקוּם; "He Shall Rise"), kibbutz in central Israel, in the southern Sharon, 7 mi. (11 km.) S. of Netanyah, affiliated with Ha-Kibbutz ha-Arẓi ha-Shomer ha-Ẓa'ir. Yakum was founded in 1947, during the struggle of the *yishuv* with the Mandatory government. The founders were Israeli-born graduates of the Ha-Shomer ha-Ẓa'ir movement, joined mainly by immigrant youth from Holland, Bulgaria, and France. In 1970 Yakum had 358 inhabitants, in the mid-1990s the population increased to 470, rising still further to 523 by 2002. Farming was based mainly on plantations and dairy cattle. The kibbutz had a factory for specialized plastics products. In addition, it benefited from its proximity to the Tel Aviv conurbation. It had an interest in a nearby gas station, operated a convention center, and developed a hi-tech industrial park on its land.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

YALAN-STEKELIS (formerly **Wilensky**), **MIRIAM** (1900–1984), Hebrew poet and writer of children's literature. Born in Russia, Miriam Yalan-Stekelis immigrated to Ereẓ Israel in 1920, and lived in Jerusalem, working at Hadassah. From 1926 she was in the Slavonic Department (heading it 1929–56) of the Jewish National and University Library. Her husband was Moshe *Stekelis.

In 1922 she began to publish (two poems in *Ha-Ḥayyim*) and subsequently her works appeared in various newspapers and journals. Her children's poetry which first appeared in 1934 (mainly in *Davar li-Yladim*) was followed by many children's books. She received the Israel Prize for children's liter-

ature, 1957, and published three volumes of collected works, *Shir ha-Gedi, Yesh Li Sod, Ba-Ḥalomi* (1958–63). *Sheker*, a collection of three stories, appeared in 1966. A collection of poems and stories (*Shirim ve-Sippurim*) was published in 1987. Miriam Yalan-Stekelis translated to and from Hebrew, including Russian folktales into Hebrew, *Peraḥ ha-Shani* (1952), and the diaries and letters of J. Trumpeldor into German. In 1968 she published the memoirs of her father, Yehudah Leib Nisan *Wilensky, to which she added much biographical material.

[Getzel Kressel]

YALKUT (HA-) MAKHIRI (Heb. יַלְקוּט הַמָּכִירִי), an anthology of aggadic Midrashim by Machir (Makhir) b. Abba Mari, on the lines of the *Yalkut Shimoni* but more limited in scope. The following extant portions have been published: Isaiah (1893) by J.Z. Kahana-Spira; Hosea (in: JQR, 15 (1924/25), 141–212) by A.J. Greenup; the rest of the Minor Prophets (1909–13) also by Greenup; additional fragments of Hosea and Micah in the *Gaster Anniversary Volume* (1936), 385–73) by J. Lauterbach; Psalms (1900) by S. Buber; Proverbs, chapters 2–4 (1927) by J.M. Badhab; Proverbs 18–31 (1902); and fragments of Proverbs 2, 3, 13, and 14 (in: E. Gruenhut, *Sefer ha-Likkutim*, 6 (1903) by E. Gruenhut. In the extant introductions at the beginning of Isaiah and Psalms, Machir mentions a *Yalkut* to the "Prophets, Jeremiah, and Ezekiel." In view of this separate mention of Jeremiah and Ezekiel, Greenup assumes that "Prophets" refers to the Early Prophets and that the author intended to cover all the books of the Bible, excluding those covered by the *Midrash Rabbah*. This, however, is doubtful; the "Prophets" may refer to the later prophets and the Hagiographa. It is certain, however, that only part of the original *Yalkut* has been preserved.

The *Yalkut* includes quotations from many sources: the tannaitic and amoraic literature and many of the homiletical Midrashim. The sources are usually given, though sometimes merely "Midrash" or "Midrash *Aggadah*" is stated; also, the quotations are not always to be found in the existing editions of the sources indicated. Machir is usually exact in giving the actual language of his sources, and as he had many manuscripts (apparently of Sephardi origin) before him, his work is often a basis for restoring the correct reading. There is no information about Machir or the period when the *Yalkut* was compiled. The author traces his ancestry back six generations, but these ancestors cannot be identified. The colophon to the Leiden manuscript states that it was sold in 1415, thus determining the latest possible date the work was compiled. Most

scholars attribute it to the 14th century, but Gaster was of the opinion that it was compiled in the 12th century, apparently in Spain, and assumed that the author of part two of the *Yalkut Shimoni*, who according to Gaster lived in the 14th century in Spain, made use of the *Yalkut* (*ha-*) *Makhiri*, abridging and summarizing it. This theory has, however, been disproved by Epstein. Both Epstein and Buber claim correctly that neither anthologist knew the other and point out that they differ in their method of citing sources, that each of them cites Midrashim unknown to the other, and that certain Midrashim were known to them under different names. That it was compiled in Provence, the generally accepted opinion, merely because the name Machir was known there, is not supported by internal evidence or by the local dialects. On the contrary, Machir's use of a *Deuteronomy Rabbah* (published by S. Lieberman, 1940, 1965²) which was known only in Spain and the statement of Shabbetai Bass in the *Siftei Yeshenim* (Amsterdam, 1680, 29, no. 42) possibly relying upon a tradition that "the *Yalkut* (*ha-*) *Makhiri* was compiled before the Spanish expulsion" (*Kunteres Aḥaron,*) at least tends to support the assumption that Machir came from Spain.

[Jacob Elbaum]

YALKUT SHIMONI (usually referred to as **"the Yalkut" of Simeon of Frankfurt**) the best known and most comprehensive midrashic anthology, covering the whole Bible. Some scholars (S.J. Rapoport, etc.) claimed that its author and compiler was Simeon Kara, the father of Joseph Kara and a contemporary of Rashi, but A. Epstein showed that there is no basis for this view. He proved that the Simeon mentioned by Rashi is not the compiler of the *Yalkut* and attributed it to a Simeon ha-Darshan, who lived in the 13th century. Nothing is known of this Simeon, except for a reference by M. Prinz to a "Rabbenu Simeon, chief of the preachers of Frankfurt." The copyist of the Oxford manuscript of 1308, as well as the publishers in Salonika, simply refer to him as *ha-darshan* ("the preacher"), but Prinz's view that he came from Frankfurt is supported by the traditions of the Jews of that town. Zunz dated the Midrash to the 13th century based on the facts that Nathan b. Jehiel of Rome, Rashi, and other 12th-century scholars did not know the *Yalkut*, its use of sources which date at the earliest from the end of the 11th century (according to Zunz – including *Exodus Rabbah, Numbers Rabbah, Midrash Avkir, Divrei ha-Yamim ha-Arokh*, etc.) as well as the fact that Azariah dei *Rossi had a manuscript of it written in 1310. Not all of Zunz's arguments are valid. For example, Rapoport has shown that the *Yalkut* does not utilize *Exodus Rabbah* and *Numbers Rabbah*, but Zunz's view as to its date prevails, despite Gaster's claim that it was compiled in Spain in the 14th century. The attempt of Aptowitzer to predate it to the middle of the 12th century is not convincing. Nevertheless, the *Yal-*

kut began to circulate widely only at the end of the 15th century, becoming popular and relied on to such an extent that the study of its midrashic sources was neglected. The reason for its late circulation lies in the historical circumstances of those times. The copying of a work of such great volume as the *Yalkut* was difficult and the period was equally barren in creativity in other spheres. The first to mention the *Yalkut* was Isaac Abrabanel, and his son Samuel possessed a copy of part of the *Yalkut* to the prophets.

The aim of the compiler of the *Yalkut* was to assimilate the bulk of rabbinical sayings at his disposal, following the order of the verses of the Bible. It contains more than 10,000 statements in *aggadah* and *halakhah*, covering all the books of the Bible, most of its chapters, and including commentaries on a substantial part of individual verses. He collected material from more than 50 works (in *halakhah* and in *aggadah*) both early and late. The *Yalkut* is the only source for some of them, including *Sifrei Zuta, Yelammedenu, Midrash Esfah, Midrash Avkir, Midrash Tadshe, Devarim Zuta*, etc. The identification of these works was made possible in part by the author's custom of noting the source for his statement (in the manuscripts they are in the margin, in the first printed edition in the text, and in later printed editions again in the margin). These source-notes, however, are incomplete; in hundreds of places no reference is given and even in cases where they are, mistakes and corruptions have crept in, many of them in the late editions.

The *variae lectiones* of the *Yalkut* are of great importance, but great caution must be exercised in relying upon them, especially as regards the later editions, for three reasons: Sometimes the compiler based himself on faulty manuscripts; his method of assembling statements from various sources and combining them caused him at times to abridge and even alter them; and editors and printers used a free hand in altering passages according to their own views. Their tendency, in the words of M. Prinz in the introduction to his edition (Venice, 1566), was to straighten out the words "that were topsy turvy, first things last and last things first, omissions and additions, letters and words distorted and crossed out, partially obliterated and worked over," at times adding to the corrupt state of the text.

Many paragraphs in the *Yalkut* are numbered and are commonly designated *remazim* ("allusions") by the author, though he sometimes employs the term *siman* ("sign") and in a number of places *erekh* ("topic"). The total number of these *remazim* is 966 (963 in the Salonika edition) for the Pentateuch and 1,085 for the other books of the Bible. The method followed in numbering the *remazim* is puzzling: the author does not number each quotation, and although there are numbers covering a few lines dealing with a single dictum (Isaiah 444 has 3 lines) there are also some of exceptional length containing numerous statements extending to several columns (cf. Deut. 938). There are *remazim* which cover the commentary to two successive paragraphs and some even to two successive books. Zunz regarded this numbering as arbi-

trary, but it seems probable that it served an internal need of the book itself, its purpose being not to divide the work into sections, but to indicate those statements to which he intended to refer in some other part of his work. In fact, in the Oxford manuscript and in the Salonika edition, the number is placed by the side of the particular statement to be referred to elsewhere and not at the beginning of the section (this explanation was put forward by H.Z. Finkel of Jerusalem, and cf. D. Hyman, in: *Hadorom*, 12 (1960), 144–7 and *Mekorot Yalkut Shimoni* (1965), 6–7). In addition to these *remazim*, in various books there is an added division whose nature is not always clear. From the indications in the first edition, it is clear that the author follows the order of books of the Bible given in the Talmud (BB 14b), placing Jeremiah and Ezekiel before Isaiah. In the printed editions the accepted order has been followed, and in consequence the printers, at the beginning of the commentary to Isaiah, quoted the relevant passage from *Bava Batra*, "the sages have taught that the order of the prophets is Joshua, Judges, Samuel, Kings, Jeremiah, Ezekial, Isaiah, the Twelve," and explaining that this accounts for the order in the numbering of the *remazim*. From the Venice edition (1566) onward the numbering is also corrupt.

The numbering of the Psalms in the *Yalkut* differs from the traditional one. The anthologist notes the number at the beginnings of each Psalm and only gives 147. This division was customary in the amoraic period, and the author apparently took it from the Midrash to Psalms which interpreted the verse (Ps. 22:4) "Yet thou art holy, O Thou that art enthroned upon the praises of Israel" (i.e., Jacob) to mean that "the 147 Psalms in the Book of Psalms correspond to the 147 years of Jacob." This division appears only in the Salonika edition and was subsequently blurred. The chief printed editions of the *Yalkut Shimoni* are Salonika editions, Prophets and Hagiographa (1521) and Pentateuch (1526). To this edition a *kunteres aḥaron* (addendum) was added (at the end of part 1) containing 256 *remazim* from the *aggadot* of the Jerusalem Talmud, with deviations from the present order of the tractates and 55 *remazim* from the *Midrash Yelammedenu* on the Pentateuch to all of which cross-references occur in the main work. This addendum was omitted from all subsequent editions. Since then the *Yalkut* has been published frequently but many errors have crept into it. For accurate reading one can rely only on the Salonika edition, which was published from manuscripts, and on the manuscripts available today in the libraries of Oxford, Vienna, Parma, and Hamburg, although they are mostly fragmentary and even in their totality do not cover all the books of the Bible. A. Epstein, in dealing with the differences between the Salonika and Venice editions, proved that the editor of the Venice edition, Meir Prinz, used the printed Salonika edition as the basis of his edition, although he made many changes to it at his discretion, and this impaired it. Hyman, in his *Mekorot Yalkut Shimoni* to the Prophets and Hagiographa, gives the sources of the *Yalkut* in accordance with the manuscripts and first editions and adds his own sources. He also gives the passages, including several long and important ones, which occur in the first edition and in the manuscripts but were excluded from the later editions by the censor.

[Jacob Elbaum]

YALON (originally **Distenfeld**), **HANOCH** (**Henoch**; 1886–1970), Hebrew linguist. Born in Trutky, near Lopatin in Galicia, Yalon was influenced by his older brothers who had become *maskilim*, and became well versed in the Hebrew literature of the *Haskalah. At the age of 22 he went to Lemberg (Lvov) where he taught Hebrew. He studied Akkadian at Lemberg University and during World War I moved to Vienna where he studied Semitic languages at the university.

Yalon was invited in 1921 to teach at the Mizrachi Teachers' Seminary in Jerusalem, where he was employed until 1946. He then devoted his life solely to research. In 1962 he received the Israel prize for Jewish scholarship. In 1963 a jubilee volume was published in his honor.

Yalon's published work is comprised only of articles, most of which were collected in three books: *Mavo le-Nikkud ha-Mishnah* ("Introduction to the Vocalization of the Mishnah," 1964); *Pirkei Lashon* ("Studies in the Hebrew Language," 1971; posthumously); and *Megillot Midbar Yehudah* ("Studies in the Dead Sea Scrolls," 1967). He also edited *Kunteresim le-Inyenei ha-Lashon ha-Ivrit* (vol. 1, 1937–38; vol. 2, 1938–39; altogether four issues); and *Inyenei Lashon* (two issues, 1942–43).

Yalon's achievements as an innovator in the field of research on the Hebrew language were considerable. His studies cover all periods of the history of the Hebrew language: the Bible, mishnaic Hebrew, *piyyut*, medieval grammarians, Hebrew poetry in Spain, rabbinical Hebrew, grammarians of more recent centuries, and the Haskalah literature down to the contemporary spoken language. Yalon was the first to recognize the importance of the living traditions of Hebrew, especially that of the Yemenite community. While teaching at the Mizrachi Seminary, whose students came from all ethnic groups in the country, he observed the differences between the living traditions. He found that the Yemenite tradition was close to Hebrew and Aramaic with the Babylonian vocalization. Up to this time it was customary to dismiss the oral traditions of the various communities as "errors." Yalon, however, showed that sometimes their traditions had a Hebrew basis which was different from that transmitted by the masoretes of Tiberias.

His approach established research in mishnaic Hebrew grammar on a new basis. Like J.N. *Epstein, by whom he was greatly influenced, and S. *Lieberman, he realized that the printed versions of mishnaic Hebrew texts were unreliable

and therefore one must go to the manuscripts. Consequently he showed that between the grammar of mishnaic Hebrew and biblical Hebrew there were far greater differences than had been thought up to his time.

His achievements were no less in the field of criticism. Yalon wrote about scholars who were fixed in their views which were based on past and dated scientific methods. Outspoken and very sharp in his criticisms, Yalon showed great courage in his attack. His critical activity was admirable for he persisted in it knowing that it would have little effect. Only toward the end of his life he realized that his teachings, and not those of his rivals, had triumphed in the research of Hebrew linguistics in Israel. To the public at large Yalon was known mainly as the scholar who had vocalized the six books of the *Mishnah (with a commentary by Ḥ. *Albeck, 1952–58, 1958–592). Yalon did not aim at a pure scientific vocalization which would reflect the original form, but at times he even left the faulty vocalization which had become sanctioned through the acceptance of all the communities for many generations.

YALOW, ROSALYN SUSSMAN (1921–), U.S. medical physicist and Nobel laureate in physiology or medicine. Yalow was born in New York and received her B.A. from Hunter College (1941) and M.S. and Ph.D. in nuclear physics from the University of Illinois under the direction of Maurice Goldhaber (1945). After teaching at Hunter (1946–50), she started her long association with the Bronx Veterans Administration Hospital. She set up the radioisotope service over the period 1950–70 and became head of the nuclear medicine service (1970–80), senior medical investigator (1972–92) and director of the Solomon A. Berson Research Laboratory (1973–92). She was also appointed research professor (1968–74) and distinguished service professor (1974–79) in the department of medicine of the affiliated Mt. Sinai School of Medicine. Yalow was professor at large at Albert Einstein College of Medicine and Yeshiva University (1979–85) and chairperson of the department of clinical science at Montefiore Hospital in the Bronx (1980–85). She was professor emeritus from 1985 and Solomon A. Berson Distinguished Professor at Large at Mt. Sinai School of Medicine from 1986. Her collaboration with Solomon Berson began in 1950 and lasted until his death in 1972. They developed the technique of radioimmunoassay which became the standard method of measuring small amounts of peptide hormones and other substances in blood and tissues for research and routine clinical purposes, and they established the basic principles of subsequent immunoassays. Throughout her career she made major contributions to studies of hormones and especially insulin in health and disease. Yalow was awarded the Nobel Prize for this work (1977) jointly with Roger Guillemin and Andrew Schally. Her other honors include the Gairdner Award (1971), the inaugural Hagedorn Memorial Lecture (1973), membership in the U.S. National Academy of Sciences (1975), and the Lasker Award for Basic Medical Science (1976). Yalow was an early advocate and role model for women's right to pursue a career in science.

[Michael Denman (2nd ed.)]

YALTA, city and port in the Crimea, Russia. The winter palace of the czar's family, Livadiya, was situated near the town and as a result Jewish residence was restricted. From 1837 to 1860 Jews were forbidden to live there at all. Between 1860 and 1893 the prohibition was lifted, but from 1893 only those Jews who were registered as inhabitants or those with rights to reside anywhere in Russia were authorized to remain there. The others, including sick persons who had been sent there for convalescence, were expelled. In 1897 there were 1,025 Jews (approximately 8% of the total population) in Yalta. By 1926 their numbers had increased to 2,353 (6.2%). With the German occupation of Crimea at the end of 1941, the Jews who had remained in the town were concentrated in a ghetto and on Dec. 16–17, 1941, about 1,500 people were murdered.

By 2005, Yalta had a Jewish community center and a charity center called Hesed Naftul. In 2004, for the first time in 80 years, a Sefer Torah was brought to the town by a group of rabbinical students.

[Yehuda Slutsky]

YALTA (fourth century C.E.), wife of Naḥman (d. 320) and daughter of the Exilarch (Kid. 70a). When Naḥman entertained prominent scholars he would ask them to send her their greetings. On one occasion he asked Rav Judah, a prominent contemporary, who was visiting him on a legal matter, to send her greetings. Judah objected, however, quoting successive statements in the name of Samuel as to the impropriety of having associations with women. Yalta thereupon sent a message to her husband: "Settle his case before he makes you appear like any ignoramus" (*ibid.*, 70a–b). On another occasion, when her husband was entertaining *Ulla, and the latter stubbornly refused to send her any wine of the cup over which he had recited a blessing, she reportedly broke 400 jars of wine in her anger (Ber. 51b). She also apparently had a sharp tongue, and commented on his refusal, "Gossip comes from peddlers and vermin from rags," i.e., what can you expect from a man like that? (*ibid.*). When dissatisfied with the ruling of one rabbi she appealed to another, apparently concealing from him the fact that she had already consulted one (Nid. 20b). She once said to her husband, "The Torah has permitted something of a similar taste for everything it has forbidden; I would like to eat meat in milk," whereupon he told the butcher to give her roasted udder (Ḥul. 109b).

YAMIM NORA'IM (Heb. יָמִים נוֹרָאִים; "Days of Awe"), a term applied to the period from the first day of *Rosh Ha-Shanah until the *Day of Atonement and more particularly to these

two festivals. This period is more commonly referred to as the *Ten Days of Penitence. *Yamim Nora'im* is also the title of a compilation on the subject by S.Y. *Agnon.

YAMMIT REGION.

Upbuilding

Of all the new regions whose development was projected after the 1967 Six-Day War, the northeast corner of Sinai initially appeared to be the least promising. This was the Rafiah Salient, which later became known as the Yammit Region, an area whose thick dune cover gave it the aspect of a typical desert. With a scant rainfall of 5–8 inches per year, it was obvious that water for development purposes would have to be taken from Israel's scanty supply. Prospects for future settlement seemed poor. The region was inhabited by several thousand semi-sedentary bedouin, who eked out their livelihood from flocks of sheep and goats, some date-palm groves and rhicinus bush plantations, and small vegetable plots in the depressions between shore dunes. Occasionally they supplemented their income by selling quails, which they caught along the shore during the season of migratory flight.

However, Israel's ruling party at the time, the Alignment Party, felt the necessity of creating a barrier in this region between Egypt and the Gaza Strip, even though in principle they were not opposed to the return of territories for peace. For this reason, it was decided to develop the area.

Once construction was begun, Yammit soon proved its superiority to other regions of settlement, in several respects: The sand dunes were found to be well suited to drip irrigation farming, and the mild climate was beneficial to crops. The water supply was augmented by a shallow coastal aquifer, although it was still necessary to obtain water from Israel's national carrier. It therefore became possible to plan for a larger area of cultivation and a larger population than were originally envisaged. The fine beaches were a tourist attraction. Moshe Dayan, among others, suggested developing Yammit as Israel's third Mediterranean seaport, and industrial firms considered the possibilities for establishing various enterprises. The planning authorities also intended substantial improvements for the local Bedouin as well. Yammit was also blueprinted as a favorable inflow site for the projected Mediterranean–Dead Sea saltwater canal.

By 1977, the year of Sadat's peace initiative, the town of Yammit had over 2,000 inhabitants and was growing fast. By 1981, another 2,000 were living nearby, in the rural center of Avshalom, the kibbutzim Sufah and Ḥolit, and the moshavim Dikla, Ḥaruvit (Tarsag), Ne'ot Sinai, Netiv ha'Asarah, Nir Avraham, Peri'el, Sadot, Talme Yosef and Ugdah. Several more settlements were in the planning stage, and reclamation work by JNF crews was under way. Over 12,000 dunams were under irrigation. Roses, carnations and other flowers were being cultivated in more than 200 greenhouses, as well as under light cover and in open fields. Citrus groves, vineyards and orchards of tropical fruit such as mangoes were flourishing. The settlers tended vegetables, principally out-of-season winter crops,

both in greenhouses and in the open. Their fruit and flowers found a ready market in Europe. Scientists contributed their expertise in the areas of water usage, new equipment, construction of greenhouses, seed selection, etc., thus enhancing Israel's reputation for agricultural research. Moshav Sadot, with 70 families and a population of over 350, was one of several settlements which greatly increased their farm production by employing bedouin laborers. They incurred criticism from the Moshav Movement and Labor circles in general for this step, which was seen as a departure from their ideological principles and an inducement to outside Arabs to settle nearby and swell the region's non-Jewish population. A modern, well-equipped regional school was established near Sadot, and Yammit also established educational facilities. In the south of the region, the Etam military airport was considered the most advanced of its kind.

To the Evacuation

Even after Sadat's visit to Jerusalem, it was generally felt that everything possible should be done to retain the Yammit Region. The Likkud government later agreed to suspend the establishment of new Yammit Region settlements while continuing to develop those already in existence. This was done as a gesture to Egypt and the U.S. But Egypt adamantly insisted on a return to the pre-1948 borders, and the 1978 Camp David Accords dashed any hope that Egypt would permit the settlers to remain in Sinai after it was returned to her. In the Knesset discussion on Camp David, both the Likkud coalition and the Alignment opposition defined the evacuation of the area as Israel's most painful concession, but most held it to be an unavoidable step in the peace process. (There were, however, dissenters in both parties, and in the religious and nationalist parties as well.) Among certain circles the hope was expressed that something might occur in the two-and-a-half years remaining before the set evacuation date, which would prevent the evacuation of the Sinai settlements, without, however, interrupting the peace process. Begin decreed that everything should proceed normally in the region until the very last day. In July 1981 the chairman of the Knesset Security and Foreign Committee, Moshe Arens, expressed his reservations concerning the decision to cede northern Sinai, and in August Prime Minister Begin declared that Israel would have to reconsider the evacuation timetable if the Egyptian president continued to stall on renewal of talks on autonomy in Judea and Samaria. Sadat's murder (October 6 1981) raised expectations among the opponents of evacuation that the timetable might be postponed, but this was not the case. One week later the Israel government unanimously agreed to proceed with implementation of the peace treaty as planned. On October 20 President Mubarak announced his intention of continuing the peace process even after Egypt had received all of Sinai. Some Israelis feared that the Sinai evacuation would set a precedent affecting all the administered regions, but others felt that it was a conciliatory step that could win Western and Egyptian acceptance of a continued Israeli presence in Sinai.

These speculations disrupted plans for the orderly liquidation of property in Sinai, with minimal losses to the settlers and the State. They also hampered plans for developing the Pitḥat Shalom (Peace Salient) area in the northwestern Negev, to where most of the Yammit villages were due to be transferred.

It was generally accepted that the settlers should be compensated for the time, money and pioneering efforts that they had invested in the Yammit area. Furthermore, it was hoped that generous remuneration would encourage them to found new settlements elsewhere in Israel. But as a result of the uncertainty surrounding the actual evacuation of Yammit, costs soared and negotiations were protracted. Moreover, opinions differed as to the extent and nature of the compensation, and the amount to be deducted for income tax. The government offered advance payment to the settlers to enable them to prepare in good time for their new lives elsewhere, and after much controversy, the Knesset adapted the Compensation Law on March 30, 1982.

More serious was the struggle with the "League for Preventing the Sinai Retreat" (also known as "Maʾoz"). At its core were *Gush Emunim and the Ha-Teḥiyyah Party (an extreme nationalist political party), but it had many other sympathizers, including some within the government. In May 1979, when Neʾot Sinai (the settlement closest to El-Arish) was handed over to Egypt six months in advance as a goodwill gesture, volunteers from the League joined local settlers in protesting the move and clashed violently with Israeli soldiers who were sent to remove them.

Maʾoz initiated the founding of new settlements in the westernmost part of the area. Ḥaruvit was established at the time when the Knesset was endorsing the Camp David Agreement, Aẓmonah in 1980, Ḥaẓar Adar in December 1981, and Maʾoz ha-Yam as late as January 1982. Groundbreaking ceremonies were attended by many sympathizers, including some from the Labor Party. These gatherings, although unauthorized, were permitted to take place. The movement also occupied houses left by settlers who had returned to the "Green Line" (the original boundaries of the State of Israel). Ha-Teḥiyyah demanded a plebiscite on evacuation, and the League's nationwide street poll claimed to have collected 700,000 signatures. More volunteer "nuclei" were created in Yammit, Talme Yosef, and Nir Avraham, with the number of "squatters" mounting to 200, and later 350 families. However, not all the veteran settlers welcomed their presence and there were cases of blows and quarrels. Government reaction was divided between those who demanded a forceful reaction and those who advised moderation.

At the end of February 1982 the army set up road blocks to prevent all but genuine inhabitants from entering the area. Defense Minister Ariel Sharon declared March 1 to be the evacuation date, instructing the army to refrain from using violence under any circumstances. The Yammit and Merḥav Shelomo regions were pronounced military zones. Tension rapidly mounted, the inhabitants staged a demonstration of passive resistance to the army, and supporters in Israel declared hunger strikes. Evacuation was postponed until April 1, but permission was obtained for the settlers to remain for the Passover holiday.

On April 19, the army began to remove the resisting settlers and Maʾoz militants. Rabbi Meir Kahane, leader of the Jewish Defense League, rushed from New York to Yammit, where some of his followers were threatening to commit suicide in their bunker rather than comply with the army. He managed persuade them to leave. From April 23, all remaining buildings and installations were systematically reduced to rubble and then flattened, and roadways were torn up. Resistance eventually petered out with no serious clashes. The last Israelis departed on April 25, and by April 26, 1982, all of Sinai was in Egyptian hands.

[Efraim Orni (2nd ed.)]

YAMPOLSKY, BERTA (1934–), choreographer and artistic director of the Israel Ballet. Born in Paris to Russian parents, Yampolsky immigrated at a young age with her family to Israel. She studied with Valentina Archipova Grossman and Mia *Arbatova and continued her studies at London's Royal Ballet. She and her husband, Hillel Markman, were leading soloists in many dance companies all over the world and returned to Israel in 1964. In 1967, the husband-and-wife team established the Israel Ballet. As its choreographer, she produced dramatic ballets, abstract and contemporary in the neoclassical style. In 1977, in Santiago, Chile, she was awarded the prize for the best foreign choreographer for her work entitled *Dvořák Variations*. She created most of the dances for the company, including *The House of Bernarda Alba* (1978), *Carmen* (1980), *Untitled* (1981), *Mendelssohn Concerto* (1982), *Opus 1* (1983), *The Nutcracker* (1985), *Two by Two* (1989), *Harmonium* (1989), a full-length version of *Romeo and Juliet* (1989), *Valse Mephisto* (1992), *Gurre Lieder* (1996), *Ecstasy* (1998), and *Medea* (1999). The repertoire of the company includes a number of works by George Balanchine, as well as works by Roberto Lazzini, Heinz Spoerli, Roberto Trinchero, and the renowned work of John *Cranko, *Onegin*.

In 1998, she received the Minister of Education and Culture Lifework in Dance Award. In 2004 the company numbered 35 dancers, most of them Israeli-born, some immigrants from the former U.S.S.R. and the rest from Western countries. The troupe performed in Israel and at major dance festivals abroad.

YANG-CHOU (formerly **Wei-yang**), city in Kiangsu province, China. It had connections with the Jewish community of *Kaifeng. A few scattered references to Jewish and Chinese individuals from Yang-chou are found in the Chinese stele inscriptions of the Kaifeng Jews, dating from 1489 and 1512, and several Chinese officials from Yang-chou helped in the prepa-

ration of these inscriptions. A member of the Kaifeng Chin family had his home in Yang-chou, but he donated "a copy of the Scriptures of the Way [*Tao*], and set up the second gateway" in the Kaifeng synagogue. The oral tradition of the existence of a sizeable community and even of a synagogue in Yang-chou cannot be corroborated.

YANKOWICH, LEON RENE (1888–1975), U.S. jurist. Born in Romania, he went to the U.S. in 1907. In 1927 he was appointed to the Superior Court bench in Los Angeles County, California, and in 1935 he became a judge of the Federal District Court. He sponsored social legislation for women, was an authority on the law of libel, and as judge became famous for liberal decisions in favor of illegitimate children and in favor of the federal government's claim of mineral lands against the claims of Standard Oil Co. of California.

[Milton Ridvas Konvitz (2nd ed.)]

YANNAI, or **Yannai Rabbah** (**the Great**), early third century Palestinian *amora*. It seems highly likely that the late "*tanna*" Yannai, who is mentioned in Avot 4:14, and Tosefta Sanhedrin 2:5, is to be identified with the early *amora* Yannai (S. Friedman, Language and Terminology in Talmudic Literature). According to a genealogical scroll found in Jerusalem, Yannai was descended from the high priest, Eli (TJ, Ta'an. 4:2, 68a). Yannai transmitted some halakhic rulings in the name of Judah ha-Nasi (TJ, Ḥag. 3:2, 79b), but his main teacher was Ḥiyya, whom he consulted in difficult cases, and who predicted that Yannai would one day to be a leader in Israel (TJ, Dem. 7:1, 26a). Yannai's daughter married a son of Ḥiyya (Ket. 62b), and he also had a son, Simeon (TJ, MK 2:2, 81a). Though Yannai is recorded in one place as having prayed in Sepphoris (TJ. Ber. 4:6, 8c), Halevi maintains that he always lived in Akbara in Upper Galilee. There he established an academy (TJ, Er. 8:4, 25a), where his pupils lived as a family and tilled the land in addition to their studies (TJ, Shev. 8:6, 38b). The rulings of the academy of Yannai are frequently quoted in the Talmud. His best known pupils were *Oshaiah (Ket. 79a), *Aibu (Kid. 19a), and above all, Johanan and Resh Lakish, who transmitted many of his halakhic decisions (TJ, Kil. 8:1, 31b; BK 52a and 115a; et al.). After his death his pupils turned to Yohanan for guidance (TJ, Shev. 8:6, 38b). Yannai was noted as both a halakhist and an aggadist. An important principle enunciated by Yannai has become part of the general Jewish outlook: danger may not be incurred in the expectation of a miracle (Shab. 32a). He counseled submission to the ruling power (Zev. 102a), and permitted the fields to be sown in the sabbatical years (regarding its force as only rabbinical) to meet the government's heavy taxation (Sanh. 26a). He also ruled leniently with regard to tithing (BM 87bf.).

Yannai was a wealthy man (Kid. 11a), owning an orchard (MK 12b) and vineyards (BB 14a). He was very charitable and at one time, for certain religious reasons, declared the fruit of his orchard free to all for one year (MK 12b). His sensitivity to the feelings of the poor is indicated in his dictum, "Better not to give charity at all, than to shame the recipient by giving it to him in public" (Ḥag. 5a). He compared the man who studies without fear of God to one who makes his door before erecting the building (Shab. 31b). The commandments would retain their validity, he held, even after the *Resurrection of the Dead (Nid. 61b). According to a tradition in the Babylonian Talmud, in his last testament he enjoined his children not to bury him in white, lest his place be among the wicked and he would appear like a bridegroom amid mourners, nor in black, lest his place be amid the righteous, and he would appear like a mourner amid bridegrooms (Shab. 114a).

Apart from Yannai the Great, there were several other *amoraim* of this name. Since the name is often given without patronymic or title, it is not always clear to whom it refers. Yannai b. Ishmael, a Palestinian *amora* of the late third century, is mentioned several times. Laws are quoted in his name concerning liturgy (Ta'an. 14a) and in several aggadic passages, one concerning the tragic victims of Bethar (Git. 58a) and others dealing with biblical themes (BM 86b). A general plea for tolerance may be read into the reply he attributes to Abraham's visitors, who, when he invited them to wash their feet (Gen. 18:4), rebuked him: "Do you take us for Arabs who worship the dust of their feet? Ishmael (who does likewise) has already issued from you" (BM 86b).

[Benjamin Cohen]

YANNAI, liturgical poet, one of the principal representatives of the old Palestinian *piyyut*.

References to Yannai in the Sources
Yannai is first mentioned in *Kirkisani's *Kitāb al-Anwar* (beginning of the tenth century) once, together with Eleazar (i.e., *Kallir) and Phinehas, as a composer of Hebrew hymns, and in two other places as an authority on religious law. Kirkisani mentions that *Hai (b. David), head of the Pumbedita academy, and his father, after having found rabbinical sources for all but two rules in *Anan's Karaite code of law, finally found these in Yanai's *Ḥazzanah*. Around the same time *Saadiah names the following among the "elder poets" whose verses he declares as models: *Yose b. Yose, Eleazar *(Kallir), *Joshua, and *Phinehas. An anonymous manual of poetry from Saadiah's circle cites poems by the "famous Yannai" as the example of rhymed prose. An anonymous poem of similar provenance, and the grammarian *Yehudi b. Sheshat (second half of the tenth century), name Yannai and Kallir in succession. *Gershom b. Judah (*Me'or ha-Golah*) states that Yannai, whom he cites as one of the earliest authors, composed *kerovot* for all weekly Torah portions. Finally, in a Hebrew manuscript (Munich, Ms. 69) and in a liturgical work of Ephraim

of Bonn, Yannai is named as Kallir's teacher. Ephraim adds that in "Lombardy" (i.e., Italy), Yannai's hymn "*Onei Pitrei Raḥamatayim*" is not recited because he was considered to be Kallir's murderer: he supposedly put a scorpion in his pupil's sandal, thus causing his death.

Rediscovery of Yannai's Works in the *Genizah*

Yannai is not mentioned in later literature; modern research made his name and works known again. The scholars who first engaged in research on Yannai had only fragments of a *kerovah* ("*Onei Pitrei Raḥamatayim*") and a *piyyut* ("*Az Rov Nissim*") from the Passover *Haggadah* as material (it was later discovered that this *piyyut* was part of the *kerovah*). Yannai's personality was brought into new light only in the 20th century with the discovery and publication of Cairo *Genizah fragments. In 1901 S.H. Wertheimer published two poems attributed to Yannai (*Ginzei Yerushalayim*, 2 (1901), 18b). In 1903 S. Poznański found a list of books where the *Ḥazzanah* of Yannai is mentioned as a special work (JQR, 15 (1903), 77, no. 12). Davidson's publications opened new horizons for research into Yannai. In 1910 he found a *Genizah* fragment with quotations and beginnings of poems from the "*Maḥzor Yannai*"; this established the existence of a greater poetic work of Yannai's. In 1919 he found in some Greek-Hebrew *genizah*, fragment palimpsests (published by F.C. Burkitt in *Fragments of the Book of Kings* (1897), and by C. Taylor in *Hebrew-Greek Cairo Genizah Palimpsests*, 1900) some of Yannai's *kerovot* which were thought lost, and which he later published with notes by L. Ginzberg (*Maḥzor Yannai* (1919)). In 1928 Davidson found – following a suggestion by Brody – three other poems by Yannai among the *Genizah* fragments in the Bodleian Library: he published them in *Genizah Studies* (vol. 3, 1928). Paul Kahle published, in the *Masoreten des Westens* (1927; 24–27 (Heb. part) with Ger. translation, 59–66), two poems that had already been published as anonymous in 1898–99, with supralinear (Palestinian) vocalization, which he recognized as Yannai's. Apart from that, Kahle found some *Genizah* fragments in Cambridge (Taylor-Schechter Collection) and in Leningrad/St. Petersburg (Collection of the Archimandrite Antonin), which also contained *kerovot* by Yannai and which were in part published by M. Kober (1929). Many more texts by Yannai were identified by J. Schirmann in the large *Genizah* collections especially in Cambridge in 1931 and 1932. They were photographed for the Archives of the Berlin Institute for Research of Hebrew Poetry, together with thousands of other *Genizah* fragments. M. Zulay discovered many more unknown texts by Yannai among the fragments and collected all Yannai's works known to him, in a critical edition (1938). Zulay, more than any other researcher, was interested in Yannai, and apart from important text editions, also conducted intensive research into Yannai's language. J. Mann (1940), S. Widder (1941), I. Sonne (1944), Zulay himself (1947), A. Diez-Macho (1955), and A. Murtonen (1958) published important additions to Zulay's preceding work. Among the most recent publications of Yannai's poetry, it is worth mentioning J. Yahalom's (1978), and above all the

edition of Z.M. Rabinowitz (1985–87), with the additions and comments of N.M. Bronznick (2000).

Yannai's *Kerovot*

Davidson established already in his first publication the scheme of the structure of Yannai's *kerovot*, which with some modifications is still valid. (It is doubtful that Yannai invented the special structure of the *kerovah*; its regular and rather complicated features make a slow evolution probable.) This type of *kerovah* served as the model for all his successors, although they differ in many details. Yannai wrote essentially two kinds of *kerovot:*

(1) The *kedushta*, a poem for the Sabbath *Shaḥarit* (morning service) based on the first three benedictions of the *Amidah* and dealing with the biblical portion of each Sabbath. The third *kedushta* contains Yannai's name in an acrostic; it also alludes to the *haftarah* of the relevant biblical portion;

(2) The *shivata*, for the *Musaf* and the eve of Sabbaths and festivals, based on seven benedictions of the *Amidah* (the first three and the last three being always included).

Yannai's Dates

A close relationship between the older Palestinian Midrashim and Yannai's poetry can be established by numerous parallels in content and style. It cannot be determined, however, whether the Midrashim influenced his poetry, or whether both, belonging to approximately the same period, represent the same spirit in somewhat different forms. It is difficult to accept Yannai's compact style with its many allusions to classical sources as his own creation. Between Yannai and *Yose b. Yose – his only predecessor known by name – there is a linguistic disparity which can be explained only by assuming several intermediary stages in language development between them. Furthermore, it is clear that Yannai lived some centuries before Saadiah, who already considers Yannai to belong to the dim past. As historical perspective was undeveloped in Kirkisani's day, his reference (see above) does not prove that Yannai lived before Anan, but only that a later author (Hai b. David) found two points of Karaite law in Yannai's work. The tale of Yannai's relation to Kallir, being legendary, does not help in the determination of Yannai's dates, apart from the fact that Kallir's dates too are uncertain. While modern scholars have accepted the sixth–seventh century as a dating for Yannai, an older one (fourth–fifth century) is also possible.

Yannai's Provenance

For several reasons, it is obvious that Yannai must have lived in Palestine. His *kerovot* are written according to the *triennial Palestinian cycle; only Christians are named as Israel's enemies; and his name is usually spelled יַנַּי, according to the usage of the Jerusalem Talmud, and not יַנַּאי. Other Diaspora countries were not yet Jewish cultural centers and, therefore, cannot be taken into account. What Gershom b. Judah says of him (see above) has been fully confirmed by modern research. Yannai's *Ḥazzanah* (Arabization of the Hebrew *ḥazzanut*, "liturgy") must have contained *kerovot* to all the portions of the

(triennial) Palestinian cycle; used by the Palestinian community in Cairo, it was fragmentarily preserved there in the *Genizah*. The work could have been considered as a source of religious law, as it contained, apart from the *aggadah*, much halakhic material. With the rapid diffusion of Kallir's works, though, it became obsolete and lost its standing in literature.

Yannai was probably the first, or one of the very first, to introduce into the tradition of Jewish liturgical poetry the rhyme and the alphabetic and nominal acrostic.

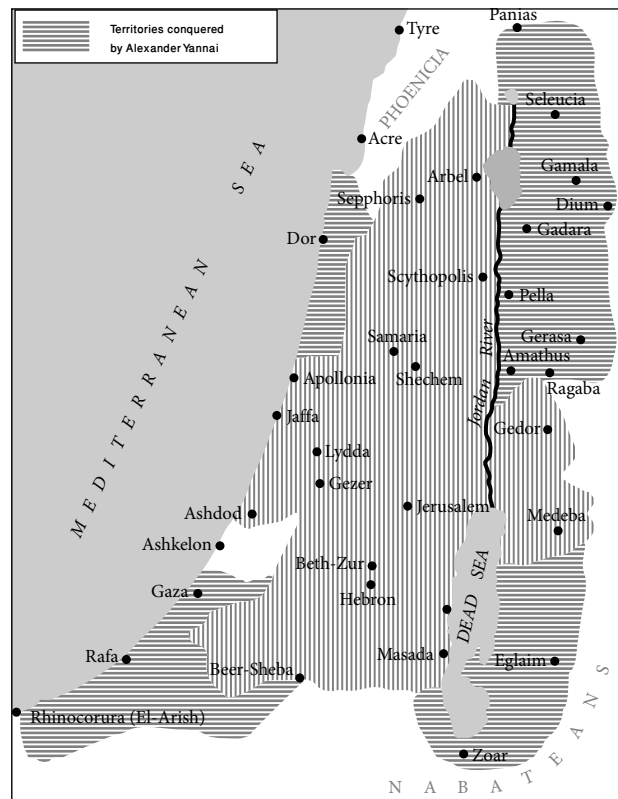
[Jefim (Hayyim) Schirmann]

YANNAI (Jannaeus), ALEXANDER (b. c. 126–76 B.C.E.), Hasmonean ruler of Judaea (103–76 B.C.E.), son of John Hyrcanus; was high priest and king. According to Josephus, Yannai was hated by his father and for this reason was forced to spend his childhood in Galilee. When his eldest brother, Aristobulus, inherited the high priesthood from their father, he was imprisoned together with other brothers and his mother for fear they would attempt to seize power. Upon the death of Aristobulus, his widow, Salome Alexandra, designated Yannai as the successor, and the new high priest married his sister-in-law, in accordance with the Jewish rite of levirate.

Since Josephus holds that Aristobulus had already transformed the government into a kingdom, he also assumes that


The kingdom of Alexander Yannai, 103–76 B.C.E. Based on Zev Vilnay, New Israel Atlas, Jerusalem, 1968.

Yannai inherited the kingship from him. However, Strabo's assertion (16:2, 40) and the testimony of Aristobulus' and Yannai's coins may support the opinion that Aristobulus never was a king and that Yannai became a king only at a later stage of his rule.

The political history of Judaea under Yannai may be divided into four periods. The first period extends from 103 until about the year 95. At the start of his rule, Yannai took advantage of the dissensions inside the Ptolemaic kingdom and besieged one of the most impressive Ptolemaic strongholds on the Mediterranean coast: Ptolemais (Acco). Ptolemy Lathyrus, who previously was compelled to retreat to Cyprus by his queen Cleopatra III, his mother, promptly reacted. While leaving part of his army besieging Ptolemais, he invaded Judaea and defeated Yannai. The latter was saved only by Cleopatra's intervention. She launched a military campaign against Lathyrus, took again Gaza and Ptolemais, and forced him to retreat again to Cyprus. Thus freed from Lathyrus' threat, Yannai seems to have turned to Transjordan, perhaps in order to take revenge upon Lathyrus' allies, notably Theodorus, the tyrant of Amathus. Yannai succeeded in conquering Gadara in Transjordan, and Amathus. In the meantime, Cleopatra met her death, while Lathyrus carried on waging war against his brother Ptolemy Alexander. As a result, Yannai turned again to the Mediterranean coast, and this time, he succeeded in subduing Gaza (c. 96). By this time, he had

gained control of the entire coastal region from Mount Carmel in the north down to the Egyptian border (with the exception of Ashkelon).

The second period extends roughly from c. 95 to 88. It seems that strengthened by his successes, Yannai assumed the title of king only at this stage of his rule, thus claiming to be free of any other political power. In any case, Yannai's military policies may have overly angered the Jewish population and a civil war broke out, which lasted six years and whose leaders were probably the Pharisees. Since they were unable to defeat the king's army reinforced by mercenaries, they called the Seleucid overlord of Judaea, Demetrius III, to come and fight against Yannai. Demetrius invaded Judaea and defeated Yannai near Shechem (89/88 B.C.E.). Taking advantage of Yannai's weakness, the *Nabateans compelled him to relinquish the territories he previously conquered in Transjordan.

In the aftermath of his defeat, Yannai was compelled to renounce the title of king. He seems to have spent the next three years fighting his Jewish opponents and recovering from his bitter defeat. Having subdued their most powerful stronghold, Bethoma, he made his opponents prisoners, and bringing them back to Jerusalem, he ordered eight hundred of them to be crucified. Both Josephus and Qumranic *Pesher Nahum* echo the horror of such a cruel deed.

The last period of his rule (84–76 B.C.E.) was the culmination of his power and of the territorial expansion of his kingdom. Both Ptolemaic Egypt and Seleucid Syria were on their decline. Although he still endured attacks from Seleucids, Antiochos XII Dionysus attempted to again subdue Judaea on his way against the Nabateans and from Nabateans themselves, when Aretas became the ruler of Damascus. However, with the appearance of the Armenians under Tigranes in 83 B.C.E., and Lathyrus' death in 80 B.C.E., Yannai got rid of his old enemies and felt free to recapture most of the territory east of Jordan, the Decapolis and Golan. New series of coins were struck bearing the title of king once again.

Yannai met his death while besieging Regev, a fortress east of Jordan. According to his will, the throne went to his widow. He left two sons, Hyrcanus and Aristobulus, the former nominated high priest by Alexandra, until the civil war which erupted after the death of their mother (67 B.C.E.).

Yannai and the Pharisees

Josephus on the one hand and rabbinic sources on the other record a number of clashes between Yannai and the Pharisees (e.g., Ant., 13:372–383; Kid. 66a; Sot. 47a; Sanh. 19a). However, according to Josephus (Ant., 13:400–404), on his death bed the king advised his wife to yield a certain amount of power to them, so that she could govern with no problems.

Yannai and Qumran Literature

Yannai appears at least in two Qumranic compositions. *Pesher Nahum* is indignant of the way the "Lion of Wrath" took revenge of "those who seek smooth things" by hanging men alive after Demetrius' unsuccessful attempt to conquer Jerusalem (1Qp Nahum 1:2–8). The historical coincidence points to Yannai's deed against his opponents, mainly Pharisees (here surnamed "those who seek smooth things").

Although the king is named "Alexander Yannai" by Josephus and "Yannai the king" by rabbinic literature, his full name was "Alexander Jonathan" (or "Yehonathan") as attested to by his coins. Therefore most scholars think a previously unknown prayer (4Q448) recalls him when speaking of "Jonathan the king." The editors understood the prayer as "for the welfare of King Jonathan and his kingdom." However the meaning of the biblical phrases quoted by the author suggests another interpretation. It is rather a call to God to arise against Jonathan the king so that God's kingdom may be blessed.

Another group of texts, mainly *Pesher Habakkuk*, recalls the way the "Wicked Priest" persecuted the "Teacher of Righteousness," the head of the Dead Sea sect, and his group. The phrase "Wicked Priest" seems to aim at the High Priest living in Jerusalem, contemporary of the Teacher of Righteousness. Thus some scholars identify this figure with Alexander Yannai, while other scholars seek to identify him with one of his predecessors or successors. An additional hypothesis suggests to understand the phrase "the Wicked Priest" as a generic surname referring to each of the Hasmonean rulers, one after the other. The various opinions seem to result from the supposed times of the Teacher of Righteousness.

[Emmanuelle Main (2nd ed.)]

YARCHO, NOE (Noah; 1862–1912), Argentine physician. Yarcho was one of the first to practice medicine in the settlements of the *Jewish Colonization Association (ICA) in Argentina. Born of a religious family in Slutsk, Russia, he worked for a while in England and in 1893 he left for Argentina, accompanied by his wife, sister of the cooperativist leader Miguel *Sajaroff. They settled in the center of the Jewish settlements of Entre Ríos. In 1894 Yarcho faced an exanthematic typhoid epidemic which exhausted the newly arrived settlers. He later wrote the first medical study on this disease to be published in Argentina. He practiced his profession with fervent idealism, striving to give spiritual as well as physical help to the Jewish and native settlers of the vast region.

[Lazaro Schallman]

YARDENAH (Heb. יַרְדֶּנָה), moshav in northern Israel, 7 mi. (12 km.) N.E. of Beth-Shean, affiliated with Tenu'at ha-Moshavim. Yardenah was founded in the framework of the "town to country movement" in 1952 by laborers originating from Iraqi Kurdistan. The moshav, with 370 inhabitants in 1968, was outstanding among the Jewish settlements for the large size of its families. Ever since its founding Yardenah suffered from enemy attack and, in the period after the *Six-Day War (1967), came under particularly frequent and heavy shelling from Jordanian artillery from beyond the border. Intensive field crops, especially cotton, constituted the prominent farming branch. In 2002 Yardenah's population was 439. The name is derived from the nearby Jordan River.

[Efraim Orni]

YARĪM, town in the central mountains of *Yemen, about 60 miles (100 km.) south of *San'a on the way to Ta'izz, built on a 2,400 m high plateau and dominated by the massif of nearby Mount Sumarrah, which rises to about 3,000 m. Yarīm is rich in historical sites, including Ḥimyari. In antiquity, the Yarīm area was the core of the state of Ḥimyar, which ruled over much of southern *Arabia from about 115 B.C.E. to 575 C.E. The Ḥimyari capital was Ẓafar, about 10 miles (15 km.) south of Yarīm. In the geonic period there existed in Yarīm an important community which contributed to the Babylonian academies. One of the last *geonim* complained to two inhabitants of Yarīm that their townspeople had stopped sending contributions to the academy and demanded that what was legally owing to the academies be sent to him. There is no further record of Jews in Yarīm until the 18th century, when the traveler *Niebuhr makes a parenthetical reference to them. He writes that when, in 1763, the grave of one of his fellow travelers, who had been buried in Yarīm, was desecrated, the Jews were forced to see to his reburial, since they had to perform all lowly tasks. During the last generation before the emigration to Israel, the 100-family Jewish community dwelt in a separate neighborhood, with four synagogues. Their leader was R. Ḥayyim Qāfiḥ, whose father Mussa Qāfiḥ functioned as the regional governor under the Ottoman Turks, entitled to judge Jews as well as Muslims. Some of the Jews were wholesale traders, but most of them were craftsmen: weavers, ironsmiths, cobblers, potters, and carpenters.

[Yosef Tobi (2nd ed.)]

YARIV (**Rabinowitz**), **AHARON** (1920–1994), Israeli soldier and politician. Yariv was born in Riga, Latvia, and immigrated to Ereẓ Israel with his parents in 1935. He joined the *Haganah in 1938 and in World War II served in the Palestinian units of the British army and with the Jewish Brigade.

On the outbreak of the War of Independence he was appointed deputy-commander of the Alexandroni Brigade and subsequently commander of the Carmeli Brigade. He was later appointed head of operations of the Israel Defense Forces and from 1954 to 1956 headed the newly formed Staff School of the Army. In January 1964, he was appointed chief of military intelligence, a position he held until his release from the army in 1972 when he was appointed adviser to the prime minister on the war against terrorism abroad, serving in that capacity until 1973. On the outbreak of the Yom Kippur War he was appointed assistant to the chief of staff, and headed the negotiations for the disengagement of forces with Egypt on the Cairo-Suez road. Elected to the Eighth Knesset on behalf of the Israel Labor Party he was appointed minister of communications in the government of Golda Meir in March 1974 and minister of information in the government of Yitzhak Rabin in June of that year, but resigned in January 1975.

YARKON or **ME-YARKON** (**Jarkon**; Heb. מֵי[הַ]יַּרְקוֹן), river on the border of the tribe of Dan, which is described as passing Bene-Berak, Gath-Rimmon, and "Me-Jarkon, and Rakkon, with the border over against Joppa" (Josh. 19:45–46). The majority of scholars, regarding the form Rakkon as a haplography, identify the Yarkon mentioned there with the river known in Arabic as Nahr al-'Awjā, the second largest source of water in Israel. The Yarkon rises from the vicinity of Tell Aphek (Ra's al-'Ayn), approximately 8 mi. (13 km.) from the sea, and after describing a bow to the north, falls into the sea at Tel Aviv, after a course of approximately 16 mi. (26 km.). It receives several tributaries, of which the Naḥal Natuf (Wadi Deir (Dayr) Ballūṭ), from the north, and the Naḥal Aijalon (Wadi al-Muṣrā), from the south, are the largest. At present, the river is barred by a sandy spit, but in ancient times it was navigable for a certain length. This explains the existence of an ancient port and storage center at Tell Qasīle, approximately 2 mi. (3 km.) inland, on the northern bank of the river.

The name Yarkon is derived from the root *yarok* ("green"), which refers to the color of its waters. According to Greek legend, it was in the waters of this river that Perseus washed his sword after killing the dragon and liberating Andromeda on the rocks before Jaffa; therefore, at certain seasons, its waters run red. This fact is explained by the red soil (*ḥamrā'*) through which the Yarkon runs. In the Mishnah (Par. 8:10), it is referred to as Me-Puga, the waters of Pegai (the Greek name for Tell Aphek, from where the river rises). It is listed in the Talmud (BB 74b) and elsewhere as one of the four rivers of the Holy Land; due to its swampy origin, its waters were unusable for service in the Temple. As the most prominent of the east-west water courses passing the coastal plain, the Yarkon served as the boundary of the territories of Jaffa, Philistia, and Judea at various times. Passage over it was sufficiently difficult to cause the course of the Via Maris to be diverted so as to pass Tell Aphek, a fact which explains the importance of this site. Alexander Yannai tried to use the line of the river as an obstacle to the advance of the Seleucid army southward by fortifying it. Remains of his fortifications have been found at various places in Tel Aviv.

In early Arab times, the Yarkon was called Nahr Abu Futrus, a corruption of the name *Antipatris, the city founded by Herod at Tell Aphek. On its banks the famous battle of al-Tawwāḥīn between the Tūlūnid Egyptian and the Abbasid troops was fought for the possession of Palestine in 885. In Crusader times, it was known as the "River of Jaffa" (Flum de Japhe), rising at the "tower of the silent springs" (*Toron quod superiacet surdis fontibus*). Even at that time it was called Nahr al-ʿAwjā ("the tortuous river") by the Arabs, a name which the Crusaders corrupted to les Loges. The first accurate mapping of the Yarkon was made by Jacotin in 1799. In the 19th century, its basin became one of the centers of Jewish settlement, beginning with Petaḥ Tikvah and then Bene-Berak, Ramat Gan, and Tel Aviv. Its waters were used for irrigation and other purposes by the settlements along its course; a project to exploit it for generating electricity had to be given up. The crossing of the Yarkon by Allenby's army in 1917 marked the culmination of the first British campaign in Palestine. In recent years, half of its waters have been diverted to irrigate the Negev, thus reducing its level and drying out its bed drastically. The establishment of new settlements and industries along its course introduced pollutants into the water. As a result, only in the eastern part of the river, near its sources, is there running water. Its western part contains seawater. In 1988 the Yarkon Authority was established to clean up the river, and a large park, the Yarkon Park, was created on its western bank. However, the river remained polluted, and the Maccabiah tragedy of 1997, when a bridge collapsed as the Australian contingent crossed it, cost people their lives due to exposure to the polluted waters of the Yarkon.

[Michael Avi-Yonah / Shaked Gilboa (2nd ed.)]

YARKONAH (Heb. יַרְקוֹנָה), moshav in central Israel, in the southern Sharon south of Hod ha-Sharon. Yarkonah was founded in 1932 by veteran farm laborers of the "illegal" immigration and *Third Aliyah who, in the initial years, developed their homesteads and farms while continuing to earn their livelihood as hired laborers. After the *War of Independence (1948), two more moshavim, Adanim and Neveh Yarak, were established in the neighborhood. In 1970, Yarkonah had 110 inhabitants, in the mid-1990s the population grew to approximately 150, and in 2002 to 272. Its farming consisted mainly of citrus groves.

[Efraim Orni]

YARKONI, YAFFA (1925–), Israeli popular singer. Born in Givatayim, Yarkoni first became known during the War of Independence in the Ḥishtron military troupe, whose repertoire mainly suited the salon, e.g., the tangos "*Sheḥarḥoret*," "*Ḥabibi*," and "*Al Na Tomar Li Shalom*." At the same time, Yarkoni also sang military songs such as "*Bab el-Wad*." Although these were seen as a break with her previous style, in fact many songs, like "*Haʾamini Yom Yavo*," shared features of both. Shortly after the war, Yarkoni also became a leading singer of children's songs like "*Aggalah im Susah*," a song that combines Russian and Oriental influences. Yarkoni also followed folkloristic trends, especially in the masterful recordings with the Emanuel Zamir group. She remained a leading figure in Israeli popular music during the 1950s and 1960s. She performed the winning songs in 1965 and 1966 Israel Song Festival. In the 1970s she participated in several children's song festivals. Around 1970 she had new successes, such as "*Keshehayinu Yeladim*" (1969) and "*Pamela*" (1971). After the early 1970s she recorded few new songs but did produce new versions of her old repertoire, many of them collected in a 5-CD compilation of her songs (1998). In 1998, Yarkoni was awarded Israel Prize for her achievements in the field of Hebrew song.

YARMOLINSKY, AVRAHM (**Abraham**; 1890–1975), U.S. literary scholar and biographer. Born in the Ukraine, Yarmolinsky immigrated to the U.S. in 1913. He was head of the Slavonic division of the New York Library (1918–55) and was active in stimulating Slavonic research.

His major works include *Turgenev: The Man, His Art, and His Age* (1926); *Dostoevsky, A Life* (1934; republished in 1957 as *Dostoevsky, His Life and Art*); and *Literature under Communism* (1969), a study of literary policy under Stalin after World War II. He translated (with his wife Babbette *Deutsch) *Modern Russian Poetry* (1921), *Contemporary German Poetry* (1923), and *Russian Poetry* (1927). Yarmolinsky's Jewish interests were reflected in his study, *The Jews and Other Minor Nationalities Under the Soviets* (1928). He also wrote *Road to Revolution* (1957) and edited an *Anthology of Russian Verse, 1812–1960* (1962).

[Sol Liptzin]

YARMUK (Heb. יַרְמוּךְ), a confluent of the Jordan River on its east side. The Yarmuk is the second largest river in Ereẓ Israel (after the Jordan) in volume, and the third largest in length (after the Jordan and Naḥal Paran); it is the largest river in Jordan. The etymology and meaning of the name are unknown. The Yarmuk is first mentioned in Hebrew in the Mishnah: "The waters of the Jordan and the Yarmuk are invalid because they are mixed waters" (Par. 8:10), i.e., it was forbidden to use them for sprinkling in cases of uncleanness, for which purpose only running water is permitted (Num. 19:17). According to *Estori ha-Parḥi, the mixed waters in the Mishnah refer to the waters of Ḥammat-Gader, which empty into the Yarmuk (*Kaftor va-Feraḥ*, 7, ed. Luncz, p. 125) – thus the Mishnah considered the Yarmuk as the river starting at Ḥammat-Gader and

its continuation below. In the Babylonian Talmud (BB 74b) and *Midrash Tehillim* (to 24), on the other hand, the entire course of the river is called the Yarmuk, since it is enumerated as one of the four rivers comprising the border of Ereẓ Israel. The Yarmuk appears in variant spellings in Greek and Latin: Pliny the Elder, in the time of the destruction of the Second Temple, mentions it as Hieromices (not Hieromax) and it appears as such on coins of Gadara; on the Peutinger Map it appears as Heromicas. Byzantine writers of the 8th–11th centuries refer to it as Hiermochthas or Thos. In Arabic the lower course is called Nahr al-Yarmuk and the middle course is called Shari'at al-Munaḍira.

On maps the upper course coincides with Wadi Zaydī, the longest intermittent stream joining the Yarmuk. Wadi Zaydī rises in the heights of Mt. Bashan and receives water from ephemeral streams descending from Tell al-Jaynā' and Tell al-Kulayb, for about 12½ mi. (20 km.). In the mountains it contains water all year long. In the tableland it passes by Bozrah and Edrei, and after this point its continuation, called Wadi al-Madān in Arabic, contains water most of the year and often all year long. About 9 mi. (15 km.) northwest of Edrei the Madān is joined by Wadi al-Dhahab, which also descends from the Bashan, and 2 mi. (3 km.) after this junction a tributary with abundant and perennial water – Wadi al-Bajja – empties into the Dhahab. Wadi al-Bajja issues from a small lake and springs in Muzayīb. From this junction and below, the Yarmuk is a perennial river even in years of drought. After Edrei the bed of the Yarmuk deepens and after passing the mouth of the Bajja it becomes a deep gorge, which is much lower than the plateau on both its sides.

The tributaries to the east and west have not cut courses as deep as the Yarmuk and the smaller they are the higher is the level from which they fall to the bed of the Yarmuk. Waterfalls are thus created – in the small tributaries, right on the slope of the Yarmuk, and in the large tributaries, which have hollowed out channels as deep as the main bed, at some distance away. The waterfalls are especially numerous during heavy rains, when water also rushes down the ephemeral streams. The first large permanent waterfall is situated near Zīzūn north of the Yarmuk. About 3 mi. (6 km.) west of Zīzūn the Yarmuk receives the al-Shallāla River, which flows from the south from northern Gilead near the Jabbok; it is a perennial stream for the last 12½ mi. (20 km.) of its course. Then the al-'Alān River flows from the Bashan plateau and joins Wadi al-Iḥrayr (or Ḥarīr) near its mouth. In Arabic the 'Aānl is called "*nahr*," i.e., a perennial stream, but this is true for only about 9 mi. (15 km.) of its length. The Iḥrayr rises in the northern Bashan tableland near the large village of Sanamayn, and the network of its tributaries also extends through the northern part of Mt. Bashan. Because of its large drainage area, huge quantities of water rush down during torrential rains and contribute much to the flooding of the Yarmuk.

The last large tributary of the Yarmuk is Nahr al-Ruqqād, which rises in northern Golan near Tell al-Shaykha and passes through the eastern part of the Golan. From the mouth of Wadi Shallāla to Ḥammat-Gader, the Yarmuk plain forms an arc to the north whose chord is about 12 mi. (19 km.) long, and when the lower part of the Shallāla is added, a semicircle is formed with a diameter of about 13½ mi. (22 km.). Inside the arc several small streams from the Gilead empty into the Yarmuk. From Ḥammat-Gader the Yarmuk flows in an easterly direction, and when it enters the Jordan Valley, it turns southeast to follow the southern slope of the valley. As long as the Yarmuk is in a gorge, its bed is 56 to 63 ft. (17 to 19 m.) wide and only a few small sections are not affected during its flooding. In the Jordan Valley the bed at first is only slightly lower than its banks but after several hundred meters the river bed cuts deeply into the soft marl soil.

A famous battle between the Byzantines and the Arabs was fought on the banks of the Yarmuk on Aug. 20, 636. Outflanked by the Muslims from the northeast and blinded by a desert wind from the sandy south, the Byzantine army perished in the ravines of the river gorge; this battle decided the fate of Syria in favor of the Muslims. In memory of this victory, the "Liberation Army" of Fawzi al-Kaukji in 1947 called itself the "Army of the Yarmuk"; it was defeated and dispersed in 1948 near *Mishmar ha-Emek.

To utilize the Yarmuk's water for irrigation by gravitation, it must be diverted before it leaves the gorge either into a canal extending along the eastern end of the Jordan Valley or into a high aqueduct. The former method was used by the Jordanians in 1960–62 and the latter by Jews in Jordan Valley settlements. In 1908 a railway line was installed through the Yarmuk Valley to connect Haifa with the Hejaz railway (now operating from Damascus to Ma'on in Edom), but in 1948 this linkup with Haifa was cut and the railway's importance ceased. From 1920 the Yarmuk formed the boundary between Syria and Jordan. Its name regularly crops in talks about a regional peace agreement in the Middle East, due to its importance as water source for Israel, Syria, and Jordan.

[Michael Avi-Yonah / Abraham J. Brawer /
Shaked Gilboa (2nd ed.)]

YARON, REUVEN (1924–), Israeli scholar of Roman and ancient Near Eastern law. Yaron, born in Vienna, settled in Palestine in 1939. He taught jurisprudence at the University of Aberdeen (1956–57) and in 1957 began to teach Roman law at the Hebrew University in Jerusalem, and subsequently taught ancient Near Eastern law as well (from 1962). In 1967 he became dean of the law faculty at the Hebrew University. Yaron was an excellent Romanist and a leading historian of ancient Oriental law in the contemporary period, noted for his mastery of the sources and philology, methodological acumen, imaginative grasp of the legal milieu of antiquity, and selection of fundamental topics. His work testifies to the necessity of a background in non-Jewish legal developments for an understanding of Jewish ones. Yaron was appointed direc-

tor of the Jewish National and University Library, Jerusalem, in 1973, resigning in 1978 when he was appointed head of the Israel Broadcasting Authority.

Yaron's works in English include *Gifts in Contemplation of Death in Jewish and Roman Law* (1960); *Introduction to the Law of the Aramaic Papyri* (1961); and *The Laws of Eshnunna* (1969, 1988²). His Hebrew publications include *Ha-Mishpat shel Mismekhei Yeb* ("Laws of the Elephantine Documents," 1961) and *Meḥkarim be-Mishpat Romi* ("Studies in Roman Law," 1968).

YARON (**Zinger**), **ẒEVI** (1921–1977), Zionist thinker and educator. Born in Rzeszow, Poland; his family moved to Belgium in 1925. He escaped alone to England in 1940, studied at Yeshivat Etz Ḥayyim in London, and at Manchester University. During his stay in England he became a leading member of the Religious Zionist Youth Movement (Baḥad), serving as *madrikh* of the Thaxted Hachsharah Farm from 1945 to 1947 and director of the Mercaz Limud in Manchester from 1947 to 1950.

In 1950 he immigrated to Israel and was a founder of kibbutz Lavi in the Galilee, director of the cultural department of *Ha-Kibbutz ha-Dati from 1953 to 1957, deputy editor of the religious weekly *Panim el Panim*, and director of the religious section of the Youth and He-Ḥalutz Department of the Jewish Agency. He also taught at the School for Overseas Students of the Hebrew University.

He was a member of the Israel Interfaith Committee, editor of the quarterly *Forum*, and founder and first editor of *Ammudim*, the monthly of Ha-Kibbutz ha-Dati. His major work in addition to numerous articles on religion and state was *Mishnato Shel ha-Rav Kook* (The Teachings of Rabbi Kook, 1974).

YAROSLAVSKY, YEMELYAN (**Gubelman**; 1878–1943), Russian communist leader, publicist, and historian. Born in Chita, Yaroslavsky joined the Russian Social-Democratic Workers' Party at its founding in 1898 and became a close collaborator of Lenin. He moved to St. Petersburg in 1903 and participated in the revolution of 1905. During the Bolshevik Revolution of 1917, he was a leader of the armed uprising in Moscow and an active figure of the Communist Party. In 1923, he was made a member of the Central Committee of the Party. Yaroslavsky was one of Stalin's principal supporters. In 1921, he became one of the three secretaries of the Party Central Committee and in 1934 was made a member of the strategic Party Control Commission. He served on the Central Executive Committee of the U.S.S.R. and was a deputy to the Supreme Soviet. He was also a member of the editorial board of both the Party newspaper, *Pravda*, and the Party's theoretical organ, *Bolshevik*. Yaroslavsky acquired a notorious reputation as chairman of the League of Militant Godless, the Party organization that campaigned on behalf of atheism against all religions. He was the coauthor of an important history of the Soviet Communist Party, editor of the periodical *Istoricheskiy Zhurnal* ("History

Journal"), and served on the editorial board of *Istorik-marksist* ("The Marxist Historian"), a major scholarly journal. During World War II he was head of the Communist Party's propaganda department.

YARROW, SIR ALFRED, FIRST BARONET (1842–1932), British shipbuilder. Yarrow was the son of an Anglican merchant; his mother, Esther Lindo, came from an old Sephardi family. Yarrow was educated at University College School, London, and was then apprenticed to a marine engineer. The firm he founded in the 1860s, Alfred Yarrow & Co., became one of the leading naval boat builders in the world, producing 29 destroyers and many gunboats and other vessels for the Royal Navy. Yarrow pioneered the torpedo boat as well as a variety of important innovations in ships' boilers and propellers and introduced aluminum and other lightweight materials into ship design. In 1906–8 he moved his works from London to the River Clyde near Glasgow. He gave very substantial sums to charity and in 1916 was made a baronet (a hereditary knight.) His son SIR HAROLD YARROW, Second Baronet (1884–1962), was chairman of the firm for 40 years.

[William D. Rubinstein (2nd ed.)]

YARROW, PETER (1938–), U.S. folk singer, producer, composer, songwriter, member of the folk trio Peter, Paul and Mary. Born in New York City, Yarrow began his singing career after graduating from Cornell University. He moved to Greenwich Village, where he met Noel "Paul" Stookey and Mary Travers and formed the group Peter, Paul and Mary, which become the most popular folk group of the 1960s, as well as leaders of the 1960s folk revival. The group made its debut in 1961 at the Bitter End coffeehouse, a bastion of folk music, and recorded its eponymous debut album the following year, which spawned such hits as "Five Hundred Miles" and "Lemon Tree," as well as covers of Pete Seeger's "Where Have All the Flowers Gone" and "If I Had a Hammer." The album remained on the Billboard Top 100 for the next three years. "If I Had a Hammer" won the trio the first of its two Grammy Awards, for Best Performance by a Vocal Group and Best Folk Recording. The group's 1963 album, *In the Wind*, with its cover version of Dylan's "Blowin' in the Wind," sold 300,000 copies in less than two weeks. "Puff, the Magic Dragon," written by Yarrow as a college student in 1958, was first released on 1963's *Moving* and became a No. 1 single, and one of the most popular children's songs of all time. Yarrow's involvement in the U.S. civil rights movement led the group to sing "If I Had

a Hammer" at the historic March on Washington in 1963, as well as to participate in the Selma-to-Montgomery march in 1965. Yarrow was an active participant in the anti-Vietnam War movement, and coproduced numerous events for the peace movement. The group supported Senator Eugene McCarthy's presidential campaign for the democratic nomination in 1968, and independently released a single titled "Eugene McCarthy for President." Yarrow married the senator's niece, Mary Beth McCarthy, and the couple had two children, but later divorced. *Album 1700* (1967) initially spawned two hits, "I'm in Love With a Big Blue Frog," and "I Dig Rock and Roll Music," but it was not until two years later when DJs started playing "Leaving on a Jet Plane," a song by the then-unknown John Denver, that the album saw a No. 1 hit. In 1970, Yarrow pleaded guilty to taking "immoral and indecent liberties" with a 14-year-old girl who came to his hotel room for an autograph, and subsequently served three months in jail. He was pardoned by President Jimmy *Carter in 1981. By the time the group broke up in 1970 to pursue solo careers, it had earned eight gold and five platinum albums. Yarrow continued to focus on his songwriting and political activism, and produced three Emmy Award-winning CBS specials based on "Puff the Magic Dragon." In 1978, Peter, Paul and Mary reunited for an antinuclear benefit, which led to sporadic reunion shows throughout the 1980s. The group released a record of new material in 1988, *A Holiday Celebration*, and subsequently released several live albums and a few new albums of original material. Their children's album, and accompanying television special, "Peter, Paul and Mommy, Too," won the group a Grammy and an Emmy. The group was inducted into the Vocal Group Hall of Fame in 1999.

[Harry Rubenstein (2nd ed.)]

YASKI, AVRAHAM (1927–), Israeli architect. Born in Kishinev, Yaski was brought to Palestine in 1935. A prizewinning architect, he designed the social sciences wing of the Givat Ram campus of the Hebrew University, the IBM building in Tel Aviv, the Ben-Gurion University of the Negev campus, and the Gilo neighborhood in Jerusalem. In 1982 he was awarded the Israel Prize for architecture.

YASSER, JOSEPH (1893–1981), organist, musicologist, and theorist. Born in Lodz, Poland, he began his musical studies in Moscow at the age of six under the pianist Jacob Weinberg. In 1917, he graduated from the Moscow Conservatory, where he studied with Alexander Goedicke and Leonid Sabaneyev. There he was appointed director of the Organ Department and concurrently served as organist for the Bolshoi Theater. Following a three-year sojourn in China, where in Shanghai he directed a choral society; he immigrated to the United States in 1923. Settling in New York, he established a reputation as a performing artist, whose organ recitals earned him positions at prestigious Reform synagogues, and ultimately as organist and choirmaster at Temple Rodeph Shalom from 1929 to 1960.

He published an important treatise, *A Theory of Evolving Tonality* (1932), which postulates the evolution from the primitive pentatonic (5-tone) through the diatonic (7-tone) and chromatic (12-tone) scale to the formation of an ultrachromatic scale of 19 microtonal intervals of equal size. His second and controversial treatise on *Medieval Quartal Harmony* (1938) proposed the 4th as a preferred interval over the 5th for accompanying plainchant. Yasser wrote articles on various aspects of Jewish and Russian music, served on the faculty of the Cantors' Institute at the Jewish Theological Seminary (1952–60), and was one of the founders of the American Musicological Society (1935); he was actively involved with the Jewish Music Forum (1945–55) and the National Jewish Music Council (1944–60).

BIBLIOGRAPHY: MGG²; NG²; A. Weisser, *Selected Writings and Lectures of Joseph Yasser: An Annotated Bibliography* (1979); H. Berlinski, "Joseph Yasser (1893–1981): A Personal Recollection," in: *Musica Judaica*, 4 (1981–82), 113–20.

[Israel J. Katz (2nd ed.)]

YASSKY, HAIM (1896–1948), medical administrator in Palestine. Born in Kishinev, Bessarabia, Yassky took part in underground Zionist activities and in Jewish *self-defense in Odessa. He went to Palestine in 1919, just before his final medical examinations. After working as a sanitary inspector, he went to Geneva, completing his medical studies and specializing in ophthalmology. He joined the *Hadassah Medical Organization in 1921. In 1924 he successfully tackled the scourge of trachoma in Judea and earned wide recognition. Appointed director of Hadassah Medical Organization in 1931, he initiated the erection of the Rothschild-Hadassah University Hospital on Mount Scopus (1939), a medical center that established high standards in the Middle East. He developed blueprints for the Jerusalem Medical School and for the immigrant medical service. Yassky was killed by Arabs in the massacre of April 13, 1948, while leading staff and colleagues in a convoy from the city to Mount Scopus. The Hadassah Hospital in Beersheba and the chair of social medicine at the Hebrew University-Hadassah Medical School were named after him.

[Eli Davis]

YATED NEEMAN, Israeli daily newspaper published in Benei Berak. Established in 1985, *Yated Neeman* is the acronym of "*Yoman Da'at Torah*" ("Torah Opinion Journal"). It was founded as a rival newspaper by the Degel ha-Torah Party after Rabbi Eliezer *Shach, the spiritual leader of Lithuanian ("Litvak") Jews, resigned from the Council of Torah Sages – the umbrella group of ḥaredi rabbis – after the Council declined to publish his views in the Agudat Israel party newspaper *Hamodia* in a dispute with the Gur Rebbe over sanctioning the erection of a hotel in Tiberias at the site of Jewish graves. Its founding editor was Moshe Grylick. In 1988 he was succeeded by Natan Grossman.

Yated Neeman and *Ha-Modi'a* remained the only party newspapers in Israel, the former reflecting the views of Degel

ha-Torah, as when it refused to take advertisements for housing in the ḥaredi town of Emanuel because it was beyond the "green line"; Shach argued that *piku'aḥ nefesh* (the saving of life) took precedence over the biblical injunction not to relinquish Jewish land in Ereẓ Israel.

In addition to party journalism, it also acted as an educational instrument. The newspaper was controlled by a spiritual committee, whose censors examined the contents of each issue – editorial and advertising – prior to publication to ensure it did not offend ḥaredi sensibilities. Sex-related content and pictures of women were taboo in conformity with ḥaredi views on modesty (*ẓeniyut*). The names of women journalists on the newspaper were abbreviated. Much crime went uncovered. Entertainment and sports were also not covered. In aspiring to build the model Jewish society, the ḥaredi newspaper was also a channel to educate readers in the historical ḥaredi opposition to Zionism as premature vis-à-vis the coming of the Messiah, and to attack Israeli institutions like the Knesset and the Supreme Court for making decisions regarded as running counter to Torah values.

It published eight pages daily, including national political news, news about the Lithuanian ḥaredi sector, and world news. On weekends it had two supplements: a magazine, and a *kadosh* section containing inspiring essays by rabbis on the weekly Bible reading, Jewish law, and Jewish history. On Thursdays there were family supplements geared to women and on Tuesdays a children's supplement.

Shach's death in 2001 left a void. The dispute over whether Rabbi Elyashiv or Rabbi Steineman would become Shach's recognized successor was also played out in *Yated Neeman*. The editors became divided, with the daily edition, edited by Grossman, identifying with Rabbi Elyashiv and the Sabbath edition identifying with Rabbi Steineman.

Nineteen percent of ḥaredim read *Yated Neeman* daily in 2005, and 21% read the Sabbath eve issue. A 1995 survey found that 64% of the newspaper's readers defined themselves as Lithuanian ḥaredim and 22% were undefined ḥaredim (only 7% replied that they were ḥasidim). The newspaper had to contend with a rival ḥaredi commercial press, which grew in the 1980s and 1990s. A weekly English-language newspaper broke away from the Hebrew paper and was published in the United States. In conformity with the ḥaredi rabbinic ban on the Internet, the newspaper had no website.

[Yoel Cohen (2nd ed.)]

YATES, SIDNEY RICHARD (1909–2000), U.S. lawyer and congressman. Born in Chicago, Illinois, Yates received a B.A. from the University of Chicago in 1931 and a Juris Doctor degree in 1933. He was admitted to the Illinois bar in 1933, and practiced law in his own firm. He was assistant attorney to the

Illinois Bank Receiver (1935–37) and assistant attorney general attached to the Illinois Commerce Commission (1937–40). He served in the U.S. Navy during World War II (1944–46). First elected to Congress in 1948, Yates was on the Appropriations Committee and the Committee on Small Business of the House of Representatives for ten years. In 1962 he yielded his seat to run successfully for the Senate. The following year President John F. Kennedy appointed him U.S. representative to the Trusteeship Council of the United Nations, with the rank of ambassador. There he served until 1964, when he returned to his former position in the House of Representatives, remaining there until 1999. A friend of Adlai Stevenson, he was always considered a liberal. He opposed the supersonic transport (SST) and the Sentinel antiballistic missile system (ABM), fought for ecology measures, urban housing improvements, and changes in the electoral system. Yates was a member of the American Veterans Committee, the Decalogue Society of Lawyers (editor of its bulletin in 1947), and the Chicago Council of Foreign Relations.

YAVETS, ZVI (1925–), historian. Yavets was born in Czernowitz, Romania, and made his way to Palestine in 1944. He obtained his doctorate from the Hebrew University of Jerusalem in 1956, and after few years as a lecturer at the Hebrew University of Jerusalem, he moved to Tel Aviv University in 1959. In 1962–64 he served as dean of University of Addis-Ababa in Ethiopia. In 1964 he was appointed as dean of Humanities in Tel Aviv University and from 1966 he was chairman of the Department of History at Tel Aviv University. In 1970 he became chairman of the Graduate School of History. Yavets also held the Lessing Chair in Roman History from 1976. His book *Princeps and Plebs* (1969) was of seminal importance to the field of Roman history. His other books – he wrote 23 and edited 9 – and over 50 articles made significant contributions to the study of Greek, Roman, and Jewish history in ancient times. He was awarded the Israel Prize for the humanities in 1990.

[Fern Lee Seckbach / Shaked Gilboa (2nd ed.)]

YAVIN, ḤAYYIM (1932–), Israeli TV news presenter. Yavin began his media career in 1956 on Israel's Kol Israel radio station as a news, entertainment, and music presenter. In 1962 he helped start up a new radio station, Ha-Gal ha-Kal, which later became Reshet Bet, Kol Israel's second station. Subsequently he became a producer, editor, and presenter in the documentary department. When the Israeli government decided to establish a TV channel, he was chosen to present the first news edition. From then on he was the main presenter of the nightly news on Israeli TV. He also produced TV documentaries and taught in academic institutions. Yavin was famous for his announcement of Menaḥem *Begin's 1977 election win with the single word *mahapakh* ("upset"), which marked a dramatic highpoint in Israeli broadcasting and became a Hebrew idiom. In 1977 he was awarded the Israel Prize for media.

YAVNE'ELI (Jawnieli, Warshavsky), SHEMUEL (1884–1961), labor leader in Erez Israel. Born in Kazanka, a village near Kherson, Ukraine, Yavne'eli went to Erez Israel in 1905, worked as an agricultural laborer in Judea, and contributed to the labor periodicals, particularly *Ha-Po'el ha-Za'ir*. In 1911 he was sent to *Yemen at his own request by the Palestine Office of the Zionist Organization to study the Jewish community there and encourage it to migrate to Erez Israel. He undertook two lengthy journeys in Yemen: one from *Aden through San'a to Hodeida, and the other from Aden to *Hadramaut, reaching *Habbān. Yavne'eli rode on mules and donkeys; he was bearded and dressed in Yemenite fashion. The Jews of Yemen and Hadhramaut saw in him a harbinger of the imminent redemption of the people and the land of Israel through *aliyah* and by tilling the ancestral soil. The journey lasted over a year, and subsequently large groups of Yemenite Jews migrated to Erez Israel, reaching it before the outbreak of World War I. The journey is described (with documents) in Yavne'eli's book, *Massa le-Teiman* ("Journey to Yemen," 1952). He was a member of the executive committee of the *Aḥdut ha-Avodah Party and later a member of the *Mapai central committee. He was also active in the *Histadrut in the cultural and educational spheres, and also in the social insurance system.

His other books include: *Bi-Negohot ha-Yamim* (collected articles 1951) and *Aliyat ha-Yesod* (1952). He edited the writings of Berl *Katznelson and published studies in Zionist history: *Tekufat Ḥibbat Ziyyon* (2 vols., 1961[2]) and *Be-Vokrah shel Tenu'ah* (1939). Three volumes of his collected works appeared in 1961–62 (bibliography of his writings, vol. 3, 335–56).

YAVNEH, development town in central Israel, 5 mi. (8 km.). S.W. of Reḥovot. At the end of the 19th century the population of the Arab village Yibn, on the site of historical *Jabneh, increased due to the proximity of such Jewish settlements as *Gederah and *Reḥovot, which supplied opportunities for hired labor and constituted markets for farm products. Arab farmers added garden crops to their grain fields and later planted citrus groves. In 1943 the village had about 3,600 inhabitants and in 1947 about 4,000. During the *War of Independence *Haganah forces occupied Yibnā in May 1948, thereby halting the Egyptian army's advance against Jaffa and Tel Aviv. From the end of 1948 Jewish immigrants were housed in the abandoned village, and in 1949 a number of moshavim – Ben Zakkai, Bet Gamli'el and Benayah – were founded in the vicinity. Yavneh gradually became a semi-urban agglomeration and received municipal council status. In the first phase, small trade, hired labor in farming and industry, and some auxiliary farming formed a narrow economic base. Living standards were low, housing was often primitive, and social cases were numerous. With progressive industrialization, including the transfer of several enterprises from the Tel Aviv area to Yavneh, the town progressed economically, particularly in the 1960s. It contains leather, textiles, metals, and other industries. New housing quarters were built and social and educational standards improved. Its population increased from 1,600 in 1953 to over 10,100 in 1970. By the mid-1990s the population was 25,600, further rising to 31,700 in 2002 and occupying an area of 12 sq. mi. (30 sq. km.). Yavneh received city status in 1986. The main latter-day economic branches were industry, crafts, commerce, and services. A splendid *Mamluk building is traditionally held to house the tomb of R. *Simeon ben Gamaliel II, the Sanhedrin president at Jabneh.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

YAVNEH (Heb. יַבְנֶה), kibbutz in the southern Coastal Plain of Israel, about 5 mi. (8 km.) S. of the town of Yavneh, affiliated with Ha-Kibbutz ha-Dati. It was founded in 1941 by pioneers from Germany. They were later joined by members from English-speaking and other countries and by Israeli-born graduates of the *Bnei Akiva movement. Yavneh soon became a center of the religious kibbutz movement and set up a yeshivah, Kerem be-Yavneh, and a *Youth Aliyah village, Givat Washington. In 1970, Yavneh numbered 645 inhabitants; a further 200 lived at the yeshivah. In the mid-1990s the population was approximately 730, rising to 1,030 in 2002. The kibbutz developed intensive, mostly irrigated farming as well as having poultry, turkeys, dairy cattle, and field crops. It also produced cattle feed and had a hatchery turning out 600,000 chicks a week along with a food preserves plant and watch factory. The historical name Yavneh was chosen for the kibbutz for its proximity to the historical site of *Jabneh.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

YAVNEH-YAM, LEGAL DOCUMENT FROM, an inscribed potsherd (maximal measures: 8 × 6 in., or 20 × 16 cm.) containing a Hebrew letter of 14 lines, found in the guardroom of an ancient fortress excavated at Mezad Ḥashavyahu by J. Naveh (1960), about one mile south of Yavneh-Yam (Minat-Rubin). The examination of the pottery found on the site (partly East Greek sherds of the Middle Wild Goat Style from 630–600 B.C.E.), the historical and geographic considerations, as well as the paleographic evidence indicate that the fortress was built by *Josiah king of Judah (640–609 B.C.E.).

The letter begins with the following phrase: "Let my lord the governor hear the word of his servant." The addressee apparently was Josiah's military governor in the newly conquered coastal area which formerly belonged to the Philistines. In the letter, written by a local scribe, a reaper, who was employed in harvesting at a royal estate named Ḥazar-Asam, complains of the confiscation of his coat by a man named Hoshaiahu the son of Shobai, evidently the governor's official. It seems that the charge in question was one of idling. The reaper requests the governor to return his garment, because he has finished his quota and his fellow reapers are prepared to testify his innocence.

This document sheds light on laws concerning negligence in the biblical period, well known from cuneiform sources (see

Driver-Miles in bibl.). Exodus 22:25–26, which admonishes the creditor to give back the debtor's garment "before the sun goes down," reflects a similar situation, and was instituted to protect the debtor.

[Joseph Naveh]

YAVOROV (Pol. **Jaworów**), city in Lvov oblast, Ukraine, within Poland until World War II. The first information about Jewish settlement in Yavorov dates from 1538. The community increased during the 16th and 17th centuries. In 1627, 56 Jewish families are recorded, 23 of them houseowners; besides merchants and artisans the community included viticulturists. An agreement concluded in 1641 between the Jews and burghers of Yavorov regulated the social and economic status of the Jews of the city. Many Jews in Yavorov perished during the *Chmielnicki massacres in 1648. The community was later reconstituted; in 1658 it received assistance from King John Sobieski, the owner of the city, in building a magnificent wooden synagogue. Within the communal framework, the Yavorov congregation formed part of the borough of *Lvov, and played an important role in community affairs. The Jewish population in Yavorov numbered about 700 in 1765; 1,837 (about 21% of the total population) in 1857; 2,405 in 1921; and 2,950 (about 27.5%) in 1931. Among scholars of Yavorov, the best known are Ḥayyim b. Leib, *parnas* and leader of the Councils of the *Lands from 1673 to 1690; the preacher Berechiah *Berakh the younger, who lived in Yavorov between 1725 and 1730; and Jehiel *Altschuler (about 1753).

[Aryeh-Lieb Kalish]

Holocaust Period

Before the German invasion (June 1941), the Jewish population of Yavorov numbered more than 3,000. Early in July 1941 the Germans ordered the Jews to remove all ritual articles and prayer books from their homes, throw them into the flames of the burning synagogue, and stand by and chant religious melodies. That month 15 persons were shot. In April 1942, 1,000 young Jews and in July, 100 girls were deported to the Janow camp. On Nov. 7–8, 1942, an *Aktion* took place: 1,300 persons were deported to the *Belzec death camp and about 200 were shot on the spot. Some 200 persons found refuge in hideouts but were discovered and shot a few days later. The remaining Jews were concentrated into the ghetto, where Jews from Mosciska, Krakowiec, Sadowa Wisznia, Wielkie Oczy, Szklo, Ozomle, and other nearby towns were also brought. In the spring of 1943 an organized group of youths fled to the forest. They obtained arms and conducted partisan activities in the Lubaczewski area. Artur Henner headed one group and Henry

Gleich another. Most of the youths fell in battle. On April 18, 1943 the ghetto was liquidated. Some Jews hid in bunkers in the Janow forest, but most of them were exterminated.

YEAR (Heb. שָׁנָה, *shanah*), the period during which the earth makes one complete revolution around the sun. This period corresponds roughly to 12 revolutions of the moon around the earth. The determination of the length of a year and its 12 parts for fixing agricultural, cultic, and political cycles led to the development of calendars. Three of these are clearly attested in the Bible. The most common one, which is accepted by the priestly stratum of the Pentateuch (e.g., Lev. 16:29), designates the months of the year numerically as do the pre-Exilic prophets (e.g., Jer. 28:1). Elsewhere in the Pentateuch, as in the pre-Exilic historical books, the months are given names of apparently Canaanite origin. The Book of Deuteronomy employs each system once (Deut. 1:3; 16:1). Post-Exilic writings designate the months by names of Babylonian origin.

The priestly calendar called for a solar year made up of 12 months of 30 days each. Thus the sun and moon were to "serve as signs for the set times – the days and the years" (Gen. 1:14), but not for the months. Consequently, the duration of the Deluge – from the 17th of the second month to the 17th of the seventh month – was exactly 150 days (Gen. 7:11; 8:3–4).

In this calendar the days were counted from sunrise, as noted by Ibn Ezra in his commentary on Genesis 1:5. Leviticus 23:32, however, may point to the reckoning of days from the end of twilight.

The first month of the year in the priestly calendar was that in which Passover fell (Ex. 12:1–2, 18). Thus there were five and a half months intervening between the first day of the Feast of Tabernacles (Lev. 23:39 ff.) and the beginning of the new year and exactly six months between the former and the first day of the Feast of Unleavened Bread. A second biblical calendar, that of the Covenant Code (Ex. 21–24) and the Smaller Covenant Code (Ex. 34) designated the Feast of Ingathering as the end of the year (Ex. 23:16) or the turn of the year (Ex. 34:22). In this calendar, therefore, the Feast of Unleavened Bread would presumably come in the seventh month. The latter was designated by the name Abib, "green ear of grain," rather than by number.

The designation of this month by name and the general agreement that the Covenant Code reflects the early monarchical period or the period of the Judges have led to the assumption that the calendar of JE is the same as that referred to in I Kings 6–8. There it is stated that the foundations of Solomon's Temple were laid in the month of Ziv (I Kings 6:1,37), that the Temple was completed seven years later in the month of Bul (I Kings 6:38), and that it was dedicated in the month of Ethanim (I Kings 8:2). The special word for month (Heb. *yeraḥ*) used in these contexts which is attested altogether only 12 times in the entire Hebrew Bible, refers specifically to a lu-

nar month. In each of these passages in 1 Kings the narrator gives the equivalent date according to the priestly calendar. The lunar month of Ziv is therefore designated also as the second 30-day month (Heb. *ḥodesh*).

Evidently the transition from a year of named lunar months to a year of numerically designated months of 30 days each took place between the time of King Solomon and the redaction of the Book of Kings. The months of the later calendar were designated by the term previously employed for New Moon (Heb. *ḥodesh*, e.g., 1 Sam. 20:18).

The calendar of the early monarchy corresponds to the *Gezer Calendar in three respects. These are (1) the lunar month (Her. *yeraḥ*); (2) the association of the names of months with agricultural phenomena; and (3) the beginning of the year with the ingathering (Heb. *ʾasif*).

There is no biblical evidence as to how the lunar calendar of the early monarchy was reconciled with the solar year. It is obvious, however, that this agricultural calendar could not ignore it. The 360-day priestly calendar, however, may very well not have been reconciled with the true solar year by intercalation inasmuch as the Egyptians assumed a 360-day year down to 237 B.C.E.

The third biblical calendar, which is first attested in Zechariah 1:7 and 7:1, employs the Babylonian month names, which go back to the calendar of Nippur that antedated Hammurapi. According to rabbinic tradition, these names were imported by those who returned to the land of Israel from the Babylonian Exile (TJ, RH 1:2, 56d). It is most likely that these immigrants also introduced the lunar-solar calendar and the intercalation of a month to reconcile the lunar and solar years, a characteristic of the Babylonian calendar. The adoption of the Babylonian calendar was also responsible for the custom of reckoning the day from the previous evening (e.g., Esth. 4:16; Dan. 8:14). While Zechariah and Esther (Esth. 2:16, et al.) clarify dates in the priestly calendar by reference to the Babylonian system, Nehemiah (Neh. 2:1) employs only the Babylonian names of months.

The Book of Jubilees and the Book of Enoch both reflect sectarian tendencies which regarded the Babylonian lunar-solar calendar as offensive to God as the eating of blood (Jub. 6:38). The sectarians opposed the rabbis' adjustment of the calendar based on the observation of the moon, and they insisted on no deviation from a year of 52 weeks and 364 days (Jub. 6:30–32). The 364 days were attained by counting 12 months of 30 days each and four intercalary days (1 En. 82:6). Despite speculations to the contrary, the testimony of the sources admits of no further adjustments.

It has been widely asserted that the priestly calendar's numbering of the months beginning with that in which Passover falls reflects the Babylonian *akītu*-festival or spring New Year. Y. Kaufmann, however, has argued convincingly that both the spring and the autumn New Years are of equally ancient native Israelite origin. Thus the very oldest biblical calendars (Ex. 23:15; 34:18) begin the numbering of the festivals with the Feast of Unleavened Bread while even the priestly

calendar figured the beginning of the agricultural year from the seventh month of the liturgical year (Lev. 25:8; cf. Deut. 11:12; 31:10).

Aside from the 50 days which intervene between Passover and Pentecost (Lev. 23:16; Deut. 16:9), there is no evidence for a pentecostal calendar in ancient Israel. The theory which assumes such a calendar is based on a most dubious interpretation of the time-unit *ḥumuštum* mentioned in Old Assyrian economic texts from Cappadocia.

In the Pentateuch years and months are sometimes numbered from the Exodus (Ex. 19:1; Num. 9:1) as in 1 Kings 6:1. The pre-Exilic prophets and historical books generally number the years in accordance with the years of the reign of the kings of Israel and Judah while post-Exilic writers number the years with reference to the years of the reign of the ruler of Persia (Haggai 1:1; Neh. 2:1).

In Jewish tradition, the religious year begins in the month of Nisan, while the civil year (e.g., in reigns of kings or in contracts) in Tishri.

YEDIDYAH (Heb. יְדִידְיָה), moshav in central Israel, 3 mi. (5 km.) N.W. of Netanyah, affiliated with Tenu'at ha-Moshavim. Yedidyah was founded in 1935 by settlers from Germany and had 285 inhabitants in 1970. In the mid-1990s the population was around 395, further increasing to 489 in 2002. Its economy was based mainly on citrus groves, olive plantations, flowers, plant nurseries, dairy cattle, and poultry. The moshav was named after the philosopher Philo (Yedidyah).

YEDINTSY (Rom. **Edineţi**), town in N. Moldova in the region of Bessarabia. Yedintsy developed in the first half of the 19th century from a village into an urban settlement as a result of the settlement of Jews who were then coming to Bessarabia. In 1897 the Jews numbered 7,379 (72 percent of the total population) and in 1930 5,341 (90.4 percent). The writer Judah *Steinberg lived there at the end of the 19th century. The institutions of the community included a hospital, established in 1930, and a *Tarbut school.

[Eliyahu Feldman]

Holocaust Period

The town was occupied by Germans and Romanians on July 5, 1941. Within two days 500 to 1,000 Jews were murdered. Women and young girls were raped and some of them committed suicide. The victims were buried in three large ditches and the Jewish gravediggers who had interred the bodies were in turn murdered and buried on the spot. Romanian

gendarmes and troops were assisted in the massacre of the Jews by many of the peasants living in the area. In the middle of August a concentration camp was set up at Yedintsy, where all surviving Jews and those from different places in the north of Bessarabia, particularly from *Bukovina, were interned. In September there were about 12,000 Jews in the camp. Many of the inmates succumbed to disease, cold weather, hunger, and thirst; 70 to 100 persons died every day. On Sept. 16, 1941 all the inmates of the camp were deported to *Transnistria and only a few managed to survive. The few dozen families still alive at the end of the war settled either in Chernovtsy or in Israel. Only a handful chose to return to Yedintsy. In the late 1960s the Jewish population was estimated at about 200. There was no synagogue although the Jewish cemetery was still extant.

YEDIOTH AHARONOTH, afternoon daily newspaper founded in Tel Aviv in 1939 by Nahum Komerov. The following year the newspaper came into the possession of a printer named Alexander *Mozes. Its editorial operation was administered by Alexander's father, Yehudah, who took on the title of publisher, and brother, Noah. The paper consisted of mostly two pages daily, and had a circulation of only 30,000. Facing heavy financial losses, the family sold half of the newspaper's stock to *Mapai in 1949. But its major crisis had occurred a year earlier in February 1948, when its editor, Dr. Azriel *Carlebach, and most of its journalistic and administrative staff walked out overnight, partly because of excessive intervention by management in editorial matters, and a lack of clear demarcation between editorial content and advertising interests. The group formed their own newspaper, *Maariv, to be owned and run by journalists. *Maariv* grew to became Israel's largest newspaper with an estimated circulation of 200,000. Rebuilding *Yedioth Aharonoth*, Yehudah Mozes appointed Dr. Herzl *Rosenblum as editor, with responsibility for the op-ed pages and a daily signed editorial which appeared for over 40 years until his retirement in 1986. Dov *Yudkovsky, the managing editor for news, conceived the newspaper to be the "the people's newspaper," with both a tabloid appearance and editorial matter of interest to readers from the professional classes. With the death of Yehudah in 1955, Noah Mozes became publisher. By the end of the 1960s, *Yedioth Aharonoth* drew even with *Maariv* in its circulation war, and in the mid-1970s took over the lead, maintaining its position since. Its publication schedule gradually moved to the early morning. By the end of the century, the newspaper had achieved a very high circulation: a 2005 Teleseker survey reported that 42% of Israelis read it daily, and 54% the Friday weekend issue.

The newspaper's financial structure is centralized, with its company stock comprising 100 basic shares and 1,400 regular shares. The basic share stock was divided between fam-

ily members. Following Noah Mozes' death in a traffic accident in 1986, his son, Arnon ("Noni"), became publisher and sought to monopolize the running of the newspaper and its associated operations by buying out the stock of other family members. Dov Yudkovsky, who was Yehudah Mozes' cousin, was fired, and he moved to *Maariv* where he became editor. In the 1990s the newspaper became involved in the so-called wiretapping affair with *Maariv*. Editor Moshe Vardi and assignments editor Ruth Ben Ari received suspended sentences. Vardi was reinstated afterward and continued as editor until his retirement in 2004, upon which Rafi Ginat, an Israel Television journalist, was appointed editor.

In 2000 the newspaper created an Internet website, Y-Net, with a separate reporting staff. In 2005 it had 3.3 million users monthly. The newspaper's growth in the 1980s and 1990s extended to a chain of 17 local newspapers, special interest publications including women's magazines, shares in the Channel 2 television network, and book publishing.

[Yoel Cohen (2nd ed.)]

YEFET, SARAH (1934–   ), Israeli historian specializing in the biblical historiography of the Second Temple period and the Jewish interpretation of the Bible in the Middle Ages. Yefet was born in Petaḥ Tikvah. She received her Ph.D. in Bible studies from the Hebrew University of Jerusalem in 1973, becoming a lecturer (1973) and professor (1987) in the Department of Bible Studies there. From 1984 to 1986 she was the head of the department. From 1990 to 1993 and in 1996 she served as professor in the Beit Midrash for Jewish Studies in Jerusalem. During these years she was a visiting professor in various universities in the United States and Britain, including Berkeley, Oxford, Harvard, and Cambridge. In 1996–97 she was the chairwoman of the academic committee of Magnes Press and in 1997–2001 she was the head of the National and University Library. Yefet published many articles and books, among them *Rabbi Samuel ben Meir's Interpretation of Ecclesiastes* (1985); *Rabbi Samuel ben Meir's Interpretation of Job* (2000); *Studies in Bible* (1986); and *The Bible in the Light of Its Interpreters* (1996). In 2004 she received the Israel Prize for Bible studies.

[Shaked Gilboa (2nd ed.)]

YEFINGAR, Jewish agricultural settlement on the River Ingul (Kherson district, Nikolaev province of Ukraine), which existed from 1809 to 1941. The first settlers attracted by the political support of the Czarist government for agriculture were, evidently, from Lithuania. There were 48 families with 276 people who originally took up viticulture and kitchen-gardening. In 1897, Yefingar had a Jewish population of 2,038 out of a total population of 2,226 and had a Jewish school. Under the Soviets a Jewish collective farm was established in Yefingar which became one of the most prosperous in the province. With the German attack on Russia in June 1941 almost all the male population was called up military service; several days before the arrival of German forces teenagers and all means

of transportation were mobilized. The other inhabitants were not evacuated. After Yefingar was occupied by the German troops, all the remaining Jews (521 people) were executed by the Germans and their local accomplices on September 10, 1941. After the war Yefingar was renamed Plyushchevka. The inscription on the monument there, set up with great difficulty by relatives of those massacred, does not indicate that the victims were Jews. No Jews now live in the village and the former Jewish cemetery has been destroyed.

[*Shorter Jewish Encyclopedia in Russian*]

YEFROYKIN, ISRAEL (1884–1954), socialist and communal leader, born in Vieksniai, Lithuania. In 1904 he became active in the Zionist socialist group *Vozrozhdenie. He was among the founders in Russia of the monthly *Yidishe Velt* in 1912 with S. *Dubnow, I. *Zinberg, and others. After the February 1917 Revolution he organized with S. Dubnow, N. *Shtif, and others the Yidishe *Folkspartei. In 1920 he went to Paris with a delegation of the *YEKOPO (Jewish Relief Committee), and directed its central office there until its liquidation in 1925. He was one of the founders of the *World Jewish Congress in 1936. With E. *Tcherikower he published *Oyfn Sheydweg* ("On the crossroads," Paris 1939), a literary anthology. During World War II he took refuge in Montevideo, Uruguay, where he was coeditor of the review *Shriftn* and joined the Po'alei Zion – Hitaḥadut party. He subsequently returned to Paris, where between 1948 and 1952 he edited the review *Kiem*. His writings include *In Kholem un oyf der Vor* ("In Dream and Reality," 1944); *A Kheshbn Hanefesh* ("Introspection," 1948); and *Kedushe un Gevure bay Yidn Amol un Haynt* ("Self-Sacrifice and Heroism by Jews in the Past and Today," 1949).

YEḤI'AM (Heb. יְחִיעָם), kibbutz in northern Israel, 7 mi. (12 km.) E. of Nahariyyah, affiliated with Kibbutz Arẓi, ha-Shomer ha-Ẓa'ir. Yeḥi'am was founded by pioneers from Hungary and Israel-born youth in 1946, at a time of maximum tension between the *yishuv* and Mandatory authorities. Its establishment in the brush-covered mountain terrain near the crusader castle ruin Jūdīn was valued as a step of political importance. In the *War of Independence, the isolated kibbutz held out against overwhelming odds using the castle as a fort. A convoy of 47 men to reinforce Yeḥi'am was ambushed and wiped out near *Kabri (March 28, 1948). The siege was lifted in May 1948. The front lines finally receded from Yeḥi'am with Operation Ḥiram (October) which cleared all of Galilee. In 1970 Yeḥi'am had 415 inhabitants, dropping to 362 in 2002. Its economy was based on citrus groves, plantations, and poultry. The kibbutz also produced meat products and operated guest rooms. The name commemorates Yeḥi'am Weitz, who fell with 13 comrades on June 17, 1946, in an action to blast the Achzib bridge (*Gesher ha-Ziv).

[Efraim Orni]

YEHOASH (pseudonym of **Yehoash Solomon Bloomgarden**; 1872–1927), Yiddish poet and translator. Yehoash was born in Virbalen, Lithuania, and as a boy he read maskilic literature as well as studying Torah with his father, briefly attending the yeshivah of Volozhin, only to begin a career as a Hebrew poet. At the age of 17 he took his first Hebrew poems to Warsaw, where I.L. *Peretz encouraged him to continue writing Hebrew and Yiddish lyrics. The following year Yehoash immigrated to the U.S. He made no headway either as a Hebrew poet or in various callings – bookkeeping, tailoring, peddling, and Hebrew teaching. For a decade he faced severe privations until he contracted tuberculosis and went to the Denver Sanatorium for Consumptives in 1900 to recuperate. There he remained for almost ten years, maturing as a Yiddish poet, publishing his poems, ballads, fables, and translations in leading dailies, periodicals, and literary almanacs. In his early 30s, he undertook to translate the Bible into a modern Yiddish which would combine scholarly precision with simple idiomatic language, a task to which he devoted the rest of his life. While at work on this translation, he prepared, together with Charles D. Spivak, his physician and the co-founder of the sanatorium, a Yiddish dictionary, first published in 1911, which defined about 4,000 Hebrew and Aramaic words used in Yiddish and which went through many editions as a basic reference work.

Returning to New York in 1909, Yehoash had to struggle to make a living, even though his fame was worldwide and Yiddish periodicals in many lands gladly published his contributions. In January 1914, he left for Erez Israel and settled in Reḥovot. He mastered classical Arabic and translated portions of the Koran and Arabian tales into Yiddish. When the Ottoman Empire entered World War I, he returned to New York and published the story of his experiences in three volumes of travel sketches, *Fun New York biz Rekhovot un Tsurik* ("From New York to Reḥovot and Back," 1917–18; Eng. *The Feet of the Messenger*, 1923). His sojourn in Erez Israel as well as his knowledge of Arabic proved useful to him in his work on the translation of the Bible. Although he had published a Yiddish rendering of several biblical books including Isaiah and Job in 1910, he realized the inadequacy of this initial attempt and began anew. His more adequate rendering, starting with Genesis, appeared in installments in the New York daily *Der Tog* from 1922. At the time of his death only the Pentateuch translation had been published, but the rest of the biblical books were printed from his manuscripts. His version was hailed as a contribution of national significance. The translator drew upon idiomatic treasures of various Yiddish dialects, upon the *Khumesh-Taytsh* (the Old Yiddish, word-for-word translation of Pentateuch), vocabulary used by *melammedim* in Ashkenazi schools for many generations, and expressions of the *Ẓe'enah u-Re'enah* (*Tsene-Rene*), with its archaic patina. Yehoash was thus able to retain the rhythm and flavor of the Hebrew to a larger extent than preceding Bible translators. The two-volume edition, with parallel Hebrew and Yiddish texts, distributed in tens of thousands of copies, became a standard

work for Yiddish-speaking homes throughout the world. In 1949, Mordecai Kosover edited Yehoash's notes to the Bible, which afforded an insight into the translator's many years of wrestling with the sacred text.

Yehoash, who also translated Longfellow's *Hiawatha* and the *Rubáiyát* of Omar Khayyam into Yiddish, was far ahead of his time in terms of his own poetry. When the first edition of his *Gezamelte Lider* ("Collected Poems") appeared in 1907, he was widely hailed as a first-rank artist. His lyrics were reprinted in anthologies and school texts, and were translated into many languages. An English translation, *Poems of Yehoash*, by Isidore Goldstick, appeared in 1952, and a Hebrew version (1957) was a cooperative venture by a number of significant Hebrew writers, including Jacob *Fichmann and Dov *Sadan. Yehoash's two later lyric volumes (1919 and 1921) linked him with *Inzikhism, the modernist trend of introspection in post-World War I Yiddish poetry, the leaders of which acclaimed him as their forerunner. Yehoash gave expression in his lyrics to his awareness of a divine force permeating the universe. He re-imagined in verse biblical and post-biblical legends, tales from medieval Jewish chronicles, and ḥasidic lore, versified fables from the Talmud, Aesop, La Fontaine, and Lessing, and created new fables of his own. He wrote romantic, ghostly ballads, but he also felt the spell of Peretz, his lifelong friend, and strove for classical purity and perfection in rhythm and rhyme.

Yehoash also influenced American Jewish poetry in English, notably the modernist work of Louis Zukofsky.

[Melech Ravitch]

YEHOSHUA, AVRAHAM B. (1936–), Israeli novelist, short-story writer, playwright, and essayist, considered both nationally and internationally one of the foremost Israeli writers; recipient of all the literary prizes awarded in Israel including the prestigious Israel Prize (1995). He was also awarded many international prizes, such as the National Jewish Book Award in the U.S., the Jewish Quarterly-Wingate prize in the U.K., and the Boccatio and Lampeduza prizes in Italy. Yehoshua's books have been translated into 26 languages, and many of his stories and novels have been adapted for the theater, cinema, television, and opera.

While Yehoshua's literary works focus on the hidden realms of the individual psyche embedded in its familial, social, and cultural context, his challenging essays address ideological, political, and ethical issues. In these essays Yehoshua questions the very tenets of Israeli society: Judaism, Zionism, religion and nationalism, the Israel-Palestinian conflict, and antisemitism.

A.B. Yehoshua was born in Jerusalem, the fifth generation of a Sephardi family on his father's side, and the first generation on his mother's side. His father, Jacob Yehoshua, an Orientalist by training, wrote a number of books recounting the life of the Sephardi community in Jerusalem from the end of the 19th century to the beginning of the 20th, and two books on the Palestinian press of that time. While his father's occupation with the language, history, and culture of the Palestinians probably opened Yehoshua's eyes to their unique plight and thus indirectly influenced his *Weltanschauung* in general, his father's numerous books served him in the writing of his most acclaimed novel, *Mar Mani* (1990; *Mr. Mani*, 1992). The background of his mother – Malka née Rosolio, born to a rich merchant in Morocco – was a source of inspiration for his novel *Massah el Tom ha-Elef* (1997; *Voyage to the End of the Millennium*, 1999). Although Yehoshua's family was observant, his parents, avid Zionists, sent him to a secular school, the Hebrew Gymnasium in Jerusalem. Yehoshua was also active in the scout movement. His early exposure to the moderate Sephardi version of Jewish tradition along with his secular education and Zionist ideology contributed to a lifelong preoccupation with the complex theme of identity which underlies all his writings.

Upon the completion of his military service (1957), Yehoshua began studying Hebrew literature and philosophy at the Hebrew University of Jerusalem. At that time, he started publishing his first short stories, later collected in his first book *Mot ha-Zaken* (1962). After his graduation, he taught literature in Jerusalem, and then moved to Paris, where he spent the next four years (1963–67). There he served as a school principal and later as the general secretary of the World Union of Jewish Students. During his stay in Paris, he also completed his second book of short stories and novellas, *Mul ha-Yeʾarot* (1968; *Three Days and a Child* 1970). In all, Yehoshua published four collections of short stories before he wrote his first novel, a genre to which he has devoted most of his later writings.

Yehoshua's early stories drew immediate attention from literary critics: some were critical of the nightmarish impact of an absurd, alienated reality presented in those stories, others recognized the influence of Agnon and Kafka on his early stories, acknowledged his unique talent, and predicted that he would leave his mark on Israeli literature. Whereas the first volume of stories is surrealistic and grotesque, placed in a no man's land, his later stories, though still grotesque and terrifying, have become more realistic, placed in the familiar settings of Israeli scene. The gripping plots, a hallmark in all of Yehoshua's writing, evolve around single, lonely, and lethargic characters controlled by underlying destructive powers, unconsciously driven to their unavoidable ends.

Returning to Israel shortly after the 1967 war, Yehoshua joined Haifa University as the head of the department for the advancement of immigrant and minority students. Five years later he was appointed professor of comparative and Hebrew

literature (1972); a position he held until his retirement in 2002. Following the Six-Day War and its ensuing upheaval, Yehoshua became involved in various left-wing movements and started publishing essays in which he elaborated his ideological and political stance. His active participation coupled with his intellectual and rhetorical skills have made him one of the major spokesmen for the Zionist left wing and the Israeli peace camp, at home and abroad. Many of his thought-provoking and often controversial essays were later published in two volumes: *Bi-Zekhut ha-Normali'ut* (1980; *Between Right and Right* 1981), and *Ha-Kir ve-ha-Har* (1989). Another volume of essays, *Kokha ha-Nora shel Ashmah Ketanah* (1998), focuses on the moral dilemmas underlying all great literary texts.

After the publication of his first novel, *Ha-Me'ahev* (1977; *The Lover*, 1978), Yehoshua wrote eight novels, exploring innovative artistic forms, enlarging the historical scope from which the narrative is told, tackling new terrains, retrieving the writers' lost "authority over sociological, economical, historical, and ideological issues."

In *Ha-Meahev* and in *Gerushim Me'uḥarim* (1982: *A Late Divorce*, 1984), his second novel, the plot is retold by different voices and from different points of view, thus reflecting the essence of the polyphonic Israeli society and giving voice to hitherto muted voices within that society, such as that of a slightly deranged expatriate, or an Arab-Israeli youth (*Ha-Me'ahev*). The scene of events in these, and in most of Yehoshua's novels, is the family, where identity is forged and which also serves as a mirror of society. The first novel encounters the chain of events of a family in a state of deterioration following the father's attempt to revive his long-lost libido by introducing two lovers into the household. The second novel expounds the effects of a bitter and fatally late divorce on the three children of the family, leading to the ultimate destruction of the father.

Hailed by readers and critics, *Mar Mani*, Yehoshua's most ambitious novel, is one of the most interpreted novels of modern Hebrew literature. Like its predecessor *Molcho* (1987; *Five Seasons* 1989), its unique perspective is achieved by juxtaposing the Sephardi angle with the Ashkenazi one: whereas in *Molcho* Yehoshua's narrator follows Molcho, a Sephardi Jerusalemite, throughout the first year of mourning following the death of his "yekke" Ashkenazi wife, in *Mar Mani* Yehoshua employs a polyphonic device in a highly artistic and innovative manner, unfolding the story of more than five generations of a Sephardi family, the Manis, through five one-sided dialogues related by "outsiders," mostly Europeans, about their fatal encounter with one or more of the Manis. In particular, the genealogical novel explores the often disastrous effects of the unconscious, personal and collective, on individuals as well as on nations. The novel encompasses close to 200 years, and explores new terrain (such as Poland and Crete), different cultures (such as the Minoan), and diverse languages (such as Yiddish and Ladino), attempting to understand in depth the complex relationship between Judaism and Zionism, Israel and the Diaspora, religion and nationalism, and above all,

the human psyche, where the struggle to make sense of it all takes place.

Wanderlust, restlessness, and a drive to uncover unconscious desires and anxieties send many of Yehoshua's characters on eventful journeys to unknown continents where the confrontation with the irrational is inevitable, such as: Benji's passage to and from India in *Ha-Shivah me-Hodu* (1994; *Open Heart* 1995); Ben Attar's marine voyage to Europe at the end of the first millennium in *Masah el Tom ha-Elef*'; Professor Rivlin's repeated travels to Jerusalem, the West Bank, and an Arab village in the Galil in *Ha-Kalah ha-Meshaḥreret* (2002; *The Liberating Bride*, 2004); and the Via Dolorosa journey of the manager of the human resource division to an unnamed northern country in *Sheliḥuto shel ha-Memuneh al Mashabei Enosh* ("The Mission of the Human Resource Man," 2004). Yehoshua's strength in portraying dramatic situations, often by means of fatal albeit healing confrontations, was also expounded in his plays such as *Layla be-Mai* (1969; "A Night in May," 1974), and *Ḥafaẓim* (1986; "Possessions," 1993), and many of his stories and novels have been adapted for the theater such as *Mar Mani*; for the cinema: *Ha- Me'ahev;* and in 2005 his own libretto based on *Masah el Tom ha-Elef,* for the opera.

[Doreet Hopp (2nd ed.)]

YEHUD (Heb. יְהוּד, יְהֻד), urban settlement in central Israel, 8 mi. (12 km.) E. of Tel Aviv. On the site, mentioned in Joshua 19:45 as one of the towns of the tribe of Dan, ancient tombs, coffins, and remnants of structures were found. An Arab village on the site, named Yahdiyya, expanded in the 20th century, as a result of the development of the region by Jewish settlement. Earlier, several of the founders of *Petaḥ Tikvah, who had to evacuate that settlement temporarily because of the danger of malaria, stayed at Yehud between 1882 and 1893. In Israel's *War of Independence Yahūdiyya was taken, together with the nearby Lydda Airport, by Israel forces in July 1948 and evacuated by its Arab inhabitants. At the end of the same year the first Jewish settlers arrived, and the place soon absorbed numerous newcomers from various countries, subsequently increasing its population from 3,200 in 1950 to 8,600 in 1970. The original plan to base local settlement on full or auxiliary farming was gradually superseded by urbanization and industrialization, as Yehud became part of the outer ring

of the Tel Aviv conurbation. In 1951 Yehud received municipal council status and in 1955 it received city status. Its area is 1.6 sq. mi. (4.1 sq. km.). While a number of inhabitants continued to be employed in other centers of the Tel Aviv region, industry, with 32 local enterprises (motor cars, sweets, knitting, textiles, and other branches), became the principal foundation of Yehud's economy. To a certain degree the town also served as a commercial center for settlements of the vicinity (Neveh Efrayim (Monosson), Savyon, Gannei Yehudah, etc.). In the mid-1990s the population was approximately 17,300, increasing to 22,000 in 2002.

[Shlomo Hasson /Shaked Gilboa (2nd ed.)]

YEHUDAI BEN NAḤMAN (**Yehudai Gaon**) head of the academy of Sura c. 757–61. Yehudai was one of the scholars of Pumbedita, but the Exilarch Solomon b. Ḥasdai transferred him to Sura, because "there was no scholar in Sura who was his peer in knowledge" (*Iggeret Sherira Ga'on*, ed. by B.M. Lewin (1921), 107) – despite his advanced age, the fact that he was blind, and as an exception to the tradition of Sura not to appoint as its head anyone who had not been educated there. During his period at Sura, his brother Dudai served as *Gaon* of the Pumbedita academy. Yehudai is referred to as "light of the world, holy and pure" and *Sherira states that "we may not do what Yehudai refrained from doing" (*Teshuvot ha-Ge'onim*, ed. by J. Mussafia (1864), no. 43). His pupils included Ḥaninai b. Huna and Natronai Nasi b. Ḥakhinai; the most distinguished was Rav Abba (Rabbah), the author of a collection of *halakhot*. Yehudai is the first in the geonic period to whom or to whose pupils is attributed the authorship of a book, the *Halakhot Pesukot. In *halakhah* Yehudai based himself entirely upon the Babylonian Talmud and the traditions of the *savora'im* and merely gave the final ruling of the Talmud, omitting the halakhic discussion. He attempted to reestablish talmudic law and averred that he had always replied to halakhic questions with proof from the Talmud as interpreted by his teachers in practice (*Ginzei Schechter*, 2 (1929), 558). He was the first *gaon* to compile responsa, 131 of which are extant; these are distinguished by their brevity, merely giving the ruling without quoting the sources or the reasons for his decision. In consequence of his ambition to make the Babylonian Talmud and the customs of the Babylonian academies authoritative throughout the Diaspora, Yehudai was the first *gaon* to establish contact with the Jewish communities of North Africa. He protested to the Jews of Ereẓ Israel that their customs were "customs due to persecution" which originated in the religious persecutions in that country at the close of the Byzantine era, and demanded that they accept the customs of Babylon. Some scholars assert that these opinions of Yehudai were very much a matter of conjecture and exaggeration. According to *Pirkoi ben Baboi, a pupil of Yehudai's pupil, Rav Abba, who reproduced certain passages of Yehudai's in his own work, the scholars of Ereẓ Israel opposed him and continued to rely upon their ancient custom and traditions. In some cases Yehudai's rulings did not accord with the custom of Sura. Thanks to his

activity, however, the influence of the Babylonian academies spread and the Babylonian Talmud became the sole authority for halakhic ruling. Yehudai and his pupils fought fiercely against the spread of *Karaism in Babylonia, and succeeded in defending the Oral Law by stressing the importance of the Talmud and the especial authority of the scholars in these areas (e.g., family law) challenged by the Karaites. According to some, however, Yehudai's aim in his work was not to combat Karaism since *Anan effected the communal schism only during the last years of Yehudai, and the need to consolidate and summarize halakhic material is understandable even without the rise of Karaism. In consequence of his blindness, Yehudai's rulings and directives were written by his pupils and as a result many interpolations by his pupils found their way into his works. Yehudai is described by Pirkoi b. Baboi as "great in sanctity and purity, in piety and in humility, and meticulous in the observance of all the precepts. He dedicated himself to Heaven, and brought people nearer to the Torah and its precepts" (*Ginzei Schechter,* 2 (1929), 556f.).

[Yehoshua Horowitz]

YEHUDI BEN SHESHET (or **Sheshat**; second half of tenth century), Spanish Hebrew grammarian and poet. A student of *Dunash b. Labrat, Yehudi wrote, between 970 and 990, a work against the responsa of the students of *Menaḥem b. Saruk written in reply to Dunash's criticism of their teacher (the only manuscript of the work was published by S.G. Stern in 1870, and again by M.E. Varela in 1981). Yehudi's work is composed like the responsa of Dunash and those of the students of Menaḥem: the first part is in metric form (154 verses in the same meter and rhyme of Dunash's panegyric to Ḥisdai and of the answer of the disciples of Menaḥem, attacking the adversaries directly), and is followed by rhymed prose serving as introduction to the second part, which contains explanations of metalinguistic subjects in the poem. From this work, the names of several of Menaḥem's students are known: Ibn *Kapron, Judah b. David *Ḥayyuj, and Isaac b. *Gikatilla.

Yehudi deals with 42 questions, answering the greater part of the objections which Menaḥem's students had made against Dunash. In 21 responsa, explanations are given for some biblical terms. In ten responsa Yehudi deals with roots of several words and lexical units to which they belong. In one responsum, Yehudi replies to the objection voiced by Menaḥem's students concerning the introduction of Arabic metric patterns into Hebrew poetry. In four responsa he deals with objections against Dunash's usage of several words. Ye-

hudi defends his teacher by citing biblical usage. Three responsa object to some usages of Menaḥem and his students. Another deals with the position of *dalet* and *tet* in the classification of the letters of the alphabet into "root" letters and "servile" letters (prefixed, infixed, suffixed), defending Dunash's point of view against all the other medieval grammarians. In the last responsum, Yehudi admits that one objection made by Dunash was based on a misunderstanding.

While discussing the meaning of specific terms, Yehudi also comments on general questions of grammar that go beyond the specific problem, e.g., dealing with the meaning of the word *kemaḥ* ("flour," Gen. 18:6). Yehudi deals also with the meaning of the term *ke-mashmaʾo* ("as its meaning"), which had been used by Menaḥem 161 times in his *Maḥberet*. A matter of principle, such as to what extent Aramaic is to be relied upon when explaining a Hebrew term in the Bible, is dealt with in the discussion on the meaning of the word *piggeru*, interpreted by Menaḥem as "they stayed behind" and by Dunash, basing himself on the Targum, as "they were destroyed; they were weakened" (I Sam. 30:10). In dealing with the word *lo* (Ex. 21:8), he also explores the general problem of *keri* and *ketiv*. Generally, Yehudi does not bring new opinions but repeats those of Dunash, adding intricate arguments which border sometimes on insult and abuse. Nevertheless, Yehudi does make some original contributions; in the discussion of the term חֹנָךְ (*ḥonakh*, Ps. 53:6), for example, he remarks that there are grammatical forms impossible in the Bible, but possible in post-biblical (paytanic) usage. On other occasions he maintains that the Hebrew language in his time has reduced to a very sorry state, and there are forms that might have been found in it had we known the language in its fullness. Like Dunash, he defends linguistic comparatism, known at least in the work of Saadiah, against the anti-comparatist attitude of Menaḥem and his disciples.

YEIVIN, ISRAEL (1923–), Hebrew Language scholar, son of Yehoshua Heschel *Yeivin. Israel Yeivin was born in Berlin and in 1925 came with family to Palestine. In addition to supervising the ancient literature section in the Academy of the Hebrew Language's Historical Hebrew Language Dictionary project, he did research on ancient biblical manuscripts as part of the Hebrew University Bible project. He was professor in the Hebrew University Hebrew Language department. In 1989 he received the Israel Prize for research in the Hebrew language. Among his books are *Keter Aram Zova, Nikkudo u-*

Teʾamav ("Keter Aram Zova. Its Vocalization and Cantillation Signs," 1969) and *Masoret ha-Lashon ha-Ivrit ha-Mishtakefet ba-Nikkud ha-Bavli* ("The Hebrew Language Tradition as Reflected in the Babylonian Vocalization," 1985; Ha-*Masorah la-Mikraʾi* ("The Biblical Masorah," 2003).

[Fern Lee Seckbach]

YEIVIN, SHEMUEL (1896–1982), Israeli archaeologist. Born in Odessa, he studied at the Herzlia Gymnasium in Tel Aviv and the universities of London and Berlin, specializing in Egyptology and Semitic philology. He took part in the excavations at Luxor (1924) and Beth-Shean (1924–28) and in the University of Michigan expedition to Seleucia in Iraq (1929–37). He was co-director with J. Krause-Marquet of the excavations at Ai (1933). He was a member of the Hebrew Language Committee (1935–42); chairman of the Jewish Palestine Exploration Society (1944–46); chief Hebrew translator for the British Mandatory government of Palestine (1944–48); director of the Department of Antiquities in Israel (1948–61); secretary and then editor of the *Encyclopaedia Biblica*; professor of biblical history and archaeology at Tel Aviv University; and member of the Hebrew Language Academy. In 1968 he received the Israel Prize for Jewish studies. His publications include *Toledot ha-Ketav ha-Ivri* (1939), *Milḥamot Bar Kokhva* (1946), and *Kadmoniyyot Arẓenu* (1955), an archaeological handbook written jointly with M. Avi-Yonah.

[Michael Avi-Yonah]

YEIVIN, YEHOSHUA HESCHEL (1891–1970), Hebrew writer and editor. Born in Vinnitsa, Ukraine, Yeivin studied medicine, but gradually left his profession in favor of literature. After emigrating to Palestine in 1924, he joined the founders of the Revisionist movement in 1928 and henceforth became an editor of its press and a regular contributor to it.

His first literary articles and essays appeared in *Haolam* of Odessa, and he continued to publish in *Ha-Tekufah* and other periodicals. In the Revisionist press he published articles and novels on historical subjects. In 1959 he won first place in the Israel Bible Contest. His books include: *Sippurim* (1928); *Be-Sod Ḥalalim* (1930); *Uri Ẓevi Greenberg, Meshorer Meḥokek* (1938); *Milḥemet Beit Ḥashmonai* (a story about the Hasmoneans, 1953); *Ha-Ḥayyah ha-Reviʾit* (1949); *Mi-Meʾonot Arayot* (stories of the underground movement, 1954); *Bi-Shevilei Emunat Yisrael* (essays, 1960); and *Ha-Malkhut Asher Lo Tissof* (1967).

[Getzel Kressel]

YEKOPO (acronym of **Yevreyskiy komitet pomoschi zhertvam voyny** – "Jewish Relief Committee for War Victims"), organization formed in Russia after the outbreak of World War I to succor Jewish war victims. The need for such relief was most urgent because many Jewish communities were situated in the battle regions and had already suffered heavily during the first days of the war. Many refugees streamed to

the rear from the front. The situation deteriorated with the intensification of the anti-Jewish policy adopted by the military authorities, which at first took the form of the detention of Jews as hostages and subsequently of mass expulsions from the battle regions. These persecutions reached their climax in the great expulsion of the Jews from the provinces of *Kovno and *Courland in the spring of 1915. It was also necessary to support the tens of thousands of families of Jewish soldiers. The committee of Petrograd rapidly became the central committee to which all the local branches addressed themselves. Its task was to raise funds and distribute them among the local committees and the various bodies that preoccupied themselves with the different relief activities as well as the organization and supervision of relief activities in various places. The committees of Moscow (YEVOPO) and of Kiev (KOPE) were of particular importance.

The YEKOPO was headed by members of the older intelligentsia and the leading capitalists of St. Petersburg, such as Baron A. *Guenzburg, H. *Sliozberg, D. *Feinberg, M. *Vinawer, L. *Bramson, and J. *Brutzkus. The brunt of the practical work, however, was carried out by "accredited" officials of the committee who came mainly from the ranks of the popular intelligentsia and more particularly from among the members of the Jewish Socialist parties. The committee received much support from the older societies, such as the *Society for the Promotion of Culture among the Jews of Russia, *ORT, *Jewish Colonization Association (ICA) and *OZE. Relief took the form of arrangements for the transportation of the refugees; the provision of escorts for their convoys; provisional arrangement for their nutrition, clothing, and accommodation; the provision of medical care; the organization of "medical-sanitary units"; the care of children and, later, efforts to find them employment and occupations; the establishment of credit funds; the development of vocational schools and courses, etc. In addition, the committee represented the Jewish population before the authorities in its demands for assistance to the Jewish war victims.

For internal and external political reasons, the government recognized the committee and encouraged it by granting authority to its delegates and workers; they received the status of government officials, a factor of prime importance during the period of the hostilities. The committee also maintained relations with the general public institutions, such as the All-Russian Alliance of Towns, and zemstvo workers. By the end of 1916, the committee had provided its services to 240,000 Jews (out of the estimated total of 350,000 Jewish war refugees). The funds received by the central committee in Petrograd until then – 31,000,000 rubles – were derived from the sources as shown in the table below.

The important allocation of the government is also of historical and political significance, as is the considerable contribution of the Jews of the United States. The participation of Russian Jewry in this relief enterprise was larger than is apparent in the table, because many of the funds which were collected in the provinces did not pass through the

Source	Total in rubles	%
Russian government	17,179,000	55.8
General Russian Relief Committee	292,000	0.9
American Jewish Joint Distribution Committee (United States)	7,258,000	23.6

Contributions of the Jews in the provinces	1,700,000	5.6
Total	30,787,000	100.0

treasury of the central committee but were directly spent by the local committees. A considerable part of the communities' funds were derived from a system of compulsory contributions.

The activities of YEKOPO also encompassed the Jews of the regions occupied by the Russian army in Galicia and Bukovina. In the execution of their tasks, several divergences of opinion emerged between the workers of the committee, mainly over cultural problems (religious or secular education, schools in the Russian, Hebrew or Yiddish languages), with each side attempting to divert the relief activities in the direction of its own outlook. Much material on the history of this relief work is to be found in the central periodical of YEKOPO, *Pomoshch* (1915–16; later *Delo Pomoshchi*, 1916–17). After the Revolution of February 1917, when the focus of the political activity of Russian Jewry was transferred to the public organizations and the parties, YEKOPO pursued its relief work in a restricted sense. It also continued its activities during the civil war years, when the central role was played by the committee of Kiev (KOPE). In 1920, with the establishment of the Jewish-Soviet relief organization *Idgeskom*, the YEKOPO was in practice absorbed by it. The committee of YEKOPO continued to function in the provinces of *Vilna and *Novogrudok, within the borders of independent Poland, where it concentrated efforts on the rehabilitation of the communities which had been severely affected by World War I and the Polish-Soviet war. The committee was then headed by Dr. Z. *Shabad and was mainly supported by the *American Jewish Joint Distribution Committee (JDC).

[Yehuda Slutsky]

YEKUM PURKAN (Aram. יְקוּם פֻּרְקָן; lit. "may deliverance arise"), the name of two prayers recited in the Ashkenazi rite immediately after the reading of the *haftarah* on the Sabbath. Written in Aramaic, the prayers derive their name from their opening words. Both are very similar in form. The first consists of a prayer for the welfare of the students in the academies of Erez Israel and Babylonia, their teachers, the exilarchs,

and the judges. Many of the phrases of this prayer resemble those of the *Kaddish de-Rabbanan ("the scholars' Kaddish"). In modern times, some communities have added the phrase Ve-di be-khol arat galvatana ("and all that are in the lands of the dispersion") in order to make this prayer more meaningful (Baer's Siddur, 229). The second is a more general prayer for the welfare of the congregation, similar in content to the Hebrew prayer Mi she-Berakh which follows it. The prayers are not found in the Babylonian siddurim of *Amram Gaon and *Saadiah Gaon, although they were probably written in Babylonia. The first is found in the *Maḥzor Vitry, and the second in the Roke'aḥ of *Eleazar b. Judah of Worms (1160–1238). Both prayers are absent from the Sephardi rite, although a similar but more lengthy prayer entitled "Prayer for the Congregation" is found in some Yemenite prayer book manuscripts (Duschinsky, in bibl., 194–7).

These prayers are not recited on festivals. A reason given for this is to enable the worshippers to leave the synagogue earlier and enjoy the meals which they are permitted to cook on the holidays (S. Shuck, Siddur Rashban (Vienna, 1894), 20b).

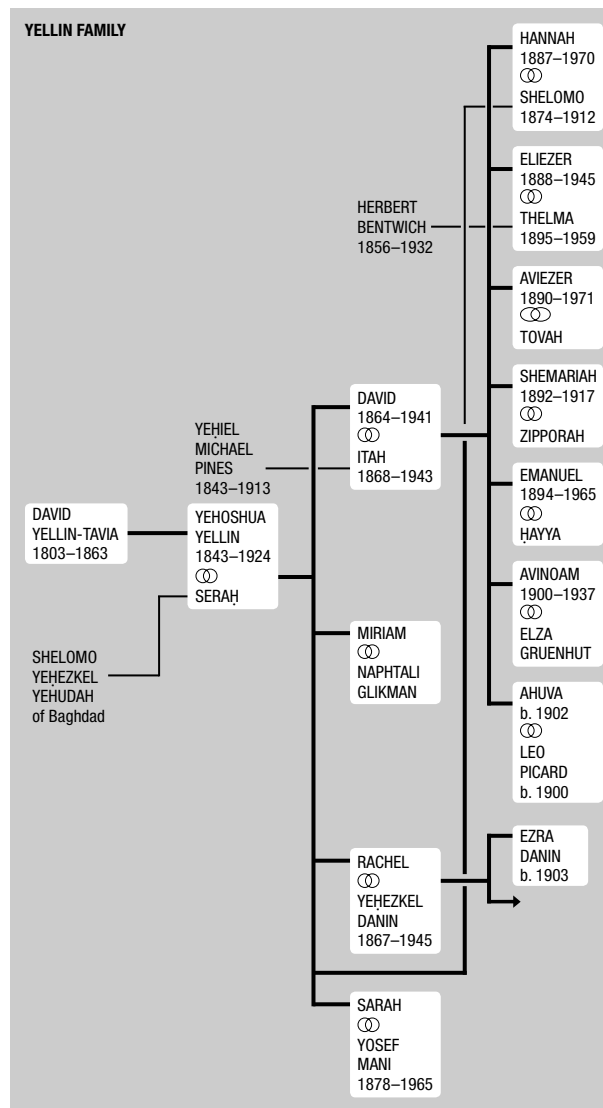
YELLIN, pioneer family in modern Ereẓ Israel. YEHOSHUA (1843–1924), pioneer in Ereẓ Israel, was born in Jerusalem, the son of the prosperous Yellin-Tavia family from Lomza, Poland, that immigrated to Ereẓ Israel in 1834. He married into the Yehuda family of Baghdad and learned Arabic and Oriental customs in the home of his father-in-law, Shelomo Yeḥezkel Yehuda. In 1860, under the auspices of the British consul, James *Finn, he and his father purchased land in the village of Kalonya (Colonia) on which the settlement of Moẓa was established in 1891. Yehoshua was one of the founders of Naḥalat Shivah, the third Jewish quarter of Jerusalem built outside the Old City by residents of the city (1869).

In 1876 he belonged to the group that tried to buy government lands near Jericho for the establishment of a settlement to be called Petaḥ Tikvah – an attempt that failed because of the opposition of the Turkish government in Constantinople. In 1882 Yellin entered his son David, born in Jerusalem, at the Alliance Israélite Universelle school just opened in Jerusalem and was thus the first member of the Ashkenazi community to ignore the boycott imposed by its rabbis (led by Rabbi Moshe Yehoshua Leib *Diskin) on study in schools. As a punishment he was deprived of his allocation from the *ḥalukkah. In 1897 he was elected a member of the Jerusalem Town Council and served in this capacity until 1901. In his later years he wrote memoirs, Zikhronot le-Ven Yerushalayim ("The Memoirs of a Son of Jerusalem," 1924), which are a source for the history of the old Jewish community in Jerusalem at the end of the 19th century.

[Yehuda Slutsky]

His son, DAVID YELLIN (1864–1941), was a distinguished teacher, writer, scholar, and one of the leaders of the yishuv.

YELLIN FAMILY


David studied at the Eẓ Ḥayyim yeshivah and also acquired a general education and knowledge of both Eastern and Western languages. In 1882 he became a pupil (later teacher) in Jerusalem at the Alliance Israélite Universelle school and at the Laemel school. In 1903 Yellin was one of the organizers of the founding conference of the *Teachers' Association at Zikhron Ya'akov and was the association's president. In 1912 he became deputy director of the teachers' seminary founded by the *Hilfsverein der Deutschen Juden (Ezra) in Jerusalem. During the language controversy, when the Hilfsverein tried to introduce German as language of instruction, he founded the Hebrew Teachers' Seminary (later at Bet ha-Kerem in Jerusalem) and was its principal until his death. In 1926 he was appointed professor of Hebrew poetry of the Spanish period at the Hebrew University. His knowledge of Arabic language and literature brought him to a deep understanding of Hebrew poetry written in Spain, and he published a number of works by Spanish Hebrew poets. In addition to research

works in the field of poetics, he wrote *Torat ha-Shirah ha-Sefaradit* (1941), in which he described the techniques of various poets, types of poems, meters, and the influence of Arabic poetry on that of Hebrew poets in Spain. Yellin was active in the development of Jerusalem and its institutions, participating in the establishment of new quarters and public buildings such as the Zikhron Moshe quarter, the Laemel school, and the Bet ha-Kerem Seminary. Together with his father-in-law, Y.M. *Pines, and E. *Ben-Yehuda, Yellin sat on the Va'ad ha-Lashon (Hebrew Language Committee). He also helped to establish the National Library and organize *B'nai B'rith in the country. He was a member of the Ottoman parliament (1913) and a leader of the Jewish community's aid committee during World War I. He was among the first public figures in the country to join the Zionist movement openly, took part in Zionist Congresses, and in 1917 was exiled by the Turks to Damascus. From 1920 to 1925 he was a member of the Jerusalem Town Council and deputy mayor, introducing the municipality's first Hebrew seal. From 1920 to 1928 David was chairman of the Va'ad Le'ummi (National Council of the Jews of Palestine) and appeared as a Jewish representative on the League of Nations "Wailing Wall Committee" (1931).

Apart from textbooks (the best known is *Mikra le-Fi ha-Taf*, 1900–01), and translations from Arabic (*Shirat Shemu'el Ben Adaya*) and from European languages (e.g., *The Vicar of Wakefield*), David published many studies on Hebrew language and grammar (e.g., *Dikduk ha-Lashon ha-Ivrit*, 1942; *Toledot Dikduk ha-Lashon ha-Ivrit ve-Hitpattehutah*, 1947); and on the Bible (among them commentaries on the books of Job and Isaiah, 1927). The first two volumes of his selected writings, which appeared in 1936 and 1939, contain a selection of his articles in the Hebrew press in Jerusalem and are a valuable source on the history of the *yishuv*. David Yellin was a symbol of the integration of the Ashkenazi and Sephardi communities in Erez Israel, which was also expressed in his scholarship. He was also a leader in education as it developed in the *yishuv*.

David's second son AVIEZER (1890–1971), educator, was born in Jerusalem and attended the Laemel school and the Ezra Teachers' Seminary. He taught in Bulgaria in 1910 and later in the Ezra Seminary. During World War I he founded the first Hebrew girls' school in Damascus. Aviezer was one of the founders and leaders of the *Maccabi and scout movements in Israel. He was a delegate to the first Asefat ha-Nivharim (Elected Assembly of Palestine Jews) and a member of the Jewish Communal Council in Jerusalem. In 1925 he became a member of the central committee of the Teachers' Association and served as its secretary until 1956 when he was elected as its honorary president. He wrote many articles on education, sports, and current affairs.

[Benzion Dinur (Dinaburg)]

David's fifth son, AVINOAM (1900–1937), educator and Orientalist, was born in Jerusalem. He translated *The Book of Ahikar the Wise* from the Syriac and Aramaic into Hebrew (*Sefer Ahikar he-Hakham*, 1937) and published modern text-

books for the study of Hebrew and classical Arabic (the latter together with Levi *Billig), as well as numerous studies and articles. A member of the Hebrew Language committee (Va'ad ha-Lashon), he became supervisor of Jewish schools in the British Mandatory administration. He was killed in Jerusalem by Arab rioters.

YELLIN-BENTWICH, THELMA (1895–1959), Israeli cellist and pedagogue, a leading personality in the creation and shaping of musical life in Israel. She was born in England as the ninth child of the aristocratic Bentwich family, all the members of which received professional instrumental training. She studied at the Royal College of Music in London, and was accepted by Pablo Casals as a private pupil. In 1915 she founded in London the all-women trio with Myra *Hess and Jelly d'Arranyi. Yet the tensions of the life of a traveling professional soloist did not suit her nature. In 1919 she joined her brother and two sisters who had already settled in Jerusalem and married Eliezer Yellin, the son of David *Yellin. In 1921 she founded the Jerusalem Music Society which pioneered high quality weekly concerts of chamber music in Jerusalem to a cosmopolitan audience of Jews, Arabs, British, German, and members of other nationalities. The backbone of these concerts was the Jerusalem String Quartet, the first in the country, with her sister, violinist Margery Bentwich. In 1951 she joined the Israeli String Quartet with Lorand and Alice Fenyves (violins) and Oeden *Partos (viola). She also appeared with the Philharmonic and radio orchestras and taught cello and chamber music at the academies of music in Tel Aviv and Jerusalem as one of the most admired cello pedagogues in the country. Her plans for a "music gymnasium" for talented children came to fruition in 1962 in Tel Aviv when the Thelma Yellin Gymnasium was opened.

YELLIN-MOR (Friedman), NATHAN (1913–1980), one of the leaders of *Lohamei Herut Israel and Israeli politician, member of the First Knesset. Born in Grodno, Poland, Yellin-Mor completed his studies as an engineer in Warsaw, where he joined the Berit ha-Ziyyonim ha-Revizyonistim and *Betar movements and in the late 1930s supported extreme activism, associated, in Palestine, with the *Irgun Zeva'i Le'ummi (IZL). In 1938–39 Yellin-Mor edited the short-lived Warsaw Yiddish daily *Di Tat*, which was an IZL organ. After the outbreak of World War II, Yellin-Mor managed to reach Palestine and joined Avraham *Stern, who decided to break away from the IZL and establish a new organization that was called Lohamei Herut Israel (Lehi). In 1941 he traveled to Syria on

behalf of Stern, with the purpose of reaching neutral Turkey in order to contact representatives of Nazi Germany and offer them cooperation against the British in exchange for a mass evacuation of European Jews to Palestine. However, he was arrested by the British in Syria and imprisoned in Palestine. In 1943 he escaped from a detention camp with a group of his colleagues through a tunnel. After his escape Yellin-Mor became one of a triumvirate of Leḥi leaders, replacing Stern, who was murdered by the British in 1942, concentrating on military operations until 1948.

He was arrested together with other Leḥi members by the Israeli police after the assassination of the UN mediator Count Folke Bernadotte in the fall of 1948. An Israeli military court found him guilty of membership in a terrorist organization but acquitted him of complicity in Bernadotte's assassination. Yellin-Mor was included in the general amnesty granted by the Provisional Government, and ran in the elections to the First Knesset in 1949 on the "Fighters" (Loḥamim) ticket that was made up of former Leḥi members. However, he was the only member elected, and soon after his election to the Knesset, he underwent an ideological shift that took him to the extreme Left. Together with Uri *Avneri, he established in 1956 a political group called "Semitic Action" (Ha-Pe'ulah ha-Shemit), which supported the idea of a Jewish-Arab federation in the territory of Mandatory Palestine that would form part of a broader Middle East federation. Yellin-Mor was not elected to the Second Knesset, went into business, and edited a journal called Etgar ("Challenge"), in which he professed his views. After Avneri entered the Knesset in 1965, Yellin-Mor left all direct political activity.

His writings include Loḥamei Ḥerut Yisrael: Anashim, Ra'ayonot, Alilot ("Loḥamei Ḥerut Yisrael: People, Ideas, Deeds," 1975) and Shenot be-Terem ("The Years Before," 1990).

[Susan Hattis Rolef (2nd ed.)]

YEMEN, country in S.W. corner of the Arabian Peninsula; capital, Sanʿa.

The Land and the People
The southern part of the Arabian Peninsula is called al-Yaman (the south), after which the country is named in the West. In pre-Islamic times there were five separate political entities in this area, the history of which is known only in epigraphic sources from the tenth century B.C.E.: Maʾīn (with the capital Qarnāw), Ḥimyar (ʿAfar), Sabā (Mārib), Katabān (Tamnā), and Ḥaḍramawt (Shabwah). The country was politically united under the Ḥimyari kingdom from the fourth century C.E. The Ḥimyari king Abūkarib adopted the Jewish religion in 384, which was retained until 525/530, when *Dhū Nuwās, the last Ḥimyari king was defeated and killed by the invading Christian army from Abyssinia. In 570 the country was conquered by the Sassanid Persians and in 629 was taken over without a fight by the Muslim army. Since then Yemen has been a Muslim country, although its ruling dynasties have changed many times and almost never has Yemen constituted one political

entity. After being a remote province of the *Umayyads and the *Abbassids it was actually ruled by different local families, until it fell under the rule of a Zaydī imām, Yaḥyā al-Hādī ilā al-Ḥaqq. His successors became the main political and religious power except for relatively long intervals: 1173–1229 (Egyptian Abbassids), 1229–1454 (Rasūlīs), 1454–1526 (Banū Ẓāhir), 1536–1636 (*Ottoman Turks), 1872–1918 (Ottoman Turks). But even during these intervals the Zaydīs kept their power in the northern part of the country. Since *Sanʿa was the political and religious center, except during the Rasūlī period with the capital Taʾizz, the far southeastern region of Yemen, Ḥaḍramawt was never under the control of the central government but only under that of various local sultans. Part of the country with its important seaport of *Aden was actually under British control between the years 1839 and 1967. In 1962 the Zaydī imamate came to its end in consequence of the republican revolution and since then Yemen has been a Muslim republic. In 1990 Yemen and the State of South Yemen, established after the British had evacuated Aden, were united into one state for the first time in history to include all south Arabia, up the border of Oman in the east. Religiously the country is evenly divided between Zaydīs in the north and the central plateau and Shāfiʾīs in the southern lowlands and Ḥaḍramawt.

As an orthodox Muslim state Yemen was always hostile to the Jewish settlement in the Holy Land since the first mass aliyyot from Yemen in 1882 and actually tried to prevent them. Later, after the establishment of the State of Israel in 1948, Yemen was one of the seven Arab states who sent their armies against the newborn Jewish state. Yemen never recognized Israel de jure or de facto and in the early 21st century was one of the radical Arab and Muslim states in terms of its political relation to Israel.

History
There are no documents or other reliable sources about the beginning of Jewish existence in Yemen. The traditions of the Jews of Yemen themselves relate that a large group of Jews left Jerusalem some years before the destruction of the First Temple following the prophecies of Jeremiah. They first came to some localities in Yemen, called Resh Galut, such as Sanʿa, Tanʾim, and Dhamār. According to their tradition, the Jews of Yemen rejected the call of Ezra to return to the Holy Land since they anticipated that the Second Temple would be destroyed as well. This tradition may be supported by their pronunciation of Hebrew, which fits that of Judea, like that of the medieval Jews of Babylonia, and differs from the Galilean (Tiberian) pronunciation maintained by all other Jewish communities; and the counting of the years from the ninth of Av since the destruction of the First Temple, a unique custom not existing in any other Jewish community. However, the first certain evidence of Jewish life in Yemen is the tombs of Ḥimyarī Jews in Beth Sheʾarim, dated to the beginning of the third century C.E., which means that at least in the second half of the second century C.E. there already were Jewish settlements in Yemen.

Jewish communities in Yemen before the mass emigration to Israel, 1949–50.

One may conclude, then, that Jews left Judea southward after the destruction of the Second Temple (70 C.E.) and eventually arrived in Yemen to build their new life.

Judaism in pre-Islamic Yemen gained more and more power and influence. The crucial step was in early 380, when the Ḥimyarī king Abūkarib adopted Judaism as the formal religion of the kingdom. Polytheism was completely rejected and for 150 years all inscriptions, the almost ultimate source for pre-Islamic history, were monotheist or Jewish. During that time, a bitter struggle developed between Judaism and Christi-

anity in Yemen, culminating with Yūsuf Dhū Nuwās (522–525/ 530). But when the foreign army of Aksūm, the Christian power in Ethiopia, intervened and invaded the country, as a response to the punitive expedition of Yūsuf against the rebellious Christians in Najrān, the Jewish regime of Ḥimyar came to its end and the Jews lost their strong standing in the country. From early Muslim sources, however, we learn that Judaism spread out among many Arab tribes, especially in Ḥaḍramawt. The next big step in the degradation of Judaism and Jews in Yemen took place in 629, when the country

was taken by the victorious Muslim army of *Muhammad. Suddenly the Jews became *dhimmīs, namely second-degree subjects protected by the government in return for paying a special tax (only for adult males) – the jizyah. It seems that only a few of the Jews of Yemen converted to Islam, although there is not the slightest information in terms of numbers. However, early Muslim sources are quite informative about Yemeni Jews – or about those Jewish scholars who converted to Islam and enriched it with endless Jewish traditions and stories, frequently lost in genuine Jewish sources. To name just a few we may mention *Ka'b al-Aḥbār, 'Abd Allah ibn Sallām, 'Abd Allah ibn Sabā', and Wahb ibn Munabbih.

We know almost nothing about the Jews in Yemen during the Umayyad and first Abbassid periods up to the end of the 9th century, when the Zaydi imamate was established in northern Yemen in 897 by Yaḥyā al-Hādī ilā al-Ḥaqq. From a rare document preserved in his sīrah (biography) we know that basically he did not adopt discriminatory and humiliating regulations against the Jews but forbade Jews to build synagogues and hold Muslim slaves. It is notable that he did not prevent Jews from owning lands and even confirmed their right to buy new lands from Muslims.

Again, for more than 250 years, Jewish and Arab sources are almost completely silent regarding Yemeni Jews, but from the scarce information we have it is clear that the Jews of Yemen maintained close relations with the geonim in the Babylonian Jewish centers. However, as a result of the growing importance of Yemen and especially of its southern seaport of Aden in international commerce from the Mediterranean basin to *India, the Jewish community of Yemen rises from oblivion, particularly in the documents of the Cairo *Genizah. During the 11th, 12th, and 13th centuries, Yemen and its Jewish community were like a suburb of *Egypt and its large Jewish Egyptian community. Yemenite Jewry of that time was an integral part of the Jewish world in the vast Muslim area from the shores of the Atlantic to India. In the 12th and 13th centuries, in the course of which Yemen constituted an important part of the Ayyubid dynasty in Egypt, it had special communal and religious relations with *Maimonides and his son Abraham, both of them heads of the Jewish community in Egypt and close to the government. These special relations were first shaped when Maimonides acted on their behalf in the Ayyubid court in Cairo and sent them his famous Epistle to Yemen (1172) to lead them away from their belief in the false messiah who appeared at that time in Yemen and to comfort them. Generally the Ayyubid period (1172–1254) was quite happy for the Jews, except for a short time when Mu'izz al-Dīn Ismāʿīl (1196–1201) forced them to convert to Islam, a tragic episode ending with his sudden death.

The transition of the government in Yemen from the Ayyubid to the Rasūlī dynasty (1254–1454) did not radically change the political and economic conditions of the Jews. Despite the sparse details in Muslim sources about some Jews who had converted to Islam, there is a good likelihood that in general the Jews lived calmly and securely. They could maintain their close relations with Egyptian Jewry under the rule of the *Mamluks and excel in their literary production, which was the richest and the most diverse in their history. Matters changed with the rise of Banū Ẓāhir in 1454, particularly as a result of another Jewish false messiah who attracted many Jews as well as Muslim followers. Not only was the rebellious messiah killed, but Jews were no longer allowed to dwell in the vast area of Ḥaḍramawt, claimed by the fanatic Muslims to be the land of the pre-Islamic prophet Hūd. This ban was only the first in an unceasing trend to limit the boundaries of Jewish settlement in Yemen. No wonder, then, that the Jews of Yemen looked with hope to Portuguese activities on the seacoast of southern Yemen during the first decade of the 15th century, and some of them even helped them as spies.

Shortly after that, the Zaydī imams, who for several centuries had been pushed to their strongholds in the north, gained power and took control of larger territories in the central plateau where large Jewish communities lived. It should be noted that the Zaydī attitude towards Jews had been greatly altered during the 15th century under the impact of the writings of Ḥanbalī scholars, becoming less tolerant, as attested in legal books of Zaydī scholars. But then came the Ottoman Turks who pushed the Zaydīs back to the north after gaining control of the central plateau, including San'a. In spite of the formal improvement of living conditions of the Jews under the Turks, as the new strict regulations against them were abrogated, they suffered severely from the unceasing war between the Ottoman armies and the Zaydī rebels. This situation came to a head in late 1620, when Faḍlī Pāsha, the Turkish governor in the southern lowlands, arrested the leaders of the Jews, trying to win the sympathies of local Muslims. Nevertheless, the Jews were accused by the Muslim Yemenis of being collaborators of the Turks. When eventually the Yemenis, led by the Qāsimīs, the new dynasty of imams, succeeded in driving the Turks out of the country in 1636, the Jews were submitted to new anti-Jewish Zaydī regulations.

It was just a question of timing for the fanatically religious Imām al-Mutawakkil Ismā'īl (1644–1676) as to when to act to bring about the total annihilation of Jewish existence in Yemen, a question regularly discussed in Zaydī legal writings since the middle of the 16th century. This occured in 1667, in the wake of the messianic expectations of Shabbateanism throughout Yemen, as well as all over the Jewish world, when a group of San'anī Jews, led by Slaymān Jamāl, one of their scholars, asked the governor of San'a to hand the government over to him. The reaction of Imām Ismā'īl was quick and harsh. He legally abrogated the status of the Jews as a protected minority and applied to scholars of both the Zaydī and Shāfi'ī schools regarding the question of whether Yemen is like the Ḥijāz where non-Muslims are not allowed to dwell. After years of hesitation he adopted the ruling of these scholars, who believed that Yemen was a part of the Ḥijāz, and on his deathbed he instructed his heir, Imām al-Mahdī Aḥmad (1676–1681), to carry out this ruling. The immediate mean-

ing was unequivocal: the Jews could no longer live as Jews in Yemen; they had to choose between Islam and death. The new imām chose a third alternative, to expel the Jews from Yemen. But eventually, for logistic reasons, they were expelled to *Mawzaʾ, a small town in the west of the country, not far from the seaport of Mochā, where living conditions were almost unbearable.

After about a year and a half, the Jews were allowed to return to their towns and villages, although not to same quarters and houses, all of which had been confiscated by the government. They had to build new houses in new neighborhoods, outside the wall in walled cities. For more than two generations the social, economic, and spiritual situation of the Jews was quite bad. It was only in late 1720, under the community leadership of Shalom Iraqi, who served three imāms as collector of taxes and was responsible for the mint house, that the Jews rehabilitated their life, particularly economically as the Jews took part in the new commerce with British India. But that was only for a short time, owing to the jealousy of the Muslims over the growing wealth of the Jews. In 1762 Iraqi was thrown into prison, when he was more than 80 years old, his wealth and property were confiscated, and all synagogues in Sanʾa were closed for 30 years. It was then that the spiritual leadership, headed by R. Yiḥye (d. 1805), held the reins of the Jewish community and rescued it from moral and communal decline. But this could not help the politically and economically deteriorating status of the Jews, a trend which continued and even worsened during the 19th century, up to 1872, when Yemen was conquered by the Turks.

For many years after the British had taken over Aden (1839) and the Turks had invaded Yemen (1849), the Jews of Yemen looked forward to the total occupation of the country by a Western power and tried hard to involve other Jewish communities, especially in England, on their behalf. This could be attained only after the Turks had entered Sanʾa in 1872. In principle, the new rulers canceled the traditional Muslim anti-Jewish regulations, in accordance with Ottoman policy in the entire Empire. Indeed, the situation of the Jews improved during the Turkish occupation and their ties with coreligionists in Europe were strengthened, especially with Jewish settlements in the Holy Land to which the Jews of Yemen started to immigrate in mass beginning in 1882.

These two trends opened a completely new period in the history of the Jews of Yemen during which immigration to the Holy Land was a main political and social factor with a decisive impact upon all aspects of life. Another major factor was the centralist and ultra-orthodox regime of Imām Yaḥyā (1904–48), who led the rebellion against the Turks after his father's death in 1904. He wrested significant authority from the Turks in 1911 regarding internal and religious issues (Jews included), and eventually obtained the entire governing authority in 1918 after the Turks had evacuated the country. Yaḥyā strictly implemented the traditional Zaydī policy regarding the Jews, including two harsh edicts: (a) the orphans' edict,

according to which every Jewish orphan was to be taken by the government from his family and raised as a Muslim; (b) the latrine decree, according to which the Jews had to clean the streets and the public baths and lavatories (in order to humiliate them). As an expression of identification and sympathy with Arabs in their conflict with the Jews in the Holy Land, he published a regulation prohibiting Jews from leaving Yemen for that country. But on the other hand he followed a very firm policy of protecting the Jews and severely punished any Muslim, either a regular citizen or a government officer, who harmed them.

However, what had a greater effect on the worsening conditions of life of the Jews during Yaḥyā's reign was his general despotic conduct toward his subjects, Muslims as well as Jews. To gain maximum control over his subjects and to prevent any possibility of revolt against him, Yaḥyā imposed extremely high taxes on the Muslims, particularly the peasants, and set up many factories and companies to deprive Jews of their main source of income, the crafts, which were the primary occupation they were allowed to practice. The Jewish community grew poorer and poorer and instead of the financial help sent by the Jews of Yemen to the new Yemenite communities in the Holy Land during the Ottoman occupation, the Yemenite Jews in the Holy Land collected money and sent it to their brethren in Yemen. Understandably, many Jews tried hard to escape from Yemen and immigrate to the Holy Land, despite the prohibition of the imām. Thus, almost more than a third of the Yemenite Jews had settled in the Holy Land prior to the establishment of the State of Israel in 1948.

Thus, the Jewish community in Yemen experienced much turmoil during the years 1900–1951. In the beginning of the 20th century Yemen was severely afflicted by famine caused by three years of drought (1903–1905), and many Jews died or left in order to find food. The circumstances were particularly terrible in Sanʾa, which was besieged by the rebellious army of Yaḥyā, where more than half (according to one estimate almost 90%) lost their lives. This event, remembered by the Jews of Yemen as ḥawzat al-nafar (the siege during which a handful of wheat was sold for one real), triggered the internal immigration of Jews, a phenomenon strengthened in the time of Imām Yaḥyā because of the worsening economic conditions and the immigration to the Holy Land or to British Aden, where the Jews lived in improved conditions. In consequence of this turmoil the traditional social structure of Jewish communities in Yemen was weakened and the negative results could be felt in different aspects of life.

Another factor which shook the communal structure in Sanʾa and in its vicinity was the scandalous controversy over the *Kabbalah. Influenced by the enlightenment movement of Jewish Europe (Haskalah), either by scholars visiting Yemen, such as Joseph Halévy (1869/70) or Eduard *Glaser (1882–1894), or by publications that reached Yemen, some relatively young Sanʾani Jews, headed by R. Yiḥye, established a kind of reform group, completely negating the Kabbalah or any mystical element in Judaism. This controversy resulted in

rich literary productions (see below), but on the social level it was highly destructive, as the community of Sanʾa was splintered in 1910 into two hostile factions, avoiding intermarriage or eating the meat slaughtered by the other side. This controversy was the main social issue in the Sanʾani community up to its total immigration in 1949–1951. It was transferred to the Holy Land, where it still exists in the 21st century.

Social Position

The basic factor which determined the social status of the Yemenite Jews was the religious-political arrangement imposed on them by the Muslim regime since 629, the *dhimma, namely, the protection they got from the government in return for the *jizyah, the tax each male adult had to pay. This arrangement was more effective in the center than in the remote regions of the country, where Jews lived among the tribes and their relations were based on the tribal pre-Islamic social institute of jār. The protection bestowed by the sheikh and his men upon the Jew, as upon any other weak person within the tribal community, was based on the issue of honor and had nothing to do with Islam. The general trend in the social status of Jews among Muslims in Yemen was one of deterioration, since even the Zaydī regime eventually adopted all anti-Jewish restrictive and humiliating regulations established by the most extremist Sunnī religious scholars or rulers. Although on the declarative level Jews were not compelled to convert, the entire history of the Jews in Islamic Yemen was an unceasing struggle with the attempts of the government and Muslim society to turn them into Muslims. Indeed, conversion to Islam was a distinct phenomenon among the Jews of Yemen, even though it never stemmed from a real and deep conviction of the truth of Islam.

Basically, the Jew was considered by Yemeni Muslims as an inferior human being, devoid of any rights. Jews were not allowed to build more than two-story houses, carry arms, wear light-colored garments, ride mounts except donkeys (and even then only sidesaddle like a woman), or live among Muslims; also they were ordered to wear sidelocks so as to be recognized as Jews, speak humbly to Muslims, and walk only to the left of a Muslim. The Jew had to be very careful when speaking about Islam or Muslim institutions, as any sign of criticism or disparagement against them might end in capital punishment. In principle Muslim and Jewish communities did not interact; but in contrast to cities and towns, where Jews were completely secluded in neighborhoods, there was a more lenient approach in villages, where the style of life produced more diverse possibilities for social or other kind of encounters between Jews and Muslims. No wonder then that the cultural distance in all aspects, spiritual as well as material, between village Jews and Muslims was much less clear-cut and decisive than that between townfolk Jews and Muslims.

Economic Situation

By and large, Yemeni Jews were very poor. Only rarely do we hear about rich Jews in Yemen, when they could freely deal in international or nationwide trade, as in the 11th, 12th, and 18th centuries or during the second Ottoman occupation (1872–1918). The outcome of the ceaseless social and religious pressure on the Jews was their being the poorest component of the Yemeni population. It is true that almost all the citizens of Yemen were poor because of endless military struggles and the despotism of the rulers, as in the time of Imām Yaḥyā (1918–1948), but the Jews suffered also due to their social inferiority and their exclusion from the main source of livelihood – agriculture. Most Jews were artisans and could make quite a good living in days of peace and calm. However, this situation was rare and in the customary situation of political turmoil and disorder or during frequent years of natural afflictions like drought and locusts, there was no demand for the crafts of the Jews. The best proof of the poverty of the Jews of Yemen is the list of the jizyah payers, where most of them are recorded as adnā (lowest), and only a small number as a'lā (highest). There were only a few families who could boast of their wealth, made via international commerce through Aden or Ḥudaydah, such as the Ḥibshūsh family or Israel Ḥubayri, who made his fortune as the exclusive importer of arms from Germany and Belgium for Imām Yaḥyāʾs army. Famine was then the main reason for conversion to Islam, particularly because Jews were not helped by the government with food as were Muslims.

Messianic Expectations

The messianic activity of the Jews of Yemen was one of their most characteristic features even in pre-Islamic times, from the fall of Yūsuf Dhū Nuwās in 525/530 in the war against Ethiopian Christians to the rise of *Muhammad. The appearance of Muhammad stimulated messianic expectations among the Jews. Some scholars ascribed to ʿAbdallah ibn Sabā, the Jewish convert to Islam at the start of the new religion, and similarly to other proselytes, an important role in conveying messianic notions to Islam, particularly the Shīʿī branch. On the other hand, the Zaydi sect, which was the foremost religious-political force in Yemen from the end of the 9th century, and which belonged to the Shīʿa, elevated the Imām to a meta-human level and did not adopt the idea of the Hidden Imām, existing in abstentia (ghaybah), whose advent was awaited by all (al-mahdī al-muntaẓar). Yet Muslim Yemen was not free of messianic tension throughout the generations, especially among the Sunni (Shāfiʿi) section of the population, most of it in the south; and often Jewish and Muslim messianic activities nurtured each other. For example, some Muslims followed Jewish messiahs. Moreover, the strong Jewish belief that on a certain day, Messiah, the Son of David, would be revealed, would redeem the Jews of Yemen, and bring them to their land seeped into Muslims in Yemen, and indeed made them fearful lest they be punished for their unfavorable treatment of Jews. By contrast, the authorities, whether Zaydī or Sunnī, were highly suspicious of the Jews' messianic faith, regarding any activity stemming from it as rebellion against the government requiring a swift response. Such reactions to the display of messian-

ism in Yemen since the 12th century contributed to the continuous decline in the political and social status of the Jews of Yemen and the shrinking of the areas of their settlement.

Immigration and Settlement in Erez Israel

Throughout their history, the Jews of Yemen had ties with the Jewish settlement in Erez Israel. From the *Genizah* documents and *Alḥarizi's *Taḥkemoni* we learn about the Yemenite community in Erez Israel. Many years later, R. Obadiah of *Bertinoro reports on Jews of "the Land of Aden," namely Yemen, who immigrated to Erez Israel, probably in the middle of the 15th century. Since then we have little evidence about individuals or solitary families from Yemen making *aliyah*. It was only in 1881 that the flow of Jews left Yemen for Erez Israel, in consequence of three factors: (a) encouraging information about the living conditions there and the rumors about land distributed there to any Jew who came on *aliyah*; (b) improvement in sailing conditions from Yemen to Erez Israel, then both provinces of the *Ottoman Empire; (c) the disappointment with the Turkish government in Yemen.

The first immigrants came to Jerusalem in August 1881 to establish a separate community there; in contrast to previous immigrants from Yemen they blended with the Sephardi community. Many others from Yemen joined this community, most of them from San'a and settled first in the Old City of Jerusalem and from 1885 in new neighborhoods built specially for them outside the walls, like Kefar ha-Shiloaḥ, Mishkenot, and Naḥalat Ẓevi. In 1908, Yemenite Jews in Jerusalem numbered more than 2,500, constituting an independent community after attaining a *firman* from the Ottoman government. Some of the immigrants settled in *Jaffa and there established a smaller community (350 in 1903). In 1908 village Jews of north Yemen started to immigrate and settle in young Hebrew moshavot like Reḥovot. Like them, thousands of immigrants who came from the south of Yemen (Shar'ab), following the mission of Shemu'el Yavne'eli, settled in most of the moshavot in Judea and the Galilee, numbering about half the total population and making their living from agriculture, either as hired laborers or independent farmers. At the end of World War I there were 4,500 Yemenite Jews in the country. The flow of emigrants from all over Yemen was renewed after World War I, this time more to the urban center of Jaffa-Tel Aviv and the new Hebrew towns, as small businessmen, laborers, and retailers. Between the two world wars more then 15,000 left Yemen illegally for Erez Israel through Aden, where they obtained immigration certificates from the British Mandatory government. By the outbreak of World War II there were about 28,000 Yemenite Jews in Erez Israel.

In early 1920 the Zionist movement in Erez Israel started to act in Aden and later in Yemen, in order to encourage and help Jews to emigrate. But owing to the hostile attitude of Imām Yaḥyā to Zionism nothing could be done. It was only in the mid-1940s, that the imām eased his policy, responding to the grave economic situation of his Jewish subjects. Emissaries of the Zionist institutions in Erez Israel acted in Yemen on the eve of the establishment of the State of Israel. Thousands wandered on the routes from all over Yemen to Aden, the only seaport in south Arabia from which Jews could emigrate. With the help of the British authorities in Aden, there was built, next to the city of Aden, Camp Ge'ullah in which the refugees from Yemen were received and well treated by Zionist emissaries and even got a modern Zionist education to facilitate their absorption in the Promised Land. This activity was the basis of the overall emigration of Yemenite Jewry following the establishment of the State of Israel in 1948 and the murder of Imām Yaḥyā, who was considered the ultimate protector of the Jews, in the same year. Aḥmad, the new imām, decided to let the Jews leave his country to Israel, on two conditions: they had to sell all their property to Muslims and to teach the Muslims their crafts. Both conditions were not properly fulfilled, but in any event more than 50,000 Jews left the country in 1949–51, through Aden, except for some several thousands who preferred to stay, clinging to their property or hoping to collect on loans owed by Muslims. A thin trickle of emigration continued until 1954 and even later in 1962, on the eve of the republican revolution. Since then, up to the early 1990s, an iron curtain had fallen on the Jews of Yemen. Some left, however, nominally to the U.S., but most to Israel. No more than 200 Jews still live in Yemen.

Since their first emigration to Jerusalem in 1881, Yemenite Jews dreamed of settling in their old-new homeland as farmers. That was the hope when they settled in Kefar ha-Shiloaḥ and that was what stimulated their leader R. Avraham Naddāf (1891–1920) to purchase land for agricultural settlement and to establish the Shivat Zion society designed for the same goal. Actually Yemenite Jews lived as farmers in Naḥalat Israel Rama not far from Jerusalem for about a year (1895/6). In addition to their agricultural settlements next to the Hebrew moshavot, they established prior to the founding of the State of Israel two independent moshavim – Elyashiv (1933) and Ge'ulim (1945). But the archives of the Hitaḥadut ha-Teimanim, the main Yemenite organization in Erez Israel, inform us that the Zionist organizations did not respond positively to their initiatives to establish agricultural settlements. However, after the mass immigration of Yemenite Jews in 1949–51, the policy was to take them out of the transit camps (*ma'barot*) and settle them in abandoned Arab villages and later in new localities as farmers, in more than 50 places. Soon it became clear, however, that not all Yemenite Jews were fit or wanted to be farmers, and many of them left for the urban settlements, leaving only about 35 Yemenite moshavim. Since then, Yemenite immigrants and their descendants practice all kinds of professions marking their increased social and political acculturation in the State of Israel.

Literary and Scholarly Activities

It is impossible to present a complete picture of Jewish literature in Yemen, as a considerable part is still hidden in unpublished manuscripts. Available sources do not attest that there existed a Jewish literature in Yemen prior to the 10th century.

However, it is probable that the writings of the Sages in Ereẓ Israel and Babylonia, namely the Talmud (Babylonian, not Palestinian) and the Midrashim arrived in Yemen and were preserved there in carefully copied manuscripts. Jewish Yemenite literature constitutes an integral part of Jewish literature in the Muslim-Arabic realm from *Spain to *Persia. In its first steps Jewish literature in Yemen echoes Jewish literature produced in the major Jewish spiritual centers: *Italy, *Iraq, Ereẓ Israel, Spain, North Africa, and Egypt. Thus its first work is probably a Judeo-Arabic translation made by Zechariah ben Saʾīd al-Yamanī of Josippon's *History of the Jews during the Second Temple*, a Hebrew work composed in Italy in 933, or the anonymous *Maḥberet ha-Tijān*, a compendium of the reading rules of the Bible as known from the Eastern tradition and *Saadiah. The third work is a Judeo-Arabic commentary of *Alfasi's compendium to the Talmud tractate *Ḥullin*, by an anonymous author, seemingly of the 11th century. A fourth work of the same time is the enlarged adaptation of the Ereẓ Israeli scholar Rav Nathan ha-Yeshivah's *Commentary on the Mishnah*. The first original work is the ethical-philosophical *Bustān al-ʿUqūl,* written again in Judeo-Arabic by Nethanel berav Fayyūmī around 1150. It is not, then, an accident that all the aforementioned works are in Judeo-Arabic, as since the 10th–15th centuries Yemen Jewry was culturally well immersed in Arab-Muslim culture, just like other Jewish communities in Spain, North Africa, and the East. But there is a highly significant difference, because for all the other communities the proximity to Arab-Muslim culture had been curtailed around 1250. The period from 1150 to 1500 was the most productive for Jewish literature in Yemen in various fields: (a) Poetry – Hebrew poetry in Yemen started in the second half of the 12th century, first by Saʾīd ben Marḥab, who was still influenced by ancient Ereẓ-Israeli *piyyut*, then by his contemporary Daniel berav Fayyūmī, probably Nethanel's brother, who was already influenced by the Spanish school of Hebrew poetry. They both wrote liturgical poems. A later poet who lived before the beginning of the 13th century was Abraham ben Ḥalfon, from whom we have remnants of his *dīwān* of both liturgical and secular poems. The latest poet in that period was David ben Yeshaʾ ha-Levi (around 1500). (b) Biblical Commentary – this is the richest field of literary activity in that period in Yemen, of which we mention here only four works. The earliest is *Nur al-ʿĀlam* by Nethanel ben Yesha (1329) on the Pentateuch, but two other more important commentaries on the Pentateuch are *Midrash ha-Ḥefeẓ* by Zechariah ha-Rofeh (first half of the 15th century) and *al-Wajīz al-Mughnī*, still in manuscript, by David ben Yesha ha-Levi. A commentary on the early Prophets was compiled by Abraham ben Solomon (14th century), only partly published. (c) Midrashic Compilations – the most comprehensive of which is *Midrash ha-Gadol* by David ha-Adani. (d) *Halakhah* – most of the works are commentaries on *Maimonides' *Mishneh Torah*, like that by Zechariah ha-Rofeh. (e) Philosophy – in this category, too, most of the works are commentaries on Maimonides' works, especially *Guide of the Perplexed*. But there were many other works, characterized by their allegoric tendency regarding the *aggadah* of the Sages and even biblical figures and stories. This tendency was influenced on one side by the Maimonidean school in Spain and on the other by Ismāʿīlī writings which flourished in Yemen. The most interesting work of this Yemeni school is *Kitāb al-Ḥaqāʾiq,* compiled by the rabbis of Ẓăʾdah, who were harshly criticized by the rabbis of Sanʾa. Another kind of philosophical compositions, unique to Yemen, is *masāʾil*, short discussions providing answers to philosophical questions, like that of Ḥoker bi-Shelomo (first half of the 15th century). (f) Lexicography – most of the compilations in this category were Hebrew-Arabic lexicons, aimed at enabling the understanding of the Mishnah and Maimonides' *Mishneh Torah*, such as *al-Jāmiʾ* by David ben Yesha ha-Levi. (g) Science – mainly astronomy, needed for establishing the Hebrew calendar, and lists of medicines, like *kitāb al-wajīz* by Zechariah ha-Rofeh. The most prolific writers who acted in almost each of the above-mentioned fields and more are Saʾadiah ben David ha-Adani, David ben Yesha ha-Levi, and Moses al-Balīdah (1475–1525). Most of the works in the period under discussion, except poetry and *Midrash ha-Gadol*, were in Judeo-Arabic.

The 16th century was a transitional period between two major schools of Jewish literature in Yemen: the medieval one focused on Midrash, *halakhah*, and philosophy, mostly in Judeo-Arabic, with a rationalistic orientation, while the other focused on poetry and Kabbalah, mostly in Hebrew and with strong mystical nuances. The most important character in that transitional time was Yiḥye (Zechariah) al-Ẓāhirī, mainly known for his *Sefer ha-Musar*, of the *maqāma* genre, strongly influenced by Al-Ḥarīzī's *Taḥkemoni* and Immanuel's *Maḥbarot*, but also for his poems and *Ẓedah la-Derekh*, the commentary on the Pentateuch, both with rich kabbalistic motifs borrowed from the new school of *Safed which he visited himself. The new school of Jewish Yemeni literature started with the poet *Joseph ben Israel (d. in the 1620s), the founder of classic Jewish poetry in Yemen, characterized by the growing importance of its Arabic element and its openness to the Yemeni Muslim poetry in terms of structure (*muwashshaḥ*) and literary motifs. However, the most prominent figure in Jewish Yemenite poetry, who overshadowed his predecessors as well as his successors, is Shalom Shabazī (1619– after 1680), a younger relative of Joseph ben Israel, both of the Sharabi *Mahsta* family in southern Yemen. Shabazī was a prolific and gifted poet from whom we have about 850 poems. But it should be stressed that Arabic completely disappeared from the new school, except in poetry and a very few folklore-type works or those aimed for less-educated people.

The closer relations between Yemenite Jewry and Jewish spiritual centers and the reinforced encounter with their different traditions and customs resulted first in a comprehensive attempt to adjust Yemenite traditions with these foreign but prestigious traditions. The major scholar who dedicated almost all of his writings to that end was Isaac Wannah (first

half of the 17th century), a prolific writer, mainly known for the prayerbook he compiled (*Pa'amon Zahav*) and the commentary he attached to it (*ḥiddushin*), being a dedicated propagandist of the Kabbalah. However, the tendency of neglecting the genuine ancient Yemenite traditions provoked strong resistance among San'ani scholars in the 18th century, who tried to find the golden mean. This was worked out primarily by Yiḥye Ṣaliḥ (d. 1805), the president of the San'ani Jewish court, who was the unchallenged spiritual and communal leader of Yemenite Jewry for more than 40 years. To support his work he searched ancient manuscripts and documented oral and written traditions on all aspects of religious and communal life. He was accepted in Yemen as the ultimate religious authority and his numerous works are so considered until today.

The 19th century presents in general a very pale image of Jewish Yemenite literature, since most of the production by that time was chiefly additions to and commentaries on Ṣaliḥ's works. No wonder, then, that under the alleged impact of Jewish European scholars, some young San'ani scholars, headed by Yiḥye Qāfiḥ (*Kafaḥ) set out to improve the spiritual level of Yemenite Jewry by a complete rejection of kabbalistic literature and customs, including the Zohar, and a return to the medieval school, based on the Talmud and the Judeo-Arabic philosophical literature of Saadiah Gaon and Maimonides. The trend of this new school, very active in the first half of the 20th century and severely criticized by the "orthodox" majority of the Jewish community, yielded rich literary production, the culmination of which was that of Rabbi Joseph *Kafaḥ, the grandson of Yiḥye Qāfiḥ, already in Israel (he left Yemen in 1943, d. 2000), who was awarded the Israel Prize (1969). In the framework of this production one field should be specifically noted, that of chronological works, which had already been started in the 18th century by Sā'īd Ṣa'dī and Yiḥye Ṣaliḥ. The tendency of searching Yemenite tradition and history continued in Ereẓ Israel, first by Yemen-born scholars like Abraham Naddāf and later by younger scholars, natives of the new land. Close to this kind of cultural activity one may mention the Yemenite poets and prose writers, whose prominent figure is Mordechai *Tabib, who were spokesmen of their communal brethren and described the difficulties of their cultural and economic acculturation.

Culture and Art

Yemenite Jewry had developed a very particular and rich tradition in all aspects of material culture: music, dance, architecture, clothing, embroidery, gold and silver crafts, and so forth. Although we may find not a few common characteristics with the neighboring material culture of the immediate close circle of the Muslims in Yemen or of farther circles like that of India or East Africa, it is convincingly clear that material Jewish culture was different from the Muslim one. This is much more unequivocal regarding what is connected to religious life, such as the music of the synagogue or the shaping of ceremonial objects like Ḥanukkah candles or Torah cases.

All that unfamiliar culture, brought to the Holy Land when Yemenite Jews first came en masse in 1881, attracted scholars and artists, like A.Z. Idelsohn and Boris Shatz in Jerusalem. The former established there around 1910 the Shirat Israel (Poetry of Israel) institute, designed to train young Yemenites in their musical traditions, while the latter established in 1906 an association named Bezalel with the goal of promoting Yemenite gold and silver craft, embroidery, and other handicrafts. To that end he set up workshops in Jerusalem and in the moshavah of Ben-Shemen, where Yemenite artists worked and trained for industrial production. In general, Yemenite material culture was sympathetically welcomed in Ereẓ Israel, and the latter's newly shaped culture derived some of its representative elements in music, dance, and artistic works from Yemenite tradition.

The Yemenite community had scores of artists of all kinds, some of them expressing Yemenite tradition, others more rooted in general Israeli culture. The most active field is music. Since the first woman singer, Brachah *Zefirah, a native of Jerusalem, who had a magnificent career in Ereẓ Israel as in Europe, there were, and still are, scores of Yemenite singers, mostly women, who stand in the forefront of light music in Israel. The most famous name is that of Shoshana *Damari (d. 2006), who left Yemen in 1930 when she was a year old and received the Israel Prize in 1988. A much more diversified artist was Sarah *Levi-Tannai, born in Jerusalem in 1911, poetess, composer, and choreographer, and the founder of *Inbal, the most important Yemenite artistic institution in Israel (1949); for many years, this dance theater was the best artistic representative of the young State of Israel in the U.S. and Europe, performing scores of musicals about the folklore of Yemenite Jews. While Yemenite singers in Israel could derive their tradition from the folklore of their families in Yemen, Yemenite painters could not, as painting or any kind of plastic art had not existed in Yemen, excluding a limited engagement with manuscript illumination. This explains why this field of art came relatively later than others to Yemenites in Israel. Two names out of fewer than 20 may be mentioned here: Avshalom Ukkashi and Itamar Siyani, who hold an honored place among Israeli painters. Of all fields of art, only one is still vital and flourishing in its original form after two thousand years: singing. This widely requested cultural product is performed not only by Yemen-born singers like Aharon Amram, but by scores of Israeli-born singers, of the second and even the third generation of people who came from Yemen. Admittedly, this cultural element, along with the traditional Yemenite performance of the prayer in the communal synagogue (and Yemenite dishes as well), symbolizes the intense wish of many of the Yemenites not to be over-acculturated in Israel and completely lose their unique cultural emblems.

[Yosef Tobi (2nd ed.)]

Music Tradition

Today as in the past the Arabs say that the best and the most genuine music comes from Yemen. Unfortunately very few

examples of Yemenite Arab music have been studied. The few melodies published in the Western World are not sufficient to draw any conclusions about Yemenite music, and about the possible similarities and dissimilarities between Arab and Jewish music in Yemen. Meanwhile Yemenite Jewish music (studied through the Yemenite Jews in Palestine and Israel, never in Yemen itself) can only be compared with Jewish music in other Middle Eastern countries. Although there are many basic similarities of intent, content, and application, the musical differences are so great that they place Yemenite Jewish music outside the sphere of the musical culture of the Middle East as known today. Some of the differences are the following:

(1) Biblical cantillation does not conform to the cantillation of other Middle Eastern Jews who follow primarily the so-called Babylonian (Baghdadi) tradition.

(2) Prayer song is almost entirely in strict rhythm, and rudimentary harmony and polyphony, in contradistinction to the free rhythm and heterophony found in other Oriental communities.

(3) Folk song is based on the unusually rigid segregation of men and women resulting in different language, content, melodies, form, and style, as if men and women were living in totally different worlds – a phenomenon not observed in any other Jewish community.

(4) There are no musical instruments and therefore no instrumental (art) music, so much beloved elsewhere in the Middle East.

(5) Dance is limited to ceremonial functions such as weddings, men and women being separated to such an extent that they developed different styles.

MASORETIC CANTILLATION. The cantillation is wordbound (logogenic) without any noticeable melisma. The Hebrew text follows the masoretic accents, while the Targum uses a melodic phrase which is shortened or lengthened according to the number of syllables in the sentence. The range of the accents is small, preferably within a third, but fourths and fifths also occur (*sof pasuk*). The movement is stepwise with an occasional third. No pentatonic is discernible. The Targum employs only three successive notes in a *parlando*-melody. The mode resembles the **maqām bayat* in outline (D-/E-F-G-A-/B-C-D), rhythm follows the word-rhythm, the form follows the structure of each individual sentence with clauses and half-clauses, and the voice practice is nasal, sometimes throaty and guttural. The melodic images are so distinctive that once heard they are never forgotten. Cantillation has exerted its powerful influence on the prayer tunes and semireligious songs of Yemenite men. Among the Jews of the world the Yemenites are the only ones to follow the mishnaic precept to read the Targum publicly in the synagogue, a custom long ago abandoned by the others, since Aramaic, once the vernacular of Israel, is no longer in use except by Kurdish Jews (but even they no longer recite the Targum publicly in the synagogue, although they do employ it at home for study).

PRAYER SONG. Communal singing is in fortissimo and in strict rhythmical unison – nobody rushes forward or stays behind. There is, however, no melodic unison but instead chanting in parallel fourths and fifths, often superimposed in *organum*. This type of singing is totally unknown to other Middle Eastern Jews. Whether rhythmical rudimentary harmony and polyphony are indigenous to Yemen, or a remnant of Temple service in Israel, or an African influence is open to investigation. Since there are other isolated regions in the Middle East showing similar features (Turkmen, Anatolian, Samaritan), it is not impossible that the music of the Yemenites represents an old stratum which was later overlaid by the all-pervasive Middle Eastern music in Islamic times. Extended solo singing within the service is not as frequent as in other communities. The Yemenites prefer to sing in rhythmic unison or divided into two choruses responding to each other. There are, however, special occasions when solo becomes important. One of these occasions is a prayer for rain in case of severe drought. A short motive is repeated over and over again, the tense emotion driving the pitch higher and higher with every repetition, until the difference between the initial and final pitch level amounts to a major third. All Yemenite prayer songs can be classified into 15 types of melody, expressing context, mood, and associations with holidays. All 15 melody types can be broken down into motivic materials and modes. Both are used in a totally Oriental way but do not seem identical with any known Arabic musical system. The motives may be used in the improvisational Arab manner, and the modes may be likened to certain Arabic *maqāmāt*, but the intervals are different.

SEMIRELIGIOUS SONG. Semireligious song is performed outside the synagogue and in the home on holidays and festivities. It is the exclusive property of the men. The texts are always religious and in Hebrew and Aramaic. There are a variety of forms with and without meter: *Hallelot, Zafāt, Hidduyot, Neshid, Shirot,* and *Shabbat Shirot*. Except for *Hallelot* all songs require alternating choruses of at least four men. The first verse is sung by the principal singer, who introduces the melody and is followed by two alternating choruses. After having repeated the melody through several verses of the song, the principal singer introduces another melody; the more changes of melody the more prestige to the singer who introduces the melody and is followed by two alternate choruses. Many of the songs are influenced by the synagogue and often do not employ meter. Others are metrical and are used for dancing. The meters can be complicated and alternating (7/8 or 2/4:3/4). The listeners do not join in the singing but accompany the performers with handclapping. Women are excluded from participation except for *Zafāt*, in which they may play a simple percussion instrument (drum or metal platter) and interpolate their high vocal trills or ululations. The men often dance while singing religious texts.

SECULAR SONG. Just as the semireligious song is the exclusive domain of the men, so is secular song the sole domain of

the women. Women never attend synagogue and are totally unfamiliar with the men's spiritual world. They do not know Hebrew and all their songs are in Arabic. Barred from the men's spiritual world, the women create their own and express it through narratives, recitation of historical events, songs of love and courtship, marriage, birth, and death, the joys and sorrows of domestic life. They sing while working at home at a trade like embroidery or silversmithing, and while performing such daily chores as grinding flour or baking bread. Women's songs do not bear any melodic similarity to men's songs since even at such an important event as a wedding, celebrations take place in separate quarters. On the whole, women's songs are a great deal simpler than men's songs. The melodies consist of one, two, or three parts and are sung in unison or heterophony. The meter is simple (binary or ternary) and almost all songs can also be danced. The modes employed are *maqāmāt*-like but do not belong to any known system. Augmented seconds are absent and if present are indicative of a foreign intrusion.

MUSICAL INSTRUMENTS. No musical instruments were permitted in Yemen under the fanatical Shiʿa sect, except for the imam's military band. Musical instruments and phonographs were banned and the cinema and foreign broadcasts frowned upon. However, music was played in secret even though if discovered the perpetrators were severely punished. It is no wonder that Yemenite Jews, one of the lowest castes in Yemen, did not play musical instruments except for empty tin cans, copper trays (*ṣaḥn*), and on occasion drums. All instrumental accompaniment in contemporary Yemenite song was acquired in Israel as part of the general acculturation.

DANCE. Men and women never dance together and rarely see each other dance. The men often accompany their semireligious song by dancing, which is graceful, light, and includes leaps in the air and movements reminiscent of Indian dance. The women hardly move at all while dancing; their movements are slow, dignified, and restrained. The excitement, exuberance, and increasing speed of the movements observed in the male dancing style is totally lacking.

COMPATIBILITY WITH WESTERN MUSIC. It is worthy of note that many elements of Yemenite Jewish music were absorbed by Israel folk song and left its imprint on it. One explanation may lie in the greater compatibility of European and Yemenite music, which expresses itself in (rudimentary) harmony and polyphony, the preference for strict rhythm and meter, the almost total absence of melisma, and a somewhat diatonic tendency, in contradistinction to other Middle Eastern musical forms which are often heterophonic, free in rhythm and meter (or so complicated that they sound to the untutored as free meter), highly melismatic, and microtonal. While Middle Eastern song is totally incompatible with European musical structure, Yemenite song is not. This is why it should not be classified as "Middle Eastern" music, but must be considered apart. Whether it belongs to an ancient Middle Eastern stra-

tum which was obliterated with the coming of Islam and only survived in certain isolated areas, or is a special development of Yemen or a remnant of Temple music preserved by the Yemenite Jews must still be determined.

YEROḤAM (Heb. יְרֹחָם), urban settlement in southern Israel, in the northern section of the Negev Hills, 9 mi. (14 km.) S.W. of Dimonah. In 1951, it was founded on a site called in Arabic Tell Rakhma near a junction of roads, one of which was built under the British Mandate with a view to carrying out trial drillings for oil in the vicinity. New immigrants from Romania, Iraq, North Africa, etc., settled there. Initially, it was planned to base the settlement on agriculture (therefore the site was called at first Kefar – village – Yeroḥam), but when this failed it took on the character of a *maʾbarah whose inhabitants worked in road building and other public works and in mining of glass, sand and ceramic clays in the nearby Makhtesh Gadol and Makhtesh Ramon. There was, however, no full employment, and for a long time the inhabitants had to live in transitory wooden huts. In the 1960s, the situation gradually improved with the development of the Oron phosphate field, inhabitants of Yeroḥam finding employment in the *Sedom-Dead Sea Works and the establishment of successful local factories (glass and glass bottles, soft beverages, etc.). Yeroḥam's importance as a road station on the Eilat-Beersheba highway diminished, however, with the construction of the Sedom-Eilat and Revivim-Sedeh Boker highways. The serious water problem was largely solved with the construction of a local storage dam of floodwaters in the gorge of Naḥal Revivim, near a dam of the Roman period. Yeroḥam attained municipal council status in 1959 and grew from 229 inhabitants in 1954 to 5,400 in 1970. With the arrival of new immigrants, the population increased to 6,810 in the mid-1990s and 8,610 in 2002. The municipal area is 13 sq. mi. (34 sq. km.). The main economic branches of Yeroḥam remained industry and public services, with unemployment high as a result of failing factories and income considerably below the national average.

[Shlomo Hasson / Shaked Gilboa (2nd ed.)]

YERUSHALMI, RINA (1939–), Israeli theater and opera director, founder and artistic director of the Itim Theatre Ensemble and professor of acting and directing at the department of theater arts at Tel Aviv University. Born in Afula, Yerushalmi grew up in Haifa where she started her studies in dance. Her education combined dance, movement, and acting. In England she studied classical dance along with the Laban technique and the Alexander technique. She continued her studies of the Laban technique in Germany with Kurt Joss. In Israel she worked with Moshe Feldenkrais on the Feldenkrais technique. Yerushalmi also studied acting with Nola Chilton, Peter Brook, and Joe Chaikin. She studied Noh and Kyogen in Tokyo, Japan, at Carnegie Mellon University in Pittsburgh, PA, and in New York.

Yerushalmi directed in Israel and in the U.S. Her preferred materials were classical plays of Shakespeare, Pirandello, Lorca, Ibsen, and Beckett.

In 1989 she gathered young unknown actors and founded her own group, the Itim Theatre Ensemble. Their first production, Shakespeare's *Hamlet* (1990), performed in the rehearsal studio of the Cameri Theater of Tel Aviv, was a huge success. Yerushalmi's interpretation of *Hamlet* was based on the physical and spiritual presence of the actors on stage, their collective effort to create on stage a fictional world based on theatrical images and metaphors, and the interaction between their gestures and movements and the audience's imagination. Shakespeare's *Romeo and Juliet* (1991) and Buchner's *Woyzeck* (1992) followed. In each one of these productions Yerushalmi developed her special dramaturgy methods. She adapted the plays and inserted different materials, not always dramatic, thus enlarging their scope and opening them to various readings. The performance was fresh, young, and energetic and the theatrical space was filled with fantastic accessories and stage elements intended to broaden the theatrical framework of the performances.

In 1994 Yerushalmi set off to create her spectacular Bible Project. The project originated in her wish to research the cultural roots of Israeli society. She was intent on finding out whether the Bible was still approachable to Israeli-born, non-religious young people. This research took her and her actors to the desert, where they read the Pentateuch and were overwhelmed by the beauty of the text and the relevance to modern-day Israel. Yerushalmi adapted the Torah (the Pentateuch) without adding or changing the texts, thereby creating two performances: *Va-Yomer va-Yelekh* ("and he said and he went," 1996), and *Va-Yishtaḥu va-Yar* ("and they bowed and he saw," 1998). The result was a dynamic, theatrical performance of beautiful stage images and a unique experience of actors' group work. The Bible Project was performed for more than five years in Israel and in Hamburg, Berlin, London, and New York.

In 2001, Yerushalmi set out on another big project: this time she was led by the wish to analyze vengeance on the personal, the familial, and the national levels. It brought her back to Greek tragedy, to ancient and modern plays dealing with the Trojan War. The result was *Mythos*, a four-hour performance in which the events of the Trojan War were repeated in order to show their influence on the lives of the last generation, that of Electra and Orestes, the victims who become murderers because of the heritage of vengeance they carried along. The relevance to the Israeli-Palestinian conflict was evident, although Yerushalmi did not insert any contemporary indications in the text or in the stage design. The images on stage were constructed of different components – a stage design that deconstructed the stage as the myth unfolded, while huge projections and scientific explanations of the astral system accompanied the scenes. The actors working as a collective body, the chorus facing Electra and Orestes, incarnated the different characters of the plots, but most of all they danced, sang, and

lamented, following the tradition of the ancient Greek chorus. *Mythos* was performed in Israel for two years. It was also invited to Zurich and to the Summer Festival of the Lincoln Center in New York.

Yerushalmi worked at the Israeli Opera. In 1997 she directed Humperdinck's *Haensel und Gretel*, and in 2000 she directed Richard Strauss' *Elektra* for a production of the Jerusalem Festival in Caesarea. Yerushalmi received many prizes and awards for her performances: in 1990 she received the Margalit prize for *Hamlet;* in 1992 the Moshe Halevi theater prize for *Woyzeck*, best directing and extraordinary contribution to Israeli theater; in 1998 an award of the Israeli Academy of the Theater for the Bible Project; and again in 1999 the Milo award for the Bible Project; the Rosenbaum award for the founding of the Itim Theatre Ensemble; in 2005 the Landau prize of Mif'al Ha-Payis for excellence in creating an original, powerful, and total theatrical language. In 2001 she received an honorary doctorate from the Hebrew University of Jerusalem. She was the recipient of the Unesco Fellowship for Theater Research and of the Corporation for Public Broadcasting (CPB) fellowship for television, U.S.

YERUSHALMI, YOSEF HAYIM (1932–), U.S. scholar of medieval and modern Jewish history. Yerushalmi was born in New York, graduated with a B.A. from Yeshiva University in 1953, took his doctorate at Columbia in 1966, and was ordained at the Jewish Theological Seminary of America in 1957. He was appointed assistant professor of Hebrew and Jewish history at Harvard University in 1966 and full professor in 1970; in 1972 he was elected a fellow of the American Academy of Jewish Research. In 1976–77 he was a fellow of the National Endowment for the Humanities; in 1978 he was appointed chairman of the Department of Near Eastern Languages and Civilization at Harvard; in 1978, Jacob Safra Professor of Jewish history and Sephardic civilization; and in 1980 director of the Center for Israel and Jewish Studies at Columbia University and Salo Wittmayer Baron Professor of Jewish history, culture, and society, focusing on medieval and modern Jewish history. A specialist in Sephardic and Marrano studies, he is editor of *Studia Sephardica*. Yerushalmi was chairman of the Publications Committee of the Jewish Publication Society of America, and from 1987 to 1991 served as president of the Leo Baeck Institute in New York.

Among his many works are *From Spanish Court to Italian Ghetto; Isaac Cardoso, a Study in 17th Century Marranism and Jewish Apologetics* (1971); "The Inquisition and the Jews of France in the Time of Bernard Gui," in: *Harvard Theological Review*, 63 (1970), 317–376; *Haggadah and History* (1973); *The Jewish People and Palestine* (with C. Berlin, 1973); *The Lisbon Massacre of 1506 and the Royal Image in the Shebet Yehudah*

(1976); *Zakhor: Jewish History and Jewish Memory* (1982); *Freud's Moses* (1991); *Ein Feld in Anathoth* (1993), and *Sefardica* (1998). He has also prepared authoritative editions of M. Kayserlings' *Bibliotheca española-portugueza-judaica* (1971); and A. Herculano's *History of the Origin and Establishment of the Inquisition in Portugal.*

YESHAYAHU-SHAR'ABI, ISRAEL (1908–1979), Israeli politician, member of the First to Eighth Knessets. Yeshayahu was born in Sadan, *Yemen, where he received a traditional *ḥeder* education and attended the yeshivah of Rabbi Yihye Kafaḥ. In Yemen he was active in the Dor De'ah Movement. In 1929 he immigrated to Palestine and worked as a farm laborer in the vineyards and on road construction. Soon, however, Yeshayahu entered political life as a member of Mapai, and was active in the Histadrut, serving from 1934 to 1948 as head of the department for immigrants from Yemen and other Muslim countries. In 1948 he was appointed by David Ben-Gurion as deputy government secretary in charge of contacts with the Knesset, and in 1949 was elected to the First Knesset on the Mapai list. From 1948 to 1952 he was active in organizing the immigration of the Jews from Yemen and was sent to Aden to organize Operation "Magic Carpet." He served as a deputy speaker in the Fourth, Fifth, and Sixth Knessets, and served on various Knesset committees. In 1967, he was appointed minister of postal services, holding the position until January 1970, when he was appointed secretary-general of the Israel Labor Party. In the Seventh Knesset he served as chairman of the Knesset House Committee, until, following the death of Re'uven Barkat, he was appointed speaker of the Knesset in 1972. He remained in the position until after the elections to the Ninth Knesset in 1977.

Among his writings are *Mi-Teiman le-Ẓiyyon* (prepared with Shimon Garidi, 1938) and *Ba'al ha-Taltalim ve-Od Sippurim* ("The Curly One and Other Stories," 1979). He was co-editor with Yosef Tobi of *Yahadut Teiman: Pirkei Mehkar ve-Iyyun* ("The Jewry of Yemen: Chapters of Research and Study," 1975).

BIBLIOGRAPHY: Y. Gal-Ron, *Kitvei Yisrael Yeshayahu* (1984).

YESHEVAV THE SCRIBE (end of the first half of the second century C.E.), *tanna*. A pupil of Joshua b. *Hananiah, he was a reliable transmitter of his master's opinions. Even his great colleague, *Akiva, who had opposed him on a halakhic issue, changed his mind and accepted Yeshevav's view which, the latter claimed, had been handed down by his teacher (Ḥul. 2:4; Tosef., Ḥul. 2:9) – this is the only Mishnah which mentions his name. On other occasions Akiva usually opposed him. Once when Yeshevav had gone to the trouble of locating some human bodies in order to declare the area around them a graveyard site, Akiva bluntly told him, "All your trouble was in vain" (Tosef., Oho. 16:3; Naz. 65a). When Akiva declared the offspring of all prohibited unions to be *mamzerim* Yeshevav exclaimed, "Come, let us cry out against Akiva b. Joseph…" (Ket. 29b, et. al.). Yeshevav was extremely generous and he

once gave away all his property to the poor. This step was opposed by Rabban Gamaliel *II (TJ, Pe'ah 1:1, 15b, cf. Ket. 50a). Yeshevav is counted among the Ten *Martyrs put to death by the Romans. He is mentioned as being in the company of four other rabbis at Sepphoris in Galilee (Tosef., Kel. BB 2:2), where they were apparently hiding during the Hadrianic persecution. According to a later Midrash (*Midrash Elleh Ezkerah*, in: A. Jellinek (ed.), *Beit ha-Midrash*, 2 (1938²), 71) he was 90 years old when he was executed, and his parting message to his disciples was "Support one another, and love peace and justice; perhaps there is hope."

[Moses Aberbach]

YESHIVA CHOVEVEI TORAH, rabbinical school in New York City. Situated near Columbia University on the upper West Side of Manhattan, Chovevei Torah was founded in 1999 by Rabbi Avi Weiss, senior rabbi of the Hebrew Institute of Riverdale and a former instructor at Yeshiva University (YU). It positioned itself as a Modern Orthodox alternative to the Rabbi Isaac Elchanan Theological Seminary, the YU rabbinical school. Weiss and his backers believed that the YU seminary had moved so far toward Orthodox sectarianism that the moderate elements of Orthodoxy – those that endorsed secular education as a positive good, favored ameliorating the status of women under Jewish law, sought cooperation with non-Orthodox forms of Judaism, and advocated religious Zionism – no longer had a yeshiva with which they could identify. Chovevei Torah focuses on producing practicing rabbis, Jewish educators, and Hillel directors who, over time, might change the face of American Orthodoxy, making it, in Weiss's words, "open" and "nonjudgmental" rather than combative and exclusionary. To that end, students in the four-year program are given full scholarships on condition that, after ordination, they serve as rabbis for at least three years. The curriculum gives less attention to Talmud study than other Orthodox seminaries and more to nuts-and-bolts skills required in the rabbinate, such as pastoral counseling and interpersonal relations. In the view of many observers, the fortunes of Chovevei Torah could well play a decisive role in the development of American Orthodox Judaism.

[Lawrence Grossman (2ⁿᵈ ed.)]

YESHIVA UNIVERSITY, institution of higher education in New York City. The Rabbi Isaac Elhanan Theological Seminary (RIETS, named for R. Isaac Elhanan Spektor), the nucleus around which Yeshiva University grew, was founded in 1897 by Rabbis Moses Matlin and Yehuda David Bernstein, and David Abramowitz, as a small institution for the advanced study of Talmud, attracting primarily immigrant youth. RIETS was the first advanced yeshivah in the United States. However, Yeshiva University dates its inception from 1886, when Yeshivat Etz Chaim, an elementary school which was merged with RIETS in 1915, was formed. Following student turmoil over the question

of secular studies in 1906 and 1908 the school's administration was reorganized and some secular studies were permitted. Early presidents of the institution included Rabbi Moses Zebulun (Ramaz) *Margolies, Rabbi Bernard *Levinthal, and David Cohen. In 1915, Bernard *Revel became president and head of the faculty. In 1916 an accredited high school which combined talmudic and secular studies was opened. In 1922 the institution absorbed the Teachers Institute, which had been founded in 1917 by the Mizrachi Organization of America. In 1928 Yeshiva College accepted its first students. The high school, the college, RIETS, and the Teachers Institute were now all subdivisions of one institution, located in the Washington Heights section of New York City, which was to continue to expand its number of divisions as well as students. In 1970, RIETS was reincorporated as an "affiliate" of the university, a distinct legal entity with its own board.

Since its inception RIETS has devoted itself almost entirely to the teaching of Talmud and codes, the basis of the religious tradition, in a manner no different from any traditional yeshivah. The course of study culminates in a four-year program leading to *semikhah* ("rabbinical ordination"). For students of exceptional ability there are several *kollelim* (advanced study programs) that provide training in deciding complex issues of Jewish law. There were over 300 students in the rabbinical program in 2006, whose entrance requirements include a college degree in addition to extensive preparation in Talmud. Some courses in practical rabbinics were given for many years. From 1955 rabbinical students were also required to take courses in such subjects as Bible, Jewish history, philosophy, and Hebrew literature, and in recent years additional requirements have been instituted in the area of practical rabbinics. Yeshiva University has ordained about 2,600 rabbis since its inception. Over 70 percent of its active rabbinical graduates serve the Jewish community today in some formal capacity – as rabbis, teachers and educators, or communal workers – although the number entering the pulpit rabbinate has declined.

At the undergraduate college for men (Yeshiva College) and at the college for women (Stern College), which opened in 1954, students pursue a dual program of studies, taking courses in Jewish subjects as well as a normal load of secular subjects. Both colleges, with their combined enrollment in 2006 of 3,000 students, seek to impart mastery by the students of two intellectual worlds, the religious world and the secular one. There have been periods in the past, especially in the 1960s, when the emphasis was on integration within the curriculum of both worlds so that the content from one area of study may shed light or direction on the other. The talmudic faculty of Yeshiva University has always included some of the outstanding rabbinic scholars of the world. Preeminent among its faculty was Rabbi Joseph B. *Soloveitchik. An increasing number of the talmudic faculty are graduates of the institution. In 1943 Samuel *Belkin, a talmudic authority and Semitic scholar, succeeded to the presidency, left vacant by the death of Bernard Revel in 1940. Under Belkin's leader-

ship the institution greatly expanded. In 1945 it was elevated to university status. It includes such specifically Jewish divisions and programs, in addition to those already mentioned, as the Bernard Revel Graduate School of Jewish Studies, the Azrieli Graduate School of Jewish Education, the Belz School of Jewish Music, and two high schools.

There are four alternative Jewish divisions in which all Yeshiva College students must also be enrolled: the Mechina Program (formerly called the James Striar School, for students with little background in Jewish studies); the Isaac Breuer College (which stresses Hebrew language and literature); and two that concentrate on Talmudic studies – the Irving Stone Beit Midrash Program and the Mazer School.

The secular, nonsectarian divisions of Yeshiva University have undergone the greatest expansion since 1945. These divisions now include the Ferkauf Graduate School of Psychology; the Wurzweiler School of Social Work; the Benjamin N. Cardozo School of Law; and probably best known of all, the Albert Einstein College of Medicine and its affiliated Albert Einstein College Hospital. While these divisions include a diverse student body and a distinguished non-Jewish as well as Jewish faculty, they do, in varying degrees, reflect Yeshiva University's orientation to Orthodox Judaism. All divisions observe the requirements of Jewish law and offer courses that explore the Jewish dimension of the field being studied. The Wurzweiler School requires all students to attend courses in Jewish sociology and in Jewish social work values. On the undergraduate level, the Sy Sims School of Business enables students both at Yeshiva College and Stern College to major in business-related areas.

In addition to its educational and other scholarly activity, the university plays a major role in the Jewish community through its Community Service Division. This division is responsible for rabbinic and teacher placement, conducts adult education and extension courses, provides educational services to many *Talmud Torahs* and youth groups, and sponsors seminars throughout the United States. The approximate enrollment in the various schools and divisions of Yeshiva University in 2006 was 6,000.

[Charles S. Liebman]

Developments since the 1970s

The economic situation of the country and the pressing needs of the state of Israel hurt Yeshiva University's ability to raise funds in the early 1970s. Following the retirement of Dr. Samuel Belkin in 1975, Dr. Norman *Lamm was elected to succeed him as president of the university in 1976. Lamm proved a potent fundraiser, rescuing the institution from the brink of bankruptcy. But another challenge appeared that threatened the university: the growing polarization of American Orthodox Judaism. While Yeshiva had traditionally serviced the educational needs of the so-called "modern Orthodox," for whom the combined religious-secular curriculum was essential, the Orthodox community was now turning rightward, and, partially as a result of the year or more that most Orthodox high-school graduates were spending at Israeli educational institu-

tions, there was a demand for more rigorous religious classes and less emphasis on secular disciplines. In its undergraduate recruitment efforts, Yeshiva University sought to adapt to the new mood, competing for students with the sectarian yeshivot that were skeptical about college rather than with the nation's top universities. Its efforts, however, were complicated by the emergence of *Touro College, which promised a more rigorously Orthodox environment for those seeking higher secular education, and three new institutions that tried to fill the vacuum in the modern Orthodox sector that Yeshiva University had apparently abandoned: *Edah, an educational and consciousness-raising group; the *Jewish Orthodox Feminist Alliance (JOFA); and *Yeshivat Chovevei Torah, which trained rabbis to fill modern Orthodox pulpits. The secular graduate schools of Yeshiva, meanwhile, chafed at what they saw as a growing fundamentalist strain within the university.

Yeshiva University's internal contradictions came to a head with the announcement, in 2001, of Dr. Lamm's impending retirement and elevation to the post of chancellor. Since the classical Orthodox rabbi-scholar model typified by Revel, Belkin, and Lamm had not been cultivated within the institution for a quarter-century, there was no one in that mold to take over the presidency. It was not until 2003 that a new president was inaugurated, Richard Joel, previously the president of Hillel, the organization of Jewish college students. Neither a rabbi nor an academic – the job of Rosh Yeshiva at REITS remained with Lamm and Joel was president of the University – Joel, enjoying the advantage of the financial cushion provided by his predecessor's fund-raising, appeared committed to reorienting the university back toward its modern Orthodox roots, but in such a way as to retain the loyalties of the more tradition-bound rabbis. He energetically set out to increase enrollment, boost morale, upgrade student services, and strengthen the university's bonds with the American Jewish community through the creation of a Center for the Jewish Future.

[Lawrence Grossman (2nd ed.)]

YESHIVOT. The name yeshivah was applied to institutes of talmudic learning of three distinct kinds:

(1) the academies in Ereẓ Israel and Babylonia in which the Mishnah was studied by the *amoraim* and which produced the Jerusalem and Babylonian Talmud (see *Talmud, Babylonian and *Talmud, Jerusalem);

(2) the academies of Sura and Pumbedita which in the geonic period were the central authoritative religious bodies for world Jewry;

(3) local institutions for the pursuit of talmudic studies which developed in the post-geonic period. This article deals with the third category only; for the others see *Academies.

The Yeshivot in Islamic Countries and in Western and Central Europe to the 15th Century

The first yeshivot outside Babylon and Ereẓ Israel were already established during the time of the *geonim*. *Pirkoi b. Baboi in the eighth century testifies to their existence in North Africa and in Spain, and in the tenth century yeshivot arose in the Maghreb – in Fez, in Gabès, in Sijilmassa, and in Tlemcen. The Kairouan yeshivah, where *Ḥushi'el b. Elhanan, regarded as its founder, and *Jacob b. Nissim were active, became especially famous. In Egypt there was a renowned yeshivah in Fostat headed by *Elhanan b. Shemariah, and he and other heads of yeshivot in Egypt were termed *reish bei-rabbanan* ("head of scholars") or *rosh ha-seder* ("head of the order"). In Egypt an effort was even made to revive the geonate and during the 12th century the head of yeshivot in Fostat bore the title **gaon. *Maimonides, who gave public discourses in Fostat, may have headed a yeshivah. There were still important yeshivot in Egypt in the 16th century, headed by *David b. Solomon ibn Abi Zimra, Bezalel *Ashkenazi, and others.

The yeshivot of Ereẓ Israel moved to Damascus after the *Crusades and remained there until the end of the 12th century. There was also an important center of talmudic study in *Aleppo. The largest yeshivah in Oriental countries, headed by the last of the *geonim*, was in Gabhda, where there were also nine small yeshivot.

In Spain yeshivot are mentioned as existing in Lucena and in Barcelona in the middle of the eighth century, but definite evidence of them exists only from the tenth century onward. In the middle of that century *Moses b. Ḥanokh founded a large yeshivah in Córdoba, where he was succeeded by his son, Ḥanokh. The yeshivah of Granada was headed by *Samuel ha-Nagid and after him by his son Joseph. The yeshivah of Lucena attracted many students from outside Spain and continued to exist for some 250 years. Among its pupils were Jonah *Ibn Janāḥ and *Judah Halevi, among its later heads Isaac ibn Ghayyat, Isaac *Alfasi, and Joseph *Ibn Migash. The *Almohad invasion brought about the ruin of the yeshivot in southern Spain and they were replaced by the great yeshivot of Aragon and Castile.

The yeshivot of Barcelona and Toledo flourished in the time of Solomon b. Abraham *Adret, *Asher b. Jehiel, and *Nissim b. Reuben Gerondi, continued to exist until the persecutions of 1391, and exercised great influence upon the yeshivot of France and Germany. Subsequently, and until the expulsion, there were many yeshivot in Spain and by a resolution of the leaders of the communities of Castile in 1432 the duty was even imposed upon every rabbi to establish a yeshivah in his community. At that time the yeshivot of Isaac *Campanton and Isaac de *Leon in Toledo, Isaac *Aboab II, and of Samuel de Valensi became well known. Even Joseph *Jabez, who castigates the scholars of his generation for their secular outlook on life, admits that at the time of the Spanish expulsion the number of yeshivot in Castile was greater than it had ever been.

The first yeshivah in southern France was at *Narbonne, apparently founded in the tenth century. Among its heads (in the 12th century) was *Abraham b. Isaac, author of *Ha-Eshkol*. When *Benjamin of Tudela visited Lunel he found there an important yeshivah, whose pupils, although from other towns, were supported by the local community. The pupils of the yeshivah of Posquières were maintained at the personal expense of its head, *Abraham b. David. The yeshivot at *Béziers, Marseilles, and Montpellier also gained a great reputation. A vivid description of the method of learning in the yeshivot of Provence has been preserved in the work of *Jedaiah b. Abraham ha-Penini, who studied in the yeshivah of Béziers. In northern France the pupils and descendants of *Rashi headed the yeshivot – Jacob b. Meir *Tam at Ramerupt and *Isaac b. Samuel at Dampierre. Students were attracted to them from afar, even from the Slavonic countries. According to one tradition 60 scholars of the Dampierre yeshivah took part in the halakhic discussions which served as the basis for the *Tosafot*. There were also important yeshivot in Orleans, Falaise, Sens, Coucy, and Chinon. The yeshivah of *Jehiel of Paris had 300 students. *Moses b. Jacob of Coucy relates that the students of the French yeshivot were so assiduous in their studies that they even slept in their clothes. The expulsion of the Jews from France in 1306 put an end to the yeshivot there; on their return an effort at revival was made by Mattathias Treves, who founded a yeshivah in Paris after 1360, but it did not succeed.

In Germany the yeshivah of R. *Gershom b. Judah in Mainz, to which pupils came even from Spain, was especially renowned. His pupils continued his activity both in Mainz and in *Worms. In the 11th, and still more in the 12th-13th centuries, there flourished the yeshivot of Speyer, Regensburg, Bonn, and Paris. The students made their way on foot, a custom preserved also in the following generations, and they were welcomed by the Jews of each locality with great honor. After the destruction of the *Rhine communities in the persecutions accompanying the *Black Death (1348–49), Austria became the center for study of the Talmud, and pupils began to stream to the yeshivot of Vienna from the north and the west. As a result of the activity of Isaac Or Zaru'a it became a Torah center as early as the 13th century, as did Wiener-Neustadt, where Israel *Isserlein was active, and Krems. In Prague, Bohemia, there were already yeshivot in the 12th century, headed by pupils of Jacob Tam, but their main flowering was from the end of the 15th century.

In Italy teaching institutions for Talmud existed at a very early period, and some scholars ascribe to Italy a special historical function in the chain of handing down the teaching of Oral Law in Europe. However, both the problem of its relationship to the Torah of Ereẓ Israel as well as of its influence upon the yeshivot of Europe that arose after it have not been sufficiently clarified and are subjects of dispute. In any event there was already a yeshivah in Venosa in the ninth century. Yeshivot, important in their time, existed then and in the tenth century within the Byzantine possessions in the

south – at Oria Otranto, and Bari – and also in central Italy at Lucca – from where the *Kalonymus family brought the study of the Talmud to Mainz – and subsequently at Siponto and at Rome. The Jewish centers in the south were destroyed in the later Middle Ages and the northern ones declined in standard. A new impetus to the study of Talmud in Italy was given in the 15th–16th centuries by the arrival of the exiles from Germany and France.

[Simha Assaf]

The Shifting of Yeshivah Centers in the 15th–18th Centuries

Although the political and economic position of the Jews in Germany, Austria, and Spain became increasingly precarious, the yeshivot continued their activities and even increased in number. Yeshivot such as those headed by R. Jacob *Moellin (Mainz), R. Jacob *Weil (Nuremberg, Augsburg), R. Isaac Canpanton (Castile, Spain), and R. Israel Isserlein (Krems, Austria) attracted large numbers of students. However, there was a continuous shifting of the Jewish population to southern and Eastern Europe and study centers moved to Italy, Bohemia, and Poland-Lithuania. R. Moses *Muenz (Minz) opened a yeshivah at Poznan (Poland), and R. Joseph *Colon at Pavia (Italy). R. Jacob *Pollak of Nuremberg moved first to Prague and then to Cracow, students flocking to him wherever he went.

The 16th and 17th centuries witnessed a large concentration of yeshivot and widespread Torah learning in Poland-Lithuania. Among outstanding yeshivah heads were R. *Shalom Shakhna (Lublin), R. Moses *Isserles (Cracow), R. Solomon *Luria (Ostrog, Lublin), R. Judah *Loew (Prague, Poznan, Nikolsburg), R. Mordecai *Jaffe (Prague, Grodno, Lublin), R. Joshua *Falk (Lvov), R. Samuel *Edels (Ostrog), R. Isaiah *Horowitz (Ostrog, Prague), R. Yom Tov Lipmann *Heller (Prague, Vladmir-Volynski (Ludmir), Cracow), and R. Menahem Mendel *Krochmal (Nikolsburg). In Lithuania, important yeshivot were at Brest-Litovsk, Pinsk, and Slutsk. This illustrious stage in the history of the Ashkenazi yeshivah was summed up, if somewhat exaggeratedly, by R. Nathan *Hannover in his *Yeven Mezulah*: "There were yeshivot in each and every community." During the same period, yeshivah centers sprang up in Italy, Greece, Turkey, and Erez Israel. Important institutions were headed by R. Judah *Minz (Padua; see Elijah *Capsali's vivid account, in: REJ, 79 (1924), 28–60), R. Joseph *Ottolenghi (Cremona), and later by R. Moses *Zacuto (Mantua). Renowned yeshivot were also maintained at Venice and later at Leghorn. The influx of refugees from Spain into the Levant caused a marked upsurge in the study of the Talmud there as is evident by such famous heads of yeshivot as R. Elijah *Mizraḥi (Constantinople), R. Joseph *Taitaẓak and R. Samuel di *Medina (Salonika), R. *Levi b. Ḥabib and later R. Jacob *Ḥagiz (Jerusalem), R. Jacob *Berab and R. Joseph *Caro (Safed), R. *David ibn Abi Zimra (Jerusalem, Cairo). Yeshivot of importance were also supported by the Smyrna community.

After the 1648–49 massacres (see *Chmielnicki) the Polish-Lithuanian yeshivot declined, though they were still attended by students from Western Europe. Scholars from Eastern Europe were increasingly to be found as rabbis and heads of yeshivot in German communities, such as Frankfurt on the Main, Fuerth, Hamburg-Altona, Halberstadt, and Metz. Famous heads of yeshivot in these communities in the 18th century included R. Jacob Joshua *Falk, R. Zevi *Ashkenazi, R. Jonathan *Eybeschutz, R. Raphael *Kohen, and R. Phinehas *Horowitz. The Prague yeshivah continued to flourish under R. Ezekiel *Landau, and yeshivot were established in Hungary (Eisenstadt, Pressburg). The Sephardi yeshivah Etz-Ḥayyim in Amsterdam made a special name for itself, while the yeshivot in the Ottoman Empire were declining steadily. In Italy R. Isaac *Lampronti attracted many students to his yeshivah in Ferrara. By the close of the 18th century the *Haskalah in the West and acute impoverishment in the East had caused many yeshivot to close, and the number of students at the surviving ones was lower than ever.

Organization and Inner Life

Prior to the 16th century, the Ashkenazi yeshivah had only been loosely affiliated with the local community, being mostly the semiprivate undertaking of the scholar who headed it. Almost every talmudic scholar who attained the position of a rabbi would open a yeshivah and he was responsible for meeting its financial requirements. The well-to-do students paid for their studies and upkeep, while the poor ones were supported by communal charity. Many communities paid special taxes to the city for the right to have students from other places at the local yeshivah.

Gradually the yeshivot became more closely connected with the communal administration. By the middle of the 16th century a new type of "community yeshivah" (*yeshivat ha-kahal*) had crystallized, while the former, semiprivate type continued to exist side by side with it, usually supported by wealthy rabbis or by laymen through charitable trusts. The communal yeshivot were subject to the rules (*takkanot*) laid down by the general councils of entire areas, defining their administrative and scholastic functions in the minutest details, such as the universal duty of the communities to maintain and support yeshivot; qualifications of yeshivah heads; admission of students; curriculum; supply of books; graduation of students; distribution of meals for students among members of the communities. In Spain rules regulating the organization of yeshivot had already been promulgated by the Council of Valladolid in 1432. In Italy and Germany numerous little synagogues were endowed by wealthy donors where masters were "enclosed" (hence their name: *Klaus* in German and *Hesger* in Hebrew) with a small number of students. There was also a tightening of social relations between the yeshivah and the community. While students usually conducted separate prayer services with the rabbi, local religious traditions were binding on the yeshivah congregation, and in matters of rabbinical jurisprudence arising in the community the rabbi consulted senior members of his yeshivah (*benei yeshivah*), and local legal cases were brought up for discussion in the plenum of the yeshivah.

Masters and students were in constant personal contact. Many students were "wandering scholars," moving from one yeshivah to another, urged on by necessity or thirst for knowledge. The youngest were aged 13, but the middle-aged, married *baḥur* was not exceptional. At some yeshivot the students organized some form of self-government. Many of them tried to supplement their material resources by teaching young children, copying manuscripts, acting as cantors in outlying communities, and even engaging in some moneylending. While yeshivah students were not known for committing excesses and outrages like university scholars, there were occasional outbursts of merry-making. Their life was devoted to high moral and intellectual ideas, yet it was not somber and other-worldly.

Curriculum

The subject matter of instruction at the Ashkenazi yeshivot was almost exclusively the Oral Law as expounded in the Talmud and its commentaries and supercommentaries of the French-German school. Few traces can be found of formal Bible lectures. This was not universally considered satisfactory, and it came under sharp attack from Sephardi scholars, at whose yeshivot much more time was devoted to Bible and aggadic literature. Nevertheless, the advocates of the Ashkenazi curriculum stressed its greater relevance to religious practice and effectiveness for developing the intellect. However, the private scholarly interests of students were more diversified. In the 15th century a favorite preoccupation was the typically humanistic study of *minhagim, the local customs and traditions, and students also recorded in great detail the religious practices of their masters. Later this gave rise to a systematic study of codificatory literature (*posekim), and in Italy, where the pope had banned the Talmud in 1559, this became the central part of the curriculum. At the Etz-Ḥayyim yeshivah in Amsterdam senior students were required to write responsa to set questions on topical matters of *halakhah. Kabbalistic studies, though increasingly popular, never became part of the formal Ashkenazi studies, as they did in Italy and in the Levant. Secular studies were practically unknown at the Ashkenazi yeshivot, although in Renaissance Italy suggestions were made for combining Torah with the study of science. The academic year was divided into two semesters, with few vacations and holidays. Gradually the vacations were prolonged, especially in the autumn, as masters and their students visited the trade fairs (see *Markets and Fairs) where scholars used to convene to discuss matters of academic and public interest.

For methods of study see *Pilpul.

Degrees and Graduation

The first grade attained by a young yeshivah student was that of *baḥur*, and upon reaching a certain degree of academic independence he was made a *meshuḥrar*. A student of many years' standing and high scholastic merit was given the title of *ḥaver*. Toward the end of the 14th century the academic and rabbinical title of *morenu* was introduced and the rules of graduation and ordination (*semikhah) were stabilized. This

had become necessary in order to safeguard the academic standard of the rabbinate against the perils of dispersal and migration. However, as soon as *semikhah* was formalized, a process of institutionalization set in, enabling mediocre scholars to attain rabbinical authority and privilege, a fact which was much lamented by leading rabbis. Here and there *semikhah* became a source of income for rabbis, and it was necessary for communities and general councils to issue *takkanot* defining the conditions under which a student could be known as *morenu*. By the end of the 16th century the titles of *morenu* and *ḥaver* lost their purely academic character and were increasingly used as symbols of social status.

Despite persecution, dispersion, and changing social and economic conditions, the ideals of Torah study persisted throughout the Middle Ages. Study was one of the supreme modes of worship, and the central position of scholars and scholarship in the communities made the yeshivah one of the main pillars of Jewish life.

[Mordechai Breuer]

Lithuania and Russia

Documentary evidence exists of yeshivot in Lithuania and Belorussia in the 16th century. By a resolution of its first assembly in 1622 the Council of Lithuanian Jewry obliged every community with a rabbi to maintain a yeshivah with a suitable number of pupils. The large communities were authorized to supervise the implementation of the resolution. An agreement between the rabbi and his community on a limitation of the number of pupils was of no validity. The pupils of the yeshivah were maintained by the members of the community, who made themselves responsible for providing for the material needs of the students not as became customary later on a daily basis ("*essen teg,*" literally "eating days") but for a period of two to four weeks. Jews in the neighboring villages were also obliged to help maintain the yeshivah pupils. "Between terms" (from the 15th of Av to the first of Ḥeshvan, and from the 15th of Shevat to the first of Nisan), the pupils lived in the homes of the village Jews. As this caused them to slacken in their study of the Talmud, in 1639 the council limited the students' stay in the villages to the months of Nisan, Elul, and Tishri. Subsequently this practice was abolished completely. The communities also undertook the obligation of supplying the yeshivot with copies of the Talmud and other books. The Lithuanian yeshivot, which were mainly concentrated in the regions of Grodno (Brest-Litvosk), Vilna, and Minsk (Pinsk, Slutsk), never reached the level of the Polish yeshivot and in the 18th century continued to decline. According to the testimony of Joseph Krinki, a pupil of Ḥayyim of Volozhin, the yeshivah in Zamet, which in the past had been a center of Talmud study, ceased to exist.

A new era in the spiritual life of the Jews of Lithuania, however, was inaugurated by *Elijah b. Solomon, the Gaon of Vilna, whose pupils established a network of yeshivot in Lithuania and Belorussia. The most important of these was founded in 1802 in *Volozhin, near Vilna, by Ḥayyim of Volozhin (see Ḥayyim *Volozhiner), the Gaon of Vilna's most distinguished

pupil. Only talented students with a good grounding were accepted. Ḥayyim continued the Gaon's method and like him was opposed to the method of *pilpul* prevailing in the yeshivot of Poland. His successor, his son Isaac, made great efforts to make the yeshivah acceptable to the government. From 1854 until its closure by the government in 1892, the yeshivah was headed by Isaac's son-in-law, Naphtali Ẓevi Judah *Berlin (the "Neẓiv"), during whose time its standard rose. The number of students from all parts of Russia and even beyond reached 400. To maintain the yeshivah and needy students, emissaries were dispatched to all the communities of Russia, and even to the United States. From the yeshivah of Volozhin came most of the rabbis and talmudic scholars of Russia in the 19th century. As a factor against the inroads of Haskalah it had a great influence on the spiritual life of the Jews of Russia, as a result of which the representatives of the Haskalah fought against it fiercely. The Russian government, which regarded the Haskalah movement with greater favor, treated the yeshivah with suspicion and several times ordered its closure. The yeshivah was indeed reopened several times after the death of Berlin in 1893, but it never regained its previous eminence. Alongside it there existed other large yeshivot in the towns of Mir (Minsk region), Vilna, Minsk, etc. In the 1870s and 1880s the yeshivot of *Slobodka and *Telz (Telsiai) were founded. The number of their pupils exceeded 300 and they were in some degree intended to make good the deficiency caused by the closure of the Volozhin yeshivah. The Telz yeshivah, headed by Eliezer *Gordon (d. 1910), was distinguished by its rational method of study and the strict arrangement of its studies. The students were obliged to complete five classes of *shi'urim*. In the yeshivah, Keneset Israel (not to be confused with the Keneset Yiẓḥak institute in the same town), founded in Slobodka by disciples of Israel (Salanter) *Lipkin, members of the *Musar movement, particular stress was laid upon the learning of *musar*, prayer with devotion, and the fulfillment of precepts. This approach aroused opposition for fear that the stress on the devotional and ethical teaching of the Talmud was likely to limit its intensive study. However, in the last decades before the Holocaust the system prevailed in most Lithuanian yeshivot. Mention must also be made of the yeshivot of Lomza, Radzyn, Novogrudok, Slutsk, Malch, and Bryansk. The adherents of the Chabad ḥasidic movement maintained a yeshivah in Lubavich with 400 pupils and had branches in other towns. The curriculum of the ḥasidic yeshivot naturally devoted considerable time to ḥasidic doctrine.

The new trends in the spiritual life of the Jews of Russia found an echo among the youth in the yeshivot. In many places the masters endeavored to keep the students from any contact with secular literature, and in Slobodka in particular there was strict supervision. The movement toward acquiring general culture did not touch the ḥasidic yeshivot at all, perhaps since most of them were in small towns far from the cities. Money for their maintenance was collected by emissaries who were at the same time wandering preachers. Apart from the large yeshivot there existed in several localities small ye-

shivot for the local youth supported by the community and the neighborhood. Since married students were not accepted in the yeshivot and the codes were not studied in them, those married students of the Talmud who wanted to become ordained for the rabbinate would unite in *kolelim. Such *kolelim* existed in Volozhin (in a branch of the yeshivah), in Eishishok, Minsk, Vilna, and other places. An exceptionally high standard was attained by the Perushim *kolel* in Kovno headed by Isaac Elhanan Spektor (d. 1897), which in the 1890s had more than 200 students. Both the members of these *kolelim*, whose studies lasted from three to four years, and their families, were adequately supported.

In the last decades before the Holocaust the tendency developed to admit other Jewish studies (Bible, Hebrew, etc.) besides Talmud into the curriculum as well as secular studies. One such reformed yeshivah was founded in Lida, in 1905 by Isaac Jacob Reines, with the intention not only of providing general culture for rabbis and teachers but also of furnishing students who intended engaging in business with comprehensive Jewish knowledge. It had about 300 pupils. The yeshivah founded in 1905 by Ḥayyim *Tchernowitz (Rav Ẓa'ir) in Odessa was meant to be an advanced school for Jewish studies and an academy for rabbis, equipped with the apparatus of modern scholarship. The scientific method was practiced in all branches, even in Talmud. In its early period *Bialik and *Klausner were lecturers there, in addition to Tchernowitz. After the Bolshevik Revolution all the yeshivot in the Soviet Union were closed. Until the Holocaust yeshivot remained in Lithuania in Slobodka, Telz, and Ponevezh (Panevezyas); in Poland they remained in Mir, Kletsk, Baranovichi, Radzyn, Warsaw, and elsewhere. In Lublin a large yeshivah was opened under the leadership of Meir *Shapira.

[Simha Assaf]

Yeshivot in the 20th Century
From the beginning of the 20th century it became clear to Orthodox Jewry that only an orderly and organized religious education could serve as a protective barrier against the spread of general cultural trends and the new social movements of the time. As a result, at the very time that the influence of Torah in the life of the individual and the community was being undermined, yeshivah learning and education, which had previously been a matter for the religious intellectual elite only, became an accepted and widespread feature in the life of the young men of Orthodox Jewry as a whole. With the improvement of the economic status of the Jews in Europe and the United States and the improvement in methods of communication and in means of propaganda, the possibilities of establishing a material basis and organizational framework for the subsistence of rabbi and students were created. Consequently the number of yeshivot and their students continued to increase. The improvement in their economic situation and the general recognition of their importance freed them to a great extent from dependence upon the community and its institutions, and in consequence the importance and the personal influence of the heads of the yeshivot rose; through

their many students who were dispersed throughout numerous communities, they became the leaders of the whole of Orthodox Jewry, and their influence was greater than that of the rabbis of the communities. In ḥasidic Poland, too, at the beginning of the 20ᵗʰ century there was a large increase in the number of yeshivot affiliated to the courts of the different *ẓaddikim despite the special standpoint of *Ḥasidism on this question. During this era, particularly between the two world wars, the yeshivot of Lithuania attained a position of hegemony in Torah Judaism.

The quantitative growth and the rise in social status which are among the prominent external marks of yeshivot in the 20ᵗʰ century brought with them many changes in the structure and essence of yeshivot in the Jewish world, leading to a change in the very connotation of the whole concept. However, the increase in the number of yeshivot and the growth in the number of students brought in its wake a decline in the average standard of the pre-yeshivah preparation, and in consequence also in the standard of studies at the yeshivah itself. Spiritual movements in Orthodox Jewry, like the different trends of *musar* and Ḥasidism, on the one hand, and the increasing need for the acquisition of general spiritual values under the pressure of modern life on the other, all brought about a strengthening of the educational basis in the yeshivot, and this, to no small degree, at the expense of the instructional basis. Although the basic structure remained the same, the large yeshivot increasingly assumed the character of places of education in Judaism, while higher studies were mainly connected with *kolelim*. One of the conspicuous consequences of this process was the founding of the "minor yeshivot" designed to provide their pupils with a level suitable for regular study in the standard yeshivot. These yeshivot constituted a kind of intermediate stage between elementary and higher education, and the age levels of the students were roughly between 13 and 18. As in the large yeshivot, study was in principle self study but it took place under the continuous and intensive supervision and guidance of teachers and supervisors.

The Holocaust brought the yeshivot of Eastern and Central Europe to an end, but in a number of Western countries which had no yeshivot or where yeshivot had ceased to exist a number of large ones were established. From the mid-20ᵗʰ century the greatest number of yeshivot, and the most important of them, was centered in Israel and in the United States, but they were also found in many other Western countries (e.g., in *Gateshead, England). The *Chabad movement was especially active in this direction, establishing yeshivot in France, Australia, and North Africa.

Yeshivot in Ereẓ Israel

Israel became the greatest center of yeshivot, having the greatest number of yeshivot and students since the talmudic era. In Israel there were also to be found the greatest number of diversified types of yeshivot each of which had a character of its own.

(1) The yeshivot of the old *yishuv*, the oldest in the country, pertained to the very structure of this *yishuv* and were to a great degree connected with the *kolelim* and with the system of the *ḥalukkah*. They provided talmudic education for large numbers. Most of the students were of mature age, some continuing their study during their whole lifetime. Generally speaking about 20 to 30 men, mostly married, were concentrated in such a yeshivah and they received a minimal material support. In most of these yeshivot the system of study was undefined. The larger yeshivot of this type, with hundreds of students (like Eẓ Ḥayyim, or Ḥayyei Olam in Jerusalem), had a character similar to that of the ordinary large yeshivot, and tuition was given in Yiddish. With this type should be connected a number of yeshivot that studied Kabbalah.

(2) The Sephardi yeshivot, the largest and oldest of which was Porat Yosef in Jerusalem, still followed the old Sephardi pattern of study, strong stress being placed on the preparation of religious functions for Oriental communities all over the world.

(3) The central yeshivot, removed from Eastern Europe to Israel (like Slobodka-Hebron), or whose heads reestablished them with the same composition and names, the same applying to the large ḥasidic yeshivot transferred from their center in Poland.

(4) Yeshivot Hesder, yeshivot which combine Israel army service with intensive yeshivah studies. In 1991 there were 3,300 students in the program. In that year the program was awarded the Israel Prize in recognition of its students excelling in the study halls and in the IDF's elite combat units.

An important aspect of yeshivot in Israel were the *kolelim* which developed greatly and in which the young men continued their studies after marriage and at a higher level. These *kolelim* were dependent on the large yeshivot and were an important factor in raising the level of studies in the whole yeshivah. From these *kolelim*, unlike those of the old *yishuv*, the scholars passed after five to ten years to serve as rabbis, *dayyanim*, or teachers at yeshivot. Some of them worked at preparing manuscripts of rabbinic works for publication, in a scientific manner. A number (like Merkaz ha-Rav and Kol Torah in Jerusalem) gave all the tuition in Hebrew but in most the official *shi'ur* was still given in Yiddish, even though most of the learning was conducted in Hebrew.

Another very important change was the attempt to combine secular studies within the framework of the classical yeshivah and at a parallel standard. The idea first arose among German Orthodoxy (see A. *Hildesheimer; S.R. *Hirsch) as an expression of the aims of *Torah im Derekh Ereẓ* ("Jewish with secular learning"), but without any connection with the activity and programs of Orthodox proponents of the Wissenschaft des Judentums or the various types of rabbinical seminary. Chiefly in Ereẓ Israel – and later in the State of Israel – numerous new types of yeshivah were created which combined the classical learning within their compass with various and diversified forms of secular studies organized according to the pattern of the different general schools and

subject to the general directions, inspection, and examinations of the state Department of Education. The essence of the attempt and the most successful were the *yeshivot tikhoniyyot* ("high school yeshivot") which finally emerged as the minor yeshivah in which the instruction during the first half of the day was devoted to Talmud with secondary school studies in the afternoon. The talmudic studies in these yeshivot were dominated by the Lithuanian system of study. The success of the attempt brought about its diversification into combinations of "vocational yeshivot" and "agricultural yeshivot," etc. Many minor yeshivot and *yeshivot tikhoniyyot* existed in Israel, and most of the pupils continued in the large yeshivot. The first yeshivah that began to move in this direction was the yeshivah of Ha-Yishuv he-Ḥadash (the "new settlement") in Tel Aviv, established by Rabbi M.A. *Amiel, in which only the evening hours were devoted to secular studies and a fifth year was added to make it possible for the students to take the state matriculation examination. A greater, more direct influence was achieved by the yeshivah of the *Bnei Akiva movement (see *National Religious Party) in Kefar ha-Ro'eh, which became the pattern for about 20 other yeshivot. These yeshivot competed with the religious grammar schools and even encroached upon them. From the teaching standpoint, the two parts, the sacred and the secular, remained uncombined but side by side, but educationally a successful combination was achieved. On the establishment of the State of Israel the heads of the yeshivot came to an agreement with the Ministry of Defense that their students would be exempt from military service, on grounds of recognition of the duty to help in the spiritual rebuilding of Judaism after the Holocaust. This agreement had no legal validity but was an ad hoc arrangement according to which the yeshivah students were regarded as receiving deferment for the duration of their studies. The arrangement was viewed with mixed feelings by the public, even including religious circles, and many yeshivah students interrupted their studies in order to do their military service. In a number of yeshivot there existed various arrangements that combined yeshivah studies with active service, particularly in the framework of *Naḥal.

Most yeshivot in Israel were administratively combined under a loose roof organization, called Va'ad ha-Yeshivot; about ten yeshivot with around 500 students were connected with the Iḥud ha-Yeshivot of the *Neturei Karta. Few yeshivot were definitely associated with a specific religious political party, but most of their heads and students were close to *Agudat Israel and supported it. Those yeshivot closer to the National Religious Party served as a factor inclining their party in a more conservative direction.

The arrangement whereby the State of Israel supported a limited number of yeshivah students (originally 400) designated "professional religious scholars," granting them draft exemptions as well, has mushroomed into a system where the great majority of ultra-Orthodox men (some 80,000 in 2006, half married) study full time. The economic and social consequences of maintaining such a "society of scholars," in

the phrase of Menachem Friedman, are a subject of constant debate in Israel.

Yeshivot in the United States

There were large yeshivot of the kind traditional in Eastern Europe, some being actually the original yeshivot transferred there with their students during World War II. Also, many large yeshivot, whose main creation was in the United States, became an important factor in Jewish life there. *Yeshiva University was a valuable contribution of American Jewry to the development of the yeshivah. In this institute the yeshivah studies were no different in quality from the European version and at the same time it contained a large university. This yeshivah brought an important change in the situation of Orthodoxy in the United States, succeeding in raising a new generation of rabbis and spiritual guides who brought about a revival of Orthodox Jewry and had a great influence throughout the whole of the United States. Another great American yeshivah institute is the Beth Midrash Govoha in Lakewood, New Jersey, with 3,000 students in the early 2000s. Founded in 1943 by R. Aaron *Kotler on the rigid Lithuanian model that demanded full-time study, it now offers a Bachelor (and even Master) of Talmudic Law degree which allows students to go on to graduate school. Thus, unlike their Israeli counterparts, the American "Litvaks" are able to ultimately enter the job market in high-paying professions ranging from law and medicine to high-tech industry.

YESHURUN, AVOT (pseudonym of **Yehiel Perlmutter**; 1904–1992), Israeli poet. Born in Volhynia, he immigrated to Palestine in 1925, and his poems first appeared in *Turim*, in 1934. Among Yeshurun's published volumes of poetry are *Al Ḥokhmat Derakhim* ("The Wisdom of the Road," 1942, under his original name); *Re'em* (1961), and *Sheloshim Ammudim shel*

Avot Yeshurun ("Thirty Pages," 1965); *Ha-Shever ha-Suri-Afri-kani* (1974; translated into English as *The Syrian-African Rift*, 1980); *Homograph* (1985); and *Ein Li Akhshav* ("I have no now," 1992). A collection of all his poems (*Kol Shirav*) was edited by his daughter, Helit Yeshurun, with a forward by B. Harshav (1995). He sets personal experience against the background of national problems. At first his poetry found its inspiration in the Bedouin world in a kind of ancient alliance between two peoples nurtured in the same region. Following the Israel War of Independence, he saw the Arab people's exile from Palestine and the Jewish tragedy in Europe as a "common Holocaust." The Eastern European Jew and the Palestinian Arab share a common destiny. This is reflected in his poetic idiom which is studded with Yiddish and Arab elements as well as Hebrew-Arabic puns. Yeshurun's unconventional style, his distortions of syntax and his idiosyncrasies of rhyme and diction reflect his attempt to forge a new idiom. His autobiography appeared in *Massa*, 1 (Jan. 1965). He was awarded the Israel Prize in 1992. For translations into various languages see the ITHL website at www.ithl.org.il.

[Yonah David]

YESODOT (Heb. יְסוֹדוֹת; "Foundations"), moshav shittufi in central Israel, near Ḥuldah, affiliated with Po'alei Agudat Israel. Yesodot was founded in June 1948 in the short interval between the battles during the War of Independence for the opening of the Jerusalem corridor. The site was near a large army camp which British forces had turned over to the invading Iraqi units, but which was stormed and taken by Jewish units. The settlers were immigrants from Germany and Romania. Its farming mainly consisted of intensive field and garden crops (e.g., flowers), cattle, and poultry. In the mid-1990s, the population of Yesodot was about 300, growing to 362 in 2002.

[Efraim Orni]

YESUD HA-MA'ALAH (Heb. יְסֻד הַמַּעֲלָה), moshavah with municipal council status in northern Israel, in the Ḥuleh Valley. Yesud ha-Ma'alah was established in 1883, as one of the earliest settlements in the country, by settlers originating from the Polish town of Mezirech. The first settlers lived in reed huts near Lake Ḥuleh. They endured great hardship due to malaria, the scarcity of food, and lack of medicine. In the initial years, the settlers' agricultural inexperience resulted in negligible harvests. Although Baron Edmond de *Rothschild included Yesud ha-Ma'alah in the settlement network receiving his support, progress continued to be very slow. Attempts to develop specialized branches, e.g., plants for perfume and mulberry groves for silkworm cultivation, failed, and the village subsisted on unirrigated grain crops in spite of the nearness of the sweet water lake. The situation slowly improved in the 1940s, when the Palestine Jewish Colonization Association (PICA) transferred the land to the settlers and a group of youth from the moshavim, Benei Peled, joined the village population. Farming was intensified and the threat of malaria was finally overcome. After the *War of Independence (1948), a small number of immigrants was absorbed. With the draining of the lake in 1958, Yesud ha-Ma'alah received additional farm land. In 1970 the village had 432 inhabitants. By the mid-1990s the population had doubled to 865, increasing further to 1,160 in 2002. Its farming was based on citrus groves, deciduous fruit orchards, and flowers. Other sources of livelihood were tourism (guest rooms) and small enterprises. The 2,960-dunam (740-acre) Ḥuleh Nature Reserve, where a remnant of the former lake and swamps with their unique vegetation and wildlife is preserved, is located nearby. The name Yesud ha-Ma'alah is mentioned in Ezra 7:9.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

YE'USH (Heb. יֵאוּשׁ; lit. "despair"), despair of property. A person's ownership of property ceases when it is apparent that he has made up his mind that the property will be out of his possession forever (see *Ownership). This occurs

(a) where he has indicated that he conveys the property to another in which case it ceases to be his the moment the latter acquires it (see *Sale; *Acquisition, Modes of),

(b) where he abandons it, or

(c) where he despairs of it (*ye'ush*), thus ceasing to be the owner of it and no further act is required of him. *Ye'ush* means that under certain circumstances the owner indicates that he has lost all hope of recovering his property. *Ye'ush* is distinguished from acquisition and abandonment since it is only possible in respect of an object which is out of the "despairing" person's possession. Despair of an object still in the owner's possession is not considered *ye'ush*. Similarly, for property to be despaired of it must be against the owner's wish, for he despairs because the object has been lost or stolen; but if the owner gives up the object of his own free will, it is abandonment, and not *ye'ush*. *Ye'ush* may be apparent either from the owner's speech or behavior, or from the circumstances in which the right went out of his possession. In the first instance, if the owner has said: "What a misfortune that I have suffered a loss of money!" (BM 23a) he has indicated that he has despaired of recovering his money, and the same applies to any other expression having the same meaning. Similarly, if a river carries away logs and their owner does not pursue them, he has indicated his despair (BM 22a). In the second instance, if a lost object has no identification marks, it is presumed that the owner has despaired of it and that it has become ownerless

(*hefker*), belonging to whoever finds it. This is also the case with an identifiable object which has been lost in a place frequented by the general public (BM 21b), or where a long time has passed since it was lost (Rashi, BM 23b). According to the Jerusalem Talmud (BM 2:1, 8b) and Maimonides (Yad, Gezelah 11:10), even property which is lost to its owner and to all persons, for instance if carried away by the river, may be kept by its finder, since the owner has given it up for lost. The circumstances in which the object is found create the presumption of *ye'ush* if most people would have despaired of the object in such circumstances; and it is immaterial that the owner protests that he had not given up hope, for it is presumed that surely in his heart he has, in fact, despaired. Even if he has not, the finder may disregard such an exceptional state of mind. If the circumstances are such, however, that most people would not usually despair, then *ye'ush* must be preceded by a specific act or speech by the owner (Maharik, no. 3:2).

Ye'ush does not require an act on the part of the despairer, only an indication of his state of mind, as is the case in all other cases whereby the ownership ceases by an indication of the owner's mind (abandonment and conveyance). Thus *ye'ush* cannot apply to the legally incompetent (BM 22b). The case where the owner cannot know that he has lost the object in circumstances that would usually result in *ye'ush*, is the subject of a dispute between Abbaye and Rava (BM 21b). According to Abbaye constructive *ye'ush* (i.e., if the owner does not know that he has a reason to despair) is not deemed to be *ye'ush* because, since the owner has not yet set his mind to the fact that the property is lost and irretrievable, the ownership thereof has not ceased. The finder will therefore gain ownership of the lost article only if he has found it after most people would have already known of its loss and despaired thereof. According to Rava constructive *ye'ush* is deemed to be *ye'ush* because, when the owner of the lost property learns of its loss, it is to be presumed that he will despair of it, and his reason for not yet despairing thereof is his ignorance of the true state of affairs. This dispute concerning *ye'ush* extends to acquisition as well, as in the case where a person confers property on another which does not belong to him without the knowledge of the owner, and the owner subsequently consents thereto; because acquisition, like *ye'ush*, is only the cessation of ownership by the owner's resolving that the property will never return permanently into his possession.

The concept of *ye'ush* is employed in the laws of lost property and in the laws of theft and robbery. In such cases the property goes out of the owner's possession and, accordingly, when it appears that the property will not be recovered by the owner, there is justification for *ye'ush*. Thereafter the finder or thief or robber acquired ownership of the property. According to Tosafot (BK 66a, s.v. *Hakhi*) a finder who has taken lost property before any *ye'ush*, acquires it after there has been *ye'ush*, but has to pay the owner its value, in accordance with the laws of robbers. According to Naḥmanides (*Milḥamot ha-Shem*, BM 26b) if the finder takes the lost property with the intention of returning it, but subsequently changes his mind,

the lost property never becomes his since the owner's *ye'ush* is, in fact, not *ye'ush*; but if the finder takes the lost property in order to keep it, he acquired it after there has been *ye'ush*. As to the laws of theft and robbery, various disputes are recorded in the Talmud, dating back to the day of the *tannaim*, as to when it was usual for a person to despair of converted property. There are some who think that only in the case of theft is there *ye'ush*; others contend that there is *ye'ush* only in the case of robbery; still others maintain that there is *ye'ush* in both cases. It is also disputed whether *ye'ush* is itself indicative of genuine despair in the owner's heart or whether a change of possession is also required (i.e., that the object pass into the hands of a third party), or a change of name (i.e., that the object becomes so transformed that people call it by another name) for the *ye'ush* to be genuine (see *Theft and Robbery). In the law of the State of Israel *ye'ush* is of no consequence, and ownership does not cease as a result of despair.

[Shalom Albeck]

YEVAMOT (Heb. יְבָמוֹת; "Levirate Marriages"), first tractate in the order *Nashim*, in the Mishnah, Tosefta, and Babylonian and Jerusalem Talmuds. In the Cambridge manuscript it is called *Nashim* ("Women"), a title which is partly justified by the great variety of laws it contains appertaining to women, far beyond those of levirate marriage with which it primarily deals. The Mishnah of *Yevamot* consists of 16 chapters.

Chapter 1 enumerates 15 categories of women who, since they are forbidden to marry the levir, thereby exempt their co-wives from levirate marriage or *ḥaliẓah*. It continues with the enumeration of six other relatives the prohibition of whose marriage with the levir is of more stringent character and the marriage of whose co-wives to the levir is permitted. Chapters 2–6 discuss in detail every other aspect of the obligations and exemptions regarding levirate marriage and *ḥaliẓah*. Mishnah 6:3, which deals inter alia with the prohibition of the marriage of a kohen to a woman who has been released by *ḥaliẓah*, serves as a transition point for the discussion of a large variety of laws applying to women and the forbidden degrees of propinquity. The discussion on the stated subject of the tractate is not resumed until chapter 12, although individual *mishnayot* do deal with this subject. Thus the rest of chapter 6 deals with the women who are permitted to marry priests or a high priest and with the laws of procreation. Chapter 7 deals with the circumstances in which a woman of priestly rank or her slave are deprived of the right to eat *terumah*, while chapter 8 deals with the opposite, priests who are forbidden to eat *terumah* though their wives and slaves may do so, leading to a discussion of all those categories of men or women who as a result of personal physical defects or national origin

(e.g., Ammonites and Moabites) are forbidden to many Jews. Chapter 9 lists women who are permitted to their husbands but forbidden to their levirs and vice versa, and those permitted and forbidden to both; it concludes with the circumstances under which a woman may eat *terumah*. Chapter 10 deals with the case of a woman who remarried because of an erroneous report of the death of her husband abroad and with its legal consequences for married life (see Prohibited *Marriage). Chapter 11 deals with the prohibition against marriage with a woman who has been raped or seduced (or her relatives), and the laws appertaining to the marriage of a child of doubtful fatherhood. Chapter 12 lays down the number of judges necessary to constitute the special *bet din* for *ḥaliẓah* and the details of the ceremony and its requirements. Chapter 13 deals with *me'un* (see Child *Marriage) and generally with the laws connected with the marriage of minors. Chapter 14 deals with the laws of the marriage of deaf-mutes and imbeciles with one another and with a normal person. Chapters 15 and 16 deal with the acceptance of evidence of the death of a husband, son, or levir on the part of a woman who returns from abroad; it also deals with other aspects of the evidence needed for presumption of death.

The *halakhot* of Mishnah *Yevamot* belong to an early period and include a relatively large number of the disputes of Bet Shammai and Bet *Hillel, and some of them even precede the time of these two schools (see above 15:1 and 2). A substantial section dates from the period before the halakhic differences between the schools were decided. This is implicit in the tradition which praises the fact that "although Bet Shammai and Bet Hillel are in disagreement about rival wives (1:4), sisters (3:1), a doubtfully married woman, etc., yet Bet Shammai did not abstain from marrying women of the families of Bet Hillel, nor did Bet Hillel abstain from marrying women of the families of Bet Shammai. This teaches you that they showed love and friendship toward one another, putting into practice the text [Zech. 8:19]: 'Love ye truth and peace.' Although these forbade and those permitted, they did not refrain from acts requiring ritual purity in the presence of one another, thus fulfilling the text [Prov. 21:2]: 'Every way of a man is right in his eyes; but the Lord weigheth the hearts'" (Tosef. 1:10 and 11). The Mishnah in its present form stems from Judah ha-Nasi, but it contains many anonymous *mishnayot* belonging to the school of Akiva and his disciples. In particular the formulas of the general statements ("Some are permitted their husbands and forbidden their levirs, permitted their levirs and forbidden their husbands," etc.) in chapter 9 accord with the method and teaching of Akiva (see Epstein, Tannaim, 87).

The Tosefta has 14 chapters. The Mishnah to chapter 9, which, as stated, is from the school of Akiva, has no parallel in the Tosefta, but the contents of Tosefta *Yevamot* parallels and supplements the Mishnah to a great extent, even though the order differs. Of Mishnah 6:6, which discusses the precept to be fruitful and multiply, Ben Azzai says in Tosefta 8:4, "Anyone not engaged in procreation is considered by Scripture as diminishing the image (of the Creator) since it says [Gen. 9:6–7]: 'for in the image of God made He man. And you, be ye fruitful and multiply.' Eleazar said to him: 'Words are beautiful when they come from one who performs them. Some preach well and practice well, Ben Azzai [who was celibate] preaches well but does not practice well." Ben Azzai retorted: 'I cannot help it, my soul is in love with Torah; the world can be carried on by others'" (see also Yev. 63b). The Mishnah also lays down that if a man married and lived with his wife ten years but she has no children, he may not abstain from procreation (*ibid.*); the Tosefta (8:4) adds that the period of residence outside Ereẓ Israel is not counted. A *baraita*, reflecting the state of the *halakhah* before it was decided in accordance with Bet Hillel, is cited in Tosefta 1:13 to the effect that whoever wishes to follow the stricter practices of both Bet Shammai and Bet Hillel, of him the Bible says (Eccles. 2:14): "the fool walketh in darkness," while he who follows the lenient practices of both Bet Shammai and Bet Hillel is wicked; but one must follow either both the leniencies and stringencies of Bet Shammai or of Bet Hillel."

The themes of tractate *Yevamot* are considered the most difficult of the Talmud. One of the *halakhot* that emerge from this tractate is that the sages were exceptionally lenient in problems of *agunah (88a). They permitted a wife whose husband had disappeared to remarry on the testimony of a single witness, of a woman, and the like; and even on the basis of a mere rumor of her husband's death, the woman is permitted to remarry (16:6 and 7). A great variety of cases are quoted to give examples of the application of these *halakhot* in practice (see Yev. 120 ff.). The tractate discusses the problem of proselytization and the indispensability of circumcision and ritual bathing (46a–b) as part of its rite. According to one view "Proselytes are hurtful to Israel as a sore on the skin" (109b). Similarly opinions differ on whether proselytes for the sake of marriage or to "enjoy the royal bounty" should be accepted. The *halakhah* accepts them as proselytes (24b). Praise of family life is implicit in the statement: "A Jew who has no wife lives without joy, without blessing, and without goodness" (62b). On the other hand the lives of a number of sages who suffered severely from their wives are described, and to them is applied the verse (Eccles. 7:26): "And I find more bitter than death the woman" (63a–b). As evidence for these ideas, verses are cited from Ben Sira (26:3 f.): "a good wife is a good gift… an evil wife is as leprosy to her husband" (see ed. Segal, p. 156 ff.). Among the maxims quoted, the following are worthy of mention: "It is religious duty to obey the sages" (20a); "a judge should always imagine that a sword is lying between his thighs and Gehenna is open beneath him" (109b); and "scholars increase peace in the world" (122b). A parallel to IV Maccabees 2:10 – "For the law ranks above affection to parents" – is the statement: "Since one might have assumed that honoring father and mother should supersede the Sabbath, therefore it is stated (Lev. 19:3) 'Ye shall fear every man his mother and his father, and ye shall keep my Sabbaths,' all of you have the duty to honor Me" (5b ff.).

There is not much *aggadah* in the Jerusalem Talmud to *Yevamot*. The statement that R. Ḥiyya b. Ashi was quick to mate his ass soon after it had given birth reveals the knowledge of natural processes on the part of the sages; that such mating is most desirable is also mentioned by Aristotle and Pliny (see S. Lieberman, *Hellenism in Jewish Palestine* (1950), 186 f.). A statement of great importance (12:1, 12c) is: "Were the prophet Elijah to come and say [that] *ḥaliẓah* can be performed with a shoe, he would be obeyed, that it cannot be performed with a sandal, he would not be obeyed, since the majority is accustomed to perform *ḥaliẓah* with a sandal, and custom takes precedence over the *halakhah*" (cf. TB, Yev. 102a). In a similar vein it states (TJ, 7:2, 8a): "Any *halakhah* about which the *bet din* vacillates and the law is unknown, go and see how people act and act accordingly", *Yevamot* was translated into English by I.W. Slotki in the Soncino edition of the Talmud (1936).
